

Draft – For Discussion Purpose

RESIDENTIAL AND COMMERCIAL ENERGY WHITE PAPER

TABLE OF CONTENTS

- I. Introduction**
 - a. Purpose and Objective (See Attachment)
 - b. White Paper Outline

- II. Background**
 - a. Overview of Residential and Commercial Sector in Basin
 - i. Types of Housing and Commercial Sectors
 - 1. Type of Energy Used in Each Sector
 - ii. Energy Use relative to other sectors and areas
 - iii. Indirect Energy Consumption and Linkage with Other Sectors (water use, waste streams, transportation, etc..)

 - b. Emissions
 - i. Air Quality
 - 1. Regional Emissions from Residential and Commercial Sector
 - ii. GHG Emissions

 - c. Benefits from energy reductions and changes to how energy and water are used in the residential and commercial sectors (i.e. efficiency impacts cumulative, infrastructure impacts):
 - i. Environmental Benefits
 - ii. Economic Benefits
 - iii. Infrastructure Benefits

- III. Overview of Current Practices for Efficiency, Conservation, and Generation measures being undertaken in Residential/ Commercial Sector**

- IV. Review of Existing Programs, Regulations, and Financing Mechanisms**
 - a. Residential
 - i. Regulations
 - ii. Incentive/Rebate Programs
 - iii. Financing Mechanisms
 - iv. Impacts and Benefits of Existing Programs
 - v. Limitations or deficiencies of existing programs
 - vi. Difficulties and obstacles to overcome to achieve greater implementation of existing programs
 - 1. Rental homes, multi-unit dwellings, lower income households
 - 2. Financial Barriers – Upfront Capital,

3. Homeowner decisions – efficiency measure or solar, contractor selection

b. Commercial

- i. Regulations
- ii. Incentive/Rebate Programs
- iii. Financing Mechanisms
- iv. Impacts and Benefits of Existing Programs
- v. Limitations or deficiencies of existing programs
- vi. Difficulties and obstacles to overcome to achieve greater implementation of existing programs
 1. Leased Buildings
 2. Financial Barriers
 3. Business decisions – type of retrofit, ROI, contractor selection

V. Emerging Technology Assessment

- a. Renewable Energy, Biofuels, storage
- b. Load management
- c. Combined Heat and Power
- d. Cross sector coupling

VI. Scenario Analysis

- a. Analyze emission reduction potentials for different penetration rates
 - i. Technology deployments
 - ii. Program implementations

VII. Findings and Recommendations for 2016 AQMP

- a. Quantification methodologies
- b. Emission Reductions from Existing and Emerging Residential/Commercial Energy Programs
- c. Additional Opportunities the 2016 AQMP could pursue for Emission Reductions in Commercial and Residential Sectors
