Subject: Rule 1410: Do not accept refinery proffer letters

Dear ACMD Board:

I'm sorry I am not able to attend the SCAQMD Board meeting on Friday but I urge Board members to reject the proffer letters from the Valero and Torrance refineries and instead to continue with Rule 1410 to either require adequate mitigation measures or a full ban of MHF. The letter from the LA County Public Health Agency (September 3, 2019) is on point and I hope Board members respond to the concerns for community safety. The recent refinery fire in Philadelphia and the recent report of an active Inglewood fault are two additional reasons why the mitigation measures proposed by the refineries in their proffer letters and in the preferred MOU's are not adequate to protect our community.

Thank you for your consideration!
