DRAFT 2022 AIR QUALITY MANAGEMENT PLAN

1

What is Ozone

Ozone forms in the atmosphere in the presence of sunlight

Complex, chemical reactions

Ultraviolet light transforms molecules

Health Impacts of Ozone Exposure

Coughing
and Sore
Throat

Aggravation of
Emphysema
and Chronic
Bronchitis

Increased
Susceptibility to
Infection

Airway Inflammation
and Damage

Asthma Attacks

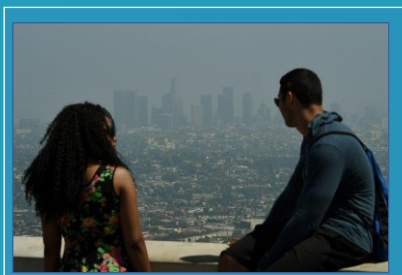

- The pollutants that form ozone also increase PM2.5 pollution
- PM2.5 can cause **premature death** in addition to other serious health effects

3

3

Our Challenge

Our region has historically suffered from some of the worst air quality in the United States

Los Angeles 2017

Los Angeles c. 1950

We have made significant progress, but still suffer from poor air quality

- Worst ozone (smog) in the country
- Second-worst fine particulate matter (PM_{2.5})

4

4

National Ambient Air Quality Standards*

U.S. EPA sets health-based standards for the criteria pollutants

Areas that fail to meet standards must develop plans to meet the standards by specific timelines

The latest standard was set as 70 ppb for 8-hour ozone in 2015

Areas that ultimately fail to meet the standards by the given timeline are potentially subject to sanctions and draconian federal regulations

* NAAQS cover ozone, particulate matter, lead, carbon monoxide, sulfur dioxide, and nitrogen dioxide

5

5

Air Quality Management Plans

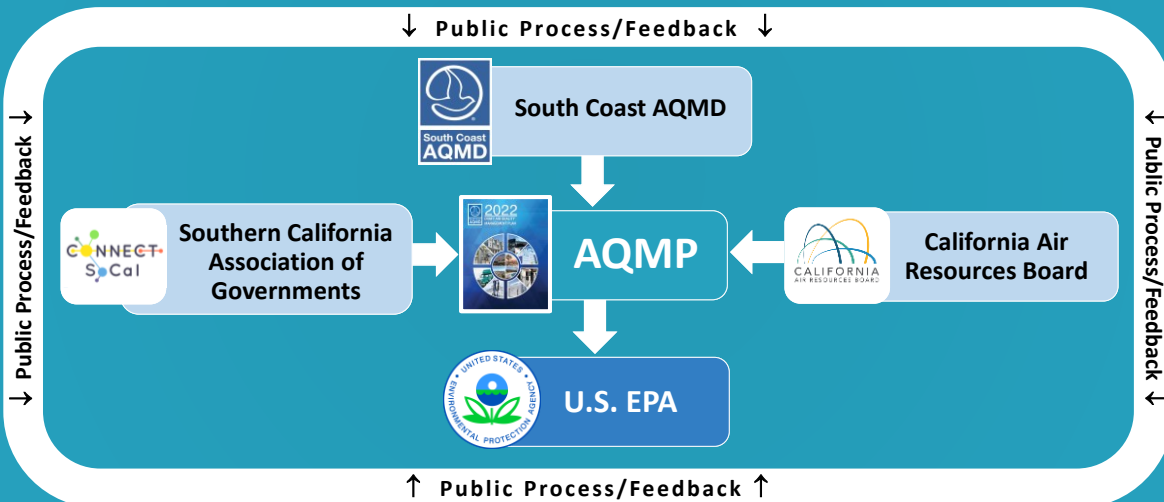

- An Air Quality Management Plan (AQMP) is the blueprint for how the region will attain national ambient air quality standards
- South Coast Air Basin is classified as “extreme” nonattainment area for the 2015 8-hour ozone standard, 70 ppb
- South Coast Air Basin has to meet the standard by 2037
- **2022 AQMP is a plan to meet the 2015 ozone standard by 2037**

6

6

2022 AQMP Process

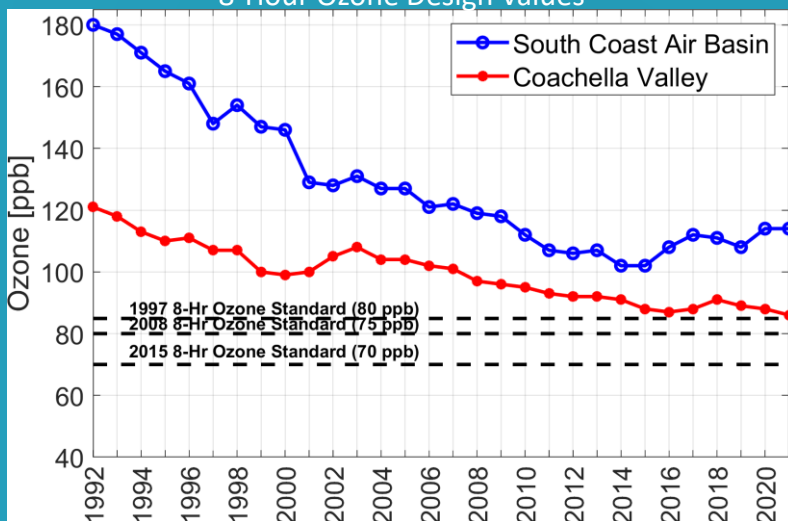

7

7

Ozone Trends in the South Coast Air Basin

8-Hour Ozone Design Values

Overall air quality has dramatically improved

Temporary increase in ozone in past few years primarily due to poor meteorology. Further emission reductions will reduce ozone

8

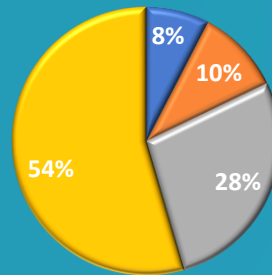

8

Key Pollutants for Ozone Attainment

- NOx reduction is key to attain ozone standards
- Limited VOC reductions will also improve air quality
 - Reduce PM and health risks from the exposure of air pollutants

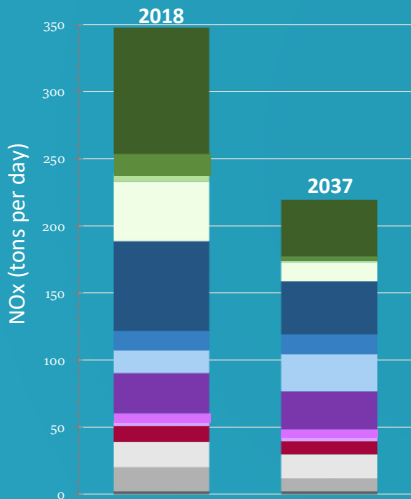

Where NOx Emissions Come From (2037)

■ Point ■ Area ■ On-Road ■ Off-Road

NOx Reductions Needed for Attainment

Basin Total NOx Emissions in Tons Per Day

Total Reductions from 2018 to Attainment

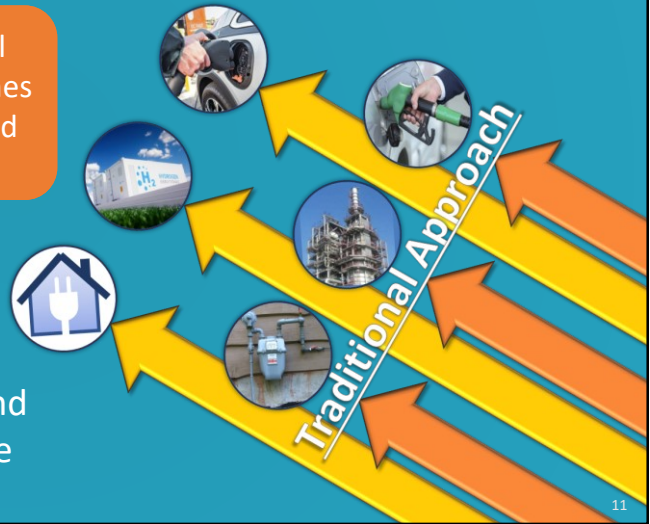

Carrying Capacity is approximately 63 tons per day

- Heavy-Duty Diesel Trucks
- Medium-Duty & Heavy-Duty Gas Trucks
- Buses
- Cars/Light-Duty Trucks/SUVs/Motorcycles
- Off-Road Equipment and Vehicles
- Locomotives
- Aircraft
- Ocean Going Vessels
- Commerical Harbor Craft
- Recreational Boats
- Residential Fuel Combustion
- Industrial/Commercial Fuel Combustion
- Larger Industrial Facilities
- Other Stationary

Innovative Approaches Needed

Traditional approach relies on additional tailpipe/exhaust stack controls, new engines technology, or fuel improvements tailored to individual use cases

These traditional approaches on already highly controlled sources cannot achieve additional $\approx 71\%$ reduction in the South Coast Basin and must be bypassed wherever possible

11

11

Key Considerations on a Zero Emissions Approach

○ What does the pathway look like through time?

○ Which fuels for which applications?

○ How can this be made most affordable?

- Ensures adoption at scale, and available equitably

12

12

Proposed Method of Control and Implementation for Stationary/Area sources

Regulatory Approach

- Require zero NOx emissions; allow lower NOx technology when not be feasible
- Amend or develop rules reflecting updated Best Available Retrofit Control Technology (BARCT)

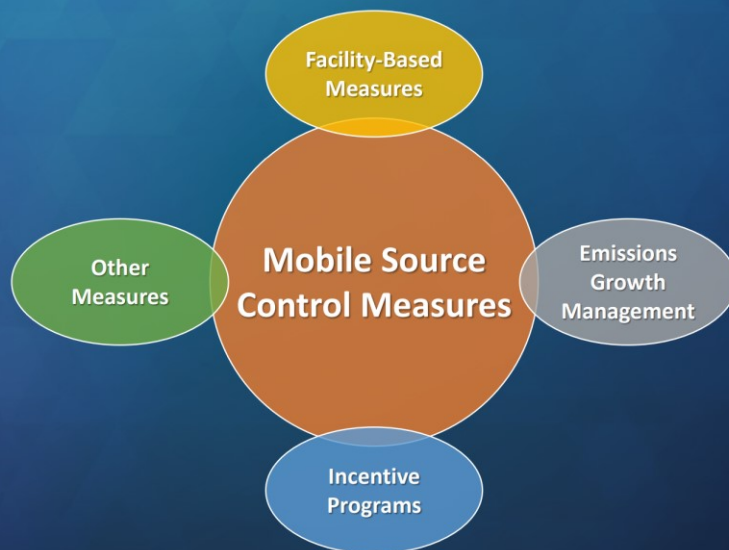

Incentive Approach

- Focus on disadvantaged communities
- Encourage early deployment of zero emission requirement

13

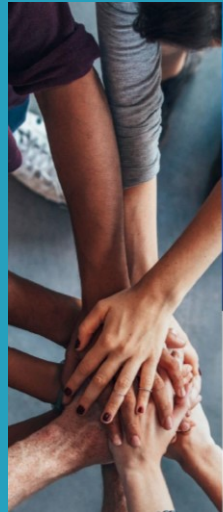

13

Overview of Draft South Coast AQMD Mobile Source Control Strategy

14

Environmental Justice Communities

Chapter 8 Environmental Justice Communities

- The impacts of air pollution are not distributed equitably throughout the South Coast AQMD jurisdiction, with some communities bearing much higher air pollution burdens.
- The 2022 AQMP includes control measures to reduce the levels of ozone – a regional pollutant. The South Coast AQMD, however, addresses disproportionate impacts of local air pollution in disadvantaged communities through the AB 617 program.

- The 2022 AQMP includes control measures to reduce the levels of ozone – a regional pollutant
- EJ discussions in the AQMP includes
 - Air Quality
 - Emissions in base and future year
 - Meeting federal air quality standards in EJ communities
 - Control measures and Approaches to assist EJ communities

18

Incentive Funding

- Incentive fundings
 - Promoting deployment of clean technologies for both stationary and mobile sources
 - Specifically important for building electrification measures
 - Changing out gas appliances, heaters and boilers to zero emission not necessarily affordable
- Prioritize funding in EJ areas
- Expanding rebate programs for stationary Sources
 - South Coast AQMD's Clear Air Furnace program
- Mitigation fee option will be evaluated
 - R-CMB-01, R-CMB-02, R-CMB-04, C-CMB-01 and C-CMB-02

19

19

Partnerships with Other Organizations

- Public Utilities Commission of the State of California (CPUC)
 - Decision 21-11-002
 - Incremental cost from the use of replaced electrical appliances may be covered by utility companies depending on study results
- Technology and Equipment for Clean Heating (TECH) Clean California
- Southern California Edison and other utility companies
