03/04/16 (10:00am to 11:40am)

- Methane concentrations ~150-200 ft E of SS-25 are still elevated (up to 48 ppm)
- Methane levels immediately W and NW of well SS-25 have been decreasing but are still higher than background
- SCAQMD inspectors used a portable TVA-1000 monitor to confirm these findings and complement the LICOR data
- Videos were taken with FLIR cameras to identify the presence of natural gas
