Requirements for Continuous Emission Monitoring

Proposed Amended Rules (PAR) 218 and 218.1

Working Group Meeting #5

September 12, 2019
1:30 pm

Telephone number: 1-866-705-2554
Passcode: 556560

South Coast AQMD Headquarters
Diamond Bar, California
Agenda

- Background and Approach
- Progress of Key Topic Discussion
- Revisit Key Topics and Address Comments
- New Key Topics for Today’s Discussion
- Key Topics for Future WG Meeting Discussion
- Next Step
Background and Approach
Background and Approach

RECLAIM is transitioning to a command-and-control structure

Current monitoring, reporting, and recordkeeping (MRR) requirements on CEMS are defined by:

- Rule 218 and 218.1 for non-RECLAIM facilities
- Rule 2012 Chapter 2 for RECLAIM facilities

PAR 218 and 218.1 requirements would apply to

- CEMS of any non-RECLAIM facility, former RECLAIM facility, or facility that is required by a landing rule to comply with Rule 218/218.1
- Harmonize requirements for key topics
Progress of Key Topic Discussion
Overall Approach to Address Key Topics*

- Discuss key topics at each WG meeting
- Provide initial recommendation for key topic discussed at WG meeting
- Add new key topics
- If needed, revisit previously discussed topics
- Incorporate recommendation in Proposed Amended Rules 218/218.1

*Key topics related to proposed rule language
## Progress of Key Topics Discussion

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. PAR 218/218.1 Applicability</strong></td>
<td>Applicable to all pollutants, but the focus of this amendment will be on NOx MRR requirements</td>
<td>No changes to applicability</td>
</tr>
<tr>
<td>➢ Any change?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| **2. Semi-Continuous Emission Monitoring System (SCEMS)**                  | • R218/218.1 includes time-shared CEMS in SCEMS definition  
• Rule 2012 has specification on time-shared CEMS  
• No impact to NOx sources to retain R218/218.1 SCEMS requirements                                                                 | • No changes to definition of SCEMS  
• Retain SCEMS requirements in PAR 218/218.1                                                      |
<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
</table>
| 3. NO2 to NO Conversion efficiency test  
  ➢ Required? | Specified in Rules 218/218.1 but not in Rule 2012 | Require NO2 to NO conversion efficiency test |
| 4. Reporting excess emissions  
  ➢ Also applicable to non-Title V source CEMS? | Would impact RECLAIM CEMS of non-Title V sources that report all mass emissions but not excess emissions | Require reporting excess emissions for both Title V and non-Title V sources with CEMS |
| 5. The standards for “existing” CEMS  
  ➢ Still applicable? | Obsolete requirements in Rules 218/218.1 | Remove the requirement |
### Progress of Key Topic Discussion – cont.

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>6. Full Span Range (FSR)</td>
<td>With concentration limit being established for facilities exiting RECLAIM, their Full Span Range should be aligned with the Rules 218/218.1 requirements</td>
<td>• Use the Rules 218/218.1 requirements</td>
</tr>
<tr>
<td>➢ Any change to existing requirements?</td>
<td></td>
<td>• Provide additional recommendation for data that falls below 10% of the range</td>
</tr>
<tr>
<td>➢ What if most of data falls below 10% of the range?</td>
<td></td>
<td>• <strong>Further discussion at today’s meeting</strong></td>
</tr>
<tr>
<td>➢ Is low value calibration gas available?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>7. Missing Data Procedure</td>
<td>Required for RECLAIM sources, but no longer needed for concentration based monitoring</td>
<td>Remove the requirement</td>
</tr>
<tr>
<td>➢ Applicable?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## Progress of Key Topic Discussion – cont.

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>8. Strip chart recorder ➢ Continue to require?</td>
<td>The existing CEMS Data Acquisition and Handling System (DAHS or DAS) would be sufficient</td>
<td>Remove the requirement</td>
</tr>
</tbody>
</table>
| 9. Quality assurance (QA) test report submittal ➢ Extend the requirement to all CEMS? | • Not required by Rules 218/218.1  
• Required by Rule 2012  
• RECLAIM facilities submit QA test report summary by Electronic Data Reporting (EDR) | Require all PAR 218/218.1 facilities submit QA test report for all applicable pollutants via EDR |
## Progress of Key Topic Discussion – cont.

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>10. PAR 218/218.1 alignment with EPA’s Part 75</strong>&lt;br&gt;How to align?</td>
<td>• An analyzer at or below 30 ppm span level is common in this area;&lt;br&gt;• PAR 218/218.1 are also applicable for pollutants not regulated by Part 75;&lt;br&gt;• Part 75 linearity check data could be used to calculate CGA;&lt;br&gt;• PAR 218/218.1 CEMS monitored units may often have off-line time</td>
<td>• Continue to require CGA instead of linearity check;&lt;br&gt;• May allow linearity check as an alternative in complying with CGA requirement;&lt;br&gt;• Continue to allow certain tests to be conducted off-line</td>
</tr>
</tbody>
</table>
### Progress of Key Topic Discussion – cont.

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>11. CEMS data availability threshold</td>
<td>Current R218/218.1 • Defines data availability on an annual basis</td>
<td>• Clarify the definition and calculation method for data availability;</td>
</tr>
<tr>
<td></td>
<td>• Requires 95% as the threshold for data availability</td>
<td>• Exclude the startup and shutdown hours allowed by permit condition from data availability calculation</td>
</tr>
<tr>
<td></td>
<td>• Excludes 40 hours of CEMS calibration, maintenance, repair, or audit each month from data availability calculation</td>
<td>• Exclude CEMS maintenance, repair or audit for up to 120 hours/year (10 hours/month)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• When data availability falls below 95%, certain requirements could be triggered</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Further discussion at today’s meeting</strong></td>
</tr>
</tbody>
</table>

**Comment:** Rolling annual data availability could penalize facility beyond the data loss period

**Comment:** Daily calibration for a CEMS with multiple pollutants may not allow the generation of a valid hour
## Progress of Key Topic Discussion

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
</table>
| **12. CEMS measuring low emissions**     | Stakeholders expressed difficulty meeting a 7-day calibration drift standard for CEMS measuring low emissions | • Considering an alternative standard  
• Analysis on in-house data for NOx ranging from 2 ppm to 50 ppm indicating no difficulty for CEMS measuring low emission  
• **Further discussion at today’s meeting** |
| What are the challenges on passing QAQC test? |                                                                            |                                                                                        |
| **13. Certification testing**             | Certification testing requirements were summarized at the WG meeting       | • Remove the requirements specific for RECLAIM (e.g., bias test for bias adjustment factor)  
• Update the Rule 218/218.1 guidance document for certification test accordingly |
| Any change?                               |                                                                            |                                                                                        |

Comment 1: Difficult to meet this alternative standard;  
Comment 2: Should have data to support the recommendation for alternative standard
**Progress of Key Topic Discussion – cont.**

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
</table>
| 14. Recertification and diagnostic tests | Any modification that may affect the description on the CEMS certification letter would require the CEMS application (Form ST-220) and the applicable tests according to Technical Guidance Document R-002 | • The recertification requirements should not change  
• PAR 218/218.1 will provide clarification for recertification requirements  
• Staff will assess if the guidance document should be updated |
### Progress of Key Topic Discussion – cont.

<table>
<thead>
<tr>
<th>Key Topics</th>
<th>Discussion</th>
<th>Initial Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>15. Performance Standards for Relative Accuracy Test Audit (RATA)</td>
<td>Relative accuracy and <em>de minimis</em>/Alternative Standards required by different regulations were compared</td>
<td>• No change to the relative accuracy standards in PAR 218/218.1 (10% for O2/CO2, 20% for NOx concentration and mass emission, and 15% for flow);</td>
</tr>
<tr>
<td>➢ What will be the changes to the relative accuracy standards and <em>de minimis</em> standards for RATA?</td>
<td></td>
<td>• Specify calculation method on meeting <em>de minimis</em> standards;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Retain R218/218.1 <em>de minimis</em> standards, but add <em>de minimis</em> 1.0% for CO2 and reduce the current NOx <em>de minimis</em> standard from 1.0 ppm to a lower level</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• When the measured O2/CO2 is at or below 15%, allow 20% RA for O2/CO2 with Executive Officer’s approval</td>
</tr>
</tbody>
</table>
### Key Topics

| 16. The option of complying with Part 60 Appendices B & F (alternative to Rule 218.1 standards) | Analyzed the differences between Part 60 and R218.1 on:  
- Certification tests  
- 7-day drift standard  
- Out-of-control period  
- Data point >95% of span  
- RATA standard  
- Operation load for RATA  
- Numbers of runs for RATA  
- Calibration gas requirement |  
- Phase out Part 60 option for those requirements  
- EO has discretion to approve otherwise (e.g., Operation load for RATA below normal load)  
- Requirements will be effective at next CEMS recertification  
- Additional recommendation regarding valid hour and hourly averaging will be discussed at today’s meeting (Key topic #18) |

- Shall the permit holders refer to R218.1 only or have the option to refer to Part 60 for CEMS certification and QAQC requirements?

---

**Comment:** Need Part 60 option to ensure biogas can pass calibration

Revisit Key Topics and Address Comments
Full Span Range Requirements

- Initially proposed to retain existing span range requirements
- Proposed additional recommendation at WG #4
- Stakeholder made a comment at WG #4 concerning availability of low value calibration gas
For the concern on availability of low value calibration gas

**Solution 1:**
Allow span range to be set at a higher value upon approval for CEMS monitoring a unit with emission limit at or below 5 ppm (e.g., Turbines with 2 or 2.5 ppm limit)

**Solution 2:**
Alternative certification protocol (upon approval) for calibration gas (Key Topic #19)
## Full Span Range Requirements – Additional Recommendations

### Existing Span Range Requirements

**All data points**
- Within 10 – 95% of the range
- Set at 150 – 200% of the concentration limit

### Additional Recommendations at WG #4

**Allow data below 10% of the range reported at the 10% of the range as valid data, or use the low value spike method, when span is set at:**
- 150 – 200% of the concentration limit

### Additional Recommendations

Span range may be set otherwise upon approval
- For CEMS monitoring a unit with emission limit at or below 5 ppm (e.g., Turbines with 2 or 2.5 ppm limit)
- For CEMS monitoring emissions that are much lower than the applicable limit (e.g., CO analyzer)
CEMS Data Availability Requirements – Period for Computation

**Question**

Is R218/218.1 data availability calculated on a quarterly or annual basis?

**Comment**

Rolling annual data availability could penalize facility beyond the data loss period.
CEMS Data Availability Requirements – Period for Computation

Existing requirement on period for computation by various regulations

<table>
<thead>
<tr>
<th>Monthly</th>
<th>Quarterly</th>
<th>Annually</th>
</tr>
</thead>
</table>
Propose to compute data availability on a calendar quarter basis

While data availability on an annual basis is essential in Part 75 and RECLAIM R2012 in applying a reasonable Missing Data Procedure (MDP), it is not as essential in PAR 218/218.1 which does not require MDP.

This proposal aligns with the requirements proposed for situations when data availability falls below 95% (See WG meeting #4 presentation for different requirements depending if it is one or two consecutive quarters below 95%)

Low data availability of previous calendar quarter would not affect data availability of any subsequent calendar quarter (Addresses previous comment)

Calculate data availability using the following equation:

\[ W = \frac{Y}{Z} \times 100\% \]

Where:

- \( W \) = the percent calendar quarter monitor availability
- \( Y \) = the total emitting source operating hours for which the monitor provided quality-assured data during the calendar quarter
- \( Z \) = the total emitting source operating hours during the calendar quarter
CEMS Measuring Low Emissions – Alternative Standard for 7-day Drift Test

Stakeholders Comment at WG #2 (5/2/2019)

- Difficulty meeting a 7-day calibration drift standard for CEMS measuring low NOx emissions at initial certification

Staff Analysis & Consideration

- Reviewed in-house data for NOx ranging from 2 ppm to 50 ppm but found no difficulty for CEMS measuring low emission
- Stakeholders did not provide supporting data but recommended that the NOx cut off level for determining the alternative standard should be 10 ppm
- Staff proposed NOx 0.3 ppm as an alternative standard at WG #4

Stakeholders Comment at WG #4 (8/1/2019)

- *Comment 1*: Difficult to meet the alternative standard (0.3 ppm) that was proposed
- *Comment 2*: Should have data to support the recommendation
Current 7-day calibration drift standard (2.5% of Reference Method) is universally referenced by EPA and local agencies.

Staff will withdraw the alternative standard proposed at WG #4 and maintain the existing standard.

Would consider an alternative proposal based on additional valid data received from stakeholders.
New Key Topics for WG #5 Discussion
New Key Topics for Today’s WG Meeting

17. Relief on CEMS operation and data availability
18. Valid hour and hourly average
19. Calibration gas
20. Alternative CEMS
Relief on CEMS operation and data availability

Requests by stakeholders at WG #4 for relief on CEMS operation and data availability for the following situations:

- Emitting Source Breakdown
- Emitting Source Non-Operation
- CEMS Repair

- Unit Breakdown - Unit in Operation
- CEMS repair – Unit in Operation

- Provide relief on CEMS data availability
- Allow CEMS non-operation
- Provide relief on CEMS data availability
Relief on CEMS Operation and Data Availability: CEMS Non-Operation

Existing requirements by R218/218.1 and R2012:

- CEMS shall operate at all times, except during a scheduled or unscheduled CEMS maintenance/repair:
  - CEMS non-operation is allowed for up to 96 hours; and
  - Can be extended for additional hours, specified differently by R2012 and R218/218.1

  - **R2012**: an additional 96 hours allowed if the emitting source is not operating and monitor for the stack flow or concentration indicates non-operation status
  - **R218/218.1**: additional hours with an interim variance
Relief on CEMS Operation and Data Availability -
CEMS Non-Operation –
Initial Recommendation

During a scheduled or unscheduled CEMS maintenance/repair

- Allow CEMS non-operation for up to 96 hours
- May extend it for additional 96 hours if the emitting source is not operating, demonstrated by
  - Disconnected fuel line or zero fuel flow with a dedicated fuel meter
    (Stack flow monitoring is not referenced for this purposes as it is not required for non-RECLAIM sources)
- Will require variance for further additional hours
Relief on CEMS Operation and Data Availability - CEMS Non-Operation – Initial Recommendation – cont.

Additional proposal:

- Allow CEMS non-operation when the emitting source is shut down for $\geq 7$ consecutive days (168 consecutive hours), provided all the following requirements are met:

  - Applicable for combustion emitting sources only (not for any source with process emissions)
  - Require notification, written report, and recordkeeping
  - Disconnect the fuel line or demonstrate zero fuel flow with a dedicated fully operational quality assured fuel meter
  - Continue to operate the CEMS by showing zero emission for $x$ hours after emitting source stops operation, and restarts the CEMS $x$ hours before emitting source resumes operation
  - Calibrate the CEMS before any emission is detected upon emitting source restart
Relief on CEMS Operation and Data Availability - Hours to Exclude from Data Availability

Existing requirements for the number of hours that can be excluded from data availability computation:

- R218/218.1: Can exclude up to 40 hours/month for CEMS calibration, maintenance, repair, or audit
- R2012: No exclusion
Relief on CEMS Operation and Data Availability - Hours to Exclude from Data Availability – Recommendations

- Recommended at WG #4 for hours to exclude from data availability calculation
  - Startup and shutdown exempted by permit condition from complying with any emission limit
  - CEMS maintenance, repair or audit for up to 120 hours/year (10 hours/month)
    - 30 hours/month already counted for daily calibration (valid QAQC hour per Topic #18)

- Additional recommendation for hours to exclude
  - A valid emitting source Breakdown that meets Rule 430 Breakdown Provisions
    - A valid Breakdown is exempted from complying with emission limit for non-RECLAIM sources by Rule 430 (for RECLAIM sources by Rule 2004 (i))
Valid Hour and Hourly Average

- Current R218/218.1 does not have specification on valid hour and hourly average method
  - Non-RECLAIM R218/218.1 sources are either referring to Part 60 or RECLAIM R2012 for data handling
- PAR 218/218.1 should specify and harmonize the requirements for valid hour and hourly average
# Valid Data Points Required for a Valid Hour

<table>
<thead>
<tr>
<th></th>
<th>Full operating clock hour*</th>
<th>Partial operating clock hour*</th>
<th>Maintenance/QAQC hour</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Minimum one valid data point in each operating quadrant hour</td>
<td>Minimum one valid data point in each operating quadrant hour (no recording required for non-operation period)</td>
<td>Minimum two valid data points separated by $\geq 15$ minutes if unit operates for more than one quadrant hour</td>
</tr>
<tr>
<td></td>
<td>Same</td>
<td>Same; and Non-operation quadrant hours recorded as valid zero</td>
<td>Maximum four 1-hour maintenance/QAQC periods each day</td>
</tr>
<tr>
<td></td>
<td>No specification</td>
<td>No specification</td>
<td>No specification</td>
</tr>
</tbody>
</table>

* Clock hour is a period of time from zero to sixty minutes for each hour in the 24-hour day
### Hourly Average Method

<table>
<thead>
<tr>
<th>Part 60 and Part 75</th>
<th>RECLAIM Rule 2012</th>
<th>Rule 218/218.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hourly average is calculated using all the required valid data points</td>
<td>A valid quadrant hour is calculated using required valid data points in the quadrant hour. Hourly average is then calculated using the required valid quadrant hour.</td>
<td>No specification</td>
</tr>
</tbody>
</table>
Valid Hour and Hourly Average – Summary on Current Requirement

- Part 60 and Part 75 are aligned on valid hour and hourly averaging
- RECLAIM CEMS requirements differ on
  - Valid data points for maintenance/QAQC hour
  - Hourly average calculation
- R218/218.1 does not specify valid hour and hourly average
  - Most of R218/218.1 CEMS refer to Part 60 data handling method
### Valid hour and Hourly Average – Initial Recommendation

<table>
<thead>
<tr>
<th>For PAR 218/218.1</th>
<th>Specify valid hour and hourly average according to Part 60 &amp; Part 75 method</th>
</tr>
</thead>
<tbody>
<tr>
<td>For RECLAIM CEMS</td>
<td>CEMS with RECLAIM averaging method may continue until the next CEMS recertification as a result of any change needed to meet the landing rule NOx limits</td>
</tr>
<tr>
<td>Demonstrate compliance for a 15-minute interval*</td>
<td>Emission data may be averaged for each 15-minute quadrant of the hour in which the unit operates, utilizing all valid data points</td>
</tr>
<tr>
<td>Demonstrate compliance for an interval greater than 1-hour*</td>
<td>Emission data may be averaged for the required interval utilizing 1-hour averages computed in accordance with PAR 218/218.1</td>
</tr>
<tr>
<td>Concentration correction by diluent gas (e.g., NOx @ 3%O2)</td>
<td>Performed with the averaged value at the interval required for compliance demonstration</td>
</tr>
</tbody>
</table>

*The comparable requirement of a landing rule may supersede this.
Calibration gas

- Existing requirement for calibration gas varies for RECLAIM R2012 and non-RECLAIM R218/218.1
- PAR 218/218.1 should harmonize the requirements and also take into consideration of stakeholder’s comments (e.g., Availability of low value calibration gas)
## Calibration gas

### Existing requirements

<table>
<thead>
<tr>
<th>Category</th>
<th>R2012</th>
<th>R218/218.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calibration gas</td>
<td>• EPA Protocol Gases&lt;br&gt;• National Institute of Standards and Technology (NIST)/EPA approved standard reference materials&lt;br&gt;• Certified reference materials</td>
<td>• EPA Protocol Gases&lt;br&gt;• Alternative certification protocol upon approval</td>
</tr>
</tbody>
</table>

*Certified according to “EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards,” September 1997, EPA 600/R-97/121 or any subsequent version published by EPA*
Calibration gas – Initial Recommendation

Proposed requirements

- EPA Protocol gases
- NIST standard reference materials;
- A standard reference material-equivalent compressed gas primary reference material;
- NIST traceable reference material;
- NIST/EPA-approved certified reference materials;
- If not covered by any of above programs, and upon approval by the Executive Officer, facility may use NIST research gas mixture, gas manufacturer's intermediate standard, or gas manufacturer's alternative certification protocol for the specific compound or compounds
Alternative CEMS

- R218/218.1 does not have a provision for Alternative CEMS

- Currently there are eight Alternative CEMS certified through RECLAIM R2012 according to 40 CFR Part 75 Subpart E specifications
  - They will be subject to PAR 218/218.1 after existing RECLAIM

- PAR 218/218.1 should incorporate requirements for Alternative CEMS
R2012 Chapter 2

- May request to approve an alternative monitoring device (or system components) to quantify the emissions of NOx
- Demonstrate that the proposed alternative monitoring device is at a minimum equivalent in relative accuracy, precision, reliability, and timeliness to a CEMS for that source, according to the criteria specified in 40 CFR Part 75 Subpart E
Alternative CEMS - Initial Recommendation

For PAR 218/218.1, use R2012 Chapter 2 Alternative CEMS certification requirements

– Certifying Alternative CEMS according to the criteria specified in 40 CFR Part 75 Subpart E
Recap – Key Topics Discussed today

Initial or additional recommendation was provided for each topic below:

6. Full Span Range requirements – Additional recommendations
11. CEMS data availability threshold – Calendar quarter basis
12. CEMS measuring low emissions – Need data to propose alternative standard for 7-day drift test
17. Relief on CEMS Operation and Data Availability – The exempted period
18. Valid hour and hourly average – Part 60 & Part 75 method
19. Calibration gas – Extended specification
20. Alternative CEMS – Apply R2012 requirements
Recap – Response to Comments Made at WG #4

Concern on availability of low value calibration gas

- Will propose additional recommendation for span range requirement
  - Span range may be set otherwise upon approval for CEMS monitoring a unit with emission limit at or below 5 ppm (e.g., Turbines with 2 or 2.5 ppm limit)
  - May allow alternative procedure for certified calibration gas

Low data availability may not be able to improve even without further data loss if it is on the annual basis

- Propose to compute data availability on a calendar quarter basis
Recap – Response to Comments Made at WG #4 – cont.

Alternative Standard for 7-day calibration drift test
Comment 1: Difficult to meet this alternative standard
Comment 2: Should have data to support the recommendation

- Staff will withdraw the alternative standard proposed at WG #4 and maintain the existing standard.
- Would consider an alternative proposal base on additional valid data received from stakeholders
Recap – Response to Comments Made at WG #4 – cont.

Daily calibration for a CEMS with multiple pollutants may not allow the generation of a valid hour

- Dividing the calibration into different hours could ensure each calibration hour to be a valid hour

Should consider biogas which may be more difficult to pass calibration (need the Part 60 option for compliance)

- Calibration gas is used for calibration check which is independent of the unit fuel use
- Any fuel sensitive requirement should be addressed in the landing rules
Recap – Response to Comments Made at WG #4 – cont.

<table>
