The following business in your neighborhood has been emitting toxic air pollutants that could potentially cause a risk to public health. Southern California Edison’s Pebble Beach Generating Station (PBGS) has been required to conduct a Health Risk Assessment (HRA) to evaluate how emissions are released and dispersed from PBGS and the potential impact those releases may have to public health.

As the air pollution control agency for this area, South Coast Air Quality Management District (South Coast AQMD) will hold a public meeting to answer questions about the results of PBGS’s 2015 Approved HRA. Officials from PBGS will also attend the meeting to answer questions about their operations and future plans to reduce emissions impacting your neighborhood. South Coast AQMD will hold the public meeting via video conferencing and by telephone. The audience will be able to participate during the public comment period.

**INSTRUCTIONS FOR ELECTRONIC PARTICIPATION**

**Instructions for Participating in a Virtual Meeting as an Attendee**
- As an attendee, you will have the opportunity to virtually raise your hand and provide public comment.
- Before joining the call, please silence your other communication devices such as your cell phone or desk phone. This will prevent any feedback or interruptions during the meeting.
- Please Note: During the meeting, all participants will be placed on mute by the host. You will not be able to mute or unmute your lines manually.
- Speakers will be limited to a total of three (3) minutes for their opportunity to provide comments. This time may be reduced if there are a large number of commenters to ensure that all comments can be heard. A countdown timer will be displayed on the screen for each public comment.
- Once you raise your hand to provide public comment, your name will be added to the speaker list. Your name will be called when it is your turn to comment. The host will then unmute your line.

**Directions for Video Zoom on a Desktop/Laptop/Smartphone**
- If you would like to make a public comment, please click on the “Participants” button on the bottom of the screen.
- A list of participants will appear on the right side of the screen for computers and on a new screen for smartphones. At the bottom of the list, please click on the grey “Raise Hand” button.
- This will signal to the host that you would like to provide a public comment and you will be added to the list.

**Directions for Telephone Line Only**
- If you would like to make a public comment, please dial *9 on your keypad to signal that you would like to comment.
Summary of Health Risk Assessment

The approved HRA, which used 2015 data, showed that pollutants (primarily diesel particulate matter) from PBGS may cause an increased health risk for people who live and work in the area as seen in the attached Facility Risk Map (Figure 1).

The attached information sheet provides additional background on the business, air pollutants and health risks. The following table shows the estimated, potential health risks from the 2015 Approved HRA.

<table>

For more information about South Coast AQMD programs to control toxic air pollution or the public meeting, please contact Victoria Moaveni of South Coast AQMD at (909) 396-2455 or vmoaveni@aqmd.gov. For more information about the facility, please contact Ronald Hite at (310) 510-4315 or Ronald.Hite@sce.com.

Disability and language-related accommodations can be requested to allow participation in the PBGS Rule 1402 public notification meeting. The agenda will be made available, upon request, in appropriate alternative formats to assist persons with a disability (Gov’t Code Section 54954.2(a)). In addition, other documents may be requested in alternative formats and languages. Any disability or language-related accommodation must be requested as soon as practicable. Requests will be accommodated unless providing the accommodation would result in a fundamental alteration or undue burden to the District. Please contact the AB 2588 Hotline at (909) 396-3610 from 7:00 a.m. to 5:30 p.m., Tuesday through Friday, or send the request to AB2588@aqmd.gov.

PBGS
Public Notification Area Map
Cancer Risk 10 in-a-million (Yellow Contour)
PBGS (Red Outline)

Public Notification Required if:
- Maximum probability of cancer for those living closest to the facility is greater than 10 in-one-million
- Maximum probability of cancer for those working closest to the facility is greater than 10 in-one-million
- Long-term non-cancer health effects are greater than state health-based guidelines
- Short-term non-cancer health effects are greater than state health-based guidelines
What are toxic air pollutants?
Chemicals that can cause cancer and other adverse health effects such as harm to the human respiratory system are known as toxic substances. When these toxic substances are released in the air, they are called toxic air pollutants. Toxic air pollutants come from a variety of sources including chemical plants, large manufacturers, businesses and cars and trucks. Many products used at home, such as cleaners and paint thinners also contain toxic air pollutants.

What toxic air pollutants does this facility emit?
Exposure to elevated concentrations of diesel particulate matter can have potential cancer and non-cancer health risks. Long and short term health-based levels have been established by the California Office of Environmental Health Hazard Assessment (OEHHA).

What is the cancer risk from toxic air contaminants in general?
The Multiple Air Toxics Exposure Study IV (MATES IV) presents estimates of cancer risk throughout South Coast AQMD’s four county jurisdiction. The estimated risk for cancer from all toxic air contaminants emitted from all sources (cars, trucks, factories, power plants, etc.) is about 900 in-one-million.

How was the health risk from this facility determined?
The 2015 Approved HRA used estimated amounts of pollutants released from operations at PBGS. That information is inputted into a computer-based model that evaluates air quality dispersion and predicts air pollution concentrations throughout the community. The results are then measured against exposure levels determined by OEHHA to predict potential impacts to people’s health.

OEHHHA updated their health effects guidance in March 2015 to specifically include new information that provides more insight on how toxic air pollutants can have a greater impact on children than they do on adults. This newer methodology led to stricter health standards, which in turn resulted in health risk estimates that are approximately 3.7 times more conservative than those using previous methods. This method of determining risk may differ from other regulatory programs, such as public notification being carried out under Proposition 65.

What did the Health Risk Assessment find?
An HRA is currently the best method for estimating the amount of exposure to a chemical over a long period of time and the potential health impacts.

The 2015 Approved HRA for PBGS was calculated using a 30-year conservative exposure measurement that assumed a person would be continually exposed to emissions from a facility for 30 years.

The 2015 Approved HRA, based on known information at the time, found that people who live in the area shown on the Facility Risk Map (Figure 1), if continuously exposed for 30 years, would have a maximum chance of 11.8 chances in-a-million of developing cancer mainly due to diesel particulate matter emissions from this facility. Those who work in the area would have a maximum chance of 5.7 in-a-million. The risk is primarily due to diesel particulate matter emissions from six diesel-fired internal combustion engines for electric power generation.

What is the cancer risk from toxic air contaminants in general?
The Multiple Air Toxics Exposure Study IV (MATES IV) presents estimates of cancer risk throughout South Coast AQMD’s four county jurisdiction. The estimated risk for cancer from all toxic air contaminants emitted from all sources (cars, trucks, factories, power plants, etc.) is about 900 in-one-million.

How can I get more information?
Page ES-3 of MATES IV Executive Summary, available at:
http://www.aqmd.gov/docs/default-source/air-quality/air-toxic-studies/mates-iv/mates-iv-final-draft-report-4-1-15 A copy of South Coast AQMD’s approved health risk assessment for PBGS is available online at:
