South Coast AQMD Issues Windblown Dust Advisory

Valid Monday December 27, 2021 through Tuesday December 28, 2021

This advisory is in effect through early Tuesday morning. South Coast AQMD will issue an update if additional information becomes available.

A PM10 Dust Advisory is in effect from noon on Monday through early Tuesday morning in the Coachella Valley due to forecasted high winds with gusts of 60 mph. As of Monday morning, the National Weather Service (NWS) has posted a High Wind Warning covering the Coachella Valley. Despite widespread rainfall further west, rainfall in the eastern Coachella Valley is expected to be limited. High winds without wetting rainfall can lift dust and soil and lead to poor air quality. For information regarding the NWS warnings, please visit the NWS San Diego (<https://www.weather.gov/sgx/>) website.

High winds may lead to air quality conditions that are Unhealthy for Sensitive Groups or worse at times in the Coachella Valley due to elevated particulate matter (PM10) levels. Air quality can vary hour by hour and by location depending on wind conditions and actual rainfall, if any.

In areas directly impacted by high levels of windblown dust, limit your exposure by remaining indoors with windows and doors closed and avoiding vigorous physical activity. Run your air conditioner or an air purifier. If temperatures allow, avoid using whole house fans or swamp coolers that bring in outside air.

Exposure to high particle pollution levels can cause serious health problems, including asthma attacks, heart and lung disease symptoms, and increased risk of respiratory infections. People with heart or lung diseases should follow their doctor's advice for dealing with episodes of unhealthy air quality. Children, older adults, and people with respiratory or heart disease should avoid prolonged exposure and strenuous activities when particle pollution levels are high.

Areas of direct impacts and poor air quality may include portions of:

- **Riverside County:** Coachella Valley (Area 30)

In areas directly impacted by windblown dust: Limit your exposure by remaining indoors with windows and doors closed and avoiding vigorous physical activity.
