Nonattainment New Source Review and Clean Fuels for Boilers Compliance Demonstration for 2015 Ozone Standard

**** Availability of Document for Review ****

For the 2015 8-hour ozone standard (70 ppb), the South Coast Air Basin is classified as an Extreme nonattainment area and the Coachella Valley is classified as a Severe nonattainment area. The Clean Air Act requires nonattainment areas to submit a nonattainment new source review (NSR) plan or plan revision. In addition, for Extreme nonattainment areas, the use of clean fuels or advanced control technologies are also required for electric utility and industrial and commercial boilers emitting more than 25 tons of NO_x per year. The South Coast Air Quality Management District (South Coast AQMD) has prepared a draft certification to demonstrate that South Coast AQMD's existing SIP-approved rules and regulations meet the requirements for nonattainment NSR and clean fuels for boilers. The draft certification is available on the South Coast AQMD's webpage (<http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan>). The certification of nonattainment NSR and clean fuels for boilers compliance demonstration is scheduled for consideration by the South Coast AQMD Governing Board on June 4, 2021. Comments on the draft certification should be submitted no later than April 26, 2021.
