

1/27/2011 1:23 PM

# **DRAFT**

## **MEETING, FEBRUARY 4, 2011**

A meeting of the South Coast Air Quality Management District Board will be held at 9:00 a.m., in the Auditorium at AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California.

The agenda and documents in the agenda packet will be made available upon request in appropriate alternative formats to assist persons with a disability. Disability-related accommodations will also be made available to allow participation in the Board meeting. Any accommodations must be requested as soon as practicable. Requests will be accommodated to the extent feasible. Please telephone the Clerk of the Boards Office at (909) 396-2500 from 7:00 a.m. to 5:30 p.m. Tuesday through Friday.

All documents (i) constituting non-exempt public records, (ii) relating to an item on the agenda, and (iii) having been distributed to at least a majority of the Governing Board after the agenda is posted, are available prior to the meeting for public review at the South Coast Air Quality Management District Clerk of the Boards Office, 21865 Copley Drive, Diamond Bar, CA 91765.

Please note: This is a draft agenda and is subject to change.

## **CALL TO ORDER**

- Pledge of Allegiance
  
- Swearing In of Reappointed Board Members Josie Gonzales and Ronald O. Loveridge and Newly Appointed Board Member Shawn Nelson **Burke**
  
- Opening Comments: William A. Burke, Ed.D., Chair  
Other Board Members  
Barry R. Wallerstein, D. Env., Executive Officer
  
- Update on Distribution of 'State of the Air' Video to Local Cable and Public Access TV Stations in South Coast Air Basin **Atwood/3687**  
*(No Written Material)*

---

Staff/Phone (909) 396-

## **CONSENT CALENDAR (Items 1 through 18)**

Note: Consent Calendar items held for discussion will be moved to Item No. 19.

1. Approve Minutes of January 7, 2011 Board Meeting **McDaniel/2821**
  
2. Set Public Hearing March 4, 2011 to Consider Amendments and/or Adoption to AQMD Rules and Regulations **Wallerstein/3131**

Amend Regulation IX - Standards of Performance for New Stationary Sources

Periodic amendments to Regulation IX incorporate new or amended federal standards by reference. The standard for Portland Cement Manufacturing enacted by U.S. EPA in 2010, for NSPS, is proposed for incorporation into Regulation IX. (Reviewed: Stationary Source Committee, January 21, 2011)

**Budget/Fiscal Impact**

3. Amend Contract for Policy Consultation Regarding Local, State and Federal Transportation Issues **Ganguli/3185**

On January 8, 2010 the Board approved a contract for policy consultation regarding local, state and federal transportation issues with the Lee Andrews Group, which expires in February 2011. The contractor has provided valuable services on transportation issues and staff wishes to retain them for further consultation in the transportation arena, to further advance AQMD's clean air agenda this year. The current contract has options for two one-year extensions. This action is to approve the first one-year extension of the existing contract. Total contract amount shall not exceed \$100,000 for a one-year period starting February 2011, which is the existing contract amount. (Reviewed: Administrative Committee, January 14, 2011; Recommended for Approval)

4. Execute Sole Source Contracts, Amend Contract, and Recognize Revenues for CNG Vehicles and Education and Training in Support of U.S. DOE Clean Cities Programs **Hogo/3184**

In December 2009, the Board awarded two sole source contracts for the purchase of CNG taxicabs and shuttle vans. This action is to deobligate funds for the award for CNG shuttle vans and award to three companies providing shuttle services at LAX. The three companies will operate 20 CNG shuttle vans and 15 CNG shuttle buses at a cost not to exceed \$561,100 from the Clean Fuels Program. Southern California Gas Company has expressed interest in partnering with AQMD on conducting natural gas-powered vehicle safety training, and partner with AQMD on a CNG Fuel System Inspector Certification program. This action is also to recognize revenues from the Gas Company and augment funding of an existing contract with Advanced Transportation Technology and Energy Network of the California Community Colleges to expand the CNG vehicle training/safety and fuel cylinder inspection program at a total cost not to exceed \$160,000. (Reviewed: Technology Committee, January 21, 2011; Recommended for Approval)

5. Execute Contract to Develop and Demonstrate Hydraulic Hybrid Heavy-Duty Vehicles **Miyasato/3249**

Heavy-duty fleet vehicles represent a targeted category for emission reductions within the South Coast Air Basin. Parker Hannifin proposes to work in partnership with the AQMD, Freightliner and Coca-Cola to develop and demonstrate up to four heavy-duty hydraulic hybrid delivery vehicles. These delivery vehicles will be deployed in Coca-Cola's normal fleet to evaluate their performance, operating cost and emissions benefit. This action is to execute a contract with Parker Hannifin for an amount not to exceed \$250,000 from the Clean Fuels Fund. The total cost of this proposed project is \$2,000,000. (Reviewed: Technology Committee, January 21, 2011; Recommended for Approval)

6. **Execute Contract to Develop and Demonstrate Plug-In Hybrid Electric Drive System for Medium- and Heavy-Duty Vehicles** **Miyasato/3249**

Medium- and heavy-duty fleet vehicles represent a large emissions category within the South Coast Air Basin. Odyne Systems, LLC (Odyne) proposes to work in partnership with the AQMD, U.S. Department of Energy, Los Angeles Department of Water and Power and Los Angeles County to develop and demonstrate up to two medium- and heavy-duty plug-in hybrid electric vehicles. These vehicles will be deployed in normal fleet service to evaluate their utility, emissions reduction and fossil fuel consumption reduction potential. This action is to execute a contract with Odyne in an amount not to exceed \$494,000 from the Clean Fuels Fund. The total cost for this proposed project is \$2,599,000. (Reviewed: Technology Committee, January 21, 2011; Recommended for Approval)

7. **Transfer Funds from Clean Fuels Fund to DOE Plug-in Hybrid Electric Vehicle Fund** **Miyasato/3249**

The AQMD received a \$5 million award from the California Energy Commission (CEC) to cofund the DOE medium-duty Plug-in Hybrid Electric Vehicle (PHEV) demonstration program. A condition of the award requires the AQMD to incur cost before corresponding payments can be made by the CEC. To comply with the conditions of the CEC award, it is requested that up to \$5 million be transferred as a loan from the Clean Fuels Fund to the DOE PHEV Fund. The transferred funds will be used to pay contractual obligations toward work completed on the medium-duty PHEV program. The AQMD will be reimbursed by the CEC for these payments made to subcontractors and will subsequently reimburse the Clean Fuels Fund. (Reviewed: Technology Committee, January 21, 2011; Recommended for Approval)

8. **Execute Contract for Janitorial Services at Diamond Bar Headquarters** **Johnson/3018**

The current contract for Diamond Bar headquarters janitorial services was due to expire on October 31, 2010. On September 10, 2010, the Board extended the contract for up to six months, pending a determination whether to contract out or hire employees to perform these services. Upon considering both options, the Board approved the release of an RFP to solicit proposals from firms interested in providing these services. This action is to execute a new two-year contract with Diamond Contract Services, for a total amount not to exceed \$825,896. Funding has been included in the FY 2010-11 Budget and will be requested in successive fiscal years. (Reviewed: Administrative Committee, January 14, 2011; Recommended for Approval)

9. Amend Contract to Provide Technical Support for AQMD PAMS Upper Air Meteorological Monitoring Network **Tisopulos/3123**

On February 5, 2010, the Board awarded a new contract with Sonoma Technology, Inc. (STI) to provide technical support for the AQMD PAMS Upper Air Monitoring Network, with options for three annual contract renewals. This action is to amend the STI contract for the next year of field support and data management for the upper air measurement program at a cost not to exceed \$100,000. This exercises the first of three renewal options based on STI's responsiveness and satisfactory performance, bringing the contract total to \$190,000. Funding for this contract amendment is allocated in the U.S. EPA 19th Year Section 105 Grant for the PAMS program. (Reviewed: Administrative Committee, January 14, 2011; Recommended for Approval)

10. Issue Solicitations for Off-Road Diesel Exhaust After-treatment Demonstration and Major Event Center Transportation Programs under MSRC's FY 2010-11 AB 2766 Discretionary Fund Work Program **Winterbottom**

The MSRC approved release of an RFQ to solicit manufacturers' applications for after-treatment devices to be demonstrated on off-road vehicles and a Program Announcement to solicit applications for vehicles to be retrofitted with such devices. The MSRC also approved release of a Program Announcement for a major event center transportation service program to assist congested venues not currently served by sufficient transportation service. The MSRC seeks Board approval to release the solicitations at this time as part of the FY 2010-11 AB 2766 Discretionary Fund Work Program. (Reviewed: Mobile Source Air Pollution Reduction Review Committee, January 20, 2011; Recommended for Approval)

**Items 12 through 18 -- Information Only/Receive and File**

11. Legislative & Public Affairs Report **Abarca/3242**

This report highlights the December 2010 outreach activities of Legislative & Public Affairs, which include Environmental Justice Update, Community Events/Public Meetings, Business Assistance, and Outreach to Business and Federal, State and Local Government. (No Committee Review)

12. Hearing Board Report **Camarena/2500**

This reports the action taken by the Hearing Board during the period of December 1 through December 31, 2010. (No Committee Review)

13. **Civil Filings and Civil Penalties Report** **Wiese/3460**

This reports the monthly penalties from November 1 through December 31, 2010, and legal actions filed by the District Prosecutor during December 1 through December 31, 2010. An Index of District Rules is attached with the penalty report. (No Committee Review)
  
14. **Lead Agency Projects and Environmental Documents Received by AQMD** **Chang/3186**

This report provides, for the Board's consideration, a listing of CEQA documents received by the AQMD between December 1, 2010 and December 31, 2010, and those projects for which the AQMD is acting as lead agency pursuant to CEQA. (Reviewed: Mobile Source Committee, January 21, 2011)
  
15. **Rule and Control Measure Forecast** **Chang/3186**

This report highlights AQMD rulemaking activity and public workshops potentially scheduled for the year 2011. (No Committee Review)
  
16. **Report of RFPs and RFQs Scheduled for Release in February** **O'Kelly/2828**

This report summarizes the RFPs and RFQs for budgeted services over \$75,000 scheduled to be released for advertisement for the month of February. (Reviewed: Administrative Committee, January 14, 2011; Recommended for Approval)
  
17. **Summary of Changes to FY 2010-11 Approved Budget** **O'Kelly/2828**

This is the mid-year report of budget changes for FY 2010-11. (No Committee Review)
  
18. **Status Report on Major Projects for Information Management Scheduled to Start During Last Six Months of FY 2010-11** **Marlia/3148**

Information Management is responsible for data systems management services in support of all AQMD operations. This action is to provide the monthly status report on major automation contracts and projects to be initiated by Information Management during the last six months of FY 2010-11. (No Committee Review)
  
19. **Items Deferred from Consent Calendar**

## **BOARD CALENDAR**

*Note: There was no CARB meeting held in January; the next meeting is scheduled for February 24, 2011.*

20. Administrative Committee (Receive & File) **Chair: Burke** **Wallerstein/3131**

21. Legislative Committee **Chair: Carney** **Abarca/3242**

Receive and file; and adopt the following action as recommended:

<b>Agenda Item</b>	<b>Recommended Action</b>
Pension Reform Principles	Approve with amendment

22. Mobile Source Committee (Receive & File) **Chair: Loveridge** **Chang/3186**

23. Stationary Source Committee (Receive & File) **Chair: Yates** **Nazemi/2662**

24. Technology Committee (Receive & File) **Chair: Gonzales** **Liu/2105**

25. Mobile Source Air Pollution Reduction Review Committee (Receive & File) **Board Liaison: Antonovich** **Hogo/3184**

## **PUBLIC HEARINGS**

26. Adopt Proposed Rule 1315 – Federal New Source Review Tracking System ***(Continued from January 7, 2011 Board Meeting for Board Deliberation Only)*** **Nazemi/2662**

Proposed Rule 1315 was developed to maintain AQMD's ability to issue permits to major sources that require offsets, but obtain offset credits from the AQMD's Priority Reserve under Rule 1309.1 and/or that are exempt from offsets under AQMD Rule 1304 through December 31, 2030. The rule will also memorialize in rule form the procedures to be followed to both establish the equivalency of AQMD's NSR program with federal NSR offset requirements for such major sources and demonstrate that sufficient emission reductions, including previously-untracked emission reductions, exist beyond regulatory requirements under federal law to be used as offset credits to establish that AQMD's NSR program is equivalent with federal NSR offset requirements for those major sources. The rule includes provisions designed to ensure equivalency with federal offset requirements is achieved and additional backstop provisions to ensure the actual impacts of implementing the proposed rule do not exceed the impacts analyzed in the CEQA process. This action is to adopt the resolution: 1) Certifying the CEQA Program Environmental Assessment for Proposed Rule 1315; and 2) Adopting Rule 1315. (Reviewed: Stationary Source Committee, November 19, 2010)

27. Receive Public Input on Executive Officer's Proposed Program Goals/Objectives for FY 2011-12 **Wallerstein/3131**

A set of priority goals for the FY 2011-12 Budget has been developed. The Executive Officer wishes to receive public and Board Member input on these priority goals as they serve as the foundation of AQMD's Work Program. (Reviewed: Administrative Committee, January 14, 2011)

28. Amend Rule 1150.1 - Control of Gaseous Emissions from Municipal Solid Waste Landfills **Tisopoulos/3123**

The proposed amendments will incorporate provisions to make the rule consistent with a CARB statewide rule for landfills, add NESHAP requirements which are already in effect, make minor corrections for clarity and amendments to reduce recordkeeping and reporting requirements to multiple agencies. This action is to adopt the resolution: 1) Certifying the Notice of Exemption for the proposed amendments to Rule 1150.1; and 2) Amending Rule 1150.1. (Reviewed: Stationary Source Committee, July 23, 2010 and January 21, 2011)

29. Amend Rule 317 – Clean Air Act Non-Attainment Fees

Tisopulos/3123

Sections 182 and 185 of the Clean Air Act, as amended in 1990, require major stationary sources of NOx and VOC located in air basins that do not attain the federal one-hour ozone standard by the statutory deadline pay mitigation fees based upon a prescribed formula each year until attainment is demonstrated. The proposed amended rule provides for compliance with the Clean Air Act by utilizing a fee equivalent approach as provided in Section 172(e) of the Act. The fee equivalent approach recognizes funding from programs that are surplus to the SIP and provide for air quality improvement projects in the SCAQMD. Proposed Amended Rule 317 replaces 2007 AQMP Control Measure MCS-08, 1997 AQMP FSS-04 (same as in 2003 AQMP), and 1994 AQMP CTY-10. This action is to Adopt the resolution: 1) Certifying the Final Subsequent Environmental Assessment for Proposed Amended Rule 317 – Clean Air Act Non-Attainment Fees, and 2) Amending Rule 317 – Clean Air Act Non-Attainment Fees, to replace Control Measure MCS-08 of the 2007 AQMP and its predecessor control measures. (Reviewed: Stationary Source Committee, January 21, 2011)

**OTHER BUSINESS**

30. Make Findings Regarding Board Member Assistant/Consultant

Wallerstein/3131

This action is for the Board to act in the place of the Administrative Committee to review a Board Member's Proposal for SCAQMD Board Member Assistant/Consultant and make the findings required by Board policy.

**PUBLIC COMMENT PERIOD – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3)**

**BOARD MEMBER TRAVEL – (No Written Material)**

Board member travel reports have been filed with the Clerk of the Boards, and copies are available upon request.

**CLOSED SESSION - (No Written Material)**

Wiese/3460

It is necessary for the Board to recess to closed session pursuant to Government Code section 54956.9(a) to confer with its counsel regarding pending litigation which has been initiated formally and to which the District is a party. The actions are:

- NRDC, et al. v. SCAQMD, et al., U.S. District Court Case No. CV08-05403 GW (PLAx) and United States Court of Appeals, 9<sup>th</sup> Circuit, Case No. 09-57064;

- CCAT, et al. v. State of California; SCAQMD, et al., Los Angeles Superior Court Case No. BS124264 and California Court of Appeal, Second District, Case No. B226692;
- Petition Before the Administrator of the U.S. Environment Protection Agency In the Matter of Alleged Failure of California to Comply with Mandatory Procedures to Amend SIP Regarding Internal Bank Offset Credits Held by the South Coast Air Quality Management District (filed December 10, 2009);
- NPCA v. SCAQMD, Court of Appeal, 4<sup>th</sup> Appellate District, Division Three, Case No. G040122 and Supreme Court of California Case No. S177823;
- W.M. Barr & Company, Inc. v. SCAQMD, Los Angeles Superior Court Case No. BS127359;
- Southern California Gas Company v. SCAQMD, Los Angeles Superior Court Case No. BS122004;
- Communities for a Better Environment v. South Coast Air Quality Management District, et al., Los Angeles Superior Court Case No. BS091275, and Carlos Valdez, et al. v. South Coast Air Quality Management District, et al., Los Angeles Superior Court Case No. BS091276, Court of Appeal of the State of California Case No. B193500, and Supreme Court of California Case No. S161190;
- Natural Resources Defense Council, et al. v. EPA, United States Court of Appeals, 9<sup>th</sup> Circuit, Case No. 08-72288;
- Pacific Merchant Shipping Association v. Goldstene, United States District Court, Eastern, Case No. 09-01151, U.S. Court of Appeals, 9<sup>th</sup> Circuit, Case No. 09-17765; and
- Neenah Enterprises, Inc., et al, United States Bankruptcy Court for the District of Delaware, Case No. 10-10360 (MFW) [Neenah Enterprises is the parent of Gregg Industries].

It is also necessary for the Board to recess to closed session under Government Code section 54956.9(c) to consider initiation of litigation (one case).

In addition, it is also necessary for the Board to recess to closed session pursuant to Government Code sections 54956.8 to confer regarding real property negotiations regarding:

Property: 21825 Copley Drive, Diamond Bar, California 91765

Agency Negotiator: Barry Wallerstein

Negotiating Party: City of Diamond Bar

Under Negotiation: Price and terms of lease.

## **ADJOURNMENT**

**\*\*\*PUBLIC COMMENTS\*\*\***

**Members of the public are afforded an opportunity to speak on any listed item before or during consideration of that item. Please notify the Clerk of the Board, (909) 396-2500, if you wish to do so. All agendas are posted at AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, at least 72 hours in advance of the meeting. At the end of the agenda, an opportunity is also provided for the public to speak on any subject within the AQMD's authority. Speakers may be limited to three (3) minutes each.**

**Note that on items listed on the Consent Calendar and the balance of the agenda any motion, including action, can be taken (consideration is not limited to listed recommended actions). Additional matters can be added and action taken by two-thirds vote, or in the case of an emergency, by a majority vote. Matters raised under Public Comments may not be acted upon at that meeting other than as provided above.**

**Written comments will be accepted by the Board and made part of the record, provided 25 copies are presented to the Clerk of the Board. Electronic submittals to [cob@aqmd.gov](mailto:cob@aqmd.gov) of 10 pages or less including attachment, in MS WORD, plain or HTML format will also be accepted by the Board and made part of the record if received no later than 5:00 p.m., on the Tuesday prior to the Board meeting.**

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 1

MINUTES: Governing Board Monthly Meeting

SYNOPSIS: Attached are the Minutes of the January 7, 2011 meeting.

**RECOMMENDED ACTION:**

Approve Minutes of the January 7, 2011 Board Meeting.

Sandra McDaniel,  
Clerk of the Boards

sm:dp

---

**FRIDAY, JANUARY 7, 2011**

Notice having been duly given, the regular meeting of the South Coast Air Quality Management District Board was held at District Headquarters, 21865 Copley Drive, Diamond Bar, California. Members present:

William A. Burke, Ed.D., Chairman  
Speaker of the Assembly Appointee

Mayor Dennis R. Yates, Vice Chairman  
Cities of San Bernardino County

Supervisor Michael D. Antonovich  
County of Los Angeles

Supervisor John J. Benoit  
County of Riverside

Councilmember Michael A. Cacciotti  
Cities of Los Angeles County – Eastern Region

Supervisor Bill Campbell  
County of Orange

Ms. Jane W. Carney  
Senate Rules Committee Appointee

Supervisor Josie Gonzales  
County of San Bernardino

Dr. Joseph K. Lyou  
Governor's Appointee

Councilmember Judith Mitchell  
Cities of Los Angeles County – Western Region

Councilmember Jan Perry  
City of Los Angeles

Mayor Miguel A. Pulido (left at 10:50 a.m.)  
Cities of Orange County

Members Absent:

Mayor Ronald O. Loveridge  
Cities of Riverside County

**CALL TO ORDER:** Chairman Burke called the meeting to order at 9:10 a.m.

- Pledge of Allegiance: Led by Mayor Yates.
- Swearing In of Reappointed Board Member Michael D. Antonovich

Chairman Burke administered the oath of office to Supervisor Antonovich, who was reappointed to the Board by the Los Angeles County Board of Supervisors, for a term ending January 15, 2015.

- Video Presentation: "State of the Air 2011"

Dr. Burke extended thanks to the staff that prepared the video and asked for the status of distributing the video via e-mail.

Ms. Carney requested that staff provide the Board with more detail regarding the 100 day challenge that the video introduced and expressed optimism for the potential to encourage more participation from residents of the Basin.

Dr. Wallerstein confirmed that staff will provide a report regarding the new effort at the February 4, 2011 Board meeting. In regards to the status of e-mailing the video to a large distribution list, he explained that staff is working with the contractor who is creating the database to ensure that distribution occurs in a timely manner.

Sam Atwood, Media Manager, provided an overview of the planned distribution for the video, indicating that in addition to the video being placed on the AQMD website, it would be provided to fifty or more local cable television access stations and local governments so that it can be played during city council meetings. In addition, copies will be distributed to the public library systems in all four counties, various health organizations, as well as provided to over 400 teachers who attended the A World We Can Change Conference.

- Opening Comments

Councilwoman Mitchell. Announced that she attended an event sponsored by the South Bay Cities Council of Governments in partnership with the AQMD on December 9, 2010, called EV101, in an effort to inform local government officials of the challenges ahead as electric vehicles are more widely available to the general population. She also explained a pilot program that is in effect in the

South Bay that utilizes local use vehicles or LUVs, which are small vehicles that can be used on low-speed, city streets. She added that the vehicles have been well received by those individuals who are using them for local driving trips and she expressed optimism for their potential expanded use as another step to improve air quality.

Supervisor Antonovich noted that air-powered vehicle technology is advancing and demonstration vehicles will soon be available.

### **CONSENT CALENDAR**

1. Approve Minutes of December 3, 2010 Board Meeting and Minutes of December 7, 2010 Special Board Meeting
2. Set Public Hearings February 4, 2011:
  - (A). Receive Public Input on Executive Officer's Priority Goals for FY 2011-12
  - (B). Amend Rule 1150.1 - Control of Gaseous Emissions from Municipal Solid Waste Landfills
  - (C). Amend Rule 317 – Clean Air Act Non-Attainment Fees

### **Budget/Fiscal Impact**

3. Adopt Resolution and Recognize Funds from California Department of Transportation
4. Execute Contract to Install and Maintain Air Filtration Systems in Wilmington Area Schools
5. Recognize Funds and Approve Issuance of Program Announcement for FY 2008-09 "Year 2" Proposition 1B-Goods Movement Program
6. Appropriate Funds for Purchase of One Gas Chromatograph/Mass Spectrometer/Flame Ionization Detector and Authorize Purchase of Gas Chromatograph/Mass Spectrometer/Flame Ionization Detector System

7. Revise Procurement Policy and Procedure
8. Amend Administrative Code to Include Policy for Distribution of Tickets to Officials and Employees

**Items 9 through 15 -- Information Only/Receive and File**

9. Legislative & Public Affairs Report
10. Hearing Board Report
11. Civil Filings and Civil Penalties Report
12. Rule and Control Measure Forecast
13. Lead Agency Projects and Environmental Documents Received by AQMD
14. Report of RFPs and RFQs Scheduled for Release in January
15. Report on Major Projects for Information Management Scheduled to Start During Last Six Months of FY 2010-11

**BOARD CALENDAR**

17. Administrative Committee
18. California Air Resources Board Monthly Report
19. Response to U.S. EPA's Proposed Partial Approval and Partial Disapproval of 2007 Air Quality Management Plan PM2.5 Plan

Supervisor Gonzales and Councilwoman Mitchell announced their abstentions on Item No. 1 because they were not in attendance at the December 3, 2010 Board Meeting. Dr. Lyou announced his abstention on Item No. 1 because he was not in attendance at the December 7, 2010 Special Meeting. Ms. Carney announced her abstention on Item No. 2C due to Loma Linda University Medical Center being a source of income to her.

Agenda item 4 was withheld for comment.

MOVED BY GONZALES, SECONDED BY CAMPBELL, AGENDA ITEMS 1 THROUGH 3, 5 THROUGH 15, AND 17 THROUGH 19 APPROVED AS RECOMMENDED, ADOPTING RESOLUTION NO. 11-1 RECOGNIZING \$1,799,612 IN GRANT FUNDS FROM THE CALIFORNIA DEPARTMENT OF TRANSPORTATION IN THE PROP 1B FUNDING-GOODS MOVEMENT SPECIAL REVENUE FUND TO REPLACE EXISTING HEAVY-DUTY DIESEL TRUCKS WITH NEW HEAVY-DUTY NATURAL GAS TRUCKS, AND IDENTIFYING THE EXECUTIVE OFFICER OR DESIGNEE AS THE OFFICIAL AUTHORIZED TO EXECUTE THE SUBJECT GRANT AGREEMENT BETWEEN AQMD AND CALTRANS; ADOPTING RESOLUTION NO. 11-2 AMENDING THE ADMINISTRATIVE CODE TO INCLUDE SECTION 45 WHICH SETS FORTH A POLICY FOR DISTRIBUTION OF TICKETS TO OFFICIALS AND EMPLOYEES; AND RECEIVING AND FILING THE BOARD COMMITTEE AND CARB REPORTS, BY THE FOLLOWING VOTE:

AYES: Antonovich, Benoit, Burke, Cacciotti, Campbell, Carney (*except Item #2C*), Gonzales (*except Item #1*), Lyou (*except Item #1*), Mitchell (*except Item #1*), Perry, Pulido and Yates.

NOES: None.

ABSTAIN: Gonzales, Lyou and Mitchell (*Item #1 only*); and Carney (*Item #2C only*).

ABSENT: Loveridge.

16. Items Deferred from Consent Calendar

4. Execute Contract to Install and Maintain Air Filtration Systems in Wilmington Area Schools

After announcing his abstention on Agenda Item 4 because Coalition for Clean Air is a source of income to him, Dr. Lyou left the room.

DREW WOOD, Kids IAQ, NPO

---

Expressed concern with the testing process and the efficiency of the filters that are scheduled for installation and indicated that the Los Angeles Unified School District was not satisfied with the current plan.

Dr. Wallerstein suggested that Mr. Wood meet with a staff person in the back of the room to provide more information regarding his statements, because staff was not aware of any problems with the test program.

GLORY DOLPHIN, IQ Air North America

---

Assured the Board that their products come out on top relative to performance, as further validated by the testing completed by CE-CERT prior to them being recommended for award of the contract. She has been involved in meetings with the LAUSD and has not heard of any concerns or problems that would impede the installation of the filters in the schools.

Chairman Burke trailed Item No. 4 until clarification could be obtained from Mr. Wood regarding any objections made by the LAUSD.

-o-

Chairman Burke noted the Board would go back to Item No. 19 in order to hear comments from a member of the public whose request to speak card had been inadvertently overlooked.

**BOARD CALENDAR (continued)**

19. Response to U.S. EPA's Proposed Partial Approval and Partial Disapproval of 2007 Air Quality Management Plan PM<sub>2.5</sub> Plan

Jim Stewart, Los Angeles Chapter of the Sierra Club, urged the Board to take this opportunity to put pressure on CARB to act on the on- and off-road vehicle components that so greatly affect the PM<sub>2.5</sub> levels.

Dr. Wallerstein responded that staff believes that the response does request that CARB contribute its fair share of emission reductions and take on more of the burden due to mobile sources being highest.

-o-

**PUBLIC HEARINGS**

20. Adopt Proposed Rule 1315 – Federal New Source Review Tracking System

Mohsen Nazemi, DEO/Engineering & Compliance, gave the staff presentation.

The public hearing was opened, and the following individuals addressed the Board on Agenda Item 20.

MAYA GOLDEN-KRASNER, Communities for a Better Environment

SHABAKA HERU, Society for Positive Action

JIM STEWART, Los Angeles Chapter of the Sierra Club

\*ADRIAN MARTINEZ, Natural Resources Defense Council

ROBINA SUWOL, California Safe Schools

\* (Submitted Written Comments)

Expressed opposition to the credit-generating mechanisms in Rule 1315 which would have extremely detrimental impacts to air quality and public health, particularly children and Southern Californians afflicted with respiratory diseases; and noted that should the Board go forward, they must select Alternative D to comply with CEQA.

CYNTHIA BABICH, Del Amo Action Committee

Expressed discontent that Rule 1315 would create more pollution credits from businesses that have already closed, which would negate the benefit of cleaner air that the Basin has benefited from. She added that the community members are doing their best to speak out against a rule that will have significant impacts, but that their attempts to meet with Board Members prior to the meeting were refused.

Dr. Burke noted that he was not contacted by the speaker and asked other Board Members if they were contacted, as he did not believe Ms. Babich's claims were justified.

JASMINE CORTEZ, PATRICIA ESTRADA, JONATHAN IARIA RIOS,  
DARRYL MOLINA and JENNIFER GANATA, Communities for a Better  
Environment

Expressed concern for the health of their loved ones and community members that are subject to poor air quality; and expressed their opposition to Rule 1315 and the potential harm that will arise if the rule is adopted, including death and increased hospitalizations as a result of increased illness, cancer and asthma risks.

ANGELA JOHNSON MESZAROS, Clean Air Matters

---

Addressed the Board in response to previous testimony regarding attempts to contact Board Members prior to the hearing to discuss concerns about the impacts of Rule 1315. She indicated it was their belief that they were not allowed to reach out to larger than a quorum of the Board.

Dr. Burke responded that that assumption is incorrect and does not apply to the Board, and clarified that of the few members that were contacted, that communication was made so recently, that meeting with the organizations with such little notice was not feasible.

Councilwoman Mitchell commented that her assistant was contacted by counsel for NRDC, but as an attorney herself, she felt it inappropriate to meet with that individual because the AQMD is involved in litigation with NRDC on a number of matters. She also pointed out that she was only contacted within the week of the Board meeting which left little time to meet with the requestor.

Mayor Yates commented that he was contacted by Adrian Martinez two days prior to the meeting, but the lack of notice made it impractical for Mayor Yates to meet with him. He did receive a letter from Mr. Martinez in lieu of meeting with him, pursuant to Mr. Martinez' request.

Ms. Johnson Meszaros continued her testimony, noting that she submitted comments that further detailed the basis for her opposition to this rule; however, she felt it necessary to testify in order to emphasize that a major flaw of the rule is that it will generate far more credits than are necessary for the District to meet its obligations to a limited number of facilities; and highlighted staff's report which shows that there are solutions that can be initiated to meet the objectives of the project but that will also protect the health of those in the Basin.

SOFIA CARRILLO, JESSE MARQUEZ and RICARDO PULIDO, Coalition for a Safe Environment

---

Explained that the many members of their organization strongly oppose the proposal because 1) it includes the creation of offset credits; 2) it will lead to an increase in air pollution; and 3) it will allow continued and increased health impacts, including premature death. They expressed concern that the EIR showed a majority of significant impacts, as well as staff's own data which shows that emissions in every category will increase every year for the next twenty years; and urged the Board to delay a decision on the matter so that further discussions could occur.

Mayor Yates noted that no representatives from any of the community groups that testified thus far had participated in the most recent Stationary Source Committee meeting where the item was on the agenda. He urged organizations and individuals to attend the committee meetings so that their

concerns can be shared and the committee can possibly direct staff to address the concerns prior to the item coming before the Board.

(Mayor Pulido left the meeting at 10:50 a.m.)

GENE SNITKER, Wright Business Graphics

Explained that his company has operated a printing business in Southern California since 1958 and they currently employ 78 people, with 38 of those jobs being added in the last year thanks to the successful permitting of three new presses; and he expressed appreciation for the role the Board plays in balancing the needs of the public with those of the business sector.

JANE WILLIAMS, California Communities Against Toxics

Questioned why the Board would want to reemit pollution into the air that has already been reduced by reissuing ERCs; and also asked why the AQMD does not establish a buyback program where businesses planning to close could receive monetary incentive in exchange for turning over the ERCs they have earned.

JUDY YORK, York Engineering  
HENRY NUÑEZ, San Gabriel Valley Economic Partnership  
CURTIS COLEMAN, Southern California Air Quality Alliance  
PAUL CHOE, Drycleaners Association of Southern California  
LINDA HOLCOMB, California Auto Body Association  
BILL QUINN, California Council for Environmental and Economic Balance  
MIKE CARROLL, Latham & Watkins  
BILL LAMARR, California Small Business Alliance  
CLAYTON MILLER, Construction Industry Air Quality Coalition

Commented on the hardships that their various industries and small businesses faced when the permit moratorium was in place; and urged the Board to adopt the proposed rule in order to allow for facility modernization, through permitting and the use of ERCs, which will increase efficiency and reduce air pollution without causing disruptions that could have unintended consequences to the economy and to public health, which might occur if an alternative is selected.

STEPHEN ATCHLEY, Councilmember for the City of Pomona

Expressed appreciation for the incredible improvement in his quality of life as a result of AQMD's presence in the South Coast; and urged the Board to adopt Rule 1315 as proposed in order to make accommodations for the inevitable population growth in the region.

JESSICA DUBOFF, Los Angeles Area Chamber of Commerce  
KATE KLIMOW, Orange County Business Council  
DAN HOFFMAN, Wilmington Chamber of Commerce

---

Spoke in support of proposed Rule 1315, on behalf of their organizations and the businesses they represent, and the resulting ability for the District to continue to issue permits to qualifying facilities, including essential public resources such as schools, hospitals and public transit, as well as economic drivers, such as small businesses and innovative technology and research operations which will greatly assist in the economic recovery in the region while maintaining an environmental and public health balance.

DAVID TIEU, Orange County Waste and Recycling  
FELIPE GREGORIO, Eastern Municipal Water District  
LEE WALLACE, Southern California Gas Company/San Diego Gas & Electric  
GREG ADAMS, Los Angeles County Sanitation Districts  
JOHN PASTORE, Southern CA Alliance of Publicly Owned Treatment Works  
VLAD KOGAN, Orange County Sanitation District

---

Urged the Board to adopt Rule 1315 so that their various agencies can continue to provide essential public services such as wastewater treatment, operating landfills and providing energy; spoke about the difficulties that afflicted their agencies during the permit moratorium; and added that the priority reserve is essential for maintaining their current level of service as well as providing for necessary expansion projects.

MICHAEL PETRACCA, Kroger, Inc. – La Habra bakery

---

Explained that in his role as plant engineer for Kroger's La Habra Bakery, which employs 250 people and provides products for 400 stores, he has seen firsthand the effects of businesses shutting down or moving out of California; and expressed hope that the adoption of Rule 1315 will provide for continued expansion projects at his facility that will further reduce their emissions as they increase production and hopefully provide more jobs in the area.

There being no further public testimony on this item, the public hearing was closed.

Due to the amount of testimony received and given the history on this rule, the Board 1) closed the public hearing; and 2) asked staff to review the information received and report back to the Board for their deliberation at the February Board Meeting.

MOVED BY YATES, SECONDED BY GONZALES, AND UNANIMOUSLY CARRIED (Absent: Loveridge and Pulido), AGENDA ITEM 20 WAS CONTINUED TO THE FEBRUARY 4, 2011 BOARD MEETING, FOR BOARD DELIBERATION ONLY.

## **OTHER BUSINESS**

### 21. Notification of Executive Officer Enforcement Discretion Regarding Rule 1147

Dr. Wallerstein explained that stakeholders that are affected by Rule 1147 came to staff with concerns they had regarding a requirement to have certain technology in place as of January 1, 2011. Staff determined that rule amendments are appropriate; but, due to the lead time required for notice of a proposed rule amendment, Dr. Wallerstein explained that he would be utilizing enforcement discretion until such time that a proposal for modification of select elements of the rule can be brought to the Board.

Randy Wyatt, Wyatt's Paint and Body, commented on the difficulties that his business faces as a result of recent rule adoptions and amendments, including the switch to waterborne paint and restrictions on cleaning solvents; and urged the Board to consider the drawbacks to changing these products, including increased energy usage and the subsequent cost of the increased usage which is required to dry the new paint products.

Dr. Wallerstein suggested that Mr. Wyatt meet with staff at the conclusion of the meeting to discuss his specific concerns and allow staff to ascertain what specific cleaning agents he has tried. He clarified that before a rule is amended or adopted, an EIR analyzes the possibility for resulting increased electricity or natural gas usage.

Pursuant to a request by Dr. Lyou and Chairman Burke, Dr. Wallerstein confirmed that the Board will be kept apprised of any further developments in this matter. He reminded the Board that this item is simply a notification that he will be utilizing enforcement discretion to loosen current requirements of the rule, including the requirement of a fuel flow meter, and the rule will come before the Board for modification at a future meeting.

RECEIVED AND FILED; NO ACTION NECESSARY.

**CONSENT CALENDAR (continued)**

4. Execute Contract to Install and Maintain Air Filtration Systems in Wilmington Area Schools

Dr. Lyou left the room because of his previously announced abstention on Agenda Item 4.

Dr. Chung Liu, DEO/Science & Technology Advancement, notified the Board that he spoke with the Deputy Director of Maintenance and Operations for LAUSD and he confirmed that the School District does want to move forward on this item and they look forward to working with the AQMD on the project.

MOVED BY CAMPBELL, SECONDED BY CACCIOTTI, AGENDA ITEM 4 APPROVED AS RECOMMENDED, BY THE FOLLOWING VOTE:

AYES: Antonovich, Benoit, Burke, Cacciotti, Campbell, Carney, Gonzales, Mitchell, Perry and Yates.

NOES: None.

ABSTAIN: Lyou.

ABSENT: Loveridge and Pulido.

**PUBLIC COMMENT PERIOD** – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3)

Ling Ling Chang, City of Diamond Bar Mayor Pro Tem, introduced herself to the Board as the newest member of the Diamond Bar City Council; expressed her appreciation for the great partnership that has been in effect with the AQMD; and commended the Board for the exemplary State of the Air video.

## **CLOSED SESSION**

The Board recessed to closed session at 12:05 p.m., pursuant to Government Code section 54956.9(a) to confer with its counsel regarding pending litigation which has been initiated formally and to which the District is a party, as follows:

- NRDC, et al. v. SCAQMD, et al., U.S. District Court Case No. CV08-05403 GW (PLAx) and United States Court of Appeals, 9th Circuit, Case No. 09-57064;
- CCAT, et al. v. State of California; SCAQMD, et al., Los Angeles Superior Court Case No. BS124264 and California Court of Appeal, Second District, Case No. B226692;
- Petition Before the Administrator of the U.S. Environment Protection Agency In the Matter of Alleged Failure of California to Comply with Mandatory Procedures to Amend SIP Regarding Internal Bank Offset Credits Held by the South Coast Air Quality Management District (filed December 10, 2009); and
- Communities for a Better Environment v. South Coast Air Quality Management District, et al., Los Angeles Superior Court Case No. BS091275, and Carlos Valdez, et al. v. South Coast Air Quality Management District, et al., Los Angeles Superior Court Case No. BS091276, Court of Appeal of the State of California Case No. B193500, and Supreme Court of California Case No. S161190.

In addition, it was also necessary for the Board to recess to closed session pursuant to Government Code sections 54956.8 to confer regarding real property negotiations regarding:

Property: 21825 Copley Drive, Diamond Bar, California 91765

Agency Negotiator: Barry Wallerstein

Negotiating Party: City of Diamond Bar

Under Negotiation: Price and terms of lease.

Following closed session, General Counsel Kurt Wiese announced that a report of any reportable actions taken in closed session will be filed with the Clerk of the Board and made available upon request.

**ADJOURNMENT**

There being no further business, the meeting was adjourned by General Counsel Kurt Wiese at 12:35 p.m.

The foregoing is a true statement of the proceedings held by the South Coast Air Quality Management District Board on January 7, 2011.

Respectfully Submitted,

Denise Pupo  
Senior Deputy Clerk

Date Minutes Approved: \_\_\_\_\_

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 2

PROPOSAL: Set Public Hearing March 4, 2011 to Consider Amendments and/or Adoption to AQMD Rules and Regulations:

Amend Regulation IX - Standards of Performance for New Stationary Sources. Periodic amendments to Regulation IX incorporate new or amended federal standards by reference. The standard for Portland Cement Manufacturing enacted by U.S. EPA in 2010, for NSPS, is proposed for incorporation into Regulation IX. (Reviewed: Stationary Source Committee, January 21, 2011)

The complete text of the proposed amendment, staff report, and other supporting documents will be available from the District's Public Information Center, (909) 396-2550, and on the Internet ([www.aqmd.gov](http://www.aqmd.gov)) on February 1, 2011.

RECOMMENDED ACTION:

Set Public Hearing March 4, 2011 to amend Regulation IX.

Barry R. Wallerstein, D.Env.  
Executive Officer

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 2A

**PROPOSAL:** Set Public Hearing March 4, 2011 to Amend Regulation IX – Standards of Performance for New Stationary Sources

**SYNOPSIS:** Periodic amendments to Regulation IX incorporate new or amended federal standards by reference. The standard for Portland Cement Manufacturing enacted by U.S. EPA in 2010, for NSPS, is proposed for incorporation into Regulation IX.

**COMMITTEE:** Stationary Source, January 21, 2011, Reviewed

**RECOMMENDED ACTION:**

Set Public Hearing March 4, 2011 to Amend Regulation IX – Standards of Performance for New Stationary Sources.

Barry R. Wallerstein, D.Env.  
Executive Officer

EC:JW:TG:PP

---

**Background**

U.S. EPA periodically promulgates NSPSs and NESHAPs. NSPSs govern the operation of all new, modified, or reconstructed sources of air pollution identified in Part 60 of the Code of Federal Regulations (CFR). NESHAPs govern the operation of new and existing sources specifically identified in Part 61 of the CFR that emit substances that have been designated as hazardous air pollutants pursuant to Section 112 of the Clean Air Act (CAA) Amendments. In order to administer and enforce NSPSs and NESHAPs at the local level, the AQMD Board initially adopted the NSPS federal standards by reference as Regulation IX, and the NESHAP federal standards as Regulation X, on December 3, 1976. The Board has since amended these regulations to incorporate new or amended standards as necessary. In 1997, U.S. EPA delegated and redelegated its authority for specific

Sections of 40 CFR Parts 60 and 61, respectively, as listed in the April 23, 1997 Federal Register, Volume 62, No. 78, 19679 – 19682. Regulation IX was last amended March 5, 2010. Regulation X was last amended April 4, 2008. There were no amendments to Part 61 in 2010 and thus no proposed amendments for Regulation X are necessary.

The 1990 Amendments to the federal CAA called for U.S. EPA to establish maximum achievable control technology (MACT) standards for new and existing major sources of hazardous air pollutants, starting within two years of enactment and finishing within ten years. The MACT standards are published in the CFR as Part 63. U.S. EPA delegated authority for the implementation and enforcement of Part 63 to the AQMD on February 27, 1997. However, the AQMD has not established a separate regulation to encompass those standards but directly implements them for covered sources through delegation of the Part 70 program (Title V).

All new sources of air pollution and all modified or reconstructed sources of air pollution are required to comply with the more stringent of the applicable federal, state, and local standards, criteria, and requirements set forth in Regulation IX or other AQMD rules. These standards are in effect and enforceable by AQMD pursuant to §301, in conjunction with §§110 and 111(c)(1) of the federal CAA, regardless of whether AQMD incorporates them by reference into Regulation IX. Nonetheless, adoption of NSPS by reference into Regulation IX helps sources by providing a single point of reference for determining which federal and local requirements apply to their specific operations.

This Board letter and its attachments serve as the staff report for proposed amendments to Regulation IX.

### **Regulation IX Proposal**

Updates to reflect federal actions for 2010 are included in this Board package. One NSPS action, for which the AQMD has delegation of authority, was promulgated by U.S. EPA during 2010 and is proposed for incorporation by reference into Regulation IX. The nature of this action includes addition or revision of emission limits for Portland cement plants for PM, opacity, nitrogen oxides (NO<sub>x</sub>), and sulfur dioxide (SO<sub>2</sub>) for facilities commencing construction, modification, or reconstruction after June 16, 2008; and additional testing and monitoring requirements.

Table 1 lists NSPSs currently proposed for incorporation by reference into AQMD Regulation IX.<sup>1</sup> For a description of the actions, please see Attachment A.

**Table 1. NSPS Proposed for Incorporation into Regulation IX**

40 CFR Part 60	Title	U.S. EPA Action (date)	Reference
Subparts A and F	General Provisions and Standards of Performance for Portland Cement Plants	Final Rule, Amendment (September 9, 2010)	75 FR54970, Vol. 75, No. 174

**Public Workshops**

U.S. EPA held public workshops with public comment periods as part of its rule development process. No public workshops were held by AQMD staff since the proposed amendments incorporate by reference existing federal requirements and do not significantly affect air quality or emissions limitations.

**CEQA and Socioeconomic Impacts**

The SCAQMD has reviewed the proposed project, the amendments to Regulation IX, pursuant to the CEQA Guidelines §15002 (k)(1) - three-step process and CEQA Guidelines §15061 – review for exemption, and has determined that the proposed amendments are exempt from CEQA pursuant to CEQA Guidelines §15268 – Ministerial Projects. The SCAQMD proposes to incorporate by reference federal NSPS requirements into Regulation IX. Because the SCAQMD exercises no discretion with regard to the proposed project, it is considered to be ministerially exempt. Furthermore, the proposed amendments are categorically exempt because they are considered actions to protect or enhance the environment pursuant to CEQA Guidelines §15308 – Class 8 Categorical Exemption. A Notice of Exemption will be prepared pursuant to CEQA Guidelines §15062 – Notice of Exemption and if approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties immediately following Board action on the proposed project.

The proposed amendments do not impose new requirements in addition to the federal regulations and do not significantly affect air quality or emissions limitations. As such, there will be no socioeconomic impacts beyond what was

---

<sup>1</sup> Due to the bulk of these materials, the complete text of Federal Register Notice announcing final action on NSPS proposed for incorporation by reference into Regulation IX have been distributed to Board members only. Anyone wishing to view this material may do so by contacting AQMD’s Public Information Center at (909) 396-3600.

identified for the federal NSPS requirements, an no socioeconomic assessment was performed by SCAQMD.

### **AQMP and Legal Mandates**

These federal requirements are not included in the AQMP. The federal Clean Air Act §301, in conjunction with §§110 and 111(c)(1), authorize U.S. EPA to delegate authority to implement and enforce standards and related compliance periods for new, modified, or reconstructed sources of air pollution set forth in 40 CFR Part 60, to local air districts. Adoption of new and amended NSPSs into AQMD Regulation IX, by reference, formally recognizes AQMD's authority to assist in the implementation and enforcement of these federal regulations at the local level.

### **Implementation Plan**

The proposed amendments do not materially affect the structure or function of existing programs associated with the implementation of Regulation IX - Standards of Performance for New Stationary Sources, or any other AQMD rules. Staff is available to assist facilities covered by the proposed amendments.

### **Resource Impacts**

Current AQMD resources are sufficient to implement and enforce proposed Regulation IX amendments.

SUMMARY OF PROPOSED AMENDMENTS  
TO REGULATION IX**

**Subparts A and F– General Provisions, and New Source Performance Standards for Portland Cement Plants**

(Amend) (U.S. EPA effective date: November 8, 2010)

Reference: 75 FR54970, Vol. 75, No. 174, September 9, 2010

This action promulgates additional or revised emission limits for PM, opacity, nitrogen oxides (NO<sub>x</sub>), and sulfur dioxide (SO<sub>2</sub>) for facilities that commenced construction, modification, or reconstruction after June 16, 2008. The action also includes additional testing and monitoring requirements for affected sources.

## **REGULATION IX**

### **STANDARDS OF PERFORMANCE FOR NEW STATIONARY SOURCES**

The provisions of Part 60, Chapter I, Title 40, of the Code of Federal Regulations (CFR), in effect July 1, 1984, applicable to the subparts listed in this Regulation were adopted by the South Coast Air Quality Management District on the date shown and were made part of the Rules and Regulations of the South Coast Air Quality Management District.

All new sources of air pollution and all modified or reconstructed sources of air pollution shall comply with the more stringent of the standards, criteria, and requirements set forth herein or in applicable District rules. For the purpose of this Regulation, the word "Administrator" as used in Part 60, Chapter I, Title 40, of the CFR shall mean the Executive Officer of the South Coast Air Quality Management District, except that the Executive Officer shall not be empowered to approve alternate test methods or alternate opacity limits. Other deviations from these federal standards, as presented in the CFR and which were ordered by the South Coast Air Quality Management District Board to suit the needs of the South Coast Air Quality Management District, are noted in the affected subpart.

#### **SUBPART A            GENERAL PROVISIONS**

(40FR53346, Nov. 17, 1975)	(Adopted Dec. 3, 1976)
	(Amended Oct. 5, 1984)

(71FR33388, June 9, 2006)	(Amended April 6, 2007)

(72FR32710, June 13, 2007) (Amended April 4, 2008)  
(74FR5072, January 28, 2009) (Amended March 5, 2010)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART Db STANDARDS OF PERFORMANCE FOR INDUSTRIAL-COMMERCIAL-INSTITUTIONAL STEAM GENERATING UNITS**

(51FR42768, Nov. 25, 1986) (Adopted April 3, 1987)  
(51FR42839, Nov. 26, 1986)  
(52FR47826, Dec. 16, 1987) (Amended May 5, 1989)  
(54FR51820, Dec. 18, 1989) (Amended, Sept. 7, 1990)  
(63FR4992, Sept. 16, 1998) (Amended August 13, 1999)  
(65FR13242, March 13, 2000) (Amended May 11, 2001)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)  
(66FR18546, April 10, 2001) (Amended April 5, 2002)  
(66FR31177, June 11, 2001) (Amended April 5, 2002)  
(66FR42608, August 14, 2001) (Amended April 5, 2002)  
(66FR49830, October 1, 2001) (Amended April 5, 2002)  
(71FR9866, February 27, 2006) (Amended April 6, 2007)  
(71FR33388, June 9, 2006) (Amended April 6, 2007)  
(72FR32710, June 13, 2007) (Amended April 4, 2008)  
(74FR5072, January 28, 2009) (Amended March 5, 2010)

**SUBPART Dc STANDARDS OF PERFORMANCE FOR SMALL INDUSTRIAL COMMERCIAL-INSTITUTIONAL STEAM GENERATING UNITS**

(55FR37674, Sept. 12, 1990) (Adopted Oct. 4, 1991)  
(61FR20734, May 8, 1996) (Amended August 13, 1999)  
(64FR24049, May 5, 1999) (Amended April 21, 2000)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)  
(70FR74679, Dec. 16, 2005) (Amended Sept. 8, 2006)  
(71FR9866, February 27, 2006) (Amended April 6, 2007)  
(72FR32710, June 13, 2007) (Amended April 4, 2008)  
(74FR5072, January 28, 2009) (Amended March 5, 2010)

**SUBPART E STANDARDS OF PERFORMANCE FOR INCINERATORS**

(36FR24877, Dec. 23, 1971) (Adopted Dec. 3, 1976)  
(55FR5211, Feb. 14, 1990) (Amended Oct. 4, 1991)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)  
(71FR27324, May 10, 2006) (Amended April 6, 2007)

**SUBPART Ea      STANDARDS OF PERFORMANCE FOR MUNICIPAL WASTE COMBUSTORS**

(56FR5488, Feb. 11, 1991)      (Adopted April 3, 1992)  
(60FR65381, Dec. 19, 1995)      (Adopted Dec. 12, 1997)  
(65FR61743, Oct. 17, 2000)      (Amended May 11, 2001)

**SUBPART Eb      STANDARDS OF PERFORMANCE AND EMISSION GUIDELINES FOR MUNICIPAL WASTE COMBUSTORS**

(60FR65387, Dec. 19, 1995)      (Adopted Dec. 12, 1997)  
(62FR45116, Aug. 25, 1997)      (Amended Dec. 12, 1997)  
(62FR45124, Aug. 25, 1997)      (Amended Dec. 12, 1997)  
(65FR61743, October 17, 2000)      (Amended May 11, 2001)  
(66FR36473, July 12, 2001)      (Amended April 5, 2002)  
(66FR57824, Nov. 16, 2001)      (Amended April 5, 2002)  
(71FR27324, May 10, 2006)      (Amended April 6, 2007)

**SUBPART Ec      STANDARDS OF PERFORMANCE FOR HOSPITAL/MEDICAL INFECTIOUS WASTE INCINERATORS**

(62FR48348, Sept. 15, 1997)      (Adopted Dec. 12, 1997)  
(65FR61743, Oct. 17, 2000)      (Amended May 11, 2001)  
(68FR61759, Oct. 30, 2003)      (Amended May 7, 2004)

**SUBPART F      STANDARDS OF PERFORMANCE FOR PORTLAND CEMENT PLANTS**

(36FR24877, Dec. 23, 1971)      (Adopted Dec. 3, 1976)  
(53FR50354 Dec. 14, 1988)      (Amended May 5, 1989)  
(61FR14637, April 3, 1996)      (Amended August 13, 1999)  
(65FR61743, Oct. 17, 2000)      (Amended May 11, 2001)  
(75FR54970, Sept. 9, 2010)      (Amended Date of Adoption)

**SUBPART G      STANDARDS OF PERFORMANCE FOR NITRIC ACID PLANTS**

(39FR20794, June 14, 1974)      (Adopted Dec. 3, 1976)

**SUBPART H      STANDARDS OF PERFORMANCE FOR SULFURIC ACID PLANTS**

(39FR20794, June 14, 1974)      (Adopted Dec. 3, 1976)  
(65FR61743, Oct. 17, 2000)      (Amended May 11, 2001)

**SUBPART Kb      STANDARDS OF PERFORMANCE FOR STORAGE  
VESSELS FOR PETROLEUM LIQUIDS FOR WHICH  
CONSTRUCTION, RECONSTRUCTION, OR  
MODIFICATION COMMENCED AFTER JULY 23, 1983**

(52FR11420, April 8, 1987) and (Adopted May 5, 1989)  
(52FR22779, June 16, 1987) (Amended Sept. 7, 1990)  
(54FR32972, August 11, 1989) (Amended May 11, 2001)  
(65FR2336, January 14, 2000) (Amended May 11, 2001)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART L      STANDARDS OF PERFORMANCE FOR SECONDARY  
LEAD SMELTERS**

(39FR9317, March 8, 1974) (Adopted Dec. 3, 1976)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART M      STANDARDS OF PERFORMANCE FOR SECONDARY  
BRASS AND BRONZE PRODUCTION PLANTS**

(39FR9318, March 8, 1974) (Adopted Dec. 3, 1976)  
(49FR21864, Mar. 23, 1984) (Amended Oct. 5, 1984)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART N      STANDARDS OF PERFORMANCE FOR IRON AND  
STEEL PLANTS**

(39FR9318, March 8, 1974) (Adopted Dec. 3, 1976)  
(51FR150, Jan. 2, 1986) (Amended June 5, 1981)  
(Amended April 3, 1987)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART Na      STANDARDS OF PERFORMANCE FOR BASIC OXYGEN  
PROCESS FURNACES**

(51FR150, Jan. 2, 1986) (Adopted April 3, 1987)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART O      STANDARDS OF PERFORMANCE FOR SEWAGE  
TREATMENT PLANTS**

(39FR9319, March 8, 1974) (Adopted Dec. 3, 1976)  
(51FR13432, April 18, 1986) (Amended Oct. 3, 1986)  
(54FR27015, June 27, 1989) (Amended Sept. 7, 1990)  
(59FR5107, February 3, 1994) (Amended Dec. 12, 1997)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

<b>SUBPART P</b>	<b>STANDARDS OF PERFORMANCE FOR PRIMARY COPPER SMELTERS</b>  (41FR2338, Jan. 15, 1976) (65FR61743, October 17, 2000)	(Adopted Nov. 1, 1985) (Amended May 11, 2001)
<b>SUBPART Q</b>	<b>STANDARDS OF PERFORMANCE FOR PRIMARY ZINC SMELTERS</b>  (41FR2340, Jan. 15, 1976)	(Adopted Nov. 1, 1985)
<b>SUBPART R</b>	<b>STANDARDS OF PERFORMANCE FOR PRIMARY LEAD SMELTERS</b>  (41FR2340, Jan. 15, 1976)	(Adopted Nov. 1, 1985)
<b>SUBPART S</b>	<b>STANDARDS OF PERFORMANCE FOR PRIMARY ALUMINUM REDUCTION PLANTS</b>  (45FR44207, June 30, 1980) (65FR61743, October 17, 2000)	(Adopted Nov. 1, 1985) (Amended May 11, 2001)
<b>SUBPART T</b>	<b>STANDARDS OF PERFORMANCE FOR THE PHOSPHATE FERTILIZER INDUSTRY: WET-PROCESS PHOSPHORIC ACID PLANTS</b>  (40FR33154, August 6, 1975)  (65FR61743, October 17, 2000)	(Adopted Dec. 3, 1976) (Amended August 5, 1983) (Amended May 11, 2001)
<b>SUBPART U</b>	<b>STANDARDS OF PERFORMANCE FOR THE PHOSPHATE FERTILIZER INDUSTRY: SUPERPHOSPHORIC ACID PLANTS</b>  (40FR33155, August 6, 1975)  (65FR61743, October 17, 2000)	(Adopted Dec. 3, 1976) (Amended Aug. 5, 1983) (Amended May 11, 2001)
<b>SUBPART V</b>	<b>STANDARDS OF PERFORMANCE FOR THE PHOSPHATE FERTILIZER INDUSTRY: DIAMMONIUM PHOSPHATE PLANTS</b>  (40FR33155, August 6, 1975)  (65FR61743, October 17, 2000)	(Adopted Dec. 3, 1976) (Amended Aug. 5, 1983) (Amended May 11, 2001)

**SUBPART AAa STANDARDS OF PERFORMANCE FOR STEEL PLANTS:  
ELECTRIC ARC FURNACES AND ARGON-OXYGEN  
DECARBURIZATION VESSELS CONSTRUCTED AFTER  
AUGUST 17, 1983**

(49FR43838, Oct. 3, 1984)	(Adopted June 7, 1985)
(64FR10105, March 2, 1999)	(Amended April 21, 2000)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)
(70FR8523, February 22, 2005)	(Amended Sept. 8, 2006)

**SUBPART BB STANDARDS OF PERFORMANCE FOR KRAFT PULP  
MILLS**

(43FR7572, Feb. 23, 1978)	(Adopted Nov. 1, 1985)
(51FR18538, May 20, 1986)	(Amended Oct. 3, 1986)
(55FR5211, Feb. 14, 1990)	(Amended Oct. 4, 1991)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART CC STANDARDS OF PERFORMANCE FOR GLASS  
MANUFACTURING PLANTS**

(45FR66751, Oct. 7, 1980)	(Adopted June 7, 1985)
(49FR41030, Oct. 19, 1984)	
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART DD STANDARDS OF PERFORMANCE FOR GRAIN  
ELEVATORS**

(43FR34347, Aug. 3, 1978)	(Adopted March 6, 1981)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART EE STANDARDS OF PERFORMANCE FOR SURFACE  
COATING OF METAL FURNITURE**

(47FR49287, Oct. 29, 1982)	(Adopted Oct. 5, 1984)
(49FR40542, Oct. 16, 1984)	(Amended Nov. 1, 1985)
(55FR51378, Dec.13, 1990)	(Amended Oct. 4, 1991)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART GG STANDARDS OF PERFORMANCE FOR STATIONARY GAS TURBINES**

(44FR52798, Sept. 10, 1979)	(Adopted March 6, 1981)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)
(69FR41346, July 8, 2004)	(Amended Dec. 2, 2005)
(71FR9453, February 24, 2006)	(Amended April 6, 2007)

**SUBPART HH STANDARDS OF PERFORMANCE FOR LIME MANUFACTURING PLANTS**

(43FR9453, March 7, 1978)	(Adopted April 3, 1981)
(49FR18076, Apr. 26, 1984)	(Amended Oct. 5, 1984)
(52FR4773, Feb. 17, 1987)	(Amended May 5, 1989)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART KK STANDARDS OF PERFORMANCE FOR LEAD-ACID BATTERY MANUFACTURING PLANTS**

(47FR16573, Apr. 16, 1982)	(Adopted August 5, 1983)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART LL STANDARDS OF PERFORMANCE FOR METALLIC MINERAL PROCESSING PLANTS**

(49FR6464, Feb. 21, 1984)	(Adopted Nov. 1, 1985)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART MM STANDARDS OF PERFORMANCE FOR AUTOMOBILE AND LIGHT-DUTY TRUCK SURFACE COATING OPERATIONS**

(45FR85415, Dec. 24, 1980)	(Adopted Oct. 5, 1984)
(55FR51378, Dec. 13, 1990)	(Amended Oct. 4, 1991)
(59FR51383, Oct. 11, 1994)	(Amended Aug. 13, 1999)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART NN STANDARDS OF PERFORMANCE FOR PHOSPHATE ROCK PLANTS**

(47FR16589, April 16, 1982)	(Adopted Nov. 1, 1985)
(65FR61743, October 17, 2000)	(Amended May 11, 2001)

**SUBPART PP      STANDARDS OF PERFORMANCE FOR AMMONIUM  
SULFATE MANUFACTURE**

(45FR74850, Nov. 12, 1980)      (Adopted Feb. 13, 1981)  
(65FR61743, October 17, 2000)      (Amended May 11, 2001)

**SUBPART QQ      STANDARDS OF PERFORMANCE FOR THE GRAPHIC  
ARTS INDUSTRY: PUBLICATION ROTOGRAVURE  
PRINTING**

(47FR50649, Nov. 8, 1982)      (Adopted July 6, 1984)  
(65FR61743, October 17, 2000)      (Amended May 11, 2001)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART RR      STANDARDS OF PERFORMANCE FOR PRESSURE  
SENSITIVE TAPE AND LABEL SURFACE COATING  
OPERATIONS**

(48FR48368, Oct. 18, 1983)      (Adopted May 4, 1984)  
(55FR51378, Dec 13, 1990)      (Amended Oct. 4, 1991)  
(65FR61743, October 17, 2000)      (Amended May 11, 2001)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART SS      STANDARDS OF PERFORMANCE FOR INDUSTRIAL  
SURFACE COATING: LARGE APPLIANCES**

(47FR47785, Oct. 27, 1982)      (Adopted Oct. 5, 1984)  
(55FR51378, Dec 13, 1990)      (Amended Oct. 4, 1991)  
(65FR61743, October 17, 2000)      (Amended May 11, 2001)

Note: The 30-day emission averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART TT      STANDARDS OF PERFORMANCE FOR METAL COIL  
SURFACE COATING**

(47FR49612, Nov. 1, 1982)      (Adopted Oct. 5, 1984)  
(51FR22938, June 24, 1986)      (Amended Oct. 3, 1986)  
(55FR51378, Dec 13, 1990)      (Amended Oct. 4, 1991)  
(65FR61743, October 17, 2000)      (Amended May 11, 2001)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART UU      STANDARDS OF PERFORMANCE FOR ASPHALT  
PROCESSING AND ASPHALT ROOFING  
MANUFACTURE**

(45FR34143, Aug. 6, 1982)                      (Adopted Aug. 5, 1983)  
(65FR61743, October 17, 2000)              (Amended May 11, 2001)

**SUBPART VV      STANDARDS OF PERFORMANCE FOR EQUIPMENT  
LEAKS OF VOC IN THE SYNTHETIC ORGANIC  
CHEMICALS MANUFACTURING INDUSTRY**

(48FR48355, Oct. 18, 1983)                      (Adopted Oct. 5, 1984)  
(51FR2699, Jan. 21, 1986)                      (Amended April 3, 1987)  
(61FR29875, June 12, 1996)                      (Amended Aug. 13, 1999)  
(65FR61743, October 17, 2000)                      (Amended May 11, 2001)  
(72FR64860, Nov. 16, 2007)                      (Amended April 4, 2008)  
(73FR31372, June 2, 2008)                      (Amended April 3, 2009)  
(73FR31376, June 2, 2008)                      (Amended April 3, 2009)

**SUBPART VVa      STANDARDS OF PERFORMANCE FOR EQUIPMENT  
LEAKS OF VOC IN THE SYNTHETIC ORGANIC  
CHEMICALS MANUFACTURING INDUSTRY FOR  
WHICH CONSTRUCTION, RECONSTRUCTION, OR  
MODIFICATION COMMENCED AFTER NOVEMBER 7,  
2006**

72FR64860, Nov. 16, 2007                      (Adopted April 4, 2008)  
(73FR31372, June 2, 2008)                      (Amended April 3, 2009)  
(73FR31376, June 2, 2008)                      (Amended April 3, 2009)

**SUBPART              STANDARDS OF PERFORMANCE FOR THE BEVERAGE  
WW                      CAN SURFACE COATING INDUSTRY**

(48FR38737, Aug. 25, 1983)                      (Adopted Oct. 5, 1984)  
(55FR51378, Dec 13, 1990)                      (Amended Oct. 4, 1991)  
(65FR61743, October 17, 2000)                      (Amended May 11, 2001)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD.

**SUBPART  
AAA**

**STANDARDS OF PERFORMANCE FOR NEW  
RESIDENTIAL WOOD HEATERS**

(52FR5860, Feb. 26, 1988) and  
(53FR12009, April 12, 1988) (Adopted May 5, 1989)  
(63FR64869, Nov. 24, 1998) (Amended Aug. 13, 1999)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART  
BBB**

**STANDARDS OF PERFORMANCE FOR THE RUBBER  
TIRE MANUFACTURING INDUSTRY**

(52FR34868, Sept. 15, 1987) and  
(52FR37874, Oct. 9, 1987) (Adopted May 5, 1989)  
(54FR38634, Sept. 19, 1989) (Amended Sept. 7, 1990)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART  
DDD**

**STANDARDS OF PERFORMANCE FOR VOLATILE  
ORGANIC COMPOUND (VOC) EMISSIONS FROM THE  
POLYMER MANUFACTURING INDUSTRY**

(55FR51010, Dec. 11, 1990) (Adopted Oct. 4, 1991)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)

**SUBPART FFF**

**STANDARDS OF PERFORMANCE FOR FLEXIBLE  
VINYL AND URETHANE COATING AND PRINTING**

(49FR26892, June 29, 1984) (Adopted June 7, 1985)

Note: The 30-day emissions averaging periods specified in the federal standard are deleted and replaced with 24-hour maximum emissions averaging periods for affected facilities in the SCAQMD

**SUBPART  
GGG**

**STANDARDS OF PERFORMANCE FOR EQUIPMENT  
LEAKS OF VOC IN PETROLEUM REFINERIES FOR  
WHICH CONSTRUCTION, RECONSTRUCTION, OR  
MODIFICATION COMMENCED AFTER JANUARY 4, 1983,  
AND ON OR BEFORE NOVEMBER 7, 2006**

(49FR22606, May 30, 1984) (Adopted June 7, 1985)  
(65FR61743, October 17, 2000) (Amended May 11, 2001)  
(72FR64860, Nov. 16, 2007) (Amended April 4, 2008)  
(73FR31372, June 2, 2008) (Amended April 3, 2009)  
(73FR31376, June 2, 2008) (Amended April 3, 2009)

**SUBPART  
GGGa**                    **STANDARDS OF PERFORMANCE FOR EQUIPMENT  
LEAKS OF VOC IN PETROLEUM REFINERIES FOR  
WHICH CONSTRUCTION, RECONSTRUCTION, OR  
MODIFICATION COMMENCED AFTER NOVEMBER 7,  
2006**

(72FR64896, Nov. 16, 2007)                    (Adopted April 3, 2009)  
73FR31372, June 2, 2008                    (Amended April 3, 2009)  
73FR31376, June 2, 2008                    (Amended April 3, 2009)

**SUBPART  
HHH**                    **STANDARDS OF PERFORMANCE FOR SYNTHETIC  
FIBER PRODUCTION FACILITIES**

(49FR13651, April 5, 1984)                    (Adopted Nov. 1, 1985)  
(55FR51378, Dec 13, 1990)                    (Amended Oct. 4, 1991)

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 3

**PROPOSAL:** Amend Contract for Policy Consultation Regarding Local, State and Federal Transportation Issues

**SYNOPSIS:** On January 8, 2010 the Board approved a contract for Policy Consultation Regarding Local, State and Federal Transportation issues with the Lee Andrews Group, which expires in February 2011. The contractor has provided valuable services on transportation issues and staff wishes to retain them for further consultation in the Transportation arena, to further advance AQMD's clean air agenda this year. The current contract has options for two one-year extensions. This action is to approve the first one-year extension of the existing contract. Total contract amount shall not exceed \$ 100,000 for a one-year period starting February 2011, which is the existing contract amount.

**COMMITTEE:** Administrative, January 14, 2011, Recommended for approval.

**RECOMMENDED ACTION:**

1. Authorize the Chairman to approve the first one-year extension of the contract with Lee Andrews Group in an amount not to exceed \$100,000 for a one-year period.
2. Appropriate \$100,000 from the District's Undesignated Fund Balance to Legislative & Public Affairs FY 2010-11 Budget, Services & Supplies Major Object, Professional & Special Services Account.

Barry R. Wallerstein, D.Env.  
Executive Officer

OA:AG:WS:PC:MC

---

**Background**

Because mobile sources, including on-road vehicles, create the vast majority of air pollution in the South Coast Air Basin, the Board in 2008 directed staff to participate in the development of the next federal surface transportation reauthorization legislation in order to maximize emissions reductions from the transportation sector. Throughout the

ensuing period, in fulfillment of the Board's directive, staff has actively participated in a wide array of strategic development discussions with fellow stakeholders and key policymaking officials at local, state and federal levels.

It is expected that a great deal of attention will be focused on the federal surface transportation reauthorization bill in 2011, as it will dictate the federal transportation policies and priorities through at least 2016. This bill will establish not only funding formulas and priorities, but will authorize funding for specific projects and could significantly change the process for funding allocation in the transportation sector for years to come.

Recognizing the importance of reducing emissions from the transportation sector, the Board in January 2010 authorized the services of a consultant selected through an RFP process to assist staff in outreach efforts related to this important transportation legislation. The contractor has worked with staff in reaching out to key stakeholders and decision-makers throughout the country, prepared materials and briefings, conducted research, and initiated the formation of a national coalition to support our environmental issues in Washington, D.C. In addition, the contractor has proposed a conference which would provide a forum to stakeholders and decision-makers to discuss key air quality and public health policy priorities related to reducing mobile source emissions. It may be noted that AQMD's efforts have been directed at transportation spending that realizes multiple benefits, so that air quality considerations are strengthened and incorporated at the policy level for reducing mobile source emissions in polluted areas. Additional efforts will be focused on securing increased state and federal actions needed to reduce mobile source emissions from transportation and goods-movement related activities, and the contractor's efforts will augment other staff efforts.

This multi-year effort should be continued so as not to lose momentum. While staff is knowledgeable about the transportation funding process and has access to federal advocates, it is necessary to continue to engage with individuals, organizations, and coalitions at the local, state and federal levels across the nation who will play significant roles in the formulation of the next surface transportation reauthorization bill and also help to address other transportation and goods-movement related mobile source emissions.

#### *Private-Public Partnerships (P3)*

There is a need to develop Private-Public Partnerships (P3) on big-ticket clean transportation projects, such as dedicated truck lanes for clean fuel vehicles or electrified goods movement systems, with key private and public stakeholders. This effort should also be directed to seek the support of state and federal decision-makers on innovative financing efforts to make these infrastructure projects happen. The development of an innovative P3 coalition with P3 financing, as well as possible federal

financing, would create an attractive package option for needed clean transportation funding. This option is recommended for the Board's consideration to leverage other regulatory and incentive efforts for greater emission reductions from these sectors.

The contractor's services will be needed to help determine the best approach for developing such a P3 coalition on big ticket proposals and to build a coalition of partners in support of these projects. The contractor would also be asked to set up meetings with potential partners, develop collaterals for use in meetings, prepare presentations, and once a coalition is developed, help get support for policy concepts from key stakeholders and decision-makers, to enhance efforts to advocate for these projects at the state and federal levels.

#### *National Conferences*

In 2011, the contractor can play a key and needed role in implementing a couple of national conferences to focus attention on P3 as a means to address air pollution and health issues in the transportation and goods movement sector throughout the country. It is expected that participation by local, state, and federal public officials and key private stakeholders at these events will help craft policy solutions that can be further implemented at state and federal levels. It is proposed that one conference take place in Southern California involving policy education and advocacy planning, while the second conference be held in Washington, D.C. in conjunction with a coalition advocacy trip, during which coalition members will have productive meetings with key stakeholders and decision makers. Both conferences will provide educational and policy information and discuss ways and means to reduce mobile source emissions from transportation and goods-movement related activities, particularly in polluted areas.

To put on successful conferences, it will be necessary for the consultant to achieve other tasks in 2011 such as expanding the base of relationships/partnerships with individual and organizational partners nationwide. It will also be critical to educate and engage these key stakeholders so that they are inclined to want to learn more, engage in air quality issues, and attend the conferences being proposed. Accordingly, the consultant will be tasked with educating key stakeholders on AQMD's federal legislative priorities, health issues, and the need for the state and federal government to better address mobile source emissions.

#### *Meetings & Events*

Lastly, the consultant will also create opportunities for AQMD Board members and staff to participate in and speak on health and air quality issues at public and private events and meetings sponsored by various stakeholders and decision-makers on transportation and goods movement topics.

**Proposal**

There is a window of opportunity in 2011-12 for AQMD to seek to influence the next surface transportation bill for greater mobile sources emission reductions, including emission reductions in transportation and goods movement sectors, and the consultant's services will enhance such efforts. The creation and activation of a P3 coalition in support of big-ticket clean transportation projects with innovative alternative funding package proposals is also recommended, with the contractor's assistance. Policy consultation regarding transportation issues will continue along the lines initiated in 2010, with further emphasis on building and utilizing a national P3 coalition and implementing two national conferences – one in Southern California and one in Washington, D.C., which will include an advocacy trip, for educating key stakeholders and decision makers and further raising air quality awareness at the policy level. These actions are needed to highlight AQMD's policy priorities and the need to better address air pollution from mobile sources and further advance the Board's legislative and policy priorities, as discussed before.

Staff recommends amending the existing contract with Lee Andrews Group, to extend the contract by one year, at a cost not to exceed \$100,000. The contract approved by the Board in January 2010 contained options for two one-year renewals, and this constitutes the first renewal.

**Resource Impacts**

The Legislative & Public Affairs budget for FY 2010-11 contains insufficient funds for this purpose and additional funding is necessary in an amount of \$100,000 to cover the cost of this contract renewal. Therefore it is recommended that \$100,000 be appropriated from Undesignated Fund Balance to the Legislative & Public Affairs FY 2010-2011 Budget, Services & Supplies Major Object, Professional & Special Services Account.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 4

**PROPOSAL:** Execute Sole Source Contracts, Amend Contract, and Recognize Revenues for CNG Vehicles and Education and Training in Support of U.S. DOE Clean Cities Programs

**SYNOPSIS:** In December 2009, the Board awarded two sole source contracts for the purchase of CNG taxicabs and shuttle vans. This action is to deobligate funds for the award for CNG shuttle vans and award to three companies providing shuttle services at LAX. The three companies will operate 20 CNG shuttle vans and 15 CNG shuttle buses at a cost not to exceed \$561,100 from the Clean Fuels Program. Southern California Gas Company has expressed interest in partnering with AQMD on conducting natural gas-powered vehicle safety training, and partner with AQMD on a CNG Fuel System Inspector Certification program. This action is also to recognize revenues from the Gas Company and augment funding of an existing contract with Advanced Transportation Technology and Energy Network of the California Community Colleges to expand the CNG vehicle training/safety and fuel cylinder inspection program at a total cost not to exceed \$160,000.

**COMMITTEE:** Technology, January 21, 2011, Recommended for Approval

**RECOMMENDED ACTIONS:**

1. Terminate commitment with Prime Time Shuttle for CNG shuttle van buydown contract and revert \$561,000 allocated to this award to the Clean Fuels Program (Fund 31).
2. Authorize the Chairman to execute a sole source contract with SuperShuttle to purchase 20 CNG shuttle vans at a cost not to exceed \$320,600 from the Clean Fuels Program (Fund 31).
3. Authorize the Chairman to execute a sole source contract with Central Parking System to purchase nine (9) CNG cutaway buses at a cost not to exceed \$144,300 from the Clean Fuels Program (Fund 31).

4. Authorize the Chairman to execute a sole source contract with Ace Parking Management to purchase six (6) CNG cutaway buses at a cost not to exceed \$96,200 from the Clean Fuels Program (Fund 31).
5. Recognize \$67,100 in funding from the Southern California Gas Company into the Clean Fuels Program (Fund 31).
6. Authorize the Chairman to augment the funding of the contract with Advanced Transportation Technology and Energy for natural gas-powered vehicle training and safety and fuel cylinder inspection program by an amount not to exceed \$130,000 from the Clean Fuels Program (Fund 31).
7. Authorize the Chairman to execute a sole source contract with CSA America to provide up to three CNG Fuel System Inspector Certification courses at a cost not to exceed \$28,200 from the Clean Fuels Program (Fund 31).

Barry R. Wallerstein, D.Env.  
Executive Officer

CSL:HH:DS:DC:PMB

---

## **Background**

### ***Buydown for CNG Airport Ground Transportation***

On December 4, 2009, the Board recognized a \$500,000 funding award from the U.S. Department of Energy's (DOE) Clean Cities FY 09 Petroleum Reduction Technologies Projects for the Transportation Sector, and also approved \$750,000 in AQMD funds to the project. Both funds were placed into the Clean Fuels Program (Fund 31). The project awarded by the U.S. DOE continues implementation of the AQMD's natural gas taxicab buydown program which provides funding to owners and operators of vehicles which serve the airport ground transportation sector in the AQMD jurisdictional area. U.S. DOE cofunding will assist in covering the incremental cost of dedicated CNG-powered vehicles and will help to reduce VOC and NOx, air toxic contaminants, and greenhouse gases in the region.

The Board's action in December 2009 approved award of two sole source contracts to Yellow Cab of Greater Orange County for an amount not to exceed \$675,000, and Prime Time Shuttle for an amount not to exceed \$561,000. The contract with Yellow Cab of Greater Orange County has resulted in the deployment of 45 dedicated CNG-powered Ford Crown Victorias which are currently providing ground transportation service at major commercial airports in the AQMD. Conversely, a contract with Prime Time Shuttle was not executed as Prime Time Shuttle elected to not participate in the project. However, three airport ground transportation companies (SuperShuttle International,

Central Parking Systems, and Ace Parking Management) have expressed interest and provided letters of commitment to participate in this project.

U.S. DOE funds require a minimum recipient cost share of 50 percent towards the cost of converting gasoline-powered vehicles to dedicated CNG-powered vehicles. The incremental cost for converting a Ford E-350 van is \$16,500; the incremental cost for converting a Ford E-450 cutaway shuttle bus is \$25,000.

### ***Natural Gas Vehicle Outreach and Safety Training***

The AQMD received a grant from the U.S. DOE through the American Recovery and Reinvestment Act (ARRA) to provide education and outreach on natural gas vehicles. To implement this program, the Board awarded a contract to Advanced Transportation Technology and Energy Network of the California Community Colleges (ATTE) to develop education materials and curriculum and conducting training and safety programs for natural gas-powered vehicles. In October 2010, ATTE presented a proposal to the AQMD to expand the scope of the natural gas vehicle outreach and safety training program to include CNG school bus drivers/operators, technicians, and fleet managers operating in the AQMD. The proposed program includes natural gas safety overview, natural gas cylinder inspection training, natural gas technician training, and on-going technical assistance. The Southern California Gas Company has expressed interest in cost sharing in this program in an amount not exceeding 50 percent of the total cost.

### **Proposal**

#### ***Buydown for CNG Airport Ground Transportation***

A total of \$561,000 of Clean Fuels Funds remains uncommitted as a result of non-participation by Prime Time Shuttle to implement a CNG-powered shuttle project. These remaining funds result from the original \$1,250,000 total project award which apportioned \$675,000 for the purchase of 45 CNG-powered taxicabs by Yellow Cab of Greater Orange County and \$561,000 for the purchase of 34 CNG-powered shuttle vans by Prime Time Shuttle, and \$14,000 for AQMD administrative costs to implement this project. As a result, staff recommends terminating the award with Prime Time Shuttle and reallocating these funds to three airport ground transportation companies which have provided letters of interest and commitment to participate in the buydown program to convert gasoline-powered shuttle vans to dedicated CNG-powered shuttle vans. Staff recommends that the Board award three sole source contracts each to: (1) SuperShuttle International for the purchase and conversion of twenty (20) new dedicated CNG shuttle vans, in an amount not to exceed \$320,000; (2) Central Parking Systems for the purchase and conversion of nine new dedicated CNG cutaway shuttle buses, in an amount not to exceed \$144,000; and (3) Ace Parking Management for the purchase and conversion of six new dedicated CNG cutaway shuttle buses, in an amount not to exceed \$96,000, with turnback funds from the Board's previous award to Prime Time Shuttle.

The three contracts will specify that these vehicles be used to provide airport ground transportation services to commercial airports within the AQMD jurisdictional area.

SuperShuttle is a wholly owned subsidiary of Veolia Transportation, a global leader in the transportation industry. Veolia Transportation has over 125 years of experience operating bus, rail, shuttle, and taxi systems in 27 countries worldwide. Veolia operates in 120 locations in the U.S. and Canada. Since 1983, SuperShuttle has been the recognized leader in the shared-ride airport ground transportation industry. SuperShuttle currently operates more than 1,200 vans serving 25 airports in 19 cities all across the country. Each day, nearly 20,000 customers use SuperShuttle to get to and from our nation's airports and for charter van services.

SuperShuttle currently operates shuttle vans at all of the major commercial airports in Southern California. SuperShuttle has expressed its intent to purchase 20 new CNG Ford E-350 vans certified by CARB to meet SULEV standards. The 20 shuttle vans will be used by SuperShuttle to provide door-to-door shuttle services for passengers to all major airports within the Los Angeles Basin. SuperShuttle's financial contribution to this project includes each vehicle's base cost, sales tax, and vehicle registration fees and \$470 of the CNG conversion cost; estimated contribution is \$31,700 per vehicle, and estimated total project contribution is \$634,000.

Central Parking System is a leader in professional parking management. With offices in all major metropolitan areas in the United States, the company operates more than 2,500 parking facilities containing 1.2 million spaces. The company's clients include some of the nation's largest owners and operators of mixed-use projects, office buildings, hotels, stadiums, and arenas as well as airports, hospitals, and municipalities. Their airport division provides a wide range of services such as self-parking management, valet parking, taxi-starter and commercial vehicle control, shuttle operation, and parking consulting to assist in the ever-changing needs of airports of all sizes.

Central Parking Systems has expressed its intent to purchase nine new CNG Ford E-450 cutaway shuttle buses certified by CARB to meet SULEV standards. The nine cutaway shuttle buses will provide airport ground transportation service at Los Angeles International Airport. Central Parking Systems' financial contribution to this project includes each vehicle's base cost, sales tax, vehicle registration fees, and \$9,000 of the CNG conversion cost; estimated contribution is \$89,000 per vehicle, and estimated total project contribution is \$801,000.

Ace Parking Management, started in 1950 with one parking lot, has steadily grown to manage 450 parking applications across the western and southern United States, employing more than 3,600 individuals. Ace Parking Management has expressed its intent to purchase six new CNG Ford E-450 cutaway shuttle buses certified by CARB to

meet SULEV standards. The six cutaway shuttle buses will provide airport ground transportation service at Los Angeles International airport. Ace Parking Management’s financial contribution to this project includes each vehicle’s base cost, sales tax, vehicle registration fees, and \$9,000 of the CNG conversion costs; estimated contribution is \$84,125 per vehicle, and estimated total project contribution is \$505,000.

***Natural Gas Vehicle Outreach and Safety Training, and CNG Fuel System Inspector Certification***

Staff is requesting to amend the existing contract with ATTE (Contract No. 11144). This contract is funded under a grant from the U.S. DOE through ARRA. Staff proposes to augment the funding of this contract with cost share from the Southern California Gas Company and AQMD, and extend outreach in education and safety training for natural vehicle operators, technicians, and fleet managers operating in the AQMD. The training and curriculum element of the contract with ATTE would be amended to include additional training courses in natural gas vehicle safety, CNG fueling cylinder inspection, and natural gas vehicle diagnostics. The programs will focus primarily on heavy-duty vehicles. Table 1 below provides the proposed amendments, costs and cost share.

**Table 1 – ATTE Natural Gas Vehicle Training Courses, Costs, and Cost Shares**

<b>Product Description</b>	<b>Courses</b>	<b>Amount</b>	<b>Gas Co.</b>	<b>AQMD</b>
Natural Gas Safety Overview	4	\$ 8,000	\$4,000	\$4,000
Natural Gas Cylinder Inspection	3	\$30,800	\$15,400	\$15,400
Natural Gas Technician Training	6	\$67,200	\$33,600	\$33,600
On-Going Technical Assistance	6 months	\$24,000	\$0	\$24,000
<b>Total</b>		\$130,000	\$53,000	\$77,000

In a related program, Southern California Gas Company has proposed to cost share with the AQMD to provide up to three courses on CNG Fuel System Inspector Certification. Students completing the ATTE training programs will be eligible to participate in the Certification Exam.

The Certification Exam is conducted by Canadian Standards Association (CSA) America. CSA is a leading standards developer for gas-fired products and alternative energy standards and has over 80 years’ experience in the development of standards and is accredited by the American National Standards Institute (ANSI) under the Committee, Canvass and Organizational Methods of standards development.

Staff proposes to implement the Certification Exam program under a contract with CSA America. Table 2 below provides the description and costs of the CSA Certification Exam program.

**Table 2 – CNG Fuel System Inspector Certification and Cost Share**

<b>Product Description</b>	<b>Courses</b>	<b>Amount</b>	<b>Gas Co.</b>	<b>AQMD</b>
CSA Application/Exam (25/course)	3	\$28,200	\$14,100	\$14,100

**Benefits to the AQMD**

The primary objective of the proposed projects is to increase the use of alternative-fueled vehicles through the deployment of natural gas fueled vehicles in the Southern California region.

Ground transportation services at major commercial airports in the AQMD jurisdictional area use significant amounts of gasoline due to the high annual miles accrued on these vehicles. In addition, the emissions from these vehicles contribute to the air quality problem in the region; and contribute to greenhouse gas emissions. Shuttle van fleets and passenger shuttle vehicles serving commercial airports within the AQMD jurisdictional area are one of the highest accumulated mileage fleets operating in the region, totaling hundreds of thousand miles on its vehicles. It is estimated that, on average, an individual vehicle providing airport ground transportation service may accrue as much as 80,000 miles per year. Considering the high annual mileage, these vehicles contribute significantly to the ozone air quality problem in the South Coast Air Basin. A buydown program for airport ground transportation vehicles serving commercial airports in the South Coast Air Basin will ensure that the pollution contribution from these fleets will be kept to a minimum while concurrently displacing petroleum use.

Outreach efforts to expand the education and understanding of alternative fuels are an on-going element of the AQMD’s Clean Fuels Program. The proposed project will augment the funding of the heavy-duty drayage trucks contract and expand the training and curriculum component of this project to include courses for operators, technicians and fleet managers of medium- and heavy-duty natural vehicles including local school districts. Additional outreach efforts will allow individuals to obtain certification as CNG fuel system inspectors.

**Sole Source Justification**

Section VIII.B.2 of the Procurement Policy and Procedure identifies four major provisions under which a sole source award may be justified. This request for a sole source award for airport ground transportation services to commercial airports is made under provision B.2.d.: Other circumstances exist which in the determination of the Executive Officer require such waiver in the best interest of the AQMD. Specifically, these circumstances are: B.2.d.(1) Projects involving cost sharing by multiple sponsors.

The AQMD proposes to contract with: (1) SuperShuttle International (2) Central Parking Systems, and (3) Ace Parking Management. All three companies have agreed to cost share in the project from the purchase of new base vehicles for conversion from gasoline to dedicated CNG-powered vehicles.

The request for a sole source award to CSA America is made under the provision B.2.c.(1): Other circumstances exist which in the determination of the Executive Officer require such waiver in the best interest of the AQMD. Specifically, these circumstances are: B.2.c.(1) The unique experience and capabilities of the proposed contractor or contractor team.

The Southern California Gas Company, as a cost share partner, has a service agreement with CSA America in conducting certification exams for purposes of CNG Fuel System Inspector Certifications. This service relationship with Southern California Gas Company has proven successful, and they have requested such services.

**Resource Impacts**

The U.S. DOE has awarded the AQMD with \$500,000 towards a buydown program for CNG taxicabs and shuttle vans servicing commercial airports in the AQMD. The U.S. DOE funds are conditioned with a minimum recipient cost share of 50% towards the incremental cost of converting a gasoline-powered vehicle to a CNG-powered vehicle. The AQMD is providing \$750,000 in matching funds towards this project to meet and exceed the U.S. DOE requirement.

The proposed actions to convert an additional 35 airport ground transportation vehicles to dedicated CNG will total \$561,100 which is derived from the termination of the Prime Time Shuttle award. Table 3 lists the total cost shares on each of the programs under the U.S. DOE project including the project under the original Board action with Yellow Cab of Greater Orange County and reflects the total project costs and cost shares. Table 3 reflects the amounts DOE will be invoiced for each project.

**Table 3 – Cost Shares for U.S. DOE Clean Cities Project for CNG Airport Taxis and Shuttle Vans**

<b>Contributor</b>	<b>Vehicles</b>	<b>U.S. DOE</b>	<b>AQMD</b>	<b>Totals</b>
Yellow Cab	45	\$337,500	\$337,500	\$675,000
SuperShuttle International	20	84,850	235,750	\$320,600
Central Parking Systems	9	38,150	106,150	\$144,300
Ace Parking Management	6	25,500	70,700	\$96,200
<b>Total</b>	<b>80</b>	<b>\$486,000*</b>	<b>\$750,100</b>	<b>\$1,236,100</b>

\* \$14,000 of U.S. DOE funds applied to program administration

The source of AQMD funds proposed for this program have been previously approved by the Board to assist in the purchase of dedicated CNG-powered passenger vehicles for use at commercial airports. Funds for the previously approved purchase assistance program are from the Clean Fuels Program (Fund 31).

***Natural Gas Vehicle Outreach and Safety Training, and CNG Fuel System Inspector Certification***

The costs and cost shares for expanding the Natural Gas Vehicle Outreach and Safety Training program is provided in Table 1 above. The costs and cost shares for conducting certification testing for CNG Fuel System Inspectors are provided in Table 2 above. The source of AQMD funds proposed for both programs is requested from the Clean Fuels Program (Fund 31).

The Clean Fuels Program (Fund 31) is a special revenue fund resulting from the state-mandated Clean Fuels Program. The Clean Fuels Program, under Health and Safety Code Sections 40448.5 and 40512 and Vehicle Code Section 9250.11, establishes mechanisms to collect revenues from mobile sources to support projects to increase the utilization of clean fuels, including the development of the necessary advanced enabling technologies. Funds collected from motor vehicles are restricted, by statute, to be used for projects and program activities related to mobile sources that support the objectives of the Clean Fuels Program.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 5

**PROPOSAL:** Execute Contract to Develop and Demonstrate Hydraulic Hybrid Heavy-Duty Vehicles

**SYNOPSIS:** Heavy-duty fleet vehicles represent a targeted category for emission reductions within the South Coast Air Basin. Parker Hannifin proposes to work in partnership with the AQMD, Freightliner and Coca-Cola to develop and demonstrate up to four heavy-duty hydraulic hybrid delivery vehicles. These delivery vehicles will be deployed in Coca-Cola's normal fleet to evaluate their performance, operating cost and emissions benefit. This action is to execute a contract with Parker Hannifin for an amount not to exceed \$250,000 from the Clean Fuels Fund. The total cost of this proposed project is \$2,000,000.

**COMMITTEE:** Technology, January 21, 2011, Recommended for Approval

**RECOMMENDED ACTION:**

Authorize the Chairman to execute a contract with Parker Hannifin in an amount not to exceed \$250,000 from the Clean Fuels Fund (31) for the development and demonstration of up to four heavy-duty hydraulic hybrid vehicles.

Barry R. Wallerstein, D.Env.  
Executive Officer

CSL:MMM:DS:JGC

---

**Background**

Parker Hannifin (Parker) is the world's leading diversified manufacturer of motion and control technologies, providing systematic, precision-engineered solutions for a wide variety of commercial, mobile, industrial and aerospace markets. With extensive engineering expertise in motion and control, market leading breadth of product, and global distribution, Parker provides components and complete systems to customers worldwide while partnering with customers to improve productivity and profitability. Parker products are vital to virtually everything that moves or requires control,

including all forms of transport from goods movement to logistics to delivery systems and collection vehicles, the manufacture and processing of raw materials, durable goods, and other such industries.

Parker began developing the hydraulic hybrid systems in the early 1990's and successfully implemented a series of small-scale demonstration projects with heavy-duty vehicles, such as refuse, bus, and delivery fleets. This technology has since secured early commitments from prominent nationwide fleets such as United Parcel Service (UPS), Hialeah, Miami-Dade County, and the City of Miami refuse collection business.

According to the EMFAC 2007 model, heavy-duty vehicles represent a relatively small percentage of the vehicle population, but they are responsible for creating a significant amount of emissions in the South Coast Air Basin. This vehicle segment provides an opportunity to significantly reduce NOx and particulate matter emissions through the introduction of a relatively small number of cleaner transportation technologies. The hybridization of vehicles in this segment provides one such opportunity to reduce emissions.

The successful deployment of hybridized vehicles in this segment requires that a specific technology is matched to a vocation with a driving behavior that is complementary to the technology. Hydraulic hybrids are power dense, which allows them to absorb and release energy at high rates. However, these systems are not energy dense, so they cannot store significant amounts of energy onboard the vehicle. These are ideal attributes for intensive stop-and-go driving behavior and would be well matched to meet the needs of the refuse, logistics, delivery and goods movement applications.

### **Proposal**

Parker Hannifin proposes to partner with Coca-Cola, Daimler Trucks North America, Inc., Freightliner Truck Division, Cummins, Inc., and FEV Group to design, integrate, rollout and field test up to four hybrid hydraulic beverage delivery tractors used by Coca-Cola Enterprises on urban delivery routes within the South Coast Air Basin.

The driving behavior associated with Coca-Cola's urban delivery routes should be well matched to the characteristics of Parker's hydraulic hybrid system. The stop-and-go driving associated with urban delivery routes will allow a hydraulic hybrid-equipped vehicle to capture a significant amount of braking energy that would otherwise have been wasted as heat through the vehicle's friction brakes. The Parker Hannifin hydraulic hybrid drive system is designed to recover brake energy and store it for later use using hydraulic accumulators instead of chemical energy storage systems used in hybrid electric systems today. Upon braking, the hydraulic hybrid system allows vehicle inertia to be converted and stored as high-pressure energy within hydraulic accumulators. Accumulated energy is then made available for use when the vehicle is

next accelerated, to supplement or displace the power that would otherwise be supplied by the diesel engine.

The vehicles that are developed and deployed within Coca-Cola’s fleet shall be used to quantify the performance, operating cost and emissions benefit of the hydraulic hybrid system in a heavy-duty urban delivery vehicle application.

**Benefits to AQMD**

The expansion of hybrid vehicle technologies is included in the *Technology Advancement Office Clean Fuels Program 2010 Plan Update* under the category of “Electric and Hybrid Technologies.” The hybridization of transportation technologies has the potential to lower criteria pollutant emissions and reduce greenhouse gas emissions. This can provide substantial air quality benefits to communities, neighborhoods, and schools where these vehicles operate.

**Sole Source Justification**

Section VIII.B.2 of the Procurement Policy and Procedure identifies four major provisions under which a sole source award may be justified. This request for a sole source award is made under provision B.2.d.: Other circumstances exist which in the determination of the Executive Officer require such waiver in the best interest of the AQMD. Specifically, these circumstances are: B.2.d.(1) Project involving cost sharing by multiple sponsors. The multiple sponsors contributing financially to this project include Parker Hannifin, Coca-Cola, Freightliner and the California Energy Commission.

**Resource Impacts**

The total cost for the project is \$2,000,000 with the proposed AQMD cost not to exceed \$250,000 from the Clean Fuels Fund. The project funding sources are identified in the table below.

	<b>Funding Amount</b>	<b>Percentage (%)</b>
CEC	\$750,000	37.5
Parker Hannifin	\$354,000	17.7
Coca-Cola	\$515,000	25.8
Freightliner	\$131,000	6.6
AQMD proposed	\$250,000	12.5
Total	\$2,000,000	100

Sufficient funds are available in the Clean Fuels Fund for this proposed project. The Clean Fuels Fund is established as a special revenue fund resulting from the state-mandated Clean Fuels Program. The Clean Fuels Program, under Health and Safety Code Sections 40448.5 and 40512 and Vehicle Code Section 9250.11, establishes

mechanisms to collect revenues from mobile sources to support projects to increase the utilization of clean fuels, including the development of the necessary advanced enabling technologies. Funds collected from motor vehicles are restricted, by statute, to be used for projects and program activities related to mobile sources that support the objectives of the Clean Fuels Program.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 6

**PROPOSAL:** Execute Contract to Develop and Demonstrate Plug-In Hybrid Electric Drive System for Medium- and Heavy-Duty Vehicles

**SYNOPSIS:** Medium- and heavy-duty fleet vehicles represent a large emissions category within the South Coast Air Basin. Odyne Systems, LLC (Odyne) proposes to work in partnership with the AQMD, U.S. Department of Energy, Los Angeles Department of Water and Power and Los Angeles County to develop and demonstrate up to two medium- and heavy-duty plug-in hybrid electric vehicles (PHEVs). These vehicles will be deployed in normal fleet service to evaluate their utility, emissions reduction and fossil fuel consumption reduction potential. This action is to execute a contract with Odyne in an amount not to exceed \$494,000 from the Clean Fuels Fund. The total cost for this proposed project is \$2,599,000.

**COMMITTEE:** Technology, January 21, 2011, Recommended for Approval

**RECOMMENDED ACTION:**

Authorize the Chairman to execute a contract with Odyne in an amount not to exceed \$494,000 from the Clean Fuels Fund (31) for the development and demonstration of up to two medium- and heavy-duty plug-in hybrid electric vehicles.

Barry R. Wallerstein, D.Env.  
Executive Officer

CSL:MMM:DS:JGC

---

**Background**

Odyne is a clean technology company that develops and manufactures propulsion systems for medium- and heavy-duty PHEVs. Odyne has developed proprietary and patented hybrid technology combining electric power conversion, power control and energy storage technology with standard electric motors, storage batteries, and other components. Odyne's plug-in hybrid technology has been applied to commercial truck applications including bucket trucks, digger derricks and compressor trucks. These

development efforts have also benefited from \$1.9M in Congressionally Directed Funds that were administered through the U.S. Department of Energy (DOE). This funding being administered through the DOE would also be partially used as cost share for this proposed project.

The work truck segment targeted by Odyne is almost exclusively made up of medium- and heavy-duty vehicles. This vehicle weight group is responsible for creating a disproportionate amount of emissions in the South Coast Air Basin, since they represent a relatively small percentage of the vehicle population, but are responsible for the majority of the NOx and particulate matter emissions. This fact provides opportunities to significantly reduce NOx and particulate matter emissions through the introduction of a relatively small number of cleaner transportation technologies. The hybridization and electrification of vehicles in this segment is one such opportunity to reduce emissions.

The incorporation of plug-in hybrid technology will add functionality that includes idle reduction, launch assist, regenerative braking, in-cab climate controls, and exportable power. These features will improve vehicle efficiency while driving and electrify their operation while working at a jobsite. Electrification of the vehicle's jobsite operation will eliminate emissions at the point of use, reduce emissions on a full-cycle basis, and provide the co-benefit of reducing fossil fuel consumption.

The Odyne PHEV system uses an architecture which allows it to interface with the vehicle without modifying the OEM powertrain. This design attribute would allow the PHEV system to be retrofitted to existing and new vehicles.

### **Proposal**

Odyne proposes to partner with the AQMD, the U.S. Department of Energy, Los Angeles Department of Water and Power (LADWP) and Los Angeles County to design, integrate and field test up to two medium- and heavy-duty work trucks. The work trucks are proposed to be placed with LADWP and Los Angeles County for normal fleet service. The vehicles will be used to quantify the performance, operating cost and emissions benefit of Odyne's PHEV system in medium- and heavy-duty applications.

The AQMD funds will cover a portion of the costs for the engineering design, prototype development, deployment, testing and service of the new PHEV system. The testing will be inclusive of emissions tests with the goal of obtaining CARB verification or certification of these plug-in hybrid vehicles.

### **Benefits to AQMD**

The expansion of the hybrid vehicle technologies is included in the *Technology Advancement Office Clean Fuels Program 2010 Plan Update* under the category of "Electric and Hybrid Technologies." The hybridization of transportation technologies has the potential to lower criteria pollutant emissions and reduce greenhouse gas

emissions. This can provide substantial air quality benefits to communities, neighborhoods, and schools where these vehicles operate.

**Sole Source Justification**

Section VIII.B.2 of the Procurement Policy and Procedure identifies four major provisions under which a sole source award may be justified. This request for a sole source award is made under provision B.2.d.: Other circumstances exist which in the determination of the Executive Officer require such waiver in the best interest of the AQMD. Specifically, these circumstances are: B.2.d.(1) Project involving cost sharing by multiple sponsors. The multiple sponsors contributing financially to this project include Odyne, U.S. Department of Energy, Los Angeles Department of Water and Power and Los Angeles County.

**Resource Impacts**

The total cost for the project is \$2,599,000, with the proposed AQMD cost not to exceed \$494,000 from the Clean Fuels Fund. The project funding sources are identified in the table below.

	<b>Funding Amount</b>	<b>Percentage (%)</b>
Odyne	\$1,011,000	39
U.S. DOE	\$809,000	31
LADWP	\$200,000	8
LA County	\$85,000	3
AQMD proposed	\$494,000	19
Total	\$2,599,000	100

Sufficient funds are available in the Clean Fuels Fund for this proposed project. The Clean Fuels Fund is established as a special revenue fund resulting from the state-mandated Cleans Fuels Program. The Clean Fuels Program, under Health and Safety Code Sections 40448.5 and 40512 and Vehicle Code Section 9250.11, establishes mechanisms to collect revenues from mobile sources to support projects to increase the utilization of clean fuels, including the development of the necessary advanced enabling technologies. Funds collected from motor vehicles are restricted, by statute, to be used for projects and program activities related to mobile sources that support the objectives of the Clean Fuels Program.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 7

**PROPOSAL:** Transfer Funds from Clean Fuels Fund to DOE Plug-in Hybrid Electric Vehicle Fund

**SYNOPSIS:** The AQMD received a \$5 million award from the California Energy Commission (CEC) to cofund the DOE medium-duty plug-in hybrid electric vehicle (PHEV) demonstration program. A condition of the award requires the AQMD to incur cost before corresponding payments can be made by the CEC. To comply with the conditions of the CEC award, it is requested that up to \$5 million be transferred as a loan from the Clean Fuels Fund to the DOE PHEV Fund. The transferred funds will be used to pay contractual obligations toward work completed on the medium-duty PHEV program. The AQMD will be reimbursed by the CEC for these payments made to subcontractors and will subsequently reimburse the Clean Fuels Fund.

**COMMITTEE:** Technology, January 21, 2011, Recommended for Approval

**RECOMMENDED ACTIONS:**

1. Transfer up to \$5,000,000 from the Clean Fuels Fund (31) to the DOE PHEV Fund (50); and
2. Return funds from the DOE PHEV Fund (50) to the Clean Fuels Fund (31) as payments are received from the California Energy Commission.

Barry R. Wallerstein, D.Env.  
Executive Officer

CSL:MMM:DS:JGC

---

**Background**

In April 2010, AQMD was awarded \$5 million from the CEC to be used as cost share for a larger \$45.4 million award from the U.S. Department of Energy (DOE) to conduct a medium-duty PHEV demonstration program. A condition of the award from the CEC requires that cost is incurred before the AQMD can draw-down on the CEC award.

This condition from the CEC will require the AQMD to make payments to subcontractors prior to the receipt of funding from the CEC.

**Proposal**

Transfer as a loan up to \$5 million from Clean Fuels Fund (31) to the DOE PHEV Fund (50). The fund transfer will allow the AQMD to make payments to subcontractors that are working on the medium-duty PHEV demonstration program. The payments made to the subcontractors will be reimbursed by the CEC according to the terms of that award. Upon the receipt of funds from the CEC, the expended monies will be returned to the Clean Fuels Fund.

**Benefits to AQMD**

The transfer of funds from the Clean Fuels Fund will allow the AQMD to conduct a medium-duty plug-in hybrid electric vehicle program that is being cofunded by the DOE. The expansion of plug-in hybrid technologies is included in the *Technology Advancement Office Clean Fuels Program 2010 Plan Update* under the category of “Electric and Hybrid Technologies.” The electrification and hybridization of transportation technologies has the potential for lower criteria pollutant emissions and reduced greenhouse gas emissions. This can provide substantial air quality benefits to communities, neighborhoods, and schools where these vehicles operate.

**Resource Impacts**

The requested action will not have an impact on the AQMD’s financial resources. All funding that is expended from the Clean Fuels Fund will be reimbursed by the CEC and returned to the Clean Fuels Fund.

Sufficient funds are available in the Clean Fuels Fund for the requested loan. The Clean Fuels Fund is established as a special revenue fund resulting from the state-mandated Clean Fuels Program. The Clean Fuels Program, under Health and Safety Code Sections 40448.5 and 40512 and Vehicle Code Section 9250.11, establishes mechanisms to collect revenues from mobile sources to support projects to increase the utilization of clean fuels, including the development of the necessary advanced enabling technologies. Funds collected from motor vehicles are restricted, by statute, to be used for projects and program activities related to mobile sources that support the objectives of the Clean Fuels Program.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 8

TITLE: Execute Contract for Janitorial Services at Diamond Bar Headquarters

SYNOPSIS: The current contract for Diamond Bar headquarters janitorial services was due to expire on October 31, 2010. On September 10, 2010, the Board extended the contract for up to six months, pending a determination whether to contract out or hire employees to perform these services. Upon considering both options, the Board approved the release of an RFP to solicit proposals from firms interested in providing these services. This action is to execute a new two-year contract with Diamond Contract Services, for a total amount not to exceed \$825,896. Funding has been included in the FY 2010-11 Budget and will be requested in successive fiscal years.

COMMITTEE Administrative, January 14, 2011, Recommended for Approval

**RECOMMENDED ACTION:**

Authorize the Chairman to execute a two-year contract with Diamond Contract Services for janitorial services, for the period of March 1, 2011 through February 28, 2013, for a total amount not to exceed \$825,896.

Barry R. Wallerstein, D.Env.  
Executive Officer

WJ:SO

---

**Background**

AQMD contracts with a firm to provide routine janitorial services and supplies at the Diamond Bar headquarters. The contract with the current contractor, Diamond Contract Services, Inc., was scheduled to expire October 31, 2010. On September 10, 2010, the Board extended the current janitorial contract for up to six months pending a determination whether to contract out or hire employees to perform janitorial services at Diamond Bar headquarters. The Board determined that contracting for janitorial services would continue and released RFP #2011-02, with revisions that included changing the term of the contract from three years to two years.

The revision also included adding ten (10) points for potential health benefits to the cumulative fifteen (15) additional points for small business, local business, DVBE, use of small business or DVBE subcontractors and/or low emission vehicle business, for a possible total of 25 additional points.

### **Outreach**

In accordance with AQMD's Procurement Policy and Procedure, a public notice advertising the RFP and inviting bids was published in the Los Angeles Times, the Orange County Register, the San Bernardino Sun, and Riverside County Press Enterprise newspapers to leverage the most cost-effective method of outreach to the entire South Coast Basin.

Additionally, potential bidders may have been notified utilizing AQMD's own electronic listing of certified minority vendors. Notice of the RFP has been mailed to the Black and Latino Legislative Caucuses and various minority chambers of commerce and business associations, and placed on the Internet at AQMD's Web site (<http://www.aqmd.gov/>). Information was also available on AQMD's bidder's 24-hour telephone message line (909) 396-2724.

### **Proposal Evaluation**

One hundred and sixty-three (163) copies of the RFP were mailed out and 43 vendors attended the mandatory bidders' conference held on September 29, 2010. Eighteen proposals were received when final bidding closed at 2:00 p.m., October 13, 2010. Eight of the proposals received were deemed complete and met RFP requirements.

The panel evaluating proposals included four AQMD employees — a Business Services Manager, Facilities Services Technician, a Program Supervisor, and an Air Quality Specialist. Of these four panel members, two are Caucasian and two are Hispanic; two are female and two are male.

The panel evaluated the eight qualified and responsive proposals based on criteria specified in the RFP, which included completeness of response, cost, understanding of the requirements, contractor qualifications, and references regarding past experience.

Attachment A summarizes scores of the qualified bids. Diamond Contract Services was the firm that submitted the highest-rated qualified bid, which included excellent references for comparable public-sector janitorial services as well as qualifying for 15 additional points for being a local business and subcontracting with a certified small business. Diamond Contract Services submitted their proposal with the health benefits that meet the criteria as outlined in the RFP for the additional ten (10) health benefit points. Diamond Contract Services' proposal reflects a wage increase for the day porter and supervisor positions for both year one and year two of the contract, and for the janitor positions in the second year.

One other bidder besides Diamond Contract Services qualified for the additional health benefits points. However, the bidder did not qualify for any other additional points and reflected an increase in wages only for the day porter position during the first year, and a lower hourly rate for the janitor and supervisor positions than what the current contractors' employees are paid though the existing contract. Additionally, there were no increases proposed for any of the positions in the second year of the contract.

There were three other bidders that offered health plans in their proposals, but they did not meet the criteria for the additional health benefits points and scored lower in the other technical areas.

Staff recommends the contract be awarded to Diamond Contract Services. This option provides the best alternative to AQMD while providing comparable or better wages and health benefits to the janitorial staff working at AQMD's Diamond Bar facility.

### **Resource Impacts**

Sufficient funds in the amount of \$135,825 are available in the approved FY 2010-11 Budget for the remainder of this fiscal year. Since this will be a two-year contract, continuing funding will need to be included in the budgets for each of the remaining fiscal years of the contract. Annual costs are \$411,123 for FY 2011-12, and \$278,948 for the eight months of the contract that fall within FY 2012-13.

### **Attachment**

ROGAN BUILDING SERVICES	\$895,801.08	28.5	44.05	5		77.6

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 9

**PROPOSAL:** Amend Contract to Provide Technical Support for AQMD PAMS Upper Air Meteorological Monitoring Network

**SYNOPSIS:** On February 5, 2010, the Board awarded a new contract with Sonoma Technology, Inc. (STI) to provide technical support for the AQMD PAMS Upper Air Monitoring Network, with options for three annual contract renewals. This action is to amend the STI contract for the next year of field support and data management for the upper air measurement program at a cost not to exceed \$100,000. This exercises the first of three renewal options based on STI's responsiveness and satisfactory performance, bringing the contract total to \$190,000. Funding for this contract amendment is allocated in the U.S. EPA 19<sup>th</sup> Year Section 105 Grant for the PAMS program.

**COMMITTEE:** Administrative, January 14, 2011, Recommended for Approval

**RECOMMENDED ACTION:**

Authorize the Executive Officer to amend the existing contract with Sonoma Technology, Inc. in an amount not to exceed \$100,000 to exercise the first of three one-year renewal options to provide continued technical support for the AQMD PAMS Upper Air Meteorological Monitoring Network.

Barry R. Wallerstein, D.Env.  
Executive Officer

## **Background**

As part of the U.S. EPA PAMS Program, comprehensive measurements of meteorological parameters have been collected in the South Coast Air Basin since 1994, using a network of radar wind and temperature profilers, acoustic wind profilers and tower-mounted meteorological sensors. Data from the upper air measurement stations is routinely used for air quality forecasting and event analyses and has been invaluable for regional modeling efforts. Since 2003, AQMD has utilized consultants to provide operational support, due to the limited availability of staff resources to maintain this valuable network. In addition to the routine site operations and data support, the proposed contract effort is also expected to enhance the utility of the upper air data for regional modeling and its accessibility to the public and other agencies.

On November 6, 2009, RFP #P2010-09 was released to solicit consultants capable of providing technical support for the operation of the AQMD PAMS upper air meteorological monitoring network, under a contract with multi-year renewal options to provide for greater continuity of the measurements. On February 5, 2010, the Board awarded a contract in the amount of \$90,000 to Sonoma Technology, Inc. (STI) for the initial year of this effort, with future-year renewals of up to \$100,000 per year, based upon availability of funds and satisfactory contractor performance.

STI has provided excellent service under this contract, which has included troubleshooting and repairs of component failures and the relocation of the Moreno Valley station, as well as the continuing maintenance of all five stations, data archives and web access. Data recovery percentages have been high and the data collected has been proven to be an important component of analyses and modeling efforts. Due to the addition of new instrumentation and analyses, staff requests that the award amount be the full \$100,000 for the next year of this project.

## **Proposal**

Based on STI's responsiveness and satisfactory performance, staff recommends exercising the first of three renewal options in STI's contract for an amount not to exceed \$100,000.

## **Resource Impacts**

Funds for this contract have been earmarked from the U.S. EPA Section 105 Grant for the 19<sup>th</sup> Year PAMS program. These funds were recognized and appropriated by the Board at the November 5, 2010 meeting. Since this contract uses PAMS pass-through funds, it will not impact AQMD staff or fiscal resources.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 10

**PROPOSAL:** Issue Solicitations for Off-Road Diesel Exhaust After-treatment Demonstration and Major Event Center Transportation Programs under MSRC's FY 2010-11 AB 2766 Discretionary Fund Work Program

**SYNOPSIS:** The MSRC approved release of an RFQ to solicit manufacturers' applications for after-treatment devices to be demonstrated on off-road vehicles and a Program Announcement to solicit applications for vehicles to be retrofitted with such devices. The MSRC also approved release of a Program Announcement for a major event center transportation service program to assist congested venues not currently served by sufficient transportation service. The MSRC seeks Board approval to release the solicitations at this time as part of the FY 2010-11 AB 2766 Discretionary Fund Work Program.

**COMMITTEE:** Mobile Source Air Pollution Reduction Review, January 20, 2011, Recommended for Approval

**RECOMMENDED ACTIONS:**

1. Issue RFQ for the "Showcase II" Off-Road Diesel Exhaust After-treatment Manufacturer Program, as described in this letter; and
2. Issue Program Announcement for the "Showcase II" Off-Road Diesel Exhaust After-treatment Demonstration Program, with a targeted funding level of \$2,250,000, as described in this letter; and
3. Issue Program Announcement for Major Event Center Transportation Programs, with a targeted funding level of \$1,500,000, as described in this letter.

Ron Roberts  
Acting Chair, MSRC

### **Background**

In September 1990 Assembly Bill 2766 was signed into law (Health & Safety Code Sections 44220-44247) authorizing the imposition of an annual \$4 motor vehicle registration fee to fund the implementation of programs exclusively to reduce air pollution from motor vehicles. AB 2766 provides that 30 percent of the annual \$4 vehicle registration fee subvended to the AQMD be placed into an account to be allocated pursuant to a work program developed and adopted by the MSRC and approved by the Board.

### **Showcase II Program**

As an element of the FY 2006-07 Work Program, the MSRC allocated funding for a program, known as the Showcase Program, to facilitate the verification of multiple after-treatment devices for off-road vehicles. During the tenure of this program, a number of devices have obtained verified status. There remains a need to demonstrate the viability and effectiveness of diesel emission control systems on those segments of the off-road heavy-duty diesel vehicle inventory which are not yet fully served with such systems. This includes needs for demonstration of installation designs which meet Cal/OSHA visibility requirements on certain vehicle types and for additional demonstrations of devices on exhaust gas recirculation engines. In recognition of the need for additional demonstrations, in October 2010 the MSRC allocated \$2.25 million for a follow-up, Showcase II Program as an element of the FY 2010-11 Work Program. The MSRC directed the development of an RFQ to solicit the participation of manufacturers of after-treatment devices and a Program Announcement to seek applications for vehicles to be retrofitted. At its January 20, 2011 meeting, the MSRC considered the proposed RFQ and Program Announcement; details are provided in the Proposals section.

### **Major Event Center Transportation Program**

In February 2010, the MSRC helped fund a clean fuel transportation service to Dodger Stadium for the 2010 baseball season. The ensuing project was very successful in achieving emission reductions by eliminating automobile vehicle miles traveled and automobile trips. Building on this success, as part of the FY 2010-11 Work Program, the MSRC allocated \$1.5 million to provide funding for the implementation of new or expanded transportation programs at major event venues not currently served by sufficient transportation service. The MSRC directed staff to prepare a solicitation document to seek projects throughout the region. On January 20, 2011, the MSRC considered the proposed Program Announcement; details are provided in the Proposals section.

## **Outreach**

In accordance with AQMD's Procurement Policy and Procedure, public notices advertising the Showcase II and Major Event Center Transportation solicitations and inviting bids will be published in the Los Angeles Times, the Orange County Register, the San Bernardino Sun, and Riverside County Press Enterprise newspapers to leverage the most cost-effective method of outreach to the entire South Coast Basin.

Additionally, potential bidders may be notified utilizing AQMD's own electronic listing of certified minority vendors. Notice of the solicitations will be mailed to the Black and Latino Legislative Caucuses and various minority chambers of commerce and business associations, and placed on the Internet at AQMD's Web site (<http://www.aqmd.gov>) where it can be viewed by making menu selections "Inside AQMD"/"Employment and Business Opportunities"/"Business Opportunities" or by going directly to <http://www.aqmd.gov/rfp/index.html>). Information is also available on AQMD's bidder's 24-hour telephone message line (909) 396-2724. Further, the solicitations will be posted on the MSRC's website at <http://www.cleantransportationfunding.org> and electronic notifications will be sent to those subscribing to this website's notification service.

## **Proposal Evaluation and Panel Composition**

Proposals received in response to the solicitations (further outlined under the Proposals section) will be evaluated by members of the MSRC's Technical Advisory Committee (MSRC-TAC), a diverse group of individuals appointed by participating members as prescribed in the Health & Safety Code.

## **Proposals**

At its January 20, 2011 meeting, the MSRC considered recommendations from its MSRC-TAC and unanimously approved the following:

### **"Showcase II" Program**

The MSRC unanimously approved release of RFQ2011-07 and PA2011-07 under the FY 2010-11 AB 2766 Discretionary Fund Work Program. The RFQ solicits applications from manufacturers interested in having their after-treatment devices demonstrated on off-road vehicles. Candidate devices will be evaluated and pre-qualified before they can be matched with vehicles under the Program Announcement. Devices may be designed to reduce PM<sub>10</sub>, NO<sub>x</sub>, or both. The Program Announcement, with a targeted funding level of \$2,250,000, seeks applications for vehicles to be retrofitted with, and demonstrate, devices pre-qualified under the RFQ. A vehicle may be submitted as a part of a complete "package" to be retrofitted with a specified device, or the applicant can request that their vehicle be matched with an appropriate device by the MSRC. \$1,250,000 of the total funding is initially reserved for demonstrations which fit specified priority profiles, including compliance with Cal/OSHA visibility requirements, engines with exhaust gas recirculation, and vehicles based at ports or landfills. If the MSRC has

not fully awarded the priority allocation by July 21, 2011, the residual funds will become available to any qualifying project. Both the RFQ and the Program Announcement have application preparation and submission periods commencing February 4, 2011 and closing October 7, 2011. Recommended vehicle/device matches will be brought to the MSRC for consideration of awards throughout and immediately following this period.

#### Major Event Center Transportation Program

The MSRC unanimously approved release of PA2011-08 under the FY 2010-11 AB 2766 Discretionary Fund Work Program. The Program Announcement solicits applications from qualifying major event centers and/or transportation providers to provide transportation service for venues not currently served by sufficient transportation service. To qualify, an event center must have an occupancy capacity of at least 5,000, and an average event attendance of at least 2,000. The applicant must demonstrate that the center is impacted by traffic to the extent that the design capacity of the surrounding streets is exceeded. Applications may be submitted at any time from February 4, 2011 to August 5, 2011, and projects may be brought to the MSRC for consideration of awards throughout and immediately following this period. The maximum total funding award to any entity shall not exceed \$750,000, and the maximum amount which can be applied to transportation programs at any one event center is \$450,000. The MSRC can waive these maximum funding restrictions in the event the MSRC does not receive sufficient meritorious proposals from other bidders to utilize the remaining funds, or if the MSRC allocates additional funds to the Program.

At this time the MSRC requests approval to release the solicitations described in this letter under the FY 2010-11 Work Program.

#### **Resource Impacts**

The AQMD acts as fiscal administrator for the AB 2766 Discretionary Fund Program (Health & Safety Code Section 44243). Money received for this program is recorded in a special revenue fund (Fund 23) and any contracts awarded in response to the solicitations will be drawn from this fund. These contracts will have no fiscal impact on the AQMD's operational budget.

## **SECTION I.A: PROGRAM INTRODUCTION**

The Mobile Source Air Pollution Reduction Review Committee (MSRC) is pleased to announce an opportunity for manufacturers of diesel emission control system technologies to demonstrate the viability and effectiveness of their products in heavy-duty off-road diesel equipment under various operating conditions and duty cycles. The Off-Road Diesel Retrofit “Showcase II” Program is designed to encourage manufacturers of qualifying retrofit devices to participate with off-road vehicle fleet owners in retrofitting their equipment with diesel emission control devices that reduce diesel particulate matter (PM), diesel PM plus oxides of nitrogen (NO<sub>x</sub>), or NO<sub>x</sub> only.

While the Showcase Program will result in significant immediate reductions in harmful diesel emissions, the principal goal is to successfully demonstrate the viability and effectiveness of diesel emission control systems on those segments of the off-road heavy-duty diesel equipment inventory which are not yet fully served with such systems. If they have not already obtained verification, manufacturers participating in this Program must commit to seek CARB verified status following successful demonstration of their retrofit device.

All diesel emission control devices must be qualified pursuant to this RFQ before they can be approved for the retrofit of specific vehicles. The qualification of a device for participation in the Showcase II Program will be based upon evaluation of the Qualifications & Participation Application submitted by the interested retrofit device manufacturer. Applications will be evaluated by the technical staff of the MSRC, CARB, and South Coast Air Quality Management District (AQMD).

While the MSRC strives to be inclusive with its **Clean Transportation Funding™** programs, it is important to state up front that the Showcase II Demonstration Program is unique. While each manufacturer seeking participation in the Program will be given thorough and thoughtful consideration, some manufacturer applications may not be deemed qualified. Once qualified, there is no guarantee that a particular device will be matched with any vehicles.

## **I.B. PROGRAM SCHEDULE**

The Showcase II demonstration program will be conducted in accordance with the timeline shown below. Manufacturer Participation Applications will be accepted as of February 4, 2011. Participation Applications will be accepted for an eight-month period, closing on October 7, 2011. Applications may be submitted at any time during this period. The MSRC may elect to extend the period during which applications may be submitted.

Table 1.B.1: Key Program Dates

Showcase II Event	Date
Program Announcement & Application Release	February 4, 2011
Earliest Date for Application Submission	February 4, 2011
Manufacturer Workshop	February 24, 2011
Last Date that Applications will be Accepted	October 7, 2011
Qualification of Devices	Continuously throughout application period and months immediately following
Matching of Devices with Equipment	

MSRC and CARB staff members are available to answer questions and provide technical guidance anytime during the application acceptance period. Please refer Section I.G. of this document for a list of staff contacts.

#### I.C. MANUFACTURER WORKSHOP

A joint MSRC/CARB Manufacturer Workshop will be held on Wednesday, February 24, 2011. ***Please note that attendance at the Manufacturer Workshop is voluntary.*** The purpose of the Manufacturer Workshop is to provide new or updated solicitation information, provide clarification regarding this Request for Qualifications, and answer general questions regarding application preparation. In addition, the Manufacturer Workshop will provide a forum to address individual application preparation issues and provide one-on-one guidance to potential applicants. The location and time for the Manufacturer Workshop is as follows:

Date: February 24, 2011  
 Time: 1:00 p.m. – 2:00 p.m.  
 Location: South Coast AQMD Headquarters  
 Conference Room CC-6  
 Address: 21865 Copley Drive  
 Diamond Bar, California 91765

Please note that the Applicant Workshop for the Showcase II Vehicle Program Announcement PA2011-07 will be convened immediately following the Manufacturer Workshop. Manufacturers are welcome to attend both workshops. Please contact the MSRC staff if you need more information regarding either Workshop or directions to the South Coast AQMD Headquarters. Contact information is provided in Section I.G.

#### I.D. PARTICIPATION GUIDELINES, REQUIREMENTS, & PROCEDURES

The Showcase II Program is a voluntary demonstration program that will pair manufacturers of diesel emission control retrofit devices with off-road vehicle operators located in the South

Coast Air Quality Management District (AQMD)<sup>1</sup>. To ensure that the Showcase II Program conforms to all applicable AQMD legal requirements and MSRC policies, the following requirements and conditions have been established and apply to all manufacturer applicants:

1. **Eligible Participants** – Any manufacturer of off-road diesel emission control systems may apply. The applicant must manufacture the proposed device. Authorized distributors or vendors are not eligible to submit applications to this RFQ, although they can respond to its companion Program Announcement PA2011-07 – Showcase II Vehicle Program, as described therein. Devices brought forward by manufacturers who demonstrate experience with the verification process, by virtue of having earned a prior on-road or off-road verification from the United States Environmental Protection Agency’s (U.S. EPA) **Voluntary Retrofit Program**, CARB’s **Verification Procedure**, or the **Verminderung der Emissionen von Realmaschinen im Tunnelbau** (VERT) program for one or more of their company’s products, are more likely to be deemed qualified.
2. **Authorized Individual(s)** – Only those individuals designated as authorized representatives by the manufacturer of the diesel emission control system may sign the application form as agreement to participate in the Showcase II Program, and as such, will be held responsible for the accuracy of any and all information provided.
3. **Diesel Emission Control Strategy Requirement** – Devices which reduce NO<sub>x</sub> only are eligible for demonstration. Otherwise, devices must reduce particulate matter emissions by at least 85% (Level 3 verification) except in cases where installation of a Level 3 device poses insurmountable visibility challenges as discussed below in Section I.E. - Priority Retrofit Profiles. However, all Showcase II Program diesel emission control system devices which control particulate matter must achieve a reduction in particulate matter emissions of at least 50% (Level 2 verification).
4. **Verification Requirement** – As previously stated, one of the primary goals of the Showcase II Program is to obtain new verified diesel emission control systems for those segments of the off-road heavy-duty diesel equipment inventory which are not yet fully served with such systems. Therefore, if they have not already obtained verification, **manufacturers participating in Showcase II must intend to pursue verification of their product through CARB in the near future**. In all cases, applicants must agree to comply with all requirements and conditions as detailed in the CARB Verification Procedure. Complete information may be found in the *Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines* on the CARB website at: [www.arb.ca.gov/diesel/verdev/verdev.htm](http://www.arb.ca.gov/diesel/verdev/verdev.htm)
5. **Experimental Permit Requirement** - Manufacturers are required to obtain an experimental permit(s) before installing a non-ARB verified device or system on an engine for use in the Showcase project. Section 43014 of the California Health and Safety Code allows the Air Resources Board to issue this permit for the testing of experimental motor vehicle pollution control device installed in used motor vehicles. To obtain a permit, the manufacturer must submit a letter of request to:

---

<sup>1</sup> The geographical jurisdiction of the South Coast AQMD includes the urban, non-desert portions of Los Angeles, Orange, Riverside, and San Bernardino Counties in Southern California.

Air Resources Board  
Aftermarket Parts Section  
9480 Telstar Avenue  
El Monte, CA 91731  
Attn: Ms. Rose Castro

These experimental permits are valid for one year from the date of signature and are not transferable. If the demonstration testing for the Showcase project continues beyond this time period, the manufacturer must apply for an extension of the permit(s).

Questions regarding this requirement should be addressed to:

Ms. Rose Castro, Manager, Aftermarket Parts Section, at (626) 575-6848.

6. **Modification of Device** – Once proposed in response to this RFQ, a manufacturer's product *cannot* be modified without first notifying the MSRC. This includes, but is not limited to, modifications following device installation. In most cases, modifications to installed devices will restart the accumulation of durability hours.
7. **Conditional Verification** – Applicants may be eligible to receive conditional verification of their product by completing one-third of the required minimum durability period or through the use of preexisting data. Conditional verification is equivalent to full verification for the purposes of satisfying the requirements of in-use emission control regulations as set forth by CARB.
8. **Application Screening** – Applications received in response to this RFQ will be screened to ensure they comply with all program requirements and policies of the MSRC and CARB. Applications deemed noncompliant with the requirements included herein will be returned to the applicant and will not undergo further evaluation. The MSRC retains sole authority for determining whether or not an application meets the minimum qualifications requirements.
9. **Selection Criteria** – Rating of manufacturer's applications will include the selection criteria as outlined in Section I.F. Those applications which are judged both to fulfill mandatory requirements and to provide a high probability of successful demonstration will be deemed Pre-Qualified. A device must be Pre-Qualified before it can be matched with a vehicle. However, achieving Pre-Qualified status is no guarantee that the device will be matched with any vehicles.
10. **Device/Vehicle Matching** – Vehicles will be proposed for retrofit in response to the Showcase II Vehicle Program Announcement PA2011-07. Retrofit devices will be matched with proposed off-road vehicles based on applicability and compatibility of technologies. In those cases where a vehicle owner proposes a vehicle to be retrofit without proposing a specific device, one or more pre-qualified manufacturers deemed compatible with the proposed vehicle, engine and duty-cycle will be asked to provide a quote to retrofit that vehicle. Final match decisions will be made by MSRC and CARB based upon factors including, but not limited to, device purchase and maintenance costs, and the vehicle/device pairing's ability to address Program priorities. Both the manufacturer and the vehicle owner will be asked to approve the proposed match. If a manufacturer and/or vehicle owner declines a proposed match, MSRC and CARB may, at their discretion, propose an alternative match for that vehicle.

11. **Multimedia Assessment** – Manufacturers whose diesel emission control strategies rely on Alternative Diesel Fuel or a fuel additive must complete a multimedia assessment to ensure that their product does not have any adverse effect on the environment. The multimedia requirement represents a significant cost of verification and applicants should thoroughly understand the process before deciding to undertake this testing. Information on the multimedia requirement may be found in the *Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines*, Section 2710, available on CARB's website at: [www.arb.ca.gov/diesel/verdev/verdev.htm](http://www.arb.ca.gov/diesel/verdev/verdev.htm). Applicants intending to utilize alternative diesel fuel or fuel additives are encouraged to contact Ms. Shawn Daley (see Contact Information Section I.G.) to discuss multimedia requirements.
12. **Initial Vehicle Evaluation** – Once a vehicle/device match is approved and a contract executed, the manufacturer will be required to complete initial data logging in accordance with MSRC and CARB guidance to confirm the feasibility of the particular device's operation. Reasonable data logging costs will be reimbursed. The manufacturer is also required to evaluate the vehicle's engine to assure readiness for retrofit, i.e. that it is well maintained, and to provide the results of the evaluation to MSRC. MSRC and CARB staff may agree to allow these evaluations to be performed in a single visit, but retain the discretion to require a satisfactory engine evaluation prior to the performance of data logging.
13. **Additional Installation Requirements** – A proposed installation design drawing showing the location of major components must be submitted and approved for each vehicle prior to installation. The design must demonstrate compliance with the CalOSHA visibility requirements. Additionally, notwithstanding any data-logging capabilities incorporated in the after-treatment device, the manufacturer will be required to purchase and install an independent data-logging device on each retrofitted vehicle to monitor the after-treatment device. It shall be and function as a stand-alone system, complete with the hardware and software needed to interface with the vehicle. Required specifications will be provided in the contract, but are expected to resemble the specifications in the original Showcase Program. Reasonable installation design and data logger costs will be reimbursed to the Project Participant following completion of the installation in accordance with the approved installation design.
14. **Optional Particulate Matter Sensors** – In the recent past, engine mechanics relied on visual cues such as smoke to determine whether an engine was in need of attention. With the use of diesel particulate filters these cues are absent. Manufacturers *may* propose the installation of particulate matter sensors as a tool to indicate if the state of the engine has changed and to predict the soot loading rate to the filter. By notifying the vehicle owner and/or device manufacturer of changes in engine condition, the frequency of device regeneration might be reduced. Requests to include such sensors as part of a Showcase II demonstration will be considered as part of the vehicle/device matching process. If the use of such sensors is approved for a particular retrofit, their purchase and installation will be an allowable expense.
15. **Available Funding** – The amount of MSRC funding currently allocated to the Showcase II Program is \$2,250,000.
16. **Participation with Multiple Off-Road Construction Equipment Fleets** – Manufacturers may participate with more than one off-road vehicle owner, if applicable.

17. **Payment** –The contractor under PA2011-07 – Showcase II Vehicle Program will be able to request reimbursement from the MSRC for initial vehicle data logging upon completion. All other reimbursements are contingent upon completion of retrofit device installation, submission of all required reports and invoices, and completion of a post-inspection to confirm installation in accordance with approved installation design. Payment will also be contingent upon proof of warranty with coverage for full repair or replacement cost of returning engine components to the condition they were in prior to the failure, for damage to the engine proximately caused by the after-treatment device. Vehicle owners will have the *option* to, but are not required to, request that payments be made directly to the manufacturer or vendor. Each Manufacturer should negotiate payment provisions with the vehicle owner as part of their agreement.
18. **Agreement with Vehicle Owner** – Manufacturers will be required to enter into a contract and/or legally enforceable agreement with the off-road vehicle owner for the purchase and installation of the agreed-upon retrofit device(s). All after-treatment devices must be purchased and installed within twelve (12) months of execution of this Agreement. All devices are to become the property of the vehicle owner.
19. **Priority Retrofit Profiles** – \$1,250,000 of the available funding under PA2011-07 is initially set aside for priority retrofits. Profiles of priority vehicle and retrofit demonstrations sought for participation in the Showcase II are provided in Section I.E. for your information. These profiles are primarily based upon identified “holes” in the universe of available off-road retrofits. For example, a certain vehicle may have verified devices but needs demonstration of a Cal/OSHA compliant installation design. *These profiles have no bearing on a proposed device achieving Pre-Qualified status.* Devices with the potential to fulfill one of the designated priorities may be more likely to be matched with vehicles, as a portion of the funding under the Vehicle Program Announcement is initially reserved for these categories.
20. **Technical Support and Issue Resolution** – Manufacturers will be required to provide at least four hours of training to fleet personnel, as well as on-site technical support for the duration of the demonstration project, which will include 1000 hours of operation. This may include, but is not limited to: troubleshooting device installation issues; malfunction of backpressure monitors; training of equipment operators in device operation and regeneration; any other issue that may arise while the demonstration is in progress. Manufacturers will be expected to respond to a complaint or issue reported by a fleet or by MSRC within 24 hours. On-site response by the manufacturer or its local service representative must be made in a time frame acceptable to the fleet. Failure to promptly respond to complaints or issues will be considered in future applications by the manufacturer. .

#### **I.E. PRIORITY RETROFIT PROFILES**

Priorities for retrofit span a number of characteristics, so that some vehicles and/or retrofits may fall into more than one Priority category, but any of the following will qualify as Priority:

1. **Vehicles Difficult to Retrofit Without Impacting Driver Visibility** – Some vehicle designs are more challenging to retrofit in compliance with Cal/OSHA visibility requirements. The MSRC believes that, in many of these cases, a motivated manufacturer or installer could develop a solution using a verified Level 3 device, and higher than average installation design costs would be allowable. For this category only, Level 2 devices could be

demonstrated in the interests of achieving substantial emission benefits when it is not feasible to install a Level 3 device. Representative vehicles in this category include, but are not limited to, the following vehicle types:

- Deere 624J wheel loader
- Caterpillar RC60 forklift
- Deere 200CLC excavator
- Deere 225C excavator
- Rollers (including Ingersoll Rand, Dynapac, Cat, and Hyster)
- Cat 613C scraper
- Cat 623B scraper
- Deere 772D grader
- Dresser 850 grader

2. **Engine Size** – Vehicles equipped with 500 horsepower or greater engines
3. **Engine Technology** – Vehicles equipped with engines which utilize exhaust gas recirculation (EGR) to reduce NO<sub>x</sub> emissions
4. **Vehicle Operating Location** – Vehicles which are, or will be, operating at ports or landfills
5. **NO<sub>x</sub> Reduction Technology** - Retrofit devices which utilize non-urea-based technologies for NO<sub>x</sub> control

#### I.F. DEVICE EVALUATION & SELECTION CRITERIA

Each diesel emission control system or device proposed by a manufacturer for demonstration in the Showcase II Program will undergo evaluation by a Committee comprised of representatives of the MSRC, South Coast AQMD and CARB staff. The criteria set forth below will be considered in the evaluation process to determine whether a device is deemed Pre-Qualified:

1. **Mandatory** – Failure in either of these elements will automatically disqualify the product:
  - a. If product is not already verified, applicant must attest their intention to complete the verification process for the product in the near future.
  - b. Applicant must also agree to provide technical support throughout the demonstration project period.
2. **Other Criteria** – these criteria will also be considered in determining Pre-Qualification status:
  - a. Demonstrated manufacturer experience
  - b. Anticipated/verified PM reduction level (Level 2 devices can only be used on vehicles with insurmountable visibility issues)
  - c. Potential increase in pollutants other than NO<sub>x</sub> or PM
  - d. Feasibility of control device operation and installation
  - e. Readiness for commercial availability
  - f. Cost of device, installation, and maintenance
  - g. Manufacturer's methods for evaluating vehicles for retrofit

## I.G. IF YOU NEED HELP... CONTACT INFORMATION

This Request for Qualifications and Participation Application can be obtained by accessing the MSRC web site at [www.cleantransportationfunding.org](http://www.cleantransportationfunding.org) or the Air Resources Board Showcase website at [www.arb.ca.gov/diesel/showcase/showcase.htm](http://www.arb.ca.gov/diesel/showcase/showcase.htm). MSRC and CARB staff members are available to answer questions during the application acceptance period. In order to help expedite assistance, please direct your inquiries to the applicable staff person, as follows:

- For **General & Administrative Assistance**, please contact:

Ms. Cynthia Ravenstein  
MSRC Contracts Administrator  
Phone: 909-396-3269  
Fax: 909-396-3682  
E-mail: [cravenstein@aqmd.gov](mailto:cravenstein@aqmd.gov)

- For **Testing and Installation**, please contact:

Mr. John Karim  
CARB In-Use Retrofit Section  
Phone: 626-459-4303  
Fax: 626-575-6699  
E-mail: [jkarim@arb.ca.gov](mailto:jkarim@arb.ca.gov)

- For **Verification Program**, please contact:

Ms. Shawn Daley  
Manager, CARB Retrofit Assessment Section  
Phone: 626-575-6972  
Fax: 626-575-6699  
E-mail: [sdaley@arb.ca.gov](mailto:sdaley@arb.ca.gov)

- For **Experimental Permits**, please contact:

Ms. Rose Castro  
Manager, Aftermarket Parts Section  
Phone: 626-575-6848  
Fax: 626-575-6699  
E-mail: [rcastro@arb.ca.gov](mailto:rcastro@arb.ca.gov)

## SECTION II: APPLICATION PROCESS

### II.A. APPLICATION INSTRUCTIONS

A Participation Application must be completed and submitted prior to receiving approval to participate in the Showcase II Program. A separate application must be submitted for each device proposed for Qualification. The application forms are included in Section II.B. of this document. Applications must be submitted in accordance with the instructions outlined below and all requested information must be supplied.

1. **Application Elements** - All applications must contain the following:

- a) **Cover letter** - Transmittal of the application must be accompanied by a cover letter signed by the person(s) authorized to contractually bind the proposing entity. In the cover letter, applicants must agree to provide technical support during the demonstration project period. And if the proposed product is not already verified, applicant must attest their intention to complete the verification process for the product in the near future.
  - b) **Application Forms** - Applications must include completed Forms, including all required attachments and supporting documentation as requested.
2. **Application Submittal Instructions** - All applicants must submit four (4) complete copies in a sealed envelope, marked in the upper left-hand corner with the name and address of the applicant and the words "RFQ2011-07 Showcase II Manufacturer Program". The earliest date for application submittal is February 4, 2011. Please note that Showcase applications must be received no later than 5:00 p.m. October 7, 2011 to be considered. All applications should be directed to:

Procurement Unit  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

In addition to the paper application, applicants must also submit an electronic copy of their application in either PDF or Microsoft Word format. This should be provided via CD-ROM in care of the Procurement Unit at the street address listed above.

*Please note that the application is only deemed "received" when the four (4) complete paper copies are submitted in accordance with the above instructions - submittal of an electronic application only does not constitute receipt by the AQMD. In addition, please note that faxed applications will not be accepted. All applications will be time and date stamped upon receipt by the South Coast Air Quality Management District. **PLEASE NOTE THAT ANY PROPOSAL TIME STAMPED 5:01 P.M. OR LATER ON OCTOBER 7, 2011 WILL NOT BE REVIEWED AND WILL NOT BE DEEMED PRE-QUALIFIED; AND THEREFORE WILL NOT BE ELIGIBLE TO PARTICIPATE.** No exceptions will be granted regardless of reason or circumstances.*

3. **Addenda** – The MSRC may modify the RFQ and/or issue supplementary information or guidelines relating to the RFQ during the application preparation period of February 4, 2011 through October 7, 2011. Any solicitation amendments will be posted on the MSRC Website at [www.CleanTransportationFunding.org](http://www.CleanTransportationFunding.org).
4. **Application Modifications** - Once submitted, applications cannot be altered without the prior written consent of the MSRC.
5. **Application Screening** - Applications received in response to this Showcase II RFQ will be screened upon receipt to insure they comply with all program legal requirements of the AQMD and policies of the MSRC and CARB. Applications that do not comply with the stipulated requirements will be returned to the applicant for revision and resubmission. Only applications received that comply with all minimum submission requirements will be deemed acceptable and undergo further evaluation.

6. **Application Evaluation & Approval Process** - Applications deemed compliant by MSRC staff will be forwarded to a Committee of representatives from MSRC, South Coast AQMD and CARB staff. This committee will evaluate applications using criteria previously described in Section I.F.

Following Application evaluation, the MSRC will notify all manufacturer applicants as to the results of the evaluation. Manufacturers whose devices are deemed Pre-Qualified will receive written confirmation from the MSRC. Manufacturers who are not recommended for participation in the Showcase Demonstration Program will receive a written explanation of the evaluation results and Committee member findings and will be offered a formal application debriefing if desired. The MSRC retains sole authority to determine which devices, if any, are deemed Pre-Qualified to participate in the Showcase II Program.

The MSRC and CARB will match Pre-Qualified devices with participating off-road equipment. ***While every effort will be made to match each manufacturer's qualified retrofit device with a participating fleet, the unique attributes of the Showcase Demonstration may result in some devices not being demonstrated. Thus, the MSRC cannot guarantee that every Pre-Qualified device will ultimately participate in the Showcase II Program.***

## Manufacturers of Diesel Emission Control Systems Application for Participation in the Showcase Program

### MANUFACTURER INFORMATION

<b>A. Identification Information</b>						
Name of Company:						
Name of Primary Contact Person:

**D. Previous Experience and Pre-Existing Data**

Is your device currently used in any off-road conditions?	If yes, please describe
Do you have any previous data-logging data on off-road applications? If yes, please provide with application.	Yes <input type="checkbox"/> No <input type="checkbox"/>
Do you have existing test data and/or engineering analysis to support anticipated emission reduction/increase claim(s)? If yes, please provide with application.	Yes <input type="checkbox"/> No <input type="checkbox"/>

**E. Verification**

The intent is to have project participants complete the verification process. Do you intend to pursue CARB verification?	Yes <input type="checkbox"/> No <input type="checkbox"/>
---	--

<b>F. Identification of Emission Control Group</b>	
For what category of engines do you intend to verify/are you verified? Unregulated <input type="checkbox"/> Tier 1 <input type="checkbox"/> Tier 2 <input type="checkbox"/> Tier 3 <input type="checkbox"/> Tier 4i <input type="checkbox"/>	
What horse-power ranges are included in the above categories?	
Identify parameters used in selection of engines	
• Application	
• Engine type	
• Minimum exhaust temperature for proper operation	
• Maximum consecutive minutes operating below minimum exhaust temperature	
• Number of Hours of Operation Before Cleaning of Filter Required	
• Fuel Type	
• Verification Level Sought	
What is the maximum backpressure allowed when the control strategy is in operation?	

**G. Commercial Availability**

Is control strategy commercially available?
Please provide information on any demonstrated retrofits.

**H. Emissions Reduction**

What is the anticipated percent reduction from control strategy (from baseline emissions)?					
PM		A. %	NOx (if applicable)		%
What is the potential increase in other pollutant levels from control strategy (percent increase from baseline emissions)?					
NO <sub>2</sub>		%			
NO <sub>x</sub>		%			
CO		%			
CO <sub>2</sub>		%			
HC		%			

**I. Material and Installation Costs (include sales tax where applicable; note that these are standard costs/ranges, and specific quotes will be sought if a match is contemplated)**

Retrofit device	\$
Design cost for installation	\$
Installation cost	\$
Data-logging cost	\$
Fuel cost	\$
Fuel infrastructure cost (if applicable)	\$
Maintenance cost	\$
Will your company be willing to pay for a portion of the material and/or installation cost?	Yes <input type="checkbox"/> No <input type="checkbox"/>
If so, please specify amount:	

**J. Vehicle Evaluation**

Describe the methods your company uses to evaluate whether a particular vehicle and engine is suitable to be equipped with your device:

**K. Technical Support**

Your company will be required to provide technical support should problems arise during demonstration/installation. Please list the contact information for the person providing technical support during the test program:	
Name:	
Office Phone:	Mobile:

## Devices Participating in Original Showcase Program Application for Participation in the Showcase II Program

For devices qualified under the original Showcase Program which are proposed to be included in Showcase II without modification, manufacturers can complete and submit the following condensed application

### MANUFACTURER INFORMATION

<b>A. Identification Information</b>					
Name of Company:					
Name of Primary Contact Person:					
Phone Number:		E-Mail Address:			
Company Mailing Address:					
City:		State:		Zip:	
Device name:					

**B. Material and Installation Costs (include sales tax where applicable; note that these are standard costs/ranges, and specific quotes will be sought if a match is contemplated)**

Retrofit device	\$
Design cost for installation	\$
Installation cost	\$
Data-logging cost	\$
Fuel cost	\$
Fuel infrastructure cost (if applicable)	\$
Maintenance cost	\$
Will your company be willing to pay for a portion of the material and/or installation cost?	Yes <input type="checkbox"/> No <input type="checkbox"/>
If so, please specify amount:	

**C. Technical Support**

Your company will be required to provide technical support should problems arise during demonstration/installation. Please list the contact information for the person providing technical support during the test program:

Name:

## SECTION I.A: PROGRAM INTRODUCTION

The Mobile Source Air Pollution Reduction Review Committee (MSRC) is pleased to announce a **Clean Transportation Funding™** opportunity for owners of off-road vehicles (henceforth referred to as “fleets”) located in the South Coast Air Quality Management District (AQMD). Recently-adopted changes to California’s regulation for off-road vehicles have allowed fleets additional time and options for compliance, thereby increasing the prospects for early compliance and double credit. The Off-Road Diesel Retrofit “Showcase II Program” offers to fund 100% of the cost of purchasing and installing a qualifying diesel emission control retrofit device. The MSRC can realize surplus emission reduction benefits, and fleets can take advantage of full **Clean Transportation Funding** for actions that count towards future requirements.

Participation in the Showcase II Program is open to most fleets, including private companies and public agencies. Profiles of priority vehicle and retrofit demonstrations sought for participation in the Showcase II are provided in Section I.E. for your information. However, a vehicle does not need to fall within the priority profile to qualify for funding, so anyone interested in installing a retrofit is encouraged to apply.

Please note that selection to participate will ultimately be based upon the specific attributes of each vehicle, with vehicles and engines evaluated for compatibility with the diesel emission control devices deemed qualified under the Showcase II Manufacturer Program. While the MSRC strives to be inclusive with its **Clean Transportation Funding™** programs, there is no guarantee that a particular vehicle will be selected to participate.

## I.B. PROGRAM SCHEDULE

The Showcase II Program will be conducted in accordance with the timeline shown below. Applications will be accepted as of February 4, 2011 for an eight-month period, closing on October 7, 2011. Applications may be submitted at any time during this period. The MSRC may elect to extend the period during which applications may be submitted.

Table 1.B.1: Key Program Dates

Showcase II Event	Date
Program Announcement & Application Release	February 4, 2011
Earliest Date for Application Submission	February 4, 2011
Applicant Workshop	February 24, 2011
Last Date that Applications will be Accepted	October 7, 2011
Matching of Devices with Vehicles	Continuously throughout application period and months immediately following

MSRC and CARB staff members are available to answer questions and provide technical guidance anytime during the application acceptance period. Please refer Section I.F. of this document for a list of staff contacts.

### **I.C. APPLICANT WORKSHOP**

An Applicant Workshop will be held on Thursday, February 24, 2011. Attendance is voluntary. The purpose is to provide new or updated solicitation information, provide clarification, and answer general questions regarding application preparation. In addition, the Applicant Workshop will provide a forum to address individual application preparation issues and provide one-on-one guidance to potential applicants. The location and time for the Workshop is as follows:

Date:	February 24, 2011
Time:	2:00 p.m. – 3:00 p.m.
Location:	South Coast AQMD Headquarters Conference Room CC-6
Address:	21865 Copley Drive Diamond Bar, California 91765

Please note that the Showcase II Manufacturer Workshop will be held prior to the Applicant Workshop at 1:00 pm in the same location. Fleets are welcome to attend both Workshops. Please contact the MSRC staff if you need directions or more information regarding either Workshop. Contact information is provided in Section I.F.

### **I.D. PARTICIPATION GUIDELINES, REQUIREMENTS, & PROCEDURES**

The Showcase II Program is a voluntary demonstration program that will pair manufacturers or authorized vendors of diesel emission control retrofit devices with fleets. The following requirements and conditions have been established and apply to all participants:

- 1. Eligible Participants** – Any fleet may apply. Manufacturers or authorized vendors of retrofit devices may also apply, but only when proposing a complete vehicle/device “package”—each application must identify the specific vehicle(s) to be retrofitted. For purposes of this Program Announcement, locomotives and marine vessels are not considered off-road vehicles. If an award is made, the applicant will be required to enter into a contract with AQMD to effectuate the award. If not the applicant, a participating fleet may be required to sign a Participant Agreement affirming that they will comply with Program requirements.
- 2. Funding Availability** - The amount of MSRC Clean Transportation Funding™ allocated for the Showcase II Program is \$2,250,000. \$1,250,000 of the available funding is initially reserved for retrofits which fall within the Priority Retrofit Profiles set forth in Section I.E. In the event that this Priority allocation is not fully awarded to projects by July 21, 2011, the

residual funds will become available to any qualifying project. Additional funding may be applied to this program at the discretion of the MSRC. Based on limited funding, not all applicants may receive funding.

3. **Showcase II Funding Level** – The MSRC will pay 100% of the cost of purchase and installation for Qualified devices. This includes:
  - Full purchase cost of device, including sales tax and shipping costs (if any). Device installation cost, and any additives needed for the 1000-hour demonstration period, should also be built into price.
  - Data logger and its installation
  - Reasonable funding for initial data logging and installation design. The MSRC reserves the right to reduce award for costs deemed excessive.
  - \$500 per vehicle to cover a portion of fleet’s program management costs through the installation phase (only available if fleet is the applicant)
  - Device manufacturers may propose the installation of particulate matter sensors. If the use of such sensors is authorized, the full purchase and installation cost will be included.
4. **Maximum Funding per Entity** – The maximum total funding award to any single fleet shall not exceed \$500,000. This maximum funding restriction can be waived in the event the MSRC allocates additional funding to this Program or does not receive qualifying applications from other fleets that meet or exceed \$2,250,000.
5. **Payment Terms** – Fleets will have the option to, but are not required to, request that payments be made directly to the manufacturer or vendor. The contractor can request reimbursement from the MSRC upon completion of initial vehicle data logging. All other reimbursements are contingent upon completion of retrofit device installation, submission of all required reports and invoices, and completion of a post-inspection to confirm installation in accordance with approved installation design. Manufacturers should negotiate payment provisions with the fleet as part of their agreements.

Please note that the source of MSRC **Clean Transportation Funding™** is motor vehicle registration fees collected by the California Department of Motor Vehicles (DMV) in accordance with the California Health and Safety Code. Thus, the availability of MSRC **Clean Transportation Funding™** is contingent upon the timely receipt of funds from the DMV. Neither the MSRC nor AQMD can guarantee the collection or remittance of registration fees by the DMV.

6. **Equipment Operating Location** – Off-road vehicles selected to participate must operate at least 85% of their total annual hours within the geographical jurisdiction of the AQMD.
7. **Emission Reductions must be “Above and Beyond” Mandated Requirements** - Applicants must certify that the proposed deployment of diesel retrofit devices is not required by, or in fulfillment of, any local, state or federal law, rule, or regulation.

8. **Device/Vehicle Matching** – Specific vehicle/device matches proposed will be evaluated and recommended for approval or denial. All devices, even those proposed as part of a package, must be deemed Qualified via the MSRC’s RFQ2011-07 – Request for Manufacturer Qualifications and Participation Application, before an award can be approved. Retrofit devices designed primarily for control of particulate matter must utilize technologies expected to achieve an 85% or greater reduction in particulate matter in off-road equipment applications (Level 3 verification), with two exceptions. In cases where installation of a Level 3 device poses insurmountable visibility challenges as discussed below in Section I.E. - Priority Retrofit Profiles, a device which achieves a reduction in particulate matter emissions of at least 50% (Level 2 verification) may be used. Devices which reduce NO<sub>x</sub> only are also eligible for demonstration.

If not already proposing a “package”, vehicle owners will be matched with pre-qualified retrofit devices deemed compatible with the proposed vehicle, engine, and duty-cycle. One or more manufacturers will be asked to provide quotes to retrofit the specific vehicle(s). Final match decisions will be made by MSRC and CARB based upon factors including, but not limited to, device purchase and maintenance costs, and the vehicle/device pairing’s ability to address Program priorities. Applicants will be asked to approve the proposed match. If an applicant declines a proposed match, MSRC and CARB may, at their discretion, propose an alternative match for that vehicle. Only approved retrofit devices will be eligible to receive an MSRC funding reimbursement.

All retrofit devices will be required to comply with warranty provisions to protect the participating vehicle owner.

9. **Retrofit Device Installation Deadline** – All vehicle retrofits should be completed within twelve months of the date of contract execution between the MSRC and the applicant.
10. **Access to Equipment** – On a periodic basis, CARB, AQMD or MSRC and the device manufacturer may request access to the equipment retrofitted with a diesel emission control device for the purpose of monitoring, data retrieval, and/or onsite emissions testing. Participating fleets will be required to grant limited access for these purposes.
11. **Reporting Requirements** – The reporting requirements are intended to ensure adequate monitoring of the use of public funds, while avoiding the imposition of excessive reporting burdens on the participants. The following are the minimum reporting requirements:
- An Interim Report, to be submitted along with the retrofit device purchase/installation invoice for each vehicle retrofitted. This report must contain a brief summary of the installation process, initial vehicle performance, and any relevant issues experienced. Fleets may be asked to maintain records of vehicle oil consumption. MSRC will provide an interim report template.

- A concise Final Report, to be submitted approximately six months from the date of the last retrofit device installation. This report must contain a brief summary of each vehicle's performance using the emission control device, driver comments regarding vehicle performance, and any mechanical or operational issues experienced. MSRC will provide a final report template. Failure to submit a Final Report will be considered in future funding requests from the applicant.

## 12. Additional Conditions for Participation:

- Once a vehicle/device match is approved, the device manufacturer will perform a vehicle evaluation to confirm the vehicle's readiness for retrofit including a period of datalogging, a smoke opacity test, and physical inspection;
- Fleets will be expected to keep funded devices installed for the duration of the demonstration. If the vehicle owner believes that an after-treatment device is interfering with proper operation of the vehicle, they will have to notify **both** the manufacturer and MSRC staff prior to modifying, removing, or disconnecting the after-treatment device;
- Fleets will be expected to maintain their vehicles and engines in accordance with the manufacturer's recommendations, and respond without delay to any retrofit device warning lights and messages, for the duration of the demonstration;
- Vehicles funded under the Showcase II Program are not eligible to receive additional diesel emission control system incentive funds from any other state or local agency;
- Device regeneration equipment, maintenance, etc. are not allowable costs for reimbursement;
- In accordance with state law, all projects funded with MSRC Discretionary Funds are subject to audit.

## I.E. PRIORITY RETROFIT PROFILES

As noted above, \$1,250,000 of the available funding is initially reserved for retrofits which fall within the Priority Retrofit Profiles. Priorities for retrofit span a number of characteristics, so that some vehicles and/or retrofits may fall into more than one Priority category, but any of the following will qualify as Priority:

1. **Vehicles Difficult to Retrofit Without Impacting Driver Visibility** – Some vehicle designs are more challenging to retrofit in compliance with Cal/OSHA visibility requirements. The MSRC believes that, in many of these cases, a motivated manufacturer or installer could develop a solution using a verified Level 3 device. Higher than average installation design costs would be allowable in such instances. Also, for this category *only*, Level 2 devices could be demonstrated in the interests of achieving substantial emission benefits when it is

not feasible to install a Level 3 device. Representative vehicles in this category include, but are not limited to, the following:

- Deere 624J wheel loader
  - Caterpillar RC60 forklift
  - Deere 200CLC excavator
  - Deere 225C excavator
  - Rollers (including Ingersoll Rand, Dynapac, Cat, and Hyster)
  - Cat 613C scraper
  - Cat 623B scraper
  - Deere 772D grader
  - Dresser 850 grader
2. **≥ 500 Hp Engines** – Due to a need for additional demonstrations in this size category, vehicles equipped with 500 horsepower or greater engines
  3. **Engines with EGR** – Due to the increased complexity of retrofit, vehicles equipped with engines which utilize exhaust gas recirculation (EGR) to reduce NO<sub>x</sub> emissions
  4. **Vehicle Operating Location** – Vehicles which are, or will be, operating at ports or landfills
  5. **NO<sub>x</sub> Reduction Technology** - Retrofit devices which utilize non-urea-based - technologies for NO<sub>x</sub> control

#### **I.F. IF YOU NEED HELP... CONTACT INFORMATION**

This Program Announcement can be obtained by accessing the MSRC web site at [www.cleantransportationfunding.org](http://www.cleantransportationfunding.org) or the CARB Showcase website at [www.arb.ca.gov/diesel/showcase/showcase.htm](http://www.arb.ca.gov/diesel/showcase/showcase.htm). MSRC and CARB staff members are available to answer questions during the application acceptance period. In order to help expedite assistance, please direct your inquiries to the applicable staff person, as follows:

- For **General & Administrative Assistance**, please contact:  
Cynthia Ravenstein  
MSRC Contracts Administrator  
Phone: 909-396-3269  
Fax: 909-396-3682  
E-mail: [cynthia@cleantransportationfunding.org](mailto:cynthia@cleantransportationfunding.org)
- For **Technical Assistance**, please contact:  
Ray Gorski  
MSRC Technical Advisor  
Phone: 909-396-2479  
Fax: 909-396-3682  
E-mail: [rgorski@agmd.gov](mailto:rgorski@agmd.gov)

- For **Testing and Installation**, please contact:

John Karim  
CARB, Testing and Field Support Section  
Phone: 626-459-4303  
Fax: 626-575-6699  
E-mail: [jkarim@arb.ca.gov](mailto:jkarim@arb.ca.gov)

## SECTION II: APPLICATION PROCESS

### II.A. APPLICATION SUBMITTAL INSTRUCTIONS

A Participation Application must be completed and submitted prior to receiving approval to participate in the Showcase II program. Applications must be submitted in accordance with the instructions outlined below.

1. **Application Elements** - All applications must contain the following:
  - a) **Cover letter** - Transmittal of the application must be accompanied by a cover letter signed by the person(s) authorized to contractually bind the proposing entity.
  - b) **Support letter** – If applicant is not the vehicle owner, a support letter from the vehicle owner must be included. This letter needs to indicate their intention to retrofit the vehicle(s) and approval of the proposed vehicle/device match(es).
  - c) **Application Attachments** - In an effort to reduce the paperwork burden on applicants, a template based application format has been provided. The template forms, included in Section II.B. below, are designed to be self-explanatory and should prove straightforward to complete.
  - d) **Certifications** – All applicants must complete and submit the following forms as an element of their Application:
    - Internal Revenue Service Form W-9 – Request for Taxpayer Identification Number and Certification. If you are selected for an award, you cannot be established as a vendor without this information.
    - Campaign Contributions Disclosure. This information must be provided at the time of application in accordance with California law. You may be asked for an update when awards are considered.
    - Disadvantaged Business Certification. The AQMD needs this information for their vendor database. IT WILL NOT BE CONSIDERED IN THE DETERMINATION OF YOUR MSRC AWARD.
2. **Application Submittal Instructions** - All applicants must submit one original application and five copies in a sealed envelope, marked in the upper left-hand corner with the name and address of the applicant and the words “PA2011-07” Showcase II Vehicle Program”.

**Please note that Showcase II applications must be received no later than 5:00 p.m., October 7, 2011, to be considered for funding.** All applications should be directed to:

Procurement Unit  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

**Please note that faxed or e-mailed applications will not be accepted.**

3. **Addenda** – The MSRC may modify this Program Announcement and/or issue supplementary information or guidelines during the application preparation period of February 4, 2011 through October 7, 2011. Any solicitation amendments will be posted on the MSRC Website at [www.CleanTransportationFunding.org](http://www.CleanTransportationFunding.org).
4. **Application Modifications** - Once submitted, applications cannot be altered without the prior written consent of the MSRC.
5. **Application Screening** - Applications received in response to this Program Announcement will be screened to insure they comply with all stated program requirements and policies of the MSRC and AQMD.
6. **Application Evaluation & Approval Process** - Applications deemed compliant by MSRC staff will be forwarded to a Committee of representatives from MSRC, AQMD and CARB staff. In some cases, additional clarifying information may be requested from a vehicle owner. As discussed in Section I.D.7. above, the Committee will match qualifying off-road vehicles with compatible diesel emission control systems. While every effort will be made to match qualifying vehicles with a retrofit device, funding availability and the technical and programmatic goals of Showcase may result in some vehicles not being recommended to participate.
  - Please note that substitutions of off-road diesel vehicles will constitute a new application. This new application will be evaluated when received and cannot directly replace an application that had been previously received;
  - The recommendations of the Evaluation Committee will be provided to each applicant. An applicant will have the ability to review the Evaluation Committee recommendation as it pertains to matching retrofit device(s). The applicant reserves the right to opt out of the Showcase II Program in the event the recommended retrofit device(s) is not acceptable to the applicant;
  - Once the applicant has concurred, the recommendations of the Evaluation Committee will be forwarded to the MSRC Technical Advisory Committee for review and approval;

- The recommendations of the MSRC Technical Advisory Committee will be forwarded to the MSRC for consideration. Upon approval by the MSRC, the funding recommendations will be brought to the AQMD Governing Board for approval;
- Applicants selected for participation will be required to enter into a binding contract with the AQMD on behalf of the MSRC. This contractual instrument is required to allow funding reimbursement for devices purchased under this Program;
- The selected applicants will be authorized to purchase and install qualifying retrofit devices only upon receipt of Authorization to Proceed from the MSRC/AQMD. Authorization to Proceed will be given at the time the contract is fully executed;
- The purchase of a qualified retrofit device by an applicant selected to participate in the Showcase Program, prior to receipt of a fully executed contract, is not allowable. **Any purchase of qualifying devices prior to receipt of a fully executed contract is done solely at the equipment owners' risk and there is no guarantee qualifying devices purchased in advance of contract execution will receive reimbursement;**

The forms included in the following templates should be completed by the applicant and submitted in accordance with the instructions provided in Section II.A., "Application Submittal Instructions".

**FORM 1: APPLICATION SUMMARY INFORMATION**

A. Please provide the following applicant information in the space provided:

Business Name			
Division of:			
Subsidiary of:			
Website Address			
Type of Business			
Address			
City/Town			
State/Province		Zip	
Phone	(    )    -    Ext	Fax	(    )    -
Contact		Title	
E-mail Address			
Payment Name if Different			

If Fleet is different from Applicant, please complete the following:

Fleet Name	
Fleet Address	
Fleet Phone	
Fleet Contact Name	
Fleet E-mail Address	

B. Funding Request Summary:

MSRC **Clean Transportation Funding™** Requested:                   \$ \_\_\_\_\_  
 Other Co-Funding Applied to Project (optional)                   \$ \_\_\_\_\_  
**Total Project Cost:**   \$ \_\_\_\_\_

**FORM 2: VEHICLE INFORMATION**

Please provide the following information for each Off-Road Vehicle proposed. ***Please Use a Separate Sheet for each vehicle. Attach all completed sheets to your Application.***

Vehicle Type and ID (i.e., CAT D9N Dozer, Equipment ID 00123)	
Vehicle Model Year	
Engine Manufacturer	
Engine Model	
Engine Model Year	
Total Engine Hours Since New (Estimated)	
Engine Hours Since Last Rebuild	
Engine Serial Number	
Engine Rated Horsepower	
Annual Hours of Operation (Estimate)	
Address of Vehicle Storage Yard	Street Address:
	City:
Anticipated Vehicle Operating Location During Demonstration	Street Address (if known):
	City:
	Job Site Name:
Expected Duration at Above Location (months)	
Expected Number of Engine Hours to be Accrued at Proposed Operating Location	

1. CARB and the MSRC are seeking vehicles that will be able to accrue approximately **1000 hours of engine operation** within the jurisdiction of the South Coast AQMD. ***Do you anticipate that the proposed piece of equipment will be able to accrue approximately 1000 hours within the South Coast AQMD<sup>1</sup> jurisdiction within a 12 month period?*** (check appropriate box; a “no” answer will not automatically disqualify you)

**YES**

**NO**

<sup>1</sup> The geographical jurisdiction of the South Coast AQMD includes the urban, non-desert portions of Los Angeles, Orange, Riverside, and San Bernardino Counties in Southern California. Includes the Coachella Valley.

**FORM 3 – CERTIFICATIONS**

Form **W-9**  
(Rev. January 2005)  
Department of the Treasury  
Internal Revenue Service

**Request for Taxpayer  
Identification Number and Certification**

Give form to the  
requester. Do not  
send to the IRS.

Print or type  
See Specific Instructions on page 2.

Name (as shown on your income tax return)	
Business name, if different from above	
Check appropriate box: <input type="checkbox"/> Individual/ Sole proprietor <input type="checkbox"/> Corporation <input type="checkbox"/> Partnership <input type="checkbox"/> Other ▶ .....	<input type="checkbox"/> Exempt from backup withholding
Address (number, street, and apt. or suite no.)	Requester's name and address (optional)
City, state, and ZIP code	
List account number(s) here (optional)	

**Part I Taxpayer Identification Number (TIN)**

Enter your TIN in the appropriate box. The TIN provided must match the name given on Line 1 to avoid backup withholding. For individuals, this is your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

Social security number								
or								
Employer identification number								

**Note.** If the account is in more than one name, see the chart on page 4 for guidelines on whose number to enter.

**Part II Certification**

Under penalties of perjury, I certify that:

- The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and
- I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and
- I am a U.S. person (including a U.S. resident alien).

**Certification instructions.** You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the Certification, but you must provide your correct TIN. (See the instructions on page 4.)

<b>Sign Here</b>	Signature of U.S. person ▶	Date ▶

**Purpose of Form**

A person who is required to file an information return with the IRS, must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

**U.S. person.** Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

- Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
- Certify that you are not subject to backup withholding, or
- Claim exemption from backup withholding if you are a U.S. exempt payee.

**Note.** If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

For federal tax purposes you are considered a person if you are:

- An individual who is a citizen or resident of the United States,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States, or

- Any estate (other than a foreign estate) or trust. See Regulations sections 301.7701-6(a) and 7(a) for additional information.

**Foreign person.** If you are a foreign person, do not use Form W-9. Instead, use the appropriate Form W-8 (see Publication 515, Withholding of Tax on Nonresident Aliens and Foreign Entities).

**Nonresident alien who becomes a resident alien.** Generally, only a nonresident alien individual may use the terms of a tax treaty to reduce or eliminate U.S. tax on certain types of income. However, most tax treaties contain a provision known as a "saving clause." Exceptions specified in the saving clause may permit an exemption from tax to continue for certain types of income even after the recipient has otherwise become a U.S. resident alien for tax purposes.

If you are a U.S. resident alien who is relying on an exception contained in the saving clause of a tax treaty to claim an exemption from U.S. tax on certain types of income, you must attach a statement to Form W-9 that specifies the following five items:

- The treaty country. Generally, this must be the same treaty under which you claimed exemption from tax as a nonresident alien.
- The treaty article addressing the income.
- The article number (or location) in the tax treaty that contains the saving clause and its exceptions.

4. The type and amount of income that qualifies for the exemption from tax.

5. Sufficient facts to justify the exemption from tax under the terms of the treaty article.

**Example.** Article 20 of the U.S.-China income tax treaty allows an exemption from tax for scholarship income received by a Chinese student temporarily present in the United States. Under U.S. law, this student will become a resident alien for tax purposes if his or her stay in the United States exceeds 5 calendar years. However, paragraph 2 of the first Protocol to the U.S.-China treaty (dated April 30, 1984) allows the provisions of Article 20 to continue to apply even after the Chinese student becomes a resident alien of the United States. A Chinese student who qualifies for this exception (under paragraph 2 of the first protocol) and is relying on this exception to claim an exemption from tax on his or her scholarship or fellowship income would attach to Form W-9 a statement that includes the information described above to support that exemption.

If you are a nonresident alien or a foreign entity not subject to backup withholding, give the requester the appropriate completed Form W-8.

**What is backup withholding?** Persons making certain payments to you must under certain conditions withhold and pay to the IRS 28% of such payments (after December 31, 2002). This is called "backup withholding." Payments that may be subject to backup withholding include interest, dividends, broker and barter exchange transactions, rents, royalties, nonemployee pay, and certain payments from fishing boat operators. Real estate transactions are not subject to backup withholding.

You will not be subject to backup withholding on payments you receive if you give the requester your correct TIN, make the proper certifications, and report all your taxable interest and dividends on your tax return.

Payments you receive will be subject to backup withholding if:

1. You do not furnish your TIN to the requester, or
2. You do not certify your TIN when required (see the Part II instructions on page 4 for details), or
3. The IRS tells the requester that you furnished an incorrect TIN, or
4. The IRS tells you that you are subject to backup withholding because you did not report all your interest and dividends on your tax return (for reportable interest and dividends only), or
5. You do not certify to the requester that you are not subject to backup withholding under 4 above (for reportable interest and dividend accounts opened after 1983 only).

Certain payees and payments are exempt from backup withholding. See the instructions below and the separate Instructions for the Requester of Form W-9.

## Penalties

**Failure to furnish TIN.** If you fail to furnish your correct TIN to a requester, you are subject to a penalty of \$50 for each such failure unless your failure is due to reasonable cause and not to willful neglect.

**Civil penalty for false information with respect to withholding.** If you make a false statement with no reasonable basis that results in no backup withholding, you are subject to a \$500 penalty.

**Criminal penalty for falsifying information.** Willfully falsifying certifications or affirmations may subject you to criminal penalties including fines and/or imprisonment.

**Misuse of TINs.** If the requester discloses or uses TINs in violation of federal law, the requester may be subject to civil and criminal penalties.

## Specific Instructions

### Name

If you are an individual, you must generally enter the name shown on your social security card. However, if you have changed your last name, for instance, due to marriage without informing the Social Security Administration of the name change, enter your first name, the last name shown on your social security card, and your new last name.

If the account is in joint names, list first, and then circle, the name of the person or entity whose number you entered in Part I of the form.

**Sole proprietor.** Enter your individual name as shown on your social security card on the "Name" line. You may enter your business, trade, or "doing business as (DBA)" name on the "Business name" line.

**Limited liability company (LLC).** If you are a single-member LLC (including a foreign LLC with a domestic owner) that is disregarded as an entity separate from its owner under Treasury regulations section 301.7701-3, enter the owner's name on the "Name" line. Enter the LLC's name on the "Business name" line. Check the appropriate box for your filing status (sole proprietor, corporation, etc.), then check the box for "Other" and enter "LLC" in the space provided.

**Other entities.** Enter your business name as shown on required Federal tax documents on the "Name" line. This name should match the name shown on the charter or other legal document creating the entity. You may enter any business, trade, or DBA name on the "Business name" line.

**Note.** You are requested to check the appropriate box for your status (individual/sole proprietor, corporation, etc.).

### Exempt From Backup Withholding

If you are exempt, enter your name as described above and check the appropriate box for your status, then check the "Exempt from backup withholding" box in the line following the business name, sign and date the form.

Generally, individuals (including sole proprietors) are not exempt from backup withholding. Corporations are exempt from backup withholding for certain payments, such as interest and dividends.

**Note.** If you are exempt from backup withholding, you should still complete this form to avoid possible erroneous backup withholding.

**Exempt payees.** Backup withholding is not required on any payments made to the following payees:

1. An organization exempt from tax under section 501(a), any IRA, or a custodial account under section 403(b)(7) if the account satisfies the requirements of section 401(f)(2),
2. The United States or any of its agencies or instrumentalities,
3. A state, the District of Columbia, a possession of the United States, or any of their political subdivisions or instrumentalities,
4. A foreign government or any of its political subdivisions, agencies, or instrumentalities, or
5. An international organization or any of its agencies or instrumentalities.

Other payees that may be exempt from backup withholding include:

6. A corporation,

- 7. A foreign central bank of issue,
- 8. A dealer in securities or commodities required to register in the United States, the District of Columbia, or a possession of the United States,
- 9. A futures commission merchant registered with the Commodity Futures Trading Commission,
- 10. A real estate investment trust,
- 11. An entity registered at all times during the tax year under the Investment Company Act of 1940,
- 12. A common trust fund operated by a bank under section 584(a),
- 13. A financial institution,
- 14. A middleman known in the investment community as a nominee or custodian, or
- 15. A trust exempt from tax under section 664 or described in section 4947.

The chart below shows types of payments that may be exempt from backup withholding. The chart applies to the exempt recipients listed above, 1 through 15.

IF the payment is for . . .	THEN the payment is exempt for . . .
Interest and dividend payments	All exempt recipients except for 9
Broker transactions	Exempt recipients 1 through 13. Also, a person registered under the Investment Advisers Act of 1940 who regularly acts as a broker
Barter exchange transactions and patronage dividends	Exempt recipients 1 through 5
Payments over \$600 required to be reported and direct sales over \$5,000 <sup>1</sup>	Generally, exempt recipients 1 through 7 <sup>2</sup>

<sup>1</sup>See Form 1099-MISC, Miscellaneous Income, and its instructions.

<sup>2</sup>However, the following payments made to a corporation (including gross proceeds paid to an attorney under section 6045(f), even if the attorney is a corporation) and reportable on Form 1099-MISC are not exempt from backup withholding: medical and health care payments, attorneys' fees; and payments for services paid by a Federal executive agency.

## Part I. Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. If you are a resident alien and you do not have and are not eligible to get an SSN, your TIN is your IRS individual taxpayer identification number (ITIN). Enter it in the social security number box. If you do not have an ITIN, see *How to get a TIN* below.

If you are a sole proprietor and you have an EIN, you may enter either your SSN or EIN. However, the IRS prefers that you use your SSN.

If you are a single-owner LLC that is disregarded as an entity separate from its owner (see *Limited liability company (LLC)* on page 2), enter your SSN (or EIN, if you have one). If the LLC is a corporation, partnership, etc., enter the entity's EIN.

Note. See the chart on page 4 for further clarification of name and TIN combinations.

**How to get a TIN.** If you do not have a TIN, apply for one immediately. To apply for an SSN, get Form SS-5, Application for a Social Security Card, from your local Social Security Administration office or get this form online at [www.socialsecurity.gov/online/ss-5.pdf](http://www.socialsecurity.gov/online/ss-5.pdf). You may also get this form by calling 1-800-772-1213. Use Form W-7, Application for IRS Individual Taxpayer Identification Number, to apply for an ITIN, or Form SS-4, Application for Employer Identification Number, to apply for an EIN. You can apply for an EIN online by accessing the IRS website at [www.irs.gov/businesses/](http://www.irs.gov/businesses/) and clicking on Employer ID Numbers under Related Topics. You can get Forms W-7 and SS-4 from the IRS by visiting [www.irs.gov](http://www.irs.gov) or by calling 1-800-TAX-FORM (1-800-829-3676).

If you are asked to complete Form W-9 but do not have a TIN, write "Applied For" in the space for the TIN, sign and date the form, and give it to the requester. For interest and dividend payments, and certain payments made with respect to readily tradable instruments, generally you will have 60 days to get a TIN and give it to the requester before you are subject to backup withholding on payments. The 60-day rule does not apply to other types of payments. You will be subject to backup withholding on all such payments until you provide your TIN to the requester.

Note. Writing "Applied For" means that you have already applied for a TIN or that you intend to apply for one soon.

Caution: A disregarded domestic entity that has a foreign owner must use the appropriate Form W-8.

## Part II. Certification

To establish to the withholding agent that you are a U.S. person, or resident alien, sign Form W-9. You may be requested to sign by the withholding agent even if items 1, 4, and 5 below indicate otherwise.

For a joint account, only the person whose TIN is shown in Part I should sign (when required). Exempt recipients, see *Exempt From Backup Withholding* on page 2.

**Signature requirements.** Complete the certification as indicated in 1 through 5 below.

**1. Interest, dividend, and barter exchange accounts opened before 1984 and broker accounts considered active during 1983.** You must give your correct TIN, but you do not have to sign the certification.

**2. Interest, dividend, broker, and barter exchange accounts opened after 1983 and broker accounts considered inactive during 1983.** You must sign the certification or backup withholding will apply. If you are subject to backup withholding and you are merely providing your correct TIN to the requester, you must cross out item 2 in the certification before signing the form.

**3. Real estate transactions.** You must sign the certification. You may cross out item 2 of the certification.

**4. Other payments.** You must give your correct TIN, but you do not have to sign the certification unless you have been notified that you have previously given an incorrect TIN. "Other payments" include payments made in the course of the requester's trade or business for rents, royalties, goods (other than bills for merchandise), medical and health care services (including payments to corporations), payments to a nonemployee for services, payments to certain fishing boat crew members and fishermen, and gross proceeds paid to attorneys (including payments to corporations).

**5. Mortgage interest paid by you, acquisition or abandonment of secured property, cancellation of debt, qualified tuition program payments (under section 529), IRA, Coverdell ESA, Archer MSA or HSA contributions or distributions, and pension distributions.** You must give your correct TIN, but you do not have to sign the certification.

## What Name and Number To Give the Requester

For this type of account:	Give name and SSN of:
1. Individual	The individual
2. Two or more individuals (joint account)	The actual owner of the account or, if combined funds, the first individual on the account <sup>1</sup>
3. Custodian account of a minor (Uniform Gift to Minors Act)	The minor <sup>2</sup>
4. a. The usual revocable savings trust (grantor is also trustee)	The grantor-trustee <sup>1</sup>
b. So-called trust account that is not a legal or valid trust under state law	The actual owner <sup>1</sup>
5. Sole proprietorship or single-owner LLC	The owner <sup>3</sup>
For this type of account:	Give name and EIN of:
6. Sole proprietorship or single-owner LLC	The owner <sup>3</sup>
7. A valid trust, estate, or pension trust	Legal entity <sup>4</sup>
8. Corporate or LLC electing corporate status on Form 8832	The corporation
9. Association, club, religious, charitable, educational, or other tax-exempt organization	The organization
10. Partnership or multi-member LLC	The partnership
11. A broker or registered nominee	The broker or nominee
12. Account with the Department of Agriculture in the name of a public entity (such as a state or local government, school district, or prison) that receives agricultural program payments	The public entity

<sup>1</sup>List first and circle the name of the person whose number you furnish. If only one person on a joint account has an SSN, that person's number must be furnished.

<sup>2</sup>Circle the minor's name and furnish the minor's SSN.

<sup>3</sup>You must show your individual name and you may also enter your business or "DBA" name on the second name line. You may use either your SSN or EIN (if you have one). If you are a sole proprietor, IRS encourages you to use your SSN.

<sup>4</sup>List first and circle the name of the legal trust, estate, or pension trust. (Do not furnish the TIN of the personal representative or trustee unless the legal entity itself is not designated in the account title.)

**Note.** If no name is circled when more than one name is listed, the number will be considered to be that of the first name listed.

## Privacy Act Notice

Section 6109 of the Internal Revenue Code requires you to provide your correct TIN to persons who must file information returns with the IRS to report interest, dividends, and certain other income paid to you, mortgage interest you paid, the acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA, or Archer MSA or HSA. The IRS uses the numbers for identification purposes and to help verify the accuracy of your tax return. The IRS may also provide this information to the Department of Justice for civil and criminal litigation, and to cities, states, and the District of Columbia to carry out their tax laws. We may also disclose this information to other countries under a tax treaty, to federal and state agencies to enforce federal nontax criminal laws, or to federal law enforcement and intelligence agencies to combat terrorism.

You must provide your TIN whether or not you are required to file a tax return. Payers must generally withhold 28% of taxable interest, dividend, and certain other payments to a payee who does not give a TIN to a payer. Certain penalties may also apply.

## CAMPAIGN CONTRIBUTIONS DISCLOSURE

California law prohibits a party, or an agent, from making campaign contributions to AQMD Governing Board Members or members/alternates of the Mobile Source Air Pollution Reduction Review Committee (MSRC) of \$250 or more while their contract or permit is pending before the AQMD; and further prohibits a campaign contribution from being made for three (3) months following the date of the final decision by the Governing Board or the MSRC on a donor's contract or permit. Gov't Code §84308(d). For purposes of reaching the \$250 limit, the campaign contributions of the bidder or contractor plus contributions by its parents, affiliates, and related companies of the contractor or bidder are added together. 2 C.C.R. §18438.5.

In addition, Board Members or members/alternates of the MSRC must abstain from voting on a contract or permit if they have received a campaign contribution from a party or participant to the proceeding, or agent, totaling \$250 or more in the 12-month period prior to the consideration of the item by the Governing Board or the MSRC. Gov't Code §84308(c). When abstaining, the Board Member or members/alternates of the MSRC must announce the source of the campaign contribution on the record. *Id.* The requirement to abstain is triggered by campaign contributions of \$250 or more in total contributions of the bidder or contractor, *plus* any of its parent, subsidiary, or affiliated companies. 2 C.C.R. §18438.5.

In accordance with California law, bidders and contracting parties are required to disclose, at the time the application is filed, information relating to any campaign contributions made to Board Members or members/alternates of the MSRC, including: the name of the party making the contribution (which includes any parent, subsidiary or otherwise related business entity, as defined below), the amount of the contribution, and the date the contribution was made. 2 C.C.R. §18438.8(b).

The list of current AQMD Governing Board Members can be found at the AQMD website ([www.aqmd.gov](http://www.aqmd.gov)). The list of current MSRC members/alternates can be found at the MSRC website (<http://www.cleantransportationfunding.org>).

## DEFINITIONS

Parent, Subsidiary, or Otherwise Related Business Entity.

- (1) *Parent subsidiary. A parent subsidiary relationship exists when one corporation directly or indirectly owns shares possessing more than 50 percent of the voting power of another corporation.*
  
- (2) *Otherwise related business entity. Business entities, including corporations, partnerships, joint ventures and any other organizations and enterprises operated for profit, which do not have a parent subsidiary relationship are otherwise related if any one of the following three tests is met:*
  - (A) *One business entity has a controlling ownership interest in the other business entity.*
  - (B) *There is shared management and control between the entities. In determining whether there is shared management and control, consideration should be given to the following factors:*
    - (i) *The same person or substantially the same person owns and manages the two entities;*
    - (ii) *There are common or commingled funds or assets;*
    - (iii) *The business entities share the use of the same offices or employees, or otherwise share activities, resources or personnel on a regular basis;*
    - (iv) *There is otherwise a regular and close working relationship between the entities; or*
  - (C) *A controlling owner (50% or greater interest as a shareholder or as a general partner) in one entity also is a controlling owner in the other entity.*

2 Cal. Code of Regs., §18703.1(d).

**DISADVANTAGED BUSINESS CERTIFICATION**

Federal guidance for utilization of disadvantaged business enterprises allows a vendor to be deemed a small business enterprise (SBE), minority business enterprise (MBE) or women business enterprise (WBE) if it meets the criteria below.

- is certified by the Small Business Administration or
- is certified by a state or federal agency or
- is an independent MBE(s) or WBE(s) business concern which is at least 51 percent owned and controlled by minority group member(s) who are citizens of the United States.

Following state guidance, a vendor may be deemed a disabled veteran business enterprise (DVBE) if it meets the following:

- is an independent business concern which is at least 51 percent owned and controlled by disabled veteran(s), and the home office is located in the U.S.

Statements of certification:

As a prime contractor to the SCAQMD, \_\_\_\_\_ (name of business) will engage in good faith efforts to achieve the fair share in accordance with 40 CFR Section 31.36(e), and will follow the six affirmative steps listed below **for contracts or purchase orders funded in whole or in part by federal grants and contracts.**

1. Place qualified SBEs, MBEs, and WBEs on solicitation lists.
2. Assure that SBEs, MBEs, and WBEs are solicited whenever possible.
3. When economically feasible, divide total requirements into small tasks or quantities to permit greater participation by SBEs, MBEs, and WBEs.
4. Establish delivery schedules, if possible, to encourage participation by SBEs, MBEs, and WBEs.
5. Use services of Small Business Administration, Minority Business Development Agency of the Department of Commerce, and/or any agency authorized as a clearinghouse for SBEs, MBEs, and WBEs.
6. If subcontracts are to be let, take the above affirmative steps.

<b>B. NAME</b>	<b>TITLE</b>
----------------	--------------

<b>C. TELEPHONE NUMBER</b>	<b>DATE</b>
----------------------------	-------------

(a) *Definitions*

**Disabled Veteran-Owned Business Enterprise** means a business that meets all of the following criteria:

- is a sole proprietorship or partnership of which is at least 51 percent owned by one or more disabled veterans, or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more disabled veterans; a subsidiary which is wholly owned by a parent corporation but only if at least 51 percent of the voting stock of the parent corporation is owned by one or more disabled veterans; or a joint venture in which at least 51 percent of the joint venture's management and control and earnings are held by one or more disabled veterans.
- the management and control of the daily business operations are by one or more disabled veterans. The disabled veterans who exercise management and control are not required to be the same disabled veterans as the owners of the business.
- is a sole proprietorship, corporation, partnership, or joint venture with its primary headquarters office located in the United States and which is not a branch or subsidiary of a foreign corporation, firm, or other foreign-based business.

**Joint Venture** means that one party to the joint venture is a MBE/WBE/DVBE and owns at least 51 percent of the joint venture. In the case of a joint venture formed for a single project this means that MBE/WBE/DVBE will receive at least 51 percent of the project dollars.

**Local Business** means a business that meets all of the following criteria:

- has an ongoing business within the boundary of the SCAQMD at the time of bid application.
- performs 90 percent of the work within SCAQMD's jurisdiction.

**Minority-Owned Business Enterprise** means a business that meets all of the following criteria:

- is at least 51 percent owned by one or more minority persons or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more minority persons.
- is a business whose management and daily business operations are controlled or owned by one or more minority person.
- is a business which is a sole proprietorship, corporation, partnership, joint venture, an association, or a cooperative with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign business.

"Minority" person means a Black American, Hispanic American, Native American (including American Indian, Eskimo, Aleut, and Native Hawaiian), Asian-Indian American (including a person whose origins are from India, Pakistan, or Bangladesh), Asian-Pacific American (including a person whose origins are from Japan, China, the Philippines, Vietnam, Korea, Samoa, Guam, the United States Trust Territories of the Pacific, Northern Marianas, Laos, Cambodia, or Taiwan).

**Small Business Enterprise** means a business that meets all of the following criteria:

- is any business enterprise including its affiliates located inside the United States that is organized for profit, pays U.S. taxes, and/or uses American products, materials, and/or labor, etc.
- is independently owned and operated
- is not dominant in the field of operation
- is qualified as a small business under the criteria and size standards set forth in 13 CFR 121

**Women-Owned Business Enterprise** means a business that meets all of the following criteria:

- is at least 51 percent owned by one or more women or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more women.
- is a business whose management and daily business operations are controlled or owned by one or more women.

is a business which is a sole proprietorship, corporation, partnership, or a joint venture, with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign business.

**ATTACHMENT A - SAMPLE CONTRACT  
OFF-ROAD DIESEL VEHICLE RETROFIT DEMONSTRATION PROGRAM**

1. PARTIES - The parties to this Contract are the South Coast Air Quality Management District (hereinafter referred to as "AQMD") whose address is 21865 Copley Drive, Diamond Bar, California 91765-4178, and \*\*\* (hereinafter referred to as "CONTRACTOR") whose address is \*\*\*.
  
2. RECITALS
  - A. AQMD is the local agency with primary responsibility for regulating stationary source air pollution in the South Coast Air Basin in the State of California (State). AQMD is authorized under State Health & Safety Code Section 44225 (Assembly Bill (AB) 2766) to levy a fee on motor vehicles for the purpose of reducing air pollution from such vehicles and to implement the California Clean Air Act.
  - B. Under AB 2766 the AQMD'S Governing Board has authorized the imposition of the statutorily set motor vehicle fee. By taking such action the State's Department of Motor Vehicles (DMV) is required to collect such fee and remit it periodically to AQMD.
  - C. AB 2766 further mandates that thirty (30) percent of such vehicle registration fees be placed by AQMD into a separate account for the sole purpose of implementing and monitoring programs to reduce air pollution from motor vehicles.
  - D. AB 2766 creates a regional Mobile Source Air Pollution Reduction Review Committee (MSRC) to develop a work program to fund projects from the separate account. Pursuant to approval of the work program by AQMD'S Governing Board, AQMD Board authorized a contract with CONTRACTOR for services described in Attachment 1 - Statement of Work, expressly incorporated herein by this reference and made a part hereof of this Contract. CONTRACTOR warrants that it is well qualified, experienced, and has the expertise to provide such services on the terms set forth here.
  - E. This project is part of the *Showcase II* Program. The *Showcase II* Program brings together owners of off-road vehicles, manufacturers of after-treatment devices, the California Air Resources Board (CARB), AQMD and the MSRC in order to achieve multiple goals. By providing essential in-use operations data, the *Showcase* Program encourages verification of diesel after-treatment devices for off-road vehicles by CARB. Additionally, the *Showcase II* Program in general and this project in particular are intended to reduce the public's exposure to diesel exhaust particulate and/or oxides of nitrogen by reducing emissions from off-road motor vehicles and further the applicability of the technology to other motor vehicle applications.
  - F. The MSRC and AQMD have relied upon the expertise of CARB for determining which after-treatment device would be appropriate, and most efficacious and successful for the *Showcase II* Program, and for demonstration on each particular off-road vehicle. The MSRC and AQMD make no warranty or endorsement of any product or technology associated with the *Showcase II* Program.
  
3. DMV FEES - CONTRACTOR acknowledges that AQMD cannot guarantee the amount of fees to be collected under AB 2766 will be sufficient to fund this Contract. CONTRACTOR further acknowledges

that AQMD'S receipt of funds is contingent on the timely remittance by State's DMV. AQMD assumes no responsibility for the collection and remittance of motor vehicle registration fees by DMV to AQMD in a timely manner.

4. AUDIT - Additionally, CONTRACTOR shall, at least once every two years, or within two years of the termination of the Contract if the term is less than two years, be subject to an audit by AQMD or its authorized representative to determine if the revenues received by CONTRACTOR were spent for the reduction of pollution from Motor Vehicles pursuant to the Clean Air Act of 1988. AQMD shall coordinate such audit through CONTRACTOR'S audit staff. If an amount is found to be inappropriately expended, AQMD may withhold revenue from CONTRACTOR in the amount equal to the amount which was inappropriately expended. Such withholding shall not be construed as AQMD'S sole remedy and shall not relieve CONTRACTOR of its obligation to perform under the terms of this Contract.
5. SERVICES - CONTRACTOR agrees to furnish all labor, materials, equipment, required licenses, permits, fees, and other appropriate legal authorization from all applicable federal, state, and local jurisdictions necessary to perform and complete, per schedule, in a professional manner, the services described herein.
6. REPORTING - CONTRACTOR shall submit reports to AQMD as outlined in Attachment 1 - Statement of Work. AQMD reserves the right to review, comment, and request changes to any report produced as a result of this Contract.
7. TERM - The term of this Contract is from the date of execution by both parties to \*\*\*, unless terminated earlier as provided for in Clause 8 below entitled Termination, or extended by modification of this Contract in writing. No work shall commence prior to the Contract start date, except at CONTRACTOR'S cost and risk, and no charges are authorized until this Contract is fully executed. Upon written request and with adequate justification from CONTRACTOR, the MSRC Contracts Administrator may extend the Contract up to an additional six months at no additional cost. Term extensions greater than six months must be reviewed and approved by the MSRC.
8. TERMINATION - In the event any party fails to comply with any term or condition of this Contract, or fails to provide the services in the manner agreed upon by the parties, including, but not limited to, the requirements of Attachment 1 - Statement of Work, this shall constitute a material breach of the Contract. The nonbreaching party shall have the sole and exclusive option either to notify the breaching party that it must cure this breach within fifteen (15) days or provide written notification of its intention to terminate this Contract with thirty (30) day's written notice. Notification shall be provided in the manner set forth in Clause 13 below, entitled - Notices. Termination shall not be the exclusive remedy of the nonbreaching party. The nonbreaching party reserves the right to seek any and all remedies provided by law. AQMD will reimburse CONTRACTOR for actual costs incurred (not to exceed the total Contract value), including all noncancellable commitments incurred in performance of this Contract through the effective date of termination for any reason other than breach.

9. INSURANCE

- A. CONTRACTOR shall furnish evidence to AQMD of workers' compensation insurance for each of its employees, in accordance with either California or other states' applicable statutory requirements prior to commencement of any work on this Contract.
- B. CONTRACTOR shall furnish evidence to AQMD of general liability insurance with a limit of at least \$1,000,000 per occurrence, and \$2,000,000 in a general aggregate prior to commencement of any work on this Contract. AQMD shall be named as an additional insured on any such liability policy, and thirty (30) days written notice prior to cancellation of any such insurance shall be given by CONTRACTOR to AQMD.
- C. CONTRACTOR shall furnish evidence to AQMD of automobile liability insurance with limits of at least \$100,000 per person and \$300,000 per accident for bodily injuries, and \$50,000 in property damage, or \$1,000,000 combined single limit for bodily injury or property damage, prior to commencement of any work on this Contract. AQMD shall be named as an additional insured on any such liability policy, and thirty (30) days written notice prior to cancellation of any such insurance shall be given by CONTRACTOR to AQMD.
- D. If CONTRACTOR fails to maintain the required insurance coverage set forth above, AQMD reserves the right either to purchase such additional insurance and to deduct the cost thereof from any payments owed to CONTRACTOR or terminate this Contract for breach.
- E. All insurance certificates should be mailed to: AQMD Risk Management, 21865 Copley Drive, Diamond Bar, CA 91765-4178. **The AQMD Contract Number must be included on the face of the certificate.**
- F. CONTRACTOR must provide updates on the insurance coverage throughout the term of the Contract to ensure that there is no break in coverage during the period of contract performance. Failure to provide evidence of current coverage shall be grounds for termination for breach of Contract.

10. INDEMNIFICATION - CONTRACTOR agrees to hold harmless, defend, and indemnify, AQMD, its officers, employees, agents, representatives, and successors-in-interest against any and all loss, damage, cost, or expenses which AQMD, its officers, employees, agents, representatives, and successors-in-interest may incur or be required to pay by reason of any injury or property damage caused or incurred by CONTRACTOR, its employees, subcontractors, or agents in the performance of this Contract.

11. DISCLAIMER OF WARRANTY

- A. The AQMD does not warrant, guarantee or endorse any after-treatment or data-logging devices, nor any thermal insulation sold or provided under this program. It is understood by the Parties that the after-treatment devices are warranted solely by the manufacturer of the devices, and that a manufacturer's warranty pursuant to Title 13, California Code of Regulations, §2707 is required for verification by CARB. It is understood by the Parties that the AQMD does not warrant the design, workmanship, installation or operation of the after-treatment devices, thermal insulation or data logging devices, or the suitability of such devices for CONTRACTOR's intended use.
- B. AQMD shall not be liable for any injuries or property damage resulting from the patent or latent defects in such devices or insulation. It is understood by the Parties that the AQMD is not liable for any damage to CONTRACTOR's engines or vehicles on which the devices are installed and operated. CONTRACTOR's sole remedy is against the manufacturer or installer. AQMD is relying

on the determination made by CARB that the devices are suitable for installation in CONTRACTOR's fleet. Nothing herein shall be construed as granting any rights to participants or to third parties against the AQMD.

12. WARRANTY BY MANUFACTURER – As discussed more fully in Attachment 1 – Statement of Work, attached hereto and made a part hereof, after-treatment device manufacturers shall be required to warrant their devices for the term of the demonstration. This includes coverage for full repair or replacement cost of returning engine components to the condition they were in prior to the device's failure. CONTRACTOR is responsible for ensuring that purchase agreement(s) between after-treatment device manufacturers/vendors and vehicle owners provide for such warranty. Documentation of warranty coverage is a condition of payment as specified in Clause 13.C.3. below.

13. PAYMENT

- A. AQMD shall reimburse CONTRACTOR up to a total amount of \*\*\* Dollars (\$\*\*\*) in accordance with Attachment 2 - Payment Schedule, expressly incorporated herein by this reference and made a part hereof of this Contract. Any funds not expended upon early contract termination or contract completion shall revert to the AB 2766 Discretionary Fund. Payment of charges shall be made by AQMD to CONTRACTOR within thirty (30) days after approval by AQMD of an itemized invoice prepared and furnished by CONTRACTOR, referencing the task completed or a percent of work accomplished and detailing line item expenditures as listed in Attachment 2 - Payment Schedule, and the amount of charge claimed. In those cases where CONTRACTOR is the owner of the vehicle being retrofitted, and if desired by CONTRACTOR, payment shall be made directly to the device manufacturer or data-logger vendor upon submission of invoice from the CONTRACTOR requesting that such direct payment be made.
- B. An invoice submitted to AQMD for payment must be prepared in duplicate, on company letterhead, and list AQMD'S contract number, period covered by invoice, and CONTRACTOR'S social security number or Employer Identification Number and submitted to:
- South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765-4178  
Attn: Cynthia Ravenstein, MSRC Contract Administrator
- C. AQMD'S payment of invoices shall be subject to the following limitations and requirements:
1. Charges for equipment, material, and supply costs, travel expenses, subcontractors, and other charges, as applicable, must be itemized by CONTRACTOR. Reimbursement for equipment, material, supplies, subcontractors, and other charges shall be made at actual cost. Supporting documentation must be provided for all individual charges (with the exception of direct labor charges provided by CONTRACTOR).
  2. CONTRACTOR'S failure to provide receipts shall be grounds for AQMD'S non-reimbursement of such charges. AQMD may reduce payments on invoices by those charges for which receipts were not provided.
  3. Prior to payment of any invoices for the purchase and installation of an after-treatment device, AQMD must have received documentation of warranty coverage as discussed in Clause 12. above and Attachment 1 – Statement of Work.
- D. CONTRACTOR must submit final invoice no later than ninety (90) days after the termination date of this Contract or invoice may not be paid.

14. MOBILE SOURCE EMISSION REDUCTION CREDITS (MSERCs)

- A. The MSRC has adopted a policy that no MSERCs resulting from AB 2766 Discretionary Funds may be generated and/or sold.
- B. CONTRACTOR has the opportunity to generate MSERCs as a by-product of the project if a portion of the air quality benefits attributable to the project resulted from other funding sources. These MSERCs, which are issued by AQMD, are based upon the quantified vehicle miles traveled (VMT) by project vehicles or other activity data as appropriate. Therefore, a portion of prospective MSERCs, generated as a result of AB 2766 Funds, must be retired. The portion of prospective credits funded by the AB 2766 program, and which are subject to retirement, shall be referred to as "AB 2766-MSERCs."
- C. The determination of AB 2766-MSERC's is to be prorated based upon the AB 2766 program's contribution to the cost associated with the air quality benefits. In the case where AB 2766 Discretionary Funds are used to pay for the full differential cost of a new alternative fuel vehicle or for the retrofitting or repowering of an existing vehicle, all MSERCs attributable to AB 2766 Discretionary Funds must be retired. The determination of AB 2766-MSERCs for infrastructure and other ancillary items is to be prorated based upon the AB 2766 program's contribution to the associated air quality benefits. Determination of the project's overall cost will be on a case-by-case basis at the time an MSERC application is submitted. AQMD staff, at the time an MSERC application is submitted, will calculate total MSERCs and retire the AB 2766-MSERCs. CONTRACTOR would then receive the balance of the MSERCs not associated with AB 2766 funding.

15. DISPLAY OF SHOWCASE PROGRAM LOGO - CONTRACTOR agrees to permanently display one *Showcase* Program decal in a prominent location on each vehicle equipped with an after-treatment device pursuant to this Contract. Decals will be provided by MSRC upon notification that subject vehicles have been returned to service following device installation. Decals are approximately 12 inches in height and 18 inches in width. CONTRACTOR shall maintain decal for life of vehicle or equipment subject to this Contract. Should any decal become damaged, faded, or otherwise unreadable, CONTRACTOR shall request replacement decal from MSRC and apply new decal in the same or other prominent location. MSRC shall not be responsible for damage to paint or other vehicle surfaces arising from application or removal of decals. In addition, all promotional materials related to the project, including, but not limited to, press kits, brochures and signs shall include the *Showcase* Program logo. Press releases shall acknowledge MSRC financial support for the project.

16. NOTICES - Any notices from either party to the other shall be given in writing to the attention of the persons listed below or to other such addresses or addressees as may hereafter be designated in writing for notices by either party to the other. A notice shall be deemed received when delivered or three days after deposit in the U.S. Mail, postage prepaid, whichever is earlier.

AQMD:                    South Coast Air Quality Management District  
                                 21865 Copley Drive  
                                 Diamond Bar, CA 91765-4178  
                                 Attn: Cynthia Ravenstein, MSRC Contract Administrator

CONTRACTOR: \*\*\*  
\*\*\*  
\*\*\*  
Attn: \*\*\*

17. EMPLOYEES OF CONTRACTOR

- A. CONTRACTOR warrants that it will employ no subcontractor without written approval from AQMD. CONTRACTOR shall be responsible for the cost of regular pay to its employees, as well as cost of vacation, vacation replacements, sick leave, severance pay and pay for legal holidays.
- B. CONTRACTOR shall also pay all federal and state payroll taxes for its employees and shall maintain workers' compensation and liability insurance for each of its employees.
- C. CONTRACTOR, its officers, employees, agents, or representatives shall in no sense be considered employees or agents of AQMD, nor shall CONTRACTOR, its officers, employees, agents, or representatives be entitled to or eligible to participate in any benefits, privileges, or plans, given or extended by AQMD to its employees.
- D. CONTRACTOR warrants that it has no interest and shall not acquire any interest, direct or indirect, which would conflict in any manner or degree with the performance of services required to be performed under this Contract. CONTRACTOR further represents that in performance of this Contract, no person having any such interest shall be employed by CONTRACTOR or any subcontractor.

18. RIGHTS OF TECHNICAL DATA - AQMD shall have unlimited right to use technical data resulting from performance of CONTRACTOR under this Contract. CONTRACTOR shall have the right to use data for its own benefit.

19. ACCESS TO EQUIPMENT – On a periodic basis, representatives of AQMD, MSRC and the California Air Resources Board (CARB) may request access to the equipment retrofitted with a diesel emission control device for the purpose of monitoring, data retrieval, and/or onsite emissions monitoring. CONTRACTOR shall grant access to AQMD, MSRC and CARB representatives for these purposes.

20. OPERATION WITHIN SOUTH COAST AIR QUALITY DISTRICT – Each of the vehicles retrofitted with a diesel emission control device under this Contract must accrue at least 85% of its annual mileage or engine hours of operation within the geographical boundaries of the South Coast Air Quality Management District.

21. NON-DISCRIMINATION - In the performance of this Contract, CONTRACTOR shall not discriminate in recruiting, hiring, promotion, demotion, or termination practices on the basis of race, religious creed, color, national origin, ancestry, sex, age, or physical handicap and shall comply with the provisions of the California Fair Employment & Housing Act (Government Code Section 12900, *et seq.*), the Federal Civil Rights Act of 1964 (P.L. 88-352) and all amendments thereto, Executive Order No. 11246 (30 Federal Register 12319), and all administrative rules and regulations issued pursuant to said Acts and Order. CONTRACTOR shall likewise require each subcontractor to comply with this clause and shall include in each such subcontract language similar to this clause.

22. SOLICITATION OF EMPLOYEES - CONTRACTOR expressly agrees that CONTRACTOR shall not, during the term of this Contract, nor for a period of six months after termination, solicit for employment,

whether as an employee or independent contractor, any person who is or has been employed by AQMD during the term of this Contract without the consent of AQMD.

23. ASSIGNMENT - The rights granted hereby may not be assigned, sold, licensed, or otherwise transferred by either party without the prior written consent of the other, and any attempt by either party to do so shall be void upon inception.
24. NON-EFFECT OF WAIVER – CONTRACTOR’S or AQMD’S failure to insist upon the performance of any or all of the terms, covenants, or conditions of this Contract, or failure to exercise any rights or remedies hereunder, shall not be construed as a waiver or relinquishment of the future performance of any such terms, covenants, or conditions, or of the future exercise of such rights or remedies, unless otherwise provided for herein.
25. ATTORNEYS’ FEES - In the event any action (including arbitration) is filed in connection with the enforcement or interpretation of this Contract, each party in said action shall pay its own attorneys’ fees and costs.
26. FORCE MAJEURE - Neither AQMD nor CONTRACTOR shall be liable or deemed to be in default for any delay or failure in performance under this Contract or interruption of services resulting, directly or indirectly, from acts of God, civil or military authority, acts of public enemy, war, strikes, labor disputes, shortages of suitable parts, materials, labor or transportation, or any similar cause beyond the reasonable control of AQMD or CONTRACTOR.
27. SEVERABILITY - In the event that any one or more of the provisions contained in this Contract shall for any reason be held to be unenforceable in any respect by a court of competent jurisdiction, such holding shall not affect any other provisions of this Contract, and the Contract shall then be construed as if such unenforceable provisions are not a part hereof.
28. HEADINGS - Headings on the clauses of this Contract are for convenience and reference only, and the words contained therein shall in no way be held to explain, modify, amplify, or aid in the interpretation, construction, or meaning of the provisions of this Contract.
29. DUPLICATE EXECUTION - This Contract is executed in duplicate. Each signed copy shall have the force and effect of an original.
30. GOVERNING LAW - This Contract shall be construed and interpreted and the legal relations created thereby shall be determined in accordance with the laws of the State of California. Venue for resolution of any dispute shall be Los Angeles County, California.
31. APPROVAL OF SUBCONTRACT
  - A. If CONTRACTOR intends to subcontract a portion of the work under this Contract, written approval of the terms of the proposed subcontract(s) shall be obtained from AQMD’s Executive Officer or designee prior to execution of the subcontract. No subcontract charges will be reimbursed unless such approval has been obtained.

- B. Any material changes to the subcontract(s) that affect the scope of work, deliverable schedule, and/or cost schedule shall also require the written approval of the Executive Officer or designee prior to execution.
  - C. The sole purpose of AQMD's review is to insure that AQMD's contract rights have not been diminished in the subcontractor agreement. AQMD shall not supervise, direct, or have control over, or be responsible for, subcontractor's means, methods, techniques, work sequences or procedures or for the safety precautions and programs incident thereto, or for any failure of subcontractor to comply with any local, state, or federal laws, or rules or regulations.
32. CHANGE TERMS - Changes to any part of this Contract must be requested in writing by CONTRACTOR, submitted to AQMD and approved by MSRC in accordance with MSRC policies and procedures. Requests to expend funds above the Contract value stated in Clause 11A must be approved prior to the expenditure of additional funds. CONTRACTOR must make such request a minimum of 90 days prior to desired effective date of change. All modifications to this Contract shall be in writing and signed by both parties.
33. ENTIRE CONTRACT - This Contract represents the entire agreement between the parties hereto related to CONTRACTOR providing services to AQMD and there are no understandings, representations, or warranties of any kind except as expressly set forth herein. No waiver, alteration, or modification of any of the provisions herein shall be binding on any party unless in writing and signed by the party against whom enforcement of such waiver, alteration, or modification is sought.
34. AUTHORITY - The signator hereto represents and warrants that he or she is authorized and empowered and has the legal capacity to execute this Contract and to legally bind CONTRACTOR both in an operational and financial capacity and that the requirements and obligations under this Contract are legally enforceable and binding on CONTRACTOR.

IN WITNESS WHEREOF, the parties to this Contract have caused this Contract to be duly executed on their behalf by their authorized representatives.

# **MAJOR EVENT CENTER TRANSPORTATION PROGRAMS**

*“Air Quality Improvements through Automobile Trip  
Reduction & Roadway Congestion Mitigation”*

**Funding for the Implementation of New or Expanded Public  
Transportation Programs for Event Center Destinations  
Located in the South Coast Air Quality Management District**

**Program Announcement**

**PA2011-08**

**February 4, 2011**

## SECTION 1 - INTRODUCTION

There are literally dozens of Major Event Centers located within the South Coast Air Quality Management jurisdiction – these include sports arenas, fairgrounds, stadiums, race tracks, speedways, Convention Centers, etc. Compared to other destination centers such as shopping malls, event centers are utilized on a less frequent, and more importantly, less consistent basis. In the case of sports venues, the arena or stadium is used frequently during the regular season, but sits relatively idle during the off season.

However, when a ball game, NASCAR race, or other high profile, high attendance event is scheduled at a major event center, the impacts on surrounding communities are usually much more disruptive as compared to other destination centers. As drivers, we have all experienced the traffic impacts created prior to and following an event at a major venue. Surface streets surrounding the event center are impacted by traffic volumes that greatly exceed their capacity; freeways are impacted at off-ramps; vehicle queues extend at signalized intersections to the point where gridlock ensues.

While we understand and even anticipate the extreme traffic congestion that accompanies special events, we often forget that gridlock also has a significant impact on air quality. Vehicles that inch along in stop and go traffic or idle for extended periods burn excessive amounts of fuel and emit excessive levels of air pollutants. The impacts extend well beyond the vehicles that actually attend the event center – traffic impacts can extend for many miles surrounding the event center and impact streets, major arterials, and freeways.

An effective strategy to reduce traffic congestion and its associated air quality impacts, not to mention driver frustration and stress, is to utilize public transportation in lieu of driving to the event. Given these benefits, many newer event centers are located adjacent to regularly scheduled bus, shuttle, or rail service. Event center patrons who take advantage of public transportation are typically spared the aggravation associated with event center parking lot congestion, avoid excessive parking fees and, whether they realize it or not, are doing something beneficial for the environment by *not* driving their car.

The MSRC, however, is aware that not all major event centers within the South Coast AQMD jurisdiction are served by regularly scheduled transit service, particularly older venues. In some cases, the regularly scheduled service that is provided does not match the spike in demand that occurs before and particularly after an event, and therefore requires schedules and service levels to be adjusted to meet the event schedule.

The purpose of this Program Announcement is to identify opportunities to reduce automobile trips, traffic congestion, and their associated air pollutant emissions by shifting attendees of major event center functions out of their personal automobile and onto public transportation. The goal is to align major event centers with their regional transit providers to create a transportation option for event attendees as an alternative to their personal automobile. A shift from automobile to transit benefits not only those who take advantage of the service, but also the communities where the event center is located. The air pollution reduction benefits achieved through automobile trip reduction and congestion relief benefit all residents of the South Coast AQMD.

To facilitate implementation of new or expanded public transportation programs that facilitate use of transportation services to major event centers, the Mobile Source Air Pollution Reduction Review Committee (MSRC) has allocated a total of \$1.5M in **Clean Transportation Funding™**. This funding opportunity has at its core the following goals and objectives:

- Seek out major event center venues located within the South Coast AQMD jurisdiction that experience high levels of traffic congestion during scheduled events and are not served by, or are insufficiently served by, regular public transit services;
- Partner with transit providers and event center venues to develop and implement new or expanded programs to attract patrons to transit services that are tailored to each venue's scheduled events;
- Encourage transit providers and event center venues to establish ongoing relationships to continue event-specific transit service beyond the MSRC funding period, including the identification of funding sources in addition to the MSRC to support future transportation services.

The following Sections describe the eligibility requirements to participate in the MSRC Major Event Center Transportation Services Program, limits on the amount of **Clean Transportation Funding™** available to Program participants, and guidelines for proposal preparation. It is important to recognize that the MSRC must ensure that the use of Clean Transportation funds will result in direct, tangible, and quantifiable air quality benefits. To this end, this Program Announcement stipulates specific performance thresholds and participation obligations that must be met in order to be deemed eligible for an MSRC funding award. Projects submitted for funding consideration will be scrutinized to ensure they meet the minimum eligibility requirements described herein. It is likely that some event center transportation proposals will be deemed ineligible or offer insufficient benefits and will not receive an MSRC funding award.

MSRC staff members are available to answer questions and provide technical and programmatic guidance as appropriate. Please refer to Section 6 of this document for a list of MSRC Staff contacts.

**Available Funding** - The amount of FY 2010-'11 MSRC **Clean Transportation Funding™** allocated for the Major Event Center Transportation Program is \$1.5M. This funding level is a targeted amount – should meritorious projects be received totaling greater than \$1.5M, the MSRC reserves the right to increase the amount of total funding available.

Also, should the MSRC receive proposals with total requests less than the amount allocated, or if proposals are deemed non-meritorious, the MSRC reserves the right to reduce the total funding available and reallocate funds to other Work Program categories. The MSRC also reserves the right to not fund any of the proposals received, irrespective of the merits of the proposals submitted.

Please note that the source of MSRC **Clean Transportation Funding™** for projects submitted in response to this solicitation is motor vehicle registration fees collected by the California Department of Motor Vehicles (DMV) in accordance with the California Health and Safety Code. Thus, the availability of MSRC **Clean Transportation Funding™** is contingent upon the timely receipt of funds from the DMV. Neither the MSRC nor South Coast AQMD can guarantee the collection or remittance of registration fees by the DMV.

## SECTION 2 – ELIGIBILITY REQUIREMENTS

This Program Announcement seeks to facilitate the reduction of automobile trips and mitigate traffic congestion by shifting event attendees out of their personal automobile and onto public transportation at major event centers that are not currently served by regularly scheduled transit or shuttle service prior to, during, and following the venue's events.

For the purpose of this Program Announcement, the following definitions apply:

- **Major Event Center** – a Major Event Center is defined as a publicly or privately-owned, publicly accessible venue located within the geographical jurisdiction of the South Coast Air Quality Management District that possesses the following attributes, at a minimum:
  - Occupancy capacity of at least 5,000 people;
  - Average event attendance of at least 2,000 people;
  - Dedicated parking lot or structure co-located with the event center.

***Only event centers that conform to the above definition are eligible to participate in this Program!***

- **Traffic Impacted Event** – A scheduled event held at a Major Event Center that results in recurrent traffic congestion prior to, during, or after the scheduled event whose impact on surrounding roadways, arterials, intersections, or freeways exceeds design capacity;

***Only event centers that are Traffic Impacted are eligible to participate in this Program!***

- **Transportation Provider** – includes but is not necessarily limited to a) public transit agencies, including regional and municipal transit agencies and authorities; b) private transit operators, including subcontractor service providers to public transit agencies; and c) paratransit providers and other licensed, private transportation and shuttle providers;
- **Qualifying Transit Vehicle** – vehicles proposed for use in Event Center Transportation Services must conform to the following minimum requirements:
  - Dedicated Alternative Fuel – vehicles must operate on a dedicated alternative fuel. Eligible alternative fuels include compressed natural gas (CNG), liquefied natural gas (LNG), liquefied petroleum gas (LPG), H<sub>2</sub>, or gasoline hybrid-electric, and zero-emission electric. Non-hybrid electric gasoline, diesel, biodiesel, and flexible fuel vehicles do not satisfy the definition of dedicated alternative fuel;
  - Vehicle Seating Capacity – vehicles must have a minimum seated position capacity of twenty-two (22) occupants;
  - Vehicles must meet all Americans with Disabilities Act (ADA), US Department of Transportation (DOT), California Department of Motor Vehicles (DMV), and other applicable regulatory agency requirements.

***Qualifying dedicated alternative fuel vehicles must be used in this Program!***

- **Transportation Deficient** – a Major Event Center that is not served by regularly scheduled public transit or private shuttle service sufficient to entice patrons to attend the event using public transit rather than private automobile, or is served by public and/or private transportation services that are operating at maximum capacity. Please note that this Program Announcement is NOT intended to subsidize ongoing public or private transportation services.

***Only transit deficient event centers are eligible to participate in this Program!***

The MSRC seeks the formation of *partnerships* between traffic-impacted, transit-deficient major event centers and transportation providers who operate qualifying vehicles. The following Sections define who is eligible to submit a proposal to the MSRC, who is eligible to enter in to a contract for event center transportation services, and what transportation costs are eligible for reimbursement by the MSRC:

- ***Who can submit a proposal in response to this Program Announcement?*** Either a qualifying major event center and/or a qualifying transportation provider may respond to this Program

Announcement and submit a proposal for MSRC consideration. Proposals may also be submitted from a joint event center/transportation provider partnership. Please note that the following conditions apply:

- A proposal submitted by qualifying Major Event Centers must identify what Transportation Provider(s) will provide the event center service. The proposal must include a Memorandum of Understanding (MOU) between the event center and transportation provider(s) stating their mutual intent to implement and operate event center transit service in accordance with Program requirements in the event the MSRC provides a funding award;
  - A proposal submitted by a qualifying Transportation Provider must identify which Major Event Center(s) will be served in the Program. The proposal must include a MOU or letter of support between the transportation provider and event center(s) stating their mutual intent to implement and operate event center transit service in accordance with Program requirements in the event the MSRC provides a funding award;
  - A proposal submitted jointly by an event Center in partnership with a transportation provider must also include a MOU, as above.
- ***Who is eligible to receive an award of MSRC Clean Transportation Funding™ under this Program Announcement?*** While either a major event center or qualifying transportation provider are eligible to submit a proposal, only the qualifying transportation provider is eligible to enter into a contract on behalf of the proposed event center transportation service partnership. The rationale for this restriction is that *only transportation service costs (including transit program and traffic control costs) are eligible for reimbursement under this Program*. Thus, it makes sense that the service provider who incurs direct expenses in providing transportation services be the party to the contract that provides reimbursement. Please note that the MSRC does not enter into three-party agreements.

In summary, major event centers that meet the above eligibility requirements and transportation providers that meet qualifying requirements are eligible to participate in this MSRC Program. Both Event Centers and Transportation Providers are eligible to submit a proposal; however, each party must be identified by name in the proposal, accompanied by a MOU between the named participants. Only the transportation provider can be the MSRC funding recipient and contract signatory.

### **SECTION 3 - PARTICIPATION GUIDELINES, CONDITIONS & RESTRICTIONS**

The following guidelines, requirements, and conditions have been established and apply to all Proposals:

1. **Program Scope** – The primary objective of this Program is to eliminate automobile trips, reduce automobile vehicle miles traveled (VMT), and reduce traffic congestion in the vicinity of a major event center prior to, during, and following an event, resulting in a reduction in air pollutant emissions. Automobile trip reduction and traffic congestion mitigation are achieved by shifting the travel mode of event attendees from their personal automobile and onto new or expanded public transportation service or dedicated shuttle event center feeder service. To facilitate this mode shift, the MSRC will consider proposals for event center transportation services. **MSRC Clean Transportation Funding™** is available to co-fund the cost of implementing new or expanded

transportation programs. Only direct costs of transportation programs are eligible for reimbursement under this Program. Proposals submitted in response to this Program Announcement must include as named participants the major event center where new or expanded transit or shuttle service will be operated as well as the transportation provider who will implement the event center transportation program.

2. **Maximum Duration of MSRC Incentivized Transportation Programs** – the maximum length of time that MSRC Clean Transportation Funding™ can be used to co-fund transportation programs is one (1) year or, in the case of sporting events, one full season, including pre, regular, and postseason as applicable;
3. **Maximum MSRC Funding Limits**– To ensure broad-based participation, the MSRC has established the following maximum funding parameters:
  - The maximum total funding award to any entity that provides event center transportation programs under this solicitation shall not exceed 50% of the total Available Funding. The total available funding currently allocated by the MSRC for this Program is \$1.5M. Thus, the maximum total funding award for any single transportation service provider is currently set at \$750,000. This maximum funding restriction can be waived by the MSRC in the event the MSRC does not receive meritorious Proposals from other bidders that meet or exceed 50% of the total available funds, or if the MSRC allocates additional funds to the Program. The MSRC reserves the right to determine which projects, if any, are deemed meritorious and warrant a **Clean Transportation Funding™** award; and
  - The maximum funding allocated for transportation programs for any single major event center shall not exceed 30% of the total available funding. Thus, the maximum MSRC funding amount that can be applied to implementing transportation programs at any one event center is currently limited to a maximum of \$450,000, subject to the MSRC discretionary provisions cited above.
4. **Transportation Programs Advertising, Outreach, Marketing, and Promotion** – All event center transportation programs projects that receive an MSRC Clean Transportation Funding™ award must include advertising and promotion of the availability of the service as a project element. ***This is a mandatory component of any MSRC-funded event center transportation programs project.*** Advertising and promotion may include, but is not limited to:
  - a) Radio, television, newspaper, or specialty publication advertisements;
  - b) Print materials;
  - c) Materials developed for incorporation into a website, electronic media, etc.;
  - d) Transportation program kickoff events, ribbon cuttings, or news conferences, etc.
5. **Program Co-Funding Requirements** – Program participants, including the event center owner(s), transportation providers, and other potential project stakeholders, are required to match MSRC Clean Transportation Funding™ awarded with **cash or in-kind co-funding in an amount equal to or greater than the MSRC funding award amount**. Co-funding may include, but is not necessarily limited to, the following:
  - **Direct Cost Share** – Cash, direct labor, and equipment use contributions from the transportation provider may be accounted for as co-funding;

- **Fare box Revenue** – Fare box revenue collected to augment MSRC-funded transportation program may be documented and applied as co-funding;
  - **Transportation Programs Outreach, Marketing, and Promotion** – Costs associated with advertising the availability of event center transportation programs may be applied as co-funding. Appropriate outreach may include, but is not limited to, radio, television, newspaper, or specialty publication advertisements, printed materials, materials developed for incorporation into a website, electronic media, transportation program kickoff events, ribbon cuttings, or news conferences, etc.;
  - **Event Center Traffic Control/Bus Priority** – Costs associated with providing traffic control to provide participating transportation vehicles event center ingress and egress priority may be proposed as project co-funding. This includes, but is not necessarily limited to: special lane designation for transit vehicles, including cones, lane striping, etc.; traffic control personnel to direct traffic and grant participating vehicles faster entry and exit; designation of areas for drop off and pickup of event center patrons who utilize the transportation service, including directional signage, markings and placards, etc.
6. **Funding Restrictions** – MSRC funds may only be applied to direct operating costs associated with event center transportation programs. These include transportation operations and traffic control costs only. MSRC funds cannot be used:
- To fund capital acquisition costs associated with transportation vehicle purchase;
  - To recoup lost parking lot revenue.
7. **MSRC Funds Remitted on a Reimbursement Basis** - MSRC funds will be distributed on a reimbursement basis only upon completion of approved project milestones and submission of all required reports and invoices.
8. **Additional Conditions on MSRC Funding**
- MSRC projects are funded on a “site-specific” basis; that is, each project is evaluated with respect to the proposed event center’s unique location, traffic congestion, availability of other transportation options, etc. Thus, proposals that result in an award of MSRC funds are not allowed to change the event center venue under any circumstances. In the event the proposed venue becomes unavailable, nonviable, or no longer cost-effective, either contract negotiations will terminate or the contract will terminate, as applicable;
  - Project Proposers are expected to provide a project implementation schedule as an element of their Proposal. In the event a Proposal is awarded MSRC funds resulting in a contract, the proposed project implementation schedule will become an element of the contract. In the event a contractor is unable to meet project milestones and requires additional time, the MSRC reserves the right to administratively authorize a one-time extension to the period of performance, not to exceed an additional one (1) year. No additional extensions to the contract period of performance will be granted;
  - All projects must include an advertising, marketing, and outreach component. Acceptable outreach strategies are described in the previous section;
  - Conflict of Interest – Proposers must identify possible conflicts of interest with other clients affected by actions performed by the firm on behalf of the MSRC. Although the bidder will not be automatically disqualified by reason of work performed for such firms, the MSRC reserves the right to consider the nature and extent of such work in evaluating the proposal.

- Certifications – All Proposers must complete and submit the included Attachment H forms as an element of their Proposal (unless specifically exempted below):
  - Internal Revenue Service Form W-9 – Request for Taxpayer Identification Number and Certification. If you are selected for an award, you cannot be established as a vendor without this information.
  - Disadvantaged Business Certification. The AQMD needs this information for their vendor database. It will not be considered in the determination of your MSRC funding award. Governmental entities do not need to complete this form.
- Finally, in accordance with state law, all projects awarded MSRC **Clean Transportation Funding™** are subject to audit. The provisions of the audit are discussed in the Sample Contract, included as Section 9 of this Program Announcement. It is highly recommended that bidders employ government accepted accounting practices when administering their MSRC co-funded project.

**SECTION 4 – PROGRAM ANNOUNCEMENT TIMETABLE**

The MSRC understands that developing an event center transportation programs project is a complex undertaking. The MSRC also appreciates that events scheduled at a major venue are firm; thus, the MSRC Program is designed to afford potential proposers as much flexibility as possible to allow development of outstanding event center transportation projects.

To that end, the MSRC has established a six-month window to submit proposals for funding consideration. The window is anticipated to open with the approval of this Program Announcement on February 4, 2011. Proposals will be accepted anytime within this six (6) month period.

Note that the last date and time to submit a proposal for funding consideration is August 5, 2011 at 5:00 pm. *Late proposals will not be evaluated and will not be eligible for MSRC funding!*

Table 4-1 - Key Event Center Transportation Programs Program Dates

Program Event	Date
Program Announcement Release	February 4, 2011
Proposal Submittal Period	February 4 – August 5, 2011
Latest Date/Time for Proposal Submittal	August 5, 2011 @ 5:00 p.m.

**SECTION 5 - PROPOSAL PREPARATION & SUBMITTAL INSTRUCTIONS**

An Event Center Transportation Project Proposal must be completed and submitted for funding consideration under this Program. Proposals must be prepared and submitted in accordance with the instructions outlined below.

1. **Proposal Preparation** – The following information must be included in all Proposals seeking MSRC **Clean Transportation Funding™** under the Major Event Center Transportation Programs Program:

a) **Attachments A-G** - Proposals must include the following completed Attachments, including all required supporting documentation as requested. Proposal Templates and Instructions are included in Section 8 of this Program Announcement:

- Attachment A: Proposer and Project Participant Information
- Attachment B: Project Description
- Attachment C: Project Cost Breakdown
- Attachment D: Project Implementation Schedule
- Attachment E: Memorandum of Understanding/letter of support between Event Center(s) and Transportation Services Provider(s) (as applicable)
- Attachment F: Transportation Service Ridership Estimates
- Attachment G: Certifications

2. **Proposal Submittal Instructions** - Proposers must submit one (1) original Proposal and three (3) copies (total of four) in a sealed envelope, marked in the upper left-hand corner with the name and address of the Proposer and the words "PA2011-08, Event Center Transportation Program". When possible, any plans, diagrams, etc. should be affixed to standard size paper to facilitate reproduction. The earliest date for Proposal submittal is February 4, 2011. The last date and time to submit is August 5, 2011 at 5:00 p.m. All Proposals should be directed to:

Procurement Unit  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

In addition to the paper Proposal, Proposers must also submit an electronic copy of their Proposal in either PDF format or Microsoft Word. This may be provided via e-mail or CD-ROM at the convenience of the Proposer. Over-sized attachments, such as site drawings, etc. are not required to be included in the electronic copy if inclusion would be problematic. E-mailed electronic Proposal copies should be sent to [matt@cleantransportationfunding.org](mailto:matt@cleantransportationfunding.org); CD-ROM disks should be sent in care of the Procurement Unit at the street address listed above.

*Please note that the Proposal is only deemed "received" when the four (4) complete paper copies are submitted in accordance with the above instructions - submittal of an electronic Proposal only does not constitute receipt by the AQMD.* In addition, please note that faxed Proposals will not be accepted.

3. **Addenda** – The Mobile Source Air Pollution Reduction Review Committee may modify the Program Announcement and/or issue supplementary information or guidelines relating to the Program Announcement during the Proposal preparation and acceptance period of February 4 to August 5, 2011. Amendments will be posted on the MSRC website at [www.cleantransportationfunding.org](http://www.cleantransportationfunding.org).
4. **Proposal Modifications** - Once submitted, Proposals cannot be altered without the prior written consent of the Mobile Source Air Pollution Reduction Review Committee.
5. **Certificates of Insurance** - Upon notification of an MSRC funding award, a certificate(s) of insurance naming the South Coast Air Quality Management District (SCAQMD) as an additional insured will be

required within forty-five (45) days. Entities that are self-insured will be required to provide proof of self-insurance prior to contract execution.

## SECTION 6 - IF YOU NEED HELP...

This Program Announcement can be obtained by accessing the MSRC web site at [www.cleantransportationfunding.org](http://www.cleantransportationfunding.org). MSRC staff members are available to answer questions during the Proposal acceptance period. In order to help expedite assistance, please direct your inquiries to the applicable staff person, as follows:

- For **General or Technical Assistance**, please contact:

Ray Gorski  
MSRC Technical Advisor  
Phone: 909-396-2479  
Fax: 909-396-3682  
E-mail: [Ray@cleantransportationfunding.org](mailto:Ray@cleantransportationfunding.org)

- For **Administrative Assistance**, please contact:

Cynthia Ravenstein  
MSRC Contracts Administrator  
Phone: 909-396-3269  
Fax: 909-396-3682  
E-mail: [Cynthia@cleantransportationfunding.org](mailto:Cynthia@cleantransportationfunding.org)

- For **Contractual Assistance**, please contact:

Dean Hughbanks  
AQMD Procurement Manager  
Phone: 909-396-2808  
E-mail: [dhughbanks@aqmd.gov](mailto:dhughbanks@aqmd.gov)

## SECTION 7- PROPOSAL EVALUATION AND APPROVAL PROCESS

Proposals will be screened upon receipt by MSRC staff members to determine compliance with all mandatory requirements. Proposals deemed compliant will be forwarded to an Evaluation Subcommittee comprised of members of the MSRC Technical Advisory Committee (MSRC-TAC). Proposals will be evaluated in order of receipt using criteria established by the MSRC; these criteria are listed below. Proposals will be recommended for funding based upon their perceived conformance with the established criteria and in accordance with the maximum funding provisions stipulated in Section 3.3 of this Program Announcement. Please note that the MSRC reserves the right to make funding awards upon determination that a proposed event center transportation program is meritorious. As such, it is possible that all funding allocated to this Program could be fully expended prior to the close of the proposal submittal period, August 5, 2011.

**Evaluation Criteria** – Factors to be used when assessing the merits of a proposed alternative fuel infrastructure project are outlined below. Each project will be assessed individually against the evaluation criteria.

1. EVENT CENTER VENUE CHARACTERISTICS – Major Event Center characteristics will be evaluated to determine the potential benefits of implementing new or expanded transportation programs. Factors to be evaluated include:
  - The event center location, population density, location relative to major arterial roadways and freeways, and demonstrated impact on traffic congestion in proximity to the event center;
  - The number of events scheduled or planned for the event center during the proposed period of program;
  - The average venue attendance at similar events;
  - Availability of transportation options other than personal automobile.
2. POTENTIAL FOR CONNECTIVITY WITH OTHER PUBLIC TRANSIT – The ability to integrate the proposed transportation program with other existing public transportation services will be evaluated. This includes potential connectivity with existing bus line, rail lines, etc. Connectivity with regional or municipal bus service, MetroLink, light rail, transit centers, park and ride lots, etc. will be evaluated;
3. PROJECT CO-FUNDING – The amount of cash and in-kind co-funding, as well as the proposed use of co-funding, will be evaluated;
4. PROGRAM CONTINUATION PLAN – The potential for extending event center transportation programs beyond the MSRC-funded period will be assessed. Projects that have a definitive plan for continuing transportation programs beyond the initial MSRC funding period will be more favorably considered.

Proposals deemed meritorious by the MSRC-TAC will be forwarded to the MSRC for evaluation, review, and potential funding approval. Please note that the MSRC retains full discretion and authority as it pertains to a potential award of **Clean Transportation Funding™**. The decision to award funding, or not award funding, will be based on the proposed project's potential to achieve direct and tangible emission reductions. Thus, it is anticipated that not all projects submitted for funding consideration will receive an MSRC award.

Please note that Proposers will be required to complete a Campaign Contributions Disclosure Form prior to having their proposal reviewed by the MSRC. This document will be provided by MSRC staff at the appropriate time. In addition, all proposals selected for funding by the MSRC must be approved by the South Coast AQMD Governing Board. The contract negotiation and formation process will commence once all required approvals have been granted.

**SECTION 8 - PROPOSAL ATTACHMENTS**

**ATTACHMENT A: PROPOSAL CONTACT INFORMATION**

A. Please provide the following Proposer information in the space provided (This is information about the entity submitting the proposal):

Business Name	
Division of:	
Subsidiary of:	
Website Address	
Type of Business	

Address			
City			
State		Zip	
Phone	(     )     -     Ext	Fax	(     )     -
Contact Name		Title	
E-mail Address			
Payment Name if Different			

B. Funding Request Summary:

MSRC Clean Transportation Funding™ Requested:                     \$ \_\_\_\_\_

Other Co-Funding Applied to Project:                                     \$ \_\_\_\_\_

**Total Project Cost:**     \$ \_\_\_\_\_

C. Please provide the following information about the Event Center in the space provided below:

Event Center Name	
Website Address	
Type of Venue	

Address			
City			
State		Zip	
Phone	(     )     -     Ext	Fax	(     )     -
Venue Contact Name		Title	
E-mail Address			
Payment Name if Different			

D. Please provide the following information about the Transportation Service Provider in the space provided (If this information was provided in Section 8.A, simply type "See Above"):

Business Name	
Division of:	
Subsidiary of:	
Website Address	
Type of Business	

Address			
City/Town			
State/Province		Zip	
Phone	(     )     -     Ext	Fax	(     )     -
Contact Name		Title	
E-mail Address			
Payment Name if Different			

## ATTACHMENT B: PROJECT DESCRIPTION

1. **Event Center Description** - Please provide a detailed description of the major event center. At a minimum, provide the following information:
  - a) General Characteristics of the Event Center, including type of venue, facility physical size, occupancy capacity, parking lot capacity, etc.;
  - b) Average number of events held annually or during a full season of operation;
  - c) Average attendance at a regularly scheduled event; peak attendance at special events;
  - d) Traffic conditions in proximity to event center prior to, during, and following a regularly scheduled event. If possible, provide a statement from the City or County Traffic Engineering Department verifying that traffic volumes on adjacent roadways and intersections prior to and following a scheduled event exceed roadway and intersection capacity.
2. **Proposed Transportation Program Description** – Provide a detailed description of the proposed event center transportation program. This should include, at a minimum:
  - a) A description of the vehicles proposed to perform transportation services, including the make and model, model year, engine, alternative fuel type, seating positions, total capacity (seated and standing) for each vehicle proposed to be utilized in event center transportation services.
  - b) The estimated number of events for which transportation program will be implemented. Include event schedules, dates, etc. to the extent feasible.
  - c) A description of how the transportation program services will be conducted, including passenger pickup locations, passenger drop-off locations, anticipated headways, hours of operation, etc.
3. **Connectivity with Other Public Transit Service** - Please discuss potential connectivity with other public transit services, including but not limited to potential connectivity with existing regional or municipal bus lines, MetroLink, light rail, transit centers, park and ride lots, etc.
4. **Advertising, Marketing, Outreach, and Promotion of Event Center Transportation Program** – Please describe the plan for conducting outreach and promotion of the availability of event center transportation programs. This may include, but is not limited to, radio, television, newspaper, or specialty publication advertisements; other printed materials; materials developed for incorporation into a website, electronic media, etc., transportation program kickoff events, ribbon cuttings, or news conferences, etc. Please note that outreach and promotion is a mandatory element of any event center transportation program project funded by the MSRC and may be accounted for as an in-kind co-funding contribution.
5. **Program Continuation Plan** – Please describe what efforts will be made by the event center/transportation provider partnership to secure necessary resources to continue event center transportation program beyond the initial MSRC funding period.

**ATTACHMENT C: COST BREAKDOWN:** Please provide a detailed cost breakdown of the proposed project. Please note that MSRC **Clean Transportation Funding™** is intended to help offset the cost of transportation program, and cannot be applied to capital equipment purchases or used to offset lost parking facility revenues. The MSRC reserves the right to exclude cost elements deemed unallowable, as well as award funding in an amount less than the requested amount.

**ATTACHMENT D: PROJECT IMPLEMENTATION SCHEDULE**

Please provide a Milestone Schedule for your proposed event center transportation program project. This should include, at a minimum, the anticipated date event center transportation program will commence, as well as any additional information regarding scheduled events to be supported by transportation services.

**ATTACHMENT E: MEMORANDUM OF UNDERSTANDING/LETTER OF SUPPORT BETWEEN TRANSPORTATION SERVICE PROVIDER (PROPOSED CONTRACTOR) AND EVENT CENTER SITE**

For projects seeking MSRC **Clean Transportation Funding™** for implementation or expansion of event center transportation program, a fully executed Memorandum of Understanding (MOU) or letter of support must be submitted as an element of the proposal package.

The MOU/Letter of Support must be provided at the time of Proposal Submittal and must contain the following essential elements, at a minimum:

- The parties to the MOU/Letter of Support, including the transportation service provider(s) and event center site owner or authorized representative;
- The term of the MOU/Letter of Support;
- The specific location of where transportation services will be provided;
- Anticipated dates of transportation service start of operation and completion;
- Executed signatures by individuals authorized on behalf of the parties to the MOU/Letter of Support.

**ATTACHMENT F: TRANSPORTATION PROGRAM RIDERSHIP ESTIMATES**

Please provide an estimate of the anticipated utilization of the event center transportation program if implemented as proposed. Please include any empirical information used to generate ridership estimates, including but not limited to survey results, focus group results, etc.

Please note that as a condition of funding award, the contractor will be required to survey, document, or otherwise quantify the patronage of the event center transportation program in order for the MSRC to quantify motor vehicle emission reductions achieved by the transportation program.

**ATTACHMENT G: CERTIFICATIONS**

Form <b>W-9</b> (Rev. January 2005) Department of the Treasury Internal Revenue Service	<h2 style="margin:0;">Request for Taxpayer Identification Number and Certification</h2>	Give form to the requester. Do not send to the IRS.
Print or type See Specific Instructions on page 2.	Name (as shown on your income tax return)	
	Business name, if different from above	
	Check appropriate box: <input type="checkbox"/> Individual/Sole proprietor <input type="checkbox"/> Corporation <input type="checkbox"/> Partnership <input type="checkbox"/> Other ▶ ..... <input type="checkbox"/> Exempt from backup withholding	
	Address (number, street, and apt. or suite no.)	Requester's name and address (optional)
	City, state, and ZIP code	
List account number(s) here (optional)		

**Part I Taxpayer Identification Number (TIN)**

Enter your TIN in the appropriate box. The TIN provided must match the name given on Line 1 to avoid backup withholding. For individuals, this is your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the Part I instructions on page 3. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN* on page 3.

Social security number								
OR								
Employer identification number								

**Note.** If the account is in more than one name, see the chart on page 4 for guidelines on whose number to enter.

**Part II Certification**

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me), and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding, and
3. I am a U.S. person (including a U.S. resident alien).

Certification instructions. You must check out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the Certification, but you must provide your correct TIN. (See the instructions on page 4.)

<b>Sign Here</b>	Signature of U.S. person ▶	Date ▶
------------------	----------------------------	--------

**Purpose of Form**

A person who is required to file an information return with the IRS, must obtain your correct taxpayer identification number (TIN) to report, for example, income paid to you, real estate transactions, mortgage interest you paid, acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA.

**U.S. person.** Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN to the person requesting it (the requester) and, when applicable, to:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee.

**Note.** If a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

For federal tax purposes you are considered a person if you are:

- An individual who is a citizen or resident of the United States,
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States, or

• Any estate (other than a foreign estate) or trust. See Regulations sections 301.7701-6(a) and 7(a) for additional information.

**Foreign person.** If you are a foreign person, do not use Form W-9. Instead, use the appropriate Form W-8 (see Publication 515, Withholding of Tax on Nonresident Aliens and Foreign Entities).

**Nonresident alien who becomes a resident alien.** Generally, only a nonresident alien individual may use the terms of a tax treaty to reduce or eliminate U.S. tax on certain types of income. However, most tax treaties contain a provision known as a "saving clause." Exceptions specified in the saving clause may permit an exemption from tax to continue for certain types of income even after the recipient has otherwise become a U.S. resident alien for tax purposes.

If you are a U.S. resident alien who is relying on an exception contained in the saving clause of a tax treaty to claim an exemption from U.S. tax on certain types of income, you must attach a statement to Form W-9 that specifies the following five items:

1. The treaty country. Generally, this must be the same treaty under which you claimed exemption from tax as a nonresident alien.
2. The treaty article addressing the income.
3. The article number (or location) in the tax treaty that contains the saving clause and its exceptions.

4. The type and amount of income that qualifies for the exemption from tax.

5. Sufficient facts to justify the exemption from tax under the terms of the treaty article.

**Example.** Article 20 of the U.S.-China income tax treaty allows an exemption from tax for scholarship income received by a Chinese student temporarily present in the United States. Under U.S. law, this student will become a resident alien for tax purposes if his or her stay in the United States exceeds 5 calendar years. However, paragraph 2 of the first Protocol to the U.S.-China treaty (dated April 30, 1984) allows the provisions of Article 20 to continue to apply even after the Chinese student becomes a resident alien of the United States. A Chinese student who qualifies for this exception (under paragraph 2 of the first protocol) and is relying on this exception to claim an exemption from tax on his or her scholarship or fellowship income would attach to Form W-9 a statement that includes the information described above to support that exemption.

If you are a nonresident alien or a foreign entity not subject to backup withholding, give the requester the appropriate completed Form W-8.

**What is backup withholding?** Persons making certain payments to you must under certain conditions withhold and pay to the IRS 28% of such payments (after December 31, 2002). This is called "backup withholding." Payments that may be subject to backup withholding include interest, dividends, broker and barter exchange transactions, rents, royalties, nonemployee pay, and certain payments from fishing boat operators. Real estate transactions are not subject to backup withholding.

You will not be subject to backup withholding on payments you receive if you give the requester your correct TIN, make the proper certifications, and report all your taxable interest and dividends on your tax return.

Payments you receive will be subject to backup withholding if:

1. You do not furnish your TIN to the requester, or
2. You do not certify your TIN when required (see the Part II instructions on page 4 for details), or
3. The IRS tells the requester that you furnished an incorrect TIN, or
4. The IRS tells you that you are subject to backup withholding because you did not report all your interest and dividends on your tax return (for reportable interest and dividends only), or
5. You do not certify to the requester that you are not subject to backup withholding under 4 above (for reportable interest and dividend accounts opened after 1983 only).

Certain payees and payments are exempt from backup withholding. See the instructions below and the separate instructions for the Requester of Form W-9.

## Penalties

**Failure to furnish TIN.** If you fail to furnish your correct TIN to a requester, you are subject to a penalty of \$50 for each such failure unless your failure is due to reasonable cause and not to willful neglect.

**Civil penalty for false information with respect to withholding.** If you make a false statement with no reasonable basis that results in no backup withholding, you are subject to a \$500 penalty.

**Criminal penalty for falsifying information.** Willfully falsifying certifications or affirmations may subject you to criminal penalties including fines and/or imprisonment.

**Misuse of TINs.** If the requester discloses or uses TINs in violation of federal law, the requester may be subject to civil and criminal penalties.

## Specific Instructions

### Name

If you are an individual, you must generally enter the name shown on your social security card. However, if you have changed your last name, for instance, due to marriage without informing the Social Security Administration of the name change, enter your first name, the last name shown on your social security card, and your new last name.

If the account is in joint names, list first, and then circle, the name of the person or entity whose number you entered in Part I of the form.

**Sole proprietor.** Enter your individual name as shown on your social security card on the "Name" line. You may enter your business, trade, or "doing business as (DBA)" name on the "Business name" line.

**Limited liability company (LLC).** If you are a single-member LLC (including a foreign LLC with a domestic owner) that is disregarded as an entity separate from its owner under Treasury regulations section 301.7701-3, enter the owner's name on the "Name" line. Enter the LLC's name on the "Business name" line. Check the appropriate box for your filing status (sole proprietor, corporation, etc.), then check the box for "Other" and enter "LLC" in the space provided.

**Other entities.** Enter your business name as shown on required Federal tax documents on the "Name" line. This name should match the name shown on the charter or other legal document creating the entity. You may enter any business, trade, or DBA name on the "Business name" line.

**Note.** You are requested to check the appropriate box for your status (individual/sole proprietor, corporation, etc.).

### Exempt From Backup Withholding

If you are exempt, enter your name as described above and check the appropriate box for your status, then check the "Exempt from backup withholding" box in the line following the business name, sign and date the form.

Generally, individuals (including sole proprietors) are not exempt from backup withholding. Corporations are exempt from backup withholding for certain payments, such as interest and dividends.

**Note.** If you are exempt from backup withholding, you should still complete this form to avoid possible erroneous backup withholding.

**Exempt payees.** Backup withholding is not required on any payments made to the following payees:

1. An organization exempt from tax under section 501(a), any IRA, or a custodial account under section 403(b)(7) if the account satisfies the requirements of section 401(f)(2),
2. The United States or any of its agencies or instrumentalities,
3. A state, the District of Columbia, a possession of the United States, or any of their political subdivisions or instrumentalities,
4. A foreign government or any of its political subdivisions, agencies, or instrumentalities, or
5. An international organization or any of its agencies or instrumentalities.

Other payees that may be exempt from backup withholding include:

6. A corporation,

- 7. A foreign central bank of issue,
- 8. A dealer in securities or commodities required to register in the United States, the District of Columbia, or a possession of the United States,
- 9. A futures commission merchant registered with the Commodity Futures Trading Commission,
- 10. A real estate investment trust,
- 11. An entity registered at all times during the tax year under the Investment Company Act of 1940,
- 12. A common trust fund operated by a bank under section 584(a),
- 13. A financial institution,
- 14. A middleman known in the investment community as a nominee or custodian, or
- 15. A trust exempt from tax under section 664 or described in section 4947.

The chart below shows types of payments that may be exempt from backup withholding. The chart applies to the exempt recipients listed above, 1 through 15.

IF the payment is for . . .	THEN the payment is exempt for . . .
Interest and dividend payments	All exempt recipients except for 9
Broker transactions	Exempt recipients 1 through 13. Also, a person registered under the Investment Advisers Act of 1940 who regularly acts as a broker
Barter exchange transactions and patronage dividends	Exempt recipients 1 through 5
Payments over \$600 required to be reported and direct sales over \$5,000 <sup>1</sup>	Generally, exempt recipients 1 through 7 <sup>2</sup>

<sup>1</sup>See Form 1099-MISC, Miscellaneous Income, and its instructions.

<sup>2</sup>However, the following payments made to a corporation (including gross proceeds paid to an attorney under section 6045(f), even if the attorney is a corporation) and reportable on Form 1099-MISC are not exempt from backup withholding: medical and health care payments, attorneys' fees; and payments for services paid by a Federal executive agency.

## Part I. Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. If you are a resident alien and you do not have and are not eligible to get an SSN, your TIN is your IRS individual taxpayer identification number (ITIN). Enter it in the social security number box. If you do not have an ITIN, see *How to get a TIN* below.

If you are a sole proprietor and you have an EIN, you may enter either your SSN or EIN. However, the IRS prefers that you use your SSN.

If you are a single-owner LLC that is disregarded as an entity separate from its owner (see *Limited liability company (LLC)* on page 2), enter your SSN (or EIN, if you have one). If the LLC is a corporation, partnership, etc., enter the entity's EIN.

Note. See the chart on page 4 for further clarification of name and TIN combinations.

**How to get a TIN.** If you do not have a TIN, apply for one immediately. To apply for an SSN, get Form SS-5, Application for a Social Security Card, from your local Social Security Administration office or get this form online at [www.socialsecurity.gov/online/ss-5.pdf](http://www.socialsecurity.gov/online/ss-5.pdf). You may also get this form by calling 1-800-772-1213. Use Form W-7, Application for IRS Individual Taxpayer Identification Number, to apply for an ITIN, or Form SS-4, Application for Employer Identification Number, to apply for an EIN. You can apply for an EIN online by accessing the IRS website at [www.irs.gov/businesses/](http://www.irs.gov/businesses/) and clicking on Employer ID Numbers under Related Topics. You can get Forms W-7 and SS-4 from the IRS by visiting [www.irs.gov](http://www.irs.gov) or by calling 1-800-TAX-FORM (1-800-829-3676).

If you are asked to complete Form W-9 but do not have a TIN, write "Applied For" in the space for the TIN, sign and date the form, and give it to the requester. For interest and dividend payments, and certain payments made with respect to readily tradable instruments, generally you will have 60 days to get a TIN and give it to the requester before you are subject to backup withholding on payments. The 60-day rule does not apply to other types of payments. You will be subject to backup withholding on all such payments until you provide your TIN to the requester.

Note. Writing "Applied For" means that you have already applied for a TIN or that you intend to apply for one soon.

Caution: A disregarded domestic entity that has a foreign owner must use the appropriate Form W-8.

**Part II. Certification**

To establish to the withholding agent that you are a U.S. person, or resident alien, sign Form W-9. You may be requested to sign by the withholding agent even if items 1, 4, and 5 below indicate otherwise.

For a joint account, only the person whose TIN is shown in Part I should sign (when required). Exempt recipients, see *Exempt From Backup Withholding* on page 2.

**Signature requirements.** Complete the certification as indicated in 1 through 5 below.

1. Interest, dividend, and barter exchange accounts opened before 1984 and broker accounts considered active during 1983. You must give your correct TIN, but you do not have to sign the certification.

2. Interest, dividend, broker, and barter exchange accounts opened after 1983 and broker accounts considered inactive during 1983. You must sign the certification or backup withholding will apply. If you are subject to backup withholding and you are merely providing your correct TIN to the requester, you must cross out item 2 in the certification before signing the form.

3. Real estate transactions. You must sign the certification. You may cross out item 2 of the certification.

4. Other payments. You must give your correct TIN, but you do not have to sign the certification unless you have been notified that you have previously given an incorrect TIN. "Other payments" include payments made in the course of the requester's trade or business for rents, royalties, goods (other than bills for merchandise), medical and health care services (including payments to corporations), payments to a nonemployee for services, payments to certain fishing boat crew members and fishermen, and gross proceeds paid to attorneys (including payments to corporations).

5. Mortgage interest paid by you, acquisition or abandonment of secured property, cancellation of debt, qualified tuition program payments (under section 529), IRA, Coverdell ESA, Archer MSA or HSA contributions or distributions, and pension distributions. You must give your correct TIN, but you do not have to sign the certification.

**What Name and Number To Give the Requester**

For this type of account:	Give name and SSN of:
1. Individual	The individual
2. Two or more individuals (joint account)	The actual owner of the account or, if combined funds, the first individual on the account <sup>1</sup>
3. Custodian account of a minor (Uniform Gift to Minors Act)	The minor <sup>2</sup>
4. a. The usual revocable savings trust (grantor is also trustee)	The grantor-trustee <sup>1</sup>
b. So-called trust account that is not a legal or valid trust under state law	The actual owner <sup>1</sup>
5. Sole proprietorship or single-owner LLC	The owner <sup>3</sup>
For this type of account:	Give name and EIN of:
6. Sole proprietorship or single-owner LLC	The owner <sup>3</sup>
7. A valid trust, estate, or pension trust	Legal entity <sup>4</sup>
8. Corporate or LLC electing corporate status on Form 8832	The corporation
9. Association, club, religious, charitable, educational, or other tax-exempt organization	The organization
10. Partnership or multi-member LLC	The partnership
11. A broker or registered nominee	The broker or nominee
12. Account with the Department of Agriculture in the name of a public entity (such as a state or local government, school district, or prison) that receives agricultural program payments	The public entity

<sup>1</sup>List first and circle the name of the person whose number you furnish. If only one person on a joint account has an SSN, that person's number must be furnished.

<sup>2</sup>Circle the minor's name and furnish the minor's SSN.

<sup>3</sup>You must show your individual name and you may also enter your business or "DBA" name on the second name line. You may use either your SSN or EIN (if you have one). If you are a sole proprietor, IRS encourages you to use your SSN.

<sup>4</sup>List first and circle the name of the legal trust, estate, or pension trust. (Do not furnish the TIN of the personal representative or trustee unless the legal entity itself is not designated in the account title.)

Note. If no name is circled when more than one name is listed, the number will be considered to be that of the first name listed.

**Privacy Act Notice**

Section 6109 of the Internal Revenue Code requires you to provide your correct TIN to persons who must file information returns with the IRS to report interest, dividends, and certain other income paid to you, mortgage interest you paid, the acquisition or abandonment of secured property, cancellation of debt, or contributions you made to an IRA, or Archer MSA or HSA. The IRS uses the numbers for identification purposes and to help verify the accuracy of your tax return. The IRS may also provide this information to the Department of Justice for civil and criminal litigation, and to cities, states, and the District of Columbia to carry out their tax laws. We may also disclose this information to other countries under a tax treaty, to federal and state agencies to enforce federal nontax criminal laws, or to federal law enforcement and intelligence agencies to combat terrorism.

You must provide your TIN whether or not you are required to file a tax return. Payers must generally withhold 28% of taxable interest, dividend, and certain other payments to a payee who does not give a TIN to a payer. Certain penalties may also apply.

**DISADVANTAGED BUSINESS CERTIFICATION**

Federal guidance for utilization of disadvantaged business enterprises allows a vendor to be deemed a small business enterprise (SBE), minority business enterprise (MBE) or women business enterprise (WBE) if it meets the criteria below.

- is certified by the Small Business Administration or
- is certified by a state or federal agency or
- is an independent MBE(s) or WBE(s) business concern which is at least 51 percent owned and controlled by minority group member(s) who are citizens of the United States.

Statements of certification:

As a prime contractor to the SCAQMD, \_\_\_\_\_ (name of business) will engage in good faith efforts to achieve the fair share in accordance with 40 CFR Section 31.36(e), and will follow the six affirmative steps listed below **for contracts or purchase orders funded in whole or in part by federal grants and contracts.**

1. Place qualified SBEs, MBEs, and WBEs on solicitation lists.
2. Assure that SBEs, MBEs, and WBEs are solicited whenever possible.
3. When economically feasible, divide total requirements into small tasks or quantities to permit greater participation by SBEs, MBEs, and WBEs.
4. Establish delivery schedules, if possible, to encourage participation by SBEs, MBEs, and WBEs.
5. Use services of Small Business Administration, Minority Business Development Agency of the Department of Commerce, and/or any agency authorized as a clearinghouse for SBEs, MBEs, and WBEs.
6. If subcontracts are to be let, take the above affirmative steps.

(a) Self-Certification Verification:

(a) *Definitions*

**Disabled Veteran-Owned Business Enterprise** means a business that meets all of the following criteria:

- is a sole proprietorship or partnership of which is at least 51 percent owned by one or more disabled veterans, or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more disabled veterans; a subsidiary which is wholly owned by a parent corporation but only if at least 51 percent of the voting stock of the parent corporation is owned by one or more disabled veterans; or a joint venture in which at least 51 percent of the joint venture's management and control and earnings are held by one or more disabled veterans.
- the management and control of the daily business operations are by one or more disabled veterans. The disabled veterans who exercise management and control are not required to be the same disabled veterans as the owners of the business.
- is a sole proprietorship, corporation, partnership, or joint venture with its primary headquarters office located in the United States and which is not a branch or subsidiary of a foreign corporation, firm, or other foreign-based business.

**Joint Venture** means that one party to the joint venture is a MBE/WBE/DVBE and owns at least 51 percent of the joint venture. In the case of a joint venture formed for a single project this means that MBE/WBE/DVBE will receive at least 51 percent of the project dollars.

**Local Business** means a business that meets all of the following criteria:

- has an ongoing business within the boundary of the SCAQMD at the time of bid application.
- performs 90 percent of the work within SCAQMD's jurisdiction.

**Minority-Owned Business Enterprise** means a business that meets all of the following criteria:

- is at least 51 percent owned by one or more minority persons or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more minority persons.
- is a business whose management and daily business operations are controlled or owned by one or more minority person.
- is a business which is a sole proprietorship, corporation, partnership, joint venture, an association, or a cooperative with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign business.

"Minority" person means a Black American, Hispanic American, Native American (including American Indian, Eskimo, Aleut, and Native Hawaiian), Asian-Indian American (including a person whose origins are from India, Pakistan, or Bangladesh), Asian-Pacific American (including a person whose origins are from Japan, China, the Philippines, Vietnam, Korea, Samoa, Guam, the United States Trust Territories of the Pacific, Northern Marianas, Laos, Cambodia, or Taiwan).

**Small Business Enterprise** means a business that meets the following criteria:

- a. 1) an independently owned and operated business; 2) not dominant in its field of operation; 3) together with affiliates is either:
  - A service, construction, or non-manufacturer with 100 or fewer employees, and average annual gross receipts of ten million dollars (\$10,000,000) or less over the previous three years, or
  - A manufacturer with 100 or fewer employees.
- b. Manufacturer means a business that is both of the following:
  - 1) Primarily engaged in the chemical or mechanical transformation of raw materials or processed substances into new products.

- 2) Classified between Codes 311000 and 339000, inclusive, of the North American Industrial Classification System (NAICS) Manual published by the United States Office of Management and Budget, 2007 edition.

**Women-Owned Business Enterprise** means a business that meets all of the following criteria:

- is at least 51 percent owned by one or more women or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more women.
- is a business whose management and daily business operations are controlled or owned by one or more women.

is a business which is a sole proprietorship, corporation, partnership, or a joint venture, with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign business.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 11

PROPOSAL: Legislative and Public Affairs Report

SYNOPSIS: This report highlights December 2010 outreach activities of Legislative and Public Affairs, which include: Environmental Justice Update, Community Events/Public Meetings, Business Assistance, and Outreach to Business and Federal, State, and Local Government.

COMMITTEE: Not Applicable

RECOMMENDED ACTION:  
Receive and file.

Barry R. Wallerstein, D.Env.  
Executive Officer

OA:AG:MC:DA

---

### **Background**

This report summarizes the activities of Legislative and Public Affairs for December 2010. The report includes four major areas: Environmental Justice Update; Community Events/Public Meetings (including the Speakers Bureau/Visitor Services, Communications Center, and Public Information Center); Business Assistance; and Outreach to Business and Federal, State, and Local Governments.

### **ENVIRONMENTAL JUSTICE UPDATE**

The following are key environmental justice-related activities in which staff participated during December 2010. These events involve communities which suffer disproportionately from adverse air quality impacts.

- On December 2, staff participated in the U.S. Environmental Protection Agency (U.S. EPA) 40th Anniversary celebration, held by U.S. EPA Region 9 – Pacific Southwest, at which many people/organizations that have advocated for environmental justice issues were recognized.

- On December 22, a Board Member, Board assistant and staff attended a meeting with Monsignor John Moretta at the Church of the Resurrection in Los Angeles where discussions were held on environmental justice issues including the Clean Communities Plan and health impacts to low-income community members.

### **COMMUNITY EVENTS/PUBLIC MEETINGS**

Each year, thousands of residents engage in valuable information exchanges through events and meetings that AQMD sponsors alone, or in partnership with others.

Attendees typically receive the following information: tips on reducing their exposure to smog and its health effects; invitations or notices of conferences, seminars, workshops and other public events, ways to participate in AQMD rule and policy development; and assistance in resolving air quality-related problems. The events that AQMD staff attended and provided information and updates include:

- December 4 City of Hemet Centennial Christmas Parade
- December 9 Ready, Set, Charge, an EV101 Workshop for Local Governments, Carson

### **Speakers Bureau/Visitor Services**

AQMD receives requests for staff to speak on a variety of air quality-related issues. The requests come from organizations such as trade associations, chambers of commerce, community-based groups, schools, hospitals and health-based organizations. AQMD also hosts visitors from around the world who meet with staff on a wide range of air quality issues.

- On December 1, staff provided a presentation on Rule 1147 and issues related to auto body repair facilities to 25 representatives of Avalon Collision Center in Rancho Cucamonga.
- On December 2, staff provided an air quality briefing and tour of AQMD's headquarters facility and laboratory for six representatives from Loma Linda University School of Public Health.

### **Communication Center Statistics**

The Communication Center handles calls on the AQMD main line, 1-800-CUT-SMOG<sup>®</sup> line and Spanish line. Calls received in the month of December 2010 are summarized below:

Main Line Calls	1,143
1-800-CUT-SMOG® Line	498
After Hours Calls*	106
Spanish Line Calls	29
Clean Air Connections	12
Total Phone Calls**	1,788

\* Saturday, Sunday, holidays and after 9:00 p.m., Monday through Friday.

\*\* These figures reflect only the first two weeks of December as the electronic call-logging system was down for the remainder of December.

### **Public Information Center Statistics**

The Public Information Center (PIC) handles phone calls and walk-in requests for general information. Information for the month of December 2010 is summarized below:

Visitor Transactions	188
Packages Mailed Out	0
Calls Received by PIC Staff	45
Calls to Automated System	0*
Total Phone Calls	45
E-mail Advisories Sent	32,988

\* No data because the Contact Center Manager Server was experiencing difficulties.

### **BUSINESS ASSISTANCE**

AQMD assists businesses by notifying them of proposed regulations so they can participate in the development of these rules. AQMD also works with other agencies and states to identify efficient, cost-effective ways to reduce air pollution and shares that information broadly. Additionally, staff provides personalized assistance to small businesses both over the telephone and by on-site consultation. The information is summarized below.

- Conducted three free on-site consultations
- Provided assistance in filing one request for variance
- Provided permit application assistance to 110 companies
- Issued 9 clearance letters

Types of business assisted:

- ✓ Chemical mixing
- ✓ Auto body shops
- ✓ Gasoline stations
- ✓ Abrasive blasting
- ✓ Metal plating
- ✓ Building management
- ✓ Powder coating
- ✓ Restaurants
- ✓ Dry cleaners
- ✓ Construction

### **OUTREACH TO BUSINESS AND FEDERAL, STATE, AND LOCAL GOVERNMENT**

Field visits and communications were conducted with elected officials or staff from the following cities:

Alhambra, Agoura Hills, Aliso Viejo, Anaheim, Arcadia, Artesia, Avalon, Azusa, Baldwin Park, Banning, Beaumont, Bell, Bell Gardens, Bellflower, Beverly Hills, Big Bear Lake, Bradbury, Brea, Buena Park, Burbank, Calabasas, Calimesa, Canyon Lake, Carson, Cathedral City, Cerritos, Chino, Chino Hills, Claremont, Coachella, Colton, Commerce, Compton, Corona, Costa Mesa, Covina, Cudahy, Culver City, Cypress, Dana Point, Desert Hot Springs, Diamond Bar, Downey, Duarte, El Monte, El Segundo, Fontana, Fountain Valley, Fullerton, Garden Grove, Gardena, Glendale, Glendora, Grand Terrace, Hawaiian Gardens, Hawthorne, Hemet, Hermosa Beach, Hidden Hills, Highland, Huntington Beach, Huntington Park, Indian Wells, Indio, Industry, Inglewood, Irvine, Irwindale, La Cañada Flintridge, La Habra, La Habra Heights, La Mirada, La Palma, La Puente, La Quinta, La Verne, Laguna Beach, Laguna Hills, Laguna Niguel, Laguna Woods, Lake Elsinore, Lake Forest, Lakewood, Lawndale, Loma Linda, Lomita, Long Beach, Los Alamitos, Los Angeles, Lynwood, Malibu, Manhattan Beach, Maywood, Menifee, Mission Viejo, Monrovia, Montclair, Montebello, Monterey Park, Moreno Valley, Murrieta, Newport Beach, Norco, Norwalk, Ontario, Orange, Palm Desert, Palm Springs, Palos Verdes Estates, Paramount, Pasadena, Perris, Pico Rivera, Placentia, Pomona, Rancho Cucamonga, Rancho Mirage, Rancho Palos Verdes, Rancho Santa Margarita, Redlands, Redondo Beach, Rialto, Riverside, Rolling Hills, Rolling Hills Estates, Rosemead, San Bernardino, San Clemente, San Dimas, San Fernando, San Gabriel, San Jacinto, San Juan Capistrano, San Marino, Santa Ana, Santa Clarita, Santa Fe Springs, Santa Monica, Seal Beach, Sierra Madre, Signal Hill, South El Monte, South Gate, South Pasadena, Stanton, Temecula, Temple City, Torrance, Tustin, Upland, Vernon, Villa Park, Walnut, West Covina, West Hollywood, Westlake Village, Westminster, Whittier, Wildomar, Yorba Linda, and Yucaipa.

AGENDA NO. 12

REPORT: Hearing Board Report

SYNOPSIS: This reports the actions taken by the Hearing Board during the period of December 1 through December 31, 2010.

COMMITTEE: Not Applicable

RECOMMENDED ACTION:

Receive and file this report.

Edward Camarena  
Chairman of Hearing Board

SM

---

Three summaries are attached: **Rules From Which Variances and Orders for Abatement Were Requested in 2010** and **December 2010 Hearing Board Cases**.

The total number of appeals filed during the period December 1 to December 31, 2010 is 0; and total number of appeals filed during the period of January 1 to December 31, 2010 is 12.

## Report of December 2010 Hearing Board Cases

Case Name and Case No.	Rules	Reason for Petition	District Position/ Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
1. Air Products and Chemicals, Inc. Case No. 4276-12 (J. Panasiti)	203(b) 2004(f)(1) 2012(c)(2)(A) 3002(c)(1)	A malfunction of the reformer stack wet oxygen analyzer occurred. Petitioner was unable to repair it within the 96 hours grace period.	Not Opposed/Granted	Ex Parte EV granted commencing 12/28/10 and continuing for 30 days or until the EV hearing currently scheduled for 1/5/11, whichever comes first.	None.
2. AOC, LLC Case #5733-3 (N. Sanchez)	203(b) 2004(f)(1) 3002(c)(1)	The afterburner controlling the VOC from the mixing tanks will shut down when the boiler that fuels it is shut down for the State required inspection.	Not Opposed/Granted	SV granted commencing 12/5/10 and continuing through 12/10/10.	VOC: Estimated at 18 lbs over six days
3. BP West Coast Products, LLC Case #5357-69 (K. Manwaring)	203(b) 463(e)(4) 3002(c)(1)	The floating roof on the gasoline storage tank failed (submerged). Petitioner is unable to rectify the problem within the 72 hours allotted by Rule 463.	Not Opposed/Granted	Ex Parte EV granted commencing 12/17/10 and continuing through 12/21/10.	VOC: TBD by 1/7/11
4. BP West Coast Products, LLC Case No. 5357-70 (T. Barrera)	203(b) 463(c)(2)(C) 463(e)(4) 3002(c)(1)	Petitioner is unable to complete the removal of VOCs from roof of floating tank in the time allotted by EV Case No. 5357-69.	Not Opposed/Granted	Ex Parte EV granted commencing 12/22/10 and continuing for 30 days or until the EV hearing currently scheduled for 1/5/11, whichever occurs first.	TBD by 1/6/11
5. Chevron Products Company Case #831-357 (N. Sanchez)	203(b) 2004(f)(1) 3002(c)(1)	The NH3 CEMS was dismantled and sent to the manufacturer for repairs.	Not Opposed/Granted	SV granted commencing 12/1/10 and continuing through 2/3/11.	None.
6. City of Los Angeles, Sanitation Bureau, Hyperion Treatment Plant Case #1212-32 (J. Panasiti)	203(b) 431.1 3002(c)	Digester gas will be vented to flare during demolition of existing equipment and installation of four new digester gas compressors.	Not Opposed/Granted	SV granted commencing 12/08/10 and continuing through 3/13/11.	H2S: 71 lbs/day for 6 days
7. Double Tree Hotel Carson Case #5797-1 (N. Sanchez)	203(a) 222 1146.2	Petitioner is operating five unregistered boilers that exceed emission limits.	Not Opposed/ Dismissed	IV dismissed without prejudice for lack of good cause. RV currently scheduled for 1/13/11.	N/A

8. Eastern Municipal Water District Case #4937-45 (N. Sanchez)	202(b) 1110.2(d)(1)(B)(ii)	Petitioner is operating the ICE in excess of the NO <sub>x</sub> limit in Rule 1110.2 and is in noncompliance with the conditions of its permit.	Not Opposed/Granted	SV granted for a period of 120 non-consecutive hours in a window-of-time starting on 12/22/10 and continuing through 3/21/11.	NO <sub>x</sub> : 1554 lbs/for 120 hours
9. ExxonMobil Oil Corporation Case #1183-451 (K. Manwaring)	203(b) 2004(f)(1) 3002(c)(1)	Petitioner must take the SCR offline to conduct maintenance and repair of the air preheater and SCR.	Not Opposed/Granted	SV & AOC granted for a period of 168 consecutive hours in a window-of-time commencing on 2/10/11 and continuing through no later than 4/25/11.	NO <sub>x</sub> : 2352 lbs/variance period
10. L.A. City, Department of Airports Case #4703-7 (J. Panasiti)	203(b) 2004(f)(1) 3002(c)(1)	Petitioner seeks an increase in rock crusher throughput limit to meet the construction deadline.	Not Opposed/Granted	SV granted commencing 12/22/10 and continuing through 3/21/11.	TBD by 1/6/11
11. Lunday-Thagard Company Case #2033-17 (N. Feldman)	202(b) 203(b) 204 2004(f)(1)	Petitioner exceeds the throughput limits on VOC storage tanks, and is waiting for the issuance of permit modifications.	Not Opposed/Granted	M/E granted commencing 12/16/10 and continuing through 5/1/11.	VOC: 2 lbs/day
12. SCAQMD vs. 520 La Fayette Park, LLC Case #5798-1 (N. Sanchez)	203(a)	Respondent is operating the boiler without a permit.	Stipulated/Issued	O/A issued. The Hearing Board shall retain jurisdiction over this matter until 3/30/11.	N/A
13. SCAQMD vs. Gas Dispensing Facilities Case #5795-1 (N. Sanchez)	203(b) 461(c)(2)(A) 461(e)(1)	Respondents are each operating gasoline dispensing facilities without required in-station diagnostic.	Stipulated/Issued	Group O/A issued. The Hearing Board shall retain jurisdiction over this matter until 7/31/11, at which time this O/A, if it has not been properly extended, shall expire.	N/A
14. SCAQMD vs. Santana Cycles, Inc. Case #4403-5 (J. Panasiti)	1107	Respondent is using noncompliant coatings.	Stipulated/Issued	O/A issued. The Hearing Board shall retain jurisdiction over this matter until all increments of progress are completed or 11/18/11, whichever occurs first.	N/A
15. SCAQMD vs. Mitsubishi Cement Corporation Case #5545-1 (J. Panasiti)	203(b)	Respondent is waiting for the issuance of permits pending CEQA review.	Not Stipulated/ Dismissed	Mod. O/A dismissed without prejudice as the Board determined that it is unclear whether it has authority to modify the order without the stipulation of both parties and it is unwilling at this time to bring its own motion for a new order for abatement in this matter.	N/A

16. Southern California Edison Company Case #1262-97 (N. Sanchez)	203(b)	The emergency standby generator exceeds the limit on hours of operation.	Not Opposed/ Dismissed	IV dismissed without prejudice for lack of good cause. SV currently scheduled for 12/21/10.	N/A
17. Southern California Edison Company Case #1262-97 (N. Sanchez)	203(b)	The emergency standby generator exceeds the limit on hours of operation.	Not Opposed/ Dismissed	SV dismissed without prejudice.	N/A
18. Southern California Edison Company Case #1262-98 (Consent Calendar Item) (N. Sanchez)	203(b)	Respondent has exceeded the annual operation limit for the emergency generator.	Stipulated/Issued	O/A issued. The Hearing Board shall retain jurisdiction over this matter until 1/7/11.	N/A

REPORT: Lead Agency Projects and Environmental Documents Received by the AQMD

SYNOPSIS: This report provides, for the Board's consideration, a listing of CEQA documents received by the AQMD between December 1, 2010, and December 31, 2010, and those projects for which the AQMD is acting as lead agency pursuant to CEQA.

COMMITTEE: Mobile Source, January 21, 2011

RECOMMENDED ACTION:  
Receive and file.

Barry R. Wallerstein, D.Env.  
Executive Officer

EC:LT:SN:IM:AK

---

## Background

**CEQA Document Receipt and Review Logs (Attachments A and B)** – Each month, the AQMD receives numerous CEQA documents from other public agencies on projects that could adversely affect air quality. A listing of all documents received during the reporting period of December 1, 2010 through December 31, 2010, is contained in Attachment A. A list of active projects from previous reporting periods for which AQMD staff is continuing to evaluate or prepare comments is included as Attachment B.

The Intergovernmental Review function, which consists of reviewing and commenting on the adequacy of the air quality analysis in CEQA documents prepared by other lead agencies, is consistent with the Board's 1997 Environmental Justice Guiding Principles and Initiative #4. Consistent with the Environmental Justice Program Enhancements for FY 2002-03 approved by the Board in September 2002, each of the attachments notes those proposed projects where the AQMD has been contacted regarding potential air quality-related environmental justice concerns. The AQMD has established an internal central contact to receive information on projects with potential air quality-related

environmental justice concerns. The public may contact the AQMD about projects of concern by the following means: in writing via fax, e-mail, or standard letters; through telephone communication; as part of oral comments at AQMD meetings or other meetings where AQMD staff is present; or submitting newspaper articles. The attachments also identify for each project the dates of the public comment period and the public hearing date, if known at the time the CEQA document is received by the AQMD.

At the January 6, 2006 Board meeting, the Board approved the Workplan for the Chairman's Clean Port Initiatives. One action item of the Chairman's Initiatives was to prepare a monthly report describing CEQA documents for projects related to goods movement and to make full use of the process to ensure the air quality impacts of such projects are thoroughly mitigated. In response to describing goods movement CEQA documents, Attachments A and B were reorganized to group projects of interest into the following categories: goods movement projects; schools; landfills and wastewater projects; airports; and general land use projects; etc. In response to the mitigation component, guidance information on mitigation measures were compiled into a series of tables relative to the following equipment: off-road engines, on-road engines, harbor craft, ocean-going vessels, locomotives, and fugitive dust. These mitigation measure tables are on the CEQA webpages portion of the AQMD's website. Staff will continue compiling tables of mitigation measures for other emission sources including airport ground support equipment, etc.

As resources permit, staff focuses on reviewing and preparing comments for projects: where the AQMD is a responsible agency; that may have significant adverse regional air quality impacts (e.g., special event centers, landfills, goods movement, etc.); that may have localized or toxic air quality impacts (e.g., warehouse and distribution centers); where environmental justice concerns have been raised; and those projects for which a lead or responsible agency has specifically requested AQMD review.

During the period December 1, 2010, through December 31, 2010, the AQMD received 39 CEQA documents. Of the total of 56 documents listed in Attachments A and B:

- 22 comment letters were sent;
- 8 documents were reviewed, but no comments were made;
- 22 documents are currently under review;
- 3 documents did not require comments (e.g., public notices, plot plans, Final Environmental Impact Reports); and
- 0 documents were not reviewed.

Copies of all comment letters sent to lead agencies can be found on the AQMD's CEQA webpage at the following internet address: [www.aqmd.gov/ceqa/letters.html](http://www.aqmd.gov/ceqa/letters.html).

**AQMD Lead Agency Projects (Attachment C)** – Pursuant to CEQA, the AQMD periodically acts as lead agency for stationary source permit projects. Under CEQA, the lead agency is responsible for determining whether an Environmental Impact Report (EIR) or a Negative Declaration (ND) is appropriate for any proposal considered to be a “project” as defined by CEQA. An EIR is prepared when the AQMD, as lead agency, finds substantial evidence that the proposed project may have significant adverse effects on the environment. A ND or Mitigated Negative Declaration (MND) may be prepared if the AQMD determines that the proposed project will not generate significant adverse environmental impacts, or the impacts can be mitigated to less than significance. The ND and MND are written statements describing the reasons why proposed projects will not have a significant adverse effect on the environment and, therefore, do not require the preparation of an EIR.

Attachment C to this report summarizes the active projects for which the AQMD is lead agency and is currently preparing or has prepared environmental documentation. Through the end of December, the AQMD received no new requests to be the lead agency for stationary source permit application projects. No CEQA documents for permit application projects were certified in December. As noted in Attachment C, through the end of December 2010, the AQMD continued working on the CEQA documents for five active projects.

To date in 2010, AQMD staff has been responsible for preparing or having prepared CEQA documents for seven stationary source permit projects, four continuing from 2009. Through the end of December 2010, two CEQA documents have been certified for permit application projects.

INCOMING CEQA DOCUMENTS LOG  
DECEMBER 1, 2010 TO DECEMBER 31, 2010**

<u>SCAQMD LOG-IN NUMBER</u> PROJECT TITLE	PROJECT DESCRIPTION	TYPE OF DOC.	LEAD AGENCY	COMMENT STATUS
<b><i>Goods Movement</i></b> <u>LAC101221-01</u> Evergreen - Replacement of Three Container Cranes, Berths 226-231	This document consists of a public hearing on a Notice of Exemption to receive public comments prior to considering the Coastal Development Permit to replace three container cranes with three larger cranes.  Comment Period: N/A Public Hearing: 1/6/2011	Other	Port of Los Angeles	Currently under review
<b><i>Industrial and Commercial</i></b> <u>ORC101210-01</u> Ayres Hotel and Parking Structure	The proposed project consists of consolidating several parcels for the redevelopment of an existing hotel. The project includes the construction of a new 93,452 square-foot hotel building and parking structure on 114,996 square feet of land.  Comment Period: 12/9/2010 - 1/3/2011 Public Hearing: N/A	Mitigated ND	City of Orange	Document reviewed - No comments
<b><i>Industrial and Commercial</i></b> <u>RVC101209-01</u> Plot Plan No. 24763	This document consists of initial case transmittal for the proposed project to extend the life of the permit of an operating and permitted trucking operation for 94 truck and trailer parking spaces, 10 standard spaces and a minimum of 14,810 square feet of landscaping area.  Comment Period: N/A Public Hearing: N/A	Other	Riverside County	Document does not require comments
<b><i>Industrial and Commercial</i></b> <u>RVC101221-03</u> Clay Street Business Park (TPM 36192)	This document consists of responses to SCAQMD comments. The proposed project includes the subdivision of 68.92 gross acres into 20 industrial parcels and four lettered lots for ingress/egress, open space and detention basin purposes. The project will comprise approximately 889,502 square feet of light industrial and business park building area which, at full occupancy will support approximately 900 employees.  Comment Period: N/A Public Hearing: 1/5/2011	FEIR	Riverside County	Currently under review
<b><i>Industrial and Commercial</i></b> <u>SBC101209-02</u> P201000498/CUP	This document consists of a project notice for the conditional use permit to add five buildings as an industrial park to an existing steel fabrication complex.  Comment Period: 11/9/2010 - 11/22/2010 Public Hearing: N/A	Other	San Bernardino County	Document reviewed - No comments
<b><i>Institutional (schools, government, etc.)</i></b> <u>LAC101207-03</u> Black Hawk Helicopter Company at Los Alamitos Joint Forces Training Base	This document consists of a notice of preparation of an Environmental Assessment to analyze the potential environmental effects of stationing a Black Hawk Company at the Los Alamitos Joint Forces Training Base Los Alamitos.  Comment Period: 12/7/2010 - 1/5/2011 Public Hearing: N/A	Other	United States Army Reserve	AQMD commented 12/16/2010

DEIR - Draft Environmental Impact Report  
FEIR - Final Environmental Impact Report  
RDEIR - Revised Draft Environmental Impact Report  
SEIR - Subsequent Environmental Impact Report

<u>SCAQMD LOG-IN NUMBER</u> PROJECT TITLE	PROJECT DESCRIPTION	TYPE OF DOC.	LEAD AGENCY	COMMENT STATUS
<i>Plans and Regulations</i> <u>LAC101209-03</u> Downtown Specific Plan	The proposed project consists of the Downtown Plan Project which at full implementation of the could increase the density and intensity of existing Downtown land uses by allowing up to: 1) approximately 5,000 new residential units; 2) 15 million square feet of new office, civic, cultural, and similar uses; 3) 384,000 square feet of new retail; 4) 96,000 square feet of restaurants; and 5) 800 new hotel rooms. Comment Period: 12/10/2010 - 4/4/2011 Public Hearing: N/A	DEIR	City of Long Beach	Currently under review
<i>Plans and Regulations</i> <u>LAC101223-02</u> La Canada Flintridge General Plan Update (GPA 05-01)	The proposed project consists of an update to the General Plan. Under the proposed project, residential dwelling units are projected to increase by an additional 814 units to a total of 7,883 units, while commercial space is expected to expand from 845,696 to 2,100,703 square feet, an increase of approximately 1,355,783 square feet, with the majority being added as mixed-use commercial. Comment Period: 12/22/2010 - 12/21/2011 Public Hearing: N/A	Draft PEIR	City of La Cañada Flintridge	Currently under review
<i>Plans and Regulations</i> <u>LAC101228-04</u> ZON2010-00183	The proposed project consists of a code amendment to establish reasonable accommodation procedures for individuals with disabilities; establishing standards for single room occupancy units; identifying a zone district in which emergency shelters are a permitted use, and identifying in the development code that transitional and supportive housing are considered a residential use of property. Comment Period: 12/24/2010 - 1/18/2011 Public Hearing: N/A	ND	City of Palos Verdes	Document does not require comments
<i>Plans and Regulations</i> <u>RVC101201-01</u> La Quinta General Plan Update	The proposed project consists of the assignment of land use designations on incorporated lands, and its Sphere of Influence. Comment Period: 11/24/2010 - 12/23/2010 Public Hearing: N/A	NOP/IS	City of La Quinta	AQMD commented 12/16/2010
<i>Plans and Regulations</i> <u>RVC101208-01</u> Proposed 2011 Amendment to the Redevelopment Plan for the Merged Desert Hot Springs Redevelopment Project	The proposed project consists of adopting an amendment adding territory to the Merged Desert Hot Springs Redevelopment Project. The proposed amendment consists of an approximately 1,535 acre expansion of the existing project area and removing certain qualifying parcels or groups of parcels from within the Merged Redevelopment Project and reintegrating them into the Added Territory under a new base year and base year values. Comment Period: 12/8/2010 - 1/6/2011 Public Hearing: N/A	NOP/IS	Desert Hot Springs Redevelopment Agency	AQMD commented 12/16/2010

<u>SCAQMD LOG-IN NUMBER</u> PROJECT TITLE	PROJECT DESCRIPTION	TYPE OF DOC.	LEAD AGENCY	COMMENT STATUS
<b><i>Plans and Regulations</i></b> <u>RVC101214-03</u> College Park Specific Plan	The proposed project encompasses 510+ acres in the northern area of the urbanized portion of the City of Palm Springs. The plan includes the future 118+ acres College of the Desert West Valley Campus, and additional multi-family residential, industrial and commercial development. The planning area is approximately 75 percent built out. Comment Period: 12/13/2010 - 1/28/2011 Public Hearing: N/A	DEIR	City of Palm Springs	Currently under review
<b><i>Retail</i></b> <u>LAC101207-02</u> Target Retail Shopping Center Project	The proposed project consists of demolishing the existing 59,651 square feet of single-story buildings, electrical substation, and surface parking lot for the construction of a 194,749 gross square feet retail shopping center. Comment Period: 12/7/2010 - 1/14/2011 Public Hearing: N/A	NOP (No IS Attached)	City of Los Angeles	AQMD commented 12/16/2010
<b><i>Retail</i></b> <u>RVC101217-01</u> Gless Ranch	The proposed project consists of removing the existing orange grove and associated structures on site. The existing fruit stand will stay on site and be incorporated into the larger development plan. The 40-acre site will be developed into a commercial retail center. The total size of the proposed project will not exceed 420,000 square feet. The project includes an approximately 138,516 square-foot Target store, an approximately 124,076 square-foot home improvement center with approximately 31,357 square feet of outdoor garden center, and approximately 125,608 square feet of other retail pads. Comment Period: 12/17/2010 - 1/16/2011 Public Hearing: 1/6/2011	NOP/IS	City of Riverside	AQMD commented 12/29/2010
<b><i>Transportation</i></b> <u>ORC101208-02</u> Pacific Coast Highway/ Del Prado Avenue Phase 1 Street Improvement Project	The proposed project consists of the Pacific Coast Highway/ Del Prado Avenue Phase 1 streetscape improvements for the Dana Point Town Center. Comment Period: 12/8/2010 - 1/17/2011 Public Hearing: N/A	DEIR	City of Dana Point	Currently under review
<b><i>Transportation</i></b> <u>RVC101203-03</u> Perris Valley Line	The proposed project consists of extending the Metrolink commuter rail service between Riverside and Perris using existing Burlington Northern Santa Fe and San Jacinto Branch Line track. A new "Citrus Connection" would be constructed to link them. Comment Period: 12/1/2010 - 1/6/2011 Public Hearing: N/A	Draft SupEIR	Perris Valley Line	Document reviewed - No comments

ACTIVE AQMD LEAD AGENCY PROJECTS  
THROUGH DECEMBER 31, 2010**

Project Description	Project Proponent	Type of Document	Status	Consultant
# Operators of Warren E & P, Inc. are proposing to install a new flare, heater treater, etc., at their refinery facility in the Wilmington area of Los Angeles. The proposed project also includes bringing six microturbines into compliance with SCAQMD permit requirements.	E & P Warren	Subsequent Mitigated Negative Declaration	SCAQMD staff is currently reviewing the administrative Draft Subsequent MND.	Environ International Corp.
The proposed project is a biomass-to-energy project that would be located at the Sunshine Canyon Landfill. Specifically, landfill operators are proposing to generate electricity by installing turbines to burn landfill gas that is currently flared.	Sunshine Canyon Landfill	Subsequent EIR	Public comment period for Notice of Preparation/Initial Study closed on December 18, 2009. SCAQMD staff is currently reviewing the administrative Draft SEIR.	ARCADIS
Shell Carson Terminal operators are proposing a permit modification to base throughput on ethanol and gasoline, not just ethanol.	Shell Carson Distribution Terminal	EIR	Public comment period for Notice of Preparation/Initial Study closed May 18, 2010. SCAQMD staff is currently reviewing the administrative Draft EIR.	AECOM
Petro Diamond operators are proposing to change current permit conditions to allow an increase in the number of annual marine vessel visits to the terminal, but limit ship visits per month.	Petro Diamond Terminal Company	Not Yet Determined	Consultant preparing Initial Study	SABS Environmental Services
The project is being proposed to comply with the recently approved amendments to the SOx RECLAIM program (Regulation XX). Specifically, the proposed project consists of installing a wet gas scrubber on the sulfuric acid plant to reduce SOx emissions.	Rhodia Inc., Dominguez Facility	Not Yet Determined	Facility operators are in the process of selecting a CEQA consultant.	Environ International Corp.

A shaded row indicates a new project.

# = AQMD was contacted regarding potential environmental justice concerns due to the nature and/or location of the project.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 15

REPORT: Rule and Control Measure Forecast

SYNOPSIS: This report highlights AQMD rulemaking activity and public workshops potentially scheduled for the year 2011.

COMMITTEE: Not Applicable

RECOMMENDED ACTION:  
Receive and file.

Barry R. Wallerstein, D.Env.  
Executive Officer

---

The Rule and Control Measure Forecast Report provides the Board with a monthly update of AQMD's rulemaking and control measure implementation schedule. There are no scheduling changes that occurred since last month's forecast relative to the period of March 2011 through December 2011.

**2011 MASTER CALENDAR  
Advance Target for Board Hearings**

Below is a list of all rulemaking activity scheduled for the year 2011. The last four columns refer to the type of rule adoption or amendment. A more detailed description of the proposed rule adoption or amendment is located in the Attachments (A through D) under the type of rule adoption or amendment (i.e. AQMP, Toxics, Other and Climate Change).

*\*An asterisk indicates that the rulemaking is a potentially significant hearing.*

*+This proposed rule will reduce criteria air contaminants and assist toward attainment of ambient air quality standards.*

*<sup>1</sup>Subject to Board approval*

*California Environmental Quality Act shall be referred to as "CEQA."*

*Socioeconomic Analysis shall be referred to as "Socio."*

Reg. IV, IX, X, XI, XIV, XX and XXX Rules	Various rule amendments may be needed to meet the requirements of state and federal laws, address variance issues/technology-forcing limits, or to seek additional reductions to meet the SIP short-term measure commitment. The Clean Communities Plan (CCP) has been updated to include new measures to address toxic emissions in the basin. The CCP includes a variety of measures that will reduce exposure to air toxics from stationary, mobile, and area sources. Rule amendments may include updates to provide consistency with CARB Statewide Air Toxic Control Measures.	√	√	√	√

Note: AQMD may add control measures necessary to satisfy federal requirements, to abate a substantial endangerment to public health or welfare, state regulatory requirements or SIP commitment.

## AQMP Rule Activity Schedule (continued)

**2011**

<b>June</b>	<b>(continued)</b>
2301 <sup>*+</sup>	<p><b>Control of Emissions from New or Redevelopment Projects (EGM-01)</b>  <i>[Projected Emission Reduction: Committed to reduce 0.5 tons per day of VOC, 0.8 tons per day of NOx, and 0.5 tons per day of PM2.5 in 2023.]</i>                      Rule 2301 would implement Control Measure EGM-01 of the 2007 AQMP to manage emissions growth from new and redevelopment projects.  <i>Carol Gomez 909.396.3264 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>July</b>	
1177	<p><b>Liquid Petroleum Gas Transfer and Dispensing (MCS-07)</b>  <i>[Projected Emission Reduction for both rules: TBD]</i>                      Proposed Rule 1177 will establish controls for transfer and dispensing of liquefied propane gas.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>September</b>	
1123	<p><b>Pilot Program for Refinery Start-up, Shutdown and Turnaround Procedures (MCS-06)</b>  <i>[Projected Emission Reduction: N/A]</i>                      Rule 1123 would implement 2007 AQMP, Control Measure MCS-06 by identifying improved operating procedures and best management practices to reduce emissions from start-up, shutdown and turnaround operations.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Leu (3059)</i></p>
1138 <sup>*+</sup>	<p><b>Control of Emissions from Restaurant Operations (BCM-05)</b>  <i>[Projected Emission Reduction: TBD]</i>                      The proposed amended rule will add requirements for under-fired charbroilers and implement 2007 AQMP Control Measure BCM-05.  <i>Jill Whynot 909.396.3104 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

# ATTACHMENT A

## AQMP Rule Activity Schedule (continued)

### TO-BE DETERMINED 2011

<b>To-Be Determined</b>	
<p>223 1127<sup>+</sup> 1127.1<sup>+</sup></p>	<p><b>Emission Reduction Permits for Large Confined Animal Facilities</b>  <b>Emission Reductions from Livestock Waste (MCS-05)</b>  <b>Control of Emissions from Hog and Poultry Operations (MCS-05)</b>  <i>[Projected Emission Reduction unknown and TBD]</i>  Proposed amendments to Rule 223 may be necessary to harmonize rule requirements with those in Rules 1127 and 1127.1. Proposed amendments to Rule 1127 and Proposed Rule 1127.1 will seek to reduce VOC and other pollutant emissions from livestock operations and implement control measure MCS-05 of the 2007 AQMP.  <i>Laki Tisopulos 909.396.3123 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<p>1106</p>	<p><b>Marine Coating Operations (MCS-07)</b>  <i>[Projected Emission Reduction: N/A]</i>  Proposed amendments will further reduce VOC emissions from the application of marine coatings. Amendments may also improve clarity and enforceability.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<p>1106.1</p>	<p><b>Pleasure Craft Coating Operations (MCS-07)</b>  <i>[Projected Emission Reduction: unknown]</i>  Amendments to Rule 1106.1 will reduce VOC emissions from the application of coatings to pleasure craft and improve the enforceability and clarity of the rule.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<p>1903<sup>*+</sup></p>	<p><b>Emission Budgets and Mitigation Program for General Conformity Projects (EGM-02)</b>  <i>[Projected Emission Reduction: N/A]</i>  Rule 1903 would implement Control Measure EGM-02 of the 2007 AQMP. The rule would specify procedures for how federal projects subject to general conformity could access an emission budget and/or pay mitigation fees for emissions from the project.  <i>Joe Cassmassi 909.396.3155 909.396.3155 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

## AQMP Rule Activity Schedule (continued)

### TO-BE DETERMINED 2011

<b>To-Be Determined</b>	<b>(continued)</b>
Reg. IV, IX, X, XI, XIV, XX and XXX Rules	Various rule amendments may be needed to meet the requirements of state and federal laws, address variance issues/technology-forcing limits, or to seek additional reductions to meet the SIP short-term measure commitment. The Clean Communities Plan (CCP) has been updated to include new measures to address toxic emissions in the basin. The CCP includes a variety of measures that will reduce exposure to air toxics from stationary, mobile, and area sources. Rule amendments may include updates to provide consistency with CARB Statewide Air Toxic Control Measures.

## ATTACHMENT B

### Toxics Rule Activity Schedule

This attachment lists those rules or rule amendments for the Governing Board consideration that are designed to implement the Air Toxics Control Plan.

**2011**

<b>April</b>	
1470	<b>Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines</b>
1471	<p><b>Requirements for Diesel-Fueled Internal Combustion and Other Compression Ignition Engines Used in Agricultural Operations</b>  <i>[Projected Emission Reduction: TBD]</i>                      CARB has amended the ATCM for stationary diesel-fueled internal combustion engines to reduce particulate emissions from stationary diesel powered agricultural engines that are used for growing crops, raising fowl or other animals at farms, ranches, universities, or other places. Proposed Rule 1471 will consolidate requirements for existing and new diesel-powered agricultural engines.  <i>Susan Nakamura 909.396.3105 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>June</b>	
4010 <sup>*+</sup>	<b>General Provisions and Requirements for Ports of Los Angeles and Long Beach (MOB-03)</b>
4020 <sup>*+</sup>	<p><b>Backstop Requirements for Ports of Los Angeles and Long Beach (MOB-03)</b>  <i>[Projected Emission Reduction: TBD]</i>                      The proposed rules will address toxic and criteria pollutant emissions from new and existing port-related sources.  <i>Susan Nakamura 909.396.3105 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>November</b>	
1420	<p><b>Emissions Standard for Lead</b>  <i>[Projected Emission Reduction: TBD]</i>                      Rule 1420 would be amended to incorporate the 2008 National Ambient Air Quality Standard for Lead and may include measures to reduce lead emissions to ensure compliance with the new standard.  <i>Susan Nakamura 909.396.3105 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

## ATTACHMENT B

### Toxics Rule Activity Schedule (continued)

#### To-Be Determined 2011

<b>To-Be Determined</b>	
<p>1401 1402</p>	<p><b>New Source Review of Toxic Air Contaminants</b></p> <p><b>Control of Toxic Air Contaminants from Existing Sources</b>  <i>[Projected Emission Reduction: TBD]</i>                      The Office of Environmental Health Hazard Assessment (OEHHA) periodically reviews the list of toxic compounds and revises or establishes risk values. Rules 1401 and 1402 will be amended to revise the list of TACs. OEHHA is currently revising their risk assessment guidelines and, when adopted, District guidelines will be amended requiring Board approval. In addition, other administrative changes may be proposed.  <i>Susan Nakamura 909.396.3105 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<p>1420 1420.2</p>	<p><b>Emission Standard for Lead</b></p> <p><b>Emission Standard for Lead from Medium Lead Emitting Facilities</b>  <i>[Projected Emission Reduction: TBD]</i>                      In October 2008, U.S. EPA lowered the National Ambient Air Quality Standard for lead from 1.5 to 0.15 ug/m<sup>3</sup>. Proposed Amended Rule 1420 and Proposed Rule 1420.2 will apply to lead sources and will include requirements to ensure the Basin meets the new lead standard.  <i>Susan Nakamura 909.396.3105 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<p>Reg. IV, IX, X, XI, XIV, XX and XXX Rules</p>	<p>Various rule amendments may be needed to meet the requirements of state and federal laws, address variance issues/technology-forcing limits, or to seek additional reductions to meet the SIP short-term measure commitment. The Clean Communities Plan (CCP) has been updated to include new measures to address toxic emissions in the basin. The CCP includes a variety of measures that will reduce exposure to air toxics from stationary, mobile, and area sources. Rule amendments may include updates to provide consistency with CARB Statewide Air Toxic Control Measures.</p>

## Other Rule Activity Schedule

This attachment lists those rules or rule amendments for the Governing Board consideration that are designed to improve rule enforceability, SIP corrections, or implementing state or federal regulations.

**2011**

<b>March</b>	
Reg. IX Reg. X	<p><b>Standards for Performance for New Stationary Sources</b>  <b>National Emission Standards for Hazardous Air Pollutants</b>                      Periodic amendments to Regulation IX and X incorporate new or amended standards by reference that were approved during the prior calendar year.  <i>Jill Whynot 909.396.3104 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
2005	<p><b>New Source Review for RECLAIM</b>                      [Projected Emission Reduction: TBD]                      The proposed amendment is to address recurring RTC holding requirements for emission increases at existing RECLAIM facilities.  <i>Danny Luong 909.396.2622 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
2202	<p><b>On-Road Motor Vehicle Mitigation Options</b>                      [Projected Emission Reduction: unknown]                      Proposed Rule 2202 amendments will include language to clarify program options, facilitate meeting rule emission reduction targets, and clarify definitions. Rule 2202 supporting guidelines will also be updated to reflect rule requirements, policies, and practices.  <i>Carol Gomez 909.396.3264 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>April</b>	
1311 <sup>*+</sup>	<p><b>Federal PM2.5 New Source Review Program</b>                      [Projected Emission Reduction: N/A]                      Proposed Rule 1311 will implement U.S. EPA's New Source Review program requirements relative to PM2.5.  <i>Jill Whynot 909.396.3104 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>May</b>	
Reg. III	<p><b>Fees</b>                      [Projected Emission Reduction: N/A]                      Amend fee rules in accordance with FY 2011-12 AQMD Budget.  <i>Jill Whynot 909.396.3104 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
1132	<p><b>Further Control of VOC Emissions from High-Emitting Spray Booth Facilities</b>                      [Projected Emission Reduction: N/A]                      The proposed amendments will seek to revise the emission reporting from fiscal year to calendar year to reflect the revised reporting period.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

# ATTACHMENT C

## Other Rule Activity Schedule (continued)

**2011**

<b>May</b>	<b>(continued)</b>
1147	<p><b>NOx Reductions From Miscellaneous Sources</b>  <i>[Projected Emission Reduction: N/A]</i>                      Proposed amendments are to clarify the fuel and time meters requirements.  <i>Joe Cassmassi 909.396.3155 909.396.3155 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
2511	<p><b>Credit Generation Program for Locomotive Head End Power Unit Engines</b>  <i>[Projected Emission Reduction: TBD]</i>                      Develop a rule to allow generation of PM mobile source emission reduction credits from Locomotive Head End Power Unit Engines. Credits will be generated by retrofitting engines with PM controls or replacing the engines with new lower-emitting engines.  <i>Randal Pasek 909.396.2251 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
2512	<p><b>Credit Generation Program for Ocean-Going Vessels at Berth</b>  <i>[Projected Emission Reduction: TBD]</i>                      Develop a rule to allow generation of PM, NOx and SOx emission reduction credits from ocean going vessels while at berth. Credits will be generated by controlling the emissions from auxiliary engines and boilers of ships while docked.  <i>Randal Pasek 909.396.2251 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>July</b>	
314	<p><b>Fees of Architectural Coatings</b>  <i>[Projected Emission Reduction: TBD]</i>                      The proposed amendments would improve clarity and reporting requirements as well as consider an exemption from fees for small manufacturers.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
1110.2	<p><b>Emissions from Gaseous- and Liquid-Fueled Engines</b>  <i>[Projected Emission Reduction: TBD]</i>                      Amendments to Rule 1110.2 are proposed to address the impacts of contaminants in biogas used to fuel power generators at landfills and municipal waste facilities. The amendments may result in a delay or loss of emissions reductions  <i>Joe Cassmassi 909.396.3155 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
<b>September</b>	
463	<p><b>Storage of Organic Liquids</b>  <i>[Projected Emission Reduction: N/A]</i>                      The proposed amendment will seek to alter a test method for determining sulfur compounds with greater accuracy.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

## Other Rule Activity Schedule (continued)

**2011**

September	(continued)
1118	<p><b>Control of Emissions from Refinery Flares</b>  <i>[Projected Emission Reduction: TBD]</i>                      Amendments may be necessary to address results of the additional analysis required by the adopting resolution for the last amendment and to consider the advances in monitoring technology. Amendments may also be necessary to implement an AB 32 measure.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

## To-Be Determined 2011

To-Be Determined	
102	<p><b>Definition of Terms</b>  <i>[Projected Emission Reduction: N/A]</i>                      Proposed amendments to Rule 102 may be necessary to include compounds exempted by the U.S. EPA with consideration for health risks as defined by the Office of Environmental Health Hazard Assessment (OEHHA).  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
402	<p><b>Nuisance</b>  <i>[Projected Emission Reduction: TBD]</i>                      AQMD staff will assess the feasibility of expanding the current nuisance rule as part of a proposed measure in the draft Clean Communities Plan (CCP). The assessment may result in a recommendation to amend Rule 402 to make it more effective and more responsive to public complaints.  <i>Susan Nakamura 909.396.3105 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
461	<p><b>Gasoline Transfer and Dispensing</b>  <i>[Projected Emission Reduction: TBD]</i>                      Proposed amendments to Rule 461 will explore the feasibility of further reducing VOC and toxic emissions from gasoline dispensing facilities by improving implementation of the Enhanced Vapor Recovery Regulation.  <i>Naveen Berry 909.396.2363 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>
701	<p><b>Air Pollution Emergency Contingency Actions</b>  <i>[Projected Emission Reduction: N/A]</i>                      Proposed amendments to Rule 701 will update the episode criteria to reflect newly established standards and clarify air quality reporting and dissemination protocol.  <i>Joe Cassmassi 909.396.3155 909.396.3155 CEQA: Smith (3054) Socio: Lieu (3059)</i></p>

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 16

PROPOSAL: Report of RFPs and RFQs Scheduled for Release in February

SYNOPSIS: This report summarizes the RFPs and RFQs for budgeted services over \$75,000 scheduled to be released for advertisement for the month of February.

COMMITTEE: Administrative, January 14, 2011, Recommended for Approval

RECOMMENDED ACTION:

Approve the release of RFPs/RFQs for the month of February.

Barry R. Wallerstein, D.Env.  
Executive Officer

MO:lg

---

### **Background**

At its January 8, 2010 meeting, the Board approved a revised Procurement Policy and Procedure. Under the revised policy, RFPs and RFQs for budgeted items over \$75,000, which follow the standard evaluation criteria, no longer require individual Board approval. However, a monthly report of all RFPs and RFQs over \$75,000 is included as part of the Board agenda package and the Board may, if desired, take individual action on any item. The report provides the title and synopsis of the RFP or RFQ, the budgeted funds available, the release date, the closing date, the type of evaluation method, and the AQMD contact.

### **Outreach**

In accordance with AQMD's Procurement Policy and Procedure, a public notice advertising the RFP/RFQ and inviting bids will be published in the Los Angeles Times, the Orange County Register, the San Bernardino Sun, and Riverside County Press Enterprise newspapers to leverage the most cost-effective method of outreach to the entire South Coast Basin.

Additionally, potential bidders may be notified utilizing AQMD's own electronic listing of certified minority vendors. Notice of the RFP/RFQ will be mailed to the Black and Latino Legislative Caucuses and various minority chambers of commerce and business associations, and placed on the Internet at AQMD's website (<http://www.aqmd.gov>)

where it can be viewed by making menu selections “Inside AQMD”/“Employment and Business Opportunities”/“Business Opportunities” or by going directly to <http://www.aqmd.gov/rfp/index.html>). Information is also available on AQMD’s bidder’s 24-hour telephone message line (909) 396-2724.

**Proposal Evaluation**

Proposals received will be evaluated by applicable diverse panels of technically qualified individuals familiar with the subject matter of the project or equipment and may include outside public sector or academic community expertise.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 17

REPORT: Summary of Changes to FY 2010-11 Approved Budget

SYNOPSIS This is the mid-year report of budget changes for FY 2010-11.

COMMITTEE: Not Applicable

RECOMMENDED ACTION:

Receive and file.

Barry R. Wallerstein, D.Env.  
Executive Officer

MBO:DRP:lg

---

### **Background**

After the close of each fiscal year, staff has prepared and presented to the Board a report of revisions made during the year to the budget. The attached list of Board-approved budget changes reflect actions taken by the Board during the initial six months of the current fiscal year which have increased the operating budget. In addition to these Board-approved changes, organizational unit-requested budget changes have also been made which did not increase the budget but reallocated already-budgeted funds within a Major Object to meet operational needs.

Organizational unit-requested budget changes included such items as a transfer of budgeted funds from Planning, Rules and Area Sources to Information Management for transportation database enhancements, maintenance on the Rule 2202 computer system, and enhancements to the Annual Emissions Reporting System; from District General to Information Management for the development of modules in support of electronic receivables posting and for billing system modifications to incorporate California Consumer Price Index (CPI) rebates; from Finance to Information Management for PeopleSoft Finance module implementation; and from District General to Legislative and Public Affairs for community outreach efforts. Expenditures relating to budget increases and/or transfers follow Board-established policy regarding purchasing and contracting.

**BOARD-APPROVED FY 2010-11 BUDGET CHANGES (JULY – DECEMBER)**

<u>Date of Board Action</u>	<u>Budget Increases</u>	<u>Description</u>
June 2010	\$ 200,000	From Undesignated Fund Balance – for consulting services to develop Greenhouse Gas Registry.
June 2010	\$ 1,995,000	From Undesignated Fund Balance – for labor agreement costs for period Sept 2010-June 2011.
July 2010	\$ 645,500	From the U.S. EPA – for the PM2.5 Monitoring program (\$310,000); for the reallocation of unspent Section 105, Year 18, PAMS program funds (\$197,000); for the reallocation of unspent funds from the Community-Scale Air Toxics Monitoring program (\$41,000); and for the NATTS program (\$97,500).
July 2010	\$ 385,116	From the U.S. DHS – for the Enhanced Particulate Monitoring program.
July 2010	\$ 800,000	From Designation for Litigation and Enforcement – for outside litigation assistance related to the internal credit bank.
July 2010	\$ 58,880	From the AB 2766 Discretionary Fund – to facilitate the payment of MSRC miscellaneous direct and travel costs.
September 2010	\$ 78,487	From Rule 1309.1 Priority Reserve Fund – for AB 118 AQIP Advanced Locomotive Aftertreatment Technology Demonstration Project.
September 2010	\$ 150,957	From CARB – for AB 118 AQIP Advanced Locomotive Aftertreatment Technology Demonstration Project.
September 2010	\$ 25,000	From the U.S. EPA – for Motive Power, Inc. contract to redesign SCR system on Metrolink passenger locomotive.
September 2010	\$ 1,000,000	From the U.S. EPA – for heavy-duty diesel truck retrofit project funded under the National Clean Diesel Funding Assistance Program.

**BOARD-APPROVED FY 2010-11 BUDGET CHANGES (JULY – DECEMBER) Cont.**

<u>Date of Board Action</u>	<u>Budget Increases</u>	<u>Description</u>
September 2010	\$ 50,000	From the AQIP Special Revenue Fund – to assist in implementing an enhanced “Mow Down Air Pollution 2010” program.
September 2010	\$ 150,000	From the U.S. DOE – for contract to upgrade existing LNG fueling facility in the City of Ontario.
September 2010	\$ 600,000	From the Clean Fuels Program Fund – for technical assistance, expert consultation, public outreach and technical conference sponsorship, and advanced technology vehicle leases.
September 2010	\$ 300,000	From the Carl Moyer Program AB 923 Fund – to support administrative, outreach education and other directly related AB 923 activities.
September 2010	\$ 300,000	From the Prop 1B Goods Movement Fund – to support administrative and technical assistance and other directly related Prop 1B/Goods Movement activities.
October 2010	\$ 170,080	From Undesignated Fund Balance (Walmart settlement public outreach funds) – for AQMD Signature Video.
October 2010	\$ 550,000	From Rule 1309.1 Priority Reserve Fund – for advice and litigation services regarding the internal offset accounts, including the re-adoption of Rule 1315.
November 2010	\$ 400,000	From Undesignated Fund Balance (Walmart settlement public outreach funds) – for the Chinese-American Advertising Initiative.
November 2010	\$ 996,300	From U.S. EPA – for Section 105, 19 <sup>th</sup> year, PAMS program funds (\$882,800); Lead Monitoring Network (\$47,500); and PM2.5 Monitoring Program (\$66,000).
November 2010	\$ 425,000	From Designation for Litigation and Enforcement – for matters to be handled by specialized legal counsel.

**BOARD-APPROVED FY 2010-11 BUDGET CHANGES (JULY – DECEMBER) Cont.**

<u>Date of Board Action</u>	<u>Budget Increases</u>	<u>Description</u>
December 2010	\$ 236,018	From Undesignated Fund Balance – for legislative advocacy in Washington, DC.
December 2010	\$ 91,750	From Undesignated Fund Balance – for legislative advocacy in Sacramento.
December 2010	\$ 66,300	From Undesignated Fund Balance – for CBS-2 TV Weather Sponsorship.
December 2010	\$ 68,000	From Undesignated Fund Balance – to implement four additional Air Quality Institute programs.
December 2010	\$ 120,000	From Undesignated Fund Balance – to purchase and implement an electronic contact database.
	<u>\$ 9,862,388</u>	Total Board-approved FY 2010-11 mid-year Budget changes

**Sources of Funding:**

\$1,937,367	<i>Interfund Transfers</i>
\$3,352,873	<i>Grants/Contracts</i>
\$1,225,000	<i>Budget Designations</i>
\$3,347,148	<i>Undesignated Fund Balance</i>
<u>\$129,819,623</u>	FY 2010-11 Adopted Budget
<u>\$139,682,011</u>	FY 2010-11 Budget as of December 2010

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 18

**PROPOSAL:** Status Report on Major Projects for Information Management Scheduled to Start During Last Six Months of FY 2010-11

**SYNOPSIS:** Information Management is responsible for data systems management services in support of all AQMD operations. This action is to provide the monthly status report on major automation contracts and projects to be initiated by Information Management during the last six months of FY 2010-11.

**COMMITTEE:** Not Applicable

**RECOMMENDED ACTION:**  
Receive and file.

Barry R. Wallerstein, D.Env.  
Executive Officer

---

### **Background**

Information Management (IM) provides a wide range of information systems and services in support of all AQMD operations. IM's primary goal is to provide automated tools and systems to implement Board-approved rules and regulations, and to improve internal efficiencies. The annual Budget specifies projects planned during the fiscal year to develop, acquire, enhance, or maintain mission-critical information systems. As provided last July for the first six months of the fiscal year, Information Management is providing this report to detail major projects/contracts or purchases that are expected during the last six months.

### **Summary of Report**

The attached report identifies each of the major projects/contracts or purchases that are expected to come before the Board between January 1 and June 30, 2011. Information provided for each project includes a brief project description, FY 2010-11 Budget, and the schedule associated with known major milestones (issue RFP/RFQ, execute contract, etc.).

AGENDA NO. 20

REPORT: Administrative Committee

SYNOPSIS: The Administrative Committee met on Friday, January 14, 2011. The Committee discussed various issues detailed in the Committee report. The next Administrative Committee meeting is scheduled for Friday, February 11, 2011, at 10:00 a.m. in Conference Room CC-8.

RECOMMENDED ACTION:  
Receive and file.

Dr. William A. Burke, Chair  
Administrative Committee

tc

---

**Attendance:** Attending the January 14, 2011 meeting were Chair Dr. William A. Burke and Supervisor Josie Gonzales via videoconference. Committee Members Mayor Dennis Yates, Jane Carney and Mayor Ron Loveridge were present at AQMD.

**ACTION/DISCUSSION ITEMS:**

1. **Board Members' Concerns:** Mayor Yates congratulated Supervisor Gonzales on her appointment as Chair of the San Bernardino Board of Supervisors.
2. **Chairman's Report of Approved Travel:** Dr. Wallerstein stated that Supervisor Gonzales traveled to Sacramento on January 5-6, 2011 to participate at the California Fuel Cell Partnership meeting; she is Chair this year. Dr. Burke stated he was pleased that AQMD has such a fine representative. Supervisor Gonzales stated that she supports active collaboration whereby AQMD can serve a major role in promoting zero-emission technologies.

3. **Approval of Compensation for Board Member Assistant(s)/Consultant(s):** None.
4. **Report of Approved Out-of-Country Travel:** Dr. Wallerstein stated that he will be traveling to London to attend the European Carbon Capture and Storage conference, which is a major front of climate change issues. This conference is organized by Platts, a leading global provider of energy statistical information and analysis. The conference is in its fifth year and distinguished energy experts will be attending.
5. **Report/Discussion of 2010 Time Capsule:** Dr. Wallerstein stated that, as per prior concurrence of the Committee, the time capsule had been opened up by staff at the AQMD year-end gathering. (It was originally sealed in 1991 for opening upon the planned 2010 ozone attainment year.) He noted the various contents. Mayor Loveridge noted that in 1965 the City of Riverside had 200 smog alerts, and he emphasized that while attainment had not yet been reached, tremendous progress had been made. He requested to review items #70 (“Making Clean Air a Priority” (30 pp.) and #71 (“The Challenge of Attainment” -- April 1990). Dr. Wallerstein also noted that he was requesting staff to suggest items to be placed in the capsule to be reopened at a to-be-determined future year, but will discuss with the Committee Members what items will be placed in it.

**FEBRUARY AGENDA ITEMS:**

6. **Receive Public Input on Executive Officer’s Proposed Program Goals/Objectives for FY 2011-12:** Dr. Wallerstein stated that this item is brought before the Committee each year as a draft of the goals and objectives of the agency and is provided to the public as part of the budget process. He stated that in addition to the ongoing programs there are three priority projects included in this year’s report: (1) Commence demonstration/deployment of a zero-emission cargo container movement system; (2) Incentivize five megawatts of in-basin renewable distributed electricity generation and storage to support electric technology applications; and (3) Make substantial progress in creating programs to facilitate construction of new and modified stationary sources in areas where the supply of emissions offsets is limited, consistent with AQMD’s clean air objectives.

Supervisor Gonzales suggested that any desirable basic structures needed to support the goals and objectives be delineated by using footnotes or asterisks. Mayor Loveridge stated that AQMD should more strongly describe its intended efforts with SCAG and SB375. He also stated that with the reduced federal and state funding, AQMD needs to defend vital programs; Dr. Wallerstein responded that will be covered

via legislative goals and objectives. Dr. Burke affirmed that there is a concern with state funding and a great need for enhanced SCAG partnership.

Mrs. Carney asked about the senior conferences being scheduled, and Dr. Wallerstein answered that Councilwoman Perry requested these conferences as seniors were a key audience regarding air quality issues. Dr. Burke stated that recently Councilwoman Perry held a seniors conference which was attended by 3,000 constituents. He mentioned that seniors' lives on average have been extended by 22% over previous projections. Dr. Wallerstein stated that this is a major activity for staff to undertake, but previous conferences have already been held regarding green technologies, youth, and regional health impacts, and noted that seniors are an important constituency. Mrs. Carney asked if AQMD would again conduct youth conferences in the near future, and Dr. Wallerstein answered affirmatively. Supervisor Gonzales added that seniors now are more active in later years and add their life experiences. Mayor Yates suggested also pursuing venture capital funding for major projects, such as widening of the 710 freeway or moving freight or storing electricity. Dr. Burke agreed with this suggestion.

7. **Report of RFPs and RFQs Schedule for Release in February:** Michael O'Kelly, Chief Financial Officer, stated that there is an RFQ to prequalify providers for temporary employment services.

Moved by Yates; seconded by Gonzales; unanimously approved.

8. **Amend Contract to Provide Technical Support for AQMD PAMS Upper Meteorological Monitoring Network:** Laki Tisopulos, Asst. DEO/Planning, Rule Development & Area Sources, stated in February 2010 AQMD entered into contracts with Sonoma Technology, Inc. to provide technical support to maintain monitoring networks. Staff is proposing to exercise the first of the three-year extension option for an amount of \$100,000 based on good performance. Funding is allocated from EPA's Section 105 grant money.

Moved by Carney; seconded by Loveridge; unanimously approved.

Mayor Yates left at 10:57 a.m. to attend the Local Government & Small Business Assistance Advisory Group meeting.

9. **Execute Contract for Janitorial Services at Diamond Bar Headquarters:** Bill Johnson, Asst. DEO/Administrative & Human Resources, stated that staff is recommending to award a contract to Diamond Contract Services, which is providing acceptable health insurance to their employees. Mrs. Carney asked

how much more expensive this contract is than the previous, and Mr. Johnson answered \$100,000 over two years.

Moved by Carney; seconded by Gonzales; unanimously approved.

Mayor Loveridge left at 10:58 a.m. as he had a conference call to make.

10. **Amend Contract for Policy Consultation Regarding Local, State, and Federal Transportation Issues:** Pom Pom Ganguli, Asst. DEO/Legislative & Public Affairs, explained that the Board approved a contract with Lee Andrews in January 2010 related to transportation issues. The contractor has performed very well, and is proposing two major emphases this year – a major stakeholders’ conference and a focus on developing private-public partnerships. Staff is recommending approval for contract renewal of \$100,000 for a one-year period.

Moved by Carney; seconded by Gonzales; unanimously approved.

11. **Local Government & Small Business Advisory Group Minutes for the November 12, 2010 Meeting:** Attached for information only are the Local Government & Small Business Advisory Group Minutes of the November 12, 2010 meeting.
12. **Draft Environmental Justice Advisory Group minutes of the October 29, 2010 meeting:** Attached for information only are the draft Environmental Justice Advisory Group minutes of the October 29, 2010 meeting.
13. **Review February 4, 2011 Governing Board Agenda:** Dr. Wallerstein stated that Rule 1315 will be continued to the February 4<sup>th</sup> Board meeting for Board deliberation only as the hearing was concluded at the January 7<sup>th</sup> Board meeting. He stated that Proposed Rule 317 – Clean Air Act Non-Attainment Fees (CAA Sections 182 and 185) will be heard at the February 4<sup>th</sup> Board meeting and is being supported by the business community, and was vetted with CARB and U.S. EPA.
14. **Other Business:** None.
15. **Public Comment:** None.

Meeting adjourned at 11:03 a.m.

Minutes from the November 12, 2010 Local Government & Small Business Assistance  
Advisory Group meeting

Draft Minutes from the October 29, 2010 Environmental Justice Advisory Group  
meeting

**LOCAL GOVERNMENT & SMALL BUSINESS ASSISTANCE ADVISORY GROUP  
FRIDAY, NOVEMBER 12, 2010  
MEETING MINUTES**

**MEMBERS PRESENT:**

Dennis Yates, AQMD Governing Board Member, LGSBA Chairman  
Greg Adams, L.A. County Sanitation District  
Felipe Aguirre, Vice Mayor, City of Maywood  
Paul Avila, P.B.A. & Associates  
Jacob Haik, Office of School Board Member Richard Vladovic  
Maria Elena Kennedy, Kennedy Communications  
Rita Loof, RadTech International  
Steve Mugg, South Orange County Representative, City of Mission Viejo

**MEMBERS ABSENT:**

Ronald Loveridge, AQMD Governing Board Member, LGSBA Vice Chairman  
Luis Ayala, City of Alhambra  
Geoffrey Blake, Metal Finishers of Southern California/All Metals  
Todd Campbell, Clean Energy  
Sergio Carrillo, South Bay Yellow Cab and United Checker Cab  
Daniel Cunningham, Metal Finishing Association of Southern California  
Lucy Dunn, Orange County Business Council  
Samuel Garrison, Los Angeles Area Chamber of Commerce  
Angelo Logan, East Yard Communities for Environmental Justice  
Mary Ann Lutz, City of Monrovia  
Kelly Moulton, Paralegal

**OTHERS PRESENT:**

Earl Elrod, Board Member Assistant (*Yates*)  
Kris Flaig, City of Los Angeles  
Nicole Nishimura, Board Member Assistant (*Lyou*)

**AQMD STAFF:**

Naveen Berry, Planning & Rules Manager  
Philip Crabbe, Community Relations Manager  
Kevin Durkee, Sr. Meteorologist  
Peter Greenwald, Senior Policy Advisor  
John Olvera, Principal Deputy District Counsel  
William Sanchez, Sr. Public Affairs Manager  
Nicole Soto, Secretary  
Laki Tisopulos, Asst. Deputy Executive Officer  
Greg Ushijima, Air Quality Engineer  
Brian Yeh, Sr. AQ Engineering Manager

**Agenda Item #1 - Call to Order/Opening Remarks**

Chair Dennis Yates called the meeting to order at 11:01 a.m.

**Agenda Item #2 – Approval of October 8, 2010 Meeting Minutes/Review of Follow-Up/Action Items**

Chair Yates called for approval of the meeting minutes.

The October 8, 2010 meeting minutes were approved.

*Action Item: Agendize Clean Air Action Plan presentation by Mr. Peter Greenwald.*

- ✓ The Ports' Clean Air Action Plan is agendized for the current meeting. Completed.

**Agenda Item #3 –Status Report on 2010 Update to Ports' Clean Air Action Plan**

Mr. Peter Greenwald gave a status report on the 2010 Update to the Ports' Clean Air Action Plan.

Mr. Greg Adams asked for clarification on the reduction of NOx and port cargo. Mr. Greenwald indicated the total reduction in NOx was about 35%, while port throughput was reduced by 24%.

Mr. Paul Avila asked if the San Pedro Bay area has a separate "wish list" for the Clean Air Action Plan. Mr. Greenwald indicated that they are not a government group, but there are community organizations and environmental groups that are active in that area.

Mr. Jacob Haik commented that standards need to be statewide and nationwide to help protect the local employment and economy. Mr. Greenwald replied that staff is aware of the role the Ports play in supporting the Southern California economy and jobs, thus staff advocates for national and international standards and focuses on technology as a means of achieving the needed emission reductions.

Mr. Avila asked what the time frame is for building new ships and whether the new ships' engines will be compliant with air quality laws. Mr. Greenwald indicated that it takes three years from order to delivery. He added that any ship built after January 1, 2016 operating in an emission control area has to have 80% NOx control.

**Agenda Item #4 – 2010 Ozone Season and Ongoing Air Quality Trends**

Mr. Kevin Durkee provided an overview of the 2010 Ozone Season and Ongoing Air Quality Trends.

Mr. Adams asked whether the South Coast Air Basin smog trend is focused at any particular monitoring station. Mr. Durkee replied that the data is basin wide and encompasses all of the south coast air basin stations, but not the Coachella Valley.

**Agenda Item #5 – Rule 1143 - Consumer Paint Thinners and Multi-Purpose Solvents**

Mr. Naveen Berry gave a presentation on Rule 1143 – Consumer Paint Thinners and Multi-Purpose Solvents

Mr. Adams asked to confirm whether 100,000 gallons of these products are being sold and used each month primarily for metal surface cleaning. Mr. Berry replied that these products are used for cleaning in general, due to the small amount of solvent based paint being sold. Mr. Adams asked about the recent settlement with Lowe's. Mr. Berry replied that that was strictly for non-compliant paints and not solvents.

Mr. Steve Mugg asked whether there are any other uses for paint thinners or solvents other than cleaning. Mr. Berry replied that discussions with the Fire Departments have indicated that people use them to clean engines and boats, among other things.

Ms. Rita Loof asked if staff was able to resolve CEQA issues, and whether staff foresees any future challenges with the re-adopted rule. Mr. Berry replied that the AQMD has already been sued for the July 2010 amendments.

Mr. Haik asked about how to address illegal sales of these products. Mr. Berry replied that on paints, we have enhanced our enforcement program.

Ms. Loof asked what happens to the rule while there is an ongoing legal challenge pending. Mr. Berry indicated the rule currently remains in effect.

**Agenda Item #6 – Monthly Report on Small Business Assistance Activities**

No comments.

**Agenda Item #7 – Update on Climate Change Activities (Written Report)**

Ms. Jill Whynot provided a written report on climate change activities.

**Agenda Item #8 - Other Business**

Chair Yates announced to the group that the December Meeting will be held at Honolulu Harry's in Chino.

**Agenda Item #9 - Public Comment**

No comments.

**Agenda Item #10 - Adjournment**

The meeting adjourned at 12:04 p.m.

**ENVIRONMENTAL JUSTICE ADVISORY GROUP  
FRIDAY, OCTOBER 29, 2010  
DRAFT MEETING MINUTES**

**MEMBERS PRESENT:**

Dr. Joseph Lyou, AQMD Governing Board Member, EJAG Chairman  
Rhetta Alexander, San Fernando Valley Interfaith Council  
Afif El-Hasan, American Lung Association  
Alycia Enciso, Small Business Owner  
Mary Figueroa, Riverside Community College  
Maria Elena Kennedy, Quail Valley Task Force  
Evelyn Knight, Long Beach Economic Development Commission  
Brenda LaMothe, S. Los Angeles Service Representative for L.A. Mayor  
Angelo Logan, East Yard Communities for Environmental Justice  
Daniel Morales, National Alliance for Human Rights  
Neal Richman, Breathe LA  
Rafael Yanez, Member of the Public

**MEMBERS ABSENT:**

Detrich Allen, City of Los Angeles Environmental Affairs  
Lawrence Beeson, Loma Linda University, School of Public Health  
Suzanne Bilodeau, Knott's Berry Farm  
Paul Choe, Korean Drycleaners & Laundry Association  
Mimi Holt, SEIU Local 121 Registered Nurses  
Andrea Hricko, Southern California Environmental Health Sciences  
Pat Kennedy, Greater Long Beach Interfaith Community  
Margaret Mapes, St. Joseph Center  
John Moretta, Resurrection Church  
Elina Nasser, Center for Occupational and Environmental Health, UCLA  
William Nelson, OC Signature Properties  
Paul Ong, UCLA School of Public Affairs  
Salvador Ramirez, National Hispanic Environmental Council  
Woodie Rucker-Hughes, NAACP – Riverside Branch

**OTHERS PRESENT:**

Earl Elrod, Board Member Assistant (*Yates*)  
Sue Gornich, BP  
Renee Moilanea, POLB  
Nicole Nishimura, Board Member Assistant (*Lyou*)  
Marissa Perez, Board Member Assistant, (*Mitchell*)  
Darcy Wheelles, California Environmental Associates

**AQMD STAFF:**

Mohan Balagopalan, Air Quality and Compliance Supervisor  
Alan Caldwell, Community Relations Manager  
Henry Hogo, Asst. DEO, Science & Technology Advancement  
Susan Nakamura, Planning and Rules Manager  
John Olvera, Principal Deputy District Counsel  
Jean Ospital, Health Effects Officer  
William Sanchez, Sr. Public Affairs Manager  
Rocio Santacruz, Sr. Public Information Specialist  
Nicole Soto, Secretary  
Patti Whiting, Staff Specialist

**Agenda Item #1 - Call to Order/Opening Remarks**

Chair Dr. Joseph Lyou called the meeting to order at 12:05 PM.

**Agenda Item #2 – Approval of July 30, 2010 Meeting Minutes**

Chair Lyou asked if there were any objections to the July 30, 2010 meeting minutes. Upon hearing no objections, the minutes were approved.

Ms. Alycia Enciso asked to receive the minutes further in advance. Chair Lyou said it is important to receive the minutes in a timely manner and said the minutes will be sent 10 days in advance of the meeting.

*Action Item: Send meeting minutes to members 10 days in advance of the meeting.*

Mr. Alan Caldwell reviewed the action items from the July 30, 2010 meeting.

**Agenda Item #3 – Member Updates**

Ms. Enciso discussed a new school being planned in San Bernardino next to a freeway and railroad, and requested a series of seminars for local agencies to learn about land use planning decisions. Chair Lyou asked staff to work with Ms. Enciso and any other members' interested, to discuss better land use decisions by school districts.

*Action Item: Meet with members to discuss better land use decisions by school districts.*

Chair Lyou mentioned the next Governing Board meeting would have several issues of importance to the committee, including a proposed Lead rule – Rule 1143, the Clean Communities Plan, and a proposal to adjust the SOx cap under the RECLAIM program. Mr. Angelo Logan asked if the items would be Action Items to adopt the proposals, and if it's the last opportunity to comment on the items. Chair Lyou stated that he could not confirm it would be the last opportunity to comment, but the items are on the Agenda in that order.

**Agenda Item #4 – Update Regarding Goods Movement and Programs for Emissions Reductions (Formerly Agenda Item #7)**

Mr. Henry Hogo discussed policies and programs related to goods movement. Dr. Afif El-Hasan asked about the decrease in expected cancer risk resulting from the 85% decrease in diesel emissions. Mr. Hogo responded that the decrease is almost linear, but it is a function of the source location. Mr. Logan noted there are problems with the California Air Resources Board (CARB) approach because the 85% decrease is across the board but in some cases reductions are greater for maintenance or crane operations, while in other cases the cancer risk is higher, so on average the estimate would be linear, but

the health risk is not linear in terms of emission reductions. Mr. Hogo said the proximity of residents to the source is important, so the District has commented to CARB to look at not only reducing Particulate Matter (PM) but also the risk level.

Ms. Margaret Mapes asked which four railyards were identified above. Mr. Hogo answered San Bernardino, Hobart, Commerce, and the Intermodal Container Transfer Facility (ICTF).

Mr. Rafael Yanez asked if the District has looked at modeling that shows the ability to reduce traffic by connecting the 710 freeway to the 210 freeway. Mr. Hogo said they have not specifically looked at the connection but said trucks mostly travel to the railyards and head east to San Bernardino. Mr. Yanez explained that stop and go traffic on the freeways would be relieved by reducing car traffic, which would result in trucks getting off the roads sooner. Chair Lyou noted that the Regional Transportation Plan includes considerable discussion on measures to reduce congestion, but unfortunately some of the measures only increase congestion. Mr. Hogo added that Southern California Association of Governments (SCAG) conducts analysis for congestion management and they are involved in the District's planning process.

Chair Lyou asked when the Ports will reconsider the updated Clean Air Action Plan (CAAP). Mr. Hogo replied in mid November and said there will be a Stakeholder's Meeting on November 2, for which further information is available on the Port's website.

Mr. Logan asked how the Federal Air Quality Attainment Dates slide is related to the Near-Freeway Areas slide. Mr. Hogo said NOx sources are analyzed for near roadway impacts rather than as a regional impact. Mr. Logan asked how PM 2.5 standards relate to near freeway areas. Mr. Hogo responded that NOx emissions are a precursor to PM. Mr. Logan wondered since the slide shows more than 50% of people living near freeways, if the PM 2.5 standard is relevant to those people. Chair Lyou said it is a subject of debate and there is currently a lawsuit against the Environmental Protection Agency (EPA) over the issue. Mr. Logan asked if members can recommend that the District study the topic. Chair Lyou responded the District has intervened on the side of the EPA. Mr. Hogo added the EPA has already established a NO2 standard and regions have to meet the PM 2.5 standard, but for the next AQMP the District will review both standards. Chair Lyou said it would be helpful to hold a discussion on the lawsuit against the EPA for near roadway standards in the future.

***Action Item:*** *Agendize or send a memo to members on the lawsuit against EPA for near roadway standards.*

Mr. Logan asked how the members can promote future policy in protecting people who live near freeways, under the present air quality standards. Chair Lyou explained the way the Clean Air Act is designed, monitoring stations are located to get Ambient Air Quality levels in a variety of places that are representative of air quality throughout the basin and are not purposely situated in the most impacted areas. He continued to say it is becoming an issue of what the true impacts are since people near roadways are not getting the same air quality protection as others. Chair Lyou said in terms of letting the Board know about the near roadway impacts, studies are being done and on the next Board Agenda there is a proposal to fund additional monitoring near freeways. Mr. Logan said if the District's goal in 2020/2035 is to use zero emission technology for transportation, then it has a direct correlation to conformity with the Regional Transportation Plan, and zero emission technology may not be used. Mr. Logan continued to say that if PM 2.5 is monitored near roadways there's going to be a major shift in the way transportation corridors are planned. He closed by recommending the dialogue should continue and to ensure that the Board knows it is a very important issue to communities.

Mr. Neal Richman asked where EPA and CARB stand on micro-particulates. Chair Lyou said the rule making process is slow and deliberate, but experienced researchers and epidemiologists widely recognize that ultra fine particulates are on the horizon. He continued to say EPA is at the first step of the process, but there is a huge gap in regulation so there are a lot of questions on how much more information is needed and how it will be regulated. Chair Lyou also noted the District is funding research in this area through grants.

Mr. El-Hasan said many of the goals that are set for 2020/2024 rely on data for the type of fuel that will be available for use at that time, which might change. Mr. Hogo said it is being taken into consideration and added that state fuel regulations for marine vessels are already in place. He continued to say the International Maritime Organization (IMO) has promulgated standards for new ships as well as for cleaner fuels, being implemented by EPA. Mr. Hogo further noted EPA has asked that the United States be considered an emission control area, so cleaner fuels will have to be used within 200 miles of the coast.

Mr. Yanez discussed two new school sites in Los Angeles, one which is at the corner of the East Los Angeles interchange where methane gas was unearthed and the gaseous emissions are blowing right into the school. The second school is built on a Superfund site, which is adjacent to a Metrolink Service Center and bounded by Highway 2 and Interstate 5 and 10. Mr. Yanez asked how Los Angeles Unified School District (LAUSD) can build these High Schools with so many surrounding sources and what regulations and monitoring the District can implement in order to ensure the emissions don't affect the students. Ms. Enciso asked if the schools were already built. Mr. Yanez replied one is complete while the second is about 80% complete and scheduled to open next year. Chair Lyou said there was a similar case in Maywood and expressed concern that the situations are unbelievable. Ms. Margaret Mapes asked what the diversity is for the areas around the schools. Mr. Yanez responded Hispanic, Philipino, and Asian. Ms. Evelyn Knight said planning procedures are disconnected and asked how to close the gaps. Ms. Enciso stated she is concerned local agencies are not communicating with each other enough and asked what the group should start doing to educate the cities to make them aware of the issues. Chair Lyou responded that District staff regularly communicates with Local Governments and said there are opportunities for members to talk to Local Governments and he would be happy to start a process to make sure it works. Chair Lyou asked staff to explore opportunities for members to engage in better land use decisions.

***Action Item:*** *Explore ways members can communicate with Local Governments for better land use decisions when planning schools.*

Dr. El-Hasan asked if a citizen knows there's a Superfund site, can they go to court with a Writ of Discovery and ask for an analysis of the chemicals in the area. He further asked if the chemicals are within a reasonable proximity to each other if the citizen has a legal right to ask what environmental impact report has been done on that specific combination. Mr. John Olvera explained the process would be working through the California Environmental Quality Act (CEQA), and the environmental impact analysis the responsible agency completes. Mr. Olvera added the agency would prepare a report that analyzes the factors surrounding the sites and how it would impact the surrounding communities, and through this process you have a right to comment and raise specific questions. Mr. Olvera noted if during adoption there is still concern the review wasn't done adequately, the public has a legal right to challenge the documents. Ms. Enciso asked what CEQA is. Mr. Olvera explained it is the California Environmental Quality Act, which is a process established for projects being proposed by agencies that

requires them to review environmental impacts on surrounding areas, and if there are significant impacts, the measures that will be taken to mitigate those impacts.

Ms. Kennedy asked if it's possible to create working groups under EJAG. Chair Lyou said within the Charter they are allowed to create sub-committees that are not funded or staffed, and if there is consensus to form sub-committees, they are allowed to meet and submit their reports to put on record.

Mr. Logan asked if it's in the Charter to make recommendations to the Board, which Chair Lyou confirmed. Mr. Logan recommended for the Board to consider a California Legislative approach on siting of new schools. Chair Lyou encouraged members attend the Legislative Committee Meeting, and as an EJAG member, make the proposal about problems with school siting, noting it is a more effective way of getting the request through the Board. Ms. Enciso asked when the Legislative meetings are, which Chair Lyou responded the second Friday of the month at 9:00 AM. Mr. Logan asked if his recommendation for school siting can be a formal recommendation, which Chair Lyou responded yes.

***Action Item:** Recommend the Board to consider a California Legislative approach on siting new schools.*

Mr. Yanez asked if the District issues permits for monitoring methane in basements and used the Belmont Learning Center as an example. He also asked if the District could adopt a rule to regulate methane emissions. Chair Lyou said they typically are not regulated by the District but are part of the permit process as a conditional use of the land, to mitigate the impacts, such as construct barriers or conduct monitoring. Mr. Yanez noted that local governments do not get involved in school or hospital projects. Mr. Hogo responded the monitoring would mainly be with the Department of Toxics and Substance Control (DTSC). Mr. Yanez found that the owners of the Superfund site had to go through DTSC. Chair Lyou said as part of some Superfund processes, exceptions are made in cases where it's impractical to do something, such as the Del Amo Superfund site where homes were not built because the contamination could not be removed.

#### **Agenda Item #5 – Overview of Railroad Operations and Programs (Formerly Agenda Item #8)**

Ms. Darcy Wheelles gave an overview of railroad operations and programs. Ms. Rhetta Alexander asked if the electric locomotive in Australia was considered a Tier 4. Ms. Wheelles confirmed it was and said any Tier 4 that was electric would have zero emissions so the only emissions would be from the power plant. Ms. Wheelles explained the issue with electrification in other countries is they have different trains while the U.S. system has much heavier trains and go longer distances. She continued to say electrification is very expensive and said SCAG did an analysis in the early 90's that showed the benefits did not justify the costs.

Ms. Enciso asked how railroad employees in the yards are protected from diesel particulates. Ms. Wheelles replied she did not know. Ms. Enciso asked how many Tier 2 locomotives are in the San Bernardino yard. Ms. Wheelles said she was unsure how many go through the San Bernardino yard, but that there are 100 between Union Pacific (UP) and Burlington Northern Santa Fe (BNSF) and said she could find out. Ms. Enciso said she has proposed a flag system in San Bernardino, similar to the Districts program, and asked if the flag would constantly be red in that area. Chair Lyou said meeting the air quality standards in San Bernardino is a challenging task, but also added that San Bernardino is not out of compliance with the standards for every day. Ms. Enciso asked to get more information on a possible flag program in San Bernardino, and Chair Lyou replied he would get further information.

***Action Item:** Look into the flag program and how it would apply in San Bernardino.*

Dr. El-Hasan said his understanding is once a locomotive gets to full speed, the pollutants are minimal, and asked if the issue is getting the locomotives to full speed, which Ms. Wheelles confirmed. Dr. El-Hasan asked if it is possible to launch the locomotive using a electricity based system near the railyard. Ms. Wheelles said it's a good question and she's been suggesting to the technical people to hold a forum and said she would get more information on the issue to him. Ms. Wheelles said her understanding is one needs a dual mode locomotive, which would not fit on the existing platform, and the platform would have to be made larger and entirely new. She continued to say they are quite expensive and, in addition, you have to sort out electrical issues and how you would create the infrastructure to provide electricity. Dr. El-Hasan said this is probably why the hybrids have failed and asked if it's been considered and also asked how many miles it takes to get to full speed. Ms. Wheelles said she was unsure but would check.

Ms. Brenda LaMothe referred to the charts in the presentation showing the economic slowdown and asked if the charts subsequent to that include the economic slowdown. Ms. Wheelles said the charts do not include the economic slowdown so the reduction would be greater if it was included, and also mentioned the numbers were taken from CARB.

Ms. Knight asked if Natural Gas is being considered as a potential cleaner fuel. Ms. Wheelles said there is extensive research being conducted and that Liquefied Natural Gas (LNG) has been developed over the past 40 years but have all engines have been abandoned except two LNG Switchers in operation in Southern California, which are considered low emitting by CARB. Ms. Knight asked what the issue is with Natural Gas. Ms. Wheelles responded there is not as much energy in Natural Gas as there is in diesel per gallon and more fuel is needed for the same amount of work, which does not provide the emissions benefit. She continued to say LNG locomotives often have to pull an extra car of fuel.

Ms. Enciso asked if they can share a map that shows all the railroad tracks. Ms. Wheelles said she can but it's easier just to Google it and that the Federal Railroad Administration has such maps. Ms. Enciso asked if the Tier 2, 3, and 4 locomotives are being made in the United States, and Ms. Wheelles responded that she does not know because they are not being made yet. Ms. Enciso recommended that they should consider the electric locomotives and asked if they can be phased in. Ms. Wheelles said there are technical challenges to implementing the technology and if the United States decided as a policy to electrify Southern California, then it would be discussed and added that it was essentially a Government funded decision in other countries. Ms. Enciso said it should be jointly funded, and Ms. Wheelles replied that it's a question of cost analysis and cost effectiveness.

Mr. Yanez asked what the current schedule is to install particulate traps on the older locomotives and asked if the Gen-sets are being routed to Southern California. Ms. Wheelles clarified that the Gen-sets don't travel far but the Tier 2 Line Haulers do, which are the cleanest locomotives currently available, and because of the 1998 MOU are being routed to Southern California. Ms. Wheelles said there are three or four efforts to look at diesel particulate traps for locomotives since there are a variety of different locomotives. She said the District is looking into passenger diesel locomotives, BNSF and UP are working with CARB on testing switch locomotives, and UP is separately working on a medium horsepower locomotive. Ms. Wheelles said they are still in the testing phase, but thinks it could be a couple years until they become commercially available.

Chair Lyou mentioned he toured the General Atomics Full Scale Magnetic Levitation Train and said they put a demonstration project on their site and also want to put one at the Ports. He said American Maglev has invested 50 million dollars of its own money to put in magnetic levitation technology and added that General Atomics needs to make an investment in the technology. Chair Lyou asked Ms.

Wheeles to take the request to her clients that they invest in the project to reduce emissions in the most polluted areas of the country. Chair Lyou said in regards to the technical challenges with electrification, Trans-Siberian Railway is an example, and we should be able to build such a system here. Chair Lyou mentioned Mr. Logan's efforts and noted that the railroads are calculating miles per ton, but it's actually not calculated until after 500 miles have gone by and not from startup. Therefore the calculation does not include the emissions associated with getting the locomotive up to full speed. Ms. Wheeles said it's based on a report issued last year by the Federal Railroad Administration and she would have to look at the report and talk with Mr. Logan.

Ms. LaMothe asked if the railroads ever meet with groups such as EJAG so they can see their faces and hear their opinions. Ms. Wheeles said there have been extensive meetings as part of the 2005 MOU, specifically in Commerce where BNSF and UP have railyards right next to one another. She also agreed to make the railroad contact information available. Chair Lyou mentioned the offer to take a tour of the railyards, which Ms. Wheeles confirmed and added that smaller tours are better and anyone interested should email her for arrangements. Chair Lyou instructed members to contact Ms. Wheeles individually. Ms. Enciso asked if maps will be provided for the tours, and Ms. Wheeles replied in the negative. Ms. Enciso asked if they will be allowed to get down, and Ms. Wheeles declined such requests due to safety issues. Ms. Enciso asked what the profits for BNSF and UP were last year. Ms. Wheeles said she did not know.

**Agenda Item #6 – Facility Information Detail (FIND) search program on AQMD website (Formerly Agenda Item #5)**

This item has been placed on the January Agenda.

**Agenda Item #7 – Update Regarding National Ambient Air Quality Standards (Formerly Agenda Item #6)**

This item has been placed on the January Agenda.

**Agenda Item #8 – Other Recommendations**

Chair Lyou discussed the 2011 meeting dates and asked staff to email the dates to members.

*Action Item: Email the 2011 meeting dates to members.*

**Agenda Item #9 – Public Comment**

No Comments.

**Agenda Item #10 – Adjournment**

The meeting adjourned at 2:58 PM.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 21

REPORT: Legislative Committee

SYNOPSIS: The Legislative Committee held a meeting on Friday, January 14, 2011. The next Legislative Committee meeting is scheduled for Friday, February 11, 2011 at 9:00 a.m. in Conference Room CC8. The Committee deliberated on agenda items for Board consideration and recommended the following actions:

Agenda Item	Recommended Action
Pension Reform Principles	Approve with amendment

**RECOMMENDED ACTION:**

Receive and file this report, and approve agenda items as specified in this letter.

Jane Carney, Chair  
Legislative Committee

OA:AG:WS:dm

---

**Attendance [Attachment 1]**

The Legislative Committee met on January 14, 2011. Committee Chair Jane Carney was present. Committee Vice Chair Jan Perry, and Members Michael D. Antonovich, and Josie Gonzales were present via video conference.

**Update on Federal Legislative Issues**

Mark Kadesh, AQMD federal legislative consultant reported that 112<sup>th</sup> Congress has convened. He pointed out that there are over 50 senators who have expressed some level of interest in limiting EPA's authority to regulate greenhouse gases, and there will likely be an effort this year to limit EPA's authority in this area.

Warren Weinstein, AQMD federal legislative consultant reported that the Senate Energy Committee will first focus on the Gulf oil spill issue. After that, there is a good chance they will work on a clean energy portfolio standard that may include nuclear energy.

Chris Kierig, AQMD federal legislative consultant reported on the Federal budget, transportation authorization, and appropriations for the next year. He pointed out that the Federal Government currently operates under a continuing resolution that expires on March 4, but that it is widely expected to be extended to cover this entire fiscal year. The next Surface Transportation Bill also faces potential funding issues.

Andy Ehrlich, AQMD federal legislative consultant reported that they are optimistic about energy and environmental issues being acted on this year. Similarly, he is optimistic about the Surface Transportation Bill passing later this year because legislators are also working on a bill to define “earmarks.” That is important for the Surface Transportation bill because it will determine what transportation projects could be funded.

### **Update on Sacramento Legislative Issues**

Paul Gonsalves, AQMD state legislative consultant, gave an overview of the state budget. He announced that Governor Brown recently released his proposed budget with a \$26.4 billion budget deficit. This comprises an estimated deficit of \$25.4 billion over the next 18 months, including \$8.2 billion for the current year, and \$17.2 for the next year, and \$1 billion for reserves. In his proposal, the Governor calls for \$12 billion in spending reductions and \$12 billion in the extension of existing taxes for 5 years. His strategy is to get the legislature to pass the budget by early March to get this on the June ballot for voter approval.

Will Gonzalez, AQMD state legislative consultant reported that there were not many changes in leadership. A noticeable exception was Senator Alan Lowenthal as Chair of the Senate Transportation Committee moving to Chair of Education. Senator Mark De Saulnier, from the Bay area, former CARB Board Member, became the new Chair of Transportation. Also, Senate President Pro Tem Darrell Steinberg has decided to combine the revenue and taxation committee with local government committee chaired by Sen. Rodrick Wright. The combination of these two committees is consistent with the Governor’s agenda to realign programs.

Carolyn Veal-Hunter, AQMD state legislative consultant reported that the 33% renewable energy portfolio standard bill is back. That bill was very contentious last year, and will again take up a big part of the legislative session in both houses this year. In regards to pension reform, they are analyzing attempts made last session and tracking bills that may be introduced now. She noted that Governor Brown’s recent inaugural address and recent budget package makes no reference to pension reform; however, as a

candidate, he indicated that that pension benefits for state employees should be addressed.

### **Pension Reform Principles [Attachment 2]**

Dr. Barry Wallerstein, AQMD Executive Officer, reported that AQMD's Governing Board at the end of 2010 established goals and objectives for its legislative activities in 2011. This included the ability to obtain greater flexibility for the Governing Board regarding its pension program for AQMD employees. Such pension reform is needed to ensure that pension costs are within appropriate levels of the AQMD's budget. However, the AQMD's pension program is governed by the County 1937 Retirement Act, which currently precludes the Governing Board from exercising any flexibility to entertain different options that might constrain pension costs. To start this effort, staff is proposing to the committee a set of principles that would guide the legislative staff's future work. (See attached January 13, 2011 Draft Principles to Guide Pension Reform Efforts). At this time, AQMD's state lobbyists will be directed to secure a spot bill to meet legislative deadlines, while monitoring pension reform legislations introduced by others.

Michael O'Kelly, AQMD's Chief Financial Officer, presented nine different retirement formulas contained within the 1937 Act along with their projected cost impacts.

### **[Attachment 3]**

### **Discussion on Pension Reform**

Chair Carney asked about public employees in California that are not in this 1937 Act and inquired about their relative retirement plans. Michael O'Kelly responded that state government employees are not in the 1937 Act, which mostly covers counties, some special districts, and some cities.

Chair Carney also asked AQMD consultant Carolyn Veal-Hunter if she had enough information about the AQMD's pension reform principles. Carolyn Veal-Hunter responded that this is the right time for the AQMD to seek some potential flexibility in its pension program.

Dr. Barry Wallerstein recommended that Carolyn meet with AQMD's budget staff at the district to review AQMD's budget impacts and some of the analyses regarding pension costs, for greater clarity and understanding of the issue.

### **Public Comments**

Ray Whitmer, representing AQMD employees in the Teamsters Union requested that the pension reform principles reflect that, prior to legislative language being introduced, thorough discussions should be held with represented employees with the goal of getting their buy-in on the proposed legislative reform. He ultimately added that he understood that AQMD needed to introduce a spot bill, at this point, but agreement should be

reached prior to detailed language being introduced.

Dr. Barry Wallerstein commented that staff had already met with the unions representing employees regarding the need for pension reform. He will continue to conduct additional meetings on this item to discuss specific bill language.

Chair Jane Carney said she would not object to adding another bullet point to the principles recommended by staff that prior to any specific language being introduced, thorough discussions would be held with all stakeholders with the goal of getting their buy-in.

Kris Flaig, Environmental Engineer and member of labor negotiations committees with the City of Los Angeles, commented that when labor and management work together a more unified course occurs that would allow greater changes to take place. He further recommended that as part of its efforts to contain costs, AQMD should look at ensuring proper oversight of the pension program.

Kambiz Hadjforoosh, President of the Professional Employees Unit at AQMD, commented that the AQMD should insure that the principles make clear that any pension reform only applies to new employees and that discussions should occur with their association prior to specific language being introduced.

The Legislative Committee approved the proposed Pension Reform Principles with the addition that thorough discussions be held with all stakeholders with the goal of getting their buy-in before any specific legislative language is introduced.

Action on staff recommendations regarding legislation listed below was postponed until the next legislative committee meeting to be held on February 11, 2011.

### **Recommend Position on Federal/State Bills**

<b><u>Bill #</u></b>	<b><u>Author</u></b>	<b><u>Bill Title</u></b>

## ATTENDANCE RECORD – January 14, 2011

### **DISTRICT BOARD MEMBERS:**

Jane Carney  
Jan Perry (*Videoconference, Los Angeles*)  
Josie Gonzales (*Videoconference, San Bernardino*)  
Michael D. Antonovich (*Videoconference, Los Angeles*)

### **STAFF TO COMMITTEE:**

Oscar Abarca, Deputy Executive Officer  
Anupom Ganguli, Assistant Deputy Executive Officer  
William Sanchez, Senior Legislative & Public Affairs Manager  
Julie Franco, Senior Administrative Secretary  
America Robledo, Secretary  
Daniel Wong, Secretary

### **DISTRICT STAFF:**

Dr. Barry Wallerstein, Executive Officer  
Peter Greenwald, Senior Policy Advisor  
Elaine Chang, Deputy Executive Officer  
Dr. Laki Tisopulos, Assistant Deputy Executive Officer  
Philip Crabbe, Community Relations Manager  
Patti Whiting, Staff Specialist  
Paul Wright, Audio Visual Specialist  
Jeanell Bradley, Human Resources Manager  
Rainbow Yeung, Sr. Public Information Specialist (*Videoconference, Los Angeles*)  
Bill Wong, Principal Deputy District Counsel  
Chung Lui, Deputy Executive Officer  
Mohsen Nazemi, Deputy Executive Officer  
Laki Tisopulos, Assistant Deputy Executive Officer  
Michael O'Kelly, Chief Financial Officer  
John Olvera, Principal Deputy District Counsel  
Bill Johnson, Assistant Deputy Executive Officer  
Paul Wuebben, Clean Fuels Officer  
Marc Carrel, Program Supervisor  
Ricardo Rivera, Sr. Staff Specialist  
Tina Cherry, Sr. Public Information Specialist  
Kim White, Public Affairs Specialist  
Dave Madsen, Sr. Public Information Specialist  
Veera Tyagi, Deputy District Counsel II  
Barbara Radlein, Air Quality Specialist  
Kambiz Hadjforoosh, Air Quality Engineer II

**OTHERS PRESENT:**

Andy Ehrlich, B&D Consulting (teleconference)  
Paul Gonsalves, Gonsalves & Son (teleconference)  
Chris Kierig, Kadesh & Associates (teleconference)  
Mark Kadesh, Kadesh & Associates (teleconference)  
Warren Weinstein, Kadesh & Associates (teleconference)  
Carolyn V. Hunter, Sloat, Higgins, Jensen & Associates (teleconference)  
Bill Lamarr, California Small Business Association  
Nicole Nishimura, Board Member Assistant (Lyou)  
Debra Mendelsohn, Board Member Assistant (Antonovich)  
Marisa Perez, Board Member Assistant (Mitchell)  
Greg Adams, LACSD  
Steve Schuyler, WSPA  
Kris Flaig, City of Los Angeles/SCAP  
Sarah Wewa, AAR  
Max Pike, AAR  
Rita Loof, Rad Tech  
Sue Gorwick, BP  
Terry Ahn, OCSD  
Phillip Hubbard, Teamsters Local 911  
Ray Whitmer, Teamsters Local 911  
June Allen, Teamsters Local 911  
Norma Martinez, Teamsters Local 911  
Jane Powers, Teamsters Local 911  
Lisha Smith, Board Member Assistant (Gonzales; teleconference)  
John Richardson, CAO (San Bernardino)  
Lance Larson, CAO (San Bernardino)  
Josh Camdelaria, CAO (San Bernardino)

## **Attachment 2**

### **Principles to Guide Pension Reform Efforts**

**Draft: January 14, 2011**

Defined benefit retirement plans have been the traditional approach for more than 70 years in California and have produced retirement benefits that have been central to recruiting and retaining quality public employees. It is becoming widely recognized that current pension systems are in need of modernization to better align with today's financial conditions.

AQMD's goal relative to any pension reform is equitable and financially sustainable pensions for its employees consistent with the following principles:

- The proper level of public pension benefits should be set with the goal of providing a fair and adequate benefit for employees, while ensuring fiscally sustainable contributions by government employers.
- Public pension benefits should be designed with professional, reliable, actuarial work to justify pension levels with respect to pension costs to employers. Attempts to establish pension benefits that are not supported by actuarial information should be rejected.
- Pension benefits should be viewed in the context of an overall compensation structure whose goal is the recruitment and retention of qualified employees. In recognition of competitive market forces, any change in the structure of retirement benefits must be evaluated in concert with other adjustments in compensation necessary to attract and retain an experienced and qualified workforce.
- SCAQMD's pension system is limited by statute as to what reforms may be considered, and SCAQMD's Governing Board should seek statutory authority for flexibility in structuring retirement benefits for District employees, including at a minimum the ability to select any of the different pension benefit formulas within the County 1937 Act provisions.
- SCAQMD shall negotiate with its represented Bargaining Units according to the provisions of the Meyers-Milias-Brown Act for any pension system adjustments.
- SCAQMD's Governing Board should be allowed the flexibility to select the retirement system administrator, as appropriate, to meet the fiscal needs of the contributing employers, in keeping with the principles stated above.
- Prior to any specific legislation being introduced, AQMD will thoroughly discuss with interested parties, including its employees, any proposals with the goal of obtaining their buy-in.\*

\*Added by Legislative Committee (1/14/2011)

## 1937 Act Retirement Formulas

Government Code Sec.	% of Earnable Comp for Each Year of Service (by Gov Code)									
	31676.1	31676.11	31676.12	31676.13	31676.14	31676.15	31676.17	31676.18	31676.19	
50	1.18	1.24	1.34	1.36	1.48	1.49	2.00	2.00	2.00

### SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT LEGISLATIVE REPORT

#### FROM HOME RULE ADVISORY GROUP MEETING OF NOVEMBER 17, 2010

**HRAG members present:**

Dr. Elaine Chang (SCAQMD)

Greg Adams, L.A. County Sanitation Districts

Mike Carroll, Latham & Watkins

Curtis Coleman, Southern California Air Quality Alliance

Chris Gallenstein on behalf of Richard Corey, CARB (participated by phone)

Jayne Joy, Eastern Municipal Water District

Bill LaMarr, California Small Business Alliance

Rongsheng Luo on behalf of Jonathan Nadler, SCAG (participated by phone)

Art Montez, AMA International

Bill Quinn, CCEEB (participated by phone)

Larry Rubio, Riverside Transit Agency (participated by phone)

Mike Wang, WSPA

**LEGISLATIVE UPDATE**

Philip Crabbe provided a summary of what was discussed at the Legislative Committee meeting on November 12, 2010. The federal and state legislative consultants provided an update which focused on the election and the possible impact it might have on the District's initiatives. The Legislative Committee adopted staff's proposed 2011 state and federal legislative goals and objectives. State goals include Section 185 issues, pension reform, offsets, intellectual property, and infrastructure funding for the Carl Moyer Program, etc. Federal goals include Section 185 issues, offsets, surface transportation bill, DERA funding, technology advancement funding, marine vessel emissions, etc. The Legislative Committee took the contract extensions for both state and federal legislative consultants under consideration and will make recommendations to the Board.

**Discussion**

Mr. Wang asked if the intellectual property legislation applies to other agencies or if the legislation is specific to AQMD. Dr. Chang responded that the legislation was started initially for AQMD for the development of fuel cell technology but other agencies have shown interest. Mr. Quinn commented that CCEEB is concerned that the District may be able to collect revenue from something that they helped develop but that they also regulate. Ms. Baird responded that she believes that this is not the District's intent and that District staff is having internal discussions on this issue.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 22

REPORT: Mobile Source Committee

SYNOPSIS: The Mobile Source Committee met Friday, January 21, 2011. Following is a summary of that meeting.

RECOMMENDED ACTION:  
Receive and file.

Ronald O. Loveridge, Chair  
Mobile Source Committee

EC:fmt

---

### **Attendance**

Chair Ron Loveridge called the meeting to order at 9:05 a.m. Present was Committee Member Jane Carney. Attending via videoconference were Committee Members Bill Campbell and Jan Perry (arrived at 9:15 a.m.). Committee Member John J. Benoit was absent. The following items were presented:

### **ACTION ITEM:**

- 1) Proposed Endorsement of Freight Transportation Improvement Principles**  
Marc Carrel, Program Supervisor in Legislative & Public Affairs, presented a set of Freight Transportation Improvement Principles for the committee to endorse. He mentioned that with the federal surface transportation bill up for reauthorization, freight transportation is expected to be a significant topic. AQMD staff joined a working group spearheaded by the Environmental Defense Fund, working with a coalition of environmental groups, government agencies, and private sector organizations. Over the course of several months they came up with a set of principles that reflect the views of AQMD staff, and particularly principles adopted by the Governing Board in 2009 on federal goods movement legislation, and in 2008 on federal surface transportation legislation. Staff from the Southern California Association of Governments (SCAG) and the Ports of Long Beach and Los Angeles were involved in the meetings that developed these Freight Transportation Improvement Principles. Chair Ron Loveridge asked what SCAG's position is, and whether they have taken a position. Mr. Carrel responded

that SCAG is a member of several groups which have signed onto the principles but that he was not sure whether they had taken a specific position. Ms. Jane Carney asked if these principles were consistent with AQMD concerns and if they would hinder our ability to move toward cleaner rail. Henry Hogo explained that these principles are more short term focused as the legislation is for the short term while the effort to move toward Tier 4 locomotives is longer term. Ms. Carney asked if Tier 4 locomotives were available yet. Mr. Hogo explained that they could be ordered but would not be available until 2013. Supervisor Bill Campbell asked about the membership of coalitions that have endorsed the principles. Chair Loveridge then reiterated his concern about working with SCAG, especially on transportation issues. Ms. Carney added that we should also know if the Ports of Los Angeles and Long Beach have taken a position.

*Chair Loveridge moved to recommend conditional endorsement of the principles, and directed staff to inquire about SCAG and the port's position on these principles and to report back to the Committee if there is any concern.*

## **INFORMATIONAL ITEMS:**

### **2) Overview of the 2011 Federal and State Regulatory Agenda**

Henry Hogo, Assistant Deputy Executive Officer, provided a report on state and federal regulatory activities for 2011. Staff indicated that there will not be as many new regulations being proposed by CARB this year. However, there are several major amendments to existing regulations that the CARB Board will be considering. Relative to on-road mobile sources, CARB will be releasing for a 15-day comment period proposed draft language to implement the CARB Board's approval of the amendments to the Truck and Bus Regulation and the Drayage Truck Regulation. The most significant addition is the allowance for fleets to credit surplus actions taken to reduce off-road vehicles towards on-road truck compliance and vice versa. CARB will allow such crediting within a fleet's mix of vehicles, but not among different fleets. The proposed crediting will affect primarily construction fleets. Relative to the Drayage Truck Regulation, the CARB Board did not approve CARB staff recommendation to remove the Phase II implementation that would require all trucks entering marine ports and intermodal yards to meet 2007 exhaust emissions standards by 2014. The Board did approve the sunset of the Drayage Truck Regulation and requiring that all drayage trucks meet the Truck and Bus Regulation requirements beginning in 2017. The proposed 15-day language is scheduled to be released in February 2011.

The more significant amendments that will be considered by the CARB Board are proposals to amend the Zero Emissions Vehicle (ZEV) Program and Phase III of the Low Emissions Vehicle (LEV III) Program. The CARB Board directed their

staff to propose amendments to the two programs by the end of 2010. However, CARB staff indicated that the U.S. EPA will be proposing greenhouse gas emissions standards for model year 2017 to 2025 passenger vehicles and CARB staff wanted the ZEV and LEV III Programs to be consistent with the federal proposals. CARB staff projected that in order to meet the State's goal of 80% reduction in greenhouse gas emissions by 2050, there will be a need to have around 425,000 zero emissions vehicles by 2025 and over 1.4 million vehicles by 2050. CARB staff will be releasing specific regulatory language for public comments in the Spring of 2011.

Relative to off-road mobile sources, CARB staff will be proposing regulations to control evaporative emissions from off-road recreational vehicles, on-road motorcycles, and spark-ignition marine engines. The proposed regulation for off-road recreational vehicles and on-road motorcycles would reduce evaporative emissions by 90% from uncontrolled levels. Relative to spark-ignition marine engines, CARB staff is proposing to adopt the federal emissions standards. However, the controls will be more stringent based on a proposed seven-day evaporative test method compared to the federal three-day test method. Overall reductions would be about 67% compared to uncontrolled levels. CARB staff is completing emission inventory updates, prior to release of specific draft language and no date has been set for the CARB Board's consideration of the two regulations.

Other off-road regulation proposed amendments include the Low-Sulfur Marine Fuel Regulation and Cargo Handling Equipment Regulation. CARB staff indicated that there is a need to amend the Low-Sulfur Marine Fuel Regulation to extend the 24 nautical mile definition to be from the Santa Barbara Channel Islands to capture marine vessels that have been navigating beyond the 24 nautical miles off the California coast to avoid having to use the lower sulfur content marine fuels. Relative to cargo handling equipment, CARB staff is proposing regulatory relief for some equipment that do not have available particulate matter retrofit devices.

Lastly, CARB staff is assessing the need to develop a marine vessel speed reduction regulation. In addition, CARB staff will be implementing the railyard emission reduction commitment discussed in Agenda Item 3.

On the federal level, U.S. EPA and the U.S. Department of Transportation (DOT) are proposing greenhouse gas emissions standards for light-duty vehicles produced beginning in 2017 through 2025. The U.S. EPA is seeking comments on the stringency of the emissions standards that range from a 3% to a 6% reduction per year. In addition to the light-duty vehicle proposal, the U.S. EPA and DOT are proposing greenhouse gas emissions standards for medium- and heavy-duty

vehicles beginning with model year 2014 through 2018. The proposed standards would cover Class 2b to Class 8 trucks. The proposals include engine exhaust emissions standard and vocational vehicle standards. In addition, improved fuel efficiency standards are proposed.

The Committee members asked how fuel cell vehicles and electric vehicles will be brought to the commercial market given the significant number of zero emission vehicles needed to meet the 80% reduction in greenhouse gas emissions by 2050. Staff indicated that for the February Committee meeting, staff will provide an overview on fuel cell vehicles and electric vehicles.

*Councilwoman Jan Perry left at 9:55 a.m.*

**3) Status Report on CARB's Railyard-Specific Commitment Language**

Henry Hogo provided an update on the progress of CARB railyard-specific commitment language to reduce particulate emissions at the four railyards with the highest levels of estimated cancer risk located in the South Coast Air Basin (BNSF San Bernardino, BNSF Hobart, UP Commerce, and UP ICTF/Dolores). Mr. Hogo provided an overview of the public process to date and indicated that the CARB Board approved moving forward with the commitment language at its June 24, 2010 meeting. However, CARB staff only recently released the CARB Board Resolution regarding the CARB Board's findings and direction to staff.

The CARB Board found that the commitment language if implemented would achieve an 85% reduction in particulate matter (PM) emissions by 2020; residents living within two miles of railyards are the intended beneficiaries and are entitled to enforce CARB's commitments (i.e., they can take actions on CARB if CARB fails to enforce their commitments); direct regulations on the railroads would not achieve as great of emissions reductions as the voluntary commitments; and that the maximum incremental cancer risk of 400 in a million at the San Bernardino Railyard is unacceptable. In addition, the CARB Board found that incentives funding would help in achieving PM emissions reductions, but the reductions are conditioned upon receiving funding. As long as the railroads meet their commitments, it is appropriate for CARB to take no actions to regulate railyard sources or take any other federal legislative or administrative actions to obtain greater authority over railyard sources. Lastly, if the railroads do not meet their commitments, CARB staff will return within four months with proposed regulations.

The CARB Board delegated to the CARB Executive Officer to send the cover letter of the railyard commitments to the railroads for their agreement and to implement the Board's findings. In addition, the CARB Executive Officer was delegated the responsibility to conduct the appropriate environmental analysis as

required under CEQA for the railyard commitments. In addition, CARB staff is to explore technologies and other solutions to continue to reduce the maximum incremental cancer risk at the San Bernardino Railyard to a level below 400 in a million. Lastly, by the end of 2011, a locomotive technology symposium would be dedicated to zero and near-zero technologies for railyard operations and locomotives.

Staff indicated that CARB will be releasing the environmental analysis in the first quarter of 2011 with a 45-day public comment period. CARB did not request any public comments on the commitment language at this time. However, the AQMD District Counsel's Office has been in discussions with CARB's counsel regarding the railyard commitment language.

The Committee commented on CARB's position relative to their authority to regulate railyard emissions sources and the AQMD Board's concerns. Staff will provide updates to the Committee as CARB moves forward with the commitment language.

**4) Reasonable Further Progress Requirements for the 1997 8-Hour Ozone National Ambient Air Quality Standards**

Joe Cassmassi, Planning and Rules Manager, provided an update on U.S. EPA's proposed change in policy that would eliminate the use of "out of area" emissions reductions to help satisfy Reasonable Further Progress (RFP) emissions reductions for non-attainment areas. The change in policy resulted from litigation and the courts direction to U.S. EPA to reconcile RFP policy with that applied to Reasonable Available Control Technology (RACT) that is specifically required for sources solely "in the non-attainment area." The change in policy would impact the Coachella Valley, but U.S. EPA and staff believe that the impact will be minimal and can be handled with a RFP revision. U.S. EPA is seeking comments on their proposal by February 4, 2011.

**5) Rule 2202 Activity Report**

Written report submitted. No comments.

**6) Monthly Report on Environmental Justice Initiatives – CEQA Document Commenting Update**

Written report submitted. No comments.

**7) Other Business**

None

**8) Public Comment**  
Supervisor announced that

The meeting adjourned at 10:12 a.m.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 23

REPORT: Stationary Source Committee

SYNOPSIS: The Stationary Source Committee met Friday, January 21, 2011. Following is a summary of that meeting. The next meeting will be February 18, at 10:30 a.m., in Conference Room CC8.

RECOMMENDED ACTION:  
Receive and file.

Dennis Yates, Chair,  
Stationary Source Committee

MN:am

---

### **Attendance**

The meeting began at 10:30 a.m. Present were Dennis Yates, Jane Carney and Judith Mitchell, Bill Campbell (attended by Videoconference, left the meeting at 11:10), and Ronald Loveridge.

*Committee Chair Dennis Yates announced that agenda item #4 would be heard first, followed by #'s 2, 3, 5 and then 1.*

### **INFORMATIONAL ITEM**

#### **4. Rule 1113 – Architectural Coatings**

Naveen Berry, Planning and Rules Manager, presented a summary of the staff proposal. David Darling, American Coatings Association, commented on the impact of economic conditions on the industry, the need for certain higher-VOC categories, as well as the reductions in overall VOC emissions over the past few years. Robert Wendoll, Dunn Edwards, informed the Committee of a 50% reduction of sales since 2005 in the District and expressed concern pertaining to the VOC limit proposed for primers. Rita Loof, RadTech, expressed concern about the proposed phase-out of the Averaging Compliance Option, VOC test method for UV coatings, and possible enforcement against a consumer. After comments

were received from members representing the coatings industry, Committee Member Loveridge asked staff to respond to the public comments. Mr. Berry addressed the issues regarding test methods, enforceability clarifications, the phase out of the averaging compliance provision, and the proposed VOC limit reductions. Committee Member Judith Mitchell inquired about the functionality of the lower VOC primers and the implementation dates. Mr. Berry explained that the implementation dates have already been extended based on feedback, and that commercial products are available and in use that can be formulated to practically zero VOC and have similar, if not better, performance than the higher VOC primers. Dr. Tisopulos committed to continue working with the stakeholders to assess if there are areas within the primer category which require a higher VOC limit. Chairman Yates emphasized the importance of sound surface preparation for maximum performance regardless of the VOC content of the primer. He also acknowledged the difficulties that have been experienced during the recent economic downturn but emphasized the need to continue improving air quality and ultimately save lives.

2. **Update on Rule 1150.1 – Control of Gaseous Emissions from Municipal Solid Waste Landfills**

Jill Whynot, Director of Strategic Initiatives, provided an update on proposed amendments to Rule 1150.1 which has controlled VOC emissions from landfills for over 20 years in the South Coast. The rule is being amended to make it consistent with a state AB 32 measure for greenhouse gases, which was modeled largely on Rule 1150.1.

The same controls for VOCs also reduce methane, so landfills in the South Coast will not have to add control equipment. There are some differences between the two rules, so Rule 1150.1 is being modified to match the state rule. The integrated surface monitoring limit is being lowered from 50 to 25 ppmv, but landfills here are already meeting that level and will not need to make changes. Staff is also recommending changes to streamline the recordkeeping and reporting.

South Coast will implement the state rule through an enforcement agreement with CARB. The agreement is still being worked out, with the intent to avoid redundancy for permits and inspections at the same facilities by both agencies. Also pending is a state guidance document to clarify some aspects of rule implementation.

The rule currently allows Alternative Compliance Plans to address some of the unique situations at landfills. Staff is working with industry to ensure a smooth transition for any new requirements that may also need alternatives.

Industry will have some costs if they revise their Alternative Compliance Plans. There are no adverse environmental impacts. The public hearing for this rule will be in February.

There were no public comments on this item. Ms. Mitchell asked how many landfills are in the South Coast. Ms. Whynot said there are 83, with 19 currently accepting waste. Landfills continue to generate methane after they close and must still maintain the controls. Mayor Yates mentioned that customers that used the Millken landfill in Chino will be getting billed, and he asked how long landfills have to control emissions. Jay Chen, Senior Engineering Manager responded that under state law, landfills must establish funding for continued maintenance after their closures. This particular landfill may have been closed before the law came into effect, or may not have sufficient funding.

**3. Proposed Amendments to Regulation IX – Standards of Performance for New Stationary Sources**

Ms. Whynot briefed the Committee on a routine update to Regulation IX that will go to the Board in May. Each year staff incorporates, by reference, any changes to the federal requirements for Standards of Performance for New Stationary Sources. In 2010, there was only one action which related to Portland Cement Plants. There are no additional economic or environmental impacts associated with this rule amendment. There were no public comments or questions from Committee Members.

**5. Rule 2005 – New Source Review for RECLAIM**

Joe Cassmassi, Planning and Rules Manager provided a brief summary of the proposed amendment to Rule 2005. The amended rule would not require existing RECLAIM facilities to hold RTCs at the beginning of the year (and start of each year thereafter) for new sources or modifications to equipment at their facility. The proposed amendment would allow the existing facility to reconcile RTC allocations at the end of the year. This would provide flexibility and potential financial relief by not requiring the RECLAIM facility to purchase or hold RTC's in the beginning of the year when the credits are most costly. The rule amendment would have no impact on emissions since all of the facilities are required to reconcile emissions on either a quarterly or annual basis. Board Member Mitchell asked staff whether there was any opposition to the amendment. Dr. Elaine Chang commented that the rule amendment had been discussed with EPA and that staff was not aware of any challenges at this time.

*Ms. Carney indicated that she would not participate in agenda #1 due to conflict of interest as Loma Linda Medical Center is a source of income for her, at which time she left the meeting.*

**1. Rule 317 – Clean Air Act Non-Attainment Fees**

Dr. Laki Tisopulos, Assistant Deputy Executive Officer with the Planning, Rule Development and Area Sources, gave the staff presentation on proposed amendments to Rule 317. The revised proposal reflects staff's diligent work with the stakeholders, CARB and U.S. EPA over the last six months to address Section 185 requirements of the federal Clean Air Act (CAA). As provided under Section 172(e) of the CAA, the revised proposal offers a fee-equivalent framework. Staff is proposing the establishment of a fee-equivalent account to be funded by several mobile and area-source funding programs that produce ozone precursor reductions that are surplus to the one-hour ozone SIP. The account will be debited by the Section 185 fees that major stationary sources would otherwise be subject to. The rule commits the Executive Officer to conduct annual equivalency demonstrations and report the results to U.S. EPA on an annual basis. Staff has identified adequate funding to meet the region's fee obligation. In the unlikely event that a funding shortfall is experienced, the proposal commits staff to develop a backstop rule to cover the shortfall. Dr. Tisopulos indicated that, at the workshop held in early January, the proposal received mostly positive feedback. Several members of the public including Curt Coleman representing Southern California Air Quality Alliance, Bill LaMarr of the Small Business Alliance and David Rothbart of L.A. County Sanitation District commented in support of the proposal focusing on mobile source emission reduction programs, indicating that the proposal reflects the result of a long cooperative work with staff, industry, and U.S. EPA. They expressed some concern about the state of the State's economy and the impact it may have on the long-term viability of certain program revenue streams the staff proposal relies on, and acknowledged, however, that it reflects the best route under the circumstances and thanked the Board Members and Supervisor Campbell for their leadership and support.

**WRITTEN REPORTS**

All written reports were acknowledged by the Committee.

**PUBLIC COMMENTS**

There were no public comments.

Mayor Yates announced that the next Stationary Source Committee meeting will be on February 18, 2011.

The meeting was adjourned at 11:40 a.m.

AGENDA NO. 24

REPORT: Technology Committee

SYNOPSIS: The Technology Committee met on January 21, 2011. Major topics included Technology Advancement items reflected in the regular Board Agenda for the February Board meeting. A summary of these topics with the Committee's comments is provided. The next Technology Committee meeting will be on February 18, 2011 at 12 p.m. in CC-8.

RECOMMENDED ACTION:

Receive and file.

Josie Gonzales  
Technology Committee Chair

---

**Attendance:** Committee Chair Josie Gonzales and Committee Member John Benoit participated by video-teleconference. Committee Member William Burke participated via teleconference. Committee Member Judith Mitchell was in attendance at District headquarters. Committee Members Miguel Pulido and Dennis Yates were absent due to a conflict with their schedules.

## **FEBRUARY BOARD AGENDA ITEMS**

### **1. Execute Contract to Develop and Demonstrate Hydraulic Hybrid Heavy-Duty Vehicles**

Heavy-duty fleet vehicles represent a targeted category for emission reductions within the South Coast Air Basin. Parker Hannifin proposes to work in partnership with the AQMD, Freightliner and Coca-Cola to develop and demonstrate up to four heavy-duty hydraulic hybrid delivery vehicles. These delivery vehicles will be deployed in Coca-Cola's normal fleet to evaluate their performance, operating cost and emissions benefit. This action is to execute a contract with Parker Hannifin for an amount not to exceed \$250,000 from the Clean Fuels Fund. The total cost of this proposed project is \$2,000,000.

*Councilmember Mitchell asked how close this technology is to being implemented more widely. Staff responded this technology would be appropriate for all applications that involve stop-and-go operations, i.e., goods delivery trucks, refuse haulers and package delivery trucks.*

*Moved by Benoit; seconded by Mitchell; unanimously approved.*

**2. Execute Contract to Develop and Demonstrate Plug-In Hybrid Electric Drive System for Medium- and Heavy-Duty Vehicles**

Medium- and heavy-duty fleet vehicles represent a large emissions category within the South Coast Air Basin. Odyne Systems, LLC (Odyne) proposes to work in partnership with the AQMD, U.S. Department of Energy, Los Angeles Department of Water and Power and Los Angeles County to develop and demonstrate up to two medium- and heavy-duty plug-in hybrid electric vehicles. These vehicles will be deployed in normal fleet service to evaluate their utility, emissions reduction and fossil fuel consumption reduction potential. This action is to execute a contract with Odyne in an amount not to exceed \$494,000 from the Clean Fuels Fund. The total cost for this proposed project is \$2,599,000.

*Supervisor John Benoit asked about the use of taxpayer money to develop this type of technology. Staff agreed we should work to obtain authority for intellectual property rights and also the recovery of AQMD funds. Additionally, because the project will develop a retrofittable technology, there is the potential for large emissions benefits and so it is appropriate to commit AQMD resources to support this project.*

*Moved by Mitchell; seconded by Benoit; unanimously approved.*

**3. Transfer Funds from Clean Fuels Fund to DOE Plug-in Hybrid Electric Vehicle Fund**

The AQMD received a \$5 million award from the California Energy Commission (CEC) to cofund the DOE medium-duty plug-in hybrid electric vehicle (PHEV) demonstration program. A condition of the award requires the AQMD to incur cost before corresponding payments can be made by the CEC. To comply with the conditions of the CEC award, it is requested that up to \$5 million be transferred from the Clean Fuels Fund to the DOE PHEV Fund. The transferred funds will be used to pay contractual obligations toward work completed on the medium-duty PHEV program. The AQMD will be reimbursed by the CEC for these payments made to subcontractors and will subsequently reimburse the Clean Fuels Fund.

*Staff concurred with Supervisor Gonzales' statement that we need to be aware whether the benefits outweigh the potential cost of these projects. There is an additional 1200 lbs. of weight involved with these vehicles; however, the fuel savings*

*and emissions reductions far outweigh the cost associated with tire wear, brakes, and the additional load.*

*Moved by Benoit; seconded by Mitchell; unanimously approved.*

**4. Execute Sole Source Contracts, Amend Contract, and Recognize Revenues for CNG Vehicles and Education and Training in Support of U.S. DOE Clean Cities Programs**

In December 2009, the Board awarded two sole source contracts for the purchase of CNG taxicabs and shuttle vans. This action is to deobligate funds for the award for CNG shuttle vans and award these funds to three companies providing shuttle services at LAX. The three companies will operate 20 CNG shuttle vans and 15 CNG shuttle buses at a cost not to exceed \$561,100 from the Clean Fuels Program. Southern California Gas Company has expressed interest in partnering with AQMD on conducting natural gas-powered vehicle safety training, and partnering with AQMD on a CNG Fuel System Inspector Certification program. This action is also to recognize revenues from the Gas Company and augment funding of an existing contract with Advanced Transportation Technology and Energy Network of the California Community Colleges to expand the CNG vehicle training/safety and fuel cylinder inspection program at a total cost not to exceed \$160,000.

*Supervisor Benoit asked how close we are to contracting with SuperShuttle, Central Parking System, and Ace Parking Management. Staff responded that we have letters of intent indicating the companies are committed to go forward.*

*Moved by Burke; seconded by Benoit; unanimously approved.*

**Public Comment Period** – *Richard Teebay, Los Angeles County, conveyed his appreciation to Odyne, LADWP, and SCAQMD for their support in developing and demonstrating the two medium- and heavy-duty plug-in hybrid electric vehicles.*

**Other Business** – There was no other business.

The next meeting will be March 18.

BOARD MEETING DATE: February 4, 2011

AGENDA NO. 25

REPORT: Mobile Source Air Pollution Reduction Review Committee

SYNOPSIS: Below is a summary of key issues addressed at the MSRC's meeting on January 20, 2011. The MSRC's next meeting is currently scheduled for Thursday, February 17, 2011, at 2:00 p.m. in Conference Room CC8.

RECOMMENDED ACTION:  
Receive and file.

Michael D. Antonovich  
AQMD Representative on MSRC

CSL:HH:DAH

---

### **Issuance of Solicitations as Part of FY 2010-11 Work Program**

In October 2010 as an element of the FY 2010-11 Work Program, the MSRC allocated \$2.25 million for a Showcase II Program to demonstrate the viability and effectiveness of diesel emission control systems on off-road heavy-duty diesel vehicles, with priority to devices with installation designs that meet Cal/OSHA visibility requirements, demonstrations of devices on exhaust gas recirculation engines and vehicles based at ports or landfills. At its January 20, 2011 meeting, the MSRC unanimously approved a Request for Qualifications to solicit qualified manufacturer with after-treatment devices and a Program Announcement to seek applications from fleets for vehicles to participate in the program. Candidate devices, which may be designed to reduce either PM or NOx or both, will be evaluated and pre-qualified before they can be matched with vehicles. A vehicle may be submitted as a part of a complete "package" to be retrofitted with a specified device, or the applicant can request that their vehicle be matched with an appropriate device by the MSRC. Of the \$2.25 million set aside for the PA, \$1,250,000 will initially be reserved for priority demonstrations and then made available to other qualifying projects if not committed by July 21, 2011. Both the RFQ and the Program Announcement have application preparation and submission periods commencing February 4, 2011 and closing October 7, 2011. Recommended vehicle/device matches

will be brought to the MSRC for consideration of awards throughout and immediately following this period.

In February 2010, the MSRC helped fund a clean fuel transportation service to Dodger Stadium for the 2010 baseball season. The ensuing project was very successful in achieving emission reductions by eliminating automobile vehicle miles traveled and automobile trips. Building on this success, as part of the FY 2010-11 Work Program, the MSRC allocated \$1.5 million for event center shuttle services in the South Coast region. On January 20, 2011, the MSRC unanimously approved a Program Announcement to solicit applications from qualifying major event centers and/or transportation providers to provide transportation service for venues not currently served by sufficient transportation service. To qualify, an event center must have an occupancy capacity of at least 5,000 and an average event attendance of at least 2,000 plus demonstrate that the center is impacted by traffic to the extent that the design capacity of the surrounding streets is exceeded. Applications may be submitted at any time from February 4, 2011 to August 5, 2011, and projects may be brought to the MSRC for consideration of awards throughout and immediately following this period.

The AQMD Board will consider release of these two solicitations as part of the MSRC's FY 2010-11 Work Program at their February 4, 2011 meeting. Projects approved by the MSRC under the solicitations will be brought forward to the AQMD Board for approval.

### **Received and Approved Final Reports**

The MSRC received and approved three final report summaries, as follows:

- Orange County Transportation Authority Contract #MS08057, which provided \$400,000 to install a CNG fueling station in Garden Grove;
- City of Commerce Contract #MS06013, which provided \$350,000 to construct a new L/CNG station; and
- Republic Services, Inc. Contract #MS07054, which provided \$1,280,000 towards the purchase of 40 LNG refuse trucks.

All final reports are filed in the AQMD's library and a two-page summary of each closed project can be viewed in the electronic library on the MSRC's website at <http://www.cleantransportationfunding.org>.

### **Amended Policy on Contracts Administrator Responsibilities for Scope Changes**

The MSRC previously adopted a policy identifying how scope changes (contract modifications) would be handled including authorizing their Contracts Administrator to administratively process initial no-cost contract term extensions up to six months. The Administrative Subcommittee of the MSRC's Technical Advisory Committee recommended a change to this policy, granting the Contracts Administrator the authority

to make initial no-cost contract term extensions up to one year. The MSRC unanimously approved this change to its policy. The no-cost contract term extension will still go through the AQMD Procurement process for approval; it simply will not need to be formally approved by the MSRC at one of its meetings.

### **Contract Modification Requests**

The MSRC considered contract modification requests and took the following unanimous actions:

1. For California State University, Los Angeles Contract #zMS07022, which provides \$250,000 to construct a new hydrogen fueling station, approval of a one-year, no-cost contract term extension; and
2. Perris Union High School District Contract #MS08069, which provides \$225,000 to construct a new CNG fueling station, approval of a one-year, no-cost contract term extension.

### **MSRC's 20th Anniversary Event & Annual Retreat**

Staff asked the MSRC to reserve the entire day on Thursday, May 19, 2011, for its 20<sup>th</sup> Anniversary event, explaining that the scope of the event had been expanded to not only look back at accomplishments and lessons learned but to engage its stakeholders to look toward the next 20 years. Additionally, the annual offsite retreat between the MSRC and its Technical Advisory Committee may be coupled with this event.

### **Contracts Administrator's Report**

The MSRC's AB 2766 Contracts Administrator provides a written status report on all open contracts from FY 2002-03 through the present. The Contracts Administrator's Report for January 2011 is attached for your information.

### **Attachment**

January 2011 Contracts Administrator's Report

MSRC Agenda Item No. 3

**DATE:** January 20, 2011

**FROM:** Cynthia Ravenstein

**SUBJECT:** AB 2766 Contracts Administrator's Report

**SYNOPSIS:** This report covers key issues addressed by MSRC staff, status of open contracts, and administrative scope changes from October 27 through December 29, 2010.

**RECOMMENDATION:** Receive and file report

**WORK PROGRAM IMPACT:** None

**Contract Execution Status**

**2009-10 Work Program**

On September 11, 2009, the AQMD Governing Board approved 27 awards under the Local Government Match Program as part of the MSRC's FY 2009-10 Work Program. All these projects also received partial funding as part of the MSRC's FY 2008-09 Work Program (see below). These contracts are with the prospective contractor for signature or executed.

On November 6, 2009, the AQMD Governing Board approved 11 additional awards, as well as 1 augmentation for a project which previously received a partial award, under the Local Government Match Program as part of the MSRC's FY 2009-10 Work Program. These contracts are awaiting responses from the prospective contractor, with the prospective contractor for signature, or executed.

On March 5, 2010, the AQMD Governing Board approved an award to the Coachella Valley Association of Governments for the Coachella Valley Regional PM10 Street Sweeping Program. Also on March 5, 2010, the Board approved an award to the Los Angeles County Metropolitan Transportation Authority to provide clean fuel transit service to Dodger Stadium. Both awards were part of the MSRC's FY 2009-10 Work Program and both contracts are executed.

On July 9, 2010, the AQMD Governing Board approved 21 awards under the Heavy-Duty Alternative Fuel Engines for On-Road Vehicles Program as part of the FY 2009-10 Work Program. These contracts are under development, undergoing internal review, with the prospective contractor for signature, or executed.

### **2008-09 Work Program**

On July 11, 2008, the AQMD Governing Board approved six augmentations for projects which previously received partial awards under the FY 2007-08 Work Program, as well as six additional awards, for the Alternative Fuel Heavy-Duty Engines for On-Road Vehicles Program as part of the MSRC's FY 2008-09 Work Program. Also on July 11, 2008, the Board approved 26 awards under the Local Government Match Program and 22 awards under the Alternative Fuel Infrastructure Funding Opportunities Program as part of the MSRC's FY 2008-09 Work Program. Some of these projects also received partial funding as part of the MSRC's FY 2007-08 Work Program (see below). Lastly, on this date the Board approved a sole-source award to Administrative Services Co-Op/Long Beach Yellow Cab to place into service up to 15 dedicated CNG taxicabs. Except as detailed below, these contracts are executed:

- One of the augmented awards was to Diversified Truck Rental and Leasing for the purchase of ten natural gas refuse trucks. MSRC staff has been informed that the company was sold. After multiple attempts to obtain a response from the purchasing entity, they were informed that they must respond by July 16, 2010 or MSRC staff would recommend that the MSRC terminate negotiations. Diversified subsequently responded and MSRC staff is making final attempts to negotiate a contract.

On September 5, 2008, the AQMD Governing Board approved an augmented award under the Local Government Match Program for an application which had been misplaced and thus not considered with the original awards. This contract is executed. Also on September 5, 2008, the MSRC approved a sole-source award to FuelMaker Corporation to provide incentives for natural gas home refueling units. This contract was under development when MSRC staff learned that FuelMaker Corporation had been adjudged bankrupt by the Ontario (Canada) Superior Court. Subsequently, FuelMaker was purchased by IMPCO. MSRC staff is currently awaiting responses from IMPCO to determine what actions may be necessary to continue implementation of the Program.

On January 9, 2009, the AQMD Governing Board approved an award for a replacement CNG refueling station vendor in support of the Mountain Area CNG School Bus Demonstration Program. At their March 19, 2009 meeting, the MSRC approved an augmentation to this award, and the AQMD Board approved the increase on May 1, 2009; this contract is executed.

On March 6, 2009, the AQMD Governing Board approved two augmented awards under the Local Government Match Program for applications which had been misplaced and thus not considered with the original awards. These contracts are executed.

On September 11, 2009, the AQMD Governing Board approved 29 awards under the MSRC's FY 2008-09 Local Government Match Program. Some of these projects also received funding as part of the MSRC's FY 2009-10 Work Program (see above). Also on September 11, 2009, the Board approved modifications to the 511 Commuter Services Outreach and Public Awareness Campaign, reflecting the bifurcation of outreach efforts, as part of the MSRC's FY 2006-07 Work Program. These included a modified award changing the original contractor name to LA SAFE and reducing the award amount from \$1,000,000 to \$700,000, as well as new sole-source awards to Riverside County Transportation Commission and the Better World Group. These contracts are with the prospective contractor for signature or executed.

### **2007-08 Work Program**

Except as discussed below, contracts for this Work Program are executed or declined.

On May 2, 2008, the Board approved nine awards for the Alternative Fuel Heavy-Duty Engines for On-Road Vehicles Program. As noted above, MSRC staff is making final attempts to conclude negotiations with the entity which purchased Diversified Truck Rental and Leasing.

### **Work Program Status**

Contract Status Reports for work program years with open and pending contracts are attached. MSRC or MSRC-TAC members may request spreadsheets covering any other work program year.

#### ***FY 2003-04 Work Program Contracts***

Two regular contracts from this work program year are open.

#### ***FY 2003-04 Regular Work Program Invoices Paid***

No invoices were paid during this period.

#### ***FY 2004-05 Work Program Contracts***

One regular and five Local Match contracts from this work program year are open. All Diesel Exhaust After-treatment contracts are now closed.

#### ***FY 2004-05 Regular Work Program Invoices Paid***

Two invoices totaling \$600.00 were paid during this period.

#### ***FY 2004-05 Local Government Match Program Invoices Paid***

No invoices were paid during this period.

#### ***FY 2005-06 Work Program Contracts***

6 regular, 11 Local Match, and one Diesel Exhaust After-treatment contracts from this work program year are open; and 9 regular and 24 Local Match contracts are in "Open/Complete" status, having completed all obligations save ongoing operation.

#### ***FY 2005-06 Regular Work Program Invoices Paid***

Two invoices totaling \$64,277.21 were paid during this period.

#### ***FY 2005-06 Local Government Match Program Invoices Paid***

No invoices were paid during this period.

#### ***FY 2005-06 Diesel Exhaust After-treatment Program Invoices Paid***

No invoices were paid during this period.

#### ***FY 2006-07 Work Program Contracts***

24 regular and 9 Local Match contracts from this work program year are open; and 12 regular and 10 Local Match contracts are in "Open/Complete" status, having completed all obligations save ongoing operation. One contract passed into "Open/Complete" status during this period: City of Los Angeles, General Services Department, Contract #ML07034 – Install New CNG Station. Two contracts closed during this period, both with the City of Cathedral City: Contract #MS07019 – Maintenance Facility Modifications; and Contract #ML07048 – Street Sweeping Operations.

*FY 2006-07 Regular Work Program Invoices Paid*

Two invoices totaling \$34,780.00 were paid during this period.

*FY 2006-07 Local Government Match Program Invoices Paid*

Two invoices totaling \$380,311.65 were paid during this period.

***FY 2007-08 Work Program Contracts***

34 regular and 16 Local Match contracts from this work program year are open; and 6 regular and 9 Local Match contracts are in "Open/Complete" status, having completed all obligations save ongoing operation. One contract passed into "Open/Complete" status during this period: City of Culver City, Contract #ML08047 –Purchase 6 Heavy-Duty CNG Vehicles.

*FY 2007-08 Regular Work Program Invoices Paid*

Four invoices totaling \$876,448.90 were paid during this period.

*FY 2007-08 Local Government Match Program Invoices Paid*

No invoices were paid during this period.

***FY 2008-09 Work Program Contracts***

Three regular and 26 Local Match contracts from this work program year are open; and three Local Match contracts are in "Open/Complete" status. One contract passed into "Open/Complete" status during this period: City of Redondo Beach, Contract #ML09037 – Purchase 2 CNG Street Sweepers.

*FY 2008-09 Regular Work Program Invoices Paid*

One invoice in the amount of \$180,000.00 was paid during this period.

*FY 2008-09 Local Government Match Program Invoices Paid*

Two invoices totaling \$300,000.00 were paid during this period.

***FY 2009-10 Work Program Contracts***

Nine regular contracts from this work program year are open. One contract closed during this period: Coachella Valley Association of Governments, Contract #MS10002 – PM10 Reduction Street Sweeping.

*FY 2009-10 Regular Work Program Invoices Paid*

Four invoices totaling \$136,875.27 were paid during this period.

***Administrative Scope Changes***

No administrative scope changes were initiated during the period of October 27 through December 29, 2010.

(Item #26 is Continued from January 7, 2011 Board Meeting for Board Deliberation Only)

BOARD MEETING DATE: January 7, 2011

AGENDA NO. 20

PROPOSAL: Adopt Proposed Rule 1315 – Federal New Source Review Tracking System.

SYNOPSIS: Proposed Rule 1315 was developed to maintain AQMD's ability to issue permits to major sources that require offsets, but obtain offset credits from the AQMD's Priority Reserve under Rule 1309.1 and/or that are exempt from offsets under AQMD Rule 1304 through December 31, 2030. The rule will also memorialize in rule form the procedures to be followed to both establish the equivalency of AQMD's NSR program with federal NSR offset requirements for such major sources and demonstrate that sufficient emission reductions, including previously-untracked emission reductions, exist beyond regulatory requirements under federal law to be used as offset credits to establish that AQMD's NSR program is equivalent with federal NSR offset requirements for those major sources. The rule includes provisions designed to ensure equivalency with federal offset requirements is achieved and additional backstop provisions to ensure the actual impacts of implementing the proposed rule do not exceed the impacts analyzed in the CEQA process.

COMMITTEE: Stationary Source, November 19, 2010, Reviewed

RECOMMENDED ACTION:

Adopt the attached resolution:

1. Certifying the CEQA Program Environmental Assessment for Proposed Rule 1315;  
and
2. Adopting Rule 1315 – Federal New Source Review Tracking System.

Barry R. Wallerstein, D.Env.  
Executive Officer

## **Background**

In general, the Federal Clean Air Act requires that emission increases of nonattainment air pollutants from new and major modifications of federal major sources be offset with emissions decreases. The specific quantity of emission decreases required to offset a specific increase in federal nonattainment emissions is dependent upon the pollutant's federal nonattainment classification for the air basin in which the increase occurs. For the case of AQMD, the applicable offset ratios are 1.2 pounds of decrease for every 1.0 pound of increase for VOCs and NO<sub>x</sub> and at least 1.0 pound of decrease for every 1.0 pound of increase for all other nonattainment pollutants and their precursors. Some aspects of the offset requirements in AQMD's non-RECLAIM NSR program (Regulation XIII – New Source Review) are more stringent than the federal offset requirements. For example, Regulation XIII is more stringent in that it requires offsets for increases from sources that are not federal major sources (federal minor sources) and an offset ratio of 1.2-to-1.0 for all nonattainment pollutants and their precursors (rather than the federally-required 1.0-to-1.0 for pollutants other than VOCs and NO<sub>x</sub>). AQMD's program also provides exemptions from the offset requirement in specific cases, whereas such sources may not be exempt from federal offset requirements. However, U.S. EPA allows a permitting agency to implement an offset program for major sources that is not identical to the federal program but is equivalent or more stringent on an overall aggregate or programmatic basis.

Accordingly, U.S. EPA approved AQMD's NSR program into the SIP in 1996 while at the same time expecting that AQMD implement a tracking system to account for emission decreases of federal nonattainment air contaminants and their precursors that occur under AQMD's NSR program but that are surplus under federal NSR, as well as emission increases of federal nonattainment pollutants and their precursors that occur under AQMD's NSR program at federal major sources without individually complying with federal NSR's offset requirements. The purpose of this tracking system is to demonstrate that AQMD's NSR program provides the sufficient offsets to comply with the emissions offsets requirements of the Clean Air Act on an aggregate or programmatic basis (*i.e.*, to establish equivalency with federal requirements). Therefore, AQMD implemented an NSR tracking system, which included maintaining offset accounts to accumulate emissions offsets from surplus emissions reductions and to provide for use emissions offsets to projects via Rule 1309.1's Priority Reserve and the offset exemption provisions of Rule 1304. AQMD prepared a series of reports that track credits and debits from August 1990 through July 2002. Around this time, U.S. EPA expressed some concerns regarding specific elements of the tracking system, so AQMD developed a revised tracking system in consultation with U.S. EPA. The revised tracking system was codified in the September 2006 adoption of Rule 1315 – Federal New Source Review Tracking System, as described below. The 1990 through July 2002 tracking was updated consistent with the revised tracking system. Tracking reports covering 1990 through July 2002 and subsequently August 2002 through

December 2005 and presenting the remaining balances of credits in AQMD's federal offset accounts were prepared and presented to the Governing Board. Later on, an additional report tracking the 2006 offset use but not 2006 offset generation was also presented to the Governing Board. Subsequent reports were not presented due to litigation over the tracking system, but Appendix I to the staff report brings the tracking up to date.

AQMD's Governing Board adopted Rule 1315 – Federal New Source Review Tracking System (codifying a revised and updated version of its NSR tracking system) along with amendments to Rule 1309.1 – Priority Reserve (creating a temporary mechanism for proposed electrical generating facilities (EGFs) to obtain, for a limited time, emissions offsets for specified nonattainment pollutants, or precursors, from the Priority Reserve and requiring mitigation fees to be paid to obtain emission reductions) on September 8, 2006. The CEQA documents prepared for that adoption of Rule 1315 and amendment of Rule 1309.1 determined that both rule actions were exempt from CEQA. A group of environmental organizations that had opposed these rule actions filed suit against AQMD regarding these rules on CEQA grounds, including disputing that either rulemaking was exempt from CEQA. After AQMD's demurrer was overruled, rather than wait for the suit to be finally decided in court, AQMD initiated the process of readopting Rule 1315 and re-amending Rule 1309.1 while the litigation was pending and prepared full CEQA documents. As a result of AQMD's action, the case was therefore dismissed as moot.

The Governing Board readopted Rule 1315 and a revised version of the amendments to Rule 1309.1 on August 3, 2007. The same environmental organizations considered the CEQA documents for the August 3, 2007 re-adoption and re-amendment inadequate and again filed suit and prevailed in the Superior Court of the State of California, County of Los Angeles (Court). On July 28, 2008, a Court decision was issued declaring that the August 2007 Governing Board action adopting Rule 1315 and amending Rule 1309.1 would be vacated and AQMD would be enjoined from "undertaking any action to further implement these rules pending CEQA compliance." The Court subsequently issued a writ of mandate on November 3, 2008 ordering AQMD to, *inter alia*, set aside the rules, "including the certification of the Final Program Environmental Assessment." This was done on January 8, 2010. AQMD is now proposing to replace the set aside version of Rule 1315 with a different version (PR 1315) supported by a new program environmental assessment that analyzes the potential direct and indirect impacts and addresses concerns expressed by the Court. AQMD is not proposing to readopt the amendments to Rule 1309.1. In the meantime, AQMD has been implementing SB 827 (2009), which allows the issuance of permits to sources exempt from offsets under Rule 1304, and obtaining offsets from the Priority Reserve under Rule 1309.1 (primarily essential public services). SB 827 sunsets in May 2012.

The current PR 1315 includes important differences from the previously adopted Rule 1315. Nevertheless, it remains completely consistent with the revised NSR tracking system developed in consultation with U.S. EPA and with which U.S. EPA has expressed concurrence in a letter to AQMD in April 2006. The differences between the proposed rule language and the previously adopted language fall into two categories: (1) clarifications and (2) enhancement and expansion of the backstop provisions. None of the differences result in any changes to credit accounting or the balances in AQMD's offset accounts. For example, the proposed rule language includes definitions for "Community Bank," "Priority Reserve," and "shortfall," all of which were undefined in the previously adopted Rule 1315. Additionally, the current proposal includes enhanced backstop provisions designed to ensure that environmental impacts of the proposed rule would not exceed the impacts analyzed in the Program Environmental Assessment (PEA) by prohibiting issuance of permits if the cumulative net emissions increases from both major and minor sources that result from implementation of the proposed rule would exceed the cumulative net emissions increases considered in the CEQA analysis.

### **Summary of Rule 1315 Proposed for Adoption**

- Without affecting permits already issued relying upon such offsets, retroactively eliminate all Pre-1990 credits in AQMD's federal offset accounts for which it no longer retains adequate documentation or records (this will reduce AQMD's previously-reported Pre-1990 credits by 60% overall and by from about 7% to 92% by pollutant).
- Use only the revised and re-verified Pre-1990 credits for which records exist.
- Retire any portion of the revised and re-verified Pre-1990 credits remaining unused in AQMD's offset accounts as of December 31, 2005 as an environmental benefit and not use any Pre-1990 credits after 2005.
- Use as sources of credits to AQMD's federal offset accounts both minor and major source orphan shutdowns and reductions.
- Use as sources of offsets to AQMD's federal offset accounts any surplus ERCs used to offset emission increases beyond the requirements of federal NSR.
- Eliminate and remove as sources of offsets to AQMD's federal offset accounts all ERC BACT discounts both prospectively and retrospectively to the beginning of AQMD NSR offset account balances in 1990 except in cases where AQMD has demonstrated, and U.S. EPA has concurred, that the discount amount is not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan.
- Discount all offsets derived from orphan shutdowns and reductions (both for major and minor sources) in AQMD's federal offset accounts to ensure that they remain surplus and meet the federal offset criteria.

In addition, AQMD is proposing, as part of Proposed Rule 1315, to provide for:

- A “worst case” preliminary annual equivalency demonstration within twelve months of the close of each reporting period, with a final annual equivalency demonstration within six additional months.
- In conjunction with each annual equivalency demonstration, provide a projection for the next two years of the NSR offset account balances based on the averages of the last five years’ federal offset accounts’ credits and debits.
- For January 7, 2011 through the end of the 2011 reporting period and through the end of each subsequent reporting period, track cumulative net emissions increases of nonattainment air contaminants and their precursors subject to the proposed rule resulting from both major and minor sources receiving permits to construct or operate pursuant to the offset exemption provisions of Rule 1304 or that obtain emissions offsets from the Priority Reserve pursuant to Rule 1309.1.
- The Executive Officer to do both of the following if the most recent final annual equivalency demonstration demonstrates a shortfall in the AQMD offset account for a nonattainment air contaminant (*i.e.*, the Equivalency Backstop):
  - Withhold future funding of the Priority Reserve for that nonattainment air contaminant; and
  - Discontinue issuing permits to construct and permits to operate that rely on further use of AQMD’s offset accounts for that air contaminant to sources that are major sources of that air contaminant.
- The Executive Officer to prepare a report to the Governing Board recommending appropriate action to rectify any actual shortfall or any projected shortfall that could occur in the next two years in AQMD’s offset accounts, or demonstrating that AQMD remains in compliance with federal NSR requirements on an aggregate basis.
- The Executive Officer to discontinue issuing permits to construct and permits to operate that rely on use of AQMD’s offset accounts if the cumulative net emission increase of a nonattainment air contaminant exceeds the amount analyzed in the PEA to major and minor sources of that air contaminant (*i.e.*, the CEQA Backstop).

## **CEQA Analysis**

The AQMD is the lead agency for the proposed project and has prepared a PEA pursuant to its certified regulatory program (CEQA Guidelines §15251(l)) as codified as AQMD Rule 110. A Draft Program Environmental Assessment (PEA) for the Proposed Rule (PR) 1315 has been prepared because the proposed rule would establish criteria to govern the conduct of a continuing program.

PR 1315 would codify existing procedures and establish new requirements for establishing equivalency under federal New Source Review requirements through the

use of AQMD's internal emission offsets by operators of various projects that either obtain emissions offsets pursuant to Rule 1309.1 – Priority Reserve or are exempt from the emissions offsets requirements of Rule 1303 – Requirements pursuant to Rule 1304 – Exemptions. The PEA analyzes direct and indirect impacts from both major and non-major sources relying on offsets from the AQMD's internal offset accounts pursuant to Rule 1309.1 – Priority Reserve or Rule 1304 – Offset exemptions. The analysis in the PEA includes the conservative assumption that all net emission increases will occur at a rate consistent with growth rate projections in the 2007 Air Quality Management Plan (AQMP).

The PEA analysis indicated that air quality would be impacted by the proposed project. The proposed project also has the potential for significant indirect adverse impacts resulting from construction and operation of sources obtaining permits on all environmental topic areas on the environmental checklist.

The air quality impacts from the emissions resulting from permits issued and emission reductions foregone and environmental impacts from the siting, construction, and operation of those facilities that were provided offsets from the AQMD's internal accounts would exceed the AQMD's significance thresholds, so the environmental impacts from the proposed project have been determined to be significant. The PEA has been circulated for a 62-day public review and comment period. After the close of the public review period, responses to all comments will be prepared and included in the PEA, at which time the document will become a Final PEA.

### **AQMP and Legal Mandates**

The California Health and Safety Code requires the AQMD to adopt an Air Quality Management Plan (AQMP) to meet state and federal ambient air quality standards in the South Coast Air Basin. In addition, the California Health and Safety Code requires that the AQMD adopt rules and regulations that carry out the objectives of the AQMP. While Rule 1315 is not an AQMP measure, it is necessary to accommodate the growth anticipated in the AQMP.

### **Comparative Analysis**

A comparative analysis, as required by H&S Code §40727.2, is applicable when an amended rule or regulation imposes, or has the potential to impose, a new emissions limit, or other air pollution control requirements. The proposed rule does not impose new requirements and a comparative analysis is not required.

### **Resource Impacts**

Due to the volume and complexity of the analyses required, it is estimated that implementation of Proposed Rule 1315 requirements will require one FTE and \$150,000 in programming costs for enhancements to AQMD's New Source Review computer program.

**RESOLUTION NO. 11-**

**A Resolution of the South Coast Air Quality Management District (AQMD) Governing Board certifying the Final Program Environmental Assessment for Proposed Rule 1315 – Federal New Source Review Tracking System.**

**A Resolution of the AQMD Governing Board adopting the Findings and Statement of Overriding Considerations for Proposed Rule 1315 – Federal New Source Review Tracking System.**

**A Resolution of the AQMD Governing Board adopting Proposed Rule 1315 – Federal New Source Review Tracking System.**

**WHEREAS**, the Governing Board finds and determines with certainty that the proposed re-adoption of Rule 1315 – Federal New Source Review Tracking System, is considered a “project” pursuant to the California Environmental Quality Act (CEQA); and

**WHEREAS**, the AQMD has had its regulatory program certified pursuant to Public Resources Code §21080.5 and has conducted CEQA review pursuant to such program (AQMD Rule 110); and

**WHEREAS**, the AQMD staff has prepared a Draft Program Environmental Assessment (PEA) (State Clearinghouse Number 2009031044) pursuant to its certified regulatory program and CEQA Guidelines §§15168 and 15252, setting forth the potential environmental consequences of Proposed Rule 1315 – Federal New Source Review Tracking System; and

**WHEREAS**, the Draft PEA was released for 45-day public review and comment period that was subsequently extended to 62 days, all comments received were responded to, and the Draft PEA has been revised such that it is now a Final PEA; and,

**WHEREAS**, the PEA included an evaluation of project-specific and cumulative direct and indirect impacts from the proposed project and five project alternatives; and

**WHEREAS**, the AQMD staff reviewed the Proposed project and determined that the Proposed project may have the potential to generate significant adverse environmental impacts; and

**WHEREAS**, all comments received on the Draft PEA were responded to, and the Draft PEA has been revised such that it is now a Final PEA; and,

**WHEREAS**, it is necessary that the adequacy of the Final PEA, including responses to comments, be determined by the Governing Board prior to its certification; and

**WHEREAS**, it is necessary that the AQMD prepare a Statement of Findings and a Statement of Overriding Considerations pursuant to CEQA Guidelines §§15091 and 15093, respectively, regarding adverse environmental impacts that cannot be mitigated to insignificance; and,

**WHEREAS**, Findings and a Statement of Overriding Considerations have been prepared and are included in Attachment 1 to this Resolution, which is attached and incorporated herein by reference; and

**WHEREAS**, the Governing Board finds and determines, taking into consideration the factors in §(d)(4)(D) of the Governing Board Procedures, that the modifications that have been made to Proposed Rule 1315 – Federal New Source Review Tracking System, since the Draft PEA was made available for public review would not constitute significant new information within the meaning of the CEQA Guidelines; and

**WHEREAS**, the Governing Board voting on Proposed Rule 1315 – Federal New Source Review Tracking System, has reviewed, considered, and hereby approves the Final PEA, including responses to comments, the Findings, and the Statement of Overriding Considerations; and

**WHEREAS**, the Governing Board has determined that the air quality objectives of Proposed Rule 1315 – Federal New Source Review Tracking System are to maintain AQMD’s ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1 (AQMD’s policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to retrofit for regulatory compliance and/or install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and

socioeconomic benefits as well as environmental and socioeconomic impacts); memorialize in rule form the accounting procedures AQMD uses to establish equivalency of AQMD's New Source Review program with federal offset requirements, and ensure that adequate offsets are projected to be available in AQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset; recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate federal equivalency for major sources that are exempt under Rule 1304 or that obtain credits from the Priority Reserve under Rule 1309.1; and

**WHEREAS**, the Governing Board has determined that the socioeconomic impact assessment of Proposed Rule 1315 – Federal New Source Review Tracking System, is consistent with the Governing Board March 17, 1989 and October 14, 1994 Socioeconomic Resolution for rule adoption; and

**WHEREAS**, the Governing Board has determined that the socioeconomic impact assessment of Proposed Rule 1315 – Federal New Source Review Tracking System, complies with the provisions of Health and Safety Code §§ 40440.8 and 40728.5; and

**WHEREAS**, the Governing Board has reviewed and considered the AQMD staff's findings related to cost impacts of Proposed Rule 1315 – Federal New Source Review Tracking System, as set forth in the socioeconomic impact assessment, and hereby finds and determines that the cost impacts are as set forth in that assessment; and

**WHEREAS**, the Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System, is not a control measure in the 2007 Air Quality Management Plan (AQMP) amended in 2007 and thus is not ranked by cost-effectiveness relative to other AQMP control measures in the amended 2007 AQMP; and

**WHEREAS**, the Governing Board has determined that a need exists to adopt Proposed Rule 1315 – Federal New Source Review Tracking System to:

- Maintain AQMD's ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1. AQMD's policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable

equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and socioeconomic benefits as well as environmental and socioeconomic impacts;

- Memorialize in rule form the accounting procedures AQMD uses to establish equivalency of AQMD's New Source Review program with federal offset requirements, and ensure that valid offsets are projected to be available in AQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset; and
- Recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate federal equivalency for major sources that are exempt under Rule 1304 or that obtain credits from the Priority Reserve under Rule 1309.1; and

**WHEREAS**, the Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System, has been written or displayed so that its meaning can be easily understood by the persons affected by it; and

**WHEREAS**, the Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System is in harmony with, and not in conflict with or contradictory to, existing federal or state statutes, court decisions, or regulations; and

**WHEREAS**, the Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System does not impose the same requirements as any existing state or federal regulations and is necessary and proper to execute the powers and duties granted to, and imposed upon, the AQMD; and

**WHEREAS**, the Governing Board obtains its authority to adopt, amend, or repeal rules and regulations from California Health and Safety Code §§ 39002, 40000, 40001, 40440, 40441, 40463, 40702, 40725 through 40728, 41508, and 42300 *et seq.*; and

**WHEREAS**, the Governing Board in considering Proposed Rule 1315 – Federal New Source Tracking System references the following statutes that the AQMD hereby implements, interprets or makes specific: California Health and Safety Code §§ 40001, 40702, 40910 *et seq.*, 40920.5, 42300 *et seq.*, and federal Clean Air Act §§ 110, 172, 173, 182, and 189 (42 U.S.C. §§ 7410, 7502, 7503, 7511a, and 7513a); and

**WHEREAS**, a public hearing has been properly noticed in accordance with the provisions of California Health and Safety Code § 40725; and

**WHEREAS,** the Governing Board has held a public hearing in accordance with all provisions of law; and

**WHEREAS,** the AQMD specifies the Deputy Executive Officer of Proposed Rule 1315 – Federal New Source Review Tracking System, as the custodian of the documents or other materials that constitute the record of proceedings upon which the adoption of this Proposed amendment is based, which are located at the South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, California; and

**NOW, THEREFORE, BE IT RESOLVED** that the AQMD Governing Board does hereby certify that the Final Program Environmental Assessment for Proposed Rule 1315 – Federal New Source Review Tracking System, was completed in compliance with the California Environmental Quality Act (CEQA) and the CEQA Guidelines; and finds that the Final PEA was presented to the Governing Board, whose members reviewed, considered and approved the information therein prior to acting on Proposed Rule 1315 – Federal New Source Review Tracking System; and finds that the final Program Environmental Assessment reflects the AQMD’s independent judgment and analysis; and

**BE IT FURTHER RESOLVED,** that the Governing Board does hereby adopt the Findings and Statement of Overriding Considerations pursuant to CEQA Guidelines §§15091 and 15093, respectively, regarding adverse environmental impacts that cannot be mitigated to insignificance, as required by CEQA and that are included as Attachment 1 and incorporated herein by reference; and

**BE IT FURTHER RESOLVED,** that the Governing Board does hereby approve the Socioeconomic Impact Assessment; and

**BE IT FURTHER RESOLVED,** that the Governing Board does hereby adopt Proposed Rule 1315 – Federal New Source Review Tracking System, pursuant to the authority granted by law, as set forth in the attached and incorporated herein by reference.

## **I. INTRODUCTION**

These California Environmental Quality Act (CEQA) findings address the determination by the South Coast Air Quality Management District (SCAQMD) to re-adopt Rule 1315 – Federal New Source Review Tracking System, which codifies SCAQMD procedures for establishing equivalency under federal New Source Review requirements (“the Project”). Equivalency means that the SCAQMD provides sufficient offsets from its internal offset accounts to cover the emission increases from new or modified sources that are exempt from offsets under SCAQMD rules or that obtain offsets from the Priority Reserve, but are subject to offset requirements under federal law. The USEPA has requested that the SCAQMD adopt a tracking rule to demonstrate equivalency with federal offset requirements. Rule 1315 is designed to ensure that exempt sources under Rule 1304 and essential public services and other projects that qualify for Priority Reserve offsets under Rule 1309.1 are fully offset to the extent required by federal law by valid emission reductions from SCAQMD’s internal offset accounts.

SCAQMD is the lead agency for the Project and has prepared a Program Environmental Assessment (PEA) pursuant SCAQMD Rule 110. The format of the PEA is as follows. Volume I includes: Chapter 1 – Introduction and Executive Summary; Chapter 2 – Project Description; Chapter 3 – Environmental Setting; and Chapter 4 – Environmental Impacts and Mitigation Measures. Volume II consists of Chapter 5 – Indirect Environmental Impacts and Mitigation Measures. Volume III includes: Chapter 6 – Alternatives- Direct and Indirect Air Quality, Visibility, and Greenhouse Gas Impacts; Chapter 7 – Alternatives-Indirect Impacts; Chapter 8 – Responses to the Court’s Decision on Amended Rule 1309.1 and Rule 1315; Chapter 9 – Acronyms; Chapter 10 – References; and Chapter 11 – Contributors. Volume IV includes the appendices referred to in Volumes I through III, comments on the Draft PEA and responses to these comments (Appendix J).

SCAQMD circulated a Draft PEA for review and comment. The Final PEA includes the Draft PEA, all comments received regarding the Draft PEA, and responses to comments on the Draft PEA. The Final PEA was presented to the Governing Board in advance of its January 7, 2011 public hearing to consider whether to re-adopt Rule 1315.

## **II. CERTIFICATION OF THE FINAL PEA**

The Governing Board of SCAQMD (the “Governing Board”) certifies that it has been presented with the Final PEA and that it has reviewed and considered the information contained in the Final PEA prior to making the following certifications and findings.

Pursuant to CEQA Guidelines Section 15090 (Title 14 of the California Code of Regulations, Section 15090) the Governing Board certifies that the Final PEA has been completed in compliance with CEQA and the State CEQA Guidelines. The

Governing Board certifies the Final PEA for the actions described in these findings and in the Final PEA, *i.e.*, the Project as described above.

The Governing Board further certifies that the Final PEA reflects its independent judgment and analysis.

### **III. FINDINGS**

Having received, reviewed, and considered the Final PEA and other information in the record of proceedings, the Governing Board hereby adopts the following findings in compliance with CEQA and the CEQA Guidelines:

Part A: Findings regarding the environmental review process and the contents of the Final PEA.

Part B: Findings regarding the environmental impacts of the Project and the mitigation measure for those impacts identified in the Final PEA and adopted as part of Rule 1315.

Part C: Findings regarding alternatives and the reasons that such alternatives are rejected.

Part D: Statement of Overriding Considerations determining that the benefits of implementing the Project outweigh the significant unavoidable environmental impacts that will result and therefore justify approval of the Project despite such impacts.

The Governing Board certifies that these findings are based on full appraisal of all viewpoints, including all comments received up to the date of adoption of these findings, concerning the environmental issues identified and discussed in the Final PEA.

In addition to the findings regarding environmental impacts, alternatives and overriding considerations, Part E, below, identifies the custodian and location of the record of proceedings, as required by CEQA.

Part F describes the Mitigation Monitoring Program for the Project. As described in Part F, the Board hereby adopts the Mitigation Monitoring Program as set forth in Exhibit A to these findings.

**A. Environmental Review Process**

**1. Project Summary**

Rule 1315 ensures that exempt sources under Rule 1304 and essential public services and other facilities that qualify for Priority Reserve offsets under Rule 1309.1 are fully offset to the extent required by federal law by valid emission reductions from the SCAQMD's internal offset accounts. The rule achieves this by specifying the types of reductions that are eligible to be tracked as offsets in SCAQMD's internal accounts, and how those reductions are tracked. The rule provides for the use of certain types of offsets that previously had not been accounted for in the SCAQMD's federal tracking system. In addition, the rule provides for annual demonstrations of equivalency with federal offset requirements. Internal offsets tracked under Rule 1315 may only be used for sources that are eligible for a permit under either Rule 1304 or Rule 309.1.

Rule 1315 provides for offsets to be tracked in the SCAQMD's internal accounts for: (1) orphan shutdowns and orphan reductions, including from minor federal sources as defined under federal law; (2) Emission Reduction Credits (ERCs) provided as emissions offsets for sources located at federal minor facilities; (3) the difference between the quantity of ERCs provided for a source located at a major polluting facility at a 1.2-to-1.0 ratio and quantity of ERCs required to offset emissions at a 1:0-to-1:0 ratio (for pollutants other than NO<sub>x</sub> and VOC); (4) return of offsets originally obtained from the SCAQMD, including Community Bank allocations; and (5) the difference between the reduction in daily emissions that is actually achieved and the reduction in daily emissions as calculated with the BACT adjustment when a facility reduces emissions and applies for an ERC with EPA's agreement. For offsets resulting from orphan shutdowns or reductions, credit is taken for eighty percent of the permitted emission levels.

Rule 1315 provides for an overall cumulative annual cap, for each pollutant, on the amount of offsets that are available to be used from the SCAQMD's internal offset accounts for major and minor sources. If the cap is exceeded for any pollutant in a given year, Rule 1315 would bar the issuance of permits for individual projects that require offsets from the SCAQMD's internal offset accounts until consistency with the cap is restored.

**2. Preparation of the PEA**

On March 17, 2009, SCAQMD issued a Notice of Preparation announcing the intended preparation of the Draft PEA and describing its proposed scope. A public workshop and scoping meeting for the Project were held on April 8, 2009.

The Draft PEA was released and made available to the public on September 9, 2010, with the comment period scheduled to close on October 26, 2010. To accommodate a written request for additional time, while balancing desires of other members of the public for the SCAQMD to take prompt action on Rule 1315, SCAQMD extended the comment period to November 9, 2010, which provided a total of 62 days for

comment on the Draft PEA. During the comment period, a second workshop was held for the Project on September 22, 2010.

The Final PEA was completed and made available for review by public agencies and members of the public on December 22, 2009.

The Final PEA contains all of the comments received during the public comment period, together with written responses to those comments which were prepared in accordance with CEQA and the CEQA Guidelines.

The Governing Board finds and determines that the Final PEA provides adequate, good faith, and reasoned responses to all comments raising significant environmental issues.

### **3. Absence of Significant New Information**

CEQA Guidelines Section 15088.5 requires a lead agency to recirculate an EIR for further review and comment when significant new information is added to the EIR after public notice is given of the availability of the draft EIR but before certification of the final EIR. New information added to an EIR is not “significant” unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect that the project proponent declines to implement. The Guidelines provide examples of significant new information under this standard. Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.

The Governing Board recognizes that the Final PEA incorporates information obtained by SCAQMD since the Draft PEA was completed, and contains additions and clarifications. With respect to this information, the Governing Board finds as follows:

***Changes to Rule 1315.*** As described in the Staff Report for adoption of Rule 1315, since the Draft PEA was circulated, changes were made to ensure that the language of the rule is clear and unambiguous and is consistent with the intent of the rule. The Governing Board finds that these changes to Rule 1315 strengthen the effectiveness of the rule and enhance its clarity, but do not cause any new or more severe environmental impacts. Therefore, in accordance with CEQA and the CEQA Guidelines, no recirculation of the PEA is necessary based on the changes to the language of Rule 1315.

***Responses to Comments.*** In addition to the changes to Rule 1315 described above, the Final PEA provides additional information in response to comments and questions from the public. The Governing Board finds that this additional information does not constitute significant new information requiring recirculation, but rather that the additional information clarifies or amplifies an adequate PEA. Specifically, the Governing Board finds that the additional information including the changes described above, does not show that:

- (1) A new significant environmental impact would result from the project.
- (2) A substantial increase in the severity of an environmental impact would result.
- (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.
- (4) The draft PEA was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

Based on the foregoing, and having reviewed the information contained in the Final PEA and in the record of SCAQMD's proceedings, including the comments on the Draft PEA and the responses thereto, the Staff Report, and the above-described information, the Governing Board hereby finds that no significant new information has been added to the Final PEA since public notice was given of the availability of the Draft PEA that would require recirculation of the PEA.

#### **4. Differences of Opinion Regarding the Impacts of the Project**

In making its determination to certify the Final PEA and to approve the Project, the Governing Board recognizes that the Project involves a number of controversial environmental issues and that a range of opinion exists with respect to those issues. The Governing Board has acquired an understanding of the range of opinion by its review of the Draft PEA, the comments received on the Draft PEA and the responses to those comments in the Final PEA, as well as its own experience and expertise in assessing air quality effects and in administering its rules. The Governing Board has reviewed and considered, as a whole, the evidence and analysis presented in the Draft PEA, the analysis presented in the comments on the Draft PEA, the analysis presented in the Final PEA, and the expert opinions of SCAQMD staff addressing those comments. The Governing Board has gained a comprehensive and well-rounded understanding of the environmental issues presented by the Project. In turn, this understanding has enabled the Governing Board to make its decisions after weighing and considering the various viewpoints on these important issues. The Governing Board accordingly certifies that its findings are based on full appraisal of all of the information contained in the Final PEA, as well as the evidence and other information in the record.

#### **B. Impacts and Mitigation Measures**

These findings provide the written analysis and conclusions of the Governing Board regarding the environmental impacts of the Project and the mitigation measure proposed by the Final PEA and adopted by the Governing Board as part of Rule 1315.

In making these findings, the Governing Board has considered the opinions of other members of the public, including opinions that disagree with some of the analysis used in the PEA. The Board finds that the appropriate methodology for calculating effects and determining significance is a judgment within the discretion of the Governing Board; the method of analysis used in the PEA is supported by substantial

evidence in the record, including the expert opinions of the SCAQMD staff; and the significance thresholds used in the PEA provide reasonable and appropriate means of assessing the significance of the adverse environmental effects of the Project.

Tables 1 and 2, below, summarize the environmental determinations of the Final PEA about the Project's impacts. These tables do not attempt to describe the full analysis of each environmental impact contained in the Final PEA. Instead, Tables 1 and 2 provide a summary description of each impact and state the Governing Board's findings on the significance of each impact. A full explanation of these environmental findings and conclusions can be found in the Final PEA and these findings hereby incorporate by reference the discussion and analysis in the Final PEA supporting the Final PEA's determinations regarding the Project's impacts and mitigation measure designed to address those impacts. In making these findings, the Governing Board ratifies, adopts, and incorporates the analysis and explanation in the Final PEA, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Final PEA relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

The analysis in the PEA was separated into the following two categories: 1) direct and indirect air quality, visibility, and greenhouse gas impacts and 2) indirect environmental impacts resulting from the construction and operation of future facilities that obtain offsets pursuant to Rule 1309.1 and facilities exempt from offsets pursuant to Rule 1304.

Table 1 summarizes the significance determinations for direct, indirect, and overall air quality, visibility, and greenhouse gas impacts that were analyzed in Subchapter 4.1 in the Final PEA.

**Table 1**  
**Significance Determination for Direct and Indirect Air Quality, Visibility, and Greenhouse Gas Impacts**

Air Quality Impact Area	Direct Impacts	Indirect Impacts	Overall Significance Determination
Consistency with AQMP	Not significant	Not significant	Not significant
Regional Emissions from Criteria Pollutants - Project	Significant	Significant	Significant
Regional Emissions from Criteria Pollutants - Cumulative	Significant	Significant	Significant
Regional Emissions from Lead – Project	Not significant	Not significant	Not significant
Regional Emissions from Lead - Cumulative	Not significant	Not significant	Not significant
Localized Concentrations	Significant	Significant	Significant
Health Effects (Criteria Pollutants) – Project	Significant	Significant	Significant
Health Effects (Criteria Pollutants) – Cumulative	Significant	Significant	Significant
Regional Health Impacts (TACs) - Project	Significant	Significant	Significant
Regional Health Impacts (TACs)-Cumulative	Significant	Significant	Significant
Localized Toxic Air Contaminants	Significant	Significant	Significant
Odors	Significant	Significant	Significant
Visibility – Project	Not significant	Presumed significant	Presumed significant
Visibility - Cumulative	Not significant	Presumed significant	Presumed significant
Greenhouse Gases	Significant	Significant	Significant

As shown in Table 1, the Project would generate significant adverse direct and indirect project-specific and cumulatively considerable air quality, visibility, and greenhouse gas impacts.

**Finding:** The Governing Board finds that the Project would generate significant adverse direct and indirect project-specific and cumulative air quality, visibility, and greenhouse gas impacts as identified in Table 1 and discussed in the Final PEA.

**Mitigation Measure AQ-1:** As set forth in Rule 1315, subdivision (g), the Project includes a cap on total emissions offsets to be provided from the SCAQMD internal accounts for each pollutant in order to ensure that the net emissions increase attributable to both federal major and non-major sources do not exceed the emissions analyzed in the Final PEA.

The Governing Board finds that by incorporating mitigation measure AQ-1 into Rule 1315, SCAQMD is able to ensure that this measure is fully enforceable through SCAQMD permit and enforcement activities.

Subchapter 4.1 of the Final PEA identifies existing and future requirements that are not mitigation measures unique to this Project, but that will have the effect of limiting the total quantity of emissions by new or modified sources, including requirements pertaining to “best available control technology” (BACT) for any new or modified source resulting in an emissions increase of nonattainment pollutants and their precursors; requirements pertaining to T-BACT for any facility that emits identified toxic air contaminants and results in a maximum individual cancer risk of more than one in a million ( $1 \times 10^{-6}$ ); and future requirements adopted pursuant to the U.S. EPA Greenhouse Gas Tailoring Rule (75 Fed. Reg. 31513). These requirements will significantly reduce the potential air pollution impacts of new or modified sources that are permitted by the SCAQMD to the extent feasible. The Governing Board finds that no additional feasible mitigation measures which would reduce or avoid the impacts of the Project have been identified.

The Governing Board finds that, after mitigation, each of the significant impacts identified in Table 1 will remain significant.

Table 2 identifies the indirect impacts from siting, constructing and operating the facilities containing sources permitted in reliance upon the internal offsets tracked under Rule 1315, as analyzed in Chapter 5 of the Final PEA.

**TABLE 2**  
**Indirect Impacts of the Project**

<b>Environmental Topic</b>	<b>Project-Specific Impacts</b>	<b>Cumulative Impacts</b>
<b>I. Aesthetics</b>		
a. Scenic Vista	Significant	Significant

Indirect Impacts of the Project (cont'd)**

<b>Environmental Topic</b>	<b>Project-Specific Impacts</b>	<b>Cumulative Impacts</b>
e. Adverse indirect impacts to other public facilities	Significant	Significant
<b>XIV. Recreation</b>		
a. Increase the use of neighborhood parks	Significant	Significant
b. Require construction of neighborhood parks	Significant	Significant
<b>XV. Solid/Hazardous Wastes</b>		
a. Have sufficient landfill capacity to accommodate project	Significant	Significant
b. Comply with regulations regarding solid/hazardous wastes	Significant	Significant
<b>XVI. Transportation/Traffic</b>		
a. Cause a substantial increase in traffic	Significant	Significant
b. Individually or cumulatively exceed LOS standards	Significant	Significant
c. Change air traffic patterns	Significant	Significant
d. Increase road hazards	Significant	Significant
e. Result in inadequate emergency access	Significant	Significant
f. Result in inadequate parking	Significant	Significant
g. Conflict with alternative transportation policies	Significant	Significant
<b>XVII. Consistency</b>		
a. Regional Comprehensive Plan & Guide	Consistent	Consistent
b. Regional Mobility Element & Congestion Management Plan	Consistent	Consistent

As shown in Table 2 above, the Project has the potential to generate significant adverse indirect project-specific and cumulative impacts to all of the environmental topic areas identified in the environmental checklist (CEQA Guidelines, Appendix G). Consistency with SCAG’s Regional Comprehensive Plan and Guide and the Regional Mobility Element and the Congestion Management Plan was also evaluated in Chapter 5 of the PEA. The Project is consistent with both plans.

**Explanation:** The subchapters in Chapter 5 of the Final PEA include analyses of indirect project-specific and cumulative impacts from the siting, construction and operation of individual facilities containing stationary pollutant sources that qualify

to receive emissions offsets from the SCAQMD internal offset accounts tracked pursuant to Rule 1315. The conclusions regarding indirect impacts are based on the methodology described in Chapter 5 of the Final PEA.

Although mitigation measures were described in the CEQA documents that were surveyed relating to potentially significant adverse indirect project-specific and cumulative impacts, no mitigation measures were identified that are within the jurisdiction of the SCAQMD, as a single purpose public agency responsible for adopting and enforcing air quality rules and regulations, to implement. In addition, it is not feasible to identify appropriate facility-specific mitigation measures in connection with adoption of Rule 1315. Instead, appropriate facility-specific mitigation measures will be identified in the CEQA documents prepared for future facilities.

**Finding:** The Governing Board finds that the Project has the potential to result in significant adverse indirect project-specific and cumulative impacts to each of the resource categories identified in Appendix G to the CEQA Guidelines as shown on Table 2 and discussed in the Final PEA. The Governing Board finds further that no feasible changes or alterations to the Project would mitigate or avoid the significant adverse indirect project-specific and cumulative impacts identified in Table 2. Finally, the Governing Board finds that identification and adoption of measures to mitigate significant adverse indirect project-specific and cumulative impacts from future individual facilities containing stationary pollutant sources that qualify to receive emissions offsets from the SCAQMD internal offset accounts tracked pursuant to Rule 1315 can and should be the responsibility of local general purpose public agencies (e.g., city or county) or other permitting agencies that would typically serve as the lead agency for environmental review of such future facilities.

### **C. Basis for the Governing Board's Decision to Approve the Project**

#### **1. Summary of Discussion of Alternatives in the Final PEA**

The Final PEA evaluates a number of potential alternatives to the Project. The PEA examines the environmental impacts of each alternative in comparison with the Project and the relative ability of each alternative to satisfy the project objectives.

The PEA also summarizes the criteria used to identify a range of reasonable alternatives for review in the PEA and describes proposals that SCAQMD concluded did not merit additional, more-detailed review either because they did not present viable alternatives to the Project or they are variations on the alternatives that are evaluated in detail.

#### **2. The Governing Board's Findings Relating to Alternatives**

In making these findings, the Governing Board certifies that it has independently reviewed and considered the information on alternatives provided in the Final PEA, including the information provided in comments on the Draft PEA and the responses to those comments in the Final PEA, the Staff Report, and the Socioeconomic Impact

Assessment. The Final PEA’s discussion and analysis of these alternatives is not repeated in these findings, but the discussion and analysis of the alternatives in the Final PEA is incorporated in these findings by reference.

The Final PEA describes and evaluates five alternatives to the Project. The Governing Board finds Rule 1315 (the Project) would satisfy the Project Objectives. The Governing Board finds that the alternatives are unable to satisfy the project objectives to the same degree as the Project. The Governing Board further finds that, on balance, none of the alternatives has environmental advantages over the Project that are sufficiently great to justify approval of such an alternative instead of the Project, in light of each such alternative’s inability to satisfy the project objectives to the same degree as the Project. Accordingly, the Governing Board has determined to approve the Project instead of approving any of the alternatives.

In making this determination, the Governing Board finds that when compared to the alternatives described and evaluated in the Final PEA, the Project provides a reasonable balance between fully satisfying the project objectives and reducing potential environmental impacts to an acceptable level. The Governing Board further finds and determines that the Project should be approved, rather than one of the other alternatives, for the reasons set forth below.

**a. Description of Project Objectives**

The project objectives are as follows:

- Maintain SCAQMD’s ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1. SCAQMD’s policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and socioeconomic benefits as well as environmental and socioeconomic impacts;
- Memorialize in rule form the accounting procedures SCAQMD uses to establish equivalency of SCAQMD’s New Source Review program with federal offset requirements, and ensure that valid offsets are projected to be available in SCAQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset; and
- Recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate

federal equivalency for major sources that are exempt under Rule 1304 or that obtain credits from the Priority Reserve under Rule 1309.1.

**b. Discussion and Findings Relating to the Alternatives Evaluated in the Final PEA**

**Alternative A -- No Project.** Under CEQA, a “No-Project Alternative” compares the impacts of proceeding with a proposed project with the impacts of not proceeding with the proposed project. A No-Project Alternative describes the environmental conditions in existence at the time the Notice of Preparation was published, along with a discussion of what would be reasonably expected to occur at the site in the foreseeable future, based on current plans and consistent with available infrastructure and community services.

The No-Project Alternative assumes that neither the Project nor Alternatives B through E would be adopted. However, without the Project, SB 827 would remain in effect, which will allow the issuance of offsets from the internal accounts between January 1, 2010 and May 1, 2012.

This alternative would eliminate many of the significant environmental effects of the Project; however, this alternative would not satisfy any of the project objectives. Adoption of Alternative A, the No Project Alternative, would mean that offsets from the SCAQMD internal accounts would not be available beyond May 1, 2012 to facilities providing essential public services. These essential public services include prisons, police facilities, fire fighting facilities, schools, hospitals, water delivery operations, public transit, publicly owned or operated sewage treatment facilities, and landfill gas control or processing facilities. It is expected that few, if any, such facilities would be able to purchase credits on the open market. As a result, development of new or expanded facilities needed to improve essential public services and to serve population growth would be hampered.

In addition, commercial and industrial manufacturing capacity in the district would be limited because the types of facilities that could obtain offsets pursuant to Rules 1304 or 1309.1 under the Project would no longer have access to these sources of offsets. Because credits available on the open market may be too expensive to afford, future affected facilities would likely not be built or could not be modified. This would limit the number of future new jobs because fewer new or modified facilities could be built compared to a scenario where offsets from the SCAQMD’s internal offset accounts are available. As described in the Socioeconomic Impact Assessment, the No Project Alternative would not accommodate projected growth, and would not allow the regional economy to grow to the same degree as the Project.

On balance, the environmental benefits that might be achieved with this alternative are outweighed by the failure to achieve any of the project objectives.

**Alternative B -- Offset User Fees for Large Businesses.** This alternative is largely the same as the Project, except that Alternative B includes “offset user fees” for large businesses that seek an exemption from offset requirements pursuant to Rule 1304.

The analysis in the Final PEA assumes that large businesses would continue to seek exemptions under Rule 1304 despite the requirement that they pay an offset user fee to benefit from the exemption. This assumption is used to ensure that the combined analyses of Alternatives B and C (described below) bracket the range of potential outcomes if large businesses are subject to the high cost of obtaining offsets on the open market. Offset user fees would increase the cost of developing a new or modified source and would restrain the rate of growth in commercial and industrial sources that would otherwise qualify for the Rule 1304 exemption. Thus, this alternative would not fully accomplish the project objectives, which include accommodating population growth through implementation of Rule 1304.

On balance, the environmental benefits of the Alternative do not outweigh its policy disadvantages in terms of meeting the project objectives when compared to the Project.

**Alternative C-- Large Businesses Prohibited from Accessing Rule 1304**

**Exemptions.** This alternative is largely the same as the Project, except that Alternative C would prohibit access by large businesses to the Rule 1304 exemption.

The analysis in the Final PEA assumes that large businesses would have to obtain credits on the open market. However, credits on the open market are in short supply; accordingly fewer facilities would be able to obtain permits for new or modified sources. Therefore, the analysis assumes these facilities would not be built. By a prohibition of access to the SCAQMD offset accounts, increasing the cost of developing a new or modified source would restrain the rate of growth in commercial and industrial sources that would otherwise qualify for the Rule 1304 exemption. Indeed, sufficient offsets may not be available, regardless of cost. Thus, this alternative would not fully accomplish the project objectives, which include accommodating population growth through implementation of Rule 1304.

On balance, the environmental benefits of the Alternative do not outweigh its policy disadvantages when compared to the Project in terms of meeting the project objectives.

**Alternative D -- Use of Credits Generated in 2009 and Beyond Only.** This alternative would allow only the use of credits generated in 2009 and beyond to be used to offset emissions from facilities that qualify for permits under Rules 1304 and 1309.1 in order to demonstrate equivalency with federal offset requirements. Any unused credits in a given year would roll over to the next year.

Under this Alternative, much of the growth in emissions forecasted in the 2007 AQMP for the industries potentially eligible to receive permits under Rules 1304 and 1309.1 would not occur. However, emissions from sources that shut down or reductions at facilities that previously received permits under Rules 1304 and 1309.1 could be replaced with emissions from new or modified sources receiving new permits under Rules 1304 and 1309.1.

Under Alternative D, offsets from the SCAQMD internal accounts would not be available beyond May 1, 2012 for growth of facilities providing essential public

services. It is expected that few, if any, such facilities would be able to purchase credits on the open market. As a result, development of new or expanded facilities needed to improve essential public services and to serve population growth would be hampered.

In addition, growth in commercial and industrial manufacturing capacity in the district would be limited because the types of facilities that could obtain offsets pursuant to Rules 1304 or 1309.1 under the Project would have limited access to these sources of offsets. Because credits available on the open market may be too expensive to afford, many future affected facilities would likely not be built or could not be modified. This would limit the number of future new jobs because fewer new or modified facilities could be built compared to a scenario where sufficient offsets from the SCAQMD's internal offset accounts are available to accommodate growth.

This alternative would not fully accomplish the project objectives, which include accommodating population growth through implementation of Rules 1304 and 1309.1. On balance, the environmental benefits of the Alternative do not outweigh its policy disadvantages when compared to the Project.

**Alternative E -- Limited Offset Availability.** The Project would limit the cumulative net emissions increases by all sources (major or minor) obtaining offsets from the Priority Reserve or exempt from offsets pursuant to Rule 1304 to levels based upon the growth assumptions in the 2007 AQMP for the relevant industry categories. Alternative E would limit the cumulative net emission increases from those sources to levels set at 50 percent of the relevant AQMP-based levels.

Under Alternative E, fewer offsets from the SCAQMD internal accounts would be available for growth of facilities providing essential public services. As a result, development of new or expanded facilities needed to improve essential public services and to serve population growth would be hampered.

In addition, growth in commercial and industrial manufacturing capacity in the district would be limited because the types of facilities that could obtain offsets pursuant to Rules 1304 or 1309.1 under the Project would have limited access to these sources of offsets. Because credits available on the open market may be too expensive to afford, many future affected facilities would likely not be built or could not be modified. This would limit the number of future new jobs because fewer new or modified facilities could be built compared to a scenario where sufficient offsets from the SCAQMD's internal offset accounts are available to accommodate growth.

This alternative would not fully accomplish the project objectives, which include accommodating population growth through implementation of Rules 1304 and 1309.1. On balance, the environmental benefits of the Alternative do not outweigh its policy disadvantages when compared to the Project.

**Summary of Findings Regarding Alternatives.** For all of the foregoing reasons, the Governing Board has determined to approve the Project instead of one of the alternatives to the Project.

**c. Findings Regarding the Range of**

## **Alternatives**

The Governing Board finds that the range of alternatives evaluated in the PEA reflects a reasonable attempt to identify and evaluate various types of alternatives that would potentially be capable of reducing the Project's environmental effects, while accomplishing most but not all of the project objectives. The Governing Board finds that the alternatives analysis including the information in the Socioeconomic Impact Assessment and the Staff Report is sufficient to inform the Governing Board and the public regarding the tradeoffs between the degree to which alternatives to the Project could reduce environmental impacts and the corresponding degree to which the alternatives would hinder SCAQMD's ability to achieve its project objectives.

### **D. Statement of Overriding Considerations**

#### **1. Impacts That Remain Significant**

As discussed in Section III.B, the Governing Board has found that each of the significant impacts identified on Tables 1 and 2, above, remains significant following adoption and implementation of the mitigation measure described in the Final PEA.

#### **2. Overriding Considerations Justifying Project Approval**

In accordance with CEQA Guidelines Section 15093, the Governing Board has, in determining whether or not to approve the Project, balanced the economic, social, technological, and other project benefits against its unavoidable environmental risks, and finds that each of the benefits of the Project set forth below outweigh the significant adverse environmental effects that are not mitigated to less-than-significant levels. This statement of overriding considerations is based on the Governing Board's review of the Final PEA and other information in the administrative record. Each of the benefits identified below provides a separate and independent basis for overriding the significant environmental effects of the Project. The benefits of the Project are as follows:

1. Adopting Rule 1315 would maintain the SCAQMD's ability to continue to administer its new source review program for major and minor sources to accommodate population growth through implementation of Rule 1304 and Rule 1309.1 through January 1, 2031.
2. Adopting Rule 1315 would maintain the SCAQMD's ability to continue to administer its new source review program for major and minor sources accordance with Rule 1304 and 1309.1, which would allow facilities to install pollution control equipment.
3. Adopting Rule 1315 would maintain the SCAQMD's ability to continue to administer its new source review program for major and minor sources accordance with Rule 1304 and 1309.1, which would allow facility modernization, thus, increasing equipment efficiency.

4. Adopting Rule 1315 would maintain the SCAQMD's ability to continue to administer its new source review program for major and minor sources accordance with Rule 1304 and 1309.1, which would allow emergency equipment to be installed.
5. Adopting Rule 1315 would maintain the SCAQMD's ability to continue to administer its new source review program for major and minor sources accordance with Rule 1304 and 1309.1, which would allow permitting of equipment necessary for small emitters.
6. Adopting Rule 1315 would maintain the SCAQMD's ability to continue to administer its new source review program for major and minor sources accordance with Rule 1304 and 1309.1, which would allow operation of equipment determined as a policy matter to be essential public services eligible for Priority Reserve offsets.

**E. Record of Proceedings**

The record of approval for Rule 1315 and all documents and other materials related to this Project may be found at SCAQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, 91765. The Custodian of the Record is the Deputy Executive Officer in charge of Rule 1315.

**F. Mitigation Monitoring Program**

The Governing Board hereby adopts the Mitigation Monitoring Program for the Project attached to these findings as Exhibit A.

## EXHIBIT A

### MITIGATION MONITORING PROGRAM FOR RULE 1315

Pursuant to the requirements of Public Resources Code §21081.6(a)(1) and CEQA Guidelines §15097, when a public agency conducts an environmental review of a proposed project in conjunction with approving a project, the lead agency shall adopt a program for monitoring or reporting on the measures it has imposed to mitigate or avoid significant adverse environmental effects.

**Summary of Mitigation Measure AQ-1:** The emissions directly resulting from Rule 1315 equal the quantity of offsets that are used pursuant to Rules 1304 and 1309.1. Thus, any reduction or limitation on the use of the offsets will directly limit regional air pollutant emissions. For this reason, the Project includes a cap on total emissions offsets to be provided from the SCAQMD offset accounts for each pollutant in order to ensure that the net emissions increase attributable to both federal major and non-major sources do not exceed the emissions analyzed in the PEA. Mitigation Measure AQ-1 is fully described in subdivision g of Rule 1315. Incorporating the mitigation measure into the Project, i.e., the regulation is consistent with CEQA Guidelines §15126.4(a)(1), which states, “Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally binding instruments. In the case of the adoption of a plan, policy, regulation, or other public project, mitigation measures can be incorporated into the plan, policy, regulation, or project design.”

**Monitoring and Reporting Program:** The program for monitoring and reporting upon implementation of Measure AQ-1 has been incorporated in Rule 1315, subdivision (g), and is as follows:

(g) California Environmental Quality Act Backstop Provisions

(1) Net Emission Increases

(A) Emission Increases at Major and Minor Facilities

In addition to the tracking of offset account debits provided to sources at major polluting facilities pursuant to paragraph (c)(2) of this rule, the Executive Officer shall track all increases in potential to emit that occur at major and minor facilities pursuant to Rule 1304 or Rule 1309.1. Increases in potential to emit at minor facilities tracked pursuant to this paragraph shall not constitute debits from the District offset accounts.

(B) Calculation of Net Emission Increases

The Executive Officer shall calculate the cumulative net emission increase of each nonattainment air contaminant that is tracked pursuant to paragraphs (c)(2) and (c)(3) of this rule from [date of adoption] through the end of the calendar year 2011 reporting period and through the end of each subsequent reporting period no later

than the FDE completion deadline for each such reporting period specified in paragraph (d)(3) of this rule.

(C) Reporting Net Emission Increases

The Executive Officer's report to the Governing Board of each FDE commencing with the FDE for the calendar year 2011 reporting period shall include the cumulative net emission increases from [date of adoption] through the end of the reporting period analyzed by the FDE calculated pursuant to paragraph (d)(3) of this rule. In cases where, pursuant to paragraph (d)(3) of this rule, the Executive Officer reports the credit accounting elements identified in paragraph (c)(3) of this rule with the PDE for the subsequent reporting period, the Executive Officer shall also report the cumulative net emission increase(s) for the same air contaminant(s) with the PDE for the subsequent reporting period. Although net emission increases are to be reported with the results of the FDEs, they are separate from the FDEs and do not constitute an element of the FDEs.

(2) Projections of Cumulative Net Emission Increases

Each PDE report and each FDE report the Executive Officer prepares and presents to the Governing Board and EPA commencing with the reports analyzing the 2011 reporting period shall also include projections of the cumulative net emission increases at the end of each of the two subsequent reporting periods. The Executive Officer shall make the projections of the cumulative net emission increases from both major sources and minor sources based upon the average of the aggregate increase in potential to emit of each nonattainment air contaminant subject to tracking pursuant to paragraph (c)(2) of this rule and the average of the aggregate emissions reductions of the same nonattainment air contaminant for the five reporting periods most recently included in a PDE or an FDE or each of the reporting periods commencing with the 2011 reporting period, whichever is fewer reporting periods. Although these projections are to be reported with the results of the PDEs and FDEs, they are separate from the determinations of equivalency and do not constitute an element of the determinations of equivalency.

(3) Issuance of Permits

If the cumulative net emission increase of a nonattainment air contaminant, as tracked pursuant to subparagraph (g)(1)(B) of this rule and reported with an FDE pursuant to subparagraph (g)(1)(C) of this rule, exceeds the paragraph (g)(4) threshold or is projected pursuant to paragraph (g)(2) of this rule to exceed the paragraph (g)(4) threshold for that air contaminant, the Executive Officer shall discontinue issuing permits to construct and permits to operate that rely on further use of Rule 1304 exemptions or Rule 1309.1 Priority Reserve offsets for that air contaminant to major and minor sources of that air contaminant. Such permit issuance shall cease no later than the paragraph (d)(2) PDE completion deadline or the paragraph (d)(3) FDE completion deadline applicable to the PDE or FDE with which the paragraph (g)(4) threshold exceedance or projected exceedance will be reported to the Governing Board. The Executive Officer shall not resume issuing such permits unless and until the corresponding cumulative net emission increase

returns to a level at least ten percent below the threshold for the year in which permitting is to resume, as shown in Table B.

(4) Cumulative Net Emission Increase Thresholds

The cumulative net emission increase thresholds based upon the growth assumptions in the 2007 AQMP for [date of adoption] through December of 2011 and each subsequent year through 2030 are presented in Table B to Rule 1315.

**TABLE B Cumulative Net Emission Increase Thresholds (tons per day)**

[date of adoption] through December of]	VOC	NOx	SOx	PM10
2011	1.68	0.15	0.04	0.24
2012	2.80	0.25	0.06	0.40
2013	3.91	0.35	0.09	0.55
2014	5.03	0.45	0.11	0.71
2015	6.30	0.53	0.14	0.90
2016	7.58	0.61	0.18	1.09
2017	8.85	0.68	0.21	1.29
2018	10.12	0.76	0.24	1.48
2019	11.39	0.84	0.27	1.67
2020	12.67	0.92	0.30	1.86
2021	13.94	1.00	0.33	2.05
2022	15.21	1.08	0.36	2.24
2023	16.48	1.15	0.39	2.43
2024	17.73	1.27	0.42	2.63
2025	18.98	1.39	0.45	2.83
2026	20.23	1.50	0.48	3.03
2027	21.49	1.62	0.51	3.23
2028	22.74	1.73	0.55	3.43

**TABLE B Cumulative Net Emission Increase Thresholds (tons per day) (cont')**

[date of adoption] through December of]	VOC	NOx	SOx	PM10
2029	23.99	1.85	0.58	3.63
2030	25.24	1.96	0.61	3.83

**Implementing Party:** Implementing Mitigation Measure AQ-1 is the responsibility of the SCAQMD through the procedures and requirements listed in Rule 1315.

**Monitoring Agency:** Through its discretionary authority to issue and enforce permits, the SCAQMD will ensure compliance with Mitigation Measure AQ-1.

**ATTACHMENT D**

**PROPOSED RULE 1315 RULE LANGUAGE**

**PROPOSED RULE 1315 FEDERAL NEW SOURCE REVIEW TRACKING  
SYSTEM**

(a) Purpose

The purpose of this rule is to:

- (1) Maintain the District's ability to continue through December 31, 2030 to issue permits to major sources that obtain offset credits from the Priority Reserve under Rule 1309.1 and/or that are exempt from offsets under Rule 1304;
- (2) Memorialize in rule form the procedures to be followed by the Executive Officer for:
  - (A) Establishing the District's NSR program equivalency with federal NSR offset requirements for such major sources; and
  - (B) Demonstrating that sufficient emission reductions, including previously-untracked emission reductions, existed beyond regulatory requirements under federal law to be used as offset credits to establish that the District's NSR program is equivalent with federal NSR offset requirements for major sources that are exempt from offsets under Rule 1304 or obtain offset credits from the Priority Reserve under Rule 1309.1.

(b) Definitions

- (1) COMMUNITY BANK means the Community Bank as established by Rule 1309.1 – Community Bank, as adopted June 28, 1990 and by Rule 1309.1 – Community Bank And Priority Reserve, as amended May 3, 1991, and became unavailable to applications deemed complete after the December 7, 1995 amendments to Rule 1309.1 – Priority Reserve, which eliminated the Community Bank.
- (2) NET EMISSION INCREASE means the aggregate increase in potential to emit from permitted major and minor stationary sources of a nonattainment air contaminant subject to tracking pursuant to paragraph (c)(2) of this rule that are offset from the Priority Reserve or exempt from offsets pursuant to Rule 1304 minus the aggregate emissions reductions of the same nonattainment air contaminant tracked pursuant to paragraph (c)(3) of this rule over the same time period.

- (3) OFFSET RATIO means the ratio of the quantity of offset credits provided (in pounds per day) to the increase in potential emissions (in pounds per day) requiring offsets.
  - (4) ORPHAN REDUCTION means any reduction in actual emissions from a permitted source within the District resulting from a physical change to the source and/or a change to the method of operation of the source provided the change is reflected in a revised permit for the source and provided such reduction is not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan and does not result in issuance of an ERC.
  - (5) ORPHAN SHUTDOWN means any reduction in actual emissions from a permitted source within the District resulting from removal of the source from service and inactivation of the permit without subsequent reinstatement of such permit provided such reduction is not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan and does not result in issuance of an ERC.
  - (6) PRIORITY RESERVE means the Priority Reserve as established by the June 28, 1990 adoption of Rule 1309.1 – Community Bank and as amended by the May 3, 1991 amendments to Rule 1309.1 – Community Bank and Priority Reserve and by the December 7, 1995 and subsequent amendments to Rule 1309.1 – Priority Reserve.
  - (7) SHORTFALL means a negative net balance in any of the District offset accounts described in paragraph (c)(1) of this rule as demonstrated through an FDE prepared pursuant to paragraph (d)(3) of this rule or projected pursuant to subdivision (e) of this rule.
- (c) Offset Accounts for Federal NSR Equivalency
- (1) District Offset Accounts for Federal Nonattainment Air Contaminants  
The Executive Officer shall maintain a separate District offset account for each federal nonattainment air contaminant excluding PM2.5. The District offset accounts were established as of October 1, 1990 with valid emission reductions that had occurred prior to that date, as reflected in various facilities’ negative NSR account balances and that were aggregated as the initial account balances listed in Table A for each nonattainment air contaminant. Any portions of the initial account

balances identified in Table A remaining in the District offset accounts at the end of calendar year 2005 were removed from the District offset accounts as an environmental benefit by the Executive Officer and are not used for purposes of demonstrating equivalency between federal NSR offset requirements and the District’s NSR program. Additional District offset accounts are to be established by the Executive Officer in the event that additional federal nonattainment air contaminants other than PM2.5 or their precursors become subject to federal nonattainment NSR offset requirements, unless by rule the District establishes that Rule 1304 and Rule 1309.1 do not apply to such contaminants or their precursors. If the United States Environmental Protection Agency (EPA) re-designates the District’s attainment status from nonattainment to attainment for a specific air contaminant the Executive Officer may discontinue tracking and reporting the associated District offset account for that air contaminant provided there is a showing in the maintenance plan that the continued use of emissions offsets for that air contaminant is not necessary to maintain attainment for that air contaminant. The District’s NSR program shall be considered equivalent to federal nonattainment NSR offset requirements for a nonattainment air contaminant so long as the procedures specified in this rule are followed and the balance in the District offset account for that air contaminant remains positive.

TABLE A  
Initial District Offset Account Balances

Air Contaminant	Initial Account Balance (tons per day)
Volatile Organic Compounds (VOC)	38.46
Nitrogen Oxides (NOx)	23.92
Sulfur Oxides (SOx)	8.04
Carbon Monoxide (CO)	8.45
Particulate Matter (PM10)	2.67

- (2) Tracking of Offset Account Debits for Federal NSR Equivalency  
The Executive Officer shall track the amount of emissions and debit from the District offset accounts for the following types of offset allocations or exemptions provided from the District offset accounts for sources located

at major polluting facilities and that are not exempt from the offset requirements of federal nonattainment NSR:

- (A) Emission offsets from the Priority Reserve or Community Bank pursuant to Rule 1309.1; and
- (B) Exemptions from the offset requirements of Rule 1303 – Requirements pursuant to Rule 1304 – Exemptions.

The applicable offset ratios for offsets tracked by the Executive Officer pursuant to this paragraph is 1.2-to-1.0 for extreme nonattainment air contaminants and their precursors and is 1.0-to-1.0 for all other nonattainment air contaminants.

- (3) Tracking of Offset Account Credits for Federal NSR Equivalency
  - (A) The Executive Officer shall track and verify the amount of the following types of emission reductions that have occurred since October 1, 1990 to the District offset accounts:
    - (i) Orphan shutdowns;
    - (ii) Orphan reductions;
    - (iii) ERCs provided as emission offsets for sources located at minor facilities;
    - (iv) The difference between the quantity of ERCs provided for a source located at a major polluting facility at a 1.2-to-1.0 offset ratio pursuant to Rule 1303(b)(2)(A) and the quantity of ERCs required to offset the emission increases at a ratio of 1.0-to-1.0 for all non-attainment air contaminants except extreme nonattainment air contaminants and their precursors.
    - (v) The amount of emission reductions associated with a facility's NSR balance, Community Bank and Priority Reserve allocations, and offset exemptions that is subtracted from the emission reductions quantified pursuant to Rule 1306(c) as part of the Executive Officer's evaluation of an ERC banking application; and
    - (vi) The difference between the actual daily emission reductions calculated pursuant to Rule 1306(c) with and without the BACT adjustment required in Rule 1306(c)(2) as part of the Executive Officer's evaluation of an ERC banking application. This clause applies only in cases

where the Executive Officer demonstrates and EPA concurs that the subtracted amount is not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan. This clause is not applicable to emission reductions that occur in the Riverside County portion of the Salton Sea Air Basin (SSAB) or the non-Palo Verde, Riverside County portion of the Mojave Desert Air Basin (MDAB).

- (B) The Executive Officer shall quantify and deposit emission reductions that are tracked pursuant to subparagraph (c)(3)(A) of this rule into the District offset accounts according to the following procedures:
- (i) From orphan sources tracked pursuant to clauses (c)(3)(A)(i) or (c)(3)(A)(ii) of this rule at eighty percent of the total or change in the source's NSR permitted emission levels, respectively; and
  - (ii) From ERCs tracked pursuant to clauses (c)(3)(A)(iii), (c)(3)(A)(iv), (c)(3)(A)(v), and (c)(3)(A)(vi) of this rule in the amounts specified pursuant to those clauses.
- (C) The Executive Officer may choose not to track all potential sources of credits in any reporting period if the Executive Officer determines that sufficient credits remain in the District offset accounts to demonstrate equivalency in each reporting period.
- (4) Surplus at the Time of Use  
All credits deposited into the District offset accounts pursuant to clauses (c)(3)(A)(i), (c)(3)(A)(ii), and (c)(3)(A)(vi) of this rule shall be discounted by the Executive Officer to ensure that they remain surplus at the time of use. Such discounting shall be performed annually and shall be based on the percentage reduction in overall permitted emissions projected to be achieved as a result of implementation of control requirements that became effective during the previous calendar year for each specific nonattainment air contaminant within the District.
- (5) Tracking Sequence  
The tracking elements described in paragraphs (c)(2) through (c)(4) of this rule shall be carried out separately for each District Offset Account in the

following sequence for each reporting period as defined in paragraph (d)(1) of this rule:

- (A) Apply the surplus at the time of use discount described in paragraph (c)(4) of this rule to the offsets tracked pursuant to subparagraph (c)(3)(A) of this rule remaining in the District Offset Account, if any;
- (B) Subtract as much of the aggregate District Offset Account debits tracked and quantified pursuant to paragraph (c)(2) of this rule from the unused Table A initial balance remaining in the corresponding District Offset Account, if any, as possible without resulting in a negative District Offset Account balance;
- (C) Subtract the aggregate District Offset Account debits tracked and quantified pursuant to paragraph (c)(2) of this rule remaining after conducting the subtraction specified in subparagraph (c)(5)(A) of this rule, if any, from the corresponding District Offset Account balance; and
- (D) Add the emission reductions tracked pursuant to subparagraph (c)(3)(A) of this rule for the current reporting period to the corresponding District Offset Account Balance.

The PDE for each reporting period through the 2005 reporting period shall follow the tracking sequence identified in subparagraphs (c)(5)(A), (c)(5)(B), and (c)(5)(C) and the PDE for each reporting period commencing with the 2006 reporting period shall follow the tracking sequence identified in subparagraphs (c)(5)(A) and (c)(5)(C). The FDE for each reporting period shall be completed by adding the results of subparagraph (c)(5)(A) tracking to the PDE results for the same reporting period.

(6) Federal Offset Criteria

Offset account credits used to offset debits pursuant to Rule 1304 or Rule 1309.1, as specified in paragraph (c)(2), are real as specified in subparagraphs (c)(3)(A) and (c)(3)(B), surplus as specified in paragraphs (b)(4), (b)(5), and (c)(4), permanent as specified in paragraphs (b)(4) and (b)(5) and subparagraph (c)(3)(A), quantifiable as specified in paragraphs (c)(1), (c)(3), (c)(4), and (c)(5), and enforceable as specified in paragraphs (b)(4), (b)(5), and (c)(3).

**(d) Federal NSR Equivalency Determination Reports****(1) Reporting Periods**

The Executive Officer shall aggregate and track offsets debited from and offsets deposited to the District offset accounts into the following reporting periods for purposes of making periodic determinations of equivalency:

(A) October 1, 1990 through July 31, 1995;

(B) Each of the consecutive twelve-month periods commencing with August 1995 through July 1996 and concluding with August 2003 through July 2004;

(C) August 2004 through December 2005;

(D) Each calendar year from 2006 through 2009; and

(E) Each calendar year from 2010 through 2030.

**(2) Preliminary Determinations of Equivalency**

Commencing with the calendar year 2010 reporting period, and for each reporting period thereafter, the Executive Officer shall, no later than twelve months after the completion of the reporting period, complete a Preliminary Determination of Equivalency (PDE) with federal nonattainment NSR offset requirements. The Executive Officer shall report the PDE to the District's Governing Board and EPA no later than the second regularly-scheduled monthly Governing Board meeting after the completion deadline for the PDE. The PDE is a conservative assessment of the District offset account balances without accounting for orphan and other credits that become available during the subject reporting period. Each PDE shall include the debit accounting elements identified in paragraph (c)(2) of this rule and the running balances in the District offset accounts at the beginning and at the end of the subject reporting period.

**(3) Final Determinations of Equivalency**

Commencing with the calendar year 2010 reporting period, and for each reporting period thereafter, the Executive Officer shall complete a Final Determination of Equivalency (FDE) with federal nonattainment NSR offset requirements for each District Offset Account. The FDE for each account shall be completed no later than eighteen months after the completion of the subject reporting period. The Executive Officer shall report the FDE to the District's Governing Board and EPA no later than

the second regularly-scheduled monthly Governing Board meeting after the completion deadline for the FDE for any account(s) for which the PDE did not demonstrate equivalence. Each FDE shall include both the debit and the credit accounting elements identified in paragraphs (c)(2) and (c)(3) of this rule, respectively, and the running balances in the District offset accounts at the beginning and at the end of the subject reporting period. The Executive Officer shall report the FDE for any account(s) for which the PDE did demonstrate equivalence no later than the reporting deadline for the subsequent reporting period's PDE specified in paragraph (d)(2) of this rule.

(4) Early FDE Subsuming PDE

In lieu of preparing both a PDE and an FDE for a single reporting period, the Executive Officer may opt to include the PDE in the FDE for the same reporting period. Such FDEs are subject to the same completion and reporting deadlines as are the PDEs that they subsume.

(e) Projections of District Offset Account Balances

Each PDE report and each FDE report the Executive Officer prepares and presents to the Governing Board and EPA shall also include projections of the District offset account balances at the end of each of the two subsequent reporting periods. The Executive Officer shall make the projections of the District offset account balances based upon the average of the total annual debits and the average of the total annual credits for the five reporting periods most recently included in a PDE or an FDE. Although these projections are to be reported with the results of the PDEs and FDEs, they are separate from the determinations of equivalency and do not constitute an element of the determinations of equivalency.

(f) Equivalency Backstop Provisions

(1) Funding of the Priority Reserve and Issuance of Permits

If the most recent District offset account balances determined by an FDE pursuant to paragraph (d)(3) of this rule demonstrate a shortfall for any air contaminant, the Executive Officer shall:

- (A) Discontinue funding the Priority Reserve for any air contaminant that the most recent FDE has demonstrated does not have a positive balance in its District offset account no later than the

completion deadline for the FDE specified in paragraph (d)(3) of this rule. The Executive Officer may resume funding the Priority Reserve upon completion of an FDE demonstrating that the shortfall no longer exists.

- (B) Discontinue issuing permits to construct and permits to operate that are subject to paragraph (c)(2) Offset Account debits resulting in the further use of Rule 1304 exemptions or Priority Reserve offsets from Rule 1309.1 for the air contaminant that has a shortfall to sources that are major sources of that air contaminant commencing no later than the completion deadline for the FDE demonstrating the shortfall. Additionally, the Executive Officer shall place all major source applications that would otherwise qualify for an offset exemption pursuant to Rule 1304 or to access the Priority Reserve for the air contaminant that has a shortfall on hold until the results of an FDE demonstrating that the shortfall has been rectified have been reported to and approved by the Governing Board unless the applicant elects to provide sufficient ERCs to offset the emissions increase pursuant to Rule 1303(b)(2). The Executive Officer may resume issuance of such permits upon completion of an FDE demonstrating that the shortfall no longer exists.

- (2) Report to the Governing Board: Rectification of a Shortfall  
If an FDE demonstrates that a shortfall exists in any of the District offset accounts, or the most recent projected District offset balances calculated pursuant to subdivision (e) of this rule predict that such a shortfall will exist, the Executive Officer shall prepare a report to the Governing Board recommending appropriate action to rectify the shortfall. The Executive Officer shall present this report to the Governing Board no later than six months after the paragraph (d)(2) or (d)(3) completion deadline for the PDE projecting or the FDE demonstrating or projecting the shortfall. The report shall either recommend implementing one or more of the following backstop provisions as needed to correct the shortfall or include an explanation of why it is not necessary to implement any of the following backstop provisions by making a demonstration that the District remains in compliance with federal nonattainment NSR offset requirements on an aggregate basis:

- (A) Provide additional credits to the District offset account(s) that have a shortfall within six months of the FDE that demonstrated the shortfall or the subdivision (e) projection that predicted it. The Executive Officer may obtain such credits by purchasing them, by funding emission reduction projects using quantification protocols approved by EPA, by applying BACT (federal LAER) in excess of federal requirements, or by other methods approved by EPA; and/or
- (B) Propose amendments to Rule 1304 and/or Rule 1309.1 to eliminate certain offset exemptions or to eliminate certain sources' eligibility to receive offsets from the Priority Reserve, respectively.

The report shall also include a proposed timeline for implementation of the actions it recommends.

(g) California Environmental Quality Act Backstop Provisions

(1) Net Emission Increases

(A) Emission Increases at Major and Minor Facilities

In addition to the tracking of offset account debits provided to sources at major polluting facilities pursuant to paragraph (c)(2) of this rule, the Executive Officer shall track all increases in potential to emit that occur at major and minor facilities pursuant to Rule 1304 or Rule 1309.1. Increases in potential to emit at minor facilities tracked pursuant to this paragraph shall not constitute debits from the District offset accounts.

(B) Calculation of Net Emission Increases

The Executive Officer shall calculate the cumulative net emission increase of each nonattainment air contaminant that is tracked pursuant to paragraphs (c)(2) and (c)(3) of this rule from [date of adoption] through the end of the calendar year 2011 reporting period and through the end of each subsequent reporting period no later than the FDE completion deadline for each such reporting period specified in paragraph (d)(3) of this rule.

(C) Reporting Net Emission Increases

The Executive Officer's report to the Governing Board of each FDE commencing with the FDE for the calendar year 2011 reporting period shall include the cumulative net emission

increases from [date of adoption] through the end of the reporting period analyzed by the FDE calculated pursuant to paragraph (d)(3) of this rule. In cases where, pursuant to paragraph (d)(3) of this rule, the Executive Officer reports the credit accounting elements identified in paragraph (c)(3) of this rule with the PDE for the subsequent reporting period, the Executive Officer shall also report the cumulative net emission increase(s) for the same air contaminant(s) with the PDE for the subsequent reporting period. Although net emission increases are to be reported with the results of the FDEs, they are separate from the FDEs and do not constitute an element of the FDEs.

(2) Projections of Cumulative Net Emission Increases

Each PDE report and each FDE report the Executive Officer prepares and presents to the Governing Board and EPA commencing with the reports analyzing the 2011 reporting period shall also include projections of the cumulative net emission increases at the end of each of the two subsequent reporting periods. The Executive Officer shall make the projections of the cumulative net emission increases from both major sources and minor sources based upon the average of the aggregate increase in potential to emit of each nonattainment air contaminant subject to tracking pursuant to paragraph (c)(2) of this rule and the average of the aggregate emissions reductions of the same nonattainment air contaminant for the five reporting periods most recently included in a PDE or an FDE or each of the reporting periods commencing with the 2011 reporting period, whichever is fewer reporting periods. Although these projections are to be reported with the results of the PDEs and FDEs, they are separate from the determinations of equivalency and do not constitute an element of the determinations of equivalency.

(3) Issuance of Permits

If the cumulative net emission increase of a nonattainment air contaminant, as tracked pursuant to subparagraph (g)(1)(B) of this rule and reported with an FDE pursuant to subparagraph (g)(1)(C) of this rule, exceeds the paragraph (g)(4) threshold or is projected pursuant to paragraph (g)(2) of this rule to exceed the paragraph (g)(4) threshold for that air contaminant, the Executive Officer shall discontinue issuing permits to construct and permits to operate that rely on further use of Rule

1304 exemptions or Rule 1309.1 Priority Reserve offsets for that air contaminant to major and minor sources of that air contaminant. Such permit issuance shall cease no later than the paragraph (d)(2) PDE completion deadline or the paragraph (d)(3) FDE completion deadline applicable to the PDE or FDE with which the paragraph (g)(4) threshold exceedance or projected exceedance will be reported to the Governing Board. The Executive Officer shall not resume issuing such permits unless and until the corresponding cumulative net emission increase returns to a level at least ten percent below the threshold for the year in which permitting is to resume, as shown in Table B.

(4) Cumulative Net Emission Increase Thresholds

The cumulative net emission increase thresholds based upon the growth assumptions in the 2007 AQMP for [date of adoption] through December of 2011 and each subsequent year through 2030 are presented in Table B.

TABLE B  
Cumulative Net Emission Increase Thresholds  
(tons per day)

[date of adoption] through December of	VOC	NOx	SOx	PM10
2011	1.68	0.15	0.04	0.24

## EXECUTIVE SUMMARY

AQMD's New Source Review (NSR) program is defined in and established by Regulation XIII – New Source Review. EPA approved AQMD's Regulation XIII into the State Implementation Plan (SIP) in 1996 (Federal Register Volume 61, No. 234, pages 64291-94), establishing that AQMD's NSR requirements and the federal NSR requirements are programmatically equivalent<sup>1</sup>. As part of the preamble to this SIP-approval, EPA stated that AQMD was expected to track both emission increases from major sources not required to provide emissions offsets and offsetting emission reductions. The purpose of the tracking was to make annual showings that the aggregate emissions offsets provided by AQMD for emission increases pursuant to AQMD's NSR program for sources exempt from emissions offsets are equal to (or greater than) the aggregate emissions offsets that would be required for such sources pursuant to the federal NSR offset requirements. Emissions offsets are emission reductions created at one location to compensate and balance emission increases at another location. AQMD's NSR program (Rule 1303) requires that emission increases are offset by emission reduction credits (ERCs) provided by the applicant or by allocations from the Priority Reserve pursuant to Rule 1309.1 – Priority Reserve unless they are exempt from offset requirements pursuant to Rule 1304 - Exemptions. The federal new source review program does not provide any offset exemptions for most of the Priority Reserve sources or for the sources that qualify for the exemptions listed in Rule 1304. Therefore, major sources subject to Rule 1309.1 or exempt under Rule 1304 are not exempt from the offset requirements of federal NSR. As a result, AQMD maintains internal offset accounts from which it provides offsets for federal major sources exempt from AQMD's NSR requirements pursuant to Rule 1304 and for federal major sources that receive offsets from the Priority Reserve (Rule 1309.1; principally essential public services). AQMD tracks all disbursements from these offset accounts, as well as all deposits to them. The results of this tracking are aggregated and reported on an annual basis. These annual reports summarize the disbursements from and deposits to AQMD's offset accounts, as well as the running account balances. They also demonstrate programmatic equivalency between AQMD's NSR offset requirements and federal NSR offset requirements contained in the federal Clean Air Act for such sources.

Rule 1315 – Federal New Source Review Tracking System was initially developed and adopted in 2006 to:

- Formalize AQMD's then-existing accounting methodology used to track debits from and credits to AQMD's federal offset accounts and AQMD's equivalency demonstration and reporting procedures;
- Remove certain categories of offset credits, including pre-1990 credits without sufficient currently-available documentation and almost all the BACT discounts of newly issued ERCs, from AQMD's federal offset accounts; and
- Track creditable and eligible offset sources in AQMD's federal offset accounts, which were previously not tracked in the federal tracking system, including surplus emission reductions

---

<sup>1</sup> Subsequent to that, in June 2006, EPA SIP-approved AQMD's May 2002 amendments to Rule 1309.1 (Federal Register Volume 71, No. 117, pages 35157-59).

from minor sources and use of ERCs as emissions offsets beyond federal NSR offset requirements.

The accounting methodology contained in Rule 1315 as adopted in 2006 was intended to be used to continue to annually demonstrate that emissions increases from sources that are not required to provide ERCs (*i.e.*, sources whose offsets are provided by AQMD) are offset by AQMD's accounts. The rule applied exclusively to AQMD's internal federal offset accounts. Therefore, the accounting methodology and equivalency demonstration requirements did not impact holders of ERCs.

At the same time as it adopted Rule 1315 in 2006, AQMD also adopted amendments to Rule 1309.1. The amendments to Rule 1309.1 would have allowed power plants on a temporary basis to access to the Priority Reserve upon qualifying and paying mitigation fees.

A lawsuit was filed in Superior Court regarding Rules 1309.1 and 1315 after their joint September 2006 amendment (Rule 1309.1) and adoption (Rule 1315) on California Environmental Quality Act (CEQA) grounds. On August 3, 2007, AQMD approved a Program Environmental Assessment, re-amended Rule 1309.1 by adding more stringent air quality and health risk requirements for power plants to qualify for access to the Priority Reserve, and readopted Rule 1315, rendering the litigation moot. However, a new lawsuit was filed challenging the August 2007 amendment and adoption, again on CEQA grounds. The petitioners prevailed in this case, and the Superior Court of the State of California, County of Los Angeles (Court) issued a writ of mandate ordering AQMD to, *inter alia*, set aside the August 2007 rule adoptions. AQMD repealed Rule 1315 and the August 3, 2007 amendments to Rule 1309.1 in January 2010.

AQMD now proposes to adopt a revised version of Rule 1315. The current Proposed Rule 1315 (PR 1315) is similar to the rule previously adopted in 2006 and 2007 but includes an updated and more detailed Purpose subdivision and several new definitions, introduces the concept of tracking cumulative net emissions increases resulting from implementation of the proposed rule, strengthens the backstop provisions designed to ensure programmatic equivalency with the offset requirements of federal NSR, and adds a new set of backstop provisions that are designed to ensure the actual cumulative net increases in potential to emit nonattainment air contaminants resulting from implementation of the proposed rule do not need exceed the anticipated increases that were analyzed in the CEQA review of the proposed rule. The CEQA document (Program Environmental Assessment or PEA) prepared for PR 1315 analyzes direct and indirect impacts that could result from implementation of PR 1315, and addresses concerns expressed by the Court. This analysis of impacts includes the direct and indirect impacts of issuing permits relying on the Priority Reserve pursuant to Rule 1309.1 and/or offset exemptions pursuant to Rule 1304 to non-major sources even though the proposed Federal NSR tracking rule would not track such non-major source permit actions. This is because AQMD interpreted the Court decision as preventing the issuance of permits relying on the Priority Reserve and/or the offset exemptions of Rule 1304 to either minor or major sources until a federal tracking rule is adopted in compliance with CEQA requirements. Thus, a direct result of adoption of Proposed Rule 1315 would be the issuance of such permits to both minor and major sources. The AQMD does not propose to re-adopt the amendments to Rule 1309.1 for power plants. SB 827, California

Health and Safety Code Section 40440.13, effective January 1, 2010, allows AQMD until May 1, 2012 to issue permits pursuant to Rules 1309.1 and 1304.

## BACKGROUND

In general, the Federal Clean Air Act (CAA) requires that emission increases of nonattainment air pollutants from new and major modifications of federal major sources be offset with equal or greater quantities of emissions decreases. The specific quantity of emission decreases required to offset a specific increase in federal nonattainment emissions is dependent upon the pollutant's federal nonattainment classification for the air basin in which the increase occurs. In the case of AQMD, the applicable offset ratios are 1.2 pounds of decrease for every 1.0 pounds of increase for VOC and NOx<sup>2</sup> and at least 1.0 pounds of decrease for every 1.0 pounds of increase for all other nonattainment pollutants and their precursors. Some aspects of the offset requirements in AQMD's NSR program (Regulation XIII – New Source Review<sup>3</sup>) are more stringent than the federal offset requirements. For example, Regulation XIII is more stringent in that it requires offsets for increases from sources that are not federal major sources (federal minor sources) and an offset ratio of 1.2-to-1.0 for all nonattainment pollutants and their precursors (rather than the federally-required 1.0-to-1.0 for pollutants other than VOC and NOx). On the other hand, Regulation XIII includes certain exemptions from the offset requirement that do not exist in federal NSR. Several of these exemptions, however, are necessitated by the increased stringency of the AQMD NSR program as compared to the federal program.

AQMD submitted its NSR program to California Air Resources Board (CARB) for approval into the SIP. CARB approved AQMD's NSR program as satisfying the applicable requirements without condition and forwarded the rules to the United States Environmental Protection Agency (EPA) for federal approval into the SIP. EPA subsequently approved AQMD's NSR program into the SIP (refer to Table 1 for the specific revisions of each rule in Regulation XIII that EPA has approved). However, EPA's approval in the preamble anticipated that AQMD would implement a tracking system to account for emission decreases of federal nonattainment air contaminants that occur under AQMD's NSR program but that are surplus under federal NSR, as well as emission increases of federal nonattainment pollutants that occur under AQMD's NSR program without individually complying with federal NSR's offset requirements<sup>4</sup>. The purpose of this tracking system referred to in EPA's Technical Support Document is to "continuously show that in the aggregate the District will be able to provide for the necessary offsets required to meet the appropriate statutory offset ratio" (TSD, p. 16). The TSD further states that "EPA

<sup>2</sup> As precursors to ozone (for which the South Coast Air Basin is designated by EPA as extreme nonattainment), the federally-required offset ratio for VOC and NOx applicable to AQMD would be 1.5-to-1.0, but AQMD requires installation of Best Available Retrofit Control Technology (BARCT, which is equivalent to federal Best Available Control Technology or BACT) on all permitted sources, making AQMD eligible to use a 1.2-to-1.0 offset ratio for VOC and NOx under the federal Clean Air Act (42 U.S.C. §7511a(e)(1) and §7511a(f)(1)).

<sup>3</sup> AQMD's Regional Clean Air Incentives Market (RECLAIM) program includes its own NSR requirements for new and modified sources of NOx and/or SOx subject to RECLAIM in its Rule 2005 – New Source Review for RECLAIM. PR 1315 is not applicable to RECLAIM emissions, so Rule 2005 is outside the scope of this discussion.

<sup>4</sup> United States Environmental Protection Agency, Region IX Air & Toxics Division Technical Support Document for EPA's Notice of Final Rulemaking for the California State Implementation Plan South Coast Air Quality Management District New Source Review by Gerardo C. Rios, October 24, 1996 (Technical Support Document or TSD).

determined that the District’s proposal to offset all emissions increases with emissions reductions not otherwise required by the Act could be met in the aggregate was consistent with the language of the Act” (p. 16). Thus, AQMD’s development and maintenance of a tracking system to account for the differences in emissions reductions achieved by and offsets required by the AQMD and federal NSR programs is expected by EPA’s approval of Regulation XIII into the SIP. EPA determined in 1996 that AQMD’s internal offsets “meet or exceed the legal requirements in Section 173(c).”<sup>5</sup> Responses to Comments for Docket No. EPA-R09-OAR-2006-0281, Revisions to the California State Implementation Plan, South Coast Air Quality Management District.

1315	(Rescinded by AQMD 1/8/2010)

Since EPA’s October 1996 approval of AQMD’s NSR program, AQMD has implemented an NSR tracking system to demonstrate programmatic equivalence between its NSR program and the offset requirements of the federal program. As a part of this effort, AQMD staff has prepared and presented to the AQMD Governing Board at public meetings a series of reports that track credits and debits from August 1990 through July 2002 and present the remaining balances of credits in AQMD’s federal accounts including the initial pre-1990 offsets. These NSR tracking reports go back to the year 1990 because that was the year when fundamental amendments were made to AQMD’s Regulation XIII. A key source of credits in these tracking reports was “orphan shutdowns” of federal major sources. “Orphan shutdowns” refers to shutdowns of

<sup>5</sup> Responses to Comments for Docket No. EPA-R09-OAR-2006-0281, Revisions to the California State Implementation Plan, South Coast Air Quality Management District.

sources that did not receive ERCs either because they originally obtained their offsets from AQMD or because they failed to properly claim ERCs. Other credit sources included “negative NSR balances” resulting from permit actions prior to 1990, and the “BACT discount” currently required by Regulation XIII when banking ERCs. Additionally, the staff report for the original adoption of Rule 1315 in September 2006 included preliminary revised tracking of credits and debits pursuant to the revised tracking system embodied in then-Proposed Rule 1315 from 1990 through July 2004. After Rule 1315 was adopted additional tracking reports finalizing the revised tracking through 2005 as well as tracking the 2006 debits but not 2006 credits<sup>6</sup> were presented to the Governing Board.

In 2002 AQMD adopted an Offset Budget rule (Rule 1309.2 – Offset Budget) as part of AQMD’s NSR program to address some of the shortage problems with ERCs. As adopted, Rule 1309.2 would have made the Offset Budget available as a “bank of last resort” to sources subject to AQMD’s NSR offset requirements but unable to obtain sufficient NO<sub>x</sub>, SO<sub>x</sub>, CO, or PM<sub>10</sub> ERCs to provide as emissions offsets on the open market<sup>7</sup>. Offset credits would have been available to such sources from the Offset Budget provided the sources paid a non-refundable mitigation fee based on the quantity and type of offsets to be obtained from the Offset Budget. As part of the discussions between EPA and AQMD regarding Rule 1309.2, EPA raised some questions related to the credits in AQMD’s offset accounts for use in the Offset Budget. Among the key issues raised by EPA were the following:

- availability of pre-1990 emission reductions, particularly availability of existing records associated with such reductions;
- availability of reductions resulting from the BACT discount of newly-banked ERCs, since the discount is presumably also used to satisfy the federal surplus at the time of use discount requirement;
- baseline calculation procedures to assure an “actual” baseline;
- surplus adjustment at time of use for credits in the tracking system; and
- consistency of credit use with assumptions in the SIP.

EPA staff requested that these issues be resolved prior to EPA considering approval of Rule 1309.2 into the SIP. EPA staff also requested that AQMD adopt a rule specifying how the tracking of debits and credits would occur in the future. Therefore, EPA and AQMD staff engaged in a series of discussions to develop a proposed revised NSR tracking system intended to demonstrate continued programmatic equivalency of AQMD’s NSR program with federal NSR requirements and to address EPA’s above-described concerns. AQMD spent several thousand person hours to evaluate the existing NSR tracking system as a part of this effort. Rule

---

<sup>6</sup> The Court decision enjoining AQMD from implementing Rule 1315 was issued after the report describing 2006 credits was presented to the Governing Board’s Stationary Source Committee but before it was presented to the Governing Board itself. Therefore, that report was never finalized. This staff report brings the tracking up to date.

<sup>7</sup> Rule 1309.2 included a provision specifying that the Offset Budget would be established by the Executive Officer upon approval of the rule by CARB and EPA. EPA never approved the rule and AQMD’s Governing Board repealed the rule in February 2010. Therefore, the Offset Budget was never implemented and no permits were ever issued relying upon the Offset Budget.

1315 – Federal New Source Review Tracking System, as adopted September 8, 2006, was the result of this process.

AQMD's Governing Board adopted Rule 1315 along with amendments to Rule 1309.1 – Priority Reserve (creating a mechanism for proposed electrical generating facilities (EGFs) to temporarily obtain emissions offsets for specified nonattainment pollutants from the Priority Reserve) on September 8, 2006. Pursuant to the California Environmental Quality Act (CEQA), AQMD determined the adoption of Rule 1315 and the amendment of Rule 1309.1 were exempt from CEQA<sup>8</sup>. A group of environmental organizations that had opposed these rule actions during the Public Hearing filed suit against AQMD challenging these rules on CEQA grounds, disputing that either rulemaking was exempt from CEQA. After AQMD's demurer was overruled, and rather than wait for the suit to be finally decided in court, possibly resulting in the rule actions being vacated and the resulting need to readopt Rule 1315 and the amendments to Rule 1309.1 after many months of delay, AQMD initiated the process of preparing a full CEQA analysis for Rule 1315 and the amendments to Rule 1309.1 while the litigation was pending. The case was therefore dismissed as moot. The Governing Board approved a Program Environmental Assessment, readopted Rule 1315 and re-amended Rule 1309.1 on August 3, 2007. The September 2006 and August 2007 adoptions of Rule 1315 were identical; the August 2007 amendments to Rule 1309.1 differed from the September 2006 amendments in that they included additional environmental requirements based on the location of the project in environmental justice or more polluted areas. The same environmental organizations considered the CEQA documents for the August 3, 2007 re-adoption and re-amendment inadequate and again filed suit and prevailed in the Superior Court of the State of California, County of Los Angeles (Court), resulting in a July 28, 2008 Court decision determining that the August 2007 Governing Board action adopting Rule 1315 and amending Rule 1309.1 would be vacated and that AQMD would be enjoined from "undertaking any action to further implement these rules pending CEQA compliance." The Court subsequently issued a writ of mandate on November 3, 2008 ordering AQMD to, *inter alia*, set aside its actions to adopt Rule 1315 and amend Rule 1309.1, "including the certification of the Final Program Environmental Assessment." AQMD does not intend to readopt the amendments to Rule 1309.1 for power plants, but is proceeding with a rulemaking effort to replace the set aside version of Rule 1315 with a different version (PR 1315) supported by a new environmental assessment that analyzes the potential direct and indirect impacts of PR 1315, and addresses concerns expressed by the Court.

During the interval between the September 8, 2006 adoption of Rule 1315 and the July 28, 2008 Court decision ordering it to be vacated, AQMD implemented Rule 1315 to demonstrate ongoing equivalency between AQMD's NSR program and federal NSR requirements. Therefore, a Status Report on Regulation XIII – New Source Review was presented to the Governing Board on February 2, 2007 and a second status report was presented on September 7, 2007. The first of these reports demonstrated continued equivalency for the August 2002 through July 2003 and

---

<sup>8</sup> AQMD staff reviewed then-Proposed Rule 1315 and concluded that it did not meet CEQA's definition of "project" and, even if it were determined to be a project, that it was exempt from CEQA pursuant to CEQA Guidelines §15061(b)(3), referred to as the general rule or commonsense exemption. Similarly, staff concluded that the amendments to Rule 1309.1 were exempt because each of the EGF projects which would make use of the amendments would be subject to individual CEQA review with the California Energy Commission as lead agency, making the amendments statutorily exempt from CEQA pursuant to CEQA Guidelines §15271 – Early Activities Related to Thermal Power Plants.

August 2003 through July 2004 time periods; the second report did so for the August 2004 through December 2005 time period. The accounting procedures for demonstrating equivalency between AQMD's NSR program and federal NSR remain consistent between the previously-adopted versions of Rule 1315 and the current PR 1315. Therefore, the NSR tracking presented in the staff reports for the September 2006 and August 2007 adoptions of Rule 1315 were consistent with the provisions of the current PR 1315, as were the February and September 2007 status reports on Regulation XIII. As a result, if of the current PR 1315 is adopted, the February and September 2007 reports will be consistent with the newly-adopted Rule 1315 and with the exception of minor adjustments (see Appendix I) no new federal tracking reports for August 2002 through December 2005 will be needed. The balances in AQMD's federal offset accounts as of December 31, 2005 are shown in Table 2.

## PROJECT DESCRIPTION

In light of the circumstances described above, AQMD proposes to adopt Rule 1315 – Federal New Source Review Tracking System with the following objectives:

- Maintain AQMD's ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1. AQMD's policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and socioeconomic benefits as well as environmental and socioeconomic impacts;
- Memorialize in rule form the accounting procedures AQMD uses to establish equivalency of AQMD's New Source Review program with federal offset requirements, and ensure that valid offsets are projected to be available in AQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset; and
- Recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate federal equivalency for major

sources that are exempt under Rule 1304 or that obtain credits from the Priority Reserve under Rule 1309.1.

PR 1315 would be used to establish that exempt sources (under Rule 1304) and Priority Reserve sources (under Rule 1309.1) are fully offset to the extent required by federal law by valid emission reductions from AQMD's internal offset accounts. PR 1315 would achieve this by establishing what types of reductions are eligible to be used to offset emissions. PR 1315 would also allow the use of certain previously unused credits that are eligible to offset emission increases. For example, PR 1315 would recognize emission reductions generated from minor source "orphan shutdowns," which were not previously accounted for in AQMD's NSR tracking system and federal equivalency demonstrations, to offset emission increases from other sources. PR 1315 would also exclude from the applicable equivalency obligation any new or modified permits that are not required to provide offsets under federal law. PR 1315 would expire January 1, 2031. AQMD has prepared a Program Environmental Assessment for this rule development effort.

## **DISCUSSION OF AQMD'S PROPOSED REVISED NSR TRACKING SYSTEM**

AQMD staff has developed a proposed rule that formalizes AQMD's NSR tracking system and includes certain revisions to the procedures used in the previous tracking system that existed prior to September 2006. The proposed revised procedures include elimination of all pre-1990 credits for which AQMD no longer retains documentation. AQMD has also included additional classes of creditable and eligible offsets in the proposed revised tracking system, including orphan shutdowns and orphan reductions of minor sources, as well as other surplus reductions. As a result of these revisions, and even with the inclusion of the additional offset sources, AQMD's previously-reported 2002 federal offset account balances<sup>9</sup> for all pollutants except for NOx<sup>10</sup> would be reduced, depending on the pollutant, by from 37% to 81%. Several elements of the proposed revisions to AQMD's tracking system contribute to these reductions, as discussed below, but the single element of the proposal with the greatest contribution is the reevaluation of pre-1990 credits and proposed elimination of all offsets for which AQMD no longer retains documentation. As a result of this proposed change, AQMD's pre-1990 credits would be reduced, depending on the pollutant, by from 7% to 92%. The specific amounts of reductions for each pollutant for the pre-1990 and the 2002 offset account balances are shown in Table 3.

---

<sup>9</sup> This was the latest NSR Annual Report utilizing the pre-September 6, 2006 tracking procedures.

<sup>10</sup> The 2002 federal NOx balance increased relative to the previously-reported 2002 balance. This increase is the result of both the fact that reevaluation of the pre-1990 balances had only a minor impact on NOx (7 % reduction compared with 56 % to 92 % reductions for the other four pollutants) and the inclusion of additional offset sources into the revised federal tracking system that have always been surplus but previously were not tracked due to the ample supply of offsets in AQMD's federal offset accounts for all five pollutants.

**Table 3**  
**Pre-1990 Credits Deposited in AQMD's Offset Accounts/  
Reduction in 2002 Federal Offset Account Balances  
(Tons per Day)**

	VOC	NOx	SOx	CO	PM10	Overall
Previously-Reported Pre-1990 Credits	92.4	25.8	18.4	34.9	34.5	206.0
Revised Pre-1990 Credits Verified with Records or Validation Procedures	38.46	23.92	8.04	8.45	2.67	81.54
Percent <b>Reduction</b> in Pre-1990 Credits	58%	7%	56%	76%	92%	60%
Previously-Reported 2002 Federal Offset Account Balances	107.65	21.60	18.76	24.09	41.24	213.34
Revised 2002 Federal Offset Account Balances	68.70	28.84	10.72	7.84	7.68	123.78
Percent <b>Reduction</b> in 2002 Federal Offset Account Balances	36%	-34%	43%	67%	81%	42%

The detailed line-by-line adjusted credit balances that result from the proposed modified procedures are shown in Appendix I: *AQMD's NSR Offset Tracking—Updated Federal Running Balances*. The following is a more detailed description of the proposed changes.

## SOURCES OF OFFSETS

AQMD has described in its annual status reports on Regulation XIII a 1990 starting balance for offset accounts based on data available in 1990. While portions of pre-1990 credits were used years ago, EPA staff requested an accounting of the validity of such offsets to ensure that they were creditable. To that end, EPA staff raised questions about the availability of records relating to the pre-1990 credits. To address these and other issues raised by EPA, AQMD staff spent several thousand staff hours reviewing and reevaluating all available data for the offsets in AQMD's federal offset accounts, including the pre-1990 credits in the 1990 starting balances. The following is a description of sources of offsets in AQMD's tracking system. The pre-1990 timeframe and the 1990 and beyond timeframe are addressed separately due to differing provisions of AQMD rules applicable to generation of offsets in these time periods.

### Pre-1990 Credits

#### *Pre-1990 Permitting Program*

AQMD had, and continues to have, a robust stationary source permitting program for all sources regardless of potential to emit (including both major and minor sources) in place well before 1990. Key elements of that program are summarized below:

- **Permit Rules**

Since prior to 1976, the year that AQMD adopted its initial NSR rules, virtually any construction or modification of a source has required the operator to obtain a permit to construct from AQMD (Rule 201 – Permit to Construct). The only exceptions to these permit requirements are, and at all times were, specified in AQMD Rule 219 – Equipment not Requiring a Written Permit Pursuant to Regulation II, which exempts certain equipment from permit requirements due to minimal potential to affect air quality. With the exception of the specific exemptions in Rule 219, there has been no exemption from permit requirements for sources emitting even relatively small amounts of air contaminants; that is, *all* sources with potential to emit or control air contaminants, including all federal minor sources, have been required to obtain permits when constructed or modified unless specifically exempted by Rule 219.
- **New Source Review Rules**

AQMD adopted its initial New Source Review rules in October 1976, prior to the adoption of the New Source Review requirements into the federal CAA. Originally included in Rule 213 – Standards for Permits to Construct: Air Quality Impact, the NSR rules were moved into a series of rules in Regulation XIII – New Source Review in 1979. The rules required offsetting of emissions increases that exceeded certain thresholds. The thresholds were decreased over time pursuant to rule amendments. For example, for volatile organic compounds and nitrogen oxides, the offset threshold initially was 250 pounds per day, and was reduced by rule amendments during the 1980’s to 150 pounds per day, 75 pounds per day, 30 pounds VOC per day and 40 pounds NO<sub>x</sub> per day, and finally down to zero, requiring no net increase in potential to emit (using an actual emissions baseline if the source had not previously undergone NSR analysis as described under the discussion of NSR Balance below), unless ERCs are provided or specifically exempt from offset requirements pursuant to Regulation XIII.
- **NSR Balance**

Prior to 1990, in order to implement its offset requirements, AQMD kept a running “NSR balance” for each facility with permitted sources. The NSR balance included an entry for every increase and every decrease in emissions at the facility that resulted from a permit action. The entries in the NSR balance were based on *maximum allowable* emissions, *i.e.* the maximum amount of emissions that a source could emit given its physical capabilities and permit limitations and rule requirements. However, the NSR balance was initially determined for each piece of equipment which had not previously undergone NSR analysis (*i.e.*, pre-NSR equipment) from an *actual* emissions baseline for that equipment. Any subsequent NSR activity for such equipment was conducted on a potential-to-potential basis. Therefore, a pre-NSR source modified under NSR would be subject to NSR on an actual-to-potential basis (*i.e.*, actual pre-modification emissions to potential post-modification emissions)—a very conservative approach.

Prior to 1990, emissions offsets were required when a permit was sought for construction of a new source, or for modification of an existing source, that would cause the sum of increases and decreases at a facility (*i.e.* the NSR balance) to exceed the pre-1990 offset threshold levels in effect at the time of permit issuance.

NSR balance entries had to be quantifiable and enforceable. Such entries only occurred pursuant to permit applications with sufficient substantiating data to ensure quantifiability, after evaluation by AQMD engineers and review by supervisory staff pursuant to Regulation XIII rules and implementing policies established by the agency, and upon issuance of permits or permit modifications that were enforceable under state law.

AQMD applied substantial resources to implementing these rules. For example, from 1985 through 1989 AQMD's engineering staff that processed permits consisted of between 97 and 175 professional engineers and supervisory and management staff. In sum, at all times including, but not limited to, prior to 1990, AQMD has had a robust air quality permitting system—a system that AQMD considers qualitatively superior in terms of quantification and reliability to any other NSR permitting system in the nation.

- **Compliance with Federal NSR Requirements**

In addition to being reliable, the above-described pre-1990 AQMD NSR rules fully complied with all federal requirements. AQMD's NSR rules were more stringent than required by federal law in the following important respects: (1) offset thresholds were lower than required by federal law and; (2) unlike federal requirements that allowed “bubbling” or netting out of LAER, until the 1990 amendments to the CAA, which prohibited netting out for ozone precursors, AQMD's BACT requirement (equivalent to federal LAER) applied to any emissions increase from an individual piece of equipment; *i.e.*, there was no netting out of LAER; (3) a 1.2-to-1.0 offset ratio was used for all sources and all emittents while federal law required a 1.2-to-1.0 offset ratio for precursors to ozone (*i.e.*, VOC and NO<sub>x</sub>) provided federal BACT is required for all major sources and a 1.0-to-1.0 offset ratio for SO<sub>x</sub>, CO, and PM<sub>10</sub>; and (4) AQMD had a zero BACT threshold (*i.e.*, BACT—federal LAER—was required for all emission increases, no matter how small at all sources, no matter how low the potential to emit). EPA SIP-approved AQMD's Rule 201 as amended January 5, 1990, and AQMD's NSR rules as adopted or amended on the dates identified in Table 1, above.
- **Negative Balances**

By 1990, some facilities had negative NSR balances. These negative balances were the result of equipment shutdowns or process changes since October 1976 that resulted in reductions in emissions from one or more sources exceeding any increases at the facility. The majority of negative balances resulted from equipment shutdowns. Like all entries contributing to a facility's NSR balance, negative entries only occurred pursuant to permit actions—*i.e.* either modification of an AQMD permit or shutdown of equipment and inactivation of the associated permit. Negative entries were quantified by AQMD engineers based upon the permitted physical capabilities of the modified or shut down equipment and applicable permit and rule requirements; negative balances resulted when the sum of a facility's positive and negative NSR entries was negative.

#### *Pre-1990 Accounting as it Existed Prior to September 8, 2006*

AQMD's offset accounts were established with starting balances based on pre-1990 emissions reductions. The primary source of these pre-1990 reductions was a portion of facilities' negative NSR balances that were discounted as specified in the 1990 amendments to Regulation XIII (described below). The 1990 Regulation XIII amendments also directed the Executive Officer to

recall all existing pre-1990 ERCs that had resulted from shutdowns, discount them by eighty percent, and issue new ERCs at twenty percent of their original values. The eighty percent discount of the pre-1990 shutdown ERCs was deposited into AQMD's offset accounts along with the amounts derived from the discount of pre-1990 negative balances (further explanation of the implementation of the 1990 amendments to Regulation XIII is provided with the discussion of AQMD's proposed revisions to its pre-1990 accounting). All of AQMD's annual status reports prepared prior to September 2006 included the starting balances from these sources (discount of pre-1990 negative balances and pre-1990 shutdown ERCs); AQMD has not prior to the initial adoption of Rule 1315 taken credit for any other pre-1990 offset sources, such as the zero BACT threshold, use of ERCs by minor sources, and the additional ERCs provided by major sources for SO<sub>x</sub>, CO, and PM<sub>10</sub> at a ratio of 1.2-to-1.0 compared to 1.0-to-1.0.

#### *Proposed Adjustments to Pre-1990 Accounting*

AQMD is now proposing to significantly reduce (by more than 60% overall) its pre-1990 emission offsets balances as they existed prior to September 8, 2006 by continuing to eliminate any present or past use of any offsets for which AQMD presently has no records in its possession so cannot re-verify their validity and to only utilize the portion of the previously-reported pre-1990 emission reductions that was originally validated in 1990 and 1991 and revalidated in 2003 through 2005 as offsets in its tracking system and for which AQMD has all or some records. The emission reductions that underlie those offsets occurred between 20 and 34 years ago, and not all records related to them are available today. In many cases, however, summary data based on previous analyses are available. In addition, AQMD at all relevant times prior to and after 1990 had a sufficiently robust permitting program and record validation procedure to provide a high level of confidence regarding the validated emission reductions for which AQMD proposes to retain pre-1990 credits. This conclusion is supported by the facts summarized in the preceding discussion of AQMD's pre-1990 permitting program and the following summary of the 1990 Regulation XIII amendments and their implementation:

- **1990 Regulation XIII Amendments**  
AQMD substantially modified Regulation XIII in 1990. The offset threshold was dropped to zero, although relatively small emitting facilities (*e.g.* less than 30 pounds per day of VOC or 40 pounds per day of NO<sub>x</sub>) were eligible to obtain needed offsets from a new "Community Bank." Under the 1990 amendments, negative balances were to be "verified by the Executive Officer" and discounted by 80%. The rules specified that "upon validation" the remaining 20% was to be issued to the permit holder in the form of an ERC (Rule 1309(a)).
- **Implementation of 1990 Amendments**  
Shortly after adoption of the 1990 amendments to Regulation XIII, AQMD staff drafted a detailed internal guidance document titled "Regulation XIII – New Source Review Guidance Manual" (Guidance Manual) specifying how the amendments would be implemented by AQMD permit processing engineers. The required treatment of negative balances was described in this document. It specified that negative balances would have to be "verified" in accordance with standard procedures established by the Guidance Manual. It also specified that each facility's NSR account would be searched by computer to determine if any "forgivenesses" (*i.e.* negative entries due to prior rule amendments lowering offset thresholds) contributed to the facility's negative balance. The Guidance Manual further

provided that NSR balances “shall be recalculated” excluding any forgivenesses since they were not “real” emission reductions and therefore did not qualify for ERC generation pursuant to Rule 1309(b)(1). The Guidance Manual also specified that any negative particulate matter emissions balances would be converted to PM10 by multiplying the particulate matter emissions by an average factor of 0.5. Finally, the Guidance Manual stated that any facility with a negative balance of 500 pounds per day or greater was to have each negative entry “confirmed by reviewing the application file which resulted in the negative NSR entry.” The vast majority of negative balances at the time (in excess of 80%) were associated with facilities with negative balances exceeding 500 pounds.

In 1991, AQMD’s engineering staff commenced the verification and validation processes described in the Guidance Manual. The result of these processes was a substantial reduction in the amount of the negative balances for some pollutants, even prior to the 80% discount. These reductions were the result of (1) addressing the “forgivenesses,” (2) determinations that some reductions were required by AQMD rules and thus ineligible for ERCs, and (3) in some cases correction of simple data entry errors. Table 3 presents the 80% portion of the 1990 negative balances that were deposited in AQMD’s offset accounts. The larger amount shown for each pollutant is the amount originally deposited as the result of this process in the early 1990s and which has been previously reported as the 1990 starting balance in the annual NSR status reports prior to September 2006. The lower amount is revised based upon recent (2003-2005) re-validation of these numbers by AQMD staff based on records that are still available to address EPA’s comments and consistent with EPA policy guidance that allows use of pre-1990 credits that are explicitly included and quantified as growth in the SIP.

Records for pre-1990 emission credits are from 20 to 34 years old. AQMD staff recently conducted an extensive review of the pre-1990 credits and determined that the types of records available today include printouts of NSR data captured in AQMD’s permitting database at the time of permit issuance and complete engineering files, which include the materials and documentation submitted by the applicant and AQMD’s engineering evaluation.

In the proposed revised NSR tracking system, AQMD is recommending to only use the revised and re-verified pre-1990 credits (as set forth in Table 3). These are pre-1990 credits that can reasonably be concluded to be creditable based on presently available records. However, for the majority of the pre-1990 credits (more than 60% overall), the AQMD at present time no longer has the ability to substantiate the validity of the original reductions based on the available records. Therefore, AQMD is proposing to adjust the pre-1990 credits by eliminating any past or present use of any credits for which AQMD presently does not have the records and can no longer substantiate the validity of such records.

- **Remaining Pre-1990 Credits**

AQMD’s NSR tracking system did not specify the age of credits held in AQMD’s offset accounts before 2006. However, in response to EPA’s comments about the use of pre-1990 credits, staff has completed a “First In/First Out” analysis of its federal offset accounts. The results of this analysis are summarized in Table 4, which show that, as of December 31,

2005, significant portions of the adjusted pre-1990 VOC and SO<sub>x</sub> credits and about one fifth of the pre-1990 NO<sub>x</sub> credits remained in AQMD's federal offset accounts. All of the pre-1990 CO and PM<sub>10</sub> credits were depleted from AQMD's federal offset accounts by 1997<sup>11</sup>. In order to address EPA's comment regarding prolonged use of pre-1990 credits from AQMD's accounts, AQMD proposes to retire all unused pre-1990 credits remaining in its federal offset accounts at the end of the 2004-2005 reporting period as a clean air benefit and not use any pre-1990 credits in its offset accounts post 2005. As explained below, the retired pre-1990 credits will be replaced by newly tracked sources of offsets. As a result of this replacement, any shortfalls in offsets supporting permits already issued occasioned by retiring the pre-1990 credits will be eliminated, although the 1990 balances and 2002 balances except for NO<sub>x</sub> will be smaller than they were before. This will in turn eliminate the continued need for the offset tracking authorized by SB 827-~~or AB 1318~~ either prospectively or retrospectively.

**Table 4**

Unused and retired pre-1990 credits as of December 31, 2005	21.52	4.52	7.42	0	0	33.46
Percent of pre-1990 credits unused and retired	56%	19%	92%	0%	0%	41%

### 1990 and Beyond Credits

#### *1990 and Beyond Accounting as it Existed Prior to September 8, 2006*

Due to the relatively high level of available offsets in AQMD's accounts prior to the September 8, 2006 adoption of Rule 1315, AQMD only took credit for some of the qualified sources of emission reductions during the period prior to September 2006. For example, AQMD's federal NSR tracking system took credit for orphan shutdowns from major sources, but not from minor sources during that period. The pre-September 2006 tracking system credited orphan shutdowns to AQMD's federal offset accounts based upon the allowable permitted level of emissions of the shutdown source. It also did not take credit in the federal offset accounts for surplus reductions

<sup>11</sup> All data for 1991 to 1997 is aggregated, so it is uncertain when in this time period the adjusted pre-1990 CO, and PM<sub>10</sub> credits were depleted from AQMD's federal offset accounts. However, by assuming that these credits were consumed at an approximately constant rate, it is estimated that PM<sub>10</sub> was depleted from AQMD's federal offset accounts in 1994, while CO was depleted from AQMD's federal offset accounts in 1995.

of SO<sub>x</sub>, CO, or PM<sub>10</sub> provided as ERCs by major sources as a result of the differences between the federal and local offset requirements for these pollutants (local requirement is 1.2-to-1.0 while federal law does not specify an offset ratio in excess of 1.0-to-1.0 for SO<sub>x</sub>, CO, or PM<sub>10</sub>) or for surplus reductions resulting from minor sources providing ERCs as emission offsets as required by local but not federal NSR. The tracking system also did not take credit for AQMD's zero BACT threshold. BACT discounts applied to newly-banked ERCs were credited to AQMD's federal offset accounts prior to 2006. Offsets were debited from AQMD's federal offset accounts at 1.2-to-1.0 for all five pollutants when major sources that were not exempt pursuant to the CAA were permitted using Rule 1304 exemptions or the Priority Reserve. AQMD's portion of the California SIP did not include commitments to make up any shortfall in AQMD's federal offset accounts; it also did not commit to discontinue issuing permits relying on offsets from AQMD's offset accounts if the balances in those accounts are depleted. Additionally, the tracking system did not take credit into the federal offset accounts for surplus reductions resulting from offsets provided in connection with modifications at major sources that do not constitute "major modifications" pursuant to the new NSR Reform Regulations even though federal NSR does not require offsets in such cases.

#### *Proposed Adjustments to 1990 and Beyond Accounting*

The proposed changes to the sources of credits to and debits from AQMD's federal offset accounts for the 1990 and beyond time period are summarized below:

- **Pre-1990 Credits**  
In addition to elimination of almost 60% of overall pre-1990 credits (those for which AQMD no longer retains records), AQMD proposes to retire any unused pre-1990 credits remaining in its offset accounts at the end of the 2004-2005 reporting period as an air quality benefit and to not use any pre-1990 credits in its offset accounts post 2005.
- **Orphan Shutdowns of Minor Sources**  
Prior to 2006, the NSR tracking system used orphan shutdowns of only major sources to fund AQMD's federal offset accounts. However, shutdowns of permitted minor sources also meet the requirements that credits be real, permanent, enforceable, quantifiable, and surplus in the same way as do shutdowns of major sources. ERCs applied for and issued for emission reductions from minor sources are commonly used to fulfill the offset requirements for emission increases at major sources that are not exempt from offset requirements under AQMD's NSR rules. Therefore, although AQMD has not previously used these reductions, it is appropriate to include emission reductions from minor source orphan shutdowns as offsets in AQMD's federal offset accounts.

AQMD's Rule 201 requires written authorization from the Executive Officer (*i.e.*, a permit to construct) before a person may build, erect, install, alter or replace any equipment, the use of which may cause the issuance of air contaminants or the use of which may eliminate, reduce or control the issuance of air contaminants. Rule 203 – Permit to Operate similarly prohibits the operation or use of such equipment without a permit issued by the Executive Officer. The only exceptions to these requirements are specifically identified in Rule 219. Therefore, all of the minor sources that AQMD proposes to use as sources of orphan shutdown offsets as described above have been through the permitting process. In fact, such minor sources are

subject to the same Regulation IV - Prohibitions, Regulation XI - Source Specific Standards, and Regulation XIII rule requirements as are major sources. In some cases the operators of these sources go through the necessary steps to quantify and generate ERCs when they experience real, permanent, enforceable, quantifiable, surplus emission reductions (*e.g.*, equipment or facility shutdown or modification). Such ERCs generated by minor sources are fully valid and eligible for use as offsets for major sources. Therefore, in cases where the operators do not go through the steps to generate ERCs from their emission reductions, or are not eligible for ERCs because they originally obtained their offsets from AQMD internal accounts, it is appropriate for AQMD to treat these orphan shutdowns in the same manner as it does orphan shutdowns at major sources, *i.e.*, to allow such reductions to offset increases from major sources.

- **Major Source Use of SO<sub>x</sub>, CO, and PM<sub>10</sub> ERCs**  
AQMD proposes to include credit for the 20% additional SO<sub>x</sub>, CO, and PM<sub>10</sub> ERCs provided by major sources as emission offsets at a ratio of 1.2-to-1.0 pursuant to Rule 1303 rather than the federally-required 1.0-to-1.0 as a source of offsets to its federal accounts. The 20% above a 1.0-to-1.0 offset ratio is creditable because the federal CAA only requires a 1.2-to-1.0 offset ratio for extreme non-attainment pollutants and their precursors (*i.e.*, VOC and NO<sub>x</sub>); the required offset ratio for SO<sub>x</sub>, CO, and PM<sub>10</sub> pursuant to the CAA and the TSD is “at least 1-to-1” according to EPA.
- **Offset Ratio for Major Sources of SO<sub>x</sub>, CO, and PM<sub>10</sub>**  
The proposed tracking system would provide emissions offsets for major sources of SO<sub>x</sub>, CO, and PM<sub>10</sub> from AQMD’s federal offset accounts at an offset ratio of 1.0-to-1.0. This change is consistent with the CAA, which only requires a 1.2-to-1.0 offset ratio for extreme nonattainment pollutants and their precursors (*i.e.*, VOC and NO<sub>x</sub>, not SO<sub>x</sub>, CO, or PM<sub>10</sub>).
- **ERCs Provided by Minor Sources to Offset Emission Increases**  
The CAA does not require offsets for emission increases from minor sources. Therefore, the third-party (*i.e.*, private market) ERCs that these sources provide to offset their increases pursuant to Rule 1303 would be creditable to AQMD’s federal offset accounts.
- **Surplus Discount at Time of Use**  
AQMD also proposes that offsets in its federal offset accounts that resulted from post-1990 orphan shutdowns or orphan reductions and that, based on a first-in/first-out analysis, are not used in the same timeframe they are banked be subject to a best available retrofit control technology (BARCT) at the time of use adjustment. This would be accomplished based on rule control requirements that become effective each year. Specifically, each year all offsets in AQMD’s federal accounts carried over from the previous year would be discounted by the amount of the percentage reduction in overall permitted emissions<sup>12</sup> projected to be achieved as a result of implementation of control requirements that become effective during the year for the pollutant in question. This analysis would be performed on an aggregate basis each year for offsets carried over from the previous year on a pollutant-by-pollutant basis.

---

<sup>12</sup> Permitted emissions data is derived primarily from permitted facilities emitting more than four tons of VOC, NO<sub>x</sub>, SO<sub>x</sub>, or PM per year or more than 100 tons of CO per year.

- **Actual Emissions Baseline**

AQMD proposes to use an average discount factor to account for the difference between potential and actual emissions. Since 1997, AQMD has used a twenty percent discount to convert potential emissions to estimated actual emissions for purposes of compliance with California requirements for no net increase in emissions of California nonattainment air pollutants. This procedure has been used with concurrence of the California Air Resources Board. The current proposal is to use the same factor for federal NSR tracking purposes. In light of the methodology used to quantify potential emissions (explained in more detail below), staff’s engineering judgment indicates that, on average, a twenty percent reduction from potential emissions is a reasonable calculation of actual emissions. Actual emissions for individual sources range from the sources’ full potential emissions down to less than eighty percent of potential emissions, but eighty percent of potential emissions represents a calculation of aggregate actual emissions. The use of eighty percent of potential emissions as a calculation of actual emissions is well documented in AQMD’s annual status reports regarding Regulation XIII and is further supported by “Industrial Production and Capacity Utilization<sup>13</sup>” and “Industrial Production and Capacity Utilization: The 2009 Annual Revision<sup>14</sup>.”

Facilities with potential to emit in excess of the Rule 1304 exemption thresholds (4 tons per year for VOC, NOx, SOx, and PM10 and 29 tons per year for CO), provide ERCs to offset their increases in potential emissions so they have a strong incentive to keep their potential emissions in line with actual emissions at times of high production. Smaller facilities with potential to emit below the exemption thresholds theoretically may be inclined to request permits based on potential emissions at the exemption threshold levels because the offsets are provided by AQMD at no cost to the facility; however, as shown below, this generally does not occur. AQMD engineers perform a thorough evaluation of each permit application prior to recommending issuance of a permit to construct or a permit to operate. These evaluations include a determination of the actual controlled emission rate (based on source test results, VOC content of coatings, sulfur content of fuel, or potential toxics emissions, for example) or expected actual controlled emission rate (based on established emission factors or manufacturers’ guarantees, for example). This data is then combined with the maximum anticipated production rate to determine the equipment’s potential to emit. Note that the maximum production rate used in these calculations is based on what is reasonably expected for the facility and source in question during periods of high production and is not based on either “24-7” operations (except for those facilities that actually do operate in such a manner) or an artificially highest permissible emission level for each source. In addition, although these sources are not required to provide emission offsets, they are still subject to AQMD’s toxics NSR rules, and as such are discouraged from artificially raising their potential to emit or permitted emissions since to do so would increase potential toxic emissions. Therefore, actual emissions are not expected to be considerably different than potential emissions, and 80% of potential emissions provides a reasonable calculation of actual emissions. This conclusion is further supported by potential to emit data for facilities at or below the

---

<sup>13</sup> Federal Reserve Statistical Release G.17, June 25, 2010, [http://www.federalreserve.gov/releases/g17/cap\\_notes.htm](http://www.federalreserve.gov/releases/g17/cap_notes.htm).

<sup>14</sup> Anne Hall, Federal Reserve Board, Division of Research and Statistics, August 2009, <http://www.federalreserve.gov/pubs/bulletin/2009/pdf/Industrial09.pdf>.

exemption thresholds. Table 5 shows that there are far more facilities with potentials to emit below the exemption thresholds than at the exemption thresholds.

**Table 5**  
**Ratio of Numbers of Facilities with Potential to Emit (PTE) Below Exemptions Thresholds to Numbers of Facilities with PTE at Exemption Thresholds**

Pollutant	Facility Count			Ratio (Below Threshold: At Threshold)
	PTE Range A <sup>1</sup>	PTE Range B <sup>2</sup>	PTE C <sup>3</sup>	
VOC	4,583	2,228	2,237	3:1
NOx	4,218	560	25	191:1
SOx	480	99	3	193:1
CO	2,719	219	0	Undefined:1
PM10	2,163	454	18	144:1

<sup>1</sup> PTE Range A is greater than zero but less than 2 tons per year for VOC, NOx, SOx, and PM10 and is greater than zero but less than 15 tons per year for CO.

<sup>2</sup> PTE Range B is greater than or equal to two but less than four tons per year for VOC, NOx, SOx, and PM10 and is greater than or equal to 15 but less than 29 tons per year for CO.

<sup>3</sup> PTE C is four tons per year for VOC, NOx, SOx, and PM10 and is 29 tons per year for CO.

The above table indicates that it is likely that few facilities obtain a potential to emit (permit limit) substantially higher than their actual emissions.

- Discounting Newly-Banked ERCs to BACT

Rule 1309 – Emission Reduction Credits and Short Term Credits specifies that the amount of emission reductions banked as a new ERC not be “greater than the equipment would have achieved if operating with current Best Available Control Technology (BACT).” Similarly, Rule 1306 – Emission Calculations specifies that “emission decreases from sources which are modified or removed from service shall be the actual emissions reduced to the amount which would be actual if current BACT were applied” in its description of the procedure to be used for quantifying emission reductions used to generate ERCs. No similar requirement exists in the federal CAA. Therefore, the amount of any otherwise qualifying emission reductions not issued as an ERC due to implementation of these provisions is surplus.

However, EPA has indicated that AQMD uses the BACT discount at time of generation in lieu of the federally-required BARCT discount at time of use and, therefore, AQMD cannot take credit into its federal offset accounts for the BACT discount of ERCs. In order to address EPA’s concerns, AQMD proposes to retroactively remove all offsets generated from BACT discount of ERCs from its offset accounts, except such offsets that AQMD has demonstrated (or demonstrates in the future) are not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan exceed the discount that would be required by approved SIP rules and rules scheduled to be approved by AQMD in the following year’s rule cycle. AQMD would notify EPA and obtain EPA’s concurrence when making this alternative discount. Specifically, AQMD has

identified 6.67 tons of CO per day of BACT discount of ERC credits from 1991<sup>15</sup> in AQMD's federal CO offset account that are satisfied this criterion at the time of their use (1998 and earlier)~~beyond approved SIP rules and rules scheduled to be approved by AQMD in the following year's rule cycle~~. AQMD, therefore, proposes to retain these offsets (which were used in the early 1990s).

- SIP Inventory and Growth Assumptions

To date, AQMD has incorporated a sufficient portion of available tracking system offsets into the Air Quality Management Plan (AQMP or Plan) at the time of Plan revision to assure that the growth assumptions in the Plan are consistent with NSR offsets used. In order to assure that the actual impacts of the proposed rule do not exceed the impacts analyzed in the PEA, PR 1315 includes provisions directing the Executive Officer to track cumulative net emissions increases by pollutant and to discontinue issuing permits to construct and permits to operate issued to major and minor sources that rely on new use of offsets from the internal accounts resulting from the use of Rule 1304 exemptions or Priority Reserve offsets for any pollutant with a cumulative net emissions increase that exceeds cap set forth in the rule, which is based on the stationary source growth assumption for that pollutant in the SIP.

- Other Potential Credits

AQMD does not propose to take any credits for surplus reductions such as application of LAER in excess of federal requirements to any increase in emissions at a major stationary source for non-ozone precursors such as SO<sub>x</sub>, CO and PM<sub>10</sub> or the zero BACT threshold. AQMD understands that when and if it wants to use such credits it will be necessary to hold further discussions with EPA and CARB. AQMD is also not presently proposing to take any credits for not having to deduct emission increases resulting from modifications at major sources that do not constitute major modifications pursuant to the NSR Reform Regulations at this time. Such an approach to credit generation would be subject to future discussion with and approval by EPA.

## Summary

The proposed revised NSR tracking system establishes a very conservative accounting methodology for demonstrating equivalency with federal NSR offset requirements. It also establishes new sources of emissions offsets for inclusion in AQMD's offset accounts. As

---

<sup>15</sup> The 6.67 tons of CO per day that AQMD has claimed as BACT discount credits which were not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan~~beyond approved SIP rules and rules scheduled for the following year's rule cycle~~ at the time of use resulted from the shutdown of internal combustion engines (ICEs). In particular, Southern California Edison (SCE) arranged for various operators to remove their ICEs from service in 1991 as a means of mitigating the then-proposed merger between SCE and San Diego Gas and Electric. However, the PUC denied the merger request, so SCE applied for ERCs for the shutdown engines. According to the first in/first out analysis on the resulting BACT discount CO credits, the credits were completely used by the 1997-98 reporting period. The rule limit for CO emissions from ICEs was 2,000 ppm during the 1991 through 1998 timeframe and all of the subject ICEs were in compliance with this limit prior to being removed from service. BACT for CO emissions from ICEs was 250 ppm during the same timeframe. ~~Furthermore, there were not only no approved SIP rules and no rules scheduled for adoption in the following year's rule cycle, but there also were no control measures in AQMD's Air Quality Management Plan seeking CO emission reductions from ICEs during that timeframe.~~ Therefore, the 1991 BACT discount of the resulting ERCs was available for credit to AQMD's offset accounts at the time of use (1998 and earlier).

indicated earlier and shown in Tables 3 and 6, it includes reducing AQMD's previously-reported pre-1990 credits from a 7% reduction in NOx to a 92% reduction in PM10 and would change the previously-reported federal 2002 NSR offset accounts from a 34% increase in NOx credits to an 81% reduction in PM10 credits. The overall impact on the federal offset accounts of the proposed revised NSR tracking system is summarized in Table 6 for both the 1990 starting balances and the July 2002 running balances. Table 6 also presents the federal offset account balances at the end of the 2002-2003, 2003-2004, 2004-2005, 2006, 2007, and 2008 reporting periods as calculated consistent with the proposed revised NSR tracking system procedures. A detailed accounting of federal tracking, including debits, the various categories of credits, BARCT adjustments, and balances of pre-1990 and post 1990 offsets during each reporting period is presented in Appendix A.

**Table 6**  
**Summary of Federal Offsets Accounts**  
**(Tons per Day)**

	<b>VOC</b>	<b>NOx</b>	<b>SOx</b>	<b>CO</b>	<b>PM10</b>
Previously-Reported Pre-1990 Beginning Balance	92.40	25.80	18.40	34.90	34.50
Revised Pre-1990 Beginning Balance	38.45	23.92	8.04	8.45	2.67
Reductions in Pre-1990 Beginning Balance	58%	7%	56%	76%	92%
Previously-Reported 2001-02 Ending Balance	107.65	21.60	18.76	24.09	41.24
Revised 2001-02 Ending Balance	68.75	28.84	10.72	8.30	7.67
Reductions in 2001-02 Ending Balance	36.1%	-33.5%	42.9%	65.5%	81.4%
2002-03 Ending Balance	74.23	30.29	10.95	9.60	9.34
2003-04 Ending Balance	82.86	29.79	10.79	10.73	10.36
2004-05 Ending Balance	64.40	23.61	1.89	11.08	10.77
2006 Ending Balance	68.72	27.10	2.19	13.87	11.07
2007 Ending Balance	72.57	28.25	2.40	15.00	11.29
2008 Ending Balance	73.30	28.85	2.43	15.91	11.68

Tables 7 and 8 summarize the changes between AQMD's pre-September 2006 federal NSR tracking system and the proposed federal NSR tracking system that would be established by PR 1315. Specifically, these tables compare the existing and proposed revised NSR tracking systems for pre-1990 emission reductions and 1990 and beyond emission reductions.

**Table 7**  
**Summary of Changes between AQMD'S Pre-September 2006 and Proposed Revised NSR Tracking Systems for Equivalency with Federal Requirements:**

**Pre-1990 Federal Emission Reductions**

<b>AQMD's Pre-September 2006 NSR Tracking System</b>	<b>AQMD's Proposed Revised NSR Tracking System</b>
Starting Balance based on data generated in 1990 from facilities' (both major and minor sources) emission reductions recorded as negative NSR balances. This data has been used and previously reported in all pre-September 2006 annual NSR status reports.	Initial Starting Balance would be based on data from facilities' (both major and minor sources) emission reductions recorded as negative NSR balances that were originally verified in 1990-1991 and re-verified in 2003-2005 and all or some records currently exist. This would exclude all other data for emission reductions with no present records.
No credit taken for surplus reductions from SO <sub>x</sub> , CO, and PM <sub>10</sub> offsets provided (at 120% of PTE) as ERCs for minor sources.	No Change.
No credit taken for the 20% additional SO <sub>x</sub> , CO, and PM <sub>10</sub> offsets (ERCs) for major sources provided at a ratio of 1.2-to-1.0 compared to 1.0-to-1.0.	No Change.
No credit taken for emission reductions created from the application of zero BACT threshold <sup>(1)</sup> .	No Change.

<sup>(1)</sup> "Zero BACT threshold" refers to AQMD's requirement that BACT applies to all emission increases (no matter how small) at all sources (no matter how low their potential to emit).

**Table 8**  
**Summary of Changes between AQMD'S Pre-September 2006 and Proposed Revised NSR Tracking Systems for Equivalency with Federal Requirements:**

**1990 and Beyond Federal Emission Reductions**

<b>AQMD's Pre-September 2006 NSR Tracking System</b>	<b>AQMD's Proposed Revised NSR Tracking System</b>
Remaining pre-1990 credits eligible for use until depleted.	Remaining pre-1990 credits would be eligible for use until the end of 2005; no pre-1990 credits would be used post-2005.
No credit taken for orphan shutdowns from minor sources.	Creditable orphan shutdowns would include shutdowns of both major and minor sources.
No further discount/adjustment applied to estimate actual emissions.	All orphan shutdowns would be discounted/adjusted to reflect estimated actual emissions.
No further discount/adjustment for orphan shutdowns due to BARCT at time of use.	All orphan shutdowns would be discounted/adjusted to BARCT at time of use by discounting balances "carried over" from one year to the next.

Table 8 (continued)

## 1990 and Beyond Federal Emission Reductions

AQMD's Pre-September 2006 NSR Tracking System	AQMD's Proposed Revised NSR Tracking System
BACT discount of newly-issued ERCs eligible for crediting to AQMD's offset accounts (as previously approved by EPA).	No BACT-discount credits from any past or future-issued ERCs would be eligible for crediting to AQMD's offset accounts except those for specific projects for which staff has demonstrated or demonstrates and EPA has agreed or agrees that the BACT discount is <u>not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan beyond approved SIP rules and rules scheduled to be approved by AQMD in the following year's rule cycle.</u>
VOC and NOx offsets provided by AQMD for federal major sources exempted by AQMD at a ratio of 1.2-to-1.0.	No Change.
SOx, CO, and PM10 offsets provided by AQMD for major sources exempted from providing offsets by Rule 1304 or using the Priority Reserve at a ratio of 1.2-to-1.0 compared to 1.0-to-1.0.	SOx, CO, and PM10 offsets would be provided by AQMD for major sources exempted from providing offsets by Rule 1304 or using the Priority Reserve at a ratio of 1.0-to-1.0.
No credit taken for surplus reductions created from offsets (ERCs) provided (at 120% of PTE) by minor sources that are not exempt from offset requirements under AQMD NSR rules (e.g., > 4 but < 10 TPY of VOC and NOx, etc.).	Credit would be taken for surplus reductions created from offsets (ERCs) provided (at 120% of PTE) by minor sources (i.e., not subject to federal offset requirements) that are not exempt from offset requirements under AQMD rules (e.g., > 4 but < 10 TPY of VOC and NOx, etc.).
No credit taken for surplus reductions created from the 20% additional SOx, CO, and PM10 offsets (ERCs) provided by major sources at 1.2-to-1.0 ratio compared to 1.0-to-1.0 ratio.	Credit would be taken for surplus reductions created from the 20% additional SOx, CO, and PM10 offsets (ERCs) provided by major sources at a ratio of 1.2-to-1.0 compared to 1.0-to-1.0 ratio.
No credit taken for emission reductions created from the application of zero BACT threshold.	No Change.
No credit taken for application of LAER in excess of federal requirements to non-major modifications resulting in any increase in emissions at a major stationary source for non-ozone precursors (SOx, CO, and PM10).	No credit would be taken for application of LAER in excess of federal requirements to non-major modifications resulting in any increase in emissions at a major stationary source for non-ozone precursors (SOx, CO, and PM10).

**Table 8 (continued)****1990 and Beyond Federal Emission Reductions**

<b>AQMD's Pre-September 2006 NSR Tracking System</b>	<b>AQMD's Proposed Revised NSR Tracking System</b>
No SIP adjustment for NSR tracking system and no backstop to ensure net emissions increases do not exceed AQMP growth assumptions.	Appropriate assumptions would be included in the SIP to reflect NSR tracking system with commitment to make up any shortfall in next AQMP revision pursuant to state law and backstop provisions stopping issuance of permits to major and minor sources relying on new use of credits from internal offset accounts if cumulative net emissions increase of any air contaminant exceeds the rule cap based on AQMP growth assumption for that air contaminant.

**USE OF OFFSETS**

The above-described offsets would be used by AQMD for the following purposes:

- To provide offsets for federal major sources that are exempt from offset requirements under AQMD Regulation XIII (Rule 1304)<sup>16</sup>; and
- To provide Priority Reserve offsets (Rule 1309.1) to major sources.

These uses of the offsets in AQMD's accounts ensure ongoing equivalence with federal NSR requirements. As indicated earlier, a list of sources that Rule 1304 exempts from offset requirements or that are eligible to obtain offsets from the Priority Reserve pursuant to Rule 1309.1 and for which AQMD uses its offset accounts to demonstrate equivalency is presented in Appendix II.

**DEMONSTRATIONS OF EQUIVALENCY**

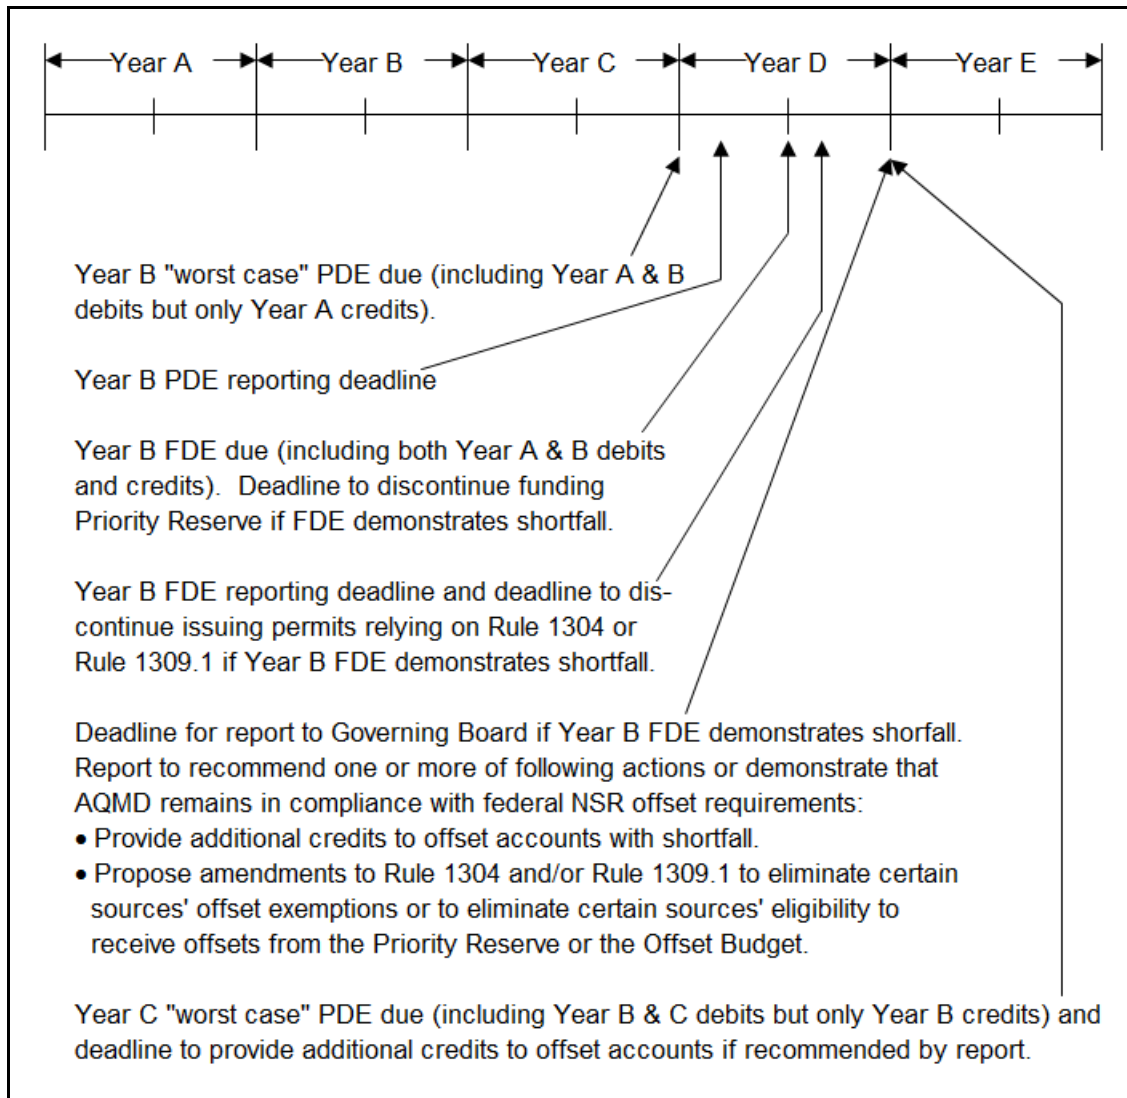

AQMD's proposed revised NSR tracking system would call for the Executive Officer to make annual equivalency demonstrations in two steps. In the first step, AQMD would make a preliminary determination of equivalency (PDE) within twelve months of the close of each reporting period. Each PDE would be a very conservative determination based on the reporting

<sup>16</sup> Rule 1304 includes exemptions from the offset requirements of Rule 1303(b)(2) for a variety of categories of sources. Three of those categories—replacements with no increase in maximum rating, relocations without any increase in potential to emit, and concurrent facility modifications resulting in net emissions decreases—are essentially self offsetting in that for each emissions increase they include and provide a corresponding emissions decrease. Furthermore, BACT is required to be employed on all the new sources permitted pursuant to these exemption provisions. Therefore, the decreases are expected to offset the increases, so neither the emissions reductions associated with the old permits nor the increases associated with the new permits need to be tracked pursuant to Rule 1315.

period's combined debits but would not include the credits from that reporting period. Therefore, the PDE would represent a "worst case" analysis. As the second step, the Executive Officer would then make a final determination of equivalency (FDE), which would include crediting the reporting period's surplus reductions to the offset accounts, within another six months (*i.e.*, within eighteen months of the close of the reporting period). For example, the PDE for reporting year B (including all debits for years A and B and credits for year A only) would be completed by the end of reporting year C. Then an FDE incorporating year B's credits would be prepared within six months of the end of year C. Each PDE would be presented to AQMD's Governing Board in a report from the Executive Officer ("Board Letter") at a public meeting of the AQMD Governing Board, no later than the second regularly-scheduled Governing Board meeting after the conclusion of the applicable twelve-month period. Similarly, reports presenting the results of each FDE for a reporting period with a PDE that does not demonstrate equivalency with federal NSR offset requirements would be due to the Governing Board by the second regularly scheduled Governing Board meeting after the FDE completion deadline. However, reports presenting the results of each FDE for a reporting period with a PDE that does demonstrate equivalency with federal NSR offset requirements would be due with the report for the subsequent reporting period's PDE. Figure 1 illustrates the timeline for preparing PDEs and FDEs, and for reporting their results to the Governing Board. The PDE and FDE reports would include the balances in AQMD's offset accounts, as well as summaries of credit and debit data by category such as Priority Reserve, Community Bank, and Rule 1304 exemptions. Table 9 summarizes the differences between AQMD's pre-September 2006 and proposed revised determinations of equivalency. In lieu of preparing a PDE and an FDE for a particular reporting period, the Executive Officer would have the option to merge the PDE into the FDE provided the FDE includes all of the elements of the PDE that it subsumes and it complies with the completion and reporting requirements of the subsumed PDE. The offset accounting for year B would be conducted in the following order:

1. Discount any post-1990 credits remaining from year A as described in the discussion of Surplus Discount at Time of Use; then
2. Subtract as much of year B's debits from any remaining pre-1990 credits as possible without resulting in a negative balance of pre-1990 credits (1990-2005 timeframe only); then
3. Subtract any debits remaining after step 2 from any post-1990 credits remaining from year A after application of step 1; then
4. Add year B's credits to the remaining discounted post-1990 credits.

**Figure 1  
Equivalency Demonstration Timeline**

In addition, AQMD would evaluate the future availability of offsets in AQMD's accounts by conducting a two-year projection of debits, credits, and account balances in conjunction with (but not as a part of) each determination of equivalency. This analysis would include projected debits, credits, and offset account balances for each of the two years following the subject reporting period. The projections for each pollutant would be based on the average of the previous five years' credits and debits for that pollutant. The purpose of the projections would be to provide the Executive Officer a prospective indicator that a shortfall may be coming so that the Executive Officer can further investigate, inform the Governing Board of the findings of the investigation, and recommend appropriate actions to prevent or resolve the shortfall or demonstrate that no action is needed because AQMD remains in aggregate equivalency with federal offset requirements.

**Table 9**  
**Summary of Changes between AQMD’S Pre-September**  
**2006 and Proposed Revised Determinations of Equivalency**

AQMD’s Pre-September 2006 NSR Tracking System	AQMD’s Proposed Revised NSR Tracking System
Annual reports to the Governing Board “regarding the effectiveness of Regulation XIII in meeting the state and federal NSR requirements” specified by Rule 1310 – Analysis and Reporting.	Preliminary (worst case) determination of equivalency (PDE) would be completed within one year of the close of the reporting period. If PDE does not verify equivalency, final determination of equivalency (FDE) would be completed within six months of the PDE timeframe.
No projections of future equivalency done with annual equivalency demonstrations.	All annual demonstrations of equivalency (FDE or PDE) would be accompanied by projected NSR offset account balances for the two years following the subject reporting period. These projections would be for the purpose of prospectively determining if implementation of backstop measures is necessary to prevent an offset account shortfall and would not constitute a part of the determinations of equivalency.

## TRACKING AND BACKSTOP

AQMD’s proposed revised NSR tracking system includes equivalency backstop provisions that would be triggered in the event that an FDE does not demonstrate equivalency. In such an event, the backstop provisions would require the Executive Officer to both discontinue funding the Priority Reserve for each air contaminant with a shortfall<sup>17</sup> and discontinue issuing permits to construct and permits to operate that rely on Rule 1304 exemptions or on offsets from the Priority Reserve for each air contaminant that has a shortfall to sources that are major sources of that air contaminant. Funding of the Priority Reserve and issuance of permits relying on Rule 1304 exemptions or on offsets from the Priority Reserve may resume upon completion of an FDE demonstrating that the shortfall no longer exists. Additionally, if there is an actual or projected shortfall in any of the offset accounts, the backstop provisions would require the Executive Officer to prepare a report to the Governing Board recommending appropriate action to remedy the shortfall. The report would either recommend implementing one or more of the

<sup>17</sup> Offsets provided from the Priority Reserve would be debited from AQMD’s offset accounts for the period during which the permit was issued (*i.e.*, for the timeframe they are used) whereas the quarterly allocations made to the Priority Reserve pursuant to Rule 1309.1(a) would not constitute debits from AQMD’s offset accounts. The newly-proposed future years’ projections of balances in AQMD’s offset accounts would include projected use of Priority Reserve offsets as well as sources exempted pursuant to Rule 1304. A significant portion of the quarterly allocations to the Priority Reserve are used by sources that are not subject to federal offset requirements (*i.e.*, federal minor sources) and, therefore, do not need to be debited from AQMD’s offset accounts for purposes of demonstrating equivalency with federal NSR requirements.

following actions as needed to correct the shortfall or include an explanation of why it is not necessary to implement any of the following actions by making a demonstration that AQMD remains in compliance with federal NSR offset requirements on an aggregate basis, as applicable:

- Provide additional offsets within six months of the FDE demonstrating the shortfall or of the projection that predicted it; such offsets could be derived through AQMD purchase of credits, through AQMD funding of emission reduction projects using quantification protocols or rules approved by EPA/CARB on a case-by case or programmatic basis, application of LAER/BACT in excess of federal requirements<sup>18</sup>, or other approved sources of credits.
- Propose amendments to Rules 1309.1 and/or 1304 to restrict access by specific sources to the Priority Reserve and/or to eliminate certain categories of offset exemptions, respectively, to be identified during the rulemaking process.

In addition to the equivalency backstop provisions discussed above, the proposed revised NSR tracking system also includes backstop provisions designed to ensure the impacts of implementing the proposed project do not exceed those analyzed in the Program Environmental Assessment (PEA) pursuant to the California Environmental Quality Act (CEQA; refer to the CEQA Analysis section of this staff report for further information regarding the PEA). In particular, the proposed rule includes provisions directing the Executive Officer to track the cumulative net emissions increase of each nonattainment air contaminant tracked pursuant to the proposed revised federal NSR tracking system. (Net emission increase is defined as the “aggregate increase in potential to emit from permitted major and minor stationary sources of a nonattainment air contaminant subject to tracking pursuant to paragraph (c)(2) offset from the Priority Reserve or exempt from offsets pursuant to Rule 1304 minus the aggregate emissions reductions of the same nonattainment air contaminant tracked pursuant to paragraph (c)(3) over the same time period.”) The proposed rule also includes a table summarizing cumulative net emission increase thresholds for each nonattainment air contaminant to be initially tracked for each year from 2010 through 2030. The CEQA backstop provisions specify that, if the cumulative net emission increase of a nonattainment air contaminant tracked pursuant to the proposed rule and reported in an FDE exceeds the corresponding threshold for that air contaminant, the Executive Officer shall discontinue issuing permits to construct and permits to operate that rely on new use of Rule 1304 exemptions or Priority Reserve offsets for that air contaminant. If triggered, this backstop provision would prevent the issuance of permits drawing on the Priority Reserve or on Rule 1304 exemptions for the air contaminant with cumulative net emission increases in excess of the applicable threshold in the proposed rule to major or minor sources until the cumulative net emissions increase is reduced to a level at least ten percent below its threshold.

---

<sup>18</sup> Precise quantification of all surplus credits generated through application of LAER/BACT in excess of federal requirements may be extremely resource intensive. Therefore, AQMD could, with EPA approval, demonstrate that such application of LAER/BACT has generated at least enough surplus reductions to make up for the shortfall using very conservative assumptions to estimate the surplus reductions.

Table 10 summarizes the differences between AQMD's pre-September 2006 and proposed revised NSR tracking backstop measures.

**Table 10**  
**Summary of Changes between AQMD'S Pre-September**  
**2006 and Proposed Revised Backstop Measures**

AQMD's Existing NSR Tracking System	AQMD's Proposed Revised NSR Tracking System
No backstop measures identified for addressing potential shortfalls in AQMD's offset accounts.	<p>Several backstop provisions identified in the proposed revised NSR tracking system:</p> <ul style="list-style-type: none"> <li>• If there is an actual shortfall: <ul style="list-style-type: none"> <li>▪ Discontinue funding the Priority Reserve for the contaminant(s) with a shortfall; and</li> <li>▪ Discontinue issuing permits relying on AQMD's offset accounts for pollutant(s) with a shortfall.</li> </ul> </li> <li>• If there is an actual or projected shortfall, recommend one or more of the following or demonstrate continued compliance with federal NSR offset requirements, as appropriate: <ul style="list-style-type: none"> <li>▪ Provide additional credits within six months of the demonstration or projection of the shortfall; to be derived from AQMD purchase of credits, AQMD funding of emission reduction projects using quantification protocols or rules approved by EPA, application of LAER/BACT in excess of federal/California requirements, or other EPA-approved credit sources.</li> <li>▪ Suspend issuance of Priority Reserve credits within 90 days of the report to the Governing Board, not to be resumed until equivalency has been reestablished.</li> <li>▪ Propose amendments to Rules 1309.1 and/or 1304 to eliminate access to the Priority Reserve by certain sources and/or eliminate certain offset exemptions, respectively.</li> </ul> </li> </ul>
No backstop measures identified for addressing cumulative net emission increases.	Discontinue issuing permits relying on new use of the Priority Reserve or of Rule 1304 exemptions if cumulative net emission increase for any pollutant exceeds the specified threshold until the cumulative net emission increase has returned to a level at least 10% below current threshold.

## STATE IMPLEMENTATION PLAN AND RULE SUNSET DATE

The provisions of PR 1315 pertaining to tracking of cumulative net emissions increase and CEQA backstop measures would not be included in the SIP. The rule would expire January 1, 2031.

## DISCUSSION OF PR 1315 RULE LANGUAGE

Several changes have been made to the language of PR 1315 since the Draft PEA was circulated. The following changes were made to ensure that the language of the proposed rule is clear and unambiguous and is consistent with the intent of the proposed rule.

- Paragraph (c)(1) was clarified to explain that AQMD may discontinue tracking of an attainment air contaminant only if the use of emission offsets is not necessary to maintain attainment for that air contaminant.
- The provisions pertaining to CEQA backstop formerly contained in subdivisions (d), (f), and (h) were consolidated into a single subdivision of the proposed rule, subdivision (g). Some wording changes were also made to ensure that these backstop provisions are unambiguous and consistent with their intent.
- The provisions in paragraph (c)(4) requiring that credits deposited into the District's offset accounts be discounted to ensure they remain surplus at the time of use was extended to include clause (c)(3)(A)(vi) for offset credits derived from the Rule 1306(c)(2) BACT adjustment that applies to newly banked ERCs. In addition, the criteria in clause (c)(3)(A)(vi) for determining if the reductions are surplus were strengthened.
- Provisions explicitly stating the sequence and order in which each tracking element is implemented for each reporting period were added in paragraph (c)(5) to remove a potential source of confusion.
- A paragraph explicitly identifying the provisions of the proposed rule that ensure offsets tracked pursuant to PR 1315 meet the federal offset criteria was added in paragraph (c)(6).
- A clarifying provision was added in subparagraph (f)(1)(B) to require that, as part of the equivalency backstops, any permit application that has not provided sufficient ERCs and is put on hold due to a shortfall will not be approved until the Governing Board has approved an FDE report demonstrating that the shortfall that triggered the backstop provisions has been rectified.
- It was clarified in paragraph (d)(3) that if a PDE shows compliance with federal NSR, an FDE will be prepared either separately or with the next reporting period's PDE.
- The sunset date specified in subdivision (i), formerly subdivision (j), was removed from the list of provisions to be excluded from submittals for approval into the SIP so that the rule would not remain active in the SIP after expiring locally.
- The language excluding PM<sub>2.5</sub> from tracking was clarified.
- The Public Hearing to consider adoption of PR 1315, previously scheduled for December 2010, is now scheduled for January 2011. Therefore, several dates in subdivisions (d) and (g) of the proposed rule were updated accordingly.

The following discussion provides a subdivision-by-subdivision analysis of PR 1315:

- PR 1315(a) Purpose  
Subdivision (a) would summarize the purpose of this proposed rule. In particular, PR 1315 would specify and memorialize in rule form the procedures to: maintain AQMD’s ability to issue permits to major sources that rely on the Priority Reserve for emissions offsets or that are exempt from AQMD’s NSR offset requirements, and demonstrate programmatic equivalency between its NSR program and federal NSR offset requirements, ~~and demonstrate equivalence between AQMD and federal NSR offset requirements.~~
- PR 1315(b) Definitions  
Subdivision (b) would provide definitions for “Community Bank,” “net emission increase,” “offset ratio,” “orphan reduction,” “orphan shutdown,” “Priority Reserve,” and “shortfall.”
- PR 1315(c) Offset Accounts for Federal NSR Equivalency
  - Paragraph(c)(1) District Offset Accounts for Federal Nonattainment Air Contaminants  
Paragraph (c)(1) would establish AQMD’s offset accounts, including starting balances for VOC, NO<sub>x</sub>, SO<sub>x</sub>, CO, and PM<sub>10</sub> as of 1990, and specify that any portion of the starting balances not used by December 31, 2005 would be retired for clean air. Paragraph (c)(1) would further direct the Executive Officer to establish additional offset accounts for any nonattainment air contaminants (excluding PM<sub>2.5</sub><sup>19</sup>) or their precursors that become subject to federal nonattainment NSR offset requirements (unless by rule, the District establishes that Rule 1304 and Rule 1309.1 do not apply to such contaminants or their precursors) and would provide for the Executive Officer to discontinue tracking and reporting the offset account for any air contaminant that is changed from a nonattainment designation to attainment by EPA. Finally, paragraph (c)(1) would specify the criterion for considering AQMD’s NSR program equivalent with federal nonattainment NSR offset requirements to be that following the procedures in PR 1315 results in the balances in AQMD’s offset accounts remaining positive.
  - Paragraph (c)(2) Tracking of Offset Account Debits for Federal NSR Equivalency  
Paragraph (c)(2) would identify the sources of debits from AQMD’s offset accounts as emissions offsets from the Priority Reserve or Community Bank pursuant to Rule 1309.1 for major sources and exemptions from the offset requirements of Rule 1303 for major sources pursuant to Rule 1304 and would specify that the offset ratios applicable to these debits are 1.2-to-1.0 for extreme nonattainment air contaminants and their precursors and 1.0-to-1.0 for all other nonattainment air contaminants.
  - Paragraph (c)(3) Tracking of Offset Account Credits for Federal NSR Equivalency  
Paragraph (c)(3) would identify the sources of credits to AQMD’s offset accounts as orphan shutdowns (at eighty percent of permitted emission levels<sup>20</sup>), orphan reductions

<sup>19</sup> The provision directing the Executive Officer to establish additional offset accounts for any nonattainment air contaminants or their precursors that become subject to federal nonattainment NSR offset requirements is not applicable to PM<sub>2.5</sub> because AQMD is developing a separate regulation specifically addressing federal nonattainment NSR for PM<sub>2.5</sub> and existing Regulation XIII will not be applicable to PM<sub>2.5</sub>. Therefore, facilities will not be able obtain PM<sub>2.5</sub> offsets via the Priority Reserve or the offset exemptions in Rule 1304.

<sup>20</sup> The permitted emission level is the potential to emit of the source in pounds per day on a thirty-day average basis calculated by an AQMD engineer as part of the evaluation of the permit application. This emission level often, but not always, appears on the permit either directly as an emission limit or indirectly as a throughput limit (e.g., a

(at eighty percent of the reduction in permitted emission levels), ERCs provided as offsets by minor sources, excess ERCs provided at a 1.2-to-1.0 offset ratio rather than 1.0-to-1.0 by major sources of non-attainment air contaminants that are not extreme non-attainment air contaminants, payback of NSR offset debt through the ERC banking process, and the BACT discount of newly-banked ERCs in cases where “the Executive Officer demonstrates and EPA concurs that the subtracted amount is not otherwise required by rule, regulation, law, approved Air Quality Management Plan Control Measure, or the State Implementation Plan.” Paragraph (c)(3) would also provide the Executive Officer the option to not track some of the potential sources of credits provided sufficient credits remain in the federal offset accounts to demonstrate equivalence with federal NSR offset requirements each reporting period.

- Paragraph (c)(4) Surplus at the Time of Use  
Paragraph (c)(4) would direct the Executive Officer to discount all orphan shutdown and orphan reduction credits, as well as all credits resulting from the BACT discount of newly-banked ERCs, deposited in AQMD’s federal offset accounts pursuant to paragraph (c)(3) to ensure that they are surplus at the time of use. This discounting would be performed annually “based on the percentage reduction in overall permitted emissions projected to be achieved as a result of implementation of control requirements that become effective during the year for each specific pollutant within the District.”
  - Paragraph (c)(5) Tracking Sequence  
Paragraph (c)(5) would specify the order in which the tracking elements described in paragraphs (c)(2), (c)(3), and (c)(4) would be carried out. That order would be apply surplus at the time of use discount to any remaining post-1990 balance, subtract the aggregate debits from the remaining Pre-1990 unused initial balance to the extent available, subtract remaining debits from the post-1990 balance, and add the credits to the corresponding District Offset Account Balance.
  - Paragraph (c)(6) Federal Offset Criteria  
Paragraph (c)(6) would specify that offset account credits used pursuant to Rule 1304 or Rule 1309.1 are real as specified in subparagraphs (c)(3)(A) and (c)(3)(B), surplus as specified in paragraphs (b)(4), (b)(5), and (c)(4), permanent as specified in paragraphs (b)(4) and (b)(5) and subparagraph (c)(3)(A), quantifiable as specified in subdivisions paragraphs (c)(1), (c)(3), (c)(4), and (c)(5), and enforceable as specified in paragraphs (b)(4), (b)(5), and (c)(3).
- PR 1315(d) Federal NSR Equivalency Determination Reports
    - Paragraph (d)(1) Reporting Periods  
Paragraph (d)(1) would establish the following reporting periods for purposes of NSR tracking: October 1, 1990 through July 31, 1995; each year starting with August 1995 through July 1996 and ending with August 2003 through July 2004; August 2004 through December 2005; each calendar year from 2006 through 2009, and each calendar year from 2010 through 2030.

---

limit on fuel or raw material consumption). In the case of a permit that did not have a 30-day average emission level calculated by the engineer as a part of the application evaluation (e.g., a “pre-NSR” permit), the permitted emission level would be estimated based on the controlled emission rate (the source’s emission rate considering the effect of any installed control equipment in pounds per hour) and the operating schedule (if no operating schedule is on file for the source then a schedule of eight hours per day, five days per week, and fifty weeks per year would be used).

- Paragraph (d)(2) Preliminary Determinations of Equivalency  
Paragraph (d)(2) would specify that, commencing with the 2010 reporting period, the Executive Officer would complete a PDE within twelve months of the end of each reporting period and report each to the Governing Board and to EPA by the second regularly-scheduled Governing Board meeting after its completion deadline. Each PDE would be a conservative assessment of the remaining balances in AQMD's offset accounts at the end of the reporting period obtained by subtracting the reporting period's aggregate debits from the remaining balance that existed at the start of the reporting period without accounting for any credits that accrued during the reporting period.
- Paragraph (d)(3) Final Determinations of Equivalency  
Paragraph (d)(3) would specify that, commencing with the 2010 reporting period, the Executive Officer would complete an FDE within eighteen months of the end of each reporting period. The Executive Officer would report the FDE to the Governing Board and to EPA by the second regularly-scheduled Governing Board meeting after the PDE completion deadline for cases in which the PDE did not demonstrate equivalence with federal NSR offset requirements (*i.e.*, did not show a positive balance in each of AQMD's federal offset accounts) and by the reporting deadline for the subsequent reporting period's PDE for cases in which the PDE did demonstrate equivalence with federal NSR offset requirements. Each FDE would be an assessment of the remaining balances in AQMD's offset accounts at the end of the reporting period obtained by subtracting the reporting period's aggregate debits from and adding the reporting period's aggregate credits to the remaining balance that existed at the start of the reporting period.
- Paragraph (d)(4) Early FDE Subsuming PDE  
Paragraph (d)(4) would provide the Executive Officer the option to combine all of the elements of a reporting period's PDE and FDE into the FDE provided the consolidated FDE complies with the completion and reporting deadlines of the subsumed PDE.
- PR 1315(e) Projections of District Offset Account Balances  
Subdivision (e) would specify that each PDE [PR 1315(d)(2)] report and each FDE [PR 1315(d)(3)] report would also include projections of the federal offset account balances at the end of each of the two subsequent reporting periods based upon the average of the total annual debits and credits for the five reporting periods most recently included in a PDE or an FDE. These projections would be reported with the results of the PDE or FDE but would not be a part of them. Because PDEs would not include tracking of aggregate credits or aggregate emissions reductions for the subject reporting period, projections presented in PDE reports would need to include projections of the subject reporting period's aggregate credits and aggregate emissions reductions in addition to the projections for the subsequent two reporting periods.
- PR 1315(f) Equivalency Backstop Provisions
  - Paragraph (f)(1) Funding of the Priority Reserve and Issuance of Permits  
Paragraph (f)(1) would establish that, if the most-recent FDE [PR 1315(d)(3)] demonstrates a shortfall in the federal offset account for any air contaminant, the Executive Officer would discontinue funding the Priority Reserve for the air contaminant(s) with a shortfall and discontinue issuing permits to construct and permits to operate that rely on Rule 1304 exemptions or the Priority Reserve for any air contaminant with a shortfall to any source that is a major source of that air contaminant.

The Executive Officer would be able to resume funding the Priority Reserve and issuing such permits upon completion of an FDE demonstrating that the shortfall no longer exists.

- Paragraph (f)(2) Report to the Governing Board: Rectification of a Shortfall  
Paragraph (f)(2) would, in the event of an FDE [PR 1315(d)(3)] demonstrating a shortfall or of a projection [PR 1315(e)] predicting a shortfall, direct the Executive Officer to prepare a report to the Governing Board either recommending action to remedy the shortfall or demonstrating that AQMD “remains in compliance with federal nonattainment NSR offset requirements on an aggregate basis.” If such a report were to recommend action to remedy the shortfall, the recommended action would include one or more of the following:
  - Provide additional credits to the federal offset account(s) with a shortfall within six months of the demonstration or projection of the shortfall. The Executive Officer could purchase them, fund emission reduction projects using quantification protocols approved by EPA, track application of BACT (federal LAER) in excess of federal requirements<sup>21</sup>, or implement other credit sources approved by EPA; and/or
  - Propose amendments to Rule 1304 and/or Rule 1309.1 to eliminate certain offset exemptions or certain sources’ ability to obtain offsets from the Priority Reserve.
- PR 1315(g) California Environmental Quality Act Backstop Provisions  
Subdivision (g) would direct the Executive Officer to track the cumulative net emission increase from both major and minor sources of each nonattainment air contaminant tracked pursuant to the proposed rule from the date of adoption through the end of each post-adoption reporting period and to report those cumulative net emission increases to the Governing Board, and would establish annual cumulative net emission increase thresholds for nonattainment air contaminants resulting from major and minor Rule 1309.1 and Rule 1304 sources based upon AQMP growth projections. It would further specify that, if the cumulative net emission increase of a nonattainment air contaminant from such sources exceeds the threshold for that air contaminant, issuance of permits to construct and permits to operate relying on new use of Rule 1304 exemptions or Priority Reserve offsets for that air contaminant would cease, not to resume unless and until the corresponding net emission increase returns to a level at least ten percent below the corresponding threshold. Additionally, commencing with the reports for the 2011 reporting period, each PDE report and each FDE report would also include projections of the cumulative net emission increases at the end of each of the two subsequent reporting periods based upon the average of the aggregate increase in potential to emit of each nonattainment air contaminant and the average of the aggregate emissions reductions of the same nonattainment air contaminant for the five reporting periods most recently included in a PDE or an FDE or each of the reporting periods commencing with the 2011 reporting period, whichever is fewer reporting periods.

---

<sup>21</sup> Quantification of all surplus emissions reductions resulting from application of LAER beyond federal requirements could be extremely resource intensive. Therefore, with the concurrence of EPA, AQMD could make a demonstration based on conservative assumptions that application of LAER has generated at least enough surplus reductions to rectify the shortfall.

- PR 1315(h) State Implementation Plan Submittals  
Subdivision (h) would specify that paragraphs (b)(2) and (e)(2) and subdivisions (g) and (h) shall not be submitted to the California Air Resources Board or to the United States Environmental Protection Agency for inclusion in the California State Implementation Plan.
- PR 1315(i) Sunset Date for Permit Issuance  
Subdivision (i) would specify that Rule 1315 expires on January 1, 2031.

### **CALIFORNIA HEALTH AND SAFETY SECTION 40440.5(c)(3)—REQUIRED STAFF REPORT ELEMENTS**

Section 40440.5(c)(3) of the California Health and Safety Code specifies that the staff report for a proposed rule that would significantly affect air quality or emissions limitations must include “the full text of the proposed rule or regulation, an analysis of alternative control measures, a list of reference materials used in developing the proposed rule or regulation, an environmental assessment, exhibits, and draft findings for consideration by the south coast district board pursuant to Section 40727. Further, if an environmental assessment is prepared, the staff report shall also include social, economic, and public health analyses.” Table 11 identifies where each of the elements required by H&SC §40440.5(c)(3) is located in this staff report and associated documents.

## CEQA ANALYSIS

The AQMD is the lead agency for the proposed project and has prepared a PEA pursuant to its certified regulatory program (CEQA Guidelines §15251(l)) as codified as AQMD Rule 110. A Draft Program Environmental Assessment (PEA) for the Proposed Rule (PR) 1315 has been prepared because the proposed rule would establish criteria to govern the conduct of a continuing program.

PR 1315 would codify existing procedures and establish new requirements for establishing equivalency under federal New Source Review requirements through the use of AQMD's internal emission offsets by operators of various projects that either obtain emissions offsets pursuant to Rule 1309.1 – Priority Reserve or are exempt from the emissions offsets requirements of Rule 1303 – Requirements pursuant to Rule 1304 – Exemptions. The PEA analyzes direct and indirect impacts from both major and non-major sources relying on offsets from the AQMD's internal offset accounts pursuant to Rule 1309.1 – Priority Reserve or Rule 1304 – Offset exemptions. The analysis in the PEA includes the conservative assumption that all net emission increases will occur at a rate consistent with growth rate projections in the 2007 Air Quality Management Plan (AQMP).

Air quality would be directly impacted by the proposed project. In addition, the proposed project has the potential for significant adverse impacts resulting from construction and operation of sources obtaining permits on all environmental topic areas on the environmental checklist.

The air quality impacts from the emissions resulting from permits issued and emission reductions foregone and environmental impacts from the siting, construction, and operation of those facilities provided offsets from the AQMD's internal accounts would exceed the AQMD's significance thresholds, so the environmental impacts from the proposed project have been determined to be significant. The PEA has been circulated for a 62-day public review and

comment period. After the close of the public review period, responses to all comments will be prepared and included in the PEA, at which time the document will become a Final PEA.

## **SOCIO-ECONOMIC IMPACTS**

The analysis of socio-economic impacts is contained in a socio-economic analysis circulated with this staff report.

## **AQMP AND LEGAL MANDATES**

The California Health and Safety Code requires AQMD to adopt an AQMP to meet state and federal ambient air quality standards in the South Coast Air Basin. In addition, the California Health and Safety Code requires that AQMD adopt rules and regulations that carry out the objectives of the AQMP. While Proposed Rule 1315 is not a control measure included in the AQMP, its requirements are consistent with the AQMP objectives.

## **RESOURCE IMPACTS**

Due to the volume and complexity of analysis required, it is estimated that implementation of PR 1315 would require one full time employee and \$150,000 in programming costs for enhancements to AQMD's New Source Review computer program.

## **DRAFT FINDINGS**

Before adopting, amending or repealing a rule, the AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference, as defined in Health and Safety Code Section 40727. The draft findings are as follows:

**Necessity** – The AQMD Governing Board has determined that a need exists to adopt Proposed Rule 1315 – Federal New Source Review Tracking System to:

- Maintain AQMD's ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1. AQMD's policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and socioeconomic benefits as well as environmental and socioeconomic impacts;
- Memorialize in rule form the accounting procedures AQMD uses to establish equivalency of AQMD's New Source Review program with federal offset requirements, and ensure that valid offsets are projected to be available in AQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset; and

- Recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate federal equivalency for major sources that are exempt under Rule 1304 or that obtain credits from the Priority Reserve under Rule 1309.1.

**Authority** – The AQMD Governing Board obtains its authority to adopt, amend, or repeal rules and regulations from Sections 39002, 40000, 40001, 40440, 40441, 40463, 40702, 40725 through 40728, 41508, and 42300 *et seq.* of the California Health and Safety Code.

**Clarity** – The AQMD Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System, as proposed to be adopted, is written or displayed so that its meaning can be easily understood by the persons directly affected by it.

**Consistency** – The AQMD Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System, as proposed to be adopted is in harmony with, and not in conflict with or contradictory to, existing statutes, court decisions, or state or federal regulations.

**Non-Duplication** – The AQMD Governing Board has determined that Proposed Rule 1315 – Federal New Source Review Tracking System, as proposed to be adopted, does not impose the same requirements as any existing state or federal regulation and is necessary and proper to execute the power and duties granted to, and imposed upon, the AQMD.

**Reference** – The AQMD Governing Board, in adopting Proposed Rule 1315 – Federal New Source Review Tracking System, references the following statutes that the AQMD hereby implements, interprets, or makes specific: Health and Safety Code Sections 40001, 40702, 40910 *et seq.*, 40920.5, and 42300 *et seq.* and Clean Air Act Sections 110, 172, 173, 182, and 189 (42 U.S.C. §§ 7410, 7502, 7503, 7511a, and 7513a).

## CONCLUSIONS AND RECOMMENDATIONS

The comparative analysis referred to in Health and Safety Code Section 40727.2 is not required because PR 1315 would not establish a new emissions limit, make an existing limit more stringent, or impose new or more stringent monitoring, reporting, or recordkeeping requirements on a source. Similarly, the proposed rule would not impose any requirements on regulated sources so the incremental cost effectiveness analysis identified in Health and Safety Code Section 40920.6 (which only applies to adoption of rules or regulations that require use of best available retrofit control technology or that are feasible measures pursuant to Health and Safety Code Section 40914) is not required.

Staff recommends adoption of Proposed Rule 1315 for the reasons stated in this staff report.

## Notes:

- (1) The total amount of the Previously Reported Pre-1990 Beginning Balance.
- (2) Donated and Unclaimed ERCs reflect 20% of the negative NSR balances for facilities that donated or did not claim their pre-1990 ERCs; the other 80% of these pre-1990 negative NSR balance amounts are included in the Discounted Pre-1990 ERCs.
- (3) Revised Beginning Balances based on documented values with records.
- (4) Minor Source and Major Source Credits are orphan shutdowns and orphan reductions from Minor and Major Sources, respectively, and reflect 80 % of permitted allowable emission values.
- (5) No credit claimed for BACT discount of ERCs except CO 1991 BACT discount of ERCs issued for removal of ICES. This discount was surplus to BARCT at the time of use. The resulting credits were completely used by the 1997-98 reporting period to offset portions of the 13.71 tons per day debits for 1990-97 and the 1.98 tons per day debits for 1997-98.
- (6) Debits are sources that were exempt from offset requirements under Reg. XIII yet were not exempt from offset requirements under Federal NSR. Debits are denoted as negative amounts and are deducted from the account

balances at a ratio of 1.2:1.0 for ozone precursors (1.2 pounds are deducted for each pound of increase in potential emissions) and at a ratio of 1.0:1.0 for non-ozone precursors.

- (7) The Debits are first deducted from Pre-1990 account balances, if any, and any remaining debits are then deducted from the earliest available Post-1990 account balances.
- (8) Projections based on average of the previous five years' credits and debits.

---

**APPENDIX II:  
LIST OF SOURCES EXEMPT FROM OFFSET REQUIREMENTS AND PROVISIONS  
COVERED BY EQUIVALENCY SHOWING**

The following sources are exempt from AQMD's NSR offset requirements or eligible to obtain their offsets from AQMD's Priority Reserve but are not exempt from federal NSR offset requirements. Therefore, use of these exemptions or use of Priority Reserve offsets by major sources requires debits from AQMD's offset accounts and would be reflected in AQMD's demonstrations of equivalency.

**Rule 1304 - Exemptions:**

- (1) Replacements of electric utility steam boilers with combined cycle gas turbines, intercooled, chemically-recuperated gas turbines, other advanced gas turbines, solar, geothermal, or wind energy, or other equipment to allow compliance with Rule 1135 – Emissions of Oxides of Nitrogen from Electric Power Generating Systems or Regulation XX – Regional Clean Air Incentives Market. If the replacement results in a per-utility increase in basinwide electricity generating capacity, the emissions associated with the increase in capacity is not exempt.
- (2) Abrasive Blasting Equipment
- (3) Air Pollution Control Strategies
- (4) Emergency Equipment
- (5) Portable Internal Combustion Engines
- (6) Methyl Bromide Fumigation
- (7) Replacement of Ozone Depleting Compounds
- (8) Portable Equipment
- (9) Regulatory Compliance
- (10) Regulatory Compliance for Essential Public Services
- (11) Facility Exemption (VOC, NO<sub>x</sub>, SO<sub>x</sub>, or PM<sub>10</sub> PTE less than 4 tons per year or CO PTE less than 29 tons per year)
- (12) Resource Recovery and Energy Conservation
- (13) Electric Utility Boilers

**Rule 1309.1 - Priority Reserve**

The Priority Reserve, which is funded from AQMD's offset accounts, provides a source of emission offsets for certain priority categories of sources. Except as noted below, these offsets

are provided by AQMD at no cost to the operator. The various categories of sources eligible to access the Priority Reserve pursuant to Rule 1309.1 as amended May 3, 2002, which is the currently operative version of the rule, are summarized below:

- (1) Innovative Technology  
Use of a technology that results in significantly lower emissions than would the use of BACT.
- (2) Research Operations  
Projects with the purpose of “investigation, [experimentation], or research to advance the state of knowledge or the state-of-the-art.” Limited to at most two years.
- (3) Essential Public Service  
Sources in the following categories located at facilities where all sources operate at or below BARCT levels
  - Publicly-owned sewage facilities;
  - Prisons;
  - Police facilities;
  - Fire fighting facilities;
  - Schools;
  - Hospitals;
  - Construction/operation of landfill gas control or processing facility;
  - Water delivery operations;
  - Public transit; and
- (4) Electrical Generating Facilities (2000 through 2003)  
Specified categories of facilities that generate electricity; meet BARCT for all sources; applicant has conducted a due diligence effort to acquire ERCs on the open market; applicant has applied for California Energy Commission certification or AQMD permit to construct during calendar years 2000, 2001, 2002, or 2003; and applicant pays the following fee for each pound of Priority Reserve offsets obtained (VOC and NOx not available for these sources):
  - \$25,000 per pound PM10 and day;
  - \$8,900 per pound SOx per day; and
  - \$12,000 per pound CO per day.

## EXECUTIVE SUMMARY

A socioeconomic analysis was conducted to assess the impacts of Proposed Rule (PR) 1315—Federal New Source Review Tracking System. A summary of the analysis and findings is presented below.

<b>Elements of Proposed Rule</b>	PR 1315 would allow the AQMD to continue to issue permits based on the Priority Reserve of Rule 1309.1 and/or the offset exemptions of Rule 1304. PR 1315 memorializes the procedures for establishing equivalency with the federal NSR requirements and provides safeguards to ensure that sufficient offsets are available in the AQMD's internal bank and to ensure air emission impacts do not exceed those analyzed in the CEQA document.
<b>Affected Facilities and Industries</b>	<p>Sources that are qualified to seek access to the Priority Reserve include innovative technology, research operations, and essential public services. Essential public services include sewage treatment facilities, prisons, police and fire fighting facilities, schools, hospitals, landfill gas control or processing facilities, water delivery operations, and public transit.</p> <p>Sources that are exempt from the offset requirements include various types of equipment as well as replacement equipment; relocation; concurrent facility modifications; projects for resource conservation, resource recovery, and regulatory compliance; and new and modified facilities with permitted emissions less than the specified thresholds, etc.</p> <p>Sources eligible for the Priority Reserve and the offset exemptions are from all the sectors of the four-county economy.</p>
<b>Assumptions of Analysis</b>	<p>Implementation of PR 1315 would allow the AQMD to continue to issue permits to the sources under Rules 1309.1 (Priority Reserve) and 1304 (Exemptions), consistent with the growth assumptions used for the 2007 Air Quality Management Plan (AQMP). As such, the baseline economic forecast used for the socioeconomic assessment of the 2007 AQMP incorporated the impact of PR 1315 (See p. 4 for a description of the baseline forecast used for this analysis). PR 1315 is a growth-accommodating rule for new and modified sources. Therefore, the analysis of PR 1315 was based on projected growth of individual industries.</p> <p>Estimated changes in concentrations of either ozone, PM<sub>2.5</sub>, or both from the proposed rule relative to concentration changes in the 2007 AQMP were used to assess the forgone air quality benefits due to PR 1315.</p>

<b>Compliance Costs</b>	PR 1315 is not expected to generate additional compliance costs since it allows the AQMD to continue its current offset exemption for Rules 1304 and 1309.1 sources.
<b>Economic Impacts</b>	<p>Allowing eligible sources to have access to the AQMD internal offsets as allowed by PR 1315 would be expected to result in more than 1.86 million jobs, an increase of over 2.11 million people, and a gain of more than \$283 billion of gross regional product (GRP) to the local economy in 2030, as compared to the conditions without the proposed rule. These translate to increases in employment, population, and GRP by 16.1 percent, 9.7 percent, and 20.5 percent, respectively, as compared to the conditions without the proposed rule. As stated above, these growth projections have been incorporated in the 2007 AQMP. However, it is not certain whether all the anticipated population increase would be avoided without the proposed rule since population increase is based on births and migration.</p> <p>The emissions from sources permitted in reliance upon the internal offset accounts tracked under PR 1315 translate into forgone air quality benefits of \$1.2 billion in 2030, 76 percent of which are health benefits.</p>
<b>Impacts of CEQA Alternatives</b>	<p>There are five CEQA Alternatives. Alternative A—No Project Alternative—would restrict growth for certain industries to the 2010 levels. Compared to PR 1315, more than 1.86 million jobs would be forgone, population would be reduced by more than 2.11 million people, and GRP would decrease by more than \$283 billion in 2030. Alternative A would have an extreme impact on the local economy.</p> <p>Under Alternative B large businesses would pay offset fees even if their emissions are less than four tons. The offset fees would make expansion, new development, and modernization in the region more expensive. Alternative C—Large Businesses Prohibited from Accessing Rule 1304 Exemptions—would create uncertainty for large businesses in terms of offset prices and quantities in the open market and for purposes of analysis, is projected to result in large businesses not being able to replace equipment or expand. Alternative D—Use of Credits Generated in 2009 and Beyond Only (as it limits small businesses as well as large businesses)—would create even a greater uncertainty (i.e., quantity and timing) than Alternative C for the long-term development of a business in light of today’s high control efficiency, implementation of the Best Available Control Technology, and fluctuation and delayed availability of shutdown credits. This alternative is projected to allow only replacement of existing equipment, no expansion, or no new facilities since all offsets would come from reductions or shutdown of existing sources. Alternative E would cap the growth</p>

	<p>to one-half of the 2007 AQMP amount.</p> <p>Alternatives B through E are projected to result in reduction in job growth. Such reduction is expected to be the least for Alternative B because of its similarity to PR 1315.</p> <p>Limited growth from Alternatives A through E translates into fewer emission reductions forgone due to growth, thus benefiting air quality compared with assumptions in the 2007 AQMP. Alternative A has the highest air quality benefit as it has the toughest limit on growth. Alternative B is projected to have the least air quality benefit of all the alternatives to the proposed rule.</p>
--	--

## INTRODUCTION

Proposed Rule 1315—Federal New Source Review Tracking System—would allow the AQMD to issue permits based on the Priority Reserve of Rule 1309.1 and/or the offset exemptions of Rule 1304. Without PR 1315, sources that would otherwise be qualified for offsets from the AQMD internal offset accounts would have to purchase Emission Reduction Credits (ERCs) from the open market in order to offset their emission increases. However, it is unlikely that a sufficient quantity of ERCs would be available to accommodate the growth projected in the 2007 Air Quality Management Plan (AQMP).

## LEGISLATIVE MANDATES

The socioeconomic assessments at the AQMD have evolved over time to reflect the benefits and costs of regulations. The legal mandates directly related to the assessment of the proposed amendments include the AQMD Governing Board resolutions and various sections of the California Health & Safety Code (H&SC).

### AQMD Governing Board Resolutions

On March 17, 1989 the AQMD Governing Board adopted a resolution that calls for preparing an economic analysis of each proposed rule for the following elements:

- Affected Industries
- Range of Control Costs
- Cost Effectiveness
- Public Health Benefits

On October 14, 1994, the Board passed a resolution which directed staff to address whether the rules or amendments brought to the Board for adoption are in the order of cost effectiveness as defined in the AQMP. The intent was to bring forth those rules that are cost effective first.

### Health & Safety Code Requirements

The state legislature adopted legislation that reinforces and expands the Governing Board resolutions for socioeconomic assessments. H&SC Sections 40440.8(a) and (b), which became effective on January 1, 1991, require that a socioeconomic analysis be prepared for any proposed rule or rule amendment that "will significantly affect air quality or emissions limitations." Specifically, the scope of the analysis should include:

- Type of Affected Industries
- Impact on Employment and the Economy of the District
- Range of Probable Costs, Including Those to Industries
- Emission Reduction Potential
- Necessity of Adopting, Amending or Repealing the Rule in Order to Attain State and Federal Ambient Air Quality Standards
- Availability and Cost Effectiveness of Alternatives to the Rule

The analysis for PR 1315 projects that the rule will not increase costs compares to conditions without the rule. Therefore, some types of analysis are not applicable. For the necessity of rule adoption, please refer to the Staff Report for Proposed Rule 1315. Cost effectiveness is not relevant to the proposed rule since it does not require emission reductions. Similarly, the range of control costs is not applicable to this rule since it does not increase control requirements. Additionally, the AQMD is required to actively consider the socioeconomic impacts of regulations and make a good faith effort to minimize adverse socioeconomic impacts. H&SC Section 40728.5, which became effective on January 1, 1992, requires the AQMD to:

- Examine the type of industries affected, including small businesses; and
- Consider Socioeconomic Impacts in Rule Adoption

H&SC Section 40920.6, which became effective on January 1, 1996, requires that incremental cost effectiveness be performed for a proposed rule or amendment that imposes Best Available Retrofit Control Technology or “all feasible measures” requirements relating to ozone, carbon monoxide (CO), oxides of sulfur (SOx), oxides of nitrogen (NOx), and their precursors. Incremental cost effectiveness is defined as the difference in costs divided by the difference in emission reductions between one level of control and the next more stringent control. This analysis is not relevant since the rule is not a retrofit requirement or an “all feasible measures” requirement. The analysis focuses on the economic effects of the proposed rule and the alternatives, including the health dis-benefits of emission reductions forgone, as compared to conditions without PR 1315.

## **AFFECTED FACILITIES**

Sources that are qualified for the Priority Reserve include innovative technology, research operations, and essential public services. Essential public services include sewage treatment facilities, prisons, police and fire fighting facilities, schools, hospitals, landfill gas control or processing facilities, water delivery operations, and public transit.

Sources that are exempt from the offset requirements include various types of equipment as well as replacement equipment; relocation; concurrent facility modifications; projects for resource conservation, resource recovery, and regulatory compliance; and new and modified facilities with permitted emissions less than the specified thresholds, etc.<sup>1</sup>

Sources eligible for the Priority Reserve and the offset exemptions are in all the sectors of the four-county economy. It is too speculative to predict which individual sources would access the AQMD internal offset accounts. The socioeconomic analysis herein evaluates the impact of PR 1315 on the growth of industries.

### **Small Businesses**

The AQMD defines a "small business" in Rule 102 for purposes of fees as one which employs 10 or fewer persons and which earns less than \$500,000 in gross annual receipts. The AQMD

---

<sup>1</sup> The thresholds are four tons per year for VOC, NOx, SOx, and PM10; and 29 tons per year for CO.

also defines “small business” for the purpose of qualifying for access to services from the AQMD’s Small Business Assistance Office as a business with an annual receipt of \$5 million or less, or with 100 or fewer employees. In addition to the AQMD's definition of a small business, the federal Small Business Administration (SBA), the federal Clean Air Act Amendments (CAAA) of 1990, and the California Department of Health Services (DHS) also provide definitions of a small business.

The SBA's definition of a small business uses the criteria of gross annual receipts (ranging from \$0.5 million to \$25 million), number of employees (ranging from 100 to 1,500), megawatt hours generated (4 million), or assets (\$150 million), depending on industry type. The SBA definitions of small businesses vary by 6-digit North American Industrial Classification System (NAICS) code.

The CAAA classifies a facility as a "small business stationary source" if it: (1) employs 100 or fewer employees, (2) does not emit more than 10 tons per year of either VOC or NOx, and (3) is a small business as defined by SBA.

The sources that would utilize the AQMD’s internal accounts in the future as a result of PR 1315 cannot be readily identified. As such, their small business status cannot be determined.

For Alternatives B and C in the Environmental Assessment of PR 1315, a business with an annual gross receipt of \$5 million or less, or a total number of employees below 100 is considered small (Small Business Assistance Office definition in Rule 102—Definition of Terms).

## IMPACTS OF PR 1315

The growth impact from PR 1315 translates to additional employment, output, and population. On the other hand, emission increases from growth would forgo some of the air quality benefits [compared to conditions without the project, but would still be consistent with, including](#) health benefits that were projected for the 2007 AQMP [because the growth associated with PR 1315 was assumed in the 2007 AQMP.](#)

### Economic Impact

The REMI model (REMI, 2006) is used to assess the total socioeconomic impacts of a policy change (e.g., PR 1315). The model links economic activities in the 19 sub-areas that make up the counties of Los Angeles, Orange, Riverside, and San Bernardino. The REMI model for each sub-area is comprised of a five block structure that includes (1) output and demand, (2) labor and capital, (3) population and labor force, (4) wages, prices and costs, and (5) market shares. These five blocks are interrelated. Within each sub-area, producers are made up of 66 private non-farm industries, three government sectors, and a farm sector. Trade flows are captured between sectors as well as across the 19 sub-areas and the rest of U.S. Market shares of industries are dependent upon their product prices, access to production inputs, and local infrastructure. The demographic/migration component has 160 ages/gender/race/ethnicity cohorts and captures population changes in births, deaths, and migration.

The growth assumptions used for the 2007 AQMP were based on the Southern California Association of Governments' socioeconomic projections for the region, which did not assume a constraint on growth from an inability of the AQMD to issue permits to sources under Rules 1309.1 and 1304. As such, the baseline economic forecast used for the socioeconomic assessment of the 2007 AQMP incorporated the impact of PR 1315. The baseline economic forecast was based on future uncontrolled emissions, i.e., there would have been no further controls beyond those already adopted before the 2007 AQMP.

As shown in Table 1, the baseline economic forecast (including Rule 1315) projected an annual growth rate of 0.82 percent in employment, 0.85 percent in population, and 2.27 percent in gross regional product, respectively, from 2011 to 2030 within the four-county area of the AQMD jurisdiction. Table 2 shows the projected employment by key sector for 2011, 2014, 2023, and 2030.

Table 1  
2007 AQMP Baseline Economic Forecast

Economic Variable	2011	2014	2023	2030
Employment (thousands)	9,895	10,217	10,980	11,565
Population (thousands)	18,589	19,149	20,725	21,841
GRP (billions in 2000 \$)	\$904	\$987	\$1,198	\$1,384

Table 2  
Employment by Industry

Industry	NAICS	2011	2014	2023	2030

Total		9,894,565	10,216,599	10,979,937	11,565,368

In order to analyze the impact of PR 1315, the industries that are likely to be affected by PR 1315 were identified, as shown in Table 3. Without the proposed rule, their growth (in terms of production) beyond 2010 is assumed to be restricted to the 2010 level. Additionally, without PR 1315, future shutdown credits returning to the AQMD internal offset accounts would not be allowed to be used. The shutdown effect was approximated by a percentage of the restricted growth that was calculated as the average ratio of shutdown credits returning to the AQMD to the total emissions of permitted sources absent PR 1315 for VOC, SO<sub>x</sub>, and PM<sub>10</sub>, respectively. VOC emissions serve as a proxy for process-oriented sources, SO<sub>x</sub> for combustion sources, and PM<sub>10</sub> for sources with combustion and process characteristics. The average ratio was calculated for 2014, 2023, and 2030 and interpolated for interim years.

Table 3  
No Growth Industries Beyond 2010 Without PR 1315

Industries	NAICS
Support activities for mining	213
Wood product manufacturing	321
Primary metal manufacturing	331
Fabricated metal product manufacturing	332
Machinery manufacturing	333
Computer and electronic product manufacturing	334
Electrical equipment and appliance manufacturing	335
Transportation equipment manufacturing	336
Furniture and related product manufacturing	337
Miscellaneous manufacturing	339
Food manufacturing	311
Beverage and tobacco product manufacturing	312
Textile & textile product mills	313-314
Apparel manufacturing	315
Leather and allied product manufacturing	316
Paper manufacturing	322
Printing and related support activities	323
Petroleum and coal products manufacturing	324
Chemical manufacturing	325
Plastics and rubber products manufacturing	326
Wholesale & retail trade	42, 44-45
Air transportation	481
Transit and ground passenger transportation	485
Scenic and sightseeing transportation; support activities	487-488
Publishing industries, except Internet	511
Motion picture and sound recording industries	512
Waste management and remediation services	562
Educational services	61
Ambulatory health care services	621
Hospitals	622
Nursing and residential care facilities	623
Accommodation	721
Repair and maintenance	811
Personal and laundry services	812

If these industries were allowed to grow as anticipated, they collectively would bring more than 1.86 million jobs, an increase of over 2.11 million people, and a gain of more than \$283 billion of gross regional product (GRP) to the local economy in 2030 (Table 4). These translate to increases in employment, population, and GRP by 16.1 percent, 9.7 percent, and 20.5 percent, respectively, as compared to the conditions without the proposed rule, under which it is assumed that this growth would not occur.

Table 4  
Annual Economic Impact of Proposed Rule (Compared to Without PR 1315)

Variable	2011	2014	2023	2030
Employment (thousands)	144	564	1,325	1,857
Population (thousands)	30	264	1,256	2,111
Gross Regional Product (billions of 2000\$)	\$18	\$70	\$183	\$283

The detailed employment impact by sector by year is presented in Table 5. The entire four-county area is projected to gain more than 1.33 million jobs in 2023 and 1.86 million jobs in 2030, respectively. The majority of jobs gained would be in the industries of manufacturing, wholesale and retail trade, and health care and social assistance where growth is most affected by PR 1315.

Table 5  
Annual Employment Impact of Proposed Rule by Sector by Year  
(Compared to Without PR 1315)

Total		144,025	563,944	1,325,400	1,857,331

## Forgone Air Quality Benefits

The forgone air quality benefits due to the proposed rule were estimated by scaling the estimated benefits from implementing the 2007 AQMP presented in the 2007 AQMP Socioeconomic Analysis. The benefit categories considered herein include morbidity and mortality, visibility, materials, and crops. The additional air quality benefits that could be achieved if PR 1315 were not adopted, beyond the benefits forecasted in the 2007 AQMO Socioeconomic Report, are projected to be valued at \$1.2 billion in 2030, 76 percent of which are health benefits, as shown in Table 6. The consequence of adopting PR 1315 is that additional health benefits would be forgone.

Table 6  
Annual Forgone Benefit by Category by Year (in millions of 2000 dollars)

Category	2014	2023	2030
Ozone Mortality	\$42.1	\$70.5	\$121.5
Ozone Morbidity	5.1	8.5	14.7
PM Mortality	198.0	516.0	750.0
PM Morbidity	13.3	34.0	49.1
Visibility	52.4	157.9	270.3
Materials	5.8	12.5	19.1
Crops	0.8	1.4	2.3
Total	\$317.5	\$800.8	\$1,227.0

Specifically, estimated concentrations of either ozone, PM<sub>2.5</sub> or both pollutants attributed to the proposed rule were calculated. The per incident values associated with mortality and morbidity presented in the 2007 AQMP Socioeconomic Analysis were directly applied to the number of cases of each health effect resulting from both PM<sub>2.5</sub> and ozone exposure provided in the Program Environmental Assessment. The estimated impact on crop yield was based on estimated ozone exposure from the proposed rule, which was then scaled to the differential average ozone exposure projected between the 2023 baseline and controlled emissions scenarios. An approximate \$0.9 million per part per billion ozone exposure to crops was used. A similar approach, projected visual range miles reduced from the proposed rule, was used to estimate the impact on visibility. The analysis was based on an approximate \$575 million per mile visual range. It was assumed that the impact on materials was proportional to exposure from both ozone and PM<sub>2.5</sub>. Specifically, a factor of \$3.1 million per part per billion ozone and \$53.4 million per microgram per cubic meter PM<sub>2.5</sub> were applied to the concentrations calculated for the proposed rule.

## CEQA ALTERNATIVES

Five alternatives to the proposed amendments have been identified in the Program Environmental Assessment prepared pursuant to the California Environmental Quality Act (CEQA). Alternative A is the No Project Alternative, which would not implement the proposed

rule. It is assumed that all new and modified sources that had access to the AQMD internal offset accounts would have to obtain ERCs from the open market. Otherwise, these sources would not be able to obtain permits from the AQMD and therefore would not be built or operated. Because sufficient ERCs are not likely to be available, Alternative A assumes no growth in the industries that receive permits under Rules 1304 and 1309.1.

Relative to PR 1315, Alternative B—Offset User Fees for Large Businesses—would require that large businesses under Rule 1304 pay for the use of offsets from the AQMD internal accounts. Alternative C—Large Businesses Prohibited from Accessing Rule 1304 Exemptions—would prohibit large businesses from accessing offsets under Rule 1304. Alternative D—Use of Credits Generated in 2009 and Beyond Only—would eliminate existing balances of the AQMD’s internal offset accounts, which would be funded only by credits generated beginning in 2009. Alternative E—Limited Offset Availability—would cap the emission increases at 50 percent of the 2007 AQMP allowable levels.

### Assessment Methodology

The socioeconomic analysis for the No Project Alternative assumed that there would be no growth after 2010 for the industries identified in Table 3. The production (output) of these industries after 2010 would be set at the 2010 level and future shutdown credits returning to the AQMD banks would not be allowed to be used. The result of these two effects is that AQMD would not be able to issue permits pursuant to Rules 1304 and 1309.1.

The socioeconomic impact analysis of Alternative B was conducted qualitatively relative to the proposed rule due to their similarities in requirements except for the offset user fee for large businesses.

Both Alternatives A and D have restricted growth to the 2010 level for the industries identified in Table 3. However, relative to Alternative A, future shutdown credits would be allowed to be used under Alternative D.

Alternatives C and E would allow more growth than Alternative A. The additional growth was assessed by multiplying the ratio of emission increases from each of Alternatives C and E to those from Alternative A by the forgone production for each industry identified in Table 3 because of Alternative A. The ratio was an average from three pollutants, VOC, SO<sub>x</sub>, and PM<sub>10</sub>. VOC emissions serve as a proxy for process-oriented sources, SO<sub>x</sub> for combustion sources, and PM<sub>10</sub> for sources with combustion and process characteristics. The average ratio was calculated for 2014, 2023, and 2030 and interpolated for interim years. Table 7 shows these ratios by alternative by year.

Table 7  
Ratio of Emission Reductions Forgone Relative to Alternative A

Alternative	2014	2023	2030
Alternative C	0.880	0.856	0.845
Alternative E	0.647	0.591	0.569

Increases in air quality benefits, beyond those forecasted in the 2007 AQMP Socioeconomic Report, associated with Alternatives A through E were conducted in the same manner as for the proposed rule.

### Assessment Results

As shown in Table 8, PR 1315 would restore job growth assumed in the 2007 AQMP. Relative to the condition without PR 1315, PR 1315 would result in growth of more than 1.8 million jobs in 2030. Another consequence of adopting PR 1315 is that additional air quality benefits (\$1.23 billion in 2030) would be forgone.

Table 8  
Impact of PR 1315 Relative to Without PR 1315

	Job Impacts				Benefits (in millions dollars)		
	2011	2014	2023	2030	2014	2023	2030
PR 1315	144,37002 <u>5</u>	564563,61894 <u>4</u>	1,327325,03140 <u>0</u>	1,859857,55033 <u>1</u>			
					-\$318	-\$801	-\$1,227

Table 9 shows a comparison of impacts of all the CEQA alternatives in terms of job impacts and air quality benefits. Alternatives A through E are projected to result in reduction in job growth compared to the baseline projections for the 2007 AQMP. Such reduction is expected to be the least for Alternative B because of its similarity to PR 1315. All the job growth resulting from PR 1315 would be lost under Alternative A, which would not implement PR 1315.

Limited growth from Alternatives A through E translates into fewer emission increases, thus benefiting air quality. Alternative A has the highest air quality benefit as it has the toughest limit on growth. Of the alternative B is projected to have the least air quality benefit.

#### *Alternative A*

The ability of affected sources to obtain offsets in the open market is very limited, based on the current and anticipated future offset availability in the market. This is because there would be few opportunities to generate offsets from new technologies beyond regulatory requirements in light of today's high control efficiency and implementation of the Best Available Control Technology (BACT).

Relative to baseline economic forecast for the 2007 AQMP, the No Project Alternative is projected to result in substantially lower growth in employment, population, and gross regional product. Specifically, in 2030 there would be over 1.86 million fewer jobs, a reduction of over 2.11 million people, and a loss of more than \$283 billion of GRP in 2030 compared to the baseline projections for the 2007 AQMP, which included conditions under PR 1315.

Table 9  
Impacts of CEQA Alternatives Relative to Baseline Economic Forecast of 2007 AQMP

Alternatives	Job Impacts				Benefits (in millions dollars)		
	2011	2014	2023	2030	2014	2023	2030
A	-144,370	-564,618	-1,327,031	-1,859,550	\$318	\$801	\$1,227
B	Slightly Less Than PR 1315				Similar to PR 1315		
C	-6,474	-162,132	-560,196	-897,174	\$27	\$103	\$170
D	-102,628	-407,403	-1,132,653	-1,680,027	\$175	\$616	\$994
E	-14,749	-268,751	-796,357	-1,210,786	\$88	\$306	\$497
Alternatives	Variables		2011	2014	2023	2030	
A	Employment		-144,025	-563,944	-1,325,400	-1,857,331	
	Population		-29,756	-263,945	-1,256,416	-2,111,000	
	GRP (billions 2000\$)		-\$18	-\$70	-\$183	-\$283	
	Benefit (millions 2000\$)		N/A	\$318	\$801	\$1,227	
B	Similar to PR 1315						
C	Employment		-6,474	-162,132	-560,196	-897,174	
	Population		-596	-68,219	-507,012	-972,449	
	GRP (billions 2000\$)		\$1	-\$4	-\$10	-\$21	
	Benefit (millions 2000\$)		N/A	\$27	\$103	\$170

	Population		-20,883	-193,041	-1,040,027	-1,850,154	
	GRP (billions 2000\$)		-\$14	-\$53	-\$160	-\$261	
	Benefit (millions 2000\$)		N/A	\$175	\$616	\$994	
E	Employment		-14,749	-268,751	-796,357	-1,210,786	
	Population		-2,340	-107,141	-721,191	-1,325,080	
	GRP (billions 2000\$)		<-\$1	-\$7	-\$64	-\$107	
	Benefit (millions 2000\$)		N/A	\$88	\$306	\$497	

### Alternative B

Alternative B would require that large businesses using offsets pay fees to the AQMD for the use of offsets from the AQMD internal accounts, resulting in the additional cost of doing business to these facilities. Large businesses with relatively small emissions (i.e., less than four tons of emissions) would have to pay offset fees. Offset fees would make expansion, new development, and modernization in the region more expensive. Alternatively, large businesses might decide to reduce the size of a project or pull a project completely. As a result, the projected growth under Alternative B would be less than under the proposed rule, but it is not possible to quantify the increment. The job impact of Alternative B would be closer to that of PR 1315 if few large businesses decide to pull back in light of offset costs.

### Alternative C

Large businesses would be prohibited from accessing offsets from Rules 1309.1 or 1304 under Alternative C. These businesses would have to acquire offsets in the open market or these

projects would not be built. There would be potential uncertainty on offset availability and prices. Or, large businesses would not pursue the planned investments. This report and the Program Environmental Assessment assume that, under Alternative C, there would be no growth of large businesses in the industries affected by PR 1315. Alternatives B and C bracket the range of potential outcomes if large businesses are charged fees for or denied access to the AQMD internal offset accounts. The actual outcome likely would not be at either end of the range, but the point within the range cannot be quantified.

#### *Alternative D*

Alternative D would allow only the use of internal offsets generated in 2009 and beyond. Offset balances prior to 2009 would be forfeited. As such, the internal offset access is more limited than Alternatives B and C for all businesses unless generation of offsets in the future increases to more than compensate for the loss of offset balances prior to 2009. However, significant control efficiency that we experience today along with the requirement that new sources implement the BACT means that the majority of future offsets would come from shutdowns, which would require verification. Additionally, shutdown credits would fluctuate from year to year. The resulting uncertainty under Alternative D would make it difficult for businesses to do long-range planning. The business impacts under Alternative D could be more severe in early years while the AQMD internal offset account balances are being built up.

#### *Alternative E*

Job reduction from Alternative E (compared to the baseline projections for the 2007 AQMP) is expected to be less severe than from Alternatives A and D but more severe than those from Alternatives B and C. As with Alternatives A through D, Alternative E would generate air quality benefits beyond the benefits identified in the 2007 AQMP due to the limited growth.

### **RULE ADOPTION RELATIVE TO THE COST EFFECTIVENESS SCHEDULE**

On October 14, 1994, the Governing Board adopted a resolution that requires staff to address whether rules being proposed for adoption are considered in the order of cost-effectiveness. The 2007 Air Quality Management Plan (AQMP) ranked, in the order of cost-effectiveness, all of the control measures for which costs were quantified. It is generally recommended that the most cost-effective actions be taken first. Proposed Rule 1315 is not a control measure in the 2007 AQMP. Therefore, implementation by cost-effectiveness does not apply.

## PREFACE

This document constitutes the Final Program Environmental Assessment (PEA) for proposed Rule 1315 – Federal New Source Review Tracking System. The Draft PEA was released and made available to the public on September 9, 2010 for a 45-day public review and comment period (the review and comment period was actually 48 days). At the request of the public, a 14-day extension of the comment period was granted resulting in a total comment period of 62 days. Six comment letters were received on the Draft PEA. Comment letters received and responses to all comments were prepared and are included in Appendix J of the Final PEA

To facilitate identifying modifications to the document, added text is included as underlined text and text removed from the document is indicated by ~~striketrough~~ text. Only minor modifications were made to the Final PEA. Further, no public comments were received that resulted in modifications to the Final PEA that alter any conclusions reached in the Draft EA or provide significant new information such as: a new significant environmental impact that would result from the project or from a new mitigation measure proposed to be implemented; or a substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance relative to the draft PEA. On December 8, 2010, a revised version of proposed Rule 1315 was made available for a 30-day review period. Revisions to proposed Rule 1315 were made to clarify the rule's requirements to ensure that the rule would operate as intended. SCAQMD staff's evaluation of these revisions concluded that the revisions would not result in any changes to the analysis in the PEA. Therefore, no provisions are triggered that would require recirculation of the document pursuant to CEQA Guidelines §15088.5. Therefore, this document constitutes the Final EA for Proposed Rule 1315 – Federal New Source Review Tracking System.

 <b>CHAPTER 2 – PROJECT DESCRIPTION</b>	
Project Location .....	2-1
Background .....	2-1
Project Description.....	2-12
Project Objectives .....	2-19
Permits and Approvals.....	2-20
Other Issues Relevant to Project Description .....	2-20
 <b>CHAPTER 3 – EXISTING SETTING</b>	
3.0 Introduction.....	3.0-1
3.1 Aesthetics	
Introduction.....	3.1-1
Environmental Setting .....	3.1-1
Regulatory Setting .....	3.1-10
3.2 Agricultural and Forestry Resources	
Introduction.....	3.2-1
Environmental Setting .....	3.2-1
Regulatory Setting .....	3.2-10

3.3	Air Quality, Visibility and Climate Change	
	Introduction.....	3.3-1
	Environmental Setting .....	3.3-1
	Regulatory Setting .....	3.3-20
	Visibility Environmental Setting .....	3.3-24
	Visibility Regulatory Setting .....	3.3-25
	Climate Change Environmental Setting.....	3.3-25
	Climate Change Regulatory Setting.....	3.3-30
3.4	Biological Resources	
	Introduction.....	3.4-1
	Environmental Setting .....	3.4-1
	Regulatory Setting .....	3.4-9
3.5	Cultural Resources	
	Introduction.....	3.5-1
	Environmental Setting .....	3.5-1
	Cultural History of SCAG Region.....	3.5-6
	Regulatory Setting .....	3.5-8
3.6	Energy	
	Introduction.....	3.6-1
	Environmental Setting .....	3.6-1
	Regulatory Setting .....	3.6-7
3.7	Geology and Soils	
	Introduction.....	3.7-1
	Environmental Setting .....	3.7-1
	Regulatory Setting .....	3.7-17
3.8	Hazards and Hazardous Materials	
	Introduction.....	3.8-1
	Environmental Setting .....	3.8-2
	Regulatory Setting .....	3.8-6
3.9	Hydrology/Water Quality	
	Introduction.....	3.9-1
	Environmental Setting .....	3.9-1
	Regulatory Setting .....	3.9-25
3.10	Land Use and Planning	
	Introduction.....	3.10-1
	Environmental Setting .....	3.10-1
	Regulatory Setting .....	3.10-8
3.11	Mineral Resources	
	Introduction.....	3.11-1
	Environmental Setting .....	3.11-1
	Regulatory Setting .....	3.11-5
3.12	Noise	
	Introduction.....	3.12-1
	Environmental Setting .....	3.12-1
	Regulatory Setting .....	3.12-8
3.13	Population and Housing	

	Introduction.....	3.13-1
	Environmental Setting .....	3.13-1
	Regulatory Setting .....	3.13-7
3.14	Public Services	
	Introduction.....	3.14-1
	Environmental Setting .....	3.14-1
	Regulatory Setting .....	3.14-5
3.15	Recreation	
	Introduction.....	3.15-1
	Environmental Setting .....	3.15-1
	Regulatory Setting .....	3.15-6
3.16	Solid/Hazardous Waste	
	Introduction.....	3.16-1
	Environmental Setting .....	3.16-1
	Regulatory Setting .....	3.16-4
3.17	Transportation/Traffic	
	Introduction.....	3.17-1
	Environmental Setting .....	3.17-1
	Regulatory Framework .....	3.17-6

**CHAPTER 4 – DIRECT ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES**

4.0	Methodology	
	Introduction.....	4.0-1
	Air Quality .....	4.0-2
	Mass Emissions of Criteria Pollutants.....	4.0-4
	Modeled Concentrations of Criteria Pollutant Emissions .....	4.0-11
	Health Effects of Criteria Pollutant Emissions and Toxic Air Contaminants.....	4.0-20
	Odors .....	4.0-24
	Visibility .....	4.0-24
	Climate Change.....	4.0-27
	Greenhouse Gas Emissions .....	4.0-27
4.1	Air Quality	
	Introduction.....	4.1-1
	Significance Criteria .....	4.1-1
	Air Quality .....	4.1-7
	Visibility Impacts.....	4.1-45
	Climate Change Impacts .....	4.1-48
	Indirect Impact Analysis - Construction and Mobile Source Emissions .....	4.1-54
	Summary of Overall Significance Determination of Direct and Indirect Air Quality Impacts.....	4.1-57
	Mitigation Measures .....	4.1-58

**CHAPTER 5 – INDIRECT ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES**

5.0	Methodology		
	Introduction.....	5.0-1	
	Methodology for Analysis of Environmental Impacts Related to Facility Construction and Operation.....	5.0-2	
	Existing and New Facilities .....	5.0-11	
	Mapping of Known Historic Permitted and Pending Facility Locations .....	5.0-13	
5.1	Aesthetics		
	Introduction.....	5.1-1	
	Impact Analysis .....	5.1-2	
5.2	Agricultural and Forestry Resources		
	Introduction.....	5.2-1	
	Impact Analysis .....	5.2-2	
5.3	Air Quality		
	Introduction.....	5.3-1	
	Impact Analysis .....	5.3-1	
5.4	Biological Resources		
	Introduction.....	5.4-1	
	Impact Analysis .....	5.4-2	
5.5	Cultural Resources		
	Introduction.....	5.5-1	
	Impact Analysis .....	5.5-2	
5.6	Energy		
	Introduction.....	5.6-1	
	Impact Analysis .....	5.6-2	
5.7	Geology and Soils		
	Introduction.....	5.7-1	
	Impact Analysis .....	5.7-2	
5.8	Hazards and Hazardous Materials		
	Introduction.....	5.8-1	
	Impact Analysis .....	5.8-2	
5.9	Hydrology and Water Quality		
	Introduction.....	5.9-1	
	Impact Analysis .....	5.9-2	
5.10	Land Use and Planning		
	Introduction.....	5.10-1	
	Impact Analysis .....	5.10-2	
5.11	Mineral Resources		
	Introduction.....	5.11-1	
	Impact Analysis .....	5.11-2	
5.12	Noise		
	Introduction.....	5.12-1	
	Impact Analysis .....	5.12-2	
5.13	Population and Housing		

	Introduction.....	5.13-1
	Impact Analysis .....	5.13-2
5.14	Public Services	
	Introduction.....	5.14-1
	Impact Analysis .....	5.14-2
5.15	Recreation	
	Introduction.....	5.15-1
	Impact Analysis .....	5.15-1
5.16	Solid/Hazardous Wastes	
	Introduction.....	5.16-1
	Impact Analysis .....	5.16-2
5.17	Transportation/Traffic	
	Introduction.....	5.17-1
	Impact Analysis .....	5.17-2
5.18	Consistency .....	5-18-1

**CHAPTER 6 – ALTERNATIVES -- DIRECT AND INDIRECT AIR QUALITY, VISIBILITY, AND GREENHOUSE GAS IMPACTS**

	Introduction.....	6-1
	Alternatives Rejected as Infeasible.....	6-1
	Prohibit the Use of Offsets from Shutdowns or Reductions at Minor Sources to Demonstrate Equivalency with Federal Offset Requirements .....	6-2
	Prohibit the Use of Any Credits Not Previously Recognized Prior to Adoption of Rule.....	6-2
	Fossil Fueled Power Plant Project Alternative .....	6-3
	Other Project Alternatives Suggested by the Superior Court .....	6-5
	Issue Offsets to Priority Projects First .....	6-5
	Description of Project Alternatives.....	6-6
	Summary of the Proposed Project.....	6-6
	Alternative A - No Project Alternative .....	6-15
	Alternative B – Offset User Fees for Large Businesses .....	6-17
	Alternative C – Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	6-22
	Alternative D – Use of Credits Generated in 2009 and Beyond Only.....	6-23
	Alternative E – Limited Offset Availability .....	6-24
	Evaluation of the Comparative Effects of the Project Alternatives .....	6-25
	Alternative A - No Project Alternative .....	6-26
	Alternative B - Offset User Fees for Large Businesses .....	6-38
	Alternative C - Alternative C- Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	6-65
	Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	6-89
	Alternative E – Limited Offset Availability .....	6-113
	Least Toxic Alternative.....	6-140
	Conclusion and Environmentally Superior Alternative.....	6-141

**CHAPTER 7 – ALTERNATIVES – INDIRECT IMPACTS**

Introduction.....	7-1
Alternatives Rejected as Infeasible.....	7-1
Description of Project Alternatives.....	7-1
Evaluation of the Comparative Effects of the Project Alternatives.....	7-10
Aesthetics	
Proposed Project.....	7-28
Alternative A - No Project Alternative.....	7-30
Alternative B - Offset User Fees for Large Businesses.....	7-32
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions.....	7-40
Alternative D - Use of Credits Generated in 2009 and Beyond Only.....	7-43
Alternative E - Limited Offset Availability.....	7-46
Agricultural and Forestry Resources	
Proposed Project.....	7-49
Alternative A - No Project Alternative.....	7-51
Alternative B - Offset User Fees for Large Businesses.....	7-54
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions.....	7-58
Alternative D - Use of Credits Generated in 2009 and Beyond Only.....	7-61
Alternative E - Limited Offset Availability.....	7-64
Air Quality	
Biological Resources	
Proposed Project.....	7-68
Alternative A - No Project Alternative.....	7-71
Alternative B - Offset User Fees for Large Businesses.....	7-74
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions.....	7-78
Alternative D - Use of Credits Generated in 2009 and Beyond Only.....	7-82
Alternative E - Limited Offset Availability.....	7-87
Cultural Resources	
Proposed Project.....	7-91
Alternative A - No Project Alternative.....	7-93
Alternative B - Offset User Fees for Large Businesses.....	7-95
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions.....	7-98
Alternative D - Use of Credits Generated in 2009 and Beyond Only.....	7-101
Alternative E - Limited Offset Availability.....	7-103
Energy	
Proposed Project.....	7-106
Alternative A - No Project Alternative.....	7-108
Alternative B - Offset User Fees for Large Businesses.....	7-111
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions.....	7-114
Alternative D - Use of Credits Generated in 2009 and Beyond Only.....	7-117

Alternative E - Limited Offset Availability .....	7-120
Geology Soils	
Proposed Project .....	7-123
Alternative A - No Project Alternative .....	7-125
Alternative B - Offset User Fees for Large Businesses .....	7-129
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	7-132
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-135
Alternative E - Limited Offset Availability .....	7-139
Hazards and Hazardous Materials	
Proposed Project .....	7-142
Alternative A - No Project Alternative .....	7-146
Alternative B - Offset User Fees for Large Businesses .....	7-154
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	7-162
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-168
Alternative E - Limited Offset Availability .....	7-175
Hydrology and Water Quality	
Proposed Project .....	7-182
Alternative A - No Project Alternative .....	7-187
Alternative B - Offset User Fees for Large Businesses .....	7-197
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	7-208
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-217
Alternative E - Limited Offset Availability .....	7-228
Land Use and Planning	
Proposed Project .....	7-238
Alternative A - No Project Alternative .....	7-240
Alternative B - Offset User Fees for Large Businesses .....	7-242
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	7-244
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-246
Alternative E - Limited Offset Availability .....	7-249
Mineral Resources	
Proposed Project .....	7-251
Alternative A - No Project Alternative .....	7-252
Alternative B - Offset User Fees for Large Businesses .....	7-254
Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions .....	7-255
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-256
Alternative E - Limited Offset Availability .....	7-258
Noise	
Proposed Project .....	7-259
Alternative A - No Project Alternative .....	7-262
Alternative B - Offset User Fees for Large Businesses .....	7-266
Alternative C - Large Businesses Prohibited from Accessing Rule 1304	

Exemptions .....	7-270
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-274
Alternative E - Limited Offset Availability .....	7-278
Population and Housing	
Proposed Project .....	7-283
Alternative A - No Project Alternative .....	7-284
Alternative B - Offset User Fees for Large Businesses .....	7-286
Alternative C - Large Business Prohibited from Accessing Rule 1304	
Exemptions .....	7-288
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-290
Alternative E - Limited Offset Availability .....	7-292
Public Services	
Proposed Project .....	7-294
Alternative A - No Project Alternative .....	7-296
Alternative B - Offset User Fees for Large Businesses .....	7-303
Alternative C - Large Businesses Prohibited from Accessing Rule 1304	
Exemptions .....	7-306
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-309
Alternative E - Limited Offset Availability .....	7-312
Recreation	
Proposed Project .....	7-316
Alternative A - No Project Alternative .....	7-317
Alternative B - Offset User Fees for Large Businesses .....	7-319
Alternative C - Large Businesses Prohibited from Accessing Rule 1304	
Exemptions .....	7-320
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-322
Alternative E - Limited Offset Availability .....	7-323
Solid/Hazardous Wastes	
Proposed Project .....	7-325
Alternative A - No Project Alternative .....	7-326
Alternative B - Offset User Fees for Large Businesses .....	7-329
Alternative C - Large Businesses Prohibited from Accessing Rule 1304	
Exemptions .....	7-330
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-332
Alternative E - Limited Offset Availability .....	7-333
Transportation/Traffic	
Proposed Project .....	7-334
Alternative A - No Project Alternative .....	7-337
Alternative B - Offset User Fees for Large Businesses .....	7-346
Alternative C - Large Businesses Prohibited from Accessing Rule 1304	
Exemptions .....	7-351
Alternative D - Use of Credits Generated in 2009 and Beyond Only .....	7-355
Alternative E - Limited Offset Availability .....	7-360

**CHAPTER 8 – RESPONSES TO THE COURT’S DECISION ON AMENDED RULE 1309.2 AND RULE 1315**

Introduction..... 8.0-1  
 Summary of Court’s Decision ..... 8.0-1  
     Project Description..... 8.0-1  
     Health Effects..... 8.0-3  
     Aesthetic Impacts..... 8.0-4  
     Greenhouse Gases..... 8.0-5  
 Scope of Emissions Attributed To the Proposed Project ..... 8.0-6  
     Historic Use of Credits in SCAQMD Internal Accounts..... 8.0-7  
     Impact Analysis Assuming Full Use of Credits (Maximum Use Scenario) ... 8.0-11

**CHAPTER 9 - ACRONYMS**

Acronyms ..... 9-1

**CHAPTER 10 - REFERENCES**

References ..... 10-1

**CHAPTER 11 – LIST OF PREPARERS**

Preparers ..... 11-1

**APPENDICES:**

Appendix A: Proposed Rule 1315  
 Appendix B: Notice of Preparation/Initial Study; Comments Received on the NOP/Initial Study and Responses to the Comments  
 Appendix C: Air Quality Analysis for SCAQMD Proposed Rule 1315  
 Appendix D: Greenhouse Gas Emissions Analysis  
 Appendix E: Historic Permit Data and NAICS Code Categorization  
 Appendix F: Primary Facility Categories Location Maps  
 Appendix G: **(Appendix G has been withdrawn)**  
 Appendix H: Facilities Affected by Permit Moratorium  
 Appendix I: Modeling Files **(Available Only Upon Request)**  
 Appendix J: Comments on the Draft PEA and Responses to Comments

**FIGURES:**

Figure 2-1 South Coast Air Quality Management District Boundaries..... 2-2  
 Figure 3.3-1 Southern California Air Basins within the SCAQMD..... 3.3-2  
 Figure 3.3-2 General Forecast and Air Monitoring Areas..... 3.3-7  
 Figure 3.3-3 2005 Annual Baseline Visibility ..... 3.3-24  
 Figure 3.7-1 Geomorphic Provinces within SCAQMD ..... 3.7-2

## **INTRODUCTION AND SUMMARY**

**Introduction**

**Project Objectives**

**Legislative Authority**

**California Environmental Quality Act**

**Intended Uses of this Document**

**Areas of Controversy**

**Executive Summary**

**Document Format**

## INTRODUCTION

The South Coast Air Quality Management District (SCAQMD) has prepared this Program Environmental Assessment (PEA) for the re-adoption of proposed Rule 1315 – Federal New Source Review Tracking System, with modifications. Proposed Rule 1315 would codify SCAQMD procedures for establishing equivalency under federal New Source Review requirements. Equivalency means that the SCAQMD provides sufficient offsets from its internal offset accounts to cover the emission increases from new or modified sources that are exempt from offsets under SCAQMD rules or that obtain credits from the Priority Reserve, but are subject to offset requirements under federal law. The USEPA has asked that the SCAQMD adopt a tracking rule to demonstrate equivalency with federal offset requirements. Proposed Rule 1315 would ensure that exempt sources under Rule 1304 and essential public services and other projects that qualify for Priority Reserve offsets under Rule 1309.1 are fully offset to the extent required by federal law, using valid emission reductions from the SCAQMD’s internal offset accounts.

Proposed Rule 1315 would also specify what types of emissions reductions are eligible to be deposited into the SCAQMD’s internal offset accounts, including newly-tracked reductions. “Newly tracked” emissions reductions are reductions that had not been historically tracked until the adoption of a prior version of Rule 1315 in 2006.

## PROJECT OBJECTIVES

The objectives of the proposed project include the following:

First, to maintain the SCAQMD’s ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1. SCAQMD’s policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and socioeconomic benefits as well as environmental and socioeconomic impacts.

Second, to memorialize in rule form the accounting procedures the SCAQMD uses to establish equivalency of SCAQMD’s New Source Review program with federal offset requirements, and ensure that valid offsets are projected to be available in SCAQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset.

Third, to recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate federal equivalency

for major sources that are exempt under Rule 1304 or that are allocated credits from the Priority Reserve under Rule 1309.1.

## LEGISLATIVE AUTHORITY

The California Legislature created the SCAQMD in 1977<sup>1</sup> as the agency responsible for developing and enforcing air pollution control rules and regulations in the South Coast Air Basin (Basin) and portions of the Salton Sea Air Basin and Mojave Desert Air Basin, (this geographic area is referred to hereinafter as the district). The political and geographical boundaries of the district are described in greater detail in the discussion of the project location (below). By statute, the SCAQMD is required to adopt an air quality management plan (AQMP) to achieve and maintain compliance with all federal and state ambient air quality standards for the district<sup>2</sup>. Furthermore, the SCAQMD must adopt rules and regulations that carry out the AQMP<sup>3</sup>. As part of the strategy to achieve ambient air quality standards, federal and state laws require the development and implementation of air quality permitting programs, commonly known as New Source Review (NSR) programs for nonattainment pollutants. Local NSR programs must, at a minimum, comply with the requirements established pursuant to federal and state law. The general requirements of NSR programs include: (1) pre-construction review; (2) installing best available control technology (BACT)<sup>4</sup>; and (3) mitigating emission increases by providing emission offsets, where required.

## CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

Proposed Rule 1315 comprises a "project" as defined by CEQA (Cal. Public Resources Code §21000, *et. seq.*). The SCAQMD is the lead agency for the proposed project and has prepared an appropriate environmental analysis pursuant to its certified regulatory program under California Public Resources Code §21080.5. That statute allows public agencies with certified regulatory programs to prepare a plan or other written document that is the functional equivalent of an environmental impact report once the Secretary of the Resources Agency has certified the regulatory program. The SCAQMD's regulatory program was certified by the Secretary of the Resources Agency on March 1, 1989, and is codified as SCAQMD Rule 110.

SCAQMD staff previously prepared an initial study (IS) and concluded that an EIR or EIR-equivalent CEQA document was warranted. The IS, along with a Notice of Preparation (NOP), was circulated for a 30-day public review period to solicit comments from public

---

<sup>1</sup> The Lewis-Presley Air Quality Management Act, 1976 Cal. Stats., Ch 324 (codified at Cal. Health & Safety Code, §§ 40400-40540).

<sup>2</sup> Cal. Health & Safety Code, § 40460 (a).

<sup>3</sup> Cal. Health & Safety Code, § 40440 (a).

<sup>4</sup> California BACT is comparable to federal lowest achievable emission rate (LAER; Health and Safety Code §40405).

agencies and the public in general, on potential impacts from the proposed project. Two comment letters were received by the SCAQMD during the public comment period on the NOP/IS. Responses to comments received during the public comment period on the NOP/IS are included in Appendix B of this PEA.

CEQA requires that potential adverse environmental impacts of proposed projects be evaluated and that feasible methods to reduce or avoid significant adverse environmental impacts of these projects be identified. To fulfill the purpose and intent of CEQA, the SCAQMD has prepared this PEA, which identifies potentially significant adverse direct and indirect environmental impacts associated with adopting and implementing proposed Rule 1315. Proposed Rule 1315 would not authorize any particular sources to be permitted and operated. However, adoption of proposed Rule 1315 would enable the SCAQMD to continue issuing permits for exempt sources under Rule 1304 and for essential public services and other projects that qualify for priority reserve offsets under Rule 1309.1. Rule 1315 will remain in effect through 2030. This PEA accordingly provides an overall analysis of the direct and indirect impacts of sources expected to receive permits under Rule 1304 and Rule 1309.1 through 2030.

It is expected that individual future projects that apply for permits from the SCAQMD under Rule 1304 or 1309.1 will undergo a project-specific CEQA review in connection with their permit applications.

## **INTENDED USES OF THIS DOCUMENT**

In general, a CEQA document is an informational document that informs a public agency's decision-makers and the public generally of potentially significant environmental effects of a project, identifies possible ways to avoid or minimize the significant effects, and describes reasonable alternatives to the project (CEQA Guidelines §15121). A public agency's decision-makers must consider the information in a CEQA document prior to making a decision on the project. Accordingly, this ~~Draft PEA~~Final PEA is intended to: (a) provide the SCAQMD Governing Board and the public with information on the environmental effects of the proposed project; and, (b) be used as a tool by the SCAQMD Governing Board to facilitate decision making on the proposed project.

## **AREAS OF CONTROVERSY**

In accordance with CEQA Guidelines §15123(b)(2), the areas of controversy known to the lead agency, including issues raised by agencies and the public, shall be identified in the CEQA document. The following discussion identifies the areas of controversy that have been raised relating to proposed Rule 1315.

The SCAQMD is proposing to readopt proposed Rule 1315, with modifications, as a result of a court ruling that set aside a former version of Rule 1315 and an amendment to Rule 1309.1 (which would have allowed electric generating facilities temporary access to the SCAQMD's internal offset accounts) based on a determination by the court that the CEQA review SCAQMD had prepared was legally inadequate in several respects. In that ruling,

the Los Angeles County Superior Court issued a writ of mandate ordering the SCAQMD to, *inter alia*, set aside its August 2007 adoption of Rule 1315 and the amendment to Rule 1309.1 (“the 2007 Project”). The Court also issued an order that enjoined the SCAQMD from undertaking any actions to implement the 2007 Project pending CEQA compliance. In response to the Court’s decision, on January 8, 2010, the SCAQMD repealed the 2007 amendments to Rule 1309.1, as well as the 2007 adopted version of Rule 1315.

A key area of controversy in the litigation was the amendment to Rule 1309.1, which gave electric generating facilities temporary access to offsets in SCAQMD’s internal accounts. The SCAQMD does not intend to pursue re-adopting amendments to Rule 1309.1 that would allow electric generating facilities access to internal offsets in the SCAQMD’s internal offset accounts. Other areas of controversy raised in the litigation related to the overall effect of Rule 1315 on air emissions and the impacts of those emissions, including impacts on health, visibility and greenhouse gas emissions. These issues are addressed in detail in this PEA.

## **EXECUTIVE SUMMARY**

The following sections provide summaries of the contents of this PEA.

### **Executive Summary – Chapter 2: Project Description**

The proposed project would occur within the SCAQMD’s area of jurisdiction, which covers an area of 10,473 square miles, consisting of the four-county South Coast Air Basin (Basin) and the Riverside County portions of the Salton Sea Air Basin and the Mojave Desert Air Basin. The Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties.

Proposed Rule 1315 would ensure that exempt sources under Rule 1304 and essential public services and other projects that qualify for Priority Reserve offsets under Rule 1309.1 are fully offset to the extent required by federal law by valid emission reductions from the SCAQMD’s internal offset accounts. The proposed rule would achieve this by specifying what types of reductions are eligible to be credited as offsets to SCAQMD’s internal accounts and how those reductions are tracked. The proposed rule would provide for the use of certain types of offsets that, prior to the initial adoption of Rule 1315 in 2006, had not been accounted for in the SCAQMD’s federal tracking system. In addition, the proposed rule provides for annual demonstrations of equivalency with federal offset requirements. The proposed rule would require debits from the SCAQMD’s internal accounts for emissions offsets allocated from the Priority Reserve under Rule 1309.1 and for increased emissions from sources permitted under exemptions from the offset requirements under Rule 1304.

Proposed Rule 1315 provides for offsets to be credited to the SCAQMD’s internal accounts for: (1) orphan shutdowns and orphan reductions, including from minor federal sources as defined under federal law; (2) ERCs provided as emissions offsets for sources located at federal minor facilities; (3) the difference between the quantity of ERCs provided for a source located at a major polluting facility at a 1.2-to-1.0 ratio and quantity of ERCs

required to offset emissions at a 1:0-to-1:0 ratio; (4) return of offsets originally obtained from the SCAQMD, including Community Bank allocations; and (5) the difference between the reduction in daily emissions that is actually achieved and the reduction in daily emissions as calculated with the BACT adjustment when a facility reduces emissions and applies for an ERC. For offsets resulting from orphan shutdowns or reductions, credit is taken for eighty percent of the permitted emission levels.

Proposed Rule 1315 provides for an overall cumulative annual cap, for each pollutant, on the amount of offsets that are available to be used from the SCAQMD's internal offset accounts. If the cap is exceeded for any pollutant in a given year, proposed Rule 1315 would bar the issuance of permits for individual projects that require offsets from the SCAQMD's internal offset accounts until consistency with the cap is restored. The cumulative annual caps are established based upon the growth assumptions in the approved 2007 Air Quality Management Plan through December of 2010 and each subsequent year through 2030 for industries that potentially would obtain permits under Rules 1304 (exemptions) and 1309.1 (Priority Reserve).

### **Executive Summary – Chapter 3: Environmental Settings**

The Subchapters in Chapter 3 describe the existing setting for each environmental topic area evaluated in the PEA to determine whether or not the proposed project could generate significant adverse impacts. Each Subchapter in Chapter 3 is devoted to a description of the setting relevant to each environmental topic area.

### **Executive Summary – Chapter 4: Direct Environmental Impacts and Mitigation Measures**

#### **Subchapter 4.0 - Methodology**

This subchapter describes the methodology used to quantify the potential adverse air quality, visibility and greenhouse gas impacts resulting from the proposed project.

- *Baseline*

Because the project will be carried out over the next twenty years, a “future” baseline is appropriate for assessing the project's emissions-related effects. Sources relying on the SCAQMD's internal offset accounts make up a portion of the regional growth analyzed in the 2007 AQMP. During this twenty-year time frame, the 2007 AQMP forecasts that the total amount of regional emissions of all pollutants will be dropping substantially, due to the effect of pollution control rules and regulations adopted by SCAQMD, EPA, and CARB. The overall reduction in emissions from these regulatory controls will be greater than the increase in emissions associated with regional growth. The PEA therefore compares forecasts of future emissions with the proposed project in place to forecasts of future emissions without the proposed project. The analysis assumes that if the project were not approved, a portion of the regional growth projected in the AQMP would not occur and future regional emissions without the project would be lower than they would be with the project.

- *Analysis Years*

The air quality analysis is presented for the years in which emission reductions are required to be in place in order for the Basin to attain the NAAQS, as well as for the project end year of 2030. The years modeled are 2014 for a 2015 PM<sub>2.5</sub> attainment date, 2023 for a 2024 ozone attainment date, and 2030 for the project end date.

- *Mass Emissions of Criteria Pollutants –Project*

For criteria pollutants, the analysis of project impacts was performed by first determining the total quantities of future emissions of each criteria pollutant that are expected to occur under the proposed project. Next, staff determined the future emissions of each criteria pollutant under future conditions without the project. The incremental difference between emissions under project conditions and emissions without the project was used to quantify and assess project impacts in terms of mass emissions of criteria pollutants.

- *Mass Emissions of Criteria Pollutants – Cumulative*

For this analysis, cumulative impacts associated with emissions of criteria pollutants are assessed in two ways. First, emissions from other sources approved pursuant to permits that have relied or foreseeably may rely on SCAQMD internal account offsets are quantified and added to the incremental project emissions to assess the combined effect of all sources relying on the SCAQMD internal account offsets. This analysis includes emissions from sources approved under prior versions of Rule 1315, SB 827 and the emissions from power plants approved pursuant to state legislation requiring use of the SCAQMD internal offset accounts. Second, the analysis of cumulative impacts also assesses the impacts under the proposed project in the context of all emissions forecasted in the 2007 AQMP.

- *Modeled Concentrations of Regional Criteria Pollutant Emissions - Project*

After quantifying the incremental difference in mass emissions of each criteria pollutant under the project and without project conditions, SCAQMD staff then used air quality modeling to determine the resulting changes in concentration levels (micrograms per cubic meter for PM<sub>2.5</sub> and PM<sub>10</sub>, and parts per billion (ppb) for ozone) for the three primary criteria pollutants: ozone, PM<sub>2.5</sub> and PM<sub>10</sub> in both the Basin and Coachella Valley. The modeling used the same methods as were used in the 2007 AQMP. SO<sub>2</sub>, NO<sub>2</sub> and CO concentrations were estimated using an emissions weighted approach that linearly relates changes in emissions to expected changes in ambient air quality. Lead emissions were projected based on reported data and growth projected in the 2007 AQMP.

- *Modeled Concentrations of Regional Criteria Pollutant Emissions- Cumulative*

The emissions associated with the cumulative conditions are modeled to determine the concentrations of pollutants resulting from the combination of sources obtaining permits in reliance on offsets in the SCAQMD internal offset accounts.

- *Modeled Concentrations of Localized Criteria Pollutant Emissions*

Because the specific attributes of sources that may be permitted under the project are not known, the evaluation of localized concentrations is made on the basis of air dispersion modeling of emissions from recently permitted sources. This analysis is intended to provide an estimate of the potential impacts on localized concentrations of criteria pollutants in the vicinity of individual facilities as a result of future permits issued under the proposed project. This approach treats previously-permitted sources as representative of the types of individual sources and air pollutants emitted by sources that would be permitted in the future under the proposed project.

- *Health Effects of Criteria Pollutant Emissions - Project*

The analysis of criteria pollutant health effects compares the forecasted health benefits under the proposed project to the greater health benefits anticipated if the project were not approved, in order to quantify the incremental difference. The differences between regional health benefits under the proposed project and under without project conditions are calculated for PM<sub>2.5</sub> and ozone using the methodology developed for the Final Socioeconomic Report for the 2007 AQMP. Even with the proposed project, health impacts will be reduced greatly in the future, as projected in the Socioeconomic Report for the 2007 AQMP.

- *Health Effects of Criteria Pollutant Emissions - Cumulative*

Similar to the health effects analysis for the proposed project, the cumulative impacts analysis relies on the methodology used in the Final Socioeconomic Report for the 2007 AQMP. In this case, the incremental health effects of the proposed project together with the other permits issued in reliance upon the SCAQMD internal account offsets are quantified.

- *Health Effects of Toxic Air Contaminants - Project*

Due to future control measures, air pollutants are expected to decrease, resulting in decreased health effects from toxic air contaminants. However, the impacts of the project are compared to conditions without the project. The proposed project's incremental contribution to future regional health risks from toxic air contaminants are estimated using the MATES-III modeling methodology and the methodology developed for the 2010 Draft Clean Communities Plan.

The metric used to estimate the cancer risk impacts in the PEA is the change in overall population-weighted inhalation cancer risks between the conditions with and without the project. The total inhalation cancer risk is the summation of the products of the population-weighted average pollutant concentrations and their corresponding inhalation unit risk factors. In addition, regional changes in cancer burden (projected number of cancer cases) are evaluated.

The population weighted non-cancer chronic hazard index is calculated similarly. The total population-weighted non-cancer chronic hazard index is the summation of the ratios of

population-weighted average pollutant concentrations to its chronic reference exposure level (REL). The acute hazard index is the summation of the ratios of peak hourly pollutant concentrations to its acute reference exposure level. The metric used to estimate the non-cancer chronic and acute impacts in the PEA is the change in overall population-weighted chronic hazard index between the conditions with and without the project.

- *Health Effects of Toxic Air Contaminants - Cumulative*

The same methodology used to assess health effects of Toxic Air Contaminants associated with the project is used to assess the toxic air contaminant emissions from the other sources with permits issued in reliance on Rules 1304 and 1309.1.

- *Localized Concentrations of Toxic Air Contaminants*

In addition to contributing to region-wide health risk, sources emitting toxic air contaminants have the potential to result in localized concentrations of toxic air contaminants that exceed the SCAQMD significance thresholds. A qualitative discussion of localized concentrations of toxic air contaminants is included in the analysis.

- *Odors*

The potential for the proposed project to result in significant odors is assessed qualitatively based upon the attributes of sources permitted under Rules 1304 and 1309.1 and applicable SCAQMD rules.

- *Visibility – Project and Cumulative*

To evaluate the visibility effects of the proposed project, air pollution modeling results are used to calculate the potential for visual range reduction, measured in light extinction and miles, and also translated into “deciviews.” While the deciview calculation does not directly measure changes in color, such as the brown sky that can be caused by photochemical smog, it captures these effects by incorporating reductions of light absorbing particulates and gases (elemental carbon and NO<sub>2</sub>) and the scattering effects of particulate mass into the evaluation. The cumulative impacts analysis relies on the same methodology as is used to evaluate project effects -- in this case, the incremental effects on visibility of the proposed project, plus the emissions from the other permits issued in reliance upon the SCAQMD internal account offsets.

- *Climate Change - Project*

For greenhouse gas emissions, the analysis in this PEA uses one methodology to calculate CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions, and a second methodology to calculate HFCs, PFC, and SF<sub>6</sub>. First, an analysis of emissions data from the 2007 AQMP focuses on directly emitted CO<sub>2</sub>, N<sub>2</sub>O, and CH<sub>4</sub> emissions because these are the primary GHG pollutants emitted during combustion processes. SO<sub>x</sub> emissions were selected as a surrogate to prorate the GHG emissions because SO<sub>x</sub> emissions result primarily from sulfur contained in fossil fuels and this correlates to GHGs emitted from combustion of fossil fuels. Second, an analysis of

the statewide GHG inventory is conducted to determine the quantities of the remaining GHG pollutants attributed to the project — HFCs, PFCs and SF6.

- *Climate Change - Cumulative*

Cumulative impacts are determined by combining GHGs attributed to the proposed project with other permits relying on the SCAQMD internal offset accounts.

#### **Subchapter 4.1 - Environmental Impacts and Mitigation Measures**

Based on the methodology in subchapter 4.0, subchapter 4.1 evaluates the air quality impacts resulting from the proposed project. This subchapter first describes the significance criteria used to assess whether the air quality impacts from the proposed project are significant. It then provides an impact assessment based on those criteria. This assessment includes direct and indirect, as well as cumulative, impacts. The subchapter concludes with a discussion of mitigation measures.

- *Conflict with AQMP*

Emissions from regional growth in the industry sectors that are eligible for permits issued in reliance upon SCAQMD internal account offsets are a component of the emissions forecasted in the 2007 AQMP and are accounted for in the 2007 AQMP. For that reason, the proposed project would not conflict with or obstruct the implementation of the AQMP.

- *Mass Emissions of Criteria Pollutants –Project*

Emissions attributed to the proposed project are based on the projections in the 2007 AQMP for the industry sectors that could be eligible for permits under Rules 1304 and 1309.1, with a 15 percent factor added to ensure reasonable worst case emissions are captured. In addition, emissions attributed to the project include emissions represented by shutdowns of stationary sources that have obtained offsets from SCAQMD internal offset accounts, which would be replaced under the proposed project but not under the without project scenario.

The stationary source emissions attributable to the proposed project are considered to result in a significant air quality impact because the emissions will exceed the applicable operational significance threshold for each of the following criteria pollutants: VOC, NO<sub>x</sub>, SO<sub>x</sub>, CO, PM<sub>10</sub> and PM<sub>2.5</sub>. Table 1-2, located at the end of this chapter, identifies the mass emissions of each of these pollutants from the proposed project.

The net increase of lead emissions attributed to the project would be less than the CEQA significance threshold of three pounds per day so project lead impacts are not significant.

- *Mass Emissions of Criteria Pollutants –Cumulative*

The cumulative emissions from permitted sources receiving offsets from SCAQMD internal offsets accounts include the emissions from the proposed project, plus emissions from sources permitted since 2006 under the prior version of Rule 1315 and under state

legislation, SB 827, through May 1, 2012. The cumulative impact analysis also includes emissions from three power plant projects. As explained in Chapter 2, these three power plants are considered probable foreseeable future projects that could contribute to cumulative impacts. The three projects have been evaluated by the California Energy Commission (CEC), the CEQA lead agency for the projects. Because the cumulative emissions of VOC, NO<sub>x</sub>, SO<sub>x</sub>, CO, PM<sub>2.5</sub> and PM<sub>10</sub> exceed the SCAQMD's significance thresholds, the cumulative impact is significant and the project's contribution is cumulatively considerable. Cumulative lead emissions do not exceed the applicable significance threshold.

In the larger context of all emissions forecasted in the 2007 AQMP from all sources, project VOC emissions would be less than ten percent of the total regional VOC emissions, about 6/10ths of one percent of the total regional NO<sub>x</sub> emissions, one percent of the total regional SO<sub>x</sub> emissions, and slightly over one percent of the total regional PM<sub>10</sub> emissions. The impacts under the proposed project are considered cumulatively considerable, and therefore significant, even though emissions attributed to the project represent a fraction of the cumulative future regional emissions projected in the 2007 AQMP.

- *Modeled Concentrations of Regional Criteria Pollutant Emissions – Project*

The PEA supplements the analysis of mass emissions of criteria pollutants by identifying the project's contributions to regional concentrations of these same pollutants. No new threshold is applied to assess the regional concentrations of pollutants.

Ozone and Particulate Matter. The estimates in the 2007 AQMP include emissions from future projected cumulative growth throughout the region. As a result, it is not anticipated that the emissions attributed to the proposed project would interfere with attainment of the 80 ppb federal ozone standard as demonstrated in the 2007 AQMP.

In the future, additional emissions reduction measures will be needed beyond the control measures identified in the 2007 AQMP in order to reduce ambient ozone levels to achieve attainment of the 75 ppb federal ozone standard adopted in 2008 and the California 1-hour and 8-hour ozone standards (90 ppb and 70 ppb, respectively). It cannot be ascertained precisely when these standards will be attained. The 2007 AQMP projects attainment in the Basin and Coachella Valley will not occur until after 2024.

The proposed project also would not interfere with the attainment demonstrations made in connection with the 2007 AQMP and the 2010 PM<sub>10</sub> maintenance plans—specifically, the continued attainment of the NAAQS for PM<sub>10</sub>; continued attainment of the 24-hour NAAQS for PM<sub>2.5</sub> of 65 µg/m<sup>3</sup>, and the Basin's attainment by 2015 of the annual NAAQS for PM<sub>2.5</sub> of 15 µg/m<sup>3</sup>.

It is possible that, without the project, attainment of the ozone and particulate matter NAAQS and CAAQS could occur at an earlier date than under the conditions with the proposed project. However, for several reasons, it cannot be determined whether the without project scenario would in fact achieve attainment at an earlier date than under the proposed project, and if so when. These reasons include the long-term nature of the control

measures needed to reduce ozone and PM levels; and the relatively small amount that the project would contribute to ozone concentrations (from 0.5 to 2.9 ppb), PM<sub>2.5</sub> concentrations (from 0.01 to 1.6 µg/m<sup>3</sup>) and PM<sub>10</sub> (from 0.01 to 2.5 µg/m<sup>3</sup>).

SO<sub>2</sub> and NO<sub>2</sub>. The reductions in SO<sub>2</sub> concentrations under the without project scenario likely would not make any difference in the attainment designation for this pollutant, as compared to future conditions with the proposed project.

With respect to NO<sub>2</sub>, the Basin is in compliance with the annual NAAQS of 53 ppb, but has recently been classified by CARB as a nonattainment region for the new annual CAAQS of 30 ppb. The current estimate is that the Basin and Coachella Valley are in attainment with the federal 1-hour standard. The maximum potential incremental increased contribution to Basin NO<sub>2</sub> from the project would be less than 1 ppb in 2014 and 1 ppb in 2023 and 2030, for 1-hour or annual averages. In all cases, the NO<sub>2</sub> contribution from the project represents only a small fraction of the California and federal standards, and is not expected to result in exceedance of the existing standards or delay in attaining the new state standard.

Lead. Facilities that use or process lead are only rarely permitted by the SCAQMD and very few sources emit sufficient levels of lead to cause or contribute to a nonattainment problem. There are two such sources in Los Angeles County, both battery recycling facilities. It is not anticipated that any facilities would be permitted under the proposed project that would cause or contribute to a violation of a federal or state ambient standard for lead.

CO. The Basin is in attainment of both the California and federal 1-hour and 8-hour carbon monoxide standards. The proposed project is estimated to contribute to ambient CO concentrations in an amount less than 0.1 part per million, for all years simulated. The project would have no impact on the Basin's attainment status (either California or federal standards).

- *Modeled Concentrations of Regional Criteria Pollutant Emissions – Cumulative*

Ozone and Particulate Matter. The contribution to ozone, PM<sub>2.5</sub> and PM<sub>10</sub> concentrations from the cumulative projects (including the three power plants) relying on offsets from the SCAQMD internal offset accounts would be greater than the project contribution.

SO<sub>2</sub> and NO<sub>2</sub>. The cumulative projects' contributions to regional SO<sub>2</sub> concentrations reflect only a minor fraction of the California SO<sub>2</sub> standards at 250 ppb for 1-hour average and 40 ppb for 24-hour average, and the federal SO<sub>2</sub> standards at 75 ppb for 1-hour average and 30 ppb for annual average. The cumulative projects' contribution to regional NO<sub>2</sub> concentrations range from 0.0 to 2.0 ppb for the Basin and Coachella Valley. Overall, the cumulative projects' contributions to SO<sub>2</sub> and NO<sub>2</sub> concentrations are not projected to result in an exceedance of the existing and newly adopted NO<sub>2</sub> and SO<sub>2</sub> state and federal standards.

CO. The cumulative projects' contribution to regional CO concentrations, are less than 0.1 part per million, for all years simulated. Thus, the cumulative projects would have no effect on the Basin's attainment status (either California or federal standards).

- *Modeled Concentrations of Localized Criteria Pollutant Emissions*

The analysis of localized concentrations of particulate matter evaluates concentrations of pollutants that may result from individual sources based on modeling for representative categories of facilities that receive permits from the district. The actual permitted sources may result in lower concentrations of pollutants than the modeled concentrations shown in the analysis. The results include estimated concentrations for both the 50<sup>th</sup> and 95<sup>th</sup> percentile emission rates for both short- and long-term exposure periods. These concentrations are then compared to the SCAQMD's significance thresholds

The impact resulting from the proposed project would be significant in terms of localized criteria pollutant concentrations based on the data collected, which in some cases results in modeled exceedances of SCAQMD's localized significance thresholds. It should be noted that the modeling reflects worst-case meteorological conditions and incorporates conservative assumptions regarding hours of operation.

- *Health Effects of Criteria Pollutant Emissions – Project*

Health effects can be evaluated by modeling criteria pollutant concentrations, which can provide information on mortality, hospital admissions, emergency room visits, minor restricted activity days, school absence days, loss of work days, and cases of acute/chronic bronchitis, nonfatal heart attacks and adverse upper/lower respiratory conditions.

The current population in the SCAQMD is approximately 17 million, and is expected to grow to approximately 20 million by 2030. CARB has estimated that there are approximately 6,500 premature deaths each year in the Basin resulting from exposure to ozone and PM<sub>2.5</sub> concentrations. There are approximately 100,000 cases of asthma and other respiratory symptoms each year in the Basin due to these exposures.

The Final Socioeconomic Report for the 2007 AQMP explained the health benefits (or, conversely, the reductions in adverse health impacts) resulting from the emissions controls to be implemented under the AQMP. In comparison with the with-project scenario, the without project scenario would result in additional health benefits beyond those identified in the Final Socioeconomic Report for the 2007 AQMP. As compared to future conditions under the proposed project, the ozone reductions without the project conditions would result in the additional avoidance of approximately 12 premature deaths in 2023. In the year 2030, the ozone reductions from the without project scenario would result in the avoidance of approximately 20 premature deaths. These impacts show additional benefits which could occur if the project were not implemented. The avoidance of 12 premature deaths in 2023 under the without project scenario would represent an increase of six percent in the health benefits described in the 2007 AQMP, which projects that future emissions controls would avoid 200 premature deaths from ozone emissions in the year 2023.

The 2007 AQMP projects that PM<sub>2.5</sub> emissions controls will avoid 1,500 premature deaths in the year 2015. The particulate matter reductions under the without project scenario would avoid an additional 33 premature deaths during the same timeframe (in 2014). Thus, the health benefits in terms of premature deaths avoided by not implementing the proposed

project represent an additional 2.2 percent increase in benefits beyond what the AQMP projects.

The additional premature deaths avoided under the without project scenario increases to 86 and 125 in 2023 and 2030, respectively. The total premature deaths due to PM<sub>2.5</sub> avoided under the AQMP also would continue to increase well beyond 1,500, as a result of additional emission reductions in 2023 and 2030, although the totals for these years have not been calculated.

Given the magnitude of the health benefits under the without project scenario, the health impacts of the proposed project from criteria pollutant emissions (ozone and PM<sub>2.5</sub>) would be significant.

- *Health Effects of Criteria Pollutant Emissions – Cumulative*

As noted above, the proposed project is determined to have a significant health impact resulting from emissions of criteria pollutants. The cumulative impact is similarly significant, taking into account other stationary sources receiving permits in reliance on offsets in the internal offset accounts including the three power plants. The PEA concludes that the proposed project would make a cumulatively considerable contribution to this significant impact. In addition, the potential health impacts of the three power plants are evaluated.

- *Health Effects of Regionwide Emissions of Toxic Air Contaminants – Project and Cumulative*

Currently, about one in three female and one in two male Californians contracts cancer at some time in their lives<sup>5</sup>. This represents an overall cancer risk of 330,000 to 500,000 in a million. According to the MATES-III study completed by SCAQMD in 2008, total Basin population-weighted cancer risk from air pollution is 853 in a million, which is based on the modeling exposures over the entire basin. Approximately 94 percent of this risk is caused by mobile source emissions, primarily diesel particulates (84 percent) and six percent from industrial sources. Total risk from industrial sources is approximately 51 in a million. Total Basin population-weighted exposure is expected to be reduced to below 400 in a million by 2030, even with the proposed project.

This PEA analyzes the potential additional benefit of not implementing the proposed project. The difference in cancer risk between implementing the proposed project and not implementing it in 2014 would be approximately 1 in a million, or about 2 tenths of one percent of the projected 2014 total of 556 in a million. This difference increases to as much as 4.4 in a million by the year 2030.

---

<sup>5</sup> American Cancer Society, California Department of Public Health, California Cancer Registry. California Cancer Facts and Figures 2010. Oakland, CA: American Cancer Society, California Division, September 2009. <http://www.ccrca.org/PDF/ACS2010-9-29-09.pdf> (page 6)

The maximum cancer risk reduction attributable to the cumulative project scenario would be less than seven additional cases of cancer in a population of one million individuals that are exposed over a 70-year lifetime. The change in cancer risk per million does not exceed SCAQMD's significance threshold of 10 in one million. However, project and cumulative cancer burden does exceed the SCAQMD's significance threshold of 0.5, so the project and cumulative cancer burden impacts are considered significant.

A hazard index is a summation of the hazard (non-cancer) quotients for all chemicals to which an individual is exposed. A hazard index can be measured as a result of chronic (long-term) exposure or acute (short-term) exposure. The change in hazard index from project emissions does not exceed SCAQMD's significance threshold for acute or chronic exposure, considering either project-specific or cumulative impacts.

- *Localized Concentrations of TACs*

SCAQMD Rule 1401 (New Source Review of Toxic Air Contaminants) prohibits the issuance of a permit for a stationary source that emits a listed TAC (or for a modification to or relocation of such a source), unless the applicant demonstrates, among other things, all of the following:

- The cumulative increase in the maximum individual cancer risk (MICR),<sup>6</sup> which is the sum of the calculated MICR values for all TACs emitted from the new, relocated or modified permit unit, will not result in a cancer burden<sup>7</sup> of greater than 0.5, and will not result in an increased MICR greater than 1 in 1 million at any receptor location, if the permit unit is constructed without T-BACT,<sup>8</sup> or an increased MICR greater than 10 in 1 million, if the permit unit is constructed with T-BACT.
- The cumulative increase in the total chronic Hazard Index for any target organ system due to the total emissions from the new, relocated or modified permit unit will not exceed 1.0 at any receptor location.
- The cumulative increase in the total acute Hazard Index for any target organ system due to the total emissions from the new, relocated or modified permit unit will not exceed 1.0 at any receptor location.

See SCAQMD Rule 1401(d). These thresholds in Rule 1401 are the same as the SCAQMD's CEQA significance thresholds for toxics.

---

<sup>6</sup> MICR is the estimated probability of a potentially maximally exposed individual contracting cancer as a result of exposure to TACs over a period of 70 years for residential receptor locations, or as calculated by established Risk Assessment Procedures for worker receptor locations. SCAQMD Rule 1401(c)(8).

<sup>7</sup> "Cancer burden" means the estimated increase in the occurrence of cancer cases in a population subject to an MICR of greater than or equal to 1 in 1 million resulting from exposure to TACs. SCAQMD Rule 1401(c)(3).

<sup>8</sup> T-BACT means the most stringent emissions limitation or control technique for TACs that (a) has been achieved in practice for the category or class of source at issue; or (b) is any other emissions limitation or control technique, including process and equipment changes of basic and control equipment, found by the Executive Officer to be technologically feasible for the class or category of source, or for a specific source. SCAQMD Rule 1401(c)(2).

As a result of these regulatory prohibitions, the issuance of a permit by the SCAQMD to a stationary source of TACs would not result in stationary source emissions that exceed the CEQA significance thresholds for localized health impacts. However, the thresholds above contained in Rule 1401 are applied on a permit-unit basis; as a result, a facility with multiple permitted sources could still exceed the Hazard Index limits in Rule 1401. Such facilities would instead be subject to Rule 1402; under that rule, the allowable cancer burden is the same as under Rule 1401, but the allowable cancer risk (25 in a million) and Hazard Index limits for acute and chronic non-cancer toxic impacts are higher (3.0) than the limits under Rule 1401 and thus higher than the applicable CEQA significance thresholds. Therefore, the localized air toxic impacts are considered significant.

- *Odors*

Equipment at a permitted stationary source could create objectionable odors. However, SCAQMD evaluation of permit applications would include the imposition of conditions to minimize such odors. Such conditions would range from limiting the release of the odor emitting source to installation and operation of control equipment that provides odor abatement. Such control equipment includes thermal oxidizers, scrubbers, afterburners, carbon absorbers and paint spray booths. Despite these permitting controls, some facilities may result in significant odor effects, so odor impacts resulting from the proposed project are considered significant.

- *Visibility – Project and Cumulative*

Pollution can cause the absorption and scattering of light, which reduces the clarity and color of what we see.<sup>9</sup> Poor air quality can therefore result in adverse impacts on visibility. Emissions that substantially contribute to a violation of the statewide standard for visibility are considered significant, and emissions that cause or substantially contribute to a violation of the Regional Haze Rule for federal Class I areas (National Parks and wilderness areas), exceed a change of 0.5 deciviews, are also considered significant.

The maximum predicted impact on the light extinction coefficient (.001 km<sup>-1</sup>) attributable to the proposed project would not cause or contribute to a violation of the state standard, and is not significant. The maximum project impact measured in deciviews would be less than 0.06 in all cases, which is not significant. The maximum impact from the cumulative projects, measured in both extinction coefficient and deciviews, would be less than the significance criteria in all cases.

- *Climate Change - Project*

The estimated increase in greenhouse gas emissions attributable to the proposed project (22.26 million metric tons/year) is substantially greater than the SCAQMD's GHG significance threshold for lead agency projects (10,000 MTCO<sub>2</sub>e/yr). As such, GHG

---

<sup>9</sup> EPA, How Air Pollution Affects the View, available at [http://www.epa.gov/visibility/pdfs/haze\\_brochure\\_20060426.pdf](http://www.epa.gov/visibility/pdfs/haze_brochure_20060426.pdf).

emissions attributable to the proposed project, taken as a whole, are therefore cumulatively considerable.

- *Climate Change - Cumulative*

GHG emissions from the cumulative projects obtaining permits in reliance on offsets in the SCAQMD internal accounts are quantified using the same methodology as project emissions. The total GHG emissions in year 2030 from the cumulative projects (29.13 million metric tons/year) exceed the SCAQMD's Tier 3 GHG significance threshold of 0.01 million MT CO<sub>2</sub>e/year (or 10,000 MT CO<sub>2</sub>e/year), so GHG emissions from the cumulative scenario are cumulatively considerable.

- *Indirect Air Quality Impacts*

Because construction emissions would add to the project-related emissions, they will increase each of the significant operational impacts that are identified to some degree. The extent of that increase cannot be characterized, however, because the amount of construction emissions associated with the project cannot be estimated. Similarly, it is concluded that the significant impacts of the project will be increased by the additional mobile source emissions that will occur as an indirect result of the project.

There is no correlation between the amount of stationary source emissions at a facility receiving a permit under Rule 1304 or Rule 1309.1 and the amount of mobile source emissions that may be associated with that facility. Nor is there any correlation between the number of permits that may be issued under Rule 1304 and 1309.1 and mobile source emissions, since the relationship will depend on variables that will differ from facility to facility.

Because the difference in construction and mobile source emissions that will occur under the with project scenario in comparison to the without project scenario cannot be measured or estimated, the environmental analysis in this PEA assumes that construction and mobile sources emissions associated with stationary sources permitted under Rule 1304 or Rule 1309.1 will, in the aggregate, comprise a substantial increment of emissions in addition to the emissions attributed to the project. In addition, because construction and mobile source emissions are presumed to be substantial, combined impacts from sources permitted under Rules 1304 and 1309.1 plus construction and mobile source emissions from facilities containing such sources could result in significant impacts relating to visibility. On the other hand, given that the direct visibility impacts are so small, it is possible that associated indirect visibility impacts are not significant. SCAQMD staff therefore concludes that the visibility impacts from construction and mobile service emissions are "presumed" significant.

The combined stationary and mobile source emissions would not result in a significant impact with regard to conflicts with the AQMP because mobile source emissions are included in the AQMP. Table 1-1 provides an overview of all air quality, visibility, and greenhouse gas significance determinations.

**Table 1-1**  
**Significance Determination of Direct and Indirect Air Quality Impacts**

Air Quality Impact Area	Direct Impacts	Indirect Impacts	Overall Significance Determination
Consistency with AQMP	Not significant	Not significant	Not significant
Regional Emissions from Criteria Pollutants - Project	Significant	Significant	Significant
Regional Emissions from Criteria Pollutants - Cumulative	Significant	Significant	Significant
Regional Emissions from Lead – Project	Not significant	Not significant	Not significant
Regional Emissions from Lead - Cumulative	Not significant	Not significant	Not significant
Localized Concentrations	Significant	Significant	Significant
Health Effects (Ozone, PM) - Project	Significant	Significant	Significant
Health Effects (Ozone, PM) - Cumulative	Significant	Significant	Significant
Regional Health Impacts (TACs) - Project	Significant	Significant	Significant
Regional Health Impacts (TACs)-Cumulative	Significant	Significant	Significant
Localized Toxic Air Contaminants	Significant	Significant	Significant
Odors	Significant	Significant	Significant
Visibility – Project	Not significant	Presumed significant	Presumed significant
Visibility - Cumulative	Not significant	Presumed significant	Presumed significant
Greenhouse Gases	Significant	Significant	Significant

- *Mitigation Measures*

Chapter 4 also discusses the following measures that will have the effect of limiting the total quantity of emissions by new or modified sources.

Limitations on Total Quantity of Emissions Associated with Rule 1315. The regional emissions expected to result from Proposed Rule 1315 equal the quantity of the Rule 1315 offsets that are used pursuant to Rules 1304 and 1309.1. As a result, any limitation on the use of the offsets will directly reduce the quantity of regional air pollutant emissions. The proposed project includes a cap on total emissions offsets to be provided from the SCAQMD internal accounts for each pollutant in order to ensure that the net emissions increase attributable to both federal major and non-major sources do not exceed the emissions analyzed in this PEA.

Other Limitations on Emissions by New or Modified Sources. The following briefly summarizes requirements that apply to new or modified sources receiving emissions offsets that will ensure those projects reduce their emissions to the extent feasible.

SCAQMD rules require “best available control technology” (BACT) for any new or modified source resulting in an emissions increase of nonattainment pollutants and their precursors.

SCAQMD rules require best available control technology for toxic air pollutants (T-BACT) for any permit which would result in a maximum individual cancer risk exceeding 1 in a million at any receptor location. In addition, no permit may be issued if it exceeds a maximum individual cancer risk of 10 in a million, even with T-BACT.

The SCAQMD significance thresholds for localized impacts for criteria pollutants are based on the changes to ambient air quality caused by a project. Under SCAQMD Rule 1303, NO<sub>2</sub> and PM<sub>10</sub> for new or modified source must be modeled. If an individual source would exceed the District’s thresholds for localized concentrations of criteria pollutants, the permit would be denied. The SCAQMD will also begin implementing BACT for GHGs as soon as its rules can be adopted to require this.

## **Executive Summary – Chapter 5: Indirect Environmental Impacts**

- *Methodology*

Because providing offsets can be a necessary step in obtaining approval for a facility that is an emissions source, the proposed offset accounting system has the potential to create indirect adverse environmental impacts in the future from siting, constructing, and operating individual facilities containing stationary pollutant sources that qualify to receive emissions offsets available from the SCAQMD’s internal offset accounts under Rules 1304 and 1309.1. Depending upon the nature of the specific project and its setting, future affected facilities could require constructing new or modified structures resulting in adverse impacts in a number of different environmental topic areas.

Given the large number and variety of facilities and geographic extremes within the 10,473 square-mile area under SCAQMD jurisdiction and the fact that the project extends over the next 20 years, it is infeasible to analyze, in detail, the environmental impacts of potential future permitted facilities. Therefore, general facility categories are identified based on the available historical data from facilities that have been permitted or with permits pending during a five-year period (2003 through 2008). Based upon these facility categories, a wide selection of corresponding CEQA documentation was examined for projects that would generally fit within each of these facility categories. These selected sample CEQA documents capture a range of reasonably foreseeable significant impacts that could occur as a result of siting, constructing, and operating facilities that could receive future emission offsets under the proposed rule.

The steps for identifying primary facility categories, review of past CEQA environmental documentation, and potential future environmental impacts include the following:

- Review of available existing data of past and pending permits (years 2003 through 2008)
- Identification of primary facility categories

- Review of CEQA documents relevant to each of the facility categories
- Disclosure of potentially significant environmental impacts found in the analysis of past CEQA documents within each facility category, and the identification of general and specific significant impacts that could potentially occur for similar future projects.

The facilities were grouped according to the following general categories:

- Agriculture facilities
- Retail and service facilities
- large commercial facilities,
- Entertainment and recreational facilities
- Institutional facilities
- Transportation facilities
- utilities, including power plant facilities
- Light industrial and warehousing facilities
- Heavy industrial facilities

- *Environmental Impacts*

The proposed project has the potential to result in indirect adverse impacts in the future from siting, constructing, and operating individual facilities containing stationary pollutant sources that qualify to receive emissions offsets available from the SCAQMD's internal offset accounts. Construction and operation of future new facilities or of new or modified structures at existing new facilities obtaining emissions offsets from the SCAQMD's internal offset accounts have the potential to generate adverse impacts depending upon the nature of the project, its location, and its setting.

Environmental impacts found to be potentially significant include indirect impacts to: aesthetics, agricultural resources, air quality, biological resources, culture resources, energy, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, solid/hazardous waste, and transportation/traffic.

Indirect impacts from the proposed project were concluded to be significant for all topic areas either because one or more CEQA documents for representative projects concluded there would be significant impacts or because there could be unique circumstances or unique locations for facilities containing permitted sources that could result in significant impacts.

## Executive Summary – Chapter 6: Alternatives – Direct and Indirect Air Quality, Visibility and Greenhouse Gas Impacts

- *Introduction*

This PEA provides a discussion of alternatives to the proposed project as required by CEQA. An EIR must describe a range of reasonable alternatives to the proposed project that would feasibly attain most of the project objectives and provide a means for evaluating the comparative merits of each alternative. A "No Project" alternative must also be evaluated. The range of alternatives must be sufficient to permit a reasoned choice.

The discussion of alternatives in the PEA is presented in two chapters, mirroring the presentation of project impacts. Chapter 6 presents the air quality, visibility and greenhouse gas effects of each of the alternatives. Chapter 7 presents the indirect effects of the alternatives. Both chapters compare the effects of the alternatives to the effects of the proposed project.

- *Alternatives Rejected as Infeasible*

A CEQA document should identify any alternatives that were considered by the lead agency, but were rejected as infeasible during the scoping process and briefly explain the reasons underlying the lead agency's determination (CEQA Guidelines §15126.6(c)). The following alternatives have been considered but eliminated from further detailed consideration in the PEA for the following reasons: 1) they fail to meet most of the basic project objectives, 2) they are infeasible as defined by CEQA (CEQA Guidelines §15364), or 3) they are unable to avoid significant impacts (CEQA Guidelines §15126.6(c)). The reasons for eliminating these alternatives are described in more detail in Chapter 6.

- Prohibit the Use of Offsets from Shutdowns or Reductions at Minor Sources to Demonstrate Equivalency with Federal Offset Requirements
- Prohibit the Use of Any Credits Not Previously Recognized Prior to Adoption of Rule
- Fossil Fueled Power Plant Project Alternative
- Other Project Alternatives Suggested by the Superior Court
- Issue Offsets to Priority Projects First

- *Description of Project Alternatives*

The following subsections briefly describe each project alternative analyzed in this PEA. For a more complete description of each alternative, the reader is referred to Chapter 6 of this PEA.

Alternative A - No Project Alternative. CEQA Guidelines §15126.6 requires evaluation of a no project alternative to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. Consistent with

CEQA Guidelines §15126.6, Alternative A, the No Project Alternative, means the SCAQMD Governing Board would not re-adopt Rule 1315. The SCAQMD would no longer provide offsets to eligible facilities pursuant to Rules 1309.1 or 1304 from the SCAQMD's internal accounts. After expiration of SB 827, the only new or modified stationary sources that could be approved under the SCAQMD's New Source Review program would be those facilities obtaining ERCs on the open market or those with no increases in emissions.

Alternative B – Offset User Fees for Large Businesses. Alternative B is similar to the proposed project in all aspects except that Alternative B includes “offset user fees” for large businesses that seek an exemption from offset requirements pursuant to Rule 1304. The intent of this Alternative would be to charge fees for large businesses using the “small facility” exemption (Rule 1304(d)), but not for equipment replacement or air pollution control projects. Fees collected from large businesses would be used to fund emission reduction projects. For purposes of analysis, the PEA assumes fees charged to large businesses would be higher than the cost of purchasing ERCs in order to ensure that offsets from the internal accounts are used only as a last resort. Further, for purposes of analysis, the PEA assumes that the same amount of growth in the large business sector as has been anticipated to occur under the proposed project would occur if the user fee were charged. This is a conservative assumption to show the maximum impacts of growth and the maximum potential benefits of use of the user fees for emissions reduction projections. It is expected that any emission reductions resulting from emission reduction projects may benefit both the local area in which the emission reduction project is located and the region depending on the type and amount of air pollutants reduced. Emission reductions obtained from offset user fees, however, would be prohibited from generating future emission offsets, but would be retired for the benefit of the environment. The PEA assumes that the emissions reductions obtained from emissions reductions fees would be equal to current BACT incremental cost effectiveness, adjusted to 2010 dollars. It should be noted that if the future emission reduction projects have higher costs than the current BACT increment cost, this alternative will yield less emissions reduction benefits than analyzed. Recent mobile source reduction projects for PM10 have shown to have higher costs than the BACT incremental cost.

Alternative C - Large Businesses Prohibited from Accessing Rule 1304 Exemptions. Alternative C would prohibit access by large businesses to the Rule 1304 Exemption. In all other aspects Alternative C would be identical to the proposed project. For purposes of analysis, the PEA assumes that none of the growth in emissions from large businesses that is projected to occur under the proposed project would occur under Alternative C. (Under Alternative C, large businesses could still implement modifications that do not increase emissions from stationary sources.) This assumption ensures that the analysis of Alternatives B and C bracket the range of potential outcomes resulting from increased costs to large businesses, whether in the form of user fees under Alternative B or the restrictions on use of offsets from the district's internal accounts under Alternative C.

Alternative D - Use of Credits Generated in 2009 and Beyond Only. Alternative D would only allow the use of credits generated in 2009 and beyond to be used to offset emissions from facilities that qualify for permits under Rules 1304 and 1309.1 in order to demonstrate

equivalency with federal offset requirements. Specifically, under Alternative D, offsets in the SCAQMD's existing offset accounts would be eliminated. Instead, only new credits generated starting in 2009 and succeeding years could be used as offsets for demonstrating equivalency with federal offset requirements. Any unused credits in a given year would rollover to the next year. Because SCAQMD's previous offset accounts would be eliminated under Alternative D, use of offsets could not exceed the number of credits generated each year plus any credits rolled over from previous years, thus, effectively capping the number of offsets that can be used per year. In all other respects Alternative D is similar to the proposed project.

Alternative E – Limited Offset Availability. Alternative E would limit the cumulative net emissions increases from sources permitted under Rules 1304 and 1309.1 to levels set at 50 percent of the AQMP-based growth in emissions from the industry categories potentially eligible for offsets under these rules (“50 percent cap”). That is, staff would track the total net increases of each nonattainment air contaminant from the offset accounts from the start of implementation through the end of each reporting period and compare the results with the 50 percent caps included in the adopted rule for the corresponding period. If the cumulative net emission increase of any contaminant exceeded the cap, no further offsets of that contaminant would be available from the offset accounts until sufficient additional credits are tracked to bring the cumulative net emission increase to a level below the applicable 50 percent cap. In other respects, Alternative E would be the same as the proposed project.

- *Evaluation of the Comparative Effects of the Project Alternatives*

Table 1-2 summarizes the mass emissions of criteria pollutants that may be generated by each project alternative. Evaluations of the other air quality effects of the project alternatives compared to the proposed project are presented in Chapter 6.

Least Toxic Alternative. In accordance with SCAQMD's policy document, Environmental Justice Program Enhancements for FY 2002-03, Enhancement II-1 recommends that all EIR equivalent CEQA documents for SCAQMD regulatory projects include an analysis of a potentially feasible project alternative with the lowest air toxics emissions.

With regard to the evaluation of cancer and non-cancer effects of the alternatives evaluated in Chapter 6, Alternative A, the No Project Alternative is the least toxic alternative. Some toxic emissions from existing facilities as they age would likely occur, but such air toxics emissions would be less than the proposed project and remaining project alternatives. Of the remaining alternatives, Alternative D is concluded to be the least toxic alternative for the following reasons. Alternative D is projected to generate the lowest regional cancer risk and cancer burden for the most number of milestone years. Similarly, Alternative D has lower or equivalent regional chronic hazard impacts for more milestone years than the other alternatives.

Environmentally Superior Alternative. A CEQA document should identify an environmentally superior alternative. If the environmentally superior alternative is the “no project” alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives. Here, Alternative A, the no project alternative, would result in

the fewest air quality, visibility and greenhouse gas effects. Alternative A would also avoid most indirect effects of the proposed project. However, as discussed further in Chapter 7, Alternative A would result in greater cumulative effects on water supply, wastewater treatment capacity, and public services than the proposed project because Alternative A would hinder construction of new and expanded essential public services to accommodate anticipated population growth. Other than the no-project alternative, Alternative D is concluded to be the environmentally superior alternative. The emissions reductions achieved by limited use of offsets to those generated starting in the year 2009 would result in substantially lower emissions of criteria pollutants, TACs and greenhouse gases than any of the other project alternatives, and lesser health effects than the other project alternatives. However, Alternative D would hinder construction of new or expanded essential public services needed to accommodate population growth. Other indirect impacts associated with Alternative D would be less than those resulting from the proposed project because fewer new facilities would be constructed.

**TABLE 1-2**

---

**Executive Summary – Chapter 7: Alternatives –Indirect Impacts**

- *Introduction*

Chapter 7 of the PEA presents the analysis of indirect impacts from the project alternatives. In general, Alternatives A (no project alternative), C (large businesses prevented from using offset accounts), D (prospective credit use only) and E (limited availability of offsets) would hinder growth in the industry categories potentially eligible for use of offsets, as compared to the growth projected under the 2007 AQMP. Because each of these alternatives would result in fewer new or expanded facilities, they would result in lesser indirect effects associated with facility construction, siting and operation than the proposed project. However, by restricting future use of offsets, these alternatives also could hinder equipment replacement, which could in turn increase hazards. In addition, Alternatives A, D and E would hinder construction of new and expanded essential public services needed to accommodate expected population growth. As a result, these alternatives could result in greater cumulative effects on water supply, wastewater treatment capacity, and public services than the proposed project.

Alternative B would result in the same indirect effects from construction and operation of new and modified sources as the proposed project. If, however, fewer large businesses undertake projects to construct new or modified facilities because of the user fee associated with accessing offsets from the district's internal accounts, then the indirect effects of Alternative B could be more similar to the indirect effects of Alternative C (large businesses prevented from using offset accounts). Alternative B also would result in indirect effects associated with constructing and operating the emissions reductions projects funded by the user fees charged to large businesses. While the emissions reduction projects would reduce the air quality, visibility and greenhouse gas effects analyzed in Chapter 6 of the PEA, the projects would be expected to increase the indirect effects analyzed in Chapter 7, in comparison with the proposed project. For example, construction of alternative energy facilities could result in significant effects to aesthetic resources, depending upon where the facilities are located.

- *Evaluation of the Comparative Effects of the Project Alternatives*

Indirect impacts from the proposed project (Chapter 5) were concluded to be significant for all topic areas either because one or more CEQA documents for representative projects concluded there would be significant impacts or because there could be unique circumstances or unique locations for facilities containing permitted sources that could result in significant impacts. For the same reasons, indirect impacts of all project alternatives could also be significant. Therefore, the analysis and comparison of alternatives in this PEA presents a qualitative conclusion as to whether the impacts of each alternative in each topic area would be more or less significant than the proposed project. For a detailed discussion of environmental effects of the project alternatives compared to the proposed project, the reader is referred to Chapter 7.

---

**Executive Summary – Chapter 8: Responses to the Court’s Decision on Amended Rule 1309.1 and Rule 1315**

In the July, 2008 Decision on Ruling on Respondent’s Motion for Summary Judgment, the Superior Court found the District’s CEQA analysis for its adoption of Rule 1315 (in its previous form) and amendment of Rule 1309.1 to be inadequate regarding its description of the proposed project, and the analyses of impacts from air emissions on health, aesthetics and climate change.

- *Project Description*

The rule changes that were the subject of the Court’s decision included an amendment to SCAQMD Rule 1309.1 that would have allowed new power plants to qualify for offsets from the SCAQMD’s Priority Reserve for a limited period of time. That rule amendment is no longer proposed. Therefore, the project description for the proposed project is limited to the readoption of Rule 1315, which (as modified) has been revised.

- *Health Effects*

The emissions resulting from facilities with sources to be issued permits under Rules 1304 and 1309.1 are included in the 2007 AQMP growth projections. As a result of control measures identified in the AQMP, adverse health effects from particulate matter and ozone will be reduced over time. The PEA includes an analysis of the health effects of the incremental change in particulate and ozone pollution on a regional basis resulting from the emissions of these pollutants and their precursors attributed to the proposed project and cumulative projects. The PEA also analyzes cancer and non-cancer health risk from region-wide and localized emissions of toxic air contaminants (TACs) attributed to the proposed project and cumulative projects. The PEA also analyzes the health effects from the operation of the three power plants that were or could have been authorized by state legislation to rely on the SCAQMD’s internal offset accounts.

- *Aesthetics*

Visibility will improve in the future due to the control measures described in the 2007 AQMP. The PEA analyzes the impacts on region-wide visibility resulting from the operation of the sources potentially eligible to be issued permits under Rules 1304 and 1309.1 in reliance on the SCAQMD’s internal accounts. In addition, the PEA analyzes the cumulative impacts on visibility from the proposed project plus the other reasonably foreseeable sources that may be issued permits in reliance on the SCAQMD’s internal accounts, including the sources permitted under SB 827 and the three potential power plants.

- *Climate Change*

The PEA quantifies the six greenhouse gases identified under AB 32 expected to be emitted by sources potentially eligible to be issued permits under Rules 1309.1 and 1304. The PEA also includes an analysis of cumulative greenhouse gas emissions attributed to the proposed project plus the greenhouse gas emissions from the other reasonably foreseeable sources that

may be issued permits in reliance on the SCAQMD’s internal accounts, including the projects permitted under SB 827 and the three potential power plants

- *Impact Analysis Assuming Full Use of Credits (Maximum Use Scenario)*

The proposed project has been designed so that it is not possible for all offsets in the beginning balance plus those deposited in future years to be used. The proposed project now includes a cap on the amount of offsets that can be used.

Nevertheless, mass emissions of criteria pollutants and modeled concentrations of ozone and particulate matter emissions were calculated assuming full use of the credits. From the modeled concentration, health effects from ozone and particulate matter impacts were determined. Finally, toxic impacts, visibility and greenhouse gases from the maximum use of the credits were calculated and presented in Chapter 8.

## **DOCUMENT FORMAT**

State CEQA Guidelines outline the information required in an EIR, but allow the format of the document to vary [CEQA Guidelines §15120(a)]. The information in this PEA complies with CEQA Guidelines §15122 through §15131 and consists of the following:

Chapter 1: Introduction and Executive Summary

Chapter 2: Project Description

Chapter 3: Environmental Setting

Chapter 4: Direct Environmental Impacts and Mitigation Measures

Chapter 5: Indirect Environmental Impacts and Mitigation Measures

Chapter 6: Alternatives – Direct Impacts

Chapter 7: Alternatives – Indirect Impacts

Chapter 8: Responses to the Court’s Decision on Amended Rule 1309.1 and Rule 1315

Chapter 9: Acronyms

Chapter 10: References

Chapter 11: Contributors

Appendix A: Proposed Rule 1315

Appendix B: Notice of Preparation/Initial Study ; Comment Letters Received on the NOP/IS and Responses to Comments

Appendix C: Air Quality Analysis for SCAQMD Proposed Rule 1315

Appendix D: Greenhouse Gas Emissions Analysis

Appendix E: Historic Permit Data and NAICS Code Categorization

Appendix F: Primary Facility Categories Location Maps

Appendix G: [withdrawn]

Appendix H: Facilities Affected by Permit Moratorium

Appendix I: Modeling Files (available at SCAQMD)

## **CHAPTER 2**

---

### **PROJECT DESCRIPTION**

**Project Location**

**Background**

**Project Description**

**Project Objectives**

**Permits and Approvals**

**Other Issues Relevant to Project Description**

## PROJECT LOCATION

The proposed project consists of readopting Proposed Rule 1315 with specific modifications in response to a judgment in litigation which invalidated a prior version of the rule. If adopted by the SCAQMD's Governing Board, proposed Rule 1315 would become part of the SCAQMD's Regulation XIII – New Source Review rules, which regulate new and modified stationary sources of air pollution located within the SCAQMD's jurisdiction (i.e., the entire district).

The SCAQMD has jurisdiction over an area of 10,473 square miles, consisting of the four-county South Coast Air Basin (Basin) and the Riverside County portions of the Salton Sea Air Basin (SSAB) and the Mojave Desert Air Basin (MDAB). The Basin, which is a sub area of the SCAQMD's jurisdiction, is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The 6,745 square-mile Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The Riverside County portions of the SSAB and MDAB are bounded by the San Jacinto Mountains to the west and span eastward up to the Palo Verde Valley. The federal nonattainment area (known as the Coachella Valley Planning Area) is a sub region of both Riverside County and the SSAB and is bounded by the San Jacinto Mountains to the west and the eastern boundary of the Coachella Valley to the east. The SCAQMD's jurisdictional area is depicted in Figure 2-1. The proposed project would be in effect in the entire area of the SCAQMD's jurisdiction.

## BACKGROUND

### Overview of the Federal Clean Air Act and the Requirement for a State Implementation Plan

The federal Clean Air Act (CAA), 42 U.S.C. §§ 7401 *et seq.*, establishes a comprehensive national regulatory scheme for controlling air pollution. The CAA requires the U.S. Environmental Protection Agency (USEPA) to set National Ambient Air Quality Standards (NAAQS) for certain pollutants. The USEPA has set NAAQS for six “criteria pollutants”: ozone (O<sub>3</sub>), particulate matter,<sup>1</sup> carbon monoxide (CO), sulfur dioxide (SO<sub>2</sub>), oxides of nitrogen (NO<sub>x</sub>), and lead (Pb). The USEPA has made several recent amendments to the NAAQSs, including the adoption of: a new 24-hour standard for PM<sub>2.5</sub> in 2006, a new 8-hour ozone standard, a new standard for lead in 2008, and new standards for nitrogen dioxide (NO<sub>2</sub>) and sulfur dioxide (SO<sub>2</sub>) in 2010.

---

<sup>1</sup> The USEPA has established NAAQSs for two types of particulate matter: PM<sub>10</sub> (inhalable coarse particulate matter, which ranges from 2.5 to 10 micrometers in diameter) and PM<sub>2.5</sub> (fine particulate matter, which is less than 2.5 micrometers in diameter).

**FIGURE 2-1**

**South Coast Air Quality Management District Boundaries**

For planning purposes, the USEPA divides each state into air quality control regions and then designates those regions that do not meet the NAAQS for a particular air pollutant as a “nonattainment” region for that pollutant. There are two federal nonattainment regions within the SCAQMD’s jurisdiction. First, the Basin is currently designated as a federal nonattainment region for ozone, PM<sub>10</sub>, and PM<sub>2.5</sub>. In addition, the California Air Resources Board (CARB) has recently recommended that the USEPA designate the portion of the Basin that is located within Los Angeles County as a federal nonattainment area for the new NAAQS for lead<sup>2</sup>. Second, the Coachella Valley Planning Area, which is the portion of Riverside County that is located within the SSAB, is designated as a federal nonattainment region for ozone and PM<sub>10</sub>. Based on monitoring data, the SCAQMD and CARB have submitted a request to the USEPA to redesignate both the Basin and Coachella Valley as federal attainment areas for PM<sub>10</sub>.

Each state has the primary responsibility under the CAA for assuring air quality within its jurisdiction through the preparation and implementation of a “State Implementation Plan” (SIP), which identifies control measures to achieve and maintain compliance with the

<sup>2</sup> USEPA released a preliminary designation of nonattainment with the new 2008 lead National Ambient Air Quality Standard on June 1, 2010, which starts a 120-day public comment period. USEPA has indicated it will make a final designation of nonattainment with the 2008 lead standard by October 15, 2010.

NAAQS. The SCAQMD is responsible together with CARB and Southern California Association of Governments (SCAG) for preparing and implementing the component of the California SIP that covers the SCAQMD’s jurisdictional area.

As part of this effort, the SCAQMD has adopted numerous rules and regulations to implement the CAA’s requirements, as well as a series of air quality management plans (AQMPs) that set forth policies, strategies and control measures for reducing emissions. The SCAQMD adopted a comprehensive AQMP update in 2007. The 2007 AQMP builds on prior plans and is specifically designed to achieve attainment with the NAAQS for ozone and PM<sub>2.5</sub> in effect at the time of its adoption. The 2007 AQMP takes into account the growth that is projected in the region and is based on a comprehensive strategy aimed at controlling air pollution from all sources, including stationary sources, on-road and off-road mobile sources, and area sources. The AQMP incorporates significant new scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes and new air quality modeling tools.

### **New Source Review and the Requirement for Offsets**

Under the federal CAA, a SIP for a nonattainment area must include a “New Source Review” (NSR) permitting program for the construction and operation of new and modified “major” stationary sources of air emissions.<sup>3</sup> These requirements do not apply to mobile sources such as cars, trucks and ships. The definition of what constitutes a “major” stationary source under the CAA depends on the extent to which the region in question is in nonattainment for a particular pollutant. The Basin is classified as an “extreme” nonattainment region for ozone and therefore the threshold for triggering the NSR requirements for ozone is lower than in the Coachella Valley, which is classified as a “severe” nonattainment area for ozone. It should be noted that the SCAQMD’s permitting requirements are broader than the federal NSR requirements in that the SCAQMD’s requirements apply to *all* stationary sources that would result in a net increase in emissions of any nonattainment pollutant, even if the source does not qualify as a “major” source under the CAA.

The CAA’s NSR permitting requirements are designed to ensure that the operation of new, modified, or relocated major stationary emission sources in nonattainment areas does not impede the attainment and maintenance of the NAAQS. Under the CAA, all local major NSR permitting programs for nonattainment areas must require the implementation of the lowest achievable emissions rate (LAER). LAER is the most stringent emissions limitation derived from either of the following: (1) the most stringent emissions limitation contained in any state’s SIP for the class or category of source at issue, unless it is demonstrated that such a limitation is not achievable; or (2) the most stringent emissions limitation achieved in practice by that class or source category.

In addition, all local NSR permitting programs for nonattainment areas must require that emissions increases from permitted major sources are “offset” by corresponding emissions

---

<sup>3</sup> The CAA also establishes permitting requirements for major sources of emissions located in attainment regions, in order to prevent a significant deterioration of air quality in those areas.

reductions.<sup>4</sup> An “offset” is a reduction of emissions in an amount equal to, or greater than, the emissions increase of the same pollutant from the permitted source. Offsets can be created when an operator reduces emissions by shutting down equipment or installing controls, or implementing permanent process changes resulting in emissions reductions that are not required. The specific quantity of the offset that is required under the CAA depends on the degree of nonattainment in the area in question. The SCAQMD’s offset requirements are discussed in greater detail below.

## Overview of California Law

Similar to the federal CAA, the California Health & Safety Code (§§ 39000 *et seq*) requires the promulgation of California Ambient Air Quality Standards (CAAQS) for certain pollutants. CARB has published CAAQS for the six criteria pollutants regulated under the federal CAA, and for three other pollutants (sulfates, hydrogen sulfide and vinyl sulfide). As with the federal CAA, an area that does not meet the CAAQS for a particular pollutant is designated as a state nonattainment area for that pollutant and the local air district must develop a plan to attain the relevant CAAQS. In general, the California standards are more protective than the corresponding federal standards.

CARB has published in its regulations the state law designations for attainment with the CAAQS. See 17 Cal. Code Regs. §§ 60200 *et seq*. The Basin, the SSAB and the MDAB have all been designated in their entirety as nonattainment areas for the CAAQS for ozone and PM10. See *id.* §§ 60201, 60205. The Basin also has been designated as a state nonattainment area for PM2.5. See *id.* § 60210. In addition, CARB has adopted new regulations that, if approved by the state Office of Administrative Law, would designate the Basin as a state nonattainment area for nitrogen dioxide and the Los Angeles County portion of the Basin as a state nonattainment area for lead. See CARB Resolution 10-17 (Mar. 25, 2010).

California law requires local air districts in nonattainment areas to implement a stationary source control program designed to achieve no net increase (NNI) in emissions of state nonattainment air pollutants from new or modified stationary sources exceeding specified emissions thresholds. As under the CAA, the applicable thresholds depend on the degree of nonattainment in the area in question.

## Description of the SCAQMD’s NSR Permitting Program

### Contents of Regulation XIII

The SCAQMD’s NSR program, which is codified in the SCAQMD’s “Regulation XIII,” is designed to meet the requirements of federal and state law.<sup>5</sup> Each of the existing rules in

---

<sup>4</sup> The NSR offset requirements are set forth in Section 173(c) of the CAA, 42 U.S.C. § 7503(c).

<sup>5</sup> Separate New Source Review requirements for RECLAIM pollutants (NO<sub>x</sub> and SO<sub>x</sub>) at RECLAIM facilities are included in Rule 2005. RECLAIM (Regional Clean Air Incentives Market) is a cap and trade program consisting of the largest stationary sources of these pollutants, and Regulation XIII does not apply to these pollutants at RECLAIM sources.

Regulation XIII that collectively comprise the SCAQMD’s NSR program is summarized in the following bulleted items:

- Rule 1301 – General (adopted October 5, 1979, last amended December 7, 1995): Rule 1301 describes the purpose and applicability of Regulation XIII. As stated in Rule 1301, the purpose of the SCAQMD’s NSR program is to ensure that the operation of new, modified or relocated facilities does not interfere with progress in attaining the NAAQSs and the CAAQS, and that future economic growth within the district is not unnecessarily restricted. Rule 1301(a). A specific goal of the program “is to achieve no net increases from new or modified permitted sources of nonattainment air contaminants or their precursors.” *Id.* The program applies to the installation of a new source, or the modification of an existing source, that may cause emissions of any federal or state nonattainment air contaminant, any constituent identified by the USEPA as an ozone depleting compound, or ammonia. Rule 1301(b)(1).
- Rule 1302 – Definitions (adopted October 5, 1979, last amended December 6, 2002): Rule 1302 provides definitions for 42 terms and phrases used throughout Regulation XIII.
- Rule 1303 – Requirements (adopted October 5, 1979, last amended December 6, 2002): Rule 1303 presents the pre-construction review requirements that make up the core of SCAQMD’s NSR program.
  - The requirements include Best Available Control Technology (BACT) for new or modified sources that may cause an increase in emissions of any federal or state nonattainment air contaminant, any ozone depleting compound, or ammonia. Rule 1303(a). Under the SCAQMD regulations, BACT means the most stringent emissions limitation which: (1) has been achieved in practice for the category or class of source at issue; (2) is contained in any SIP approved by the USEPA for such category or class; or (3) is based on any other emissions limitation or technique that has been found by the SCAQMD to be technologically feasible and cost-effective. Rule 1302(h). For “major polluting facilities,”<sup>6</sup> the BACT requirements must be at least as stringent as the federal LAER requirements under the CAA. Rule 1303(a)(2). With respect to other facilities, when updating BACT requirements to make them more stringent, the SCAQMD must consider economic and technological feasibility for the class or category of sources at issue. *Id.*

---

<sup>6</sup> Under the SCAQMD’s regulations, a “major polluting facility” is: (1) any facility in the Basin that has the potential to emit 10 tons per year or more of volatile organic compounds (VOCs) or NO<sub>x</sub>, or 100 tons of per year of oxides of sulfur (SO<sub>x</sub>); 70 tons per year or more of PM<sub>10</sub>; or 50 tons per year or more of CO; (2) any facility in the Riverside County portion of the SSAB that has the potential to emit 25 tons per year or more of VOCs or NO<sub>x</sub>; 70 tons per year or more of PM<sub>10</sub>; or 100 tons per year or more of CO or SO<sub>x</sub>; or (3) any facility in the Riverside County portion of the MDAB under the SCAQMD’s jurisdiction that has the potential to emit 100 tons per year or more of any of these compounds. See Rule 1302(s).

- Rule 1303(b)(1) also requires modeling to show that the new or modified source will not cause a violation, or make significantly worse an existing violation, of any NAAQS or CAAQS at any receptor location in the district.
- Rule 1303(b)(2) further requires that, unless there is an exemption under Rule 1304 (see below), emissions increases from the new or modified permitted source must be offset by one of two methods.
  - First, under Rule 1309 (see below), for projects that meet specified eligibility requirements, the applicant can use Emissions Reductions Credits (ERCs), which are created when an operator reduces emissions from a permitted facility. Once ERCs are created, operators may bank ERCs for their own subsequent use or for sale to other permit applicants.
  - Second, under Rule 1309.1 (see below), the SCAQMD may allocate credits from its “Priority Reserve” to offset emissions from “essential public services” and other specified “priority sources.” As described more fully below, the Priority Reserve is part of an internal “bank” or internal accounts of offsets that the SCAQMD accumulates primarily from “orphan” reductions and shutdowns which occur when an operator reduces emissions from a permitted facility but does not convert the emissions reduction into ERCs. This bank of offsets is referred to in the SCAQMD regulations, and this document, as the SCAQMD’s “internal offset accounts.”
- Rule 1303(b)(2)(A) specifies the required offset ratio in terms of the amount of emissions reductions that is needed to compensate for the increase in emissions from the permitted source. For facilities located in the Basin, the required offset ratios are 1.0-to-1.0 for allocations from the Priority Reserve<sup>7</sup> and 1.2-to-1.0 for the use of ERCs. For facilities not in the Basin, the required offset ratios are 1.0-to-1.0 for allocations from the Priority Reserve; 1.2-to-1.0 for ERCs for emissions of VOCs, NO<sub>x</sub>, SO<sub>x</sub>, and PM10; and 1.0-to-1.0 for ERCs for emissions of CO. (Note: the district has achieved the California Ambient Air Quality standards for CO and has been designated as in attainment for the federal standards, so CO emissions are no longer required to be offset.)
- Rule 1303 also includes additional permitting requirements for “major polluting facilities” (as defined above) and “major modifications”<sup>8</sup> at an existing major polluting facility. These requirements include an analysis of alternatives (this

---

<sup>7</sup> Although the offset ratio for credits allocated from the SCAQMD’s Priority Reserve account is 1.0-to-1.0, this ratio is for accounting purposes of limiting the use of the Priority Reserve to the level authorized by Rule 1309.1 only and is not the offset ratio used for demonstrating equivalency with federal offset requirements. If the facility accessing the Priority Reserve is a major source then the actual ratio of credits allocated from the SCAQMD’s federal offset accounts would be 1.2-to-1.0 for extreme nonattainment air contaminants and their precursors to comply with federal offset requirements.

<sup>8</sup> Under the SCAQMD’s regulations, a “major modification” is a modification of a major polluting facility that will cause an increase of the facility’s potential to emit according to the following criteria: (a) for facilities in the Basin, one pound per day of more of VOCs or NO<sub>x</sub>; (b) for facilities under the SCAQMD’s jurisdiction that are not in the Basin, 25 tons per year or more of VOCs or NO<sub>x</sub>; or (c) for all facilities under the SCAQMD’s jurisdiction, 40 tons per year or more of SO<sub>x</sub>, 15 tons per year or more of PM10, or 50 tons per year or more of CO. Rule 1302(r).

requirement may be satisfied through CEQA compliance), a demonstration by the applicant that its facilities in California comply with applicable air quality requirements, and modeling of plume visibility for certain sources of PM<sub>10</sub> or NO<sub>x</sub> located near specified areas.

- Rule 1304 - Exemptions (adopted October 5, 1979, last amended June 14, 1996): Rule 1304 establishes exemptions from the offset requirements in Rule 1303 for the following categories of projects:
  - Replacement of a functionally identical source.
  - Replacement of electric utility steam boilers with specified types of equipment, as long as the new equipment has a maximum electric power rating that does not allow basinwide electricity generating capacity on a per-utility basis to increase.
  - Portable abrasive blasting equipment complying with all state laws.
  - Emergency standby equipment for nonutility electric power generation or any other emergency equipment as approved by the SCAQMD, provided the source does not operate more than 200 hours per year.
  - Air pollution control strategies (i.e., source modifications) for the sole purpose of reducing emissions.
  - Emergency operations performed under the jurisdiction of an authorized health office, fire protection officer, or other authorized public agency officer. Rule 1304 requires that a specific time limit be imposed for each emergency operation.
  - Portable equipment that is not located for more than 12 consecutive months at any one facility in the district. This exemption does not apply to portable internal combustion engines.
  - Portable internal combustion engines that are not located for more than 12 consecutive months at any one facility in the district. To qualify for this exemption, the emissions from the engine may not cause an exceedance of an ambient air quality standard and may not exceed specified limits for either VOCs, NO<sub>x</sub>, SO<sub>x</sub>, PM<sub>10</sub> or CO.
  - Intra-facility portable equipment meeting specified criteria where emissions from the equipment do not exceed specified emissions thresholds for any of the constituents listed in the bulleted item above.
  - Relocation of existing equipment, under the same operator or ownership, and provided that the potential to emit any air contaminant will not be greater at the new location than at the previous location when the source is operated at the same conditions as if current BACT were applied.
  - Concurrent facility modifications, which are modifications to a facility after the submittal of an application for a permit to construct, but before the start of operation. The modifications must result in a net emissions decrease and other conditions must also be satisfied.
  - Resource recovery and energy conservation projects.

- Regulatory compliance actions (i.e., modifications to comply with federal, state or SCAQMD pollution control requirements), provided there is no increase in the maximum rating of the equipment.
  - Regulatory compliance for essential public services.
  - Replacement of ozone depleting compounds (ODC), provided the replacement complies with the SCAQMD’s “ODC Replacement Guidelines” and meets other specified criteria.
  - Methyl bromide fumigation.
  - New and modified facilities with only minimal potential to emit (less than four tons per year of VOCs, NO<sub>x</sub>, SO<sub>x</sub>, or PM10 and less than 29 tons per year of CO).
- Rule 1306 – Emissions Calculations (adopted October 5, 1979, last amended December 6, 2002): Rule 1306 codifies the methodology for quantifying emissions increases and emissions reductions for Regulation XIII purposes (e.g., determining applicability of BACT, quantifying the amount of emission offsets required or the amount of ERCs to be banked), but is not applicable to the SCAQMD’s internal accounts.
  - Rule 1309 – Emission Reduction Credits and Short Term Credits (adopted September 10, 1982, last amended December 6, 2002): Rule 1309 sets forth the requirements for eligibility, registration, use and transfer of ERCs for use as offsets under Rule 1303(b)(2), but is not applicable to the SCAQMD’s internal accounts. Among other topics, the rule addresses the validation of past emissions decreases for use as ERCs; the application for an ERC for a new emissions reduction; interpollutant offsets; and inter-basin and inter-district offsets.
  - Rule 1309.1 – Priority Reserve (adopted June 28, 1990, last amended May 3, 2002<sup>9</sup>): Rule 1309.1 establishes the Priority Reserve, which is part of the SCAQMD’s internal accounts of emission offsets. The SCAQMD accumulates offsets in the Priority Reserve primarily from orphan shutdowns and reductions. The SCAQMD then allocates these offsets to meet offset requirements when issuing permits for “essential public services,” which are defined to include publicly owned or operated sewage treatment plants, prisons, police and firefighting facilities, schools, hospitals, landfill gas control or processing facilities, water delivery facilities, and public transit facilities. The SCAQMD also allocates offsets from the Priority Reserve when issuing permits for other specified priority sources, such as innovative technologies that result in lower emissions rates and experimental research activities designed to advance the state of the art. The rule requires that, before an eligible facility may use offsets from the Priority Reserve for a particular pollutant, the facility must first use any ERCs that it holds for that pollutant.

---

<sup>9</sup> As explained below, subsequent amendments to Rule 1309.1 in 2006 were replaced by the 2007 amendments, which were invalidated as a result of litigation.

- Rule 1310 – Analysis and Reporting (adopted October 5, 1979, last amended December 7, 1995): Rule 1310 addresses the Executive Officer’s application completeness determinations, annual reports to the Governing Board regarding the effectiveness of Regulation XIII and public notice requirements for banking ERCs above specified threshold amounts.
- Rule 1313 – Permits to Operate (adopted October 5, 1979, last amended December 7, 1995): Rule 1313 exempts permit renewal, change of operator, or change in Rule 219 – Equipment Not Requiring a Written Permit Pursuant to Regulation II, from the SCAQMD’s NSR program, specifies that an application for a permit to operate a source that was constructed without a prior permit to construct is considered an application for a permit to construct for purposes of the SCAQMD’s NSR program, establishes a 90-day deadline for facility operators to provide emissions offsets requested by the Executive Officer for a permit to operate, provides a window of up to 90 days for a replacement source to operate concurrently with the source it is replacing, specifies the inclusion of NSR permit conditions on permits, and specifies that relaxing or removing a condition limiting mass emissions from a permit is subject to NSR if that condition limited the source’s obligations under NSR.
- Rule 1316 – Federal Major Modifications (Adopted December 2, 2005) Rule 1316 establishes that if a permit applicant demonstrates that a proposed modification to an existing stationary source would not constitute a Federal Major Modification (as defined in the USEPA’s regulations at 40 C.F.R. § 51.165) the proposed modification is exempt from the analysis of alternatives otherwise required by Rule 1303. Rule 1316 also allows applicants for major polluting facilities to apply for a plantwide applicability limit (PAL), which is a cap on facility-wide emissions of a particular pollutant that allows the operator to make modifications to the facility without triggering the alternatives requirement of Rule 1303, as long as the requirements for PALs are met and the cap is not exceeded.

## **The SCAQMD’s System for Tracking Offsets**

### 1996 Tracking System

In 1996, the SCAQMD submitted its NSR program to CARB for approval, and incorporation into the California SIP. CARB then forwarded the SCAQMD’s NSR program to the USEPA for approval. The USEPA approved the SCAQMD’s NSR program as part of California’s SIP in December 1996. See 61 Fed. Reg. 64291 (December 4, 1996) (“Approval and Promulgation of Implementation Plan for South Coast Air Quality Management District”). The preamble to USEPA’s December 1996 approval stated that SCAQMD would apply a tracking system to show in the aggregate that the SCAQMD (1) will provide for the necessary offsets to meet the CAA’s requirements, and (2) will provide offsets for facilities that are exempt under Rule 1304, which are not exempt under the CAA from the federal offset requirements. The SCAQMD implemented a tracking system for demonstrating equivalence between the SCAQMD and federal NSR programs.

As explained by the USEPA in its October 1996 Technical Support Document (TSD), the purpose of the tracking system is to “continuously show that in the aggregate the SCAQMD is able to provide for the necessary offsets required to meet the appropriate statutory offset ratio” (TSD, page 16). In other words, the tracking system is designed to show that offsets are sufficient in the aggregate to compensate for aggregate increases of emissions of nonattainment pollutants from sources in the district that are regulated by the CAA’s major source NSR requirements including a 1.2 to one offset ratio for VOC and NO<sub>x</sub>. The USEPA concluded in the TSD and in its December 1996 Federal Register Notice that the SCAQMD’s NSR program was consistent with the provisions of the CAA, including the Act’s requirements for offsets.

Although SCAQMD Rule 1304 exempts certain types of projects from offset requirements, if they are federal major sources their emission increases are still subject to federal offset requirements pursuant to the CAA’s emission requirements. Additionally, specific essential public services and other high priority sources may obtain offsets from the SCAQMD’s Priority Reserve pursuant to SCAQMD Rule 1309.1. The NSR Tracking System accounts for offsets provided from the SCAQMD’s internal accounts to offset emissions increases from these types of sources.

Since 1996, as a part of the SCAQMD’s effort to track emissions offsets in its internal offset accounts, SCAQMD staff has prepared a series of reports that track credits and debits from August 1990 through July 2002 and present the remaining balances of credits in the SCAQMD’s federal and California offset accounts. These NSR tracking reports go back to the year 1990<sup>10</sup> because that was the year when fundamental amendments were made to the SCAQMD’s Regulation XIII. A key source of credits in these tracking reports was orphan shutdowns of federal major sources (for purposes of demonstrating equivalency with federal offset requirements) and of sources with potential to emit above California’s “no net increase” (NNI) applicability thresholds (for purposes of demonstrating equivalency with California NNI requirements). In other words, when a facility had previously reduced emissions by shutting down equipment or installing control equipment or implementing permanent process changes that were not required, but did not claim an ERC or had originally obtained its offset from SCAQMD, the SCAQMD allocated that reduction as a credit in its internal offset accounts. The USEPA’s 1996 approval of the SCAQMD NSR program confirmed its use of emissions reductions from orphan shutdowns as a source of offset credits. The USEPA also indicated that other appropriate credit sources

---

<sup>10</sup> Prior to 1990 SCAQMD kept a running “NSR balance” for each facility with permitted stationary sources. The NSR balance included an entry for every increase and every decrease in emissions at a facility that resulted from a permit action since October, 1976, when the SCAQMD first implemented an NSR program. When the SCAQMD modified Regulation XIII in 1990, it discounted and carried forward into its internal accounts the pre-1990 NSR balance for facilities that had a “negative balance,” i.e., the decreases in emissions exceeded the cumulative increases at the facility.

included, for example, the “BACT discount<sup>11</sup>” required by Regulation XIII (Rule 1306(c)) when a facility banks ERCs; and surplus emissions reductions, which occur when an offset is required under the SCAQMD regulations, but not under the CAA. In addition, USEPA confirmed that the internal bank would provide offsets for priority reserve sources under Rule 1309.1 and for facilities that are exempt under SCAQMD Rule 1304, but which are not exempt under the CAA from the federal offset requirements.

### Changes to Tracking System

In 2002, the SCAQMD adopted a new Rule 1309.2 to provide for an “offset budget” for projects that do not qualify for Priority Reserve credits.<sup>12</sup> The rule was submitted to USEPA for approval as part of the California SIP, and during its review of that rule USEPA raised the issue of whether the SCAQMD had retained adequate documentation of certain emissions reductions that arose from shutdowns occurring before 1990. After an exhaustive internal review of its documentation, the SCAQMD established to USEPA’s satisfaction that its records supported many of the pre-1990 offset credits, and agreed to remove from its internal accounts those pre-1990 offset credits for which the SCAQMD no longer possessed sufficient documentation.

Removing these offset credits reduced the balance of offsets in the SCAQMD’s internal offset accounts. To counteract this reduction, the SCAQMD proposed in 2006 to revise its offset tracking system, to, among other things, account for a set of emissions reductions it had not previously tracked as part of its federal NSR program: offsets from orphan shutdowns and reductions from federal minor sources. The SCAQMD’s federal NSR program had previously tracked offsets from orphan shutdowns and reductions of federal major sources. The USEPA approved the revised tracking system in April 2006, including the use by the SCAQMD of previously unclaimed orphan shutdown credits.<sup>13</sup>

During its review, the USEPA also requested that the SCAQMD describe its internal offset tracking system in a rule. The SCAQMD began developing new Rule 1315 for this purpose and in September 2006, adopted Rule 1315.

---

<sup>11</sup> The BACT discount serves to reduce the amount of the ERC that may be claimed when a facility curtails or reduces or ceases emissions. In particular, instead of obtaining an ERC for the amount of the actual reduction in emissions, the facility may claim an ERC under the SCAQMD’s regulations only for the amount of the reduction that would have occurred if the facility was equipped with then-current BACT at the time the reduction occurred. The CAA does not require this discount, but USEPA later indicated that the BACT discount operated as a substitute for USEPA’s requirement that ERCs be shown to be “surplus at the time of use” and therefore could not be used to generate offsets, unless the discount is demonstrated to exceed the reductions that would be required by SCAQMD rules in the SIP scheduled to be adopted in the following year.

<sup>12</sup> As indicated below, the SCAQMD rescinded Rule 1309.2 in February 2010. The amendments to Rule 1309.2 that were previously proposed for consideration in this EA have accordingly been withdrawn.

<sup>13</sup> The various changes that the SCAQMD proposed in 2006 to its pre-existing emissions offset tracking system are documented in a submittal to the USEPA in February 2006. See SCAQMD’s Revised NSR Offset Tracking System, February 23, 2006. These changes were approved in a letter from Deborah Jordan, USEPA, to Dr. Barry Wallerstein, SCAQMD, April 11, 2006, re “Proposed NSR Offset Tracking System.”

## **Litigation Challenging the Adoption of Rule 1315 and Amendment of 1309.1**

The SCAQMD adopted Rule 1315 describing its internal offset trucking system on September 8, 2006. The SCAQMD also adopted amendments to Rule 1309.1 at the same time to allow new power plants applying for a permit to qualify for offsets from the SCAQMD's Priority Reserve upon payment of mitigation fees. These amendments to Rule 1309.1 were proposed to apply for a limited period of time in recognition of the potential for an energy crisis and of the extreme difficulty such facilities faced in attempting to find ERCs on the open market.

The SCAQMD initially determined that its actions in adopting Rule 1315 and amending Rule 1309.1 were exempt from the California Environmental Quality Act. But a suit was filed in state court to challenge these rules alleging that a CEQA review was required. [*Natural Resources Defense Council, et al. v. South Coast Air Quality Management District, et al.*, Los Angeles Superior Court No. BS105728.] As a result of the lawsuit, the SCAQMD decided not to proceed on the basis of a CEQA exemption and instead to prepare a Program Environmental Assessment (PEA). After completing the PEA, in 2007 the SCAQMD readopted Rule 1315 and the amendments to Rule 1309.1 relating to power plants.

A second lawsuit was then filed to challenge the adequacy of the PEA under CEQA. [*Natural Resources Defense Council v. South Coast Air Quality Management District*, Los Angeles Superior Court Case No. BS 110792 (case filed Aug. 31, 2007)]. The court upheld the Petitioners' claims that the PEA was not adequate in certain respects. In July 2008, the court issued an order vacating the SCAQMD's approval of Rule 1315 and the amendments to Rule 1309.1, and "enjoined the SCAQMD from undertaking any action to further implement these rules pending CEQA compliance."

The SCAQMD is now undertaking environmental review under CEQA of its proposed adoption of a revised version of Rule 1315, as contemplated by the court's order.

The SCAQMD is not proposing to readopt any amendments to Rule 1309.1. As a result, the former amendments to Rule 1309.1 relating to power plants are not part of the proposed project. Instead, the SCAQMD will keep in place the current version of Rule 1309.1, as last amended in 2002.

## **PROJECT DESCRIPTION**

The proposed project consists of adopting a revised version of Rule 1315. The major components of proposed Rule 1315 are briefly summarized in the following subsections. A complete copy of proposed Rule 1315 can be found in Appendix A.

### **Proposed Rule 1315**

Proposed Rule 1315 would ensure that exempt sources under Rule 1304 and essential public services and other projects that qualify for Priority Reserve offsets under Rule 1309.1 are fully offset to the extent required by federal law by valid emission reductions from the SCAQMD's internal offset accounts. The proposed rule would achieve this by specifying

what types of reductions are eligible to be credited as offsets to SCAQMD’s internal accounts and how those reductions are tracked.

The proposed rule would provide for the use of certain types of offsets that previously had not been accounted for in the SCAQMD’s federal tracking system.<sup>14</sup> In addition, the proposed rule provides for annual demonstrations of equivalency with federal offset requirements, as discussed below.

The proposed rule would require debits from the SCAQMD’s internal accounts for emissions offsets allocated from the Priority Reserve under Rule 1309.1 and for increased emissions from sources permitted under exemptions from the offset requirements under Rule 1304.

Proposed Rule 1315 provides for offsets to be credited to the SCAQMD’s internal accounts for the following:

- Orphan shutdowns and orphan reductions, including from minor federal sources. See Proposed Rule 1315(c)(3)(A)(i), (ii).
- ERCs provided as emissions offsets for sources located at federal minor facilities. See Proposed Rule 1315(c)(3)(A)(iii).
- The difference between the quantity of ERCs provided for a source located at a major polluting facility at a 1.2-to-1.0 ratio (see Rule 1303(b)(2)(A)), and the quantity of ERCs required to offset emissions at a 1:0-to-1:0 ratio pursuant to the CAA. See Proposed Rule 1315(c)(3)(A)(iv).
- The amount of emissions reductions associated with a facility’s NSR balance<sup>15</sup> or Community Bank<sup>16</sup> allocations that are deducted from an emission reduction

<sup>14</sup> Proposed Rule 1315 provides for SCAQMD to recognize for federal NSR purposes: emission reductions from: federal minor source “orphan shutdowns” and “orphan reductions;” federal minor sources where the source provides an ERC under the SCAQMD regulations, but where no offset is required under the CAA; and, the difference between emissions reductions provided at an offset ratio of 1.2-to-1.0 and a ratio of 1.0 to 1.0 for pollutants where the CAA requires offsets of only 1.0-to-1.0. Many, but not all, of the sources of offset credits that had not previously been accounted for in federal tracking were previously tracked for purposes of demonstrating equivalency with California “No Net Increase” (NNI) requirements. Specifically, shutdowns and reductions from minor sources, regardless of how small, were tracked for state purposes for VOC and NO<sub>x</sub>. Shutdowns and reductions from minor sources of CO, PM<sub>10</sub> and SO<sub>x</sub> were tracked for state purposes if emissions were 15 tons per year or more, the threshold for state NNI tracking.

<sup>15</sup> The SCAQMD’s regulations define “NSR balance” as the sum of emissions increases, decreases, and offsets as listed in district records for a facility. Under no circumstances shall the NSR balance for a facility be greater than the facility’s potential to emit or less than zero. See Rule 1302(y).

<sup>16</sup> The Community Bank previously provided a source of offsets from the SCAQMD’s internal accounts, under a prior version of Rule 1309.1, to relatively low-emitting facilities (i.e., facilities with a total potential to emit of either less than two tons per year of each air contaminant or less than specified daily amounts for each air contaminant). The Community Bank provisions in the 1990 version of Rule 1309.1 also specified the amounts of credits available for each nonattainment or precursor pollutant required to be offset pursuant to federal regulations on a daily and monthly basis. These offsets became unavailable to applications deemed complete after adoption of the December 7, 1995 amendments to Rule 1309.1 – Priority Reserve, which eliminated the Community Bank.

quantified during the Executive Officer’s evaluation of an ERC banking application. See Proposed Rule 1315(c)(3)(A)(v).

- The difference between the reduction in daily emissions that is actually achieved and the reduction in daily emissions as calculated with the BACT adjustment required by Rule 1306(c) when a facility reduces emissions and applies for an ERC.<sup>17</sup> See Proposed Rule 1315(c)(3)(A)(vi).

For offsets resulting from orphan shutdowns or reductions, credit is taken for eighty percent of the permitted emission levels. The reason for this procedure is that it is estimated that, on average, facilities operate at approximately 80 percent of permitted levels.

Proposed Rule 1315 would specify procedures to be followed by the Executive Officer to make annual demonstrations that the SCAQMD’s NSR program, in the aggregate, satisfies federal offset requirements for major sources under Clean Air Act §173. Under proposed Rule 1315, SCAQMD will track annually all eligible offsets credited to the SCAQMD internal offset accounts. The amount of offsets needed for federal major sources relying on the SCAQMD internal offset accounts to meet the federal NSR requirements will be debited from the offset accounts.

In a significant change from the 2007 version of the Rule 1315, proposed Rule 1315 provides for an overall cumulative annual cap, for each pollutant, on the cumulative net emission increases that can be offset from the SCAQMD’s internal offset accounts. This is referred to as a CEQA “backstop” measure and establishes pollutant-specific limits on cumulative net emissions increases, based on the growth projection in the SCAQMD’s 2007 AQMP for stationary sources eligible to obtain offsets from the Priority Reserve or eligible for offset exemptions. If one of these limits is exceeded, the SCAQMD must cease issuing permits for sources that rely on the Rule 1309.1 Priority Reserve or the Rule 1304 exemption for the relevant pollutant. This will ensure that the net emission increase, if any, attributable to proposed Rule 1315 will not exceed the emissions forecasted in this PEA.

Specific components of proposed Rule 1315 are briefly summarized below.

Purpose (subdivision a)

The purpose of this rule is the following:

- Maintain the ability to continue to issue permits to major sources that obtain offset credits from the Priority Reserve under Rule 1309.1 and/or are exempt from offsets under Rule 1304 [paragraph (a)(1)];

---

<sup>17</sup> This emission reduction credit applies where the SCAQMD demonstrates, and the USEPA concurs, that the reduction as calculated with the BACT adjustment exceeds what would be required under approved SIP rules and rules scheduled for approval by the SCAQMD in the following year’s rule cycle. See Proposed Rule 1315(c)(3)(A)(vi).

- Memorialize in rule form the procedures used to establish NSR program equivalency with federal NSR offset requirements for such major sources [subparagraph (a)(2)(A)]; and
- Demonstrate that sufficient emission reductions, including previously-untracked emission reductions, exist beyond federal regulatory requirements, and could be used as offsets to establish that the SCAQMD’s NSR program is equivalent to federal NSR offset requirements for major sources exempt under Rules 1304 and/or eligible for offsets from the Priority Reserve under Rule 1309.1 [subparagraph (a)(2)(B)].

Definitions (subdivision b)

Key definitions in PR 1315 include the following:

- “Community Bank” [paragraph (b)(1)]: As indicated above, the Community Bank previously provided a source of offsets from the SCAQMD’s internal accounts to relatively low-emitting facilities (i.e., facilities with a total potential to emit of either less than two tons per year of each air contaminant or less than specified daily amounts for each air contaminant);
- Net Emission Increase [paragraph (b)(2)]: For any given nonattainment air contaminant, the aggregate increase in potential to emit from permitted major and minor stationary sources, less the aggregate emissions reduction;
- Offset Ratio [paragraph (b)(3)]: A ratio of the quantity of offset credits provided to the increase of potential emissions requiring offsets;
- Orphan Reduction [paragraph (b)(4)]: Any reduction in actual emissions from a permitted source within SCAQMD resulting from a physical change to the source and/or a change to the method of operation of the source provided the change is reflected in a revised permit for the source and provided the reduction is not otherwise required by rule, regulation, law, approved AQMP control measure or the SIP, and does not result in issuance of an ERC;
- Orphan Shutdown [paragraph (b)(5)]: Any reduction in actual emissions from a permitted source within SCAQMD resulting from removal of the source from service and inactivation of the permit without subsequent reinstatement of the permit, provided the reduction is not otherwise required by rule, regulation, law, approved AQMP control measure or the SIP, and does not result in issuance of an ERC;
- Priority Reserve [paragraph (b)(6)]: A reserve of offsets available to specified priority sources; and
- Shortfall [paragraph (b)(7)]: A negative net balance in any offset account,

Offset Accounts for Federal NSR Equivalency (subdivision c)

- The Executive Officer shall maintain a separate offset account for each federal nonattainment air contaminant that is subject to federal NSR offset requirements (federal offset account). The initial offset account balances as of October 1, 1990 for each air contaminant are listed in Table A [paragraph (c)(1)], as set forth in Table 2-1.

**TABLE 2-1**  
**Initial SCAQMD Offset Account Balances**

<b>Air Contaminant</b>	<b>Initial Account Balance</b> (tons per day)
Volatile Organic Compounds (VOC)	38.46
Nitrogen Oxides (NO <sub>x</sub> )	23.92
Sulfur Oxides (SO <sub>x</sub> )	8.04
Carbon Monoxide (CO)	8.45
Particulate Matter (PM <sub>10</sub> )	2.67

- The Executive Officer shall track and debit from the offset accounts the eligible types of offset allocations or exemptions (e.g. Priority Reserve, Community Bank, and Rule 1304 exemptions) located at major polluting facilities not exempt from federal offset requirements [paragraph (c)(2)];
- The Executive Officer shall track and credit the eligible types of emission reductions (e.g., orphan shutdowns, orphan reductions, ERCs provided for sources located at minor facilities, etc.) that have occurred since October 1, 1990 to the SCAQMD offset accounts [subparagraph (c)(3)(A)].
- The Executive Officer shall deposit emission reductions into the SCAQMD offset accounts according to procedures that make the credits real, quantifiable, permanent and enforceable. For orphan shutdowns and reductions as provided for in subparagraphs (c)(3)(A)(i) and (c)(3)(A)(ii), the entire amount of the emissions reduction is not credited to the SCAQMD's internal accounts; rather, the amount of the credit is 80 percent of the total change in the source's NSR permitted emission levels. For other types of credits as provided for in subparagraphs (c)(3)(A)(iii) through (vi) (e.g., ERCs provided for sources located at minor facilities; the difference between the quantity of ERCs provided for a source located at a major polluting facility at a 1.2-to-1.0 ratio, and the quantity of ERCs required to offset emissions at a 1:0-to-1:0 ratio pursuant to the CAA; etc.), the full amount of the credit is allocated to the SCAQMD's internal accounts [subparagraph (c)(3)(B)].

- The Executive Officer may choose not to track all potential sources of credits if it is determined that sufficient credits remain in the SCAQMD offset accounts to demonstrate equivalency for each reporting period [subparagraph (c)(3)(C)].
- All unused orphan shutdown and orphan reduction credits in the federal offset accounts shall be discounted annually, based on the percentage reduction in overall permitted emissions that are projected to be achieved as a result of the implementation of control requirements that became effective for that pollutant during the previous calendar year [paragraph (c)(4)]. This provision is designed to make sure that credits from orphan sources are adjusted each year to account for the most recent control measures and to assure that the offsets in the SCAQMD's internal accounts remain "surplus at the time of use" pursuant to USEPA policy.

Net Emissions Increases (subdivision d)

- All increases in potential to emit that occur at minor sources pursuant to Rule 1304 and Rule 1309.1 do not constitute debits from the SCAQMD offset accounts; however, these increases are tracked to ensure that the overall limits for cumulative net increases in emissions are not exceeded as specified in subdivision (h) for purposes of the CEQA backstop [paragraph (d)(1)].
- The cumulative net emission increase of each nonattainment air contaminant from use of offsets by major and minor sources shall be calculated and tracked through the end of the 2010 reporting period, and through the end of each subsequent tracking period, by no later than the Final Determination of Equivalency (FDE, which is described below) completion deadline for each period [paragraph (d)(2)].
- Cumulative net emission increases from use of offsets by major and minor sources shall be included in the Executive Officer's report to the Governing Board of each FDE commencing with the FDE for the 2010 reporting period. When the Executive Officer reports the credit accounting elements identified in paragraph (c)(3) with the PDE for the subsequent reporting period, the Executive Officer shall report the cumulative net emission increases for the same air contaminant, with the PDE for the subsequent reporting period [paragraph (d)(3)]. Net emission increases are not an element of the FDE. Net emission increases include both major and minor emission sources. The determination of equivalency with federal offset requirements only applies to major sources. Therefore, the net emissions increases are not part of the determination of equivalency with federal requirements, but are part of the CEQA backstop.

Federal NSR Equivalency Determination Reports (subdivision e)

- In order to monitor equivalency, the Executive Officer shall aggregate and track offsets debited from and offsets provided to the SCAQMD offset accounts into specific reporting periods [paragraph (e)(1)].
- Commencing with the calendar year 2009 reporting period, the Executive Officer shall, no later than twelve months after the completion of the reporting period,

complete a PDE to show equivalence with federal nonattainment NSR offset requirements [paragraph (e)(2)].

- Commencing with the calendar year 2009 reporting period, the Executive Officer shall, no later than eighteen months after the completion of the reporting period, complete an FDE to show equivalence with federal nonattainment NSR offset requirements accounting for both debits and credits during the subject reporting period for any account(s) for which the PDE did not demonstrate equivalence [paragraph (e)(3)].
- In lieu of preparing both a PDE and FDE for a single reporting period, the Executive Officer may opt to include the PDE in the FDE for the same reporting period [paragraph (e)(4)].

#### Projections of Offset Account Balances and Net Emission Increases (subdivision f)

- Each PDE and FDE report the Executive Officer prepares and presents to the Governing Board and USEPA shall also include projections of the SCAQMD offset account balances at the end of each of the two subsequent reporting periods; projections of the SCAQMD offset accounts are based upon the average of the total annual debits and average of total annual credits for the five most recent reporting periods [paragraph (f)(1)].
- Projections of the cumulative net emission increases at the end of each of the two subsequent reporting periods shall be included in each PDE report and each FDE report commencing with the reports analyzing the 2010 reporting period [paragraph (f)(2)]. Although these projections are reported as part of the PDEs and FDEs, they are separate from the determination of equivalency.

#### Equivalency Backstop Provisions (subdivision g)

- The Executive Officer shall discontinue funding the Priority Reserve for any air contaminant that the most recent FDE has demonstrated does not have a positive balance in its SCAQMD offset account. The Executive Officer may resume funding the Priority Reserve upon completion of an FDE demonstrating that the shortfall no longer exists [subparagraph (g)(1)(A)].
- If an FDE shows a shortfall (i.e., negative balance) for any air contaminant, the Executive Officer shall discontinue issuing permits to construct or operate any major sources that rely on new offset account debits resulting from the use of Rule 1304 exemptions or Priority Reserve offsets from Rule 1309.1. The Executive Officer may resume issuance of such permits upon completion of an FDE demonstrating that the shortfall no longer exists [subparagraph (g)(1)(B)].
- If an FDE demonstrates that a shortfall exists in any of the SCAQMD offset accounts or a subdivision (f) projection predicts a shortfall, the Executive Officer shall prepare a report to the Governing Board recommending implementation of

one or more backstop provisions as needed to correct the shortfall or demonstrating that the backstop provisions are not necessary by demonstrating continued compliance with federal NSR offset requirements on an aggregate basis [paragraph (g)(2)].

California Environmental Quality Act Backstop Provisions (subdivision h)

- If the cumulative net emission increase of a nonattainment air contaminant exceeds the threshold for that air contaminant, as set forth in Table B, the Executive Officer shall discontinue issuing permits to construct and permits to operate that rely on new offset account debits resulting from the use of Rule 1304 exemptions or Priority Reserve offsets from Rule 1309.1 for that air contaminant [paragraph (h)(1)].
- The cumulative net emission increase thresholds are established based upon the growth assumptions in the approved 2007 Air Quality Management Plan through December of 2010 and each subsequent year through 2030 [paragraph (h)(2)].

State Implementation Plan Submittals (subdivision i)

- Subparagraphs (b)(2) and (f)(2), and subdivisions (d), (h), (i) and (j), as these provisions are described above, will not be submitted for inclusion in the California State Implementation Plan. The purpose of this subdivision is to assure that only the method for demonstrating equivalency with federal offset requirements is included in the federally-approved state implementation plan. The CEQA backstop is based on state law requirements and is not a part of the federal equivalency demonstration.

Sunset Date for Permit Issuance (subdivision j)

- This rule shall expire on January 1, 2031.

Please refer to Appendix A for the text of Proposed Rule 1315.

## **PROJECT OBJECTIVES**

CEQA Guidelines §15124(b) requires the project description to include a statement of objectives sought by the proposed project, including the underlying purpose of the proposed project. Compatibility with project objectives is one criterion for selecting a range of reasonable project alternatives and provides a standard against which to measure project alternatives. The project objectives identified in the following bullet points have been developed: (1) in compliance with CEQA Guidelines §15124(b); (2) to be consistent with policy objectives of the SCAQMD's New Source Review program; and (3) to address the Los Angeles Superior Court's judgment in the litigation relating to the September 2007 adoption of Rule 1315 and amendments to Rule 1309.1. The project objectives are as follows:

- Maintain the SCAQMD’s ability to continue to administer its new source review program for major and minor sources for facility modernization and to accommodate population growth through implementation of Rule 1304 and Rule 1309.1. SCAQMD’s policy objectives include allowing the permitting system to operate in order to: 1) allow facility modernization which will increase efficiency and reduce air pollution, 2) allow facilities to install pollution control equipment, 3) allow emergency equipment to be installed, 4) allow permitting of equipment necessary for essential public services and small emitters, 5) allow operation of portable equipment and other sources determined as a policy matter to be exempt from offsets or eligible for Priority Reserve credits, and 6) take into account environmental and socioeconomic benefits as well as environmental and socioeconomic impacts;
- Memorialize in rule form the accounting procedures the SCAQMD uses to establish equivalency of SCAQMD’s New Source Review program with federal offset requirements, and ensure that valid offsets are projected to be available in SCAQMD internal offset accounts before a major source relying on such offsets is permitted thus assuring that increases in emissions resulting from such sources are fully offset; and
- Recognize sufficient previously-unused emission reductions that are beyond those required by applicable regulatory requirements in order to demonstrate federal equivalency for major sources that are exempt under Rule 1304 or that are allocated credits from the Priority Reserve under Rule 1309.1.

## **PERMITS AND APPROVALS**

If the SCAQMD Governing Board adopts proposed Rule 1315, CARB must then determine whether to approve the rule and submit it to the USEPA for federal approval under the CAA. This decision has been held not to be an action subject to CEQA. There are no other public agencies with discretionary approval over the proposed project, i.e., approval of proposed Rule 1315. Therefore, no other permits or approvals are required for the proposed project.

Specific future projects that may seek permits from the SCAQMD under a Rule 1304 exemption, or that may seek offsets from the Priority Reserve under Rule 1309.1, would be subject to discretionary approvals by those public agencies that have approval authority over such projects. The lead agency with the principal authority for approving each particular future project would be responsible for conducting CEQA review for the project which would be conducted at the time the project is proposed for that agency’s approval.

## **OTHER ISSUES RELEVANT TO PROJECT DESCRIPTION**

### **Legislative Requirements for Use of Credits in Internal Offset Accounts**

Following the entry of the judgment in *Natural Resources Defense Council v. South Coast Air Quality Management District* (Los Angeles County Superior Court Case No. BS 110792) in November 2008, the SCAQMD declared a Permit Moratorium under which the SCAQMD suspended issuance of permits for sources that relied on Priority Reserve internal

account offsets pursuant to Rule 1309.1, and permits using the exemptions from offset requirements found in Rule 1304, because both of these types of permits relied on offsets in the SCAQMD's internal accounts. The judgment had the effect of preventing the SCAQMD from using any of the newly-tracked types of offsets in the internal accounts, primarily minor source orphan shutdowns. As a result of the Permit Moratorium, many essential public service projects and projects seeking an exemption pursuant to Rule 1304, some of which are considered to be environmentally beneficial projects such as replacing equipment with new, cleaner equipment, could not go forward. In addition, the court decision invalidated the prior amendments to Rule 1309.1 which would have allowed qualified power plants access to internal account offsets, upon payment of a mitigation fee. Given the extreme difficulty of finding the necessary types and amounts of ERCs on the open market, new power plants also could not go forward as a result of the judgment.

In response to the court's decision, and its effect on the projects described above, in 2009 Sen. Rod Wright proposed legislation, SB 696, which in early versions would have allowed access to the internal accounts for essential public services, Rule 1304 exempt sources, and specified power plants. Through the legislative process, the bill was ultimately replaced by SB 827, which allowed access to internal offset accounts only for facilities exempt from offsets pursuant to Rule 1304 (as amended June 14, 1996) and essential public service Priority Reserve projects pursuant to Rule 1309.1 (as amended May 3, 2002). Under this legislation, the SCAQMD was required to use internal account offsets, including minor source shutdowns and reductions occurring since 1990, for these two categories of projects, notwithstanding the Superior Court decision. The bill was signed by Governor Schwarzenegger on October 11, 2009, and became effective on January 1, 2010 (Health & Safety Code §40440.13). The SCAQMD began implementing SB 827 on January 2, 2010, and issued over 1,300 permits that had been held up in the permit moratorium, some for over a year. SB 827 sunsets on May 1, 2012.

Also during the 2009 legislative session, Assemblymember V. Manuel Perez proposed legislation, AB 1318, requiring that qualified electrical generating facilities be provided with offsets from the SCAQMD's internal accounts (Health & Safety Code §40440.14). This bill also was signed by the Governor on October 11, 2009, and became effective January 1, 2010. Based on the eligibility criteria in the bill, the only power plant that foreseeably could qualify for offsets under the bill is the proposed CPV Sentinel Energy Project, proposed to be located in Desert Hot Springs, California, which is outside the South Coast Air Basin, but still within the district. AB 1318 sunsets on January 1, 2012.

Implementation of these statutes is not a part of the proposed project and does not depend on the proposed project. The SCAQMD may continue to issue permits to exempt sources under Rule 1304, and essential public services under Rule 1309.1, until SB 827 sunsets in May 2012. Similarly, the statutory provisions regarding transfer of internal account offsets to

CPV Sentinel pursuant to AB 1318 remain in effect until AB 1318 sunsets in January 2012.<sup>18</sup>

There is pending legislation, Senate Bill 388 (Calderon) that is a carbon copy of AB 1318, except that instead of providing offsets to CPV Sentinel, it would provide offsets to the Walnut Creek Mission Energy project. The bill was held on the Senate floor on the last day of the 2009 legislative session, making it a two-year bill, which can be considered for passage in the 2010 legislative session. The bill has not been adopted by either house of the California Legislature. SB 388 proposes to sunset on January 1, 2013.

In addition to these two power plants (CPV Sentinel and the Walnut Creek Mission Energy project), a third power plant – the NRG El Segundo Repowering project – was anticipated to be the subject of legislation mirroring AB 1318 and SB 388. More recently, the El Segundo plant applied for and received an exemption from the offset requirements under SCAQMD Rule 1304(a)(2), which covers electric utility steam boiler replacement. Because the El Segundo project meets the requirements of Rule 1304, it was one of the facilities allowed under SB 827. However, when preparation of the PEA commenced, it was possible that the El Segundo project would be permitted under legislation specific to that project, similar to the other two power plant projects discussed above. Thus, for purposes of analysis, this PEA discusses the impacts of the El Segundo project along with the impacts of the other two power plants. . All three of these power plant projects are considered foreseeable future projects that could contribute to cumulative impacts and, therefore, the cumulative impacts of the power plant projects are included in this PEA.

As provided in SB 827, the SCAQMD will continue to issue permits to exempt sources under Rule 1304 and essential public services under Rule 1309.1 in accordance with the provisions of SB 827, “until a new tracking system is approved by the United States Environmental Protection Agency.” As noted above, permits issued pursuant to SB 827 are not part of, nor are they dependent upon, the proposed project (i.e., adoption of proposed Rule 1315). However, it is unknown exactly when USEPA will approve the Rule 1315 tracking system, assuming proposed Rule 1315 is adopted and this PEA is certified. For that reason, this PEA’s impact analysis evaluates the impacts of using internal account offsets for sources approved under Rule 1304 and Rule 1309.1 as of July 2010. This approach will have the effect of applying the impact analysis to some permits that will be issued under SB 827 between July 2010 and the date the USEPA approves the tracking system in proposed Rule 1315. Although this approach will overstate the project related impacts to some degree, it will ensure that project impacts are fully accounted for from the date Rule 1315 takes effect.

---

<sup>18</sup> SB 827 and AB 1318 were the subject of litigation (*California Communities Against Toxics v. South Coast Air Quality Management District*, Los Angeles Superior Court Case No. BS 124264, action filed Dec. 30, 2009). On June 18, 2010 the court issued a ruling granting judgment on the pleadings in favor of SCAQMD on all claims in the case. However, plaintiffs have appealed that decision, although there is no order preventing implementation of the bills.

### **Rescission Of Former Rule 1309.2 And Deletion Of Proposed Amendments To Rule 1309.2 From The Proposed Project**

The Notice of Preparation for this PEA indicated that the PEA would address proposed amendments to Rule 1309.2. Rule 1309.2, which was adopted on December 6, 2002, provided for creation of an Offset Budget. Upon approval by the USEPA, Rule 1309.2 would have allowed projects that did not qualify for Priority Reserve credits to use offsets from the SCAQMD's internal offset accounts under certain specified circumstances. The Rule has not been approved by the EPA, and was rescinded by the SCAQMD Governing Board on February 5, 2010. Accordingly, the amendments to Rule 1309.2 which were previously proposed have been withdrawn, and those previously-proposed amendments are not discussed further in this PEA.

### **EXISTING SETTING - INTRODUCTION**

#### **Introduction**

## **INTRODUCTION**

CEQA Guidelines Section 15360 (Public Resources Code Section 21060.5) defines “environment” as “the physical conditions that exist within the area which will be affected by a proposed project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance.” According to CEQA Guidelines Section 15125, a CEQA document must include a description of the physical environment in the vicinity of the project, as it exists at the time the Notice of Preparation (NOP) is published from both a local and regional perspective. Since this is a programmatic document that covers the SCAQMD’s entire jurisdiction, the existing setting for each category of impact is described on a regional level.

The following subchapters present the existing settings for the environmental topics of concern identified in the Initial Study for the proposed project. In addition, topic areas that were initially found to be less than significant or were found to have no impact, are now included for analysis and existing setting discussions have been prepared.

## **SUBCHAPTER 3.1**

---

### **EXISTING SETTING - AESTHETICS**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

In previous litigation on Rule 1315, the Los Angeles County Superior Court issued a writ of mandate ordering the SCAQMD to, *inter alia*, set aside its August 2007 adoption of Rule 1315 and amended Rule 1309.1 (“the 2007 Project”). The Court held that the SCAQMD violated CEQA in adopting the rules. In particular, the Court concluded that the 2007 PEA did not address the visual degradation of allowing new pollution into the air of the Basin. Visual character of the sky or visibility, is a manifestation of air quality, i.e., the worse the air quality the more visibility is adversely affected. Because of the direct relationship between visibility and air quality, this topic is addressed in detail in Subchapter 3.3, baseline; Subchapter 4.1, direct project-specific impacts; and Chapter 6, direct impacts from the project alternatives.

## ENVIRONMENTAL SETTING

This environmental setting subchapter describes the aesthetics resources settings that may be adversely affected by the proposed project. Specifically, this environmental setting subchapter describes visual character and quality, visual resources, scenic highways, and coastal zones within the district.

### Visual Character and Quality

Visual character and quality are defined by the built and natural environment. The ***visual character*** of a view is descriptive cataloguing of underlying landforms and landcover including the topography, general land use patterns, scale, form, and the presence of natural areas. Urban features, such as structures, roads, utility lines, and other development associated with human activities also help to define visual character. ***Visual quality*** is an evaluative appraisal of the aesthetics of a view and is established using a well-established approach to visual analysis adopted from the Federal Highway Administration (FHWA) based upon the relative degree of vividness, intactness, and unity found within the visual setting, as defined in the following bullet points.<sup>1</sup>

- Vividness is the visual power or memorability of landscape components as they combine in striking and distinctive patterns.
- Intactness is the visual integrity of the landscape and its freedom from encroaching elements; this factor can be present in well-kept urban and rural landscapes, as well as in natural settings.
- Unity is the degree to which the visual resources of the landscape join together to form a coherent, harmonious visual pattern. Unity refers to the compositional harmony or inter-compatibility between landscape elements.

Each of the three criteria is independent and intended to evaluate one aspect of visual quality; however, no one criterion considered alone equates to visual quality.

---

<sup>1</sup>Federal Highway Administration, Visual Impact Assessment for Highway Projects, 1981.

The perception of visual quality can vary significantly among viewers depending on their level of visual sensitivity (interest). Among sensitive viewers perceptions can vary seasonally and even hourly as weather, light, shadow, and the elements that compose the viewshed change. Form, line, color, and texture are the basic components used to describe visual character and quality for most visual assessments.<sup>2</sup> Sensitivity depends upon the length of time the viewer has access to a particular view. Typically, residential viewers have extended viewing periods and are often concerned about changes in views from their homes. Visual sensitivity is, therefore, considered to be high for neighborhood residential areas. Visual sensitivity is considered to be less important for commuters and other people driving along surrounding streets. Views from vehicles are generally more fleeting and temporary, yet under certain circumstances are sometimes considered important (e.g., viewers who are driving for pleasure, views/vistas from scenic corridors).

As discussed in the Subchapter 3.1, Aesthetics, of the Southern California Association of Governments (SCAG) 2008 Regional Transportation Plan (RTP) Final Environmental Impact Report (FEIR), various jurisdictions within the SCAG region, which includes the jurisdiction of SCAQMD such as cities, counties, and federal or regional agencies, provide guidelines regarding the preservation and enhancement of visual quality in their plans or regulations.<sup>3</sup> An example of such guidance is the Caltrans Scenic Highway Visual Quality Program Intrusion Examples, which are presented in Table 3.1-1. As the table illustrates, a given visual element may be considered desirable or undesirable, depending on design, location, use, and other considerations. Because of the size and diversity of the area within the SCAQMD’s jurisdiction, it is not possible to apply uniform standards to all areas within the district.

**TABLE 3.1-1  
Caltrans Scenic Highways Program – Examples of Visual Quality Intrusions**

	<b>Minor Intrusion</b>	<b>Moderate Intrusion</b>	<b>Major Intrusion</b>
<b>BUILDINGS:</b> <i>Residential Development, Commercial Development, Industrial Development</i>			
	Widely Dispersed buildings. Natural Landscape dominates. Wide setbacks and buildings screened from roadway. Exterior colors and materials are compatible with environment. Buildings have cultural or historical significance.	Increased number of buildings, but these are complementary to the landscape. Smaller setbacks and lack of roadway screening. Buildings do not degrade or obstruct scenic view.	Dense and continuous development. Highly reflective surfaces. Buildings poorly maintained. Visible blight. Development along ridge lines. Buildings degrade or obstruct scenic view.

<sup>2</sup> *Ibid.*

<sup>3</sup> California cities and counties are not required to include visual quality elements in their General Plans although many do. However, the General Plans are required to include a Conservation Element, which includes resources such as waterways and forests that frequently are also scenic resources.

**TABLE 3.1-1 (Continued)**  
**Caltrans Scenic Highways Program – Examples of Visual Quality Intrusions**

	<b>Minor Intrusion</b>	<b>Moderate Intrusion</b>	<b>Major Intrusion</b>
<b>UNSIGHTLY LAND USES:</b> <i>Dumps, Quarries, Concrete Plants, Tank Farms, Auto Dismantling</i>			
	Screened from view so that facility is not visible from the highway.	Not screened and visible but programmed/funded for removal and site restoration.	Not screened and visible by motorists. Will not be removed or modified. Scenic view is degraded.
<b>STRIP MALLS</b>			
	No examples.	Neat and well landscaped. Single story. Blend with surroundings.	Not harmonious with surroundings. Poorly maintained or vacant. Blighted. Development degrades or obstructs scenic view.
<b>PARKING LOTS</b>			
	Screened from view so that vehicles and pavement are not visible from the highway.	Neat and well landscaped. Blend with surroundings.	Not screened or landscaped. Scenic view is degraded.
<b>OFF-SITE ADVERTISING STRUCTURES</b>			
	No examples.	No examples.	Billboards degrade or obstruct scenic view.
<b>NOISE BARRIERS</b>			
	No examples.	Noise barriers are well landscaped and complement the natural landscape. Noise barriers do not degrade or obstruct scenic view.	Noise barriers obstruct scenic view.
<b>POWER LINES</b>			
	Not easily visible from road.	Visible, but compatible with surroundings.	Poles and lines dominate view. Scenic view is degraded.
<b>AGRICULTURE:</b> <i>Structures, Equipment, Crops</i>			
	Blends in and complements scenic view. Indicative of regional culture.	Not in harmony with surroundings. Competes with natural landscape for visual dominance.	Incompatible with and dominates natural landscape. Structures, equipment or crops degrade scenic view.

**TABLE 3.1-1 (Concluded)**  
**Caltrans Scenic Highways Program – Examples of Visual Quality Intrusions**

	Minor Intrusion	Moderate Intrusion	Major Intrusion
<b>EXOTIC VEGETATION</b>			
	Used as screening and landscaping. Blends in and complements scenic view.	Competes with native vegetation for visual dominance.	Incompatible with and dominates natural landscape. Structures, equipment or crops degrade scenic view.
<b>CLEARCUTTING</b>			
	No examples.	Trees bordering highway remain so that clearcutting is not evident.	Clearcutting or deforestation is evident. Scenic view is degraded.
<b>EROSION</b>			
	Minor Soil Erosion	Slopes beginning to erode. Not stabilized.	Large slope failures and no vegetation. Scenic view is degraded.
<b>GRADING</b>			
	Grading blends with adjacent landforms and topography.	Some changes, but restoration is taking place.	Extensive cut and fill. Scarred hillsides and landscape. Canyons filled in. Scenic view is degraded.
<b>ROAD DESIGN</b>			
	Blends in and complements scenic view. Roadway structures are suitable for location and compatible with surroundings.	Cut and fill is visible but has vegetative cover.	No examples.

Source: SCAG 2008 RTP FEIR; California Department of Transportation. (1996, March). Scenic Highways Program. Sacramento, CA.

The *viewshed* can be defined as all of the surface area visible from a particular location or sequence of locations, and is described in terms of the dominance of landforms, landcover, and manmade development constituting visual character. Views of high visual quality in urban settings generally have several of the following additional characteristics:

- Harmony in scale with the surroundings;
- Context sensitive architectural design; and
- Impressive landscape design features.

Areas of medium visual quality have interesting forms but lack unique architectural design elements or landscape features. Areas of low visual quality have uninteresting features and/or undistinguished architectural design and /or other common elements.

## Visual Resources

Visual resources include historic buildings that uniquely identify a setting, views identified as significant in local plans, and/or views from scenic highways. The importance of a view to viewers is related to the position of the viewers relative to the resource and the distinctiveness of a particular view. The visibility and visual dominance of landscape elements are usually described with respect to their placement in the viewshed.

Visual resources occur in a diverse array of environments within the boundaries of the district, ranging in character from urban centers to rural agricultural land, natural woodlands, and coastal views. The extraordinary range of visual features in the region is afforded by the mixture of climate, topography, flora and fauna found in the natural environment, and the diversity of style, composition, and distribution of the built environment. Views of the coast from locations in Los Angeles and Orange counties are considered valuable visual resources, while views of various mountain ranges are prevalent throughout the district. Other natural features that may be visually significant in the district include rivers, streams, creeks, lakes, and reservoirs.

The County of Los Angeles General Plan identifies regional open space and recognized scenic areas, generally including the Santa Monica Mountains, as well as the San Gabriel Mountains, Verdugo Hills, Santa Susana Mountains, Simi Hills, Santa Monica Mountains, and Puente Hills. In addition, ridgelines and hillsides are generally considered to be scenic resources, with specific measures for the protection of these areas.<sup>4</sup>

The County of Orange General Plan identifies the Santa Ana Mountains along with their distinctive twin peaks known as “Saddleback” as the county’s signature landmark. The Plan designates 10 scenic “viewscope corridors,” which include among others Pacific Coast Highway, Oso Parkway, Ortega Highway, Jamboree Road, Santiago Canyon Road, Laguna Canyon Road. These designated viewscope corridors provide scenic views of the Santa Ana Mountains, Lomas de Santiago and the San Joaquin Hills, as well as numerous canyons and valleys including the Santa Ana Canyon, Capistrano Valley, Laguna, Aliso, Wood, Moro, San Juan, Trabuco Santiago, Modjeska, Silverado, Limestone, and Black Star Canyons. Finally, the General Plan identifies nearly 42 miles of coastline and approximately 33 miles of sandy beaches as defining scenic resources<sup>5</sup>.

The County of Riverside General Plan identifies regional scenic resources, including Santa Ana River basin, Lake Mathews, Lake Perris, Lake Elsinore, Lake Skinner, Vail Lake, the San Jacinto River, Murrieta Creek, the Santa Margarita River, the vineyard/citrus region near Temecula, the Diamond Valley Reservoir, Joshua Tree National Park, Whitewater River, the Santa Rosa Mountains, and a portion of the Salton Sea<sup>6</sup>.

---

<sup>4</sup> Scenic Resources Element, 2009. Los Angeles County Draft General Plan.

<sup>5</sup> Transportation and Resources Elements, 2004. Orange County General Plan.

<sup>6</sup> Multipurpose Open Space Element, 2003. County of Riverside General Plan.

The County of San Bernardino General Plan identifies several scenic areas, including the San Gabriel Mountains, the San Bernardino Mountains, La Loma Hills, Jurupa Hills, Chino Hills, Yucaipa Hills, Holcomb Valley, and the Mojave Desert. In addition, Big Bear Lake, Silverwood Lake, Lake Arrowhead, and Lake Gregory, along with associated waterways, serve as defining characteristics of the mountain regions within the County. San Bernardino County has a wide variety of scenic and wilderness areas respectively categorized as the Mountain, Valley, and Desert regions. Each region has its own defined measures for protecting the specific resources contained in this region. The County of San Bernardino also considers desert night-sky views to be scenic resources and has enacted measures to reflect this<sup>7</sup>.

In addition to County plans, many of the cities within the district have general plan policies, and in some cases, ordinances, related to the protection of visual resources.

In addition to the visual resources related to natural areas, many features of the built environment that may also have visual significance include individual or groups of structures that are distinctive due to their aesthetic, historical, social, or cultural significance or characteristics, such as architecturally appealing buildings or groups of buildings, landscaped freeways, bridges or overpasses, and historic resources.

### Scenic Highways

Within the district, there are numerous officially designated state and county scenic highways and one historic parkway, as listed in Table 3.1-2.

**TABLE 3.1-2  
Scenic Highways Within District Boundaries**

Route	County	Location	Description	Miles	Designation
2	Los Angeles	From near La Cañada Flintridge north to the San Bernardino County line.	This U.S. Forest Service Scenic Byway and State Scenic Highway winds along the spine of the San Gabriel Mountains. It provides views of the mountain peaks, the Mojave Desert, and the Los Angeles Basin.	55	ODSSH
38	San Bernardino	From east of South Fork Campground to State Lane.	This U.S. Forest Service Scenic Byway and State Scenic Highway crosses the San Bernardino Mountains at Onyx Summit. It features forested mountainsides with far-off desert vistas near the summit.	16	ODSSH

<sup>7</sup> Conservation Element, 2007. County of San Bernardino General Plan.

**TABLE 3.1-2 (Continued)**  
**Scenic Highways Within District Boundaries**

Route	County	Location	Description	Miles	Designation
62	Riverside	From I-10 north to the San Bernardino County line.	This highway features high desert country scenery and leads to or from Joshua Tree National Monument. Large "windmill farms," where wind power is used to generate electricity, can be seen along the way.	9	ODSSH
74	Riverside	From west boundary of the San Bernardino National Forest to SR-111 in Palm Desert.	This road goes from the southern Mojave Desert to oak and pine forests of San Bernardino National Forest. It offers views of the San Jacinto Valley and peaks of the San Jacinto Mountains.	48	ODSSH
91	Orange	From SR-55 to east of Anaheim city limit.	This freeway runs along the banks of the Santa Ana River. Views include residential and commercial development with intermittent riparian and chaparral vegetation.	4	ODSSH
243	Riverside	From SR-74 to the Banning city limit.	This U.S. Forest Service Scenic Byway and State Scenic Highway traverses forested mountain scenery along a ridge of the San Bernardino Mountains. It then drops in a series of switchbacks offering views of the San Bernardino Valley and the desert scenery.	28	ODSSH
N/A	Los Angeles	Mulholland Highway from SR-1 to Kanan Dume Road and from west of Cornell Road to east of Las Virgenes Road.	With the dramatic canyons, oak woodlands, open spaces and ocean views of the Santa Monica Mountains, Mulholland Highway offers travelers views of the mountains, the Pacific Ocean, and historic sites along its stretch.	19	ODCSH
N/A	Los Angeles	Malibu Canyon-Las Virgenes Highway from State Route 1 to Lost Hills Road	The rugged terrain and ancient rock formations along this route have been a backdrop of many early California settlers. The formations have known presence dating to the original De Anza expedition of Spanish colonists.	7.4	ODCSH

**TABLE 3.1-2 (Concluded)  
Scenic Highways Within District Boundaries**

Route	County	Location	Description	Miles	Designation
110	Los Angeles	Between milepost 25.7 and 31.9 in Los Angeles.	This segment of the Pasadena Freeway traces the first freeway in California. All structural elements of the original parkway, opened to traffic in 1940, still remain.	6	HP

ODSSH = Officially Designated State Scenic Highway

OCCSH = Officially Designated County Scenic Highway

Source: Caltrans, *California Scenic Highway Mapping System*, accessed April 2009.

There are also a number of roadways that have been determined eligible for state scenic highway designation, as listed in Table 3.1-3.

### Coastal Zones

According to the California Coastal Act of 1976, a coastal zone is the land and water area of the State of California from the Oregon border to the border of Mexico, extending seaward to the state's outer limit of jurisdiction, including all offshore islands, and extending inland generally 1,000 yards from the mean high tide line of the sea. In significant coastal estuarine, habitat, and recreational areas, the coastal zone extends inland to the first major ridgeline paralleling the sea or five miles from the mean high tide line of the sea, whichever is less, and in developed urban areas the coastal zone generally extends inland less than 1,000 yards.

The coastal zone within the district generally extends from Leo Carrillo State Park in Malibu in the northwestern corner of Los Angeles County to San Clemente Beach in San Clemente near the southern tip of Orange County.

Local Coastal Plans (LCPs) typically contain policies on visual access and site development review. LCPs are basic planning tools used by local governments to guide development in the coastal zone, in partnership with the California Coastal Commission. LCPs contain the ground rules for future development and protection of coastal resources in the 75 coastal cities and counties. The LCPs specify appropriate location, type, and scale of new or changed uses of land and water. Each LCP includes a land use plan and measures to implement the plan (such as zoning ordinances). Prepared by local government, these programs govern decisions that determine the short- and long-term conservation and use of coastal resources. While each LCP reflects unique characteristics of individual local coastal communities, regional and statewide interests and concerns must also be addressed in conformity with Coastal Act goals and policies.

## REGULATORY SETTING

### Federal

Aesthetic resources on federal lands are managed by the federal government using various visual resource management programs, depending on the type of federal land and/or the federal agency involved with a given project. Examples of federal visual resource management programs include the Visual Resource Management System utilized by the Federal Bureau of Land Management (BLM) and the Visual Management System utilized by the United States Forest Service (USFS).

### State

**California Coastal Act.** The California Coastal Act of 1976 was enacted to regulate development projects within California's Coastal Zone. The act includes requirements that protect views and aesthetic resources through siting and design control measures, which are typically implemented at the local planning level through local coastal programs (LCPs) or land use plans (LUPs). According to the California Coastal Act:

*The scenic and visual qualities of coastal areas shall be considered and protected as a resource of public importance. Permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural land forms, to be visually compatible with the character of surrounding areas, and, where feasible, to restore and enhance visual quality in visually degraded areas. New development in highly scenic areas such as those designated in the California Coastline Preservation and Recreation Plan prepared by the Department of Parks and Recreation and by local government shall be subordinate to the character of its setting.*<sup>8</sup>

For local jurisdictions that do not have an approved LCP, regulation of development projects within the coastal zone remains under the jurisdiction of the California Coastal Commission (CCC).

**State Scenic Highway Program.** California's Scenic Highway Program was created by the California Legislature in 1963 to preserve and protect scenic highway corridors from change that would diminish the aesthetic value of land adjacent to those highways. When a city or county nominates an eligible scenic highway for official designation, it must adopt ordinances to preserve the scenic quality of the corridor or document such regulations that already exist in various portions of local codes. These ordinances make up the scenic corridor protection program.

Scenic corridor protection programs include policies intended to preserve the scenic qualities of the highway corridor, including regulation of land use and density of development, detailed land and site planning, control of outdoor advertising (including a ban on billboards), careful attention to and control of earthmoving and landscaping, and careful attention to design and appearance of structures and equipment (California Streets and Highways Code § 260 et seq.).

## **Local**

**Counties and Cities.** The geographic area encompassed by the district includes numerous cities and unincorporated communities in the counties of Los Angeles, Orange, San Bernardino, and Riverside. Each of these counties and incorporated cities has prepared a general plan, which is the primary document that establishes local land use policies and goals. Many of these general plans also establish local policies related to aesthetics and the preservation of scenic resources within their communities or sub-planning areas, and may include local scenic highway programs.

**Local Coastal Programs.** The CCC and the local governments along the coast share responsibility for managing the state's coastal resources. Through coordination with the CCC, coastal cities and counties develop LCPs. These programs are the primary means for carrying out the policies of the California Coastal Act at the local level. In general, these policies are intended to promote public access and enhance recreational use of the

---

<sup>8</sup>California Public Resources Code. California Coastal Act (Chapter 3 [Coastal Resources Planning and Management Policies] Article 6, Section 30251)

coast as well as protection of natural resources in the coastal zone. Examples of counties, cities and local jurisdictions within the district that do have an approved LCP or LUP include Los Angeles County and the County of Orange and the cities of Santa Monica, El Segundo, Manhattan Beach, Hermosa Beach, Redondo Beach, Palos Verdes Estates, Rancho Palos Verdes, Long Beach, Avalon, Huntington Beach, Newport Beach, Irvine, Laguna Beach, Laguna Niguel, Dana Point, and San Clemente.

Following approval by the CCC, an LCP is certified and the local governments implement the programs. LCPs include two main components, a Land Use Plan and an Implementation Plan. These components may include policies or regulations that apply to preservation of visual and scenic resources within the coastal zone. Typically, these policies relate to preservation of views of the coast.

## **SUBCHAPTER 3.2**

---

### **EXISTING SETTING – AGRICULTURE AND FORESTRY RESOURCES**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This subchapter describes the environmental setting for agricultural resources in the Southern California Association of Governments (SCAG) region. The SCAQMD is encompassed within the SCAG region and includes Orange County and portions of Los Angeles, Riverside and San Bernardino Counties.

## ENVIRONMENTAL SETTING

This environmental setting subchapter describes the agricultural settings that may be affected by the proposed project. The environmental setting addresses designated farmlands pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency and areas of conversion from agricultural uses to non-agricultural uses in the counties in which potential future facilities that require stationary source permits that could receive emissions offsets would be located or would take effect.

### Agricultural Lands

Farmlands and rangelands are agricultural lands that are part of the region's open landscape and entail various types and degrees of modifications to natural lands. Farmlands include irrigated and non-irrigated crop production. Rangelands include any expanse of natural land that is not fertilized, irrigated, or cultivated and is predominately used for grazing by livestock and wildlife<sup>1</sup>.

The California Department of Conservation classifies important farmland by four categories: prime farmland, unique farmland, farmland of statewide importance and farmland of local importance. Through this process, the state assists in the maintenance of these valuable resources.

Following are the definitions of these four farmland categories<sup>2</sup>:

- **Prime farmland** is land best suited for producing food, feed, forage, fiber, and oilseed crops. It has the soil quality, growing season, and moisture supply needed to produce sustained high yields of crops. Production should occur economically when the land is treated and managed (including water management) according to modern farming methods.
- **Unique farmland** is land other than prime farmland and farmland of statewide importance that is currently used for the production of specific high value food and fiber crops. It has the special combination of soil quality location, growing season, and moisture supply needed to produce sustained high yields and/or high quality yields of a specific crop when treated and managed according to modern farming methods. Examples of such crops are citrus, olives, strawberries, avocados, fruit, and vegetables.

---

<sup>1</sup> Southern California Association of Governments. *Draft 2008 RTP PEIR*. January 2008.

<sup>2</sup> [http://www.ocplanning.net/docs/GeneralPlan2005/Chapter\\_VI\\_Resources.pdf](http://www.ocplanning.net/docs/GeneralPlan2005/Chapter_VI_Resources.pdf). Accessed August 7, 2009.

- **Farmland of statewide importance** is land other than prime farmland that has a good combination of suitable physical terrain and soil for producing foods, feed, forage, fiber, and oilseed crops. The land must be available for use as cropland, pastureland, range land, and forest land.
- **Farmland of Local Importance:** In some local areas there is concern for certain additional farmlands for the production of food, feed, fiber, forage, and oilseed crops, even though these lands are not identified as having national or statewide importance. These lands are to be identified by a local committee made up of concerned agencies called together by the State Department of Conservation. The local committee reviews the lands under this category on a five-year basis.

The following discussion describes the distribution of farmlands and rangelands in the SCAG region and vicinity based primarily on data provided by the California Department of Conservation. It also provides a summary of existing plans and programs in the region to conserve agricultural lands, plus a summary of growth management plans in other states that include provisions for conserving agricultural lands<sup>3</sup>. The district is included within the SCAG region.

Based on 2005 estimates prepared by the California Department of Conservation (CDC), there are approximately 2.2 million acres of agricultural lands in the SCAG region, approximately 856,000 acres of farmland and 1.2 million acres of rangeland. This estimate is substantially higher than the estimate in the 2005 SCAG land use inventory because the latter includes substantial areas of rangeland under the “vacant” category. It also should be noted that the CDC estimate is based on a selective inventory of agricultural lands and the SCAG inventory is based on aerial imagery interpretation<sup>4</sup>.

There is substantially more farmland than rangeland in Ventura, Riverside, and Imperial counties, while the reverse is true in Los Angeles, Orange, and San Bernardino counties. However, as stated in the Chapter 2, the district is comprised of portions of Los Angeles, Riverside, and San Bernardino counties and all of Orange County. Therefore, the remainder of the discussion focuses on the above-mentioned four counties.

Table 3.2-1 below shows estimated farmlands and rangelands in Los Angeles, Orange, Riverside and San Bernardino counties.

---

<sup>3</sup> Southern California Association of Governments. *Draft 2008 RTP PEIR*. January 2008.

<sup>4</sup> *Ibid.*

**TABLE 3.2-1  
Farmlands and Rangelands in Los Angeles, Orange, Riverside and San Bernardino Counties (2005 acres)**

<b>Designation</b>	<b>Los Angeles County</b>	<b>Orange County</b>	<b>Riverside County</b>	<b>San Bernardino County</b>
Farmland of Local Importance	8,684	0	244,848	2,928
Prime Farmland	33,218	7,260	134,429	20,316
Farmland of Statewide Importance	1,028	620	48,499	8,776
Unique Farmland	1,120	5,601	38,691	2,653
All Farmland	44,050	13,481	466,467	34,673
Grazing	228,826	35,872	116,029	915,549
<b>Total</b>	<b>272,876</b>	<b>49,353</b>	<b>582,496</b>	<b>950,222</b>

Source: California Department of Conservation, 2005 Estimates.

As shown in the table above, Riverside County contains the largest amount of designated farmland (466,467 acres), while San Bernardino County contains the largest amount of grazing land (915,549 acres.) Of the four counties, Orange County contains the least amount of farmland (13,481 acres) and the least amount of grazing land (35,872 acres). San Bernardino County contains the most acreage of combined farmland and rangeland (950,222 acres.)

### **Williamson Act Contract Lands**

The California Land Conservation Act, better known as the Williamson Act, has been the state's primary agricultural land protection program since its enactment in 1965. Approximately 16.9 million of the state's 29 million acres of farm and ranch land are currently protected under the Williamson Act. A Williamson Act Contract is the legal document that obligates the property owner, and any successors of interest, to the contract's enforceable restrictions.

#### **Los Angeles County**

Williamson Act Lands are not discussed in the Land Use Element or the Conservation, Open Space and Recreation Element of the General Plan. According to the California

Department of Conservation, as of July 2005, Los Angeles County discontinued offering Williamson Act contracts<sup>5</sup>.

### **Orange County**

According to the Orange County General Plan, two major landowners, the Irvine Company and Rancho Mission Viejo, have historically held the majority of property within agricultural preserves under the Williamson Act<sup>6</sup>. In 1987, the Irvine Company filed a notice of non-renewal on all of their remaining properties (approximately 19,000 acres) from their contract<sup>7</sup>. Withdrawal of the Irvine Company properties from the agricultural preserve is a ten-year process, which was completed in 1999. Rancho Mission Viejo currently holds approximately 22,000 acres in agricultural preserves.

### **Riverside County**

Specific information about Williamson Act lands located in Riverside County is not included in the Riverside County General Plan. The General Plan indicates that participation in the program is voluntary and requires 100 contiguous acres of agricultural land under one or more ownerships to file an application for agricultural preserve status with the Riverside County Planning Department<sup>8</sup>.

### **San Bernardino County**

Specific information about Williamson Act lands located in San Bernardino County is not included in the San Bernardino County General Plan. However, the General Plan does include policies and programs utilizing the provisions of the Williamson Act to further the preservation of agricultural lands<sup>9</sup>.

## **Conversion of Agricultural Lands**

Historically, development patterns in the SCAG region have been tied as much to the conversion of agricultural lands as to the consumption of natural lands for urban uses. A key issue in the region today is whether the high rate of farmland conversion in recent years can be slowed to prevent irreversible losses. An estimated 230,000 acres of farmland and grazing land were converted to non-agricultural uses and/or applied for development entitlements between 1996 and 2004. If this trend continues unabated, the existing inventory of agricultural lands could be reduced by 700,000 acres before 2030<sup>10</sup>.

<sup>9</sup> County of San Bernardino. County of San Bernardino General Plan. April 2007.

<sup>10</sup> Southern California Association of Governments. *2008 Draft RTP PEIR*. January 2008.

The following is a county summary of agricultural land conversion for 2004-2006 based on data from the California Department of Conservation<sup>11</sup>. As previously discussed, the district is comprised of all or portions of Los Angeles, Orange, Riverside and San Bernardino counties; therefore, the following discussion includes the four counties.

**Los Angeles County**

**Farmland.** According to the California Department of Conservation, Division of Land Resource Protection the total acreage inventoried of Important Farmland (which includes Prime Farmland, Farmland of Statewide Importance, Unique Farmland and Farmland of Local Importance) was 44,050 acres in 2004. In 2006, the amount decreased slightly to 43,631 acres. Approximately 2,571 acres were lost and 2,152 acres were gained for a net loss of 419 acres.

**Grazing Land.** The total acreage inventoried of grazing land was 228,826 acres in 2004. In 2006, this amount declined slightly to 228,730 acres. Approximately 2,295 acres were lost and 2,199 acres were gained for a net loss of 96 acres.

Table 3.2-2 shows the conversion of Important Farmland and Grazing Land in Los Angeles County in 2004-2006.

**TABLE 3.2-2  
Conversion of Important Farmland and Grazing Land in Los Angeles County  
2004-2006**

Land Use Category	Total Acreage Inventoried		2004-06 Acreage Changes		
	2004	2006	Acres Lost	Acres Gained	Net Acreage Changed
Important Farmland	44,050	43,631	2,571	2,152	-419
Grazing Land	228,826	228,730	2,295	2,199	-96

**Orange County**

**Farmland.** According to the California Department of Conservation, Division of Land Resource Protection the total acreage inventoried of Important Farmland (which includes Prime Farmland, Farmland of Statewide Importance, Unique Farmland and Farmland of Local Importance) was 13,480 acres in 2004. In 2006, the amount decreased to 11,915

### San Bernardino County

**Farmland.** According to the California Department of Conservation, Division of Land Resource Protection the total acreage inventoried of Important Farmland (which includes Prime Farmland, Farmland of Statewide Importance, Unique Farmland and Farmland of Local Importance) was 34,675 acres in 2004. In 2006, the amount decreased to 30,920 acres. Approximately 5,770 acres were lost and 2,015 acres were gained for a net loss of 3,755 acres.

**Grazing Land.** The total acreage inventoried of grazing land was 915,549 acres in 2004. In 2006, the amount decreased slightly to 902,853 acres. Approximately 15,892 acres were lost and 3,196 acres were gained for a net loss of 12,696 acres.

Table 3.2-5 shows the conversion of Important Farmland and Grazing Land in San Bernardino County in 2004-2006.

## Forest Resources

There are four national forests in the SCAQMD jurisdiction (Angeles, Cleveland, Los Padres and San Bernardino) that include over 3.5 million acres of federally managed public land extending from Big Sur to the north and the international border with Mexico to the south. The Angeles National Forest (662,983 acres) is located within Los Angeles, San Bernardino and Ventura Counties. The Cleveland National Forest (420,877 acres) is located within Orange, Riverside and San Diego Counties. The Los Padres National Forest (1,781,364 acres) is located within Kern, Los Angeles, Monterey, San Luis Obispo, Santa Barbara, and Ventura Counties. The San Bernardino National Forest (665,753 acres) is located within San Bernardino and Riverside Counties.

The forests provide a balanced and sustainable flow of goods and services for a growing diverse population while ensuring long-term ecosystem health, biological diversity, and species recovery. The forests also accommodate changing trends in visitor use through outreach efforts, facilities and education that meet the needs of emerging population demand.

Forest watersheds are managed to provide many benefits including flood protection and quality drinking water for downstream communities, as well as protection of Wildland/Urban Interface (WUI) areas from wildland fire. They also offer a haven for native plants and animals, and provide unique and irreplaceable habitat for threatened, endangered, and sensitive species.

Wildland fires are a fact of life in southern California. The timing and frequency of fires varies as well as how much damage will result from wildland fires. Under the right conditions, a fire started anywhere in the southern California forests may be a threat to adjacent communities. The southern California forests include millions of acres with thousands of structures in or around their borders that are threatened by wildland fire. The southern California forests are also located in one of the driest, most fire-prone areas in the United States. The situation is compounded by decades of fire suppression practices that have resulted in the development of unnaturally dense stands of trees and the accumulation of brush and other flammable fuels in many areas. Housing and other development adjacent to national forest boundaries is increasing at a rapid rate without adequate provision for the development of a 'defensible' space around them.

Oak woodlands and savannas<sup>12</sup> found in southern California forests are coast live oak and blue oak. Engelmann oak and valley oak are much less common and more restricted in their distributions. Habitat loss (due to urban expansion) has been the major threat to Engelmann oak woodlands and forests on private lands. In the case of valley oak woodlands, a combination of urbanization, agricultural conversion and poor-to-non-existent natural regeneration has threatened this habitat. Natural recruitment of valley oak appears to be inadequate to maintain its populations over time, and without

---

<sup>12</sup> United States Department of Agriculture, Forest Service, Land Management Plan – Southern California National Forests Vision <http://www.fs.fed.us/r5/scfpr/projects/lmp/docs/part1.pdf>

management intervention some areas now covered by these oaks may eventually convert to annual grasslands. Some areas of oak woodland and savannas (especially in Engelmann oak, valley oak and blue oak) that are dominated by large, old trees with little or no natural regeneration will begin to convert to annual grasslands as old oaks die without replacement. Losses of coast live oak woodlands could be accelerated by sudden oak death to which this species is particularly susceptible. The desired condition is to retain existing oak woodlands and savannas.

Southern California forests possess closed-cone conifers such as Sargent cypress, Tecate cypress, knobcone pine and Coulter pine. There are all fire-dependent tree species. According to the Forest Service, these forests typically burn in stand. Heat from a fire opens closed-cones triggering massive seed release, which is followed by seedling establishment the next spring season. All of these species depend on a well-developed aerial seed bank of closed-cones to perpetuate the stand after fire. Nevertheless, the rate at which this seed (cone) bank accumulates varies from species to species. If stands burn before they have a sufficient seed (cone) bank, they will not regenerate and will disappear from the landscape. The danger posed to the closed-cone conifers is that fires will occur too frequently, that is, before seed (cone) banks reach a sufficient size. For example, Tecate cypress is endangered because the interval between fires has shortened compared to the historic interval.

Forests located between elevations of 3,000 and 5,500 feet typically include bigcone Douglas-firs, canyon live oaks, black oaks and coastal live oaks as well as mixed evergreen forests. Alpine and subalpine forests are generally located above 8,000 feet in elevation. Subalpine conifer forests are more extensive than alpine forests and are composed of lodgepole pines, limber pines, white firs, and western junipers. Canopy cover in both vegetation types is generally sparse except where there are dense lodgepole stands in and around meadows and basins.

Timber production is negligible in southern California. The Timber Tax website<sup>13</sup> denotes a majority of timber production zones in California are located in northern California counties. Most timber activity in southern California is the result of the clearing of the forest of small trees and shrubbery that can be a hindrance to fire prevention. In addition, there is a downward trend in the demand for lumber due to a number of factors. Such factors include an unprecedented decline in home building (typically consumes 45 percent of the lumber used annually), competing cheaper Canadian lumber, and the increased interest in the use of renewable products, such as bamboo, that are replacing the need for traditional wood lumber.

## REGULATORY SETTING

### Federal

#### **Federal Farm and Ranchland Protection Program**

The Farm and Ranchland Protection Program (FRPP), also referred to as the Farmland Protection Program (FPP), is a voluntary easement purchase program that helps farmers and ranchers keep their land in agriculture. Pursuant to Sections 1539-1549, the Farmland Protection Policy Act (FPPA) of 1981 aims to minimize ways in which Federal programs contribute to the conversion of farmland to non-agricultural land uses. It also addresses compatibility with state and local government, private programs and policies to protect farmland<sup>14</sup>. The program provides matching funds to state, tribal, or local governments and nongovernmental organizations with existing farmland protection programs to purchase conservation easements or other interests in land. FPP is reauthorized in the Farm Security and Rural Investment Act of 2002 (Farm Bill). The Natural Resources Conservation Service (NRCS) manages the program. A technical committee awards funds to qualified entities to conduct their farmland protection programs. Although a minimum of 30 years is required for conservation easements, priority is given to applications with perpetual easements.

#### **Federal Environmental Quality Incentives Program**

The Environmental Quality Incentives Program (EQIP) is a voluntary program that provides assistance to farmers and ranchers who face threats to soil, water, air, and related natural resources on their land.

### State

#### **California Department of Conservation**

In 1982, the State of California created the Farmland Mapping and Monitoring Program within the California Department of Conservation to carry on the mapping activity from the NRCS on a continuing basis. The California Department of Conservation administers the California Land Conservation Act of 1965 (Williamson Act) for the conservation of farmland and other resource-oriented laws.

#### **California Land Conservation Act of 1965 (Williamson Act)**

The California Land Conservation Act (Williamson Act) has been the state's primary agricultural land protection program since its enactment in 1965. Approximately 16.9 million of the state's 29 million acres of farm and ranch land are currently protected under the Williamson Act. The California Legislature passed the Williamson Act in 1965

---

<sup>14</sup> Southern California Association of Governments. *Draft 2008 RTP PEIR*. January 2008.

to preserve agricultural and open space lands by discouraging premature and unnecessary conversion to urban uses. The Act creates an arrangement whereby private landowners contract with counties and cities to voluntarily restrict land to agricultural and open-space uses. The vehicle for these agreements is a rolling term 10-year contract (i.e. unless either party files a “notice of non-renewal” the contract is automatically renewed annually for an additional year). In return, restricted parcels are assessed for property tax purposes at a rate consistent with their actual use, rather than potential market value.<sup>15</sup>

**Farmland Security Zone.** In August of 1998, the Legislature enhanced the Williamson Act with the farmland security zone (FSZ) provisions. The FSZ provisions offer landowners greater property tax reduction in return for a minimum rolling contract term of 20 years.

### **California Farmland Conservancy Program**

The California Farmland Conservancy Program (CFCP) seeks to encourage the long-term, private stewardship of agricultural lands through the voluntary use of agricultural conservation easements. The CFCP provides grant funding for projects which use and support agricultural conservation easements for protection of agricultural lands. As of April 2005, the CFCP has funded more than 50 easement projects in California, including nearly 25,000 acres in more than a dozen counties. CFCP has also funded a number of planning grants, including some with regional or statewide value<sup>16</sup>.

**Local Counties and Cities.** The geographic area encompassed by the district includes numerous cities and unincorporated communities in the counties of Los Angeles, Orange, San Bernardino, and Riverside. Each of these counties and incorporated cities has prepared a general plan, which is the primary document that establishes local land use policies and goals. Many of these general plans also establish local policies related to conservation and open space including agricultural lands.

### **California Forest Practice Act**

The California Forest Practice Act was enacted in 1973 to ensure that logging is done in a manner that will preserve and protect fish, wildlife, forests and streams. The Act was last amended in January 2010. The Timber Harvesting Plan (THP) is the environmental review document submitted by landowners to the California Department of Forestry and Fire Protection (CAL-FIRE) outlining what timber one wants to harvest, how it will be harvested, and the steps that will be taken to prevent damage to the environment. CAL-FIRE reviews and approves approximately 500 to 1,400 THPs each year. CAL FIRE follows-up on approved THPs with site inspections and can shut down operations, cite or fine if illegal operations are found.

## **SUBCHAPTER 3.3**

---

### **EXISTING SETTING – AIR QUALITY, VISIBILITY AND CLIMATE CHANGE**

**Introduction**

**Air Quality Environmental Setting**

**Air Quality Regulatory Setting**

**Visibility Environmental Setting**

**Visibility Regulatory Setting**

**Climate Change Environmental Setting**

**Climate Change Regulatory Setting**

## **INTRODUCTION**

This section describes the existing air quality, visibility and greenhouse gas emissions within the district, as well as the regulatory setting for each of these topics, including the regulatory setting pertaining to climate change impacts and analysis.

## **AIR QUALITY ENVIRONMENTAL SETTING**

### **Existing Physical Setting And Meteorology**

#### **Air Basins**

The project area is the entire area of the SCAQMD's jurisdiction, referred to as the district, (Figure 3.3-1). The SCAQMD has jurisdiction over an area of 10,473 square miles, consisting of the four-county South Coast Air Basin (Basin) and the Riverside County portions of the Salton Sea Air Basin (SSAB) and the Mojave Desert Air Basin (MDAB). The Basin, which is a subarea of the district, is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The 6,745 square-mile Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The combination of topography, low mean mixing height, abundant sunshine, and emissions from the second largest urban area in the United States gives the Basin the worst air pollution problems in the nation.

The Riverside County portion of the SSAB and MDAB is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley. The federal non-attainment area (known as the Coachella Valley Planning Area) is a sub-region of both Riverside County and the SSAB and is bounded by the San Jacinto Mountains to the west and the eastern boundary of the Coachella Valley to the east.

#### **Climate/Meteorology in the Basin**

Air quality is not only affected by various emission sources (mobile, industry, etc.) but is also affected by atmospheric conditions such as wind speed, wind direction, temperature, rainfall, etc. The following describes the climate and meteorology in the district portion of each of the three air basins.

Climate in the Basin is determined by its terrain and geographical location. The Basin consists of a coastal plain with connecting broad valleys and low hills. The Pacific Ocean forms the southwestern border, and high mountains surround the rest of the Basin. The Basin lies in the semi-permanent high pressure zone of the eastern Pacific. The resulting climate is mild, and is tempered by cool ocean breezes. This climatological pattern is rarely interrupted. However, periods of extremely hot weather, winter storms, and Santa Ana wind conditions occur periodically.

**Figure 3.3-1**

**Southern California Air Basins within South Coast Air Quality Management District**

Annual average temperature varies little throughout the Basin, ranging from the low-to-middle 60s, measured in degrees Fahrenheit. With a more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas. The majority of annual rainfall in the Basin occurs between October and March. Summer rainfall is minimal and generally limited to scattered thundershowers in coastal regions and slightly heavier showers in the eastern portion of the Basin and along the coastal side of the mountains.

Although the Basin has a semi-arid climate, air near the surface is generally moist because of the presence of a shallow marine layer. With very low average wind speeds, there is a limited capacity to disperse air contaminants horizontally. The dominant daily wind pattern is an onshore 8 to 12 mph daytime breeze and an offshore 3 to 5 mph nighttime breeze. The typical wind flow pattern fluctuates only with occasional winter storms or strong northeasterly Santa Ana winds from the mountains and deserts northeast of the Basin. Summer wind flow patterns represent worst-case conditions, as this is the period of higher temperatures and more sunlight, which results in ozone formation.

During spring and early summer, pollution produced during any one day typically disperses out of the Basin through mountain passes or lifted by warm, vertical currents adjacent to mountain slopes. Air contaminants can be transported 60 miles or more from the Basin by ocean air during the afternoons. From early fall to winter, the transport is

less pronounced because of slower average wind speed and the appearance of drainage winds earlier in the day. During stagnant wind conditions, offshore drainage winds may begin by late afternoon. Pollutants remaining in the Basin are trapped and begin to accumulate during the night and the following morning. A low morning wind speed in pollutant source areas is an important indicator of air stagnation and the buildup potential for primary air contaminants.

Temperature normally declines with altitude. A reversal of this atmospheric state, where temperature increases with altitude, is called an inversion. The height from the earth's surface to the inversion base is known as the mixing height. With persistent low inversions and cool coastal air, morning fog and low stratus clouds are common. Cloudy days are less likely in the eastern portions of the district and about 25 percent more likely along the coast. The vertical dispersion of air pollutants in the district is limited by temperature inversions in the atmosphere close to the earth's surface.

Inversions are generally lower in the nighttime, when the ground is cool, than during daylight hours when the sun warms the ground and, in turn, the surface air layer. As this heating process continues, the temperature of the surface air layer approaches the temperature of the inversion base, causing heating along its lower edge. If enough warming takes place, the inversion layer becomes weak and opens up to allow the surface air layers to mix upward. This can be seen in the middle to late afternoon on a hot summer day when smog appears to clear suddenly. Winter inversions typically break earlier in the day, preventing excessive contaminant build-up.

The combination of stagnant wind conditions and low inversions produces the greatest pollutant concentrations. On days of no inversion or high wind speeds, ambient air pollutant concentrations are lowest. During periods of low inversions and low wind speeds, air pollutants generated in urbanized areas are transported predominantly onshore into Riverside and San Bernardino Counties. In the winter, the greatest pollution problems are carbon monoxide and oxides of nitrogen because of extremely low inversions and air stagnation during the night and early morning hours. In the summer, the longer daylight hours and the brighter sunshine combine to cause a reaction between hydrocarbons and oxides of nitrogen to form photochemical smog.

### **Climate/Meteorology in the Mojave Desert Air Basin**

The MDAB is an assemblage of mountain ranges interspersed with long broad valleys that often contain dry lakes. Many of the lower mountains that dot the vast terrain rise from 1,000 to 4,000 feet above the valley floor. Prevailing winds in the MDAB are out of the west and southwest. These prevailing winds are due to the proximity of the MDAB to coastal and central regions and the blocking effect of the Sierra Nevada Mountains to the north. Air masses pushed onshore in southern California by differential heating are channeled through the MDAB. The MDAB is separated from the southern California coastal and central California Valley regions by mountains (highest elevation approximately 10,000 feet), whose passes form the main channels for these air masses. The Mojave Desert is bordered in the southwest by the San Bernardino Mountains, separated from the San Gabriel Mountains by the Cajon Pass (4,200 feet). A lesser

channel lies between the San Bernardino Mountains and the Little San Bernardino Mountains, the Morongo Valley. The Palo Verde Valley portion of the Mojave Desert lies in the low desert, at the eastern end of a series of valleys (notably the Coachella Valley) whose primary channel is the San Gorgonio Pass (2,300 feet) between the San Bernardino and San Jacinto Mountains.

During the summer, the MDAB is generally influenced by a Pacific Subtropical High cell that sits off the coast, inhibiting cloud formation and encouraging daytime solar heating. The MDAB is rarely influenced by cold air masses moving south from Canada and Alaska, as these frontal systems are weak and diffuse by the time they reach the desert. Most desert moisture arrives from infrequent warm, moist and unstable air masses from the south. The MDAB averages between three and seven inches of precipitation per year (from 16 to 30 days with at least 0.01 inch of precipitation). The MDAB is classified as a dry-hot desert climate (Bwh), with portions classified as dry-very hot desert (Bwhh), to indicate at least three months have maximum average temperatures over 100 degrees Fahrenheit.

### **Salton Sea Air Basin**

The SSAB portion of the district is separated from the Basin region by the San Jacinto Mountains and from the MDAB region by the Little San Bernardino Mountains. Similar to the MDAB region, during the summer the SSAB is generally influenced by a Pacific Subtropical High cell that sits off the coast, inhibiting cloud formation and encouraging daytime solar heating. The SSAB is rarely influenced by cold air masses moving south from Canada and Alaska, as these frontal systems are weak and diffuse by the time they reach the desert. Most desert moisture arrives from infrequent warm, moist and unstable air masses from the south. The SSAB averages between three and seven inches of precipitation per year.

### **Criteria Pollutants**

Many of the air pollutants emitted into the ambient air by stationary and mobile sources are regulated by federal and state law. Some of these regulated air pollutants are known as “criteria air pollutants” and are categorized as primary and secondary pollutants. Primary air pollutants are those that are emitted directly from sources. Carbon monoxide (CO), reactive organic gases (ROG), nitrogen oxides (NO<sub>x</sub>), sulfur dioxide (SO<sub>2</sub>), and most fine particulate matter (PM<sub>10</sub>, PM<sub>2.5</sub>), including lead (Pb) and fugitive dust, are primary air pollutants. Of these, CO, SO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub> are criteria pollutants. ROG and NO<sub>x</sub> are criteria pollutant precursors and go on to form secondary criteria pollutants through chemical and photochemical reactions in the atmosphere. Ozone (O<sub>3</sub>) and nitrogen dioxide (NO<sub>2</sub>) are the principal secondary pollutants. Presented below is a description of each of the primary and secondary criteria air pollutants and their known health effects.

Ozone (O<sub>3</sub>), or smog, is formed by photochemical reactions between oxides of nitrogen and reactive organic gases rather than being directly emitted. O<sub>3</sub> is a pungent, colorless gas typical of Southern California smog. Elevated O<sub>3</sub> concentrations result in reduced

lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors such as the sick, elderly, and young children. O<sub>3</sub> levels peak during the summer and early fall.

Carbon Monoxide (CO) is formed by the incomplete combustion of fossil fuels, and is almost entirely from automobile exhaust. It is a colorless, odorless gas that can cause dizziness, fatigue, and impairments to central nervous system functions.

Nitrogen Dioxide (NO<sub>2</sub>), a reddish brown gas, and nitric oxide (NO), a colorless, odorless gas, are formed from fuel combustion under high temperature or pressure. These compounds are referred to jointly as nitrogen oxides, or NO<sub>x</sub>. NO<sub>x</sub> is a primary component of the photochemical smog reaction. They also contribute to other pollution problems, including a high concentration of fine particulate matter, poor visibility, and acid deposition. NO<sub>2</sub> decreases lung function and may reduce resistance to infection.

Sulfur Dioxide (SO<sub>2</sub>) is a colorless irritating gas formed primarily from incomplete combustion of fuels containing sulfur. Industrial facilities also contribute to gaseous SO<sub>2</sub> levels. SO<sub>2</sub> irritates the respiratory tract, can injure lung tissue when combined with fine particulate matter, and reduces visibility and the level of sunlight.

Particulate Matter is the term used for a mixture of solid particles and liquid droplets found in the air. Coarse particles (all particles smaller than 10 micrometers, or PM<sub>10</sub>) come from a variety of sources, including windblown dust and grinding operations. Fine particles (less than 2.5 micrometers, or PM<sub>2.5</sub>) often come from fuel combustion, power plants, and diesel buses and trucks. Fine particles can also be formed in the atmosphere through chemical reactions.

PM<sub>10</sub> can accumulate in the respiratory system and aggravate health problems such as asthma. EPA's scientific review concluded that fine particles (PM<sub>2.5</sub>), which penetrate deeply into the lungs, are more likely than coarse particles to contribute to the health effects listed in a number of recently published community epidemiological studies at concentrations that extend well below those allowed by the current PM<sub>10</sub> standards. These health effects include premature death and increased hospital admissions and emergency room visits (primarily the elderly and individuals with cardiopulmonary disease); increased respiratory symptoms and disease (children and individuals with cardiopulmonary disease such as asthma); decreased lung functions (particularly in children and individuals with asthma); and alterations in lung tissue and structure and in respiratory tract defense mechanisms.

Lead is found in old paints and coatings, plumbing, and a variety of other materials. There are also two lead-acid battery recycling facilities in the Basin. Once in the bloodstream, lead (Pb) can cause damage to the brain, nervous system and other body systems. Children are highly susceptible to the effects of lead.

## Criteria Pollutant Levels

The SCAQMD and CARB maintain a network of air quality monitoring stations located throughout the project area (Figure 3.3-2). The district is divided into fourteen General Forecast Areas based on geography, and further divided into thirty-eight Source Receptor Areas (SRA). Tables 3.3-1 through 3.3-11 show the most recent data available from monitoring stations in each General Forecast Area for which monitoring data are available.

Tables 3.3-1 through 3.3-11 list the air quality data monitored at within nine of the fourteen General Forecast Areas for which monitoring data are available. The ambient air quality data in these tables show that NO<sub>2</sub>, SO<sub>2</sub> and CO levels are either not monitored, or are below the relevant State and federal standards at all stations. O<sub>3</sub> levels exceeded State and federal standards in almost every year of the past three years at all nine monitoring stations where O<sub>3</sub> concentration was monitored.

The PM<sub>10</sub> level monitored at these air monitoring stations exceeded the State standard in almost every year of the past three years at all monitoring stations that monitor this pollutant, while the federal standard was exceeded less frequently, or not at all, at each monitoring station. The PM<sub>2.5</sub> level was exceeded at most of the stations.

Visibility, hydrogen sulfide and vinyl chloride are not measured at the monitoring stations.

## Toxic Air Contaminants

Pollutants are identified as toxic air contaminants (TACs) because of their potential to increase the risk of developing cancer or because of their acute or chronic health risks. For TACs that are known or suspected carcinogens, the California Air Resources Board (CARB) has consistently found that there are no levels or thresholds below which exposure is risk-free. Individual TACs vary greatly in the risk they present. At a given level of exposure, one TAC may pose a hazard that is many times greater than another. For certain TACs, a unit risk factor can be developed to evaluate cancer risk. For acute and chronic health risks, a similar factor, called a Hazard Index, is used to evaluate risk. In the early 1980s, CARB established a statewide comprehensive air toxics program to reduce exposure to air toxics. The Toxic Air Contaminant Identification and Control Act (AB 1807, CARB 1999<sup>1</sup>) created California's program to reduce exposure to air toxics. The Air Toxics "Hot Spots" Information and Assessment Act (AB 2588, CARB 1999) supplements the AB 1807 program by requiring a statewide air toxics inventory, notification of people exposed to a significant health risk, and facility plans to reduce these risks.

In August 1998, CARB identified particulate emissions from diesel-fueled engines as TACs. In September 2000, CARB approved a comprehensive diesel risk reduction plan to reduce emissions from both new and existing diesel-fueled engines and vehicles. The goal of the plan is to reduce diesel particulate emissions and the associated health risk by 75 percent in 2010 and by 85 percent by 2020.

TACs are identified and their toxicity is studied by the California Office of Environmental Health Hazard Assessment (OEHHA). TACs include air pollutants that can produce adverse human health effects, including carcinogenic effects, after short-term (acute) or long-term (chronic) exposure. Examples of TAC sources within the district include industrial processes, dry cleaners, gasoline stations, paint and solvent operations, and fossil fuel combustion sources.

The SCAQMD has conducted several Multiple Air Toxics Exposure (MATES) studies to quantify the current magnitude of population exposure risk from existing sources of selected air toxic contaminants. In the most recent study, Multiple Air Toxics Exposure Study III (MATES III), SCAQMD determined that the risk of contracting cancer from air toxics in the Basin, based on the average concentrations at the fixed monitoring sites, is about 1,200 per million while the population-weighted risk is about 853 in one million.<sup>2</sup> This risk refers to the expected number of additional cancers in a population of one million individuals that are exposed over a 70-year lifetime. The air toxics risk at the fixed sites used in the study ranged from 870 to 1,400 per million. Using the MATES III methodology, about 94% of the risk is attributed to emissions associated with mobile sources, and about 6% of the risk is attributed to toxics emitted from stationary sources,

<sup>2</sup> The Mates III Study is available at <http://www.aqmd.gov/prdas/matesIII/MATESIIIFinalReportSept2008.html>

which include industries, and businesses such as dry cleaners and chrome plating operations.

Diesel exhaust is the major contributor to air toxics risk, accounting for approximately 84 percent of the total risk. Compared to the MATES II study (originally published in 2000), the MATES III study (published in 2008) found a decreasing risk for air toxics exposure, with the population-weighted risk down by 17 percent from the analysis in MATES II.

## **AIR QUALITY REGULATORY SETTING**

A number of plans, policies, and regulations have been adopted by various agencies that address air quality concerns. Those plans and policies that are relevant to the proposed project are discussed below.

### **Federal Clean Air Act**

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes federal air quality standards, known as National Ambient Air Quality Standards (NAAQS), and specifies future dates for achieving compliance. The CAA also mandates that the state submit and implement a State Implementation Plan (SIP) for local areas not meeting those standards. Chapter 2 explains in more detail the architecture of the CAA.

### **California Clean Air Act**

The California Clean Air Act (CCAA), signed into law in 1988, requires all areas of the state to achieve and maintain the California Ambient Air Quality Standards (CAAQS) for ozone, NO<sub>2</sub>, CO and SO<sub>2</sub> by the earliest practical date. The CAAQS incorporate additional standards for most of the criteria pollutants and set standards for other pollutants recognized by the state. In general, the California standards are more health protective than the corresponding NAAQS. California has also set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles.

Table 3.3-12 details the current NAAQS and CAAQS, while Table 3.3-13 provides the attainment status with respect to federal and state standards in each basin.

**TABLE 3.3-12  
Federal and State Ambient Air Quality Standards**

Pollutant	Averaging Time	California Standards <sup>3</sup> Concentration	Federal Standards <sup>4</sup> Primary
<b>Ozone (O<sub>3</sub>)</b>	1 hour	0.09 ppm (180 µq/m <sup>3</sup> )	–
	8 hour	0.070 ppm (137 µq/m <sup>3</sup> )	0.075 ppm (147 µq/m <sup>3</sup> )
<b>Respirable Particulate Matter (PM<sub>10</sub>)</b>	24 hour	50 µq/m <sup>3</sup>	150 µq/m <sup>3</sup>
	Annual Arithmetic Mean	20 µq/m <sup>3</sup>	–
<b>Fine Particulate Matter (PM<sub>10</sub>)</b>	24 hour	No Separate State Standard	35 µq/m <sup>3</sup>
	Annual Arithmetic Mean	12 µq/m <sup>3</sup>	15.0 µq/m <sup>3</sup>
<b>Carbon Monoxide (CO)</b>	8 Hour	9.0 ppm (10 mg/m <sup>3</sup> )	9.0 ppm (10 mg/m <sup>3</sup> )
	1 Hour	20 ppm (23 mg/m <sup>3</sup> )	35 ppm (40 mg/m <sup>3</sup> )
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m <sup>3</sup> )	–
<b>Nitrogen Dioxide (NO<sub>2</sub>)</b>	Annual Arithmetic Mean	0.030 ppm (57 µq/m <sup>3</sup> )	0.053 ppm (100 µq/m <sup>3</sup> )
	1 Hour	0.18 ppm (339 µq/m <sup>3</sup> )	0.100 ppm
<b>Sulfur Dioxide (SO<sub>2</sub>)</b>	Annual Arithmetic Mean	–	0.030 ppm (80 µq/m <sup>3</sup> )
	24 Hour	0.04 ppm (105 µq/m <sup>3</sup> )	0.14 ppm (365 µq/m <sup>3</sup> )
	3 Hour	–	–
	1 Hour	0.25 ppm (655 µq/m <sup>3</sup> )	–
<b>Lead</b>	30 Day Average	1.5 µq/m <sup>3</sup>	–
	Calendar Quarter	–	1.5 µq/m <sup>3</sup>
	Rolling 3-Month Average	–	0.15 µq/m <sup>3</sup>
<b>Visibility Reducing Particles</b>	8 Hour	Extinction coefficient of 0.23 per kilometer - visibility of ten miles or more due to particles when relative humidity is less than 70 percent.	<b>No Federal Standards</b>
<b>Sulfates</b>	24 Hour	25 µq/m <sup>3</sup>	
<b>Hydrogen Sulfide</b>	1 Hour	0.03 ppm (42 µq/m <sup>3</sup> )	
<b>Vinyl Chloride</b>	24 Hour	0.01 ppm (26 µq/m <sup>3</sup> )	

<sup>3</sup> The California ambient air quality standards for O<sub>3</sub>, CO, SO<sub>2</sub> (1-hour and 24-hour), NO<sub>2</sub>, PM<sub>10</sub>, and PM<sub>25</sub> are values not to be exceeded. All other California standards shown are values not to be equaled or exceeded.

<sup>4</sup> The national ambient air quality standards, other than O<sub>3</sub> and those based on annual averages, are not to be exceeded more than once a year. The O<sub>3</sub> standard is attained when the expected number of days per calendar year with maximum hourly average concentrations above the standards is equal to or less than one.

## **South Coast Air Quality Management District**

SCAQMD has adopted a series of air quality management plans (AQMPs) to meet the CAAQS and NAAQS. These plans require, among other emissions-reducing activities, control technology for existing sources; control programs for area sources and indirect sources; a SCAQMD permitting system designed to allow no net increase in emissions from any new or modified (i.e., previously permitted) emission sources; and, transportation control measures.

The SCAQMD adopted a comprehensive AQMP update, the 2007 AQMP, on June 1, 2007. The Final 2007 AQMP addresses several federal planning requirements and incorporates significant new scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes and new air quality modeling tools. The 2007 AQMP builds upon the approaches taken in the 2003 AQMP for the attainment of the federal air quality standards. Additionally, the AQMP highlights the significant amount of reductions needed and the urgent need to identify additional strategies, especially in the area of mobile sources, to meet federal criteria pollutant standards within the timeframes allowed under federal Clean Air Act.

The SCAQMD adopts rules and regulations to implement portions of the AQMP. For example, SCAQMD Rule 403 requires implementing the best available fugitive dust control measures during active operations capable of generating fugitive dust emissions from on-site earth-moving activities, construction/demolition activities, and construction equipment travel on paved and unpaved roads. In addition, SCAQMD has published two additional guidance documents; Localized Significance Threshold Methodology for CEQA Evaluations (June 2003) and Particulate Matter (PM) 2.5 Significance Thresholds and Calculation Methodology. Both were used in the preparation of this analysis.

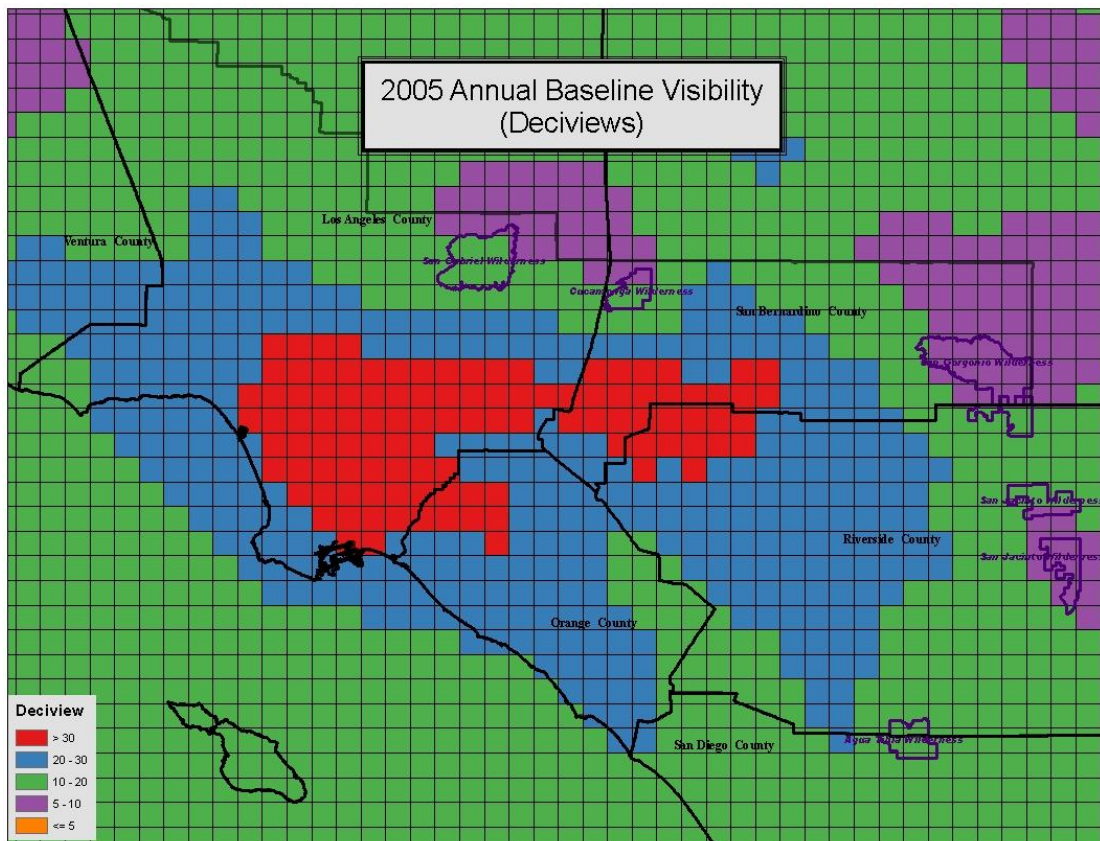

## **Southern California Association of Governments**

The Southern California Association of Governments (SCAG) is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties. It addresses regional issues relating to transportation, economy, community development, and environment. SCAG is the federally designated metropolitan planning organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With respect to air quality planning, SCAG has prepared the Regional Comprehensive Plan and Guide (RCPG) for the SCAG region, which includes Growth Management and Regional Mobility chapters, which form the basis for the land use and transportation components of the AQMP. These chapters are utilized in the preparation of air quality forecasts and the consistency analysis that is included in the AQMP.

## VISIBILITY ENVIRONMENTAL SETTING

In 2005, annual average visibility at Rudiboux (Riverside), the worst case, was just over 10 miles.<sup>5</sup> With the exception of Lake County, which is designated in attainment, all of the air districts in California are currently designated as unclassified with respect to the CAAQS for visibility reducing particles.

In Class-I wilderness areas, which typically have visual range measured in tens of miles the deciview metric is used to estimate an individual’s perception of visibility. The deciview index works inversely to visual range which is measured in miles or kilometers whereby a lower deciview is optimal. In the South Coast Air Basin, the Class-I areas are typically restricted to higher elevations (greater than 6000 feet above sea level) or far downwind of the metropolitan emission source areas. Visibility in these areas is typically unrestricted due to regional haze despite being in close proximity to the urban setting. The 2005 baseline deciview mapping of the Basin is presented in Figure 3.3-3. All of the Class-I wilderness areas reside in areas having average deciview values less than 20 with many portions of those areas having average deciview values less than 10. By contrast, Rubidoux, in the Basin has a deciview value exceeding 30.

**Figure 3.3-3**  
**2005 Annual Baseline Visibility**

<sup>5</sup> 2007 AQMP

## **VISIBILITY REGULATORY SETTING**

### **Federal Regional Haze Rule**

The federal Regional Haze Rule, established by the EPA pursuant to Clean Air Act section 169A, establishes the national goal to prevent future and remedy existing impairment of visibility in federal Class I areas (such as federal wilderness areas and national parks). EPA's visibility regulations (40 CFR 51.300 through 51.309), require states to develop measures necessary to make reasonable progress towards remedying visibility impairment in these federal Class I areas. Section 169A and these regulations also require Best Available Retrofit Technology for certain large stationary sources that were put in place between 1962 and 1977. See Regional Haze Regulations and Guidelines for Best Available Retrofit Technology (BART) Determinations, 70 Fed. Reg. 39104 (July 6, 2005).

### **California Air Resources Board**

To meet Federal Regional Haze Rule requirements, the California Air Resources Board adopted the California Regional Haze Plan on January 22, 2009, addressing California's visibility goals through 2018. As stated in Table 3.3-12 above, the California's statewide standard (applicable outside of the Lake Tahoe area) for Visibility Reducing Particles is an extinction coefficient of 0.23 per kilometer over an 8-hour averaging period. This translates to visibility of ten miles or more due to particles when relative humidity is less than 70 percent.

## **CLIMATE CHANGE ENVIRONMENTAL SETTING**

The potential impacts of climate change due to greenhouse gas emissions are described in Chapter 4.1. Worldwide emissions of GHGs in 2004 were 26.8 billion tonnes (metric tons) of CO<sub>2</sub>e. In 2004, the US emitted about 7 billion tonnes of CO<sub>2</sub>e (CO<sub>2</sub> equivalent) or about 24 tonnes of CO<sub>2</sub>e per year per person. Over 80 percent of the GHG emissions in the US are comprised of CO<sub>2</sub> emissions from energy related fossil fuel combustion. In 2004, California emitted 0.492 billion tonnes of CO<sub>2</sub>e, or about 7 percent of the US emissions. If California were a country, it would be the 16th largest emitter of GHGs in the world. This large number is due primarily to the sheer size of California. Compared to other states, California has one of the lowest per capita GHG emission rates in the country. This is due to California's higher energy efficiency standards, its temperate climate, and the fact that it relies on substantial out-of-state energy generation.

California GHG emissions in 2008 totaled approximately 477.7 million metric tons (MMT) CO<sub>2</sub>e as shown in Table 3.3-14. Approximately 84 percent of GHG emissions (in CO<sub>2</sub>e) from California were comprised of CO<sub>2</sub> emissions from fossil fuel combustion, with 4 percent comprised of CO<sub>2</sub> from process emissions. CH<sub>4</sub> accounted for 7.3 percent of total CO<sub>2</sub>e respectively, and high GWP gases accounted for 3.3 percent of the CO<sub>2</sub>e emissions.

[3] This category is listed in the Electric Power sector of ARB's GHG Emission Inventory sectors

[4] Reflects use of updated USEPA models for determining emissions from livestock and fertilizers

As shown in Table 3.3-14, transportation is responsible for 37 percent of the state's GHG emissions, followed by electricity generation (24 percent), the industrial sector (19 percent), commercial and residential (9 percent), agriculture and forestry (6 percent) and other sources (5 percent).

### **Greenhouse Gases**

Greenhouse gases (GHG) include carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), and fluorinated gases. Presented below is a description of each GHG and their known sources.

Carbon Dioxide (CO<sub>2</sub>) enters the atmosphere through the burning of fossil fuels (oil, natural gas, and coal), solid waste, trees and wood products, respiration, and also as a result of other chemical reactions (e.g., manufacture of cement). Carbon dioxide is also removed from the atmosphere (or “sequestered”) when it is absorbed by plants as part of the biological carbon cycle.

Methane (CH<sub>4</sub>) is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from livestock and other agricultural practices and by the decay of organic waste in municipal solid waste landfills.

Nitrous Oxide (N<sub>2</sub>O) is emitted during agricultural and industrial activities, as well as during combustion of fossil fuels and solid waste.

Fluorinated Gases are synthetic, strong greenhouse gases that are emitted from a variety of industrial processes. Fluorinated gases are sometimes used as substitutes for ozone-depleting substances. These gases are typically emitted in smaller quantities, but because they are potent greenhouse gases, they are sometimes referred to as High Global Warming Potential gases.

Chlorofluorocarbons (CFCs) are greenhouse gases covered under the 1987 Montreal Protocol and used for refrigeration, air conditioning, packaging, insulation, solvents, or aerosol propellants. Since they are not destroyed in the lower atmosphere (troposphere, stratosphere), CFCs drift into the upper atmosphere where, given suitable conditions, they break down ozone. These gases are being replaced by other compounds that are greenhouse gases covered under the Kyoto Protocol.

Perfluorocarbons (PFCs) are a group of human-made chemicals composed of carbon and fluorine only. These chemicals (predominantly perfluoromethane [CF<sub>4</sub>] and perfluoroethane [C<sub>2</sub>F<sub>6</sub>]) were introduced as alternatives, along with HFCs, to the ozone-depleting substances. In addition, PFCs are emitted as by-products of industrial processes and are also used in manufacturing. PFCs do not harm the stratospheric ozone layer, but they are strong greenhouse gases.

Sulfur Hexafluoride (SF<sub>6</sub>) is a colorless gas soluble in alcohol and ether, slightly soluble in water. SF<sub>6</sub> is a strong greenhouse gas used primarily in electrical transmission and distribution systems as a dielectric.

Hydrochlorofluorocarbons (HCFCs) contain hydrogen, fluorine, chlorine, and carbon atoms. Although ozone-depleting substances, they are less potent than CFCs. They have been introduced as temporary replacements for CFCs and are also greenhouse gases.

Hydrofluorocarbons (HFCs) contain only hydrogen, fluorine, and carbon atoms. They were introduced as alternatives to ozone-depleting substances in serving many industrial, commercial, and personal needs. HFCs are emitted as by-products of industrial processes and are also used in manufacturing. They do not significantly deplete the stratospheric ozone layer, but they are strong greenhouse gases.

## CLIMATE CHANGE REGULATORY SETTING

### Federal Climate Change Policy

The U.S. Environmental Protection Agency (EPA) is the Federal agency responsible for implementing the Clean Air Act (CAA). The U.S. Supreme Court ruled in its decision in *Massachusetts v. Environmental Protection Agency*, 549 U.S. 497 (2007) that carbon dioxide (CO<sub>2</sub>) is an air pollutant as defined under the CAA, and that EPA has the authority to regulate emissions of GHGs. In response to the mounting issue of climate change, EPA has taken actions to regulate, monitor, and potentially reduce GHG emissions.

#### *Mandatory Greenhouse Gas Reporting Rule*

On September 22, 2009, EPA issued a final rule for mandatory reporting of GHGs from large GHG emissions sources in the United States. 74 Fed. Reg. 56260 (Oct. 30, 2009). In general, this national reporting requirement will provide EPA with accurate and timely GHG emissions data from facilities that emit 25,000 metric tons or more of CO<sub>2</sub> per year.

On March 22, 2010, the EPA issued four proposed rules that amend the Mandatory Greenhouse Gas Reporting Rule. These proposals would require reporting of emissions data from the petroleum and natural gas industry, facilities that inject and sequester carbon dioxide (CO<sub>2</sub>) underground, and from industries that emit fluorinated greenhouse gases. 75 Fed. Reg. 18608, 18576, 18652 (April 12, 2010). In addition, the EPA has proposed to add three new reporting requirements to the General Provisions of the rule. 75 Fed. Reg. 18455 (April 12, 2010). The EPA plans to finalize all four of these proposals this year.

***Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Clean Air Act***

On December 7, 2009, the EPA issued the Endangerment and Cause or Contribute Findings for Greenhouse Gases under Section 202(a) of the CAA. 74 Fed. Reg. 66496 (Dec. 15, 2009). Section 202(a) of the CAA states that the Administrator (of EPA) should regulate and develop standards for “emission[s] of air pollution from any class of classes of new motor vehicles or new motor vehicle engines, which in [its] judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.”

The EPA made two distinct findings under Section 202(a). The first addresses whether or not the concentrations of the six key GHGs threaten the public health and welfare of current and future generations. The second addresses whether or not the combined emissions of GHGs from new motor vehicles and motor vehicle engines contribute to atmospheric concentrations of GHGs and, therefore, the threat of climate change.

**Endangerment Finding:** The EPA found that the current and projected concentrations of the six key well-mixed GHGs - carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>) - in the atmosphere threaten the public health and welfare of current and future generations. The evidence supporting this finding consists of human activity resulting in “high atmospheric levels” of GHG emissions, which are very likely responsible for increases in average temperatures and other climatic changes. Furthermore, the observed and projected results of climate change (e.g., higher likelihood of heat waves, wild fires, droughts, sea level rise, higher intensity storms) are a threat to the public health and welfare. Therefore, GHGs were found to endanger the public health and welfare of current and future generations.

**Cause or Contribute Finding:** The EPA found that the combined emissions of these well-mixed GHGs from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas pollution which threatens public health and welfare. GHG emissions from motor vehicles and motor vehicle engines were found to contribute to air pollution that endangers public health and welfare.

These findings do not themselves impose any requirements on industry or other entities. However, this action was a prerequisite for finalizing the EPA and Department of Transportation’s National Highway Safety Administration (NHTSA) joint standards for GHG emission for light-duty vehicles.

***Light-Duty Vehicle GHG Standards and CAFE Standards (EPA and NHTSA)***

On April 1, 2010, the EPA and NHTSA announce a joint final rule establishing a National Program to reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States. The joint rule was developed in response to the Obama Administration’s National Fuel Efficiency Policy for a National Program to reduce greenhouse gases and improve fuel economy (May 19, 2009).

The combined EPA and NHTSA standards apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon (MPG) if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements.

The National Program allows automobile manufacturers to build a single light-duty national fleet that satisfies requirements under the CAA, the Energy Policy and Conservation Act, and standards of the State of California.

### ***Regulation of GHGs from New or Modified Sources***

In addition to the rules promulgated by CARB under AB32, EPA has promulgated a program requiring regulation of GHGs from specified new or modified sources. SCAQMD rules do not currently require BACT for new or modified sources of GHGs, except GHGs that are also ozone depleters. (Rule 1303(a)(1)). However, on June 3, 2010, EPA published in the Federal Register its Greenhouse Gas Tailoring Rule. 73 Fed. Reg. 31513. This rule will require air permitting agencies including SCAQMD to begin imposing GHG requirements on specified new or modified sources beginning in January, 2011. EPA has explained that the new source review program that applies for attainment pollutants, which is called “prevention of significant deterioration” (PSD), will apply to GHGs. This is because PSD applies to any major stationary source of air pollutants that are subject to regulation under the CAA. As of January 2, 2011, the six GHGs identified in AB 32 will become a pollutant subject to regulation under the CAA by reason of EPA’s regulations for GHGs from motor vehicles.

Under the CAA, the PSD definition of major source includes facilities with the potential to emit 250 tpy of a regulated air pollutant, or 100 tpy for certain listed source categories. Similarly, the Title V operating permit program also applies to major sources, generally defined as emitting 100 tpy or more (or less for certain pollutants in certain areas.) Because GHGs are emitted in such large amounts (as calculated as CO<sub>2</sub> equivalent (CO<sub>2</sub>e)), these thresholds would result in requiring permits from relatively small sources, such as apartment buildings.. At these levels, EPA has concluded that it is administratively infeasible for permitting agencies to handle the vast numbers of new permits that would be required (e.g., six million new Title V permits, compared to 17,000 existing permits nationwide). EPA also concludes that applicability of these complex programs for such relatively small sources was never Congress’s intent. Therefore, EPA has promulgated the Tailoring Rule which would phase-in the PSD and Title V programs.

In Step 1, which begins January 1, 2011, only facilities that would already be subject to Title V or PSD would be subject to GHG requirements under these programs. In addition, a facility modification would only trigger PSD for GHGs if the modification resulted in an increase of 75,000 tpy CO<sub>2</sub>e. Therefore, SCAQMD would begin to require GHG BACT for these sources effective January 2, 2011.

In Step 2, which begins July 1, 2011, facilities with the potential to emit 100,000 tpy CO<sub>2</sub>e or more would be subject to Title V and PSD, regardless of whether they would otherwise be subject to these programs. However, the PSD significance threshold would still be 75,000 tpy.

In future phases of the program, EPA has committed to a further rulemaking to be completed in 2012, and a study in 2015, which will consider whether it is feasible to further lower the threshold for applicability of Title V and PSD for GHGs. It is unknown whether the thresholds will be further lowered. EPA has, however, committed not to lower the threshold below 50,000 tpy CO<sub>2</sub>e until at least May 1, 2016.

## **California Climate Change Policy**

### ***Assembly Bill 1493 (2002), California Greenhouse Gas Emissions Standards for Light-Duty Vehicles (“Pavley” Regulations)***

Prior to the EPA and NHTSA joint rulemaking, the Governor signed Assembly Bill (AB) 1493 (2002). AB 1493 requires that ARB develop and adopt, by January 1, 2005, regulations that achieve “the maximum feasible reduction of greenhouse gases emitted by passenger vehicles and light-duty trucks and other vehicles determined by ARB to be vehicles whose primary use is noncommercial personal transportation in the state.”

The ARB originally approved regulations to reduce GHGs from passenger vehicles in September 2004, with the regulations to take effect in 2009. Amendments to CCR Title 13, Sections 1900 and 1961 (13 CCR 1900, 1961), and adoption of Section 1961.1 (13 CCR 1961.1). California’s first request to the EPA to implement GHG standards for passenger vehicles was made in December 2005 and denied in March 2008. The EPA then granted California the authority to implement GHG emission reduction standards for new passenger cars, pickup trucks and sport utility vehicles on June 30, 2009.

On April 1, 2010, the ARB filed amended regulations for passenger vehicles as part of California’s commitment toward the National Program to reduce new passenger vehicle GHGs from 2012 through 2016. The amendments will prepare California to harmonize its rules with the federal Light-Duty Vehicle GHG Standards and CAFE Standards (discussed above).

### ***Executive Order S-3-05 (2005)***

Governor Schwarzenegger signed Executive Order S-3-05 on June 1, 2005, finding that California is vulnerable to the impacts of climate change. The executive order declared increased temperatures could reduce snowpack in the Sierra Nevada Mountains, further exacerbate California’s air quality problems, and potentially cause a rise in sea levels. The executive order established targets for total GHG emissions which include reducing GHG emissions to the 2000 level by 2010, to the 1990 level by 2020, and to 80 percent below the 1990 level by 2050.

The executive order directed the Secretary of the California Environmental Protection Agency to coordinate a multiagency effort to reduce GHG emissions to the target levels. The secretary will submit biannual reports to the governor and legislature describing progress made toward reaching the emission targets; impacts of global warming on California's resources; and mitigation and adaptation plans to combat impacts of global warming.

To comply with the executive order, the Secretary of the California Environmental Protection Agency created the California Climate Action Team which is made up of members from various state agencies and commissions. The California Climate Action Team (CAT) released its first report in March 2006 of which proposed achieving the GHG emissions targets by building on voluntary actions of California businesses and actions by local governments and communities along with continued implementation of state incentive and regulatory programs.

***Assembly Bill 32 (2006), California Global Warming Solutions Act***

In September 2006, the governor of California signed AB 32 (Chapter 488, Statutes of 2006), the California Global Warming Solutions Act of 2006, which enacted Sections 38500–38599 of the California Health and Safety Code. AB 32 requires the reduction of statewide GHG emissions to 1990 levels by 2020.

To effectively implement the statewide cap on GHG emissions, AB 32 directs ARB to develop and implement regulations that reduce statewide GHG emissions generated by stationary sources. Specific actions required of ARB under AB 32 include adoption of a quantified cap on GHG emissions that represent 1990 emissions levels along with disclosing how the cap was quantified, institution of a schedule to meet the emissions cap, and development of tracking, reporting, and enforcement mechanisms to ensure that the state achieves the reductions in GHG emissions needed to meet the cap.

***AB 32 Climate Change Scoping Plan***

In December 2008, ARB adopted its Climate Change Scoping Plan, which contains the main strategies California will implement to achieve reduction of approximately 169 million metric tons (MMT) of CO<sub>2</sub>e, or approximately 30 percent from the state's projected 2020 emission level of 596 MMT of CO<sub>2</sub>e under a business-as-usual scenario (this is a reduction of 42 MMT CO<sub>2</sub>e, or almost 10 percent, from 2002-2004 average emissions). The Scoping Plan also includes ARB-recommended GHG reductions for each emissions sector of the state's GHG inventory. The Scoping Plan calls for the largest reductions in GHG emissions to be achieved by implementing the following measures and standards:

- Improved emissions standards for light-duty vehicles (estimated reductions of 31.7 MMT CO<sub>2</sub>e),
- The Low-Carbon Fuel Standard (15.0 MMT CO<sub>2</sub>e),

- Energy efficiency measures in buildings and appliances and the widespread development of combined heat and power systems (26.3 MMT CO<sub>2</sub>e), and
- A renewable portfolio standard for electricity production (21.3 MMT CO<sub>2</sub>e).

***Senate Bill 1368 (2006)***

SB 1368 is the companion bill of AB 32 and was signed by Governor Schwarzenegger in September 2006. SB 1368 requires the California Public Utilities Commission (PUC) to establish a greenhouse gas emission performance standard for baseload generation from investor owned utilities by February 1, 2007. The California Energy Commission (CEC) must establish a similar standard for local publicly owned utilities by June 30, 2007. These standards cannot exceed the greenhouse gas emission rate from a baseload combined-cycle natural gas fired plant. The legislation further requires that all electricity provided to California, including imported electricity, must be generated from plants that meet the standards set by the PUC and CEC.

***Executive Order S-1-07 (2007)***

Governor Schwarzenegger signed Executive Order S-1-07 in 2007 which finds that the transportation sector is the main source of GHG emissions in California. The executive order proclaims the transportation sector accounts for over 40 percent of statewide GHG emissions. The executive order also establishes a goal to reduce the carbon intensity of transportation fuels sold in California by a minimum of 10 percent by 2020.

In particular, the executive order established a Low-Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the CEC, the ARB, the University of California, and other agencies to develop and propose protocols for measuring the “life-cycle carbon intensity” of transportation fuels. This analysis supporting development of the protocols was included in the State Implementation Plan for alternative fuels (State Alternative Fuels Plan adopted by CEC on December 24, 2007) and was submitted to ARB for consideration as an “early action” item under AB 32. The ARB adopted the LCFS on April 23, 2009.

***Senate Bill 97 (2007) and Revised CEQA Guidelines***

SB 97, signed by governor of California in August 2007 (Chapter 185, Statutes of 2007; Public Resources Code, Sections 21083.05 and 21097), directed the Governor’s Office of Planning and Research (OPR) to prepare, develop, and transmit to the California Resources Agency by July 1, 2009 guidelines for the analysis of GHG emissions under CEQA. The OPR submitted recommended amendments to the State CEQA Guidelines on April 13, 2009. The Office of Administrative Law approved the amendments on February 16, 2010. The amendments became effective on March 18, 2010. The amendments do not set a threshold for significance for GHG emissions.

***Senate Bill 375 (2008)***

SB 375, signed in September 2008, aligns regional transportation planning efforts, regional GHG reduction targets, and land use and housing allocation. As part of the alignment, SB 375 requires Metropolitan Planning Organizations (MPOs) to adopt a Sustainable Communities Strategy (SCS) or Alternative Planning Strategy (APS) which prescribes land use allocation in that MPO's Regional Transportation Plan (RTP). The ARB, in consultation with MPOs, is required to provide each affected region with reduction targets for GHGs emitted by passenger cars and light trucks in the region for the years 2020 and 2035. These reduction targets will be updated every 8 years but can be updated every 4 years if advancements in emissions technologies affect the reduction strategies to achieve the targets. The ARB is also charged with reviewing each MPO's SCS or APS for consistency with its assigned GHG emission reduction targets. If MPOs do not meet the GHG reduction targets, transportation projects located in the MPO boundaries would not be eligible for funding programmed after January 1, 2012.

ARB appointed the Regional Targets Advisory Committee (RTAC), as required under SB 375, on January 23, 2009. The RTAC's charge was to advise ARB on the factors to be considered and methodologies to be used for establishing regional targets. The RTAC provided its recommendation to ARB on September 29, 2009. ARB must adopt final targets by September 30, 2010.

***Executive Order S-13-08 (2008)***

Governor Schwarzenegger signed Executive Order S-13-08 on November 14, 2008 which directs California to develop methods for adapting to climate change through preparation of a statewide plan. The executive order directs OPR, in cooperation with the California Resources Agency (CRA), to provide land use planning guidance related to sea level rise and other climate change impacts by May 30, 2009. The order also directs the CRA to develop a state Climate Adaptation Strategy by June 30, 2009 and to convene an independent panel to complete the first California Sea Level Rise Assessment Report. The assessment report is required to be completed by December 1, 2010 and required to meet the following four criteria:

1. Project the relative sea level rise specific to California by taking into account issues such as coastal erosion rates, tidal impacts, El Niño and La Niña events, storm surge, and land subsidence rates;
2. Identify the range of uncertainty in selected sea level rise projections;
3. Synthesize existing information on projected sea level rise impacts to state infrastructure (e.g., roads, public facilities, beaches), natural areas, and coastal and marine ecosystems; and
4. Discuss future research needs relating to sea level rise in California.

***Senate Bills 1078 and 107 and Executive Order S-14-08 (2008)***

SB 1078 (Chapter 516, Statutes of 2002) requires retail sellers of electricity, including investor owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017. SB 107 (Chapter 464, Statutes of 2006) changed the target date to 2010. In November 2008 Governor Schwarzenegger signed Executive Order S-14-08, which expands the state’s Renewable Portfolio Standard to 33 percent renewable power by 2020.

## **SUBCHAPTER 3.4**

---

### **EXISTING SETTING - BIOLOGICAL RESOURCES**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This section describes the existing biological regions and resources within the district and identifies applicable regulations regarding biological resources.

## ENVIRONMENTAL SETTING

### Climate and Biological Regions

Over much of the temperate zones of the world (e.g., eastern North America) most precipitation occurs when plants and animals are most active. California is an exception to this general pattern with the majority of precipitation falling during winter, when light and temperature are at their low points. In addition, annual variation is relatively great compared with many other regions. While coastal (“cismontane”) and desert (“transmontane”) portions of the district both experience such patterns, they are quite distinct. Coastal areas experience mild temperatures, somewhat more rain, and a year-round growing season while desert areas have a more continental climate that is cool to cold in winter and very hot in summer, as well as the driest in North America.

California desert areas are grouped into the Colorado Desert, also considered is part of the larger Sonoran Desert to the east and southeast, and the Mojave Desert, which extends beyond California’s boundaries to the northeast. The district includes a large portion of the Colorado Desert but minimal Mojave Desert areas. The Colorado Desert is dominated by the Salton Sink and the Salton Sea therein; it has generally mild winters and low elevations. The Mojave Desert lies at higher average elevations and has colder winters, with snow unsurprising in some portions at that time. Rainfall in the Mojave Desert is almost entirely in the winter, while the Colorado Desert receives a moderate fraction of rainfall in the summer, though it is highly irregular from year to year. Deserts east of California tend to have an important influence of regular summer rains and, thus, are quite distinct in both plants and wildlife from the California Deserts.

The more coastal, “Mediterranean” climate in the district is shared with several other, generally coastal-associated areas of the world, such as portions of Chile, Australia, South Africa, and lands surrounding the Mediterranean Sea. Though lacking the high richness of species in tropical areas, Mediterranean climate areas are frequently noted for their high levels of endemism (species found nowhere else). They are also frequently at risk through large-scale human development, as climates are very mild and attractive to human lifestyles and commerce. The two major islands within the district are Santa Catalina and San Clemente; both have mild, marine climates but very restricted development. Both also have few species compared with the mainland, but even higher rates of endemism and significant numbers of threatened and endangered species.

As suggested above, the district extensively overlaps two distinct biomes, or large-scale ecosystems, as identified by many classical biological analyses. These are often termed

the California floristic province and the North American Desert systems of the southwestern U.S. and northern Mexico.<sup>1</sup> The California floristic province extends from southern Oregon south into northern Baja California, west of the deserts and major mountain ranges such as the Sierra Nevada. This province has been extensively studied as a distinct and unique region, with strong support both to the idea that the region is a worldwide hotspot of biodiversity and that it is one of the most biologically threatened areas of the world.<sup>2</sup> There is a higher concentration of listed, endangered and threatened plant and animal species in southern California than anywhere else on earth except Hawaii, and these species persist in the same region as the largest metropolitan area in the U.S.<sup>3</sup> The California deserts have both lower biodiversity and lower levels of endemism but are also experiencing rapid and increasing human development and have higher levels of special-status species than most of North America.

### **Los Angeles County**

Much of the Los Angeles County portion of the district has become urbanized, but many biologically important and extensive, mostly-natural spaces remain, including portions of the Santa Monica Mountains (much within a national recreation area), the San Gabriel Mountains (mostly within Angeles National Forest), and the Chino Hills and Puente Hills (within Chino Hills State Park).

Along the coast, the Palos Verdes Peninsula and Ballona Wetlands are both biologically important, with the Peninsula containing the City of Rancho Palos Verdes Multi-Species Habitat Conservation Plan (MSHCP). Dozens of smaller areas provide stepping stones among the larger open spaces; many of these are designated as Significant Ecological Areas (SEA) by the County. The Los Angeles and San Gabriel rivers are largely channelized, but both have sections with important biological resources and can provide connectivity across urban spaces to some degree.

### **Orange County**

All of Orange County lies within the district. Most of the coastal plain in north and central Orange County has shared urban growth with Los Angeles County. However, roughly 2,337 hectares of preserved lands lie within the Central/Coastal Natural Communities Conservation Plan of Orange County. The Santa Ana Mountains, much of which is in the Cleveland National Forest and a series of parks and preserves, overlap those preserves and include extensive open space within the County. There are several important, protected open spaces elsewhere in Orange County. Along the coast is a series

of estuaries and open spaces with a concentration of natural resources; among the larger of these are Seal Beach National Wildlife Refuge, Bolsa Chica Ecological Reserve, upper Newport Bay and San Joaquin Wildlife Sanctuary, and the Laguna Coast Wilderness Park.

### **Riverside County**

The Riverside County portion of the district includes all of the cismontane, or coastal slope, portion of the County, as well as most of the transmontane, or desert portion, east to the Palo Verde Valley. This includes the extensive area within the boundary of the Western Riverside County Multiple Species Habitat Conservation Plan. The eastern slopes of the Santa Ana Mountains and the San Jacinto Mountains are within this area and also receive protection as part of the Cleveland National Forest and San Bernardino National Forest, respectively. While much of the lowlands in western Riverside County is rapidly urbanizing, many important reserves are also present, including lands at Lake Mathews, Santa Rosa Plateau, the Agua Tibia Wilderness Area, Bautista Canyon, San Jacinto State Wildlife Area, San Timoteo Creek, and areas along the Santa Ana River including Hidden Valley Wildlife Area.

Essentially, all of the desert portions of the district are within Riverside County and, thus, are primarily the northern portion of the lower, or Colorado Desert. Key natural areas in this area are Joshua Tree National Park and the north end of the Salton Sea. The Santa Rosa Wilderness (Santa Rosa Mountains) and several preserves in the Coachella Valley also are regionally important natural areas.

### **San Bernardino County**

As with the other counties, the San Bernardino Valley lowlands have now largely urbanized, with few intact examples of representative wildlands in that area. Nearly all drainages in lowland areas are heavily modified for storm flow control. The most regionally significant, protected natural area in cismontane San Bernardino County is Prado Basin along the Santa Ana River. The eastern end of the San Gabriel Mountains and large portions of the San Bernardino Mountains receive protection and management by the Forest Service, and this includes some of Cajon Pass, a key connector between desert and coastal lowlands in the region. The district includes all of the cismontane slopes and extends in some areas past the upper ridgelines onto the upper, transmontane (desert) slopes. There are no approved, multi-species Habitat Conservation Plans or Natural Community Conservation Plans within San Bernardino County.

## **Human Alteration and Special-status Species**

Several “keystone” species, those having an exceptional influence on their environment, became extinct or were extirpated from the region between initial settlement by Europeans and the early part of the twentieth century. These include the Grizzly Bear (*Ursus arctos*), Pronghorn (*Antilocapra americana*), Sea Otter (*Enhydra lutris*), and a subspecies of Kit Fox (*Vulpes macrotis macrotis*). A number of plant species similarly disappeared, and several natural community types, including coastal dunes and coastal

strand vegetation, have virtually disappeared. At this time, there were also ecologically important introductions of invasive species, perhaps most notably European annual grasses of several species and Virginia Opossum (*Didelphis virginiana*).

Across the late nineteenth and early twentieth centuries, much of the coastal portion of the district was urbanized and most rivers and streams were channelized. Extensive portions of Orange County were converted from wetlands to agriculture, and then to urban and suburban spaces. Many large parks and open spaces were preserved during this period; montane areas were less-dramatically altered due to the presence of four extensive National Forests with very limited logging. During this period natural fire regimes also began to alter substantially through fire suppression and fragmentation of natural areas.

Concomitant with the development of many national, state and local environmental protections during the last half of the twentieth century, hundreds of additional plant and animal species were recognized as declining in the region. Efforts to provide protection and management of remaining natural systems have included substantial research and funding efforts as well as increased requirements for review, evaluation, and mitigation of human activities under applicable laws. The region has been a national leader in large-scale, multi-species habitat conservation plans under the federal Endangered Species Act and state Natural Communities Conservation Plan. At the same time, extensive development has continued, large-scale effects are becoming clearer, newly introduced, invasive plants and animals continue to be documented at increasing rates, and the prospect of indirect effects from global warming are beginning to be studied.

Table 3.4-1 includes all plant and animals within the district that are currently listed as endangered or threatened under either the federal or state Endangered Species Acts.<sup>4</sup> While representative of regional species with special legal status, the list is less than half of the total list of species within the district that presently have one or more types of special status routinely addressed in reviews of project-level and program-level environmental reviews within this geography. In addition, the full list of such species changes quite frequently as new species are added or, less frequently, delisted.

<sup>a</sup>Note – Many additional species in the district have other types of special legal status.

### Regional Functioning and Linkages

During the last several decades, attention toward the region's biological resources has grown beyond species-by-species and park-by-park management to a broader recognition of biological functions and values provided by the environment, as well as management for ecosystem health. Few, if any major new wildland areas, are likely to be designated in the region.<sup>5</sup> There is also ample evidence within the region that small to medium-sized reserves are failing to maintain viable populations of target species in isolation.

Therefore, much emphasis is now being placed on the viability of the existing open-space network by addressing both linkages (i.e., wildlife corridors, landscape-level functions) and management of cumulative, larger-scale issues. The latter issues include the effects of air quality, water quality, hydrologic regimes, fire cycles, invasive species, and light and noise pollution. In comparison with decades past, both regional and project-level mitigations now frequently address larger-scale values through strategic restoration, mitigation banking, and regional planning. The potential for conflicts, as well as the opportunities for cooperation in natural resource management, increase the value of

<sup>5</sup> Beier, P., K. L. Penrod, C. Luke, W. D. Spencer, and C. Cananero, *South Coast Missing Linkages: Restoring Connectivity to Wildlands in the Largest Metropolitan Area in the USA*, Chapter 22, pp. 555-586 in K. J. Crooks and M. Sanjayan, *Connectivity Conservation*, Conservation Biology 14, Cambridge Univ. Press, Cambridge, UK, 2006.

integrating efforts among the multitude of governmental and non-governmental entities at all levels.

## **REGULATORY SETTING**

### **Federal**

Many federal processes (e.g., permitting of impacts to wetlands jurisdiction under Section 404 of the Clean Water Act) trigger the need for processing and review under federal environmental laws that address biological resources. However, the following discussion presents only the major laws that deal directly with management and protection of biological resources.

Certain laws apply only when a particular project is “federalized” (i.e., when the action affects federal lands, will use federal funding, or requires a discretionary federal action, such as a Clean Water Act permit). The laws presented below for which federalization is an important trigger are the National Environmental Policy Act (NEPA), the Fish and Wildlife Coordination Act, and Executive Orders. The specific process under which projects are addressed under the federal Endangered Species Act also depends on whether a project is federalized.

#### **Migratory Bird Treaty Act**

This law, based on a series of treaties between the United States and other countries, makes it unlawful at any time, by any means or in any manner, to take (pursue, hunt, take, capture, or kill) migratory birds. Nearly all native birds are thus protected. The law applies to the destruction of active nests or eggs, as well as to activities that directly or indirectly cause the abandonment of active nests of covered species. Inactive nests of most, but not all, covered species may be removed.

Habitat destruction and degradation that do not result in take, as defined above, are not prohibited, and a permit process allows for intentional take where human safety or substantial property loss is at immediate risk. Indirect take, such as accidental destruction of active nests through project construction activities, cannot be allowed under the permit process. Projects that may result in take must apply reasonable avoidance measures, such as either avoiding the core nesting season for birds in the region or having a qualified biologist conduct a nesting bird survey and restricting work to when no nesting is present.

#### **Bald and Golden Eagle Protection Act**

This act provides for the protection of the bald eagle and the golden eagle (as amended in 1962) by prohibiting the take, possession, sale, purchase, barter, offer to sell, purchase or barter, transport, export or import, of any bald or golden eagle, alive or dead, including any part, nest, or egg, unless allowed by permit (16 U.S.C. 668(a); 50 CFR 22). “Take” includes pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or

disturb (16 U.S.C. 668c; 50 CFR 22.3). The U.S. Fish and Wildlife Service has prepared the “Bald Eagle Management Guidelines” to help landowners, land managers and others to meet the intent of this Act.

### **National Environmental Policy Act**

NEPA declares a continuing federal policy “to use all practicable means and measures...to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations.” NEPA also directs “a systematic, interdisciplinary approach” to planning and decision-making and requires environmental statements for “major Federal actions significantly affecting the quality of the human environment.” Implementation regulations by the Council on Environmental Quality (CEQ) (40 CFR Parts 1500-1508) require federal agencies to identify and assess reasonable alternatives to proposed actions that would restore and enhance the quality of the human environment and avoid or minimize adverse environmental impacts. Federal agencies are further directed to emphasize significant environmental issues in project planning and to integrate impact studies required by other environmental laws and Executive Orders into the NEPA process. The NEPA process should therefore be seen as an overall framework for the environmental evaluation of federal actions.

### **The Fish and Wildlife Coordination Act**

This act applies to any federal project where the waters of any stream or other body of water are impounded, diverted, deepened, or otherwise modified. Project proponents are required to consult with USFWS and the appropriate state wildlife agency. Provisions of the act are implemented through the NEPA process and the Clean Water Act Section 404 permit process.

### **Federal Endangered Species Act**

This complex act provides guidance for the conservation of endangered and threatened species and the ecosystems upon which they depend. “Take” is defined in Section 3 of the Act as “harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct.” Section 9 extends prohibition against take to listed endangered species, and protections are also routinely applied for listed threatened species. Note that unlike many other laws protecting species, prohibitions apply to adverse habitat modifications that can be clearly tied back to effects on the species. A minority of species currently have “critical habitat” designated; where projects are federalized, potential impacts to designated critical habitat must also be addressed.

Section 10 provides mechanisms to permit take by non-federal entities, including Habitat Conservation Plans that may cover one to many species. Section 7 requires federal agencies in consultation with, and with the assistance of, the Secretary of the Interior to ensure that actions they authorize, fund, or carry out are not likely to jeopardize the continued existence of threatened or endangered species or result in the destruction or adverse modification of critical habitat for these species. Where a proposed project is

determined to affect federally listed species, compliance with Section 7 of the Federal Endangered Species Act (FESA) rather than Section 10 is typically necessary, though this can be complex. Finally, for many projects it may be useful to note that, unless federalized, prohibitions against take do not apply to federally listed plants.

### **Executive Order 13112 – Invasive Species**

On February 3, 1999, President Clinton signed Executive Order 13112, requiring federal agencies to combat the introduction or spread of invasive species in the United States. Federal agencies involved in implementing, funding, or approving projects generally use the state’s noxious weed list to define the invasive plants that must be considered as part of the NEPA analysis for a proposed project.

### **State**

#### **California Environmental Quality Act**

CEQA establishes state policy to prevent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures. CEQA applies to projects directly undertaken, financed, or permitted by state and local lead agencies. Regulations for implementation are found in the state CEQA guidelines published by the state resources agency (Office of the Secretary).

#### **Lake or Streambed Alteration Program**

Under California Fish and Game Code Sections 1600–1616, the California Department of Fish and Game (CDFG) has authority to regulate work that will substantially divert or obstruct the natural flow—or substantially change or use any material from the bed, channel, or bank—of any river, stream, or lake. CDFG also has authority to regulate work that will deposit or dispose of debris, water, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake. This regulation takes the form of a requirement for a Lake or Streambed Alteration Agreement and is applicable to all activities, including those that do not involve government approvals at any level.

Unlike the federal Clean Water Act, whose primary purpose is to protect water quality, the Lake or Streambed Alteration Program is intended to preserve fish and wildlife habitat, and is thus centrally a biological resource protection law.

#### **Porter-Cologne Water Quality Control Act**

Under this Act, the geographically relevant Regional Water Quality Control Board is empowered to regulate all activities that may affect “waters of the State,” and the “best and highest uses” thereof (typically as defined under the relevant Basin Plan) through dredging, filling, or discharging materials. This includes those that lack significant nexus with traditionally navigable waters under the federal Clean Water Act. Note that uses that may be addressed by the regional boards under this process can and often do include habitat supporting native wildlife and plants.

### **California Endangered Species Act**

This act establishes the policy of the state to conserve, protect, restore, and enhance threatened or endangered species and their habitats. The California Endangered Species Act (CESA) prohibits activities that would result in take of listed or candidate, threatened or endangered species. Take under this act is similar to that under FESA with the exception of normal agricultural practices and that indirect harm (e.g., habitat modification) is not generally considered take.

There are no state agency consultation procedures under CESA. For projects that affect species that are both state and federally listed, compliance with FESA will also satisfy CESA if the CDFG determines that the federal incidental take authorization is consistent with CESA under California Fish and Game Code Section 2080.1. For projects that would result in take of a state-only listed species, CDFG must provide a take permit under Section 2081(b).

**Natural Communities Conservation Program (NCCP).** This program, implemented under the Natural Communities Conservation Planning Act (California Fish and Game Code Sections 2800 through 2835), is broader in its orientation and objectives than the California and Federal Endangered Species Acts. The primary objective of the NCCP program is to conserve natural communities at the ecosystem scale while accommodating compatible land use. The program focuses on the long-term stability of wildlife and plant communities and including key interests in the process. It is intended for large-scale, long-term planning efforts, and provides an alternate mechanism for take of species protected under the California Endangered Species Act.

### **Native Plant Protection Act**

Provisions of NPPA prohibit the taking of special-status plants from the wild and require notification of CDFG at least 10 days in advance of any change in land use. This allows CDFG to salvage listed plant species that would otherwise be destroyed.

### **California Desert Plant Protection Act**

This act protects certain non-listed, perennial California desert native plants from unlawful harvesting on both public and privately owned lands. It applies throughout counties that include desert areas. Harvest, transport, sale, or possession of specific native desert plants is prohibited unless a person has a valid, county-level permit, or wood receipt, and the required tags and seals. Certain types of projects are exempt, including transportation and mining.

### **State Fully Protected Species**

The California legislature first began to designate species as “fully protected” well prior to the creation of the federal and California Endangered Species Acts. Lists of fully protected species were initially developed to protect those animals viewed by legislators as rare or facing possible extinction, and included particular species of fish, mammals, amphibians and reptiles, birds, and mammals. Most fully protected species have since

been listed as threatened or endangered under CESA and/or FESA. The regulations that implement the Fully Protected Species Statute (Fish and Game Code Section 4700) provide that fully protected species may not be taken or possessed at any time and prohibits issuance of take permits except for necessary scientific research.

### **State Protections for Native Birds**

California Fish and Game Code Sections 3503, 3503.5, 3505, 3800, and 3801.6 protect all native birds, birds of prey, and all nongame birds, including their eggs and nests, that are not already listed as fully protected and which occur naturally within the state. Take prohibition is similar to that under the federal Migratory Bird Treaty Act.

### **California Coastal Act.**

The California Coastal Act (CCA) of 1976 was enacted to regulate development projects within California's Coastal Zone. The act includes requirements that protect biological resources through various control measures, which are typically implemented at the local planning level through local coastal programs (LCPs) or land use plans (LUPs). The California Coastal Act protects many biological resources through a broad definition of wetlands as, "...lands within the coastal zone which may be covered periodically or permanently with shallow water and include saltwater marshes, swamps, mudflats, and fens." (Pub. Res. Code §30121)

For local jurisdictions that do not have an approved LCP, regulation of development projects remains under the jurisdiction of the California Coastal Commission (CCC).

## **Local**

### **Counties and Cities**

The geographic area encompassed by the district includes numerous cities and unincorporated communities in the counties of Los Angeles, Orange, San Bernardino, and Riverside. By law, each of these counties and incorporated cities has prepared a general plan, establishing local land use policies and goals. Many of these general plans also establish local policies related to recognition and protection of biological resources within their communities or sub-planning areas, and may include, for example, ordinances protecting native trees of certain species and/or sizes, and special review of projects that may affect resources of existing parks or open spaces.

### **Local Coastal Programs**

The CCC and the local governments along the coast share responsibility for managing the state's coastal resources. Through coordination with the CCC, coastal cities and counties develop LCPs. These programs are the primary means for carrying out the policies of the California Coastal Act at the local level. In general, these policies are intended to promote public access and enhance recreational use of the coast as well as protection of natural resources in the coastal zone. Examples of counties, cities and local jurisdictions

within the district that do have an approved LCP or LUP include Los Angeles County and the County of Orange, and the cities of Santa Monica, El Segundo, Manhattan Beach, Hermosa Beach, Redondo Beach, Palos Verdes Estates, Rancho Palos Verdes, Long Beach, Avalon, Huntington Beach, Newport Beach, Irvine, Laguna Beach, Laguna Niguel, Dana Point, and San Clemente.

Following approval by the CCC, an LCP is certified and the local governments implement the programs. LCPs include two main components, a Land Use Plan and an Implementation Plan. These components may include policies or regulations that apply to preservation of biological resources within the coastal zone.

## **SUBCHAPTER 3.5**

---

### **EXISTING SETTING - CULTURAL RESOURCES**

**Introduction**

**Environmental Setting**

**Cultural History of the SCAG Region**

**Regulatory Setting**

## INTRODUCTION

This section describes the paleontological, archeological, and historic resources in the Southern California Association of Governments (SCAG) region.<sup>1</sup> The SCAQMD is encompassed within the SCAG region and includes Orange County and portions of Los Angeles, Riverside and San Bernardino Counties.

## ENVIRONMENTAL SETTING

### Paleontological Resources

Paleontological resources are fossilized remains of non-human organisms that lived in the region in the geologic past. Paleontological sites and fossils are non-renewable resources that are important in our understanding of the prehistory and the geologic development of Southern California. Many paleontological sites include remains of species that are now extinct. Paleontological sites are predominantly found in sedimentary rock deposits and alluvial gravels, and most of the region is composed of these sedimentary deposits. Paleontological resources are most easily found in areas that have been uplifted and eroded, and they can be found anywhere that subsurface excavation is being carried out. Ancient marine fossils have been found throughout the region, particularly in exposed canyon areas, streambeds, along road cuts. For example, they have been found in the Santa Monica Mountains and beneath the streets of Los Angeles during storm drain and subway construction. The following types of paleontological resources are known to exist within the SCAG region:

- True Fossils: Lithified or replaced remains of plants and animals preserved in a rock matrix (e.g., microfossils, shells, animal bones and skeletons, and whole tree trunks);
- Trace Fossils: Molds, casts, tracks, trails and burrow impressions made in soft clays and muds which subsequently were turned to stone, preserving the images of past life (e.g., shells, footprints, leaf prints, and worm tubes);
- Breas: Seeps of natural petroleum that trapped extinct animals and preserved and fossilized their remains.

Both marine and land vertebrate and invertebrate fossils are found in the region. Fossils and their associated geologic formations are the matrix in which most fossils are found. These formations are different from modern soils and cannot be correlated with soil maps, which depict a thin veneer of surface soils. Geologic formations form complex relationships below the surface and may range in thickness from a few feet to hundreds of

---

<sup>1</sup> Draft 2008 Regional Transportation Plan Program Environmental Impact Report. Southern California Association of Governments. January 2008.

thousands of feet. Geologic maps (available through the U.S. Geological Survey (USGS) and the California Geological Survey (CGS)) show the surface expression of geologic formations along with other geologic features such as faults, folds, and landslides. Sedimentary formations were initially deposited one atop the other. Over time the layers have been squeezed, tilted, folded, cut by faults and vertically and horizontally displaced, so that today, any one rock unit does not usually extend in a simple horizontal layer. If a sensitive formation bearing fossils can be found at the surface in an outcrop that same formation may extend many feet down into the ground and also extend for miles just below the surface. Thus, predicting which areas are paleontological sensitive is difficult. Paleontologists consider all vertebrate fossils to be of significance. Fossils of other types are considered significant if they represent a new record, new species, an oldest occurring species, the most complete specimen of its kind, a rare species worldwide, or a species helpful in the dating of formations. Fossil bearing sedimentary formations and crystalline basement rocks (metamorphic & plutonic) overlain by sedimentary and volcanic rocks are prevalent throughout Southern California. The exact locations of these formations are considered proprietary to help prevent the removal or destruction of these important, non-renewable resources.

### **Archaeological Resources**

Archaeological resources are the physical remains of past human activity, and humans have occupied Southern California for thousands of years. The region is rich in archaeological resources that range from the early prehistoric period to the historic period. Detailed information is considered proprietary by State law and the location of known archaeological sites is confidential to help prevent scavenging of artifacts. Table 3.5-1 lists these resources by county. Some of the sites have been made public in county, regional, state, and federal parks, or listed on public registers. These include:

- The site of the Puvunga Indian Village (NR), Los Angeles County
- Vasquez Rocks (NR), Los Angeles County
- The Black Star Canyon Indian Village Site (CHL-217), Orange County
- The Fairview Indian Site (NR), Orange County
- Desert Intaglios (CHL-101), Riverside County
- Site of the Indian Village of Pochea (CHL-104), Riverside County
- Carved Rock (CHL-187), Riverside County
- Painted Rock (CHL-190), Riverside County
- The Hemet Maze (CHL-557), Riverside County
- The Calico "Early Man" Site San Bernardino County

**TABLE 3.5-1**  
**Archaeological Site Distribution**

<b>County</b>	<b>Site Distribution</b>
Los Angeles County	3,752
Orange County	1,673
Riverside County	16,600
San Bernardino County	22,000
<b>TOTAL</b>	<b>43,425</b>

Note: Only the counties that are part of the district are shown, and the points tabulated are inclusive of the county as a whole, and not only the district region.

The SCAG region was occupied during both the prehistoric and protohistoric periods; therefore archaeological sites are widespread and numerous. Rocky outcrops, river and stream drainages, and coastal strips were often prime locations for Native American village sites or processing camps. These locations now include highly urbanized locations, such as cities, and undeveloped areas of the high desert. Often archaeological sites are exposed on the ground's surface. However, some sites have extensive depth or are covered by topsoil, and it is possible that construction may not disturb the surface soils by more than a foot or two, thereby protecting remains even after an area has been fully urbanized. In 1998 for example, a large undisturbed Native American burial ground, dating to the Protohistoric Period, was exposed during construction at the ARCO Refinery in Los Angeles. The refinery had been there for seventy-five years, yet the burial level was located under three to five feet of flood deposits from the nearby Los Angeles River.

### **Historical Resources**

In contrast to archaeological sites, the location of historic sites is open to the general public and can be found in registries found at the federal, state, county, and city levels. Additionally, registries are maintained by local and regional historical societies.

### **Federal Registers**

The National Register of Historic Places (NRHP) is the nation's official list of cultural resources worthy of preservation. It is administered by the National Park Service, which is part of the U.S. Department of the Interior. The NRHP is made up of all historic areas in the National Park System, National Historic Landmarks, and properties across the country that have been nominated by governments, organizations, and individuals because they are significant to the nation, to a state, or to a community. The NRHP was authorized under the National Historic Preservation Act of 1966. The National Register is part of a national program to coordinate and support public and private efforts to identify, evaluate, and protect our historic and archeological resources. Properties listed include districts, sites, buildings, structures, and objects that are significant in American history, architecture, archeology, engineering, and culture. There are over 85,000 listings

in the register nationally. There are several hundred listings on the NRHP for the SCAG region.

National Historic Landmarks (NHLs) are nationally significant historic places designated by the Secretary of the Interior because they possess exceptional value or quality in illustrating or interpreting the heritage of the United States. The NHL program is authorized under Section 213 the National Historic Preservation Act of 1966. There are over 2,400 listings in the NHL. There are over 2,400 listings in the NHL. There are 28 listings on the NHL in the SCAG region. Table 3.5-2 summarizes the number of NRHP-listed resources and NHLs found in each county in the SCAQMD within the SCAG region.

**TABLE 3.5-2**

**National Register and National Landmark in SCAG Region (Summary)**

**State Registers**

California Historical Landmarks (CHLs) are buildings, structures, sites, or places that have been determined to have statewide historical significance. The resource also must be approved for designation by the County Board of Supervisors or the City or Town Council in whose jurisdiction it is located; be recommended by the State Historical Resources Commission; and be officially designated by the Director of California State Parks. There are 1,044 listings in the CHL. There are over 200 listings on the CHL for the SCAG region. California Points of Historical Interest (PHI) are sites, buildings, features, or events that are of local (city or county) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. There are 850 PHI listings, of which over 200 are located in the SCAG region. These registers are administered by the California Office of Historic Preservation (OHP) and the State Historical Resources Commission (SHRC), which are a part of the California Department of Parks and Recreation. Table 3.5-3 contains a summary of the

period and number of historical places and landmarks in the SCAQMD region within the SCAG region, found on the California Historical Landmarks register. Table 3.5-4 contains a summary of the number of Points of Historical Interest found in each county.

**Local Registers.**

Registries may also be maintained by county and city commissions. Examples of these types of organizations include the Riverside County Historical Commission, Santa Ana Historic Resources Commission (516 Historical Properties on their register and a historic district that is composed of many historic structures and has zoning protection for its structures), and Santa Monica Landmarks Commission (with a registry that contains 89 landmarks, 2 historic districts, and more than 1,350 potential historic resources having been designated or identified).

One example of local level preservation is the City of Riverside’s preservation ordinance and creation of the Cultural Heritage Board. The California State Office of Historic

Preservation has recognized the program with its designation of Riverside as a Certified Local Government (CLG). This distinction ensures that the City's preservation program meets all state and federal standards. The Historic Preservation Program is administered through the Planning Division of the Community Development Department.<sup>2</sup>

## **CULTURAL HISTORY OF THE SCAG REGION**

### **Prehistoric Period (Prior to 1542)<sup>3</sup>**

The prehistoric occupation of southern California is divided chronologically into four temporal phases or horizons. Horizon I, or the Paleo-Indian Horizon, began at the first appearance of people in the region (approximately 12,000 years ago) and continued until about 7000 before present (BP). Although little is known about these people, it is assumed that they were semi-nomadic and subsisted primarily on game.

Horizon II, also known as the Millingstone Horizon or Encinitas Tradition, began around 7000 BP and continued until about 3500 BP. The Millingstone Horizon is characterized by widespread use of milling stones (manos and metates), core tools, and few projectile points or bone and shell artifacts. This horizon appears to represent a diversification of subsistence activities and a more sedentary settlement pattern. Archaeological evidence suggests that hunting became less important and that reliance on collecting shellfish and vegetal resources increased.

Horizon III, the Intermediate Horizon or Campbell Tradition, began around 3500 BP and continued until about 1350–1150 BP. Horizon III is defined by a shift from the use of milling stones to increased use of mortar and pestle, possibly indicating a greater reliance on acorns as a food source. Projectile points become more abundant and, together with faunal remains, indicate increased use of both land and sea mammals.

Horizon IV, the Late Horizon, which began around 1350–1150 BP and terminated with the arrival of Europeans, is characterized by dense populations; diversified hunting and gathering subsistence strategies, including intensive fishing and sea mammal hunting; extensive trade networks; use of the bow and arrow; and a general cultural elaboration.

### **Protohistoric Period (1542 to 1769)**

Although early Spanish explorers and mission fathers recorded information on the local Native American populations, professional anthropological studies did not begin until the end of the 19th Century after most of the SCAG region Indian groups had been either assimilated by Spanish, Mexican, and American cultures or relocated to reservations. The region once was the home to at least eleven distinct Native American groups. These

<sup>3</sup> Morrato, Michael. 1984. *California Archaeology*. Academic Press. San Diego, California.

include the Cahuilla, Chumash, Gabrielino, Halchidhoma, Kitanemuk, Luiseno, Mohave, Quechan, Serrano, Southern Paiute, Tataviam, and Tipai. The territorial boundaries of the Native Americans who were residing in Southern California at the time of first European contact do not coincide with today's political boundaries. Moreover, many tribal boundaries overlapped and most groups migrated within their general boundaries throughout the year. The federal government established reservations in Southern California between 1875 and 1891. This includes the Martinez, Fort Yuma, and Colorado River reservations in Imperial County. In Riverside County are Chemehuevi, Fort Mojave, Torres, Cabazon, Augustine, Santa Rosa, Ramona, Pechanga, Soboba, Agua Caliente, Mission Creek, and Morongo tribes. The two reservations in San Bernardino County are the San Manuel and Twenty-nine Palms reservations. No reservations were established in Los Angeles, Ventura, and Orange Counties. It was believed at the time that the local Native American groups in those counties had become extinct.

### **Historic Resources**

Historic resources are classified into three distinct time periods of the region's history: the Spanish Period, the Mexican Period, and the American Period.

#### **Spanish Period (1769-1822)**

Exploration of California first occurred in 1540 when a land expedition under the command of Hernando de Alarcon traversed inland along the Colorado River. Two years later, Juan Rodriquez Cabrillo was commissioned by the Spanish government to investigate the western shores of the newly acquired territory. In the following two centuries, little interest was given to California. By the late 18th Century, European political powers created renewed interest in California. Military expeditions from Great Britain, France and Russia began investigating the resources along the western shores of the entire North American continent. The Spanish government, realizing that settlement by any of these foreign parties north of Mexico could become a threat, decided it was time to establish their own settlements in California. By 1769, plans were put in place to found a series of forts (presidios) and Catholic missions along the Alta California coast extending as far north as Monterey Bay. Over the course of the next half-century, four presidios, twenty missions and three towns were established. The forts were located at San Diego, Santa Barbara, Monterey and San Francisco. The towns were founded at Los Angeles (1781), San Jose (1777) and Branciforte (1797), near Santa Cruz. The settlement at Branciforte failed but all the others were successful. During the early decades of the 19th Century, independence groups sprang up throughout the Spanish Empire. Mexico declared its independence in 1810. This attempt failed, but a second attempt ten years later succeeded. At that time, California was considered a province of Mexico. Throughout the Spanish Period, California remained largely unsettled.

#### **Mexican Period (1822-1848)**

When Mexico gained political independence from Spain, little changed for the citizens of California. The defining event from this time period was the secularization of the Catholic Missions in 1834, following the Act of Secularization of 1833. Over the next

sixteen years, all of the former mission lands were granted to secular landowners. Secularization proved disastrous for the Native Americans who were part of the mission system. The mission system made the indigenous population completely dependent on the missions and when they closed the Indians were left to fend for themselves. During the two-decade period between the 1830s until 1848, one government after another ruled California. Meanwhile, the United States pushed west across the North American continent. By 1846, a number of Americans had settled in California, often marrying into landed Hispanic families. Between 1835 and 1846 relations between Mexico and the United States deteriorated. In 1846, a revolt was attempted in Northern California. Although it was quickly thwarted, it planted the seeds for the eventual insurrection that succeeded. Within three weeks, an American naval force appeared off the California coast and formally proclaimed rule over the presidios and coastal towns. On January 13, 1847, Captain John C. Fremont accepted the surrender of Governor Pio Pico and Commander Jose Maria Flores. The United States annexed California by the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican War and beginning the American Period.

### **American Period (1848 - Present)**

Shortly after the United States annexed California, gold was discovered in central California, changing the state forever. Within months of the news, foreigners poured into California. At the same time, the cattle industry flourished, causing some rancho owners to become wealthy. However, the legality of the land grants issued by the Spanish and Mexican governments came into question. It took the American courts years to decide all the cases. In the meantime, many of the Mexican landowners lost their great ranchos through other legal maneuvers or downright deception. By the time of the American Civil War (1861-1865), Americans were the dominant group in Southern California, both politically and economically. Their feelings toward the war were divided, but generally Southern sympathizers outnumbered Northern supporters. During this same decade, a drought struck Southern California, devastating the cattle industry. As a result many of the former cattle ranches were sold off and used for agricultural purposes. The railroad to southern California was completed during the 1870s, resulting in the first great land boom. New towns began to spring up along the new rail lines in places once thought too desolate soon attracted settlers, such as the Mojave Desert. Exploration for mineral deposits soon produced new strikes in places such as Calico in San Bernardino County in 1881. During the next several decades, many such mining camps were established in the eastern counties, but most of these camps remained in existence only for a short time. In the twentieth century the region underwent a metamorphosis from a primarily agricultural region into an urban metropolis. Southern California has attracted and maintained millions of people and employment opportunities and has developed into the second-largest metropolitan region in the country.

## **REGULATORY SETTING**

Cultural resources in the six-county SCAG region include archaeological sites of prehistoric or historic origin, fossil deposits of paleontological importance, and standing

structures with national, state, or local significance. These resources are regulated at the federal, state and local levels as discussed below.

## **Federal Agencies and Regulations**

### **Federal Historic Preservation Laws**

There are a number of federal laws and portions of laws, regulations, and Presidential executive orders that pertain to the preservation of the Nation's cultural heritage. These laws were developed over the course of the 20th century, beginning with the protection of cultural sites on federal lands. Today, many aspects of the nation's cultural heritage are recognized, protected, and interpreted in national parks, other public lands, and communities across the nation. The following are key laws related to the preservation of our cultural heritage:

- American Indian Religious Freedom Act of 1978 (42 USC 1996);
- Antiquities Act of 1906 (16 USC 431-433);
- Archeological and Historic Preservation Act of 1974 (16 USC 469);
- Archaeological Resources Protection Act of 1979 (ARPA) (16 USC 470);
- Historic Sites Act of 1935 (16 USC 461-467);
- National Environmental Policy Act of 1969 (NEPA) (42 USC 4321-4347);
- National Historic Preservation Act of 1966 (NHPA), (16 USC 470);
- Native American Graves Protection and Repatriation Act NAGPRA), (25 USC 3001-3013);
- Reservoir Salvage Act of 1960 (16 USC 469); and
- United States Department of Transportation Act of 1966 (Section 4[f]), (49 USC 303).

Implementing these laws are the following:

- Advisory Council on Historic Preservation, Protection of Historic and Cultural Properties (36 CFR 800);
- National Register of Historic Places (36 CFR 60);
- National Register of Historic Places, Determinations of Eligibility for Including in the National Register of Historic Places (30 CFR 63);
- US Department of Interior, NAGPRA Regulations (43 CFR 10);
- US Department of Transportation, Section 4(f) Regulations (23 CFR 771);
- US Secretary of Interior Standards for Treatment of Historic Properties (36 CFR 68); and
- Executive Order 11593, Protection and Enhancement of the Cultural Environment, 1971.

### **National Environmental Policy Act (NEPA)**

NEPA (42 USC 4321 et seq.) became law on January 1, 1970 and mandates that all federal agencies carry out their regulations, policies, and programs in accordance with NEPA's policies of environmental protection. NEPA encourages the protection of all aspects of the environment and requires federal agencies to utilize a systematic, interdisciplinary approach to agency decision-making that will ensure the integrated use of natural sciences such as geology. NEPA, which either requires preparation of an Environmental Impact Statement (EIS) or Environmental Assessment (EA)/Finding of No Significant Impact (FONSI), addresses a wide range of environmental issues including the documentation of, and evaluation of potential impacts to, cultural and historic properties. When cultural or historic resources would be adversely affected, compliance includes an on-site survey by a qualified archaeologist or historian prior to construction. A report of findings would be included in the NEPA document and may be submitted to the State Historic Preservation Office (SHPO) for further consultation.

### **National Historic Preservation Act (NHPA)**

The NHPA established laws for historic resources to "preserve important historic, cultural, and natural aspects of our national heritage, and to maintain, wherever possible, an environment that supports diversity and a variety of individual choice." The Antiquities Act of 1966, which aimed to protect important historic and archaeological sites, initiated historic preservation legislation. It established a system of permits for conducting archaeological studies on federal land, as well as setting penalties for noncompliance. This permit process controls the disturbances that may be caused to archaeological sites. New permits are currently issued under the Archeological Resources Protection Act (ARPA) of 1979. The purpose of ARPA is to enhance reservation and protection of archaeological resources on public and Native American lands.

### **Historic Sites Act of 1935 (HSA)**

The HSA (16 USC 461-467) became law on August 21, 1935 and declared that it is national policy to "Preserve for public use historic sites, buildings, and objects of national significance." The NHPA expanded the scope to include important state and local resources. Provisions of NHPA established the National Register maintained by the National Park Service, advisory councils on Historic Preservation, State Historic Preservation Offices, and grants-in-aid programs. Section 106 of the NHPA requires all federal agencies to consult the Advisory Council before continuing any activity affecting a property listed on or eligible for listing on the National Register. The Advisory Council has developed regulations for Section 106, to encourage coordination of agency cultural resource compliance requirements under Executive Order 11593 and NEPA with those of Section 106.

### **American Indian Religious Freedom Act (AIRFA) and Native American Graves Protection and Repatriation Act (NAGPRA)**

AIFRA (42 USC 1996) became law on August 11, 1978 and recognizes that Native American religious practices, sacred sites, and sacred objects have not been properly protected under other statutes. It establishes as national policy that traditional practices and beliefs, sites (including right of access), and the use of sacred objects shall be protected and preserved. The remains of Native Americans are protected by NAGPRA (25 USC 3001 et seq.), which became law on November 11, 1990, and required that the excavation and disposition of remains is supervised by a designated “most likely descendent” as determined by the Native American Heritage Commission (see discussion of State Regulations below). Archeological and Historic Preservation Act (16 USC 469-469c-2) became law on June 27, 1960. The purpose of this Act is the preservation of historical and archeological data (including relics and specimens) which might otherwise be irreparably lost or destroyed as the result of flooding, the building of access roads, the erection of workmen’s communities, the relocation of railroads and highways, and other alterations of the terrain caused by the construction of a dam by any agency of the United States, or by any private person or corporation holding a license issued by any such agency or any alteration of the terrain caused as a result of any federal construction project or federally licensed activity or program.

### **State Agencies and Regulations**

Certain portions of California law are specifically concerned with the protection of cultural resources and archaeological human remains located on public or private land, including CEQA (Public Resources Code Section 21000); various Public Resources Code Sections 5020, 5029, 5097 including, but not limited to State-owned Historical Resources, California Register of Historical Resources, Archeological, Paleontological, and Historical Sites and Native American Historical, Cultural, and Sacred Sites; and Governor’s Executive Order W-26-92.

#### **California Environmental Quality Act (CEQA)**

CEQA (Public Resource Code 21000 et seq. and CCR 15000 et seq.) was enacted in 1970 and is a statute that requires state and local agencies to identify the significant environmental impacts of their actions and to avoid or mitigate those impacts, if feasible. The impetus for CEQA can be traced to the passage of the first federal environmental protection statute, NEPA. The basic goal of CEQA is to develop and maintain a high-quality environment now and in the future, while the specific goals of CEQA are for California's public agencies to: identify the significant environmental effects of their actions, and, either avoid those significant environmental effects, where feasible or mitigate those significant environmental effects, where feasible. CEQA applies to certain activities of state and local public agencies. A public agency must comply with CEQA when it undertakes an activity defined by CEQA as a “project.” CEQA requires preparation of either an EIR or a Negative Declaration. When applicable, CEQA requires the evaluation and mitigation of impacts to paleontological, archeological and/or historic resources.

#### **California Coastal Act (CCA)**

The CCA (Public Resources Code, Sections 30000 et seq.) includes protection of archeological resources into Land Conservation Plans that regulate land uses within the coastal zone.

### **Other Provisions of Public Resources Code (PRC)**

The State's cultural resources are regulated by the PRC. The PRC defines cultural preserves as "distinct areas of outstanding cultural interest" located in the State Park System for the protection of sites, buildings, or zones, which represent significant places or events in the flow of human experience in California. An historic resource includes, but is not limited to, "any object, building or structure, site, area, or place which is historically or archaeologically significant," or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Section 5097.5 of the PRC specifically defines unauthorized excavation, removal, destruction, etc., of archaeological, paleontological or historical features, on "Public Lands," as a misdemeanor. The California Administrative Code includes the following regulations, Title 14, State Division of Beaches and Parks, Section 4307: Archaeological Features: No person shall remove, injure, disfigure, deface, or destroy any object of paleontological, archaeological or historical interest or value. The California Penal Code, Title 14, part 1, Section 622 1/2 provides that injury, etc. to an object of archaeological or historical interest is punishable as a misdemeanor.

### **State Office of Historic Preservation (SHPO)**

SHPO implements preservation laws regarding historic resources, and is responsible for the California Historic Resources Inventory (CHRI), which uses the National Criteria for listing resources significant at the national, state, and local level.

### **Native American Heritage Commission (NAHC)**

Section 50907.9 of the PRC and Section 7050 of the Health and Safety Code authorizes the NAHC to regulate Native American concerns regarding the excavation and disposition of Native American cultural resources. Among its duties, the Commission is authorized to resolve disputes relating to the treatment and disposition of Native American human remains and items associated with burials. Upon notification of the discovery of human remains by a county coroner, the Commission notifies the Native American group or individual most likely descended from the deceased.

## **Local Agencies and Regulations**

In addition to federal and state regulations, cities and counties in the SCAG region may also provide regulatory protection and advisement regarding cultural resources. The California's planning law requires each city and county to prepare a general plan containing required seven elements. One of these elements is a conservation element under which many agencies include policies for the protection of cultural and historical

resources. Additionally, some agencies incorporate into their General Plans optional elements dealing with cultural or historic preservation issues.

## **SUBCHAPTER 3.6**

---

### **EXISTING SETTING - ENERGY**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This section describes existing energy consumption and trends within the Southern California Association of Governments (SCAG) region.<sup>1</sup> The SCAQMD is encompassed within the SCAG region and includes Orange County and portions of Los Angeles, Riverside and San Bernardino Counties.

## ENVIRONMENTAL SETTING

### Energy Types, Sources and Providers

According to SCAG,<sup>2</sup> petroleum products supply approximately 40 percent of the energy demand in the U.S. Natural gas and coal supply approximately 23 percent each of the national energy demand, nuclear energy about 8 percent and renewable sources about 7 percent of energy use. Current annual energy consumption in the U.S. is approximately 100.7 quadrillion British thermal units (BTU), which represents approximately 22 percent of the world's energy consumption.

Petroleum and natural gas supply most of the energy consumed in California. Petroleum supplies 54 percent and natural gas supplies 33 percent of California's energy. In 2004, Californians consumed about 15.4 billion gallons of gasoline and 2.8 billion gallons of diesel fuel, an increase of nearly 50 percent over the last 20 years. Electricity generation requires nearly half of the natural gas consumed in California. Nearly all of the state's transportation system is fueled currently by fossil fuels.

Current annual energy consumption in California (for all purposes, including transportation) is approximately  $8.4 \times 10^{15}$  BTUs, which represents approximately 8.3 percent of the nation's total energy consumption. California consumes more energy than any other state in the U.S., except for Texas. However, in terms of energy consumption per person, California ranks 49<sup>th</sup> among the 50 states and the District of Columbia. Presented below is a discussion of the different energy sources and consumption patterns.<sup>3</sup>

### Petroleum

The United States consumes approximately 25 percent of the world's oil, while making up 5 percent of the world's population. California consumes approximately 2 million barrels of oil per day or 2 percent of the world's oil consumption. The U.S. imports

---

<sup>1</sup> Draft 2008 Regional Transportation Plan Program Environmental Impact Report. Southern California Association of Governments. January 2008.

<sup>2</sup> Southern California Association of Governments (SCAG), *2008 Regional Transportation Plan (RTP), Final Environmental Impact Report (FEIR), Chapter 3.5 Energy*, 2008.

<sup>3</sup> *Ibid.*

approximately 60 percent of its oil. Canada provides the largest share of imported petroleum, with 1.8 million barrels per day, followed by Mexico with 1.6 million barrels per day and Saudi Arabia with 1.4 million barrels per day.

California as a state ranks fourth in crude oil reserves and crude oil production in the U.S. California also ranks first in gasoline consumption and jet fuel consumption and third in distillate fuel consumption. California relies on oil produced within the state, Alaska, and foreign nations to supply its refineries and produce the petroleum that is used in automobiles and for other purposes. The percentage of oil that is imported from foreign nations has increased dramatically in the past 20 years. For example, in 1994, California imported 49 million barrels of oil from foreign sources, and in 2006, California imported 295 million barrels from foreign sources. Of the total 655 million barrels of oil refined in 2006, 38.8 percent came from in-state oil production, 16.2 percent came from Alaska, and 45.0 percent came from foreign sources.

Most gasoline and diesel fuel sold in California for on-road motor vehicles is refined in California to meet state-specific formulations required by the California Environmental Protection Agency's (Cal/EPA) Air Resources Board (ARB). Major petroleum refineries in California are concentrated in three counties: Contra Costa County in northern California, Kern County in central California, and Los Angeles County in southern California. In Los Angeles County, petroleum refineries are located mostly in the southern portion of the county.<sup>4</sup>

### **Natural Gas**

Eighty-five percent of the natural gas consumed in California comes from the southwestern U.S., the Rocky Mountains, and Canada. The remainder is produced in California. The district, within the larger SCAG region, is served primarily by the investor-owned Southern California Gas Company, a unit of Sempra Energy. A small portion of the region is served by a municipal gas utility, Long Beach Energy (part of the City of Long Beach). The Southern California Gas Company, a privately-owned utility company, provides natural gas service throughout the district, except for the City of Long Beach, the southern portion of Orange County, and portions of San Bernardino County. The service area for Long Beach Energy, a municipal utility and natural gas supplier owned and operated by the City of Long Beach, includes the cities of Long Beach and Signal Hill, and sections of surrounding communities, including Lakewood, Bellflower, Compton, Seal Beach, Paramount, and Los Alamitos. Long Beach Energy's customer load profile is 50 percent residential and 50 percent commercial/industrial. The majority of Long Beach Energy's supplies are purchased at the California border, primarily from the southwestern U.S. San Diego Gas & Electric Company (SDG&E) provides natural gas service to the southern portion of Orange County. In San Bernardino County, Southwest Gas Corporation provides natural gas service to Victorville, Big Bear, Barstow, and Needles. The Los Angeles Department of Water and Power (LADPW) utilizes natural gas for electrical generation in the City of Los Angeles.

---

<sup>4</sup> *Ibid.*

There is also a tightening of natural gas markets due to decreasing supplies and growing demand for natural gas, which makes up 25 percent of the nation's energy use and is by comparison, a relatively clean source of electricity compared to sources such as coal. The U.S. and California will lose a major source of natural gas imports by 2010 due to the decline of Canada's largest producing basin, the Western Sedimentary Basin, coupled with an approximately 2 percent projected average annual growth in Canada's domestic consumption. Although some research has shown a world peak in natural gas occurring a decade after oil, the U.S. and California could experience the effects sooner. For example, natural gas has become the preferred source of electricity generation, supplying over 40 percent of California's power. In addition, unlike oil, it is more difficult and expensive to import replacement natural gas from overseas – as it has to be liquefied for transport and then re-gasified for distribution. An increase in natural gas prices would negatively affect the economy, potentially leading to reduced sales and employment.<sup>5</sup>

### **Electricity**

Power plants in California meet approximately 85 percent of the in-state electricity demand. Hydroelectric power from the Pacific Northwest provides another 2.6 percent, which is currently down due to drought conditions in recent years, and power plants in the southwestern U.S. provide another 13 percent. The relative contribution of in-state and out-of-state power plants depends upon, among other factors, the precipitation that occurred in the previous year and the corresponding amount of hydroelectric power that is available. Two of the largest power plants in California are located within the district: Alamitos and Redondo Beach. Both of these plants consume natural gas.

Local electricity distribution service is provided to customers within the district by one of two privately-owned utilities – either Southern California Edison Company (SCE) or San Diego-based Sempra Energy – or by a publicly-owned utility, such as the LADWP and the Imperial Irrigation district. Southern California Edison is the largest electricity utility in southern California, with a service area that covers all or nearly all of Orange, San Bernardino, and Ventura Counties, and most of Los Angeles and Riverside Counties. Sempra Energy provides local distribution service to the southern portion of Orange County.

The LADWP is the largest of the publicly-owned electric utilities in southern California. LADWP provides electricity service to most customers located in the City of Los Angeles. Other cities that operate their own electric utilities in the district include Burbank, Glendale, Pasadena, Azusa, Vernon, Anaheim, Riverside, Banning, and Colton. Two water districts provide local electric service to portions of the District: Imperial Irrigation District and Southern California Water Company. Imperial Irrigation District provides electricity to customers in the Coachella Valley portion of Riverside County. Southern California Water Company provides electric service to the community of Big

---

<sup>5</sup> *Ibid.*

Bear. Anza Electric Cooperative provides local distribution service to the Anza Valley area of southern Riverside County.<sup>6</sup>

### **Alternative and Renewable Energy Sources**

Alternative fuels, as defined by the Energy Policy Act of 1992 (EPAAct), include ethanol, natural gas, propane, hydrogen, biodiesel, electricity, methanol, and p-series fuels.<sup>7</sup> These fuels are being used worldwide in a variety of vehicle applications. Use of these fuels for transportation can generally reduce air pollutant emissions and can be domestically produced and, in some cases, derived from renewable sources. The Energy Policy Act of 2005 directed the Department of Energy to carry out a study to plan for the transition from petroleum to hydrogen in a significant percentage of vehicles sold by 2020.

Alternative or renewable energy, including cogeneration, wind, geothermal, solar, biomass and biofuels, small hydroelectric, conversion technologies, distributed generation, and nuclear energy comprise another category of potential energy sources. Electricity supply reliability depends, in part, on the diversity of energy sources. In 1978, Congress passed the Public Utilities Regulatory Policies Act (PURPA). PURPA defines facilities that use alternative or renewable energy sources as “qualifying facilities.” It provides financial incentives for their installation and requires utilities to sign long-term power purchase contracts with qualifying facilities. The California Public Utilities Commission (CPUC) has adopted contract incentives to assist qualifying facilities.

Qualifying facilities built within the district and beyond include wind and solar installations in Riverside and San Bernardino Counties and a number of cogeneration units around the southern California region. Original provisions of PURPA encouraged the construction of biomass-to-energy facilities, which use materials, such as agricultural and wood waste, as fuel for energy production. On or before March 1 of each year, each retail provider who makes a claim of specific purchases during the previous calendar year provides a filing to the Energy Commission, providing certain information about each electricity product for which a claim is made.<sup>8</sup> Cogeneration provides the most megawatts (MW) of energy from qualifying facilities for SCE with over 2,000 MWs under contract. Wind is the second largest source for energy from qualifying facilities with over 1,000 MWs.

Conversion technologies (CTs) refer to a diverse set of processes used to convert post-recycled, municipal solid waste to intermediate liquid, gas, or solid fuel products. The fuel products can then be combusted to produce energy. Conversion technology

---

<sup>6</sup> *Ibid.*

<sup>7</sup> Formulated to be used alone or mixed in any concentration with gasoline, P-series fuels are clear liquid fuels, between 89 and 93 octane, designed to be used in flex-fuel vehicles (FFVs). They are a blend of 35 percent natural gas liquids (pentanes plus) and 45 percent ethanol, with the remaining 25 percent a biomass-derived co-solvent methyltetrahydrofuran (MeTHF). The biomass portion is utilized from grass and paper waste in addition to agricultural waste.

<sup>8</sup> Public Utilities Code , Section 398.5 and California Code of Regulations, Section 1394.

processes include (but are not limited to) the following: gasification (thermal conversion of solid organic material into gaseous fuel products), pyrolysis (anaerobic thermal conversion of solid organic materials into liquid fuel products), catalytic cracking (use of chemical catalysts to breakdown polymer plastics into diesel and gasoline), acid hydrolysis (acid treatment of biomass into sugar-based ethanol production), and anaerobic digestion (bacterial process yielding biogas through the fermentation of organic wastes). The public health impacts of conversion technologies are still being assessed, but CTs with appropriate controls and emissions technology produce lower emissions of criteria air pollutants (NO<sub>x</sub> and SO<sub>x</sub>) than either landfills or direct combustion incinerators. The environmental benefits of CT scenarios are dependent on their ability to achieve high conversion efficiencies and high materials recycling rates.

An important alternative to new central station fossil-fueled generation operated by public utility companies (such as LADWP or SCE), is distributed generation (DG), which includes both cogeneration and self-generation. DG is broadly defined as electricity produced on-site or close to a load center that is also interconnected with a utility distribution system. California has approximately 2,500 MWs of small scale renewable and non-renewable DG and has added an average of 100 MWs of new small scale DG capacity every year since 2001.

California receives approximately 15 percent of its energy from nuclear sources. The three plants that supply this energy include the Diablo Canyon Power Plant located near San Luis Obispo, the San Onofre Nuclear Generating Station located near San Clemente, and the Palo Verde Nuclear Generation Station located near Phoenix, Arizona.<sup>9</sup>

## **Consumptive Uses**

### **Transportation**

Transportation (i.e., the movement of people and goods from place to place) is an important end use of energy in California, accounting for approximately 40 percent of total statewide energy consumption in 2004, and 12 percent of total U.S. energy consumption.<sup>10</sup> Nonrenewable energy products derived from crude oil, including gasoline, diesel, kerosene, and residual fuel, provide most of the energy consumed for transportation purposes by on-road motor vehicles (i.e., automobiles and trucks), locomotives, aircraft, and ships. In addition, energy is consumed in connection with construction and maintenance of transportation infrastructure, such as highways, rail facilities, runways, and shipping terminals. Trends in transportation-related technology foretell increased use of electricity and natural gas for transportation purposes.

Transportation energy is derived from a wide variety of petroleum products. Automobiles and trucks consume gasoline and diesel fuel. Turbine aircraft consume

---

<sup>9</sup> Southern California Association of Governments (SCAG), *2008 Regional Transportation Plan (RTP), Final Environmental Impact Report (FEIR), Chapter 3.5 Energy*, 2008..

<sup>10</sup> Energy Information Administration, *State Energy Profiles, California*. (October 2007). Retrieved October 29, 2007 from [http://tonto.eia.doe.gov/state/state\\_energy\\_profiles.cfm?sid=CA](http://tonto.eia.doe.gov/state/state_energy_profiles.cfm?sid=CA)

kerosene fuel; trucks and locomotives consume diesel fuel; and ships consume residual fuel oil. The transportation sector consumes relatively minor amounts of natural gas or electricity but propelled mainly by air quality laws and regulations, technological innovations in transportation are expected to increasingly rely on compressed natural gas and electricity as energy sources. Biodiesel, derived from plant sources such as used vegetable oils, is a small but growing source of transportation fuel. Vehicles powered by fuels other than gasoline or diesel are referred to as “alternative fuel vehicles.”<sup>11</sup>

### **Residential, Commercial, Industrial, and Other Uses**

Major energy consumption sectors (in addition to transportation) include residential, commercial, industrial uses as well as street lighting, mining, and agriculture. Unlike transportation, these sectors primarily consume electricity and natural gas. Total annual electricity consumption in the SCAG region is approximately 123,678 million kWh (39,432 kWh for residential uses and 84,246 kWh for nonresidential uses).<sup>12</sup> The residential, commercial, and industrial sectors account for approximately 30, 39, and 19 percent, respectively, of total regional electricity consumption. The agriculture, mining and other uses account for another 14 percent.<sup>13</sup>

Within the residential sector, lighting, small appliances, and refrigeration account for most (approximately 60 percent) of the electricity consumption, and within the industrial and commercial sector, lighting, motors, and air cooling account for most (approximately 65 percent) of the electricity consumption. Electricity use by households varies depending on the local climate and on the housing type (i.e., single-family vs. multi-family), as per the four distinct geographic zones in the SCAG region: the cooler and more temperate coastal zone; an inland valley zone; the California central valley zone, and the desert zone, where temperatures are more extreme.

Californians consumed approximately 6 billion cubic feet per day of natural gas in 2006.<sup>14</sup> The California Energy Commission (CEC) expects residential natural gas use to increase by 1.3 percent per year and commercial natural gas use to increase by 1.8 percent per year. However, industrial natural gas demand is expected to plateau or decline in nearly all of the western states because industrial customers are the most likely to respond to currently rising natural gas prices. The most recent data from the CEC show that the residential sector uses the largest amount of natural gas, both across the state and in the SCAG region. Statewide, the industrial sector was second in the amount of natural gas consumed. The commercial sector falls behind residential, mining, and industrial uses in natural gas consumption in the SCAG region and statewide. The

<sup>14</sup> *Ibid.* Energy Almanac, *Average Per Capita Natural Gas Consumption by State 2006*. Accessed on July 10, 2009. Available [http://energyalmanac.ca.gov/naturalgas/per\\_capita\\_consumption.html](http://energyalmanac.ca.gov/naturalgas/per_capita_consumption.html)

agricultural sector accounts for only 1 percent of the natural gas use statewide and in the SCAG region.<sup>15</sup>

### **Consumption Reduction Efforts**

There are various policies and initiatives to reduce petroleum vehicle fuel consumption and increase the share of renewable energy generation and use in the region. These strategies include energy efficient building practices, smarter land use with access to public transportation, increasing automobile fuel efficiency, and participating in energy efficiency incentive program. All publicly-owned utilities and most municipal-owned utilities that provide electric and natural gas service also administer energy conservation programs. These programs typically include home energy audits; incentives for replacement of existing appliances with new, energy-efficient models; provision of resources to inform businesses on development and operation of energy-efficient buildings; and construction of infrastructure to accommodate increased use of motor vehicles powered by natural gas or electricity.<sup>16</sup>

## **REGULATORY SETTING**

Federal and state agencies regulate energy use and consumption through various means and programs. On the federal level, the U.S. Department of Transportation (USDOT), U.S. Department of Energy, and U.S. Environmental Protection Agency (USEPA) are three agencies with substantial influence over energy policies and programs. Generally, federal agencies influence energy consumption through establishment and enforcement of fuel economy standards for automobiles and light trucks, through funding of energy-related research and development projects, and through funding for energy-related infrastructure projects.

On the state level, the CPUC and CEC are the main agencies with authority over different aspects of energy. The CPUC regulates privately owned utilities in the energy, rail, telecommunications, and water fields. The CEC collects and analyzes energy-related data, prepares statewide energy policy recommendations and plans, promotes and funds energy efficiency programs, and regulates the power plant siting process. Some of the more relevant federal and state energy related laws and plans are presented below.<sup>17</sup>

### **Federal**

#### **Public Utility Regulatory Policies Act of 1978 (PURPA) (Public Law 95-617)**

PURPA was passed in response to the unstable energy climate of the late 1970s. PURPA sought to promote conservation of electric energy. Additionally, PURPA created a new

---

<sup>15</sup> Southern California Association of Governments (SCAG), *2008 Regional Transportation Plan (RTP), Final Environmental Impact Report (FEIR), Chapter 3.5 Energy*, 2008...

<sup>16</sup> *Ibid.*

<sup>17</sup> *Ibid.*

class of nonutility generators, small power producers, from which, along with qualified co-generators, utilities are required to buy power.

PURPA was in part intended to augment electric utility generation with more efficiently produced electricity and to provide equitable rates to electric consumers. Utility companies are required to buy all electricity from qualifying facilities (Qfs) at avoided cost (avoided costs are the incremental savings associated with not having to produce additional units of electricity). PURPA expanded participation of nonutility generators in the electricity market and demonstrated that electricity from nonutility generators could successfully be integrated with a utility's own supply. PURPA requires utilities to buy whatever power is produced by Qfs (usually cogeneration or renewable energy). Utilities want these provisions repealed, and critics argue that it will decrease competition and impede development of the renewable energy industry. The Fuel Use Act (FUA) of 1978 (repealed in 1987) also helped Qfs become established. Under FUA, utilities were not allowed to use natural gas to fuel new generating technologies, but Qfs, which were by definition not utilities, were able to take advantage of abundant natural gas and abundant new technologies (such as combined-cycle).<sup>18</sup>

### **Energy Policy Act of 2005**

On August 8, 2005, President George W. Bush signed the National Energy Policy Act of 2005 into law. This comprehensive energy legislation contains several electricity-related provisions that aim to achieve the following:

- Help ensure that consumers receive electricity over a dependable, modern infrastructure;
- Remove outdated obstacles to investment in electricity transmission lines;
- Make electric reliability standards mandatory instead of optional; and
- Give Federal officials the authority to site new power lines in DOE-designated national corridors in certain limited circumstances.<sup>19</sup>

### **Clean Air Act**

Section 211(o) of the Clean Air Act (the Act), as amended by the Energy Policy Act of 2005, requires the Administrator of the U.S. Environmental Protection Agency (USEPA) to annually determine a renewable fuel standard (RFS), which is applicable to refiners, importers, and certain blenders of gasoline, and publish the standard in the Federal Register by November 30 of each year. On the basis of this standard, each obligated party determines the volume of renewable fuel that it must ensure is consumed as motor vehicle fuel. This standard is calculated as a percentage, by dividing the amount of renewable fuel that the Act requires to be blended into gasoline for a given year by the

---

<sup>18</sup> *Ibid.*

<sup>19</sup> *Ibid.*

amount of gasoline expected to be used during that year, including certain adjustments specified by the Act.<sup>20</sup>

### **Corporate Average Fuel Economy (CAFE) Program**

Compliance with federal fuel economy standards is determined on the basis of each manufacturer's average fuel economy for the portion of their vehicles produced for sale in the U.S. The Corporate Average Fuel Economy (CAFE) program, which is administered by the USEPA, was created to determine vehicle manufacturers' compliance with the fuel economy standards. The USEPA calculates a CAFE value for each manufacturer based on city and highway fuel economy test results and vehicle sales. Based on the information generated under the CAFE program, the USDOT is authorized to assess penalties for noncompliance.<sup>21</sup>

### **State**

The CEC and CPUC have jurisdiction over the investor-owned utilities (IOUs) in California. Within the district, the CEC also collects information for the Los LADWP and the Burbank, Glendale and Pasadena Municipal Utilities. The applicable state regulations, laws, and executive orders relevant to energy use are discussed below.<sup>22</sup>

### **California Building Energy Efficiency Standards: Title 24**

California established statewide building energy efficiency standards following legislative action. The legislation required the standards to be cost-effective based on the building life cycle and to include both prescriptive and performance-based approaches. The 2005 Building Energy Efficiency Standards were adopted in November 2003, took effect October 1, 2005, and followed by a 2008 update.<sup>23</sup>

### **AB 1007, Alternative Fuels Plan**

Assembly Bill (AB) 1007, (Pavley, Chapter 371, Statutes of 2005) requires the CEC to prepare a state plan to increase the use of alternative fuels in California (Alternative Fuels Plan). The CEC must prepare the plan in partnership with the ARB, and in consultation with the other state, federal and local agencies. In preparing the Alternative Fuels Plan, the Market Advisory Committee will incorporate and build on the work currently underway within the Bio-Energy Interagency Working Group, the work of other agencies, and also will examine the broader suite of alternative fuels that could benefit California's transportation market.<sup>24</sup>

---

<sup>20</sup> *Ibid.*

<sup>21</sup> *Ibid.*

<sup>22</sup> *Ibid.*

<sup>23</sup> *Ibid.*

<sup>24</sup> *Ibid.*

### **AB 1493, Vehicle Climate Change Standards**

AB 1493 required the state to develop and adopt regulations that achieve the maximum feasible and cost-effective reduction of climate change emissions emitted by passenger vehicles and light-duty trucks. Regulations were adopted by ARB in September 2004. Compliance with these standards is expected to improve fuel efficiency.

### **Senate Bill (SB) 1368, Greenhouse Gas Emissions Performance Standard for Major Power Plant Investments**

This law requires the CEC to develop and adopt by regulation a greenhouse gas emissions performance standard for long-term procurement of electricity by local publicly owned utilities. The CEC must adopt the standard on or before June 30, 2007 and must be consistent with the standard adopted by the CPUC for load-serving entities under their jurisdiction on or before February 1, 2007. On January 25, 2007, and on May 23, 2007, respectively, the CPUC<sup>25</sup> and the CEC<sup>26</sup> adopted specific regulations regarding greenhouse gas emissions performance standards for IOUs and other electricity service providers under SB 1368. Compliance with these standards is expected to improve fuel use.

### **California Solar Initiative**

On January 12, 2006, the CPUC approved the California Solar Initiative (CSI), which provides \$2.9 billion in incentives between 2007 and 2017. CSI is part of the Go Solar California campaign, and builds on 10 years of state solar rebates offered to California's IOU territories: Pacific Gas & Electric (PG&E), Southern California Edison (SCE), and San Diego Gas & Electric (SDG&E.) The California Solar Initiative is overseen by the CPUC, and includes a \$2.5 billion program for commercial and existing residential customers, funded through revenues and collected from gas and electric utility distribution rates. Furthermore, the CEC will manage \$350 million targeted for new residential building construction, utilizing funds already allocated to the CEC to foster renewable projects between 2007 and 2011.

Current incentives provide an upfront, capacity-based payment for a new system. In its August 24, 2006 decision, the CPUC shifted the program from volume-based to performance-based incentives and clarified many elements of the program's design and administration. These changes were enacted in 2007, when the CSI incentive system changed to performance-based payments.<sup>27</sup>

<sup>26</sup> California Energy Commission. SB 1368 Emission Performance Standards – Adopted Regulations. May 23, 2007. Accessed July 10, 2009. Available [http://www.energy.ca.gov/emission\\_standards/regulations/index.html](http://www.energy.ca.gov/emission_standards/regulations/index.html)

<sup>27</sup> *Ibid.*

### **Reducing California's Petroleum Dependence**

The CEC and ARB produced a joint report *Reducing California's Petroleum Dependence* to highlight petroleum consumption and to establish a performance based goal to reduce petroleum consumption in California over the next thirty years. The report includes the following recommendations to the Governor and Legislature regarding petroleum:

- Adopt the recommended statewide goal of reducing demand for on-road gasoline and diesel to 15 percent below the 2003 demand level by 2020 and maintaining that level for the foreseeable future.
- Work with the California delegation and other states to establish national fuel economy standards that double the fuel efficiency of new cars, light trucks, and sport utility vehicles.
- Establish a goal to increase the use of non-petroleum fuels to 20 percent of on-road fuel consumption by 2020, and 30 percent by 2030.

The CEC will use these recommendations when developing its series of recommendations to the Governor and Legislature for the integrated energy plan for electricity, natural gas, and transportation fuels.<sup>28</sup>

### **Renewables Portfolio Standard**

California's renewables portfolio standard (RPS) requires retail sellers of electricity to increase their procurement of eligible renewable energy resources by at least 1 percent per year so that 20 percent of their retail sales are procured from eligible renewable energy resources by 2017. If a seller falls short in a given year, they must procure more renewables in succeeding years to make up the shortfall. Once a retail seller reaches 20 percent, they need not increase their procurement in succeeding years. RPS was enacted via SB 1078 (Sher), signed September 2002 by Governor Davis. The CEC and the CPUC are jointly implementing the standard.<sup>29</sup>

### **SB 107, Renewable Energy Procurement**

This law requires IOUs, such as Pacific Gas and Electric (PG&E), SCE and SDG&E, to have 20 percent of its electricity come from renewable sources by 2010. Previously, state law required that this target be achieved by 2017.<sup>30</sup>

### **California Environmental Quality Act (CEQA)**

Appendix F of the CEQA Guidelines describes the types of information and analyses related to energy conservation that are to be included in EIRs that are prepared pursuant to the CEQA. In Appendix F of the CEQA Guidelines, energy conservation is described in terms of decreased per capita energy consumption, decreased reliance on natural gas and oil, and increased reliance on renewable energy sources. To assure that energy

---

<sup>28</sup> *Ibid.*

<sup>29</sup> *Ibid.*

<sup>30</sup> *Ibid.*

implications are considered in project decisions, EIRs must include a discussion of the potentially significant energy impacts of proposed projects, with particular emphasis on avoiding or reducing inefficient, wasteful and unnecessary consumption of energy.

## **SUBCHAPTER 3.7**

---

### **EXISTING SETTING - GEOLOGY AND SOILS**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This section describes the geology, soils, and seismicity within the district.

## ENVIRONMENTAL SETTING

### Topographic and Geologic Structures

Portions of the district extend over four geomorphic provinces (natural regions) of California: the Mojave Desert, the Transverse Ranges, the Peninsular Ranges, and the Colorado Desert.<sup>1</sup> These provinces are naturally defined geologic regions that display a distinct landscape or landform, as shown in Figure 3.7-1

#### Peninsular Ranges

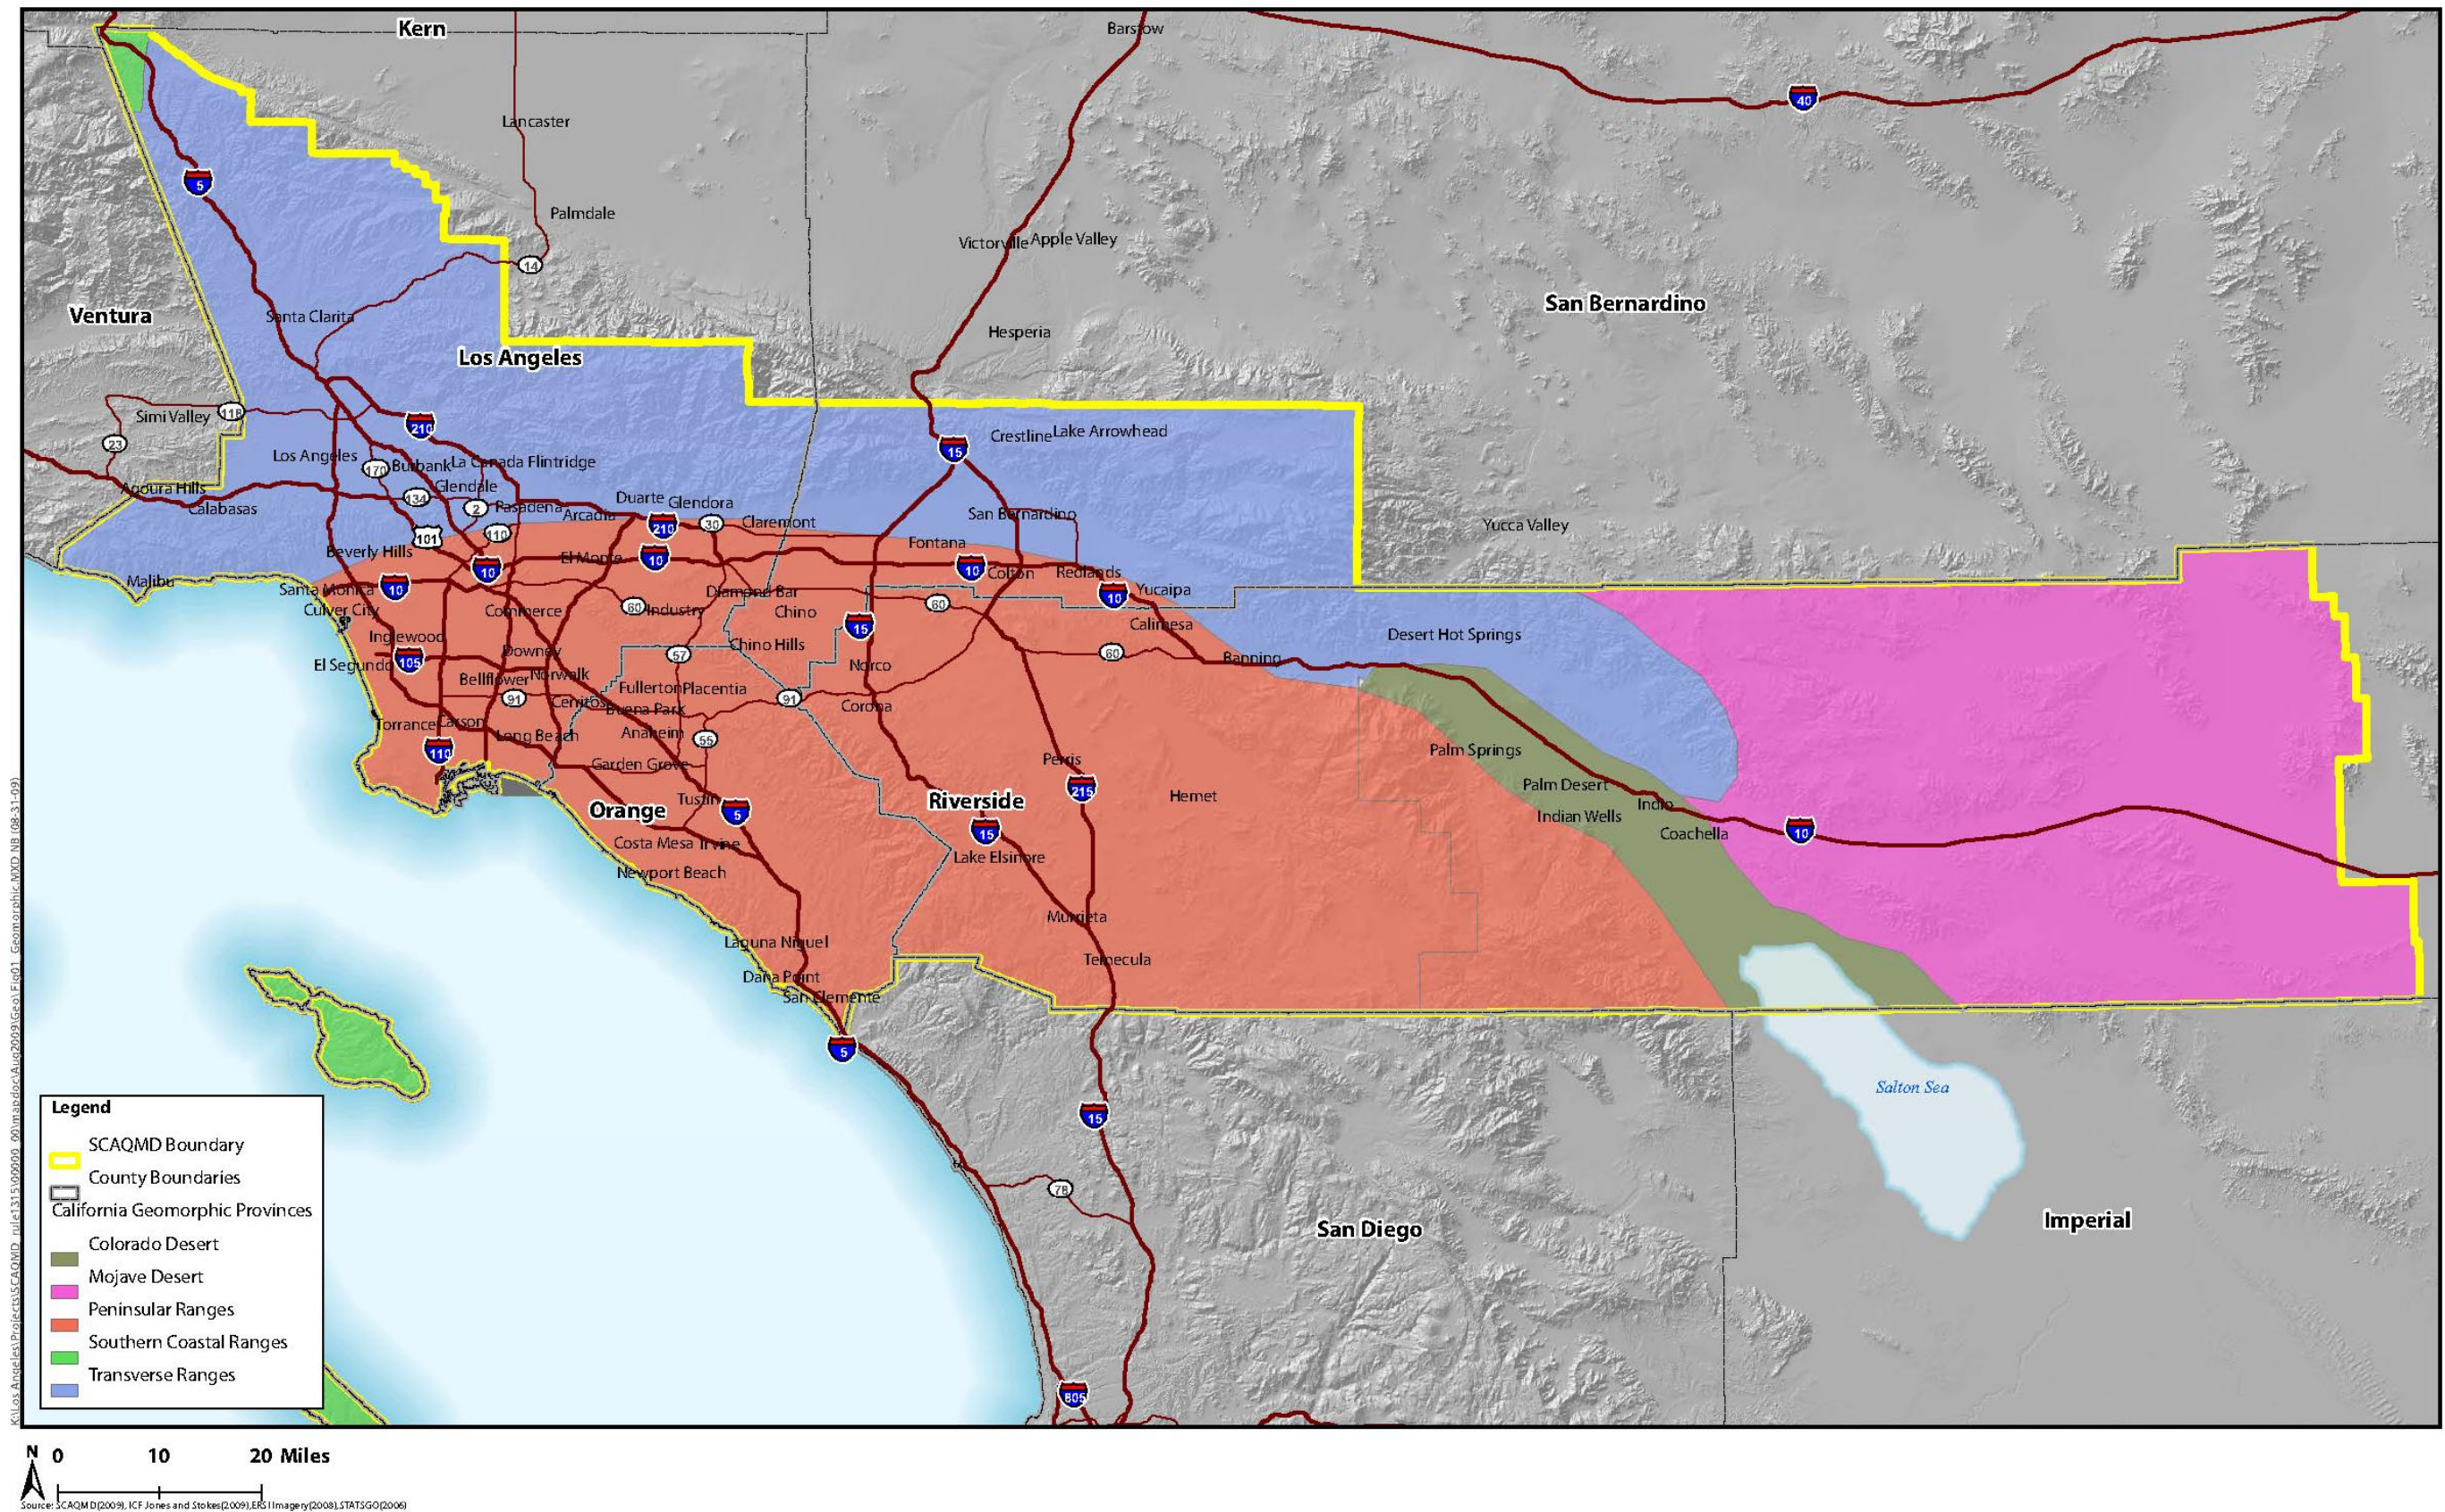

The Peninsular Ranges geomorphic province extends from the Transverse Ranges to deep within Mexico, passing through the Los Angeles Basin and continuing 775 miles south of the U.S.-Mexico border. The Peninsular Ranges are bounded on the west by the Transverse Ranges and on the east by the Colorado Desert and include the southern portion of Los Angeles County, Orange County, and the San Jacinto Mountains and the Coachella Valley in the central portion of Riverside County. The ranges are comprised of a series of northwest-southeast trending mountains that are separated by several active faults, including the San Jacinto and Elsinore Fault zones.

The Peninsular Ranges province is one of the largest geologic units in western North America. Its highest elevations are found in the San Jacinto-Santa Rosa Mountains, with San Jacinto Peak reaching 10,805 feet above mean sea level (amsl). The orientation and shape of the Peninsular Ranges is similar to the Sierra Nevada, in that the western slope is gradual and the eastern face is steep and abrupt. Drainage from the province is typically by the San Diego, San Dieguito, San Luis Rey, and Santa Margarita rivers.

---

<sup>1</sup> California Geological Survey. 2002. California Geomorphic Provinces. Note 36. Accessed June 2009, [http://www.consrv.ca.gov/cgs/information/publications/cgs\\_notes/note\\_36/Documents/note\\_36.pdf](http://www.consrv.ca.gov/cgs/information/publications/cgs_notes/note_36/Documents/note_36.pdf).

**Figure 3.7-1**  
**Geomorphic Provinces within South Coast Air Quality Management District**

### **Mojave Desert**

The Mojave Desert geomorphic province occupies approximately 25,000 square miles. It is bounded by the San Andreas fault and the Transverse Ranges to the west, the Garlock fault and the Tehachapi Mountains to the north (in Kern County), the Nevada Stateline to the east, and the San Bernardino/Riverside County boundary to the south. Portions of Los Angeles and Riverside Counties within the district lie within this province.

Erosional features, such as broad alluvial basins, that receive non-marine sediments from the adjacent uplands dominate the Mojave Desert region. Numerous playas, or ephemeral lakebeds within internal drainage basins, also characterize the region. Throughout this province, small hills—some comprise the remnants of ancient mountainous topography—rise above the valleys that are surrounded by younger alluvial sediments. The highest elevation approaches 4,000 feet amsl, and most valleys lie between 2,000 to 4,000 feet amsl.

### **Transverse Ranges**

The Transverse Ranges geomorphic province is a series of east-west trending mountain ranges and broad alluvial valleys that extend approximately 320 miles from Point Arguello in the west to the Little San Bernardino Mountains at the edge of the Mojave and Colorado Desert provinces in the east. This geomorphic province includes portions of Los Angeles, San Bernardino, and Riverside Counties within the district.

Prominent basins and ranges in the Transverse Ranges include the Ventura basin and the San Gabriel and San Bernardino Mountains. Several active faults, including the San Andreas Fault Zone, are located in the Transverse Ranges. Faults in the province include the Santa Clara River Valley fault, the San Gabriel Fault Zone, the Santa Cruz Island faults, the Santa Rosa Island Faults and the Soledad faults. This province is one of the most geologically diverse in California, containing a wide variety of bedrock types and structures. The Transverse Ranges include California's highest peaks south of the central Sierra Nevada and the only Paleozoic rocks in the coastal mountains in the U.S. The province is subdivided into ranges and intervening valleys. Broad alluvial valleys, narrow stream canyons, and prominent faults separate these ranges. Intense north-south compression is squeezing the Transverse Ranges. As a result, this is one of the most rapidly rising regions on earth. Great thicknesses of Cenozoic petroleum-rich sedimentary rocks have been folded and faulted, making this one of the important oil-producing areas in the U.S.

### **Colorado Desert (Salton Trough)**

The Colorado Desert geomorphic province (also referred to as the Salton Trough) is bounded to the east by the Colorado River, to the south by the Mexican border, and to the west by the Transverse Ranges. This province includes eastern Riverside County and Imperial County. The Colorado Desert trends northwesterly-southeasterly, as do most geologic provinces in southern California. The San Andreas Fault system is prominent in the northeast side of the Salton Trough. The Colorado Desert lies at low elevation, as compared with the Mojave Desert province, ranging from the Colorado River Valley, at

approximately 350 feet amsl, to the Salton Sea Basin, at 235 feet below mean sea level. Its geologic features include playas separated by sand dunes and the Salton Trough, a large structural depression that extends from Palm Springs to the Gulf of California.

## **Soils**

Soils within the district are classified by distinguishing characteristics and are arranged within soil associations.<sup>2</sup> Soils throughout the region differ in origin, composition, and slope development. The individual soil characteristics are important in determining the suitability of the soil for agricultural use or for urbanized development. Figure 3.7-2 shows the General soil types within the district.

The formation of surficial soil depends on the topography, climate, biology, local vegetation, and the material on which the soil profile is developed. Although many soils in the district are suitable for agricultural uses, each soil type may have properties that could limit its uses and represent an agricultural or development hazard.<sup>3</sup> Applicable U.S. Department of Agriculture Natural Resource Conservation Service (USDA-NRCS) soil surveys for specific counties provide the classification and description of each soil type encountered in the district.

## **Soil Hazards**

### **Expansive Soils**

Expansive soils possess a “shrink-swell” behavior. Shrink-swell is the cyclic change in volume (expansion and contraction) that occurs in fine-grained clay sediments from the process of wetting and drying. Structural damage may result over a long period of time, usually the result of inadequate soil and foundation engineering or the placement of structures directly on expansive soils. Typically, soils that exhibit expansive characteristics comprise the upper five feet of the surface. The effects of expansive soils could damage foundations of aboveground structures, paved roads and streets, and concrete slabs. Expansion and contraction of soils, depending on the season and the amount of surface water infiltration, could exert enough pressure on structures to result in cracking, settlement, and uplift. Locations of expansive soils are site-specific and can generally be remedied through standard engineering practices.

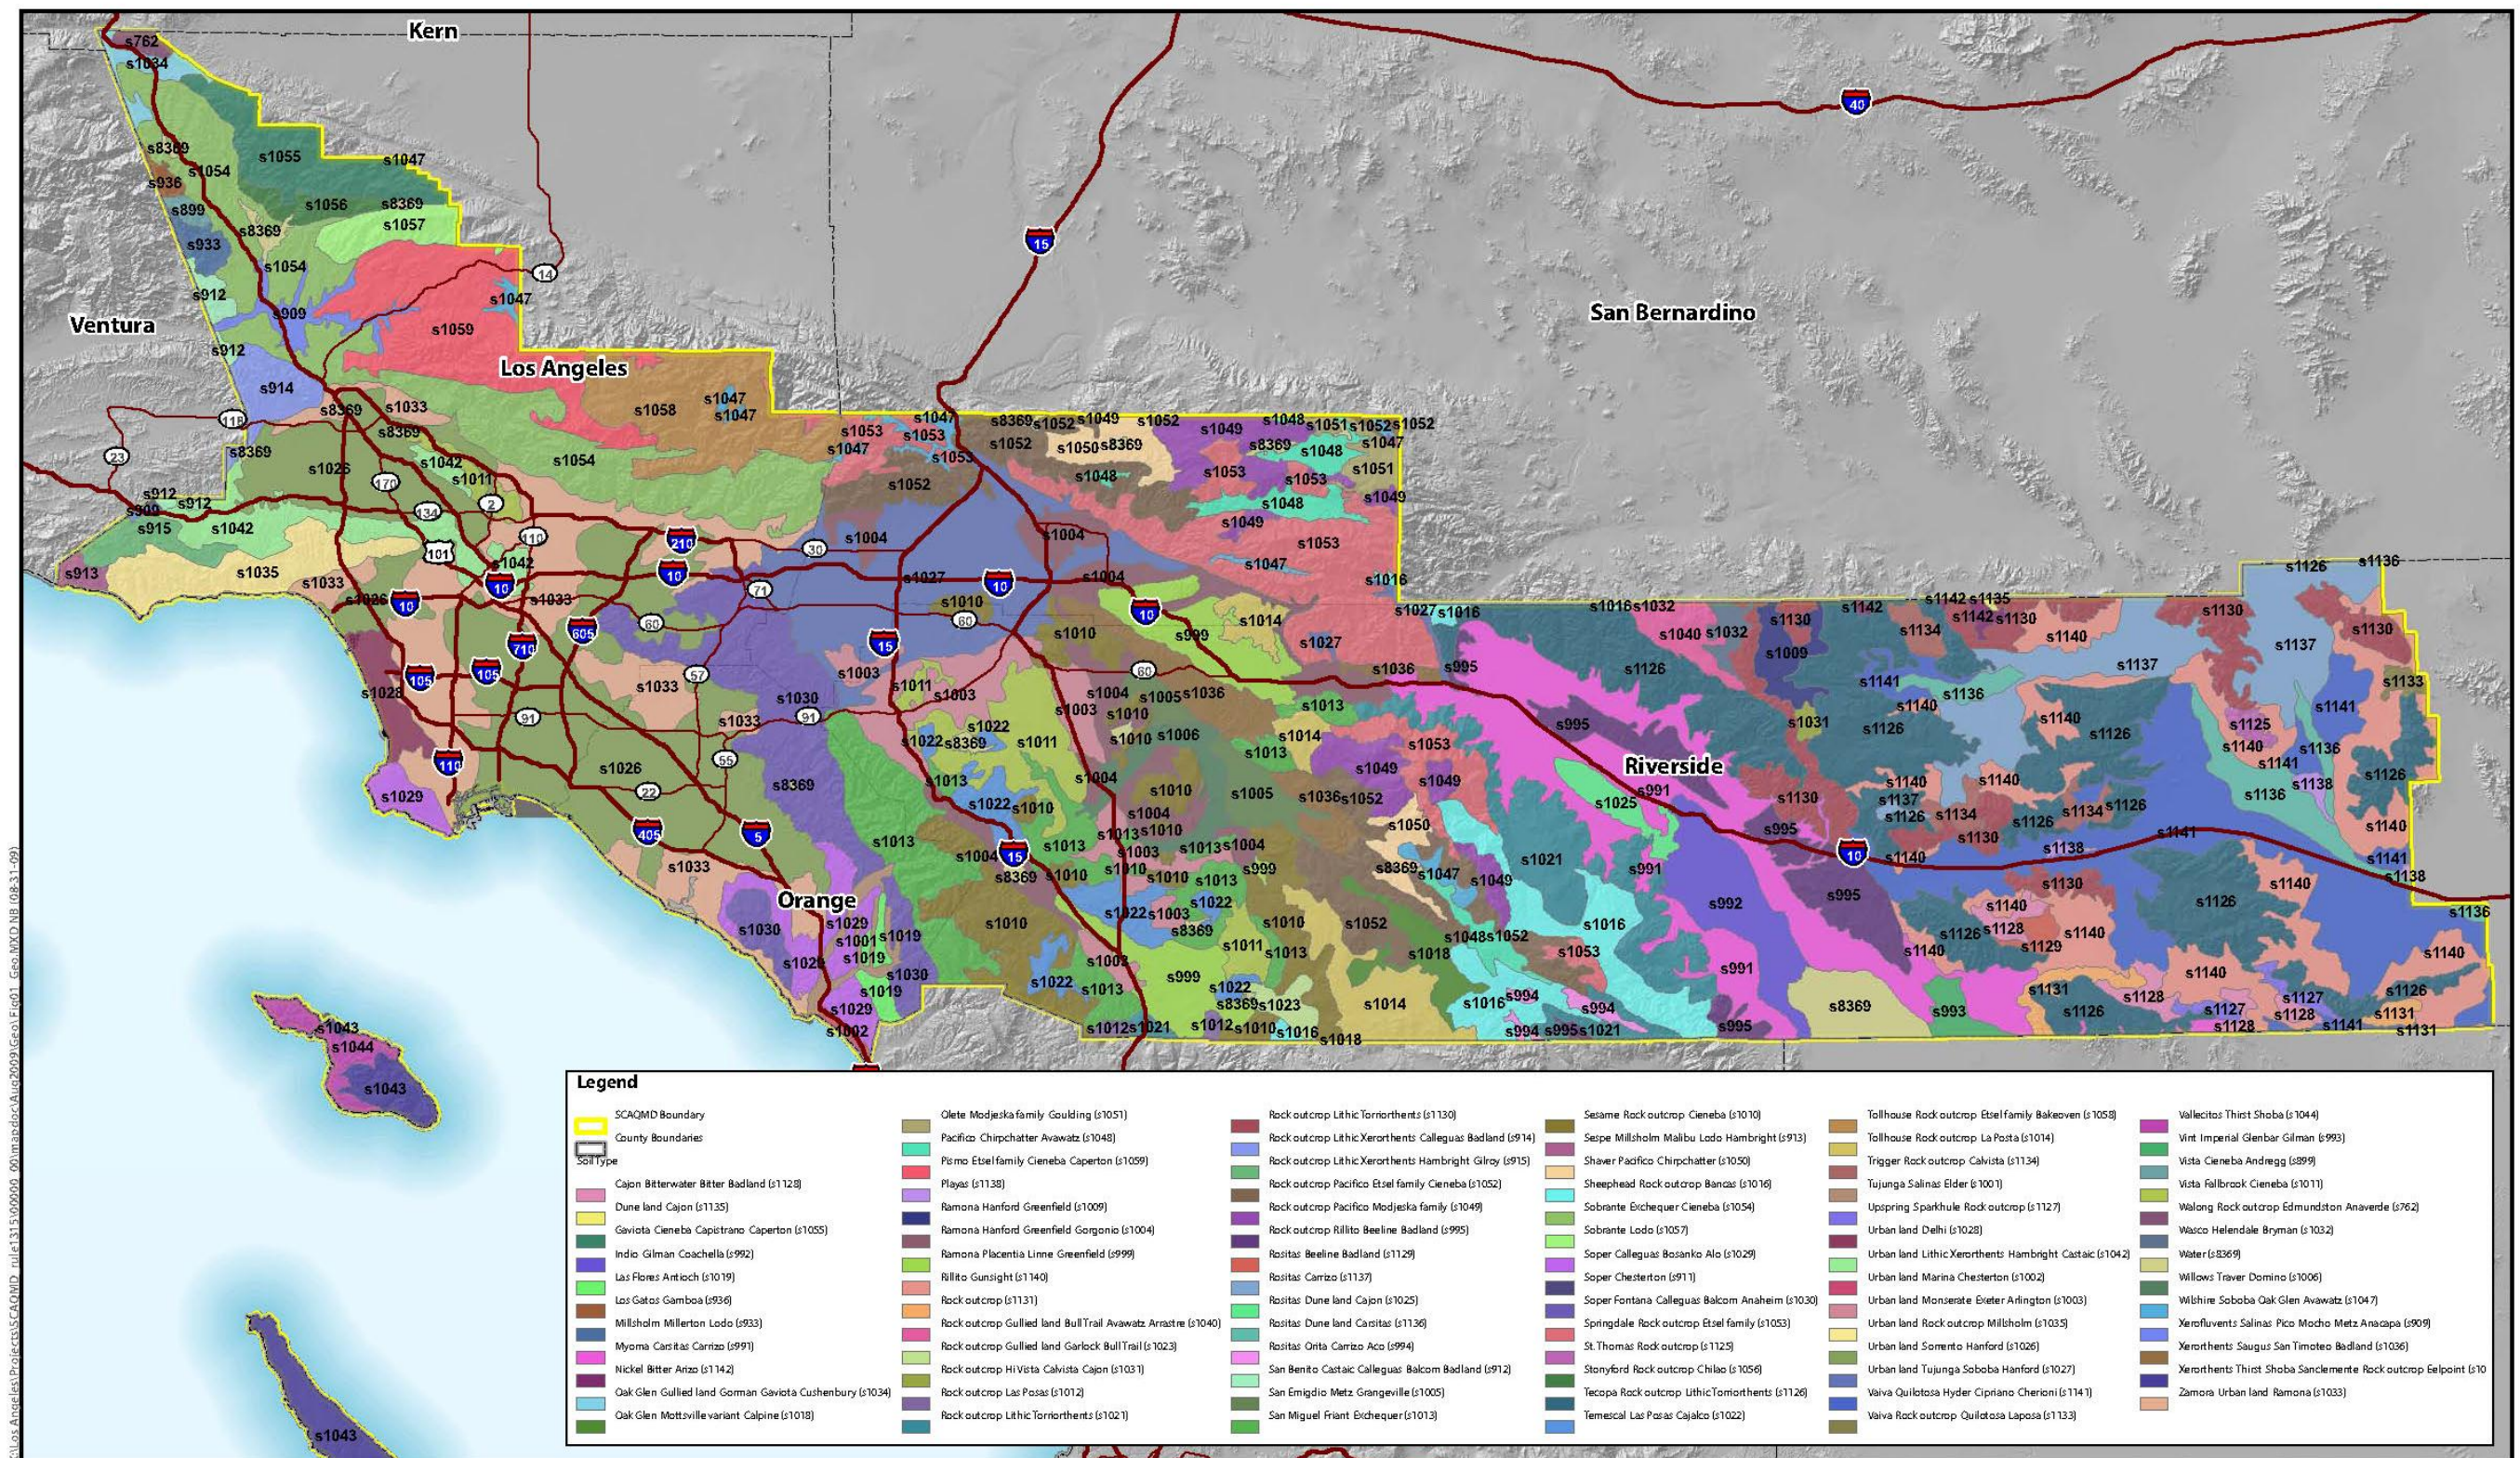

### **Soil Erosion**

Soil erosion is also a natural on-going process that transports, erodes and displaces soil particles through a transport mechanism, such as flowing water or wind. Loose texture and steep slopes primarily result in high wind erodibility potential in soils. Wind erosion is most severe in arid regions, where sandy or loamy sediments are unvegetated and

---

<sup>2</sup> Soil Association – A mapping unit consisting of a group of defined and taxonomic soil units occurring together in an individual and characteristic pattern over a geographic region.

**Figure 3.7-2**  
**General Soil Types within South Coast Air Quality Management District**

exposed to severe wind conditions. Portions of San Bernardino and Riverside Counties within District have the potential for soil erosion. Human intervention can accelerate the natural erosion process. For instance, typical consequences of development increase erosion potential from the removal of vegetative cover and reduction of overall permeable area. These activities can lead to increased water runoff rates and concentrated flows that have greater potential to erode exposed soils. The effects of excessive erosion range from nuisance problems that require additional maintenance, such as increased siltation in storm drains, to instances of more severe damage, where water courses are down-cut and gullies develop. These processes can eventually undermine adjacent structures or topography. Human activities that disturb soils in arid regions increase wind erosion potential. Many of the desert areas within the district are also susceptible to blowing sand, a severe form of wind erosion that damages property and accumulates soil on roadways. The majority of the soils within the district exhibit moderate to high erosion potential, which can be compounded by development.

### **Coastal Erosion**

Coastal erosion is a natural process that is typically the most visible during storm events. Beach sand is replenished by sediment loads in rivers and gentler waves after storm events or during summer months. Erosion rates of one inch per year are considered moderate. However, depending on the severity and duration of storm events and the degree of human intervention with natural coastline or riverine processes, coastal erosion can proceed at considerable rates, resulting in rapid visible coastline recession. In areas of extreme coastal erosion, such as the cities of Rancho Palos Verdes and Malibu, slopes have been undercut by waves during storm events, causing slope failure and resulting in property damage and risks to human health and safety. The coastal regions of Los Angeles and Orange Counties are susceptible to wave erosion hazards.

The Pacific Ocean borders the Peninsular Range province and the Transverse Range Province on the west. Nearly all the sea cliffs along the coast display some sign of coastal erosion. Coastal retreat is attributable to various processes, including undercutting from wave action, weathering and erosion of rocks and cliffs, emergence of groundwater at the cliff face, rain-wash, and landsliding. Additionally, these naturally occurring forces can be assisted by human activity, such as coastal road construction, channelization of surface water flows, or development on marine terraces.

### **Geologic Hazards**

Geologic hazards are natural geologic events that can endanger human lives and threaten human property. Potential geologic hazards include settlement, subsidence, and landslides. Relevant geologic hazards applicable within the district are discussed below. These conditions are important as they may pose hazards that can affect operation of any development project or can constrain project development.

### **Settlement**

Loose, soft soil material comprised of sand, silt and clay, if not properly engineered, has the potential to settle after a building is placed on the surface. Settlement of the loose soils generally occurs slowly but over time can amount to more than most structures can tolerate. Building settlement could lead to structural damage, such as cracked foundations and misaligned or cracked walls and windows. Settlement problems are site-specific and can generally be remedied through standard engineering applications.

### **Land Subsidence**

Land subsidence is generally caused by a variety of agricultural, municipal (construction, withdrawal of ground water for urban uses, etc.) or mining practices that contribute to the loss of support materials within a geologic formation. Agricultural practices can cause oxidation and subsequent compaction and settlement of organic clay soils or hydro compaction allowing land elevations to lower or sink. Agricultural and municipal practices can result in the overdraft of a groundwater aquifer, thereby causing aquifer settlement. Groundwater overdraft occurs when groundwater pumping from a subsurface water-bearing zone (aquifer) exceeds the rate of aquifer replenishment. The extraction of mineral or oil resources can also result in subsidence from removal of supporting layers in the geologic formation. Many areas of the district may be prone to due to groundwater extraction and subsequent lowering of the groundwater surface, typically beneath a confining clay stratum. The impact of subsidence could include lowering of the land surfaces, increased potential for flooding, potential disturbance or damage to buried pipelines and associated structures, and damage to structures designed with minimal tolerance for settlement.

### **Landslides**

Generally, a slope can fail when its ability to resist movement decreases and the stresses on a slope increase. The material in the slope and external processes, such as climate, topography, slope geometry, and human activity, can render a slope unstable and eventually initiate slope movements and failures. Factors that decrease resistance to movement in a slope include pore water pressure, material changes, and structure. Changes in slope material, such as improperly engineered fill slopes, can alter water movement and lead to chemical and physical changes within the slope. Unfavorable fracture or joint orientation and density may develop as a rock material responds to reduced weight or strain relief, resulting in a decreased ability of the rock material to resist movement. Removing the lower portion (the toe) decreases or eliminates the support that opposes lateral motion in a slope. This can occur by man-made activity, such as excavations for road-cuts located along a hillside. Over-steepening a slope by removing material can also reduce its lateral support. Placement of buildings on slopes can increase the amount of stress that is applied to a potential failure surface. Shaking during an earthquake may lead materials in a slope to lose some cohesion and cause liquefaction or change pore water pressures.

Landslide-susceptible areas within the district are those with low-strength soil material on hilly topography (e.g., the Portuguese Bend and Point Fermin areas of the Palos Verdes

Peninsula and the Blackhawk slide area on the north slope of the San Bernardino Mountains).

### **Seismicity**

The district consists of an area that has historically experienced high seismicity. In the past 100 years, several earthquakes of magnitude 5.0 or larger have been reported on the active San Andreas, San Jacinto, Elsinore, and Newport-Inglewood fault systems, all of which traverse the district. As a result, significant earthquake hazards exist in the region. It should be noted that new faults continue to reveal themselves, as in the case of the Northridge earthquake of 1994, and the potential seismic threats posed by these faults also continue to be reevaluated on the basis of new geologic information and analysis, as in the recent case of the Puente Hills Fault.<sup>4</sup> Injury to people and damage to structures during earthquakes can be caused by actual surface rupture along an active fault, by ground shaking from a nearby or distant fault, liquefaction, or dam failure.

In southern California, the last earthquake exceeding Richter magnitude 8.0 occurred in 1857. Much more frequent are smaller temblors, like the relatively moderate (but still exceedingly damaging) 1971 San Fernando and 1994 Northridge earthquakes, both classified as magnitude 6.7 quakes. The human and economic damage caused by earthquakes tends to increase with time, as more and more people and property come to occupy more and more of the land, thus cumulatively increasing the exposure of human habitation to seismic hazard. The 1994 Northridge earthquake, though hardly the most severe experienced by Southern California, was deemed the most expensive, in terms of its economic cost and its damage to human property. The California Office of Emergency Services claimed a \$15 billion total damage estimate.<sup>5</sup>

### **Regional Faults**

A fault is a fracture in the crust of the earth along which there has been displacement of the sides relative to one another parallel to the fracture. Most faults are the result of repeated displacements over a long period of time. Numerous active and potentially active faults have been mapped in the region.

The district contains lateral strike slip faults similar to the San Andreas Fault and various identified and hidden blind thrust faults. A fault trace is the surface expression of a particular fault. Buried or blind thrust faults are thought to underlie much of the district. These “buried” faults do not exhibit readily identifiable traces on the earth’s surface and are typically at considerable depth within the underlying geologic formation. Although these faults typically do not offset surface deposits, they can generate substantial ground shaking.

---

<sup>4</sup> Dolan, J.F., Christofferson, S.A. and Shaw, J.H. (2003) “Recognition of Paleoearthquakes on the Puente Hills blind thrust fault, California,” *Science*, 115-118.; McFarling, U.L. (2003) “Major Threat Seen in L.A. Quake Fault,” *Los Angeles Times*, April 4, 2003 ( <http://articles.latimes.com/2003/apr/04/science/sci-fault4> )

<sup>5</sup> EQE International, (1994) “The January 17, 1994 Northridge, CA Earthquake: An EQE Summary Report”.

The California Geological Survey (CGS) defines active faults as those that have exhibited evidence of displacement during Holocene (10,000 years ago to present) period. Potentially active faults are defined as faults that have exhibited evidence of displacement during the Pleistocene period (10,000 years to 1.8 million years ago). Class A faults have slip rates greater than 5 millimeters per year (mm/yr) and generally have substantial historic seismic data available, while Class B faults have slip rates smaller than 5 mm/yr and, as a rule, historic seismic data on which to develop reliable recurrence intervals of large events is lacking. Table 3.7-1 characterizes the major faults in the district. Figure 3.7-3 illustrates the geographic location of these faults in the region.

- Location data not found

<sup>a</sup> Characterization of the faults in southern California is derived from documents accessible at the California Geological Survey's web page, Probabilistic Seismic Hazard Assessment Maps (PSHA) available at <http://www.consrv.ca.gov/cgs/rghm/psha/index.htm>; see Petersen, et al., 1996. The geographic location of the faults is derived from fault characterizations at the U.S. Geological Survey (USGS) web site for recent earthquake activity at <http://quake.wr.usgs.gov/recenteqs/FaultMaps/118-34.htm>, and also from the list of California and Nevada faults at <http://quake.wr.usgs.gov/info/faultmaps/faultlist.html>.

<sup>b</sup> Recency of fault movement refers to the time period when the fault is believed to have last moved. The age is expressed in terms of the Geologic Time Scale. Generally, the older the activity on a fault, the less likely it is that the fault will produce an earthquake in the near future. For assessing earthquake hazard, usually only faults active in the Late Quaternary or more recently are considered. These include the following three non-overlapping time periods: *Historic*: Refers to the period for which written records are available (approximately the past 200 years, in California and Nevada). *Holocene*: Refers to a period of time between the present and 10,000 years before present. Faults of this age are commonly considered active. For the purpose of classifying faults, C.W. Jennings defined Holocene to exclude the Historic; that is, from 200 to 10,000 years before the present). *Late Quaternary*: Refers to the time period between the present and approximately 700,000 years before the present. Here too, for the purpose of classifying faults, Jennings defined Late Quaternary to exclude the Holocene and the Historic." <http://quake.wr.usgs.gov/info/faultmaps/slipage.html>

<sup>c</sup> The Maximum Moment Magnitude is an estimate of the size of a characteristic earthquake capable of occurring on a particular fault. Moment magnitude is related to the physical size of a fault rupture and movement across a fault. Richter magnitude scale reflects the maximum amplitude of a particular type of seismic wave. Moment magnitude provides a physically meaningful measure of the size of a faulting event. Richter magnitude estimations can be generally higher than moment magnitude estimations.

Source: California Geological Survey; U.S. Geological Survey.

**Figure 3.7-3**  
Major Faults within South Coast Air Quality Management District

Potential geologic hazards include expansive soils, settlement, subsidence, and erosion. Relevant geologic hazards applicable to the district are discussed below.

### **Seismic Hazards**

Movements on the previously identified faults will likely cause future earthquakes within the district. Earthquakes can originate in areas where potential seismic energy has built up along a fault over time, but has not yet been released in the form of an earthquake. Studies supported by the National Earthquake Hazards Reduction Program enable scientists to evaluate the hazard level in different areas. In southern California, scientists estimate that the probability of a magnitude 7.0 or greater earthquake by the year 2024 approaches 80 to 90 percent. The four major hazards generally associated with earthquakes are ground shaking, fault surface rupture (ground displacement), liquefaction ground failures, and settlement.

**Peak Ground Acceleration:** Ground shaking may affect areas hundreds of miles distant from the earthquake's epicenter. Historic earthquakes have caused strong ground shaking and damage in many areas within the district. The composition of underlying soils in areas located relatively distant from faults can intensify ground shaking. Areas that are underlain by bedrock tend to experience less ground shaking than those underlain by unconsolidated sediments such as artificial fill.

Ground shaking is commonly described in terms of peak ground acceleration as a fraction of the acceleration of gravity (g), or by using the Modified Mercalli Intensity Scale, a common metric for characterizing intensity. The Mercalli Scale is a more descriptive method involving 12 levels of intensity denoted by Roman numerals. As presented in Table 3.7-2, below, Modified Mercalli (MM) intense ties range from Level I (shaking that is not felt) to Level XII (total damage). MM intensities ranging from Levels IV to X could cause moderate to significant structural damage. However, the degree of structural damage will not be uniform. Not all buildings perform identically in an earthquake. The age, material, type, method of construction, size, and shape of a building all affect its performance.

Earthquakes on the various and potentially active fault systems are expected to produce a wide range of ground shaking intensities within the district. The estimated maximum moment magnitudes represent characteristic earthquakes on particular faults.<sup>6</sup> While the magnitude is a measure of the energy released in an earthquake, intensity is a measure of the ground shaking effects at a particular location.

---

<sup>6</sup> Moment magnitude is related to the physical size of a fault rupture and movement across a fault. Richter magnitude scale reflects the maximum amplitude of a particular type of seismic wave. Moment magnitude provides a physically meaningful measure of the size of a faulting event [California Geological Survey (CGS), 1997- California Geological Survey (CGS) (1997) *Guidelines for Evaluating and Mitigating Seismic Hazards in California*, CDMG Special Publication 117 (Last Updated: 05/28/02). Accessed June 2009, < <http://gmw.consrv.ca.gov/shmp/webdocs/sp117.pdf> >

**TABLE 3.7-2**  
**Modified Mercalli Intensity Scale<sup>a</sup>**

<b>Level</b>	<b>Description</b>
I	Not felt except by a very few under especially favorable conditions.
II	Felt only by a few persons at rest, especially on upper floors of buildings.
III	Felt quite noticeably by persons indoors, especially on upper floors of buildings; many people do not recognize it as an earthquake; standing motor cars may rock slightly; vibrations similar to the passing of a truck; duration estimated.
IV	Felt indoors by many, outdoors by few during the day; at night, some awakened; dishes, windows, doors disturbed; walls make cracking sound; sensation like heavy truck striking building; standing motor cars rocked noticeably.
V	Felt by nearly everyone; many awakened; some dishes, windows broken; unstable objects overturned; pendulum clocks may stop.
VI	Felt by all, many frightened; some heavy furniture moved; a few instances of fallen plaster; damage slight.
VII	Damage negligible in buildings of good design and construction; slight to moderate in well-built ordinary structures; considerable damage in poorly built or badly designed structures; some chimneys broken.
VIII	Damage slight in specially designed structures; considerable damage in ordinary substantial buildings with partial collapse; damage great in poorly built structures; fall of chimneys, factory stacks, columns, monuments, walls; heavy furniture overturned.
IX	Damage considerable in specially designed structures; well-designed frame structures thrown out of plumb; damage great in substantial buildings, with partial collapse; buildings shifted off foundations.
X	Some well-built wooden structures destroyed; most masonry and frame structures destroyed with foundations; rails bent.
XI	Few, if any (masonry) structures remain standing; bridges destroyed; rails bent greatly.
XII	Damage total; lines-of-sight and level are distorted; objects thrown into the air.

<sup>a</sup> Excerpted from <http://earthquake.usgs.gov/learning/topics/mercalli.php>

Source: U.S. Geological Survey, National Earthquake Information Center.

Shaking intensity can vary depending on the overall magnitude, distance to the fault, focus of earthquake energy, and characteristics of geologic media. Generally, intensities are highest at the fault and decrease with distance from the fault.

### **Surface Fault Rupture**

The surface expression of earthquake fault rupture typically occurs in the immediate vicinity of the originating fault. The magnitude and nature of the rupture may vary across different faults, or even along different segments of the same fault.<sup>7</sup> Rupture of the surface during earthquake events is generally limited to the narrow strip of land

<sup>7</sup> California Geological Survey (CGS), *Guidelines for evaluating the hazard of surface fault rupture*, CGS Note 49, 2002a.

immediately adjacent to the fault on which the event is occurring. Surface ruptures associated with the 1992 Landers earthquake in San Bernardino County extended for a length of 50 miles, with displacements varying from one inch to 20 feet.

The Alquist-Priolo Earthquake Fault Zoning Act was passed in 1972, to mitigate the risk to human habitation of seismically-induced ground-surface ruptures. This state law was a direct result of the 1971 San Fernando Earthquake, which was associated with extensive surface fault ruptures that damaged numerous homes, commercial buildings, and other structures. Surface rupture is the most easily avoided seismic hazard, provided regulatory stipulations embedded in this law are met.

The law requires the State Geologist to establish regulatory zones (known as Earthquake Fault Zones) around the surface traces of active faults, and to issue appropriate maps.<sup>8</sup> An indicative map of identified Earthquake Fault Zones delineating potential rupture areas is provided in Figure 3.7-3. Detailed maps are distributed to all affected cities, counties, and state agencies for their use in planning and controlling new or renewed construction. Local agencies must regulate most development projects within the zones, including all land divisions and most structures intended for human habitation. Fault surface rupture almost always follows preexisting faults, which are zones of weakness.

Rupture may occur suddenly during an earthquake, or slowly in the form of fault creep. Sudden displacements are more damaging to structures because they are accompanied by ground shaking. Fault creep is the slow rupture of the earth's crust. Not all earthquakes result in surface rupture (e.g., the 1994 Northridge earthquake).

### **Liquefaction and Ground Failure**

Liquefaction is a phenomenon in which soil loses its shear strength for short periods during an earthquake. Ground shaking of sufficient duration can result in the loss of grain-to-grain contact, due to a rapid increase in pore water pressure, causing the soil to behave as a fluid for short periods. Liquefaction has been responsible for ground failures during almost all of California's large earthquakes. The depth to groundwater can control the potential for liquefaction; the shallower the groundwater, the higher the potential for liquefaction. Earthquake-induced liquefaction most often occurs in low-lying areas with soils or sediments composed of unconsolidated, saturated, clay-free sands and silts but can also occur in dry, granular soils, or saturated soils with some clay content.

Four kinds of ground failure commonly result from liquefaction: lateral spread, flow failure, ground oscillation, and loss of bearing strength. A lateral spread is a horizontal displacement of surficial blocks of sediments resulting from liquefaction in a subsurface layer. Lateral spread occurs on slopes ranging between 0.3 and 3 percent and commonly displaces the surface by several meters to tens of meters. Flow failures occur on slopes greater than 3 degrees and are primarily liquefied soil or blocks of intact material riding on a liquefied subsurface zone. Ground oscillation occurs on gentle slopes when liquefaction occurs at depth and no lateral displacement takes place. Soil units that are

---

<sup>8</sup> "Earthquake Fault Zones" were called "Special Studies Zones" prior to January 1, 1994.

not liquefied may pull apart from each other and oscillate on the liquefied zone. Ground fissures can accompany ground oscillation and sand boils and damage underground structures and utilities. The loss of bearing pressure can occur beneath a structure when the underlying soil loses strength and liquefies. When this occurs, the structure can settle, tip, or even become buoyant and “float” upwards.

Liquefaction potential is a function of the potential level of ground shaking at a given location and depends on the geologic material at that location. Structural failure often occurs as sediments liquefy and cannot support structures that are built on them. Alluvial valleys and coastal regions are particularly susceptible to liquefaction. Unconsolidated alluvial deposits in desert region deposits are rarely saturated because of the depth to the water table and are, thus, less susceptible to liquefaction than unconsolidated alluvium adjacent to stream channels.

### **Earthquake-Induced Subsidence**

Settlement of the ground surface can be accelerated and accentuated by earthquakes. During an earthquake, settlement can occur as a result of the relatively rapid compaction and settling of subsurface materials (particularly loose, non-compacted, and variable sandy sediments) due to the rearrangement of soil particles during prolonged ground shaking. Settlement can occur both uniformly and differentially (i.e., where adjoining areas settle at different rates). Within the district, artificial fills, unconsolidated alluvial sediments, slope washes, and areas with improperly engineered construction-fills typically underlie areas susceptible to this type of settlement.

### **Seismically-Induced Landslides**

Strong ground shaking during earthquake events can generate landslides and slumps in uplands or coastal regions near the causative fault. Seismically-induced landsliding has typically been found to occur within 75 miles of the epicenter of a magnitude 6.5 earthquake. Seismically-induced landslides would be most likely to occur in areas that have previously experienced landslides or slumps, in areas of steep slopes, or in saturated hillside areas. Areas within the district are susceptible to seismically-induced landsliding because of the abundance of active faults in the region and the existing landslide hazards.

### **Earthquake-Induced Inundation**

Because California and the West Coast of the U.S. are seismically active, California is subject to flood hazard from tectonic activity capable of generating submarine earthquakes, volcanic eruptions, and landslides. Considering its proximity to the Pacific Ocean, the inundation by tsunamis (seismic sea waves) or seiches (oscillating waves in enclosed water bodies) can occur along the California coast in the event of significant earthquake. For purposes of a relative comparison, an earthquake with its epicenter in Alaska and with a magnitude of 8.5 (Richter scale) generated a seismically induced sea wave with a maximum wave height of 11 feet in the Monterey Harbor, on the central coast of California north of the district.

## REGULATORY SETTING

The regulatory setting describes the federal, state, and local agencies that have jurisdiction over geology, soils, and seismicity. The regulations pertinent to these areas that each of these agencies enforce are also described.

### Federal Agency Regulations

#### **U.S. Department Of Agriculture (USDA), Natural Resources Conservation Service (NRCS)**

The NRCS maps soils and farmland uses to provide comprehensive information necessary for understanding, managing, conserving and sustaining the nation's limited soil resources. In addition to many other natural resource conservation programs, the NRCS manages the Farmland Protection Program, which provides funds to help purchase development rights to keep productive farmland in agricultural uses. Working through existing programs, USDA joins with state, tribal, or local governments to acquire conservation easements or other interests from landowners.

### State Agency Regulations

#### **California Department of Conservation**

In 1982, the State of California created the Farmland Mapping and Monitoring Program within the California Department of Conservation to carry on the mapping activity from the NRCS on a continuing basis. The California Land Conservation Act of 1965, also known as the Williamson Act, is designed to preserve agricultural and open space lands by discouraging their premature and unnecessary conversion to urban uses. Williamson Act contracts, also known as agricultural preserves, offer tax incentives for agricultural land preservation by ensuring that land will be assessed for its agricultural productivity rather than its highest and best uses.

#### **California Building Code**

The California Building Code is another name for the body of regulations contained in Title 24, Part 2, of the California Code of Regulations, which is a portion of the California Building Standards Code.<sup>9</sup> Title 24 is assigned to the California Building Standards Commission, which, by law, is responsible for coordinating all building standards. Published by the International Conference of Building Officials, the Uniform Building Code (UBC) is a widely adopted model building code in the U.S. The California Building Code incorporates by reference the UBC with necessary California

---

<sup>9</sup> California Building Standards Commission, (CBSC), *California Building Code, Title 24, Part 2*, 2007. Available < [http://ia311328.us.archive.org/1/items/gov.ca.bsc.title24.part02.vol02/title24\\_part02\\_vol02.pdf](http://ia311328.us.archive.org/1/items/gov.ca.bsc.title24.part02.vol02/title24_part02_vol02.pdf)>

amendments. About one-third of the text within the California Building Code has been tailored for California earthquake conditions.

### **Alquist-Priolo Earthquake Fault Zoning Act**

The Alquist-Priolo Earthquake Fault Zoning Act of 1971 requires that special geologic studies be conducted to locate and assess any active fault traces in and around known active fault areas prior to development of structures for human occupancy. This state law was a direct result of the 1971 San Fernando Earthquake, which was associated with extensive surface fault ruptures that damaged numerous homes, commercial buildings, and other structures. The Alquist-Priolo Act's main purpose is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. This Act addresses only the hazard of surface fault rupture and is not directed toward other earthquake hazards.

### **Seismic Hazards Mapping Act**

The Seismic Hazards Mapping Act of 1990 addresses non-surface fault rupture earthquake hazards, including liquefaction and seismically-induced landslides. The purpose of the Act is to protect the public from the effects of strong ground shaking, liquefaction, landslides, or other ground failure, and other hazards caused by earthquakes. The program and actions mandated by the Seismic Hazards Mapping Act closely resemble those of the Alquist-Priolo Earthquake Fault Zoning Act.

## **Local Agency Regulations**

### **General Plans and Seismic Safety Element**

City and county governments typically develop as part of their General Plans safety and seismic elements that identify goals, objectives, and specific actions to minimize the loss of life, property damage and disruption of goods and services from man-made and natural disasters including floods, fires, non-seismic geologic hazards and earthquakes. General Plans can provide policies and develop ordinances to ensure acceptable protection of people and structures from risks associated with these hazards. Ordinances can include those addressing unreinforced masonry construction, erosion or grading.

## **SUBCHAPTER 3.8**

---

### **EXISTING SETTING - HAZARDS AND HAZARDOUS MATERIALS**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This section describes the potential use of hazardous materials, releases to the environment, and the associated risks within the district.

### Definitions

A number of properties may cause a substance to be hazardous, including toxicity, ignitability, corrosivity, and reactivity. The term “hazardous material” is defined in different ways for different regulatory programs. For the purposes of this PEA, the term “hazardous materials” refers to both hazardous materials and hazardous wastes. A hazardous material is defined as hazardous if it appears on a list of hazardous materials prepared by a federal, state, or local regulatory agency or if it has characteristics defined as hazardous by such an agency. The California Health & Safety Code §25501(k) defines hazardous material as follows:<sup>1</sup>

“Hazardous material” means any material that because of its quantity, concentrations, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the Contaminated Sites from Prior Hazardous Material Releases environment. “Hazardous materials” include but are not limited to hazardous substances, hazardous waste, and any material which a handler or the administering agency has a reasonable basis for believing would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment.

Examples of the types of materials and wastes considered hazardous are hazardous chemicals (e.g., toxic, ignitable, corrosive, and reactive materials), radioactive materials, and medical (infectious) waste. The characteristics of toxicity, ignitability, corrosivity, and reactivity are defined in Title 22, CCR, §§66261.20-66261.24 and are summarized below:

### Toxic Substances

Toxic substances may cause short-term or long-lasting health effects, ranging from temporary effects to permanent disability, or even death. For example, such substances can cause disorientation, acute allergic reactions, asphyxiation, skin irritation, or other adverse health effects if human exposure exceeds certain levels. (The level depends on the substances involved and are chemical-specific.) Carcinogens (substances that can cause cancer) are a special class of toxic substances. Examples of toxic substances include benzene (a component of gasoline and a suspected carcinogen) and methylene chloride (a common laboratory solvent and a suspected carcinogen).

---

<sup>1</sup> SCAG 2008 RTP FEIR, Section 3.7, Hazardous Materials.

### **Ignitable Substances**

Ignitable substances are hazardous because of their ability to burn. Gasoline, hexane, and natural gas are examples of ignitable substances.

### **Corrosive Materials**

Corrosive materials can cause severe burns. Corrosives include strong acids and bases such as sodium hydroxide (lye) or sulfuric acid (battery acid).

### **Reactive Materials**

Reactive materials may cause explosions or generate toxic gases. Explosives, pure sodium or potassium metals (which react violently with water), and cyanides are examples of reactive materials.

## **ENVIRONMENTAL SETTING**

The potential for hazards exist in the production, use, storage and transportation of hazardous materials. Hazardous materials may be found at industrial production and processing facilities, institutional, commercial, and residential establishments. Some facilities produce hazardous materials as their end product, while others use such materials as an input to their production process. Examples of hazardous materials used as consumer products include gasoline, solvents, and coatings/paints. Hazardous materials are stored at facilities that produce such materials and at facilities where hazardous materials are a part of the production process. Specifically, storage refers to the bulk handling of hazardous materials before and after they are transported to the general geographical area of use. Currently, hazardous materials are transported throughout the district in great quantities via all modes of transportation including rail, highway, water, air, and pipeline.

### **Contaminated Sites from Prior Hazardous Material Releases**

Soil and groundwater can become contaminated by hazardous material releases in a variety of ways, including permitted or illicit use and accidental or intentional disposal or spillage. Before the 1980s, most land disposal of chemicals was unregulated, resulting in numerous industrial properties and public landfills becoming dumping grounds for unwanted chemicals. The largest and most contaminated of these sites, in general, became federal Superfund sites in the early 1980s, so named for their eligibility to receive cleanup money from a federal fund established for that purpose under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Sites are added to the National Priorities List (NPL) following a hazard ranking system. The U.S. Environmental Protection Agency (USEPA) maintains this list of federal Superfund sites, as well as a more extensive list of all sites with potential to be listed, known as Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS).

Numerous smaller properties also have been designated as contaminated sites. Often, these are gas station sites, where leaking underground storage tanks were upgraded under a federal requirement in the late 1980s. Another category of sites, which may have some overlap with the types already mentioned, is brownfields – previously used, often abandoned sites that because of actual or suspected contamination, are undeveloped or underused. Both the USEPA and the California Department of Toxic Substances Control (DTSC) maintain lists of known brownfield sites. These sites are often difficult to inventory due to their owners’ reluctance to publicly label their property as potentially contaminated. In California, numerous regulatory barriers have blocked effective reuse of brownfields sites, including uncertainty as to cleanup levels and ultimate cleanup cost. Senate Bill [SB] 32 and also known as the California Land Environmental Restoration and Reuse Act, adopted in 2001, establishes a locally-based program to help speed the cleanup and reuse of brownfield sites.<sup>2</sup>

Several California environmental agencies maintain lists of properties that are contaminated or are otherwise associated with the use of hazardous materials, including the following:<sup>3</sup>

- Department of Toxic Substances Control (DTSC; part of the California Environmental Protection Agency [Cal/EPA]):
  - Site Mitigation and Brownfields Reuse Program (“CalSites”) list – sites that have known or suspected contamination;
  - HazNet list – data on hazardous waste shipments from Hazardous Waste Information System; and
  - Hazardous Waste and Substances Site List (“Cortese” list) – hazardous materials release locations.
- California Integrated Waste Management Board (CIWMB; part of Cal/EPA):
  - Solid Waste Information System – data on open, closed, or inactive solid waste disposal facilities and transfer stations.
- State Water Resources Control Board (SWRCB; part of Cal/EPA):
  - Leaking Underground Storage Tank list – data for specific parts of the state is also maintained by the Regional Water Quality Control Boards (RWQCB).
- Cal/EPA:
  - Annual Work Plan – indicates which sites are targeted for cleanup using state funds.

### **Underground Storage Tanks**

An underground storage tank (UST) system is a tank and any underground piping connected to the tank that has at least 10 percent of its combined volume underground.

---

<sup>2</sup> Southern California Association of Governments (SCAG), 2008 Regional Transportation Plan (RTP), Final Environmental Impact Report (FEIR), Section 3.7, Hazardous Materials.

<sup>3</sup> *Ibid.*

The federal UST regulations apply only to underground tanks and piping storing either petroleum or certain hazardous substances. When the UST program began, there were approximately 2.1 million regulated tanks in the U.S. Today, there are far fewer since many substandard UST systems have been closed. Nearly all USTs at these sites contain petroleum. These sites include marketers who sell gasoline to the public (such as service stations and convenience stores) and non-marketers who use tanks solely for their own needs (such as fleet service operators and local governments). The USEPA estimates about 25,000 tanks hold hazardous substances covered by the UST regulations.

The greatest potential hazard from a leaking UST is that the petroleum or other hazardous substance can seep into the soil and contaminate groundwater, the source of drinking water for nearly half of all Americans (although not such a high percentage within the district). A leaking UST can present other health and environmental risks, including the potential for fire and explosion. Until the mid-1980s, most USTs were made of bare steel, which is likely to corrode over time and allow UST contents to leak into the environment. Faulty installation or inadequate operating and maintenance procedures also can cause USTs to release their contents into the environment.<sup>4</sup>

### **Los Angeles County**

According to the 2008 Los Angeles County Draft General Plan,<sup>5</sup> the County is vulnerable to the unauthorized releases of hazardous materials. The County is also a major producer of a wide variety of toxic, flammable, and explosive materials. An assortment of toxic materials are also stored and used in many small businesses and households throughout the County. Earthquakes, fires, and floods pose a threat to the possible release or explosion of hazardous materials.

### **Orange County**

According to the 2004 County of Orange General Plan<sup>6</sup>, Orange County is among the most rapidly growing counties in California. However, this economic growth may have environmental costs. Virtually all sectors of the County's economy are users of materials that, if improperly handled, stored, or disposed of, can pose profound health and environmental problems. Their presence in the environment can degrade air quality and groundwater, severely damaging the food chain. Because of their effects, special care is required to transport, store, and dispose of these materials to ensure they do not enter the environment.

Hazardous material users include manufacturing and service industries, agriculture, military bases, hospitals, schools and households. Hazardous materials used by these societal segments are normally stored in secured, on-site areas, in small containers or large aboveground or underground storage tanks. There are approximately 9,500 underground storage tanks (UST) storing over 60 million gallons of hazardous materials at 2,875 facilities in Orange County.

---

<sup>4</sup> *Ibid.*

<sup>5</sup> Los Angeles County Draft General Plan. 2008. Chapter 8: Safety Element.

<sup>6</sup> County of Orange 2004 General Plan. Prepared by the Resources and Development Management Department of Orange County. Effective April 20, 2004.

The major transportation routes in Orange County include the freeway system, surface streets, and railroads. These routes are used daily to transport hazardous materials from suppliers to users. On these routes, transportation accidents involving hazardous materials can occur. The threats posed by a transportation accident involving hazardous materials include explosions, physical contact by emergency response personnel, and exposure to the public via airborne exposure.

Another major hazardous materials transportation mode in Orange County is that of underground pipelines. These pipelines predominately transport crude or refined petroleum, gasoline, and jet fuel. The major threats posed by this transportation method include explosions, fire, and contamination of groundwater potentially used as a source of drinking water.

The County has 175 specific licensees who use sealed and unsealed sources of radiation. Sources of radioactive material users include manufacturing and service industries, agriculture, hospitals, schools, and military bases. Each of the military bases in Orange County has the potential to store and transport radioactive material in the form of fissionable material. The County also has a large gamma ray sterilization facility that utilizes radioactive materials to sterilize equipment and food. The San Onofre Nuclear Generating Station (SONGS), located next to San Onofre State Beach, is on the Camp Pendleton U.S. Marine Corps Base in San Diego County. SONGS is approximately five miles south of the City of San Clemente.

### **San Bernardino County**

According to the 2007 County of San Bernardino General Plan<sup>7</sup>, a combination of climate, topography, vegetation, and development patterns creates high fire hazard risks throughout the County, especially in the many areas of wildland/urban intermix located in foothills and mountainous areas. As development encroaches upon wild land areas, the potential for disastrous loss of watershed, structures, and life, both human and wildlife, increases.

San Bernardino County generates about 65,000 tons of hazardous waste per year. The County's waste stream represents about 5 percent of the wastes generated in the southern California region. The major categories of waste produced in the County include metal containing liquids, waste oil, oily sludge, and baghouse waste. These wastes come from a variety of industries ranging from small businesses, such as automotive services and plating companies, to large industries, such as steel manufacturing.

### **Riverside County**

Historically, Riverside County has had the second highest number of state and federally-declared disasters in California. For example, Riverside County has suffered six fire disasters since 1970. Much of the County is at risk from wildland fire, which is a severe and growing problem. Meanwhile, throughout the 20<sup>th</sup> century, floods caused by storms have been the number one natural disaster in the U.S., for lives lost and property damage. Since 1975, Riverside County has suffered eleven floods severe enough to merit

---

<sup>7</sup> County of San Bernardino 2007 General Plan. Prepared by URS Corporation. Effective April 12, 2007.

declarations of disaster. All of these hazards are costly and potentially life-threatening and affect significant portions of Riverside County.

## **REGULATORY SETTING**

The use, storage, and transportation of hazardous materials are subject to numerous laws and regulations at all levels of government, which serve to minimize the potential impacts associated with hazards at industrial or commercial facilities. The most relevant hazardous materials laws and regulations are summarized in the following discussion.

### **Federal**

#### **United States Environmental Protection Agency (USEPA)**

The USEPA is the primary federal agency charged with protecting human health and with safeguarding the natural environment: air, water, and land. The USEPA works to develop and enforce regulations that implement environmental laws enacted by Congress. The USEPA is responsible for researching and setting national standards for a variety of environmental programs, and delegates to states and tribes the responsibility for issuing permits and for monitoring and enforcing compliance. Since 1970, Congress has enacted numerous environmental laws including the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA); and the Toxic Substances Control Act (TSCA).

Hazardous waste generation, storage, treatment, and disposal are regulated by the USEPA (see 40 CFR Parts 238-282) pursuant to RCRA. According to USEPA estimates, of the 13 billion tons of industrial, agricultural, commercial, and household wastes generated annually, more than 279 million tons (2 percent) are “hazardous,” as defined by RCRA regulations. The regulations specify requirements for generators, including waste minimization methods, as well as for transporters and for treatment, storage, and disposal facilities (TSDFs). The regulations include restrictions on land disposal of wastes and used oil management standards.

CERCLA (generally referred to as Superfund) was enacted by Congress on December 11, 1980. CERCLA established a trust fund to provide for toxic waste cleanup when no responsible party could be identified. Additionally, CERCLA gave the USEPA power to seek out those parties responsible for any release and assure their cooperation in the cleanup. CERCLA also enabled the revision of the National Contingency Plan (NCP). The NCP provided the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, or contaminants. The NCP also established the NPL sites, which is the list of hazardous waste sites eligible for long-term remedial action financed under the federal Superfund program. CERCLA was amended by the Superfund Amendments and Reauthorization Act (SARA) on October 17, 1986. Several site-specific amendments, definitions clarifications, and technical requirements were added to the legislation, including additional enforcement authorities.

The TSCA was enacted by Congress to give the USEPA the ability to track the 75,000 industrial chemicals currently produced or imported into the U.S. The USEPA repeatedly screens these chemicals and can require reporting or testing of those that may pose an environmental or human-health hazard. The USEPA can ban the manufacture and import of those chemicals that pose an unreasonable risk.<sup>8</sup>

### **United States Department of Transportation (USDOT)**

The United States Department of Transportation (USDOT) (see 49 CFR Parts 171-180) regulates hazardous materials shipping at the federal level. Congress passed the Hazardous Materials Transportation Act to give authority to the Secretary of Transportation “to provide adequate protection against the risks to life and property inherent in transporting hazardous materials in commerce.”

The Research and Special Programs Administration (RSPA) of the USDOT issues the hazardous materials regulations. The regulations cover definition and classification of hazardous materials, communication of hazards to workers and the public, packaging and labeling requirements, operational rules for shippers, and training. They apply to interstate, intrastate, and foreign commerce by air, rail, ships, and motor vehicles, and also cover hazardous waste shipments. The Federal Highway Administration (FHWA) is responsible for highway routing of hazardous materials and highway safety permits. The U.S. Coast Guard regulates bulk transport by vessel.

The hazardous material regulations include emergency response provisions, including incident reporting requirements. Reports of major incidents go to the National Response Center, which in turn is linked with CHEMTREC, a service of the chemical manufacturing industry that provides details on most chemicals shipped in the U.S.<sup>9</sup>

### **State**

The Office of Emergency Services (OES) coordinates overall state agency response to major disasters in support of local government. OES is responsible for assuring the state’s readiness to respond to and recover from natural, manmade, and war-caused emergencies, and for assisting local governments in their emergency preparedness, response, and recovery efforts. During major emergencies, OES may call upon all state agencies to help provide support. Due to their expertise, the California National Guard, California Highway Patrol (CHP), Department of Forestry and Fire Protection, Conservation Corps, Department of Social Services, and California Department of Transportation (Caltrans) are the agencies most often asked to respond and assist in emergency response activities.

California Assembly Bill (AB) 2185 requires local agencies to regulate the storage and handling of hazardous materials and requires development of a plan to mitigate the release of hazardous materials. Businesses that handle any of the specified hazardous materials must submit to government agencies (i.e., fire departments), an inventory of their hazardous materials, an emergency response plan, and an employee training

---

<sup>8</sup> SCAG 2008 RTP FEIR, Section 3.7, Hazardous Materials.

<sup>9</sup> *Ibid.*

program (19 CCR §2729 et seq.). The business plans must provide a description of the types of hazardous materials/waste on-site and the location of these materials. The information in the business plan can then be used in the event of an emergency to determine the appropriate response action, the need for public notification, and the need for evacuation. The USEPA's Emergency Planning and Community Right-to-Know Act (EPCRA), also known as Title III of SARA, imposes similar requirements.

Section 112 (r) of the Clean Air Act Amendments of 1990 [42 U.S.C. 7401 et. Seq.] and Article 2, Chapter 6.95 of the California Health and Safety Code require facilities that handle listed regulated substances to develop Risk Management Programs (RMPs) to prevent accidental releases of these substances. US EPA regulations relative to risk management are set forth in 40 Code of Federal Regulations (CFR) Part 68. Similarly, in California, the California Accidental Release Prevention (CalARP) Program regulation (19 CCR Division 2, Chapter 4.5) was issued by OES. Stationary sources with more than a threshold quantity of a regulated substance shall be evaluated to determine the potential for and impacts of accidental releases from any processes subject to the above federal or state risk management requirements. Under certain conditions, the owner or operator of a stationary source may be required to develop and submit an RMP. RMPs consist of three main elements: a hazard assessment that includes off-site consequences analyses and a five-year accident history, a prevention program, and an emergency response program. RMPs for existing facilities were required to be submitted by June 21, 1999. The local fire department usually administers the CalARP program.

Facilities that store large volumes of hazardous materials are required to have a Spill Prevention Containment and Countermeasures (SPCC) Plan per the requirements of 40 CFR, Section 112. The SPCC is designed to prevent spills from on-site facilities and includes requirements for secondary containment, provides emergency response procedures, establishes training requirements, and so forth.<sup>10</sup>

Transportation and use of hazardous materials are the concern of several state and local agencies, including Caltrans, which tracks hazardous materials spills at the district level; the CHP, whose Commercial Vehicle Section includes a Motor Carrier/Licensing and HazMat Regulations Unit; and the state OES, which responds to hazardous materials emergencies in cooperation with local responders. In addition, state law has established Certified Uniform Program Agencies (CUPA), often housed within local fire departments, to oversee local hazardous materials storage, usage, and disposal.

The identification and cleanup, or remediation, of environmentally contaminated properties is regulated by several agencies in California, depending on the size and nature of the site, its past uses, and whether soil or groundwater are impacted. As indicated by the lists given under Environmental Setting, the Cal/EPA, the DTSC, SWRCB, and RWQCBs may all have an interest or role in site cleanup. Generally, the water boards will get involved where groundwater or surface water is impacted by contamination. Cleanup of former military bases may also be managed by a group of agencies, including

---

<sup>10</sup> South Coast Air Quality Management District (SCAQMD), 2007 Air Quality Management Plan (AQMP), Final Program Environmental Impact Report (FPEIR). Section 3.3, Hazards.

the USEPA and DTSC, regional water boards, and occasionally water districts, and is advised by a local citizens' group called a Restoration Advisory Board.<sup>11</sup>

## **Local**

### **Los Angeles County**

The Office of Emergency Management is responsible for organizing and directing the preparedness efforts of the Emergency Management Organization of Los Angeles County. The County's policies towards hazardous materials management include enforcing stringent site investigations for factors related to hazards; limiting the development in high hazard areas, such as floodplains, high fire hazard areas, and seismic hazard zones; facilitating safe transportation, use, and storage of hazardous materials in the County; supporting lead paint abatement; remediating brownfield sites; encouraging the purchase of homes on the FEMA Repeat Hazard list and designating the land as open space; enforcing restrictions on access to important energy sites; limiting development downslope from aqueducts; promoting safe alternatives to chemical-based products in households; and prohibiting development in County floodways. The County has defined effective emergency response management capabilities to include supporting County emergency providers with reaching their response time goals; promoting the participation and coordination of emergency response management between cities and other Counties at all levels of government; coordinating with other County and public agency emergency planning and response activities; and encouraging the development of an early warning system for tsunamis, floods and wildfires.<sup>12</sup>

### **Orange County**

The regulatory agency responsible for enforcement, as well as inspection of pipelines transporting hazardous materials, is the California State Fire Marshal's Office, Hazardous Liquid Pipeline Division. The Orange County Health Care Agency (OCHCA) has been designated by the Board of Supervisors as the agency to enforce the UST program. The OCHCA UST Program regulates approximately 7,000 of the 9,500 underground tanks in Orange County. The program includes conducting regular inspections of underground tanks; oversight of new tank installations; issuance of permits; regulation of repair and closure of tanks; ensuring the mitigation of leaking USTs; pursuing enforcement action; and educating and assisting the industries and general public as to the laws and regulations governing USTs.

Under mandate from the California Health and Safety Code, the Orange County Fire Authority is the designated agency to inventory the distribution of hazardous materials in commercial or industrial occupancies, develop and implement emergency plans, and require businesses that handle hazardous materials to develop emergency plans do deal with these materials.

---

<sup>11</sup> SCAG 2008 RTP FEIR, Section 3.7, Hazardous Materials.

<sup>12</sup> Safety Element, 2009. Los Angeles County Draft General Plan.

Orange County's Hazardous Materials Program Office is responsible for facilitating the coordination of various parts of the County's hazardous materials program; assisting in coordinating County hazardous materials activities with outside agencies and organization; providing comprehensive, coordinated analysis of hazardous materials issues; and directing the preparation, implementation, and modification of the County's Hazardous Waste Management Plan. In regards to San Onofre Nuclear Generating Station, in an effort to prepare those who live and work in areas outside, but adjacent to SONGS, the federal and state governments have established three levels of emergency zones. Orange County is responsible for its own emergency plans concerning a nuclear power plant accident, and the Incident Response Plan is updated regularly.<sup>13</sup>

### **San Bernardino County**

San Bernardino County's Hazardous Waste Management Plan (HWMP) serves as the primary planning document for the management of hazardous waste in San Bernardino County. The HWMP identifies the types and amounts of wastes generated in the County; establishes programs for managing these wastes; identifies an application review process for the siting of specified hazardous waste facilities; identifies mechanisms for reducing the amount of waste generated in the County; and identifies goals, policies, and actions for achieving effective hazardous waste management. One of the County's stated goals is to minimize the generation of hazardous waste in the County and reduce the risk posed by storage, handling, transportation, and disposal of hazardous wastes. In addition, the County will protect its residents and visitors from injury and loss of life and protect property from fires by deploying firefighters and requiring new land developments to prepare site-specific fire protection plans.<sup>14</sup>

### **Riverside County**

Through its membership in the Southern California Hazardous Waste Management Authority (SCHWMA), the County of Riverside has agreed to work on a regional level to solve problems involving hazardous waste. SCHWMA was formed through a joint powers agreement between Santa Barbara, Ventura, San Bernardino, Orange, San Diego, Imperial, and Riverside Counties and the Cities of Los Angeles and San Diego. Working within the concept of "fair share," each SCHWMA county has agreed to take responsibility for the treatment and disposal of hazardous waste in an amount that is at least equal to the amount generated within that county. This responsibility can be met by siting hazardous waste management facilities (transfer, treatment, and/or repository) capable of processing an amount of waste equal to or larger than the amount generated within the county, or by creating intergovernmental agreements between counties to provide compensation to a county for taking another county's waste, or through a combination of both facility siting and intergovernmental agreements. When and where a facility is to be sited is primarily a function of the private market. However, once an application to site a facility has been received, the County will review the requested facility and its location against a set of established siting criteria to ensure that the

---

<sup>13</sup> Safety Element, 2004. Orange County General Plan.

<sup>14</sup> Safety Element, 2007. County of San Bernardino General Plan.

location is appropriate and may deny the application based on the findings of this review. The County of Riverside does not presently have any of these facilities within its jurisdiction and, therefore, must rely on intergovernmental agreements to fulfill its fair share responsibility to SCHWMA.<sup>15</sup>

<sup>15</sup> Safety Element. 2003. County of Riverside General Plan.

## **SUBCHAPTER 3.9**

---

### **EXISTING SETTING - HYDROLOGY AND WATER QUALITY**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## **INTRODUCTION**

This section describes existing water resources within the district.

## **ENVIRONMENTAL SETTING**

### **Climate**

The climate within the district varies widely between the coastal and inland areas. Coastal areas are characterized by long, hot, dry summers, and short, mild, relatively wet winters, also known as Mediterranean climate, while inland areas experience more extreme temperatures and little precipitation. Storms that have the potential to produce significant amounts of precipitation and flooding are extra-tropical cyclones of North Pacific origin, which normally occur from December through March. As the large winter storms move south over the ocean, they encounter colder air masses and the orographic effect of the mountains, producing widespread precipitation. These storms often last for several days. In addition to the extra-tropical cyclones, the district receives thunderstorms, which can occur at any time of the year. Comparatively, thunderstorms cover small areas but result in high-intensity precipitation, usually lasting for shorter periods. As such, thunderstorms can produce flash flooding, which are more common than widespread flooding within the region.

Most precipitation within the district occurs as rainfall, although snowfall is common at higher elevations. Historically, the region receives most of its rainfall during the month of January and the least of its rainfall during the month of June. For the entire region, annual rainfall can range from 2 to 5 inches, 10 to 18 inches on the coastal plains, and 20 to 40 inches in the mountains. The region is also subject to multi-year cycles of wet (El Niño) and dry (La Niña) weather.

### **Hydrologic Regions**

The Department of Water Resources (DWR) has divided the state into ten hydrologic regions (HR), corresponding to the state's major water drainage basins. Of the ten hydrologic regions, three are, in part, within the district: South Lahontan (parts of Los Angeles and San Bernardino counties), South Coast (Orange County, along with parts of Los Angeles, San Bernardino, and Riverside counties), and Colorado River (parts of Riverside, and San Bernardino counties). These three regions are described below.

#### **South Coast Hydrologic Region**

The South Coast Hydrologic Region comprises the southwestern portion of the state and is California's most urbanized and populous region. The topography includes a series of nearly flat coastal plains and valley, broad interior valleys, and several mountains of low and moderate elevation. The region extends from the Santa Barbara-Ventura County line

south to San Diego and the U.S. international border with Mexico. The area within the district includes portions of Orange County, Los Angeles, San Bernardino, and Riverside County. Several prominent rivers exist within the region, including Ventura River, Santa Clara River, Los Angeles River, San Gabriel River, Santa Ana River, San Jacinto Rivers, and Santa Margarita River.

**Water Supply and Use in the South Coast Hydrologic Region.** The region has a diverse mix of both local and imported water supply sources. Local water sources include water recycling, groundwater storage and conjunctive use, conservation, brackish water desalination, water transfer and storage, and infrastructure enhancements. The region imports water through the State Water Project (SWP), the Colorado River Aqueduct (CRA), and the Los Angeles Aqueduct (LAA). These resources allow the region flexibility in managing supplies and resources in wet and dry years.

The Metropolitan Water District of Southern California (MWD) wholesales imported water to a consortium of 26 cities, water districts, and a county authority that serves 18 million people living in six counties, stretching from Ventura to San Diego. MWD imported an average of 703,000 acre-feet per year of water from the SWP from 1972 to 2003, and 680,000 acre-feet or more of water from the CRA.

### **South Lahontan Hydrologic Region**

The South Lahontan Hydrologic Region is located in the southeast portion of California and is characterized by desert, sand dunes, and dry lakes. The northern half of the region includes Mono Lake, Owens Valley, Panamint Valley, Death Valley, and the Amargosa River Valley. The Mojave Desert occupies the southern half of the hydrologic region and is characterized by many small mountain ranges and valleys with playas, or dry lakes. The southern half falls within the district in San Bernardino and Los Angeles counties.

**Water Supply and Use in the South Lahontan Hydrologic Region.** The Los Angeles Aqueduct is the region's major water development feature. The initial 223-mile long aqueduct was completed by the Los Angeles Department of Water and Power (LADWP) and began diverting water from Owens Valley into the City of Los Angeles. The aqueduct was extended 115 miles in 1940 and 137 miles in 1970. The Los Angeles Aqueduct system passes through 12 hydropower plants in its way to Los Angeles. The annual energy generated is more than 1 billion kilowatt-hours (enough to supply the energy demand of approximately 220,000 homes).

Five water agencies in the southwestern portion of this region have contracts with the State Water Project (SWP) for a total of about 250,000 acre-feet of surface water annually. The East Branch of the SWP is used to recharge groundwater in the Mojave River Valley.

### **Colorado River Hydrologic Region**

The Colorado River Hydrologic Region covers the southeastern portion of California and contains 12 percent of the state's land area. The Colorado River, the main tributary of this hydrologic region, forms most of the region's eastern boundary and international

boundary with Mexico. The region includes all of Imperial County, the eastern two-thirds of Riverside County, the southeastern one-third of San Bernardino County, and about one-fourth of San Diego County. It has a variety of arid desert terrain that includes many bowl-shaped valleys, broad alluvial fans, sandy washes, and hills and mountains.

**Water Supply and Use in the Colorado River Hydrologic Region.** About 85 percent of the region's urban and agricultural water supply comes from surface water deliveries from the Colorado River. Water from the river is delivered in the region via the All American and Coachella canals, local diversions, and the Colorado River Aqueduct by means of an exchange for SWP water. The Colorado River is an interstate and international river whose use is apportioned among the seven Colorado River Basin states and Mexico by a complex body of statutes, decrees, and court decisions known collectively as the "Law of the River." Local surface water, groundwater and the SWP provide the remainder of water to the region. In addition, many of the alluvial valleys in the regions are underlain by groundwater aquifers that are the sole source of water for many local communities. However, some alluvial valleys contain groundwater of such poor quality that is not suitable for potable uses.

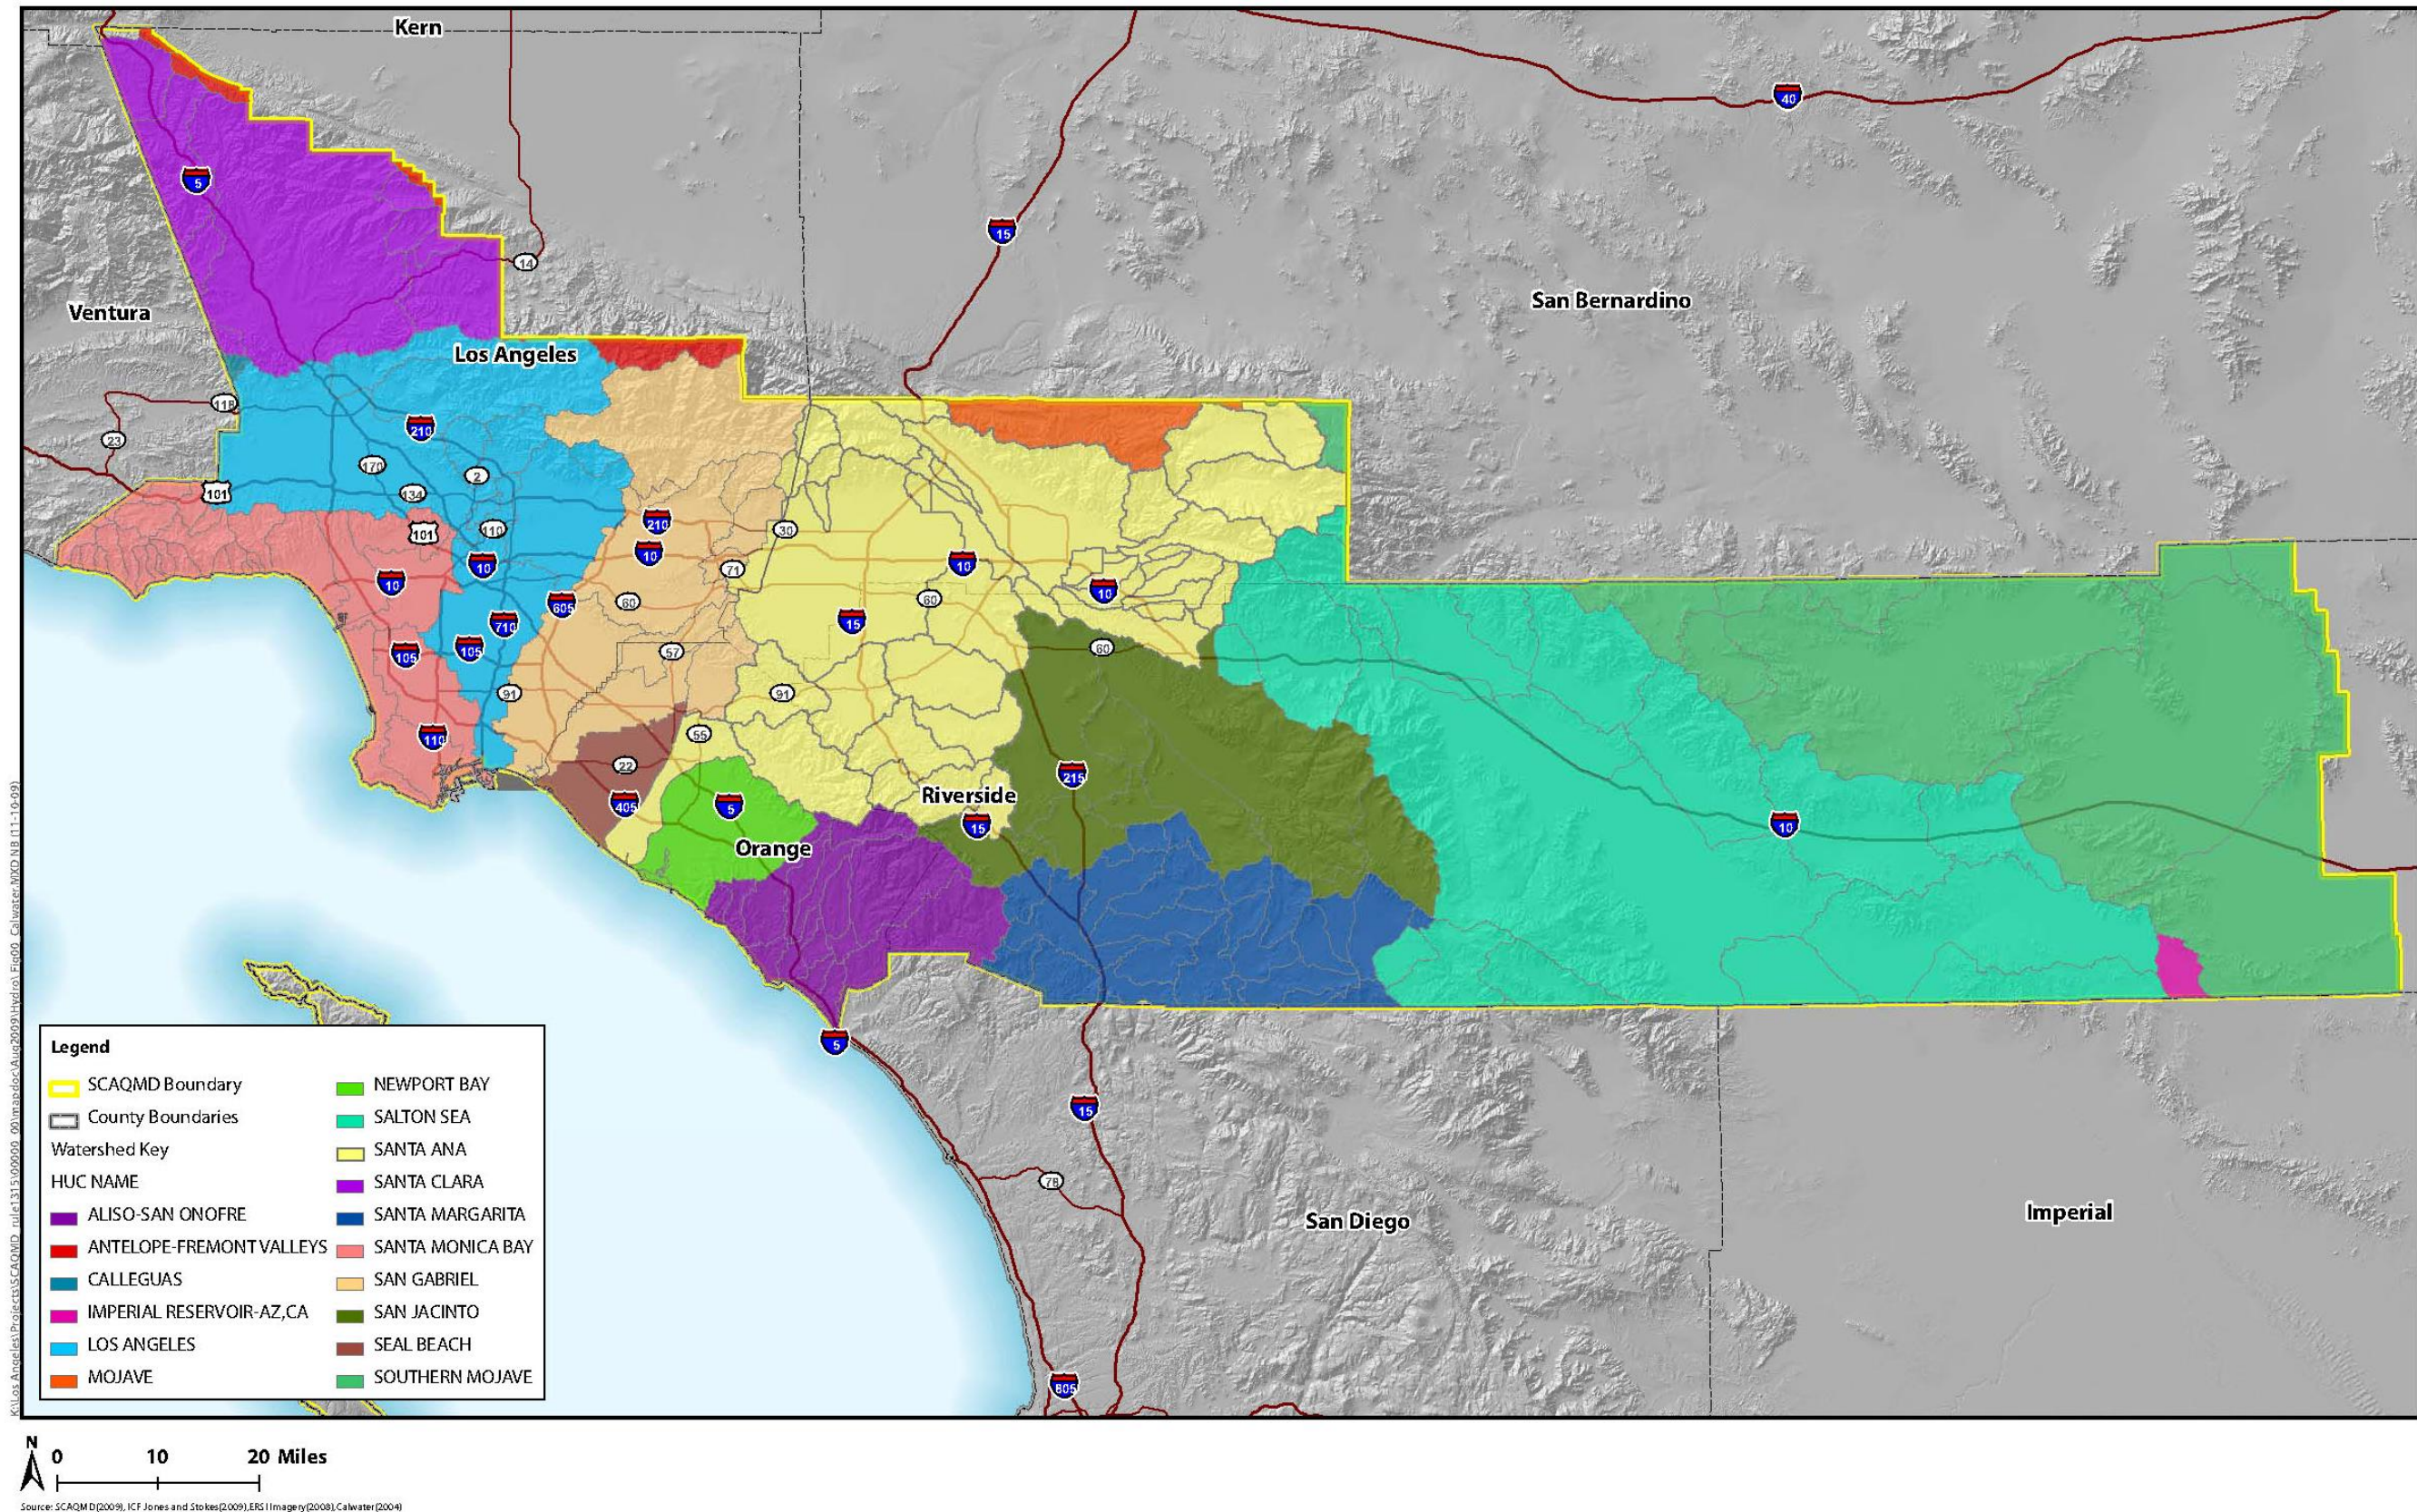

### **Surface Hydrology**

Surface water hydrology refers to surface water systems, including watersheds, floodplains, rivers, streams, lakes and reservoirs, and the inland Salton Sea.

### **Watersheds**

Watersheds refer to areas of land, or basin, in which all waterways drain to one specific outlet, or body of water, such as a river, lake, ocean, or wetland. Watersheds have topographical divisions, such as ridges, hills or mountains. All precipitation that falls within a given watershed, or basin, eventually drains into the same body of water.

Major watersheds within the district are outlined and shaped by the various topographic features of the region. Given the physiographic characteristics of the district, most of the watersheds are located along the Transverse and Peninsular Ranges, and only a small number are in the desert areas. Below is a summary of each of the major watersheds, by county, with their corresponding Hydrologic Unit Code (HUC), which is assigned by the U.S. Geological Survey (USGS). ). Figure 3.9-1 presents a map of the watersheds within the district.

**Figure 3.9-1**  
**USGS Watersheds within the South Coast Air Quality Management District**

**Santa Monica Bay Watershed (HUC 18070104).** The majority of the Santa Monica Bay Watershed is in Los Angeles County and contained within the South Coast Hydrologic Region. In the north, the watershed reaches eastward from the Santa Monica Mountains to downtown Los Angeles. From there, it extends south and west across the Los Angeles plain to include the area east of Ballona Creek and north of the Baldwin Hills. South of Ballona Creek the natural drainage area is a narrow strip of wetlands between Playa del Rey and Palos Verdes. The watershed is comprised of many sub-watersheds that cover broad alluvial valleys, coastal dunes, coastal mountains, and a number of deep and narrow canyons that flow to the Pacific Ocean. The major sub-watersheds include Ballona Creek, Malibu Creek, Topanga Canyon Creek, and Solstice Creek Watersheds. The total drainage area is 414 square miles. Santa Monica Bay Watershed is one of the nation's most highly urbanized watersheds. Major cities within the watershed include Agoura Hills, Calabasas, Malibu, Los Angeles, Culver City, Beverly Hills, Inglewood, Santa Monica, and West Hollywood.

**Los Angeles River Watershed (HUC 18070105).** Los Angeles River watershed is bounded by the Santa Susanna Mountains to the west, the San Gabriel Mountains to the north and east, and the Santa Monica Mountains and Los Angeles coastal plain to the south. The Los Angeles River is born at the confluence of Bell Creek and Calabasas Creek in the San Fernando Valley. It drains eastward from its headwaters to the northern corner of Griffith Park where the channel then turns southward through the rocky bottleneck of Glendale Narrows. After crossing the coastal plain, the river finally drains into San Pedro Bay near Long Beach. The drainage area of Los Angeles Watershed is 834 square miles and the entire watershed falls within the South Coast Hydrologic Region.

Major tributaries of the watershed are Burbank Western Channel, Pacoima Wash, Tujunga Wash, and Verdugo Wash in the San Fernando Valley and the Arroyo Seco, Compton Creek, and Rio Hondo south of the Glendale Narrows. There are numerous lakes and reservoirs in the watershed to include Big Tujunga Reservoir, Chatsworth Reservoir, Encino Reservoir, Echo Park Lake, Los Angeles Reservoir, and Silverlake Reservoir. The upper 57 percent of the watershed is covered by forest and open space, while the remaining 43 percent is highly developed with residential and urban use. Major cities within the watershed include Long Beach, Los Angeles, and East Los Angeles.

**San Gabriel River Watershed (HUC 18070106).** San Gabriel Watershed lies mostly in Los Angeles County. It is bounded by the San Gabriel Mountains to the north, Puente-Chino Hills to the southeast, the division of the Los Angeles River from the San Gabriel River to the west, and the Pacific Ocean to the south. From the mouth of San Gabriel Canyon in the city of Azusa, the San Gabriel River flows south across the San Gabriel Valley and passes through Whittier Narrows, a natural gap in the hills that form the southern boundary of the San Gabriel Valley. It continues across the Pacific Coastal Plain, through the cities of Pico Rivera, Downey, Bellflower, and Lakewood to eventually meet the Pacific Ocean. Geology of the San Gabriel Valley creates an unusual flow pattern that keeps the San Gabriel River along the western edge of the watershed for most of its length. Major tributaries are San Jose Creek, San Dimas Creek, and Walnut Creek. The watershed falls within the South Coast Hydrologic Region.

The watershed drains 640 square miles. Twenty-six percent of the watershed is developed, leaving 74 percent as open space. The river system runs through lands in the Angeles National forest as well as highly urbanized lands in the San Gabriel, Walnut, and Pomona Valleys. Major cities include Covina, Pomona, Whittier, Los Angeles, and Long Beach.

**Newport Bay Watershed (HUC 18070204).** The Newport Bay Watershed is sandwiched between the San Joaquin Hills to the north and the Santiago Hills to the south, which force surface flow onto the central, flat Tustin plain. The Pacific Ocean comprises 13.5 miles of the watershed's western border. Coastal foothills accent the alluvial and coastal plains between the two mountain ranges. In total, the watershed drains 150 square miles, which encompasses all water draining to Newport Bay. Peters Canyon Wash, San Diego Creek, and Santa Ana Delhi Channel are the watershed's major tributaries. Newport Bay Watershed falls within the South Coast Hydrologic Region.

Land in the Newport Bay Watershed is highly developed. Forty-seven percent of the landscape is urban, 4 percent agriculture, and 49 percent open space. Major cities include Santa Ana, Tustin, Irvine, Costa Mesa, and Newport Beach.

**Seal Beach - Westminster Watershed (HUC 1807020).** Westminster Watershed lies on a flat coastal plain in the northwestern corner of Orange County. Three main tributaries drain a total of 74 square miles in the watershed. The Los Alamitos Channel drains into the San Gabriel River, the Bolsa Chica Channel empties into the Anaheim Bay-Huntington Harbour complex, and the East Garden Grove-Wintersburg Channel drains through Bolsa Bay into Huntington Harbour. Seal Beach – Westminster Watershed falls in the South Coast Hydrologic Region. Westminster Watershed is almost entirely urbanized with residential and commercial development. The watershed comprises portions of the cities of Anaheim, Cypress, Fountain Valley, Garden Grove, Huntington Beach, Los Alamitos, Santa Ana, Seal Beach, Stanton, and Westminster.

**Aliso-San Onofre Watershed (HUC 18070301).** Aliso-San Onofre Watershed lies within Orange County, in the South Coast Hydrologic Region. The major waterway is Aliso Creek, which drains to the Pacific Ocean. Aliso Creek is one of three significant waterbodies in the watershed, including also Lake Mission Viejo and San Juan Creek. This watershed is highly urbanized, with over fifty percent of the land area classified as urban.

**Antelope-Fremont Valleys Watershed (HUC 18090206).** The Antelope-Fremont Valley Watershed straddles Kern and Los Angeles County, and is bordered on the southwest by the San Gabriel Mountains, on the northwest by the Tehachapi Mountains, and on the east by a series of hills and buttes that follow the San Bernardino County line. Numerous streams originate in the mountains and foothills surrounding the valley and flow across the valley floor before eventually pooling in the dry lakes adjacent to the county line. It's located in the South Lahontan Hydrologic region.

The watershed drains a total of 12,000 square miles within Los Angeles County. Three of the major tributaries are Big Rock Creek and Little Rock Creek that run from the San

Gabriel Mountains and Oak Creek that runs from the Tehachapi Mountains. Los Angeles Aqueduct also runs 180 miles through the watershed. Reservoirs include the California Aqueduct, Fairmont Reservoir, and Littlerock Reservoir. Major cities within the Los Angeles County portion of the watershed include Lancaster and Palmdale.

**Mojave Watershed (HUC 18090208).** The Mojave Watershed – comprised of high desert, mountains, and valleys - is located entirely within San Bernardino County and within the South Lahontan Hydrologic Region. It drains a total of 1,600 square miles. The San Bernardino, Granite, and Barstow Mountains form the southwestern borders of the watershed. Mountains in this region are the highest and include Butler Peak, which is the highest point of elevation at 8,500 feet. The San Bernardino Mountains are the headwaters for the Mojave River system which is born of Deep Creek and West Fork, the two perennial tributaries to the Mojave River. The Mojave River traverses the watershed for 120 miles until its terminus at Soda Lake and Silver Dry Lake. Flow is from the southwest to the northeast.

Land in the Mojave Watershed is largely recreational areas and rangeland. A small amount of the land is irrigated agricultural land and ‘rural urban’ areas. Major population centers in the watershed include Victorville, Hesperia, Apple Valley, and Adelanto.

**Southern Mojave Watershed (HUC 18100100).** The Southern Mojave Watershed lies in San Bernardino and Riverside Counties and within the Colorado River Hydrologic Region. It is bordered by a mountainous region of the Mojave Watershed to the north. The watershed is comprised of mountains, valleys, and dry lakes. A significant geographical feature of the region is the Salton Trough, which contains the Salton Sea and Imperial and Coachella Valleys. The two valleys are separated by the Salton Sea, which covers the lowest area of the depression. Major tributaries include Antelope Creek, Arrastre Creek, Homer Wash, and Pipes Canyon Creek.

**Santa Ana River Watershed (HUC 18070203).** The Santa Ana River Watershed includes much of Orange County, the northwestern corner of Riverside County, the southwestern corner of San Bernardino County, and a small portion of Los Angeles County, draining a total of 2,065 square miles. The Watershed is located within the South Coast Hydrologic Region. The watershed is bounded on the south by the San Jacinto Watershed, on the east by the Salton Sea and Southern Mojave watersheds, and on the north/west by the Mojave and San Gabriel watersheds. The highest elevation in the watershed occurs in the San Bernardino Mountains at San Gorgonio Peak at 11,485 feet and the eastern San Gabriel Mountains at Mt. Baldy at 10,080 feet. Surface waters start in this mountainous zone and flow northeast to southwest. Further downstream, the Santa Ana Mountains and the Chino Hills form a topographic high before the river flows onto the Coastal Plain in Orange County and outlets into the Pacific Ocean in Huntington Beach. Major tributaries to the Santa Ana River include San Timoteo Creek and Santiago Creek.

Santa Ana Watershed is home to the most developed portion of Orange County and much of the built-up portions of Riverside and San Bernardino Counties. Major Cities include Santa Ana, Rancho Cucamonga, Corona, and San Bernardino.

**San Jacinto Watershed (HUC 18070202).** The San Jacinto Watershed is in Riverside County, and is centered roughly on the city of Hemet. It includes Lake Elsinore, as well as Sun City.

**Calleguas Creek Watershed (HUC 18070103).** Calleguas Creek and its tributaries are located in southeast Ventura County and a small portion of western Los Angeles County. The watershed falls within the South Coast Hydrologic Region. Calleguas Creek drains an area of approximately 343 square miles from the Santa Susana Pass in the east to Mugu Lagoon in the southwest. The watershed drains from the mountains in the northeast part of the watershed toward the southwest where it flows through the Oxnard Plain before emptying into the Pacific Ocean through Mugu Lagoon. The Santa Susana Mountains, South Mountain, and Oak Ridge form the northern boundary of the watershed; the southern boundary is formed by the Simi Hills and Santa Monica Mountains.

The watershed is characterized by three major sub-watersheds: the Arroyo Simi/Las Posas in the north, Conejo Creek in the south, and Revolon Slough in the west. Major tributaries of Calleguas Creek include Arroyo Simi, Arroyo Conejo, and Arroyo Santa Rosa. The watershed includes the cities of Simi Valley, Moorpark, Thousand Oaks, and Camarillo. Most of the agriculture is located in the middle and lower watershed with the major urban areas (Thousand Oaks and Simi Valley) located in the upper watershed. The current land use in the watershed is approximately 26 percent agriculture, 24 percent urban, and 50 percent open space.

**Santa Clara River Watershed (HUC 18070102).** Santa Clara River and its tributaries run through Ventura County and the northwestern part of Los Angeles County, and it is located in the South Coast Hydrologic Region. The portion of the watershed within Los Angeles County is referred to as Upper Santa Clara and the portion within Ventura County is referred to as Lower Santa Clara. Santa Clara River drains an area of 1,634 square miles from the mountains in northern Los Angeles County to the Pacific Ocean. The watershed drains from Pacifico Mountain in the San Gabriel Mountains westward through the Angeles National Forest System before emptying into the Pacific Ocean near the City of Ventura. Ninety percent of the watershed consists of rugged mountains. The remainder of the watershed consists of valley floor and coastal plains.

Land uses in the Santa Clara watershed is 62 percent open space, 29 percent agriculture, and 9 percent urban. Major cities include Acton, Santa Clarita, Fillmore, Santa Paula, Ventura, and Oxnard.

**Salton Sea Watershed (HUC 18100200).** The Salton Sea Watershed extends from just north of the Salton Sea, in Riverside County, to the Mexicali Valley, near the US-Mexico border, in Imperial County. This watershed makes up the lower part of the Coachella Valley, bordered by mountains to the east and west, and extending south to the Colorado Delta in the Sea of Cortez. The main geographic feature in this watershed is California's largest lake, the Salton Sea, an inland saltwater lake approximately 380 square miles in size.

In 2001, the Imperial Irrigation District, the largest recipient of Colorado River water in California, agreed to a plan to transfer up to 200,000 acre-feet of water per year to San Diego for municipal water uses.

### **Floodplains**

Much of the district region's urbanized area lies within alluvial fan floodplains. Since the region is so mountainous, development often occurs in the valleys, and newer development extends into the foothills of those mountains. Floodplains in Southern California are a unique hazard area; although flooding from rain-swollen rivers can occur in valley bottoms, a more common floodplain hazard is debris flow. Debris flows are common in mountain foothill areas, especially after fire and heavy rain events, when wet, heavy soils and rock flow like water down steep slopes and into the valley below. Areas with a history of such slides can often be identified by sloping, fanshaped landforms at the base of mountains and hillsides.

### **Rivers**

Because the climate of Southern California is predominantly arid, many of the natural rivers and creeks are intermittent or ephemeral, drying up in the summer or flowing only after periods of precipitation. For example, annual rainfall amounts vary depending on elevation and proximity to the coast. Some waterways such as Ballona Creek and the Los Angeles River maintain a perennial flow due to agricultural irrigation and urban landscape watering. Figure 3.9-2 presents a map of the major rivers within the district.

Major natural streams and rivers in the district region include the Santa Clara River, Los Angeles River, San Gabriel River, Santa Ana River, San Jacinto River, and upstream portions of the Santa Margarita River.

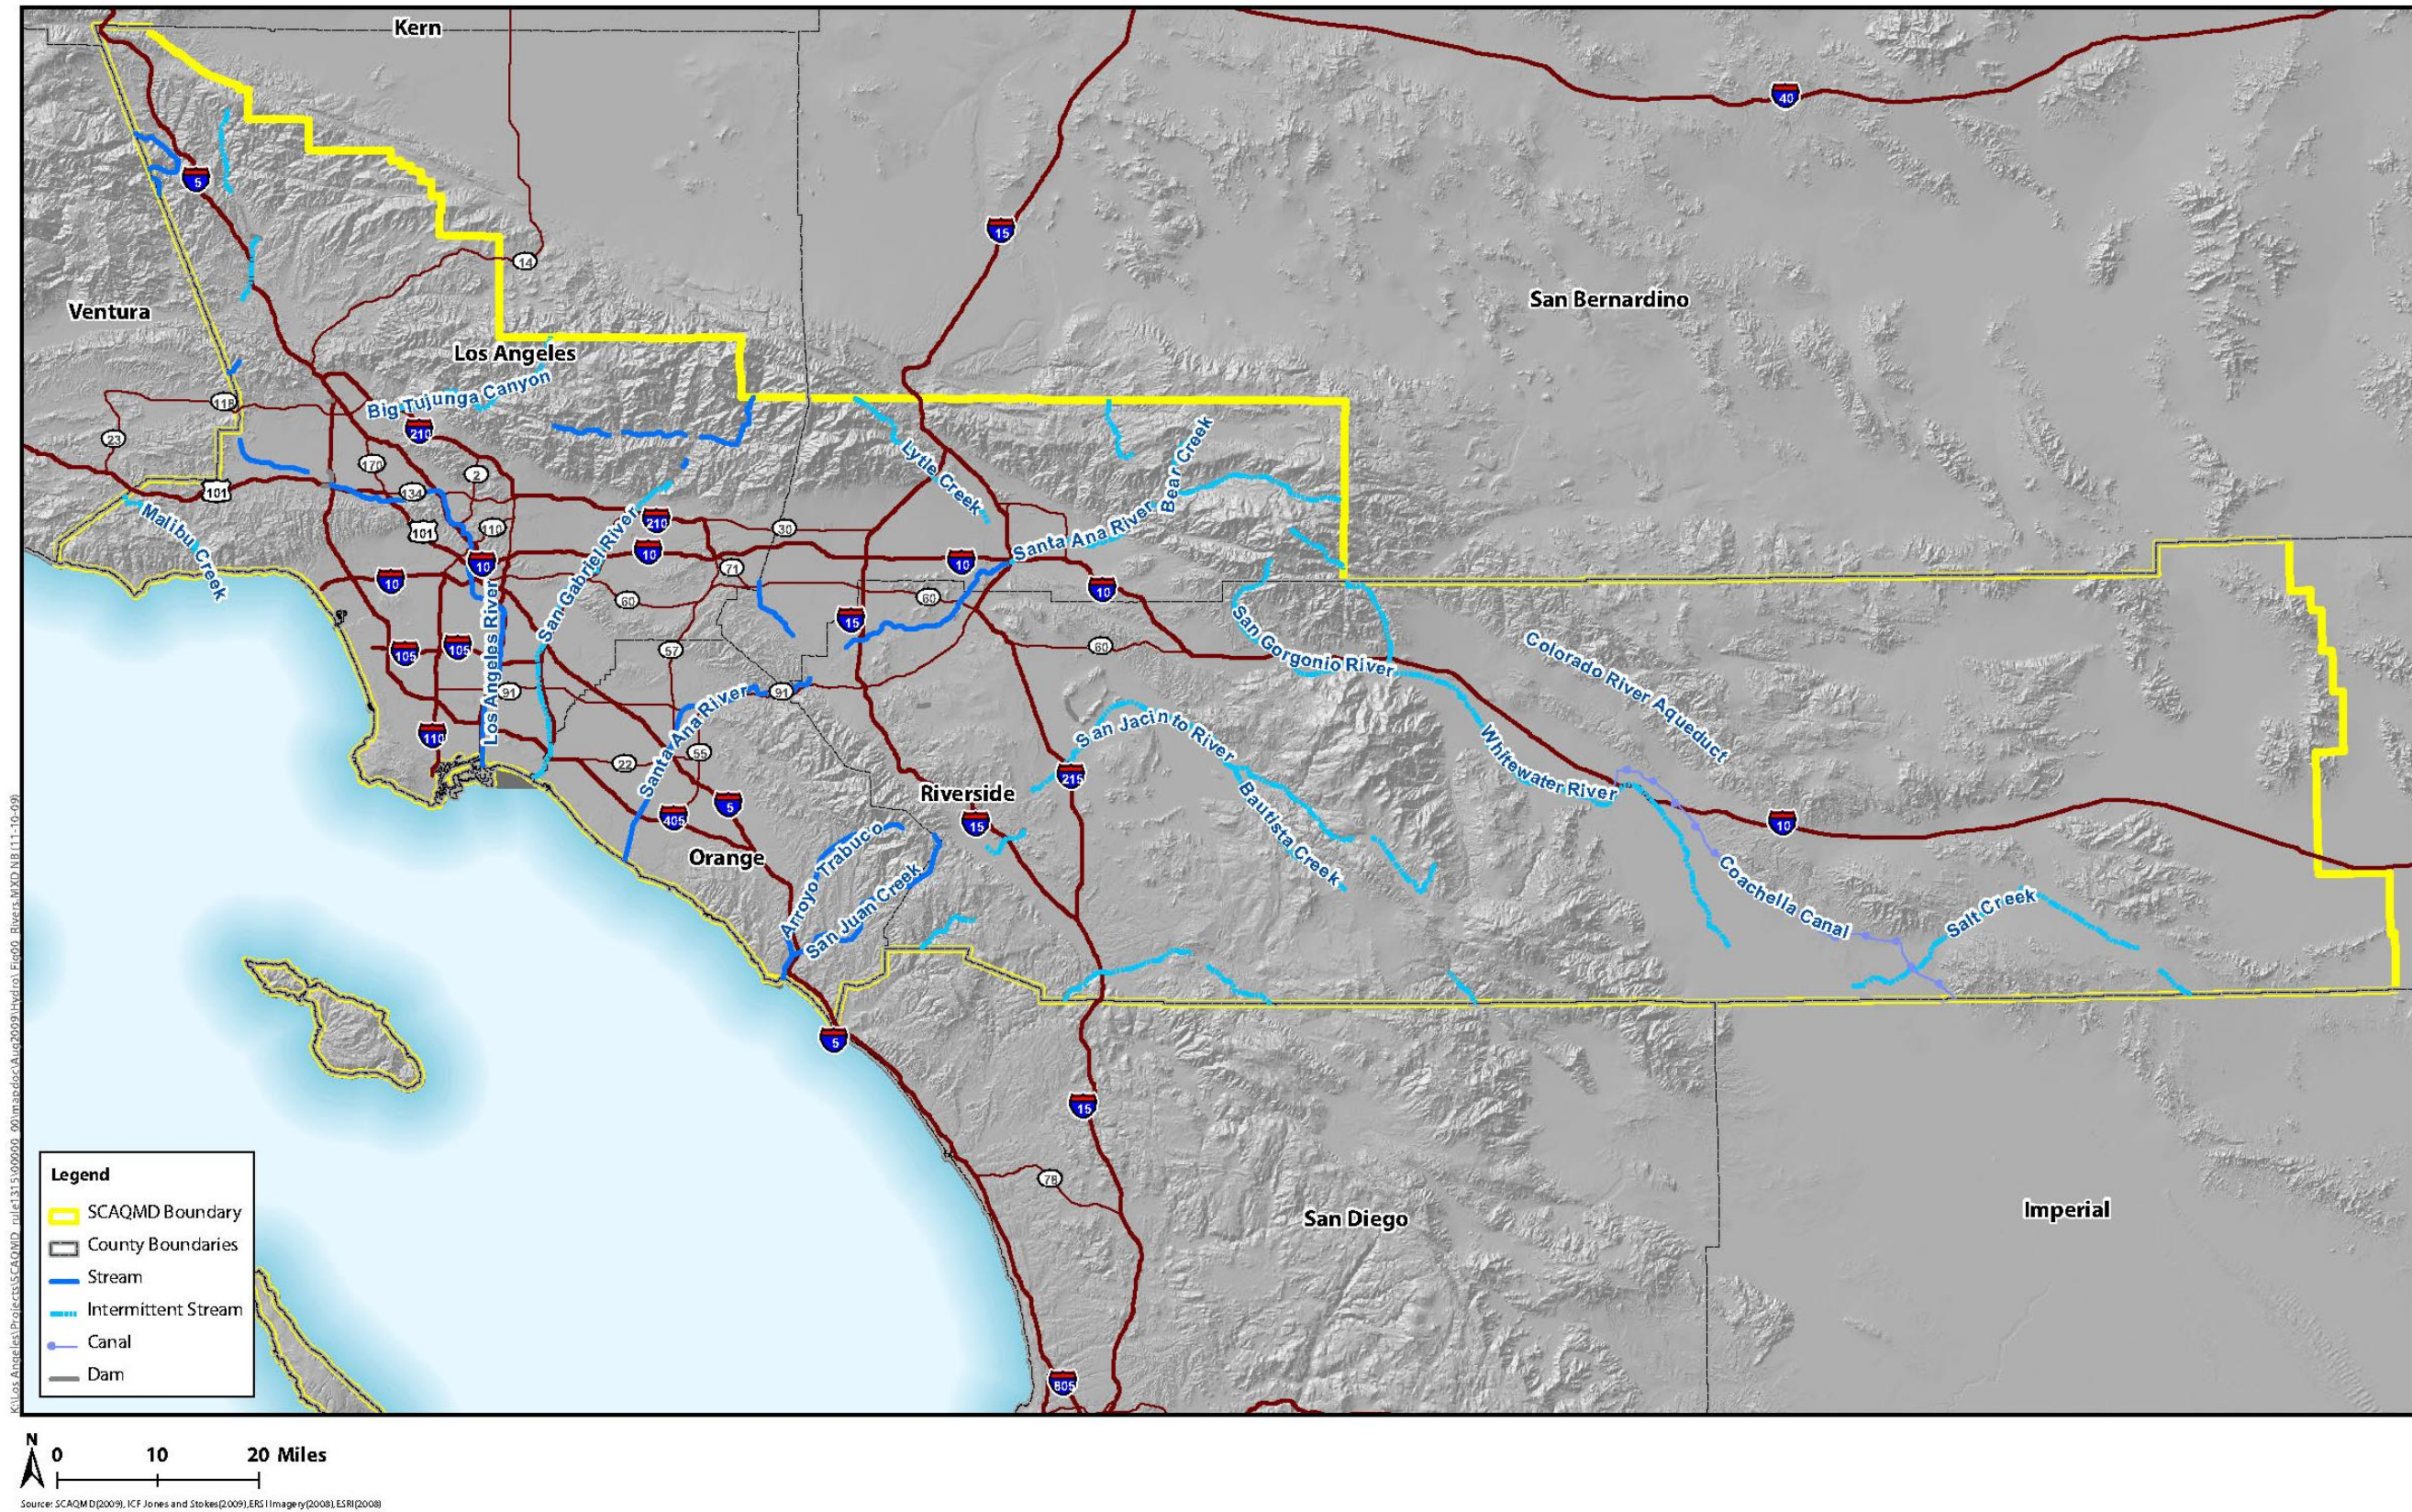

The Santa Clara River flows through the center of Ventura County and remains in a relatively natural state. Threats to water quality include increasing development in floodplain areas, flood control measures such as channeling, erosion, and loss of habitat.

The Los Angeles River is a highly disturbed system due to the flood control features along much of its length. Due to the high urbanization in the area around the Los Angeles River, runoff from industrial and commercial sources as well as illegal dumping contribute to reduce the channel's water quality.

The San Gabriel River is similarly altered with concrete flood control embankments and impacted by urban runoff.

The Santa Ana River drains the San Bernardino Mountains, cuts through the Santa Ana Mountains, and flows onto the Orange County coastal plain. Recent flood control projects along the river have established reinforced embankments for much of the river's path through urbanized Orange County.

The Santa Margarita River begins in Riverside County, draining portions of the San Jacinto Mountains and flowing to the ocean through northern San Diego County.

**Figure 3.9-2**  
Rivers within South Coast Air Quality Management District

Complete lists of surface water resources within the district region along with the beneficial uses associated with them are contained in each of the five Basin Plans prepared by the Regional Water Quality Control Boards of the region.

### **Lakes and Reservoirs**

Since Southern California is a semi-arid region, many of its lakes are drinking water reservoirs, created either through damming of rivers, or manually dug and constructed. Reservoirs also serve as flood control for downstream communities. Some of the most significant lakes, including reservoirs, in the district region are Big Bear Lake, Lake Arrowhead, Castaic Lake, Pyramid Lake, Lake Elsinore, Diamond Valley Lake, and the Salton Sea.

Big Bear Lake is a reservoir in San Bernardino County, in the San Bernardino Mountains. It was created by a granite dam in 1884, which was expanded in 1912, and holds back approximately 73,000 acre-feet of water. The lake has no tributary inflow, and is replenished entirely by snowmelt. It provides water for the community of Big Bear, as well as nearby communities.

Lake Arrowhead is also in San Bernardino County, at the center of an unincorporated community also called Lake Arrowhead. The lake is a man-made reservoir, with a capacity of approximately 48,000 acre-feet. The Lake Arrowhead Dam was completed in 1922, with the intention of turning the area into a resort for wealthy Angelinos. It is now used for recreation and as a potable water source for the surrounding community.

Castaic Lake is on the Castaic Creek, and was formed by the completion of the Castaic Dam. The lake is in northwestern Los Angeles County. It is the terminus of the West Branch of the California Aqueduct, and holds over 323,000 acre-feet of water. Much of the water is distributed throughout northern Los Angeles County, though some is released into Castaic Lagoon, which feeds Castaic Creek. The creek is a tributary of the Santa Clara River. Pyramid Lake is just above Castaic Lake, and water flows from Pyramid into Castaic through a pipeline, generating electricity during the day. At night, when electricity demand and prices are low, water is pumped back up into Pyramid Lake. Pyramid Lake is on Piru Creek, and holds 180,000 acre-feet of water.

Lake Elsinore is in the City of Lake Elsinore, in Riverside County. The lake has dried and up and been replenished throughout the last century, it is now managed to maintain a consistent water level, with outflow piped into the Temescal Canyon Wash.

Diamond Valley Lake is Southern California's newest and largest reservoir. Located in Riverside County, it was a project of the Metropolitan Water District (MWD) to expand surface storage capacity in the region. A total of three dams were required to create the lake. Completed in 1999, it was full by 2002, holding 800,000 acre-feet of water, effectively doubling MWD's surface water stores in the region. The lake is connected to the existing water infrastructure of the SWP. The lake is situated at approximately 1,500 feet above sea level, well above most of the users of the lake's water; this enables the lake to also provide hydroelectric power, as water flows through the lowest dam.

The Salton Sea is California’s largest lake, nearly 400 square miles in size. The basin is over 200 feet below sea level, and has therefore flooded and evaporated many times over, when the Colorado overtops its banks during extreme flood years. This cycle of flooding and evaporation has re-created the Sea several times over at least the last thousand years. Its most recent formation occurred in 1905 after an irrigation canal was breached and the Colorado River flowed into the basin for 18 months, creating the current lake.

The principle inflow to the Sea is from agricultural drainage, which is high in dissolved salts; approximately four million tons of dissolved salts flow into the Sea every year. The evaporation of the Sea’s water, plus the addition of highly saline water from agriculture, has created one of the saltiest bodies of water in the world. The Sea has been a highly successful fishery and is a habitat and migratory stopping and breeding area for 380 different bird species; however, the high, and ever-increasing, salinity of the Sea is a continual challenge for the fish and birds that inhabit it.

The 2001 agriculture to city water transfer agreement, between the Imperial Valley Irrigation District and San Diego will have significant implications for the Salton Sea, and the watershed. The reduction in agricultural water flowing into the Sea will significantly lower water levels, shrinking the overall size of the Sea.

The major surface waters in this section are presented in Table 3.9-1.

### Groundwater Hydrology

Groundwater is the part of the hydrologic cycle representing underground water sources. Groundwater is present in many forms: in reservoirs, both natural and constructed, in underground streams, and in the vast movement of water in and through sand, clay and rock beneath the earth's surface. The place where groundwater comes closest to the surface is called the water table, which in some areas may be very deep, and in others may be right at the surface. Groundwater hydrology is therefore connected to surface water hydrology, and cannot truly be treated as a separate system. One example of this is surface streams that are partly filled by groundwater. When that groundwater is pumped out and removed from the system, the stream levels will fall, or even dry up entirely, even though no water was removed from the stream itself.

Groundwater represents most of the district region's fresh water supply. Groundwater basins are replenished mainly through infiltration – precipitation soaking into the ground and making its way into the groundwater. Two threats to the function of this system are increases in impervious surface and overdraft.

Impervious surface decreases the area available for groundwater recharge, as precipitation runoff flows off of streets, buildings, and parking lots directly into storm sewers, and straight into either river channels or into the ocean. This prevents the natural recharge of groundwater, effectively removing groundwater from the system without any pumping. Impervious surface also deteriorates the quality of the water, as it moves over

streets and buildings, gathering pollutants and trash before entering streams, rivers, and the ocean.

To prevent seawater intrusion in coastal basins in Orange County, recycled water is injected into the ground to form a mound of groundwater between the coast and the main groundwater basin. In Los Angeles County, imported and recycled water is injected to maintain a seawater intrusion barrier.

Overdraft is the condition where the rate of water withdrawal exceeds the rate of water recharge in a particular basin over a period of time. A comprehensive assessment of overdraft in California groundwater basins has not been conducted since 1980. The most recent (2003) DWR report on California's groundwater found that in most cases, there is insufficient quantitative information to identify overdrafted groundwater basins. The report encourages local groundwater managers and DWR to seek funding and work cooperatively to evaluate groundwater basins for overdraft. The report recommends that local agencies take the lead in collecting and analyzing data to understand groundwater basin conditions, and points out that much of the data are needed by the agencies to effectively manage groundwater. Despite the lack of local data, DWR does provide overdraft estimates for the State as a whole, which are on the order of one to two million acre-feet per year, during average precipitation years.

The Natural Resources Defense Council issued a 2001 report that found California's groundwater resources face a serious long-term threat from contamination. Subsequent legislation required a comprehensive assessment of groundwater quality. The evaluation is being conducted by the U.S. Geological Survey, U.S. Department of the Interior and SWRCB. Groundwater wells throughout the district region are being studied for contaminants; the evaluation is scheduled for completion in 2010. The only portion of the district region completed to date is the Temecula Valley area in southwestern Riverside County. In the Temecula area, the study found perchlorate, pesticides, and other contaminants in water wells, but none exceeding drinking water quality standards (i.e., primary standards for maximum contaminant loads).

Volatile organic compounds have created groundwater impairments in industrialized portions of the San Gabriel and San Fernando Valley groundwater basins, where some locations have been declared federal Superfund sites. Subsequently, perchlorate contamination was found in the San Gabriel Valley. As of 2003, \$99 million had been spent removing contaminants from affected aquifers. The EPA continues to oversee installation of a groundwater cleanup system, components of which are being installed beneath the cities of La Puente and Industry in 2006. Groundwater continues to be used as the predominant source of water supply in the valley. Similar problems exist in the Bunker Hills subbasin of the Upper Santa Ana Valley groundwater basin. Perchlorate contamination is emerging as an important contaminant, and has been found in wells in the Rialto, Colton and Fontana areas of San Bernardino County.

The presence of contamination in the source water does not necessarily require the closure of a groundwater well. Water systems can implement water treatment accompanied by monthly monitoring for contaminants and/or may blend the problematic

water with other “cleaner” water in order to reduce the concentration of the contaminants of concern in the water that is ultimately to be delivered to the end-users.

## **Water Supply and Demand**

### **Water Demand**

Water demand in California can generally be divided between urban, agricultural, and environmental uses. In the SCAG area, which includes the SCAQMD area, 75 percent of potable water is provided from imported sources. Annual water demand fluctuates in relation to available supplies and according to the rainfall of a particular year. During prolonged periods of drought, water demand can be reduced significantly through conservation measures, while in years of above average rainfall, demand for imported water usually declines. In 2000, a ‘normal’ year in terms of annual precipitation, the demand for water in the State was between 82 and 83 million acre feet (maf). Of this total, the SCAG region accounted for approximately 9.8 maf.<sup>1</sup>

The increase in California’s water demand is due primarily to the increase in population. According the California Water Plan Update 2005, under a baseline scenario following current trends in use and growth, water demand in California will increase by approximately 3.5 maf by 2030. If SCAG maintains its share of 12 percent of the state’s water demand, the SCAG region could be expected to require an additional 500,000 af by 2030.

### **Demographics, Land Use, and Water Use**

Water demand is influenced not only by population size, but also by socio-economic characteristics, geographical distribution of the population, and water conservation practices. The MWD estimates that average residential per capita use ranges from 97 gallons per person per day in coastal areas to 162 gallons per person per day in the desert areas.<sup>2</sup>

### **Water Conservation**

The results of conservation in Los Angeles have been remarkable; the Los Angeles Department of Water and Power (DWP) reported in their *2005 Urban Water Management Plan* that “water conservation continues to play an important part in keeping the city’s water use equivalent to levels seen 20 years ago.” During this same period, DWP’s service area grew in population by more than 750,000 people.<sup>3</sup>

Urban conservation measures include reducing landscape water use and installing low flow toilets and showerheads in new development. In September of 1991, during a state-wide drought, the MWD and other California water agencies signed a Memorandum of Understanding Regarding Urban Water Conservation Best Management Practices. Best

---

<sup>1</sup> Southern California Association of Governments, Draft 2008 RTP PEIR, January 2008, p. 3.15-15.

<sup>2</sup> *Ibid*, p. 3.15-16.

<sup>3</sup> *Ibid*, p. 3.15-17.

Management Practices (BMPs) to conserve water in commercial, institutional, and industrial uses could further reduce demand by an estimated three to five percent. Encouragement of the use of native and drought-proof plants, increased water conservation credits, funding for innovative conservation ideas in industry, tiered water rate structures, “smart” irrigation controllers and rebates for conservation hardware are all methods being implemented for increased conservation.

In the winter of 2006/2007, the district region received its lowest rainfall in recorded history. As a result of this drought, combined with ongoing drought in the Colorado River basin and unpredictability of future water supply due to global warming, conservation has shifted from a purely temporary measure to a long-term water management strategy. In 2007, the City of Long Beach passed a water conservation ordinance requiring individual reductions and behavioral changes regarding water use. According to the Long Beach Water Department, these measures are not intended to be temporary, but to form the basis for ongoing management of the city’s water resources. Agricultural water conservation options are growing as irrigation techniques improve and as water transfer agreements create new pressures for more efficient water management and the growth of higher value and less water-intensive crops. As a result of these developments, DWR expects agricultural water consumption to decline materially by 2030 throughout the SCAQMD area.

### **Local Water Supply**

Local sources of water account for approximately 25 percent of the total volume consumed annually in the SCAG region, which includes the district within its boundaries. Local sources include surface water runoff, groundwater and water reclamation.

#### **Local Surface Runoff (within each HU Region)**

The infiltration of surface runoff augments groundwater and surface water supplies. However, the regional water demand exceeds the current natural recharge of runoff water. The arid climate, summer drought and increased urbanization contribute to this reduction in natural recharge. Urban and agricultural runoff often contains pollutants that decrease the quality of local water supplies. Runoff captured in storage reservoirs varies widely from year to year depending on the amount of local precipitation. On average precipitation contributes 55,000 acre-feet per year (afy) within the MWD service area (not including San Diego County).<sup>4</sup> Within the desert regions, the amount is considerably less, owing to weather and the absence of surface storage facilities.

#### **Local Groundwater**

Groundwater represents most of the district region’s fresh water supply, making up between 23 and 29 percent of total water use, depending on precipitation levels. In California, ground water typically provides 30 percent of the urban and agricultural water used. This proportion increases to 40 percent in dry years. The hydrologic regions vary in their dependence on groundwater for urban and agricultural uses. The California

---

<sup>4</sup> *Ibid*, p. 3.15-18.

Department of Water Resources estimates that the state has a groundwater overdraft of approximately 1 to 2 maf in average years.

Recent efforts to store recycled water and surplus water in groundwater basins for use during drought periods have proven successful. The Metropolitan Water District of Southern California (MWD) has entered into 19 agreements with various water agencies for groundwater storage, resulting in more than 87,000 af of added supply per year. A number of agencies within the region are also active in the recharge of surface water, including the Orange County Water District, Los Angeles County Department of Water and Power, Foothill Municipal Water District, San Bernardino County Water and Flood Control District, Coachella Valley Water District, the Water Replenishment District of Southern California and the San Gabriel Valley Municipal Water District.

### **Reclaimed/Recycled Water (Regional Wastewater management)**

Water reclamation and recycling involves the secondary, and sometimes tertiary, treatment of polluted groundwater and wastewater effluent. Recycled water is used for three main purposes: ocean outfall, in-stream discharge, or reuse. Recycled water may be reused for many purposes, including landscape irrigation, surface water amenities in public places, including parks, industrial processes, groundwater recharge, and non-potable interior uses such as toilets. The use of recycled water for these various purposes augments the region's local water supplies and reduces reliance on water imports. According to MWD, current recycled water projects, either planned or in operation in the SCAG region, which includes the district region, account for approximately 355,000 af annually. The agency estimates that by 2025, this amount could be as high as 480,000 af, with an additional 130,000 af by 2050.

Recycled water could be a significant source of water for industry, which often needs highly processed, but non-potable water for industrial processes. Recycled water can also play a major role in replenishing saltwater intrusion barriers and other groundwater sources, but there are still significant hurdles to these uses with regards to health regulations, cost, and public acceptance of water recycling.

### **Storage**

Water agencies in the region are also modifying existing reservoirs or creating new reservoirs to accommodate the expected future growth in water demand. MWD has recently completed filling Diamond Valley Lake near Hemet in Riverside County. This reservoir provides approximately 800,000 af of additional storage. In addition to surface storage, MWD is implementing various groundwater storage projects both within the district and in other areas of California. These "conjunctive use" projects store excess water during wet years in underground basins and can be accessed during dry years when surface water supplies are limited.

The SCAG region, which includes the district region, currently has more than 3.5 maf of storage capacity in all of its reservoirs; however, the anticipated increase in the region's population and growing uncertainty regarding water imports make increasing storage

capacity a priority for the region. Increasing storage capacity can be a difficult process, with associated social and environmental impacts.

### **Imported Water**

Imported sources of water (including the Colorado River Aqueduct, the State Water Project's California Aqueduct, and the Los Angeles Aqueduct) currently supply more than 6 maf of water to the SCAG region annually, accounting for nearly three quarters of the total water used in the region.

Since local supplies alone have not been sufficient to serve Southern California's rapidly growing population, imported water supplies have historically been developed to accommodate projected demands. Beginning with the completion of the Los Angeles Aqueduct in 1913, the region has imported water from other parts of the state to supplement local supplies.

The All-American Canal and Coachella Canal were completed in 1940, supplying water to irrigation districts in the Imperial and Coachella Valleys for agricultural operations. The Colorado River Aqueduct completed in 1941 by MWD brings Colorado River water to the urban coastal areas. The California Aqueduct completed in the 1970s delivers water from the Sacramento Delta to MWD for distribution to retail agencies throughout southern California.

### **Colorado River**

The Colorado River is a major source of water for Southern California, and is imported via the Colorado River Aqueduct, owned and operated by MWD.

Under water delivery contracts with the United States for permanent service, California entities have enjoyed legal entitlements to Colorado River water since the early 20<sup>th</sup> century. There have been several compacts, treaties, and negotiations between the seven states that use Colorado River water, beginning with the 1922 Colorado River Compact. California was entitled to 4.4 maf per year, as well as half of any surplus, as defined by the Federal Department of the Interior. Typically the River's surplus has allowed California entities to take an additional 800,000 af annually.

However, with increased urbanization in the Colorado River Basin states and recent limitation agreements between those states, surplus water for California was eliminated; the State will gradually return its original allotment of 4.4 maf. Given these new terms, California water agencies are pursuing various strategies to offset this gradual, but certain loss of future water supply. Examples of these strategies include additional reservoir and storage agreements, new water transfers between agricultural and urban users, and more water conservation and recycling.<sup>5</sup>

---

<sup>5</sup> Southern California Association of Governments, Draft 2008 RTP PEIR, January 2008, p. 3.15-20.

### **State Water Project (SWP)**

The SWP supplies water to Southern California via the California Aqueduct, with delivery points in Los Angeles, San Bernardino, and Riverside counties. SWP was constructed and is managed by DWR, and is the largest state-owned multi-purpose water project in the country. SWP has historically provided 25 to 50 percent of MWD's water, anywhere from 360,000 af to 1.3 maf annually.<sup>6</sup> Southern California's maximum SWP yield is about 2.0 maf per year. SWP provides water to approximately 23 million people and irrigation water for roughly 750,000 acres of agricultural lands annually.

In 2007, a federal judge ordered the pumps that bring water from the Sacramento Bay Delta into Southern California be shut off, to protect an endangered fish species, the Delta smelt. Although pumping later resumed, it did so at only two-thirds of capacity, reducing by one-third the amount of water coming into Southern California through that system. It is unclear when or even if full capacity pumping will resume. The situation in the Bay Delta highlights the uncertainty and vulnerability of the region's dependence on imported water. Although the situation in the Delta will eventually be resolved, it will likely be a matter of decades before a satisfactory new system is in place.

### **Los Angeles Aqueduct**

The Los Angeles Aqueduct, originally built in 1913, carries water 233 miles south from Owens Valley to Los Angeles. The original aqueduct project was extended in 1940 to Mono Basin. The system was later supplemented by a second project, parallel to the first, completed in 1970. These two aqueducts have historically supplied an average of almost 500,000 afy in normal years, and as little as 150,000 afy in drier years.<sup>7</sup> Recent deliveries have been cut almost in half due to the dwindling Sierra snowpack and a court decision restricting the amount of water that can be removed from the Owens Valley and Mono Basin in order to restore their damaged ecosystems.

### **Transfers**

In an effort to diversify water sources and reduce reliance on specific water imports, water agencies have engaged in water transfer agreements. These contractual agreements, made with irrigation districts, reduce water use on agricultural lands either through agricultural conservation or fallowing land. The water 'freed' by these reductions is transferred to a municipal water district, where it may be used or stored in aquifers for future use, a practice called *water banking*. Water banking is also done during wet years, when rainwater is collected and directed toward recharge facilities for future use.

### **Water Suppliers**

Numerous wholesale and retail water suppliers serve the district; the largest of these regional suppliers is MWD. Created by the California State legislature in 1931, MWD

---

<sup>6</sup> Southern California Association of Governments, Draft 2008 RTP PEIR, January 2008, p. 3.15-21.

<sup>7</sup> *Ibid.*

serves the urbanized coastal plain from Ventura to the Mexican border in the west to parts of the rapidly urbanizing counties of San Bernardino and Riverside in the east. It provides water to about 90 percent of the urban population of Southern California. MWD is comprised of 26 member agencies, 12 of which wholesale water to retail agencies and other wholesalers, and 14 of which are individual cities which directly serve water to their residents. A list of major water suppliers operating within the district region is given in Table 3.9-2.

**TABLE 3.9-2**  
**Major Water Suppliers in the District Region**

Water Agency	Land Area (square miles)	Sources of Water Supply
Antelope Valley and East Kern District	2,350	SWP, groundwater, reclaimed water
Bard Irrigation District (and Yuma Project Reservation Division)	23	Colorado River
Castaic Lake Water Agency	125	SWP
Coachella Valley Water District	974	SWP, Colorado River, and local
Crestline Lake Arrowhead	53	SWP
Desert Water Agency	324	SWP and groundwater
Imperial Irrigation District	1,658	Colorado River
Littlerock Creek Irrigation District	16	SWP, groundwater, and surface water
Metropolitan Water District of Southern California	5,200	SWP, Colorado River

### ***Water Quality***

The quality of the district's surface waters, groundwater, and coastal waters are discussed below.

#### **Surface Water**

Surface water resources in the district (as shown in Table 3.9-1) include creeks and rivers, lakes and reservoirs, and the inland Salton Sea. Reservoirs serving flood control and water storage functions exist throughout the region. Because the climate of Southern California is predominantly arid, many of the natural rivers and creeks are intermittent or ephemeral, drying up in the summer or flowing only in reaction to precipitation. For example, annual rainfall amounts vary depending on elevation and proximity to the coast.

Some waterways such as Ballona Creek and the Los Angeles River maintain a perennial flow due to agricultural irrigation and urban landscape watering.

The Colorado River watershed includes seven states on the western slope of the Rocky Mountains, traversing the arid southwest to the Gulf of California in Mexico. The river supplies water to 25 million people in both the U.S. and Mexico. The Salton Sea, the largest inland body of water in California, was formed around 1906 when the Colorado River was accidentally diverted from its natural course. At present, the Sea is fed by agricultural runoff from the Imperial Valley and Mexico. The Salton Sea is also fed by the New River and Alamo River and would dry up entirely without agricultural runoff.

Other major natural surface waters in the district include the Santa Clara River, Los Angeles River, San Gabriel River, Santa Ana River and the San Jacinto River. The Santa Clara River flows through the center of Ventura County and remains in a relatively natural state. Threats to water quality include increasing development in floodplain areas, flood control measures such as channeling, erosion, and loss of habitat.

The Los Angeles River is a highly disturbed system due to the flood control features along much of its length. Due to the high urbanization in the area around the Los Angeles River, runoff from industrial and commercial sources as well as illegal dumping contribute to reduce the channel's water quality. The San Gabriel River is similarly altered with concrete flood control embankments and impacted by urban runoff.

The Santa Ana River drains the San Bernardino Mountains, cuts through the Santa Ana Mountains, and flows onto the Orange County coastal plain. Recent flood control projects along the river have established reinforced embankments for much of the river's path through urbanized Orange County. The Santa Margarita River begins in Riverside County, draining portions of the San Jacinto Mountains and flowing to the ocean through northern San Diego County.

Complete lists of surface water resources within the district region along with the beneficial uses associated with them are contained in each of the five Basin Plans prepared by the Regional Water Quality Control Boards of the region.

### **Non-Point Source Pollution**

Portions of the Los Angeles River in Los Angeles County and the Santa Ana River in Orange County have been lined with concrete for flood control purposes. One of the effects of these projects has been to reduce the natural recharge of groundwater basins. A second has been to make these rivers conveyance systems that concentrate and transfer urban pollutants and waste to the ocean. With regard to the rivers themselves, the State's Water Quality Assessment Report estimated in 1992 that approximately two-thirds of California's water bodies were threatened or impaired by non-point sources of pollution.

Point source pollution refers to contaminants that enter a watershed, usually through a pipe. The location of the end of the pipe is documented and the flow out of that pipe is subject to a discharge permits issued by a Regional Water Quality Control Board. Examples of point source pollution are discharges from sewage treatment plants and

industrial facilities. Because point sources are much easier to regulate than non-point sources, they were the initial focus of the 1972 Clean Water Act. Regulation of point sources since then has dramatically improved the water quality of many rivers and streams throughout the country.

In contrast to point source pollution, non-point source pollution, also known as “pollution runoff,” is diffused. Non-point pollution comes from everywhere in a community and is significantly influenced by land uses. A driveway or the road in front of a house may be a source of pollution if spilled oil, leaves, pet waste or other contaminants leave the site and runoff into a storm drain.

“A recent study in the City of Irvine showed that the use of automated irrigation controllers reduced dry season runoff by 50 percent. Notably, the decrease in runoff did not appear to increase the concentration of pollutants in the runoff. It therefore appears that a reduction in non-point source pollution can be achieved by increasing irrigation efficiency. See [http://www.irwd.com/Conservation/water\\_conservation\\_research.php](http://www.irwd.com/Conservation/water_conservation_research.php))”

Non-point source pollution is now considered one of the major water quality problems in the United States.

### **Runoff Pollutants**

The problem of non-point source pollution is especially acute in urbanized areas where a combination of impermeable surfaces, landscape irrigation, highway runoff and illicit dumping increase the pollutant loads in stormwater. The California State Water Quality Control Board (SWQCB) has identified the following pollutants found in urban runoff as being a particular concern:

- *Sediment.* Excessive sediment loads in streams can interfere with photosynthesis, aquatic life respiration, growth, and reproduction.
- *Nutrients.* Nitrogen and phosphorus can result in eutrophication of receiving waters (excessive or accelerated growth of vegetation or algae), reducing oxygen levels in the water for other species.
- *Bacteria and viruses.* Pathogens introduced to receiving waters from animal excrement in the watershed and by septic systems can limit water contact activities.
- *Oxygen demanding substances.* Substances such as lawn clippings, animal excrement, and litter can reduce dissolved oxygen levels as they decompose.
- *Oil and grease.* Hydrocarbons resulting from automobile use are toxic to some aquatic life.
- *Metals.* Lead, zinc, cadmium, and copper are the heavy metals found most commonly in stormwater. Other metals introduced by the use of automobiles include

chromium, iron, nickel and manganese. These metals can enter waterways through storm drains along with sediment, or as atmospheric deposition.

- *Toxic pollutants.* Pesticides, phenols, and polynuclear aromatic hydrocarbons (PAHs) are toxic organic chemicals found in stormwater.
- *Floatables.* Trash in waterways increases metals and toxic pollutant loads in addition to creating aesthetic impacts.

### **Salinity**

The general quality of groundwater in the district region tends to be degraded as a result of land uses and water management practices. Fertilizers and pesticides typically used on agricultural lands infiltrate and degrade groundwater. Septic systems and leaking underground storage tanks can also impact groundwater. Over-pumping can result in saltwater intrusion from the ocean, further degrading groundwater quality. In addition, wastewater discharges in inland regions can result in salt buildup from fertilizer and dairy waste.

To address the salinity problem, an increasing number of water agencies are working with other water, groundwater and wastewater agencies, state and local government agencies and interested associations on researching and developing salinity management goals and action plans. Strategies currently in use include blending low and high salinity water and the desalination of brackish water.

### **Land Use and Water Quality**

Buildings, roads, sidewalks, parking lots and other impervious surfaces define the urban landscape. But impervious surfaces also alter the natural hydrology and prevent the infiltration of water into the ground. Impervious surfaces change the flow of stormwater over the landscape. In underdeveloped areas, vegetation holds down soil, slows the flow of stormwater over land, and filters out some pollutants by both slowing the flow of the water and trapping some pollutants in the root system. Additionally, some stormwater filters through the soil, replenishing underground aquifers.

As land is converted to other uses such as commercial developments, many of these natural processes are eliminated as vegetation is cleared and soil is paved over. As more impervious surface coverage is added to the landscape, more stormwater flows faster off the land. The greater volume of stormwater increases the possibility of flooding, and the high flow rates of stormwater do not allow for pollutants to settle out, meaning that more pollution gets concentrated in the stormwater runoff.

Research on urban stream protection has found that stream degradation occurs at relatively low levels of imperviousness—in the range of 10 to 20 percent. Wetlands suffer impairment when impervious surface coverage surpasses 10 percent. Fish habitat, spawning and diversity suffer when imperviousness is greater than 10 to 12 percent. Wetland plants and amphibian populations diminish when impervious surfaces are greater than 10 percent. Generally, the higher the percentage of impervious surface, the

greater the degradation in stream water quality. Based on this research, streams can be considered stressed in watersheds when the impervious coverage exceeds 10 to 15 percent.

The link between impervious surfaces and degraded water quality points to the need for careful comparisons between dispersed and compact development strategies. On a regional or watershed level, greater overall water quality protection is achieved through more concentrated or clustered development. Concentrated development protects the watershed by leaving a larger percentage of it in its natural condition.

### **Groundwater**

The general quality of groundwater in the district region is degraded as a result of land uses and water management practices in the Basins. Fertilizers and pesticides typically used on agricultural lands infiltrate and degrade groundwater. Septic systems and leaking underground storage tanks can also impact groundwater quality. Urban runoff is also a significant source of pollutants. Pollutants in urban runoff include urban debris, suspended solids, bacteria, viruses, heavy metals, pesticides, petroleum hydrocarbons, and other organic compounds. In addition to these impairments, excessive groundwater pumping allows saltwater intrusion from the ocean to further degrade groundwater quality. Also of note, the impacts on groundwater caused by the natural infiltration of surface waters decrease with a growth in urban development and the creation of impervious surfaces.

### **Coastal Waters**

Coastal waters in the region include bays, harbors, estuaries, beaches, and open ocean. Deep draft commercial harbors include the Los Angeles/Long Beach Harbor complex. Shallower small craft harbors are prevalent along the coast line including Dana Point Harbor, Newport Beach Harbor, Huntington Harbor, and Marina Del Rey Harbor. Several small estuaries and saltwater marshes exist along the coast and are generally considered sensitive ecological areas. These include Newport Bay, Bolsa Chica Wetlands, Ballona Wetlands, Malibu Lagoon, and Mugu Lagoon. These coastal waters are impacted by previously described wastewater discharges, non-point source runoff, dredging, bilge water discharges, illicit discharges, and spills.

### **Wastewater**

Much of the urbanized areas of Los Angeles and Orange Counties are serviced by three large publicly owned treatment works (POTWs): the City of Los Angeles Bureau of Sanitation Hyperion Facility, the Joint Outfall System of the Los Angeles County Sanitation Districts, and the Orange County Sanitation District treatment plant. These three facilities handle more than 70 percent of the wastewater generated in the entire SCAG region, which encompasses the district region.

In addition to these large facilities, medium sized POTWs (greater than 10 mgd) and small treatment plants (less than 10 mgd) service smaller communities in southern Orange County and in the inland regions. Many of these treatment systems recycle their

effluent through local landscape irrigation and groundwater recharge projects. Other treatment systems discharge to local creeks on a seasonal basis, effectively matching the natural conditions of ephemeral and intermittent stream habitats.

Many rural communities utilize individually owned and operated septic tanks rather than centralized treatment plants. The Regional Water Quality Control Board (RWQCB) generally delegates oversight of septic systems to local authorities. However, Water Discharge Requirements (WDRs) are generally required for multiple-dwelling units and in areas where groundwater is used for drinking water. These WDRs are only issued to properties greater than one acre and are not required for properties greater than five acres in size.

## **REGULATORY SETTING**

### **Federal Agencies and Regulations**

#### **U.S. Environmental Protection Agency**

The U.S. Environmental Protection Agency (USEPA) is the federal agency responsible for water quality management and administration of the Clean Water Act (CWA). The USEPA has delegated most of the administration of the CWA in California to the SWRCB. Much of the responsibility for implementation of the SWRCB's policies is further delegated to the nine Regional Water Quality Control Boards (RWQCB), as described below. EPA conducts groundwater protection and contaminated site remediation programs, such as installation of groundwater cleanup systems in the San Gabriel Valley.

The SCAQMD district encompasses portions of five separate RWQCB's: Los Angeles Region #4, Lahontan Region #6 (a very small portion of the southern basin only), Colorado River Region #7 and Santa Ana Region #8, and the San Diego Region #9 (a very small portion of southeastern Orange County).

#### **Clean Water Act**

The Clean Water Act (CWA) (33 U.S.C Section 1251 et seq), formerly the Federal Water Pollution Control Act of 1972, was enacted with the intent of restoring and maintaining the chemical, physical, and biological integrity of the water of the United States. The CWA requires states to set standards to protect, maintain, and restore water quality through the regulation of point source pollution and certain non-point source discharges to waters of the U.S. Those discharges are regulated by the National Pollutant Discharge Elimination System (NPDES) permit process (CWA Section 402). In California, NPDES permitting authority is delegated to, and administered by, the nine RWQCBs.

#### **Safe Drinking Water Act**

The Safe Drinking Water Act (SDWA) ensures the quality of Americans' drinking water. The law requires actions to protect drinking water and its sources—rivers, lakes,

reservoirs, springs and groundwater wells—and applies to public water systems serving 25 or more people. It authorizes the EPA to set national health-based standards for drinking water to protect against both naturally occurring and man-made contaminants. In addition, it oversees the states, municipalities and water suppliers that implement the standards.

EPA standards are developed as a Maximum Contaminant Level (MCL) for each chemical or microbe. The MCL is the concentration that is not anticipated to produce adverse health effects after a lifetime of exposure, based upon toxicity data and risk assessment principles. EPA's goal in setting MCLs is to assure that even small violations for a period of time do not pose significant risk to the public's health over the long run. National Primary Drinking Water Regulations (NPDWRs or primary standards) are legally enforceable standards that limit the levels of contaminants in drinking water supplied by public water systems.

Secondary standards are non-enforceable guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. EPA recommends secondary standards to water systems but does not require systems to comply. However, states may choose to adopt them as enforceable standards.<sup>8</sup>

### **U.S. Army Corps of Engineers**

Section 404 of the CWA obligates the U.S. Army Corps of Engineers (USACE) to issue permits for the movement of dredge and fill material into and from “waters of the United States.” Additionally, Section 404 requires permits for activities affecting hydrologically important areas. For example, alterations of wetlands, rivers, or ephemeral creek beds resulting from construction activities require Section 404 permits.

### **Federal Emergency Management Agency**

The U.S. Congress passed the National Flood Insurance Act in 1968 and the Flood Disaster Protection Act in 1973 in order to restrict certain types of development on floodplains and provide for a national flood insurance program. The purpose of these programs is to reduce the need for large publicly funded flood control structures and disaster relief.

The Federal Emergency Management Agency (FEMA) administers the National Flood Insurance Program and classifies flood hazard zones as follows:

- **Zone A**. Areas of 100-year flood. Base flood elevations and flood hazard factors are not determined (see Figure 3.9-3).
- **Zone B**. Areas between the limits of the 100-year flood and 500-year flood; or certain areas subject to the 100-year flooding with average depth of less than one

---

<sup>8</sup> Ibid, p. 3.15-31.

foot; or where the contributing drainage area is less than one square mile; or areas protected by levees from the base flood (see Figure 3.9-3).

- Zone C. Areas of minimal flooding not requiring flood insurance.

### **U.S. Bureau of Reclamation**

The U.S. Bureau of Reclamation (USBR) operates the Colorado River project, an extensive network of dams, canals and related facilities. USBR serves as Watermaster overseeing contentious water rights issues, and runs drought protection programs.

### **State Agencies and Regulations**

#### **California State Water Resources Control Board**

As described above, the USEPA has delegated most of the administration of the CWA in California to the State Water Resources Control Board (SWRCB). In turn, much of the responsibility for implementation of the SWRCB's policies is delegated to the nine RWQCBs. The nine RWQCBs develop and enforce water quality objectives and implementation plans.

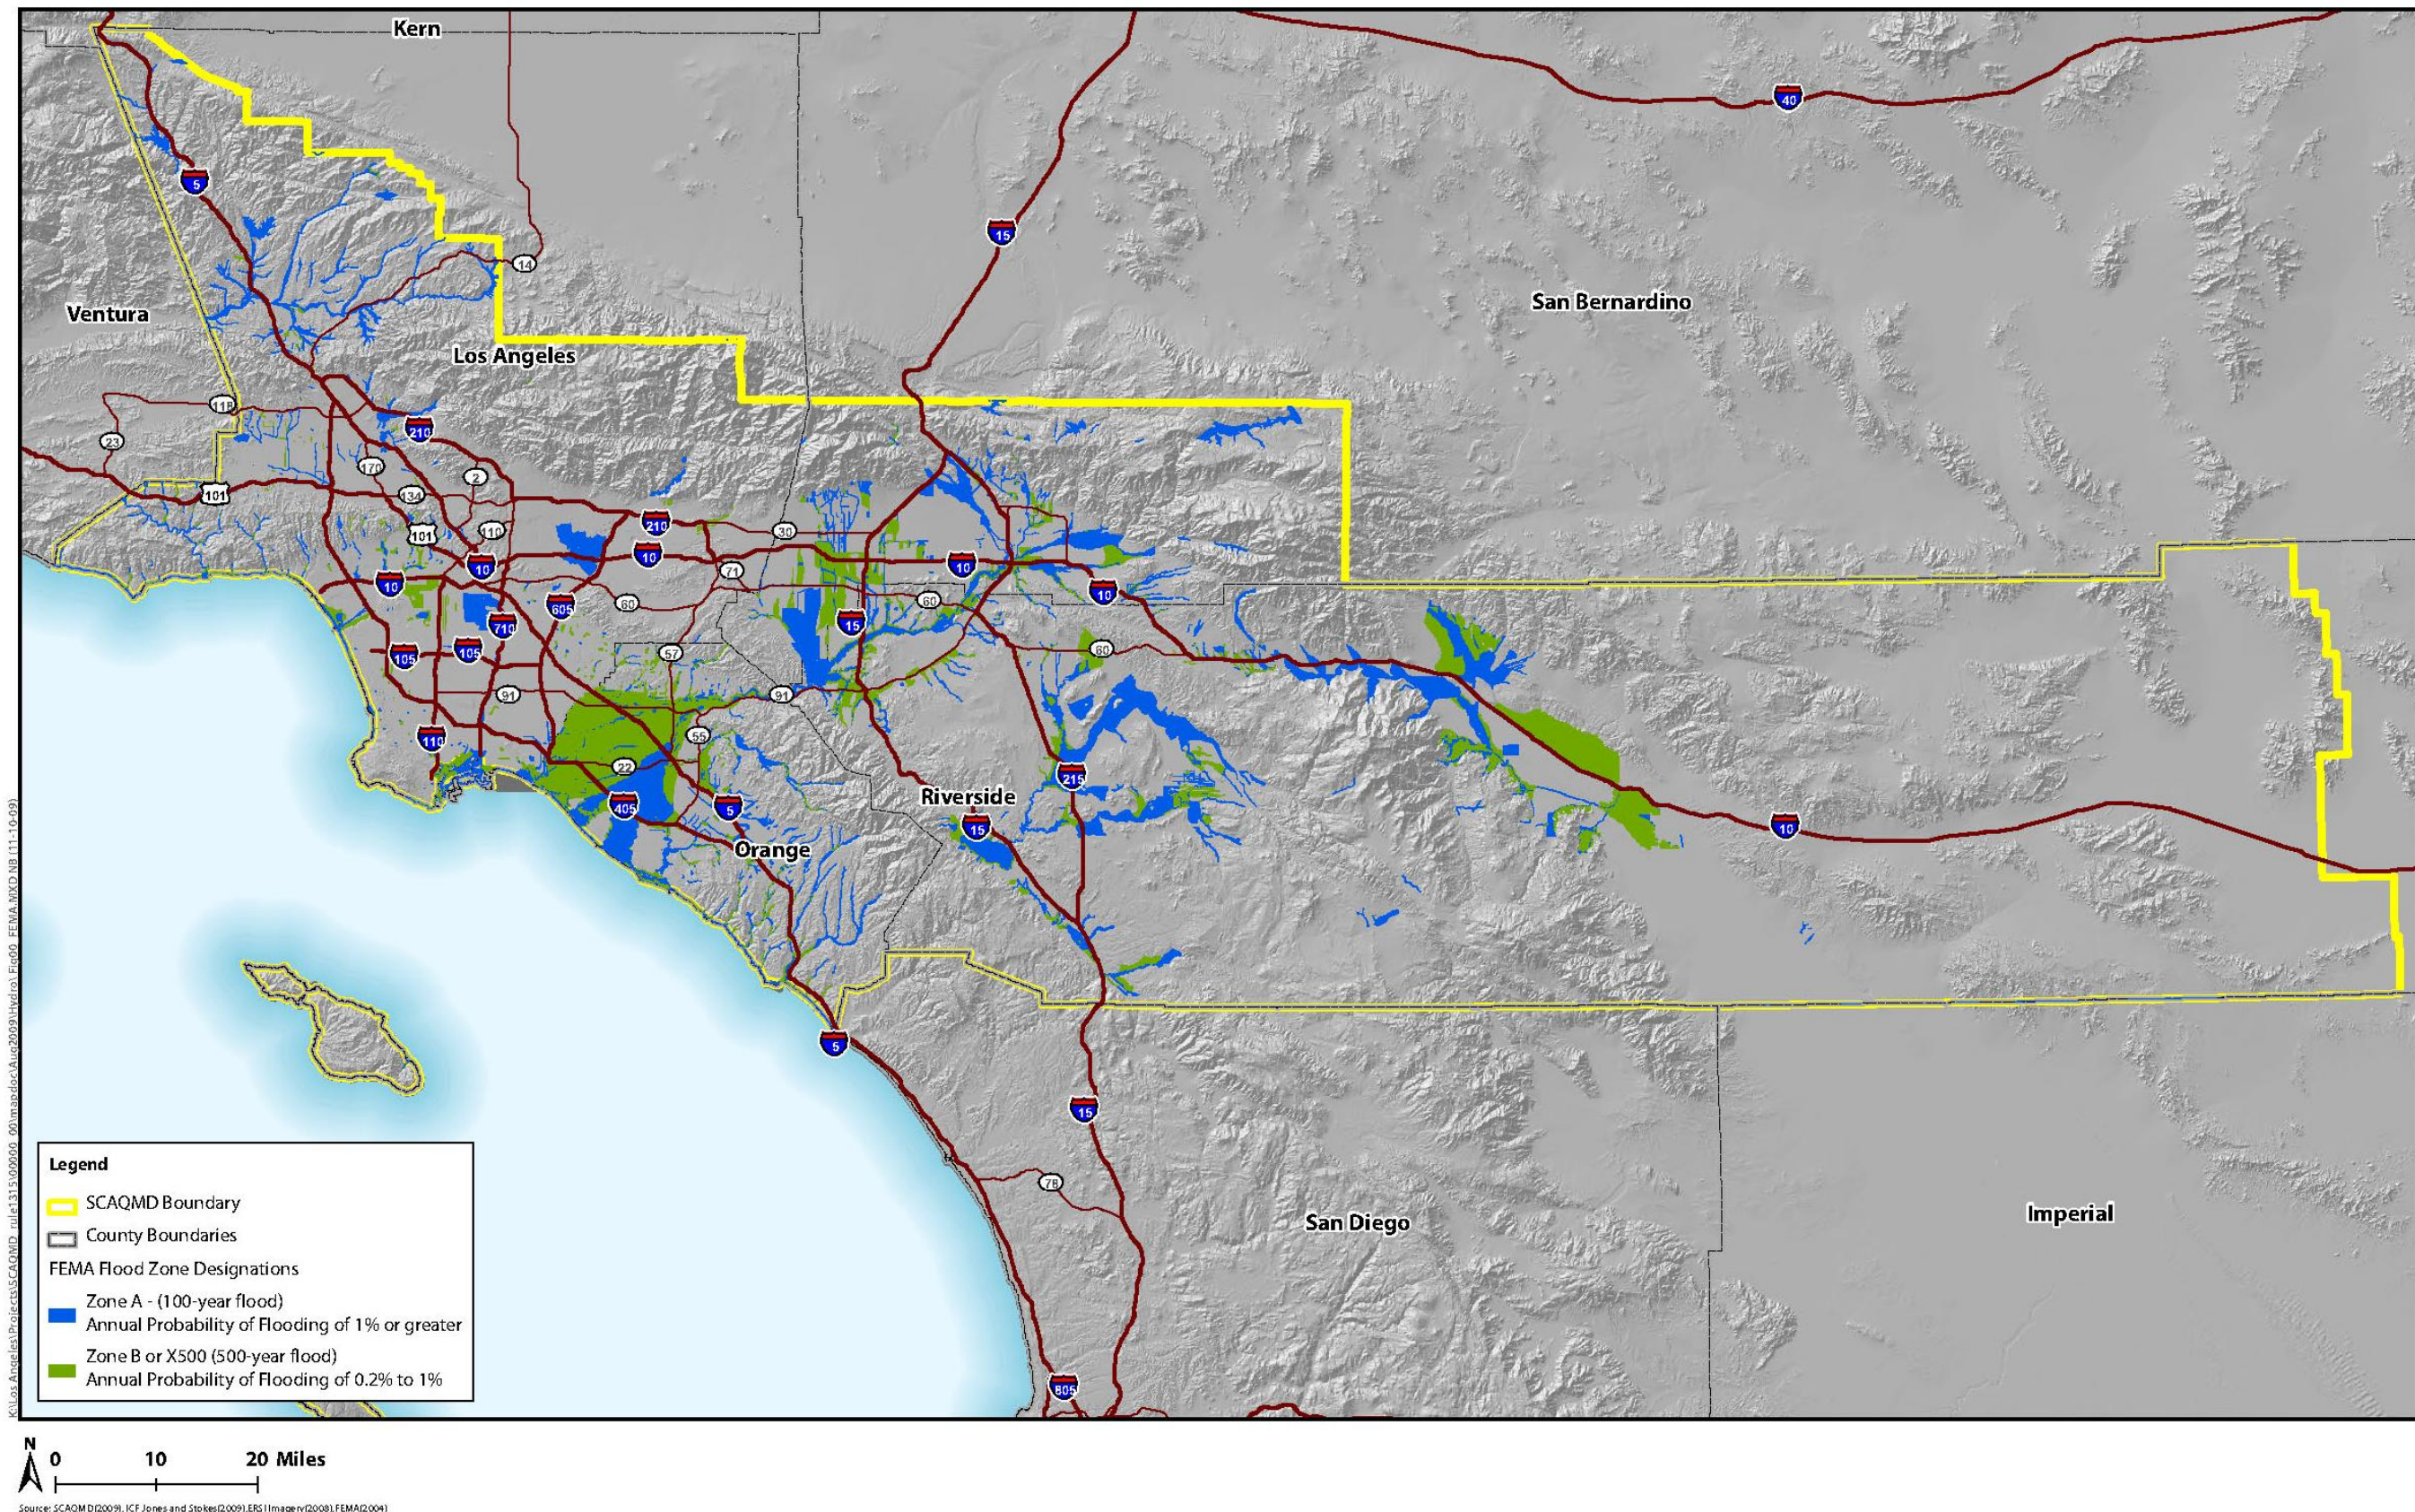

Section 303(d) of the CWA requires the SWRCB to list impaired water bodies in the State and determine total maximum daily loads (TMDLs) of pollutants or other stressors that are contributing excessively to these impaired waters. SWRCB is also responsible for granting water rights permits, approving water right transfers, investigating violations and may reconsider or amend water rights.

Five RWQCBs have jurisdiction within the district region, including the following:

- Los Angeles
- Lahontan
- Colorado River Basin
- Santa Ana
- San Diego

The Los Angeles, Lahontan and Colorado River Basin RWQCBs also have jurisdiction in counties outside the district region. The San Diego RWQCB has jurisdiction in portions of Orange County and Riverside County.

The federal CWA directs states to review water quality standards every three years and, as appropriate, modify and adopt new standards. CWA also regulates wastewater operation through state boards. CWA authorizes the EPA to administer requirements primarily to deal with the quality of effluent which may be discharged from treatment facilities, the recycling of residual solids generated in the process, the reuse of reclaimed water for irrigation and industrial uses to conserve potable water, and the nature of waste material (particularly industrial) discharged into the collection system.

**Figure 3.9-3**  
**FEMA Flood Basins within the South Coast Air Quality Management District**

### **Department of Water Resources**

The Department of Water Resources (DWR) is responsible for the planning, construction and operation of State Water Project (SWP) facilities, including the California Aqueduct, and sets conditions on use of SWP facilities. In addition, DWR is responsible for statewide water planning, evaluating urban water management plans, overseeing dam safety and flood control, and transfer of certain water rights permits (e.g., pre-1914).

### **California Department of Public Health**

The California Department of Public Health (DPH) implements the SDWA. In addition, it oversees the operational permitting and regulatory oversight of public water systems. DPH requires public water systems to perform routine monitoring for regulated contaminants that may be present in their drinking water supply. To meet water quality standards and comply with regulations, a water system with a contaminant exceeding an MCL must notify the public and remove the source from service or initiate a process and schedule to install treatment for removing the contaminant. Health violations occur when the contaminant amount exceeds the safety standard (MCL) or when water is not treated properly. In California, compliance is usually determined at the wellhead or the surface water intake. Monitoring violations involve failure to conduct or to report in a timely fashion the results of required monitoring.

In addition, DPH conducts water source assessments, oversees water recycling projects, permits water treatment devices, certifies water system employees, promotes water system security, and administers grants under the State Revolving Fund and State bonds for water system improvements.

### **California Department of Toxic Substances Control**

The California Department of Toxic Substances Control (DTSC) is responsible for oversight of hazardous substances and remediation of contaminated sites, including in some cases water sources.

### **California Department of Fish and Game**

The California Department of Fish and Game (CDFG) has jurisdiction over conservation and protection of fish, wildlife, plants and habitat. CDFG determines stream flow requirements in certain streams, acts as permitting agency for streambed alterations, presents evidence at water rights hearings on the needs of fish and wildlife, and enforces the California Endangered Species Act.

### **Porter Cologne Water Quality Control Act**

The Porter Cologne Water Quality Control Act of 1967 (Water Code Section 13000 et seq.), requires the SWRCB and the nine RWQCBs to adopt water quality criteria to protect State waters. These criteria include the identification of beneficial uses, narrative to the applicable and numerical water quality standards, and implementation procedures.

The Porter-Cologne Water Quality Control Act authorizes the state boards to adopt, review and revise policies for all waters of the state (including both surface and ground waters) and directs the regional boards to develop Basin Plans. The act also authorizes state boards to adopt Water Quality Control Plans. In the event of inconsistencies among state and regional board plans, the more stringent provisions apply.

### Regional and Local Agencies and Regulations

Many water agencies within the district have master plans and conservation ordinances, which could apply to future projects. Table 3.9-3 presents a list of the major water agencies and the jurisdictions they serve within the district.

**TABLE 3.9-3**  
**Major Water Agencies and Service Areas in the District Region**

Water Agency	Service Area
Central Basin Municipal Water District	Cities of Bell Gardens, Downey, Montebello, Norwalk, Vernon, La Habra Heights, La Mirada, Pico Rivera, Santa Fe Springs, Whittier, Bell, Commerce, Huntington Park, Maywood, Walnut Park, Cudahy, Monterey Park, Lynbrook, South Gate, Compton, Carson, Artesia, Bellflower, Cerritos, Hawaiian Gardens, Lakewood, Paramount, Signal Hill, and unincorporated County of Los Angeles areas of West Whittier-Los Nietos, South Whittier, and East Los Angeles
Desert Water Agency	Cities of Cathedral City, Desert Hot Springs, and Palm Springs
Eastern Municipal Water District	Cities of Hemet, Moreno Valley, Murrieta, Perris, San Jacinto, Temecula
East Valley Water District	Cities of San Bernardino and Highland and unincorporated areas of East San Bernardino County
Foothill Municipal Water District	City of La Canada-Flintridge and unincorporated County of Los Angeles areas of Altadena and La Crescenta
Inland Empire Utilities Agency	Cities of Chino, Chino Hills, Fontana, Montclair, Ontario, Rancho Cucamonga, and Upland
Metropolitan Water District of Southern California	Cities of Anaheim, Beverly Hills, Burbank, Compton, Fullerton, Glendale, Long Beach, Los Angeles, Pasadena, San Fernando, San Marino, Santa Ana, Santa Monica, and Torrance

**TABLE 3.9-3 (Concluded)**  
**Major Water Agencies and Service Areas in the District Region**

Water Agency	Service Area
Municipal Water District of Orange County	Water Districts of East Orange County, El Toro, Emerald Bay, Irvine Ranch, Laguna Beach, Mesa Consolidated, Moulton Niguel, Orange County, Santa Margarita, Serrano, South Coast, Trabuco Canyon, Yorba Linda and the Cities of Brea, Buena Park, Fountain Valley, Garden Grove, Huntington Beach, La Habra, Orange, Newport Beach, San Clemente, San Juan Capistrano, Seal Beach, Tustin, and Westminster
San Bernardino Valley Municipal Water District	Cities and communities of San Bernardino, Colton, Loma Linda, Redlands, Rialto, Bloomington, Highland, East Highland, Mentone, Grand Terrace, and Yucaipa
Three Valleys Municipal Water District	Cities of Azusa, City of Industry, Covina, Claremont, Diamond Bar, Hacienda Heights, Glendora, La Puente, La Verne, Pomona, Rowland Heights, Walnut, and West Covina
Upper San Gabriel Valley Municipal Water District	Cities of Alhambra, Arcadia, Azusa, Monrovia, and South Pasadena
Western Municipal Water District	Cities of Corona, Norco, Riverside, and unincorporated Riverside County areas of El Sobrante, Eagle Valley, Temescal Creek, Woodcrest, Lake Mathews, and March Air Reserve Base
West Basin Municipal Water District	Cities of Carson, Culver City, El Segundo, Gardena, Hawthorne, Hermosa Beach, Inglewood, Lawndale, Lomita, Malibu, Manhattan Beach, Palos Verdes Estates, Rancho Palos Verdes, Redondo Beach, Rolling Hills, Rolling Hills Estates, and West Hollywood, and unincorporated Los Angeles County areas of Westmont, West Athens, Topanga Canyon, Del Aire, El Camino Village, Howard, Ross-Sexton, San Pedro, View Park, Windsor Hills, Lennox, Ladera Heights, and Alondra Park

Many of these counties and cities have elements within their general plans that address water use, water conservation, and other water-related topics. In general, each of the water agencies identified above has established goals and objectives, including, but not limited to the following:

- Ensure water reliability for the communities they serve;
- Deliver water that meets all required standards and to furnish water to their customers in a planned and timely manner that anticipates future needs; and

- Supplement and enhance local water supplies to meet customers' needs for high quality water in a cost-effective and environmentally sound manner.

## **SUBCHAPTER 3.10**

---

### **EXISTING SETTING - LAND USE AND PLANNING**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## **INTRODUCTION**

The environmental setting describes the land uses that may be affected by the proposed project. The environmental setting addresses residential, commercial, industrial, and institutional land uses across the district.

## **ENVIRONMENTAL SETTING**

The district is comprised of the non-desert portion of Los Angeles County, all of Orange County, a portion of southwestern San Bernardino County, and the Salton Sea Air Basin and Mojave Desert Air Basin portions of Riverside County amounting to a jurisdiction of approximately 10,473 square miles and a population of over 16 million. Bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east; and San Diego and Imperial Counties to the south, the district contains a vast network of cities and towns, ranging from small rural developments of a few thousand residents to bustling metropolitan centers of several million residents, interspersed between large expanses of open space and undeveloped land.

Urban development in the district tends to cluster around a well-defined network of state and federal highways which connect the regional populations of the district with other regions in California and across the nation. While most urban development has historically been based in the coastal regions of Los Angeles County and Orange County, there has been considerable urban growth eastward to the mountain and valley regions of Riverside County and San Bernardino County. Downtown Los Angeles is the largest urbanized center within the district. Other urbanized areas in Los Angeles County include Long Beach, Burbank, Glendale, Pasadena and Pomona. Office-based commercial centers have emerged in Woodland Hills, Universal City, Westwood, around Los Angeles International Airport, and Century City. In the other three counties within the district, urban centers exist in the cities of Riverside, San Bernardino, Santa Ana, Anaheim, and Irvine. Much of the development in Riverside and San Bernardino Counties has taken place within unincorporated county land that both counties possess. Riverside County, in particular, has developed the Riverside County Integrated Project, which seeks to improve the quality of life for its citizens through a complimentary array of development projects and programs aimed at creating a balanced and sustainable environment. As a result of Riverside County's efforts, the valley and mountain regions of the County have quickly developed over the past 20 years from small rural settlements to relatively large suburban commuter cities.

Within the older cities and communities in the district, development has taken more of a revitalization outlook. Without a vast surplus of open space, developers in Los Angeles County and Orange County have turned to different types of housing and commercial developments, including townhouses, condominiums, apartments, and mixed-use developments that combine commercial and office uses. Older buildings are often renovated or converted to accommodate new residential or commercial uses, and land use patterns in major developed cities have generally shifted from the traditional single-use

pattern to more of a mixed use approach, where residential and commercial land uses are often found adjacent to one another, or within the same building.

Land uses across the district can typically be categorized into six general categories -- residential, commercial, industrial, institutional, open space and agricultural. Agricultural is discussed separately in Section 3.2.

## **Los Angeles County**

### **Residential**

Los Angeles County is the most populated and economically robust region in the district. As a result, high demand for housing is a consistent concern for the County. Residential land use patterns in the County, as well as the district, are dependent upon geography. Major concentrations of residential uses are found in the Los Angeles Basin, which is bounded on the north by the transverse mountain ranges of the Santa Monica Mountains and the San Gabriel Mountains. From the foothills of the transverse mountain ranges, large urban and sub-urban cities blanket the Los Angeles Basin southward to the Santa Ana Mountains and the Orange County Coast, and eastward to the San Bernardino Mountains. The County contains most of the high and medium density housing in the district, which is concentrated primarily in urban and sub-urban population centers, such as Downtown Los Angeles, East Los Angeles, Glendale, Burbank, and Long Beach. Surrounding these population centers are lower density suburbs located on the eastern and southern reaches of Los Angeles County and extending into Orange County and San Bernardino County. With the Los Angeles Basin almost completely built-out, the County is now in the process of developing residential land uses, particularly single-family residences, in the Antelope and Santa Clarita Valleys to the north<sup>1</sup>.

### **Commercial**

In the same way that residential land use patterns are related to geography, commercial land use patterns tend to form around transportation facilities, such as highways, rail lines, and airports, particularly around major freeway intersections. Downtown Los Angeles, bounded in all directions by four different freeways, is the largest commercial and business center in the district, providing jobs to residents across the district. Other major commercial office centers in the County include the area surrounding the intersection of Interstate 5 (I-5) and Interstate 405 (I-405), known as the “El Toro Y”, and the Westwood area near the University of California, Los Angeles.<sup>2</sup> The County also projects tremendous employment growth in northern Los Angeles County as housing and transportation development continues northward.

---

<sup>1</sup> Los Angeles County Department of Regional Planning, Los Angeles County Draft General Plan, Land Use Element, 1980.

<sup>2</sup> SCAG 2008. Draft RTP Programmatic EIR. Section 3.8, Land Use, 2008.

### **Industrial**

The largest concentration of industrial land uses and activities in the district is provided by the adjacent Ports of Los Angeles and Long Beach. Combined, the two ports handle approximately 40 percent of all imports to the United States and handle approximately 24 percent of all exports<sup>3</sup>. From the ports, industrial activity can be traced along cargo rail lines and major interstate highways, such as Interstate 110 and Interstate 710, north to downtown Los Angeles and east to the Cities of Industry and Commerce. Significant air cargo and associated industrial land uses also are located around Los Angeles International Airport. Oil extraction and refining industries are also found in northern Los Angeles County near the City of Santa Clarita and in southern Los Angeles County surrounding the City of Long Beach.

### **Institutional**

Institutional land uses, which include large government and private operations, such as military bases, airports, and universities, encompass a considerable footprint in the district. In the Antelope Valley, a large portion of land is dedicated to airport uses at Palmdale Airport, while Los Angeles International Airport (LAX) is the largest airport land use. Bob Hope Airport and Long Beach Airport are the other commercial airports in Los Angeles County. In addition, the Los Angeles Air Force Base, located just south of LAX is the major military land use in the County. University and college campuses are located in every county of the district, the largest of which are part of the University of California system. In Los Angeles County, the University of California, Los Angeles (UCLA), California Polytechnic University at Pomona and the University of Southern California are some of the largest universities. There are also numerous California State Universities (Northridge and Los Angeles), as well as community colleges located throughout the County.

### **Open Space**

Over half of the total geography of Los Angeles County is comprised of open space and rural land. Most rural land is located in the Palmdale – Lancaster desert region, which is just northeast of the district’s boundaries. Most of the open space in the County is composed of the Angeles National Forest, which covers the entire northern region of the district. This land is administered by the National Forest Service and provides mainly outdoor recreation and wilderness conservation functions. Other major open space areas can be found in the Santa Monica Mountains and the Whittier Narrows located in the Puente Hills.

### **Orange County**

The Orange County General Plan states as its first policy that urban land uses within the County must be planned with a balanced mix of residential, commercial, industrial and

---

<sup>3</sup> *Ibid.*

public land uses. Orange County comprises 34 cities and has a population of 2.94 million residents.<sup>4</sup>

### **Residential**

In Orange County, residential development follows the coastline and is limited from inland expansion by the Santa Ana Mountains and the Cleveland National Forest. The major population centers in northern Orange County are the Cities of Huntington Beach, Garden Grove, and Fullerton, which tend to be extensions of housing and commercial development from southern Los Angeles County, catering to a large commuter population. From these border cities, high and medium density housing development continues south through the major commercial cities of Anaheim, Santa Ana, and Orange. To the south of these cities are the Cities of Costa Mesa, Newport Beach, Irvine, Lake Forest, and Laguna Niguel, which are less densely populated with primarily single-family medium to low density housing developments.<sup>5</sup> As such, residential land uses in the County can be described as following a similar pattern to that of Los Angeles County, where the major urban and sub-urban population centers align themselves with transportation resources, particularly Interstate 5, and natural features, such as the “South Coast” and the Santa Ana Mountains.

### **Commercial**

Commercial land use in the County is divided into two types of designations; Community Commercial and Regional Commercial land uses. Community commercial land uses include general commercial facilities providing convenience goods and retail trade to individual communities of 20,000 persons.<sup>6</sup> Each city has its own community commercial developments, mainly located along major arterial highways such as Interstate 5 (I-5), Interstate 405 (I-405), State Route 22 (SR-22), State Route 55 (SR-55), and Beach Boulevard (SR-39). Regional commercial land uses are of a higher intensity and serve a larger regional population usually in the form of malls, such as the South Coast Plaza in Costa Mesa and commercial office buildings. Orange County’s commercial office activity is centered around the intersection of I-5, SR-22, and State Route 57 (SR-57) known as the “Orange Crush,” the area surrounding John Wayne Airport, and the area surrounding the University of California, at Irvine (UCI) known as the Irvine Spectrum.

### **Industrial**

Relative to the district, Orange County has few industrial land uses. In fact, the County’s General Plan does not distinguish industrial land uses from other employment providing land uses.<sup>7</sup> Fifty years ago, Orange County was primarily agricultural and the major industries were based in supporting the rich farming resources of the County. Today, much of Orange County’s industrial land uses are located along the coast and focused on

---

<sup>4</sup> County of Orange Resources and Development Management Department, Orange County General Plan, 2005.

<sup>5</sup> SCAG, Draft RTP Programmatic EIR, 2008.

<sup>6</sup> County of Orange Resources and Development Management Department, Orange County General Plan, 2005.

<sup>7</sup> *Ibid.*

oil extraction and refining, while most income in the County is provided by technical, aerospace, and information industries which are typically higher-paid white collar industries set in commercial office areas.

### **Institutional**

The major military land uses in the County are the Seal Beach Naval Weapons Station and Los Alamitos Reserve Air Station. In addition, institutional land uses also include universities, such as UCI and California State University at Fullerton, John Wayne Airport, and three active regional landfills.

### **Open Space**

The unincorporated territories of the County, consisting of approximately 321 square miles, are geographically diverse and spread throughout the County. The largest portion of unincorporated territory is mostly open space found in southeastern Orange County and includes the Cleveland National Forest, a number of planned communities, such as Coto de Caza, Las Flores, and Ladera Ranch, as well as large portions of undeveloped territory south of the Ortega Highway.<sup>8</sup>

## **Riverside County**

### **Residential**

In Riverside County, residential land uses are mainly located in the western valley portion of the county and makes up approximately 288 square miles of County land, of which 57 percent is located in unincorporated cities.<sup>9</sup> Medium to high density residential developments can be found in northwestern Riverside County mainly in the two major Cities of Riverside and Corona. Farther inland, beginning in the Coachella Valley, the County is comprised almost entirely of low density or rural housing. However, as circulation patterns and transportation resources connecting Riverside County to Los Angeles County and Orange County, medium density housing for an increasingly commuter based population will be in higher demand.<sup>10</sup>

### **Commercial**

Commercial land uses account for approximately 15,675 acres of county land, and commercial development is generally less vigorous and on a smaller scale than in Los Angeles County or Orange County.<sup>11</sup> Commercial office developments would typically be found in the downtown areas of major cities, such as the City of Riverside. Other commercial developments in the County are typically large regional retail and convenience shopping centers typically located in major cities or along major highways such as Interstate 215 (I-215) and Interstate 10 (I-10).

<sup>11</sup> County of Riverside, Riverside General Plan EIR, 2009.

### **Industrial**

A total of over 24,000 acres of the County are devoted to industrial uses, which may include heavy industry, warehousing, and mineral extraction. With the exception of land devoted to mineral extraction (89 percent of which is within unincorporated territories), the majority of industrial land is located within the cities of Riverside County. The major industries within the County are agricultural and mineral extraction industries, most of which are located in eastern Riverside County in the Coachella Valley and Salton Sea Basin. Recently, manufacturing industries, distribution centers, and warehouses have established businesses in Riverside County making it a major distribution center for goods in the region, as well as the state. Riverside County also houses a major wind energy generation site in the San Gorgonio Pass and the County should be poised for further development of wind, solar, and other green energies in the eastern portion of the County.

### **Institutional**

Approximately 106 square miles of land are devoted to various public facilities (utilities, schools, government offices, police and fire facilities, correctional facilities, military installations, museums, convention centers, libraries, theater facilities, rehabilitation facilities, short-and long-term custodial facilities, cemeteries, etc.) through the County. Major military uses include the Naval Warfare Assessment Station in Corona and the Chocolate Mountains Aerial Gunnery Range. Other major institutional land uses are Palm Springs International Airport, March Inland Port, and the University of California at Riverside.

### **Open Space**

A vast amount of land (1,313,073 acres or 28 percent of the County total) consists of open space use and provides for recreation, agriculture, scientific opportunity, and wild land preservation. The majority of open space in the County is located in eastern portion of the county in the Coachella Valley Air Basin and the Mojave Desert Air Basin, which house mostly agricultural and mineral extraction operations usually administered by the Bureau of Land Management and the California Department of Conservation. The largest major open space use in the County is the Joshua Tree National Park, which is administered by the National Parks Service and provides a variety of recreation and wild land preservation functions. Other major open space uses include the Coachella Valley National Wildlife Refuge, the southern reaches of the San Bernardino National Forest, and numerous golf courses located throughout the Coachella Valley and southern Riverside County.

## **San Bernardino County**

### **Residential**

Similar to Riverside County, residential land use in San Bernardino County is mainly concentrated in the western valley and high-desert region; however, the unincorporated areas of the desert and mountain regions are populated with dispersed low-density rural

residences. The portion of San Bernardino County located within the district, also known as the Valley Region, is perhaps the most densely populated portion of the County as the two largest cities in the County, San Bernardino and Ontario, are both located in this region. Almost half of the 51,766 acres of unincorporated County land in the Valley Region is existing single and multifamily residential uses, occupying 24,236 acres.<sup>12</sup> Most of the residential uses in the Valley Region are medium to low density uses mostly located in the major cities of the region.

### **Commercial**

Commercial uses occupy almost 2,155 acres of the Valley Region.<sup>13</sup> The Valley Region can be characterized as the center for Commerce in the County while the Desert Region assumes the role of industrial leader. Like other regions in the district, commercial land uses in San Bernardino County portion of the district tend to be retail and convenience shopping uses with some commercial office buildings located in downtown areas. Commercial uses follow similar land use patterns, usually located along major transportation corridors such as Interstate 15 (I-15), I-215, and State Route 60 (SR-60).

### **Industrial**

The Valley Region has nearly 5,155 acres of industrial uses.<sup>14</sup> While most of San Bernardino County is geared toward agricultural and mineral extraction industries, the Valley Region is geared toward supporting the Los Angeles County and Orange County economies. Like Riverside County, western San Bernardino County has become a major distribution point for the region with many manufacturing and warehouse facilities being built throughout the County. Adding to the goods coming by highway and rail through San Bernardino County are goods coming to the county by air through several airports that cater to air cargo, primarily Ontario International Airport.

### **Institutional**

Institutional land uses in the Valley Region account for 2,875 acres of the region and are limited when compared to the rest of the County, which houses numerous military facilities in its Desert Region.<sup>15</sup> Accordingly, the Valley Region does include the San Bernardino International Airport and the Ontario International Airport, as well as California State University at San Bernardino.

### **Open Space**

While San Bernardino County has the largest amount of open space and mineral resource conservation areas, the Valley Region contains very few of these land uses. The single major open space land use in the San Bernardino County portion of the district is the San Bernardino National Forest, which forms the northern and eastern boundaries of the Valley Region.

<sup>12</sup> County of San Bernardino, San Bernardino County General Plan, Final EIR, 2007.

<sup>13</sup> *Ibid.*

<sup>14</sup> *Ibid.*

<sup>15</sup> *Ibid.*

## REGULATORY SETTING

### Federal Agencies

#### **United States Bureau of Land Management (BLM)**

The BLM manages much of the undeveloped or unused land in the region, primarily in the eastern portion of the region. The California Desert Conservation Area Plan is used to manage BLM controlled areas. The BLM also implements biological resource management policies through its designation of Areas of Critical Environmental Concern.

#### **National Park Service (NPS)**

The NPS manages national parks and wilderness areas. One national park and one wilderness area are located in the district: Joshua Tree National Park and the Santa Monica Mountains National Recreation Area.

#### **United States Fish and Wildlife Service (USFWS)**

The USFWS administers the Federal Endangered Species Act (FESA) and designates critical habitat for endangered species. The USFWS manages the National Wildlife Refuges in the district such as the Seal Beach National Wildlife Refuge and the Coachella Valley National Wildlife Refuge.

#### **United States Forest Service (USFS)**

The USFS manages approximately 2.3 million acres of national forests in the district. The three national forests in the region are the Angeles National Forest, San Bernardino National Forest, and the Cleveland National Forest.

#### **United States Army Corps of Engineers (USACOE)**

Among its responsibilities, the USACOE administers Section 404 of the Clean Water Act (CWA), which governs specified activities in waters of the United States, including wetlands. In this role, the USACOE requires that a permit be obtained if a project would place structures, including dredged or filled materials, within navigable waters or wetlands, or result in alteration of such areas.

#### **U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS)**

The NRCS maps soils and farmland uses to provide comprehensive information necessary for understanding, managing, conserving and sustaining the nation's limited soil resources. The NRCS manages the Farmland Protection Program, which provides funds to help purchase development rights to keep productive farmland in agricultural uses.

## State Agencies

### **California Department of Conservation**

In 1982, the State of California created the Farmland Mapping and Monitoring Program within the California Department of Conservation to carry on the mapping activity from the NRCS on a continuing basis. The California Department of Conservation administers the California Land Conservation Act of 1965, also known as the Williamson Act, for the conservation of farmland and other resource-oriented laws.

### **California Coastal Commission**

The California Coastal Commission plans for and regulates development in the coastal zone consistent with the policies of the California Coastal Act. The Commission also administers the federal Coastal Zone Management Act in California. As part of the Coastal Act, cities and counties are required to prepare a local coastal program (LCP) for the portion of its jurisdiction within the coastal zone. With an approved LCP, cities and counties control coastal development that accords with the local coastal plan. If no local coastal plan has been approved, the Coastal Commission controls coastal development.

### **California Department of Transportation (Caltrans)**

The Caltrans jurisdiction includes rights-of-way of state and interstate routes within California. Any work within the right-of-way of a federal or state transportation corridor is subject to Caltrans regulations governing allowable actions and modifications to the right-of-way. Caltrans includes the Division of Aeronautics, which is responsible for airport permitting and establishing a county Airport Land Use Commission (ALUC) for each county with one or more public airports. ALUCs are responsible for the preparation of land use plans for areas near aviation facilities.

### **California Department of Forestry and Fire Protection (CDF)**

The CDF reviews and approves plans for timber harvesting on private lands. In addition, through its responsibility for fighting wildland fires, the CDF plays a role in planning development in forested areas.

### **California Department of Parks and Recreation (CDPR)**

The CDPR manages and provides sites for a variety of recreational and outdoor activities. The CDPR is a trustee agency that owns and operates all state parks and participates in land use planning that affects state parkland.

### **California Department of Fish and Game (CDFG)**

The land use mandate of the CDFG is to protect rare, threatened, and endangered species by managing habitat in legally designated ecological reserves or wildlife areas. CDFG reserves located in the district include the Bolsa Chica Ecological Reserve (Orange County), among others.

## **Regional and Local**

### **Southern California Association of Governments (SCAG)**

As related to land use, SCAG is authorized to undertake intergovernmental review for federal assistance and direct federal development pursuant to Presidential Executive Order 12,372. Pursuant to CEQA (Public Resource Code Sections 21083 and 21087 and CEQA Guidelines Sections 15206 and 15125(b)), SCAG reviews projects of regional significance for consistency with regional plans. SCAG is also responsible for preparation of the Regional Housing Needs Assessment (RHNA), pursuant to California Government Code Section 65584(a). SCAG's RHNA provides a tool for providing local affordable housing development strategies.

SCAG's current *Regional Comprehensive Plan and Guide (RCPG) 1996* is intended to provide a permissive framework for decision making by local governments regarding growth and development. The RCPG proposes strategies for local governments to use on a voluntary basis to reconcile local needs with state and federal planning requirements.

### **Local Agency Formation Commissions**

The Local Agency Formation Commission (LAFCO) is the agency in each county that has the responsibility to create orderly local government boundaries, with the goal of encouraging "planned, well-ordered, efficient urban development patterns," the preservation of open-space lands, and the discouragement of urban sprawl. While LAFCOs have no direct land use authority, their actions determine which local government will be responsible for planning new areas. LAFCOs address a wide range of boundary actions, including creation of spheres of influence for cities, adjustments to boundaries of special districts, annexations, incorporations, detachments of areas from cities, and dissolution of cities.

### **General Plans**

The most comprehensive land use planning for the district is provided by city and county general plans, which local governments are required by state law to prepare as a guide for future development. General plans contain goals and policies concerning topics that are mandated by state law or which the jurisdiction has chosen to include. Required topics are land use, circulation, housing, conservation, open space, noise, and safety. Other topics that local governments frequently choose to address include public facilities, parks and recreation, community design, sustainability and growth management, among others. These plans provide general definitions and implementation methods for each land use designation in the district. City and county general plans must be consistent with each other. County general plans must cover areas not included by city general plans (i.e., unincorporated areas).

### **Specific and Master Plans**

A city or county may also provide land use planning by developing community or specific plans for smaller, more specific areas within their jurisdiction. These more

localized plans provide for focused guidance for developing a specific area, with development standards tailored to the area, as well as systematic implementation of the general plan.

### **Zoning and Land Use Permits**

City and county zoning codes are the set of detailed requirements that implement the general plan policies at the level of the individual parcel. The zoning code presents standards for different uses and identifies which uses are allowed in the various zoning districts of the jurisdiction. Since 1971, state law has required the city or county zoning code to be consistent with the jurisdiction's general plan. Cities and counties typically implement their zoning codes through highly individualized land use ordinances that differ from jurisdiction to jurisdiction.

## **SUBCHAPTER 3.11**

---

### **EXISTING SETTING - MINERAL RESOURCES**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

The existing setting includes mineral resources, including known or locally-important mineral resources.

## ENVIRONMENTAL SETTING

Mineral resource extraction occurs in various portions of California but is generally limited to non-urban areas. Each county's general plan is required to identify significant mineral resource areas and apply appropriate land use designations to ensure their future availability. Most of the comprehensive mineral resource mapping in California has been completed for urban areas, where there is a high probability that converted land uses would be incompatible with mining. Gold, sand, and gravel are the primary mineral resources still extracted throughout the SCAG region.<sup>1</sup> The SCAQMD region, which includes portions of Los Angeles, Orange, Riverside and San Bernardino counties, comprises a portion of the larger SCAG region; therefore, the following discussion focuses on these counties.

The Surface Mining Reclamation Area Act (SMARA) mandates the classification of valuable lands in order to protect mineral resources within the State of California subject to urban expansion or other irreversible actions. SMARA also allows the state to designate lands containing mineral deposits of regional or statewide significance. SMARA addresses the need for a continuing supply of mineral resources and to prevent or minimize the negative impacts of surface mining to public health, property and the environment. The Act applies to anyone, including government agencies, engaged in surface mining operations in California, including federally managed lands that disturb more than one acre or remove more than 1,000 cubic yards of material cumulatively from one site. This includes, but is not limited to, prospecting and exploratory activities, dredging and quarrying, streambed skimming, borrow pitting, and the stockpiling of mined materials.

### Mineral Resource Zones

The California Department of Conservation's Division of Mines and Geology Mineral Land Classification Project provides mineral resource maps, which are used in land use planning and mineral conservation. The Division of Mines and Geology identifies lands with the potential for mineral resource recovery and identifies new mineral resource areas to help ensure their preservation. The programs produce maps of Mineral Resource Zones (MRZ) that designate known or suspected economic mineral deposits.

The classifications used by the state to define MRZs are as follows:

- **MRZ-1:** Areas where the available geologic information indicates no significant mineral deposits or a minimal likelihood of significant mineral deposits.

---

<sup>1</sup> Southern California Association of Governments, Draft 2008 RTP PEIR, January 2008.

- **MRZ-2a:** Areas where the available geologic information indicates that there are significant mineral deposits.
- **MRZ-2b:** Areas where the available geologic information indicates that there is a likelihood of significant mineral deposits.
- **MRZ-3a:** Areas where the available geologic information indicates that mineral deposits are likely to exist; however, the significance of the deposit is undetermined.
- **MRZ-4:** Areas where there is not enough information available to determine the presence or absence of mineral deposits.

### **Los Angeles County**

According to the County of Los Angeles General Plan, the majority of southern California's on-shore oil deposits are located in Los Angeles County. Additionally, the greater Los Angeles area is considered the nation's leading producer of sand and gravel for its geographic size. Los Angeles County has several deposits of sand and gravel which are located close to the market and available at low costs. Uses of these products include the following:

- Portland cement concrete aggregate;
- Asphaltic concrete aggregate;
- Base and sub-base aggregate; and
- Clean fill.<sup>2</sup>

Major sand and gravel extraction sites are found in the alluvial fans of the Big Tujunga Wash in the San Fernando Valley and in the San Gabriel River (Irwindale and adjacent areas.) Other sites are in the Santa Clara River and Little Rock and Big Rock washes in northern portions of the County.<sup>3</sup>

### **Orange County**

In 1982, the State Mining and Geology Board adopted the Classification Report for Orange County. The designation of mineral lands of regional significance occurred in April 1983. Since that time, some of the aggregate resources have become unavailable due to urban development. Approximately 20 percent of the identified aggregate

<sup>2</sup> County of Los Angeles, *County of Los Angeles General Plan Conservation and Open Space Element*, [http://planning.lacounty.gov/assets/upl/project/gp\\_web80-conservation-and-open-space.pdf](http://planning.lacounty.gov/assets/upl/project/gp_web80-conservation-and-open-space.pdf), accessed August 9, 2009.

<sup>3</sup> *Ibid.*

resources in designated areas have undergone land use changes that preclude mining. Most of the areas urbanized were developed for housing or industrial parks.<sup>4</sup>

Significant sand and gravel resources located in Orange County are located in portions of the Santa Ana River, Santiago Creek, San Juan Creek, Arroyo Trabuco, including a few other areas. Table 3.11-1 shows the aggregate resources of the Orange County region.<sup>5</sup>

**TABLE 3.11-1**  
**Aggregate Resources of the Orange County Region**

Resource Area	Million Short Tons
Santa Ana River	42
Lower Santiago Creek	187
Upper Santiago Creek	26
San Juan Creek	120
Arroyo Trabuco	78
<b>TOTAL</b>	<b>453</b>

Source: County of Riverside General Plan,  
<http://www.rctlma.org/genplan/content/gp/chapter05.html> Accessed August 9, 2009

Aggregate resources in Orange County include reserves, as well as potentially usable aggregate materials that may be mined in the future, but for which no permits allowing mining have been granted on for which marketability has not been established.<sup>6</sup>

### **Riverside County**

Mineral deposits in Riverside County are important to many industries, including construction, transportation and chemical processing. The value of mineral deposits within Riverside County is enhanced by their close proximity to urban areas. However, these mineral deposits are endangered by the same urbanization that enhances their value.<sup>7</sup>

According to the County of Riverside General Plan Mineral Resources Map, a large portion of the eastern portion of the County is designated MRZ-4. Additionally, there is a large portion of County land that is designated unstudied. The western portion of the County is largely designated MRZ-3, while there are pockets of smaller areas designated

<sup>4</sup> County of Orange, Resources and Development Management Department, *County of Orange General Plan Resources Element*, [http://www.ocplanning.net/docs/GeneralPlan2005/Chapter\\_VI\\_Resources.pdf](http://www.ocplanning.net/docs/GeneralPlan2005/Chapter_VI_Resources.pdf), accessed August 9, 2009.

<sup>7</sup> *Ibid.*

MRZ-2. A tiny area located in the southwestern portion of the County is a State-Designated Aggregate Resource Area.<sup>8</sup>

### **San Bernardino County**

According to the San Bernardino County General Plan Final EIR, mineral resources are an integral part of development and the economic well being of the County. The conservation, extraction and processing of those mineral resources is essential to meeting the needs of society. In San Bernardino County, minerals are a foremost natural resource, with the Desert Planning Area accounting for over 90 percent of all County mining activities. There are 92 mines within the County. There are several large calcium carbonate mining operations in San Bernardino County. The County is home to the largest cement producer in the state. It also has the largest rare earth mine in North America. Extensive aggregate mining is also a major component of the mining industry within the County.

San Bernardino County requires mining operations to have approved Mining/Reclamation Plans in compliance with the applicable sections of the Public Resources Code; SMARA; the State Administrative Code, Natural Resources, Mining and Geology; State Mining and Geology Board; and the San Bernardino County General Plan and Development Code prior to the start of mining operations. Before a mining project is approved, a reclamation plan must be prepared and approved by the County. The plan must include the following information:

- Maximum anticipated depth of extraction;
- A description of the reclamation land use;
- A description of the manner in which affected streambed channels and stream banks will be rehabilitated to a condition minimizing erosion;
- Final slope stability;
- Removal of improvements and actions to reduce compaction of areas sited for roads, buildings, or other improvements; and
- Revegetation methods to reestablish wildlife habitat and provide long-term soil stabilization.

The plan also includes performance standards for:

- Revegetation;
- Drainages and erosion control;
- Reclamation of prime agricultural land and other agricultural land;
- Stream protection, including protection of surface water and groundwater;
- Topsoil salvage; and
- Slope stability.

---

<sup>8</sup> *Ibid.*

## REGULATORY SETTING

### State

#### **Surface Mining Area Reclamation Act (SMARA)**

In 1975, SMARA was enacted by the California Legislature to address the need for a continuing supply of mineral resources, and to prevent or minimize the negative impacts of surface mining to public health, property and the environment. SMARA mandates the California Geological Survey (CGS) to provide objective economic-geologic expertise to assist in the protection and development of mineral resources through the land-use planning process. The primary products are mineral land classification maps and reports for urban and non-urban areas of the state. Local agencies are required to use the classification information when developing land-use plans and when making land-use decisions.<sup>9</sup>

### Counties and Cities

The geographic area encompassed by the district includes numerous cities and unincorporated communities in the counties of Los Angeles, Orange, San Bernardino, and Riverside. Each of these counties and incorporated cities has prepared a general plan, which is the primary document that establishes local land use policies and goals. Many of these general plans also establish local policies related to mineral resources extraction within their communities or sub-planning areas. Below are applicable goals and policies from each of the four counties:

#### **Los Angeles County**

The Conservation and Open Space Element<sup>10</sup> of the Los Angeles County General Plan contains several objectives related to conservation. To fulfill the objective to protect mineral resources, the following policy was established:

- Protect and conserve existing mineral resources, evaluate the extent and value of additional deposits, and require future reclamation of depleted sites.

#### **Orange County**

The Orange County General Plan includes the goal to promote the wise management of agricultural and mineral resources in order to protect these resources for existing and future needs. To fulfill that goal, the following policies have been created:

---

<sup>9</sup> Southern California Association of Governments, *Draft 2008 RTP PEIR*, January 2008.

<sup>10</sup> County of Los Angeles Department of Regional Planning, Conservation and Open Space Element, Los Angeles County General Plan, [http://planning.lacounty.gov/assets/upl/project/gp\\_web80-conservation-and-open-space.pdf](http://planning.lacounty.gov/assets/upl/project/gp_web80-conservation-and-open-space.pdf). (page 25.), accessed August 16, 2009.

- To ensure the efficient use of all mineral lands consistent with sound resource management practices.
- To ensure opportunities for the extraction of minerals in the County and to protect the environment during and after these minerals are being extracted.

### **Riverside County**

The Riverside County General Plan includes the following policies related to mineral resources:

- Require that the operation and reclamation of surface mines be consistent with the State Surface Mining and Reclamation Act (SMARA) and County Development Code provisions.
- Restrict incompatible land uses within the impact area of existing or potential surface mining areas.
- Restrict land uses incompatible with mineral resource recovery within areas designated Open Space-Mineral Resources.
- Impose conditions as necessary on mining operations to minimize or eliminate the potential adverse impact of mining operations on surrounding properties, and environmental resources.
- Require that new non-mining land uses adjacent to existing mining operations be designed to provide a buffer between the new development and the mining operations. The buffer distance shall be based on an evaluation of noise, aesthetics, drainage, operating conditions, biological resources, topography, lighting, traffic, operating hours, and air quality.

### **San Bernardino County**

The County of San Bernardino General Plan includes the goal to protect the current and future extraction of mineral resources that are important to the County's economy while minimizing impacts of this use on the public and the environment. To fulfill that goal, the following policies have been created:

- In areas containing valuable mineral resources, establish and implement conditions, criteria, and standards that are designed to protect the access to, and economic use of, these resources, provided that the mineral extraction does not result in significant adverse environmental effects and that open space uses have been considered for the area once mining operations cease.
- Implement the following state Mineral Resource Zone (MRZ) designations to establish a system that identifies mineral potential and economically viable reserves:

- ✓ Zone 1: Adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence. This designation will be applied where well-developed lines of reasoning, based upon economic geologic principles and adequate data, demonstrate that the likelihood for occurrence of significant mineral deposits is nil or slight.
- ✓ Zone 2: Adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists. This designation will be applied to known mineral deposits or where well developed lines of reasoning, based upon economic geologic principles and adequate data, demonstrate that the likelihood for occurrence of significant mineral deposits is high.
- ✓ Zone 3: Contains deposits whose significance cannot be evaluated from available data.
- ✓ Zone 4: Available information is inadequate for assignment to any other MRZ zone.
- Other MRZ designations include the following, respectively, a scientific resource zone (SZ) and identified resource areas (IRA):
  - ✓ Areas containing unique or rare occurrences of rocks, minerals, or fossils that are of outstanding scientific significance will be classified in this zone.
  - ✓ San Bernardino County or State Division of Mines and Geology Identified Resource Areas where adequate production and information indicates that significant minerals are present.
- Mining operators/owners will provide buffers between mineral resources (including access routes) and abutting incompatible land uses. New mineral and non-mineral development in these zones will be designed and reviewed according to the compatibility criteria specified in this policy.
- Review land development and mining proposals near potentially incompatible land uses with the goal of achieving land use compatibility between potentially incompatible uses.
- Protect existing mining access routes by giving them priority over proposed alterations to the land, or by accommodating the mining operations with as good or better alternate access, provided the alternate access does not adversely impact proposed open space areas or trail alignment.
- Provide for the monitoring of mining operations for compliance with the established operating guidelines, conditions of approval and the reclamation plan.

## **SUBCHAPTER 3.12**

---

### **EXISTING SETTING - NOISE**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

The environmental setting section describes the noise, and noise sources in the Southern California Association of Governments (SCAG) region.<sup>1</sup> The SCAQMD is encompassed within the SCAG region and includes Orange County and portions of Los Angeles, Riverside and San Bernardino Counties.

## ENVIRONMENTAL SETTING

### Noise Descriptors

Sound waves, traveling outward from a source, exert a sound pressure level (commonly called “sound level”), measured in decibels (dB). “Noise” is often defined as unwanted sound, and environmental noise is usually measured in “A-weighted” decibels, which is a decibel corrected for the variation in frequency response of the typical human ear at commonly-encountered noise levels. All noise levels discussed herein reflect A-weighted decibels. In general, people can perceive a 2- to 3-dB difference in noise levels; a difference of 10 dB is perceived as a doubling of loudness.

Environmental noise levels typically fluctuate across time of day; different types of noise descriptors are used to account for this variability, and different types of descriptors have been developed to differentiate between cumulative noise over a given period and single noise events. Cumulative noise descriptors include the energy-equivalent noise level ( $L_{eq}$ ), Day-Night Average Noise Level (DNL), and Community Noise Equivalent Level (CNEL). The  $L_{eq}$  is the actual time-averaged, equivalent steady-state sound level, which, in a stated period, contains the same acoustic energy as the time-varying sound level during the same period. DNL and CNEL values result from the averaging of  $L_{eq}$  values (based on A-weighted decibels) over a 24-hour period, with weighting factors applied to different periods of the day and night to account for their perceived relative annoyance. For DNL, noise that occurs during the nighttime period (10:00 p.m. to 7:00 a.m.) is “penalized” by 10 dB. CNEL is similar to DNL, except that it also includes a “penalty” of approximately 5 dB for noise that occurs during the evening period (7:00 p.m. to 10:00 p.m.). Cumulative noise descriptors, DNL and CNEL, are well correlated with public annoyance due to transportation noise sources. Table 3.12-1 shows the compatibility between various land uses and CNEL.

Individual noise events, such as train pass-bys or aircraft overflights, are further described using single-event and cumulative noise descriptors. For single events, the maximum measured noise level ( $L_{max}$ ) is often cited, as is the Sound Exposure Level (SEL). The SEL is the energy-based sum of a noise event of given duration that has been

---

<sup>1</sup> Draft 2008 Regional Transportation Plan (RTP) Program Environmental Impact Report (PEIR). Southern California Association of Governments (SCAG). January 2008.

“squeezed” into a reference duration of one second and is typically a value that is 5 to 10 dB higher than the  $L_{\max}$ .

### **Vibration Measuring and Reporting**

Vibration is an oscillatory motion through a solid medium in which the motion’s amplitude can be described in terms of displacement, velocity, or acceleration. Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some common sources of vibration are trains, buses on rough roads, and construction activities, such as blasting, pile driving, and heavy earth-moving equipment. Several different methods are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings. The root mean square (RMS) amplitude is most frequently used to describe the effect of vibration on the human body. The RMS amplitude is defined as the average of the squared amplitude of the signal. The decibel notation, VdB, is commonly used to measure RMS. The decibel notation acts to compress the range of numbers required to describe vibration.<sup>2</sup>

High levels of vibration may cause physical personal injury or damage to buildings. However, groundborne vibration levels rarely affect human health. Instead, most people consider groundborne vibration to be an annoyance that may affect concentration or disturb sleep. In addition, high levels of groundborne vibration may damage fragile buildings or interfere with equipment that is highly sensitive to groundborne vibration (e.g., electron microscopes). To counter the effects of groundborne vibration, the Federal Railway Administration (FRA) and the Federal Transit Administration (FTA) have published guidance relative to vibration impacts. According to FRA, fragile buildings can be exposed to groundborne vibration levels of 0.5 PPV without experiencing structural damage.<sup>3</sup> The FTA has identified the human annoyance response to vibration levels as 80 VdB.<sup>4</sup>

<sup>4</sup> Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, April 1995.

**TABLE 3.12-1  
Noise Land Use Compatibility Matrix**

Land Use	Annual Community Noise Equivalent Level (CNEL) in Decibels				
	55	60	65	70	75
Outdoor Amphitheatres					
Nature preserves, wildlife preserves, livestock farming; neighborhood and playgrounds					
Schools, preschools, libraries		45			
Residential- single family and multiple family, mobile homes, residential hotels, retirement homes, intermediate care facilities, hospitals, nursing homes		45			
Hotels and motels, other transient lodging; auditoriums, concert halls, indoor arenas, churches		45	45		
Office buildings- business, educational, professional and personal services; R&D offices and laboratories			50		
Riding stables, water recreation facilities, regional parks and athletic fields, cemeteries; outdoor spectator sports, golf courses					
Commercial- retail; shopping centers, restaurants, movie theatres			50	50	
Commercial- wholesale; industrial; manufacturing					
Agriculture (except residences and livestock), extractive industry, fishing, utilities, and public R-O-W					

	<p><b>Compatible:</b> The outdoor community noise equivalent level is sufficiently attenuated by conventional construction that the indoor noise level is acceptable, and both indoor and outdoor activities associated with the land use may be carried out.</p>
45	<p><b>Conditionally Compatible:</b> The outdoor community noise equivalent level will be attenuated to the indoor level shown, and the outdoor noise level is acceptable for associated outdoor activities.</p>
	<p><b>Incompatible:</b> The community noise equivalent level is severe. Although extensive mitigation techniques could make the indoor environment acceptable for performance of activities the outdoor environment would be intolerable for outdoor activities associated with the land use.</p>

Source: Southern California Association of Governments, Draft 2008 RTP PEIR, January 2008, p. 3.9-2

In contrast to noise, groundborne vibration is not a phenomenon that most people experience every day. The background vibration velocity level in residential areas is usually 50 VdB or lower, well below the threshold of perception for humans, which is around 65 VdB. Most perceptible indoor vibration is caused by sources within buildings, such as operation of mechanical equipment, movement of people, or slamming of doors. Typical outdoor sources of perceptible groundborne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If the roadway is smooth, the vibration from traffic is rarely perceptible.

### **Sensitive Receptors**

Some land uses are considered more sensitive to ambient noise levels than others due to the amount of noise exposure (in terms of both exposure time and “insulation” from noise) and the types of activities typically involved. Residences, motels and hotels, schools, libraries, churches, hospitals, nursing homes, auditoriums, natural areas, parks and outdoor recreation areas are generally more sensitive to noise than are commercial and industrial land uses. Consequently, the noise standards for sensitive land uses are more stringent than those for less sensitive uses, such as commercial and industrial.

To protect various human activities and sensitive land uses (e.g., residences, schools, and hospitals) lower noise levels are needed. A noise level of 55 to 60 dB DNL outdoors is the upper limit for intelligible speech communication inside a typical home. In addition, social surveys and case studies have shown that complaints and community annoyance in residential areas begin to occur at 55 dB DNL. Sporadic complaints associated with the 55 to 60 dB DNL range give way to widespread complaints and individual threats of legal action within the 60 to 70 dB DNL range. At 70 dB DNL and above, residential community reaction typically involves threats of legal action and strong appeals to local officials to stop the noise.

### **Noise Sources**

Many principal noise generators within the district are associated with transportation (e.g., airports, freeways, arterial roadways, seaports, and railroads). Additional noise generators include stationary sources, such as industrial manufacturing plants and construction sites. Local collector streets are not considered to be a significant source of noise since traffic volume and speed are generally much lower than for freeways and arterial roadways. Generally, transportation-related noise sources characterize the ambient noise environment of an area.

#### **Airports**

The SCAG region contains six established airports, including Los Angeles International (LAX), Bob Hope (formerly Burbank), John Wayne, Long Beach, Ontario, and Palm Springs. There are also four new and emerging airports in the Inland Empire and North Los Angeles County. These include San Bernardino International Airport (formerly Norton Air Force Base [AFB]), March Inland Port (joint use with March Air Reserve

Base), Southern California Logistics Airport (formerly George AFB), and Palmdale Airport (joint use with Air Force Plant 42).

### **Freeways and Arterial Roadways**

The SCAG region has over 20,717 centerline (route) miles and over 64,771 lane-miles of roadways, including one of the most extensive High-Occupancy Vehicle (HOV) lane systems in the country.<sup>5</sup> Additionally, the SCAG region has a growing network of tolled lanes and High-Occupancy Toll (HOT) lanes. Regionally significant arterials provide access to the freeway system and often serve as parallel alternate routes; in some cases, they are the only major system of transportation available to travelers.

The extent to which traffic noise levels affect sensitive land uses depends upon a number of factors. These include whether the roadway itself is elevated above grade or depressed below grade, whether there are intervening structures or terrain between the roadway and the sensitive uses, and the distance between the roadway and such uses. For example, measurements show that depressing a freeway by approximately 12 feet yields a reduction in traffic noise relative to an at-grade freeway of 7 to 10 dB at all distances from the freeway. Traffic noise from an elevated freeway is typically 2 to 10 dB less than the noise from an equivalent at-grade facility within 300 feet of the freeway, but beyond 300 feet, the noise radiated by an elevated and at-grade freeway (assuming equal traffic volumes, fleet mix, and vehicle speed) is the same.<sup>6</sup>

Additionally, the SCAG region has an enormous number of arterial roadways. Typical arterial roadways have one or two lanes of traffic in each direction, with some containing as many as four lanes in each direction. Noise from these sources can be a significant environmental concern where buffers (e.g., buildings, landscaping, etc.) are inadequate or where the distance from centerline to sensitive uses is relatively small. Given typical daily traffic volumes of 10,000 to 40,000 vehicle trips, noise levels along arterial roadways typically range from 65 to 70 dB DNL at a distance of 50 feet from the roadway centerlines.

### **Railroad Operations**

Railroad operations generate high, relatively brief, intermittent noise events. These noise events are an environmental concern for sensitive uses located along rail lines and in the vicinities of switching yards. Locomotive engines and the interaction of steel wheels and rails primarily generate rail noise. The latter source creates three types of noise: 1) rolling noise due to continuous rolling contact, 2) impact noise when a wheel encounters a rail joint, turnout or crossover, and 3) squeal generated by friction on tight curves. For very high speed rail vehicles, air turbulence can be a significant source of noise as well. In addition, use of air horns and crossing bell gates contribute to noise levels in the vicinity of grade crossings.<sup>7</sup>

---

<sup>5</sup> *Ibid.*, p. 3.9-4.

<sup>6</sup> *Ibid.*

<sup>7</sup> *Ibid.*, p. 3.9-5.

### **Freight Trains**

Noise levels generated by freight train pass-by events reflect locomotive engine noise and rail car wheel rail interaction. The former depends upon track grade conditions (i.e., uphill versus downhill) and is largely independent of speed, whereas the latter is highly speed dependent, increasing approximately 6 dB for each doubling of train velocity.<sup>8</sup> In addition to noise, freight trains also generate substantial amounts of ground-borne noise and vibration in the vicinity of the tracks. Ground-borne noise and vibration is a function of both the quality of the track and the operating speed of the vehicles.

The SCAG region has an extensive network of railroad lines belonging primarily to two major railroads: Union Pacific Railroad (Union Pacific) and Burlington Northern Santa Fe Railway (BNSF). SCAG's Inland Empire Railroad Main Line Study suggest that the number of freight trains on most BNSF and UP lines will more than double between 2000 and 2025 in response to a tripling of container volume at the San Pedro Bay Ports. A rail line supporting 40 freight trains per day generates approximately 75 dB DNL at 200 feet from the tracks. BNSF rail lines extend south from switching yards in eastern Los Angeles to the Los Angeles and Long Beach ports complex and east to Arizona and points beyond via San Bernardino County. BNSF generates approximately 75 dB DNL at a distance of 200 feet from the tracks.<sup>9</sup>

### **Commuter and Inter-City Passenger Trains**

In general, the noise generated by commuter rail facilities (powered by either diesel or electric locomotives) is from the locomotives themselves. In the district, there are two commuter and inter-city passenger train operators: AMTRAK and the Southern California Regional Rail Authority/Metrolink. AMTRAK operates trains with destinations in Seattle, Chicago, Orlando, San Diego, and San Luis Obispo. A typical AMTRAK pass-by event generates 107 dB SEL at 50 feet<sup>10</sup>; two such events during the daytime or evening periods generate approximately 61 dB DNL at 50 feet and approximately 52 dB DNL at 200 feet. Nine such events generate approximately 67 dB DNL at 50 feet and 58 dB DNL at 200 feet.

The Southern California Regional Rail Authority operates the Metrolink commuter rail system. This system currently includes seven rail lines, with destinations in Ventura, Los Angeles, San Bernardino, Riverside, Orange, and San Diego Counties. Noise levels generated by Metrolink are similar to those associated with AMTRAK.

### **Steel Wheel Urban Rail Transit**

Heavy rail is generally defined as electrified rapid transit trains with dedicated guideway, and light rail as electrified transit trains that do not require dedicated guideway. In general, noise increases with speed and train length. Sensitivity to rail noise generally

---

<sup>8</sup> *Ibid.*

<sup>9</sup> *Ibid.*, p. 3.9-6.

<sup>10</sup> *Ibid.*

arises when there is less than 50 feet between the rail and sensitive receptors. A significant percentage of complaints about noise can be attributed to the proximity of switches, rough or corrugated track, or wheel flats. Within the district, the Los Angeles County Metropolitan Transit Authority (Metro) provides urban rail transit service on four lines within Los Angeles County. The Blue Line extends from Long Beach to the 7<sup>th</sup> Street Metro Center in downtown Los Angeles. The Red Line connects Union Station with North Hollywood via the Metro Center, the Gold Line connects Union Station with Pasadena, and the Green Line extends from Redondo Beach to Norwalk. Other Metro operated urban transit systems include the Orange Line which connects with the northern terminus of the Red Line in North Hollywood and serves much of the northwestern portion of Los Angeles County, and the Eastside Gold Line Extension, which provides rail transit service to East Los Angeles.

### **Port Operations**

The Ports of Long Beach and Los Angeles are major regional economic development centers. These ports currently handle approximately 40 percent of the volume imported into the country and approximately 24 percent of the nation's exports. Noise is generated from four sources: ships using the port facilities, equipment associated with cargo activity within the port, and truck and rail traffic moving cargo to and from the ports. All sources affect the ambient noise levels in the port areas. Residential areas in San Pedro (City of Los Angeles) and West Long Beach are affected most by truck and rail traffic related to the ports.

The Alameda Corridor provides a substantial long-term reduction in noise and vibration associated with rail operations in the vicinities of the Ports of Long Beach and Los Angeles. The Alameda Corridor consolidates the operations of UP and BNSF on 90 miles of existing branch line tracks into one 20-mile corridor along Alameda Street. This corridor provides a direct connection between the ports of Long Beach and Los Angeles and the UP and BSNF switching yards in eastern Los Angeles. The Alameda Corridor includes four overpasses and three underpasses at intersections south of State Route 91 (SR-91) that allow vehicles to pass above the trains. North of SR-91, trains pass through a 10-mile, 33-foot-deep trench. The construction of tracks in a below-grade trench, track construction on new base materials, and the use of continuous welded track reduce noise impacts on adjacent uses from freight trains associated with the ports. Also, the Alameda Corridor includes sound walls in certain locations to mitigate vehicle noise along Alameda Street in residential neighborhoods and other sensitive areas.

### **Industrial, Manufacturing, and Construction**

Noise from industrial complexes, manufacturing plants, and construction sites are characterized as stationary, or point, sources of noise even though they may include mobile sources, such as forklifts and graders. Local governments typically regulate noise from industrial, manufacturing, and construction equipment and activities through enforcement of noise ordinance standards, implementation of general plan policies, and imposition of conditions of approval for building or grading permits.

Industrial complexes and manufacturing plants are generally located away from sensitive land uses, and, as such, noise generated from these sources generally has less effect on the local community. In contrast to industrial and manufacturing plants, construction sites are located throughout the region and are often located within, or adjacent to, residential districts. In general, construction activities generate high noise levels intermittently on and adjacent to the construction sites, and the related noise impacts are short-term in nature. The dominant source of noise from most construction equipment is the engine, usually a diesel engine, with inadequate muffling. However, in a few cases, such as impact pile driving or pavement breaking, noise generated by the process dominates. Construction equipment can be considered to operate in two modes, stationary and mobile. Stationary equipment operates in one location for one or more days at a time, with either a fixed-power operation (pumps, generators, compressors) or a variable noise operation (pile drivers, pavement breakers). Mobile equipment moves around the construction site with power applied in cyclic fashion (bulldozers, loaders), or movement to and from the site (trucks).<sup>11</sup>

Construction-related noise levels generally fluctuate depending on the construction phase, equipment type and duration of use, distance between noise source and receptor, and presence or absence of barriers between noise source and receptor. Noise levels decrease by approximately 6 dB with each doubling of distance from the construction site (e.g., noise levels from excavation might be approximately 83 dB at 100 feet from the site, and about 77 dB at 200 feet from the site). Interior noise levels from construction are approximately 10 dB (open windows) to 20 dB (closed windows) less than exterior noise levels due to the attenuation provided by building facades.<sup>12</sup>

### **Existing Vibration Sources**

Similar to the environmental setting for noise, the vibration environment is typically dominated by traffic from nearby roadways and activity on construction sites. Heavy trucks can generate groundborne vibrations that vary depending on vehicle type, weight, and pavement conditions. Heavy trucks typically operate on major streets. Nonetheless, vibration levels adjacent to roadways are typically not perceptible.

## **REGULATORY SETTING**

The federal government sets noise standards for transportation-related noise sources that are closely linked to interstate commerce, such as aircraft, locomotives, and trucks, and, for those noise sources, the state government is preempted from establishing more stringent standards. The state government sets noise standards for those transportation noise sources that are not preempted from regulation, such as automobiles, light trucks, and motorcycles. Noise sources associated with industrial, commercial, and construction activities are generally subject to local control through noise ordinances and general plan policies.

---

<sup>11</sup> *Ibid.*, p. 3.9-8.

<sup>12</sup> *Ibid.*

## **Federal Agencies and Regulations**

### **Code of Federal Regulations (CFR)**

Federal regulations for railroad noise are contained in 40 CFR, Part 201 and 49 CFR, Part 210. The regulations set noise limits for locomotives and are implemented through regulatory controls on locomotive manufacturers.

Federal regulations also establish noise limits for medium and heavy trucks (more than 4.5 tons, gross vehicle weight rating) under 40 CFR, Part 205, Subpart B. The federal truck pass-by noise standard is 80 dB at 15 meters from the vehicle pathway centerline. These controls are implemented through regulatory controls on truck manufacturers. The FHWA regulations for noise abatement must be considered for federal or federally-funded projects involving the construction of a new highway or significant modification of an existing freeway when the project would result in a substantial noise increase or when the predicted noise levels approach or exceed the “Noise Abatement Criteria.”

Under the regulations, a “substantial increase” is defined as an increase in  $L_{eq}$  of 12 dB during the peak hour of traffic noise. For sensitive uses, such as residences, schools, churches, parks, and playgrounds, the Noise Abatement Criteria for interior and exterior spaces is  $L_{eq}$  57 and 66 dB, respectively, during the peak hour of traffic noise.

### **Federal Aviation Administration (FAA)**

Aircraft operated in the U.S. are subject to certain federal requirements regarding noise emissions levels. These requirements are set forth in Title 14 of the *Code of Federal Regulations* (14 CFR), Part 36. Part 36 establishes maximum acceptable noise levels for specific aircraft types, taking into account the model year, aircraft weight, and number of engines. Pursuant to the federal Airport Noise and Capacity Act of 1990, the FAA established a schedule for complete transition to Part 36 “Stage 3” standards by year 2000. This transition schedule applies to jet aircraft with a maximum takeoff weight in excess of 75,000 pounds and, thus, applies to passenger and cargo airlines but not to operators of business jets or other general aviation aircraft.

### **Federal Vibration Policies**

The FRA and FTA have published guidance relative to vibration impacts. According to the FRA, fragile buildings can be exposed to groundborne vibration levels of 0.5 PPV without experiencing structural damage. The FTA has identified the human annoyance response to vibration levels as 80 VdB.<sup>13</sup>

---

<sup>13</sup> *Ibid.*, p. 3.9-10.

## **State Agencies and Regulations**

### **California's Airport Noise Standards**

The State of California's Airport Noise Standards, found in Title 21 of the *California Code of Regulations*, identify a noise exposure level of CNEL 65 dB as the noise impact boundary around airports. Within the noise impact boundary, airport proprietors are required to ensure that all land uses are compatible with the aircraft noise environment or the airport proprietor must secure a variance from the California Department of Transportation.

### **California Department of Transportation (Caltrans)**

The State of California establishes noise limits for vehicles licensed to operate on public roads. For heavy trucks, the state pass-by standard is consistent with the federal limit of 80 dB. The state pass-by standard for light trucks and passenger cars (less than 4.5 tons gross vehicle rating) is also 80 dB at 15 meters from the centerline. For new roadway projects, Caltrans employs the Noise Abatement Criteria, discussed above in connection with the FHWA.

### **California Noise Insulation Standards**

The California Noise Insulation Standards found in the *California Code of Regulations*, Title 24, set requirements for new multi-family residential units, hotels, and motels that may be subject to relatively high levels of transportation-related noise. For exterior noise, the noise insulation standard is DNL 45 dB in any habitable room and requires an acoustical analysis demonstrating how dwelling units have been designed to meet this interior standard where such units are proposed in areas subject to noise levels greater than DNL 60 dB.

### **State Vibration Policies**

There are no adopted state policies or standards for ground-borne vibration. However, Caltrans recommends that extreme care be taken when sustained pile driving occurs within 7.5 meters (25 feet) of any building, and 15 to 30 meters (50 to 100 feet) of a historic building or a building in poor condition.

## **Local Agencies and Regulations**

To identify, appraise, and remedy noise problems in the local community, each county and city within the district has adopted a noise element as part of its General Plan. Each noise element is required to analyze and quantify current and projected noise levels associated with local noise sources, including, but not limited to, highways and freeways, primary arterials and major local streets, rail operations, air traffic associated with the airports, local industrial plants, and other ground stationary sources that contribute to the community noise environment. Beyond statutory requirements, local jurisdictions are free to adopt their own goals and policies in their noise elements, although most

jurisdictions have chosen to adopt noise/land use compatibility guidelines that are similar to those recommended by the state. The overlapping DNL ranges (see Table 3.12-1) indicate that local conditions (existing noise levels and community attitudes toward dominant noise sources) should be considered in evaluating land use compatibility at specific locations.

In addition to regulating noise through noise element policies, local jurisdictions regulate noise through enforcement of local ordinance standards. These standards generally relate to noisy activities (e.g., use of loudspeakers and construction) and stationary noise sources and facilities (e.g., air conditioning units and industrial activities). Two cities within the district, Los Angeles and Long Beach, operate port facilities. Noise from the Ports of Los Angeles and Long Beach are regulated by the noise ordinances and noise elements of the Los Angeles and Long Beach General Plans.

In terms of airport noise, some of the actions that airport proprietors have been allowed to take to address local community noise concerns include runway use and flight routing changes, aircraft operational procedure changes, and engine run-up restrictions. These actions generally are subject to approval by the FAA, which has the authority and responsibility to control aircraft noise sources, implement and enforce flight operational procedures, and manage the air traffic control system.

## **SUBCHAPTER 3.13**

---

### **EXISTING SETTING – POPULATION AND HOUSING**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

The environmental setting section describes population, housing, and employment in the SCAQMD region.

## ENVIRONMENTAL SETTING

This section presents county, city, and census tract data for population, employment, and housing gathered from the U.S. Census Bureau web site for 2000 and 2005 and projections produced by SCAG and California Department of Finance (DOF). The 2000 census gives detailed demographic, socioeconomic, and housing data both at the individual and household level for different geographic levels for 2000 and 2005. Law mandates that the U.S. Census Bureau collect and publish data for each decade (U.S. Census Bureau 2000). SCAG, the region's federally designated metropolitan planning organization, is responsible for preparing projections regarding population, employment, and housing at the regional, county, subregional, jurisdictional, census tract, and transportation analysis zone levels.

The district is encompassed within the SCAG region and includes Orange County and portions of Los Angeles, Riverside and San Bernardino Counties. For the purposes of this section, due to the limited nature of some available information, all of Los Angeles, Riverside, and San Bernardino counties are included in the discussion of growth trends within the SCAQMD region.

### Population and Households

Current population information is presented in Table 3.13-1. Household information is presented in Table 3.13-2. Census data indicate that the four-county area (including the SCAQMD region) had a total population of 15,620,448 in 2000, with 5,103,873 households. The population within the four-county area grew by 5.83 percent in 2005 to 16,531,369,<sup>1</sup> and according to DOF estimates the population in the four-county area grew by 6.50 percent from 2005 to 2009, to 17,700,805<sup>2</sup>.

<sup>a</sup> Census, 2000.

<sup>b</sup> American Community Survey, 2005.

<sup>c</sup> Regional Transportation Plan 2008, Population, Housing, and Employment Projects, SCAG.

According to the U.S. Census Bureau, the population in the County of Los Angeles was 9,519,338 in 2000,<sup>3</sup> compared to 9,758,886 in 2005,<sup>4</sup> representing an increase of 2.52 percent. During this same time period, the population in the County of Orange grew by 3.45 percent, from 2,846,289 in 2000 to 2,944,537 in 2005. The County of Riverside grew from 1,545,387 in 2000 to 1,911,281 in 2005; an increase of 23.68 percent. The population of San Bernardino County grew from 1,709,434 in 2000 to 1,916,665 in 2005, an increase of 12.12 percent.

According to the DOF, the population in the County of Los Angeles was 10,393,185 in 2009,<sup>5</sup> representing an increase of 6.50 percent from 2005 to 2009. During this same time period, the population in the County of Orange grew by 6.60 percent to 3,139,017 in 2009. The County of Riverside grew to 2,107,653 persons in 2009; an increase of 10.27 percent. The population of San Bernardino County grew to 2,060,950 in 2009; an increase of 7.53 percent.

According to the U.S. Census Bureau, the number of households in the County of Los Angeles was 3,133,774 in 2000,<sup>6</sup> compared to 3,184,396 in 2005,<sup>7</sup> representing an increase of 1.62 percent. During this same time period, the number of households in the County of Orange grew by 3.70 percent, from 935,287 in 2000 to 969,916 in 2005. The County of Riverside grew from 506,218 households in 2000 to 623,711 households in

<sup>3</sup> Census, 2000.

<sup>4</sup> DOF, 2009, Table E-1: City/County Population Estimates with Annual Percent Change.

<sup>5</sup> American Community Survey, 2005.

<sup>6</sup> Census, 2000.

<sup>7</sup> American Community Survey, 2005.

2005; an increase of 23.21 percent while the number of households in San Bernardino County grew from 528,594 in 2000 to 588,218 in 2005, an increase of 11.28 percent.

**Projected Trends**

According to SCAG projections, the 2015 population of the four-county region would be 19,318,435 persons, an increase of 9.14 percent over 2009 estimates from DOF. The 2025 population would be 21,128,779 persons, while 2035 population would be 22,723,091 persons. These numbers represent an increase of 19.37 percent from 2009 to 2025 and an increase of 28.37 percent from 2009 to 2035 for the four-county region (see Table 3.13-1).

Amongst the four counties within the district, the County of Riverside and San Bernardino County are expected to have a high growth in population. The population of the County of Riverside would increase by 70.65 percent from 2009 to 2035, while the population of San Bernardino County would increase by 52.06 percent during the same time period. Comparatively, the county of Los Angeles would only grow by 18.72 percent from 2009 to 2035 and the County of Orange would grow by 16.41 percent from 2009 to 2035.

**Housing**

Current housing information is presented in Table 3.13-3. Census data indicate that the four-county area had a total 5,426,436 housing units in 2000. This number grew by 5.21 percent in 2005 to 5,709,258 housing units<sup>8</sup>, and according to DOF estimates the total number of housing units in four-county area grew by 3.77 percent from 2005 to 2009 to 5,924,535.<sup>9</sup>

**TABLE 3.13-3  
Housing Trends**

	<b>Los Angeles</b>	<b>Orange</b>	<b>San Bernardino</b>	<b>Riverside</b>	<b>Total</b>
<b>2000<sup>a</sup></b>	3,270,909	969,484	601,369	584,674	5,426,436

<sup>a</sup> Census, 2000.

<sup>b</sup> American Community Survey, 2005.

<sup>c</sup> DOF estimates for 2009.

<sup>8</sup> American Community Survey, 2005.

<sup>9</sup> DOF, 2009, Table E-1: City/County Population Estimates with Annual Percent Change.

According to the U.S. Census Bureau, the number of housing units in the County of Los Angeles was 3,339,763 in 2005,<sup>10</sup> compared to 3,270,909 in 2000,<sup>11</sup> representing an increase of 2.11 percent. During this same time period, the number of housing units in the County of Orange grew by 4.92 percent, from 969,484 in 2000 to 1,017,219 in 2005. The number of housing units in the County of Riverside grew from 584,674 in 2000 to 699,474 in 2005; an increase of 19.63 percent. The number of housing units in San Bernardino County grew from 601,369 in 2000 to 652,802 in 2005, an increase of 8.55 percent.

According to the DOF, the number of housing units in the County of Los Angeles was 3,418,698 in 2009,<sup>12</sup> representing an increase of 2.36 percent from 2005 to 2009. During this same time period, the number of housing units in the County of Orange grew by 1.80 percent to 1,035,491 in 2009. The County of Riverside grew to 780,112 housing units in 2009; an increase of 11.53 percent. The number of housing units in San Bernardino County grew to 690,234 in 2009, an increase of 5.73 percent.

### Employment

Current employment information is presented in Table 3.13-4. Census data indicate that the four-county area had a total of 6,579,726 employed people in 2000. According to California Economic Development Department (CEDD) estimates, the number grew by 17.17 percent in 2005 to 7,709,500 people.<sup>13</sup> The employment in the four county region decreased by 3.45 percent to 7,443,300 in 2009, likely due to the current economic downturn.

**TABLE 3.13-4  
Employment Trends**

	Los Angeles	Orange	San Bernardino	Riverside	Total
2000 <sup>a</sup>	3,957,917	1,340,842	675,676	605,291	6,579,726

<sup>a</sup> Census, 2000.

<sup>b</sup> American Community Survey, 2005.

<sup>c</sup> DOF estimates for 2009.

<sup>d</sup> Regional Transportation Plan 2008, Population, Housing, and Employment Projects, SCAG.

According to the CEDD, the employment in the County of Los Angeles was 4,552,800 in 2005,<sup>14</sup> compared to 3,957,917 in 2000,<sup>15</sup> representing an increase of 15.03 percent. During this same time period, the number of employed people in the County of Orange grew by 14.44 percent, from 1,340,842 in 2000 to 1,534,400 in 2005. Employment in the County of Riverside grew from 605,291 in 2000 to 811,000 in 2005; an increase of 33.99 percent. While the employment in San Bernardino County grew from 675,676 in 2000 to 811,300 in 2005, an increase of 20.07 percent.

The employment in the County of Los Angeles was 4,411,200 in 2009,<sup>16</sup> representing a decrease of 3.11 percent from 2005 to 2009. During this same time period, the number of employed people in the County of Orange decreased by 3.70 percent to 1,477,700 in 2009. Employment in the County of Riverside decreased to 793,000 in 2009; a decrease of 2.22 percent. Employment in San Bernardino County decreased to 761,400 in 2009, a decrease of 6.15 percent.

### **Projected Trends**

According to SCAG projections, the 2015 employment of the four-county region would be 7,902,796, an increase of 11.81 percent over 2009 estimates from DOF. The 2025 employment would be 8,994,743, while 2035 employment would be 9,691,344. These numbers represent an increase of 20.84 percent from 2009 to 2025 and an increase of 30.20 percent from 2009 to 2035 for the four-county region (see Table 3.13-4).

Amongst the four counties within the district, Riverside County and San Bernardino Counties are expected to have a high growth in employment. Employment in the County of Riverside would increase by 78.25 percent from 2009 to 2035, while employment in San Bernardino County would increase by 64.79 percent during the same time period. Comparatively, Los Angeles County would only grow by 14.28 percent from 2009 to 2035 and Orange County would grow by 34.12 percent from 2009-2035. These

<sup>14</sup> *Ibid.*

<sup>15</sup> Census, 2000.

<sup>16</sup> American Community Survey, 2005.

projections, however, do not take into account the employment losses due to recent economic downturn.

## **REGULATORY SETTING**

### **Regional Agencies Regulations**

#### **Southern California Association of Governments**

The Southern California Association of Governments (SCAG) is responsible for preparing the Regional Comprehensive Plan (RCP) and the Regional Transportation Plan (RTP). The RCP serves as a guide for local governments in addressing regional issues and developing local goals and objectives. Adopted in 2008, the RCP establishes a broad set of goals for the region and identifies strategies for agencies at all levels to use in guiding growth decisions. Adopted in 2008, the RTP contains a set of existing socioeconomic projections that are used as the basis for SCAG's transportation planning efforts. They include projections of population, housing, and employment at the regional, county, subregional, jurisdictional, census tract, and transportation analysis zone levels. The RTP includes policies and regulations set forth to ensure that development within the SCAG regional area is within planned and forecast future socioeconomic projections. SCAG information is useful in socioeconomic analyses in that it provides consistent existing and projected demographic data across multiple jurisdictional boundaries.

The Regional Housing Needs Assessment (RHNA) is mandated by State Housing Law as part of the periodic process of updating local housing elements of the General Plan. The RHNA quantifies the need for housing within each jurisdiction during specified planning periods. Communities use the RHNA in land use planning, prioritizing local resource allocation, and in deciding how to address identified existing and future housing needs resulting from population, employment and household growth. The RHNA does not necessarily encourage or promote growth, but rather allows communities to anticipate growth, so that collectively the region and subregion can grow in ways that enhance quality of life, improve access to jobs, promotes transportation mobility, and addresses social equity, fair share housing needs.

### **Local Agency Regulations**

#### **General Plans and Housing Element**

City and county governments typically develop as part of their housing elements that identify goals, objectives, and specific actions to accommodate growth and housing within their jurisdiction. Similarly, general plans also provide policies and programs to promote economic growth in the area and create jobs within their jurisdiction.

## **SUBCHAPTER 3.14**

---

### **EXISTING SETTING - PUBLIC SERVICES**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## **INTRODUCTION**

This section describes the public services that are available within the district and to the individual facilities, which qualify to receive emissions offsets available from the district's internal offset accounts.

## **ENVIRONMENTAL SETTING**

The environmental setting describes the public services that may be affected by the proposed project. The environmental setting addresses police protection services, fire protection services, education facilities and urban transportation features within the district.

### **Police Protection Services**

Law enforcement within the district takes into account a variety of federal, state, county, city, and other local law enforcement agencies. Primary law enforcement is at the community level, with City Police and County Sheriff's Departments providing this service. Additionally, there are more specialized law enforcement agencies that assist in law enforcement at the community or resource level in the region. These specialized agencies include, but are not limited to the California Highway Patrol (CHP), School Police, Airport and Harbor Police, Transit Police, Tribal Police, Park Rangers (federal, state, county, and city), and a wide variety of federal agencies (Federal Bureau of Investigation [FBI], Bureau of Alcohol, Tobacco, Firearms and Explosives [ATF], etc.). Each agency has its own responsibilities, some of which may overlap with other law enforcement agencies. State Park Rangers may call upon County Sheriff's Deputies for assistance. Transit Police might call upon City Police to aid them. In general, law enforcement agencies provide first response to all emergencies, perform preliminary investigations, and provide basic patrol services in their service area. Table 3.14-1, below, shows the breakdown of law enforcement agencies at the county and city level. County service is for both unincorporated areas and cities that contract with the county for law enforcement services.

**TABLE 3.14-1****Summary of Police Service Providers by County within the District<sup>a</sup>**

County	Number of Jurisdictions Served	
	<i>County Sheriff's Departments<sup>b</sup></i>	<i>City Police Departments<sup>c</sup></i>
Los Angeles	41	48
Orange	13	22
Riverside	12	13
San Bernardino	15	10

## NOTES:

<sup>a</sup> Does not include specialty police agencies, such as School Districts, Airports, Ports, etc.

<sup>b</sup> Includes cities and unincorporated county areas served by County Sheriff's Departments.

<sup>c</sup> Includes cities that contract with other cities for police services (i.e., Yorba Linda with Brea, Santa Fe Springs with Whittier, etc.).

Source: SCAG, Draft 2008 RTP PEIR, January 2008, p. 3.12-2.

**Fire Protection Services**

Fire protection within the district involves a number of federal, state, county, city, and other local fire protection agencies. As with police services, primary fire protection services occur at the community level, with city and county fire departments and fire protection districts providing this service. Also providing fire protection services are a variety of volunteer fire companies. There are fire protection agencies that also provide fire protection services within state and federal lands. These agencies include, but are not limited to, federal fire agencies (Bureau of Land Management, National Park Service, National Forest Service, Department of Defense, etc.), state forestry department, tribal fire departments, airport and harbor fire departments, and in some instances business-sponsored fire departments (e.g., refineries, etc.). Each agency provides fire services within its own area of responsibilities, but each of them can call upon other agencies for fire support through mutual aid agreements. Generally, fire departments take proactive and preventative measures to provide fire suppression and emergency response services for all private, institutional, and public facilities within their area of responsibility. Table 3.14-2, below, shows the breakdown of fire prevention agencies at the county and city levels. County service is for unincorporated areas, cities that contract with the county for fire protection service, and independent fire protection districts.

TABLE 3.14-2

Summary of Fire Protection Service Providers by County within the District<sup>a</sup>

County	Jurisdictions Served By		
	County Fire Departments <sup>b</sup>	City Fire Departments	Fire Protection Districts or Other Independent Fire Agencies
Los Angeles	59	30	1 <sup>c</sup>
Orange	23	10	1 <sup>c</sup>
Riverside	18	8	5
San Bernardino <sup>d</sup>	7	13	15 <sup>e</sup>

## NOTES:

<sup>a</sup> Numbers do not include various federal, state, and specialty fire departments, such as Bureau of Land Management, National Park Service, Department of Defense, California Forestry Department (wild lands), private or public airport fire departments, business fire departments (e.g., refineries, Indian Tribal lands, etc.) that might aid county, city, and independent fire departments through mutual aid agreements, and vice versa.

<sup>b</sup> Includes cities and unincorporated county areas served by county fire departments/authorities.

<sup>c</sup> City of La Habra served by the Los Angeles County Fire Department.

<sup>d</sup> Some districts service city and adjoining unincorporated areas.

<sup>e</sup> Five cities (Apple Valley, Barstow, Chino, Chino Hills, 29 Palms) served by independent fire protection districts.

Source: SCAG, Draft 2008 RTP PEIR, January 2008, p. 3.12-3.

## Educational Facilities

There are almost 3 million students enrolled from kindergarten to twelfth grade in the counties within the district. Nearly 140,000 teachers serve these students. Table 3.14-3 lists the student and teacher totals by county.

TABLE 3.14-3

## Kindergarten through Grade 12 Enrollment and Teachers in Counties within the District for the 2008-2009 School Year

County	Enrollment Kindergarten-Grade 12	Teachers
Los Angeles	1,632,191	78,852
Orange	503,524	22,541
Riverside	420,147	19,247
San Bernardino	420,127	19,184
<b>District Counties</b>	<b>2,975,989</b>	<b>139,824</b>
California	6,251,618	306,887

Source: California Department of Education Educational Demographics Office, California Public Schools - County Report, <http://dq.cde.ca.gov/dataquest/>, updated May 26, 2009.

## **Urban Transportation Features**

Elements of the transportation infrastructure, including roadways, freeways, bridges, and railroads, among others, are a large component of the urban environment and affect public services. A discussion of urban transportation features is included below.

### **Freeways, Highways, and Roadways**

On public roadways, there is a constant need for emergency services, including police, fire, and paramedic services. Safety and a constant flow of traffic are maintained by the aforementioned public services on all freeways, highways, and roadways within the district and help facilitate efficient emergency response. In addition, the major ports, airports and shipping centers described below all require police, fire and emergency services to operate efficiently.

### **Rail**

Rail operations within the district can be broken down into two categories, passenger or freight. Passenger operations include Amtrak, Metrolink, and Los Angeles County Metropolitan Transportation Agency (Metro) operated light and heavy rail lines.

Freight service generally includes those operated by BNSF, formally known as Burlington Northern Santa Fe Railway and Union Pacific Railroad (UP). Railyard facilities within the region are predominately located within industrial areas, including the Port of Los Angeles, the Port of Long Beach, East Los Angeles, City of Industry (Los Angeles County), and West Colton. Additional freight facilities are also located in less densely populated areas, such as Barstow and Yermo (San Bernardino County).

### **Airports**

The counties within the district include numerous airports serving both commercial and private airplane flights. Major commercial airports in these counties include the Los Angeles International Airport (LAX), Bob Hope Airport (BUR), and Long Beach Airport (LGB) in Los Angeles County; John Wayne Airport (SNA) in Orange County; Ontario International Airport (ONT) in San Bernardino County; and Palm Springs International Airport (PSP) in Riverside County. Airports with both passenger and cargo capability in the region include LAX, BUR, LGB, and Palmdale Regional Airport (PMD) in Los Angeles County; SNA in Orange County; ONT in San Bernardino County; and PSP in Riverside County. San Bernardino International Airport (SBD) and Southern California Logistics Airport (VCV) in San Bernardino County and March Inland Port (RIV) in Riverside County operate as cargo only airports.

### **Ports**

The shipping ports of Los Angeles and Long Beach represent the major shipping location within the district and also one of the most important shipping locations along the

western United States. Ports require public services for the safety and well being of workers and visitors.

## **REGULATORY SETTING**

Each jurisdiction (i.e., city, county, or special district) within the district is directed by internal standards and policies that guide the provision of public service to its customers. Each agency charged with protecting or providing services to the public (e.g., fire department or agency, police or sheriff's department, schools) maintains specific standards, such as response times, levels of service, school site size, and enrollment capacities, that must be adhered to during construction and operation of a project.

### **Federal**

There are no federal regulations related to public services that are applicable to the proposed project.

### **State**

#### **California Fire Code**

State fire regulations are set forth in Sections 13000 et seq. of the California Health and Safety Code, which include regulations concerning building standards (as also set forth in the California Building Code), fire protection and notification systems, fire protection devices, such as extinguishers and smoke alarms, high-rise building, and childcare facility standards, and fire suppression training.

#### **California Building Code**

Title 24, Part 6 of the California's Building Code contains fire-safety-related building standards referenced in other parts of Title 24. This Code is preassembled with the 2006 International Fire Code by the International Code Council. Title 24 requires building according to fire safety standards for all new construction, including new buildings, additions, alterations, and, in nonresidential buildings, repairs.

#### **California State Assembly Bill 2926 (AB 2926)—School Facilities Act of 1986**

In 1986, AB 2926 was enacted by the state and added to the California Government Code (Section 65995) to authorize school districts to collect development fees based on demonstrated need and generate revenue for school districts for capital acquisitions and improvements. It also established that the maximum fees (adjustable for inflation), which may be collected under this and any other school fee authorization are \$1.50 per square foot of residential development and \$0.25 per square foot of commercial and industrial space.

AB 2926, entitled the “School Facilities Act of 1986,” was then expanded and revised in 1987 through the passage of AB 1600, which added Section 66000 et seq. of the Government Code. Under this statute, payment of statutory fees by developers would serve as total CEQA mitigation to satisfy the impact of development on school facilities. However, further subsequent legislative actions have alternatively expanded and contracted the limits placed on school fees by AB 2926.

### **California Senate Bill 50 (SB 50)**

As part of the further refinement of the legislation enacted under AB 2926, the passage of SB 50 in 1998 defined the Needs Analysis process in Government Code Sections 65995.5–65998. Under the provisions of SB 50, school districts may collect fees to offset the costs associated with increasing school capacity as a result of development. School districts must demonstrate to the state their long-term facilities needs and costs based on long-term population growth in order to qualify for this source of funding.

## **Local**

### **Fire Protection and Prevention Plan**

Fire prevention, fire protection, and emergency medical services within the district operate under the applicable fire codes, municipal codes, and General Plan elements of each jurisdiction (i.e., city or county), which set forth policies and standards for fire station distribution and location, fire suppression water-flow (or fire flow), fire hydrant standards and locations, firefighting equipment access, emergency ambulance services, and fire prevention activities.

### **General Plans**

The most comprehensive land use planning for the district is provided by city and county general plans, which local governments are required by state law to prepare as a guide for future development. The geographic area encompassed by the district includes numerous cities and unincorporated communities in the counties of Los Angeles, Orange, San Bernardino, and Riverside. Each of these counties and incorporated cities has prepared a general plan, which is the primary document that establishes local land use policies and goals. Many of these general plans also establish local policies related to public services, such as those typically found in the Safety Element of a general plan.

## **SUBCHAPTER 3.15**

---

### **EXISTING SETTING - RECREATION**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This section describes the recreational resources that are available within the district.

## ENVIRONMENTAL SETTING

### Federal and State Parks

Federal and state designated open space lands comprise the majority of recreational resources available in the district. These lands provide natural outdoor settings for various recreational activities and can include United States Forest Service (USFS) designated national forests, such as the Angeles National Forest, Cleveland National Forest, and the San Bernardino National Forest; or National Parks Service (NPS) designated parks, such as Joshua Tree National Park and the Santa Monica Mountains Recreation Area. Within these open space areas, responsible federal agencies provide a variety of recreational facilities and infrastructure, including trail designations, campgrounds, scenic outlooks, educational and informative visitors' center facilities, and law enforcement personnel to protect and maintain the natural and recreational resources contained in these federal lands. In addition, the NPS National Register of Historic Places and National Historic Landmarks Program oversee the preservation of approximately 667 historic places and landmarks in the district. These historic resources are often open to the public and provide educational as well as recreational opportunities, usually in the form of a museum, to residents and visitors of California.<sup>1</sup> Other than the USFS and NPS, the Bureau of Land Management (BLM) often works cooperatively with state, regional, and local agencies in the district to manage protected wildlife and habitat resources such as the Coachella Valley National Wildlife Refuge and the Seal Beach National Wildlife Refuge. These refuges offer similar types of recreation to national parks and forests, as well as wildlife viewing opportunities.

There are approximately 40 state parks located within the district, which are under management of the California State Parks Department. State parks include a variety of recreational resources not just limited to wilderness or open space uses. Some of these uses include California historic resources and museums, such as the Antelope Valley Indian Museum; scenic beach areas, such as Bolsa Chica State Beach; and other land-intensive recreational uses, such as the Hungry Valley State Vehicular Recreation Area. The California Office of Historic Preservation (OHP) and the State Historical Resources Commission (SHRC), as part of the State Parks Department, oversee the designation of state park status for various important California Historic resources and Points of Interest. Currently, SHRC has registered and oversees the preservation of approximately 276 California Historic Resources in the district.<sup>2</sup>

---

<sup>1</sup> SCAG 2008. Draft RTP Programmatic EIR. Section 3.4 Cultural Resources. Note: Imperial and Ventura Counties omitted from estimates to provide more accurate account of the district.

<sup>2</sup> *Ibid.*

## Regional and Local Parks

The southern California region contains a varied landscape with large urban and sub-urban centers interspersed between vast expanses of rural and wilderness areas. While federal and state agencies are perhaps best for the development of wilderness recreation resources, regional and local agencies concentrate their efforts on providing outdoor and public recreation facilities within urban centers isolated from the wilderness resources surrounding them. Table 3.15-1 provides an overview of the approximate size and distribution of the various outdoor recreation uses in the district.

**TABLE 3.15-1**  
**Regional and Local Open Space and Recreation Uses by Region (Acres)<sup>a</sup>**

Land Use Category (Acres)	Los Angeles County	Orange County	Western Riverside County	San Bernardino County	Coachella Valley	Total
Beach Parks	1,840	1,350	-	-	-	3,190
Developed Local Parks and Recreation	11,705	6,525	2,978	3,341	805	25,354
Developed Regional Parks and Recreation	3,455	1,409	977	1,139	280	7,260
Golf Courses	12,216	7,307	6,234	4,462	15,412	45,631
Other Open Space and Recreation	3,916	1,185	2,364	4,548	1,245	13,258
Specimen Gardens and Arboreta	627	26	14	18	2	687

Undeveloped Regional Parks and Recreation	11,482	-	23,681	122,074	673,204	830,441
Wildlife Preserves and Sanctuaries	1,228	1,009	3,058	17	1,171	6,483
Totals	46,750	18,814	39,315	135,607	692,197	932,683

<sup>a</sup> Data is taken from SCAG data for the SCAG district. Some data have been omitted to more accurately define the SCAQMD region. The SCAG region encompasses a larger area of Southern California than SCAQMD and as such, data provided for San Bernardino County may be over-representative of the actual portion of the county comprised within the SCAQMD. Similarly, data for Western Riverside County may be over- or under-representative of the actual SCAQMD.

Source: Southern California Association of Governments (SCAG) 2005 Land Use Inventory (2006)

Generally, each region has its own standards and implementation methods for designating and maintaining recreational space. As a general guideline, the National Recreation and Parks Association (NRPA) has developed standards for regional and local recreational land as shown below in Table 3.15-2.

**TABLE 3.15-2  
National Recreation and Parks Association Guidelines for Regional and Local Parks**

<b>Type of Park<sup>a</sup></b>	<b>Service Area</b>	<b>Desirable Size</b>	<b>Acres/1,000 Population</b>
Mini-Park	>0.25 mile radius	1 acre or less	.25 to .50
Neighborhood Park/Playground	0.25-0.5 mile radius per 5,000 people	15+ acres	1.0 to 2.0
Community Park	1-2 mile radius	25+ acres	5.0 to 8.0
Regional Park	Several communities, within 1-hour drive time	200+ acres	5.0 to 10.0
NRPA Park Acreage/ Population Standar	---	---	6.25-10.5

<sup>a</sup> NRPA also has developed standards for sports facilities (see NRPA 1996).

Source: National Recreation and Parks Association, Park, Recreation, Open Space and Greenway Guidelines, 1996.

**Los Angeles County.** Despite continuing economic and population growth, Los Angeles County has maintained its abundant natural resources. A large percentage of the County's natural and wilderness areas are found in the northern region of the County where the Angeles National Forest meets with the unincorporated lands surrounding Santa Clarita, Antelope Valley, and San Fernando Valley. Other areas in the County have fewer open space and wilderness resources available for recreation due to the highly urbanized environment that defines most of Los Angeles County. The County Department of Parks and Recreation oversees local and community parks in both incorporated and unincorporated County areas. In addition, the County operates several large, regional parks and recreation areas, such as Castaic Lake Recreation Area, Frank G. Bonelli Regional Park, the Kenneth Hahn Recreation Area, and four arboreta and botanic gardens, as well as many natural areas and wildlife sanctuaries. The Department of Parks and Recreation also has jurisdiction over 19 public golf courses on 17 sites located throughout the County and maintains over 300 miles of multipurpose riding and hiking trails.

The County standard for the provision of parkland is four acres of local parkland per 1,000 residents of the County's unincorporated population, and six acres of regional parkland per 1,000 residents of the County's total population. In 2004, having recognized a growing need in the County for open space and recreational resources, the County Department of Parks and Recreation produced the Strategic Asset Management Plan (SAMP) for 2020. The SAMP report found that by 2020, the County would be short of the desired four acres/1,000 residents goal by a difference of about 4,600 acres. Despite having over 800,000 acres of recreational land and 650 acres of local parkland available in the unincorporated areas of the County, there are continuing shortages of recreational resources available to urban areas due to accessibility issues and limited availability of land. As such, the County is actively pursuing innovative means of achieving County goals for recreational resources. Such non-traditional forms of parkland include landscaped medians for jogging and walking, athletic fields that double

as seasonal flood management areas, creating rooftop gardens, planning for biking, hiking, and equestrian trails, and integrating open space into redevelopment projects.

**Orange County.** Orange County, unlike Los Angeles County, has a strong mix of developed urban centers and undeveloped or unused lands that present opportunities for expanding recreational resources. Most of the existing recreational parklands in the County are found along the County's scenic coastline and wetlands, the Santa Ana Mountains, and the canyons and hillsides of the Laguna and Newport coasts, collectively known as the South Coast. The regional government of Orange County is committed to a "balanced community" planning strategy that emphasizes the development of balanced land use plans in unincorporated areas. As a result, Orange County has higher proportions of recreational land available to the population than other counties in the district.

OC Parks manages nearly 40,000 acres of parks, historical and coastal facilities and open space for County of Orange as part of the Orange County Community Resources Department. OC Parks includes roughly 32,000 acres in 25 urban and wilderness parks, 7 miles of beaches and other coastal facilities and 7,000 acres of open space lands. It also encompasses 150 miles of existing bike trails and nearly 350 miles of existing and proposed dirt trails, as well as significant historical landmarks.<sup>3</sup> As an instructive example of the relative wealth in recreational land available to Orange County residents, the 2007 SCAG case study of southern California cities notes that the City of Irvine, located in west-central Orange County, has the highest park acres/1,000 people ratio of any city included in the survey.<sup>4</sup> Furthermore, Irvine had over three times as many acres per 1,000 people of any city surveyed within the district. Orange County's regional recreation facilities include regional harbors, beaches, parks, and historic sites and comprise approximately 27,000 acres of existing developed parks. Of the existing 27,000 acres, there are 25 existing regional parks, 19 existing county beaches, 3 county harbors, and 6 regional historic sites or parks. According to the Orange County General Plan Recreation Element, the County also has over 24,000 acres planned for new regional recreation facilities. Additionally, the County has 63 developed local parks with 20 additional parks, which have been accepted under the Orange County General Plan but are yet to be developed. The County's local park policy has a goal of 2.5 acres of local park space per 1,000 county residents. The regional County trail network 348 miles of existing and proposed trails.<sup>5</sup>

**San Bernardino County.** The County of San Bernardino has an abundance of outdoor recreational opportunities. Within the County there are water sports; hiking, bicycling, and equestrian activities; off-road vehicle recreation; fishing, camping and hunting; passive recreation and enjoyment of the natural setting; and developed parks. The major providers of outdoor recreation in the County are the Bureau of Land Management (BLM), the United States Forest Service (USFS), State Department of Parks and

<sup>5</sup> County of Orange, Orange County General Plan, Recreation Element.

Recreation, National Parks Service, County Regional Parks Department, and local City Parks Departments. BLM manages approximately 6,076,378 acres the County's public land in the Desert Region, which is located outside the district. The largest recreational development in the district is the San Bernardino National Forest, which is managed by the USFS and Department of Agriculture, which manage the majority of the geographic area within the Mountain Regions of the County totaling over 671,000 acres in the San Bernardino Mountains and a portion of the San Gabriel Mountains. The national forests are managed by the USFS for multiple uses including recreation, watershed protection, grazing, and forest stand management within the Cucamonga Wilderness, San Gorgonio Wilderness, and Big Horn Mountain Wilderness.

There are also nine regional parks in the County. Regional parks generally encompass 100 or more acres and are designed to serve a population of 100,000 residents. In addition to the regional parks, there are 17 community parks within the County. Community parks serve a two- to four-mile radius with a population of 50,000 to 80,000. The size of these parks is generally from 15 to 20 acres. There are also four designated off-road recreation areas for the use of all-terrain vehicles and motorcycles. Community, municipal and neighborhood park facilities are provided by self-governed park districts within the unincorporated portions of the County and by cities and towns within the unincorporated areas. These facilities typically include playgrounds, sports fields, and senior citizen centers.

The County standard for regional park area is 2.5 acres of park area for each 1,000 population. The County population total (incorporated and unincorporated) is approximately 1,716,166. Using the County standard of 2.5 acres per 1,000 populations, the County needs approximately 4,290 acres of parkland. The total parkland in all three planning regions is 9,647 acres, which exceeds the County standard of 2.5 acres per 1,000 County residents.

**Riverside County.** The County of Riverside currently maintains 35 regional parks, encompassing approximately 22,317 acres. More than half of these parks are located in the western portion of the County, with other facilities scattered in the desert, mountains, and Colorado River regions. Riverside County also contains four park and recreation districts. These four park districts provide approximately 27 neighborhood and community parks accounting for approximately 275 acres of parkland. The largest recreational development in the County, as well as the district, is Joshua Tree National Park, which is approximately 1,017,748 acres in size, of which 794,000 acres are used for recreational uses. Other recreation and park lands in the County's unincorporated land include seven State Parks, accounting for 39,423 acres of County land; 35 regional parks, accounting for 22,317 acres of County land; and 27 community parks between the four park planning districts, accounting for approximately 275 acres of County land. In addition to unincorporated land, cities within the County of Riverside maintain approximately 215 local parks, accounting for approximately 1,543 acres of city land. Other recreational uses in the County include private recreation facilities, such as tennis and basketball courts, swimming pools, playgrounds, and golf courses. The County standard for regional park area is three acres of park area for each 1,000 County residents.

## REGULATORY SETTING

### Federal

#### **United States Bureau of Land Management (BLM)**

The BLM manages nearly 10 million acres of the district, primarily in the eastern portion of the region. The BLM also implements biological resource management policies through its designation of Areas of Critical Environmental Concern.

#### **United States Fish and Wildlife Service (USFWS)**

The USFWS administers the Federal Endangered Species Act (FESA) and designates critical habitat for endangered species. The USFWS also manages the National Wildlife Refuges in the district, such as the Seal Beach Wildlife Refuge.

#### **National Park Service (NPS)**

The NPS manages national parks and wilderness areas. Two national parks and one wilderness area are located in the SCAG region – Joshua Tree National Park and the Santa Monica Mountains National Recreation Area.

#### **United States Forest Service (USFS)**

The USFS manages approximately 2.3 million acres of national forests in the Southern California region. The two national forests in the district are the Angeles National Forest and the San Bernardino National Forest

### State

#### **California Department of Forestry and Fire Protection (CDF)**

The CDF through its responsibility for fighting wildland fires, the CDF plays a role in planning development in forested areas.

#### **California Department of Parks and Recreation (CDPR)**

The CDPR manages and provides sites for a variety of recreational and outdoor activities. The CDPR is a trustee agency that owns and operates all state parks and participates in land use planning that affects state parkland.

#### **California Department of Fish and Game (CDFG)**

The land use mandate of the CDFG is to protect rare, threatened, and endangered species by managing habitat in legally designated ecological reserves or wildlife areas. CDFG

reserves located in the district include the Bolsa Chica Ecological Reserve (Orange County).

### **Coastal Conservancy**

Since its establishment in 1976, the Coastal Conservancy has undertaken approximately 1,000 projects over 1,100 miles of California coastline and the San Francisco Bay. Over 600 projects have been completed and over 300 projects currently active. These projects include construction of trails and other public access facilities, restoration and enhancement of wetlands and other wildlife habitat, restoration of public piers and urban waterfronts, preservation of farmland, and other projects in line with the goals of California's Coastal Act.

## **Local**

### **City and County General Plans**

The most comprehensive land use planning for the district is provided by city and county general plans, which local governments are required by state law to prepare as a guide for future development. The geographic area encompassed by the District includes numerous cities and unincorporated communities in the counties of Los Angeles, Orange, San Bernardino, and Riverside. Each of these counties and incorporated cities has prepared a general plan, which is the primary document that establishes local land use policies and goals. General plans must include seven mandatory elements including a land use, open space and conservation element. Generally, within these elements of the general plans, cities and counties establish local policies related to recreation and parks.

### **Specific and Master Plans**

A city or county may also provide land use planning by developing community or specific plans for smaller, more specific areas within their jurisdiction. These more localized plans provide for focused guidance for developing a specific area, with development standards tailored to the area, as well as systematic implementation of the general plan.

## **SUBCHAPTER 3.16**

---

### **EXISTING SETTING - SOLID/HAZARDOUS WASTE**

**Introduction**

**Environmental Setting**

**Regulatory Setting**

## INTRODUCTION

This section describes the existing generation of solid/hazardous wastes and the associated risks to the environment within the district.

## ENVIRONMENTAL SETTING

### Solid Waste Disposal and Transfer facilities

Over the past ten years, disposal tonnage has decreased significantly within the district as the emphasis on recycling to meet the requirements of Assembly Bill (AB) 939 has served to divert tonnage from landfills and conserve landfill capacity. Table 3.16-1 shows data from the California Integrated Waste Management Board (CIWMB) regarding the number of tons disposed in the year 2008 for each county within the district.

**TABLE 3.16-1**  
**Solid Waste Disposed of in the District Region – CY 2008**

County	Total Tonnage
Imperial	237,874
Los Angeles	8,149,429
Orange	4,010,688
Riverside	3,237,067
San Bernardino	1,542,476
<b>District Region</b>	<b>17,177,534</b>
California	35,641,429

Source: California Integrated Waste Management Board Landfill Tonnage Reports. Retrieved July 15, 2009; from: <http://www.ciwmb.ca.gov/Landfills/Tonnages/>

In viewing facilities on a county-by-county basis, it is important to note that landfills in one county may import waste generated elsewhere. Currently, Orange County offers capacity to out-of-county waste at a “tipping fee” low enough to attract waste from Los Angeles and San Bernardino Counties. In Riverside County, the El Sobrante Landfill is licensed to accept up to 10,000 tons of out-of-county waste per day. Table 3.16-2 provides detailed information on permitted active or planned solid waste landfills in the counties within the district.

**TABLE 3.16-2**  
**Permitted Active or Planned Solid Waste Landfills within the District**

<b>Solid Waste Landfill</b>	<b>County</b>	<b>Closure Date</b>	<b>Daily Disposal (Tons/Day)</b>	<b>Remaining Capacity (Cu. Yds.)</b>	<b>Maximum Capacity (Cu. Yds.)</b>
Scholl Canyon Sanitary Landfill	Los Angeles	1/1/2019	3,400	10,804,900	69,200,000

## Hazardous Waste Management

Hazardous material, as defined in 40 CFR 261.20 and 22 CCR Article 9, is disposed of in Class I landfills. California has enacted strict legislation for regulating Class I landfills. The California Health and Safety Code requires Class I landfills to be equipped with liners, a leachate collection and removal system, and a ground water monitoring system.

There are no hazardous waste disposal sites within the jurisdiction of the district. Hazardous waste generated at area facilities, which is not reused on-site, or recycled off-site, is disposed of at a licensed in-state hazardous waste disposal facility. Two such facilities are the Chemical Waste Management Inc. (CWMI) Kettleman Hills facility in King's County, and the Clean Harbors (formerly Safety-Kleen) facility in Buttonwillow (Kern County). Kettleman Hills has an estimated 2.5 million cubic yard capacity and expects to continue receiving wastes for approximately 3-4 years. The facility is in the process of permitting a landfill expansion which would increase the landfill's life by another five years. The facility operators would then seek a permit for development of a new landfill that would create another 15 years of life.<sup>1</sup> Buttonwillow receives approximately 960 tons of hazardous waste per day and has an approximate remaining capacity of approximately nine million cubic yards. The expectant life of the Buttonwillow Landfill is approximately 40 years.<sup>2</sup>

Hazardous waste also can be transported to permitted facilities outside of California. The nearest out-of-state landfills are U.S. Ecology, Inc., located in Beatty, Nevada; USPCI, Inc., in Murray, Utah; and EnviroSAFE Services of Idaho, Inc., in Mountain Home, Idaho. Incineration is provided at the following out-of-state facilities: Aptus, located in Aragonite, Utah; Aptus, located in Coffeyville, Kansas; Rollins Environmental Services, Inc., located in Deer Park, Texas and Baton Rouge, Louisiana; Chemical Waste Management, Inc., in Port Arthur, Texas; and Waste Research & Reclamation Co., Eau Claire, Wisconsin.

About 1.5 million tons of hazardous waste were generated in 2005 in the four counties that comprise the district and about three million tons of hazardous waste were generated in California (see Table 3.16-3). The most common types of hazardous waste generated in the district include waste oil, inorganic solid waste, contaminated soils, organic solids, asbestos-containing waste, and unspecified oil-containing wastes. Because of the population and economic base in southern California, a large portion of hazardous waste is generated within the district. Not all wastes are disposed of in a hazardous waste facility or incinerator. Many of the wastes generated, including waste oil, are recycled within the district.

## REGULATORY SETTING

### Federal Agencies and Regulations

The United States Environmental Protection Agency (EPA) is the primary federal agency charged with protecting human health and with safeguarding the natural environment: air, water, and land. EPA works to develop and enforce regulations that implement environmental laws enacted by Congress. EPA is responsible for researching and setting national standards for a variety of environmental programs, and delegates to states and tribes the responsibility for issuing permits and for monitoring and enforcing compliance.

Since 1970, Congress has enacted numerous environmental laws including the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA); and the Toxic Substances Control Act (TSCA).

The Hazardous Materials Transportation Act is the federal legislation regulating the transportation of hazardous wastes. The primary regulatory authorities are the U.S. DOT, the Federal Highway Administration, and the Federal Railroad Administration. The Hazardous Materials Transportation Act requires that carriers report accidental releases of hazardous materials to the Department of Transportation at the earliest practicable moment (49 CFR Subchapter C, Part 171).

40 CFR, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA) establishes minimum location standards for siting municipal solid waste landfills. Because California laws and regulations governing the approval of solid waste landfills meet the requirements of Subtitle D, the USEPA has delegated the enforcement responsibility to the State of California. California laws and regulations governing these facilities are summarized below.

### **State Agencies and Regulations**

The Department of Toxic Substances Control (DTSC) is responsible for the permitting of transfer, disposal, and storage facilities. The DTSC conducts annual inspections of hazardous waste facilities. Other inspections can occur on an as-needed basis.

With regard to solid non-hazardous wastes, the California Integrated Waste Management Act of 1989 (AB 939), as amended, requires each county to prepare a countywide siting element which identifies how the county and the cities within the county will address the need for 15 years of disposal (landfill and/or transformation i.e., waste-to energy facilities) capacity to safely handle solid waste generated in the county, which remains after recycling, composting, and other waste diversion activities. AB 939 has recognized that landfills and transformation facilities are necessary components of any integrated solid waste management system and an essential component of the waste management hierarchy. AB 939 establishes a hierarchy of waste management practices in the following order and priority: (1) source reduction; (2) recycling and composting; and (3) environmentally safe transformation/land disposal.

### **California Integrated Waste Management Act**

As many of the landfills in the state are approaching capacity and the siting of new landfills becomes increasingly difficult, the need for source reduction, recycling, and composting has become readily apparent. In response to this increasing solid waste problem, in September 1989 the Legislature passed AB 939, known as the California Integrated Waste Management Act. The Act requires every city and county in the state to prepare a Source Reduction and Recycling Element (SRRE) with its Solid Waste

Management Plan. The purpose of AB 939 is to facilitate the reduction, recycling, and re-use of solid waste to the greatest extent possible.

**Department of Resources Recycling and Recovery (CalRecycle) (formerly known as California Integrated Waste Management Board (CIWMB))**

CalRecycle has numerous responsibilities in implementing the federal and state regulations summarized above. CalRecycle is the state agency responsible for permitting, enforcing and monitoring solid waste landfills, transfer stations, material recovery facilities (MRFs), and composting facilities within California. Permitted facilities are issued Solid Waste Facility Permits (SWFPs) by CalRecycle. CalRecycle also certifies and appoints Local Enforcement Agencies (LEAs), county or city agencies which monitor and enforce compliance with the provisions of SWFPs. CalRecycle is also responsible for monitoring implementation of AB 939 by the cities and counties. In addition to these responsibilities, CalRecycle also manages the Recycled-Content Materials Marketing Program to increase the understanding of and commitment to using specific recycled-content products in road applications, public works projects and landscaping. These products include recycled aggregate, tire-derived aggregate (TDA), rubberized asphalt concrete (RAC), and organic materials.

As discussed above AB 939 requires that each county in the state of California prepare a Countywide Integrated Waste Management Plan (CIWMP). The CIWMP is a countywide planning document that describes the programs to be implemented in unincorporated and incorporated areas of the county that will effectively manage solid waste, and promote and implement the hierarchy of the Integrated Waste Management Act. The CIWMPs consists of a Summary Plan (SP), a Source Reduction and Recycling Element (SRRE), a Household Hazardous Waste Element (HHWE), a Non-Disposal Facility Element (NDFE), and a Countywide Siting Element (CSE).<sup>3</sup>

**California Department of Transportation (Caltrans)**

Caltrans sets standards for trucks transporting hazardous wastes in California. The regulations are enforced by the CHP. Trucks transporting hazardous wastes are required to maintain a hazardous waste manifest. The manifest is required to describe the contents of the material within the truck so that wastes can readily be identified in the event of a spill.

**Local Agencies and Regulations**

Each county within the district has created a CIWMP in accordance with AB 939. Below is a brief description of recent updates to these plans by county.

---

<sup>3</sup> California Integrated Waste Management Board, Countywide Integrated Waste Management Plan Enforcement, Retrieved November 8, 2007 from <http://www.ciwmb.ca.gov/LgLibrary/Policy/CIWMPEnforce/Default.htm#Table>

### **Los Angeles County**

The County prepares an annual CIWMP report that details the revision process, assesses remaining permitted capacity for a mandated 15-year planning horizon. Typically the report outlines different disposal capacity scenarios. The report outlines county solid waste management challenges, including a shortage of processing capacity in the county, insufficient markets for recovered materials, necessary updates to the Disposal Reporting System to incorporate all recommendations made by the legislature, and steps to promote and develop conversion technologies. Los Angeles County is revising its SP and CSE to reflect changes in the County's policies and goals, including promotion of conversion technologies, formation of the Los Angeles Regional Agency, update of countywide jurisdiction assistance programs to meet diversion goals, expansion of existing disposal facilities, and development of additional non-disposal facilities for the use of out-of-county disposal facilities.

The 2007 CIWMP found that all existing local landfills and all currently planned landfill expansions would be inadequate to meet future refuse disposal demands, with a shortfall expected to be experienced by 2015. In order to address this shortfall, a number of recommendations are made, including additional capacity expansions at existing landfills, new conversion technologies (recycling, reuse, composting, incineration, etc), and new transfer and waste transport systems (including waste-by-rail) to out of county areas.<sup>4</sup>

### **Orange County**

Orange County completed the first 5-year review of its CIWMP in April 2003. It found sufficient disposal capacity for the 15-year planning horizon but identified other challenges, including the lack of an operational materials recovery facility in the southern portion of the county, changes in records management to comply with the Disposal Recovery System, and determination of accurate base year data.

In addition to the CIWMP, Orange County's Integrated Waste Management Department has initiated a long-term strategic planning project—the Regional Landfill Options for Orange County (RELOOC)—which assesses the solid waste disposal needs of Orange County for the next 40 years. RELOOC's 2005 Strategic Plan Update summarizes progress to maximize capacity at existing landfills, assess alternative technologies and potential out-of-county disposal sites, and expand the Frank R. Bowerman and Olinda Alpha landfills.<sup>5</sup>

---

<sup>4</sup> Los Angeles Countywide Integrated Waste Management Board, Countywide Integrated Waste Management Plan, 2007 Annual Report, Retrieved July 12, 2009 from [http://dpw.lacounty.gov/swims/Upload/2007%20CIWMP%20Annual%20Report\\_5343.pdf](http://dpw.lacounty.gov/swims/Upload/2007%20CIWMP%20Annual%20Report_5343.pdf)

<sup>5</sup> Draft 2008 RTP PEIR, January 2008 p. 3.12-12.

### **Riverside County**

Riverside County's CIWMP was approved in 1996, and its 2004 5-year review found the original plan remained applicable; accordingly, no comprehensive update was required at that time. The most recent 5-year review report was due in September 2008<sup>6</sup>, but is not currently available. The Non-Disposal Facility Element was updated in 2006 to include amendments to one transfer and processing facility and one recycling facility. It also includes plans for two proposed composting facilities and one transfer station/materials recovery facility, pending permit approval. At the time of the 2004 Annual Report, it was observed that by utilizing current programs and facilities, Riverside County had 19 years of disposal capacity remaining.

### **San Bernardino County**

San Bernardino County CIWMP reflects updates to the county's goals and policies, changes to its disposal facilities, and assesses disposal capacity for the mandated 15-year planning horizon. Updated policies include programs to help jurisdictions reach diversion goals, such as additional recycling and composting programs and the development of regional material recovery facilities. An expansion of the Barstow Landfill site would add an additional 59.7 million tons to county-wide refuse capacity, and approval for this expansion was granted in 2008. Accordingly, with the inclusion of this planned expansion, the 2007 CIWMP found sufficient disposal capacity for the following 38 years.<sup>7</sup>

### **Cities**

Cities are responsible for working with each county's Local Task Force to create Source Reduction and Recycling Element (SRREs) and Household Hazardous Waste Elements (HHWEs) for inclusion in the county plan. The SRRE details how the jurisdiction will comply with the diversion rates mandated by the state, and the HHWE details how the jurisdiction will handle household hazardous waste. These elements are reviewed every five years and updated when necessary.

### **Regional Water Quality Control Boards (RWQCB)**

New or expanded landfills must submit Reports of Waste Discharge to the RWQCBs prior to landfill operations. In conjunction with the CIWMB approval of SWFPs,

RWQCBs issue Waste Discharge Orders, which regulate the liner, leachate control and removal, and groundwater monitoring systems at Class III landfills.

**SCAQMD**

The SCAQMD regulates emissions from landfills. Landfill owners/operators must obtain permits to construct and operate landfill flares, cogeneration facilities or other facilities used to combust landfill gas. Owner/operators also are subject to the provisions of SCAQMD Rule 1150.1 (Control of Gaseous Emissions from Landfills). This rule requires the submittal of a compliance plan for implementation of a landfill gas control system, periodic ambient monitoring of surface emissions, and the installation of probes to detect the lateral migration of landfill gas.

### **EXISTING SETTING – TRANSPORTATION/TRAFFIC**

**Introduction**

**Environmental Setting**

**Regulatory Framework**

## INTRODUCTION

This section describes the current transportation system in the district.

## ENVIRONMENTAL SETTING

The transportation system within the district consists of roads and highways, public transit (paratransit<sup>1</sup>, bus and rail), freight railroads, airports, marine ports and intermodal terminals. The regional roadway system consists of an interconnected network of local streets, arterial streets, freeways, carpool lanes, and toll roads. This roadway network allows for the operation of automobiles, carpools, motorcycles, private and public buses, and trucks. Non-motorized transportation modes, such as bicycles, share many of these facilities. The regional public transit system includes local shuttles, municipal and area-wide public bus operations, rail rapid transit operations, regional commuter rail services, and inter-regional passenger rail service. The freight railroad network includes an extensive system of private railroads and several publicly-owned freight rail lines serving industrial cargo and goods. The region's ports (i.e., Port of Long Beach and Port of Los Angeles) support substantial international and interregional freight movement and tourist travel. Intermodal terminals consisting of freight processing facilities serve the function of transfer, storage and distribution of goods. The airport system consists of commercial, general, and military aviation facilities serving passenger, freight, business, recreational, and defense needs.

The regional transportation system is currently operating at capacity during peak periods. The roadway system shows substantial freeway congestion in the morning and evening peak period, with random episodes of incident-related (e.g., accident, construction repair and maintenance, etc.) congestion throughout the day. The transit system is experiencing substantial overcrowding on a number of core urban bus routes with significant excess capacity on most off-peak and peripheral routes. Rail transit and commuter rail services are at or near capacity during peak hours, especially in the routes serving the downtown Los Angeles area.

### **Regional Freeway and Highway System**

The regional freeway and highway system (e.g., interstate highways, U.S. highways, and state routes) shown in Figure 3.17-1 is the primary means of person and freight movement for the region. This system provides for direct auto, bus, and truck access to employment, services, and goods. The network of freeways and state highways serves as the backbone of the system offering very high capacity limited-access travel and serving

---

<sup>1</sup> An auxiliary transit service without fixed routes or schedules, usually serving the disabled.

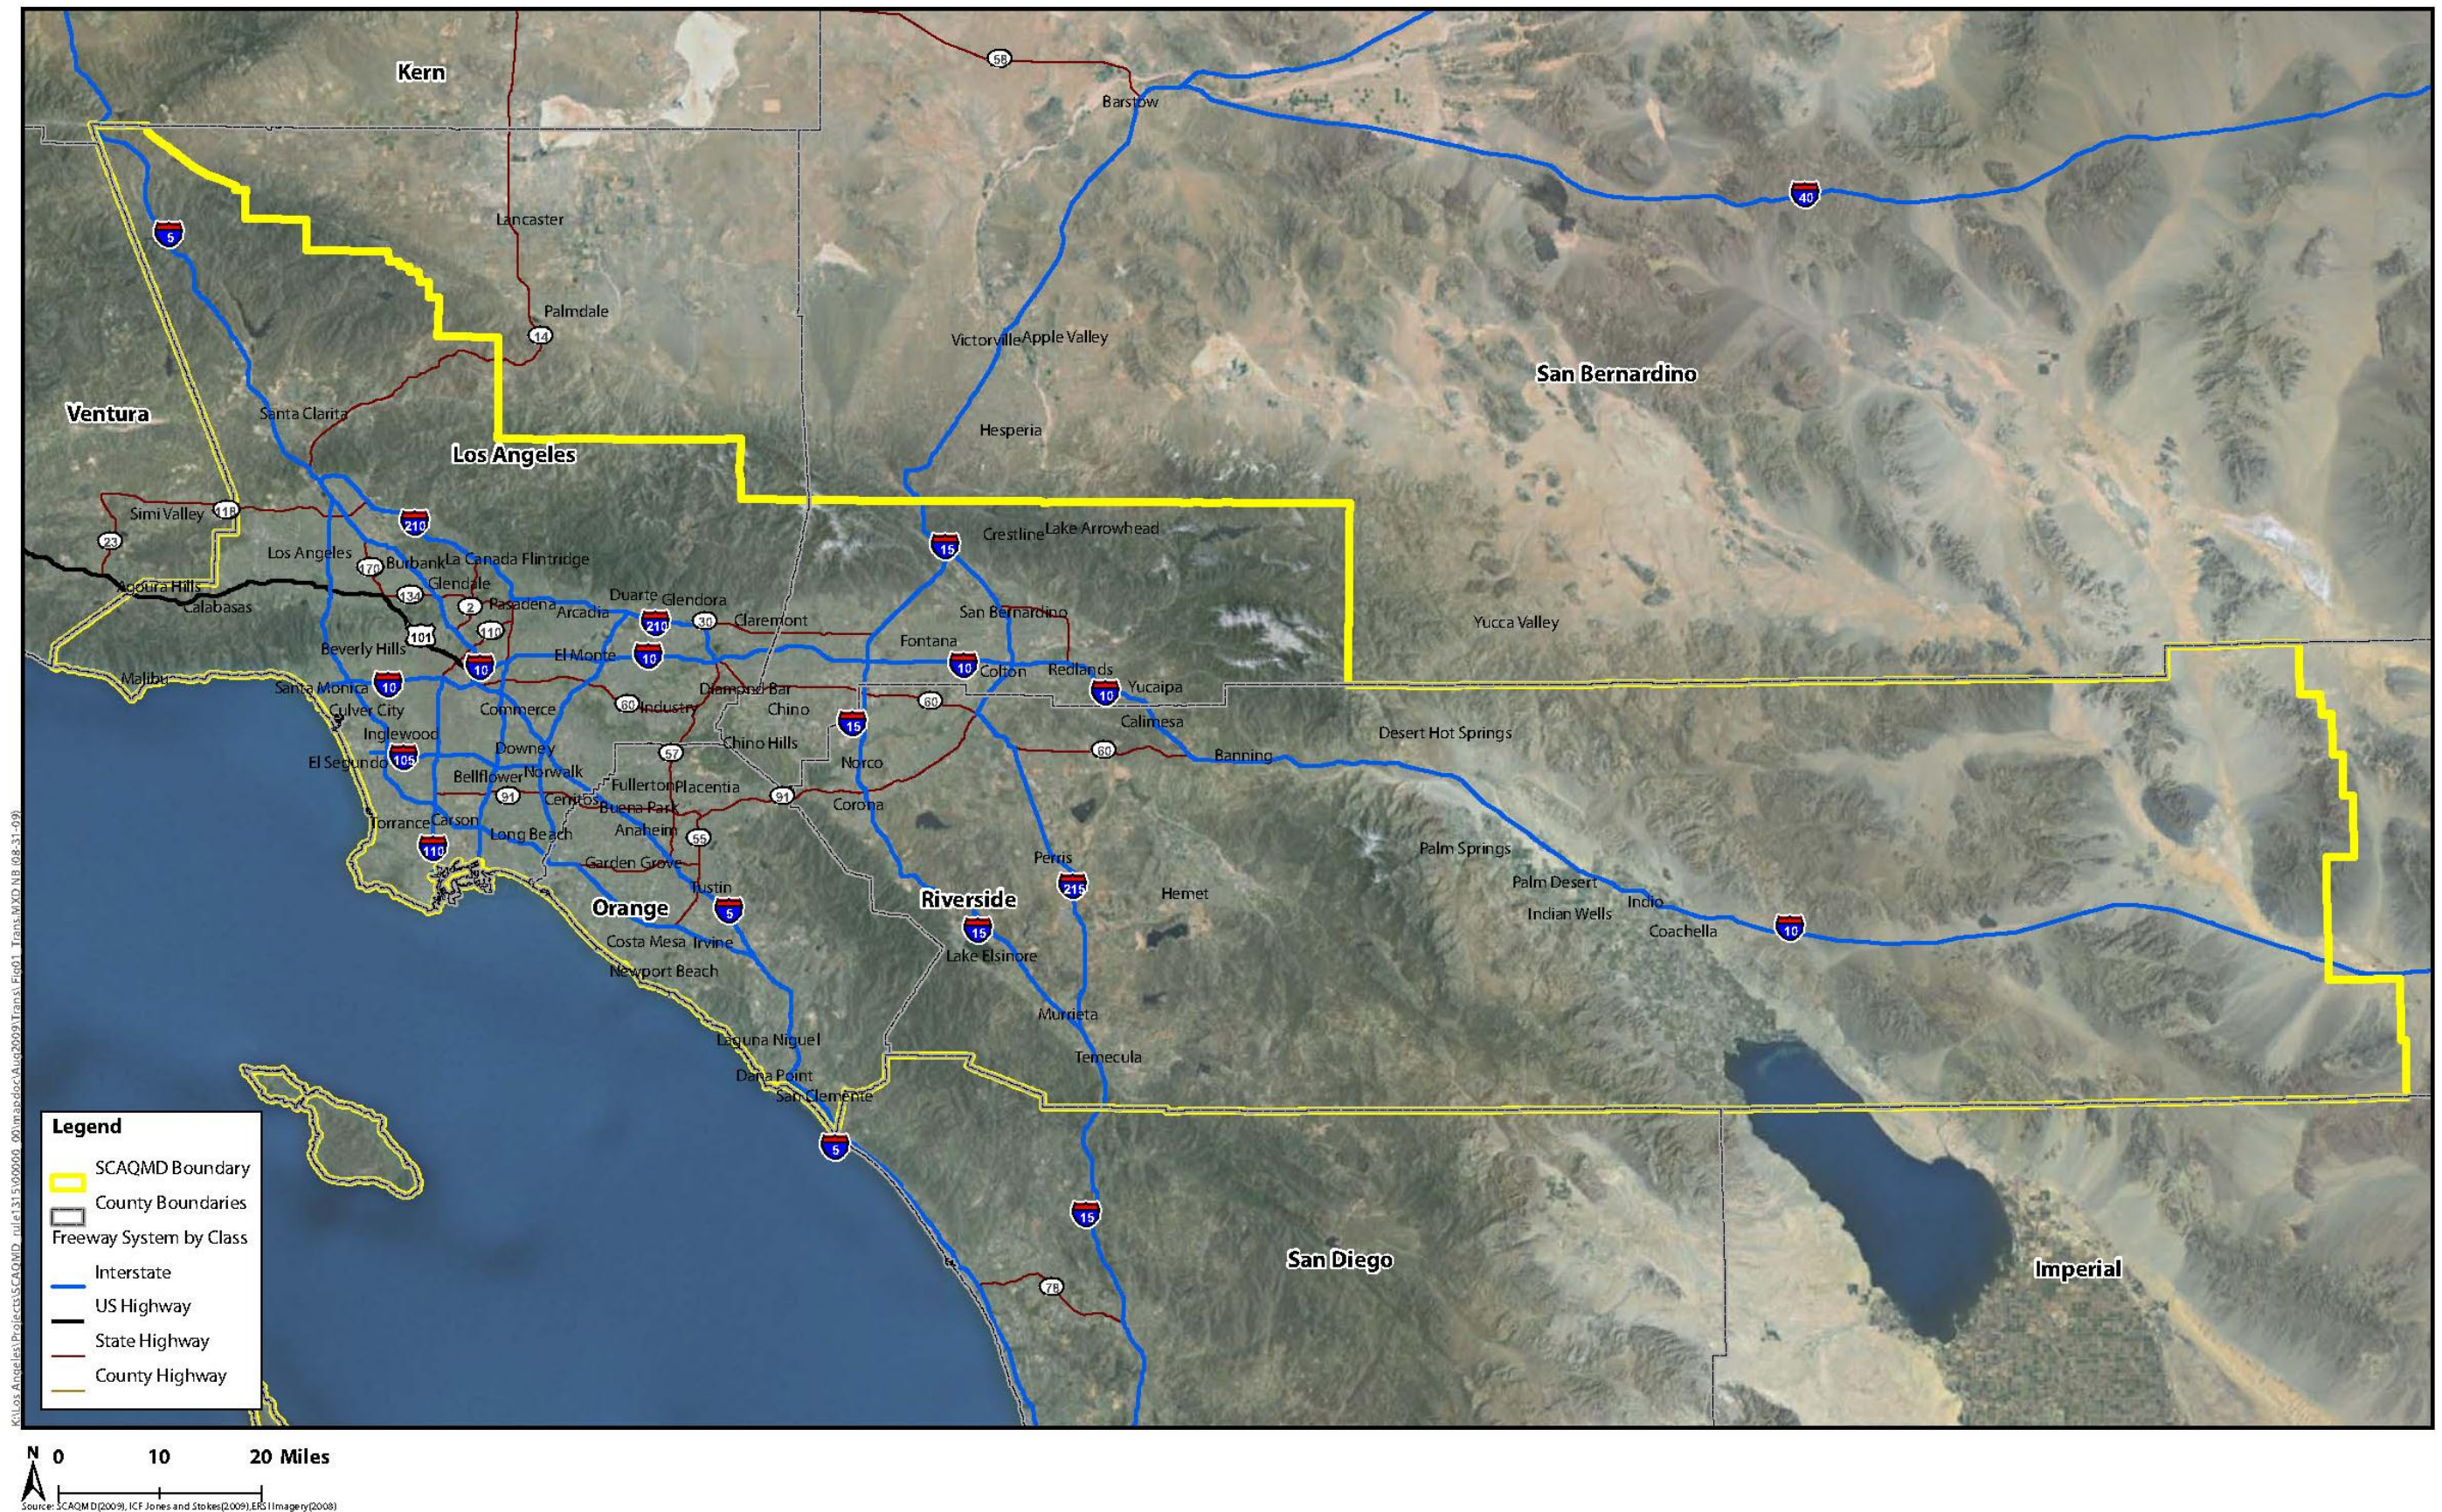

as the primary heavy-duty truck route system. These freeways are a sub-set of the state highway system.

The California Department of Transportation (Caltrans) is responsible for maintaining the state highway system through a rehabilitation program and a maintenance program. Pavement rehabilitation improves the roadway and is designed to extend its service life an additional 10 years. Maintenance activities keep the roadway safe and serviceable until rehabilitation is needed. Pavement maintenance activities include routine maintenance (day-to-day maintenance of roadway), major maintenance (planned work that is generally done under contract), and preventive maintenance (treatments applied when pavement distress is minimal to extend its period of usefulness). Roadway maintenance is primarily funded through the state's tax on the sale of gasoline.

### **Regional High-Occupancy Vehicle (HOV) System and Park-and-Ride System**

The regional HOV system consists of exclusive lanes on freeways and arterials, as well as busways and exclusive rights-of-way dedicated to the use of high-occupancy vehicles. It includes lanes on freeways, ramps, and freeway-to-freeway connectors. The regional HOV system is designed to maximize the person-carrying capacity of the freeway system through the encouragement of shared ride travel modes. HOV lanes operate at a minimum occupancy threshold of either 2 or 3 persons. Many include on-line and off-line park-and-ride facilities, and several HOV lanes are full "transit-ways," including on-line and off-line stations for buses to board passengers.

Park-and-ride facilities are generally located at the urban fringe along heavily-traveled freeway and transit corridors and support shared-ride trips, either by transit, by carpool, or vanpool. Most rail transit stations have park-and-ride lots nearby.

**Figure 3.17-1**  
Major Freeway Routes within South Coast Air Quality Management District

### **Local Roadway System**

The local roadway system comprises roads that are under the jurisdiction of a particular city or county public works department. Local roads provide access to adjacent parcels and also provide a route for traffic from the urbanized areas of the county onto the state highway system.

The primary source of funding for roadway maintenance is also through the state's tax on the sale of gasoline; however, other funding sources, such as local taxes (e.g., property taxes), may be allocated for roadway maintenance. Additionally, projects that involve the generation of large volumes of truck traffic on local roadways may be required to contribute a fee that is applied to maintenance costs, resulting from the additional traffic's damage to the roadway surface.

### **Arterial Street System**

The local street system provides access for local businesses and residents. Arterials account for bulk of the total road network and carry a high percentage of total traffic. The arterial network provides high levels of signalized street capacity and serves as a feeder system for the regional freeways. These streets also provide an integral part of the regional transportation system, particularly for shorter trips, acting as alternative routes to freeway driving. Peak period congestion on the arterial street system occurs generally in the vicinity of activity centers, at bottleneck intersections and near many freeway interchanges.

### **Public Transit**

Within the district, public transit service is comprised of local and express buses, rapid bus, urban rail, including subway and light rail principally centered in the core of Los Angeles County, commuter rail that spans five counties, and shuttles/circulators that feed all transportation modes and activity centers. Local service is supplemented by municipal lines and shuttle services.

The largest provider of public transit service in Los Angeles County is the Los Angeles County Metropolitan Transportation Authority (Metro). Metro operates a comprehensive network of fixed-route bus routes and an urban rail system (Metro Rail).

The largest provider of public transit service in Orange County is the Orange County Transportation Authority (OCTA), which operates more than 400 buses on over 70 local and express routes throughout the urbanized portions of Orange County.

The largest provider of public transit service in Riverside County is the Riverside Transit Agency (RTA), which is the primary provider of fixed-route and paratransit services

throughout a 2,500-square-mile service area in the western portion of Riverside County. It operates buses on approximately 40 local and express routes.

The largest provider of public transit service in San Bernardino County is Omnitrans, which provides bus and paratransit services in a 480-square-mile area in the San Bernardino Valley in the western portion of the county. It operates a fleet of more than 218 buses over approximately 35 routes.

### **Regional Commuter Rail**

Commuter rail service is operated by the Southern California Regional Rail Authority (SCRRA). In October of 1992, the SCRRA began initial operation of the Metrolink commuter rail system on four lines. Service on the initial system was greatly expanded after the 1994 Northridge earthquake. Currently (2009), SCRRA operates seven routes, including six from downtown Los Angeles to Oxnard, Lancaster, San Bernardino, Riverside, and Oceanside, from San Bernardino to Irvine, and from Riverside via Fullerton to downtown Los Angeles.

Amtrak provides significant regional and inter-regional service on the San Diego to San Luis Obispo corridor (also known as Amtrak's Pacific Surfliner corridor), operating 30 trains (combined weekday and weekend service) from Los Angeles Union Station. Additionally, Amtrak operates three interstate routes within the region (Coast Starlight between Los Angeles and Seattle, Sunset Limited – between California and Louisiana, and Southwest Chief – between Los Angeles and Chicago operating an average of four trains per day.

### **Goods Movement**

Goods movement includes trucking, rail freight, air cargo, marine cargo, and both domestic and international freight, the latter entering the U.S. via the marine ports, airports, and the international border with Mexico. Additionally, many cargo movements are intermodal (e.g., sea to truck, sea to rail, air to truck, or truck to rail). The goods movement system includes not only highways, railroads, sea lanes, and airways but also intermodal terminals, truck terminals, railyards, warehousing, freight consolidation/deconsolidation terminals, freight forwarding, package express, customs inspection stations, truck stops, and truck queuing areas.

### **Railroads**

The District is served by two main line commercial freight railroads - the Burlington Northern and Santa Fe Railway Co. (BNSF) and the Union Pacific Railroad (UP). These railroads link southern California with other U.S. regions, Mexico, and Canada either

directly or via their connections with other railroads. They also provide freight rail service within California.

## **REGULATORY FRAMEWORK**

### **State and Federal Requirements**

The Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21), signed into law in 1998, provides the regulatory framework at the federal level for transportation planning in urban areas. This legislation requires that Metropolitan Planning Organizations (MPO) prepare long-range transportation plans. In federally designated air quality nonattainment and maintenance areas, the long-range transportation plan is to be updated every three years. The State of California has additional regulations for the preparation of long-range transportation plans.

### **Regional Requirements**

#### **Regional Transportation Plan and Regional Transportation Improvement Program**

Southern California Association of Governments (SCAG) is the MPO within the district and is responsible for the preparation of the Regional Transportation Plan (RTP) and the Regional Transportation Improvement Program (RTIP) in order to meet state and federal certification requirements. The 2008 RTP presents the transportation vision through the year 2035 and provides a long-term investment framework for addressing the region's transportation and related challenges. The 2008 RTIP is a capital listing of all the transportation projects proposed over a six-year period for the SCAG region to implement projects and programs listed in the RTP. The projects include highway improvements, transit, rail and bus facilities, HOV lanes, signal synchronization, intersection improvements, freeway ramps, etc. County Transportation Commissions have the responsibility under state law of proposing county projects, using the current RTP's policies, programs, and projects as a guide, from among submittals by cities and local agencies.

#### **Congestion Management Program**

In order to meet federal certification requirements, SCAG and the county Congestion Management Agencies (CMAs) have to work together to develop a Congestion Management System (CMS) process for the region. In the SCAG region, the CMS is comprised of the combined activities of the RTP, the state Congestion Management Program (CMP), and the RTIP.

Under state law, CMPs are prepared and maintained by the CMAs. Metro, OCTA, the Riverside County Transportation Commission (RCTC), and the San Bernardino Associated Governments (SANBAG) are the designated CMAs of each county and are subject to state requirements. Because the magnitude of congestion and degree of urbanization differ among the counties, each CMP differs in form and local procedure. By state law, all CMAs perform the monitoring and management functions for highway performance, multi-modal performance, transportation demand management (TDM), land use programs and analysis, capital improvement programs, and deficiency planning. These monitoring and management functions would also fulfill the federal CMP requirements. All projects should conform to the CMP requirements of the respective county.

## **Local**

### **General Plans**

Under state planning law, every city and county must adopt a General Plan that sets forth the goals, policies and implementation measures for future growth and development. General plans must include seven elements, among which is a circulation element. The circulation element must describe the existing transportation network and describes all planned future transportation improvements. Many local transportation elements, or their implementing ordinances, include criteria for measuring the functionality of current and future roadways, typically through a level-of-service (LOS) measurement system, a volume-to-capacity (VC) ratio, or other such approaches.

# **DIRECT ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES - METHODOLOGY**

**Introduction**

**Direct Impacts Methodology - Air Quality**

**Direct Impacts Methodology - Visibility**

**Direct Impacts Methodology - Climate Change**

## INTRODUCTION

CEQA Guidelines §15126.2(a) requires environmental documents to identify significant environmental effects that may result from a proposed project, with consideration given to both short- and long-term impacts. If significant adverse environmental impacts are identified, CEQA Guidelines §15126.4 requires a discussion of feasible measures that could either avoid or substantially reduce any adverse environmental impacts.

As explained in more detail in Chapter 2, the proposed project consists of adopting a revised version of SCAQMD Rule 1315. The rule would establish procedures for tracking emissions offsets that would be maintained in the SCAQMD internal offset accounts. The SCAQMD would be able to rely upon the offsets from its internal accounts when permitting a new or modified stationary source under Rule 1304 (exempt sources) or Rule 1309.1 (Priority Reserve). By conducting such tracking, the SCAQMD ensures that emissions increases from new or modified major federal sources permitted under Rules 1304 and 1309.1 are offset by equivalent emissions reductions.

Proposed Rule 1315 would not authorize any particular sources to be permitted and operated. The rules that authorize such permitting, in the context of Rule 1315, are Rules 1304 and 1309.1. This PEA assumes that a direct consequence of adopting Rule 1315 would be to enable continued issuance of permits under Rules 1304 and 1309.1. The emissions associated with industry source categories potentially eligible to receive permits under those rules are the emissions attributed to the proposed project. Accordingly, this Chapter addresses the following direct effects relating to emissions, as specified under CEQA Guidelines:

### **Air Quality Impacts**

- **Conflict with Air Quality Management Plan.** Whether the proposed project would conflict with or obstruct implementation of the SCAQMD 2007 Air Quality Management Plan.
- **Mass Emissions and Modeled Concentrations of Criteria Pollutants.** Whether mass emissions or modeled concentrations of criteria pollutant emissions would violate any air quality standard or contribute to an existing or projected air quality violation.
- **Health Effects of Criteria Pollutant Emissions and Toxic Air Contaminants.** Whether emissions would expose sensitive populations to substantial pollutant concentrations.
- **Odors.** Whether emissions would create objectionable odors affecting a substantial number of people.

### **Visibility Impacts**

- **Visibility.** Whether emissions would have a substantial effect on a scenic vista, or otherwise substantially degrade the existing visual character or quality of the affected region.

### **Climate Change Impacts**

- **Greenhouse Gas Emissions.** Whether the proposed project would result in greenhouse gas emissions that may have a significant effect on the environment.

These effects are evaluated on a project and cumulative basis. In addition, this chapter also includes a discussion of indirect air quality impacts.

In addition to the criteria identified above, Appendix G to the State Resource Agency's CEQA Guidelines provides a sample checklist that asks whether a project would conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases. No adopted plan, policy or regulation pertaining to greenhouse gases directly applies to proposed Rule 1315. Accordingly, this suggested standard is not addressed further.

## **DIRECT IMPACTS METHODOLOGY – Air Quality**

### ***CEQA Baseline***

CEQA Guidelines §15125(a) describes the concept of “baseline” as follows: “An EIR must include a discussion of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, ...from both a local and regional perspective. The environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant.”

This guideline does not mean that the existing environmental setting is always the appropriate CEQA baseline. As stated by a well-known treatise, “...by using the word ‘normally’, the Resources Agency has implicitly recognized that, at least in some circumstances, a ‘past’ or ‘future’ baseline might be appropriate.” *Remy, et al., Guide to CEQA, California Environmental Quality Act, 11th Ed. 2007, page 199.*

The analysis in this PEA assumes Rule 1315 will remain in effect through the year 2030 resulting in the emission of air pollutants from sources obtaining permits under Rule 1304 and 1309.1 in reliance on the SCAQMD internal account offsets over a twenty-year period. This assumption is consistent with subdivision (j) of the proposed rule, which specifies a sunset date of January 1, 2031. Because the project will be carried out over the next twenty years, a “future” baseline is appropriate for assessing the project's direct emissions-related effects. Sources obtaining permits in reliance on Rule

1304 and 1309.1 make up a portion of the regional growth analyzed in the 2007 AQMP. During this twenty-year time frame, the 2007 AQMP forecasts that the total amount of regional emissions of all pollutants will be dropping substantially, due to the effect of pollution control rules and regulations adopted by SCAQMD, EPA, and CARB. The overall reduction in emissions from these regulatory controls will be greater than the increase in emissions associated with regional growth. As a result, if total regional emissions under the proposed project were compared to the level of emissions existing at the time the notice of preparation for this PEA was published, the comparison would show pollution levels for all pollutants that would be lower than they are today. Such an analysis would not give a full picture of the effect of the proposed project for purposes of CEQA.

Accordingly, to ensure that the decision-makers and the public are provided with sufficient information about the emissions-related effects of the proposed project, this PEA compares forecasts of future emissions with the proposed project in place to forecasts of future emissions without the proposed project. The analysis assumes that if the project were not approved, a portion of the regional growth projected in the AQMP would not occur and future regional emissions without the project would be lower than they would be with the project. The project's impacts and their significance are thus determined based upon the incremental emissions attributed to the proposed project in comparison to conditions without the project.

The conditions projected to exist without the project represent reduced levels of growth in the region, resulting in lower levels of emissions which in turn would equate to potential improvements to air quality beyond the improvements forecasted to occur under the AQMP. In this context, the consequence of approving the proposed project would be to forego such potential additional improvements. Stated differently, the impact analysis asks the questions: Without the proposed project, how much cleaner would the air be? Also, would the region attain the relevant standards sooner without the proposed project? And how much lower would greenhouse gas emissions be without the project?

### *Analysis Years*

The SCAQMD has adopted several plans that demonstrate that the national ambient air quality standard for PM<sub>10</sub> has already been attained in the Basin and in the Coachella Valley, and that the currently-existing standards for ozone and PM<sub>2.5</sub> will be attained in the time required by the Clean Air Act. The air quality analysis is presented for the years in which emission reductions are required to be in place in order for the Basin to attain the NAAQS, as well as for the project end year of 2030. The years modeled are 2014 for a 2015 PM<sub>2.5</sub> attainment date, 2023 for a 2024 ozone attainment date, and 2030 for the project end date. 2030 is also expected to be approximately the year the Basin will be required to attain the proposed future new 8-hour ozone standard, expected to be finalized by EPA in 2010. The Coachella Valley is required to attain the existing ozone standard by 2018.

The analysis focuses on the Basin and the Coachella Valley, which are the two areas within the SCAQMD's jurisdiction that are designated as federal nonattainment regions under the CAA. The Riverside County portion of the MDAB, which is also within the SCAQMD's jurisdiction, is designated as a nonattainment region only with respect to the state standards (CAAQS) for ozone and PM<sub>10</sub>. Unlike the Basin and the Coachella Valley, this area of the SCAQMD's jurisdiction does not have a monitoring station to allow for the modeling of concentration-based impacts. This area of the district has very few stationary sources, and is unlikely to be significantly impacted by the proposed project. However, it is conservatively assumed for purposes of the environmental analysis that any significant impact identified for the Coachella Valley would apply equally to this area of the MDAB.

## **Mass Emissions of Criteria Pollutants**

As explained in more detail in Chapter 3, the federal Clean Air Act and state counterpart (or state air quality laws) require the SCAQMD to attain numeric air quality standards for ozone, PM<sub>10</sub>, PM<sub>2.5</sub>, NO<sub>2</sub>, SO<sub>2</sub>, CO and lead. Ozone is caused by emissions of VOC and NO<sub>x</sub>. PM<sub>2.5</sub> is caused by direct emissions of PM<sub>2.5</sub>, as well as emissions of SO<sub>x</sub> and NO<sub>x</sub>. Accordingly, the following pollutants are considered to be criteria pollutants: VOC, NO<sub>x</sub> including NO<sub>2</sub>, SO<sub>x</sub> including SO<sub>2</sub>, PM<sub>10</sub>, PM<sub>2.5</sub>, CO, and lead.

For criteria pollutants, the analysis of project impacts was performed by first determining the total quantities of future emissions of each criteria pollutant that are expected to occur under the proposed project. Next, staff determined the future emissions of each criteria pollutant under future conditions without the project. The incremental difference between emissions under project conditions and emissions without the project was used to quantify and assess project impacts.

### ***Future Emissions Under the Proposed Project***

Proposed Rule 1315 includes a mechanism that imposes air pollutant-specific caps on the cumulative net emissions increase that can occur from the rule's implementation. Those caps are based upon the growth forecasts in the 2007 AQMP for the categories of sources potentially eligible to receive permits under Rules 1304 and 1309.1. The caps apply to both major and non-major sources that qualify for Priority Reserve offsets under Rule 1309.1 or are eligible for offset exemptions under Rule 1304. Because of the caps, net stationary source emissions from the proposed project would not be expected to exceed the emissions analyzed in this PEA.

For the purposes of this analysis, an additional 15 percent has been added to the emission projections for each pollutant, in order to ensure the CEQA analysis captures a reasonable worst-case scenario (the 15 percent factor is not added to the caps in the proposed rule).

### ***Future Emissions Without The Proposed Project***

The difference in emissions between the project conditions and the without project conditions has two components. The first component is the amount of net growth in

emissions forecasted in the 2007 AQMP for the categories of sources that are potentially eligible for permits issued under Rules 1309.1 and Rule 1304. This PEA assumes that without the project, no new permits resulting in increased emissions would be issued under Rules 1309.1 and 1304. The second component is the emissions from existing sources that relied on offsets from the SCAQMD internal accounts for permits issued prior to July 2010 and that would shut down during the twenty year analysis timeframe. Under the without project scenario, this PEA assumes that emissions from such existing sources could not be replaced, which would constitute an additional deduction from the future project conditions, to arrive at conditions without the project.

**Growth in Emissions from New Permits Relying on Offsets from SCAQMD Internal Accounts:** The 2007 AQMP includes forecasts of future annual net emissions in 2014 and 2020 from all existing and new sources in the district, including sources permitted under Rules 1304 and 1309.1 in reliance upon the SCAQMD internal account offsets. Appendix III to the 2007 AQMP describes the methodology used for the emissions forecasts in the AQMP. In brief, the 2007 AQMP includes an inventory of 2002 emissions by source category and industry. Growth rates were forecasted for each industry based on SCAG's 2004 Regional Transportation Plan (RTP), adjusted with the most recent data from Bureau of Labor Statistics, California Department of Finance, California Employment Development Department and U.S. Census Bureau.<sup>1</sup> SCAG developed socioeconomic forecasts for the RTP and the same forecasts were used in the AQMP. Industrial growth, job growth, and population growth will affect transportation patterns so therefore, they all are part of overall forecasts. Appendix III to the 2007 AQMP identifies the growth rate used for each industry and source category, and explains how the resulting growth in emissions was geographically distributed by county.

Under the without project condition, the PEA assumes that, after July 2010, none of the 2007 AQMP's projected growth in stationary source emissions from industry categories potentially eligible to receive permits under Rules 1304 and 1309.1 would occur. Because it includes all growth in the industry categories, this methodological assumption necessarily overstates emissions attributable to the project to some degree. Growth in emissions from stationary sources has three components: increased emissions from existing sources for which no new or modified permits are needed or from non-permitted sources; increased emissions from sources receiving permits based upon private-market emission reduction credits (ERCs); and increased emissions from sources receiving permits issued under Rules 1304 and 1309.1 in reliance upon the SCAQMD internal account offsets. Only this third component would be affected by the proposed project.

SCAQMD staff considered whether the fraction of the future forecasted emissions growth attributable solely to permits issued under Rules 1304 and 1309.1 could be accurately estimated. However, it is not possible to ascertain the quantity of past emissions that have been due to sources for which no new or modified permits were obtained. By contrast, it is possible to determine the historic split between emissions increases from new or modified sources permitted using ERCs, as compared to emissions

---

<sup>1</sup> 2007 AQMP, Ch. 2, p. III-2-4.

increases from new or modified sources permitted under Rules 1304 and 1309.1. Table 4.0-1 below presents the relative shares in emissions for the industry categories potentially eligible to receive permits under Rules 1304 and 1309.1.

**TABLE 4.0-1**

**Historic Share of Increases in Potential Emissions From Sources Permitted Under Rules 1304 and 1309.1 as Compared To Increases in Potential Emissions From Sources Permitted Under Other New Source Rules (September 2006 through October 2008)**

	VOC	NO <sub>x</sub>	SO <sub>x</sub>	PM <sub>10</sub>
Potential Emissions Increases from Sources Permitted Under Rules 1304 and 1309.1	94%	100%	99%	97%
Potential Emissions Increases from Sources Permitted Using ERCs	6%	0%	1%	3%

Source: The data is based on SCAQMD permit data from 9/8/06-11/4/08 and excludes RECLAIM pollutants at RECLAIM facilities.

Based upon the historic data, emissions from sources permitted under Rules 1304 and 1309.1 represent the vast majority (well over ninety percent) of the emissions increases from permitted, stationary sources for all pollutants.

Given the uncertainty in determining the share of stationary source emissions increases from non-permitted sources, and the proportion of increased emissions from sources permitted under Rules 1304 and 1309.1 as compared with sources permitted in reliance on ERCs, SCAQMD determined that it was reasonable to assume that all increased permitted stationary source emissions from the relevant industry categories would be attributable to the proposed project.

SCAQMD staff also considered whether to propose caps on cumulative net emissions increases from sources permitted under Rules 1304 and 1309.1 that would be substantially lower than the forecasted growth in stationary source emissions from the relevant industry categories. The potential benefits of such a limitation on emissions are evaluated in the alternatives analysis in Chapter 6 of this PEA and will be considered by the SCAQMD Board. It bears noting, however, that capping growth permitted under Rules 1304 and 1309.1 could result in lengthening the life of previously permitted sources, allowing continued emissions at higher levels. Because new or modified sources are fitted with the best available control technologies, it may be detrimental to direct emissions toward older sources, with less effective controls.

**Emissions From Shutdown of Existing Sources That Could Not Be Replaced:** The second component of the difference in emissions between the project conditions and the without project conditions is that without the project, some of the sources permitted under Rules 1304 and 1309.1 prior to July 2010 would shut down, but the emissions from those sources would not be replaced by permitting new or modified sources relying on

proposed Rule 1315. This would constitute further reduction in future annual emissions compared with the project conditions.

The 2007 AQMP projects that, in addition to growth in sources permitted under Rules 1304 and 1309.1, sources that previously received permits under these rules would continue to exist, and those that shut down would be replaced by other sources. Under project conditions, shutdowns of such sources would result in credits to the SCAQMD internal offset accounts because sources permitted under these rules are not eligible to bank credits as ERCs when they shut down. Some of the credits in the SCAQMD internal accounts would then be relied upon when the SCAQMD approves new or modified sources under Rules 1304 and 1309.1.

Under the without project scenario, however, no sources permitted after July 2010 would obtain their permits by relying on the SCAQMD internal account offsets under the proposed project. Accordingly, the analysis assumes that when the existing sources that previously received permits under Rules 1304 and 1309.2 shut down, the emissions from those sources would not result in credits that would be available for replacement.

In order to quantify the emissions reductions that are expected to occur from these shutdowns under the without project scenario, the SCAQMD reviewed historic data to determine the percentage of previously approved sources that would be likely to shut down during the time frame of the analysis. Of the sources receiving offsets from the SCAQMD's internal accounts, the most likely to shut down during the 20-year analysis period would be facilities with less than four tons per year of emissions that had been permitted under Rule 1304(d). Essential public services permitted under Rule 1309.1 are unlikely to shut down once built or expanded to serve population growth. Moreover, other larger sources permitted under Rules 1304 and 1309.1 typically remain in the economy for many years. These conclusions were verified by an examination of actual records of sources of credits to the SCAQMD's internal offset accounts from 2001 through 2006.

**Rule 1304(d) Offsets:** In order to determine the extent of orphan shutdowns that would occur during the analysis period without the project, it was necessary to determine (1) how many offsets have historically been issued to Rule 1304(d) facilities, and (2) the length of time before the permitted equipment relying on the Rule 1304(d) offsets shut down. With this information, it is possible to calculate the shutdown emissions reductions for each year of the analysis period.

Staff evaluated five years' worth of permitting data (August 2001 through December 2006) for Rule 1304/Rule 1309.1 permitting activity to determine the percentage of total permitted emissions attributable to Rule 1304(d) sources for VOC and NO<sub>x</sub> (see Table 4.0-2).

In order to estimate the percent of emissions that is attributable to sources under four tons per year for SO<sub>x</sub>, staff assumed that the percentage would be the same as it is for NO<sub>x</sub>. This is because both are combustion-related pollutants. For PM<sub>10</sub>, August 2001 through

July 2002 permitting data, which included permits for facilities below 15 tons per year, was used to calculate the percentage.

**TABLE 4.0-2**

**Percentage of Total SCAQMD Internal Account Offsets Provided to Rule 1304(d) Facilities**

	VOC	NO <sub>x</sub>	SO <sub>x</sub>	PM <sub>10</sub>
Percent of SCAQMD's Internal Account Offsets Provided to Rule 1304(d) Facilities	89%	24%	24%	7%

**Operational Life of Facilities:** The next step in the analysis was to determine how many of the Rule 1304(d) sources would likely shut down during the analysis period, and when they would do so. Staff conducted an analysis of permits issued from 1990 through 2009 under Rule 1304(d) and determined that approximately half of such individual sources (permit units) had shut down.

The analysis showed that, of the sources that had shut down (one-half the total), the sources had an average lifespan of six years. Therefore, on average, the Rule 1304(d) sources that would shut down during the CEQA analysis period under the conditions without the project would correspond to approximately half of the sources with permits issued under Rule 1304(d) from July 2004 through June 2010. This does not mean that exactly half of the sources with permits issued between July 2004 and June 2010 will shutdown, nor does it mean that no sources with permits issued before July 2004 will shut down during the life of the proposed project. It simply means that this averaging approach can be used to predict the overall numbers of shutdowns that will occur on average each year under the conditions without the project.

It is likely that the rate of shutdowns would be slower without the project than it has been in the past with the SCAQMD internal offset accounts operating. This is because without the SCAQMD internal account offsets, there would be fewer new sources receiving permits, so there would be less competition from new sources, and existing sources would be expected to stay in operation longer to meet demand. However, this effect cannot be quantified so the rate was held constant.

To further provide a conservative estimate, staff assumed that there may still be some additional shutdowns of sources that were permitted under Rule 1309.1 or under the provisions of Rule 1304. Therefore, staff added an additional 10 percent to the emission reductions from shut downs for NO<sub>x</sub>, SO<sub>x</sub>, and PM<sub>10</sub>, as a safety margin. In addition, since VOC ERCs on the private market have a relatively low market value compared to the other pollutants, growth of VOC projects would not be limited to the same extent as growth from sources needing offsets of other pollutants. There would be more competition from new VOC sources than from new sources of other pollutants so sources emitting VOC projects would not be expected to stay in operation longer to meet

demand. As a result, there may be additional shutdowns of VOC sources. Accordingly the total VOC projected from shutdowns was increased by 20 percent rather than 10 percent.

### ***Quantification of Incremental Difference in Emissions***

To quantify the difference in emissions between future conditions with and without the project, the emissions of each criteria pollutant under the without project scenario are subtracted from emissions of each criteria pollutant under the proposed project. The quantities of emissions are then compared to the applicable significance criteria in Chapter 4.1.

### ***Quantification of Cumulative Emissions***

CEQA requires an analysis of cumulative impacts to consider past, present, and reasonably foreseeable probable future projects. For this analysis, cumulative impacts associated with emissions of criteria pollutants are assessed in two ways. First, emissions from other sources approved pursuant to permits that have relied or foreseeably may rely on SCAQMD internal account offsets are quantified and added to the incremental project emissions to assess the combined effect of all sources relying on the SCAQMD internal account offsets. Second, the analysis of cumulative impacts also assesses the impacts under the proposed project in the context of all emissions forecasted in the 2007 AQMP.

**Combined Emissions from Permits Issued in Reliance Upon SCAQMD Internal Account Offsets:** Two categories of permits have and, in the future, may rely on the SCAQMD's internal account offsets for permitting, independent of whether the proposed project is approved: (1) permits issued under Rules 1304 and 1309.1 pursuant to the prior version of rule 1315 and to SB 827; and (2) three power plant projects for which the legislature has or may enact legislation requiring use of the SCAQMD internal account offsets. As explained in more detail in Chapter 2, the SCAQMD adopted Rule 1315 in September, 2006, and thereafter commenced issuing permits in reliance on the SCAQMD internal account offsets. In July 2008, the Los Angeles County Superior Court enjoined the SCAQMD from taking further action to implement Rule 1315. In response to the court order invalidating Rule 1315, and the resulting Permit Moratorium, the California Legislature enacted SB 827, which requires the SCAQMD to use its internal account offsets for facilities exempt from offsets pursuant to Rule 1304 and Priority Reserve Projects pursuant to Rule 1309.1. The bill became effective on January 1, 2010 and sunsets in May 2012. The proposed project will not result in issuance of permits under SB 827 but these permits are considered to contribute to cumulative impacts. The project analysis conservatively assumes that sources with increased emissions that are approved under Rules 1304 and 1309.1 after July 2010 would be approved under re-adopted Rule 1315, even though SB 827 will not sunset until May 2012.

To quantify emissions from sources permitted under Rules 1304 and 1309.1 in reliance upon the prior version of Rule 1315 and SB 827, the approach is the same as that used to quantify the incremental difference between conditions with and without the proposed project.

The second category of permits analyzed for cumulative impacts is permits for power plants for which the State Legislature has required or may require reliance upon the SCAQMD internal account offsets and that have a long-term supply contract with Southern California Edison or are wholly owned by a municipality. Chapter 2 explains that, when preparation of this PEA commenced, under Assembly Bill (AB) 1318 and Senate Bill (SB) 388 and other possible legislation, it was reasonably foreseeable that the SCAQMD may be required to provide offsets to three power plants from the SCAQMD's internal accounts regardless of whether SCAQMD adopts a modified Rule 1315: CPV Sentinel; Walnut Creek Mission Energy; and the El Segundo Power Redevelopment Project. The El Segundo Project has since received a permit under Rule 1304 in reliance on SB 827.

The three power plant projects were evaluated by the California Energy Commission (CEC) in separate Final Staff Assessments (FSAs). The FSAs were reviewed as part of this analysis to obtain the environmental impact analyses and determinations of significance made by the lead agency (CEC).

The FSAs prepared by the CEC for all three power plants calculated the criteria pollutant emissions from both the construction and operation phases of the projects. The only criteria pollutant not calculated in the FSAs prepared by the CEC for the El Segundo and Walnut Creek projects is PM<sub>2.5</sub> emissions. The FSA for the Sentinel project did include PM<sub>2.5</sub> emissions from the construction phase of the project but did not include PM<sub>2.5</sub> mass emissions from the operation of the project. However, PM<sub>10</sub> emissions from construction and operational phases of all three power plant projects were calculated in the FSAs prepared by the CEC. Using the established standards<sup>2</sup> in determining the percentage of PM<sub>10</sub> that is PM<sub>2.5</sub>, construction and operational PM<sub>2.5</sub> emissions from El Segundo and Walnut Creek, and operational PM<sub>2.5</sub> emissions from all three power projects were calculated. Pursuant to AB 1318, CPV Sentinel will be paying a mitigation fee for SO<sub>x</sub> and PM<sub>10</sub> offsets that will be spent on emission reduction projects. For this analysis, the mitigation fee is based on a previously proposed mitigation fee imposed on electric generating facilities based on the location of the facility as set forth in Rule 1309.1 as adopted August 3, 2007. This analysis estimates the amount of mitigation fees that will be collected from the CPV Sentinel Project by multiplying the quantities of offsets expected to be provided by SCAQMD's offset accounts by the pollutant-specific mitigation fees in dollars per pound. The fees are expected to finance emission reductions projects having costs based on current incremental BACT cost effectiveness, which is the dollar cost to reduce one ton of emissions. SO<sub>x</sub> and PM<sub>10</sub> emissions reduced by the emission reduction projects funded by the mitigation fee to be paid by CPV Sentinel have been estimated, based on current incremental BACT cost

---

<sup>2</sup> "Final –Methodology to Calculate Particulate Matter (PM) 2.5 and PM 2.5 Significance Thresholds" (SCAQMD, October, 2006). For example, 89 percent of PM<sub>10</sub> from off-road equipment are PM<sub>2.5</sub> emissions; 21 percent of fugitive PM<sub>10</sub> emissions from construction and demolition are PM<sub>2.5</sub> emissions; and 99 percent of PM<sub>10</sub> from combustion of stationary sources are PM<sub>2.5</sub> emissions.

effectiveness values, and the 10-year life of the project necessary to apply a capital recovery factor. Current incremental BACT cost-effectiveness refers to the maximum cost per ton of emission reductions for a given pollutant specified in SCAQMD's BACT Guidelines. The use of the maximum cost effectiveness values reduces the estimated emission reductions from the projects funded by the mitigation fee as compared to use of the average cost effectiveness. Thus, the emission reductions from the implementation of projects funded by the CPV Sentinel mitigation fee estimated for the purposes of this analysis are considered to be reasonable and conservative. Nevertheless, it is not possible to determine exactly what will be the cost of emission reduction obtained in the future.

A quantified cumulative impact analysis is provided for the combined direct emissions from the proposed project, plus the direct emissions from other sources receiving permits under Rules 1304 and 1309.1 in reliance upon the prior version of Rule 1315 and SB 827, plus all emissions from the three power plants. The quantities of combined emissions are compared to the applicable significance criteria in Chapter 4.1.

**Combined Emissions Under the 2007 AQMP.** The analysis of cumulative impacts also assesses the impacts under the proposed project in the context of all emissions forecasted in the 2007 AQMP.

## **Modeled Concentrations of Criteria Pollutant Emissions**

### *Region-wide Simulation Model*

After quantifying the incremental difference in mass emissions of each criteria pollutant under the project and without project conditions, staff then used air quality modeling to determine the resulting changes in concentration levels (micrograms per cubic meter for PM<sub>2.5</sub> and PM<sub>10</sub>, and parts per billion (ppb) for ozone) for the three primary criteria pollutants: ozone, PM<sub>2.5</sub> and PM<sub>10</sub>. The modeling used the same methods as were used in the 2007 AQMP. A discussion of modeling methods, regional air quality impacts analysis, and further information can be found in Appendix V of the 2007 AQMP, available at [http://www.aqmd.gov/aqmp/07aqmp/aqmp/Appendix\\_V.pdf](http://www.aqmd.gov/aqmp/07aqmp/aqmp/Appendix_V.pdf). Staff also determined the project's incremental effects on SO<sub>2</sub>, NO<sub>2</sub> and CO concentrations.

The PEA discusses whether, as compared to conditions without the project, the project would delay the SCAQMD's ability to achieve attainment of the National Ambient Air Quality Standards (NAAQs) or California Air Ambient Quality Standards (CAAQs). Accordingly, the modeling analysis focuses on the two air basins within the SCAQMD's jurisdiction that are not currently in attainment for the NAAQs. U.S. EPA has designated the Basin as extreme non-attainment for ozone and the Coachella Valley as Severe-15. This means that the Basin must attain the federal standard by 2024 and the Coachella Valley by 2018. In addition, both air basins are designated as severe non-attainment for 24-hour average PM<sub>10</sub>. Furthermore, the Basin is designated as non-attainment for annual average PM<sub>2.5</sub> with an attainment date of 2015. In contrast, the Coachella Valley has been in compliance with the federal PM<sub>2.5</sub> standards with observed concentrations typically valuing only two thirds of the NAAQS.

Future-year concentrations of the key air pollutants are simulated using the incremental change in emissions between the with-project and without-project conditions. The years selected for simulations are 2014, 2023 and 2030, corresponding to the dates emission reductions must be achieved for PM<sub>2.5</sub> attainment, ozone attainment, and the end date of the project, respectively. In addition, 2030 is expected to be approximately the attainment year for the new federal ozone NAAQS expected to be promulgated in August 2010.

Briefly, the regional concentrations are simulated by using National Weather Service (NWS) numerical meteorological model data to provide the characterization of the hourly weather that is coupled with a peer review regional air quality dispersion platform that reacts and transports emissions throughout a modeling domain. The Basin and Coachella Valley are both fully represented in the modeling domain.

The modeling platform developed for the 2007 AQMP utilized the combination of the Comprehensive Air Quality Model with Extensions (CAMx) dispersion model with the “one atmosphere” chemistry mechanism to simulate annual average particulate air quality and CAMx with the SAPRC99 chemistry mechanism to simulate episodic gaseous ozone air quality. The MM5 meteorological model provided critical meteorological inputs for the daily and annual simulations. The simulations utilized mobile source emissions provided by CARB’s EMFAC2007 and the growth and planning assumptions provided by SCAG from their Interim 2007 Regional Transportation Plan. Point and area source emissions profiles were developed jointly by the SCAQMD and CARB. A comprehensive discussion of the modeling techniques, input data and model performance is provided in Appendix V of the 2007 AQMP.

As described in Appendix V of the 2007 AQMP, the regional numerical air quality projections followed U.S. EPA guidance using relative response factors (RRF) to estimate future year ozone and PM<sub>2.5</sub> design values to determine future year attainment of the respective 8-hour average and annual average standards. The RRFs were used to adjust simulated future year air quality by accounting for variance in the model performance.

### **Ozone**

The ozone simulations were conducted using the CAMx/MM5/SAPRC99 platform for a series of meteorological episodes identified in the 2007 AQMP attainment demonstration. Two indices are presented in the air quality analysis: project’s contribution to ozone concentrations in each air basin having the projected maximum concentration and the average ozone concentration predicted throughout each of the basins. The modeling concentration results for the Basin and Coachella Valley for 2014, 2023 and 2030 present the ozone concentrations associated with the incremental difference in emissions between the project and without project conditions.

### **Basin Annual PM2.5**

The Basin annual PM2.5 simulations were generated for the CAMx/MM5/One-Atmosphere platform for every hour in the year for 2014, 2023 and 2030, using an emissions weighting procedure presented in the 2007 AQMP and CARB's 2007 PM2.5 SIP Staff Report. PM2.5 occurs from directly emitted primary particulate (dust and diesel soot) and secondary aerosols formed in chemical reactions (nitrates and sulfates). The 2007 AQMP established a SCAQMD-specific emissions weighting methodology to estimate changes in PM2.5 due to changes in emissions. The contributions to regional nitrate, sulfate, organic carbon, and the combination of elemental carbon and metals can be directly estimated from the daily annual average day emissions of NO<sub>x</sub>, SO<sub>x</sub>, VOC and PM2.5. Table 4.0-3 provides the Basin-average annual average day emissions conversion factors used to estimate annual PM2.5 listed in the CARB staff report. In addition to being directly emitted in the form of primary particulates such as dust (crustal PM) and soot (elemental carbon or EC), PM2.5 is formed in the atmosphere by chemical reactions involving NO<sub>x</sub> and SO<sub>x</sub>. Table 4.0-4 illustrates the relative PM2.5 forming power of the various pollutants, in terms of the effect on ambient concentrations caused by a ton per day of each of the listed pollutants. The table shows that SO<sub>x</sub> is approximately 15 times as potent as NO<sub>x</sub> in forming PM2.5 (0.0526 µg/m<sup>3</sup> per ton of SO<sub>x</sub> per day as compared to 0.0035 µg/m<sup>3</sup> per ton of NO<sub>x</sub> per day).

### **Basin Annual PM10**

Basin future year annual average PM10 concentrations were estimated by multiplying the projected annual average PM2.5 by a constant factor equal to the 10-year (1999-2008) average ratio of observed Basin annual average PM10 to co-located annual average PM2.5. The four-county average factor of 2.19 was calculated from PM10 and PM2.5 data measured at the monitoring sites used for the CAMx PM2.5 annual simulation. The average factor of 2.19 means that on average, there is 2.19 times as much PM10 measured at a given site as there is PM2.5.

### **Basin 24-Hour PM2.5**

The Basin 24-hour PM2.5 concentrations were determined using an emissions weighting algorithm developed from the 2007 AQMP 24-hour average PM2.5 attainment demonstration simulations generated using the CAMx/MM5/One-Atmosphere platform. Average emissions conversion factors for 24-hour average maximum regional PM2.5 nitrate, sulfate, organic carbon, and the combination of elemental carbon and metals were calculated from corresponding simulated 24-hour maximum component species concentrations and the daily annual average day emissions of NO<sub>2</sub>, SO<sub>2</sub>, VOC, PM10 and PM2.5 emissions. Table 4.0-4 provides the 24-hour average PM2.5 Basin-average emissions conversion factors. As in Table 4.0-3, this table shows the relative PM2.5 forming power of the various pollutants, in terms of change in concentration per one ton per day emissions, this time looking at the effect on peak day concentrations. The table shows that NO<sub>x</sub> and SO<sub>x</sub>, which form nitrates and sulfates, have an even greater impact on daily PM2.5 levels than they do on annual levels.

**TABLE 4.0-3**

**Basin-Average Annual Average PM<sub>2.5</sub> Concentration Conversion Factors**  
**(Increase in PM<sub>2.5</sub> concentration in  $\mu\text{g}/\text{m}^3$  for each ton per day of emissions)**

Pollutant Species	Species	Conversion Factor
PM <sub>2.5</sub>	EC Crustals & Metals	0.0345
NO <sub>x</sub>	Ammonium Nitrate	0.0035
SO <sub>x</sub>	Ammonium Sulfate	0.0526
VOC	Organic Carbon	0.0015

**TABLE 4.0-4**

**Basin-Average 24-Hour Average PM<sub>2.5</sub> Concentration Conversion Factors**  
**(Increase in PM<sub>2.5</sub> concentration in  $\mu\text{g}/\text{m}^3$  for each ton per day of emissions)**

Pollutant Species	Species	Conversion Factor
PM <sub>2.5</sub>	EC Crustals & Metals	0.025
NO <sub>x</sub>	Ammonium Nitrate	0.071
SO <sub>x</sub>	Ammonium Sulfate	0.325
VOC	Organic Carbon	0.020

#### **Basin 24-Hour PM<sub>10</sub>**

PM<sub>10</sub>, or particulate matter less than 10 microns in aerodynamic diameter, is made up of fine particulate, or PM less than 2.5 microns in aerodynamic diameter (PM<sub>2.5</sub>) and coarse PM, which is particulate with a aerodynamic diameter between 2.5 microns and 10 microns. For days other than exceptional events such as wild fires or high wind driven fugitive dust, peak 24-hour PM<sub>10</sub> is driven by secondary PM<sub>2.5</sub> particulate formation. The contribution of coarse particulate to the 24-hour PM<sub>10</sub> average comprises a smaller percentage of the total mass compared with the percentage for the annual PM<sub>10</sub> concentration. The Basin average maximum 24-hr average PM<sub>10</sub> impact was calculated by adding the Basin 24-hour maximum average PM<sub>2.5</sub> concentration impact to the four-county average coarse particulate impact estimated using an emissions weighted methodology. The coarse particulate was calculated by multiplying the PM<sub>10</sub> emissions by the factor of  $0.195 \mu\text{g}/\text{m}^3 / \text{TPY PM}_{10}$ . The factor was derived from the revised Basin PM<sub>10</sub> attainment demonstration presented in the South Coast Air Basin PM<sub>10</sub> Maintenance Plan submitted to U.S. EPA, March 2010 as part of the California SIP.

### **Coachella Valley Annual PM2.5 and PM10**

The project's contribution to the annual Coachella Valley PM10 concentration is almost exclusively a result of PM2.5 transport from the Basin (2003 Coachella Valley PM10 SIP). Annual PM2.5 and PM10 transport to the Coachella Valley is estimated by multiplying the predicted Basin annual average PM2.5 concentration by the factor 0.215.

PM10 mass is comprised of both fine (PM2.5) and coarse (PM10-PM2.5) particles. The coarse, larger particles settle closer to source areas and are less subject to transport over long distances. This is particularly evident for coarse particle transport from the Basin that must channel through Banning Pass while undergoing an elevation increase from a Basin average elevation of less than 1000 feet to more than 2500 feet. As a conservative estimate, this analysis assumes that all of the PM10 transport to the Coachella Valley is PM2.5.

The 1990 Coachella Valley SIP determined that transport accounted for 18 percent of the Coachella Valley annual average PM10 mass. The 0.215 factor used to estimate the PM2.5 transport to the Coachella Valley was determined by dividing 18 percent of the long-term (1999-2008) annual average Coachella PM10 concentrations by the Basin PM2.5 concentrations averaged for the same period.

The project's contribution to concentrations of annual average PM2.5 in the Coachella Valley was assumed to be equivalent to its estimated contribution to annual average PM10 concentrations.

In the cumulative analysis, the CAMx simulated particulate emissions from the Sentinel power plant, and added those emissions to both the annual PM2.5 and PM10 concentrations from project emissions.

### **Coachella Valley 24-hour PM2.5 and PM10**

The impact of the project's contribution to the 24-hour average Coachella Valley PM10 concentration is calculated following a similar methodology as the annual average PM10 concentration but using a factor based on the 24-hour average percentage transport contribution determined from the source apportionment analysis. Project estimated 24-hour average PM10 concentration transport to the Coachella Valley is estimated by multiplying the predicted Basin 24-hour average PM2.5 by the factor 0.107. In other words, previous SIP analyses showed that the amount of transport into the Coachella Valley is related to the concentration of (24-hour) PM2.5 in the Basin by a factor of 0.107. Thus, Basin concentration times 0.107 equals transport concentration into the Coachella Valley.

In the cumulative impacts analysis, the CAMx simulated particulate impacts from the Sentinel power plant are added to the both the annual PM2.5 and PM10 concentrations from project emissions.

### **Basin Sulfur Dioxide and Nitrogen Dioxide**

The contribution of the project emissions to Basin SO<sub>2</sub> and NO<sub>2</sub> concentrations is estimated using an emissions weighted approach that linearly relates changes in emissions to expected changes in ambient air quality. The emissions weighted analysis provides a very conservative approximation of the project's potential contribution to ambient SO<sub>2</sub> and NO<sub>2</sub>. Both emissions weighted analyses assume that all of the project's NO<sub>x</sub> and SO<sub>x</sub> emissions would convert directly to NO<sub>2</sub> and SO<sub>2</sub>, ignoring the contributions those emissions have towards the formation of ozone and particulates. As a result, the analysis of NO<sub>2</sub> and SO<sub>2</sub> impacts is very conservative.

**Cumulative Impacts.** The analysis includes a quantitative assessment of concentrations of pollutants resulting from the cumulative scenario described previously relating to the combined emissions from permits issued in reliance upon the SCAQMD internal account offsets, under the discussion of mass emissions of criteria pollutants. The emissions associated with the cumulative conditions are modeled to determine the concentrations of pollutants resulting from the combination of sources obtaining permits in reliance on offsets in the SCAQMD internal offset accounts.

### **Basin Carbon Monoxide**

Ambient concentrations of carbon monoxide respond linearly to changes in the emissions inventory. Emissions weighted linear rollback is the methodology used to estimate the project impact to ambient CO concentrations.

### ***Localized Concentrations of Criteria Pollutants***

In addition to modeling the proposed project's contribution to regional concentrations of pollutants from all sources permitted under Rules 1304 and 1309.1, this analysis also reviews the potential for individual sources permitted under Rules 1304 and 1309.1 to result in discrete, localized concentrations of pollutants exceeding the SCAQMD's significance criteria.

**Data Collection.** To estimate the emissions from individual sources that could receive permits under Rules 1304 and 1309.1, data from past and pending permit applications were reviewed. Review of the SCAQMD's permit database produced a list of permits issued and pending by the SCAQMD under Rules 1304 and 1309.1 from 2003 through 2008. Approved and pending permits from 2003 through 2008 were also reviewed to identify facilities that would have qualified for offsets under Rule 1309.2<sup>3</sup>, had it been in effect. The database that was analyzed started with a total of 81,173 pollutant records for permits approved and pending from 2003 through 2008. A number of the pollutants were

---

<sup>3</sup> Proposed amended Rule 1309.2 is no longer part of the proposed project and the previously adopted version of Rule 1309.2 was rescinded by the SCAQMD Governing Board on February 5, 2010. Nevertheless, these permits are potentially relevant because of the broad range of the types of facilities that could qualify for offsets under Rule 1304 or Rule 1309.1.

listed twice to provide two different unit values, one daily and one hourly. Thus, the list was updated to remove pollutants listed twice so they would not be double-counted. The updated list included 51,265 pollutant records for 12,315 permits approved and pending from 2003 through 2008. A comprehensive evaluation of the database identified approximately 7,732 individual facilities located throughout the district that had obtained permits under Rules 1304 and 1309.1 from the SCAQMD during this period.

**Localized Concentration Modeling.** The approach used to evaluate the effects on localized concentrations of pollutants resulting from the operation of individual facilities (also referred to as the “local” analysis) is described in Appendix C to this PEA. Because the specific attributes of sources that may be permitted under the project are not known, the evaluation of localized concentrations is made on the basis of air dispersion modeling of recently permitted emissions at actual facilities. This analysis is intended to provide an estimate of the potential impacts on localized concentrations of criteria pollutants in the vicinity of individual facilities as a result of future permits issued under the proposed project. This approach treats previously-permitted sources as representative of the types of individual sources and air pollutants emitted by sources that would be permitted in the future under the proposed project. It should be noted that the analysis for this PEA assigned each permit as though it were existing in the area with most adverse meteorological conditions, which is a conservative approach.

Emissions and available characteristics regarding the type of emission source (e.g., source category) are tabulated from the five-year data set described above. To facilitate the analysis of over 12,000 permits and pending permits, each permit was assigned to a permit category and cross-referenced to a Source Classification Code (SCC). SSCs are assigned to various source types by USEPA in their emissions inventory development. Using SSCs, one can determine various factors relevant to determining emissions impact, such as average stack height. SCCs were used for two purposes in the analysis: (1) to assign stack parameters to emission sources for modeling on the basis of source type; and (2) to estimate chemical speciation of permitted emissions reported as PM and organic gases with respect to particle size distribution of PM emissions. Neither of these approaches necessarily reflect the exact facts of the particular permit, but this is considered a conservative approach to analyze impacts.

Given the relatively large size of this data set, the following approach was used to evaluate the potential for significant impacts: First, a screening analysis was conducted using a screening-level air dispersion model (SCREEN3) and the permit categories were ranked according to level of risk; permit categories were ranked and prioritized on the basis of maximum ambient exposure of the emitted chemicals; categories, each comprising a range of permits, were developed on the basis of release characteristics (e.g., stack height, escape velocity, and release temperature) to allow the grouping of similar source types; and the results of this analysis were used to select a set of permit categories for further, more refined evaluation.

For criteria pollutants, SCREEN3 outputs used in the screening analysis comprised the estimated maximum offsite ambient concentration increments for the specified averaging

time. These results were compared to applicable localized significance thresholds, to obtain a screening-level measure of impact.

The results of the screening analysis indicated that relatively few sources of CO and/or SO<sub>x</sub> potentially exceeded the applicable thresholds of significance. Given the conservative assumptions and parameters used in the screening-level model, it was concluded that emissions of CO and SO<sub>x</sub> in the permit database would be unlikely to cause significant adverse air quality impacts. Consequently, CO and SO<sub>x</sub> emissions were not included in the refined localized impacts analysis (the contribution of increased SO<sub>x</sub> emissions to formation of secondary PM<sub>10</sub> and secondary PM<sub>2.5</sub> was included in the regional analysis described earlier).

For each remaining pollutant, the ten primary facility permit categories with the greatest number of permits shown in the screening analysis as potentially exceeding the applicable air quality significance threshold were selected for refined analysis. Several permit categories appear in the top ten lists for more than one pollutant. Due to the conservative assumptions incorporated in the model, this approach resulted in analyzing the majority of permits that potentially exceeded applicable air quality significance thresholds as shown using the SCREEN3 model, as indicated by the following summary statistics.

- The total number of unique combinations of permit number, pollutant, and averaging period was 48,739, counting only those combinations for which emissions were reported.
- Of this total, the number of unique combinations (permit number plus pollutant plus averaging period) that potentially exceeded the SCAQMD's significance criteria based on the SCREEN3 screening results was 20,745 or about 43 percent<sup>4</sup>. The remaining unique combinations that did not potentially exceed any applicable air quality significance thresholds were not evaluated further because, based on the conservative nature of the SCREEN3 model, it is unlikely that they would generate significant adverse air quality impacts.
- Of the number of unique combinations (permit number plus pollutant plus averaging period) that potentially exceeded any applicable air quality significance criteria, the number of unique combinations that were associated with permit categories that were then evaluated in the refined analysis was 18,375 or about 89 percent of the 20,745.

The more refined analysis was then conducted on this subset of permits to evaluate further the potential for localized concentrations exceeding the applicable significance thresholds, using U.S. EPA's AERMOD Modeling System (2004), version 010709, based

---

<sup>4</sup> It should be noted that the SCREEN3 model uses very conservative assumptions and parameters and the more refined analysis using the AERMOD model substantially reduced the number and types of facilities potentially exceeding applicable significance thresholds as shown in subchapter 4.1.

on the Guideline on Air Quality Models (40 Code of Federal Regulations [CFR], Part 51, November 2005). AERMOD was used to estimate the short and long term maximum concentrations of criteria pollutants in the vicinity of individual facilities. AERMOD is an air dispersion model that is considered to be more precise than SCREEN3. Input parameters for modeled sources are defined such that a reasonable worst-case exposure scenario for each permit category is evaluated; however, refinements are implemented to reduce some of the conservatism included in the screening-level modeling. More refined aspects of the AERMOD analysis include the following:

- use of an ozone-dependent method for converting nitrogen oxides (NO<sub>x</sub>) to nitrogen dioxide (NO<sub>2</sub>) based on the NO<sub>x</sub> within the plume and ozone contained within the volume of the plume between the source and receptor (i.e., Plume Volume Molar Ratio Method [PVMRM]),
- use of three years of AERMOD-ready meteorological data, and
- use of specific meteorological station locations selected on the basis of statistical evaluations.

Criteria pollutants, including NO<sub>2</sub>, and PM<sub>10</sub> were modeled for operational emissions of representative facilities. For each permit category evaluated in the refined analysis, emission rates for a given pollutant type (NO<sub>2</sub> or PM<sub>10</sub>) were selected from the permits in the category to represent both a typical and a reasonable maximum expected emission rate. (All PM<sub>10</sub> is assumed to be PM<sub>2.5</sub> for purposes of the maximum concentration; since PM<sub>2.5</sub> is actually a subset of PM<sub>10</sub>, this approach assures a more conservative analysis.) These emission rates are represented by the emission rate of the permits at the 50<sup>th</sup> and 95<sup>th</sup> percentile of the distribution of emission rates, respectively, within each permit category (and evaluating pollutant types separately) to demonstrate typical and reasonably foreseeable worst-case emission scenarios. It should be noted that the 95<sup>th</sup> percentile of the distribution of emission rates is not the same concept as the percentage of actual emissions or of potential to emit emissions. The predicted ground-level concentrations shown by the refined AERMOD analysis were then compared to relevant SCAQMD air quality significance thresholds to determine whether or not local air quality impacts would be significant. Potential impacts from both short- and long-term exposures were evaluated using different averaging times for outputs and corresponding thresholds.<sup>5</sup>

---

<sup>5</sup> It should be noted that in the context of actual permit applications, any individual permits shown to exceed applicable thresholds through modeling would not be approved unless additional pollution controls are installed, operations are curtailed, or the permit applicant accepts an emissions cap such that emissions are less than any applicable significance thresholds.

## Health Effects of Criteria Pollutant Emissions and Toxic Air Contaminants

### *Health Effects of Criteria Pollutant Emissions*

Criteria pollutant emissions can lead to health effects, including cardiovascular, respiratory, neurological, reproductive and respiratory diseases. These effects are characterized numerically as the number of premature deaths; hospital admissions; emergency room visits; minor restricted activity days; school absence days; loss of work days; and cases of acute/chronic bronchitis, nonfatal heart attacks and adverse upper/lower respiratory conditions that are correlated with a given concentration of pollutants.

**Project Effects.** As discussed earlier, air pollutant levels are expected to decrease in future years compared to existing conditions. This decrease in air pollution will result in health benefits for the district's residents. Under the proposed project, the growth projected in the 2007 AQMP would be expected to occur, and district-wide emissions are expected to decrease as forecasted under the 2007 AQMP. Thus, under the proposed project, the district's population would experience the same forecasted health benefits from reduced criteria pollutant emissions as are expected under the AQMP. The Final Socioeconomic Report for the 2007 AQMP quantifies these health benefits associated with the AQMP. Under the analytical assumptions in this PEA, if the proposed project were not approved, however, growth within the district would be significantly reduced and some facilities would be shut down and would not be replaced, so further reductions in criteria pollutant emissions would occur in comparison with the proposed project. Thus, without the project, the district's population would experience even more health benefits than are predicted to occur under the 2007 AQMP. In this context, the consequence of approving the proposed project would be to forego those potential additional health benefits beyond the benefits of implementing the 2007 AQMP. The analysis of criteria pollutant health effects compares the forecasted health benefits under the proposed project to the greater health benefits anticipated if the project were not approved, in order to quantify the incremental difference.

The differences between regional health benefits under the proposed project and under without project conditions are calculated for PM<sub>2.5</sub> and ozone. Regional health benefits are not calculated for attainment pollutants (including PM<sub>10</sub>, for which the SCAQMD has requested re-designation as attainment) because the National Ambient Air Quality standards are required to be set at a level that protects public health, with an adequate margin of safety. As long as pollutant levels stay below the NAAQS, health effects from criteria pollutants are considered less than significant.

To determine the health effects of the conditions without the project, all modeling inputs except total emissions are the same as were used for the Final Socioeconomic Report for the 2007 AQMP. Therefore, there is a linear relationship between the difference in estimated emissions and change in health effects.

To calculate the relationship between emissions and health effects, the Final Socioeconomic Report for the 2007 AQMP relied upon several analyses that have

estimated the health related effects to California and the Basin from PM<sub>2.5</sub> and ozone. The California Air Resources board has estimated the frequency of adverse health effects occurring in California from exposures to air pollutants. CARB's analyses have provided estimates of annual mortality and morbidity as well as ranges of uncertainty in the predicted health outcome. Aside from premature death, indices such as hospital admissions, pulmonary and cardiac impacts, and lost productivity are quantified in terms of affected population.

In the Final Socioeconomic Report for the 2007 AQMP, health benefits were estimated for attaining the then applicable ozone standard of 0.08 ppm in 2024, and the PM<sub>2.5</sub> annual standard of 15 µg/m<sup>3</sup> in 2015. The health analysis relied on the simulated ozone and PM<sub>2.5</sub> air quality and the use of U.S. EPA's BENMAP health program which translates air quality to health effects. A combined emissions and concentration weighting methodology is applied to the predicted ozone and PM<sub>2.5</sub> concentrations to scale the health effects impacts identified in the Final Socioeconomic Report for the 2007 AQMP for the conditions without the project. It is important to note that the current standards for PM<sub>2.5</sub> incorporate the health effects associated with breathing all fine particulate matter including PM<sub>10</sub>. Thus, the analysis of health effects due to PM<sub>2.5</sub> is sufficient to characterize the overall particulate related health impact without the potential for double counting health impacts that could occur if the PM<sub>2.5</sub> related health effect and the PM<sub>10</sub> related health effect were addressed separately.

**Cumulative Effects.** Similar to the health effects analysis for the proposed project, the cumulative impacts analysis relies on the methodology used in the Final Socioeconomic Report for the 2007 AQMP. In this case, the incremental health effects of the proposed project together with the other permits issued in reliance upon the SCAQMD internal account offsets are quantified. (This cumulative scenario is described further above, under the discussion of mass criteria pollutant emissions.)

### *Health Effects of Toxic Air Contaminants*

**Region-wide Effects.** The regional modeling performed in the 2008 Multiple Air Toxics Exposure Study III (MATES III)<sup>6</sup> and the 2010 Draft Clean Communities Plan (CCP)<sup>7</sup> formed the basis of the air toxics assessment for the proposed project and alternatives. MATES-III provided an analysis of the exposure to toxic air contaminants from anthropogenic sources throughout the Basin. MATES III was a monitoring and evaluation study conducted in the South Coast Air Basin over the period April 2004 to March 2006. The MATES III Study consisted of three elements: (1) a monitoring program, (2) an updated air toxics inventory for calendar year 2005, and (3) a modeling effort to characterize cancer risk across the Basin. The MATES-III regional modeling analysis built upon the inventory development and model simulations that were the foundation of the 2007 AQMP. The 2010 Draft CCP is a planning document that outlines the SCAQMD's future overall air toxics control strategy. The CCP includes the

---

<sup>6</sup> MATESIII Report: <http://www.aqmd.gov/prdas/matesIII/MATESIIIFinalReportSept2008.html>

<sup>7</sup> 2010 Draft Clean Communities Plan: <http://www.aqmd.gov/aqmp/CCP.html>

development of future year toxic inventories and regional air quality modeling out to 2023.

The proposed project's incremental contribution to health risks from toxic air contaminants are estimated using the MATES-III modeling methodology to develop emissions weighted estimates of toxic risk from each of the 17 toxic compounds listed in Table 4.0-5. The analysis in this PEA re-creates the MATES-III 2014, 2023 and 2030 model simulations for the 17 toxic compounds under conditions with the proposed project (which are the same as under the 2007 AQMP) and under conditions without the proposed project. A comprehensive discussion of the MATES-III analysis including the methodology for conducting regional modeling and projected risk is presented in the Final Report: Multiple Air Toxics Exposure Study in the South Coast Air Basin, which is available at <http://www.aqmd.gov/prdas/matesIII/matesIII.html>. The toxic particulates and gases simulated in MATES III and the CCP are listed in Table 4.0-5. It is important to acknowledge that these are not all the pollutants in the southern California atmosphere nor are they all the pollutants emitted by sources in the Basin. The pollutants listed in Table 4.0-5 are those considered important by the researchers and regulators conducting the MATES III study.

**TABLE 4.0-5**

**Toxic Compounds and Unit Risk Factors Used in CAMx/RTRAC Simulations**

Compound	Unit Risk Per Million
Diesel PM	$3.0 \times 10^{-4}$
Cr6	$1.5 \times 10^{-1}$
As	$3.3 \times 10^{-3}$
Cd	$4.2 \times 10^{-3}$
Ni	$2.6 \times 10^{-4}$
Pb	$1.2 \times 10^{-5}$
Benzene	$2.9 \times 10^{-5}$
Perchloroethylene	$5.9 \times 10^{-6}$
p-Dichlorobenzene	$1.1 \times 10^{-5}$
Methylene Chloride	$1.0 \times 10^{-6}$
Trichloroethylene	$2.0 \times 10^{-6}$
1,3-Butadiene	$1.7 \times 10^{-4}$
Primary Formaldehyde	$6.0 \times 10^{-6}$
Primary Acetaldehyde	$2.7 \times 10^{-6}$
Secondary Formaldehyde	$6.0 \times 10^{-6}$
Secondary Acetaldehyde	$2.7 \times 10^{-6}$
Naphthalene	$3.4 \times 10^{-5}$

The Comprehensive Air Quality Model with Extensions (CAMx) enhanced with a reactive tracer modeling capability (RTRAC) is the air quality modeling and atmospheric chemistry platform. The Penn State/National Center for Atmospheric Research Mesoscale Model 5 (MM5) with four dimensional data assimilation was used to generate the meteorological fields for the CAMx simulations. The CAMx dispersion model with the RTRAC was used in conjunction with the 2007 AQMP meteorological and emissions inputs. Modeling was conducted on a 240 by 150 kilometer domain that included the Basin and the coastal shipping lanes and the grid resolution was 2 km by 2 km. Cancer risk from exposure to 17 compounds (listed in Table 4.0-5) having risk factors provided by California's EPA's Office of Environmental Health Hazard Assessment (OEHHA) were simulated to estimate the regional spatial patterns and level of risk predicted in the Basin. The analysis relied on a comprehensive speciation of volatile organic compounds (VOC) emissions and metals to provide the compound-related air quality effects that were then converted into risk estimates. It is important to recognize that the MATES-III simulated toxic risk analysis was conducted as a regional modeling study and did not address the impacts of an individual source.

The metric used to estimate the cancer risk impacts in the PEA is the change in overall population-weighted inhalation cancer risks between the conditions with and without the project. CAMx provides grid cell average concentrations for each of the pollutants listed in Table 4.0-5 and the population in each grid cell is used as the weighting factor to calculate population-weighted average concentrations for each toxic air contaminant. The greater the population in the grid cell the greater its weight; grid cells with no population (e.g., grid cells over the ocean) do not contribute to the weighted average. The total inhalation cancer risk is simply the summation of the products of the population-weighted average pollutant concentrations and their corresponding inhalation unit risk factors.<sup>8</sup> All the toxics listed in Table 4.0-5 are carcinogens.

The population weighted non-cancer chronic hazard index is calculated similarly. The total population-weighted non-cancer chronic hazard index is the summation of the ratios of population-weighted average pollutant concentrations to its chronic reference exposure level (REL).<sup>9</sup> As with the cancer risk estimates only the inhalation pathway is considered. All the toxics listed in Table 4.0-5 have non-cancer chronic RELs and are thus included in the chronic hazard calculation. The metric used to estimate the non-cancer chronic impacts in the PEA is the change in overall population-weighted chronic hazard index between the conditions with and without the project.

---

<sup>8</sup> Inhalation unit risk factor is the theoretical upper bound probability of extra cancer cases occurring in the exposed population assuming a lifetime exposure to the chemical when the air concentration is expressed in exposure units of per micrograms/cubic meter. The unit risk factors are available at <http://www.arb.ca.gov/toxics/healthval/healthval.htm>.

<sup>9</sup> Reference exposure level (REL) is an exposure level at or below which no non-cancer adverse health effect is anticipated to occur in a human population exposed for a specific duration. The chronic RELs are available at <http://www.arb.ca.gov/toxics/healthval/healthval.htm>

The acute hazard index is the summation of the ratios of peak hourly pollutant concentrations to its acute reference exposure level.<sup>10</sup> The total acute hazard index is calculated for each hour at each grid cell in the modeling domain and the highest value is identified. The following pollutants have non-cancer acute RELs and are the only ones included in the acute hazard index calculation: acetaldehyde, formaldehyde, perchloroethylene, methylene chloride, arsenic, and nickel. The metric used to estimate the non-cancer acute impacts in the PEA is the change in acute hazard index between the conditions with and without the project.

**Cumulative Effects.** The same methodology as is used to assess project effects is used to assess the toxic air contaminant emissions from the other sources with permits issued in reliance on the SCAQMD internal offset accounts. The resulting concentrations of toxic air contaminants are calculated using the same methodology as is used to calculate concentrations of toxic air contaminants resulting from the proposed project.

**Localized Concentrations of Toxic Air Contaminants.** In addition to contributing to region-wide health risk, sources emitting toxic air contaminants have the potential to result in localized concentrations of toxic air contaminants that exceed the SCAQMD significance thresholds. The SCAQMD's regulations require detailed modeling of toxic air contaminants and associated health risk when new or modified sources are proposed for approval. A qualitative discussion of localized concentrations of toxic air contaminants is included in the PEA.

## Odors

The potential for the proposed project to result in significant odors is assessed qualitatively based upon the attributes of sources permitted under Rules 1304 and 1309.1 and applicable SCAQMD rules.

## DIRECT IMPACTS METHODOLOGY – Visibility

### Visibility

Pollution can cause the absorption and scattering of light, which reduces the clarity and color of what we see.<sup>11</sup> To evaluate the visibility effects of the proposed project, air pollution modeling results are used to calculate the potential for visual range reduction, measured in miles and also translated into “deciviews.”

---

<sup>10</sup> The acute RELs are available at <http://www.arb.ca.gov/toxics/healthval/healthval.htm>

<sup>11</sup> EPA, How Air Pollution Affects the View, available at [http://www.epa.gov/visibility/pdfs/haze\\_brochure\\_20060426.pdf](http://www.epa.gov/visibility/pdfs/haze_brochure_20060426.pdf)

At Class 1 Wilderness Areas, the EPA uses deciviews as the unit of measurement for the federal Regional Haze visibility program required by the federal Clean Air Act. The unit is calculated based on “light extinction” -- that is, the amount of light lost as it travels over distance, resulting in a decline in visibility. As deciview values increase, visibility decreases. The deciview index is scaled to account for the fact that linear changes in light extinction do not have a linear effect on human perception; whether or not a change is perceptible depends upon background conditions. The deciview unit scales light extinction to correspond approximately to incremental changes in human perception, across the entire range of conditions, from pristine to highly impaired.<sup>12</sup> For example, whether a 5 kilometer change in visual range is perceptible depends upon the initial visibility -- a 5 kilometer change from conditions that allow for a visibility of 400 kilometers would not be perceptible, whereas a 5 kilometer change from conditions that allow for a visibility of only 10 kilometers would be perceptible. The worse the background conditions, the more one would perceive a small change in those conditions. The deciview scale takes these background conditions into account so that a 1 deciview difference on a 20 deciview day equates to the same perception of change as a 1 deciview change on a 5 deciview day. This enables a direct impact comparison.

While the deciview calculation does not directly measure changes in color, such as the brown sky that can be caused by photochemical smog, it does capture these effects by incorporating reductions of light absorbing particulates and gases (elemental carbon and NO<sub>2</sub>) and the scattering effects of particulate mass into the evaluation.<sup>13</sup> Light absorption by carbon leads to a blackening effect and absorption by NO<sub>2</sub> leads to a browning effect, while scattering provides a white-to-gray scale impact. The calculation of the deciview (through extinction coefficient) accounts for changes in the concentrations of the gases and particulate and therefore relates to the browning effect.

A one to two deciview change is a small, but generally noticeable change in visual range (Improve, Vol. 2. No. 1, (Winter 1993)). EPA has concluded that a 0.5 deciview change does not “cause” visual impairment on its own because a 0.5 change is not perceptible, but a 0.5 change may “contribute” to cumulative changes that are perceptible. See *Regional Haze Regulations and Guidelines for Best Available Retrofit Technology (BART) Determinations*, 70 Fed. Reg. 39104, 39120, 39162 (July 6, 2005). It is important to note that a change in deciviews does not correspond to any particular linear change in visual range in miles.<sup>14</sup> A 0.5 change in deciviews is considered significant. The PEA evaluates the change in deciviews resulting from the project.

---

<sup>12</sup> EPA, Guidance for Estimating Natural Visibility Conditions Under the Regional Haze Rule, available at <http://www.epa.gov/ttnamti1/files/ambient/visible/natural.pdf>.

<sup>13</sup> William Malm, National Park Service, Introduction to Visibility, available at <http://www.epa.gov/visibility/pdfs/introvis.pdf>. In technical terms, a deciview is a log function of the light scattering and absorption extinction coefficient.

<sup>14</sup> At zero deciviews, visual range is 400 kilometers (248.5 miles); at 30 deciviews, visual range is 20 kilometers (12.4 miles); and at 42 deciviews, visual range is 6 kilometers (3.7 miles). William Malm, National Park Service, Introduction to Visibility, available at <http://www.epa.gov/visibility/pdfs/introvis.pdf>.

Light extinction of more than 0.23 per kilometer (translating to less than ten mile visibility) over an 8-hour averaging period when humidity is less than 70 percent is also considered significant based upon the standard adopted by the California Air Resources Board. The PEA evaluates compliance with this standard at the location predicted to have worst-case visibility conditions, Riverside - Rubidoux.

**Project Effects:** To estimate changes in visibility using deciviews, future year gaseous and particulate air quality are simulated using the 2007 AQMP air quality modeling platform. The CAMx dispersion air quality model is used to simulate both gaseous and particulate air quality. A comprehensive discussion of the modeling techniques, input data and model performance is provided in Appendix V of the 2007 AQMP ([http://www.aqmd.gov/aqmp/07aqmp/aqmp/Appendix\\_V.pdf](http://www.aqmd.gov/aqmp/07aqmp/aqmp/Appendix_V.pdf)). The translation into visual range reduction is performed using EPA's Interagency Monitoring of Protected Visual Environments (IMPROVE) model for the impacts on federal Class I wilderness areas, and using the methodology developed for the 1991 AQMP, and used for all subsequent AQMPs, for Riverside (the most impacted area).

The EPA-sponsored IMPROVE program was established to provide background measurements and visual range calculation in support of the federal regional haze visibility standard attainment. The IMPROVE technique utilizes empirical equations based on the relationships between visibility and air quality to provide visual range in miles, which is converted into deciviews. The IMPROVE model is designed specifically for Class I areas. Accordingly, visibility impacts to Class 1 areas at San Gabriel, San Geronio, and San Jacinto Class I wilderness areas are estimated using the EPA IMPROVE methodology. Additional information regarding the IMPROVE model can be found on the USEPA website at <http://www.epa.gov/ttnamtl/visdata.html>.

In the 2007 AQMP, Basin visibility was estimated for Riverside because that is the portion of the Basin that experiences the greatest combination of gaseous and particulate air pollution. Visual range at Riverside was estimated using the set of empirical relationships that were developed for the 1991 AQMP and have been used in successive plans. The empirical algorithms account for naturally occurring light scattering (including Rayleigh scattering by air molecules and Mie scattering from water vapor), backscatter from particulates, plus light absorption from particulates and gaseous pollutants. In this analysis, the same approach is used to determine the change in visibility between conditions with the proposed project and conditions without the proposed project. At Riverside this PEA presents the change in visibility over an 8 hour averaging period when humidity is less than 70 percent. This is because CARB sets a statewide standard based on visibility distance using these parameters.

**Cumulative Effects:** The cumulative impacts analysis relies on the same methodology as is used to evaluate project effects. In this case, the incremental effects on visibility of the proposed project, plus the emissions from the other permits issued in reliance upon the SCAQMD internal account offsets. (This cumulative scenario is described further above, under the discussion of mass criteria pollutant emissions.)

## DIRECT IMPACTS METHODOLOGY – Climate Change

### Greenhouse Gas Emissions

Pollutants that contribute to greenhouse gas emissions include carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>). These are the greenhouse gases (GHGs) identified under AB 32 as well as under EPA's motor vehicle GHG regulation. The analysis in this PEA considers all of these pollutants, but uses one methodology to calculate CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions, and a second methodology to calculate HFCs, PFC, and SF<sub>6</sub>. First, an analysis of emissions data from the 2007 AQMP focuses on directly emitted CO<sub>2</sub>, N<sub>2</sub>O, and CH<sub>4</sub> emissions because these are the primary GHG pollutants emitted during the combustion process. Second, an analysis of the statewide GHG inventory is conducted to determine the impact from the remaining GHG pollutants including HFCs, PFCs and SF<sub>6</sub>.

The analysis of GHGs is a different analysis than the analysis of criteria pollutants for the following reasons. For criteria pollutants, significance thresholds are based on daily emissions because attainment or non-attainment in many cases is based on daily exceedances of applicable ambient air quality standards. Further, several ambient air quality standards are based on relatively short-term exposure effects on human health, e.g., one-hour and eight-hour. By contrast, since the atmospheric life of CO<sub>2</sub> is approximately 100 years, for example, the effects of GHGs are longer-term, affecting global climate over a relatively long time frame. As a result, the SCAQMD's current approach is to evaluate GHG effects over a longer timeframe. GHG emissions are measured in metric tons (MT).

#### *CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O Emissions*

**Project Effects:** CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions are the major contributors to GHG emissions and represent about 98 percent of the total national GHG emissions and can be calculated as CO<sub>2</sub> equivalent (CO<sub>2</sub>e) based on their global warming potentials (GWP). GWP is a measure of how much a given mass of a GHG is estimated to contribute to global warming based on a relative scale comparing the gas in question to that of the same mass of carbon dioxide (whose GWP is by convention equal to 1). For purpose of this analysis, CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions and their corresponding criteria pollutant emissions were extracted from the 2007 AQMP basin wide inventory for Rule 1304 and Rule 1309.1-related source categories only. Affected source categories include fuel combustion (e.g., electric utilities, petroleum refining, food and agricultural processing, etc.), waste disposal (e.g., landfills, sewage treatment, etc.), cleaning and surface coatings (e.g., printing, degreasing, etc.), and industrial processes (e.g., chemical, mineral and metal processes, electronics, etc.) The inventory for the combustion sources was based on fuel-use data and the inventory for the non-combustion sources was based on the methane emissions from the total organic gases (TOG) inventory and CARB profiles. The 2007 AQMP CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions inventory from both combustion and non-combustion sources are shown in Table D-1 in Appendix D.

Because specific information regarding future equipment types, sizes, operation activity, ratings, load factors, etc. is not available for facilities that may receive permits under Rules 1304 and 1309.1, a ratio was derived to correlate criteria pollutants to GHG emissions. In order to determine the share of total GHGs represented by stationary source emissions from the industry categories eligible for permits under Rules 1309.1 and 1304, staff determined the share of total AQMP stationary source combustion emissions of SOx that is represented by SOx emissions from the relevant industry categories. SOx emissions were selected as a surrogate to prorate the GHG emissions because SOx emissions result primarily from sulfur contained in fossil fuels. The primary fuel used for stationary source combustion in the South Coast region is natural gas. To a much smaller extent diesel fuel is used by emergency backup engines during periodic engine testing and maintenance and when there is a power outage. For both fuel types, the control levels for SOx between existing equipment and the new equipment are the same. Therefore, SOx provides a more direct linkage than other pollutants to estimate the corresponding CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions. In contrast, NOx emissions are not directly related to the amount of fuel combusted because some NOx sources have a greater degree of control than others. Therefore, some sources will have less NOx emissions than other sources per unit of fuel combusted. Therefore, SOx provides a more direct linkage than other pollutants to estimate the corresponding GHG emissions. Using a ratio of GHG emissions to SOx emissions from the AQMP inventory, the GHG emissions from the proposed project are calculated using the estimated SOx emissions from the proposed project and multiplying by the ratio factor. Table D-1 in Appendix D provides a list of the affected source categories, CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions, CO<sub>2</sub>e emissions and corresponding SOx emissions from the 2007 AQMP.

#### *HFCs, PFCs, and SF<sub>6</sub> Emissions*

**Project Effects:** Because the ratio of SOx emissions to CO<sub>2</sub>e from the 2007 AQMP is based on CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions, the remaining GHG emissions from HFCs, PFCs and SF<sub>6</sub> had to be calculated using a separate methodology. This was done by using CARB's statewide overall GHG inventory and developing a ratio of statewide GHGs from high GWP pollutants (HFCs, PFCs and SF<sub>6</sub>) and applying it to the GHG emissions from all types of sources that would be affected by the proposed project (e.g., commercial, industrial, etc). The state inventory over a three-year period was examined to determine the total statewide GHG inventory and the statewide high GWP (i.e., HFCs, PFCs, and SF<sub>6</sub> emissions) sources. Specifically, the ratio was calculated by dividing the total high GWPs by the total GHG emissions from all affected sources in the state (14.48 million MT CO<sub>2</sub>e /year / 223.32 million MT CO<sub>2</sub>e /year = 0.065). By applying the ratio of statewide high GWPs to all statewide GHG sources (0.065) to the CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions from 2007 AQMP (72 million MT/year), the total six GHG pollutant emissions of all AQMP sources can be determined (72 x 1.065 = 76.68 million MT CO<sub>2</sub>e/year). Thus, a ratio of 76.68 million MT/year of total GHG emissions to 931 tons per year of total SOx emissions (76.68/931 = 0.0824) from the 2007 AQMP can be derived. The ratio was multiplied by the estimated SOx emissions from the proposed project to determine the total GHG emissions from the proposed project.

**Cumulative Effects:** In addition to calculating GHGs attributed to the proposed project, the analysis includes calculations of combined GHGs from all sources receiving permits on the SCAQMD internal offset accounts, as described under the discussion of mass emissions of critical pollutants. The analysis of GHGs from the three power plants is based upon the FSAs prepared by the CEC for each of the plants.

The FSA for the CPV Sentinel project included GHG emissions from both the construction and operational phases of the project. Because the primary sources of emissions are combustion stationary sources, the GHG emissions evaluated are carbon dioxide (CO<sub>2</sub>), nitrous oxide (N<sub>2</sub>O), and methane (CH<sub>4</sub>). GHGs are emitted from power plant sources such as combustion turbine generators (CTG) during operation, start-up and shutdown, firewater pumps, black start generators, and boilers. Annual GHG emissions are calculated by multiplying the heat or fuel input rate by the default emission factors and hours of operation for each piece of equipment.

The FSAs for the El Segundo and Walnut Creek projects did not include GHG emissions, so GHG emissions for the two power plant projects were calculated in this analysis using the known data in the Sentinel project and the same default emission factors. The FSAs prepared for the El Segundo and Walnut Creek projects included the types of affected equipment, the rated capacity of the equipment, and hours of operation. To calculate the unknown heat and fuel input for El Segundo and Walnut Creek projects, a ratio of rated capacity to heat/fuel input was derived applying the known data from the Sentinel project.

# **ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES - AIR QUALITY**

**Introduction**

**Significance Criteria**

**Direct Impact Analysis - Air Quality**

**Visibility Impacts**

**Climate Change Impacts**

**Indirect Impact Analysis – Construction and Mobile Source Emissions**

**Summary of Overall Significance Determination of Direct and Indirect Air  
Quality Impacts**

**Mitigation Measures**

## INTRODUCTION

The methodology used for analyzing air quality impacts is discussed in Subchapter 4.0. Based on that methodology, this chapter (Chapter 4.1) evaluates the air quality impacts resulting from the proposed project. This chapter first describes the significance criteria used to assess whether the air quality impacts from the proposed project are significant. It then provides an impact assessment based on those criteria. This assessment includes direct and indirect, as well as cumulative, impacts. The chapter concludes with a discussion of mitigation measures.

## SIGNIFICANCE CRITERIA

Although there is no ironclad rule as to when an impact is “significant,” generally, the questions presented in the environmental checklist in Appendix G of the CEQA Guidelines can provide a framework for analysis that can be refined by more specific criteria developed by a particular agency. The SCAQMD has developed the following air quality significance thresholds, which are used in this analysis to determine the significance of the air quality impacts from the proposed project. The primary air quality significance thresholds used for this analysis have been adopted by the SCAQMD and are provided on the SCAQMD’s website:

<http://www.aqmd.gov/ceqa/handbook/signthres.pdf>.

### Air Quality Impacts

1. **Conflict with Air Quality Management Plan.** Would the proposed project conflict with or obstruct the implementation of the applicable air quality plan? This analysis is based on the 2007 Air Quality Management Plan (AQMP) and examines whether emissions of criteria pollutants under the proposed project would conflict with or obstruct the implementation of the 2007 AQMP.
2. **Mass Emissions and Modeled Concentrations of Criteria Pollutants.** Would the proposed project violate any air quality standard or contribute to an existing or projected air quality violation? Mass daily emissions of criteria pollutants and modeled concentrations of criteria pollutants, on both a region-wide and localized basis, are considered in this analysis. For the analysis of mass emissions, the air quality significance thresholds are shown in Table 4.1-1. These significance thresholds for mass emissions were developed through a public process and approved by the SCAQMD Governing Board as significance thresholds for individual projects. Under these standards, air quality impacts from a project are

considered to be significant if any emissions equal or exceed the daily mass emissions thresholds shown in Table 4.1-1.

**TABLE 4.1-1**

**Mass Emissions Significance Thresholds for Construction and Operation Air Quality Impacts (pounds/day)**

<b>Air Pollutant</b>	<b>Construction <sup>a</sup></b>	<b>Operation</b>
Volatile Organic Compound (VOC)	75	55
Carbon Monoxide (CO)	550	550
Nitrogen Oxides (NO <sub>x</sub> )	100	55
Sulfur Oxides (SO <sub>x</sub> )	150	150
Particulates (PM10)	150	150
Fine Particulates (PM2.5)	55	55
Lead	3	3

<sup>a</sup> Construction significance thresholds also serve as the operational significance thresholds in the Coachella Valley and portion of the district.

See SCAQMD (2009) <http://www.aqmd.gov/ceqa/handbook/signthres.pdf>.

The analysis of region-wide concentrations of criteria pollutants attributable to the proposed project provides a more detailed evaluation of the effects of the mass emissions on concentrations of pollutants throughout the Basin and in the Coachella Valley. This analysis supplements the quantification of mass emissions.

For the analysis of localized concentrations of criteria pollutants, the PEA evaluates whether the proposed project would exceed the SCAQMD's concentration-based significance thresholds. A project would have a significant impact if its operations would result in offsite ambient air pollutant concentrations that would exceed any of the SCAQMD's localized thresholds of significance in Table 4.1-2.

**TABLE 4.1-2**  
**SCAQMD Localized Operational Thresholds for Ambient Air Quality Concentrations**

Air Pollutant	Ambient Operation Threshold
Nitrogen dioxide (NO <sub>2</sub> )	
1-hour average	0.18 ppm (338 µg/m <sup>3</sup> )

24-hour average	0.04 ppm (105 µg/m <sup>3</sup> )

Notes:

- a) The NO<sub>2</sub>, SO<sub>2</sub>, and CO thresholds are absolute thresholds based on the applicable ambient air quality standards; the maximum predicted impact from proposed project operations is added to the background concentration for the proposed project vicinity and compared to the threshold.
- c) The PM<sub>10</sub> and PM<sub>2.5</sub> thresholds are incremental thresholds. For CEQA significance, the maximum increase in concentration relative to the CEQA baseline is compared to the threshold.
- d) Conversion equation for parts per million (ppm) and micrograms per cubic meter of air (µg/m<sup>3</sup>):  

$$\mu\text{g}/\text{m}^3 = (\text{ppm})(\text{molecular weight})/24.45 \times 1000 (\mu\text{g}/\text{mg})$$

See SCAQMD (2009) <http://www.aqmd.gov/ceqa/handbook/signthres.pdf>.

3. **Health Effects of Criteria Pollutant Emissions and Toxic Air Contaminants.** Would the proposed project expose sensitive receptors to substantial pollutant concentrations? This analysis evaluates potential health impacts from region-wide emissions of criteria pollutants, region-wide emissions of toxic air contaminants (TACs), and localized concentrations of TACs.

With respect to the health effects associated with region-wide emissions of criteria pollutants, the SCAQMD has not adopted formal significance

thresholds for health impacts of ozone and PM<sub>2.5</sub>, as distinguished from the concentration-based significance thresholds set forth in Table 4.1-2 above. For purposes of this PEA, the SCAQMD considers the effects significant if emissions attributable to the project would make a substantial contribution to negative health effects in the affected communities in comparison to the without-project scenario.

The SCAQMD has adopted significance thresholds for TACs. One of the primary health risks of concern due to exposure to TACs is the risk of contracting cancer. The carcinogenic potential of TACs is a particular public health concern because it is believed by many scientists that there is no “safe” level of exposure to carcinogens. Any exposure to a carcinogen poses some risk of causing cancer. It is estimated that about one in four deaths in the United States is attributable to cancer.<sup>1</sup> About two percent of cancer deaths in the United States may be attributable to environmental pollution (Doll and Peto 1981).<sup>2</sup> The proportion of cancer deaths attributable to air pollution has not been estimated using epidemiological methods.

New and modified sources of TACs in the SCAQMD’s jurisdiction are subject to Rule 1401 - New Source Review of Toxic Air Contaminants, and Rule 212 - Standards for Approving Permits. Rule 212 requires notification of the SCAQMD’s intent to grant a permit to construct a significant project, which is defined as a new or modified permit unit located within 1,000 feet of a school (a state law requirement under AB 3205); a new or modified permit unit posing an maximum individual cancer risk of one in one million ( $1 \times 10^{-6}$ ) or greater; or a new or modified facility with criteria pollutant emissions exceeding specified daily maximums. Distribution of notice is required to all addresses within a 1/4-mile radius, or other area deemed appropriate by the SCAQMD. Rule 1401 currently controls emissions of carcinogenic and non-carcinogenic (health effects other than cancer) air contaminants from new, modified and relocated sources by specifying limits on cancer risk and hazard index, respectively.

Unlike carcinogens, for most non-carcinogens it is believed that there is a threshold level of exposure to the compound below which it will not pose a health risk. The California Environmental Protection Agency (CalEPA) Office of Environmental Health Hazard Assessment (OEHA) develops Reference Exposure Levels (RELs) for TACs that are health-conservative estimates of the levels of exposure at or below which health effects are not

---

<sup>1</sup> American Cancer Society, California Department of Public Health, California Cancer Registry. California Cancer Facts and Figures 2010. Oakland, CA; American Cancer Society, California Division, September 2009; <http://www.ccrca.org/PDF/ACS2010-9-29-09.pdf>

<sup>2</sup> Doll R, Peto R.; J Natl Cancer Inst. 1981 Jun;66(6):1191-308;  
<http://www.ncbi.nlm.nih.gov/sites/entrez/7017215?dopt=Abstract&holding=f1000.f1000m.isretn>

expected. The non-cancer health risk due to exposure to a TAC is assessed by comparing the estimated level of exposure to the REL. The comparison is expressed as the ratio of the estimated exposure level to the REL, called the hazard index (HI).

Under the SCAQMD's established significance standards for TACs, a project that has the potential to expose receptors to the following thresholds<sup>3</sup> is considered significant:

- the maximum incremental cancer risk would be greater than or equal to 10 in 1 million ( $10 \times 10^{-6}$ ),
- the incremental non-cancer hazard index (acute and/or chronic) would be greater than or equal to 1.0, or
- incremental cancer burden would be greater than 0.5 excess cancer cases (in areas with a cancer risk greater than or equal to one in one million ( $1 \times 10^{-6}$ )).

The SCAQMD has not developed different significance thresholds for cumulative emissions of TACs as compared to project-specific emissions from TACs. Thus, cumulative impacts are evaluated based on the same health impact significance standards for TACs as set forth above.

4. **Odors.** Would the proposed project create objectionable odors affecting a substantial number of people?

The significance threshold for odor impacts is based on whether a project creates an odor nuisance pursuant to SCAQMD Rule 402 – Nuisance.

#### **Visibility Impacts.**

5. **Visibility.** Would the proposed project create significant aesthetic impacts by resulting in air emissions that substantially degrade the existing visual character or quality of the project surroundings?

Emissions are considered to be significant if they cause a violation of the State standard for visibility-reducing particles or cause a violation of visibility standards for federal Class I areas (national parks or wilderness areas).

The state visibility standard was first adopted by CARB in 1969 based on perceived reductions in visibility to less than ten miles on days when relative humidity is less than 70 percent.<sup>4</sup> The statewide standard is

---

<sup>3</sup> <http://www.aqmd.gov/ceqa/handbook/signthres.pdf>

<sup>4</sup> Visibility-reducing particles consist of suspended particulate matter, which is a complex mixture of tiny particles that consists of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. These particles vary greatly in shape, size and chemical composition, and can be made up of many different materials such as metals, soot, soil, dust, and salt.

intended to limit the frequency and severity of visibility impairment due to regional haze. In 1989, CARB converted the statewide 10-mile standard to an instrumental standard that is equivalent to the visual standard set in 1969. Compliance with the state standard for visibility is now determined by evaluating whether there is a light extinction coefficient of 0.23 per kilometer when relative humidity is less than 70 percent, 8-hour average (10 am – 6 pm, PST). Emissions that cause a violation of this standard are considered significant.

In harmony with USEPA guidance, the SCAQMD also considers a 0.5 deciview change to be significant for Class I areas (National Parks and federal wilderness areas). The nature of the deciview unit is described in more detail in Subchapter 4.0. A one to two deciview change is a small, but generally noticeable change in visual range. The USEPA has concluded that a 0.5 deciview change does not “cause” visual impairment on its own because a 0.5 change is not perceptible, but a 0.5 change may “contribute” to cumulative changes that are perceptible. Regional Haze Regulations and Guidelines for Best Available Retrofit Technology (BART) Determinations, 70 Fed. Reg. 39104, 39120, 39162 (July 6, 2005). Accordingly, a 0.5 deciview change would be considered a significant project impact and a cumulatively considerable contribution to a significant cumulative impact. A change that is less than 0.5 deciview is not significant and is not a cumulatively considerable contribution to a cumulative impact.

### **Climate Change Impacts**

6. **Greenhouse Gas Emissions.** Would the proposed project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, based on any applicable threshold of significance?

SCAQMD’s approved<sup>5</sup> interim GHG significance threshold is a tiered approach to determining GHG significance of projects. Under Tier 1, if the proposed project qualifies for an exemption under CEQA, it is not considered significant for GHG emissions. If the project does not qualify for the exemption, then the evaluation moves to the next tier. Tier 2 consists of determining whether or not the project is consistent with a GHG reduction plan (which may be part of a local general plan, for example) that meets specified requirements. If the project is consistent with such a plan, then it is not considered significant for GHG emissions. If the project is not consistent with such a plan (or if there no such approved plan), then the evaluation moves to the next tier. Under Tier 3, a

---

<sup>5</sup> Approved SCAQMD CEQA GHG Significance Threshold for projects where SCAQMD is Lead Agency was approved by the Governing Board at its December 5, 2008. For a discussion of the basis of the SCAQMD threshold, see the following web site: <http://www.aqmd.gov/hb/2008/December/081231a.htm>.

proposed industrial project is considered significant if GHG emissions from the project exceed 10,000 metric tons CO<sub>2</sub> equivalent (MTCO<sub>2</sub>e) per year. For purposes of the analysis in this PEA, this significance threshold is applied so that the proposed project is considered significant if GHG emissions attributed to the project would exceed 10,000 MTCO<sub>2</sub>e/yr.

The following categories of emissions are included in the analysis of air quality impacts in this subchapter:

- **Emissions from sources permitted under the project.** Emissions from stationary sources that are attributed to the project are quantified, as described in the methodology section. This analysis estimates emissions through the year 2030.
- **Cumulative impacts of all sources using SCAQMD internal account offsets.** Cumulative emissions from all sources permitted through 2030 based upon offsets in the SCAQMD internal account are evaluated. As described in the methodology section, this includes emissions attributed to the project, together with emissions from sources permitted under Rule 1304 and 1309.1 pursuant to the earlier version of Rule 1315 and SB 827, and the emissions from three specific power plants (Sentinel Power Plant Project, Walnut Creek Mission Energy Project, and NRG El Segundo Repowering Project). This analysis includes estimated emissions through the year 2030.
- **All cumulative forecasted emissions.** This analysis describes cumulative emissions from all sources included in the AQMP through the year 2030. This includes the emissions attributed to the project combined with the emissions from all other stationary and mobile sources within the area covered by the AQMP.
- **Indirect emissions related to the project.** This discussion describes emissions from construction of sources permitted under the project and emissions from mobile sources associated with facilities permitted under the project. These types of indirect emissions impacts are discussed in qualitative terms.

## **DIRECT IMPACT ANALYSIS – AIR QUALITY**

1. **AQMP Consistency. Would the proposed project conflict with or obstruct the implementation of the applicable air quality plan?**

### **The 2007 AQMP**

The 2007 AQMP incorporates future growth projections for the entire region, based on data provided by the Southern California Association of Governments (SCAG). The

SCAQMD is required to use SCAG's growth projections in its AQMP. Health & Safety Code § 40460(b). The AQMP details the projected air emissions resulting from this regional growth, and sets forth measures and strategies for attaining air quality standards in light of this growth. The AQMP takes into account future emissions from both stationary and mobile sources, as well as emissions from construction activities.

The permits issued under Rule 1304 and 1309.1 with proposed Rule 1315 in effect would serve a subset of the future growth that is forecasted in the 2007 AQMP. Accordingly, the emissions from the issuance of permits under the project are not expected to cause future emissions in the region to exceed the emissions levels anticipated by the 2007 AQMP. Proposed Rule 1315 nevertheless includes a "cap," which limits the amount of stationary source emissions from the project and ensures that this amount does not exceed the level of emissions projected in this PEA. If the cap is exceeded for any pollutant, proposed Rule 1315 would bar the issuance of permits for individual projects that require offsets from the SCAQMD's internal accounts until consistency with the cap is restored.

Thus, emissions from regional growth in the industry sectors that are eligible for permits issued in reliance upon SCAQMD internal account offsets are a component of the emissions forecasted in the 2007 AQMP and are accounted for in the 2007 AQMP. For that reason, the proposed project would not conflict with or obstruct the implementation of the AQMP.

**2. Criteria Pollutant Emission Standards. Would the proposed project violate any air quality standard or contribute to an existing or projected air quality violation?**

The analysis in this section evaluates the effects on air quality attributed to the proposed project by assessing mass daily criteria pollutant emissions, region-wide concentrations of criteria pollutants, and localized concentrations of criteria pollutants. These effects are evaluated separately below for all emissions attributable to sources expected to receive permits under the project, as well as on a cumulative basis that takes account of all sources using SCAQMD internal account offsets.

**Regional Mass Criteria Pollutant Emissions - Project Impacts**

In the future, emissions in the SCAQMD's jurisdiction are expected to be substantially lower than under existing conditions. In fact, the Basin is projected to achieve the PM2.5 standard by the deadline of 2015, and the 8-hour ozone standard by the deadline of 2024, including emissions from this project. However, as described in Subchapter 4.0, the proposed project would result in a higher level of emissions than the emissions expected to occur without the project. This means that the without project scenario is projected to result in greater emissions reductions than are projected to occur under the proposed project. The analysis below quantifies the difference between the without project and with project scenarios in terms of mass emissions of criteria pollutants from stationary sources.

Table 4.1-3 below quantifies the emissions represented by the amount of stationary source emissions that is estimated to occur under the proposed project but not without the

project. The numbers in the table are based on the projections in the 2007 AQMP for the industry sectors that could be eligible for permits under Rules 1304 and 1309.1, with a 15 percent factor added to ensure reasonable worst case emissions are captured. Table 4.1-3 also depicts the emissions represented by shutdowns of stationary sources that have obtained offsets from SCAQMD internal accounts under the proposed project but not under the without project scenario. Emissions are listed in both tons per day and pounds per day. Table 4.1-4 adds the two subtotals to come up with an estimate of total stationary source emissions attributed to the proposed project. Table 4.1-4 then compares these emissions totals in pounds per day to the SCAQMD's operational significance thresholds for each pollutant for the years 2014, 2023 and 2030.

**TABLE 4.1-3****Emissions from Projected Growth and Replacement of Existing Facilities**

2010-2023	31,140	2,100	80	80	60	2,740
2010-2030	31,140	2,100	80	80	60	2,740

**TABLE 4.1-4**  
**Total Project Stationary Source Emissions**

Years	VOC	NO <sub>x</sub>	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	CO
Tons per Day						
2010-2014	16.99	1.29	0.16	0.85	0.54	1.14
2010-2023	34.52	2.38	0.49	2.84	1.80	4.16
2010-2030	44.59	3.31	0.74	4.44	2.82	6.26
Pounds per Day						
2010-2014	33,980	2,580	320	1,700	1,080	2,280
2010-2023	69,040	4,760	980	5,680	3,610	8,320
2010-2030	89,180	6,620	1,480	8,880	5,650	12,520
Significance Threshold	55	55	150	150	55	550
<b>Significant?</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>

Based on the emissions totals above, the stationary source emissions attributable to the proposed project are considered to result in a significant air quality impact because the emissions will exceed the applicable operational significance threshold for each pollutant.

**Project lead emissions.** Facilities that use or process lead are only rarely permitted by the SCAQMD and very few sources emit sufficient levels of lead to cause or contribute to a nonattainment problem. There are two such sources in Los Angeles County, both battery recycling facilities. From SCAQMD's annual emissions reporting, staff has determined that total lead emissions in the Basin are approximately 18 lbs/day (6,517 lbs/yr) based on fiscal year (FY) 2006-2007 data comprised of 566 facilities in SCAB that reported lead emissions. The SIC and county location of each facility identified the SIC growth rate listed in the 2007 AQMP (Appendix III, Table 2-5, 2007 AQMP, SCAQMD) for the years 2015, 2020 and 2030. To account for the actual net increases and decreases during the time periods of the project (2010-2030) and cumulative scenario (2007-2030), the overall net lead increases were separately estimated for each of these time periods. For the time period of July 2010 to 2030, the net increase of lead emissions from the project were estimated to be equal to 0.70 pounds per day, which was based on using the estimated lead emissions in 2010 and net increase of SIC growth factors from July 2010 to 2030. Incremental lead impacts from all the attainment demonstration years for the project are presented in Table 4.1-5. For the lead emitting facilities, there were some facilities with negative SIC growth factors. Thus, the cumulative net increase of lead emissions was determined to be lower than the project. The cumulative net increase in lead emission by 2030 in SCAB is estimated to be 0.63 pounds per day. Incremental cumulative lead impacts from all the attainment demonstration years are presented in Table 4.1-5. Both the project and cumulative lead impacts are less than the CEQA significance threshold of three pounds per day so project and cumulative lead impacts are not significant.

**TABLE 4.1-5**  
**Project Lead Emissions**

Years	Lead (lbs/day)
2010-2014	0.13
2010-2023	0.45
2010-2030	0.70

### **Regional Mass Criteria Pollutant Emissions - Cumulative Impacts**

**Cumulative impacts of all sources using SCAQMD internal account offsets.** As explained in section 4.0, the assessment of cumulative impacts of past, present and future sources using SCAQMD internal account offsets, includes three components: (1) project emissions -- emissions of criteria pollutants from sources permitted under Rules 1304 and 1309.1 after July 2010; (2) pre-project emissions -- emissions from sources permitted under Rules 1304 and 1309.1 pursuant to the prior version of Rule 1315 and SB 827; and (3) emissions for three power plants considered to be reasonably foreseeable future projects. Table 4.1-6 below presents the cumulative total project and pre-project mass emissions of criteria pollutants. The cumulative total is the sum of the 2007 AQMP industry sector growth projections (starting from 2007 as opposed to 2010 under the project impacts in Table 4.1-3) and the emission reductions from shutdowns of currently permitted sources that have obtained offsets from the SCAQMD internal accounts. The cumulative total in Table 4.1-6 is presented in both tons per day and pounds per day.

**Power plant emissions.** The cumulative impact analysis also includes emissions from three specified power plant projects. As explained in Chapter 2, these three power plants are considered probable foreseeable future projects that could contribute to cumulative impacts. The three projects have been evaluated by the California Energy Commission (CEC), the CEQA lead agency for the projects. The CEC has prepared a separate Final Staff Assessment (FSA) for each project. The FSA is the functional equivalent of an EIR under the CEC's certified regulatory process for evaluating the environmental impacts of proposed projects under its jurisdiction. The SCAQMD reviewed the FSAs in conducting the cumulative impact analysis for proposed Rule 1315.

**TABLE 4.1-6**  
**Cumulative Project and Pre-Project Stationary Source Emissions**

Years	VOC	NO <sub>x</sub>	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	CO

	Emission Reductions From Shutdowns of Currently Permitted Sources Obtaining Offsets from SCAQMD Internal Accounts (tons per day)					
2010-2014	11.21	0.77	0.03	0.03	0.02	0.87
2010-2023	15.57	1.05	0.04	0.04	0.03	1.37
2010-2030	15.57	1.05	0.04	0.04	0.03	1.37
	Cumulative Emissions (tons per day)					
2007-2014	22.78	1.80	0.29	1.67	1.06	1.41
2007-2023	39.83	2.75	0.62	3.62	2.31	4.94
2007-2030	49.80	3.71	0.86	5.24	3.33	7.13
	Cumulative Emissions (pounds per day)					
2007-2014	45,560	3,600	580	3,340	2,120	2,820
2007-2023	79,660	5,500	1,240	7,240	4,620	9,880
2007-2030	99,600	7,420	1,720	10,480	6,640	14,260

The first power plant project is the Sentinel Power Plant proposed by Competitive Power Ventures, LLC (CPV). The Sentinel power plant would be located in Desert Hot Springs in Riverside County. As discussed above, AB 1318 (Perez), which took effect on January 1, 2010, requires the SCAQMD to transfer emission offsets for SO<sub>x</sub> and particulate matter (PM<sub>10</sub>) to the Sentinel power plant upon specified conditions described in the law. The Sentinel power plant would consist of eight turbines capable of generating 850 megawatts of electricity. To obtain the PM and SO<sub>x</sub> offsets, CPV Sentinel will be required to pay a mitigation fee that will be used to fund emission reductions programs. Emission reduction projects have the potential to reduce different criteria pollutants (i.e., co-benefits) but as a conservative analysis, it is assumed the emission reduction projects will only reduce the criteria pollutant of the offset being obtained (i.e., PM or SO<sub>x</sub>). The emission reductions from the projects funded by the Sentinel mitigation fee are included in the operational emissions presented in Table 4.1-7. For detail on the origin of the Sentinel mitigation fee and the methodology used to determine the emissions reductions from projects funded by the Sentinel mitigation fee, refer to Subchapter 4.0 – Air Quality Methodology.

The second power plant project is the Walnut Creek Mission Energy power plant located in the City of Industry in Los Angeles County. This power plant is the subject of SB 388 (Calderon) which would require the SCAQMD to provide offsets to the Walnut Creek power plant. This power plant would consist of five turbines capable of generating 500 megawatts of electricity.

The third power plant is the El Segundo Power Redevelopment Project located in the City of El Segundo in Los Angeles County. The project proponent is planning to replace the existing El Segundo Generating Station (3 boilers) with a 630 megawatts natural gas-fired combined cycle electric generation facility. When the SCAQMD commenced preparation of this PEA, it appeared that NRG El Segundo would pursue special legislation similar to the Sentinel project. However, NRG El Segundo later submitted an application to carry out its repowering under Rule 1304(a)(2) electric utility steam boiler replacement and SCAQMD approved the application pursuant to SB 827. Accordingly, the NRG El Segundo power plant emissions are included in the analysis of cumulative impacts below.

Table 4.1-7 presents the mass emissions resulting from operation of the three power plants,<sup>6</sup> as presented in the FSAs prepared by the CEC.

**TABLE 4.1-7**  
**Mass Emissions (lbs/day) from Power Plant Operations**

<b>Power Plant</b>	<b>VOC</b>	<b>NO<sub>x</sub></b>	<b>SO<sub>x</sub></b>	<b>PM<sub>10</sub></b>	<b>PM<sub>2.5</sub></b>	<b>CO</b>
NRG El Segundo	1,114	2,783	167	1,837	1,819	14,210
Walnut Creek	229	1,046	73	731	723	1,684

<b>Remaining Emissions</b>	<b>1,865</b>	<b>5,790</b>	<b>336</b>	<b>2,579</b>	<b>2,961</b>	<b>18,827</b>
SCAQMD Operational Significance Threshold	55	55	150	150	55	550
<b>Significant?</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>

<sup>6</sup> The FSAs for the three power plants did not include operational PM<sub>2.5</sub> mass emissions. Using established standards for determining the percentage of PM<sub>10</sub> that is PM<sub>2.5</sub>, operational PM<sub>2.5</sub> emissions from all three power plants were calculated. For example, 89 percent of PM<sub>10</sub> emissions from off-road equipment are PM<sub>2.5</sub> emissions, 21 percent of fugitive PM<sub>10</sub> emissions from construction and demolition are PM<sub>2.5</sub> emissions, and 99 percent of PM<sub>10</sub> emissions from stationary combustion sources are PM<sub>2.5</sub> emissions.

Table 4.1-8 presents the cumulative operational total for mass emissions of criteria pollutants from stationary sources, by adding the comparable values in Tables 4.1-6 and 4.1-7 in pounds per day by year 2030. As shown in the tables below, the cumulative impact is significant. The proposed project is determined to make a cumulatively considerable contribution to this significant impact.

**TABLE 4.1-8**  
**Total Cumulative Stationary Source Mass Emissions (lbs/day) in Year 2030**

	VOC	NO <sub>x</sub>	SO <sub>x</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	CO

<b>Significant?</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>	<b>Yes</b>

**All cumulative forecasted emissions.** This component of the analysis describes project emissions projections in the larger context of all of the emissions forecasted in the 2007 AQMP from all sources.

In 2030, stationary source emissions of VOCs attributed to the proposed project are estimated at about 45 tons per day. (See Table 4.1-4.) This compares with the region-wide 2030 forecast of approximately 291 tons per day on average for stationary and area source emissions of VOCs (with total projected regional VOC emissions at approximately 508 tons per day). See 2007 AQMP, Appendix III, Table A-10 (annual average emissions) Project VOC emissions are less than ten percent of the total regional VOC emissions.

For NO<sub>x</sub> emissions in 2030, stationary source emissions from the proposed project are estimated at about 3.3 tons per day. This compares with the region-wide 2030 forecast of approximately 76 tons per day on average for stationary and area source emissions of NO<sub>x</sub> (with total projected regional NO<sub>x</sub> emissions at approximately 512 tons per day). Project emissions are about 6/10ths of one percent of the total.

For SO<sub>x</sub> emissions in 2030, stationary source emissions from the proposed project are estimated at less than 1 ton per day. This compares with the region-wide 2030 forecast of approximately 17 tons per day on average for stationary and area sources of SO<sub>x</sub> (with total projected regional SO<sub>x</sub> emissions at approximately 72 tons per day). Project emissions are about one percent of the total.

For PM10 emissions in 2030, stationary source emissions from the proposed project are estimated at about 4.5 tons per day. This compares with the region-wide 2030 forecast of approximately 282 tons per day on average for stationary and area source emissions of PM10 (with total projected regional PM10 emissions at approximately 330 tons per day). Project emissions are somewhat over one percent of the total.

The impacts under the proposed project are considered cumulatively considerable, and therefore significant, even though emissions attributed to the project represent a fraction of the cumulative future regional emissions projected in the 2007 AQMP.

**Cumulative lead emissions.** As discussed earlier under project impacts, staff determined that total lead emissions in the Basin are approximately 18 lbs/day (6,517 lbs/yr) based on fiscal year (FY) 2006-2007 data comprised of 566 facilities in SCAB that reported lead emissions. The SIC and county location of each facility identified the SIC growth rate listed in the 2007 AQMP (Appendix III, Table 2-5, 2007 AQMP, SCAQMD) for the years 2015, 2020 and 2030. Similar to the project, to account for the actual net increases and decreases during the time periods of the cumulative scenario (2007-2030), the overall net lead increases were separately estimated for each of these time periods. For the lead emitting facilities, there were some facilities with negative SIC growth factors. Thus, the cumulative net increase of lead emissions was determined to be lower than the project. The cumulative net increase in lead emission by 2030 in SCAB is estimated to be 0.63 pounds per day. Incremental cumulative lead impacts from all the attainment demonstration years are presented in Table 4.1-9. The cumulative lead impacts are less than the CEQA significance threshold of three pounds per day so cumulative lead impacts are not significant.

**TABLE 4.1-9**  
**Cumulative Lead Emissions**

Years	Lead (lbs/day)
2007-2014	0.33
2007-2023	0.50
2007-2030	0.63

### **Regional Criteria Pollutant Concentrations - Project Impacts**

The analysis below focuses on the Basin and the Coachella Valley, which are the two areas within the SCAQMD's jurisdiction that are designated as federal nonattainment regions under the CAA. The Riverside County portion of the MDAB, which is also within the SCAQMD's jurisdiction, is designated as a nonattainment region only with respect to the state standards (CAAQS) for ozone and PM10. Unlike the Basin and the Coachella Valley, this area of the SCAQMD's jurisdiction does not have a monitoring station to allow for the modeling of concentration-based impacts. This area is sparsely

populated and has few stationary sources, so it is unlikely that project impacts would even approach the extent of impact in the Coachella Valley. However, it is conservatively assumed for purposes of the environmental analysis that any impact identified for the Coachella Valley would apply equally to this area of the MDAB.

This analysis supplements the preceding section that compared mass emissions to SCAQMD numeric significance thresholds. As explained above, the region-wide emissions of criteria pollutants attributed to the proposed project are considered significant in comparison to the SCAQMD's significance thresholds. No new threshold is applied to assess the regional concentrations of those same pollutants. The information in this section is provided to further inform the public and decision-makers regarding the degree to which the emissions attributed to the proposed project could contribute to concentrations of pollutants throughout the Basin and Coachella Valley.

For the region-wide analysis, the 2014, 2023 and 2030 future air quality was simulated for the without project and proposed project emissions scenarios. Regional concentrations of pollutants are discussed below in the following order: (a) ozone concentrations; (b) PM<sub>2.5</sub> and PM<sub>10</sub> concentrations; (c) SO<sub>2</sub> and NO<sub>2</sub> concentrations; (d) lead concentrations; and (e) CO concentrations.

#### *a. Ozone Concentrations*

In 1997, the USEPA adopted an 8-hour NAAQS for ozone of 0.08 parts per million, which equals 80 parts per billion (ppb). In 2008, the USEPA adopted a revised 8-hour NAAQS for ozone of 75 ppb. California has a more stringent 8-hour standard CAAQS for ozone of 70 ppb. California also has a 1-hour CAAQS for ozone of 90 ppb.

The NAAQS that served as the basis for the 2007 AQMP was the 1997 8-hour standard of 0.08 ppm (80 ppb). Through the issuance of the AQMP, the SCAQMD voluntarily requested a "bump up" in the ozone designations for the Basin and Coachella Valley. In accordance with this request, the USEPA changed the Basin's federal ozone designation from "severe-17" to "extreme," and the Coachella Valley's federal ozone designation from "serious" to "severe-15." As a result of these designations, the Basin is required to reach the 80 ppb ozone standard by 2024 (with emission reductions required to be in place by 2023). The Coachella Valley is required to reach the standard by 2019. The 2007 AQMP demonstrates attainment with the 80 ppb standard within these timeframes, with attainment in the Basin being achieved by 2024 and attainment in the Coachella Valley being achieved in 2018.

As explained above, the emissions estimates in the 2007 AQMP include emissions from future projected cumulative growth throughout the region. As a result, it is not anticipated that the emissions attributed to the proposed project would interfere with attainment of the 80 ppb federal ozone standard as demonstrated in the 2007 AQMP.

In the future, additional emissions reduction measures will be needed beyond the control measures identified in the 2007 AQMP in order to reduce ambient ozone levels to achieve attainment of the 75 ppb federal ozone standard adopted in 2008 and the

California 1-hour and 8-hour ozone standards (90 ppb and 70 ppb, respectively). It cannot be ascertained precisely when these standards will be attained. The 2007 AQMP projects attainment in the Basin and Coachella Valley will not occur until after 2024.

Air quality will improve under future conditions with or without the proposed project. The analysis below examines the further reductions in forecasted ambient ozone concentrations projected to occur without the project, as compared with future conditions projected to occur with the proposed project. Table 4.1-10 quantifies these reductions in terms of average and maximum 8-hour ozone concentrations for the Basin and the Coachella Valley for the years 2014, 2023 and 2030.

**TABLE 4.1-10**  
**Additional Reductions in Regional Ozone Concentrations under the Without Project Scenario**

<b>Year</b>	<b>Basin Average Ozone (ppb)</b>	<b>Basin Maximum Station Ozone (ppb)</b>	<b>Coachella Valley Average Ozone (ppb)</b>	<b>Coachella Valley Maximum Station Ozone (ppb)</b>
2014	0.9	1.4	0.5	0.6
2023	1.5	1.9	0.8	1.1
2030	2.6	2.9	1.1	1.3

Given these reductions, it is possible that under the without project scenario attainment of the NAAQS and CAAQS could occur at an earlier date than under the conditions with the proposed project. However, for several reasons, it cannot be determined whether the without project scenario would in fact achieve attainment at an earlier date than under the proposed project, and if so when. These reasons include the magnitude of the ozone problem and amount of reductions that are needed; the long-term nature of the control measures needed to reduce ozone levels; and the relatively small amount of ozone attributable to the project as shown in Table 4.1-10 (which range from 0.5 to 2.9 ppb).

With respect to the 1997 federal ozone standard of 80 ppb, it is unclear whether the without project scenario would achieve attainment more quickly than would be the case under the proposed project. For the Basin, per federal guidance, the 2007 AQMP relies on long-term measures resulting from new and emerging technologies that likely will not be in place until the attainment date of 2024 approaches. Without these long-term measures, maximum ozone concentrations in the Basin would exceed 90 ppb. In addition, there are no interim dates prior to 2024 for achieving any particular level of ozone reductions. Furthermore, given these factors, predictions cannot be made about how the projected reductions in ambient ozone concentrations under the without project scenario might translate into a specific timeframe for attaining the 80 ppb standard, as compared with conditions under the proposed project. More specifically, it is impossible to determine whether an additional reduction of the maximum ozone concentration of 2 ppb in 2023 under the without project scenario would accelerate the Basin's current attainment date of 2024. Standing alone, this reduction of 2 ppb would not be sufficient

to achieve attainment. Rather, substantial additional reductions would be needed, and these reductions likely will not occur until shortly before 2024.

For the Coachella Valley, the 2007 AQMP projected a maximum ozone concentration of 88 ppb in the year 2013. But in 2014, the without project scenario is estimated to result in a reduction of only 0.6 ppb in the maximum ozone concentration, as compared to future conditions with the proposed project. This small reduction likely would not accelerate the projected attainment date of 2018 with respect to the 80 ppb ozone standard.

Nevertheless, it is possible that the reductions shown in Table 4.1-10 could lead to earlier attainment with one or more of the relevant ozone standards, as compared with conditions under the proposed project. For example, even when the Basin has attained the federal 80 ppb ozone standard, the 2008 federal ozone standard will require a further reduction in ozone levels on the order of 5 ppb (i.e., from 80 to 75 ppb). According to the projections in Table 4.1-10 for the year 2030, the without project scenario would reduce maximum ozone levels by approximately 3 ppb, which is more than half of this amount. Given that the reductions from the without project scenario are substantial in relation to the reductions to be achieved, the without project scenario could accelerate attainment with the 75 ppb standard, as compared with the conditions under the proposed project. It is also possible that the without project scenario would accelerate attainment of the California ozone standards, although as noted above it is not possible to predict when attainment might occur in comparison to the future conditions with the proposed project.

As explained in the discussion of mass emissions of criteria pollutants, the impact of the project is considered significant because it may cause or contribute to a violation of a federal or state ozone standard based on the SCAQMD's significance thresholds for emissions of criteria pollutants that are ozone precursors. The foregoing analysis provides additional information about the degree to which the without project scenario could accelerate attainment compared to conditions with the project.

#### ***b. Particulate Matter Concentrations***

The Basin is designated as a state and federal nonattainment region for PM<sub>10</sub> and PM<sub>2.5</sub>. The Coachella Valley is designated a state and federal nonattainment region for PM<sub>10</sub> (but not for PM<sub>2.5</sub>).

With respect to PM<sub>10</sub>, the USEPA has established a 24-hour NAAQS of 150 micrograms per cubic meter of air ( $\mu\text{g}/\text{m}^3$ ).<sup>7</sup> Monitored PM<sub>10</sub> in both the Basin and the Coachella Valley has not exceeded this standard for several years. The SCAQMD has accordingly submitted a request to the USEPA to redesignate both areas as federal attainment regions for PM<sub>10</sub>. California has established a 24-hour CAAQS of 50  $\mu\text{g}/\text{m}^3$  and an annual CAAQS of 20  $\mu\text{g}/\text{m}^3$ . The 2007 AQMP projects that the Basin will attain the state standards at some point after 2024. The Coachella Valley is "unclassified" for attainment with the state's PM<sub>2.5</sub> standard, however, observed PM<sub>2.5</sub> values in the Coachella

---

<sup>7</sup> In 2006, the USEPA revoked the annual NAAQS for PM<sub>10</sub>.

Valley are routinely 80 percent of the annual state standard and 75 percent of the 24-hour state standard (same as the federal standard).

With respect to PM<sub>2.5</sub> in the Basin, the USEPA previously established a 24-hour NAAQS of 65 µg/m<sup>3</sup>; in 2006 the USEPA lowered this standard to 35 µg/m<sup>3</sup>. The USEPA has also established an annual NAAQS of 15 µg/m<sup>3</sup>. The 2007 AQMP determined that the Basin has already attained the 24-hour NAAQS of 65 µg/m<sup>3</sup>, and demonstrated attainment with the annual NAAQS by 2015. The CAA requires periodic updates of the AQMP to demonstrate further emissions reductions to attain the 24-hour NAAQS. The 2007 AQMP projects that the Basin will achieve attainment with this standard at some point after 2020. California has established an annual CAAQS of 12 µg/m<sup>3</sup>. The 2007 AQMP projects that the Basin will attain this standard at some point after 2024.

As explained above, the 2007 AQMP includes all projected growth and cumulative air emissions in the region and the proposed project is not expected to cause the region to exceed the level of growth projected in the AQMP. Therefore, the proposed project would not interfere with the attainment demonstrations made in connection with the 2007 AQMP and the 2010 PM<sub>10</sub> maintenance plans— specifically, the continued attainment of the NAAQS for PM<sub>10</sub>; continued attainment of the 24-hour NAAQS for PM<sub>2.5</sub> of 65 µg/m<sup>3</sup>, and the Basin's attainment by 2015 of the annual NAAQS for PM<sub>2.5</sub> of 15 µg/m<sup>3</sup>.

However, it is possible that the without project scenario could result in emissions reductions that would, in turn, lead to earlier attainment with other relevant particulate matter standards, as compared with conditions under the proposed project. Table 4.1-11 quantifies the estimated reductions in PM<sub>2.5</sub> concentrations under the without project scenario in comparison with the scenario with the proposed project. As with the reductions in ozone concentrations, it cannot be determined whether these reductions under the without project scenario would translate, if at all, into earlier compliance with federal or state PM<sub>2.5</sub> standards.

**TABLE 4.1-11**  
**Additional Reductions in Regional PM<sub>2.5</sub> Concentrations under the Without Project Scenario**

<b>Year</b>	<b>Basin Annual Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>	<b>Basin Daily Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>	<b>Coachella Valley Annual Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>	<b>Coachella Valley Daily Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>
2014	0.06	0.6	0.01	0.1
2023	0.15	1.2	0.03	0.1
2030	0.21	1.6	0.05	0.2

Given the very small amount of reductions in PM<sub>2.5</sub> concentrations under the without project scenario for the Coachella Valley, it is not likely that there would be any

difference in the Valley's PM<sub>2.5</sub> designation as between the without project and with project scenarios. The Coachella Valley is "unclassified" for attainment with the state's PM<sub>2.5</sub> standard.

It is also not likely that the reductions in the Basin would lead to attainment of the annual PM<sub>2.5</sub> NAAQS (15 µg/m<sup>3</sup>) any earlier than the 2015 date projected in the 2007 AQMP, especially since the majority of the control measures slated to attain this standard are not scheduled for implementation until 2014. However, the reductions under the without project scenario become larger over time and as a result could influence the Basin's future attainment with the 24-hour NAAQS of 35 µg/m<sup>3</sup> and the annual CAAQS of 12 µg/m<sup>3</sup>.

With respect to PM<sub>10</sub>, Table 4.1-12 quantifies the reductions in emissions concentrations under the without project scenario. As noted above, the SCAQMD has requested that the USEPA redesignate both the Basin and the Coachella Valley as federal attainment areas for PM<sub>10</sub>. Ambient PM<sub>10</sub> concentrations in the Basin are typically less than two-thirds of the NAAQS and the Basin has been in compliance with the NAAQS for more than 5 years. Ambient PM<sub>10</sub> concentrations (excluding exceptional events) in the Coachella Valley are approximately 80 percent of the NAAQS. Based on the data, the differences in PM<sub>10</sub> concentrations as between the proposed project and without project scenarios would not make any measurable difference in terms of attainment with the NAAQS.

However, California's PM<sub>10</sub> standards are stricter than the NAAQS and both regions are designated as state nonattainment areas. As with PM<sub>2.5</sub> emissions, given the very small amount of reductions in PM<sub>10</sub> concentrations under the without project scenario in the Coachella Valley, it is unlikely that this scenario would lead to an earlier attainment date for the CAAQS as compared to future with project conditions. However, for the Basin, it is possible that the emissions reductions under the without project scenario would lead to an earlier CAAQS attainment date, especially in light of the fact that compliance with the CAAQS is not projected until some point after 2024 and given the reductions under the without project scenario in construction and mobile source emissions (which cannot be quantified and therefore are not included in Table 4.1-12).

As explained in the discussion of mass emissions of criteria pollutants, the impact of the project is considered significant because it may cause or contribute to a violation of a federal or state PM<sub>10</sub> and PM<sub>2.5</sub> standards based on the SCAQMD's significance thresholds for emissions of criteria pollutants. The foregoing analysis provides additional information about the degree to which the without project scenario could accelerate attainment compared to conditions with the project.

**TABLE 4.1-12****Additional Reductions in Regional PM10 Concentrations under the Without Project Scenario**

<b>Year</b>	<b>Basin Annual Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>	<b>Basin Daily Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>	<b>Coachella Valley Annual Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>	<b>Coachella Valley Daily Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>
2014	0.12	0.7	0.01	0.1
2023	0.32	1.8	0.03	0.1
2030	0.47	2.5	0.05	0.2

**c. SO<sub>2</sub> and NO<sub>2</sub> Concentrations**

Both the Basin and the Coachella Valley are designated as federal attainment regions for SO<sub>2</sub>. The Basin is also designated as a state attainment region for SO<sub>2</sub>, while the Coachella Valley is designated as unclassified, which means there is insufficient data to make a designation of attainment or nonattainment.

For the Basin, ambient SO<sub>2</sub> concentrations over a five year period (2004-2008) are only 30 percent of the 1-hour CAAQS (250 ppb) and 28 percent of the more protective 24-hour CAAQS (40 ppb). The observed maximum annual average is approximately seven percent of the annual NAAQS (30 ppb). Furthermore, the maximum incremental difference in SO<sub>2</sub> concentrations from stationary sources as between the proposed project and the without project scenario is projected at 1.3 percent in 2014 and 1.7 percent in 2023 and 2030. The maximum difference in 1-hour average concentrations is 1.0 ppb or less in all years.

In light of these numbers, the reductions in SO<sub>2</sub> concentrations under the without project scenario likely would not make any difference in the Basin's attainment designation for this pollutant, as compared to future conditions with the proposed project.

On June 3, 2010, U.S. E.P.A. finalized a new NAAQS for SO<sub>2</sub> of 0.075 ppm. Attainment of the standard is measured by the 4<sup>th</sup> highest 1-hour value per year, averaged over 3 years. While peak maximum 1-hour concentrations could equal the new standard, the 2004-2008 average of the Basin's 4<sup>th</sup> highest 1-hour SO<sub>2</sub> concentration is approximately 50 percent of the new standard. The emissions attributed to the project, therefore, are not expected to result in an exceedance of either the existing or newly adopted SO<sub>2</sub> standards in the Basin.

Due to the limited number of sources in the area, there is no SO<sub>2</sub> monitoring station in the Coachella Valley. Total SO<sub>x</sub> emissions from all point and area sources is approximately 0.04 tpd in the Valley (less than one tenth of one percent of the Basin SO<sub>x</sub> emissions). The project's contribution to SO<sub>x</sub> concentrations in the Coachella Valley are

expected to be less than 1 ppb and are not expected to result in an exceedance of any SO<sub>2</sub> standard in the Valley. Regional SO<sub>2</sub> concentrations are listed in Table 4.1-13.

**TABLE 4.1-13**

**Additional Reductions in Regional SO<sub>2</sub> Concentrations under the Without Project Scenario**

<b>Year</b>	<b>Basin 1-Hour Average SO<sub>2</sub> (ppb)</b>	<b>Basin 24-Hour Average SO<sub>2</sub> (ppb)</b>	<b>Basin Annual Average SO<sub>2</sub> (ppb)</b>
2014	1.0	0.0	0.0
2023	1.0	0.0	0.0
2030	1.0	0.0	0.0

With respect to NO<sub>2</sub>, the Basin is in compliance with the annual NAAQS of 53 ppb, but has recently been classified by CARB as a nonattainment region for the new annual CAAQS of 30 ppb. The current estimate is that the Basin and Coachella Valley are in attainment with the federal 1-hour standard.

The exceedance of the new annual CAAQS is fractional (four percent) and is expected to be remedied in the near-term due to emissions controls that will be implemented to meet the 2015 attainment date for the annual PM<sub>2.5</sub> NAAQS. Further, the maximum incremental difference in NO<sub>2</sub> concentrations from stationary sources as between the proposed project and without project scenario is projected at only 0.7 percent in 2014, 1.1 percent in 2023 and 1.3 percent in 2030. This translates into at most a 1 ppb difference in the daily maximum 1-hour average and less than a 0.5 ppb difference in the annual average.

The Basin remains in compliance with the federal annual standard. The maximum annual average concentration for the period 2004-2008 is approximately 59 percent of the federal annual standard. Moreover, the Basin is in compliance with the state 1-hour standard, with the peak 1-hour concentration during the five year period 2004-2008 at 77 percent of the state standard.

Using an emissions weighted approach, the maximum potential incremental increased contribution to Basin NO<sub>2</sub> from the project would be less than 1 ppb in 2014 and 1 ppb in 2023 and 2030, for 1-hour or annual averages. In all cases, the NO<sub>2</sub> contribution from the project represents only a small fraction of the California and federal standards, and is not expected to result in exceedance of the existing standards or delay in attaining the new state standard.

The Basin is projected to remain in attainment for federal standards and state 1-hour standards and to be in attainment with the new state annual average NO<sub>2</sub> standards by 2015. The small emissions reductions attributable to the without project scenario would

not be expected to accelerate this near-term compliance date. Reductions in NO<sub>2</sub> concentrations under the without project scenario are shown in Table 4.1-14.

As explained in the discussion of mass emissions of criteria pollutants, the impact of the project is considered significant because it may cause or contribute to a violation of a federal or state SO<sub>2</sub> and NO<sub>2</sub> standards based on the SCAQMD's significance thresholds for emissions of SO<sub>x</sub> and NO<sub>x</sub>. The foregoing analysis provides additional information about the degree to which the without project scenario could accelerate attainment compared to conditions with the project.

**TABLE 4.1-14**

**Additional Reductions in Regional NO<sub>2</sub> Concentrations under the Without Project Scenario**

Year	Basin 1-Hour Average NO <sub>2</sub> (ppb)	Basin Annual Average NO <sub>2</sub> (ppb)	Coachella Valley 1-Hour Average NO <sub>2</sub> (ppb)	Coachella Valley 24-Hour Average NO <sub>2</sub> (ppb)
2014	0.0	0.0	0.0	0.0
2023	1.0	0.0	0.0	0.0
2030	1.0	0.0	0.0	0.0

**d. Lead Concentrations**

CARB has recently recommended that the USEPA designate the portion of the Basin that is located within Los Angeles County as a federal non-attainment region for the new federal NAAQS for lead (adopted by the USEPA in 2008), which is a rolling three-month average of 0.15 micrograms per cubic meter of air ( $\mu\text{g}/\text{m}^3$ ). The USEPA has proposed to make this designation, which is expected to become final in October 2010. CARB has also recently adopted a regulation designating the Los Angeles County portion of the Basin as a state nonattainment region for the CAAQS for lead, which is a 30-day average of 1.5  $\mu\text{g}/\text{m}^3$ . Facilities that use or process lead are only rarely permitted by the SCAQMD and very few sources emit sufficient levels of lead to cause or contribute to a nonattainment problem. There are two such sources in Los Angeles County, both battery recycling facilities.

The SCAQMD has a rule in effect (Rule 1420) that applies to any facility that uses or processes lead-containing materials, and prevents emissions from any such facility from exceeding 1.5  $\mu\text{g}/\text{m}^3$  beyond the property line on a monthly average basis. The SCAQMD is in the process of adopting a new rule (proposed Rule 1420.1 for battery recycling facilities) and a rule amendment (proposed amendment to Rule 1420 for all other stationary sources) that will limit emissions to preclude exceeding the new NAAQS of 0.15  $\mu\text{g}/\text{m}^3$  at the facility property line. In light of this rulemaking, it is not anticipated that any facilities would be permitted under the proposed project that would cause or contribute to a violation of a federal or state ambient standard for lead.

**e. CO Concentrations**

Carbon monoxide (CO) impacts from the proposed project are expected to be minimal. The Basin is in attainment of both the California and federal 1-hour and 8-hour standards. Current maximum ambient concentrations are less than 50 percent of the 8-hour standard in the most heavily impacted portions of the Basin. The 2008 winter planning emissions inventory (2007 AQMP, Appendix III) estimated total Basin emissions at 3,180 tons per day. Mobile sources account for more than 91 percent of the emissions inventory. The stationary and area source inventory comprises less than nine percent of the total at 281 TPD.

Ambient concentrations of carbon monoxide respond linearly to changes in the emissions inventory. Emissions weighted linear rollback is the methodology used to estimate the project impact to ambient CO concentrations. Table 4.1-15 summarizes the results. The proposed project is estimated to contribute to ambient CO concentrations in an amount less than 0.1 part per million, for all years simulated. The project would not affect the Basin's attainment status (either California or federal standard).

**TABLE 4.1-15****Regional CO Concentrations from the Proposed Project**

<b>Year</b>	<b>CO Impact (ppm)</b>
2014	0.00
2023	0.01
2030	0.01

**Regional Criteria Pollutant Concentrations - Cumulative impacts of all sources using SCAQMD internal account offsets**

Table 4.1-16 below quantifies the subtotal of regional concentrations of ozone from all sources using SCAQMD internal account offsets in terms of the difference in ozone concentrations as between the cumulative project scenario and the without project scenario.

The PEA has previously identified a significant project-level impact due to the difference in mass emissions of ozone precursors under with project conditions in comparison to without project conditions. The PEA also previously explained that the cumulative impact would similarly be significant and the proposed project is determined to make a cumulatively considerable contribution to this impact. The analysis of regional concentrations of ozone from the project combined with other sources using offsets is intended to supplement the analysis of mass emissions by providing more analysis to determine the magnitude of the cumulative effect.

**TABLE 4.1-16**  
**Cumulative Projects' Contribution to Regional Ozone Concentrations**

<b>Year</b>	<b>Basin Average Ozone (ppb)</b>	<b>Basin Maximum Station Ozone (ppb)</b>	<b>Coachella Valley Average Ozone (ppb)</b>	<b>Coachella Valley Maximum Station Ozone (ppb)</b>
2014	1.1	1.8	0.8	0.8
2023	2.0	2.5	1.0	1.3
2030	3.0	3.5	1.3	1.6

Table 4.16 presents the contribution to average ozone concentrations for the Basin from the cumulative projects using internal account offsets. Table 4.1-17 presents a similar comparison for PM<sub>2.5</sub> concentrations, while Table 4.1-18 presents this comparison for PM<sub>10</sub> concentrations.

As described above, there is a significant project-level impact as a result of PM<sub>2.5</sub> and PM<sub>10</sub> emissions from the proposed project as compared with the without project scenario based on exceeding the mass daily significance thresholds (Table 4.1-4). Taking into account the emissions from the cumulative projects (including the three power plants) the PEA previously explained that the cumulative impact is similarly significant. The PEA concluded that the proposed project would make a cumulatively considerable contribution to this significant impact. Tables 4.1-17 and 4.1-18, below, provide further detail regarding this cumulative impact by identifying the contribution to regional concentrations of PM<sub>2.5</sub> and PM<sub>10</sub> from the project plus other sources relying on internal account offsets.

**TABLE 4.1-17**  
**Cumulative Projects' Contribution to Regional PM<sub>2.5</sub> Concentrations**

<b>Year</b>	<b>Basin Annual Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>	<b>Basin Daily Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>	<b>Coachella Valley Annual Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>	<b>Coachella Valley Daily Average PM<sub>2.5</sub> (µg/m<sup>3</sup>)</b>
2014	0.18	1.1	0.04	0.1
2023	0.26	1.8	0.06	0.2
2030	0.32	2.2	0.07	0.2

**TABLE 4.1-18**  
**Cumulative Projects' Contribution to Regional PM10 Concentrations**

<b>Year</b>	<b>Basin Annual Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>	<b>Basin Daily Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>	<b>Coachella Valley Annual Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>	<b>Coachella Valley Daily Average PM10 (<math>\mu\text{g}/\text{m}^3</math>)</b>
2014	0.38	1.8	0.04	0.1
2023	0.57	2.8	0.06	0.2
2030	0.71	3.5	0.07	0.2

Tables 4.1-19 and 4.1-20 provide the cumulative project's contributions to regional SO<sub>2</sub> and NO<sub>2</sub> concentrations. Using an emissions weighted approach, the maximum potential incremental cumulative increased contribution to 1-hour Basin SO<sub>2</sub> would be 1.0 parts per billion maximum concentration in each of the three time periods: 2014, 2023 and 2030 as shown in Table 4.1-19. No measurable contribution is projected for the Basin SO<sub>2</sub> 24-hour or annual standards. The cumulative projects' contributions to regional SO<sub>2</sub> concentrations shown in Table 4.1-19 reflect only a minor fraction of the California SO<sub>2</sub> standards at 250 ppb for 1-hour average and 40 ppb for 24-hour average, and the federal SO<sub>2</sub> standards at 75 ppb for 1-hour average and 30 ppb for annual average.

**TABLE 4.1-19**  
**Cumulative Projects' Contributions to Regional SO2 Concentrations**

<b>Year</b>	<b>Basin 1-Hour Average SO2 (ppb)</b>	<b>Basin 24-Hour Average SO2 (ppb)</b>	<b>Basin Annual Average SO2 (ppb)</b>
2014	1.0	0.0	0.0
2023	1.0	0.0	0.0
2030	1.0	0.0	0.0

The cumulative projects' contribution to regional NO<sub>2</sub> concentrations range from 0.0 to 2.0 ppb for the Basin and Coachella Valley as presented in Table 4.1-20. The cumulative projects' contribution to regional NO<sub>2</sub> concentrations shown in Table 4.1-20 reflect only a minor fraction of the California NO<sub>2</sub> standards at 180 ppb for 1-hour and 30 ppb for annual average, and the federal NO<sub>2</sub> standard of 53 ppb for annual average.

**TABLE 4.1-20**  
**Cumulative Projects' Contribution to Regional NO<sub>2</sub> Concentrations**

Year	Basin 1-Hour Average NO <sub>2</sub> (ppb)	Basin Annual Average NO <sub>2</sub> (ppb)	Coachella Valley 1-Hour Average NO <sub>2</sub> (ppb)	Coachella Valley 24-Hour Average NO <sub>2</sub> (ppb)
2014	1.0	0.0	1.0	0.0
2023	2.0	0.0	1.0	0.0
2030	2.0	0.0	1.0	0.0

Overall, the cumulative projects' contributions to SO<sub>2</sub> and NO<sub>2</sub> concentrations are not projected to result in an exceedance of the existing and newly adopted NO<sub>2</sub> and SO<sub>2</sub> state and federal standards.

As discussed under the proposed project analysis, CO impacts from the cumulative projects are expected to be minimal because the Basin is in attainment of both the California and federal 1-hour and 8-hour standards and current maximum ambient concentrations are less than 50 percent of the 8-hour standard in the most heavily impacted portions of the Basin. Table 4.1-21 summarizes the cumulative projects' contribution to regional CO concentrations, which are less than 0.1 part per million, for all years simulated. Thus, the cumulative projects would have no impact on the Basin's attainment status (either California or federal standard).

**TABLE 4.1-21**  
**Cumulative Projects' Contribution to Regional CO Concentrations**

Year	CO Impact (ppm)
2014	0.01
2023	0.02
2030	0.02

### **Localized Criteria Pollutant Concentrations**

In accordance with the methodology described in Chapter 4.0, the results of the modeling analysis for localized concentrations of particulate matter and NO<sub>2</sub> are presented in the following discussion. This analysis evaluates concentrations of pollutants that may result from individual sources based on modeling for representative categories of facilities that receive permits from the SCAQMD. The actual permitted sources may result in lower concentrations of pollutants than the modeled concentrations shown in this analysis. The results include estimated concentrations for both the 50<sup>th</sup> and 95<sup>th</sup> percentile emission rates for both short- and long-term exposure periods. These concentrations are then compared to the SCAQMD's significance thresholds in Table 4.1-2. The highest results

from three years of meteorological data (2005-2007) are presented for each of the three meteorological station locations evaluated (i.e., Azusa, Burbank, and La Habra<sup>8</sup>). Additional results, including results from all three modeled years, are presented in the *Air Quality Analysis* in Appendix C to this PEA.

Summaries of the maximum ambient concentrations are presented in the tables below, with exceedances noted in bold, for each permit category for each of the three representative worst-case locations. The concentrations shown are for direct stationary source emissions and estimate localized concentrations based on the modeling.

*a. Particulate Matter*

The refined analysis of potential localized PM<sub>2.5</sub> impacts identified the following representative facility categories that exceeded applicable significance thresholds at the 50<sup>th</sup> percentile emissions rate: tar pots (includes emissions from both molten asphalt inside the kettle and from the combustion of liquefied petroleum gas, which is used to heat the asphalt), blasting (abrasive), and equipment processing (typically cement processing). Exceedances were estimated for all three representative facility permit categories for the maximum 24-hour time period; the annual threshold was also exceeded for equipment processing. Of these representative facility permit categories, only emissions modeled for the tar pot category resulted in total concentrations (ambient concentrations plus project concentrations) exceeding the significance threshold by a substantial amount, with exceedances observed for all three meteorological stations modeled. Exceedances for the other two categories were small, and may not occur at locations without worst-case meteorology. It should be noted that the analysis of tar pot emissions was conducted only for the 24-hour averaging period because it was assumed that tar pots would not remain in one location for a long duration; thus, the annual-average exposures are expected to be relatively low and would not be expected to exceed any localized air quality significance threshold based on annual averages. The significance determination for PM<sub>2.5</sub> impacts is based on an incremental increase in concentrations that exceed an established threshold.

At the 95<sup>th</sup> percentile emission rate, in addition to the three representative facility categories that exceeded PM<sub>2.5</sub> thresholds at the 50<sup>th</sup> percentile emission rate, the following three additional representative facility permit categories were shown to exceed applicable significance thresholds: spray booths, gas turbine engines greater than 50 megawatts (MW), and asphalt. The analysis showed that the tar pots representative facility category continued to exceed the significance threshold by the largest amount, with exceedances again only estimated for the 24-hour averaging period (tar pot emissions were analyzed only for the maximum 24-hour time period for the same reasons given in the discussion of 50<sup>th</sup> percentile emissions rate analysis). The abrasive blasting permit category also showed potential for exceeding the 24-hour significance threshold level. Sources covered by tar pots and blasting permits were assumed to operate for

---

<sup>8</sup> The Azusa, Burbank, and La Habra air quality monitoring stations were selected for the modeling analysis because they represent “worst-case” ambient air quality conditions, i.e., the locations with the highest ambient concentrations.

fewer weeks per year and days per week than most other categories, which results in an increase in modeled 24-hour concentrations.

Although the tables above show potential significant adverse localized PM2.5 concentrations for some representative facility categories, it is unlikely that future facilities obtaining permits through either Rule 1304 or 1309.1 would generate this level of impacts for the following reasons. First, the concentration results are based on worst-case assumptions. For example, the distance to the sensitive receptor was assumed to be 50 meters for most representative facility categories, and 10 meters was used for a few categories such as tar pots. Second, equipment generally does not operate at its full potential to emit. Finally, SCAQMD Rule 1303(b)(1) would prohibit the issuance of a permit for a source that exceeds the standards set forth in Appendix A (Table A-2) to that rule; in turn, the Appendix A standards for particulate matter are the same as the significance threshold set forth above in Table 4.1-2 and in the right-hand column in

Tables 4.1-22 & 4.1-23.<sup>9</sup> Thus, under Rule 1303, permit units shown by modeling to exceed these standards would not be permitted by the SCAQMD. This conclusion may not be correct for the tar pot and abrasive blasting equipment, which may be portable equipment exempt from modeling. (Rule 1304(a)(3) & (a)(7).)

Nevertheless, the PEA determines that the impact resulting from the proposed project would be significant in terms of localized particulate matter concentrations. This finding is based on the data presented in the tables above.

### ***b. NO<sub>2</sub> Emissions***

Determining significance for NO<sub>2</sub> emissions requires knowledge of the ambient NO<sub>2</sub> concentrations in the area where the project would be located. To determine significance, an individual project's NO<sub>2</sub> emissions are modeled to obtain emissions concentrations. The individual project's emissions concentrations are then added to the local ambient NO<sub>2</sub> concentrations to obtain a maximum total NO<sub>2</sub> concentration. If any maximum total NO<sub>2</sub> concentration exceeds the applicable localized NO<sub>2</sub> significance threshold, localized NO<sub>2</sub> impacts are considered to be significant. The table below shows the ambient NO<sub>2</sub> concentrations for the three locations used to conduct the modeling analyses for the proposed project.

**TABLE 4.1-24**  
**Ambient NO<sub>2</sub> Concentrations**

Year	Time Scale	Estimated Ambient Concentration ( $\mu\text{g}/\text{m}^3$ )			Threshold ( $\mu\text{g}/\text{m}^3$ )
		Azusa	Burbank	La Habra	
2005	1-hour	223.1	187.9	204.2	338
	Annual	<b>57.5</b>	<b>58.3</b>	42.4	56
2010	1-hour	205.1	175.8	188.7	338
	Annual	48.9	49.9	34.6	56
2030	1-hour	146.2	137.0	188.0	338
	Annual	25.4	<b>65.9</b>	23.3	56

The following two tables show the maximum incremental NO<sub>2</sub> concentrations for representative facility categories that were modeled for each of the three years from 2005 through 2007 at the three meteorological stations used to perform the modeling analysis for NO<sub>2</sub>. In all cases where the background concentrations are below the localized significance threshold, the total NO<sub>2</sub> concentration (i.e., incremental plus background) is also less than the SCAQMD's localized significance threshold.

<sup>9</sup> It should be noted that Rule 1303 does not currently include modeling requirements for PM<sub>2.5</sub>. However, PM<sub>2.5</sub> is a subset of PM<sub>10</sub>, and the SCAQMD's significance threshold for PM<sub>2.5</sub> is the same as the significance and modeling threshold for PM<sub>10</sub>. Therefore, any facility that would exceed the significance threshold for PM<sub>2.5</sub> would necessarily exceed the threshold for PM<sub>10</sub>.

While the SCAQMD no longer has incremental significance thresholds for NO<sub>2</sub> in areas exceeding the NO<sub>2</sub> standards, it formerly had such thresholds, which were 20 µg/m<sup>3</sup> (1-hour) and 1 µg/m<sup>3</sup> (annual). If one were to apply these former incremental thresholds, the emissions shown in bold in the two tables below would be considered significant. However, except for the tar pot and soil treatment vapor extraction, which may be portable equipment exempt from modeling requirements, no such permits would actually be issued, since the emissions would exceed the levels allowed by Rule 1303, which are the same as the former CEQA significance thresholds.

Nevertheless, the PEA determines that the impact resulting from the proposed project would be significant in terms of localized NO<sub>2</sub> concentrations. This finding is based on the data presented in the tables in this section.

**TABLE 4.1-25**  
**NO<sub>2</sub> Maximum Concentration Over Three Years (2005-2007)**  
**Using the 50<sup>th</sup> Percentile Emissions Rate**

Permit Category	Time Scale	Estimated Incremental Concentration (µg/m <sup>3</sup> )

**3. Health Effects. Would the proposed project expose sensitive receptors to substantial pollutant concentrations?**

This section evaluates the potential health effects to sensitive receptors posed by (a) region-wide emissions of criteria pollutants; (b) region-wide emissions of toxic air contaminants (TACs); and (c) localized concentrations of TACs.

**a. Region-wide emissions of criteria pollutants**

**Project Impacts**

Increases in criteria pollutant concentrations may result in potential adverse health effects including cardiovascular, neurological, reproductive and respiratory ailments. Health effects can be evaluated by modeling criteria pollutant concentrations, which can provide information on mortality, hospital admissions, emergency room visits, minor restricted activity days, school absence days, loss of work days, and cases of acute/chronic bronchitis, nonfatal heart attacks and adverse upper/lower respiratory conditions.

The current population in the district is approximately 17 million, and is expected to grow to approximately 20 million by 2030. As is shown in Table 4.1-27 below, CARB has estimated that there are approximately 6,500 premature deaths each year in the Basin resulting from exposure to ozone and PM<sub>2.5</sub> concentrations. There are approximately 100,000 cases of asthma and other respiratory symptoms each year in the Basin due to these exposures. Results in Table 4.1-27 are based on CARB's monitored 2004-2006 PM<sub>2.5</sub> concentrations not meeting the California annual standard of 12 µg/m<sup>3</sup> and 2004-2006 ozone measurements not meeting the California 8-hour standard of 0.070 ppm.

**TABLE 4.1-27**

**Basin Health Impacts From PM<sub>2.5</sub> and Ozone Exposures**

<b>Health Outcome</b>	<b>Cases per Year</b>	<b>Uncertainty Range</b>
Premature Death	6,500	2,100 to 11,000
Hospital Admissions	4,100	2,400 to 5,800
Asthma and other Respiratory Symptoms	100,000	42,000 to 160,000
School Absence Days	8,400	0 to 17,000
Work Loss Days	660,000	560,000 to 760,000
Minor Restricted Activity Days	5,200,000	3,700,000 to 6,600,000

Source: CARB Staff, October 2009; derived from CARB's 2009 statewide health impacts data found at <http://www.arb.ca.gov/research/health/qhe/qhe.htm>

The Final Socioeconomic Report for the 2007 AQMP explained the health benefits (or, conversely, the reductions in adverse health impacts) resulting from the emissions controls to be implemented under the AQMP.

In comparison with the with-project scenario, the without project scenario would result in additional health benefits beyond what is evaluated in the Final Socioeconomic Report for the 2007 AQMP.

Table 4.1-28 provides the health benefits predicted, or impacts avoided, when fully implementing the control measures under the 2007 AQMP relating to ozone. Ozone standards are expected to demonstrate attainment by year 2023. Thus, no other attainment years are listed in Table 4.1-28. In addition, the air quality due to ozone

pollution is expected to continue to improve after the attainment of the ozone standard is reached in 2023.

**TABLE 4.1-28**  
**Estimated Ozone Health Benefits (Impacts Avoided)**  
**Predicted in 2007 AQMP (Basin and Coachella Valley)**

<b>Year</b>	<b>Mortality - Premature Deaths</b> (people)	<b>Hospital Admissions</b> (people)	<b>Minor Restricted Activity Days</b> (days)	<b>School Absences</b> (days)
2023	200	1,200	842,700	888,200

Table 4.1-29 below summarizes the estimated additional ozone health improvements that would be achieved under the without project scenario, as compared to the future conditions under the proposed project. The table therefore depicts the incremental health impacts resulting from ozone emissions attributed to the proposed project. The table is based on the methodology used in the Final Socioeconomic Report for the 2007 AQMP and covers all areas of the district.

As shown in the table, in 2023 the without project scenario, as compared to future conditions under the proposed project, would result in the additional avoidance, beyond what was projected in the AQMP from ozone, of approximately 12 premature deaths, 71 hospital admissions, 49,513 minor restricted activity days, and 52,186 school absences. In the year 2030, the without project scenario would result in the avoidance from ozone of approximately 20 premature deaths, 122 hospital admissions, 85,339 minor restricted activity days, and 89,947 school absences. These impacts show additional benefits which could occur if the project were not implemented.

**TABLE 4.1-29**  
**Estimated Ozone Health Impacts - Health Benefits Foregone**  
**(Basin and Coachella Valley)**

<b>Year</b>	<b>Mortality - Premature Deaths</b> (people)	<b>Hospital Admissions</b> (people)	<b>Minor Restricted Activity Days</b> (days)	<b>School Absences</b> (days)
2014	7	42	29,575	31,172
2023	12	71	49,513	52,186
2030	20	122	85,339	89,947

The avoidance of 12 premature deaths in 2023 under the without project scenario would represent an increase of six percent in the health benefits described in the 2007 AQMP, which projects that future emissions controls would avoid 200 premature deaths from ozone emissions in the year 2023. The avoidance of 71 hospital admissions in 2023

under the without project scenario similarly would represent an increase of six percent in health benefits described in the 2007 AQMP, which projects that future emissions controls would avoid 1,200 hospital admissions from ozone emissions in the year 2023.

Table 4.1-30 provides the health benefits predicted, or impacts avoided, when fully implementing the control measures under the 2007 AQMP relating to PM<sub>2.5</sub> and PM<sub>10</sub>. Particulate annual PM<sub>2.5</sub> matter standards are expected to be attained by the year 2014. Thus, no other attainment years are listed in Table 4.1-30. In addition, the air quality due to particulate matter pollution is expected to continue to improve after the attainment of the particulate matter standard is reached in 2014.

**TABLE 4.1-30**  
**Estimated PM<sub>2.5</sub> and PM<sub>10</sub> Health Benefits (Impacts Avoided)**  
**Predicted in 2007 AQMP (Basin and Coachella Valley)**

<b>Year</b>	<b>Mortality (deaths)</b>	<b>Acute Bronchitis (people)</b>	<b>Chronic Bronchitis (people)</b>	<b>Non- fatal Heart Attacks (people)</b>	<b>Upper/ Lower Respiratory Illness (people)</b>	<b>Annual Emergency Room Visits</b>	<b>Hospital Admissions (people)</b>	<b>Minor Restricted Activity Days</b>	<b>Work Loss (days)</b>
2014	1,500	2,700	800	1,300	57,300	500	600	1,061,300	185,000

Table 4.1-31 below provides an analysis of potential additional benefits with respect to PM<sub>2.5</sub> emissions. The 2007 AQMP projects that PM<sub>2.5</sub> emission controls will avoid 1,500 premature deaths in the year 2014. The without project scenario would avoid an additional 33 premature deaths during the same timeframe (in 2014). Thus, the health benefits in terms of premature deaths avoided by not implementing the proposed project represent an additional 2.2 percent increase in benefits beyond what the AQMP projects.

The additional premature deaths avoided under the without project scenario increases to 86 and 125 in 2023 and 2030, respectively. However, it should be noted that the total premature deaths due to PM<sub>2.5</sub> avoided under the AQMP would continue to increase well beyond 1,500, as a result of additional emission reductions in 2023 and 2030, although the totals for these years have not been calculated.

**TABLE 4.1-31**  
**Estimated PM2.5 and PM10 Health Impacts -Health Benefits Foregone**  
**(Basin and Coachella Valley)**

<b>Year</b>	<b>Mortality (deaths)</b>	<b>Acute Bronchitis (people)</b>	<b>Chronic Bronchitis (people)</b>	<b>Non- fatal Heart Attacks (people)</b>	<b>Upper/ Lower Respiratory Illness (people)</b>	<b>Annual Emergency Room Visits</b>	<b>Hospital Admissions (people)</b>	<b>Minor Restricted Activity Days</b>	<b>Work Loss (days)</b>
2014	33	59	18	29	1,262	11	13	23,374	4,074
2023	86	155	46	74	3,283	29	34	60,814	10,601
2030	125	224	66	108	4,763	42	50	88,214	15,377

Given the magnitude of the health benefits under the without project scenario, the PEA finds that the health impacts of the proposed project from criteria pollutant emissions (ozone and PM2.5) would be significant.

**Cumulative Impacts of all sources using SCAQMD internal account offsets**

Table 4.1-32 summarizes the estimated cumulative ozone health improvements under the without project scenario, as compared to the cumulative scenario which includes the project and other sources using SCAQMD internal account offsets. Table 4.1-33 presents this same analysis for particulate matter.

**TABLE 4.1-32**  
**Estimated Cumulative Ozone Health Impacts Health Benefits Foregone (Basin and Coachella Valley)**

<b>Year</b>	<b>Mortality - Premature Deaths (people)</b>	<b>Hospital Admissions (people)</b>	<b>Minor Restricted Activity Days (days)</b>	<b>School Absences (days)</b>
2014	9	54	37,662	39,696
2023	15	92	64,780	68,278
2030	24	143	100,213	105,624

2014	102	184	55	89	3,908	34	41	72,384	12,618
2023	152	273	81	132	5,803	51	61	107,476	18,735
2030	189	341	101	164	7,231	63	76	133,938	23,347

Health effects resulting from emissions from the three power plant projects are included in the cumulative health impact analysis discussed above. However, facility-specific PM<sub>2.5</sub> impacts from these 3 power plants are also included for completeness. The three power plants are unlikely to have overlapping impacts since they are located so far apart from one another (El Segundo, City of Industry, Coachella Valley). Facility-specific emissions and stack parameters from permit applications were used to estimate the PM<sub>2.5</sub> concentrations at each census block group. The emissions analyzed in the permit applications are based on the facility's maximum allowable emissions, which is higher than the actual operational emissions, since the facility will not run at maximum capacity all the time. Therefore, the estimated impacts are considered to be conservative. It was assumed that the PM<sub>10</sub> emissions are all PM<sub>2.5</sub>. The USEPA's recommended air quality dispersion model, AERMOD (version 09292), was used to estimate the PM<sub>2.5</sub> concentrations from each facility. The SCAQMD's pre-processed meteorological data (available on the internet at <http://aqmd.gov/smog/metdata/AERMOD.html>) from the meteorological site closest to each facility was selected. The modeling performed was consistent with the SCAQMD's modeling guidance utilizing the regulatory default and urban option within AERMOD. However, the rural option was selected for CPV Sentinel due to the land uses within the vicinity of the facility location. Receptors were placed at all census block group centroids located within a 25 km radius of each facility.

The El Segundo Generating Station is an existing power generating facility that consists of four (4) utility boilers. The El Segundo Power Redevelopment Project involves the demolition and removal of three (3) boilers and the construction of two (2) new gas turbines to replace those boilers. Boilers 1 and 2 have been removed and Boiler 3 will be removed when the new gas turbines are operational. No changes to Boiler 4 are anticipated. Therefore, the incremental change in PM<sub>2.5</sub> concentration at each census block was estimated by subtracting the existing concentrations due to Boilers 1, 2, and 3 from the concentrations due to new gas turbines.

The potential health effects from PM emissions from the three facilities were estimated using the CARB's methodology (CARB 2008, cited below).

The resulting change in cases of mortality in a population age group living in a specific location with a given change in PM was then calculated. The results by age group were then summed over the census block groups to give an overall estimate of the change in mortality from PM emissions of the facility.

Based on this methodology, the SCAQMD estimates that there may be an increase in annual adult mortality of 1.77 persons in the area of the Walnut Creek Energy Park, 0.05 persons in the area for El Segundo Power Redevelopment Project, and 0.19 persons in the area for CPV Sentinel Energy Project. The reference for this methodology is from CARB in their “Methodology for Estimating Premature Deaths Associated with Long-term Exposure to Fine Airborne Particulate Matter in California” (October 24, 2008). The methodology is also available and can be accessed online at <http://www.arb.ca.gov/research/health/pm-mort/PMmortalityreportFINALR10-24-08.pdf>.)

As stated by CARB, health impacts of PM exposure are commonly estimated at a state-wide or regional level. (CARB, 2008, page 36) However, CARB has developed this methodology to assist in estimating health impacts associated with exposure to PM resulting from specific sources in a limited geographic area, using the Ports of Los Angeles and Long Beach as an example. (Id.) CARB believes that “it is also reasonable to apply the PM<sub>2.5</sub>- mortality relationship to analyses of populations of small sizes, as long as uncertainties and limitations are explicitly stated.” (CARB 2008, page 44)

The first uncertainty is in estimating the increase in risk of death in response to an increase in the concentration of PM<sub>2.5</sub>. In its study, CARB used an estimate of the relative risk of premature death of 10 percent for every 10 microgram per cubic meter increase in PM<sub>2.5</sub> exposure, with a 3 to 20 percent confidence interval. (CARB 2008, p. 41). This means that while the increase in risk is estimated at 10 percent the actual increase in risk could vary from three to 20 percent. Accordingly, the actual results could be more or less resulting mortality than predicted by the methodology used in this document.

Second, when applying the methodology to a limited area, there is uncertainty in the baseline mortality rate. County-wide mortality data was used to generate the assumed mortality rate for the specific census tracts used in the analysis and there could be differences in the specific census tracts affected by the individual facility. (CARB 2008 page 45).

Third, in this case, because the power plants have not yet been built, the exposure concentration was estimated based on air quality modeling rather than direct ambient measurement. Finally, there is also uncertainty associated with modeling. (CARB 2008, page 47). Despite the uncertainties, the methodology developed in the CARB report and used here has been endorsed by CARB scientific advisors and has undergone an external peer review process.

As noted above, the proposed project is determined to have a significant health impact resulting from emissions of criteria pollutants. The cumulative impact is similarly significant, taking into account other stationary sources, receiving permits in reliance on offsets in the internal offset accounts including the three power plants. The PEA

concludes that the proposed project would make a cumulatively considerable contribution to this significant impact.

**b. Region-wide emissions of TACs**

Currently, about one in three female and one in two male Californians contracts cancer at some time in their lives<sup>10</sup>. This represents an overall cancer risk of 330,000 to 500,000 in a million. According to the MATES-III study completed by SCAQMD in 2008, total Basin population-weighted cancer risk from air pollution is 853 in a million, which is based on the modeling exposures over the entire basin. Approximately 94 percent of this risk is caused by mobile source emissions, primarily diesel particulates (84 percent) and six percent from industrial sources. Total risk from industrial sources is approximately 51 in a million. Based on emissions from stationary sources, the difference in cancer risk between implementing the proposed project and not implementing it in 2014 would be 1 in a million, or about 2 tenths of one percent of the projected 2014 total of 556 in a million, Table 4.1-35, below. This difference increases to as much as 4.5 in a million by the year 2030. Nevertheless, overall exposure to cancer risk from air pollution is expected to decrease dramatically over the next 20 years. Using MATES-III modeling, future projections of average cancer risk reductions in the SCAB were determined and listed in Table 4.1-34.

**TABLE 4.1-34  
Estimated Future Cancer Risk Reductions**

<b>Year</b>	<b>Baseline Inventory (cancer cases in a million)</b>
2005	853
2014	556
2020	439
2023	396
2030	397

Basin health risk (measured in cancer risk per million person population over a lifetime of exposure) was estimated using the MATES-III modeling platform for 2014, 2023 and 2030 model simulations for the proposed project and cumulative emissions scenarios. Table 4.1-35 summarizes the incremental cancer risk out of a population of 1 million that is associated with the proposed project and cumulative scenario, as compared to the without project scenario.

<sup>10</sup> American Cancer Society, California Department of Public Health, California Cancer Registry. California Cancer Facts and Figures 2010. Oakland, CA: American Cancer Society, California Division, September 2009. <http://www.ccrca.org/PDF/ACS2010-9-29-09.pdf> (page 6)

The maximum cancer risk attributable to the cumulative projects scenario would be less than seven additional cases of cancer in a population of one million individuals that are exposed over a 70-year lifetime. The change in cancer risk per million does not exceed SCAQMD's significance threshold of 10 in a million. For reference, the MATES-III study for 2005 attributed the risk from stationary sources, which include industries and businesses such as dry cleaners and chrome plating operations, at approximately 51 additional cancers in a population of one million individuals. However, project and cumulative cancer burden, as listed in Table 4.1-35, does exceed the SCAQMD's significance threshold of 0.5, so the project and cumulative cancer burden impacts are significant.

**TABLE 4.1-35**  
**Cancer Risk and Cancer Burden Impacts (Project and Cumulative)**

<b>Year</b>	<b>Project Toxic Risk Reduction Not Achieved</b> (cases of cancer per million)	<b>Project Cancer Burden</b> (excess cancer cases)	<b>Cumulative Project Toxic Risk Reduction Not Achieved</b> (cases of cancer per million)	<b>Cumulative Cancer Burden</b> (excess cancer cases)
2014	0.91	16	3.35	59
2023	2.86	54	5.15	96
2030	4.40	86	6.59	129

A hazard index (HI) is a summation of the hazard (non-cancer) quotients for all chemicals to which an individual is exposed. A hazard index can be measured as a result of chronic (long-term) exposure or acute (short-term) exposure. SCAQMD's significance threshold for non-cancer chronic or acute HI value is 1.0 because if the HI is less than 1.0, no significant adverse human health effects (non-cancer) are expected to occur. Evaluating the same pollutants analyzed in the MATES-III study, the weighted average chronic HI was calculated for the region to determine per capita (population) chronic HI of 0.909 (base case). Under the no-project scenario, the per capita chronic HI is 0.901. Table 4.1-36 provides the change in chronic HI in overall population-weighted between the conditions with and without and the proposed project and with and without the cumulative projects. Acute HI was calculated for each hour in each population area and the highest value is identified as the project impact. Similar to the chronic HI, the change in acute HI in overall population-weighted between the conditions with and without and the proposed project and with and without the cumulative projects is provided in Table 4.1-36.

**TABLE 4.1-36**  
**Chronic and Acute Health Impacts (Project and Cumulative)**

<b>Year</b>	<b>Project Chronic Health Index Not Achieved</b>	<b>Cumulative Projects Chronic Health Index Not Achieved</b>	<b>Project Acute Health Index Not Achieved</b>	<b>Cumulative Projects Acute Health Index Not Achieved</b>
2014	0.00	0.02	0.02	0.06
2023	0.02	0.03	0.05	0.09
2030	0.02	0.03	0.08	0.11

As shown in the above table, the change in hazard index does not exceed SCAQMD's significance threshold for acute or chronic exposure, considering either project-specific or cumulative impacts. However, overall, the PEA finds that the health impacts attributable to the proposed project are significant based on regional toxic emissions. The project would result in a cancer burden that exceeds the SCAQMD's significance threshold. For example, as compared to the without project scenario, the proposed project would create an increased cancer risk of 4.4 in 1 million in the year 2030 for the nearly 20 million people that are projected to be living in the SCAQMD's jurisdiction at that time, resulting in an increased cancer burden that exceeds the SCAQMD's 0.5 cancer burden significance threshold. The PEA further determines that there is a significant cumulative impact and that the proposed project makes a cumulatively considerable contribution to this significant impact.

*c. Localized emissions of TACs*

SCAQMD Rule 1401 (New Source Review of Toxic Air Contaminants) prohibits the issuance of a permit for a stationary source that emits a listed TAC (or for a modification to or relocation of such a source), unless the applicant demonstrates, among other things, all of the following:

- The cumulative increase in the maximum individual cancer risk (MICR),<sup>11</sup> which is the sum of the calculated MICR values for all TACs emitted from the new, relocated or modified permit unit, will not result in a cancer burden<sup>12</sup> of greater than 0.5, and will not result in an increased MICR greater than 1 in 1 million at any receptor location, if the permit unit is

<sup>11</sup> MICR is the estimated probability of a potentially maximally exposed individual contracting cancer as a result of exposure to TACs over a period of 70 years for residential receptor locations, or as calculated by established Risk Assessment Procedures for worker receptor locations. SCAQMD Rule 1401(c)(8).

<sup>12</sup> "Cancer burden" means the estimated increase in the occurrence of cancer cases in a population subject to an MICR of greater than or equal to 1 in 1 million resulting from exposure to TACs. SCAQMD Rule 1401(c)(3).

constructed without T-BACT,<sup>13</sup> or an increased MICR greater than 10 in 1 million, if the permit unit is constructed with T-BACT.

- The cumulative increase in the total chronic Hazard Index for any target organ system due to the total emissions from the new, relocated or modified permit unit will not exceed 1.0 at any receptor location.
- The cumulative increase in the total acute Hazard Index for any target organ system due to the total emissions from the new, relocated or modified permit unit will not exceed 1.0 at any receptor location.

See SCAQMD Rule 1401(d). These thresholds in Rule 1401 are the same as the SCAQMD's CEQA significance thresholds for toxics.

As a result of these regulatory prohibitions, the issuance of a permit by the SCAQMD to a stationary source of TACs would not result in stationary source emissions that exceed the CEQA significance thresholds for localized health impacts. However, the thresholds above contained in Rule 1401 are applied on a permit-unit basis; as a result, a facility with multiple permitted sources could still exceed the Hazard Index limits in Rule 1401. Such facilities would instead be subject to Rule 1402; under that rule, the allowable cancer burden is the same as under Rule 1401, but the Hazard Index limits for acute and chronic non-cancer toxic impacts are higher (3.0) than the limits under Rule 1401 and thus higher than the applicable CEQA significance thresholds. Therefore, a facility with multiple permit units could comply with Rule 1402 but still exceed the CEQA significance thresholds. Thus, the localized air toxic impacts from the project are considered significant.

The cumulative impact analysis in the section above has already evaluated the effects on public health resulting from cumulative increases in emissions of TACs. Nevertheless, based upon the information in the FSAs prepared by the CEC, the localized health risk from each of the three potential power plants is presented in Table 4.1-37.

---

<sup>13</sup> T-BACT means the most stringent emissions limitation or control technique for TACs that (a) has been achieved in practice for the category or class of source at issue; or (b) is any other emissions limitation or control technique, including process and equipment changes of basic and control equipment, found by the Executive Officer to be technologically feasible for the class or category of source, or for a specific source. SCAQMD Rule 1401(c)(2).

**TABLE 4.1-37**  
**Localized Toxic Impacts from Three Power Plants (from the CEC's FSAs)**

<b>Health Impact</b>	<b>NRG El Segundo Repower Project</b>	<b>Walnut Creek Energy Park</b>	<b>CPV Sentinel Upgrade</b>	<b>CEC Significance Threshold</b>	<b>Significant ?</b>
Cancer Risk	$0.94 \times 10^{-6}$	$1.28 \times 10^{-6}$ (a)	$0.856 \times 10^{-6}$ (b)	$10 \times 10^{-6}$	No

Acute Health Index	0.01	0.012	0.115	1.0	No

a. risk from normal project operations

b. risk at the point of maximum impact

**4. Odors. Would the proposed project create objectionable odors affecting a substantial number of people?**

Equipment at a permitted stationary source could create objectionable odors. However, SCAQMD evaluation of permit applications would include the imposition of conditions to minimize such odors. Such conditions would range from limiting the release of the odor emitting source to installation and operation of control equipment that provides odor abatement. Such control equipment includes thermal oxidizers, scrubbers, afterburners, carbon absorbers and paint spray booths. The application of the control equipment can vary depending on the source. Oxidizers, for example, can be utilized in a variety of applications including paint finishing, printing, composites, wood & furniture coating, ethanol, biodiesel, food processing, chemical, pharmaceutical, flexible packaging, adhesives, plastics, fiberglass, expanded foam, aerospace, surface coating, microelectronics, and soil vapor extraction processes. Scrubbers have been proven successful in controlling odors generated from oil refining, food processing, asphalt manufacturing, metal casting, waste handling, and semiconductor manufacturing.

Chapter 5 of this PEA includes an analysis of the impacts resulting from representative facilities that could include sources permitted under Rules 1304 and 1309.1. The environmental impact reports reviewed for the analysis in Chapter 5 show that, despite the permitting controls described above, some facilities may result in significant odor effects. These facilities are identified in subchapter 5.3. Accordingly, the odor impacts resulting from the proposed project under review in this PEA are therefore considered significant.

## IMPACT ANALYSIS - VISIBILITY IMPACTS

5. **Visibility.** Would the proposed project create significant aesthetic impacts by resulting in air emissions that substantially degrade the existing visual character or quality of the project surroundings?

Pollution can cause the absorption and scattering of light, which reduces the clarity and color of what we see.<sup>14</sup> Poor air quality can therefore result in adverse impacts on visibility. As discussed earlier in this chapter, emissions that substantially contribute to a violation of the statewide standard for visibility are considered significant, and emissions that cause or substantially contribute to a violation of the Regional Haze Rule for federal Class I areas (National Parks and wilderness areas), exceed a change of 0.5 deciviews, are also considered significant.

### **Project Effects**

Table 4.1-38 below summarizes the project's predicted visibility impacts with respect to the State standard. The State standard is a light extinction coefficient of 0.23 per kilometer when relative humidity is less than 70 percent (roughly equivalent to a 10-mile visual range), over an 8-hour averaging period (10 am – 6 pm, PST). Visual range (measured in miles) is provided for informational purposes. The without project values for the extinction coefficient predicted for the eastern Basin represented by Riverside-Rubidoux (the worst case), are from 0.063 to 0.067 from 2014 to 2030, or one third of the California standard. The maximum predicted impact on the light extinction coefficient (.001 km<sup>-1</sup>) attributable to the proposed project would not cause or contribute to a violation of the state standard, and is not significant.

**TABLE 4.1-38**  
**Project Impacts to Visibility at Riverside-Rubidoux**  
**Measured in Extinction Coefficient (km<sup>-1</sup>) and Visual Range (miles)**

Year	Predicted Extinction Coefficient Without the Project (km <sup>-1</sup> )	Project Impact on Extinction Coefficient (km <sup>-1</sup> )	Visual Range Without Project (miles)	Project Difference in Miles
2014	0.0672	0.0002	36.512	-0.091
2023	0.0629	0.0005	39.290	-0.274
2030	0.0656	0.0008	37.633	-0.469

Table 4.1-39 summarizes the project's predicted visibility impacts with respect to the federal standard for Class I areas. Under the federal standard, a 0.5 deciview change would be considered a significant project impact and a cumulatively considerable

<sup>14</sup> EPA, How Air Pollution Affects the View, available at [http://www.epa.gov/visibility/pdfs/haze\\_brochure\\_20060426.pdf](http://www.epa.gov/visibility/pdfs/haze_brochure_20060426.pdf).

contribution to a significant cumulative impact. The maximum project impact measured in deciviews would be less than 0.06 in all cases, which is not significant.

### **Cumulative Effects**

Using the same methodology as is used to calculate the visibility impacts attributed to the proposed project, the SCAQMD also calculated the visibility impacts attributed to the cumulative projects. The two tables below show the combined effects on visibility from such sources.

The data in these tables show that cumulative emissions would not result in a significant impact on visibility.

## IMPACT ANALYSIS - CLIMATE CHANGE IMPACTS

6. **Greenhouse Gas Emissions. Would the proposed project result in greenhouse gas emissions that may have a significant impact on the environment, based on any applicable threshold of significance?**

### Potential Environmental Impacts of Climate Change

Some gases in the atmosphere affect the Earth's heat balance through the greenhouse effect by absorbing infrared radiation. This layer of gases in the atmosphere prevents the heat from escaping. These gases are known as greenhouse gases. Naturally occurring GHGs have been present at relatively stable levels in the atmosphere for millennia. Examples of these natural GHGs include carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), and water vapor. In addition to these natural GHGs, there are several other man-made GHGs, including but not limited to: sulfur hexafluoride (SF<sub>6</sub>), hydrofluorocarbons (HFCs), and perfluorocarbons (PFCs).

As human industrial activity has increased, the concentrations of GHGs in the atmosphere have increased. There is a general scientific consensus that most current global warming is the result of human activity on the planet. It is widely accepted that continued increases in GHG emissions would contribute to global climate change although there is uncertainty concerning the magnitude and timing of future emissions and the resultant warming trend. Human activities associated with industrial/manufacturing, utilities, transportation, residential, and agricultural sectors contribute to these GHG emissions. CARB reports that transportation is the largest sector contributing to GHG emissions at 38 percent of the state's 2004 GHG emissions, followed by electricity generation.<sup>15</sup> Climate change may also result from other processes caused by atmospheric warming. One of the main contributing factors to increasing levels of CO<sub>2</sub> is likely melting permafrost. When permafrost thaws, it releases carbon into the soil or beneath lakes and releases CO<sub>2</sub> and methane into the atmosphere. Scientists are now estimating that there is more than twice the total amount of carbon stored in permafrost as there is in atmospheric carbon dioxide, and the impacts from

<sup>15</sup> California Air Resources Board. 2007. *Staff Report – California 1990 Greenhouse Gas Emissions Level and 2020 Emission Limit*, November 16. <http://www.arb.ca.gov/cc/ccei.htm>.

melting permafrost “could amount to roughly half those resulting from global land-use change during this century.”<sup>16</sup>

As GHG emissions increase, temperatures in California are projected to rise over the twenty-first century. The modeled magnitudes of the warming vary because of uncertainties in future emissions and the climate’s sensitivity. According to a CEC report,<sup>17</sup> projected warming scenarios predict temperatures to increase between 3.6 to 9°F by 2100. Rising temperatures could have a variety of impacts, including stress on sensitive populations (e.g., sick and elderly), additional burden on building systems (e.g., demand for air conditioning), and increasing emissions of greenhouse gases and criteria pollutants associated with energy generation.

The California Natural Resources Agency<sup>18</sup> recently prepared a document that discusses the impacts of climate change upon California. Extreme natural events are likely to occur, including higher nighttime temperatures and longer, more frequent heat waves overall; a 12 to 35 percent decrease in precipitation levels by mid-to late-twenty-first century; increased evaporation and faster incidences of snowmelt that would increase drought conditions, and more precipitation in the form of rain as compared to snow.<sup>19</sup>

It is expected that climate change would intensify California’s “Mediterranean climate pattern,” with the majority of annual precipitation occurring between November and March and drier conditions during the summer.<sup>20</sup> This would increase droughts and floods and would affect river systems. Climate change is expected to alter seasonal and inter-annual patterns of precipitation

Another impact of global climate change is increased fire hazard. Changes in temperature and precipitation may combine to alter risks of wildfire. Fire is an important natural disturbance within many California ecosystems that promotes vegetation and wildlife diversity, releases nutrients, and eliminates heavy fuel accumulations that can lead to catastrophic burns. The changing climate could alter fire regimes in ways that could have social, economic, and ecological consequences. As the existing climate throughout

<sup>20</sup> Cayan et al. 2009.

California changes over time, mass migration of species, or worse, failure of species to migrate in time to adapt to the changes in climate, could also result. The extended droughts characteristic of California's Mediterranean climate result in large areas of dry vegetation that provide fuel for wildland fires that can spread into urban areas. Wildland-urban fires occur when a fire burning in wildland vegetation gets close enough to ignite urban structures. Areas of dense, dry vegetation, particularly in canyon areas and hillsides pose the greatest wildland fire potential.<sup>21</sup>

Changes in temperature and precipitation may also cause sea levels to rise along the California coastline.<sup>22</sup> Sea level rise can cause damage to coastal communities and loss of land. An emerging effect from climate change may be acidification (i.e., a decrease in the pH of the ocean water, making it more acidic.) of the ocean. In turn, acidification would affect the ability of hard-shelled invertebrates to create their skeletal structures.<sup>23</sup> The implications of this change could be major losses to shellfish industries, and shifts in food resources for ocean fisheries. Weather pattern shifts could change the amount of calcium carbonate being delivered by rivers from sources stored in rocks, further exacerbating the reduced ability of invertebrates to form calcified shells.<sup>24</sup>

Climate change could have effects on diverse types of ecosystems, from alpine to deep-sea habitat.<sup>25</sup> As temperatures and precipitation change, seasonal shifts in vegetation would occur; this could affect the distribution of associated flora and fauna species. As the range of species shifts, habitat fragmentation could occur, with acute impacts on the distribution of certain sensitive species. Changes in distribution of plant and wildlife species due to changes in temperature, competition from colonizing species, changes in hydrologic cycles, changes in sea levels, and other climate-related effects could occur.<sup>26</sup> The IPCC states that "20 percent to 30 percent of species assessed may be at risk of extinction from climate change impacts within this century if global mean temperatures exceed 2 to 3°C (3.6 to 5.4°F) relative to preindustrial levels."<sup>27</sup> Shifts in existing biomes could also make ecosystems vulnerable to invasive species encroachment. Wildfires, which are an important control mechanism in many ecosystems, may become more

severe and more frequent, making it difficult for native plant species to repeatedly re-germinate. In general terms, climate change is expected to put a number of stressors on ecosystems, with potentially catastrophic effects on biodiversity.

Climate change may increase the risk of vector-borne infectious diseases, particularly those found in tropical areas and spread by insects: malaria, dengue fever, yellow fever, and encephalitis.<sup>28</sup> Cholera, which is associated with algal blooms, could also increase. While these health impacts would largely affect tropical areas in other parts of the world, effects could also be felt in California.

Warming of the atmosphere would be expected to increase smog and particulate pollution, which could adversely affect individuals with heart and respiratory problems, such as asthma. Extreme heat events would also be expected to occur with more frequency, and could adversely affect the elderly, children, and the homeless. Therefore, there may be an increase in heat-related human deaths and a higher risk of respiratory problems caused by deteriorating air quality.

Finally, the water supply impacts and seasonal temperature variations expected as a result of climate change could affect the viability of existing agricultural operations, making the food supply more vulnerable. Changes in growing season conditions could also affect California agriculture, causing variations in crop quality and yield.<sup>29</sup>

Given scientific uncertainties and the fact that the effect of adding or subtracting any particular greenhouse gas emissions must be considered in a global context, it is not possible to quantify or determine the exact relationship between a project's emissions and these potential environmental impacts.

### **Greenhouse Gas Emissions Attributable to the Project**

The following analysis takes two approaches in order to capture all six GHG pollutants identified in AB 32. First, an analysis of criteria pollutant emissions data from the 2007 AQMP focuses on directly emitted CO<sub>2</sub>, N<sub>2</sub>O, and CH<sub>4</sub> because these are the primary GHG pollutants emitted during the combustion process. Second, an analysis of the statewide inventory was conducted to determine the impact from the remaining GHG pollutants including HFCs, PFCs and SF<sub>6</sub>. Combustion GHG emissions are proportional to SO<sub>x</sub> emissions, while emissions of HFCs, PFCs & SF<sub>6</sub> are analyzed as proportional to emissions of CO<sub>2</sub>, CH<sub>4</sub> and N<sub>2</sub>O, based on the statewide inventory. (See Subchapter 4.0 for additional discussion of the methodology for calculating GHG emissions and Appendix D for the detailed calculations and equations).

The first part of the analysis uses SO<sub>x</sub> emissions as a surrogate to prorate the CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions because SO<sub>x</sub> emissions result primarily from sulfur contained in

---

<sup>28</sup> EPA, 2008. *Climate Change – Health and Environmental Effects*. <http://www.epa.gov/climatechange/effects/health.html#climate> (accessed January 3, 2009).

<sup>29</sup> California Energy Commission. 2006. *Inventory of California Greenhouse Gas Emissions and Sinks 1990 to 2004*. December 2006.

fossil fuels. According to the 2007 AQMP, the CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions from all affected major source categories totaled 72 million MT per year and the total SO<sub>x</sub> emissions from all affected major source categories are 931 tons per year. The second part of the analysis, which accounts for HFCs, PFCs, and SF<sub>6</sub>, uses a ratio based on the statewide inventory of high GWP pollutants (HFCs, PFCs, SF<sub>6</sub>) to statewide GHG emissions inventory from all of the types of sources that may be eligible for offsets under the proposed project. Specifically, the ratio by dividing the total high GWPs by the total GHG emissions from all affected sources ( $14.48/223.32 = 0.065$ ).

By applying the ratio of high GWPs to all GHG sources (0.065) to the CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O emissions from 2007 AQMP (72 million MT/year), the total amount of GHG emissions of all AQMP sources can be determined ( $72 \times 1.065 = 76.68$  million MT/year). Thus, a ratio of 76.68 million MT/year of total GHG emissions to 931 tons per year of total SO<sub>x</sub> emissions ( $76.68/931 = 0.0824$ ) from the 2007 AQMP, the total GHG emissions from the proposed project can be calculated using the estimated SO<sub>x</sub> emissions from the proposed project. Table 4.1-42 converts daily SO<sub>x</sub> emissions (see Table 4.1-4) into annual SO<sub>x</sub> emissions since GHG emissions are reported in annual amounts and the significance threshold is an annual one. By multiplying the annual SO<sub>x</sub> emissions to the ratio of total GHG to total SO<sub>x</sub> emissions, the total GHG emissions from all six GHG pollutants attributed to the proposed project is calculated and listed in Table 4.1-42.

**TABLE 4.1-42****SO<sub>x</sub> Emissions and Greenhouse Gas Emissions Attributed to the Proposed Project**

<b>Attainment Year Periods</b>	<b>SO<sub>x</sub> Emissions (tons/day)</b>	<b>SO<sub>x</sub> Emissions (tons/year)</b>	<b>AQMP SO<sub>x</sub> to GHG Emissions Ratio</b>	<b>TOTAL GHG Emissions (million MT CO<sub>2</sub> eq /year)</b>
2010-2014	0.16	58.4	0.0824	4.81
2010-2023	0.49	178.85	0.0824	14.74
2010-2030	0.74	270.1	0.0824	22.26

SCAQMD's adopted Tier 3 GHG significance threshold is 10,000 MT CO<sub>2</sub>eq per year for projects for which SCAQMD is lead agency. Projects with incremental increases below this threshold are not considered to result in cumulatively considerable contributions to cumulative climate change impacts. The estimated increase in greenhouse gas emissions attributable to the proposed project is greater than the SCAQMD's GHG significance threshold for lead agency projects (10,000 MT CO<sub>2</sub>e/yr). As such, GHG emissions attributable to the proposed project, taken as a whole, are therefore significant.

**Cumulative Effects**

Using the same methodology as is used to calculate GHG emissions attributed to the proposed project, the SCAQMD also calculated the additional GHG emissions attributed to the same cumulative stationary sources analyzed in the other sections. Cumulative

daily SOx emissions are listed in Table 4.1-6. Table 4.1-43 lists the total GHG emissions from all six GHG pollutants attributed to the cumulative projects.

**TABLE 4.1-43**  
**SOx Emissions and Greenhouse Gas Emissions from Cumulative Projects**

<b>Attainment Year Periods</b>	<b>SOx Emissions (tons/day)</b>	<b>SOx Emissions (tons/year)</b>	<b>AQMP SOx to GHG Emissions Ratio</b>	<b>TOTAL GHG Emissions (million MT CO<sub>2</sub> eq /year)</b>
2007-2014	0.29	106.22	0.0824	8.79
2007-2023	0.61	223.02	0.0824	18.47
2007-2030	0.86	314.27	0.0824	26.06

The Final Staff Assessments prepared by the California Energy Commission are used to calculate the additional greenhouse gas emissions associated with each of the three power plants that potentially may be permitted in reliance upon the SCAQMD internal account offsets due to State Legislation. The methodology section explains how greenhouse gas emissions were quantified based on the information in the FSAs.

A summary of the GHG emissions from each power plant project can be found in Table 4.1-44. GHG emissions for the Sentinel project were found in the FSA prepared by the CEC. Using the methodology and analysis in the Sentinel FSA, GHG emissions from the other two power plants were determined. The detailed analysis can be found in Appendix D. A summary of the operational GHG emissions and total GHG emissions from all three power plants is set forth in Table 4.1-44.

**TABLE 4.1-44**  
**GHG Emissions from Operation of the Three Power Plants**

<b>GHG Emissions (MT/yr)</b>	<b>NRG El Segundo Repower Project</b>	<b>Walnut Creek Energy Park</b>	<b>CPV Sentinel Upgrade</b>	<b>Total GHG Emissions (MT/yr)</b>
CO <sub>2</sub> eq (operation)	1,464,618	681,110	1,077,158	3,222,885

CPV Sentinel will be paying a mitigation fee for SOx and PM10 offsets that will be spent on emission reduction projects. Because SOx emissions have been used to determine GHG emissions, a change in SOx emissions from the cumulative proposed project would affect the resulting GHG emissions impact. SOx and PM10 emissions reduced by emission reduction projects funded by the mitigation fee to be paid by CPV Sentinel have been estimated, based on current best available control technology (BACT) incremental cost effectiveness. Details on how the Sentinel fee and emission reductions from funding emission reduction projects were calculated can be found in Appendix D. Table 4.1-45 provides both cumulative projects GHG emissions and power plant GHG emissions and

adds them together, along with subtracting the GHG benefit from the Sentinel fee, to determine the total GHG emissions from the cumulative scenario in year 2030. Table 4.1-45 also compares the total cumulative GHG impacts with the SCAQMD Tier 3 GHG significance threshold. The total GHG emissions of 29.13 million MT CO<sub>2</sub>e/year in year 2030 exceeds the SCAQMD's Tier 3 GHG significance threshold of 0.01 million MT CO<sub>2</sub>e/year (or 10,000 MT CO<sub>2</sub>e/year), so GHG emissions impacts are significant and, thus, the cumulative scenario is cumulatively considerable.

**TABLE 4.1-45**

## INDIRECT IMPACT ANALYSIS - CONSTRUCTION AND MOBILE SOURCE EMISSIONS

The construction and mobile source emissions associated with a facility that is permitted under the project can be characterized as an indirect effect of the project. Those emissions when added to the emissions that will be directly emitted by sources permitted under the project, described in the preceding sections, would not occur without the project, but would be expected to add to the total amount of emissions that would occur with the project.

**Construction emissions.** The quantified estimates of emissions attributable to the project, as shown in the tables in the preceding sections, do not include emissions resulting from construction of the facilities that receive permits under the project. Construction emissions include emissions from construction equipment and emissions relating to transport of workers and materials to the construction site. While the 2007 AQMP includes construction emissions expected to result from all future growth in the region, the amount of construction emissions that is attributable to the proposed project (i.e., the amount of construction emissions that would occur under the proposed project but not under the without project scenario) cannot be determined. It is not possible to calculate the potential construction emissions associated with individual stationary sources that may be permitted under the project because the conditions under which any given permitted facility will be constructed cannot be foreseen. For example, some actions permitted under Rule 1304, such as replacing a piece of equipment at an existing

facility, might result in negligible construction emissions, while other actions permitted under Rule 1304, such as relocating an entire a facility, could entail a significant amount of construction work which would in turn result in substantial construction-related emissions. Similarly, construction of a new facility that would receive a permit for equipment under Rule 1309.1 (such as a new school, fire station or hospital) could involve a significant amount of construction work while adding new equipment permitted under Rule 1309.1 to an existing facility would ordinarily involve very limited construction work.

Although the construction emissions that would occur with and without the project cannot be estimated, the total amount of construction emissions attributable to the project would exceed the significance applicable thresholds described above. Furthermore, because construction emissions would add to the project-related operational emissions which are described above, they will increase each of the significant operational impacts that are identified to some degree. The extent of that increase cannot be estimated, however, because the amount of construction emissions associated with the project cannot be quantified.

**Mobile source emissions.** Mobile source emissions associated with facilities permitted under the project could also be characterized as an indirect air quality impact of the project. These are emissions that do not result from the permitted source itself, but that result from vehicle traffic to and from the facility that contains the permitted source. Thus, for example, when a sewage treatment plant is permitted as an essential public service under Rule 1309.1, operation of the facility results in emissions from the stationary equipment at the facility that is permitted under the Rule. Operation of the facility will also result in mobile source emissions from vehicles of employees, suppliers and others that travel to and from the facility in connection with its day to day operations. The quantified analysis of emissions presented in the tables in the preceding sections do not include these mobile source emissions. As is explained below, an increase in mobile source emissions is very likely to be associated with the project in comparison with the without project scenario, but the amount of mobile source emissions which may result cannot be determined.

In general, it is unlikely that exempt sources that receive permits under Rule 1304 would result in substantial amounts of new mobile source emissions. For example, Rule 1304 provides a number of exemptions for projects where there is limited or no increase in the potential to emit pollutants or where there is a net decrease in emissions. See, e.g., Rule 1304(a)(1) (equipment replacement), (a)(5) (air pollution control strategies), (c)(1) (relocations), (c)(2) (concurrent facility modification). Given the limited scale and scope of these types of projects, they ordinarily would not be expected to lead to sizeable increases in production or employment and or a significant increase in vehicle miles traveled (VMT) associated with increases in production and employment. Rule 1304 also provides exemptions for certain temporary actions, such as emergency activities and the installation of temporary portable equipment. See, e.g., Rule 1304(a)(4), (a)(6), (a)(7), (a)(8), (b)(1). Given the temporary nature of these types of actions, they also would ordinarily not result in substantial increases in production or employment, and thus in VMT. With respect to Rule 1309.1, in general, permitting stationary emissions sources

under the project for essential public services also would not necessarily result in substantial amounts of additional VMT and a resulting increase in mobile source emissions, particularly when a new or expanded facility would serve an existing population. A new police or fire station, for example, would not be expected to significantly increase VMT, and the same would hold true of a new school sited to serve an existing population.

On the other hand, some individual projects that receive permits under Rules 1304 and 1309.1, either alone or in combination, might lead to increased traffic that would generate substantial amounts of new mobile source emissions. For example, a new public facility could result in a significant increase in employment, increasing vehicle trips by their employees, workers and others. The same is true for innovative technologies and research operations that qualify for Priority Reserve credits under Rule 1309.1. Similarly, the relocation of an existing source (see Rule 1304(c)(1)) could, in some instances, have the effect of increasing VMT by moving the facility farther away from workers and suppliers, thereby resulting in an increase in VMT.

Furthermore, some facilities that receive permits under the project may have only minimal stationary source emissions, while at the same time generating a substantial amount of traffic that results in significant mobile source emissions. For example, a boiler in a hotel might qualify for a Rule 1304 exemption due to the limited stationary source emissions from that equipment, but the hotel itself could result in substantial VMT by employees and visitors.

As this discussion illustrates, there is no correlation between the amount of stationary source emissions at a facility receiving a permit under Rule 1304 or Rule 1309.1 and the amount of mobile source emissions that may be associated with that facility. Nor is there any correlation between the number of permits that may be issued under Rule 1304 and 1309.1 and mobile source emissions, since the relationship will depend on variables that will differ from facility to facility.

Because the difference in construction and mobile source emissions that will occur under the with project scenario in comparison to the without project scenario cannot be measured or estimated, the environmental analysis in this PEA assumes that construction and mobile sources emissions associated with stationary sources permitted under Rule 1304 or Rule 1309.1 will, in the aggregate, comprise a substantial increment of emissions in addition to the emissions attributed to the project. For each of the project related regional air quality impacts found to be significant in this PEA, it is accordingly concluded that the significant impact will be increased by some degree by the additional mobile source emissions that will occur as an indirect result of the project. Stationary source mass emissions under the proposed project exceed significance thresholds and any further increase in these emissions as a result of construction and mobile source emissions adds to this previously identified significant impact. These impacts include the following: regional criteria pollution emissions; localized concentrations of criteria pollutants; health effects of criteria pollutants; health effects of toxic air contaminants; odors; and greenhouse gas emissions. As noted above, because the amount of such emissions cannot be calculated, the extent of the contribution to each impact made by

mobile source emissions cannot be characterized. However, the effect of the project in combination with such emissions is, in each instance, significant.

In addition, because construction and mobile source emissions are presumed to be substantial, combined impacts from sources permitted under Rules 1304 and 1309.1 plus construction and mobile source emissions from facilities containing such sources could result in significant impacts relating to visibility.

The combined stationary and mobile source emissions would not result in a significant impact with regard to conflicts with the AQMP because mobile source emissions are included in the AQMP.

## **SUMMARY OF OVERALL SIGNIFICANCE DETERMINATION OF DIRECT AND INDIRECT AIR QUALITY IMPACTS**

Table 4.1-46 provides an overview of all the air quality impact areas analyzed in the previous sections of this subchapter. The only impact areas that show a different significance conclusion between direct and indirect impacts are chronic and acute health impacts and visibility. The direct impact analysis determined that the change in hazard index does not exceed SCAQMD's significance threshold for acute or chronic exposure, considering either project-specific or cumulative impacts. However, based on SCAQMD staff's review of similar types of facilities that have or could have obtained offsets, it is possible that future individual projects could have significant non-cancer exposure impacts, so indirect impacts were concluded to be significant. Similarly, the direct impact analysis determined the change in visibility from emissions from permitted sources would not result in significant impacts. However, emissions from construction and mobile sources could result in significant impacts to visibility.

## MITIGATION MEASURES

### *Regional Air Quality Impacts*

#### **Limitations on Total Quantity of Emissions**

As described above, the regional emissions directly resulting from Proposed Rule 1315 equal the quantity of the Rule 1315 offsets that are used pursuant to Rules 1304 and 1309.1. Thus, any reduction or limitation on the use of the offsets will directly reduce the

quantity of regional air pollutant emissions. For this reason, the proposed project includes a cap on total emissions offsets to be provided from the SCAQMD internal accounts for each pollutant in order to ensure that the net emissions increase attributable to both federal major and non-major sources do not exceed the emissions analyzed in this PEA.

The SCAQMD Governing Board may consider whether a further limit on use of offsets from the SCAQMD internal accounts is feasible or desirable. Historically, the SCAQMD Governing Board has made a policy decision, based on social and economic considerations as allowed by CEQA, not to limit projected regional economic growth through the AQMP.

Nevertheless, this PEA includes project alternatives which would, by limiting availability of offsets, limit growth in the region. This enables the decision-makers, other agencies, and members of the public to assess the environmental benefit from additional limitations on offsets.

### **New or Modified Sources**

The discussion and analysis that follows describes measures that will continue to be applied by the SCAQMD to ensure that new or modified sources that receive offsets under Rule 1304 or 1309.1 reduce emissions to the extent feasible:

As explained in the impacts discussion, the impacts of the proposed project exceed the SCAQMD's regional pounds-per-day operational significance thresholds for each pollutant, VOC, NO<sub>x</sub>, SO<sub>x</sub>, and PM<sub>10</sub> and CO, for each time period of analysis (2010-2014, 2010-2023, and 2010-2030) based on attainment demonstration years.

The SCAQMD requires all feasible measures to reduce the pollutants of concern at the individual permit level. This is because SCAQMD rules require "best available control technology" (BACT) for any new or modified source resulting in an emissions increase of nonattainment pollutants and their precursors, and best available control technology for toxic air pollutants (T-BACT) for any permit which would result in a maximum individual cancer risk exceeding 1 in a million at any receptor location. In addition, no permit may be issued if it exceeds a maximum individual cancer risk of 10 in a million, even with T-BACT.

Rule 1303(a)(1) requires BACT for any permit for a new or modified source of a nonattainment air contaminant, and Rule 1302(z), defines "nonattainment air contaminant" to include precursors to such contaminants. The nonattainment air contaminants are ozone and particulate matter. VOC and NO<sub>x</sub> are defined as precursors to ozone, and VOC, NO<sub>x</sub>, and SO<sub>x</sub> are defined as precursors to particulate matter (Rule 1302(af)). Therefore, any new or modified source that would result in any increase of any of the pollutants for which emission offsets will be granted (VOC, NO<sub>x</sub>, SO<sub>x</sub>, and PM<sub>10</sub>) will be required to have BACT. Regulation XVII similarly requires BACT for attainment pollutants such as CO.

The term BACT is defined differently for major and non-major sources, and somewhat differently for T-BACT, but in all cases the definition of BACT is as stringent as the definition of “feasible” under CEQA. “Feasible” is defined in CEQA Guidelines section 15364 as “capable of being accomplished within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.”

For major sources, BACT is defined in Rule 1302(h) as: “the most stringent emission limitation or control technique which:

- (1) has been achieved in practice for such category or class of source; or
- (2) is contained in any state implementation plan (SIP) approved by the Environmental Protection Agency (EPA) for such category or class of source. A specific limitation or control technique shall not apply if the owner or operator of the proposed source demonstrates to the satisfaction of the Executive Officer or designee that such limitation or control technique is not presently achievable; or
- (3) is any other limitation or control technique, found by the Executive Officer or designee to be technologically feasible for such class or category of sources or for a specific source, and cost-effective as compared to measures as listed in the Air Quality Management Plan (AQMP) or rules adopted by the SCAQMD Governing Board.”

Two points are worth noting about this definition. First, the major source is required to use the most stringent of any of the three listed control techniques. Thus, if the technique has been achieved in practice anywhere for the class or category of source, it must be used. Second, the major source is not allowed to consider cost under the first “achieved in practice” test, but only under Rule 1303(h)(3) where it is more stringent than “achieved in practice.” Accordingly, BACT for major sources is more stringent than the CEQA definition of feasible, which allows consideration of both technological and economic factors.

For non-major sources, the SCAQMD rules provide that when updating BACT, “economic and technical feasibility shall be considered in establishing the class or category of sources and the applicable requirements.” (Rule 1303(a)(2)). However, BACT for non-major sources shall not be less stringent than defined in state law. (Rule 1303(a)(3)). BACT is defined in state law at Health and Safety Code section 40405 as follows: “an emission limitation that will achieve the lowest achievable emission rate for the source to which it is applied.” Subject to subdivision (b), “lowest achievable emission rate, as used in this section, means the more stringent of the following:

- (1) The most stringent emission limitation that is contained in the state implementation plan for the particular class or category of source, unless the owner or operator of the source demonstrates that the limitation is not achievable.
- (2) The most stringent limitation that is achieved in practice by that class or category of source.

(b) Lowest achievable emission rate shall not be construed to authorize the permitting of a proposed new source or a modified source that will emit any pollutant in excess of the amount allowable under the applicable new source standards of performance.”

The definition of BACT for non-major sources is less stringent than for major sources in two ways: First, it does not include the third prong of the test for major sources that allows the SCAQMD to specify BACT more stringent than required by state law. Second, the California Air Resources Board, which is responsible for assuring that air districts properly implement this code section, has interpreted state-law BACT to allow consideration of technological and economic factors in setting the class or category to which a BACT standard will apply, although not in setting BACT for an individual source. This is unlike EPA, which does not allow consideration of cost in setting achieved in practice standards. Nevertheless, the state law definition of BACT remains as stringent as the CEQA definition of feasible, which would allow consideration of cost and technological factors, even for an individual source.

Thus, BACT for nonattainment pollutants and their precursors is at least as stringent as the CEQA definition of feasible, for both major and non-major sources.

For air toxics, SCAQMD Rule 1401 requires T-BACT for any facility that emits identified toxic air contaminants and results in a maximum individual cancer risk of more than one in a million. Rule 1401(e) requires staff to bring to the Board proposed amendments to the rule whenever the state Office of Environmental Health Hazard Assessment (OEHHA) establishes risk values for additional compounds, or updates risk values for existing listed compounds.

The definition of T-BACT requires the maximum feasible reductions in emissions rate of toxic air contaminants. T-BACT is defined as: “the most stringent emissions limitation or control technique which:

(A) has been achieved in practice for such permit unit category or class of source;  
or

(B) is any other emissions limitation or control technique, including process and equipment changes of basic and control equipment, found by the Executive Officer to be technologically feasible for such class or category of sources, or for a specific source.”

Thus, T-BACT does not allow consideration of cost, and hence is more stringent than the CEQA definition of feasible.

Based on the foregoing, SCAQMD rules require the maximum feasible mitigation in terms of emissions rate from individual new or modified sources.

The PEA finds potential adverse impacts on localized concentrations of pollution for the criteria pollutants NO<sub>2</sub> and PM<sub>2.5</sub>. Under SCAQMD Rule 1303, if an individual source would exceed the SCAQMD’s thresholds for localized concentrations of NO<sub>2</sub> and PM<sub>10</sub>,

the permit would be denied. Although Rule 1303 does not currently include a modeling requirement for PM<sub>2.5</sub>, since PM<sub>2.5</sub> is a subset of PM<sub>10</sub>, and the CEQA significance thresholds for PM<sub>2.5</sub> are the same as those for PM<sub>10</sub>, any facility emitting PM<sub>2.5</sub> in excess of the significance threshold would necessarily be captured by the PM<sub>10</sub> modeling; if it exceeded significance thresholds, the permit would be denied.

The above analysis does not apply for tar pots and abrasive blasting equipment, the two categories that exceeded the localized PM<sub>2.5</sub> significance thresholds by the greatest amounts nor for tar pots and soil vapor extraction, which exceed significance thresholds for NO<sub>2</sub>. These types of equipment are not subject to modeling under Rule 1303 because they are portable equipment. (See Rule 1304(a)(3) and (a)(7)).

However, as discussed above, the SCAQMD requires BACT for all permitted equipment, including portable equipment. Therefore, the maximum feasible reduction in emissions from such portable equipment is being required.

With regard to the new federal AAQS for lead (adopted by the USEPA in 2008), a rolling three-month average of 0.15 micrograms per cubic meter of air ( $\mu\text{g}/\text{m}^3$ ) is required while CARB's recently adopted lead regulation is a 30-day average of 1.5  $\mu\text{g}/\text{m}^3$ . The SCAQMD has a rule in effect (Rule 1420) that applies to any facility that uses or processes lead-containing materials, and prevents emissions from any such facility from exceeding 1.5  $\mu\text{g}/\text{m}^3$  beyond the property line on a monthly average basis. SCAQMD is in the process of adopting a new rule (Rule 1420.1) and amending its existing rule (Rule 1420) to prohibit emission exceeding the new federal NAAQS.

## *Greenhouse Gases*

### **Existing Sources**

It is expected that CARB will adopt in October 2010 a greenhouse gas reduction cap and trade program for many of the sources that will be receiving permits under the proposed project. CARB greenhouse gas reduction measures are required to "achieve the maximum technologically feasible and cost-effective greenhouse gas reductions from sources or categories of sources" (Health & Safety Code § 38560). CARB has published a scoping plan, as required by Health and Safety Code section 38561 that identifies additional measures CARB intends to adopt that will reduce GHG emissions. The scoping plan is required to identify measures that will achieve "the maximum feasible and cost-effective reductions of greenhouse gas emissions by 2020." (Health and Safety Code § 38561(b)).

As is shown above, all CARB GHG measures are required to meet the "maximum feasible and cost-effective" reductions test. This test is equally as stringent as the CEQA definition of "feasible." Given that CARB has been working on this statutory mandate for four years, and has an entire office and staff devoted to GHG rulemaking, it would not be feasible for SCAQMD staff to develop generally applicable greenhouse gas reduction measures that go beyond CARB measures. Thus, application of CARB rules will require the maximum feasible GHG reductions for existing sources.

### New Sources

SCAQMD rules do not currently require BACT for GHG, except GHGs that are also ozone depleters. (Rule 1303(a)(1).) By 2011, SCAQMD will be required under federal law to specify GHG BACT for larger sources of GHG emissions. On June 3, 2010, EPA published in the Federal Register its Greenhouse Gas Tailoring Rule (75 Fed. Reg. 31513).

EPA has stated that because there is no national ambient air quality standard for CO<sub>2</sub>, or any of the other primary GHGs, and EPA does not plan to promulgate any, the “nonattainment” NSR program, discussed above under criteria pollutants, will not apply to GHGs. “Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule; Proposed Rule” (“Tailoring Rule Proposal”) 74 Fed. Reg. 55292, 55297 (October 27, 2009). However, the new source review program that applies for attainment pollutants, prevention of significant deterioration (PSD), will apply. PSD applies to any “major stationary source” of pollutants subject to regulation under the Clean Air Act. The Title V program for existing sources will also apply. EPA has issued its interpretation that GHGs become regulated pollutants as of the time its greenhouse gas reduction rules for motor vehicles becomes effective, i.e. January 2011. SCAQMD staff concludes it would not be feasible to begin requiring GHG BACT prior to January 2011, because it is necessary to amend the agency’s rules in order to do so.

EPA has decided to adopt a phased-in approach to regulation of GHG.

In Step 1, which begins January 2, 2011, only facilities that would already be subject to Title V or PSD would be subject to GHG requirements under these programs. In addition, a facility modification would only trigger PSD for GHGs if the modification resulted in an increase of 75,000 tpy CO<sub>2</sub>e. Therefore, SCAQMD would begin to require GHG BACT for sources already subject to PSD and having a GHG increase of 75,000 tpy or more, effective January 2, 2011.

In Step 2, which begins July 1, 2011, facilities with the potential to emit 100,000 tpy CO<sub>2</sub>e or more per year would be subject to Title V and PSD, regardless of whether they would otherwise be subject to these programs as a result of emissions of other pollutants. Therefore, SCAQMD would begin to require GHG BACT for all new and modified facilities having the potential to emit 100,000 tpy of CO<sub>2</sub>e and having an increase of at least 75,000 tpy effective July 1, 2011.

For future phases of the program, EPA has committed to a further rulemaking to be completed in 2012 which will consider whether it is feasible to further lower the thresholds for GHG coverage under these programs. However, it is unknown at this time whether the thresholds will be further lowered. EPA has, however, committed that the threshold will not be lowered below 50,000 tpy until at least May 1, 2016.

Although the definition of federal BACT for PSD sources is somewhat different from the definition of BACT that SCAQMD uses for nonattainment NSR, this definition is still at least as stringent as the CEQA definition of feasible. Pursuant to Clean Air Act section 169(3) (42 U.S.C. §7479(3)), the term “best available control technology” means in pertinent part “an emission limitation based on the maximum degree of reduction of each pollutant subject to regulation under this chapter emitted from or which results from

any major emitting facility, which the permitting authority, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such facility through application of production processes and available methods, systems, and techniques, including fuel cleaning, clean fuels, or treatment or innovative fuel combustion techniques for control of each such pollutant.” Therefore, GHG BACT is at least as stringent as CEQA’s definition of feasible mitigation, which similarly allows consideration of economic, technological and environmental factors. Thus, application of BACT will require the maximum feasible reductions of GHGs at new sources.

### ***Level of Significance after Mitigation***

In light of the uncertainty associated with the effects of future individual stationary sources that have not yet been proposed for approval, and given that the emissions estimates for the proposed project and cumulative project scenarios do not include construction activities and mobile source emissions, the PEA concludes that the adoption and implementation of feasible mitigation will not reduce significant air quality, health, and climate change impacts to a less-than-significant level. Accordingly, the project-level and cumulative impacts identified as significant in this chapter cannot feasibly be mitigated to a less-than-significant level and remain significant and unavoidable.

# **INDIRECT ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES - METHODOLOGY**

**Introduction**

**Methodology for Analysis of Environmental Impacts Related to Facility  
Construction and Operation**

**Existing and New Facilities**

**Mapping of Known Historic Permitted and Pending Facility Locations**

## **INTRODUCTION**

CEQA Guidelines §15126.2(a) requires environmental documents to identify significant environmental effects that may result from a proposed project. Significant effects of a project on the environment should be identified and described, with consideration given to both short- and long-term impacts. The discussion of environmental impacts may include, but is not limited to, the resources involved; physical changes; alterations of ecological systems; health and safety problems caused by physical changes; and other aspects of the resource base, including water, scenic quality, and public services.

The following sections describe the methodology used to identify the types of future facilities potentially affected by the proposed project, grouping like categories of facilities, and the process of identifying potential indirect impacts from construction and operation of representative facilities in each category of facilities. The analyses of potential adverse environmental impacts for each environmental topic area affected by the proposed project are located in the following subchapters.

The proposed project would establish regulatory procedures for making annual demonstrations of equivalency with federal emission offset requirements. The proposed project also proposes to establish the types of emission reductions, including newly-used reductions, eligible to offset emission increases. Accordingly, the direct adverse environmental impacts, air quality, visibility and greenhouse gas emissions, identified for the proposed project are discussed in Chapter 4. However, because providing offsets can be a critical step in obtaining approval to site a facility, the proposed offset accounting system has the potential to create indirect adverse environmental impacts in the future from siting, constructing, and operating individual facilities containing stationary pollutant sources that qualify to receive emissions offsets available from the SCAQMD's internal offset accounts under Rules 1304 and 1309.1. Depending upon the nature of the specific project and its setting, future affected facilities could require constructing new or modifying structures resulting in adverse impacts to a number of different environmental topic areas, as identified in the Initial Study prepared for the proposed project. As discussed earlier, topic areas that were initially found to be less-than-significant, or were found to have no impact, are also included for analysis. This subchapter summarizes the methodology used to evaluate the potential indirect impacts due to construction and operation of future new facilities.

As discussed in Chapter 4, Subchapter 4.0, this PEA uses a baseline for the direct air quality impacts which compares conditions with the project to conditions without the project. In both cases, the air quality will improve over future years, due to control measures already adopted and to be adopted in the future by the SCAQMD, CARB, and EPA. The PEA analysis looks at how much better conditions might be if the project were not implemented, rather than comparing conditions as of the day the NOP was issued to conditions under the project.

Chapter 5 looks at the indirect impacts of the project, which are the impacts of construction and operation of facilities receiving permits in reliance on the SCAQMD's internal offset accounts pursuant to the project. These impacts include water quality and demand, hazards, noise, impact on cultural and biological resources, etc. Most of these impacts would occur as a result of new facilities being constructed or the expansion of existing facilities. Accordingly, the more typical CEQA baseline is more appropriate. Thus, for this Chapter, the baseline is the "environmental setting", or the "physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published." (CEQA Guidelines §15125(a). As stated in the Guidelines, "this environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant." (Id.) Therefore, impacts in this Chapter are evaluated by comparing conditions with the project to conditions in the event the setting was undeveloped property.

## **METHODOLOGY FOR ANALYSIS OF ENVIRONMENTAL IMPACTS RELATED TO FACILITY CONSTRUCTION AND OPERATION**

The proposed project consists of adopting a revised version of proposed Rule 1315. A large number and a wide range of different types of pending and potential future facilities that require stationary source permits could receive permits pursuant to the proposed project. The indirect environmental impact analyses for the environmental categories other than air quality, visibility and greenhouse gas impacts are discussed in Subchapters 5.1 through 5.17 and address the potential future indirect district-wide environmental effects from future individual facilities that are exempt from offsets pursuant to Rule 1304 or that receive offsets from the Priority Reserve pursuant to Rule 1309.1 on a programmatic level as permitted by CEQA<sup>1</sup>.

Given the large number and variety of facilities and geographic extremes within the 10,473 square-mile area under SCAQMD jurisdiction, it is infeasible to analyze, in detail, the environmental impacts of each pending and potential future permitted facility. Therefore, general facility categories are identified based on the available historical data from facilities that have been permitted or with permits pending during a five-year period (2003 through 2008). Based upon these facility categories, a wide selection of corresponding CEQA documentation was examined for projects that would generally fit within each of these facility categories. These selected sample CEQA documents capture the range of reasonably foreseeable significant impacts that could occur as a result of siting, constructing, and operating facilities that could receive future emission offsets under the proposed rule.

The steps for identifying primary facility categories, review of past CEQA environmental documentation, and potential future environmental impacts are presented, in the following order:

---

<sup>1</sup> Cal. Code Reg. Title 14 §15168

1. Review of available existing data of past and pending permits (years 2003 through 2008) to identify the types of facilities that have or would have access to offsets pursuant to existing Rules 1304 and 1309.1 or would have had access to permits under Rule 1309.2<sup>2</sup> if it were in effect;
2. Identification of primary facility categories based upon review of permit data, with the number and representative percentages of facilities within the total permit database evaluated;
3. Review of CEQA documents relevant to each of the facility categories in order to determine the general characteristics of projects within each category;
4. Disclosure of potentially significant environmental impacts found in the analysis of past CEQA documents within each facility category, and the identification of significant impacts that could potentially occur for similar future projects.

Each of these steps is described in further detail below.

### **1) Review of Available Existing Data of Past and Pending Permits**

To analyze potential future reasonably foreseeable indirect impacts from the proposed project, it was first necessary to review past permits and pending permit applications to develop a master list of facility categories. Using this process to develop a master list provided a broadly inclusive selection of the different types of SCAQMD permit-related activities during a five-year period, as described in the following subsections.

Review of the SCAQMD's permit database produced a list of permits issued and pending by the SCAQMD under Rules 1304 and 1309.1 between 2003 and 2008. Approved and pending permits between 2002 and 2006 were also reviewed to identify facilities that would have qualified for offsets under Rule 1309.2, were it in effect. The list included 12,315 permits approved and pending between 2003 and 2008. A comprehensive evaluation of the database identified approximately 7,732 individual facilities located throughout the district that had obtained permits from the SCAQMD during this period. These 7,732 facilities represent a wide array of different commercial, institutional, transportation, and industrial uses, and are presented in Appendix E.

### **2) Identifying Facility Categories**

To group facilities into broad categories for analysis of environmental impacts, facilities were categorized according to their associated standardized North American Industrial

---

<sup>2</sup> Proposed amended Rule 1309.2 is no longer part of the proposed project. Rule 1309.2 was rescinded on February 5, 2010. Accordingly, the analysis includes some facilities that would no longer be eligible for SCAQMD internal accounts offsets. In view of the wide variety of sources that may be eligible for an exemption from offsets pursuant to Rule 1304, the analysis is still considered representative of potential future conditions.

Category System (NAICS)<sup>3</sup> code as available. For each facility, each assigned NAICS code (if available) consisted of a 6-digit numeric sequence, whereby the first two digits indicated the general economic activity of the facility. Each of the additional digits provided further refined detail specific to the business activities of that facility. Based upon careful review of the permit database, including the NAICS codes, the facilities were grouped according to the following general categories:

- agriculture facilities
- retail and service facilities
- large commercial facilities,
- entertainment and recreational facilities
- institutional facilities
- transportation facilities
- utilities, including power plant facilities
- light industrial and warehousing facilities
- heavy industrial facilities

**Number and Percentage of Facilities in Each Primary Facility Category**

Review of the database indicated that the total number of categorized facilities is approximately 6,230, which is based on the available NAICS codes for the known individual permitted facilities from the last five years (Table 5.0-1) (for more detail, see Appendix E). The remaining 1,502 facilities (out of 7,732) in the database were not categorized because NAICS codes for those facilities were not available. Furthermore, the full list of permitted and pending permits was manually reviewed in order to ensure accurate categorization of the wide variety of different facility types within each category.

**TABLE 5.0-1**

Number and Percentage of Permitted Facilities by Category (Years 2003 Through 2008)

Primary Facility Categories <sup>a</sup>	Number of Permitted Facilities	Percentage of Total Number of Facilities	Average Number of Permits Approved per Year	Number of Newly Sited Facilities per Year <sup>b</sup>
Agricultural Facilities	14	< 1.0%	3	<1
Retail/Services Facilities	2,621	42.1%	524	26
Large Commercial Facilities	649	10.4%	130	6
Entertainment/Recreational Facilities	24	< 1.0%	5	<1

<sup>3</sup> United States Census Bureau. 2009. North American Industrial Classification System (NAICS). Online at <http://www.census.gov/eos/www/naics/>. Referenced permitted facility NAICS codes provided by SCAQMD socioeconomics staff, May 28, 2009.

**TABLE 5.0-1 (Concluded)**

Number and Percentage of Permitted Facilities by Category (Years 2003 Through 2008)

Primary Facility Categories <sup>a</sup>	Number of Permitted Facilities	Percentage of Total Number of Facilities	Average Number of Permits Approved per Year	Number of Newly Sited Facilities per Year <sup>b</sup>
Institutional Facilities	421	6.8%	84	4
Transportation Facilities	100	1.6%	20	1
Utility Projects (Includes Power Plants)	150	2.4%	30	2
Light Industrial Warehouse Facilities	1,133	18.2%	227	11
Heavy Industrial Facilities	1,118	17.9	224	11
<b>Total</b>	<b>6,230<sup>c</sup></b>	<b>100<sup>d</sup></b>	<b>1,247</b>	<b>63<sup>d</sup></b>

<sup>a</sup> Based upon United State Census Bureau, 2009. North American Industrial Classification System (NAICS).

<sup>b</sup> Based on Small Business Administration data (2009) (See Table 5.0-3); New facilities = number of permits per year x 0.05

<sup>c</sup> The total number of individual facilities permitted within the last 5 years is 7,732. However, NAICS codes were available for only 6,230 of these facilities (SCAQMD, May 29, 2009).

<sup>d</sup> Total affected by rounding.

### 3) Review of CEQA Documents and Facility Category Descriptions

Once the survey of the SCAQMD’s permit database was completed and primary facility categories were identified based on NAICS codes, historical permit data were further reviewed to identify the basic characteristics for each primary facility. In addition, to provide a more robust analysis of potential adverse environmental impacts from implementing the proposed project, project-specific CEQA documents for facilities illustrative of each primary facility category were reviewed to identify environmental resources that may be adversely affected by facilities in each primary facility category.

#### Selection of Available CEQA Documents

The CEQA documents were selected for review based upon a number of factors. Initially, documents that were prepared or approved by SCAQMD were examined. Documents for projects that were reviewed by SCAQMD were also collected. However, there were insufficient documents to provide an adequate representation of projects across the different facility categories. Accordingly, additional CEQA documents were reviewed as listed by the State Clearinghouse and Planning Unit within the Governor’s Office of Planning and Research, and as found to be available from other public agency

sources. The available CEQA documents were screened according to their applicability to each respective facility category.

The CEQA documents were selected based upon availability, within their respective facility categories, for the sole purpose of illustrating the *types of impacts* that would be likely to result from the development of projects within each of the different general facility categories. The CEQA documents selected reflect projects currently or recently occurring for the different primary facility categories analyzed for potential indirect impacts from the proposed project. Equipment operated at these types of facilities could be eligible for offsets through Rule 1304(d) exemptions or Rule 1309.1 Priority Reserve. The CEQA analysis in the documents selected is based on the project as a whole and not just the permitted equipment eligible for offsets under the proposed project. Thus, the impacts from the CEQA analyses surveyed are not limited to the impacts from the affected equipment that will receive the offsets pursuant to Rule 1304 or 1309.1, but would reflect the impacts from the entire project.

It should be noted that these CEQA documents represent a snapshot of impacts that could be generated by future projects affected by the proposed project. A number of small projects often are not required to undergo project-specific environmental review e.g., gas stations, dry cleaners, restaurants, auto-body shops, etc.), particularly those future affected projects or operations that are located in pre-existing facilities. Further, the future contextual location and project-specific characteristics may be unique to individual projects.

Nonetheless, to the extent data were available, each facility category surveyed provided an analysis for the proposed project commensurate with the level of analysis appropriate for programmatic CEQA documents. Since it is not possible to know exactly what future permits will be approved, the analysis represents the best available information. The CEQA documents evaluated are listed in Table 5.0-2 below.

**Facility Category Descriptions**

General descriptions of each primary facility category are provided below, according to information obtained from the CEQA documents listed in Table 5.0-2 below.

*Agricultural Facilities*

Pending and potential future agricultural facilities that require stationary source permits and could receive emissions offsets pursuant to the proposed project include establishments such as dairies, ranches, wineries, and the production of various agricultural crops. Various building structures, such as farm and engine equipment operation, and agricultural crops are associated with agricultural land uses. Physical structures for these facilities are typically industrial warehouse-type buildings, located in rural, open space, and agricultural areas. Typical permitted stationary source equipment used at these facilities includes diesel and gasoline backup generators and gasoline storage and dispensing equipment.

*Retail/Service Facilities*

Pending and potential future permit applications for retail/service facilities that would require stationary source permits and could receive emissions offsets pursuant to the proposed project include various consumer products, food and beverage retail stores, restaurants, gas stations, auto repair, dry cleaning, and miscellaneous consumer retail establishments. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes backup generators; service station gasoline storage and dispensing equipment; dry cleaning equipment; printing presses; boilers; paint spray booths; and food frying, charbroiling, and other cooking equipment.

*Large Commercial Facilities*

Pending and potential permit applications for future large commercial facilities that would require stationary source permits and could receive emissions offsets pursuant to the proposed project include various professional (financial, legal, and business consulting), technical (telecommunications, research), hospitality, and large-scale retail services. These facilities are typically located in large office buildings or mixed-use developments in commercially zoned, developed urban areas. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes backup generators and boilers.

*Entertainment/Recreational facilities*

Pending and potential permit applications for future entertainment/recreation facilities that would require stationary source permits and could receive emissions offsets pursuant to the proposed project include aquariums, zoos, amusement and theme parks, golf courses, stadiums, casinos, health clubs, and some commercial entertainment districts and facilities. These facilities are located in a variety of mixed-use, commercial, open space, and residential areas. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes backup generating equipment, cooking equipment (e.g., ovens, fryers, grills, etc.), pumps, and boilers.

*Institutional Facilities*

Pending and potential permit applications for future institutional facilities that would require stationary source permits and could receive emissions offsets pursuant to the proposed rule include elementary, middle, and high schools, as well as community colleges, universities and other educational facilities; churches and religious structures; health care facilities, including medical offices, hospitals, and clinics; and various government offices. These facilities are located in commercial, residential, and mixed-use areas. Based on the analysis of permit applications for this category of facilities, permitted stationary source equipment includes backup generating equipment, gasoline storage and dispensing equipment, and boilers.

*Transportation Facilities*

Pending and potential permit applications for future transportation facilities that would require stationary source permits and could receive emissions offsets pursuant to the proposed project include seaports and airports, rail yards, shipping terminals, passenger service facilities, and road and highway construction and maintenance facilities. These facilities are located and surrounded by industrial, commercial, mixed-use, and transportation-related areas. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes generators and fuel storage and distribution facilities.

*Utility Projects including Power Plant Facilities*

Pending and potential permit applications for future utility projects that would require stationary source permits and could receive emissions offsets pursuant to the proposed project include power generating facilities if eligible for exemption under Rule 1304, water and wastewater treatment plants, and solid waste recycling and transfer facilities. These facilities are often located in heavy industrial areas. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes large-scale diesel, natural gas, and other fossil fuel powered electrical generation equipment, boilers, and incinerators (to the extent such equipment meets the exemption requirements in Rule 1304).

*Light Industrial/Warehouse Facilities*

Pending and potential permit applications for future light industrial/warehouse projects that would require stationary source permits and could receive emissions offsets pursuant to the proposed project include media and studio production facilities; business parks; merchant wholesale operations; light manufacturing; printing and paper production; and various specialty trade contractors such as custom furniture shops, industrial artists, and hardware and building material suppliers. These facilities typically are located in low-scale, one- to two-story warehouse buildings and are typically located in light industrial, commercial, or studio district land use areas. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes backup generators, paint spray booths, furnaces, metal coating and treatment equipment, boilers, storage tanks, and printing presses.

*Heavy Industrial Facilities*

Review of existing and pending permits over the last five years indicated that heavy industrial facilities that would require stationary source permits and could receive emission offsets if eligible for exemption under Rule 1304 include oil refineries, chemical plants, steel foundries and metal fabrication, machinery and heavy equipment manufacturing, electronics manufacturing, building construction materials, and mining and oil and gas extraction. Due to the scale of operation, these facilities may be of substantial size. These facilities are primarily located in areas zoned for industrial uses. Based on the analysis of permit applications for this category of facility, permitted stationary source equipment includes boilers, furnaces and drying ovens, oil refining processes, solvent and chemical production, electronic soldering equipment, chemical storage tanks, concrete batch equipment, and abrasive blasting equipment (to the extent such equipment meets the exemption requirements in Rule 1304).

**4) Assessment of Potentially Significant Environmental Impacts**

Because the SCAQMD is forecasting the nature and characteristics of future facilities based on historical permit data and information from previously prepared CEQA documents, detailed quantification of such impacts is not possible because the nature and characteristics of the specific facilities that may be constructed and operated in the future are currently not known.

The determination of impacts resulting from a particular facility category is dependent upon known information about that facility category. Types of available facility information ascertained include general physical characteristics, such as building size, footprint, height, mass, and the proximity of the facilities to sensitive receptors and visual resources, as well as operational and physical characteristics described in the selected available environmental documentation for each of the facility categories (see Table 5.0-2). Based upon the historical data of permitted facilities over the five-year period, and the impacts typically generated within each of these facility categories, it is possible to qualitatively evaluate the potential significant impacts that may occur for each category. Qualitative descriptions of the types of impacts that may occur are provided, according to the available information from the selected CEQA documents. Furthermore, a summary of the determination of significance for each environmental impact area disclosed within the CEQA documents is presented in the following subchapters in Chapter 5.

It should be noted that all future projects would require environmental documentation as deemed appropriate by the relevant lead agency, which will be responsible for the determination of significant impacts and for ensuring implementation of all appropriate mitigation measures.

## **EXISTING AND NEW FACILITIES**

While environmental impacts may occur as a result of constructing individual facilities under the proposed project, not all emissions offsets provided by the SCAQMD to eligible facilities would result in the construction of new facilities. Based upon the available permit database, it was not possible to determine whether a permit was issued for a facility in an existing structure or newly constructed facility. However, it is likely that a large majority of permits would be for the installation of new or replacement equipment at existing facilities, as explained below. Many small businesses, such as dry cleaners, automotive repair shops, and restaurants, occupy existing, established buildings in previously developed commercial centers. Furthermore, existing facilities that receive new equipment-specific permits would not necessarily generate the same types of indirect impacts as newly constructed facilities. Existing facilities obtaining offsets from the SCAQMD have the potential to generate both construction and operational air quality impacts, but because the physical characteristics of the overall facility are unlikely to change, indirect impacts to other environmental topic areas would not be expected or would be expected to be less than the indirect impacts for new facilities.

Nonetheless, in order to ensure an inclusive and conservative approach, the impact analysis in this PEA assumes that permits granted under the proposed project for each primary facility category would result in construction of new facilities.

According to the Small Business Administration (SBA)<sup>4</sup>, during the 2001, 2003, and 2004 U.S. Census years<sup>5</sup>, the SCAQMD region, including the Metropolitan Statistical Areas of Los Angeles, Long Beach, Santa Ana (LA-LB-SA) and Riverside, San Bernardino, Orange (R-SB-O), had an annual weighted average new business establishment rate of approximately 14 percent and an annual weighted average 12 percent rate of so-called ‘dead’ or non-functional business establishments (that have gone out of business), as shown below. It is reasonable to expect that similar rates of business starts and closures will continue in the future. However, these averages do not indicate the specific types of new or existing businesses, or provide a clear indication of potential reuse of existing buildings vacated by ‘dead’ businesses. They also do not account for current or changing economic conditions after 2004 that may affect the rate of new or dead establishments. Therefore, these average numbers provide only an estimate of the number of new businesses each year – approximately 14 percent (Table 5.0-3).

**TABLE 5.0-3**

Historical Information on New Versus “Dead” Businesses

Year	Region	Total Establishments (number)	New Establishments		Dead Establishments	
			number	percent	number	percent
2001	LA-LB-SA*	197,940	27,544	14%	25,159	13%
2001	R-SB-O**	48,611	7,677	16%	5,813	12%
2003	LA-LB-SA	276,168	36,438	13%	32,030	12%
2003	R-SB-O	52,529	7,330	14%	6,142	12%
2004	LA-LB-SA	280,360	37,680	13%	32,385	12%
2004	R-SB-O	53,718	8,261	15%	6,156	11%
<b>Weighted Average (2001, 2003, &amp; 2004)</b>				<b>14%</b>		<b>12%</b>

Source: SBA, 2009

<sup>4</sup> According to the Small Business Administration, a small business is defined as an independent business having fewer than 500 employees. Nationwide, small businesses represent 99.7 percent of all employer firms, employ about half of all private sector employees, and pay nearly 45 percent of total U.S. private payroll (SBA, 2009).

<sup>5</sup> 2002 data was not available from the Small Business Administration.

## **MAPPING OF KNOWN HISTORIC PERMITTED AND PENDING FACILITY LOCATIONS**

As a supplement to determining whether specific categories of facilities have historically resulted in significant impacts and for informational purposes in order to provide context and perspective to the reader, the locations of affected facilities or categories of facilities were mapped to determine their spatial distributions within the district. It may be assumed that future facilities would be spatially distributed in similar patterns to previous permitted facilities because commercial and industrial facilities can only be located in appropriately zoned areas. An individual map was created for each of the nine facility categories. The facility category location maps are presented in Appendix F.

# **INDIRECT ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES - AESTHETICS**

**Introduction**

**Impact Analysis**

## INTRODUCTION

The proposed project would provide offsets, which can be a necessary step in obtaining approval for a facility. Therefore, proposed Rule 1315 has the potential to create indirect adverse impacts in the future from siting, constructing, and operating individual facilities containing stationary pollutant sources that qualify to receive emissions offsets available from the SCAQMD's internal offset accounts. Construction of new or modified structures in future new facilities obtaining emissions offsets from the SCAQMD's internal offset accounts have the potential to generate adverse visual impacts depending upon the nature of the project, its location, and its setting. The following section summarizes the methodology used to evaluate the potential indirect impacts of the proposed project on visual resources and views from the construction and operation of future new facilities.

Impacts on visibility from air pollutant emissions are addressed in Subchapter 4.1.

### Methodology

The methodology for determining the significance of potential aesthetics impacts is based on comparing the existing setting to expected future conditions with the proposed project in place. The following analyses of potentially significant adverse aesthetics impacts include assessments of impacts to designated scenic resources (such as scenic highways or vista points), visual character, and other aesthetic qualities that may be caused by future new projects. The following factors were considered in assessing the significance of impacts on visual resources and quality from future new projects within each of the facility categories:

*Scale* – the size, density, and compatibility of a facility relative to the existing surrounding area;

*Degree of visibility* – the extent to which a facility can be seen or noticed. To a large extent, this depends on the contextual placement of the facility in relation to the existing surrounding visual resources; and

*Visual Character* – the extent to which changes to an affected facility or construction of a new facility will degrade the existing landscape, scenic views, visual look or quality of the site and the surrounding area.

Mitigation measures would be identified on a project-by-project basis and would be the responsibility of the lead agencies based on their underlying legal authority to mitigate project impacts.

## **Significance Criteria**

A significant impact is defined as “a substantial or potentially substantial, adverse change in the environment” (Public Resource Code § 21068). Although there is no ironclad rule as to when an impact is “significant,” generally, the questions presented in Appendix G of the CEQA Guidelines can serve as significance criteria, unless a particular agency has developed its own, more specific criteria. To the extent that the proposed project results in siting, constructing, and operating future facilities, these future new projects have the potential to generate significant aesthetics impacts if their implementation would result in any of the following:

- Have a substantial adverse effect on a scenic vista.
- Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway.
- Substantially degrade the existing visual character or quality of the site and its surroundings.
- Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

## **IMPACT ANALYSIS**

The following discussion presents an evaluation of potential aesthetic impacts from future facilities that would be eligible for offsets under the proposed project. The analysis is organized according to the primary facility categories and the potential impacts they may have on scenic resources and visual character of a given area. Based on the information described in Subsection 5.0, a large majority of stationary source equipment permits would be for the installation of new or replacement equipment at existing facilities. Because the analysis of impacts to aesthetic resources is qualitative in nature as explained in Subchapter 5.0, the determination of the types of impacts and the level of significance of potential facility-level project impacts will not be based on the number of newly constructed or pre-existing facilities. Therefore, information on the number of new facilities is intended for informational purposes only.

Future new or modified facilities could potentially result in built form of a scale and mass that is inconsistent with adjoining development, that could remove trees or affect historic buildings, or that could obstruct regionally or locally important views. While the specific nature or degree of such impacts is currently unknown, potentially significant adverse aesthetic impacts have been analyzed based on available information pertaining to each facility category.

## Potential Aesthetics Impacts of Identified Facility Categories

### Agricultural Facilities

Review of approved and pending permit applications over the five-year period identified 14 agricultural facilities or less than one percent of the total permit applications (see Table 5.0-1). In addition, there is an estimated annual two percent migration of dairy livestock operations from the Chino-Ontario-Norco area to other parts of California (e.g., San Joaquin Valley) or to areas outside the state due to economic pressures to reevaluate existing land uses (e.g., agricultural, dairy) due to encroaching urbanization.<sup>1</sup> Accordingly, it is unlikely that a large number of new agricultural facilities would be constructed in the district in the future. On a programmatic level, impacts to visual resources as a result of constructing future new agricultural facilities may include potentially altering undeveloped open space and natural areas, developing scenic hillsides (such as wineries), and/or obstructing views from scenic highways, including in rural or agriculturally zoned areas. Although agricultural facilities would most likely be constructed in areas zoned for agricultural uses, these facilities may be near or directly adjacent to sensitive residential and publicly accessible scenic areas. The potential scale and height of farm structures, dairy processing plants, and other agricultural-related structures may result in significant visual and aesthetic impacts to surrounding non-agricultural land uses, scenic vistas, and scenic resources.

Project-specific impacts are identified in the CEQA documents for agricultural projects available at the time the survey was conducted (see Table 5.1-1). The two selected CEQA documents,<sup>2</sup> which were prepared for a winery and a county General Plan Dairy Element, illustrate the types of impacts that agricultural-related projects would have on aesthetics and visual quality, including changes in scenic views or vistas, changes to visual quality and character of the immediate project area, and increased lighting and nighttime illumination. Based on a review of these documents, agricultural-related facilities may be of substantial size and mass, are typically constructed and operated within areas zoned for agriculture, are likely to be consistent with the existing visual character and land use of the surrounding area, and therefore, are unlikely to affect scenic views or other visual resources. Accordingly, these projects were found to have less-than-significant aesthetic impacts. More specifically, the following discussions provide an overall summary of the types of impacts identified in the two CEQA documents surveyed for this facility category.

- a) Scenic Vistas.** One of the two CEQA documents for a past project in the agricultural facility category disclosed a less-than-significant impact with the implementation of mitigation measures on scenic vistas; the other CEQA document

---

<sup>1</sup> Final Environmental Assessment for Proposed Rule 1127 – Emission Reductions from Livestock Waste (SCAQMD, August 2004).

<sup>2</sup> It should be noted that no available documents were found for projects within the district; the two selected documents for agricultural facilities were for projects in San Mateo County and Kings County in northern and central California, respectively. Although these projects are not located within the district, their environmental documents illustrate the types of impacts that may result from the development of such projects.

did not address impacts on scenic vistas. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 1 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic vistas. Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories

available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) Scenic Resources.** One of the two CEQA documents for a past project in the agricultural facility category disclosed a less-than-significant impact on scenic resources; the other CEQA document did not address impacts on scenic resources. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 1 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) Visual Character.** Both of the CEQA documents for past projects in the agricultural facility category disclosed less-than-significant impacts (without or with mitigation) on the visual character of an area. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 1 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on the visual character or quality of an area.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on the visual character or quality of a site and its surroundings from implementing the proposed project are determined to be significant.

- d) Light and Glare.** Both of the CEQA documents surveyed for the agricultural facility category disclosed either less-than-significant impacts or less-than-significant impacts with the implementation of mitigation measures on light and glare. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 1 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on light and glare.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on light and glare from implementing the proposed project are determined to be significant.

### **Retail/Service Facilities**

Review of approved and pending permit applications over the five-year period identified 2,621 retail/service facilities, or 42.1 percent of the total (see Table 5.0-1). However, based on these historical data, only some of these facilities would involve new construction since most of them would be established and operated within existing retail-oriented buildings in urban, commercial, and mixed-use residential areas. Examples of projects that may be constructed in the future include dry cleaning and laundry businesses, restaurants, gas stations, and auto repair facilities, as evidenced by the currently pending permits and permits issued by the SCAQMD in the five-year period. On a programmatic level, most future new or modified facilities would be constructed within existing developed retail and mixed-use residential areas based on historical data and would have a low potential for alteration of undeveloped open space and natural areas or obstruction of views from scenic highways or other scenic resources. Therefore, retail/service facilities would generally have a low likelihood of creating significant adverse aesthetic impacts in the future. However, the potential exists for one or more future retail/service projects to have significant adverse impacts.

Project-specific impacts are identified in the CEQA documents for retail service facilities at the time the survey was conducted (see Table 5.1-1). The eight CEQA documents surveyed, which were prepared for a medical office project, five mixed-use projects (all involving residential and retail developments), and two commercial/retail projects, illustrate the types of impacts that retail/services facilities would have on aesthetics and visual quality, including changes in scenic views or vistas, changes to visual quality and character of the immediate project area, and increased lighting and nighttime illumination. The CEQA documents for the retail and service projects surveyed involved the construction or remodeling and reconfiguration of low- and medium-scale offices, retail stores, and shopping centers or the construction of new high-rise structures in similar settings, which were found to result in changes to the visual character of the immediate project area, obstruction of existing views, or require additional outdoor lighting. However, project-specific impacts were generally not considered significant impacts as most retail and service establishments surveyed are located in developed urban areas and are largely compatible with the surrounding visual quality and character, scenic resources, and existing lighting and nighttime illumination levels. More specifically, the following discussions provide an overall summary of the types of impacts identified in the eight CEQA documents surveyed.

- a) **Scenic Vistas.** CEQA documents prepared for past projects in the retail/service facility category indicated that for some of the projects, environmental impacts on scenic vistas were concluded to be less-than-significant. However, for some projects

surveyed, the lead agencies concluded that the retail/service facility category projects had the potential to generate significant adverse environmental impacts on scenic vistas, such as those disclosed for the Shops at Santa Anita Park Specific Plan.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) Scenic Resources.** CEQA documents surveyed for the proposed project indicated that past projects in the retail/service facility category disclosed either no impacts or less-than-significant impacts on scenic resources. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 2 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) Visual Character.** CEQA documents surveyed for the proposed project indicated that past projects in the retail/service facility category disclosed either less-than-significant impacts or less-than-significant impacts with the implementation of mitigation measures on the visual character of an area. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 2 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on the visual character or quality of an area.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on visual character from implementing the proposed project are determined to be significant.

- d) Light and Glare.** CEQA documents prepared for past projects in the retail/service facility category indicated that for some of the projects, environmental impacts related to light and glare and shade/shadow were either less-than-significant or less-than-significant with the implementation of mitigation measures. However, for some

projects surveyed, the lead agencies concluded that the retail/service facility category project has the potential to generate significant adverse environmental impacts related to illumination and shade/shadow (Table 5.1-1). More specifically, those projects that include parking lots and structures were found to result in significant impacts to light and glare, while those projects that involve multiple-story structures generally were found to generate significant impacts related to shade/shadow.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts related to light and glare and shade/shadow from implementing the proposed project are determined to be significant.

### **Large Commercial Facilities**

Review of approved and pending permit applications over the five-year period identified 649 large commercial facilities, or 10.4 percent of the total (see Table 5.0-1). However, based on these historical data, only some of these facilities were anticipated to involve new construction since most of the projects would be established and operated within existing buildings and facilities in developed urban areas.

Examples of large commercial facilities that may be constructed in the future include hotels/motels, regional shopping centers, and office and media production facilities. On a programmatic level, most of the new commercial facilities that are constructed in the future would involve medium and high-rise buildings, parking structures, and outdoor lighting. Based on historical data, new large commercial facilities would likely be constructed within existing developed commercial, retail, mixed-use residential, and transit-oriented areas and would, therefore, have a low potential for alteration of undeveloped open space and natural areas or substantial new obstruction of views from scenic highways, or other scenic resources. Therefore, these facilities would generally have a low likelihood of resulting in significant aesthetic impacts. However, the potential exists for one or more future large commercial projects to have significant impacts.

Project-specific impacts are identified in the CEQA documents for large commercial facilities available at the time the survey was conducted (see Table 5.1-1). The nine CEQA documents surveyed, which were prepared for two hotel/motel projects, a regional shopping center, and six mixed-use projects (all involving commercial and residential developments), illustrate the types of impacts that large commercial facilities would have on aesthetics and visual quality, including changes in scenic views or vistas, changes to visual quality and character of the immediate project area, large electronic signage, and increased lighting and nighttime illumination. The CEQA documents for the large commercial projects surveyed involved the construction of medium- and large-scale buildings within existing urban areas, which were found to result in changes to the visual character of the surrounding neighborhood, obstruction of existing views, additional outdoor lighting, commercial signage, and removal of existing landscaping and vegetation. However, project-specific impacts were generally not considered significant impacts since most of the commercial facilities are located in developed urban areas and are largely compatible with the surrounding visual quality and character, scenic

resources, and existing lighting and nighttime illumination levels. More specifically, the following discussions provide an overall summary of the types of impacts identified in the nine CEQA documents surveyed.

- a) **Scenic Vistas.** CEQA documents for past projects in the large commercial facility category indicated that for some of the projects, environmental impacts on scenic vistas were less-than-significant. However, for some projects surveyed, the lead agencies concluded that the large commercial facility category project has the potential to generate significant adverse environmental impacts on scenic vistas, such as those disclosed for the Travelodge Hotel Project in the City of Santa Monica.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) **Scenic Resources.** CEQA documents for past projects in the retail/service facility category disclosed less-than-significant impacts on scenic resources. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 3 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) **Visual Character.** CEQA documents prepared for past projects in the large commercial facility category indicated that for some of the projects, environmental impacts on the visual character of an area were either less-than-significant or less-than-significant with the implementation of mitigation measures. However, for some projects surveyed (e.g., Projects #13 – Travelodge Hotel, #16 – Panorama Palace, #17 Metro Universal, and #19 – Plaza at the Glen), the lead agencies concluded that the large commercial facility category project has the potential to generate significant adverse environmental impacts on the visual character of an area due to the increase in height and massing on the project site and to the signage created by the specific project.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis

was prepared, impacts on visual character from implementing the proposed project are determined to be significant.

- d) Light and Glare.** CEQA documents prepared for past projects in the large commercial facility category indicated that for some of the projects, environmental impacts related to light and glare and shade/shadow that were either less-than-significant or less-than-significant with the implementation of mitigation measures. However, for three of the projects surveyed, the lead agencies concluded that the large commercial facility category project has the potential to generate significant adverse environmental impacts related to illumination and shade/shadow (Table 5.1-1). More specifically, the CEQA document for one project (Project # 16 – Panorama Palace) identified significant adverse impacts related to light due to the degree of increased illumination created by the project, and another CEQA document for a large commercial project (Project # 21 – Metro Universal) identified a significant adverse impact related to light due to the animated/moving signage created by the project. One project (Project # 19 – Plaza at the Glen) identified a significant impact related to shade/shadow.

Based on information in the CEQA documents evaluated for the proposed project, the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts related to light and glare and shade/shadow from implementing the proposed project are determined to be significant.

#### **Entertainment/Recreational Facilities**

Review of approved and pending permit applications over the five-year period identified 24 entertainment/recreational facilities, or less than one percent of the total (see Table 5.0-1). Based on these historical data, a small number of these new entertainment and recreation-oriented facilities is anticipated to be developed in the future.

Examples of projects that may be constructed in the future include sports venues, concert halls, parks, golf courses, equestrian centers, and other outdoor recreational facilities. On a programmatic level, those new facilities that would be constructed in the future may involve the construction of medium and large scale buildings, landscaping, parks, and other public facilities. Based on historical data, entertainment/recreational projects have the potential to alter undeveloped open space and natural areas that may result in the obstruction or alteration of views from scenic highways or other significant impacts on scenic resources. Therefore, the potential exists for one or more future entertainment/recreational projects to generate significant adverse aesthetic resources impacts.

Project-specific impacts are identified in the CEQA documents for entertainment/recreational facilities available at the time the survey was conducted (see Table 5.1-1). The four CEQA documents surveyed, which were prepared for the development of a professional football stadium in the City of Industry, a sports and entertainment district in downtown Los Angeles, a residential project with an equestrian center and a large open space component in the San Fernando Valley, and a waterfront

project in the Community of Wilmington in the South Bay, illustrate the types of impacts that entertainment and recreational facilities would have on aesthetics and visual quality, including changes to visual quality and character of the immediate project area, loss of vegetation, large signage, changes in scenic views or vistas, and increased lighting and nighttime illumination levels. These projects involved a variety of different structures, including medium to high-rise buildings, parking structures, outdoor lighting, and grading and landscaping of open space areas for outdoor recreational facilities, which were determined to result in changes to the visual character within the surrounding neighborhood, obstruction of existing views, additional outdoor lighting, signage, and removal of existing vegetation. Accordingly, these projects were found to have significant aesthetic impacts. More specifically, the following discussion provides an overall summary of the types of impacts identified in the four CEQA documents surveyed.

- a) **Scenic Vistas.** CEQA documents prepared for past projects in the entertainment/recreational facility category indicated that for some of the projects, no environmental impacts on scenic vistas would occur. However, for some projects surveyed, the lead agencies concluded that the entertainment/recreational facility category project has the potential to generate significant adverse environmental impacts on scenic vistas, such as those disclosed for the LA Live and Canyon Hills projects due to the obstruction of views of important architectural landmarks in an area and the substantial alteration of existing views of undeveloped hillsides from scenic highways, respectively.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) **Scenic Resources.** CEQA documents prepared for past projects in the entertainment/recreational facility category indicated that for three of the four projects surveyed, environmental impacts on scenic resources were less-than-significant. However, for one of the projects surveyed, the lead agency concluded that the entertainment/recreational facility category project has the potential to generate significant adverse environmental impacts on scenic resources, such as those disclosed for the Canyon Hills project due to the substantial alteration of major landforms and undisturbed native vegetation.

Based on information in the CEQA documents evaluated for the proposed project, the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) **Visual Character.** Review of environmental documents prepared for past projects in the entertainment/recreational facility category that have or could have obtained

offsets from the SCAQMD's internal accounts indicated that for some of the projects, environmental impacts on the visual character of an area were less-than-significant. However, for two of the four projects surveyed (e.g., Projects # 21 – LA Live and #22 – Canyon Hills), the lead agencies concluded that the entertainment/recreational facility category project has the potential to generate significant adverse environmental impacts on the visual character of an area due to the substantial alteration of undisturbed hillsides and the change in the rural ambience of an area into a developed community. In addition, significant impacts also were also found to result from the introduction of substantial signage to a primarily urban environment.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on visual character from implementing the proposed project are determined to be significant.

- d) Light and Glare.** Environmental documents prepared for past projects in the entertainment/recreational facility category indicated that for some of the projects, either environmental impacts related to light and glare were less-than-significant or no impact would occur. However, for two of the four projects surveyed (e.g., Projects # 21 – LA Live and #22 – Canyon Hills), the lead agencies concluded that the entertainment/recreational facility category project has the potential to generate significant adverse environmental impacts related to illumination. More specifically, significant impacts related to lighting were found to result from a substantial increase in illumination in an area that currently experiences a low level of illumination and has a rural character or a substantial increase in illumination in a heavily developed area due to billboard washes and spot lighting, neon, incandescent lamps, searchlights, electronic billboards, special laser light shows, and light-emitting diode (LED) screens.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts related to light and glare from implementing the proposed project are determined to be significant.

### **Institutional Facilities**

Review of approved and pending permit applications over the five-year period identified 421 institutional facilities, or 6.8 percent of the total (see Table 5.0-1). Based on these historical data, only some of these facilities were anticipated to involve new construction in the future since most would be located within existing buildings in commercial, residential, and institutional land use areas.

Examples of institutional facilities include schools, colleges, universities, hospitals, museums, and churches/temple. On a programmatic level, new institutional facilities that would be constructed in the future would involve low-, medium-, or large-scale buildings, parking structures, and outdoor lighting. Most of these facilities would be

constructed within existing commercial, residential, and institutional zoned areas and would, therefore, would have a low potential for alteration of undeveloped open space and natural areas or substantial new obstruction of views from scenic highways or other scenic resources. Therefore, these future facilities would have a low likelihood of resulting in significant aesthetic impacts. However, the potential exists for one or more future institutional projects to generate significant adverse aesthetic impacts.

Project-specific impacts are identified in the CEQA documents for schools, hospitals, senior care facilities, etc., available at the time the survey was conducted (see Table 5.1-1). The 15 CEQA documents surveyed, which were prepared for a state agency headquarters, a county courthouse facility, four schools, two colleges, an addition to an existing university campus, an addition to an existing hospital, an eldercare facility, a museum, two religious facilities, and a fire station, illustrate the types of impacts that institutional facilities would have on aesthetics and visual quality, including changes to visual quality and character of the immediate project area, loss of vegetation, changes in scenic views or vistas, and increased lighting and nighttime illumination levels. Some of these projects involved the demolition of existing buildings and the construction of low-, medium-, and large-scale buildings, landscaping, parks, playfields and gymnasiums associated with schools, hospital buildings, and other public facilities, which were found to result in changes in the visual character within the surrounding neighborhood, obstruction of existing views, additional outdoor lighting, glare, and removal of existing vegetation. However, these projects were generally found to have less-than-significant aesthetic impacts as most of these projects are located in developed urban areas and are largely compatible with the surrounding resources and existing lighting and nighttime illumination levels. More specifically, the following discussions provide an overall summary of the types of impacts identified in the 15 CEQA documents surveyed.

- a) **Scenic Vistas.** Review of the CEQA documents for past projects in the institutional facility category all disclosed either no impacts or less-than-significant impacts on scenic vistas. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 5 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic vistas.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) **Scenic Resources.** CEQA documents for past projects in the institutional facility category all disclosed either no impacts or less-than-significant impacts on scenic resources. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 5 in Appendix F), it is

possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) **Visual Character.** CEQA documents prepared for past projects in the institutional facility category indicated that for some of the projects, environmental impacts on the visual character of an area were either less-than-significant or less-than-significant with the implementation of mitigation measures. However, for some projects surveyed (e.g., Projects # 28 – Museum of Tolerance and #34 – Sierra Canyon Senior Secondary School), the lead agencies concluded that the institutional facility category project has the potential to generate significant adverse environmental impacts on the visual character of an area due to the degree of contrast between project features and the existing features on the project sites and the surrounding areas and the substantial increase in the overall mass and scale when compared with surrounding residential neighborhood.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on visual character from implementing the proposed project are determined to be significant.

- d) **Light and Glare.** CEQA documents for past projects in the institutional facility category that have or could all disclosed either less-than-significant impacts or less-than-significant impacts with the implementation of mitigation measures related to light and glare. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 5 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts related to light and glare.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts related to light and glare from implementing the proposed project are determined to be significant.

### **Transportation-Related Facilities**

Review of approved and pending permit applications over the five-year period identified 100 transportation facilities, or 1.6 percent of the total (see Table 5.0-1). Due to

continuing improvements in transportation facilities across the district to accommodate expected increases in goods movement, it is possible that a larger number of transportation-related facilities would be constructed in the future due to continuing improvements and expansion of public transportation infrastructure. However, since highways and roads typically do not require stationary source permits, the number of transportation-related facilities that would require such permits in the future does not constitute a large number (based on historical data as shown in Table 5.0-1) in comparison to the overall SCAQMD permitting activities.

Examples of transportation facilities that may be constructed in the future include port terminal expansions, transit/bus maintenance facilities, and transit lines and transit line extensions. On a programmatic level, these types of facilities may involve low- and medium-scale buildings, transportation equipment storage yards, parking structures, rail, shipping, airport facilities, and transportation-related uses (e.g., rail yards, transit centers, shipping depots, docks, cranes, runways, terminals, support facilities), and outdoor lighting. However, any new transportation-oriented facility would most likely be constructed within existing industrial, commercial, mixed-use, and transportation-zoned areas and would, therefore, have a low potential for alteration of undeveloped open space and natural areas or substantial new obstruction of views from scenic highways or other scenic resources. Therefore, transportation facilities would generally have a low likelihood of resulting in significant aesthetic impacts. However, the potential exists for one or more future projects to have significant impacts on aesthetics.

Project-specific impacts are identified in the selected CEQA documents for transportation facilities available at the time the survey was conducted (see Table 5.1-1). The three CEQA documents surveyed, which were prepared for a port terminal expansion, a bus maintenance facility, and a transit line extension, illustrate the types of impacts that transportation projects would have on aesthetics, including changes to visual quality and character of the immediate project area, changes in scenic views or vistas, and increased lighting and nighttime illumination. These projects typically involved the demolition of existing structures and the construction of a variety of new structures, including low- and medium-scale buildings, the use of large-scale cranes, and shipping infrastructure, bus storage and maintenance facilities, and mixed-use residential and commercial facilities, some of which were found to result in changes to the visual character of the surrounding community, obstruction of existing views, additional outdoor lighting, glare, and removal of existing landscaping. However, the CEQA documents for the projects that were surveyed were found to have less-than-significant aesthetic impacts as most of these projects were located in developed mixed-use, industrial, and commercial zoned areas and are largely compatible with the surrounding visual resources and existing lighting and nighttime illumination levels. More specifically, the following discussions provide an overall summary of the types of impacts identified in the three CEQA documents surveyed.

- a) **Scenic Vistas.** CEQA documents for past projects in the transportation facility category all disclosed less-than-significant impacts on scenic vistas. However, the based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's

offset accounts in the past (Figure 6 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic vistas.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) Scenic Resources.** CEQA documents for that past projects in the transportation facility category all disclosed either less-than-significant impacts or less-than-significant impacts with the implementation of mitigation measures on scenic resources. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 6 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) Visual Character.** CEQA documents prepared for past projects in the transportation facility category indicated that for some of the projects, environmental impacts on the visual character of an area were either less-than-significant or less-than-significant with the implementation of mitigation measures. However, for some projects, the lead agencies concluded that the transportation facility category project has the potential to generate significant adverse environmental impacts on the visual character of an area, such as those disclosed for the Metro West Los Angeles Transportation Facility and Sunset Avenue Project due to the degree of contrast between project elements and the existing features that embody the project area’s valued aesthetic image.

Based on information in the CEQA documents evaluated for the proposed project, and the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on visual character from implementing the proposed project are determined to be significant.

- d) Light and Glare.** CEQA documents for past projects in the transportation facility category that have or could have obtained offsets from the SCAQMD’s internal accounts all disclosed either less-than-significant impacts or less-than-significant

impacts with the implementation of mitigation measures related to light and glare. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 6 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts related to light and glare.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts related to light and glare from implementing the proposed project are determined to be significant.

### **Utility Projects**

Review of approved and pending permit applications over the five-year period identified 150 utility facilities, or 2.4 percent of the total (see Table 5.0-1). Based on this historical data, a large number of new utility-oriented facilities is not anticipated to be constructed and operated in the future. On a programmatic level, those new utility-oriented facilities that may be constructed in the future could involve water treatment plants (e.g., tanks, digesters, ponds), above- and underground pipelines, power generating equipment (e.g., boilers, fuel-storage, exhaust structures), and landfill processing, transport, and storage facilities. Some types of future utility projects may require demolition of existing structures and construction of low- to medium-scale buildings.

While a large number of new utility-oriented facilities is not anticipated to be constructed in the future, alteration, upgrades and improvement of existing facilities are likely to occur in order to meet additional future demand for public utility infrastructure. Due to the necessity and the distributed nature of many public infrastructure and utility services, these facilities have the potential to be constructed in a wide range of different areas. Although these facilities would typically be constructed in industrial zoned areas, these facilities may be sited near or directly adjacent to sensitive residential neighborhoods and publicly accessible scenic areas. The potential scale and height of exhaust structures, flares, and other functional components of a typical large scale industrial utility may result in visual impacts to surrounding non-industrial land uses. Accordingly, it is likely that a number of conflicts may occur regarding the surrounding visual quality and character, scenic resources, and existing lighting and nighttime illumination levels. Therefore, future construction and operation of utility facilities would likely generate significant adverse aesthetic impacts.

Project-specific impacts are identified in the CEQA documents for utility projects available at the time the survey was conducted (see Table 5.1-1). The four CEQA documents surveyed, which were prepared for improvements to an existing power generating facilities, a landfill and recycling center, and a recharge basin and pipeline project, illustrate the types of impacts that utility projects would have on aesthetics, including changes to visual quality and character of the immediate project area, changes in scenic views or vistas, and increased lighting and nighttime illumination levels. Based

on the evaluation of these projects, the construction, modification, or renovation of a variety of structures, including underground pipelines, water storage tanks, groundwater recharge equipment, landfills, smoke stacks, flares, and power generating equipment, could generate changes to the visual character of the surrounding neighborhood, obstruction of existing views, and additional outdoor lighting and glare. More specifically, the following discussions provide an overall summary of the types of impacts identified in the four CEQA documents surveyed.

- a) **Scenic Vistas.** CEQA documents prepared for past projects in the utility facility category indicated that for some of the projects, environmental impacts on scenic vistas were less-than-significant with the implementation of mitigation measures. However, for some projects, the lead agencies concluded that the utility facility category project has the potential to generate significant adverse environmental impacts on scenic vistas, such as those disclosed for the landfill and recharge basin/pipeline projects due to the obstruction of scenic views of the mountains and Joshua trees/desert shrubs, respectively.

Based on information in the CEQA documents evaluated for the proposed project, the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) **Scenic Resources.** Three of the four CEQA documents for a past project in the utility facility category disclosed no impacts on scenic resources; the three remaining CEQA documents did not address impacts on scenic resources. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 7 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) **Visual Character.** CEQA documents prepared for past projects in the utility facility category indicated that for some of the projects, environmental impacts on the visual character of an area were less-than-significant with the implementation of mitigation measures. However, for some projects, the lead agencies concluded that the utility facility category project has the potential to generate significant adverse environmental impacts on visual quality, such as those disclosed for the landfill and recharge basin/pipeline projects. More specifically, the CEQA document for the landfill project concluded that the proposed project could obstruct views of the

mountains, and the recharge basin/pipeline project would result in the substantial alteration of the visual character of the project sites through the removal of Joshua tree woodland and other desert vegetation, creating the appearance of development encroaching into previously undisturbed land.

Based on information in the CEQA documents evaluated for the proposed project, the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, impacts on visual character from implementing the proposed project are determined to be significant.

- d) Light and Glare.** CEQA documents for past projects in the utility facility category all disclosed either less-than-significant impacts or less-than-significant impacts with the implementation of mitigation measures related to light and glare. However, based on SCAQMD staff’s review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD’s offset accounts in the past (Figure 7 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts related to light and glare.

Based on the fact that the prior CEQA documents evaluated provide only a “snapshot” of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts related to light and glare from implementing the proposed project are determined to be significant.

#### **Light Industrial/Warehouse Facilities**

Review of approved and pending permit applications over the five-year period identified 1,133 light industrial/warehouse facilities, or 18.2 percent of the total (see Table 5.0-1). However, based on these historical data, only some of these facilities are anticipated to involve new construction in the future.

Examples of light industrial/warehouse facilities that may be constructed include production/post-production studios/facilities, business parks housing light industrial and warehouse distribution uses, and a warehouse/retail facility. On a programmatic level, new light industrial/warehouse facilities that would be constructed in the future would likely involve the construction of one- to three-story warehouse-type buildings that could require outdoor lighting and moderate amounts of construction activities, which may result in significant adverse visual impacts.

Project-specific impacts are identified in the CEQA documents for light industry/warehouse facilities available at the time the survey was conducted (see Table 5.1-1). The four CEQA documents surveyed, which were prepared for two production/post-production studios/facilities, a business park, and a warehouse/retail facility, illustrate the types of impacts that light industrial/warehouse projects would have

on aesthetics, including changes to visual quality and character of the immediate project area, changes in scenic views or vistas, and increased lighting and nighttime illumination levels. Based on the evaluation of these projects, the construction of one- to three-story warehouse-type and office-type structures may result in changes in the visual character within the surrounding neighborhood, obstruction of existing views, additional outdoor lighting, glare, and removal of existing landscaping and vegetation. However, adverse effects were not found to be significant since most of these facilities were located in developed urban industrial areas and largely compatible with the surrounding visual resources and existing lighting and nighttime illumination levels. More specifically, the following discussions provide an overall summary of the types of aesthetic impacts identified in the four CEQA documents surveyed.

- a) **Scenic Vistas.** All three CEQA documents for past projects in the light industrial/warehouse facility category disclosed less-than-significant impacts on scenic vistas. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 8 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic vistas.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic vistas from implementing the proposed project are determined to be significant.

- b) **Scenic Resources.** Review of all three CEQA documents surveyed for the proposed project indicated that past projects in the light industrial/warehouse facility category disclosed less-than-significant impacts on scenic resources. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 8 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on scenic resources.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on scenic resources from implementing the proposed project are determined to be significant.

- c) **Visual Character.** All three CEQA documents for the proposed project indicated that past projects in the light industrial/warehouse facility category disclosed less-than-significant impacts on the visual character of an area. However, based on SCAQMD staff's review of the distribution of similar types of projects for this

facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 8 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts on the visual character or quality of an area.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts on the visual character of a neighborhood from implementing the proposed project are determined to be significant.

- d) Light and Glare.** All three CEQA documents for past projects in the light industrial/warehouse facility category disclosed either less-than-significant impacts or less-than-significant impacts with the implementation of mitigation measures related to light and glare. However, based on SCAQMD staff's review of the distribution of similar types of projects for this facility category that have or could have obtained offsets from the SCAQMD's offset accounts in the past (Figure 8 in Appendix F), it is possible that future individual projects in this facility category could be sited in or near a location that could create significant adverse impacts related to light and glare.

Based on the fact that the prior CEQA documents evaluated provide only a "snapshot" of the documents for the applicable facility categories available at the time the analysis was prepared, with different types of future projects and in different environmental settings, impacts to aesthetics could be significant. Therefore, impacts related to light and glare from implementing the proposed project are determined to be significant.

### **Heavy Industrial Facilities**

Review of approved and pending permit applications over the five-year period identified 1,118 heavy industrial facilities, or 17.9 percent of the total (see Table 5.0-1). However, based on these historical data, only some of these heavy industrial facilities were anticipated to involve new construction in the future since most of them would be located within existing structures in industrial zoned areas. Examples of heavy industrial facilities that may be constructed include refineries and industrial parks. On a programmatic level, those new heavy industrial facilities that would be developed in the future as a result of implementing the proposed project would involve the construction of medium- to large-scale industrial buildings, with machinery, boilers, pumps, fuel storage tanks, refinery equipment, mining and extraction equipment, and raw material storage areas. These facilities typically require outdoor lighting, smoke stacks, flares, and other industrial structures – visual elements, which due to their long-range visibility, have the potential to affect existing views and visual quality of adjacent non-industrial areas. Accordingly, it is likely that these types of project would significantly impact the surrounding visual quality and character of a neighborhood, scenic resources, and existing lighting and nighttime illumination levels. Therefore, these future heavy industrial facilities have the potential of generating significant adverse aesthetic impacts.
