

## **Part D - SCAQMD BACT Determination**

Source Type: **Minor**  
Application No.: **625401(ICE) and 613081 (SCR)**  
Equipment Category: **I.C. Engine**  
Equipment Subcategory: **Stationary, Non-Emergency,  
Electrical Generator with SCR**  
Date: **February 23, 2022**

### **1. EQUIPMENT INFORMATION**

A. MANUFACTURER: Miratech		B. MODEL: SP-EM35-120-18	
C. DESCRIPTION: Selective Catalytic Reduction (SCR) emission control system with urea injection for prime natural gas fired electrical generation lean-burn engine			
D. FUNCTION: SCR system controls exhaust emissions from a prime operation engine used by the City of Palm Springs to generate electricity for one of their municipal facilities. Waste heat from the engine is used to heat water and provide heat to absorption chiller.			
E. SIZE/DIMENSIONS/CAPACITY: 1573 BHP, GE Jenbacher, model JMS416B86, natural gas, lean burn, turbocharged and aftercooled, 16 cylinders, four-cycle driving a 1MW electrical generator.

B. OTHER BACT REQUIREMENTS: Ammonia slip tested at least once per year and once every 3 months for the first year of operation.						
C. BASIS OF THE BACT/LAER DETERMINATION: Achieved in Practice/New Technology						
D. EMISSION INFORMATION COMMENTS: * The limits are in compliance with the Rule 1110.2 electrical energy factor. ** Time Required for VOC sampling.						

**5. CONTROL TECHNOLOGY**

A. MANUFACTURER: Miratech		B. MODEL: SP-EM35-120-18	
C. DESCRIPTION: Selective Catalytic Reduction module with a honeycomb type catalyst bed with a urea/air injector, automatic urea injection control and a 1,000 gallon capacity urea storage tank.			
D. SIZE/DIMENSIONS/CAPACITY: Minimum 3 layers of catalyst, with a minimum total of 105 blocks and with a minimum volume of 26.25 cubic feet.			
E. CONTROL EQUIPMENT PERMIT INFORMATION: APPLICATION NO. 613081 PC ISSUANCE DATE: 8/26/19 PO NO.: G58644 PO ISSUANCE DATE: 8/26/2019			
F. REQUIRED CONTROL EFFICIENCIES: Shall not exceed 10 ppm ammonia slip limit measured by volume on a dry basis at 15% oxygen over a 60 minute average.

Notes:

➤  $\text{NH}_3$  will form  $(\text{NH}_4)_2\text{SO}_4$  in the presence of  $\text{SO}_3$  and  $\text{H}_2\text{SO}_3$ . Therefore, based on chemical reaction 1 ton of  $\text{NH}_3$  can be equivalent to 1/2 ton of directly emitted  $\text{PM}_{2.5}$  as  $(\text{NH}_4)_2\text{SO}_4$ .

➤ For the SCR exhaust stream consider  $PM_{10}$  and  $PM_{2.5}$  as the same.

➤ Maximum allowed cost effectiveness was based on PM<sub>10</sub> Average/Incremental value in Table 5, Part C of the BACT Guidelines

➤ Cost for additional catalyst layer to achieve 10 ppm NH3 slip was provided by catalyst manufacturer with no change on the maintenance costs.

## I.C. Engine – Stationary, Non-Emergency, Electrical with SCR, Natural Gas

### BASIS

NH<sub>3</sub> will form (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> in the presence of SO<sub>3</sub> and H<sub>2</sub>SO<sub>3</sub>. Therefore, based on chemical reaction 1 ton of NH<sub>3</sub> can be equivalent to 1/2 ton of directly emitted PM<sub>2.5</sub> as (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>.

For most combustion sources, consider PM<sub>10</sub> and PM<sub>2.5</sub> as the same.

SCR with urea solution as reductant source installed on 1,573 BHP natural gas engine driving an electrical generator.

	VOC	NO <sub>x</sub>	SO <sub>x</sub>	CO	PM <sub>10</sub>	
Batch	<p>Tier 1: Use of an automatically operated airtight or airless cleaning system that emits no more than <math>[4.3 \times V^{0.6}]</math> lb/month of VOCs, where V is the cleaning chamber volume in cubic feet. Use of alternative equipment is allowed provided such equipment is subject to the same emissions limitation (lb/month of VOCs) as calculated above.</p> <p>Tier 2: Use of equipment that does not exceed <math>[22 \times A]</math> lb/month of VOCs, where A is the solvent surface area in square feet, provided it is technically infeasible to use Tier 1 equipment because of part deformation, inherent part pressure, part type or geometry, soil type or amount, cleanliness sensitivity, or other reasons. (4-10-98)</p>					
Conveyorized	Use of a conveyorized vapor degreaser that does not exceed $[17 \times A]$ lb/month of VOCs, where, A is the solvent surface area in square feet (04-10-98)					

Notes:

1. Use of certain halogenated solvents is also subject to 40 CFR 63, Subpart T – National Emission Standards for Halogenated Solvent Cleaning
2. Use of VOCs not subject to the above-described NESHAP is also subject to Rule 1122.
3. Any permit applicant may demonstrate that the Tier 1 BACT may not be technologically feasible for the applicant's permit unit. For batch-loaded vapor degreasing equipment, South Coast AQMD will consider the following three factors taken together as a whole, as well as any other technical factors presented by the applicant: a) Part Type and Geometry – In that different parts and part geometries lend themselves to different cleaning methods that may be acceptable to achieve proper cleanliness, South Coast AQMD will consider information presented by the applicant regarding the type and geometry of the part(s) proposed to be cleaned in determining what cleaning technologies are available for the part(s) in questions; b) Soil Type and Amount – In that different types and quantities of soils being cleaned from parts lend themselves to different cleaning methods, South Coast AQMD will consider information presented by the applicant regarding the soil type and soil quantity of the part(s) proposed to be cleaned in determining what cleaning technologies are available for the part(s) in question; c) Cleanliness Sensitivity – In that (i) different parts have different levels of sensitivity to cleanliness (e.g., medical and high technology device parts may need to achieve an extremely high level of cleanliness, whereas standard plumbing supplies may tolerate a lower level of cleanliness), and (ii) the integrity of certain parts may be compromised by exposure to the reduced pressure environment of airless cleaning systems; South Coast AQMD will consider information presented by the applicant regarding the cleanliness sensitivity of the part(s) proposed to be cleaned in determining what cleaning technologies are available for the part(s) in question.

Notes:

- 1) BACT for "I.C. Engine, Portable" is determined by deemed complete date of permit application not date of manufacture or installation.
- 2) NMHC + NO<sub>x</sub> means the sum of non-methane hydrocarbons and oxides of nitrogen emissions, unless specified as "NMHC only", which only includes NMHC emissions.
- 3) The engine must be certified by U.S. EPA or CARB to meet the Tier 4 emission requirements of 40 CFR Part 89 – Control of Emissions from New and In-use Nonroad Compression-Ignition Engines shown in the table– or otherwise demonstrate that it meets the Tier 4 emission limits. If, because of the averaging, banking, and trading program, there is no new engine from any manufacturer that meets the above standards, then the engine must meet the family emission limits established by the manufacturer and approved by U.S. EPA. Based on the model year, the CARB Airborne Toxic Control Measure (ATCM) for Portable Diesel Engines (see [www.arb.ca.gov/diesel/peatcm/peatcm.htm](http://www.arb.ca.gov/diesel/peatcm/peatcm.htm)) requires in-use portable

diesel engines to be certified to Tier 1, 2, 3 or 4 by their respective deadlines, all of which have passed. All exceptions allowed in the ATCM are also allowed in this guideline.

- 4) The CARB ATCM also requires in-use portable diesel engines to meet fleet-average PM standards beginning 1/1/2013. The PM limits in the table apply only to filterable PM.
- 5) CARB has extended the Tier 4 Final requirements deadline “until further notice” for Portable, Compression-Ignition Engines for HP  $\geq$  750.

		NMHC or VOC	NO <sub>x</sub>	NO <sub>x</sub> + NMHC <sup>2</sup>	SO <sub>x</sub>	CO	PM
	≥ 130 HP	VOC: 1.0 grams/bhp-hr <sup>6</sup> (12-02-2016)	1.5 grams/bhp-hr (10-20-2000)		See Clean Fuels Policy in Part C of the BACT Guidelines (10-20-2000)	2.0 grams/bhp-hr (10-20-2000)	See Clean Fuels Policy in Part C of the BACT Guidelines (10-20-2000)

- 1) An emergency engine is an engine which operates as a temporary replacement for primary mechanical or electrical power sources during periods of fuel or energy shortage or while a primary power source is under repair. This includes fire pumps, emergency electrical generation and other emergency uses.
- 2) NMHC + NO<sub>x</sub> means the sum of non-methane hydrocarbons and oxides of nitrogen emissions.
- 3) South Coast AQMD restricts operation of emergency compression-ignition engines to 50 hours per year, or less if required by Rule 1470, for maintenance and testing and a maximum of 200 hours per year total operation. For engines used to drive standby generators, operation beyond 50 hours per year for maintenance and testing is allowed only in the event of a loss of grid power or up to 30 minutes prior to a rotating outage provided that the electrical grid operator or electric utility has ordered rotating outages in the control area where the engine is located or has indicated that it expects to issue such an order at a certain time, and the engine is located in a control area that is subject to the rotating outage.
- 4) The engine must be certified by U.S. EPA or CARB to meet the Tier 1, 2 or 3 emission requirements of 40 CFR Part 89 – Control of Emissions from New and In-use Nonroad Compression-Ignition Engines shown in the table– or otherwise demonstrate that it meets the Tier 1, 2 or 3 emission limits. If, because of the averaging, banking, and trading program, there is no new engine from any manufacturer that meets the above standards, then the engine must meet the family emission limits established by the manufacturer and approved by U.S. EPA. The PM limits apply only to filterable PM.
- 5) South Coast AQMD restricts operation of emergency spark-ignition engines to 50 hours per year for maintenance and testing and a maximum of 200 hours per year total operation. Emergency spark-ignition engines may be used in a Demand Response Program, however the engine will require additional evaluation and may be subject to more stringent regulatory requirements. Since some requirements are based upon the California Airborne Toxic Control Measure for Stationary Compression Ignition Engines, applicants are referred to Title 17, Section 93115.3 of the California Code of Regulations for possible exemptions.
- 6) VOC limit is based on the requirement listed in Table 1 of 40 CFR 60 Subpart JJJJ – Standards of Performance for Stationary Spark Ignition Internal Combustion Engines.
- 7) BACT PM emission standard requirement for new Stationary Emergency Standby Diesel-Fueled CI Engines located at a sensitive receptor or 50 meters or less from a sensitive receptor. (xx-xx-2022)
