After March 19, 2020, in response to COVID-19, the sampling schedule changed to a limited number of sites with a shift in sampling dates.

Site #16 results did not meet the criteria for a reportable number; however, a winds analysis and the result at Site #16, which is partially upwind of Sites #14 and #15 for this date, is likely higher than those.

Notes
Sampling locations may be added or removed dependent upon data review and monitoring priorities.

Site #04 is inmonitor at this location to collect sample unit — hence no monitoring scheduled to be collected on this date.
Invalid means sample collected was invalid due to a variety of reasons such as loss of power, equipment malfunction, etc.
No means monitors were not operating due to a variety of reasons such as limited access, weather, samples under repair, etc.
Site #55 was discontinued in 2020.
Site #55 and #56 are located in northern Long Beach.
Additional monitoring data available for Sites #04 and #55 at http://www.epa.gov/home/regulations/compliance/air-monitoring-activities.
* Sample does not count towards a three day sample average per condition in the Situated Order of Abatement. See below for additional information.
** Samples tested by the City of Paramount were deployed with SCAQMD monitors. SCAQMD samples and those served by the City of Paramount are rotated between sample locations for each sampling day.
Site #04 was owned by the City of Paramount.
Collected sample must be from primary sampler, invalid.
** Site located in the City of Long Beach.
** Day 10 is favorable.

Non-routine source testing being conducted on this sample day and SCAQMD's tent recommended measures to Aesop on ways to minimize potential fugitive emissions.
