The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comment is meant as guidance for the Lead Agency and should be incorporated into the Final MND.

Project Description
The Lead Agency proposes to construct a gas station with 20 pumps and a 5,881-square-foot convenience store and carwash (Proposed Project). The Proposed Project is surrounded by commercial uses.

Compliance with SCAQMD Rules
Since the Proposed Project is a gasoline service and dispensing facility, a permit from SCAQMD would be required, and SCAQMD should be identified as a responsible agency for this Project in the Final MND. The Final MND should also demonstrate compliance with SCAQMD Rules, including, but are not limited to, Rule 201 – Permit to Construct, Rule 203 – Permit to Operate, and Rule 461 – Gasoline Transfer and Dispensing. If there are permitting questions concerning the gasoline service station, they can be directed to SCAQMD Engineering and Permitting staff at (909) 396-2551.

Air Quality Analysis
In the Air Quality analysis, the Lead Agency found that the Proposed Project’s regional construction and operational air quality impacts would be less than significant. However, the Air Quality analysis did not include operational ROG emissions generated from storage tanks or from the fueling process, which may have likely led to an under-estimation of the Proposed Project’s operational air quality impacts. It is important to note that while CalEEMod quantifies mobile source emissions (e.g., trip visits by patrons) associated with operating a gasoline service station, CalEEMod does not quantify the operational stationary source emissions from the storage tanks and fueling equipment. Therefore, it is recommended that the Lead Agency quantify operational emissions from the fueling process in the Final MND.

Health Risk Assessment
The Proposed Project would be sited in close proximity to existing commercial uses. Benzene, which is a toxic air contaminant, may be emitted from the Proposed Project’s gasoline refueling operations. SCAQMD staff is concerned about the potential health impacts on the residents from being exposed to benzene. As such, it is recommended that the Lead Agency evaluate, quantify, and perform a health risk assessment for the Proposed Project in the Final MND. Guidance for performing a gasoline dispensing station health risk assessment can be found in the SCAQMD’s Emission Inventory and Risk Assessment Guidelines for Gasoline Dispensing Stations.

---

1 CalEEMod incorporates up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and is available free of charge at: www.caleemod.com.
Guidance Regarding Gasoline Dispensing Facilities Sited Near Sensitive Receptors

SCAQMD staff recognizes that there are many factors Lead Agencies must consider when making local planning and land use decisions. To facilitate stronger collaboration between Lead Agencies and SCAQMD to reduce community exposure to source-specific and cumulative air pollution impacts, SCAQMD adopted the Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning\(^3\) in 2005. SCAQMD staff recommends that the Lead Agency review and consider this Guidance document when making local planning and land use decisions.

Pursuant to the CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. SCAQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Jack Cheng, Air Quality Specialist, CEQA IGR Section, at (909) 396-2448, if you have any questions.

Sincerely,

*Lijin Sun*
