Notes:

Only compounds with unit risk factors are listed in the table.

Screening values are calculated using risk factors from the 1995 Risk Assessment Procedures document.

*For metal compounds, use the corresponding risk values from Table 8 and apply the metal fractions in the substances.
Example: For Nickel Acetate, use the corresponding risk value for nickel from Table 8 and apply nickel fraction in the substance.

$$\text{Nickel} = (59 \text{ lb of Ni}/249 \text{ lb of Ni(OOCCH}_3)_2\cdot 4\text{HOH}) \times 100 = 23.7\%$$
