THIS PAGE IS INTENTIONALLY LEFT BLANK

## Appendix 3a: Community Profile

### Information on the Best Available Retrofit Control Technology and AB 2588 Program

AB 617 requires air districts to implement Best Available Retrofit Control Technology (BARCT) for facilities in the state greenhouse gas cap-and-trade program by December 31, 2023. The San Bernardino, Muscoy community has facilities that are subject to BARCT, specifically larger facilities that are in the REgional CLean Air Incentives Market (RECLAIM) program. In addition, CARB's Blueprint states that facilities located within the community with Risk Reduction Plans under the Assembly Bill (AB) 2588 program must be identified. Descriptions of the facilities that are subject to BARCT (specifically RECLAIM facilities) and the AB 2588 program are provided below.

### Best Available Retrofit Control Technology (BARCT)

#### *RECLAIM facilities*

Facilities within the RECLAIM program are typically larger facilities that have NOx emissions greater than four tons per year. The RECLAIM program<sup>1</sup> uses a market-based approach to achieve emission reductions from facilities for nitrogen oxides (NOx) and sulfur oxides (SOx) in the aggregate. However, an analysis of the RECLAIM program has shown that the ability to achieve NOx emission reductions using a market-based approach has diminished; therefore, pursuant to Board direction, RECLAIM NOx facilities will transition<sup>i</sup> to a command-and-control regulatory structure to ensure facilities meet BARCT. RECLAIM facilities that are also in the State greenhouse gas cap-and-trade program are subject to the BARCT requirements of AB 617. South Coast AQMD staff completed an analysis of the equipment at each RECLAIM facility, giving higher priority to older, higher polluting units that will need to install retrofit controls. The higher polluting units at RECLAIM facilities will be or have been evaluated for BARCT and will be subject to the following South Coast AQMD rules: Rules 1109.1,<sup>2</sup> 1110.2,<sup>3</sup> 1117,<sup>4</sup> 1118.1,<sup>5</sup> 1134,<sup>6</sup> 1135,<sup>7</sup> 1146, 1146.1, 1146.2,<sup>8</sup> 1147, 1147.1,<sup>9</sup> and 1147.2.<sup>10</sup> A BARCT assessment includes an evaluation of emission limits for existing units, South Coast AQMD regulatory requirements, other regulatory requirements, and pollution control technologies. Table Appendix 3a-1 list the RECLAIM facilities that may be subject to BARCT and whether they are in the State cap-and-trade program.

<sup>i</sup> For more information on the RECLAIM transition please see: <http://www.aqmd.gov/home/rules-compliance/reclaim-transition>.

Table Appendix 3a-1: List of NOx RECLAIM facilities within the  
San Bernardino, Muscoy community

RECLAIM Facility Name	Facility Address	Cap-and-Trade Facility (Yes/No)
MARS PETCARE U.S., INC.	2765 LEXINGTON WAY SUITE 400, SAN BERNARDINO	No

#### *Non-RECLAIM facilities*

As a result of the BARCT assessment conducted for RECLAIM facilities, some equipment at non-RECLAIM facilities will also be affected and will be required to meet BARCT NOx emissions. The BARCT assessment is still currently being conducted for a number of rules and the list of affected non-RECLAIM facilities that may be subject to additional requirements is being developed.

#### AB 2588 Program

The AB 2588 Program<sup>11</sup> is a statewide program that requires air districts to establish emissions inventory of air toxics from individual facilities.<sup>ii</sup> The AB 2588 program is implemented in South Coast AQMD through Rule 1402 – Control of Toxic Air Contaminants from Existing Sources<sup>12</sup> which requires certain facilities to conduct Health Risk Assessments to assess the health risk (long-term versus short-term) to the surrounding community. Facilities are required to submit Health Risk Assessments<sup>13</sup> based upon the toxicity and volume of toxic air contaminants released within proximity to potential receptors (e.g., hospitals, residences, work sites). Depending on the risk, facilities may be required to do public notices and hold a public meeting. If a facility is determined to exceed the significant risk level, as determined by each air district, they are required to reduce this risk by submitting a Risk Reduction Plan (RRP).<sup>14</sup> The RRP outlines what measures (e.g., high-efficiency particulate air (HEPA) filters) the facility will incorporate to reduce their risk. (Some facilities may be subject to the AB 2588 program, but do not exceed the action risk threshold and therefore are not required to submit a RRP.) Some facilities may also choose to voluntarily reduce their risk by submitting a voluntary RRP (VRRP).<sup>iii</sup> If a facility has an approved VRRP, the risks will be reduced below the voluntary risk threshold. Table Appendix 3a-2<sup>iv</sup> shows facilities within the San Bernardino, Muscoy community that are currently in the AB 2588 program in the South Coast AQMD. This table includes the facility name, location address, and the most recent status under the AB 2588 program. Facilities in the AB 2588 program without

<sup>ii</sup> The South Coast AQMD's AB 2588 Program incorporates the requirements of the state AB 2588 program, as well as additional and/or more stringent requirements.

<sup>iii</sup> Some facilities may have submitted applications for a VRRP; however, if the facility is found to be already under the voluntary risk threshold, no further reduction measures are required.

<sup>iv</sup> Facilities listed in the table are reducing risk or in the process of reducing risk.

a RRP or VRRP will have the prioritization level (High, Intermediate, or Low)<sup>v</sup> and what year the prioritization was conducted listed as the status. Prioritization is based on reporting every four years.

Table Appendix 3a-2: List of facilities in the AB 2588 program within the San Bernardino, Muscoy community

Facility Name	Facility Address	Status within the AB 2588 Program
ST. BERNARDINE MEDICAL CENTER	2101 N WATERMAN AVE, SAN BERNARDINO	Prioritization from 2017 - Intermediate
CALMAT CO	2400 W HIGHLAND AVE, SAN BERNARDINO	Prioritization from 2017 - Low

#### Technology Clearinghouse

South Coast AQMD staff have been conducting Best Available Control Technology (BACT) analyses and working closely with CARB to provide data for the Technology Clearinghouse. Requirements for Toxics-Best Available Control Technology (T-BACT) are established through the adoption and amendment of rules affecting air toxics (i.e., Regulation XIV). Staff will reference the Technology Clearinghouse and applicable air toxic rule requirements (inclusive of state Air Toxic Control Measures (ATCMs) and federal National Emission Standards for Hazardous Air Pollutants (NESHAPs), when available, to evaluate for potential tightening of rules through the rule development process. Permit considerations for both new and modified sources throughout the district are based on rule requirements.

# APPENDIX 4:

## ENFORCEMENT SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Appendix 4:— Enforcement

### Authority and Legal Right to Issue Violations and Penalties

CARB and South Coast AQMD both have authority to conduct inspections of alleged air pollution sources, and the right to issue notices of violations that can lead to civil and criminal penalties. ~~C-CARB civil penalties can be up to \$250,000 per day; South Coast AQMD civil penalties can be up to \$250,000 per day~~ <sup>i</sup> In cases with potential criminal violations, South Coast AQMD may refer matters to federal, state, and local prosecuting agencies. Inspection warrants also may be obtained if necessary when access to facilities or potential emissions sites is denied.

### South Coast AQMD Hearing Board

The Hearing Board is a quasi-judicial panel authorized to provide relief from South Coast AQMD regulations under certain circumstances and to order business to take specific actions to come into compliance with regulations. As state law requires, Hearing Board members are appointed by, but act independently of, the South Coast AQMD Governing Board.

The Hearing Board is authorized to hear:

- Petitions by companies for variances.
- Petitions for abatement orders. An abatement order requires a company operating out of compliance to take specific actions or to shut down its operation. This is a severe remedy normally reserved for serious violations.
- Appeals by companies regarding granting of permits, permit conditions, permit denials and suspensions, denials of emission reduction credits, and denials of pollution control plans.
- Appeals by third parties.

The Hearing Board is not authorized to:

- Modify rules.
- Exempt a business from complying with a rule.
- Grant a variance from a violation of the public nuisance law, such as one that creates an odor problem or threatens public health or property.
- Review a violation notice in any way.

---

<sup>i</sup> Fines and penalties are cited at the maximum amounts for willful and intentional emissions of air contaminants that results in great bodily harm or death. See Health and Safety Code § 42402.3(c); —CARB website,:

[www.arb.ca.gov/enf/policy2017/final\\_enforcement\\_policy\\_october2017.pdf](http://www.arb.ca.gov/enf/policy2017/final_enforcement_policy_october2017.pdf);

—South Coast AQMD website,: [www.aqmd.gov/nav/about/authority/enforcement](http://www.aqmd.gov/nav/about/authority/enforcement).

After hearing all sides of a case in which individuals or companies come into conflict with South Coast AQMD rules, the Hearing Board weighs the evidence and reaches a decision. The following table lists all the active facilities with active or expired permits within the San Bernardino, Muscoy community.

The following sections contain information regarding the compliance histories of facilities regulated by South Coast AQMD and CARB in this community. South Coast AQMD's section includes: a list of all active facilities with active or expired permits, a summary of all complaints received, a list of all inspections conducted, and a list of all enforcement actions taken. CARB's section includes: lists of individual field inspections in 2016, /2017, and /2018 and an enforcement activities map.

## South Coast AQMD Compliance History in SBM, January 2016 to December 2018

## List of All Active Facilities with Active or Expired Permits in June 2019

This table contains all of the facilities that are considered active and have valid or expired permits. Expired permits are included to ensure that any facilities that are still in operation but had not paid fees at the time of the query were still included.

Summary of All Complaints Received from January 2016 to December 2018<sup>ii</sup>

This table contains a summary of the number of complaints received by complaint type and sorted by their disposition between January 2016 and December 2018.

Complaint Disposition	Asbestos	Dust	Odors	Overspray	Residential Wood Burning	Rule 461	Smoke	Other	Total
Notice of Violation Issued		8			2				10

<sup>ii</sup> The complaint information, queried in June 2019, is based on the following Zip Codes: 92411, 92412, 92401, 92407, 92404, 92377, 92405, 92376, 92410, 92408, and 92324.

Notice To Comply Issued	2	11	8			2	1	1	25
Referred to Another Agency		1	5		1	1			8
No Enforcement Action Taken <sup>iii</sup>	9	119	70	9	5	6	28	13	259
Investigation in Progress; Disposition Pending			1				1		2
<b>Total</b>	<b>11</b>	<b>139</b>	<b>84</b>	<b>9</b>	<b>8</b>	<b>9</b>	<b>30</b>	<b>14</b>	<b>304</b>

#### List of All Inspections Conducted from January 2016 to December 2018

This table contains a list of inspections conducted within the SBM between January 2016 and December 2018.

Facility Name	Facility Id	Location	City	Zip	Technical Specialty (Ts)	Inspection Date	Enforcement Actions
7-Eleven #26934/Jagdip Singh	176507	3211 Kendall Dr	San Bernardino	92407	Ts-40 Service Stations: Retail Gasoline Dispensing (From Ts 12)	8/5/2016	

<sup>iii</sup> *No Enforcement Action Taken* means that the complaint investigation has concluded but did not result in any formal enforcement action. For example, an alleged air pollution source may have been operating in compliance at the time of the inspection or the event underlying the complaint was no longer occurring.

Appendix 4-101

## CARB Supplemental Environmental Project Process

During the settlement process, violators have the opportunity to allocate up to 50% of their penalties to a supplemental environmental project (SEP). Community-proposed projects are funded by the violators to help improve public health, reduce pollution, increase environmental compliance and bring public awareness to air pollution issues. Additional SEPS are possible in the SBM community through the proposal process.

Proposals of projects that meet the following four requirements: reducing direct/indirect air emissions or exposure to air pollution, relates to the violation, does not benefit the violator, and goes above and beyond regulatory requirements can be submitted for consideration for future settlements through the SEP proposal form (<https://calepa.ca.gov/sep-proposal-form>). Six SEPs have been funded ~~within~~ South Coast AQMD's jurisdiction including paid environmental education internships, planting trees, writing articles to inform community about air pollution and resources, conducting research (e.g., air monitoring, truck traffic survey), and school air quality education programs and filtration systems.

### Further Information on Technology Used for Compliance Investigations

#### Toxic Vapor Analyzer

*Toxic Vapor Analyzers (TVA):* Using a Flame Ionization Detector (FID) or Photoionization Detector (PID), this instrument is capable of detecting a wide variety of organic and inorganic compounds. The unit must be calibrated to identify specific compounds. Any day that the instrument is used for conducting compliance inspections, a trained inspector calibrates the equipment to a set calibration standard depending on the inspection type. For example, in an oil and gas process leak inspection to identify VOCs, a 3-Point Methane Calibration Curve is used.

This instrument displays concentrations of the gas it is calibrated to in parts per million (ppm), also known as the number of molecules of that gas per one million molecules of air. Inspectors can use TVAs to identify organic and inorganic vapors according to a standard set by the US Environmental Protection Agency (EPA) Method 21 – Determination of Volatile Organic Compound Leaks.<sup>vii</sup> This document from EPA sets the standard for the specifications and performance criteria of the instrument, as well as the process of identifying a leak.

#### Infrared Cameras

*Infrared Cameras:* Using infrared cameras equipped with Optical Gas Imaging (OGI) technology, inspectors can detect hydrocarbon leaks at a variety of facilities, including those in the oil and gas industry. The device uses a non-contact technology which identifies the infrared energy (heat) of a specific gas and converts it into an electronic signal. This signal is processed into an image, giving inspectors the ability to view emissions that would otherwise be invisible to the naked eye.

~~Using~~ Infrared OGI cameras enables inspectors to scan areas for emissions and quickly gain an overall representation for any large leaks there may be at a facility. The technology generally used by OCE is specifically calibrated to methane, enabling users to visibly identify VOC leaks. Inspectors can follow up with a TVA to quantify the leak. Inspectors who use this equipment have training through a multi-day course to understand the technology, uses, and limitations.

<sup>vii</sup> <https://www.epa.gov/emc/method-21-volatile-organic-compound-leaks>

### XRF

*X-Ray Fluorescence (XRF):* A handheld instrument which uses a non-destructive method to determine the chemistry of a sample. The device sends an x-ray to the sample that displaces the electrons, causing a release of energy. The energy released is measured by the special detector to analyze the chemistry of the sample. Inspectors can scan surfaces for the presence of toxic metals to identify sources of contamination and fugitive emissions.

### H<sub>2</sub>S Analyzer

*H<sub>2</sub>S Analyzers (Jerome Meters):* A handheld instrument that can detect hydrogen sulfide in the air. This device takes in a small sample of air and provides a reading on the amount of H<sub>2</sub>S within a few seconds, down to levels in the parts per billion (ppb) range. This instrument serves as a safety tool for inspectors conducting an inspection in an area with potential H<sub>2</sub>S and can be used to identify a potential source of rotten egg type odors.

### CARB Statewide Truck and Bus Regulation

CARB is achieving compliance with the Statewide Truck and Bus Regulation (STB), section 2025 of Title 13, California Code of Regulations ~~CR (STB)~~ by 2023 via a streamlined auditing process. STB requires diesel trucks with a Gross Vehicle Weight Rating (GVWR) greater than 14,000 pounds that operate in California to install diesel particulate filters or replace older engines with cleaner engine technology on a phased-in schedule based on the model year of the engine and GVWR. CARB staff process data from vehicle registration, compliance reporting, and inspection databases to identify potentially non-compliant fleets and prioritize them for enforcement action.

In April 2017, the Governor signed Senate Bill 1 (SB1) into law which included a provision that, beginning in 2020, a vehicle must demonstrate compliance with the STB regulation before it can be registered with the Department of Motor Vehicles (DMV). Beginning in 2020, the DMV, in conjunction with data provided by CARB, will deny vehicle registration to non-compliant heavy-duty diesel vehicles (HDDV) based on the model year of the HDDV, so that by the end of 2023, 100% compliance will be achieved for the truck and bus rule.

### Summary

Both South Coast AQMD and CARB are committed to working closely with the CSC to identify and investigate ~~air~~ area quality issues in the community. For the mobile sources regulated by CARB, this will include actively enhancing enforcement activities through a combination of improved complaint reporting, more focused inspections, and report-back meetings to update the CSC on the status of inspections and to obtain additional areas of mobile source concern. CARB plans to have, at a minimum, annual meetings with the CSC in order to prioritize strategies and identify possible locations where non-compliant vehicles are present. CARB will report-back to the community with the number of inspections performed and the number of citations and/or Notices of Violations (NOVs) issued. Further information about CARB's and South Coast AQMD's commitments can be found in Chapter 5.

## Community Steering Committee (CSC) Meeting Comments on the Community Emissions Reduction Plan (CERP) for the San Bernardino, Muscoy Community

### Public Meeting Comments CSC Meeting #7 – June 20, 2019

Public Meeting Commenter 1: Matt Abularach-Macias, California League of Conservation Voters & CLCV Ed Fund

- 1: Matt Abularach-Macias inquired on how much of the plan includes emission reductions. He expressed that he noticed that most of the CERP actions refer to exposure reduction. He also requested specifics on what a “living document” means to be written in the CERP.

#### Response to Meeting Comment 1

The CERP contains a suite of strategies to reduce emissions and exposure in the San Bernardino, Muscoy community. Emission reductions will be achieved through outreach and incentives, air monitoring and enforcement, and rules and regulations. Emission reduction targets have been identified and incorporated, where quantifiable, into Chapter 5a. These emission reduction targets are based upon mobile source incentives and certain statewide mobile source regulation measures. Some emission reductions cannot be quantified at this time, such as fugitive emissions. Air monitoring and enforcement actions will need to occur to identify the location and source of the emissions.

Because the work to implement the CERP and Community Air Monitoring Plan (CAMP) is dynamic, certain action items have been written with built-in flexibility to allow adjustments as new information (e.g., air monitoring data, new technology, etc.) becomes available. South Coast AQMD staff is committed to working with Community Steering Committee (CSC) members to evaluate ongoing actions and progress. South Coast AQMD will also provide quarterly updates to the CSC on actions in the CERP. Any major amendments would need to be brought to the South Coast AQMD Governing Board for approval. This information can be found in Chapter 1.

### Public Meeting Commenter 2: Ryan Sinclair, Loma Linda University

- 2: Ryan Sinclair inquired how community members can report idling vehicles.

#### Response to Meeting Comment 2

Complaints can be filed online through the South Coast AQMD’s on-line complaint system to report observations of excessive odors, smoke, dust, or other air contaminants (except smoking vehicles): <http://www3.aqmd.gov/webappl/complaintsystemonline/NewComplaint.aspx>. Complaints can also be made by calling 1-800-CUT SMOG (1-800-288-7664). Smoking vehicles can be reported through CARB’s complaint line using 1-800-END-SMOG. In addition, Chapter 5, Action 1 states that South Coast AQMD will “provide community outreach on existing complaints/response systems on reporting idling trucks”, to inform community members on how to report idling trucks. Staff added that “CSC members will work with the South Coast AQMD, and other local entities to disseminate information on how to report idling trucks in the community (e.g., outreach events, flyers).” The objective is to increase participation from the

Appendix RTC-3

community on the existing complaint systems to report truck idling and address truck idling emissions.

Public Meeting Commenter 3: Andrea Vidaurre, Center for Community Action and Environmental Justice (CCA EJ)

3: Andrea Vidaurre requested that BNSF provide updates to the community on the status of the railyard's emission reduction efforts.

Response to Meeting Comment 3

BNSF will be participating in the development of the Facility-Based Mobile Source Measures ("FBMSM") workshops to address railyards and intermodal facilities. South Coast AQMD staff has recently received an updated emissions inventory for the San Bernardino railyard that BNSF has voluntarily prepared. Staff will work with BNSF to review the data and will provide updates to the community in the coming months. BNSF's commitment is included in Chapter 5e, Action 1, under "Implementing Agency, Organization, Business or Other Entity".

Public Meeting Commenter 4: Chantal Power, City of San Bernardino

4: Chantal Power asked staff to reach out to the State Mining and Geology Board to see if there could be a potential collaboration. The State Mining and Geology Board helps reclaim land to useable, reusable resources and regulates mines while in operation.

Response to Meeting Comment 4

Staff has reached out to the State Mining and Geology Board. The State Mining and Geology Board staff stated that they are focused on different objectives than the efforts in AB 617. The State Mining and Geology Board focuses on mining resources and the conservation of lands and not on small concrete batch facility operations.

## Public Meeting Comments CSC Meeting #8 – July 18, 2019

Public Meeting Commenter 4: Mary Valdemar, San Bernardino Valley College

- 5: Mary Valdemar requested that public meetings for rule development held by South Coast AQMD and CARB should follow the same model as the CSC meetings to accommodate working people.

### Response to Meeting Comment 5 and 6

The CERP includes a commitment to hold at least one public meeting for the warehouse Indirect Source Rule (ISR) and one public meeting for the railyard ISR development in or near this community at a time that is convenient for working people. Public meetings conducted for rule development will be evaluated on a case-by-case basis to accommodate all stakeholders, including those that live/work in other communities. Staff will also continue to schedule AB 617 meetings to accommodate the majority of the CSC schedules to provide quarterly or biannual updates on all activities, including rulemaking.

Public Meeting Commenters 6 and 7: Matt Abularach-Macias, California League of Conservation Voters & CLCV Ed Fund and Ericka Flores, CCAEI

- 6 and 7: Ericka Flores and Matt Abularach-Macias inquired how South Coast AQMD will invest and advocate to accelerate a timeline for zero-emission technology.

### Response to Comments 6 and 7

South Coast AQMD supports the development and deployment of zero-emission (ZE) vehicles and equipment, where technology feasible and commercially available, as a key strategy in achieving the region's air quality targets and protecting public health. South Coast AQMD has funded a variety of ZE technologies over the years, including battery and fuel cell electric trucks and cargo handling equipment, leveraging grants from both federal and state agencies as well as cost shares from regional stakeholders as well as collaborating with Southern California Edison to implement electric public utility infrastructure projects.

Although significant progress has been made in the development of zero-emission technologies, most of these technologies are not yet ready for commercial market in terms of economic viability and technology maturity. For example, there are currently no feasible models of zero-emission heavy-duty trucks commercially available, although it is expected that may change in the near term. South Coast AQMD will continue its on-going efforts to support the development of these zero-emission technologies to accelerate their commercialization and deployment as early as possible. In addition, South Coast AQMD is continuously looking to identify new incentive funding programs to replace higher polluting trucks with cleaner technology that exceeds current requirements. Staff plans to use the approved CERP to implement approaches that accelerate emission reductions from all priority categories, including heavy-duty trucks.

Chapter 5d, Action 2, has been included in the CERP to support Omnitrans' transition to zero-emission buses. In addition, Chapter 5e, Action 1 includes an action to work with BNSF railyard to replace diesel-fueled equipment with cleaner technologies and to provide updates to the CSC on emission reduction progress within the San Bernardino BNSF railyard. Chapter 5c, Action 3

also states that South Coast AQMD staff will collaborate with local governments and utilities to promote the installation of fueling infrastructure needed to support zero-emission trucks/vehicles, transport refrigeration units and cargo handling equipment.

### Public Meeting Comments CSC Meeting #9 – August 15, 2019

Public Meeting Commenter 8: James Albert, San Bernardino Resident

8: James Albert requested South Coast AQMD staff provide a summary or update of the warehouses ISR development.

#### Response to Comment 8

Additional information about the ongoing warehouse ISR efforts can be found here: <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures>. In addition, staff will provide updates to the CSC as specified in Action 2 of Chapter 5c as the ISR is being developed. Finally, as part of the ISR development process, South Coast AQMD will hold working group meetings that are open to the public. Staff encourages CSC members to participate in the rule development process.

Public Meeting Commenter 9: Mary Valdemar, San Bernardino Valley College

9: Mary Valdemar suggested that language in the CERP should be simplified so everyone can understand. In addition, she requested that childcare centers, charter schools, and preschools should be added to Chapter 5g and Chicano Indigenous Community for Culturally Conscious Advocacy & Action (ChiCCCAA) be added as a collaborating organization in outreach related actions. In addition, she suggested to use multi-colored legends for future presentations so CSC members with visual impairments can read them easier.

#### Response to Comment 9

Staff has tried to make the more technical sections of the CERP user friendly by including explanations of tables, clarifying language, and improving some graphs. In addition, staff will develop presentations that are more suitable for those who are visually impaired.

In addition, "childcare centers, charter schools and preschools" have been added to Chapter 5g, Action 1. In Chapter 5g, Action 1, ChiCCCAA has also been added as a collaborating community-based organization to co-host outreach meetings and as a collaborating organization to share information or provide outreach to schools for asthma-related programs.

Public Meeting Commenter 10: Members of the public and Valerie Dobesh, San Bernardino resident

10: Several members of the public and Valerie requested to have provisions in the CERP requiring green space to reduce air pollution within the community and expressed that green spaces have been compromised by warehouse development.

#### Response to Comment 10

Action 4 in Chapter 5g includes identifying new or existing sources or programs that can provide funding for tree planting and sharing this information with CSC members, when it is available. In addition, in Chapter 5c, Action 1, South Coast AQMD will work with the City of San Bernardino and San Bernardino County staff to discuss and enhance land use policies to reduce residents' exposure to emissions from old diesel trucks visiting warehouse facilities.

Public Meeting Commenter 11: Matt Abularach-Macias, California League of Conservation Voters & CLCV Ed Fund

11: Matt Abularach asked what percentage of the emission reductions represent the emissions specified in the CERP for this community.

Response to Comment 11

The estimated emission reductions expected from this CERP are:

- NOx (nitrogen oxides): 127.9 tons per year (tpy)
- DPM (diesel particulate matter): 0.91 tpy

These reductions have been calculated based of the community's baseline and have been added to Chapter 5a. These emission reductions will be achieved through mobile source incentives and statewide mobile source regulation measures. Additional emission reductions are expected to be achieved through actions that may not be quantifiable at this time. Future quantification may occur during the rule development process or as a result of air monitoring and enhanced enforcement.

Public Meeting Commenter 12: Andreas Beyersdorf, California State University, San Bernardino

12: Andreas asked whether 1,3 butadiene is being considered in the CERP and whether there are any regulations to reduce this compound.

Response to Comment 12

Figure 2 in Chapter 3b shows that DPM is the biggest contributor to the overall cancer risk in the community, followed by 1,3-butadiene, hexavalent chromium, and benzene. Actions in the CERP focus on reducing DPM, since it is the largest weighted toxic air contaminant (TAC) contributor in this community. Most of the priorities in the community are mobile sources, which is another reason the actions are focused on addressing DPM. Reductions in combustion of diesel fuel will have ancillary benefits or reducing other toxic air contaminants.

Public Meeting Commenter 13: Jason Martinez, Chicano Indigenous Community for Culturally Conscious Advocacy & Action (ChiCCCAA)

13: Jason asked whether there is a penalty or enforcement action that will be taken if polluters do not comply with rules and regulations.

Response to Comment 13

Air pollution violations may result in either criminal or civil liability. South Coast AQMD and CARB do not criminally prosecute air pollution violations. Criminal cases are referred to state, county or city attorneys. In deciding whether to refer a case for criminal prosecution, South Coast AQMD and CARB will consider such factors as the type and severity of the violation, the state of mind of the violator, and the harm or risk of harm to the public created by the violation.

South Coast AQMD and CARB are alternatively authorized to seek civil penalties for air pollution violations. In determining the amount of a civil penalty, state statutes require South Coast

AQMD, CARB, and any court to evaluate each violation individually and with reference to all relevant facts and circumstances. The factors which must be considered in assessing civil penalties include:

- (a) The extent of harm caused by the violation.
- (b) The nature and persistence of the violation.
- (c) The length of time over which the violation occurs.
- (d) The frequency of past violations.
- (e) The record of maintenance.
- (f) The unproven or innovative nature of the control equipment.
- (g) Any action taken by the defendant to mitigate the violation.
- (h) The financial burden to the defendant.

Ongoing non-compliance by a facility may also lead to a petition for an Order for Abatement before the South Coast AQMD Hearing Board. The Hearing Board has the authority to require a facility to take certain actions to achieve compliance.

South Coast AQMD and CARB's enforcement teams seek to ensure that regulated entities comply with air quality rules and regulations. Both agencies pursue penalties and other enforcement actions for the purpose of deterring future violations, ensuring the existence of a level playing field for all regulated entities, and preventing unfair advantages for violators. Additional information about the enforcement plan can be found in Chapter 4.

#### Public Meeting Commenter 14: Christopher Chavez, Coalition for Clean Air (CCA)

14: Christopher Chavez asked for the CERP to include emissions reduction targets and include a strong ISR. He also asked that the CERP have strong regulations and increased enforcement, and not rely on incentives. He also requested to assign responsibility to polluters. He noted that although the San Bernardino Airport is not within the community boundary, it should be addressed.

#### Response to Comment 14

Emission reduction targets have been identified and incorporated, where quantifiable, into Chapter 5a. These emission reduction targets are based upon mobile source incentives and certain statewide mobile source regulation measures. Some emission reductions cannot be quantified at this time, such as fugitive emissions. Air monitoring and enforcement actions will need to occur to identify the location and source of the emissions.

One of the strategies South Coast AQMD is evaluating to reduce emissions from railyards and warehouses is through the Facility Based Mobile Source Measures or ISR. The development of

ISRs was initially intended to address regional air pollution, specifically NOx emission reductions, and to attain the National Ambient Air Quality Standards as required by the Clean Air Act. However, the CSC and commenter has made it clear that an ISR must also focus on reducing localized impacts. South Coast AQMD will continue to develop the ISRs in parallel to the AB 617 efforts and provide updates to the CSC on the rule making process. Details of ISR requirements need to be developed through the rulemaking process so that all stakeholders can participate in the public process. Proposed rule concepts and input provided by the CSC during the development of the CERP will be provided to staff developing ISR. Staff encourages CSC members to actively participate in the South Coast AQMD rule development process for ISR. All proposed rule concepts must fall within South Coast AQMD's legal authority.

The CERP contains a suite of strategies to reduce emissions and exposure in the San Bernardino, Muscoy community. Emission reductions will be achieved through outreach and incentives, air monitoring and enforcement, and rules and regulations. Incentives are only appropriated to owners or operators that would reduce emissions above and beyond current rules and regulations and will help achieve much needed emission reductions sooner for this community while ISR is currently being developed.

Although some actions may not "assign responsibility to polluters" or industry stakeholders under Implementing Agency, Organization, Business or Other Entity, any rules and regulations adopted by the South Coast AQMD and CARB will be applicable to those entities subject to the rules and regulations. Staff acknowledges that BNSF plays a key role in reducing emissions within the San Bernardino, Muscoy community. BNSF will be participating in the development of the Facility-Based Mobile Source Measures ("FBMSM") workshops to address railyards and intermodal facilities. South Coast AQMD staff has recently received an updated emissions inventory for the San Bernardino railyard that BNSF has voluntarily prepared. Staff will work with BNSF to review the data and will provide updates to the community in the coming months. BNSF's commitment is included in Chapter 5e, Action 1, under "Implementing Agency, Organization, Business or Other Entity".

South Coast AQMD is aware of the expansion of the San Bernardino International Airport. On August 15, 2018 staff provided recommendations during the preparation of the Draft Environmental Impact Report for the Proposed Eastgate Building 1 Project California Environmental Quality Act (CEQA) commenting period and these include staff's recommendation for truck trip rates for high cube warehouses<sup>1</sup> and other mitigation measures, which the San Bernardino International Airport Authority reviewed. Comments can be seen here: <http://www.aqmd.gov/docs/default-source/ceqa/comment-letters/2018/nopeastgatebuilding1-081518.pdf>. In addition, staff has included several actions in

---

<sup>1</sup> A high cube warehouse is a building that typically has at least 200,000 gross square feet of floor area, has a ceiling height of 24 feet or more and is used primarily for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. Section 5G- Schools, childcare centers, community centers, and homes 5-5: Under Action 1: Course of Action (s): bullet #2- Partner with the San Bernardino County, Dept. of Public Health

**Goals:**

- I would suggest at least 6 public outreach events
- provide 11 childcare centers ( all should get the information)
- implement CARE at least 2 (which is half of all the schools or community centers that have already been identified)

Under implementing agency, organization, business or other entity:

bullet # 2: Partner with DPH on "asthma-based programs -We do not have asthma program through the Dept. of Public Health it is through the County hospital Arrowhead Regional Medical Center (ARMC) who has the Breathmobile

**Response to Written Comment Letter 1-1**

The Draft CERP has been updated to include the San Bernardino County Department of Public Health as a collaborating agency in Chapter 5g, Action 1. In Action 1, the Goals have been updated to include the following: participate in six public outreach events, provide information relating to air quality effects on young children and reducing exposure to facilities where children are located (e.g., schools, childcare centers, and community centers) with prioritization based on Community Steering Committee (CSC) input, and implement Clean Air Ranger Education (CARE) and Why Air Quality Matters (WHAM) programs in at least two schools with the possibility of continuing for up to three years. Staff would like to share information on air quality effects on young children and how to reduce exposure to locations where children spend their time including childcare centers. Prioritization of locations will be based on CSC input.

Staff reached out to the Arrowhead Regional Medical Center (ARMC) on the BreathMobile program. AMRC and the South Coast AQMD will collaborate to share information and/or provide outreach to schools for asthma or asthma-related programs in the San Bernardino, Muscoy community. This has also been incorporated in Chapter 5g, Action 1.

**Comments (Unlimited Size) \***

In Chapter 2 there's a summary of the presentation I provided on behalf of Omnitrans at the May meeting. It says I described our current bus fleet as including near-zero and zero emission buses. But actually our current fleet includes near-zero but not zero-emission buses. We are planning to transition to zero-emission buses and recently applied for grant funds for four of them.

In Chapter 5 it says Omnitrans provides 16 million passenger trips per year. I know this was on our website, but it was out of date; it is actually 11 million passenger trips per year.

In Chapter 5 it also says Omnitrans operates more than 200 vehicles out of our East Valley maintenance facility on 5th Street in San Bernardino. This is the total number of buses we have, including our San Bernardino and our Montclair facilities. The number at the San Bernardino facility is actually 121.

Related to this, where it says Omnitrans "employs almost 700 people," I would change it to "employs almost 700 people at its two operating and maintenance facilities, including one facility in San Bernardino and one in Montclair."

Response to Written Comment Letter 2-1

Staff will change the sentence in Chapter 2 of the Draft Final CERP to indicate that Omnitrans provided information about their near-zero emissions fleet and their continuing work towards the addition of zero-emission buses to their fleet. This change will be reflected in the Final CERP.

Chapter 5d has been updated to reflect the number of passenger trips per year to 11 million, the number of buses at the San Bernardino Facility to 121 and the number of employees to 700 people at both operating and maintenance facilities.

**Comments (Unlimited Size) \***

On behalf of the Inland Empire Economic Partnership (IEEP), I write to submit comments on the Discussion Draft of the Community Emissions Reductions Plan (CERP) presented at the June 20, 2019 meeting of the San Bernardino/Muscoy Community Steering Committee (CSC). While we commend the staff of the South Coast Air Quality Management District (SCAQMD) for their efforts to develop a CERP that improves the air quality of the residents of the San Bernardino/Muscoy area, IEEP believes the following changes should be made to ensure the plan meets its intended goals.

3-1

The CERP should have an increased focus on providing incentives to replace older trucks. While we recognize that SCAQMD's ability to address mobile sources of pollution is limited, the CERP has demonstrated that it does have some tools at its disposal. For example, the CERP includes funding for the replacement of diesel trucks intended for the San Bernardino/Muscoy community. However, the funds provided are nowhere near what is necessary to meet the existing demand. While the CERP is limited to using the existing resources, it should take this opportunity to call on the state to fund these types of programs at an appropriate level. For example, it could call for incentive programs to be prioritized based on a cost/benefit analysis that looks at the amount of GHG and NOx emission reductions that are achieved compared to the cost. This will allow California to focus its efforts on the programs that have the greatest effect in reducing emissions.

Ensure accountability and effectiveness. The CERP calls for increased outreach and enforcement as ways to mitigate air pollution. While these approaches may be effective, an analysis of each program should be conducted upon its completion to determine if the program achieved its intended effect. For example, in Chapter 5B, Action 1 calls for the SCAQMD to work with the CSC to inform community members on how to report idling trucks, while Chapter 5G Action 1 requires the establishment of partnerships with community based organizations to provide outreach to schools regarding asthma related programs. In both of these instances, the goals outlined in the CERP simply call for the activities to be conducted without examining whether or not they achieved their underlying goal. For example, in the case of Chapter 5B, shouldn't the actions result in a decrease in the number of trucks that are idling longer than the existing State idling standards? If the outreach actions do not, then either the approach to inform the community was flawed or the issue may not have been as significant as it appeared. The CERP should require measureable, results-oriented goals. Programs that do not achieve their underlying goal should be revised or their resources directed to other more effective methods.

3-2

This also applies to enforcement. At various times, CSC members have raised concerns about trucks idling in their neighborhoods. The California Air Resources Board (CARB) staff mentioned some of the challenges faced when trying to enforce a measure (e.g. truck drivers seeing an enforcement officer approach and turning off their engine before an enforcement action can be taken). If community members are reporting these trucks, but existing enforcement processes are not proving effective, then additional approaches need to be considered. This would only be accomplished by having an analysis done at the end of each program to determine its effectiveness.

Monitoring of trucks and truck routes is critical and should be prioritized. A concern among the efforts by the CSC is the lack of hard data to use in determining where to direct resources. The SCAQMD staff has relied heavily on feedback provided by participants to identify sources of pollution. While helpful to determine where to begin, this type of identification is seriously flawed. We need verifiable data that can be tied to a particular region. This allows us to have uniform data that we can all work from and use to measure progress in the upcoming years. That is why IEEP supports the recommendation found in Chapter 5B Action 3 to use technology such as ALPR to collect information about neighborhoods most impacted by older trucks. By knowing where the oldest trucks operate in sensitive communities, we can direct existing resources so effectively.

3-3

IEEP supports efforts to improve the air quality in our communities. We believe the recommendations above will help achieve that goal. Thank you.

### Response to Written Comment Letter 3-1

South Coast AQMD is continuously looking to identify new incentive funding programs to replace higher polluting trucks with cleaner technology that exceeds current requirements. The funding provided by the Legislature for incentive projects to support the AB 617 program is an example of how the program has increased incentive funding to benefit disadvantaged communities. Staff continues to work with the California state legislature to set aside sustained funding for AB 617 statewide.

Staff recognize that for many of our incentive programs (e.g. Carl Moyer, Prop 1B) the requested funding levels typically is significantly higher than the available funds. As part of the process, applications are reviewed to ensure they meet incentive program funding guidelines and the most cost-effective projects are prioritized, including truck replacements. Existing grant funds, such as Carl Moyer, have state approved implementation guidelines that require surplus emission reductions, funding fleets that are in compliance with existing regulations, and not encouraging fleets and truck operators to receive public funds to pay for compliance. Implementation of Prop 1B funds does not have the same level of requirements, but still includes provisions to ensure that the emission reduction benefits are real and quantifiable, requiring additional reporting. South Coast AQMD staff expeditiously reviews applications and distributes incentive funds as quickly as possible. Additionally, South Coast AQMD continues to apply for and implement other grant funds, such as federal grants that provide flexibility to implement other approaches, including trade down approaches to provide lower emitting trucks to Independent Owner Operators (IOOs). Lastly, South Coast AQMD staff plans to use the approved Community Emissions Reduction Plan (CERP) to implement approaches that accelerate emission reductions from all priority categories, including heavy-duty trucks.

### Response to Written Comment Letter 3-2

We agree that resources should be used toward actions that are effective in reducing emissions, and staff will discuss with the CSC any suggested adjustments to the strategy based on such evaluations of the CERP actions. Staff will evaluate the effectiveness and necessity of the enforcement actions based on data collected during the idling sweeps. This would include quantitative information such as the number of trucks that were cited for idling violations, in

addition to qualitative observations such as changes in idling behavior once enforcement officers approach. This information will be included in the updates to the CSC. Other enforcement agencies, such as CARB, the City or County may also provide enforcement updates to the CSC. The CERP actions also include built-in flexibility to allow for adjustments as new information becomes available or if specific approaches and actions are found to be more effective.

Using CSC input to locate areas where the community has expressed concern with smoking and idling vehicles, CARB will conduct roadside inspections within areas where they can enforce (e.g., vehicles cannot be pulled over on freeways, but inspections can be conducted on surface streets). In addition to gathering the CSC's input, CARB and South Coast AQMD staff are in the field regularly conducting other enforcement efforts, they plan to document idling and smoking vehicles to further support this enhanced roadside inspection program.

There has been a recent reduction in allowable smoke opacity changing from 40 percent to five percent for heavy-duty trucks with diesel particulate filters. Smoke opacity is used to describe and measure the level of visible black smoke emissions. It is a method used to measure a PM-related emission parameter in the field. With this change in measurement, CARB enforcement staff will be able to ensure that vehicles are properly maintained. In addition to providing citations to non-compliant trucks, CARB enforcement staff will also distribute pamphlets to truck drivers on how to properly maintain emissions control equipment. CARB is also conducting research to determine the effectiveness of heavy-duty diesel vehicle onboard diagnostic systems to better support proper maintenance of heavy-duty diesel trucks in South Coast AQMD's AB 617 communities and will provide updates on the research's results when available.

#### Response to Written Comment Letter 3-3

South Coast AQMD will be exploring the possibility of using Automated License Plate Reader (ALPR) systems in the San Bernardino, Muscoy community to prioritize locations and targeted outreach to truck owners for incentive programs to replace higher polluting trucks with cleaner technology.

The AB 617 CERP development process emphasizes the importance of community input. The input provided by the community on locations where truck idling is observed provides valuable information about where these emissions may be impacting people in the community. If illegal idling emissions can be decreased in these areas near sensitive receptors, then these actions would have even greater impact compared to decreasing similar emissions in areas that are far away from sensitive receptors.

**Comments (Unlimited Size) \***

BNSF appreciates serving on the Steering Committee, and we offer the following comments.

1. We suggest the following edit in the Federal Actions section on page 5-3 to clarify U.S. EPA's role in regulating locomotive emissions: "Railroads operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. Environmental Protection Agency."
2. On page 5-3, the draft states: "[The EPA] regulations do not require railroads to reduce their usage of older, higher-emitting locomotives." Please add "Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time."
3. Page 5-3 states: "[EPA's] regulations limit idling for both new and remanufactured locomotives..." EPA regulations do not limit idling, but instead require the installation of devices that reduce idling on newly manufactured and remanufactured locomotives.
4. On page 5-3, the draft states: "In 2017, CARB also petitioned EPA to develop a new regulation requiring engine manufacturers to meet a cleaner Tier 5 emission standard for new engines." Please add "The CARB petition is under review by the EPA."
5. Page 5-4 states that the District "...is evaluating potential strategies to reduce emissions from railyards, including developing a potential regulation affecting railyards called an Indirect Source Rule (ISR), and/or other potential partnering strategies that could reduce emissions." The railroads have participated in workshops related to Facility Based Mobile Source Measures and will continue to engage with District staff and the community. Any ISR proposals must be within the District's legal authority.
6. Page 5-4 states: "South Coast AQMD staff conducted air monitoring near SBM during the Multiple Air Toxics Exposure Study (MATES) in 2013, which identified high levels of diesel PM near the BNSF railyard." Air quality monitors cannot identify levels of diesel PM. We suggest you change this sentence to "...identified elevated BC and UFP levels near the BNSF railyard."
7. Page 5-4 states: "South Coast AQMD also funded the Environmental Railyard Research Impacting Community Health (ENRRICH) study, which consisted of a community health assessment and public health outreach project led by the late Dr. Sam Soret of Loma Linda University." On November 10, 2014, BNSF sent comments on the ENRRICH study to the SCAQMD, which it encourages you to revisit. We must point out that the Loma Linda studies ignore the potential impacts of other emission sources in the often heavily industrial areas near railyards, and we disagree with the authors' conclusions. Moreover, as BNSF mentioned in its presentation at the June 20 CSC meeting, the railyard emissions data used to support these reports was from 2005 and does not represent current emission levels, and if updated emission levels were to be used, the studies' risk levels would be much lower.
8. Page 5-5 states: "Conduct fenceline and/or mobile monitoring around railyards to identify activities that may cause increased levels of air pollution. Mobile measurements (and fixed monitoring, when appropriate) will extend into the community to assess how railyard related emissions may contribute to the overall air pollution burden in this community." BNSF requests that the District consult with the railroads before conducting new fenceline and/or mobile monitoring so that we may share our insights and expertise with the District as it develops its monitoring protocols.
9. The railroads are updating emissions inventories for several southern California railyards which show significant reductions. We are reviewing these with District staff.
10. UP and BNSF have a multi-decade track record of improving air quality within the District and appreciate the District's successful efforts to partner with us to provide incentives to develop and test new, cleaner locomotives and technology used in railyards.
11. Again, thank you for the opportunity to be a member of the Steering Committee. Please call or email with questions.

CERP Comment Files

Response to Written Comment Letter 4-1

Chapter 5e of the Draft CERP has been updated to include the following as suggested in the Comment Letter:

1. U.S. EPA's role in regulating locomotive emissions has been clarified to "Railroads operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. Environmental Protection Agency."
2. The sentence "Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time" has been added.
3. The sentence "these regulations limit idling for both new and remanufactured locomotives and mandate the use of ultra-low sulfur diesel fuel" has been changed to "these regulations require the installation of devices that reduce idling on newly manufactured".
4. The Draft CERP included the sentence "The CARB petition is under review by the EPA". However, to elaborate and provide clarification, in the Draft Final CERP staff has replaced this sentence with: "In 2017, the California Air Resources Board (CARB) petitioned the U.S. EPA to update emission standards for new and remanufactured locomotives, establishing a cleaner Tier 5 standard for new engines. The petition asked that the new emission standards go into effect in 2023 for remanufactured locomotives, and 2025 for new locomotives. South Coast AQMD supported the petition by sending a letter of support. The U.S. EPA acknowledged the receipt of the petition, but has not provided any update or plans for further action." In addition, a footnote was also added to provide additional information: "Even if the U.S. EPA were to update the emission standards in response to the petition, the new standards would only apply to new and remanufactured locomotive engines. Given the slow turnover of the railroads' fleet, emissions reductions would not be immediate."
5. South Coast AQMD staff acknowledges that the railroads have participated in Facility Based Mobile Source Measure (FBMSM) workshops and look forward to continued discussion with all stakeholders during the rule development process. South Coast AQMD will ensure all Indirect Source Rules (ISR) are within the District's legal authority.
6. The statement "South Coast AQMD staff conducted air monitoring near SBM during the Multiple Air Toxics Exposure Study (MATES) in 2013, which identified high levels of diesel PM near the BNSF railyard" has been changed to "South Coast AQMD staff conducted air monitoring near SBM during the Multiple Air Toxics Exposure Study (MATES) in 2013, which identified high levels of black carbon (BC) and ultrafine particulate matter (PM) near the BNSF railyard."

Response to Written Comment Letter 4-2

South Coast AQMD staff has reviewed the comments received on the ENRRICH study on November 10, 2014. South Coast AQMD provided funding for the ENRRICH study as part of the Clean Communities Plan efforts in San Bernardino. The study provided new information about public health outcomes that were identified as community priorities (e.g. asthma, cancers). Drawing conclusions about causality is complex and typically requires a comprehensive review of the scientific literature; such efforts are not the aim of the CERP. Instead, the focus of the AB 617 CERP is on reducing local emissions. Based on the source attribution analysis in Chapter 3b, diesel PM, a toxic air contaminant, is the biggest contributor to the overall cancer risk in the community. Trains account for 25 percent of the toxic air contaminant emissions for this community based on 2017 baseline emissions. The 2017 baseline emissions include rule adoptions or amendments since 2016. The projected emissions for future milestone years of 2024 and 2029, show train emissions are expected to increase to 31 percent and 26 percent, respectively. Because of the projected increase and CSC input, actions are included in the CERP to address railyard emissions. South Coast AQMD staff has recently received an updated emissions inventory for the San Bernardino railyard that BNSF has voluntarily prepared. Staff will work with BNSF to review the data and will provide updates to the community in the coming months.

Response to Written Comment Letter 4-3

Staff will continue to engage all members of the CSC (including BNSF) on future air monitoring strategies through quarterly or biannual updates. Staff will continue to work with the railroads on emissions inventory data and to provide incentives for cleaner technology that goes above and beyond current requirements. Staff appreciates all CSC members' input and participation to develop the CERP.

## Comment Letter #5

Dear AB 617 Team,

On behalf of the Center for Community Action and Environmental Justice (CCA EJ), please accept these comments on the draft Community Emissions Reduction Plan (CERP) updated June 2019 for the AB 617 Year 1 Community of San Bernardino/Muscoy (SBM). For decades, the communities of SBM have been vocal about their environmental health and air quality concerns to the South Coast Air Quality Management District (SCAQMD), California Air Resource Board (CARB) and local City/County officials. We understand deeply through our lived experiences, the deteriorating effects that breathing, playing, working and living in over-polluted, unmonitored and poorly regulated communities have on our quality of life and we are determined to continue raising our concerns and work towards accountability and solutions from all stakeholders and governing bodies. For these reasons, we are actively involved on the Community Steering Committee (CSC) and raise the concerns outlined below on the draft CERP.

5-1

First, we would like to thank the SCAQMD AB 617 staff who has meaningfully engaged with us throughout the process. Their flexibility and shared vision has allowed for intentional collaboration and open dialogue as we work to identify stronger solutions. We hope that as the CERP goes through management for approval, that they too consult with the community as their staff has done.

Currently, the CERP overwhelmingly focuses on education, outreach and enforcement - strategies that are necessary and important parts of the plan. However, they must be matched with subsequent emission reduction goals and health outcome targets. A community health assessment must be required to measure the existing health standards baseline in order to have quantifiable goals and targets. In this manner, we can assess if the strategies in the CERP are a success or need strengthening.

5-2

A large part of AB 617 has to do with the incentive funding that has been allocated for the different communities. We support programs that are equitably dispersed and require data reporting that assists in us better understanding what fleets are most entering the SBM community. Much of the emission reductions will be seen through the transition to clean transportation technology. Therefore, we continue to support the accelerated adoption of only zero emission technology and a robust, clean electric supporting infrastructure. Wherever immediately possible, zero-emission technology must be prioritized (drayage, cargo handling equipment, last-mile delivery, TRU's, etc). We are excited to see that Omnitrans has laid out a tentative timeline for the electrification of their fleet. We would like to continue recommending that BNSF also allows for its neighboring communities to be aware of their tentative timeline for electrification and emissions inventory. BNSF should play an active role in implementing new CERP solutions which go beyond what they are currently meeting. This will allow the CERP to better assess its benchmarks and goals.

5-3

The CERP must go beyond what is already required in the region. Our cumulative pollution burdens continue to grow despite the existing regulations created by SCAQMD and CARB. Under the AB 617 Blueprint, we understand that the CERP can go above and beyond existing policies. Instead, the SBM CERP includes minimal suggestions for new policies and mostly relies on enforcing existing regulations - which we note are not doing a sufficient job to address our air quality and public health concerns. It is imperative that SCAQMD and CARB take the CSC's recommendation to approve and implement the Facility Based Measure and Indirect Source Rules for warehouses and railyards. Moreover, SCAQMD must consider strengthening that rule as it pertains to AB 617 communities such as SBM.

5-4

Given that SMB's primary concerns involve mobile sources, we recommend that CARB take a more active role in the creation, implementation and reassessment of the CERP. CARB should assume as much responsibility as SCAQMD has in assuring that the CERP is a community-focused, ambitious benchmark for our region. CARB should be using its expertise to strengthen the solutions that have been suggested and contribute to a comprehensive plan that goes beyond enforcing their current regulations. CARB should also use the experiences, testimonies and recommendations of the CSC to inform the urgency of future regulations, programs and incentives.

5-5

In order for the CERP to be successful, all stakeholders must continue to stay active and determined to see the CERP grow into fruition during both the implementation and reassessment phases. Specifically, the commitments made by the land use and public health agencies must be supported because of the undeniable relationship between land use decisions and air pollution. The CSC has mentioned the need for restricted truck route ordinances, CARB recommended 1,000 ft vegetative buffers, safe new/redevelopment proposals and strong County/City General Plan environmental justice policies that ensure the communities do not have an increase of environmental burdens, et al. SCAQMD must actively support the ideas, goals and actions that are not seen in their jurisdiction and assist in advocating for environmentally just land use decisions made by local elected officials and agencies. Emissions reductions will be achieved when we take a holistic approach to the problem.

5-6

Sincerely,

Ericka Flores  
Organizing Director  
SBM Community Steering Committee Primary

Andrea Vidaurre  
Policy Analyst  
SBM Community Steering Committee Alternate

---

### Response to Written Comment Letter 5-1

Thank you for your comment. Staff will continue to provide updates to and engage with the CSC, not only on the on the CERP approval process, but throughout the implementation of the CERP.

### Response to Written Comment Letter 5-2

Emission reduction targets, where quantifiable, have been included in Chapter 5a. Implementation of the CERP is estimated to reduce NOx emissions by 127.9 tons per year of and DPM emissions by 0.91 tons per year. These emission estimates are based on future statewide mobile source regulation measures from CARB and potential mobile source incentive projects to benefit this community as outlined by the actions in this chapter. Future statewide mobile source regulation measures that contribute to the estimated emission reductions in this community include the CARB Advanced Clean Truck Rule, Heavy-Duty Low NOx Rule, and Heavy-Duty Inspection and Maintenance. The table below provides a list of the overall emission reduction targets for the CERP and the type of actions that contribute to the targets. Baseline emissions refer to expected future emissions without any new action or regulation beyond those already adopted. The overall NOx and diesel PM emission reduction targets for this community are 75 tpy of NOx (10% reduction) and 0.9 tpy of diesel PM (10% reduction) by 2024, and 128 tpy of NOx (21% reduction) and 0.91 tpy of diesel PM (15% reduction) by 2029.

Some actions in this chapter are likely to result in additional emissions reductions that are not quantifiable at this time. For example, Chapter 5e – Railyards, includes an action that would reduce emissions from the BNSF railyard. The target for this action is to pursue strategies to reduce air pollution from railyards and intermodal facilities through the development of Facility Based Mobile Source Measures. However, reductions from this action would be quantified during the rule development process to provide staff an opportunity to evaluate technologies or strategies that would reduce emissions at railyards. As another example, the CERP includes an action to address fugitive emissions and PM from concrete batch, asphalt batch, and aggregate plants. This action requires enhanced air monitoring along with follow-up strategies (e.g., enforcement activities) to occur before emission reduction targets can be identified from these sources.

The commenter suggests use of health metrics and outcomes as a tool to measure success from emission reductions under the AB 617 program. The focus of the AB 617 CERP is to achieve emission reductions. Reducing air pollution will have public health benefits, and the most direct method to measure plan progress is to evaluate what emission reductions have been achieved. Many factors contribute to cumulative public health burdens and health outcomes, and short-term health benefits are difficult to assess, especially with the information that is available. In addition, conducting a study to establish a health baseline and track improvements over time is costly and may not show the long term health benefits achieved from the emission reductions in the CERP. Although it is not feasible to use health metrics and outcomes as measuring tools, staff

has addressed the community's desire to see improvements in health outcomes by including actions to partner with local health organizations for direct public health interventions, such as asthma management programs. In addition to actions to conduct school-based outreach to provide air quality information, such as the Clean Air Ranger Education (CARE) program, the CERP includes collaborative efforts with local organizations to provide public information on how to receive air quality advisories and reduce exposure to air pollution. This type of outreach would be provided to school, childcare centers, and at community events.

#### Response to Written Comment Letter 5-3

South Coast AQMD supports the development and deployment of zero emission vehicles and equipment, where technologically feasible and commercially available. The development and deployment of such vehicles and equipment is a key strategy for achieving the region's air quality targets and protecting public health. South Coast AQMD has funded a variety of zero-emission (ZE) technologies over the years, including battery and fuel cell electric trucks and cargo handling equipment, leveraging grants from both federal and state agencies as well as cost shares from regional stakeholders as well as collaborating with Southern California Edison to implement electric public utility infrastructure projects.

Although significant progress has been made in the development of zero-emission technologies, most of these technologies are not yet ready for commercial market in terms of economic viability and technology maturity. For example, there are currently no feasible models of zero-emission heavy-duty trucks commercially available, although it is expected that may change in the near term. South Coast AQMD will continue its on-going efforts to support the development of these zero-emission technologies to accelerate their commercialization and deployment as early as possible. In addition, South Coast AQMD is continuously looking to identify new incentive funding programs to replace as many higher polluting trucks with cleaner technology that exceeds current requirements. Staff plans to use the approved CERPs to implement approaches that accelerate emission reductions from all priority categories, including heavy-duty trucks.

Additionally, Chapter 5d, Action 2, has been included in the CERP to support Omnitrans' transition to zero-emission buses. In addition, Chapter 5e, Action 1 includes an action to work with BNSF railyard to replace diesel-fueled equipment with cleaner technologies and to provide updates to the CSC on emission reduction progress within the San Bernardino BNSF railyard.

#### Response to Written Comment Letter 5-4

Actions specified in the CERP have been written to address the air pollution sources prioritized by the CSC within the San Bernardino, Muscoy community. These actions are community specific and go beyond existing South Coast AQMD efforts as outlined in the Air Quality Management Plan (AQMP). For example, one key course of action included in Chapter 5b, Action 2 to reduce emission from heavy-duty trucks transiting the community by working with the City or County to identify opportunities to develop enforceable truck routes and establish designated truck areas, which is an action above and beyond what the AQMP outlines. In addition, targeted outreach

and identifying incentive funding opportunities to accelerate adoption of cleaner equipment and trucks has also been included in Chapter 5b to address truck emissions in the San Bernardino, Muscoy community. South Coast AQMD staff will continue to work on the development of Facility Based Mobile Source Measures for railyards and intermodal facilities and ISR for warehouses to address trucks that transit the community. Staff will hold one warehouse ISR working group in the Inland Empire within the next few months in addition to a joint railyard ISR working group with the CARB within the next year. The railyard ISR meeting has been incorporated into the CERP. While these efforts are ongoing, incentives for equipment that go above and beyond current rules and regulations will achieve much needed emission reductions sooner for this community. Actions will be prioritized, and updates will be provided to the CSC periodically on the implementation process of all actions included in the CERP. Timelines for each action are specified in the implementation schedule (Chapter 5h).

#### Response to Written Comment Letter 5-5

South Coast AQMD has limited jurisdiction on mobile sources. However, to address the air quality priorities established by the San Bernardino, Muscoy community, the South Coast AQMD will collaborate with CARB to address mobile sources. CARB has been written into the CERP under “Implementing Agency, Organization, Business or Other Entity” with specific responsibilities.

CARB agrees to take an active role in providing emissions reductions in the San Bernardino, Muscoy community. CARB staff will continue to work collaboratively with the San Bernardino, Muscoy community and South Coast AQMD on the implementation of the CERPs. CARB enforcement will provide quarterly sweeps and will continue to be involved during the CSC meetings by providing presentations and report back to the CSC as information becomes available. CARB will also be involved in outreach efforts to provide information about current state programs and incentives. In addition to enhanced enforcement, CARB staff is working with South Coast AQMD to reduce the cumulative burden in the community. CARB is undertaking several new regulations, listed in the CERP, to reduce emissions from heavy-duty trucks, which includes: the Advanced Clean Truck Regulation, the Heavy-Duty Vehicle Inspection and Maintenance Regulation and the Heavy-Duty Low NOx Rule. The following table provides a list of the statewide measures with expected decision dates, implementation periods, and estimated emission reductions.

Table 2: Estimated Emission Reductions from Statewide (CARB) Mobile Source Regulations by 2024 and 2029

Statewide Measure	Board Action Date <sup>a</sup>	Implementing Entity	Emission Reductions Targets 2024/2029 (tpy)		
			NOx	VOC	DPM
Heavy-Duty Vehicle Inspection and Maintenance <sup>b</sup>	2020	CARB	25/31	N/A	0.31/0.35
Advanced Clean Trucks Regulation <sup>c</sup>	2019	CARB	0.1/1.9	N/A	<0.1/0.1
Heavy-Duty Low NOx Rule <sup>d,2</sup>	2020	CARB	5/50	N/A	N/A

<sup>a</sup> Timeline based on first CARB Board hearing dates for each measure or beginning of implementation for mobile source incentives

<sup>b</sup> CARB's current inspection programs include the roadside Heavy-Duty Vehicle Inspection Program and the fleet Periodic Smoke Inspection Program. These regulations require heavy-duty vehicles operating in California to be inspected for excessive smoke and make repairs where applicable.

<sup>c</sup> CARB is working through a public process to develop and consider proposals for new approaches and strategies that may transition to zero emission technology those truck fleets that operate in urban centers, have stop and go driving cycles, and are centrally maintained and fueled.

<sup>d</sup> This rule would set new statewide engine standards for NOx reduction from trucks by 2026, and additional reductions including and after 2027. More information available at: <https://www.arb.ca.gov/msprog/hdlownox/hdlownox.htm>

Additional measures being developed that will benefit the community include: the Cargo Handling Equipment Amendment, evaluation and Potential Development of Regulation to Reduce Emissions from Locomotives, and Transport Refrigeration Units used for Cold Storage.

In addition, CARB staff also understands that idling is a concern and is taking steps to evaluate the existing idling policy and evaluate how to better enforce the existing idling regulations. CARB will continue to identify opportunities to engage with CSC and reduce emissions in the community.

#### Response to Written Comment Letter 5-6

South Coast AQMD will continue to foster partnerships with other local agencies and entities to address the CSC's priorities that are not within South Coast AQMD's jurisdiction. The CERP contains actions to identify partners (e.g., local entities, organizations) to establish greenbelts through tree planting, enforce truck idling free zones, reduce diesel-powered trucks from transiting near schools, and to develop land-use plans that reduce air pollution emissions near or exposure to residential receptors. Staff will also partner with health agencies and other local organizations to share information or provide outreach to schools for asthma-related programs

<sup>2</sup> California Air Resources Board, Heavy-Duty Low NOx, <https://www.arb.ca.gov/msprog/hdlownox/hdlownox.htm>, Accessed June 13, 2019.

as specified in Action 1 in Chapter 5g. Staff will continue to engage the CSC along with providing updates during the implementation of the CERP.

SCE appreciates the opportunity to be a business representative on the San Bernardino Community Steering Committee and work towards our shared goal of reducing emissions from transportation.

We are glad the CERP discusses SCE's funding towards infrastructure to support charging for medium- and heavy-duty electric vehicles through the Charge Ready Transport Program. We thought it would be helpful to also add that the Program requires a minimum of 25% of the infrastructure budget to serve vehicles operating at ports and warehouses. A good place to include this would be in the last paragraph of Warehouses Chapter, page 5-3. "A minimum of 40% of SCE's budget for this program must be spent in disadvantaged communities, and also a minimum of 25% of the budget must serve vehicles operating at ports and warehouses."

Also within the Warehouses Chapter, we recommend modifying one of the goals of Action 3 on page 5-6 to, "South Coast AQMD and SCE will provide outreach to all 43 existing warehouses within the San Bernardino/Muscoy community to encourage installation of infrastructure needed to support zero emissions vehicles and equipment; provide outreach to any new/planned future sites (and project partners) and determine feasibility to install zero emissions electric infrastructure, serving potential zero emissions vehicles and/or equipment in the San Bernardino/Muscoy community. South Coast AQMD and SCE will track adoption of zero emission infrastructure and provide updates to the Community Steering Committee."

We think providing outreach to all existing warehouses and any future planned warehouses in the area is a measurable goal, however, the ultimate adoption of zero emission infrastructure is beyond the control of the South Coast AQMD and SCE.

Thank you! Please feel free to contact me anytime.

Response to Written Comment Letter 6-1

Staff appreciates SCE's participation in the San Bernardino, Muscoy CSC and looks forward to collaborating to promote the installation of fueling infrastructure to support zero-emission technology. Staff has added the sentence "A minimum of 40% of SCE's budget for this program must be spent in disadvantaged communities, and also a minimum of 25% of the budget must serve vehicles operating at ports and warehouses" in Chapter 5c, Action 3.

In addition, the goals of Action 3 in Chapter 5c have been modified as "South Coast AQMD and SCE will provide outreach to all 43 existing warehouses within the San Bernardino, Muscoy community to encourage installation of infrastructure needed to support zero-emission vehicles and equipment, provide outreach to any new/planned future sites (and project partners) and

determine feasibility to install zero-emission electric infrastructure, serving potential zero-emission vehicles and/or equipment in the San Bernardino, Muscoy community. South Coast AQMD and SCE will track adoption of zero-emission infrastructure and provide updates to the CSC.”

Comment Letter #7  
**COALITION FOR**  
**CLEAN AIR**

August 6, 2019

Dr. William Burke and Board Members  
 South Coast Air Quality Management District (SCAQMD)  
 21865 Copley Drive  
 Diamond Bar, CA 91765

**Re: Comments on AB 617 Community Emission Reduction Plans (CERP) for the San Bernardino/Muscoy (SBM) Community**

Dear Chair Burke and the SCAQMD Board Members,

The Coalition for Clean Air (CCA) is writing to provide comments regarding the draft CERP for the SBM community. Since its passage in 2017, CCA has been actively involved with the implementation of AB 617 (C. Garcia) at both the statewide and air district level. CCA staff has participated in most of the AB 617 meetings hosted by the California Air Resources Board (CARB) and SCAQMD. It's important to note that we offer these comments not to speak for the local community or the Community Steering Committee (CSC), but rather to protect public health, improve air quality and prevent climate change. We hope SCAQMD uses this opportunity to begin righting decades of environmental injustice by committing to developing the strongest possible emissions reduction plan and empowering the local community.

- The SBM CERP still lacks a direct health nexus and any projections or targets for reductions of toxic air contaminants.

7-1

The various members of the CSC have been very clear in their request to see specific emission reduction targets that include a nexus with community health outcomes. Yet, the draft CERP continues to lack specific emissions reduction targets, let alone targets based on health outcomes. Rather, the draft CERP anticipates a 40-50 tons per year (tpy) reduction of oxides of nitrogen (NOx – a criteria pollutant rather than a toxic air contaminant) and a .5-.6 tpy reduction in particulate matter (PM). Even then, these anticipated reductions are estimates rather than targets, and provide little insight into reductions of toxic air contaminants.

Again, we point to the text of AB 617 and its mandate for emission reduction targets. Section 44391.2(c)(3) of the Health and Safety Code (HSC) states, “[T]he community emissions reduction programs shall be consistent with the state strategy and include emissions reduction targets, specific reduction measures, a schedule for the

660 S. Figueroa Street, Suite 1140  
 Los Angeles, California 90017  
 (213) 223-6860

1107 Ninth Street, Suite 440  
 Sacramento, California 95814  
 (916) 527-8048

[www.ccair.org](http://www.ccair.org)

implementation of measures, and an enforcement plan.” For the CERP to not include specific emission reduction targets is inconsistent with the spirit and the letter of the law. As such, we urge SCAQMD to include specific toxic air contaminant emission reductions and a nexus to community health in the finalized CERP.

7-1  
Cont.

- **To the greatest extent possible, all proposed emission reductions should meet State Implementation Plan (SIP) creditable criteria (quantifiable, surplus, enforceable and permanent). However, emission reductions that don’t meet these criteria (e.g., working with local agencies to rectify bad land use decisions) should not be excluded.**

The emission reductions achieved by the CERP should be real, measurable, and verifiable. The closer they are to meeting the criteria for being SIP creditable, the more confidence the community will have in the effectiveness of the Community Air Protection program. “Paper” compliance threatens to undermine the effectiveness of the SBM CERP and reduce the benefit to the local communities. At the same time, we recognize that not every important reduction measure lends themselves to meeting these criteria. Other opportunities which are not as easily measured but still have a positive community-level impact should not be ignored.

7-2

- **The SBM CERP relies heavily on incentive funding and does not adequately assign responsibilities to polluters.**

As with the other draft CERPs, the SBM CERP relies heavily on incentive funding to the possible detriment of more stringent rules and enforcement. While incentives should be included as part of the final CERP, other strategies need prioritization. For example, creating strong Indirect Source Rules (see page 3), mandating on-site mitigation and requiring, rather than just incentivizing, zero-emissions warehouse and railyard equipment are clear examples where tighter rules will yield emissions reductions. Additionally, rules must be enforced in order to be effective. As such, SCAQMD should include tougher penalties as authorized by Section 9 of AB 617 and greater enforcement efforts as part of its overall strategy.

7-3

Further, the lack of a specific implementing agency or firm deadlines undercuts the effectiveness of incentive programs. Regarding Action 2 of Neighborhood Truck Traffic, “Reduce Emissions from Heavy-Duty Trucks,” SCAQMD has again failed to establish measurable goals for reducing emissions from trucks. The first goal states the following, “Organize [insert number] of incentive outreach events per year and provide bianual updates to the CSC.” SCAQMD should at least provide an anticipated number of outreach events it intends to conduct about incentive funding for trucks, instead of

leaving this information blank for CSC members to fill in. At minimum (and considering the health impacts of trucks emissions and the necessity of meeting Clean Air Act goals for the South Coast Basin), SCAQMD should be providing at least monthly outreach events to trucking companies and truck drivers on incentive funding. Anything less would be irresponsible.

7-3  
Cont.

In addition to requiring greater enforcement, the CERP should assign more requirements and responsibilities to the polluters themselves. In the draft CERP, only Omnitrans is assigned any sort of responsibility. This leaves warehouses, railyards, concrete batch, asphalt batch and rock and aggregate plants without any specified responsibilities to the community under the CERP. As such, the SBC CERP should, as appropriate, assign responsibilities to the other community priorities identified in the CERP.

- **The SBM fails to mention Best Available Retrofit Control Technology (BARCT) requirements despite the heavy industrial presence in the region, particularly in relations to quarrying as well as concrete batch, asphalt batch and rock and aggregate plants.**

7-4

Unlike the other draft CERPs, the SBM CERP contains no reference to BARCT requirements for industrial sources within the SBM community. This omission is a fatal flaw in the draft CERP, given the large number of industrial sources, such as quarries, asphalt and aggregate plants in the region. CARB's interim BARCT Clearinghouse identifies various technologies to address NOx emissions from these sources. As such, BARCT should be part of the SBM CERP not just for these industries, but other industrial sources as well. Lastly, BARCT requirements should be implemented according to the 2022 timeframe identified by SCAQMD and no later than the 2023 deadline created by Health and Safety Code §40920.6(c)(1).

- **The CERP needs to commit to a strong Indirect Source Rule (ISR) for warehouses and railyards.**

San Bernardino is experiencing massive growth in warehouses and other sources that attract pollution from trucks. Similarly, the railyards have brought in pollution from trains and cargo handling equipment for decades. As such, the SBM CERP should commit SCAQMD to developing a strong ISR to address these pollution magnets. While we applaud SCAQMD for including the development of an ISR within the CERP, the CERP should go into greater detail as to what the rules would look like. This includes requiring on-site mitigation, near-zero and zero-emissions cargo handling equipment, plug-in technology and other emissions reduction and exposure-reduction strategies.

7-5

- **The CERP should anticipate emissions impacts from the San Bernardino International Airport**

San Bernardino International Airport (SBD) is an increasingly important cargo-focused international airport located just over a mile from “Community Impacted Area” and directly adjacent to the “Emissions Study Area.” Yet, the draft CERP only has a fleeting mention of its existence. Though not fully operational yet, it’s likely the airport will see increased usage after the completion of its customs facility and forthcoming passenger service. Additionally, several warehouses have been built directly adjacent to the airport, attracting truck traffic and cargo handling. While we acknowledge SBD was not included as a community priority at this time, it’s possible that it will need to be prioritized in the future.

7-6

- **More information on current efforts to reduce emissions from railyards is needed, and railroads still need responsibilities assigned to them.**

The draft CERP still does not provide any information regarding the railyards’ compliance with the second agreement in 2005 between CARB, BNSF and Union Pacific. This information should be provided to the CSC and a summary of what the railroads have done to comply with the second rule should be included in the CERP.

Further, there are still NO responsibilities assigned to the railroads themselves. Once the indirect source requirements are implemented, the railroads should have the responsibility of complying with the indirect source requirements themselves. Regarding Action 1 of Railyards, “Reduce Emissions from Railyards,” and as stated in our prior comments, it makes no sense that the railroads themselves are not listed as one of the “Implementing Agency, Organization, Business or Other Entity” that will work to reduce emissions from railyards. Surely it cannot be beyond the power of SCAQMD to mention that BNSF and Union Pacific will have to be involved in any action or policy taken to reduce emissions at their associated railyards. The railroads are certainly aware that the CERP is being developed and that this goal is being included. Referencing the railroads themselves in the CERP as an implementing business entity is essential for this goal to be finalized.

7-7

We appreciate the opportunity to submit and your consideration of our comments. CCA acknowledges and commends the thousands of staff-hours put into the implementation of AB 617, and understands this is a living, evolving process and document. However, the draft SBM CERP still needs much work and strengthening if it is going to live up to the promise of bringing cleaner, healthier air to California’s most polluted, vulnerable communities.

Sincerely,

Christopher Chavez  
Deputy Policy Director

#### Response to Written Comment Letter 7-1

Please see Response to Comment Letter # 5-2 in the for NOx and DPM emission reduction targets.

As specified in Chapter 3b, emissions of DPM (a toxic air contaminant recognized by the State of California) associated with heavy-duty trucks are also expected to decrease due to recent regulations, and CARB's in-use off-road diesel-fueled fleets regulation will also contribute to reducing DPM. The commenter urges the inclusion of specific toxic air contaminant emissions reductions. The actions on reducing DPM will reduce toxic air contaminant emissions. DPM is the main contributor to cancer risk in this community. As such, the CERP identifies multiple action items designed to reduce DPM. (e.g., Actions 1, 2 and 3 in Chapter 5b) However, in future years, DPM continues to be the main contributor to cancer risk in this community.

The commenter also suggests use of health metrics and outcomes as a tool to measure success from emission reductions under the AB 617 program. The focus of the AB 617 CERP is to achieve emission reductions. Reducing air pollution will have public health benefits, and the most direct method to measure plan progress is to evaluate what emission reductions have been achieved. Many factors contribute to cumulative public health burdens and health outcomes, and short-term health benefits are difficult to assess, especially with the information that is available. In addition, conducting a study to establish a health baseline and track improvements over time is costly and may not show the long term health benefits achieved from the emission reductions in the CERP. Although it is not feasible to use health metrics and outcomes as measuring tools, staff has addressed the community's desire to see improvements in health outcomes by including actions to partner with local health organizations for direct public health interventions, such as asthma management programs. In addition to actions to conduct school-based outreach to provide air quality information, such as the Clean Air Ranger Education (CARE) program, the CERP includes collaborative efforts with local organizations to provide public information on how to receive air quality advisories and reduce exposure to air pollution. This type of outreach would be provided to school, childcare centers, and at community events.

#### Response to Written Comment Letter 7-2

South Coast AQMD staff continues to pursue a suite of actions, including some that meet SIP creditable criteria, and some that do not meet these criteria but are equally important to reducing emissions in the community. All these actions have been carefully drafted to ensure the maximum emission reductions and to address the CSC's air quality priorities.

#### Response to Written Comment Letter 7-3

All actions written in the CERP will be implemented to ensure that all air quality priorities are addressed. In addition to incentives and outreach, the CERP uses a combination of strategies to address the air quality priorities and reduce emissions, such as air monitoring and enforcement and rules and regulations. Incentive monies are only given to owners or operators that would reduce emissions above and beyond current rules and regulations. ISRs for warehouses and railyards are still undergoing the rule development process. While these efforts are ongoing, incentives for equipment that go above and beyond current rules and regulations will achieve much needed emission reductions sooner for this community. Actions will be prioritized, and updates will be provided to the CSC periodically on the implementation process of all actions included in the CERP. Timelines for each action are specified in the implementation schedule (Chapter 5h).

Chapter 5b: Neighborhood Truck Traffic, Action 2 has been updated to specify "Organize one incentive outreach event (e.g., incentive fair, workshop) per year during the implementation period of this CERP, to be evaluated thereafter with community input". This incentive outreach event is in addition to the other ongoing incentive outreach efforts conducted by the South Coast AQMD. Also, by allowing reevaluation of these efforts, the CERP process provides the community additional opportunity for input and built-in flexibility on how outreach for incentives can be the most effective.

Although some actions may not assign responsibilities to "polluters" or industry stakeholders under Implementing Agency, Organization, Business or Other Entity, any rules and regulations adopted by the South Coast AQMD and CARB will be applicable to those entities subject to the rules and regulations.

#### Response to Written Comment Letter 7-4

As an ongoing effort, South Coast AQMD is currently dismantling the Regional Clean Air Incentives Market (RECLAIM) program, because the ability to achieve NOx emission reductions using a market-based approach has diminished. These RECLAIM NOx facilities, typically larger facilities, will transition to a command-and-control regulatory structure to ensure these facilities meet BARCT. As a part of this effort an analysis of the equipment at each RECLAIM facility has been completed by giving priority to older, higher polluting equipment that need to install retrofit controls. Appendix 3a identifies one RECLAIM facility in the San Bernardino, Muscoy community.

This facility is MARS PETCARE U.S., INC. and it is a dog and cat food manufacturing facility subject to Rule 1148.2. In addition, Equipment at non-RECLAIM facilities that are within the community and do not meet BARCT requirements, will be required to do so. As part of the BARCT process, the following South Coast AQMD Rules will be evaluated or have been evaluated: 1109.1, 1110.2, 1117, 1118.1, 1134, 1135, 1146, 1146.1, 1146.2, 1147, 1147.1, and 1147.2 will be evaluated for BARCT. The BARCT assessment is still currently being conducted for a number of rules and the list of affected non-RECLAIM facilities has not been finalized.

#### Response to Written Comment Letter 7-5

Staff is aware of the growth in the San Bernardino region and the challenges it poses. South Coast AQMD will continue to develop the ISRs in parallel to the AB 617 efforts and provide updates to the CSC on the rule making process. Details of ISR requirements needs to be conducted in the rule development process so that all stakeholders can participate in the public process. Proposed rule concepts and input provided by the CSC during the development of the CERP will be provided to staff developing ISR. Staff encourages CSC members to actively participate in the South Coast AQMD rule development process for ISR. All proposed rule concepts must fall within South Coast AQMD's legal authority.

#### Response to Written Comment Letter 7-6

South Coast AQMD is aware of the expansion of the San Bernardino International Airport. Staff has included several actions in the CERP that address emissions from trucks and warehouses that have emissions within the community boundary, which will also address air quality concerns associated with the expansion of the San Bernardino International Airport. In addition, on August 15, 2018 staff provided recommendations during the preparation of the Draft Environmental Impact Report for the Proposed Eastgate Building 1 Project California Environmental Quality Act (CEQA) commenting period and these include staff's recommendation for truck trip rates for high cube warehouses<sup>3</sup> and other mitigation measures, which the San Bernardino International Airport Authority reviewed. Comments can be seen here: <http://www.aqmd.gov/docs/default-source/ceqa/comment-letters/2018/nopeastgatebuilding1-081518.pdf>.

#### Response to Written Comment Letter 7-7

BNSF railyard's compliance with the 2005 agreement with CARB has been added in Chapter 5e, within the "State Actions (CARB)" section under "Ongoing Efforts". Since BNSF is the only railyard

---

<sup>3</sup> A high cube warehouse is a building that typically has at least 200,000 gross square feet of floor area, has a ceiling height of 24 feet or more and is used primarily for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. Reference: High-Cube Warehouse Vehicle Trip Generation Analysis

<https://www.ite.org/pub/?id=a3e6679a%2De3a8%2Dbf38%2D7f29%2D2961becdd498>

within the San Bernardino, Muscoy community; it seems only appropriate to include BNSF railyard's compliance status within the San Bernardino, Muscoy CERP.

One of the strategies South Coast AQMD is evaluating to reduce emissions from railyards and intermodal facilities is through the Facility Based Mobile Source Measures. The development of the Facility Based Mobile Source Measures was initially intended to address regional air pollution, specifically NOx emission reductions, and to attain the National Ambient Air Quality Standards as required by the Clean Air Act. However, the CSC has made it clear that the Facility Based Mobile Source Measures must also focus on reducing localized impacts.

BNSF recently prepared an updated inventory and presented a summary of this analysis at the June 20, 2019 Community Steering Committee meeting. BNSF has indicated that it plans to provide this detailed inventory analysis to South Coast AQMD for its review in the near future. This information will show key changes and emission reductions that have occurred since the 2005 agreement between CARB and BNSF. In addition, BNSF indicated in their presentation that a number of emission sources have lower emissions than they did for the 2005 inventory prepared for CARB. The slide showed that, as of 2017, diesel PM emissions have been reduced by 23% from freight locomotives and 90% from non-locomotive equipment since 2005.

BNSF will be participating in the development of the Facility-Based Mobile Source Measures ("FBMSM") workshops to address railyards and intermodal facilities. South Coast AQMD staff has recently received an updated emissions inventory for the San Bernardino railyard that BNSF has voluntarily prepared. Staff will work with BNSF to review the data and will provide updates to the community in the coming months. BNSF's commitment is included in Chapter 5e, Action 1, under "Implementing Agency, Organization, Business or Other Entity". Any rules and regulations adopted by the South Coast AQMD and CARB will be applicable to those subject to the rules and regulations.

Staff appreciates CCA's comments on the San Bernardino, Muscoy CERP.

## General Comment Letters submitted for all three AB 617 Year 1 communities

Written Comment Letter #8: Priscilla Hamilton, Southern California Gas

### Comment Letter #8

Diamond Bar, CA 91765

**RE: Assembly Bill 617 (AB 617) Community Emission Reduction Plans (CERPs)**

Dear Dr. Fine,

Thank you for the opportunity to comment on the South Coast Air Quality Management District's (SCAQMD) AB 617 efforts. Southern California Gas Company (SoCalGas) has participated in numerous Community Steering Committees (CSCs) and would like to commend SCAQMD staff on moving this monumental effort forward. SoCalGas looks forward to working with and assisting SCAQMD in the future. To that end, SoCalGas would like to submit the following comments on AB 617 and the Community Emission Reduction Plans (CERPs).

#### **I. INCENTIVES**

Incentives are integral to achieving emission reductions from Class 7 and 8 Heavy-Duty trucks. However, there are not enough incentives available to turn over the number of trucks needed to meet state, regional, and community emission reduction goals. Therefore, incentives need to be used wisely and cost-effectively to achieve the greatest amount of emission reductions today.

#### **Scrappage programs should be used to maximize emission reductions**

The most effective approach to reducing emission reductions with incentives is to require scrappage. While it is important to get clean trucks into service, it is equally important to remove older, dirtier trucks operating in disadvantaged communities. Without removing a dirtier truck through scrappage, there is no way to ensure that truck will no longer operate in communities as the fleet expands. Scrapping trucks ensures that emission reductions will be maximized. Voucher programs with no scrappage requirements, such as the Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project (HVIP), are also integral in moving the existing statewide fleet to alternative fuels, however, emission reductions in targeted areas should utilize scrappage programs to maximize emission reductions. SoCalGas recommends that incentive funding be prioritized for scrappage programs like Carl Moyer and Prop 1B.

Appendix RTC-46

**Funding technology advancement is contrary to the purpose of AB 617 – Current year incentives should be used for available technologies**

The purpose of AB 617 is to reduce emissions in disadvantaged communities within the five-year Community Emission Reduction Plan (CERP) time frame. While some have called for the use of incentives for demonstrations and pilots, this approach does not achieve the immediate emission reductions required by the AB 617 statute.<sup>1</sup> There are many other technology advancement programs locally and statewide that fund demonstrations and pilots for advancing technologies, such as the Low Carbon Transportation Pilots and Demonstrations, Zero and Near-Zero Emission Freight Facilities (ZANZEFF) and others. Those seeking funding for those types of projects should be directed to those programs. SoCalGas recommends that CERP incentives should focus solely on available technologies that can achieve tangible emission reductions.

**Incentives should prioritize technologies that can maximize emission reductions today**

Due to the current state of development, advanced technologies, such as battery electric class 7 and 8 trucks, have significant operating limitations, including but not limited to:

- **Range:** The California Air Resources Board (ARB) has stated that a technology is commercially available if it can be included in the HVIP eligibility list, as there is a robust process for a vehicle to be eligible for an HVIP voucher. Currently, there is only one Class 8 heavy-duty truck applicable for goods movement on the list. This truck has a maximum advertised range of 124 miles per charge. This is considerably less mileage than what the existing diesel fleet can achieve. This limited range also prohibits a one-to-one replacement of an older truck, limits how much a truck can be used, and thus limits its emission reduction potential.
- **Charging time:** Battery electric trucks can take several hours to charge. This is a significant operational difference between today's existing fleet, which requires only several minutes to refuel. Down time for charging will limit the hours a truck can be used in a day, which also limits its emission reduction potential.
- **Infrastructure availability:** The availability of infrastructure in the region is a major concern for battery electric technologies. While some may argue that charging stations can be slowly built out, there is a broader concern of finding land to accommodate charging and parking for these trucks. Due to charging, these trucks will be relegated to "return to base" operations and charging lots will need to be built nearby. In this case, it would be in or near an AB 617 community. AB 617 communities have stated various concerns with congestion and parking for trucks and placing charging lots in or near the communities would exacerbate the situation.

While these limitations may be overcome in the future, it is unrealistic to think that they will be resolved within the five-year CERP window. These limitations, and others, currently prevent battery electric technologies from doing all the things that the existing diesel fleet can do, therefore limiting the reductions that can be achieved. Natural gas trucks that meet ARB's

<sup>1</sup> See [https://leginfo.ca.gov/faces/billTextClient.xhtml?bill\\_id=201720180AB617](https://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=201720180AB617)

Optional Low nitrogen oxides standard<sup>2</sup> (Low-NOx trucks) can achieve significant emission reductions and can operate just like its diesel counter parts. Low-NOx trucks have similar range, power, and fuel time. They have been thoroughly tested, are available today, and can truly be a one-to-one replacement for diesel trucks.

#### Emission Reduction Effectiveness

Low-NOx trucks are the most effective solution in reducing emissions from heavy duty trucking. If SCAQMD used \$100 million of \$107 million in AB 617 incentives for low-NOx trucks, the emissions impact between the number of battery electric trucks versus Low-NOx trucks would be staggering.

*What could \$100 million of incentives get?*

Technology	Incentive Amount	Number of Trucks
Battery Electric	*\$332,500 <sup>3</sup>	300
Low NOx	\$100,000 <sup>4</sup>	1,000

*\*not including the \$50,000 per charger needed, an additional \$15 million total*

As shown above, \$100 million of incentives would result in 300 battery electric trucks or 1,000 Low NOx Trucks. In scrappage programs, this would also result in removing 1,000 diesel trucks from disadvantaged communities when funding Low NOx Trucks, compared to just 300 when funding battery electric trucks.

Both zero-tailpipe technologies and alternative fuel technologies would eliminate diesel particulate matter. For NOx, if all units were deployed at the same time, 300 battery electric trucks would reduce NOx emissions by 738 tons over the five-year CERP life, while 1,000 Low NOx trucks deployed at the same time would reduce NOx emissions by 2,406 tons over the same period. The significant discrepancy in emission reductions is due to the large difference in the number of Low-NOx trucks that can be turned over with \$100 million and the limited range<sup>5</sup> of battery electric trucks which results in substantially more emission reductions for Low-NOx trucks. In addition to achieving more emission reductions, it is important to point out that investing incentives into Low-NOx Trucks also removes 700 more older trucks from public roads, which would otherwise continue to emit.

As shown below, the emission difference is substantial even though the same amount of incentives would be used in each scenario. To utilize incentives most effectively, SCAQMD

<sup>2</sup> 0.02 grams of NOx per brake horsepower hour

<sup>3</sup> Based on a \$350,000 truck and a 95% funding from the Carl Moyer Program

<sup>4</sup> Based on Prop 1B scrappage and comparable to current Carl Moyer Program

<sup>5</sup> Battery Electric annual mileage of 37,448 based on BYD T8 advertised range of 124 miles per day for 302 days per year), Low NOx truck annual mileage of 44,558 based on EMFAC 2014 T7POLA category.

Optional Low nitrogen oxides standard<sup>2</sup> (Low-NOx trucks) can achieve significant emission reductions and can operate just like its diesel counter parts. Low-NOx trucks have similar range, power, and fuel time. They have been thoroughly tested, are available today, and can truly be a one-to-one replacement for diesel trucks.

## II. ENERGY EFFICIENCY TECHNOLOGY ADVANCEMENTS FOR AB 617 COMMUNITIES

Below are near-term technologies SoCalGas is working on that could improve energy efficiency in AB 617 communities and reduce the amount of fuel combusted for space and water heating.

### Gas-Fired Absorption Residential Heat Pump

SoCalGas has been working with Stone Mountain Technologies Inc. and the Gas technology Institute (GTI), to demonstrate a high-efficiency Gas-fired Absorption residential Heat Pump (GAHP) water heater with an Energy Factor >1.3, 11,000 Btu/hr output, and 60-80-gallon storage capacity. The GAHP is already certified by the SCAQMD and meets the 10 ng NOx/Joule regulation limit in Rule 1121. This would be a drop-in replacement for standard water heaters in existing homes.

8-5

### Residential Fuel Cell Units

SoCalGas has partnered with AQMD to demonstrate a Residential Fuel cell to be used in conjunction with solar arrays and battery storage. The solar and fuel cell will both have the ability to power the home directly while simultaneously charging the battery. The unit also has the ability to recover heat for water and/or space heating needs, which increases overall efficiency. This technology is widely used in Europe and can be an ideal solution for reducing emissions from combustion of natural gas for space and water heating in homes.

## III. Conclusion

SoCalGas appreciates your consideration of our comments. We look forward to working with staff and other stakeholders in future meetings. If you have any questions, please do not hesitate to contact me.

Sincerely,

Priscilla R. Hamilton  
Environmental Affairs Manager  
Southern California Gas Company

Response to Written Comment Letter 8-1

The CERPs for all three Year 1 communities include actions to address emissions for neighborhood trucks. The CERP prioritizes zero-emission technologies, where commercially available and technologically feasible; and where zero-emissions technology are not available, equipment will be replaced with cleaner technology (i.e., near zero) through incentives to achieve much needed emission reductions sooner. While the South Coast AQMD is currently testing and evaluating a broad range of zero-emission capable heavy-duty trucks, including battery electric and fuel cell, the only commercially available technology is the near zero-emission (0.02 g/bhp-hr NOx) 9L and 12L engines for Class 7 and 8 trucks. Therefore, as is the case with all South Coast AQMD implemented incentive programs (e.g., Carl Moyer, Prop 1B), an emphasis on cost-effectiveness will continue to be placed to maximize the NOx emissions, providing local and regional air quality benefits. Scrapping requirements are an integral part of the incentive programs to ensure that the emission reductions are real and permanent.

Response to Written Comment Letter 8-2

Incentives focus on currently available technologies, such as the near zero-emission (0.02 g/bhp-hr NOx) 9L and 12L engines for Class 7 and 8 trucks. The CSCs' have prioritized zero-emission technology, where commercially available and technologically feasible; which are not commercially available at this time for heavy-duty trucks. The development, demonstration, and commercialization of cleaner technologies helps to expedite cleaner technologies prioritized by the CSC. Current year incentives will be used for available technologies. South Coast AQMD is funding and/or cost-sharing various zero-emission capable, heavy-duty truck projects to ascertain performance and needs to varying duty cycles, including range, charging time, and infrastructure availability. As demonstration projects with truck original equipment manufacturers (OEMs) are completed, including Daimler Trucks of North America and Volvo Trucks, OEMs plan to incorporate any necessary design changes and implement these into more robust commercial projects, expected to be available in small commercial scale in 2021. South Coast AQMD will consider providing incentives to these zero-emission trucks upon commercialization and meeting incentive guidelines.

Response to Written Comment Letter 8-3

The CERPs include actions to implement the technologies commercially available today and maximize the use of available incentive funds to ensure the greatest emission reductions. South Coast AQMD staff is working closely with CARB on lowering the heavy-duty engine standard in California and has petitioned the U.S. EPA to establish near zero-emission NOx standard for the nation.

Response to Written Comment Letter 8-4

South Coast AQMD is uncertain as to the cost estimates included in the comment, or the basis for incentive amounts, but as indicated in Responses to Comment 8-1 and 8-3, the CERPs include actions to implement the technologies commercially available today and maximize the use of the available incentive funds to ensure the greatest emission reductions, using cost-effectiveness as

one of the key criteria. For mobile source projects, the incentive funds are to be implemented consistent with Carl Moyer or Prop 1B guidelines.

Response to Written Comment Letter 8-5

Thank you for your comment on gas-fired absorption residential heat pumps and residential fuel cell units. AB 617 focuses on reducing emissions from the sources of pollution prioritized by the community. These air quality priorities include refineries, ports, neighborhood truck traffic, oil drilling and production, railyards, and exposure reduction at schools, childcare centers, and homes. South Coast AQMD appreciates SoCalGas' effort to provide information on technology that improves energy efficiency.

RE: AB 617 Draft Community Emissions Reduction Plans and  
Community Air Monitoring Plans

Dear Drs. Fine and Ghosh,

On behalf of the members of the California Council for Environmental and Economic Balance (CCEEB), we appreciate the opportunity to submit comments on the South Coast Air Quality Management District (SCAQMD or "District") draft community emissions reduction plans (CERPs) and draft community air monitoring plans (CAMPs). The SCAQMD has been a leader in developing AB 617 programs and policies, and its work in the communities of Wilmington-Long Beach-Carson, Boyle Heights-East Los Angeles-West Commerce, and San Bernardino-Muscoy serves as a model statewide for achieving targeted and effective emissions and exposure reductions in overly burdened communities. CCEEB members operate in each of these three "first-year" communities, and many are active in the District's Community Steering Committee (CSC) process, as well as related activities and proceedings at the District related to AB 617 implementation.

Individual CCEEB members have been engaging with the District and other community members at the community-level, offering perspective and expertise as part of the plan development process. CCEEB has been engaging on a broader level, through its participation in the SCAQMD AB 617 Technical Advisory Group and the Air Resources Board (ARB) AB 617 Consultation Group. Our comments reflect this broader perspective, but are based on consultation with and feedback from our membership. Our intent is to help support successful program development, both in the three "first-year" communities as well as looking forward to the continued and expanded implementation of AB 617 in future communities.

Our main point is as follows:

- **Emission reduction actions should be based on technical review of those sources that contribute most to community-level exposures.** However, detailed community inventories and data on source apportionment have not yet been released, and only a high-level discussion of community impacts has occurred at community meetings. CCEEB believes the draft plans should be re-evaluated by the District and community stakeholders as more detailed and localized emissions data becomes publicly available.

AB 617 specifies that the statewide strategy to reduce criteria pollutant and toxic air contaminant emissions must include assessment of sources or source categories contributing to high cumulative exposure burdens, including the relative contribution of each source. AB 617 further specifies that air district community emissions reduction plans (CERPs) must be consistent with the statewide strategy. Yet draft actions have been developed *ahead of* the requisite technical analysis, putting the proverbial cart before the horse. For example, the Source Attribution section of the Community Profiles for Wilmington-Long Beach-Carson and San Bernardino-Muscoy will not be ready until after comments have been received on the draft CERPs. Moreover, localized air monitoring data, meant to measure and validate sources of concern to local communities, will not be available until a much later date and are not available to help establish baseline conditions or set reduction targets.

9-1

CCEEB acknowledges that much of the timing problem lies outside staff control given the accelerated implementation schedule set by the Legislature, as well as work that must be done by ARB to develop the on-road and off-road mobile inventories. However, the lack of technical background creates process concerns that will need to be addressed as new information becomes available. For example, in the Wilmington-Long Beach-Carson CERP, two of three refinery actions focus on flaring, yet no analysis has been done to show the degree to which flaring contributes to overall pollutant concentrations or that it even poses significant health risks. As such, it is difficult to evaluate whether these actions should be priorities as compared to other sources or actions, both refinery and non-refinery.

While high-level data has been presented to the CSCs, it has not been granular enough to indicate clear areas of focus. As such, identified concerns have been based on anecdotal experience and perceptions, without scientific validation. Moreover, a narrow focus in the plans on limited District authority omits a much needed discussion of how the SCAQMD, communities, and ARB can and should be partnering on strategies that tackle mobile source impacts, including diesel particulate matter. For example, while staff recognizes risks from on-road and off-road mobile sources under ARB authority, it has not yet specified the relative risk from different source types.

CCEEB recommends that the draft CERPs be revisited once technical data is available, and urges staff to provide scientific evidence validating community concerns and justifying recommended actions. CCEEB also recommends that the District and

community stakeholders engage ARB so that it is demonstrably responsible for community sources under its authority, as specified in the Health and Safety Code Section 44391.2(c)(6).

9-1

Cont.

In addition to our main point about the technical analysis needed to support the CERPs, we offer these additional recommendations on other areas of the CERPs and CAMPs.

- SCAQMD air monitoring programs are robust and seem to be well aligned with the data collection needs of AB 617 communities.** CCEEB appreciates the tremendous amount of advance work that has been done to secure appropriate instrumentation and expertise, both in-house and through outside contractors. Moving forward, it will be important that the District work with all stakeholders to ensure that data collection, data interpretation, and communication of results will be clear, transparent, and understandable to public users. Context is key. CCEEB believes that the three Community Steering Committees and the AB 617 TAG can assist with this work and provide valuable insight to District staff. Additionally, the District will need to establish how different types of monitoring data can be used for different purposes, e.g., mobile monitoring such as FluxSense can be valuable as a screening tool, but most often more precise measurements are needed as a basis for regulatory actions.
- Effective program metrics are important, yet will be a challenge to develop, track and quantify.** CCEEB believes program success should be measured based on sound data directly related to emissions and exposure reductions, to the extent feasible, while recognizing that some actions will take time to achieve desired results. Thus, it is important for the District to establish realistic timeframes, working with community members to set expectations.
- Incentives and grants will play a major role in reducing emissions and exposures in AB 617 communities.** The CERPs should include a discussion of what funds have been allocated to date, how investments will achieve quantifiable results and community benefits, and what more needs to be done, particularly how groups can help support sustained funding efforts.

9-2

9-3

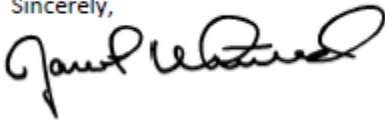

9-4

In closing, CCEEB wants to recognize the full spectrum of AB 617 activity at the District, much of which lies outside the community plans. This includes but is not limited to work to accelerate implementation of best available retrofit control technology (BARCT), the parallel process to sunset the Regional Clean Air Incentives Market, advocacy at the Legislature and with the Governor's Office to secure nearly \$700 million in incentive funding statewide for AB 617 communities, and substantial technical assistance to ARB and other agencies on issues such as emissions reporting, air monitoring, deployment of low-cost sensors, and development of scientifically sound community inventories based on monitoring and modeling data. While our comments here are specific to the first-year community draft plans, we want to express our appreciation for the totality of

SCAQMD work implementing AB 617 and for its leadership statewide in advancing effective solutions that reduce community exposures and air pollution burden. Across all these efforts, CCEEB commits to continuing our support of the District in its implementation of the landmark AB 617 legislation.

Sincerely,

Janet Whittick  
CCEEB Policy Director

cc: Ms. Karen Magliano, Director of the Office of Community Air Protection, ARB  
Ms. Frances Keeler, CCEEB Vice President and South Coast Air Project Manager  
Mr. Bill Quinn, CCEEB President  
Members of the CCEEB South Coast Air Project

#### Response to Written Comment Letter 9-1

Chapter 3b – Source Attribution Analysis for the SBM CERP was released July 12, 2109 based on the best available inventory data, which is all that is available at this time. The analysis supports the need for the actions in the Draft Final CERP that address sources prioritized by the CSC.

#### Response to Written Comment Letter 9-2

The South Coast AQMD staff will continue efforts to work with all stakeholders to ensure that data collection, data interpretation, and communication of results are clear, transparent, and understandable to public users. The South Coast AQMD has launched its AB 617 Community Air Monitoring website and its Data Display tool featuring air quality data reporting from selected fixed community air monitoring stations. The primary goal of this tool is to share preliminary continuous monitoring data in near real time and finalized results of laboratory analyses and mobile platform survey monitoring.

South Coast AQMD staff presented initial results from air monitoring conducted for the AB 617 CAMPs at the CSC meeting held on August 15, 2019. Several actions in the CERP include a commitment from staff to continue to provide similar updates. For example, Action 1 of Chapter 5d, includes a commitment from South Coast AQMD staff to provide CSC members quarterly or biannual updates on efforts for air monitoring beginning the third quarter of 2020.

#### Response to Written Comment Letter 9-3

The Draft Final CERP includes emission reduction goals and a course of action (i.e., step by step measures) with an estimated timeline. The actions include step by step measures to address emission sources, timelines and an estimate of emission reductions that contribute to the overall emission reduction goals for the Draft Final CERP. The South Coast AQMD staff will update the CSC on emission reduction progress.

Response to Written Comment Letter 9-4

Approximately \$101 million were allocated to projects in the South Coast Air basin that were funded by AB 134, of which 89% were located in disadvantaged and low-income communities. Of the total allocation \$319,622 was awarded to emission reduction projects located in the East Los Angeles, Boyle Heights community. Also, \$21,925,447 was awarded to emission reduction projects located in the San Bernardino, Muscoy community and \$9,036,563 to the Wilmington, Carson, West Long Beach community. Clean off-road equipment, near-zero emission transit vehicles, and locomotives are three examples of the kinds of projects that the allocation funded.

The emission reduction targets in Chapter 5a for mobile source incentives are based on mobile source projects that have historically been incentivized in the year 1 communities. Based on this information the estimated emission reductions for mobile source incentive projects in the year 1 communities are between 40 and 50 tpy of NOx and 0.5 to 0.6 tpy of DPM emissions. The CERPs include actions to work with other entities to identify new funding opportunities.

**ATTACHMENT C**  
**RESOLUTION NO. 19-\_\_\_\_\_**

**A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) determining that the Community Emissions Reduction Plan for the San Bernardino, Muscoy community (SBM CERP) is exempt from the requirements of the California Environmental Quality Act (CEQA).**

**A Resolution of the South Coast AQMD Governing Board Adopting the Community Emissions Reduction Plan for the San Bernardino, Muscoy community.**

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the SBM CERP is considered a “project” pursuant to CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and

**WHEREAS**, the South Coast AQMD has had its regulatory program certified pursuant to Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l), and has conducted a CEQA review and analysis of the proposed project pursuant to such program (South Coast AQMD Rule 110); and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines after conducting a review of the proposed project in accordance with CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA, and CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA, that the proposed project is determined to be exempt from CEQA; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that it can be seen with certainty that there is no possibility that the proposed project may have any significant effects on the environment, and is therefore, exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, because the proposed project is designed to further protect or enhance the environment; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project contains action items which qualify as feasibility or planning studies which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project may result in some minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies; and

**WHEREAS**, the South Coast AQMD Governing Board has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions; and

**WHEREAS**, the South Coast AQMD staff has prepared a Notice of Exemption for the proposed project that is completed in compliance with CEQA Guidelines Section 15062 – Notice of Exemption; and

**WHEREAS**, the SBM CERP, and other supporting documentation, were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the project; and

**WHEREAS**, Assembly Bill (AB) 617 directs the California Air

Resources Board (CARB) to select locations around the state for preparation of community emissions reduction programs; and

**WHEREAS**, in 2018, the South Coast AQMD Governing Board recommended communities to CARB for the AB 617 program; and

**WHEREAS**, in 2018, CARB selected the community of San Bernardino, Muscoy as one of the communities for which a Community Emissions Reduction Plan shall be prepared; and

**WHEREAS**, the AB 617 statute specifies that the air district must adopt the Community Emissions Reduction Plan within one year of the state board's selection of the community; and

**WHEREAS**, the SBM CERP is a planning document designed to assist future regulatory programs and rule development efforts, and to reduce emissions of and exposure to air toxics and other pollutants; and

**WHEREAS**, the SBM CERP is required by AB 617 and it builds upon existing criteria pollutant and air toxic programs, with greater emphasis on cumulative and localized impacts, and

**WHEREAS**, although the results of MATES IV show regional reductions in health risk from exposure to toxic air contaminants, some communities such as San Bernardino, Muscoy are disproportionately impacted by air toxics, and other environmental pollution, as well as social and economic burdens; and

**WHEREAS**, the San Bernardino, Muscoy Community Steering Committee has worked with staff to develop the Community Emissions Reduction Plan to reflect the community's air quality priorities and strategies to address these priorities; and

**WHEREAS**, the Community Emissions Reduction Plan aims to reduce air toxics and other pollutants in the San Bernardino, Muscoy community.

**NOW, THEREFORE BE IT RESOLVED**, that the South Coast AQMD Governing Board does hereby determine, pursuant to the authority granted by law, that the SBM CERP is exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, the SBM CERP contains action items which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies. The proposed project contains action items that are also categorically exempt from CEQA pursuant to, CEQA Guidelines Section 15303 –

New Construction or Conversion of Small Structures, CEQA Guidelines Section 15306 – Information Collection, CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, CEQA Guidelines Section 15309 – Inspections, and CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies. No exceptions to the application of the categorical exemptions set forth in CEQA Guidelines Section 15300.2 – Exceptions, apply to the proposed project. This information was presented to the South Coast AQMD Governing Board, whose members reviewed, considered and approved the information therein prior to acting on the proposed project; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing finds that the SBM CERP meets the requirements of AB 617 and will advance the mission of cleaning the air at a community scale in the San Bernardino, Muscoy community and will provide emission reduction co-benefits toward achieving state and national air quality standards; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing Board does hereby approve the SBM CERP; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing Board directs staff to periodically report to the Stationary Source Committee on the implementation of the SBM CERP, including updates on the actions within the plan and the emissions reductions achieved; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing Board authorizes staff to make any necessary, non-substantive edits which do not have any material impact on the environment to the SBM CERP prior to submission to CARB for approval; and

**BE IT RESOLVED**, that the South Coast AQMD Governing Board adopts the SBM CERP, dated September 2019.

Denise Garzaro, Clerk of the Boards

## NOTICE OF EXEMPTION FROM THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

---

**To:** County Clerks  
Counties of Los Angeles, Orange,  
Riverside, and San Bernardino

**From:** South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

---

**Project Title:** Community Emissions Reduction Plan for the San Bernardino and Muscoy Community per Assembly Bill 617

---

**Project Location:** The project is located at the following community within the South Coast Air Quality Management District (South Coast AQMD) jurisdiction: the City of San Bernardino and the adjacent unincorporated community of Muscoy within San Bernardino County referred to herein as San Bernardino and Muscoy (SBM) in San Bernardino County.

---

**Description of Nature, Purpose, and Beneficiaries of Project:** In accordance with Assembly Bill (AB) 617, which was signed into state law in 2017, and the California Air Resources Board's (CARB) Community Air Protection Program which implements AB 617, the South Coast AQMD is required to take specific actions to reduce air pollution and toxic air contaminants from commercial and industrial sources to address the disproportionate impacts of air pollution in environmental justice communities. Implementation of the specific actions is expected to occur over several years, and AB 617 specifies that the highest priority areas shall be disadvantaged communities with a high cumulative exposure burden for criteria pollutants and toxic air contaminants. After conducting extensive public outreach and data analysis, South Coast AQMD staff identified SBM as one of three communities qualifying as a high priority area for implementation where the first efforts to implement community monitoring and emission reduction plans pursuant to AB 617 will occur. The purpose of this project is to implement a Community Emissions Reduction Plan (CERP) for the SBM community per AB 617. The beneficiary of the project is the identified community and the nearby areas, but the entire region within South Coast AQMD's jurisdiction will also benefit. The CERP contains the following action items which have been tailored for the SBM community's identified air quality concerns and schools/hospitals/parks and community centers. The CERP for the SBM community is comprised of the following action items to address:

Truck Idling and Warehouse Truck Traffic: 1) conduct truck idling enforcement sweeps with CARB; 2) partner with the City of San Bernardino and the County of San Bernardino on land use planning issues and restrictive truck routes; 3) collaborate with the appropriate agency on restrictive truck routes and improvements to complaint and response systems; 4) expand truck traffic outreach efforts (e.g., fairs, workshops) to distribute incentive information to equipment owners; and 5) partner with CARB to identify older trucks in the community as targets for incentives.

Burlington Northern Sante Fe (BNSF) Railyard: 1) continue the ongoing development of Facility-Based Mobile Source Measures (e.g., Indirect Source Rule) for rail; 2) support CARB's petition to the United States Environmental Protection Agency for new national locomotive emission standards; and 3) incentivize the replacement of older diesel equipment (e.g., locomotives).

Warehousing: 1) collaborate with the City of San Bernardino and the County of San Bernardino on enhancing requirements to address warehouse development such as requiring loading docks to be sited away from residents, establishing buffer zones for new development, and facilitating electric utility infrastructure with appropriate parties; and 2) continue the ongoing development of Facility-Based Mobile Source Measures (e.g., Indirect Source Rule) for warehouses.

Omnitrans Bus Yard: 1) support Omnitrans on accelerating the schedule for utilizing zero emission buses and chargers; and 2) conduct mobile monitoring near Omnitrans to identify potential sources of emissions.

Concrete Batch Plants: 1) monitor particulate matter (PM10) to identify hot spots, if any, for follow-up enforcement; and 2) expand outreach efforts to operators and the community relative to best practices pursuant to South Coast AQMD Rule 403 – Fugitive Dust.

---

Schools/Hospitals/Parks/Community Centers: 1) partner with the San Bernardino County Department of Public Health on outreach materials for air quality advisories and/or asthma related programs; 2) distribute air filtration systems to schools and homes; 3) identify new or existing sources or programs that can provide funding for tree planting; and 4) identify new or existing sources or programs that can provide funding for alternative fueled school buses.

**Public Agency Approving Project:**

South Coast Air Quality Management District

**Agency Carrying Out Project:**

South Coast Air Quality Management District

**Exempt Status:**

CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption

CEQA Guidelines Section 15262 – Feasibility and Planning Studies

CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures

CEQA Guidelines Section 15306 – Information Collection

CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment

CEQA Guidelines Section 15309 – Inspections

CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies

**Reasons why project is exempt:** In accordance with the California Environmental Quality Act (CEQA), South Coast AQMD staff has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. Because the physical changes that may occur as a result of implementing portions of the proposed project would only require minimal construction activities and cause negligible physical impacts, South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that any physical actions that may be associated with the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, because the overall purpose of this project is to improve the environment of the SBM community and nearby areas and all of the action items within the SBM CERP support this goal, the action items are also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment.

The SBM CERP contains elements that qualify as feasibility and planning studies, because the collection of information is needed in order to make an informed decision about whether to take further action (e.g., future rule development). However, the portion of the SBM CERP that qualifies as feasibility and planning studies does not prescribe or commit to specific details about the future actions that may occur, nor have the future actions been approved or adopted in advance, because they require an open public process. Specifically, after the portions that qualify as feasibility or planning studies are completed, and if they result in a decision to go forward with future rule development, the regulated community, stakeholders, interested parties, and the public will be invited to participate in the rule development process in a public forum. For these reasons, the following action items for the SBM CERP are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies:

- Continuing the ongoing development of Facility-Based Mobile Source Measures (e.g., Indirect Source Rule) for rail; and
- Continuing the ongoing development of Facility-Based Mobile Source Measures (e.g., Indirect Source Rule) for warehouses.

The following action items within the SBM CERP involve minor physical modifications to existing structures or buildings which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures:

- Installing air filtration systems with priority given to public schools along major truck routes; and
- Monitoring PM10 to identify hot spots, if any, for follow-up enforcement if needed at concrete plants.

The following action items within the SBM CERP involve information collection activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection:

- Partnering with CARB to identify older trucks in community as targets for incentives;
- Monitoring PM10 to identify hot spots for follow-up enforcement if needed at concrete plants; and
- Partnering with the San Bernardino County Department of Public Health to collect and distribute outreach materials for air quality advisories and/or asthma related programs;
- Identifying new or existing sources or programs that can provide funding for tree planting;
- Identifying new or existing sources or programs that can provide funding for alternative fueled school buses; and
- Conducting monitoring near Omnitrans to identify potential sources of emissions.

The following action item within the SBM CERP involves inspection activities that check for performance or compliance are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections:

- Conducting truck idling enforcement sweeps with CARB;
- Monitoring PM10 to identify hot spots for follow-up enforcement if needed at concrete plants; and
- Conducting monitoring near Omnitrans to identify potential sources of emissions.

The following action item within the SBM CERP involves enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies:

- Conducting truck idling enforcement sweeps with CARB; and
- Monitoring PM10 to identify hot spots for follow-up enforcement if needed at concrete plants

Further, South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, the proposed project is exempt from CEQA.

# AB 617 Community Emissions Reduction Plan for San Bernardino, Muscoy

---

GOVERNING BOARD MEETING

SEPTEMBER 6, 2019

# AB 617 Year 1 Communities

## September 2018, CARB designated:

- San Bernardino, Muscoy
- East Los Angeles, Boyle Heights, West Commerce
- Wilmington, Carson, West Long Beach

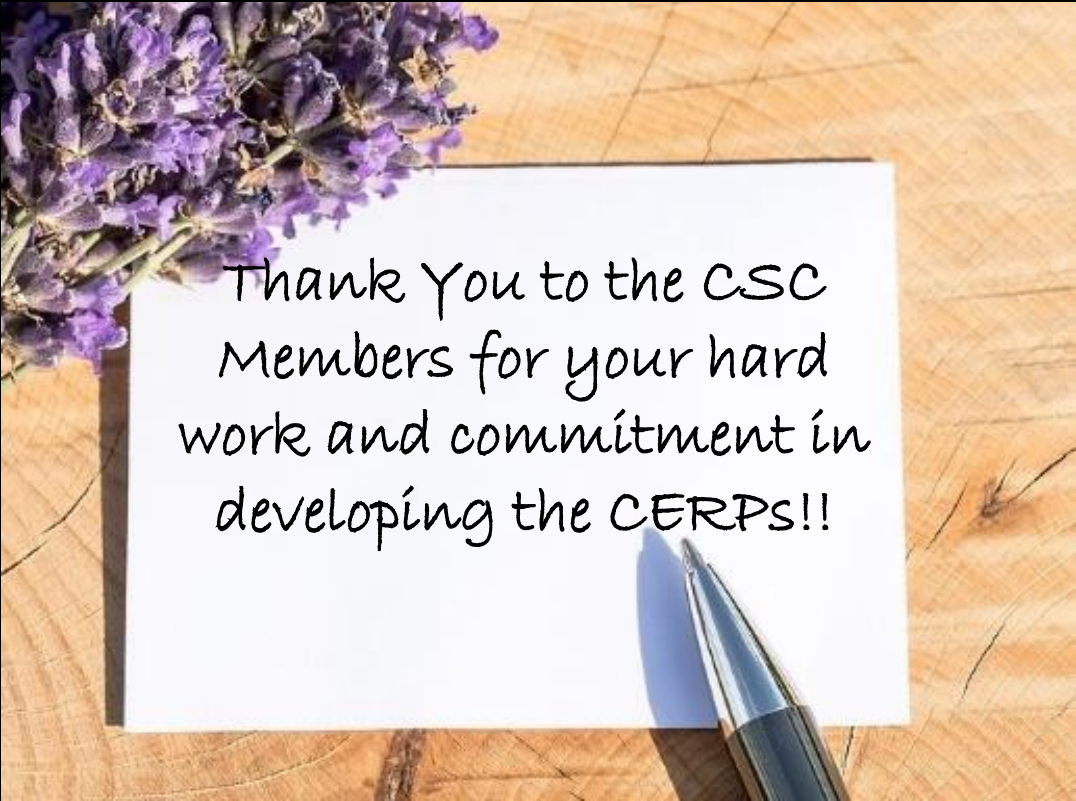

## Extensive Community Engagement:

- 3 Community Steering Committees (CSCs)
- 27 CSC meetings
- 60 + individual meetings
- 2 community bus tours
- 3 Technical Advisory Group meetings
- 6 community workshops

# Community Steering Committee

Thank You to the CSC  
Members for your hard  
work and commitment in  
developing the CERPs!!

- ❖ Community cohosts
- ❖ Committee member presentations
- ❖ Community testimonials

# Community-Driven Efforts to Develop the CERPs

## CERP Development

AQ  
Priorities

Strategies,  
Metrics

Actions,  
Steps

## CERP Actions

- 49 actions (approx. 160 steps) across the 3 CERPs
- 28 are emission reduction actions
- Each action includes:
  - Suite of strategies
  - Steps
  - Timeline/milestones
  - Metrics to track progress
  - Collaborating entities

- Plans are flexible to adapt to new information

# New Efforts and Approaches in the CERPs

## Rules and Regulations

- 7 new South Coast AQMD rule efforts
- 8 regulations to be considered by CARB
- Increased engagement and ISR efforts (e.g. Working Group meetings in communities)

## Collaboration

- Community-led monitoring
- Agency collaborations on permit cross-checks, trucking regulations, public communication

## Enforcement

- Focus on areas identified by the communities
- Improved communication for complaint response

## Public Information and Outreach

- Small business outreach to increase compliance
- School-based programs

## Incentives

- Focused efforts to generate incentive proposals in these communities
- Use technology to identify older trucks for incentive programs (e.g. ALPR)

## Air Monitoring

- Advanced monitoring technologies to provide new, purposeful data
- Data will inform compliance efforts and provide public information

# San Bernardino, Muscoy Air Quality Priorities & Actions Overview

# Actions to Reduce Mobile Source Emissions

## San Bernardino, Muscoy community

### Neighborhood Truck Traffic

#### Truck Idling

- Enforcement sweeps
- Outreach for idling truck reporting

#### Truck Emissions

- Incentive funds
- Targeted outreach
- Regulations: CARB Advanced Clean Truck Rule, Heavy Duty Low NOx Rule, and Heavy Duty Inspection and Maintenance

#### Identify Older Trucks for Incentive Programs

- ALPR systems

CSC members

### Railyards

#### Railyard Emissions

- Railyard ISR development
- CARB requirements
- Incentive projects
- ZE infrastructure

CSC members

### Omnitrans Bus Yard

#### Air Monitoring and Follow-Up

- Identify and address potential emissions

#### Support Transition to Zero-Emission Buses

- Letters of support

# Mobile Source Emissions Reduction Targets

## San Bernardino, Muscoy community

### BASELINE

### WITH CERP (SOUTH COAST AQMD AND CARB ACTIONS)

# Actions to Reduce Stationary Source Emissions

## San Bernardino, Muscoy community

### Warehouses

#### Enhance local land use policies

- Discuss buffer zones, warehouse design, truck routes

#### Develop Proposed Indirect Source Rule for Warehouses

#### Support Zero-Emission Infrastructure

- Work with Southern California Edison to install electric utility infrastructure

### Concrete Batch, Asphalt Batch, and Rock and Aggregate Plants

#### Reduce potential fugitive emissions (dust, PM, odors)

- Air monitoring and follow-up inspections
- Outreach to operators
- Enforcement actions as needed

### Metrics to Track Progress

- Rule development progress and associated emissions reductions
- Focused enforcement efforts in the community
- Air monitoring/measurements to track specific pollution levels

# Actions to Reduce Stationary Source Exposure

## San Bernardino, Muscoy community

### Schools, Childcare Centers, Community Centers, and Homes

#### Public Outreach

- School-based programs
- Asthma management programs (Breathmobile)

#### Air filtration systems

- Schools, Childcare Centers, and Community Centers

#### Exposure reduction at Homes

- Weatherization
- Home filtration systems

### Metrics to Track Progress

- Outreach events completed, by type
  - Participation & feedback
- Air filtration systems implemented
- Home weatherization or filtration systems implemented

Health Study	<ul style="list-style-type: none"><li>• CERP focuses on emission reductions, which will provide benefits to public health</li><li>• To address desire for additional health improvements, there are additional actions toward improving public health, e.g. asthma management programs</li><li>• Community health study is costly and may not show the long term health benefits associated with the emission reductions in the CERP</li><li>• Health studies are outside scope and resources of CERP process</li></ul>

# Next Steps for San Bernardino, Muscoy Community Emissions Reduction Plan (CERP)

---

# Staff Recommendations

- Determine that the Community Emissions Reduction Plan for the San Bernardino, Muscoy is exempt from CEQA
- Adopt the Community Emissions Reduction Plan for San Bernardino, Muscoy

BOARD MEETING DATE: September 6, 2019

AGENDA NO. 25B

**PROPOSAL:** Determine That Community Emissions Reduction Plan for East Los Angeles, Boyle Heights, West Commerce Community Is Exempt from CEQA and Adopt Community Emissions Reduction Plan Per Assembly Bill 617

**SYNOPSIS:** Assembly Bill (AB) 617 requires air districts to prepare Community Emissions Reduction Plans (CERPs) for the Year 1 communities selected by CARB. The CERPs provide a blueprint for achieving air pollution emission and exposure reductions within each community, and are tailored to address the community's air quality priorities. The CERPs include actions to reduce emissions and/or exposures, an implementation schedule, an enforcement plan, and a description of the process and outreach conducted to develop the CERP. Community partnership and engagement have been critical throughout the development of the CERPs.

**COMMITTEE:** Stationary Source, July 26, 2019, Reviewed

**RECOMMENDED ACTIONS:**

1. Determine that the Community Emissions Reduction Plan for the East Los Angeles, Boyle Heights, West Commerce community is exempt from the requirements of the California Environmental Quality Act; and
2. Adopt the AB 617 Community Emissions Reduction Plan for the East Los Angeles, Boyle Heights, West Commerce community.

Wayne Natri  
Executive Officer

## Background

California law known as Assembly Bill (AB) 617 established new requirements for improving air quality in California communities heavily impacted by air pollution. AB 617 requires a statewide strategy with focused actions for communities heavily impacted by air pollution. These actions include developing community air monitoring plans (CAMPs) and/or community emissions reduction plans (CERPs) to reduce emissions of toxic air contaminants (TACs) and criteria pollutants.

In 2018, the California Air Resources Board (CARB) adopted the Community Air Protection Blueprint (Blueprint) to guide the development (e.g., public process), content, and implementation of CAMPs and CERPs. An overview of the process to develop these documents as described in the CARB Blueprint is provided in Figure 1 – Overview of Community Emissions Reduction Program Process.

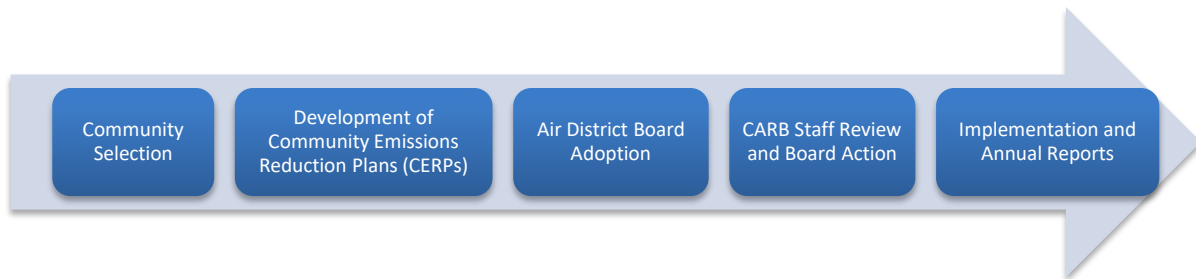

Figure 1: Overview of Community Emissions Reduction Program Process

On September 27, 2018 CARB designated three Year 1 communities within the South Coast AQMD for preparation of a CAMP and CERP for each community. The three communities designated by CARB were: 1) Wilmington, Carson, West Long Beach; 2) San Bernardino, Muscoy; and 3) East Los Angeles, Boyle Heights, West Commerce. The AB 617 statute directs air districts to adopt CERPs within one year of the CARB designation.

## Public Process

*Community Steering Committees, Technical Advisory Group, and Public Outreach*  
Beginning October 2018, staff implemented a community-focused process to develop draft CERPs that focus on the air quality priorities for each Year 1 community. The cornerstone of this process was the formation of a Community Steering Committee (CSC) for each community. The East Los Angeles, Boyle Heights, West Commerce CSC is made up of active residents, community leaders, local business owners or workers, labor unions, community organizations, local agencies, schools, universities, hospitals, and elected officials. The CSC provided their input and guidance based on community expertise that was instrumental to developing the CERP. CSC members also conducted their own community-level outreach to additional members within the community who may not have been able to attend our meetings. Since October 2018, a total of nine CSC meetings were held in each of the three communities, and approximately 50 to 100 people attended each meeting.

In February 2019, the AB 617 Technical Advisory Group (TAG) was established to provide a forum to discuss technical details related to source attribution, air monitoring and other technical analysis needed to develop the CAMPs and CERPs. Examples of topics discussed at TAG meetings are monitoring equipment, laboratory capabilities, and methodologies for developing emissions inventories. The TAG met in February, May, and July 2019.

In addition to the CSC and TAG meetings, staff held community workshops, and individual meetings with residents, community leaders, stakeholders, and public officials to enhance community participation and input in the development of the CERP. South Coast AQMD staff also created a community webpage to post updates and information about the development of the CAMPs and CERPs.

### **Proposal**

Staff is recommending adoption of the CERP for the San Bernardino, Muscoy community. Through the CSCs and public participation at the community meetings, this community identified their highest priority air quality issues based on local sources of air pollution. The CSC worked with staff to develop a set of actions to be implemented by South Coast AQMD, in collaboration with other government agencies, organizations, businesses, and other entities. Each action is to be carried out based on a set of strategies with goals and timelines to reduce emissions or exposure. The entity (e.g., government agency, organization, or business) responsible for the actions is also identified. Some actions will be conducted within the timeframes specified in the plan, while other activities such as rules would continue to apply and be enforced beyond the implementation period of the plan.

The AB 617 Year 1 communities share some common air quality priorities that are primarily driven by the movement of goods throughout the region. For example, each CSC identified air pollution from trucks and equipment used at railyards as a community air quality priority. The need for prioritizing air pollution from these sources is not surprising, given that mobile sources are the overwhelming source of diesel particulate matter in these communities, which is the predominant contributor to air toxics cancer risk. The major diesel sources in this community include heavy-heavy duty trucks, medium-heavy duty trucks, light-heavy duty trucks, off-road diesel equipment, and trains. Additionally, the communities expressed concerns about locations where children and populations who are more vulnerable to the effects of air pollution as an air quality priority for exposure reduction efforts.

This CERP is tailored to address the air quality priorities identified by this community. The actions to address the air quality priorities in the East Los Angeles, Boyle Heights West Commerce community are summarized below.

### *Air Quality Priorities*

The East Los Angeles, Boyle Heights West Commerce community identified mobile sources such as trucks, cars, and railyard equipment as the top community air quality priority. Other air quality priorities identified by the CSC include metal processing facilities, rendering facilities, and auto body shops. In addition, schools, childcare centers, libraries, and public housing projects were priorities for exposure reduction efforts. The community also cited general concerns about industrial facilities in the community, including waste transfer stations. Notable actions in the CERP for this community include: using traffic information and new technology (e.g., automated license plate readers) to identify older heavy-duty diesel trucks for incentive opportunities, reducing emissions from metal processing facilities through small business outreach efforts, providing the CSC with updates about inspections at rendering facilities, conducting air monitoring to support emission reduction strategies for auto body shops, working with land use agencies to verify facility permits and develop enhanced permit requirements, replacing older diesel-fueled equipment with cleaner technologies at railyards, and reducing children's exposure to harmful air pollutants by working with local schools to install high efficiency filtrations systems.

### **Key Issues**

#### *Emission Reduction Targets*

The CERP outlines a list of actions to address the air quality concerns prioritized by the CSC in this community. Some CSC members indicated that the CERP lacks quantifiable emission reduction targets and metrics, and strongly emphasized the importance of including metrics for emission reductions that can be quantified. Staff estimated emission reduction targets resulting from mobile source incentive projects to be 40 to 50 tons per year (tpy) of NO<sub>x</sub> and 0.5 to 0.6 tpy of diesel PM based on historical data of past projects which replaced older diesel equipment with cleaner models. Additionally, CARB has committed to considering amendments to their rules and regulations to address the air quality priorities in this community. CARB's future Advanced Clean Car 2 Rule, Advanced Clean Truck Rule, Heavy-Duty Low NO<sub>x</sub> Rule, and the Heavy-Duty Inspection and Maintenance Rule are estimated to reduce an additional 332 tpy of NO<sub>x</sub>, and 0.9 tpy of diesel PM by the year 2029. The overall NO<sub>x</sub> and diesel PM emission reduction targets for this community are 143 tpy of NO<sub>x</sub> (8% reduction) and 1.2 tpy of diesel PM (9% reduction) by 2024, and 377 tpy NO<sub>x</sub> (20% reduction) and 1.4 tpy diesel PM (13% reduction) by 2029.

Other emission reductions outlined in the CERPs may be achieved through rule development and enhanced enforcement efforts. Other actions that are expected to result in emission reductions, but cannot be quantified at this time include fugitive dust emissions from metal processing facilities and rendering facilities.

### *Health Metrics and Outcomes*

Some CSC members have requested use of health metrics and outcomes as a tool to measure success from emission reductions under the AB 617 program. Such metrics are not, however, required or advisable. The primary metrics identified in the Blueprint focus on ways of measuring the reduction of emissions. The Blueprint recommends use of monitoring and/or modeling data. To the extent additional metrics are identified in the Blueprint, they include tracking the status of rules, the dollar amount invested in incentives, the number of various types of actions, including projects implemented, enforcement actions taken, public meetings held in community, interactions with public officials, trainings, outreach, workforce development, and technical capacity-building. (See Community Air Protection Blueprint, Appendix C, p. C33-C35.) All of these metrics are more appropriate because they focus on items that are quantifiable and specifically tied to CERP actions. In comparison, a health metric cannot measure the success of CERP actions taken to reduce emissions because there are many factors which contribute to health outcomes and cumulative public health burdens. Moreover, short-term health benefits are difficult to assess, especially with the information that is available. One would need to conduct a study to establish a health baseline and track improvements over time. Such studies are costly and may not show the long-term health benefits achieved from the emission reductions in the CERP.

Although it is not currently feasible to use health metrics and outcomes as tools for measuring the success of the CERP, health data has been a critical part of this process. South Coast AQMD used health data in the prioritization of communities for the implementation of community plans. Health data also informed various policy decisions, including CARB's decision to focus on toxic air contaminants and PM2.5. The CERP will have positive impacts on public health, for example, by reducing emissions of diesel particulate matter, which is the primary contributor to air toxics cancer risk in the community. In addition, to bring further public health benefits to the community, the CERP includes actions to partner with local health organizations for direct public health interventions, such as asthma management programs. Similarly, the CERP includes actions to conduct school-based outreach to provide air quality information, such as the Clean Air Ranger Education (CARE) program. The CERP also includes collaborative efforts with local organizations to provide public information on how to receive air quality advisories and reduce exposure to air pollution. This type of outreach would be provided to school, childcare centers, and at community events. Finally, when CARB received a comment asking it to include tracking of health indicators, it did not agree that such tracking was appropriate. Instead, it too responded with information on the *other* ways that health data would be incorporated into the program. CARB declared: "Reducing emissions and improving air quality in overburdened communities will lessen the cumulative impacts that air pollution has on public health." (See CARB Summary of Comments – Community Air Protection Program, <https://ww2.arb.ca.gov/summary-comments-community-air-protection-program>.)

### **California Environmental Quality Act (CEQA)**

Pursuant to CEQA and South Coast AQMD Rule 110, the South Coast AQMD, as lead agency for the CERP, has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. The proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, because it is designed to protect or enhance the environment. Further, the CERP contains action items which qualify as feasibility or planning studies which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies. Additionally, the CERP may result in some minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures. The CERP involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection. The CERP also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections. Finally, the CERP relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies. South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, the proposed project is exempt from CEQA. A Notice of Exemption has been prepared pursuant to CEQA Guidelines Section 15062 – Notice of Exemption. If the project is approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties.

### **Implementation Plan/Schedule**

Implementation of the East Los Angeles, Boyle Heights West Commerce CERP is anticipated to begin in the third quarter 2019. CARB staff will begin reviewing and evaluating each CERP as soon as the third quarter 2019 and is expected to hold at least one public workshop in the South Coast AQMD prior to the CARB Board's consideration of each of the CERPs. CARB has scheduled a public hearing to approve the CERPs for March 16, 2020. The implementation of this CERP is to take place over approximately five years.

**Benefits to South Coast AQMD**

Implementation of the East Los Angeles, Boyle Heights West Commerce CERP will help advance our mission to reduce air pollution at a community scale, especially in the most impacted and disadvantaged communities within South Coast AQMD's jurisdiction. The East Los Angeles, Boyle Heights West Commerce CAMP and CERP will serve as statewide models for AB 617 Year 2 implementation and beyond. Additionally, emissions reductions achieved through implementation of the CERP will provide emission reduction co-benefits toward achieving state and national air quality standards.

**Resource Impacts**

South Coast AQMD received \$10.8 million for the initial implementation of AB 617 and \$20 million for the first year of this program. In addition, the Community Air Protection incentive funds will be used toward implementing associated incentive projects. In 2019, South Coast AQMD received \$85,570,000 in total grant funding through the Community Air Protection funds, which includes 6.25% administrative funds.

The anticipated resource needs for South Coast AQMD's ongoing implementation of AB 617 is \$30.7 million per year. This assumes that two to three new communities are added each year, and each community program lasts approximately five years with a maximum of 14 communities in the program simultaneously. There is no increase in the funding level for Year 2. Staff continues to work with the California state legislature to set aside sustained funding for AB 617 statewide. In June 2019, the Board approved an increase in toxics fees, which will help to provide resources for air toxics programs at South Coast AQMD, including but not limited to AB 617 toxics-related efforts.

South Coast AQMD budget impacts for future years are dependent on the number of communities that are designated, and the amount of funding allocated by the legislature to support AB 617 implementation by the local air districts. Staff will be vigilant in monitoring all AB 617 related expenditures to ensure efficient use of resources and will use its experience and insights to plan and forecast future expenditures.

# AB 617 Community Emissions Reduction Plan for East LA, Boyle Heights, West Commerce

The Community Emissions Reduction Plan (CERP) reflects the community's air quality priorities and brings new improvements to air quality in the East LA, Boyle Heights, West Commerce community.

## How much air pollution will this Plan reduce?

The CERP will reduce pollution from trucks, cars and other mobile sources. Specifically, the CERP target reductions for mobile source emissions are:

	By 2024	By 2029
NOx	143 tpy (~8% reduction)	377 tpy (~20% reduction)
Diesel PM	1.2 tpy (~9% reduction)	1.4 tpy (~13% reduction)
tpy = tons per year		

The CERP will also reduce air pollution in other ways that are not yet quantifiable. This includes actions to conduct truck idling enforcement, replace older polluting cars with cleaner models, reduce fugitive emissions from certain facilities, and develop Indirect Source Rules for Warehouses and Railyards. The CSC and staff will track progress on these actions, along with the emission reductions.

## How will this Plan benefit the East LA, Boyle Heights, West Commerce community?

### Incentive Funds

To accelerate replacement of old dirty trucks and cars with cleaner technologies.

### Focused Enforcement

To ensure rules are being followed, especially in the priority areas identified by the community.

### New Rule Development

To reduce emissions from mobile sources, which are the main contributors to air toxics in this community.

### Inter-agency Work

To work with land use agencies to develop policies that reduce the impact of air pollution sources on residents.

### School Programs

To reduce the indoor levels of air pollution that children are breathing at school.

# What actions are in this Plan?

## Neighborhood & Freeway Traffic (Trucks and Cars)

- Idling truck sweeps and truck enforcement in priority areas
- Install "no idling" signs (work with cities & county)
- Incentive funds for cleaner trucks and cars
- Use data and new technology to help target incentive funding
- Develop Indirect Source Rules, Drayage Truck Rule, Advanced Clean Truck Rule, and Heavy-Duty Low NOx Rule

## Railyards

- Develop Indirect Source Rule for Railyards, Drayage Truck Rule, TRU Regulation, CHE Rule
- Work with CARB to consider new requirements on locomotives
- Work with railyards to replace diesel equipment with cleaner technologies
- Work with local utilities to encourage zero-emission infrastructure

## Metal Processing Facilities

- Air measurements and inspections to identify potential toxic metal emissions or violations
- Outreach to businesses on best practices, rule requirements, and potential incentives

## Autobody Shops

- Outreach to operators on best practices and rule requirements
- Focused air measurements and inspections to identify potential emissions or violations
- Work with LA City Fire Department to provide fire safety information and identify any unpermitted shops

## Rendering Facilities

- Outreach to the community on Rule 415 requirements
- Respond to odor complaints and provide feedback to CSC
- Focused air measurements and facility inspections

## Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects

- Clean Air Ranger Education (CARE) and Why Air Quality Matters (WHAM) programs at local schools
- Outreach and asthma programs (partner with AltaMed and COFEM)
- Air filtration systems

## General Concerns about Industrial Facilities

- Improve FIND tool and conduct community training
- Improve awareness on how to file air quality complaints
- Identify unpermitted businesses and develop land use guidelines for reducing air pollution impacts from facilities (work with land use agencies)
- Work with LA County Regional Planning to develop Green Zones ordinance
- Air measurements and inspections at waste transfer stations

More details provided in CERP documents on this webpage:  
[www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/east-la](http://www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/east-la)

THANK YOU!

The South Coast AQMD staff thank the East Los Angeles, Boyle Heights, West Commerce community members for their tireless efforts in developing this CERP.

## East Los Angeles, Boyle Heights, West Commerce AB 617 Community Emissions Reduction Plan - Actions

		CERP Action Summary			Strategies						Key Entities			
Air Quality Priority	Action	Reduce Exposure	Reduce Emissions	Key Pollutant Type(s)	Regulations	Incentives	Enforcement	Public Info and Outreach	Air Monitoring	Collaboration	Others			
														
Neighborhood and Freeway Traffic from Trucks and Cars	<b>Action 1:</b> Reduce Truck Idling (e.g. enforcement, idling sweeps)		●	Diesel PM, NOx			●	●	●	●	●	●	●	CSC members
Neighborhood and Freeway Traffic from Trucks and Cars	<b>Action 2:</b> Reduce Emissions from Heavy-Duty Trucks (e.g. incentives, truck routes, FBMSM, CARB rule development)		●	Diesel PM, NOx	●	●	●	●		●		●	●	City of LA, County of LA, City of Commerce, CSC members
Neighborhood and Freeway Traffic from Trucks and Cars	<b>Action 3:</b> Utilize Existing Traffic Information and New Technology to Identify Older Trucks for Incentive Programs		●	Diesel PM, NOx		●		●	●	●		●	●	City of LA, County of LA, City of Commerce, CSC members
Neighborhood and Freeway Traffic from Trucks and Cars	<b>Action 4:</b> Encourage Replacement of Older Polluting Vehicles with Cleaner Vehicles, including Zero-Emission Vehicles		●	VOC		●		●		●		●	●	City of LA, County of LA, City of Commerce, CSC members
Railyards	<b>Action 1:</b> Reduce Emissions from Railyards (e.g. development of ISR, CARB regulations, incentive projects, and work with utilities on ZE infrastructure)		●	Diesel PM, NOx	●	●			●	●		●	●	CSC members
Metal Processing Facilities	<b>Action 1:</b> Identify Areas to Conduct Air Monitoring for Fugitive Toxic Metal Emissions from Metal Processing Facilities		●	Metal air toxics			●		●			●		
Metal Processing Facilities	<b>Action 2:</b> Reduce Emissions from Metal Processing Facilities through Outreach, Best Management Practices and Incentives		●	Metal air toxics	●	●		●				●		
Rendering Facilities	<b>Action 1:</b> Reduce Odors from Rendering Facilitates		●	Odors, VOC			●	●	●	●		●		
Auto Body Shops	<b>Action 1:</b> Reduce Emissions from Auto Body Shops		●	VOC			●	●	●	●		●		LA City Fire, CSC members
Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects	<b>Action 1:</b> Reduce Exposure to Harmful Air Pollutants through Public Outreach (e.g. school-based programs, asthma management programs)	●		PM, Diesel PM, air toxics				●	●	●		●		AltaMed, COFEM
Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects	<b>Action 2:</b> Reduce Exposure to Harmful Air Pollutants at Schools, Childcare Centers, Community Centers, Libraries	●		PM, Diesel PM, air toxics				●		●		●		LAUSD, cities and county
Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects	<b>Action 3:</b> Reduce Exposure to Harmful Air Pollutants at Homes	●		PM, Diesel PM, air toxics		●		●				●		
General concerns about industrial facilities	<b>Action 1:</b> Improve Public Outreach and Accessibility to Facility Information (e.g. FIND tool)	Public information		PM, Diesel PM, air toxics				●		●		●		
General concerns about industrial facilities	<b>Action 2:</b> Improve Public Awareness about How to File an Air Quality Complaint	Public information		PM, Diesel PM, air toxics, odors				●				●		
General concerns about industrial facilities	<b>Action 3:</b> Work with Land Use Agencies to Verify Facility Permits and Develop Enhanced Permit Requirements		●	PM, Diesel PM, air toxics			●	●		●		●		LA County Regional Planning, other agencies
General concerns about industrial facilities	<b>Action 4:</b> Reduce Odors and Dust from Waste Transfer Stations		●	Odors, PM			●	●	●			●		

**SUMMARY OF CHANGES TO AB 617  
COMMUNITY EMISSIONS REDUCTION PLANS (CERPS) BASED ON COMMENTS RECEIVED**

**East Los Angeles, Boyle Heights, West Commerce CERP**

- New Additions to CERP
  - Executive Summary
    - Added summary of response to comments
  - Chapter 5b: Neighborhood and Freeway Traffic
    - Added exploration of Portable Emissions Acquisition System (PEAQs) with Automated License Plate Reader (ALPR)
  - Chapter 5g: Schools, etc.
    - Action 3, added new action for funding residential air filtration systems
  - Appendix 3a: Community Profile
    - Added list of RECLAIM and AB 2588 facilities
  - Appendix 4: Enforcement Plan
    - Added status of enforcement actions
  - Appendix: Response to Comments
    - Added response to comments
- Revisions to CERP
  - Chapter 5a: Introduction
    - Revised emission reduction targets based on CARB measures (NO<sub>x</sub>: 377 tpy, DPM: 1.4 tpy)

ASSEMBLY BILL (AB) 617  
COMMUNITY AIR INITIATIVES

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Executive Summary

This Community Emissions Reduction Plan (CERP) outlines the actions and commitments by the Community Steering Committee (CSC), the South Coast AQMD, and the California Air Resources Board (CARB), to reduce air pollution in the East Los Angeles, Boyle Heights, West Commerce community. An essential piece of the Assembly Bill (AB) 617 program is the partnership and collaboration with the community to ensure that the CERP addresses the community's air quality priorities. At the center of these efforts is the CSC that was established, in part, to participate in the development and implementation of these plans. The CSC is a diverse group of people who live, work, own businesses, and/or attend school within the community. Local land use agencies, local public health agencies, local healthcare providers, and representatives from local universities and elected officials who serve the community are also part of the CSC. CSC members provided guidance, insight, critique, and community wisdom, all of which were elements in the development of the CERP. The CERP is a critical part of implementing AB 617, which is a California law that addresses the disproportionate impacts of air pollution in environmental justice communities. The AB 617 program aims to invest new resources and conduct focused actions in these communities to improve air quality as a step toward environmental equity.

The East Los Angeles, Boyle Heights, West Commerce community identified the following air quality priorities to be addressed by this plan:

- Neighborhood and freeway traffic (trucks and automobiles)
- Railyards
- Metal processing facilities
- Rendering facilities
- Auto body shops
- Exposure reduction for sensitive populations in schools, childcare centers, libraries, and housing projects
- General concerns about industrial facilities, including waste transfer stations

At its core, this plan seeks to address the identified priorities with actions that reduce air pollution emissions from sources within this local community as well as reduce air pollution exposures to the people in this community. This plan includes targeted actions using many complementary strategies, including developing and enforcing regulations, providing incentives to accelerate the adoption of cleaner technologies, and conducting outreach to provide useful information to support the public in making informed choices. Additionally, air monitoring strategies will be used to help provide critical information to help guide investigations or provide public information. Collaborative efforts with other agencies, organizations, businesses, and other stakeholders will amplify the impact of these actions. Many of the actions will only be conducted during the timeframe of this plan; however, there are also many actions (such as regulation, ongoing enforcement activities, and certain incentive programs) that will be ongoing activities conducted by South Coast AQMD.

This plan ~~focuses on~~ seeks to bring real air quality improvements ~~improving air quality~~ in the East Los Angeles, Boyle Heights, West Commerce community, through ~~concentrated~~ focused efforts and community partnerships. The CSC will continue to be engaged throughout the process of implementing the CERP and tracking its progress.

### The Reader's Guide to the CERP

The opening chapters provide background information about the AB 617 program and timeline (Chapter 1), the CSC process and community engagement (Chapter 2), and information about the air pollution sources in the community (Chapter 3).

Information about past and ongoing enforcement activities conducted by both the South Coast AQMD and ~~the~~ CARB enforcement staff are described in Chapter 4. This information will provide insights into enforcement going forward.

The specific actions to be implemented are described in Chapter 5 – Actions to Reduce Community Air Pollution. This chapter is organized by air quality priority area, and the strategies proposed for each priority area are presented in the CERP action templates. Within each CERP action, the responsible entities are identified, along with the timeframe and goals for implementing the proposed action. The CERP actions are numbered in the order in which they are presented in each section. Chapter 5 also includes a California Environmental Quality Act (CEQA) analysis based on the proposed actions within this plan.

A summary of the air monitoring approach is included in Chapter 6. These efforts are described in much greater detail in the Community Air Monitoring Plan (CAMP),<sup>1</sup> which serves as the sister document to the CERP. The actions described in Chapter 5 include specific air monitoring activities, as they relate to specific actions in the CERP. The CAMP describes the overall air monitoring approach to address the community air quality priorities. Findings from air monitoring will help to evaluate next steps, and South Coast AQMD staff will work with the CSC to review findings and make necessary adjustments.

The ~~Appendices~~ Appendix to the CERP will include additional reference material related to the CERP content.

## Summary of Response to Comments

The CSC, South Coast AQMD, and CARB closely collaborated to develop the East Los Angeles, Boyle Heights, West Commerce CERP. Development of the CERP occurred over a year-long process that included 9 CSC meetings, 3 Technical Advisory meetings, 2 Community Workshops, and over 25 individual meetings. The South Coast AQMD staff received over 200 comments from industry trade organizations, businesses, government agencies, community residents, environmental organizations, and other entities for the CERP. The table summarizes each comment and identifies if the commenter's request is included (●) or not included (◆) in the CERP. The table also provides a brief staff response that explains where requests that are included in the CERP can be found or why the request was not included. More detailed responses to comments can be found in Appendix RTC of the East Los Angeles, Boyle Heights, West Commerce CERP.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
<b>General Questions or Concerns on the CERPs</b>				
i	The CERP should have a clear plan for ongoing community engagement (minimal outreach events planned) during the implementation period of CERP actions	Cristin Mondy (Los Angeles County Department of Public Health)	●	The CERP describes more than 25 outreach events or outreach actions in this community, through the approximately 5 year timeframe for implementation. The vast majority of these events have a very specific purpose, such as outreach to specific types of businesses, or community training on how to use the FIND tool. These outreach actions are described in Chapters 5b, 5d, 5e, 5f, 5g, 5h, including information about the type of outreach, target audience, and purpose. Staff will also work with community-based organizations and the CSC to provide information to community members. In addition, staff will provide CSC members updates on upcoming working group meetings (open to the public) for new rules and

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
				amendments to existing rules that cover metal processing facilities to encourage community participation in the process.
ii	CERP lacks emission projections or reduction targets and baseline values.	Christopher Chavez (Coalition for Clean Air), Jill Johnston (University of Southern California)		Baseline emissions are provided in Chapter 3b (Source Attribution Analysis), and emission reduction targets are provided in Chapter 5a.
iii	Emission reductions should meet the State Implementation Plan (SIP) creditable criteria. However, emission reductions that do not meet these criteria should not be excluded	Christopher Chavez (Coalition for Clean Air)		South Coast AQMD staff continues to pursue a suite of actions to achieve emission reductions, including some that meet SIP creditable criteria, and some that do not meet the criteria but are equally important to reducing emissions in this community.
iv	CERP relies on incentive funding and does not assign responsibilities to polluters	Christopher Chavez (Coalition for Clean Air)		Incentive funding is only provided to projects that reduce emissions above and beyond current rule requirements. The CERP uses a suite of strategies to address the air quality priorities, including regulation, enforcement, incentives, and other strategies. Any rules and regulations adopted by the South Coast AQMD and CARB will be applicable to those entities subject to the rules and regulations.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
v	CERP does not mention BARCT requirements	Christopher Chavez (Coalition for Clean Air)	●	<p>RECLAIM NOx facilities, which are typically larger emitting facilities, will transition to a command-and-control regulatory structure to meet BARCT and Appendix 3a identifies nine RECLAIM facilities in this community.</p> <p>Before facilities can transition out of RECLAIM, a corresponding command-and-control rule for each piece of equipment is needed. As a result, the South Coast AQMD staff is conducting a BARCT assessment for all NOx rules that are part of the RECLAIM transition. If the BARCT assessment lowers the NOx emission limit in an existing command-and-control rule, non-RECLAIM facilities will also be impacted and will need to make further emission reductions. The BARCT assessment for a number of NOx proposed and proposed amended rules is still currently being conducted and the list of affected non-RECLAIM facilities is not currently known.</p>
vi	Implement and provide updates on the Facility Based Measures and Indirect Source Rules (ISR)	Christopher Chavez (Coalition for Clean Air)	●	Staff will continue to develop the proposed ISRs for warehouses and railyards and provide updates to the CSC. Staff encourages CSC members to participate in the rule development process.
vii	To what degree will NOx and PM emissions be reduced from the CERP?	Dr. Brian Johnston (White Memorial Medical Center)	●	Chapter 5a mentions annual emission reduction estimates of 377 tons for NOx and 1.4 tons for diesel PM in the ELABHWC community based on actions taken by CARB and South Coast AQMD. This represents a 20% and 13%

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
				reduction in annual emissions of NOx and PM, respectively, by 2029 in the ELABHWC community.
viii	Why is NOx monitoring not occurring at Resurrection Church and what is the frequency of mobile monitoring events?	Veronica Polanco (Active Resident - Boyle Heights)		Nitrogen oxides are now being monitored at Resurrection Church and the data is available online. Also, as described in the CAMP, South Coast AQMD has a continuous, long-term NOx monitoring station immediately north of the community boundary. Mobile air monitoring is being conducted one to two times each week (effective July 1, 2019).
ix	Elaborate on the siting and distribution of air monitoring stations to ensure adequate coverage.	Wendy Gutschow (Keck School of Medicine)		Current air monitoring efforts by South Coast AQMD are being used to guide where future fixed-monitoring stations will be located within the ELABHWC community. Continuous, long-term monitoring is occurring just north of the community boundary and around the now-closed Exide Technologies plant as well as at Resurrection Church.
x	Future air monitoring efforts should be focused on pollutants with emission reduction targets in the CERP	Jennifer Lahoda (Boyle Heights Chamber of Commerce)		The air monitoring efforts will include measurements to help estimate diesel PM levels, which is one of the emission reduction targets described in Chapter 5a. In addition, air measurements will include pollutants that are associated with the air quality priorities (e.g. metals from metal processing facilities, VOCs from auto body shops). Since the CSC prioritized reducing emissions from those facilities, these air monitoring efforts are pertinent to tracking progress in the CERP. Moreover, the Fixed Monitoring section of the CAMP mentions future

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
				monitoring efforts will be made in consultation with CSC members and members of the community.
xi	Actions to reduce emissions should be based on technical review of sources contributing to community-level exposures	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB)		The source attribution analysis is included in Chapter 3b and identifies the baseline emissions and the source contributors to this community. The analysis supports the actions to address the sources prioritized by the CSC.
xii	South Coast AQMD staff should work with all stakeholders to ensure that data collection, data interpretation and communications of results will be clear, transparent, and understandable	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB)		Staff will continue efforts to ensure that data collection, data interpretation, and communication of results are clear, transparent, and understandable to public users. The AB 617 Community Air Monitoring website and its Data Display tool has launched and provides community air monitoring data.
<b>Neighborhood and Freeway Traffic from Trucks and Automobiles</b>				
i	Truck idling: increase enforcement of CARB's Truck and Bus Idling rules, ensure signage in locations prone to idling and near sensitive receptors, work with the community to identify new areas affected by truck idling, and conduct outreach on how to file a complaint	Leoda Valenzuela (COFEM)		Action 1 of Chapter 5b commits South Coast AQMD to work with cities and counties to install signage to prohibit truck idling, work with the CSC to identify locations for signage, and conduct outreach on how to file complaints. CARB and South Coast AQMD will be conducting truck idling sweeps in priority locations in the community.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ii	Improve available complaint systems to report illegal truck idling and travel on local roadways by incentivizing community member action (e.g., monetary compensation)	Leoda Valenzuela (COFEM)	◆	The CERP includes actions to maximize the effectiveness of our existing complaint system (e.g. Chapter 5b Action 1 includes commitments to provide community outreach on filing effective complaints for reporting idling trucks). However, if the existing complaint system is determined to be ineffective, we will work with the CSC to assess where improvements are needed, and what improvements are feasible.
iii	Ensure that information distributed to the public is easily accessible for different ages, languages.	Leoda Valenzuela (COFEM)	●	South Coast AQMD staff will work to provide materials and outreach in languages that are prominent in this community and in formats that are accessible to people with varying degrees of technology usage. For example, part of the community outreach on how to file air quality complaints detailed in Action 1 of Chapter 5h includes training on how to file any air quality complaints by phone (in English or Spanish), web, or mobile app.
iv	CARB's rule development process should include representation from community organizations, and should conduct focus groups to collect further feedback from the community	Leoda Valenzuela (COFEM)	●	CARB welcomes and needs representation from community organizations during its rule development process and holds a number of public workshops during the development of new or amended regulations. The AB 617 Community Air Grants are available for community groups to support their work to help increase residents' engagement in the AB 617 process.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
v	Work with CSC to begin public information and outreach on incentives for cleaner heavy-duty trucks regardless of Automated License Plate Reader (ALPR) actions related to incentives	Leoda Valenzuela (COFEM)		Action 2 of Chapter 5b includes a commitment from South Coast AQMD to conduct outreach to truck owners and operators in the community about incentive opportunities and programs; beginning in 2020, South Coast AQMD will update the CSC and the public on the progress of these efforts. This commitment will occur regardless of ALPR actions related to incentives.
vi	Maintain transparency with the community on the general strategy to address this air quality priority, including progress of ALPR system, and outreach efforts to ensure success of incentive program	Leoda Valenzuela (COFEM)		South Coast AQMD staff will continue to maintain communication with the CSC on the CERP implementation progress, including the ALPR system, outreach events, and the incentive programs. Updates would be provided on a quarterly or biannual basis.
vii	Scrappage programs should be used to maximize emission reductions	Priscilla Hamilton (SoCalGas)		The Carl Moyer Program and Prop 1B are existing scrappage incentive programs that promote the replacement of older, higher polluting trucks, and replaces them with cleaner technology. AB 617 incentive funding follows similar guidance as the Carl Moyer program. South Coast AQMD will continue to place an emphasis on cost-effectiveness to maximize the emissions reductions to provide a local and regional air quality benefit.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
viii	Funding technology advancement is contrary to the purpose of AB 617 - Current year incentives should be used for available technologies	Priscilla Hamilton (SoCalGas)		The CSCs' have prioritized zero-emission technology, where commercially available and technologically feasible; technology which is not commercially available at this time for heavy-duty trucks. The development, demonstration, and commercialization of cleaner technologies helps to expedite cleaner technologies prioritized by the CSC.
ix	Incentives should prioritize technologies that can maximize emission reductions today	Priscilla Hamilton (SoCalGas)		The CERP includes actions to implement the technologies commercially available today and maximize the use of available incentive funds to ensure the greatest emission reductions. South Coast AQMD staff is working closely with CARB on lowering the heavy-duty engine standard in California and has petitioned the U.S. EPA to establish near zero-emission NOx standard for the nation.
x	Monitoring of idling trucks near warehouses should be described.	Evelyn Nuno (Field Representative for Assemblymember Cristina Garcia)		Chapter 5b of the CERP describes actions to reduce emissions from heavy-duty trucks, including conducting air measurements near warehouse clusters.
xi	Recommends incentive funds for emission reductions go towards the purchase of low-NOx trucks, prioritizing companies whose trucks travel through communities with high diesel truck traffic.	Member of the public		Chapter 5b describes strategies to reduce emissions from heavy-duty trucks, including additional and new incentive funding opportunities to replace such trucks with zero-emission technologies once they become available and near-zero emission technologies until then.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
xii	The Portable Emissions Acquisition System (PEAQs) system and monitoring should be included in the CERP to address trucks.	Rafael Yanez (Active Resident - East Los Angeles), Evelyn Nuño (Representative for Assemblywoman Cristina Garcia)		Chapter 5b of the CERP has been updated to explore the possibility of using ALPR and PEAQS systems in the community and choose monitoring locations based on feedback from the community. Mobile air measurement efforts will take into consideration external factors such as traffic patterns and time of day when interpreting air measurement data.
<b>Railyards</b>				
i	Please add the CARB petition to develop a new locomotive standard is under review by the U.S. EPA	Marisa Blackshire (BNSF)		South Coast AQMD issued a letter of support for the petition. The U.S. EPA acknowledged receipt of the petition, but has not provided any update or plans for further action.
ii	BNSF requests that South Coast AQMD consult with railyards to develop a monitoring protocol to share insight and expertise	Marisa Blackshire (BNSF)		Staff appreciates the input from and collaboration with BNSF to develop and implement this monitoring. Staff plans to use multiple tools to conduct mobile and/or fixed monitoring outside of the BNSF facility and in the surrounding community. If monitoring is required inside the BNSF facility, South Coast AQMD staff will work with BNSF staff to coordinate these efforts.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
iii	CERP needs to commit to a strong ISR for railyards	Christopher Chavez (CCA)		South Coast AQMD will continue to develop the ISRs in parallel to the AB 617 efforts and provide updates to the CSC on the rule development process. Details of ISR requirements will be developed in the rule development process so that all stakeholders can participate in the public process.
iv	Provide more information on enforcement actions to reduce onsite diesel emissions from railyards.	Johncito Peraza-Romero (Active Resident - West Commerce)		Chapter 5c of the CERP describes how federal laws preempt regulations curtailing emissions from locomotives put forth by state or local entities. Staff will work with CARB to provide the CSC with periodic updates on enforcement actions related to railyard emissions
v	Idling locomotives need to be addressed.	Oralia Rebollo (Councilmember of the City of Commerce)		Chapter 5c describes actions that will be conducted by CARB to reduce locomotive emissions and by South Coast AQMD to reduce emissions from railyards.
<b>Metal Processing Facilities</b>				
i	Add what actions will be taken if elevated levels of metal emissions are found and how they will be addressed	Leoda Valenzuela (COFEM)		Staff have added language in Chapter 5d Action 1 to clarify these actions. If persistent elevated levels of metal emissions are found, staff will work to determine the source of emissions. Staff may collect additional measurements, inspect nearby facilities, and/or request records from the facilities. If a facility is found to be in violation of South Coast AQMD rules, staff can take appropriate enforcement action to correct that violation (see Appendix 4).

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ii	Will the results from the mobile monitoring measurements be posted online?	Evelyn Nuno (Field Representative for Assemblymember Cristina Garcia)	●	Chapter 5i gives the implementation schedule of mobile monitoring activities in the community. South Coast AQMD is currently collecting data from the air monitoring measurements which will be posted online during the fall of 2019 once a representative number of measurement days have been processed.
<b>Rendering Facilities</b>				
i	Define “expedited basis” to respond to odor complaints, sending monitoring updates to community stakeholders	Leoda Valenzuela (COFEM)	●	South Coast AQMD’s goal is to respond to complaints within two hours. The timing of the response may depend on several factors, such as whether the assigned inspector in that area needs to first finish a facility inspection before responding to the complaint. In the absence of an ongoing, high-risk investigation, such as an inspection at a known toxics facility, available inspectors will attempt to respond immediately to these complaints.
<b>Exposure Reduction (Schools, etc.)</b>				
i	Requested air filtration in homes. Are there County or state resources to purchase air filtration systems or CARB settlement funds to use towards home air filters?	Carina Sanchez (Active Resident – East Los Angeles)	●	Staff has added Action 3 in Chapter 5g for South Coast AQMD to identify existing programs or funding sources that may provide home filtration systems. South Coast AQMD does not currently have a fund that can be used to purchase home air filters.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ii	Add the Floricanto Performing Arts Center to the list of “Where Children Spend Time”	Carina Sanchez (Active Resident – East Los Angeles)	●	The Floricanto Center for the Performing Arts has been added to Table 3a-2 of Chapter 3a and is categorized as a location where people in this community spend time.
iii	Add locations where sensitive groups gather, such as parks to reduce exposure.	Johncito Peraza-Romero (Active Resident - West Commerce)	●	Table 5g-1 in Chapter 5g was updated in the Draft CERP to identify specific parks, libraries, and recreation centers in the community where children tend to congregate.
<b>General Industrial Facilities, Including Waste Transfer Stations</b>				
i	Limit employee cars and waste collection trucks that can visit the City Terrace Recycling & Waste Transfer Station, and process for similar facilities to become fully enclosed	Carina Sanchez (Active Resident – East Los Angeles)	◆	The City Terrace Recycling & Waste Transfer Station is permitted by CalRecycle and enforced by the County of Los Angeles Department of Public Health. The facility was also identified as an air quality concern; as outlined in the CAMP, air measurements around this facility will be collected. If measurements show elevated levels of pollutants, staff will take enforcement or other action as appropriate. South Coast AQMD implements Rule 2202 – On Road Motor Vehicle Mitigation Options, to reduce emissions from employee commute trips or provide comparable emission reductions from other sources. In addition, transfer stations and material recovery systems are subject to South Coast AQMD Rule 402 – Nuisance and Rule 410 – Odors from Transfer Stations and Material Recovery Facilities. Staff will collaborate with any facilities with similar compliance concerns and local agencies to identify measures to mitigate odors from those facilities that do not have full enclosures.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
Other				
i	In mobile monitoring, please make sure that diesel PM is being tracked in the northern part of City Terrace	Carina Sanchez (Active Resident – East Los Angeles)		Staff plans on monitoring black carbon (an indicator of diesel PM) and other pollutants in the City Terrace area, north of the Interstate 10 (I-10) freeway based on the air quality concerns reported to South Coast AQMD staff. Please note that diesel PM itself cannot be measured directly, as it is a mixture of many pollutants.
ii	It should be mandatory for all industrial businesses to be part of the FIND database	Carina Sanchez (Active Resident – East Los Angeles)		The FIND tool includes information about all stationary sources that hold permits with the South Coast AQMD. Because our rules require these facilities to have permits, they are then included in the FIND database. Other agencies, such as those that regulate water, hazardous waste, or waste management, maintain their own databases for facilities that they regulate.
iii	Does the CERP include financial support for local industrial businesses to replace older equipment with less polluting equipment	Soyeon Choi (Los Angeles County Department of Regional Planning)		South Coast AQMD has programs that fund specific types of equipment replacement, such as dry cleaning equipment. At this time, the CERP does not include financial incentives for stationary industrial sources. If funding becomes available, staff will provide updates to the CSC.
iv	CSC member participation could be improved	Cristin Mondy (Los Angeles County Department of Public Health)		Staff will work to address challenges regarding CSC participation and attendance.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
v	Suggested a tax write off be incorporated to incentivize companies to reduce emissions beyond what is required. Also suggested a marketing campaign to make businesses aware about opportunities and needs to reduce emissions of certain pollutants.	Member of the public	◆	South Coast AQMD does not have the authority to give businesses a tax write-off. Staff will continue to work with the business community to increase compliance with our rules and encourage actions that go above and beyond rule requirements.
vi	Suggests that the FIND web tool list past violations and the severity of these violations.	Veronica Polanco (Active Resident - Boyle Heights); Jennifer Lahoda (Boyle Heights Chamber of Commerce)	●	The public can access the FIND tool online and search for all South Coast AQMD-regulated facilities. The tool allows the public to see any past and pending Notice of Violation (NOV) or Notice to Comply (NC) and which rule the facility has violated, but not the severity of the violation. Staff will work with the CSC to identify and implement new features in the FIND tool, to improve public accessibility to facility information.
vii	Why are emissions not displayed for many facilities in the FIND tool?	Jennifer Lahoda (Boyle Heights Chamber of Commerce)	●	South Coast AQMD has rules specifying which facilities need to report their emissions including requirements for annual reporting under the Annual Emissions Reporting program and additional requirements under the Air Toxics Hot Spots program, if applicable. These programs require reporting from facilities with typically higher levels of emissions or pose an elevated risk to the community. Staff will work with the CSC to identify and implement new features in the FIND tool, such as specifying whether a facility is required to report emissions, to improve public accessibility to facility information.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
viii	FIND tool should allow users to search for facilities with NOV's. Does a NOV indicate if there has been a Non Prosecution Agreement (NPA) between South Coast AQMD and a facility?	Wendy Gutschow (Keck School of Medicine)		The FIND tool does not have a feature that allows filtering of listed or displayed facilities by whether they ever have had a NOV or NC, and does include information about NPAs. Staff will work with the CSC to identify and implement new features in the FIND tool, such as filtering data on certain criteria, to improve public accessibility to facility information.
ix	How to file a complaint when searching for a business using FIND if one suspects or finds that a facility's emissions are not what is being reported to South Coast AQMD	Carina Sanchez (Active Resident - East Los Angeles)		If members of the public suspect that a facility is in violation of a South Coast AQMD rule, they can submit complaints online on the agency's website or call 1-800-CUT-SMOG and inspectors will be dispatched to the site to investigate the problem. All complaints received are entered into our internal database. If members of the public suspect that there are errors with a facility's emissions reports, they can call 1-800-CUT-SMOG and specify that they have a question regarding the emissions reports; staff will follow up on the request.
x	How will incentive funds be allocated?	Oralia Rebollo (Councilmember of the City of Commerce)		The first-year funding allocated to South Coast AQMD for the AB 617 program by the California legislature was \$107.5 million which was reduced to \$85.6 million for second-year funding. Incentive funds are allocated based on multiple factors such as where the emission reductions from a project will be located and a cost-effectiveness analysis. Incentive funds are not awarded on a per capita basis.

# CHAPTER 1:

## INTRODUCTION

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 1 : Introduction

Assembly Bill (AB) 617 was signed into California law in July 2017 and focuses on addressing local air pollution in environmental justice (EJ) communities. The bill recognizes that while California has seen tremendous improvement in regional air quality, some communities are still disproportionately impacted by local sources. Major local sources of air pollution in EJ communities include mobile sources (trucks, trains, ships, etc.) and industrial facilities. These communities also experience social and economic disadvantages that make people more vulnerable to the health effects of pollution. The AB 617 program provides focused action and additional resources to address air quality in these communities.

On September 27, 2018, the California Air Resources Board (CARB) designated 10 communities across the state to implement community plans for the first year of the AB 617 program. Local air districts are tasked with developing and implementing community emissions reduction and/or community air monitoring plans in partnership with residents and community stakeholders. The Community Air Monitoring Plan (CAMP) includes actions to enhance our understanding of air pollution in the designated communities, and support effective implementation of the Community Emissions Reduction Plan (CERP). For the three (3) first year AB 617 communities in the South Coast AQMD, both a CAMP and a CERP are being developed. Separate documents describe the CAMP development process and the draft plan. Information is available at [www.aqmd.gov/ab617](http://www.aqmd.gov/ab617). Figure 1-1 gives a general overview of the CERP timeline.

Figure 1-1: Overview of Community Emissions Reduction Plan (CERP) Timeline for Year 1 Communities

### Purpose of the Community Emissions Reduction Plan (CERP)

The CERP is a plan for achieving air pollution emission and exposure reductions within the East Los Angeles, Boyle Heights, West Commerce community, and is tailored to address this community's air quality priorities. The CERP includes actions to reduce emissions and/or exposures, an implementation schedule, an enforcement plan, a description of the process and outreach conducted to develop the CERP, as well as additional elements that are relevant to developing an effective CERP. Community partnership and engagement have been crucial throughout the process.

Because the work to implement the CERP and CAMP is dynamic, certain action items have been written with built-in flexibility to allow adjustments as new information becomes available. South Coast AQMD staff is committed to working with Community Steering Committee (CSC) members to evaluate ongoing actions and progress.

### CERP Development Process and Emphasis on Community Input

Community engagement and input to inform both the process and the actions in the CERP have been a primary element of the AB 617 program. The East Los Angeles, Boyle Heights, West Commerce CSC, working with the South Coast AQMD staff, are seeking to address the community's air quality priorities through development and implementation of this CERP. In addition to public meetings, numerous conversations and communications took place among committee members, South Coast AQMD staff, individuals and small groups ~~occurred~~ to ensure that community voices were an integral part of the plan. Chapter 2 describes the CSC process and the outreach that was conducted. Throughout the process, information exchanges between all parties, including feedback and input from committee members and members of the public ensured transparency and engagement. Numerous adjustments to consolidate and incorporate feedback were made and South Coast AQMD staff continuously aims to improve community engagement on air quality issues.

### About this Community

This community includes the Boyle Heights neighborhood of the City of Los Angeles, the unincorporated community of East Los Angeles, and the western portion of the City of Commerce, all of which are located in Los Angeles County (Figure 1-2).

More than 220,000 people live within the East Los Angeles, Boyle Heights, West Commerce community (Figure 1-3). More than 95% of the people living in this community are Latino (Figure 1-4). The population in this community is younger compared to the population in the state of California, with nearly 17% of the people in this community being children under the age of 10 years, and only 9% of the population being adults over the age of 65 years (Figure 1-5). These age categories are particularly important because young children and older adults can be more sensitive to the health effects of air pollution.<sup>1</sup>

Figure 1-2: Location of the East Los Angeles, Boyle Heights, West Commerce community in the South Coast AQMD jurisdiction

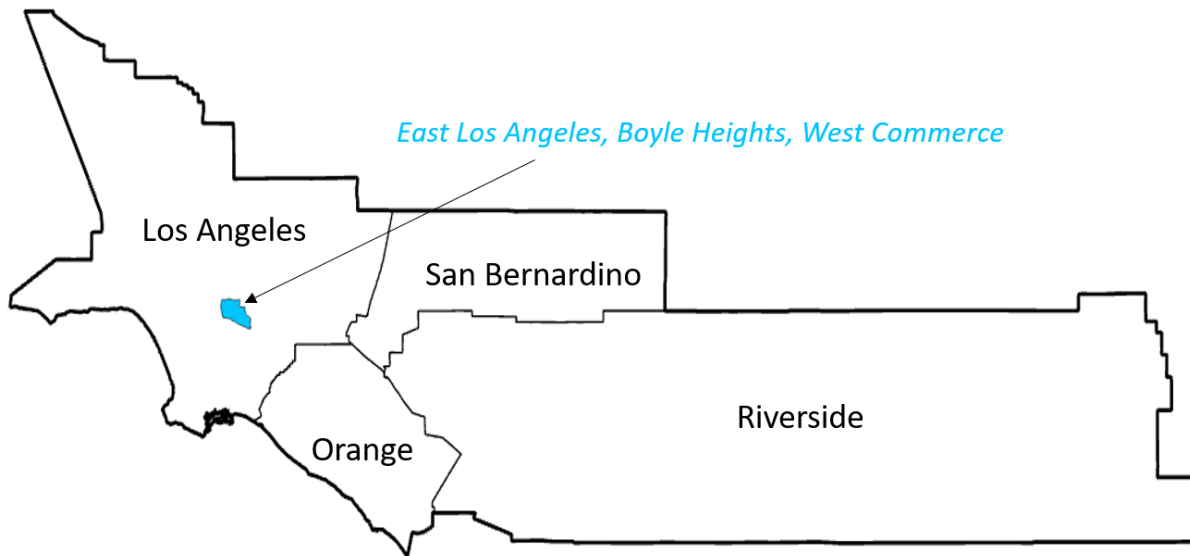

Figure 1-3: Population of East Los Angeles, Boyle Heights, West Commerce community, based on the 2010 Census

Figure 1-4: Population by Race/Ethnicity in East Los Angeles, Boyle Heights, West Commerce and the state of California, based on 2010 Census<sup>iii</sup>

Figure 1-5: Age profile in East Los Angeles, Boyle Heights, West Commerce and the state of California, based on 2010 Census

<sup>i</sup> Definitions of races are the same as CalEnviroScreen 3.0.

<sup>ii</sup> Numbers may not add up due to rounding.

While the demographics and geography provide useful information, the members of the community are what make each community unique and distinct. Community members bring intimate familiarity with their community and the air quality concerns that affect their neighborhood. Below are some community voices describing this community.

“I’ve been here all my life. I was raised here, I became an employee here, I am still serving the community in my capacity as a Councilmember, and now raising my son here. I take pride in what this community represents; we are such a close knit community, we are a huge family, all of our neighbors know each other generation to generation to have been raised here. My friends I went to school with, we are all raising our kids here together. It is important to ensure that we provide cleaner air for our kids. We know that it is a long battle, but it is important for us to provide clean air for our generation that is still here, for the generation of our children, and for generations to come because having clean air should not be something that is far-fetched. It should just be something that the community should have.”

*-Oralia Rebollo, Councilmember, City of Commerce*

“My community is an extended family, we look out for family, and I want to look out for my community.”

*-Johncito Peraza-Romero, Active Resident, City of Commerce*

“My community is a driven, passionate and powerful bastion of hope for cleaner air and environmental justice. We are connected by the stories we share. Cancer growing in our neighborhoods, our families with asthma, toxic air harming our lungs, construction site dust waves making us cough and sneeze to no end. My community is a valuable voice that will help shape a healthier future for all.”

*-Leoda Valenzuela, Field Organizer, Council of Mexican Federations (COFEM)*

# CHAPTER 2:

## COMMUNITY OUTREACH, COMMUNITY STEERING COMMITTEE AND PUBLIC PROCESS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 2: Community Outreach, Community Steering Committee and Public Process

### Introduction

Community engagement and a public process were integral parts of the Community Emissions Reduction Plan (CERP) development effort. Key features of the outreach efforts include establishing a Community Steering Committee (CSC), holding monthly meetings that were also live-streamed on the internet, during which, CSC members, South Coast AQMD and CARB made presentations, providing provided materials via email and on the a webpageinternet, live-streaming all CSC meetings, and establishing established a Technical Advisory Group (TAG). In addition, numerous interactions between CSC members and South Coast AQMD staff occurred in one-on-one or small group meetings, allowing for in-depth discussions on joint development and creation of the CERP.

### Chapter 2 Highlights

- The Community Steering Committee (CSC) and Technical Advisory Group worked with staff to develop the CERP
- Monthly meetings were held in the community to engage the CSC and public
- The Community Liaison served as the point of contact
- Additional one-on-one, small group, and community meetings also played an important part in community engagement
- A Community Webpage was created as an information portal

### Community Liaisons

A Community Liaison from the South Coast AQMD was designated for the East Los Angeles, Boyle Heights, West Commerce (ELABHWC) community. The Community Liaison served as the point of contact to communicate with members of the CSC and members of the public to address any concerns regarding logistics and implementation of the CERP and Community Air Monitoring Plan (CAMP). The Community Liaison ensured communication throughout the process of developing the CERP and worked with community members to identify the best ways to make information accessible and user-friendly. The South Coast AQMD Community Liaison for this community is Evangelina Barrera ([ebarrera@aqmd.gov](mailto:ebarrera@aqmd.gov)). In addition, Margaret Isied ([misied@aqmd.gov](mailto:misied@aqmd.gov)) serves as the South Coast AQMD point of contact for CERP-related input.

Figure 2-1: South Coast AQMD staff at a CSC meeting in East LA Commerce

## Community Meetings

Community meetings were hosted by South Coast AQMD staff on an approximately monthly basis in the community. This included one kick-off meeting and a series of CSC meetings.

### Community Kick-Off Meeting

In October 2018, kick-off meetings were held in each of the communities within the South Coast AQMD designated by CARB to be included in Year 1 of the AB 617 Program. The CSC provides input and guidance to design actions for the community, for integration into the CERP as well as the CAMP. Community members had an opportunity to fill out an Interest Form during the kick-off meeting to express their interest in being a CSC member, and were then notified by mail or by phone if they were selected as a member or an alternate.

The Community Kick-Off Meeting in the ELABHWC community was held on Tuesday, October 16, 2018 at the Commerce Senior Center (Figure 2-2). Approximately 60 people attended the meeting. In addition to receiving information about AB 617, attendees were invited to visit a variety of booths, which provided information about some existing South Coast AQMD programs, community monitoring, community air measurement efforts, and incentive programs.

Figure 2-2: Community kick-off meeting at the Commerce Senior Center

### Community Steering Committee (CSC)

A steering committee (Figure 2-3) was formed for the ELABHWC community, and monthly meetings were organized. The meetings were typically held on Thursday evenings, and all CSC meetings were held in locations in the community. All meetings were open to the public.

### CSC Roster

CSC membership is comprised of stakeholders with community knowledge to help drive community action. The CSC creates a way to incorporate community expertise and direction in the development and implementation of clean air programs in each community. Staff will continue to seek recommendations and feedback from the CSC as the CERP is being implemented, and adjust the outreach approaches as needed to be even more effective.

Figure 2-3: Community Steering Committee meeting in East Los Angeles

The ELABHWC CSC roster consisting of 34 CSC members and 16 alternate members is provided in Table 2-1. This CSC has 22 primary members and 8 alternate members representing active residents, community organizations, and businesses. While 11 primary members are on the roster representing Active Residents, an additional 5 primary members also reside within the community (resident percentage on the CSC =  $16/22 = 72.7\%$ ). Additionally, there are 12 primary members and 8 alternate members representing agencies, schools/universities, or offices of elected officials who serve this community.<sup>1</sup> The roster with member biographies is available on the webpage:

<http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/east-la/roster-with-bios.pdf?sfvrsn=29>.

---

<sup>1</sup> Per discussion with California Air Resources Board staff, members representing agencies, schools, universities, hospitals, and offices of elected officials are not included in the calculation of resident percentage on the CSC.

Table 2-1: CSC Roster for Boyle Heights, East LA and West Commerce

Affiliation	Representative	Alternate
<b>Agency, school, university, hospital</b>		
City of Los Angeles - Department of City Planning	Priya Mehendale	Jason Douglas
City of Commerce	Oralia Rebollo	Michelle Keshishian
Los Angeles County Department of Public Health	Cristin Mondy	Tiffany Romo
Los Angeles County Planning Department	Norman Ornelas	Soyeon Choi
University of Southern California (USC)	Wendy Gutschow	Jill Johnston
AltaMed Health Services	Corina Martinez	Bernice Nunez Constant
White Memorial Medical Center	Brian Johnston	
<b>Elected Officials and Neighborhood Councils</b>		
Assemblymember Cristina Garcia - District 58	Evelyn Nuno	
Boyle Heights Neighborhood Council	Hector-Alessandro Negrete	
Office of Los Angeles Mayor Eric Garcetti	Irene Burga	
First District Supervisor Hilda Solis	Joseph Martinez	Elizabeth Andalon
Assemblymember Miguel Santiago – District 53	<u>Jorge Adame</u> (previously David Juarez)	Luis Melchor
<b>Business representative, business organization or labor organization</b>		
Railroads – BNSF	<u>Marisa Blackshire</u> (previously Trini Jimenez)	<u>Ladonna DiCamillo</u> (previously Marisa Blackshire)
Labor - SEIU 721	Maribel Castillon	Griselda Mariscal
Los Angeles Area Chamber of Commerce	Kendal Asuncion	Olivia Lee
Boyle Heights Chamber of Commerce	Jennifer Lahoda	
<b>Community organization</b>		
East LA Rising	Anna Araujo	
Our Lady of Victory Catholic Church - ELA	H. Jose Garcia	Luis Reyes
Mothers of ELA	Teresa Marquez	
Resurrection Church	Msgr. John Moretta	
East Yard Communities for Environmental Justice (EYCEJ)	Cindy Donis	
Council of Mexican Federations (COFEM)	Anabella Bastida	Leoda Valenzuela
Legacy LA	Jacky Rodriguez	
<b>Active residents (not representing a community organization or a business)</b>		
Active Resident - Boyle Heights	Veronica Polanco	
Active Resident - Boyle Heights	Nadine Diaz	Diana Tarango
Active Resident - Boyle Heights	Terry Cano	Joe Gonzalez
Active Resident - Boyle Heights	Fabiola Rivas	
Active Resident - East Los Angeles	Rafael Yanez	
Active Resident - East Los Angeles	Rudy Perez	Carina Sanchez
Active Resident - East Los Angeles	mark! Lopez	
Active Resident - East Los Angeles	Martha Ofelia Jimenez	
Active Resident - West Commerce	Jennifer Reyes	
Active Resident - West Commerce	Paulina Becerra	
Active Resident - West Commerce	Johncito Peraza	
Active Resident - West Commerce	(vacant)	

### CSC Meeting Schedule and Co-Hosts

The CSC meetings were held on an approximately monthly basis (Table 2-2). Beginning with meeting #2, the meetings were run by a co-host, who is a member of the CSC who lives in the community. Anna Araujo served as a co-host (Figure 2-4) from East Los Angeles and Johncito Peraza served as a co-host from Commerce. The co-hosts worked closely with South Coast AQMD staff to provide input on the meeting agenda, serve as the point of contact for community members who wished to provide testimonials during the meetings, and conducted the meetings by setting the tone and calling on members to speak.

Figure 2-4: Anna Araujo, serving as the co-host for a CSC meeting in East Los Angeles

Table 2-2: Community Steering Committee Meeting Schedule for ELABHWC

Meeting #	Date and Location	Approximate # of Attendees
1	November 28, 2018 <b>Resurrection Church, Boyle Heights</b>	50
2	January 24, 2019 <b>East Los Angeles Service Center, East Los Angeles</b>	50
3	February 28, 2019 <b>Commerce Senior Center, Commerce</b>	40
4	March 28, 2019 <b>Resurrection Church, Boyle Heights</b>	50
5	April 25, 2019 <b>East Los Angeles Service Center, East Los Angeles</b>	40
6	May 23, 2019 <b>Resurrection Church, Boyle Heights</b>	50
7	June 27, 2019 <b>Commerce Senior Center, Commerce</b>	55
8	July 25, 2019 <b>East Los Angeles Service Center, East Los Angeles</b>	50
9	August 22, 2019 <b>Commerce Senior Center, Commerce</b>	<u>65</u>
10	September 26, 2019 <b>Resurrection Church, Boyle Heights</b>	

### CSC Charter

A charter was developed for the CSC and a draft was presented to members at the first meeting. CSC members provided comments and the feedback received was included in the revised charter. The final charter is provided on the webpage: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/east-la/charter-english.pdf?sfvrsn=8>

### Meeting Facilitator

Beginning in March 2019, the CSC meetings were facilitated by Valerie Martinez of VMA Communications ([www.vmapr.com](http://www.vmapr.com)). VMA staff also attended meetings to help with meeting facilitation.

### Social Media Report

Staff received a suggestion from one CSC member to live-stream meetings on social media in order to engage youth who use this technology and who may not be able to attend the meetings in person. All CSC meetings were subsequently live-streamed using Facebook Live shown in Figure 2-5. The links to the live-stream recording were also posted on the community webpage, so that members who could not attend or view the meeting live could view the recorded video of the meeting. Each video received approximately 100 views.

Figure 2-5: Screenshot of Facebook Live recording of a CSC meeting in Boyle Heights

### Community Webpage

A community webpage was created for the ELABHWC community. The webpage included information about upcoming meetings, meeting materials (flyers, agendas, presentations, handouts, live stream links, meeting summaries), interactive maps, the CSC roster, charter bios, and membership process, and the CAMP and CERP documents.

Webpage:

<http://www.aqmd.gov/nav/about/initiatives/environmental-justice/ab617-134/east-la>

For increased transparency, emails sent to the CSC were also posted on the webpage. All flyers, agendas, social media posts, presentations, handouts, and emails to the CSC were made available in English and Spanish. A screen shot of the community webpage is shown in Figure 2-6.

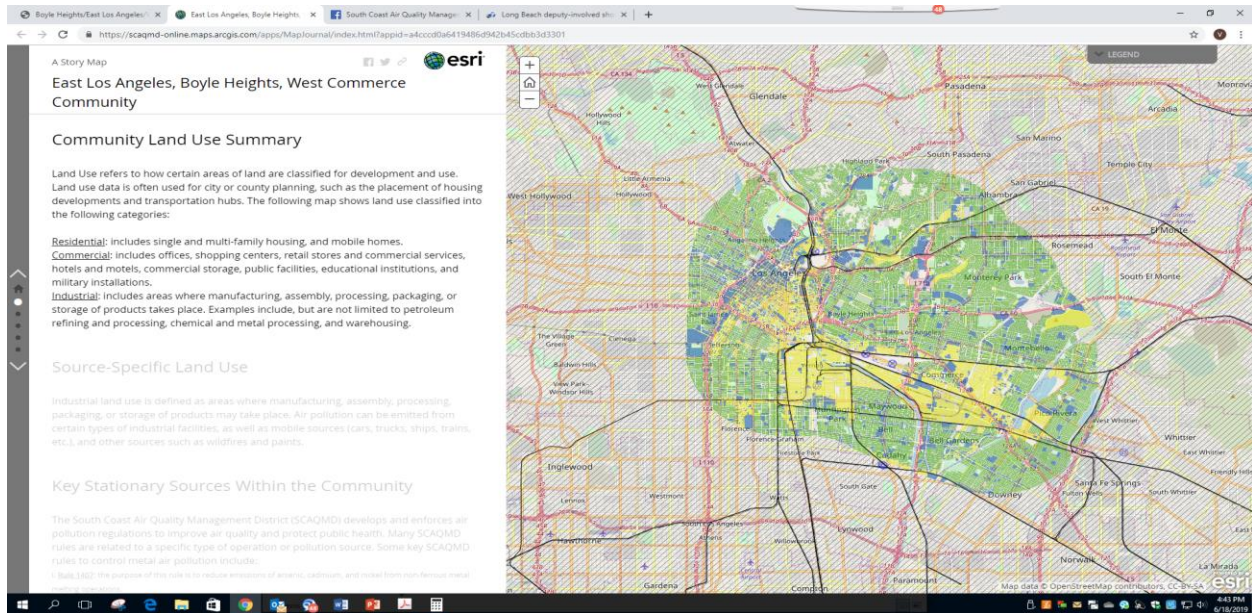

Figure 2-6: Community webpage for the ELABHWC community

In addition to being a portal for access to meeting materials and documents, the webpage also includes interactive maps that present data about the community. Figure 2-7 is an example of an interactive map that was created for the ELABHWC community. These interactive maps provide data on land use, locations of facilities, schools, hospitals, and daycare centers, and the air quality concerns identified by the CSC and members of the public. This information was provided to help inform air quality priorities for the CERP.

Figure 2-7: Interactive map showing land use in the ELABHWC community

### Community Bus Tour and Committee Presenters

A critical part of the CERP is development and implementation collaboration with CSC members and the agencies, organizations, businesses, or other entities that they represent. A Community Bus Tour (Figure 2-8) was organized by some CSC members, in collaboration with South Coast AQMD staff. The tour took place on April 13, 2019, and about thirty participants attended, including CSC members, South Coast AQMD staff, and CARB staff. The tour engaged participants in learning the effects of air pollution and the environmental justice issues in this community by visiting neighborhoods that are directly impacted by industrial facilities and transportation corridors. At the April 2019 Meeting, CSC member Jennifer Lahoda (Boyle Heights Chamber of Commerce) gave a brief recap of the community tour, which included a tour of the facility that she runs. She commented that the tour was very powerful and created great discussions. The group had

Figure 2-8: Community Bus Tour - CSC members and South Coast AQMD staff

a conversation on how businesses can engage with the community. The general sentiment expressed by the participants was that the tour was a wonderful starting point and provided optimism on developing a plan for change together. At the May 2019 meeting, CSC member Cindy Donis (East Yard Communities for Environmental Justice, (EYCEJ)) also gave a brief recap of the community bus tour.

Committee members were also invited to give presentations during CSC meetings to share information about the work they are doing in the community that is complementary to the actions being developed in the CERP, such as programs implemented by their organization that address air quality issues in the community.

At the May 2019 CSC meeting, Cindy Donis (EYCEJ) spoke about the work that her organization is doing to advocate for environmental justice in the community. Additionally, Anabella Bastida from the Council of Mexican Federations (COFEM) gave a presentation on current efforts in the community by COFEM to address air quality concerns.

At the June 2019 CSC meeting, Soyeon Choi from the Los Angeles County Department of Regional Planning provided information on their current efforts on their Green Zones Program.

At the July 2019 CSC meeting, Wendy Gutschow presented research findings from the University of Southern California Environmental Health Centers related to air pollution and toxic exposures.

### Technical Advisory Group

In February, 2019, the AB 617 Technical Advisory Group (TAG) was established to provide a forum to discuss technical details related to source attribution (information on the specific sources of monitored emissions), air monitoring and other technical analysis needed to develop the CAMPs and CERPs. The TAG meets on an approximately quarterly basis during the CERP and CAMP development process. Topics discussed include monitoring equipment and laboratory capabilities, methodology and data sources for developing an air toxics emissions inventory at a community scale, methodology for forecasting emissions in future years, and methodology for modeling air toxics levels across geographical areas. Table 2-3 shows the 2019 TAG meeting schedule. All meetings are held at South Coast AQMD headquarters, which is a location approximately in the middle of the three Year 1 communities. All meetings were webcast on the South Coast AQMD webpage ([www.aqmd.gov](http://www.aqmd.gov)), and webcast attendees could email questions to be answered during the meeting.

The majority of these technical considerations apply to all three AB 617 communities designated in Year 1 and consequently the Technical Advisory Group includes up to 3 members from each CSC, and additional technical experts from academia, research institutes, and governmental agencies (the current roster is provided in

Table 2-4 below). When additional communities are designated for the AB 617 program, representatives from those CSCs will also be added to the TAG. The webpage for the TAG is available at this link: <http://www.agmd.gov/nav/about/initiatives/environmental-justice/ab617-134/technical-advisory-group>

Table 2-3: Technical Advisory Group meetings in 2019

Meeting #	Date	Approximate Attendees
1	February 27, 2019	45
2	May 29, 2019	45
3	July 18, 2019	45

Table 2-4: Roster for the AB 617 Technical Advisory Group

Name	Affiliation	Community
Jesse Marquez	Coalition for a Safe Environment	Wilmington, Carson, West Long Beach
Flavio Mercado (Alternate for Jesse Marquez)	Active Resident from Wilmington	Wilmington, Carson, West Long Beach
Jill Johnston	University of Southern California	Wilmington, Carson, West Long Beach
Uduak-Joe Ntuk	City of Los Angeles	Wilmington, Carson, West Long Beach
Tim DeMoss (Alternate for Uduak-Joe Ntuk)	Port of Los Angeles	Wilmington, Carson, West Long Beach
Ryan Sinclair	Loma Linda University	San Bernardino, Muscoy
Andreas Beyersdorf	California State University, San Bernardino	San Bernardino, Muscoy
Tammy Yamasaki	Southern California Edison	San Bernardino, Muscoy
Hector Garcia	Our Lady of Victory	East LA, Boyle Heights, West Commerce
Marisa Blackshire	BNSF	East LA, Boyle Heights, West Commerce
Rafael Yanez	Active Resident	East LA, Boyle Heights, West Commerce
Manuel Pastor	Univ. Southern California, Sociology and American Studies & Ethnicity	Technical Expert
Madeline Wander (Alternate for Manuel Pastor)	Univ. Southern California, Sociology and American Studies & Ethnicity	Technical Expert
Scott Fruin	Univ. Southern California, Preventive Medicine	Technical Expert
Cesunica (Sunny) Ivey	UC Riverside	Technical Expert
Luis Portillo	Inland Empire Partnership	Technical Expert
Ken Davidson	US EPA Region 9 Air Division, Air Toxics, Radiation, and Indoor Air Office	Technical Expert
Janet Whittick	California Council for Environmental and Economic Balance (CCEEB)	Technical Expert
Melissa Lunden	Aclima	Technical Expert

### Additional Community Engagement

In addition to establishing the CSC and convening monthly meetings, South Coast AQMD staff conducts one-on-one or small group meetings with members, and attends meetings led by various community organizations. These meetings give CSC members an opportunity to provide input or address concerns directly with staff. Additionally, these meetings give staff an opportunity to answer questions and clarify information requested by CSC members. By attending meetings led by community organizations, staff can gain a better understanding of the unique issues faced by each community.

Broader public engagement is also important to the AB 617 program. Suggestion boxes provided at the CSC meetings allows CSC members, as well as the general public, to provide input and suggestions on the AB 617 process. Staff reviews the comments after each CSC meeting, and

responds as needed. Anonymous submissions are accepted. In addition, a Community Affairs Table at the CSC meetings provides a forum for community members to share flyers and handouts about events and programs occurring in the community.

Throughout the development of the CERP, community liaisons and other staff met with community members, environmental justice organizations, industry and other stakeholders to provide assistance and/or prompt response to concerns raised about the CSC process. Community liaisons also attended invited meetings from local organizations, environmental justice groups, city and county government agencies to promote participation in the development and implementation of the CERP. Staff attended meetings hosted by other entities in this community to give presentations on the AB 617 CERP development, and had more than 25 in-person or phone meetings with CSC members to discuss the CSC process and seek input on the CERP actions. South Coast AQMD staff will continue to work with the CSC to implement the CERP actions and provide periodic community updates on the progress of implementing the plan. Community engagement is essential to the success of the CERP as well as the AB 617 program as a whole, and all parties are committed to build and improve upon existing outreach efforts in the coming months and years.

---

# CHAPTER 3A:

## COMMUNITY PROFILE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 3a: Community Profile

### Introduction

It is essential to understand the characteristics of a community and the profile of air pollution sources in order to address community air quality priorities. The following community profile provides a general overview of the East Los Angeles, Boyle Heights, West Commerce community, including the types of air pollution impacting the community, and a characterization of public health and socioeconomic factors. In addition, this section includes information about the community boundary that reflects input from the Community Steering Committee (CSC); a

summary of the air pollution concerns identified by the community; and the air quality priorities based on CSC and public input. These air quality priorities are addressed in the Community Emissions Reduction Plan (CERP) actions described in Chapter 5.

### Chapter 3a Highlights

- The community profile is based upon input from the Community Steering Committee throughout the CERP development process
- The Community Steering Committee identified the top air quality priorities to be addressed in the CERP
- Data on land use; toxic air pollution impacts, public health factors; and both social and economic factors in the community provides useful background information
- Information about the sources of air pollution in the community is presented in a “source attribution” analysis (Chapter 3b)

### Community Boundary, Air Quality Concerns and Air Quality Priorities

During monthly CSC meetings, committee members, members of the public, and South Coast AQMD staff worked together to shape the elements and actions described in this Plan. Topics discussed with the CSC include:

- What should be the community **boundaries** for the AB 617 community plans?
- What **air quality concerns** does the community have?
- What are the top **air quality priorities** that the community would like to address through the AB 617 CERP?
- What **priority actions** should be included in the CERP?
- What should the **goals** for the priority actions include?
- Additional **feedback on the Draft CERP**

The process is summarized in [Figure 3a-1](#). CSC members discussed which geographic areas should be included within the community boundary ([Figure 3a-1](#)). The East Los Angeles, Boyle Heights, West Commerce CSC established two distinct community boundaries to represent this community for the purpose of AB 617 community plan implementation. The “Impacted Community” boundary focuses on the places in the community where community members live, work, go to school, and spend the majority of their time. The “Emissions Study Area” boundary includes both the Impacted Community

and additional air pollution sources (e.g., facilities and major truck routes) that may affect the Impacted Community. Regions within and near either community boundary will benefit from the emissions reductions within the boundary.

The CSC and members of the public participated in an interactive mapping activity to identify community air quality concerns, which were posted on the webpage.<sup>i</sup> These community air quality concerns are shown in Figure 3a-1 and listed in Table 3a-2. The vast majority of the concerns identified were within the Emissions Study Area.

Air quality concerns were grouped into categories (e.g., metal processing, truck and automobile traffic, railyards, etc.) and CSC members, as well as the public prioritized the top air quality concerns to be addressed through this CERP. CSC members were invited to provide ideas and input on CERP actions and also meet with South Coast AQMD staff to draft CERP actions together. The highest priority actions were included in the Draft CERP based on input from the CSC members.

The work to implement the CERP and Community Air Monitoring Plan (CAMP)<sup>1</sup> is dynamic, thus, certain action items have been written with built-in flexibility to permit necessary adjustments as new information becomes available. South Coast AQMD staff is committed to working with CSC members to evaluate ongoing actions and progress.

<sup>i</sup> Interactive map of air quality concerns in the East Los Angeles, Boyle Heights, West Commerce community, <https://scaqmd-online.maps.arcgis.com/apps/View/index.html?appid=3e6b40c9a9d94d01bf8d1cc02767370c&extent=-118.2963,33.9664,-118.0650,34.0778>, Accessed July 3, 2019.

Table 3a-1: Process of CSC Input on CERP elements

CSC Meeting #	Discussion Topic(s)	CSC input	How was this CSC input used in the CERP development process?
#1 November 2018	Community Air Quality Concerns and Community Boundary	Refined community <b>boundaries</b> . Identified community air quality <b>concerns</b> . <u>Outcome</u> : List of air quality concerns	<b>Boundaries</b> were used to define focus area for CERP actions (see Meetings #4-5). <b>Concerns</b> were prioritized for inclusion in Plans (see Meeting #3).
#2 January 2019	Community Boundary	Refined <b>community boundaries</b> . <u>Outcome</u> : Community boundary	<b>Boundaries</b> were used to define focus area for CERP actions (see Meetings #4-5).
#3 February 2019	Air Quality Concern Prioritization	Prioritized which concerns would be addressed in Plans. <u>Outcome</u> : Air quality priorities	Actions were developed for <b>air quality priorities</b> (Meetings #4 and #5)
#4 March 2019	Strategies & Proposed Actions (Part 1)	Ideas for <b>actions</b> can be written into the Plans. Staff will work with CSC members to write CERP actions. <u>Outcome</u> : Draft focused list of actions for CERP	Feedback on actions were used to develop the list of <b>priority actions</b> (Meeting #6).
#5 April 2019	Strategies & Proposed Actions (Part 2), Draft CAMP, and Draft CERP Table of Contents & Action Template	<b>Community bus tour</b> provided additional insight on community concerns and experiences.	
#6 May 2019	Focused list of CERP Actions (“priority actions”)	Provided feedback on which <b>priority actions</b> should be included in CERP. <u>Outcome</u> : List of priority actions for CERP	Feedback on actions were used to finalize the list of <b>priority actions</b> to be included in the <b>Draft CERP</b> .
#7 June 2019	Draft CERP, Goals for each CERP Action (Part 1)	Feedback on <b>Draft CERP</b> . Ideas for specific goals for each CERP action. <u>Outcome</u> : Revised Draft CERP	Feedback on <b>Draft CERP</b> and ideas for specific goals will be used to inform the <b>Draft Final CERP</b> in the Board package.
#8 July 2019	Goals for each CERP Action (Part 2)		
#9 August 2019	Final Discussion of Draft CERP	<b>Final revisions</b> for Draft CERP before it is submitted to South Coast AQMD Board for consideration. <u>Outcome</u> : Draft Final CERP and Appendices	Final comments to be addressed in <b>Draft Final CERP</b> that is part of the Board package.

The South Coast AQMD develops and enforces air pollution regulations to reduce emissions, improve air quality and protect public health. Many South Coast AQMD rules are related to a specific type of operation or pollution source. [Figure 3a-2](#) describes the number of facilities in this community that are subject to some key South Coast AQMD rules to control emissions from facilities processing metals. The figure also includes information about facilities that are in important key state and federal programs, which include major sources of air pollution or other types of environmental pollution. Appendix 3a also provides a list of facilities in the community that have prior and/or ongoing AB 2588 risk reduction plans and the facilities subject to Best Available Retrofit Control Technology (BARCT).

Figure 3a-2: Key stationary sources in the East Los Angeles, Boyle Heights, West Commerce community, by regulatory program

The following air quality priorities for the CERP were identified by the CSC and members of the public for the East Los Angeles, Boyle Heights, West Commerce community:

- Neighborhood and freeway traffic (trucks and automobiles)
- Railyards
- Metal processing facilities
- Rendering facilities
- Auto body shops

- Exposure reduction for sensitive populations in schools, childcare centers, community centers, libraries, and housing projects
- General concerns about industrial facilities, including waste transfer stations

Actions to address each of these air quality priorities are described in Chapter 5.

The South Coast AQMD and the California Air Resources Board (CARB) both develop and enforce air pollution regulations to improve air quality and protect public health. While CARB has primary authority over mobile sources, the South Coast AQMD has authority over stationary sources and “indirect sources”, which are facilities that attract mobile sources. Examples of indirect sources include warehouses and railyards. Specific information about ongoing rule development that is relevant to these air quality priorities is provided in Chapter 5.

### Community Air Pollution Profile and Related Data

Understanding what air pollution sources exist in the community and what air pollutants come from these sources helps identify key issues that can be addressed through CERP actions. This section presents data based on previous cumulative impact studies<sup>ii</sup> to describe the impacts of toxic air pollutants in this community, as well as other environmental pollution, public health factors, and social and economic factors that make people more sensitive or vulnerable to the health effects of pollution.<sup>2</sup>

The East Los Angeles, Boyle Heights, West Commerce community is shown in Figure 3a-1~~Figure 3a-1~~. The Impacted Community includes a land area of 18.96 square miles, and the Emission Study Area includes an area of 25.59 square miles. About 41% of this land area is used for residential living, 19% is zoned for commercial uses, 21% is zoned for industrial uses, and 10% is used for freeways, roadways, and land used for utilities and communications services (Figure 3a-3).<sup>iii</sup>

<sup>ii</sup> More information regarding MATES IV and the final report can be found on South Coast AQMD’s website at, <http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/matesiv>.

<sup>iii</sup> Land use refers to how certain areas of land are classified for development and use. Land use data is often used for city or county planning, such as the placement of housing developments and transportation hubs. Land use data is derived from the 2016 Southern California Association of Governments (SCAG) Regional Transportation Plan/ Sustainable Communities Strategy, which is based on 2012 data.

Figure 3a-3: Land use profile in East Los Angeles, Boyle Heights, West Commerce

Air toxics are one group of air pollutants that can affect public health on a local community scale. This includes pollutants from diesel exhaust, metal particulate pollutants (e.g., hexavalent chromium, lead, arsenic, nickel, etc.), and gases (e.g., benzene, formaldehyde, etc.). The South Coast AQMD conducts the Multiple Air Toxics Exposure Study (MATES) every few years to understand the cumulative health impacts of air toxics in communities across the region. The most recently completed study was MATES IV, which was conducted in 2012-2013, and used air toxics monitoring, emissions inventories, modeling, and health risk assessment techniques to calculate the cancer risk due to toxic air pollutants (“air toxics cancer risk”).<sup>iv</sup> MATES V is currently in progress. Based on MATES IV modeled data, approximately three-quarters of the air toxics cancer risk in the Basin is due to diesel particulate matter (Figure 3a-4).

<sup>iv</sup> More information regarding MATES IV and the final report can be found on South Coast AQMD’s website at: <http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/matesiv>.

The average air toxics cancer risk in the East Los Angeles, Boyle Heights, West Commerce community is higher than the Basin-wide average, and dominated by diesel particulate matter.

Figure 3a-45: Air toxics cancer risk, based on MATES IV modeled data

Figure 3a-65: Diesel mobile sources in East Los Angeles, Boyle Heights, West Commerce

Mobile sources include trucks, ships, trains, cars, buses, and other mobile equipment. Much of this equipment is powered by diesel, which is the air toxic pollutant with the highest impact in this community. The community includes more than 30.5 miles of freeways and 5 railyards, and many of these are located near residential areas ([Figure 3a-5](#)).

Understanding the community's public health and socioeconomic profile helps to provide context for the work being done through this CERP. CalEnviroScreen 3.0 is a screening tool developed by the California Office of Environmental Health Hazard Assessment (OEHHA) that is used to identify communities that are most affected by various sources of pollution, and where people are especially vulnerable to the effects of pollution. The CalEnviroScreen 3.0 data show that this community has public health factors, as well as social and economic factors, that make the community more sensitive and vulnerable to the harmful effects of air pollution compared to statewide averages ([Figure 3a-6](#) and [Figure 3a-8](#)). These data show that, on average, the East Los Angeles, Boyle Heights, West Commerce

community has generally worse public health factors and more social and economic disadvantages compared to California as a whole. The public health factors specifically show that this community has higher rates of emergency department visits for asthma and heart disease, and babies born with a low weight in comparison to statewide averages.

Figure 3a-76: CalEnviroScreen 3.0 scores for public health factors in East Los Angeles, Boyle Heights, West Commerce compared to statewide averages

Figure 3a-87: CalEnviroScreen 3.0 scores for social and economic factors in East Los Angeles, Boyle Heights, West Commerce compared to statewide averages<sup>v,vi</sup>

# CHAPTER 3B:

## COMMUNITY PROFILE SOURCE ATTRIBUTION

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 3b: Emissions Inventory and Source Attribution

### Introduction

The Community Emission Reduction Plan (CERP) identifies air quality priorities based on community input and from evaluating technical data on emission sources in the community. The Community Emissions Reduction Program (CERP) needs to identify air pollution challenges that each community faces, and defines actions and strategies to reduce the emissions and exposure burden from sources of criteria air pollutants (CAPs) and toxic air

contaminants (TACs). To accurately determine emission reductions from these actions and strategies, a baseline reference needs to be established. The baseline reference can be achieved through an emissions inventory that includes ~~Thus, rigorous~~ accounting of sources and their resulting emissions. ~~are required to produce an accurate emissions inventory that will serve as a baseline reference from which emission reductions can be measured.~~ This rigorous accounting of sources, their emissions and their contribution to cumulative exposure burden is what the CARB guidelines identify as source attribution analysis. Per the direction of CARB guidelines, source attribution is required to meet the following AB 617 statutory requirements:

#### Chapter 3b Highlights

- Information about the sources of air pollution in this community is presented in a “source attribution” analysis
- Diesel particulate matter is currently the main air toxic pollutant in this community, and it comes mostly from on-road and off-road mobile sources
- Other key air toxic pollutants in this community are hexavalent chromium (from industry and brake wear) and 1,3-butadiene (mostly from the chemical industry)
- Volatile organic compounds (VOCs) come primarily from consumer products (e.g., paints, cleaners, etc.)
- In future years, diesel emissions decrease substantially due to CARB regulations, but continues to be the main driver of air toxics cancer risk in this community

*California Health and Safety Code § 44391.2 (b) (2) directs CARB to provide “[a] methodology for assessing and identifying the contributing sources or categories of sources, including, but not limited to, stationary and mobile sources, and an estimate of their relative contribution to elevated exposure to air pollution in impacted communities...”*

CARB recommended five technical approaches to conduct source attribution analysis. They are emissions inventory, air quality modeling, targeted air monitoring/back trajectory/pollution roses/inverse modeling, chemical mass balance and positive matrix factorization. Among them, based on the availability of data and resources, an emissions inventory and an air quality modeling analysis are source attribution tools employed to identify sources contributing to air

pollution levels in the community, with an emphasis on identifying sources within the community (emissions inventory). More information on source attribution methods is included in the Source Attribution Methodology report.<sup>1</sup> The most recent air quality modeling analysis was conducted as part of the Multiple Air Toxics Exposure Study (MATES IV) in 2015, which showed Diesel Particulate Matter (DPM) was the air pollutant that contributed most to the air toxics cancer risk in the South Coast AQMD, with the ELABHWC community having higher air toxics cancer risk compared to the overall average (Figure 3a-5). A community-specific emissions inventory was developed for ~~criteria air pollutants (CAPs)~~ and TACs based on the most recent available datasets.

The ELABHWC community contains some obvious sources of air pollution, including over 30 miles of major freeways and 5 major rail yards within the community that support the goods movement industry. The community also includes a wide range of industrial facilities, including metal processing, surface coatings, auto body shops, rendering facilities, and warehousing that attracts heavy-duty truck traffic. The source attribution analysis highlights that in the year 2017, on-road and off-road mobile sources were the predominant sources of DPM, with the major contributors being heavy-heavy duty trucks, medium-heavy duty trucks, off-road diesel equipment, and trains. In this community, stationary sources and area sources are the main sources of hexavalent chromium and 1,3-butadiene, with fuel combustion in manufacturing and coating industries being the main source of hexavalent chromium, and the chemical industry as the major source for 1,3-butadiene emissions. The analysis presented in this chapter provides further details on the sources of VOCs and PM<sub>2.5</sub>. Projected emissions in future years show decreases in DPM emissions, although DPM continues to be the main contributor to air toxics cancer risk.

While detailed methodology to develop these emissions is provided in the Source Attribution Methodology report<sup>2</sup>, the community-level emissions and their sources are discussed in this report, including base year emissions of CAPs and TACs and future emissions of CAPs and TACs. ~~Base year emissions of CAPs and TACs are provided in section 2. Future year emissions of CAPs and TACs are discussed in section 3, and a summary is provided in section 4.~~

### Base year emissions inventory and source attribution

#### ~~Overall profiles of CAPs and TACs~~

A variety of sources contribute to the emissions of criteria pollutants in the East Los Angeles, Boyle Heights, West Commerce community, with different sources emitting different air pollutant species NO<sub>x</sub> emissions are related to combustion sources. In this community, on-road mobile sources are the largest emitters of NO<sub>x</sub>, with heavy-duty trucks being the largest contributor. Off-road mobile sources are the second largest contributor to NO<sub>x</sub>, and includes trains and off-road equipment. Area sources of NO<sub>x</sub> are mainly from fuel combustion for space and water heating at commercial businesses and homes, whereas point sources include a large mineral processing plant, manufacturing facilities, and electric utilities.

VOC emissions mostly come from area sources, specifically from consumer products and outdoor paints (architectural coatings), as well as vehicle exhaust. The largest contributors to PM<sub>2.5</sub> emissions are from area sources, such as commercial cooking, residential wood burning (residential fuel combustion), and paved road dust. PM is also emitted from mobile sources via vehicle exhaust and tire and brake wear. While paved road dust is also related to vehicles traveling on roads, it is considered as an area source rather than a mobile source. It is important to note that ambient PM<sub>2.5</sub> concentrations in the community have decreased steadily in the past decades due to the reductions of PM<sub>2.5</sub> precursor emissions such as NO<sub>x</sub>, SO<sub>x</sub>, and VOC. Ambient PM<sub>2.5</sub> can be either formed through chemical reactions of its precursor pollutants or be emitted directly from sources. In the South Coast Air Basin ~~including~~including this community, majority of ambient PM is chemically produced rather than ~~directly~~directly emitted from sources. Accordingly, even if PM<sub>2.5</sub> emission has not decreased much, ambient PM<sub>2.5</sub> concentrations have been improved substantially. South Coast Air Basin is close to the attainment of the U.S. EPA's ambient air quality standards for PM<sub>2.5</sub>.

TAC emissions from point sources were compiled from the emissions reported by facilities. TAC emissions from area, on-road, and off-road sources were calculated using chemical speciation profiles applied to PM or TOG emissions. Details on the chemical speciation profiles are provided in a separate Source Attribution Methodology report<sup>1</sup>. In total, 22 air toxic pollutants were analyzed and included in this report. This list of air toxic pollutants is consistent with the list of TACs that facilities are required to report under the South Coast AQMD Annual Emissions Reporting (AER) program, except chlorofluorocarbons (CFCs) and ammonia were not included. CFCs do not have an associated air toxics cancer risk, whereas ammonia is included in the CAPs inventory because is a PM precursor.

The contribution from point, area, on-road and off-road emission sources to TACs emissions in this community are presented in Figure 3b-2. Note that the emissions in the figure are weighted based on the air toxics cancer risk of each TAC relative to diesel PM (DPM). For example, Cr<sup>6+</sup> has an approximately 464 times higher air toxics cancer risk than DPM per unit weight. Thus, Cr<sup>6+</sup> emissions are multiplied by 464 to estimate the air toxics cancer-risk-weighted emissions of Cr<sup>6+</sup>. The units in the air toxics cancer risk-weighted DPM-equivalent emissions are expressed in pounds per year (lbs/year). This weighting approach enables a comparison of the contribution of each TAC to overall air toxics cancer risk using a consistent scale. Cancer risk factors are calculated using cancer potency and basin-average inhalation rates. Since the cancer-risk weighted factors are relative to the DPM risk factor, relative weighting factors using cancer risk should be equivalent to weighting factors calculated using cancer potency. However, due to precision and rounding errors, weighting factors using cancer risk might not be identical to the weighting factors calculated using cancer potency for some TACs. Figure 3b-2 indicates that DPM is the largest contributor to the overall air toxics cancer risk in the community, followed by hexavalent chromium, 1,3-butadiene, and benzene. Figure 3b-2 also indicates the major source categories from which the major TACs originate. Most of the DPM is emitted from mobile sources. A

significant portion of  $\text{Cr}^{6+}$  is emitted from on-road mobile sources, mostly from brake wear. A detailed emission inventory by major source categories is provided in the Appendix 3b.

Figure 3b-1: Contribution of major source categories to NO<sub>x</sub> emissions, TOG emissions, PM<sub>2.5</sub> emissions in the East Los Angeles, Boyle Heights, West Commerce community in 2017 (tons/year)

Figure 3b-2: Contribution of major sources to toxic air contaminant emissions (air toxic cancer risk-weighted diesel-equivalent, lbs/year) in the East Los Angeles, Boyle Heights, West Commerce community in 2017. Note the different scale for Diesel PM with respect to the other air toxics

### Stationary and Area Sources

Figure 3b-3 provides the source attribution of VOC and PM<sub>2.5</sub> emissions from stationary sources in the ELABHWC community in 2017. The largest contribution to VOC emissions is from solvent evaporation from consumer products. A wide range of industries also contribute significantly to total VOC emissions from stationary sources, with degreasing and surface coating being the second largest source of VOC from stationary and area sources, and gas stations (petroleum marketing) also being a significant source of VOC emissions.

Emissions of PM<sub>2.5</sub> in the ELABHWC community originate from a wide range of activities, including commercial cooking, residential and commercial fuel combustion, and paved road dust. In addition, emissions from various industries including electricity generation, mineral processing, and manufacturing contribute to total PM<sub>2.5</sub> emissions.

Figure 3b-4 illustrates the emissions of the major TACs from stationary and area sources in the community. The emissions of each pollutant are weighted by their corresponding air toxics cancer risk relative to Diesel PM. In this community, hexavalent chromium and 1,3-butadiene are the most predominant air toxics from stationary and area sources. Hexavalent chromium is emitted from fuel combustion in manufacturing, and from coating industries (Figure 3b-5), whereas the major source for 1,3-butadiene emissions is from the chemical industry.

### On-road Mobile Sources

In this community, passenger vehicles and light- and medium-duty vehicles contribute to the majority of VOC and PM<sub>2.5</sub> emissions (Figure 3b-6). VOC emissions are mostly from gasoline vehicles<sup>i</sup>, and, as a result, passenger cars are the main contributor to VOC emissions because of the large the number of vehicles and miles travelled by these types of vehicles. PM<sub>2.5</sub> emissions from on-road sources are from fuel combustion as well as from tire and brake wear. Light and medium duty vehicles are the main contributors to the total emissions of PM<sub>2.5</sub>, because these vehicles travel the most miles within the community. Even though heavy-duty trucks drive less than 10% of the total vehicle miles travelled in Los Angeles County, heavy-duty trucks contribute to more than 25% of the total PM<sub>2.5</sub> emissions from on-road sources<sup>ii</sup>.

Toxic emissions from on-road sources are largely dominated by DPM (Figure 3b-7). The largest contributor to DPM emissions is diesel-fueled heavy-duty trucks, so the largest impacts from on-

<sup>i</sup> These emissions are largely related to evaporative and running losses

<sup>ii</sup> Heavy-duty diesel vehicles tend to have higher PM exhaust and tire and brake wear emissions per mile driven compared to gasoline cars.

road sources in the community are concentrated along the main goods movement corridors. The second largest contributor to air toxics cancer risk from on-road sources is hexavalent chromium, which is emitted from brake wear<sup>iii</sup> and, to a smaller extent, from fuel combustion.

Other TACs emitted from on-road sources include benzene, 1,3-butadiene and formaldehyde. The source of benzene is from evaporative losses and from the incomplete combustion of gasoline, whereas formaldehyde and 1,3-butadiene emissions are generated from fuel combustion.

---

<sup>iii</sup> A small fraction of hexavalent chromium was considered to originate from vehicle brake wear. The emission factors were empirically adjusted for the MATES IV analysis. While this approach worked reasonably well for the MATES analysis, further evaluation may be required for adapting this adjustment to more recent data. For example, an adjustment may be required to reflect cleaner vehicle fuels compared to those in use during previous MATES.

### Off-Road Mobile Sources

Figure 3b-9 presents the major sources of VOC and PM<sub>2.5</sub> emissions from off-road sources. The largest contributor to total VOC from off-road sources in the community is small off-road equipment. This category includes small off-road spark-ignition engines used in lawn and garden equipment, industrial, logging, airport ground support, and commercial utility equipment, golf carts, and specialty vehicles. Other significant sources of VOC include evaporative emissions from fuel storage and handling, recreational boats and recreational vehicles, and emissions from trains. Although there is no major waterway or waterbody in the ELABHWC community, boats that are parked in the community still emit pollutants through fuel evaporation.

As in the case of VOC emissions, the largest off-road source contributing to PM<sub>2.5</sub> emissions is from small off-road equipment. The second largest contribution to PM<sub>2.5</sub> emissions from off-road sources in the community is from trains. There are 5 large railyards within the community boundaries, and some of them are near residential areas.

Figure 3b-10 presents the contribution of TAC emissions from off-road sources in the ELABHWC community. Diesel PM is the toxic air contaminant that contributes the most to total air toxics cancer risk in the community from off-road sources. The two main sources of DPM are trains and diesel off-road equipment (Figure 3b-11).

#### Trends of emission changes for CAPs and TACs

Future emissions of CAPs and TACs in the ELABHWC community are projected using the best available information for population growth, economic growth and emission adjustments reflecting ongoing or proposed regulations targeting specific air pollutants. To date, there are ten (10) facilities within the community boundary subject to Rule 1407 – Control of Emissions of

Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations and/or Rule 1420 – Emissions Standard for Lead that regulate toxic emissions from metal melting operations; five (5) facilities subject to ~~the~~ Rule 1426 that regulates electroplating operations – Emissions from Metal Finishing Operations; eight (8) facilities subject to Rule ~~1496~~–1469 – Hexavalent Chromium Emissions from Chromium Electroplating and Chromic Acid Anodizing Operations that regulates and/or Rule 1420 that regulates toxic emissions from metal melting operations; five (5) facilities subject to ~~the~~ Rule 1426 that regulates electroplating operations; and eight (8) facilities subject to Rule 1496 that regulates toxic emissions from electroplating and chromic acid anodizing operations. Furthermore, on-road DPM emissions from heavy-duty diesel vehicles in this community will be subject to ~~diesel~~ CARB's Truck and Bus Regulations enacted after 2017<sup>iv</sup>. Off-road diesel equipment is also subject to state regulations that will reduce DPM emissions. South Coast AQMD is developing various regulations to reduced NOx and VOC emissions since the adoption of the 2016 AQMP in March 2017. However, control factors for those newer regulations are under development and not reflected in the current inventory. The cutoff date for stationary NOx and VOC rules is December 2015. Future versions of emission inventory will reflect the newer regulations.

Figure 3b-12 presents the projected major CAPs emissions (NOx, VOC and PM2.5) in the ELABHWC community in the two future target years 2024 and 2029, along with the base year 2017. The NOx emissions in the community are expected to decrease substantially between the year 2017 (2,710 tons/year) to the year 2024 (1,841 tons/year), due to the existing regulations on mobile sources and the emission reduction commitments under the RECLAIM program. The NOx emissions in 2029 are projected to rise slightly (to 1,851 tons/year) due to the expected increase in industrial and mobile source activity projections. VOC emissions are expected to decrease by 10% between the years 2017 and 2029, mostly due to cleaner vehicle emissions. Unlike NOx and VOC emissions, PM2.5 emissions remain virtually unchanged, with less than a 1% change during the period from 2017 to 2029.

Trends for TAC emissions are shown in Figure 3b-13. Diesel PM continues to dominate the TACs emission inventory in future years, despite a significant reduction in DPM from heavy-duty trucks. DPM decreases by 60% from 2017 (69,553 lbs/year) to 2024 (26,425 lbs/year), and continues to decline through 2029 (22,327 lbs/year). Hexavalent chromium is the second largest contributor to air toxics cancer risk, and increases slightly from 2017 to 2029, due to an increase in brake wear emissions and projected industrial activity growth. The third largest contributor to air toxics cancer risk is 1,3-butadiene, whose emissions remain relatively stable due to slight increases in industrial emissions offset by reductions in emissions from vehicles. Benzene and formaldehyde emissions decrease throughout the 12 year period due to decreases in the emissions from

<sup>iv</sup>CARB's Truck and Bus Regulations: <https://ww2.arb.ca.gov/our-work/programs/truck-and-bus-regulation>

vehicles, whereas emissions from metals, i.e., cadmium, nickel, arsenic and lead, show a slight increasing trend due to projected industrial activity growth.

It is important to note that many of the South Coast AQMD regulations addressing toxic metal pollution emissions from industrial facilities (e.g. South Coast AQMD Rule 1407 and Rule 1469) include requirements that reduce fugitive emissions from these facilities. Fugitive emissions can often account for the vast majority of the toxic metal emissions from a facility. Unfortunately, the methods available to create an emissions inventory are not able to reflect fugitive emissions from these facilities. Therefore, while the inventory may not show an overall decrease in toxic metal emissions the regulations result in overall decreased emissions due to reductions in fugitive emissions.

Figure 3b-12: The community total emission trends for NO<sub>x</sub>, VOC & PM<sub>2.5</sub> (tons/year) for the years of 2017, 2024 and 2029

Figure 3b-13: The community total emission trends for toxic air contaminants (air toxics cancer risk-weighted diesel-equivalent emissions, lbs/year) for the years of 2017, 2024 and 2029

Figure 3b-14<sup>v</sup> presents the cumulative TAC emissions by the major categories for the three years of interest. The overall cancer-risk-weighted emissions decreased between 2017 and 2029. In particular, diesel heavy duty trucks and off-road equipment decreased substantially over the 12-year period, driving down the overall TAC emissions.

<sup>v</sup> \*Numbers may not add up due to rounding

Figure 3b-14: Toxic air contaminant emissions from all sources in the East Los Angeles, Boyle Heights, West Commerce community, shown by major categories. Emissions are weighted based on their cancer risk relative to DPM

### Stationary and Area Sources

Community-level emissions of NO<sub>x</sub>, VOC and PM<sub>2.5</sub> from stationary and area sources are presented in [Figure 3b-15](#) for the years 2017, 2024 and 2029. NO<sub>x</sub> emissions are expected to decline from 2017 to 2024, due to the emission reductions from RECLAIM facilities.<sup>vi</sup> VOC and PM<sub>2.5</sub> emissions are expected to grow gradually due to growth in population, and in economic and industrial activities.

Emissions of hexavalent chromium and 1,3-butadiene are the largest contributors to total toxic emissions from area and stationary sources ([Figure 3b-16](#)), and are expected to rise from 2017 to 2029 due to the projected industrial activity growth during the same period. Hexavalent chromium is emitted from fuel combustion in manufacturing, and from coating industries, whereas the major source for 1,3-butadiene emissions is from the chemical industry. Emissions of other TACs that are primarily emitted from industrial activities, i.e., formaldehyde, cadmium, arsenic, nickel, and lead, are also expected to increase due to industrial growth. Only benzene, DPM, and perchloroethylene emissions are expected to decline due to on-going regulations.

---

<sup>vi</sup> NO<sub>x</sub> RECLAIM is an emission cap-and-trade program that includes larger stationary sources located in the Basin. The current regulation, Rule 2002 requires 12 tons per year of NO<sub>x</sub> emission reductions from 2016 to 2022. When the rule is fully implemented in 2022, no significant changes in NO<sub>x</sub> are expected except for a slight increase from 2024 to 2029 due to the growth in economic, industrial, and commercial activities. The 2016 AQMP includes a control measure to target an additional 5 tons per year of NO<sub>x</sub> reduction from the RECLAIM facilities by 2031. The impact of the additional “NO<sub>x</sub> shave” is not reflected in the community inventory since December 2015 was the cut off for stationary source regulations to reflect on the inventory. The rulemaking to achieve additional 5 TPD NO<sub>x</sub> is still ongoing and will be reflected on the inventory when it is finalized.

Figure 3b-15: Trends in NO<sub>x</sub>, VOC and PM<sub>2.5</sub> emissions from stationary and area sources in the East Los Angeles, Boyle Heights, West Commerce community. Emissions are presented in pounds tons per year

Figure 3b-16: Trends in toxic air contaminant emissions (air toxics cancer-risk-weighted diesel-equivalent, lbs/year) from stationary and area sources in the East Los Angeles, Boyle Heights, West Commerce community

### On-Road Mobile Sources

Trends for on-road emissions are presented in [Figure 3b-17](#). On-road emissions are expected to decline significantly from 2017 to 2024, due to turnover to cleaner vehicles for both light-duty vehicles and heavy-duty trucks. Vehicle emissions decreased from 2017 to 2024 despite the

projected increase in vehicle activity, i.e. vehicle-miles traveled (VMT), for most vehicle categories (Table 3b-1). After 2024, passenger vehicles will emit less NO<sub>x</sub> because the future vehicles are cleaner than current vehicles, despite an increase in VMT. On the other hand, while regulations on heavy-duty trucks after 2024 will decrease the emissions from individual trucks, the projected increase in heavy-duty truck activity offsets these gains. As a result, overall NO<sub>x</sub> emissions from on-road mobile sources increased slightly from 2024 to 2029.

VOC emissions are expected to decline for all vehicle types except for motorcycles, whose emissions are projected to grow steadily from 2017 to 2029. PM<sub>2.5</sub> emissions are expected to decline for all vehicle types from 2017 to 2024. After 2024, the effect of vehicle regulations on light-, medium- and heavy-heavy duty trucks is offset by their growth activity. Emissions of PM<sub>2.5</sub> from heavy-duty trucks are expected to increase slightly, offsetting passenger vehicle PM<sub>2.5</sub> emission reductions. As a result, overall PM<sub>2.5</sub> emissions from vehicles are projected to grow by 1 ton/year from 2024 to 2029.

Figure 3b-18 presents the trends in emissions of toxic air contaminants from on-road mobile sources, with emissions weighting based on air toxics cancer risk relative to DPM. In 2017, DPM is the pollutant contributing most to the air toxics cancer risk, followed by hexavalent chromium. However, regulations on heavy-duty diesel trucks reduce the DPM emissions drastically from 2017 to 2024. Beyond 2024, the DPM emissions from heavy-duty diesel trucks increases slightly by 2029, due to an increase in VMT; however, the DPM emissions in 2029 are still 85% lower than in 2017. Hexavalent chromium emissions are predominantly from brake wear, which is directly related to VMT, with a small contribution from fuel combustion. Because VMT from vehicles is expected to increase, so are emissions of hexavalent chromium. Benzene emissions are projected to decline due to reductions in evaporative emissions from vehicles. Formaldehyde and 1,3-butadiene emissions are projected to decrease due to expected reductions in VOC emissions from vehicle exhaust.

Table 3b-1: Trends for vehicle miles travelled (VMT) from on-road mobile sources in the East Los Angeles, Boyle Heights, West Commerce community

Year	Vehicle Categories					Total
	Light and Medium Duty	Light Heavy Duty	Medium Heavy Duty	Heavy Heavy-Duty	Buses	
2017	7,206	164	133	203	51	7,757
2024	7,316	181	193	307	57	8,054
2029	7,637	216	251	415	65	8,584

Unit in 1000 miles

Figure 3b-17: Trends in NOx, VOC and PM2.5 emissions from on-road mobile sources in the East Los Angeles, Boyle Heights, West Commerce community. Emission values in tons per year

Figure 3b-18: Trends in toxic air contaminant emissions (air toxics cancer risk weighted diesel-equivalent, lbs/year) from on-road sources in East Los Angeles, Boyle Heights, West Commerce

3b-23

### Off-road mobile sources

Trends in emissions of NO<sub>x</sub>, VOC, and PM<sub>2.5</sub> from off-road mobile sources in the ELABHWC community are presented in [Figure 3b-19](#). All three pollutants are projected to decline steadily from 2017 to 2029. In general, emissions are expected to decline due to emission reductions from trains and industrial off-road equipment, due to turnover of older equipment to newer, cleaner equipment. Reductions in evaporative emissions from fuel storage handling and recreational vehicles drive the overall VOC reduction in the community.

Trends in toxic air contaminant emissions are presented in [Figure 3b-20](#). Emissions from off-road mobile sources in this community are dominated by diesel emissions from trains and heavy industrial and construction off-road equipment. Off-road equipment regulations and turnover to cleaner and more fuel-efficient locomotives reduce the overall TACs in the community. While benzene and 1,3-butadiene decrease from 2017 to 2024, the projected increase in industrial activity through 2029 reverts the effect of regulations shown in the 2017-2024 period. The emissions of the remaining TACs are projected to decline as a result of regulations.

Figure 3b-19: Trends in NO<sub>x</sub>, VOC and PM<sub>2.5</sub> emissions from off-road mobile sources in the East Los Angeles, Boyle Heights, West Commerce community. Emission values in tons per year

Figure 3b-20: Trends in toxic air contaminant emissions (air toxics cancer risk weighted diesel-equivalent, lbs/year) from off-road sources in East Los Angeles, Boyle Heights, West Commerce

### Summary

The main sources of air pollution emissions in the ELABHWC community are on-road traffic, trains, off-road equipment, and certain industrial activities.

NO<sub>x</sub> emissions in this community are dominated by mobile sources – both on-road and off-road – which account for 80% of the total emissions. Heavy-duty truck traffic, trains, and off-road equipment are the largest sources for NO<sub>x</sub>. Stationary and area sources contribute to 20% of NO<sub>x</sub> emissions in this community, mostly from fuel combustion in the residential, commercial, and industrial sectors.

VOC emissions are dominated by area sources, with consumer products being the largest source. Passenger vehicles and off-road equipment, such as lawn mowers and other small gasoline engines, are the largest contributors to VOC emissions from on-road and off-road sources, respectively.

Half of the PM<sub>2.5</sub> emissions are from miscellaneous area sources that include commercial cooking, residential fuel combustion, construction, and paved road dust. Industrial activities involving mineral processing, manufacturing and power generation are the second largest source of emissions, with PM<sub>2.5</sub> vehicle emissions also contributing significantly to total emissions.

Toxic air contaminants (TACs) emissions in the ELABHWC community are dominated by diesel particulate matter (DPM) from diesel exhaust. DPM is emitted from heavy-duty trucks, trains, and industrial off-road equipment. Hexavalent chromium is the second largest component of TACs based on risk-weighted emissions, and the major sources include industrial activities and brake wear from on-road vehicles. Other significant TAC species includes 1,3-butadiene and benzene, which are mostly emitted from mobile sources.

Future NO<sub>x</sub> emissions in the community are expected to decrease due to the existing regulations on mobile sources and the emission reduction commitments for major facilities. VOC emissions are also expected to decline, although they will decline more slowly compared to NO<sub>x</sub> reductions. Emissions of DPM from heavy-duty trucks are also expected to decrease substantially. CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation will also contribute to reducing DPM. Emissions of hexavalent chromium and 1,3-butadiene from stationary and area sources are expected to increase slightly in the future years, due to increased industrial activity. However, in future years, DPM continues to be the main contributor to air toxics cancer risk in this community.

# CHAPTER 4:

## ENFORCEMENT SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 4: Enforcement Plan

### Introduction

This chapter describes the enforcement history and overall approach to enforcement by the South Coast AQMD and the California Air Resources Board (CARB). In addition, the Community Emissions Reduction Plan (CERP) includes focused enforcement actions, which are described within Chapter 5 (idling truck sweeps and truck enforcement in priority areas; air monitoring and inspection at facilities). It is important that enforcement actions are part of the overall AB 617 program actions, which enables the program to be more effective in addressing this community's air quality priorities.

### Chapter 4 Highlights

- From 2016 to 2018, CARB conducted over 1,100 inspections and South Coast AQMD conducted approximately 526 inspections and responded to approximately 990 complaints in the East Los Angeles, Boyle Heights, West Commerce community.
- Both CARB and South Coast AQMD will continue to design their programs to most effectively address sources within their respective jurisdictions.
- An enforcement approach that utilizes specialized program structures, outreach efforts in the community, use of technology, and interagency partnerships can lead to further emission reductions.

### Overview of Air Quality Related Enforcement Program - Purpose and Jurisdiction

The primary goal of enforcement activities is for regulated entities to achieve compliance with air quality rules and regulations, and to protect public health. Part of this process involves consistently identifying and resolving violations, thereby ensuring a level playing field for all regulated entities and preventing unfair advantages for companies that do not comply with rules and permit conditions.

Both CARB and South Coast AQMD regulate and enforce air pollution regulations. Both agencies have the right to conduct inspections of air pollution sources, and the right to issue notices of violations that can lead to the recovery of penalties.<sup>i</sup>

An air pollution source can be a specific piece of equipment, a business, a government agency, or any other entity that creates air pollution. CARB is primarily responsible for enforcement of rules applying to trucks, buses, and other mobile sources, while South Coast AQMD is primarily responsible for enforcement relating to stationary sources (e.g., facilities).<sup>ii</sup>

<sup>i</sup> More information about penalties is provided in the Appendix 4.

<sup>ii</sup> In some cases, CARB may have agreements that give local air districts delegated authority to enforce a particular CARB rule. Other regulations, such as CARB's truck idling regulation, expressly allow enforcement by local air quality regulators.

Table 4-1: Overview of regulatory authority for South Coast AQMD and CARB

Air Pollution Source Category	Examples	Main Regulatory Agency
<b>Mobile sources<sup>iii</sup></b>	Trucks, buses, ships, boats, cargo handling equipment	CARB
<b>Stationary sources</b>	Refineries, power plants, oil and gas facilities, manufacturing plants; indirect sources	South Coast AQMD
<b>Area-wide sources</b>	Paint used on buildings, dust	South Coast AQMD
<b>Sources of greenhouse gases</b>	Methane and certain other emissions from mobile sources, refrigerants, and other sources	CARB and South Coast AQMD

### Enforcement History

Over the years, both CARB and South Coast AQMD enforcement staff have had a significant presence in the community of East Los Angeles, Boyle Heights, West Commerce. This section provides the most recent 3-year enforcement history for each agency in this community.

### South Coast AQMD Enforcement History in this Community

South Coast AQMD's enforcement presence includes many different compliance-related activities including, but not limited to, investigating complaints, responding to breakdowns, and performing facility inspections.

Responding to complaints is a crucial part of South Coast AQMD's enforcement program. By taking complaints directly from members of the public, inspectors can focus their efforts to identify and address air pollution problems that matter to the community. South Coast AQMD's enforcement team gives priority to complaints and attempts to respond to every air quality complaint received. The process of responding to a complaint can be unique for each complaint, depending on factors such as whether the air quality concern is ongoing, the type of source, the time of day, and the number of complaints received for that particular concern. For example, South Coast AQMD responds to non-business off-hour complaints based on the number of complaints that are received for a specific facility or location. Figure 4-1 shows the number and types of complaints received by South Coast AQMD in this community, for the 2016 to 2018 time period. A large portion of the complaints in this community are related to dust and odor concerns.

<sup>iii</sup> Railroads operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. EPA. These agencies' regulatory authority may preempt certain federal, state, and local regulatory authorities and actions.

Figure 4-1: Number of complaints (by type) in the East Los Angeles, Boyle Heights, West Commerce community.

Additionally, South Coast AQMD's enforcement staff perform inspections at facilities and other air pollution sources. These activities can include onsite inspections for permitted and non-permitted equipment, leaks, and compliance with rules and permit conditions, as well as surveillance activities in the community, such as to trace the source of an odor. As of May 2019, there are approximately 550 facilities permitted by the South Coast AQMD in this community. A list of these facilities is available in the Appendix 4. From 2016 to 2018, South Coast AQMD conducted approximately 526 facility inspections. A list of all inspections conducted is available in the Appendix 4.

Enforcement actions typically involve issuing one of two types of notices:

- *Notice to Comply* (NC) – requiring a facility to quickly correct a minor violation or to provide specified records; or
- *Notice of Violation* (NOV) – formally identifying a violation of particular rules or regulations, which may result in civil penalties or, in some cases, referral for criminal prosecution.

Between 2016 and 2018, South Coast AQMD issued 130 NOVs in the East Los Angeles, Boyle Heights, West Commerce community. Figure 4-2 shows the number of NCs and NOVs in this community during 2016 and 2018. A list of these compliance actions/enforcement actions is available in the Appendix 4.

Figure 4-2: Number of Notices to Comply (NCs) and Notices of Violation (NOVs) issued in the East Los Angeles, Boyle Heights, West Commerce community.

#### CARB Enforcement History in this Community

CARB's enforcement process is two-pronged, including conducting field inspections and fleet-wide audits. For field inspections, the focus has been on enforcing heavy-duty diesel vehicle (HDDV) regulations, such as the statewide truck and bus rule, off-road rule, and the heavy-duty vehicle inspection program (HDVIP); at the refineries and fueling stations enforcing fuel formulation regulations; and in the ports enforcing regulations related to shore power, ocean-going vessels, commercial harbor craft, and cargo handling equipment. As Figure 4-3 shows, of the vehicles inspected in the East Los Angeles, Boyle Heights, West Commerce community, compliance with CARB's regulations has varied (see the Appendix 4 for CARB's 2016 - 2018 Three-Year Enforcement History) annually. Compliance can depend on various factors, including the number of vehicles inspected or the method of selecting vehicles for inspection (e.g., targeting vehicles that might fail inspection). CARB's enforcement has been focused on HDDV regulations, such as the Idling, Transportation Refrigeration Unit, and the Statewide Truck and Bus rules, as well as the HDVIP in this community, with over 1,100 inspections from 2016 to 2018. Of those vehicles inspected, less than 275 were not in compliance with CARB's regulations.

For fleet-wide audits, generally fewer heavy-duty vehicle enforcement inspections have occurred in the area during this time-frame; however, beginning in 2018, CARB added the Streamlined Truck Enforcement Program (STEP) to enhance its ability to enforce the Statewide Truck and Bus regulations. Between January 2018 and May 2019, CARB audited 179 fleets in East Los Angeles, Boyle Heights, West

Commerce. Of the 376 vehicles in the audit, CARB placed California Department of Motor Vehicles (DMV) registration holds on 240 vehicles. This represents a compliance rate of 32 percent with the Statewide Truck and Bus rule. As of May 2019, owners have brought 15 of those vehicles audited in STEP into compliance. Compliance can be achieved a number of ways, such as repowering the vehicle's engine with a compliant model year, retrofitting with a diesel particulate filter for certain model year engines, or following the other compliance methods listed in CARB's heavy-duty diesel regulations. The DMV registration holds also represent that the vehicles will be in compliance with the regulation within the next year, because the vehicle may not legally be operated in California past the current year's registration.

The STEP and CARB's roadside inspection program complement each other. In CARB's roadside inspections, which represents a snapshot of HDDV activity, the overall compliance rate from 2016 – 2018 was 52 percent (based on inspecting 250 vehicles). While the STEP process can assess more trucks more quickly ~~quicker~~ than in-person roadside inspections, CARB believes that compliance with the Statewide Truck and Bus regulation will continue to improve next year as compliance is tied to California DMV vehicle registration.<sup>iv</sup>

For some of CARB's regulations, enforcement staff have not yet conducted extensive enforcement activities on the concerns that the CSC has raised. However, CARB's enforcement efforts are being enhanced in this community to address community concerns.

Figure 4-3: CARB Heavy-duty Diesel Vehicle Enforcement History by Program Type in the East Los Angeles, Boyle Heights, West Commerce community.

<sup>iv</sup> State Bill 1 ([https://leginfo.ca.gov/faces/billTextClient.xhtml?bill\\_id=201720180SB1](https://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=201720180SB1))

In summary, between 2016 and 2018, both CARB and South Coast AQMD have conducted a range of compliance activities in the community including more than 1100 inspections from CARB enforcement staff related to heavy-duty diesel vehicles. Of those inspections, the vast majority of vehicles were in compliance, with less than 275 not in compliance. South Coast AQMD enforcement staff conducted approximately 526 facility inspections, responded to approximately 990 complaints, and conducted numerous other investigation activities in ELAWCBH. South Coast AQMD issued 130 Notices of Violation. Considering that a portion of these compliance actions are focused on the same facilities, the compliance rate may not be an effective indicator of overall compliance within the area.

Due to the air pollution concerns in this community, an enforcement approach by both agencies that fully utilizes their specialized program structures, outreach efforts in the community, use of technology, and interagency partnerships can lead to further reductions in non-compliance and emissions. Both South Coast AQMD and CARB will continue to work closely with the CSC to identify and investigate air quality issues within the community.

#### Enforcement Approach – Program Structures

Both CARB and South Coast AQMD have designed their programs to most effectively address sources under their respective jurisdictions.

#### South Coast AQMD's Office of Compliance and Enforcement (OCE)

The structure of this group is based on teams that focus on source type, and inspectors are also assigned by geographic region. The organizational structure based on source type enables inspectors to become technical specialists on the air pollution regulations that apply to the types of industries or facilities assigned to that team. In addition, assigning inspectors by geographic area improves the agency's ability to respond in a timely manner to complaints or compliance issues in that area.

Teams include an Industrial team which has broad knowledge to inspect a wide variety of source types and equipment. The Toxics & Waste Management team has the training and personal protective equipment to conduct inspections at facilities with toxic air contaminants. Certain facilities may be inspected by inspectors from multiple teams. This ensures that the approach is focused enough to address a variety of sources, yet flexible enough to handle complex facilities.

For most teams, the inspectors conduct regular inspections at their assigned facilities or within their assigned geographic regions. The frequency of regular inspections depends on the type of facility. For example, a chrome plating facility is inspected more frequently than an auto body shop. It is important to consider that there are approximately 110 chrome plating facilities in the South Coast Air Basin, compared to over 1,500 auto body facilities in the region. When considering limited resources, priority for inspections is typically given to higher risk pollution sources – that is, those facilities that emit the more toxic air pollutants and/or are close to schools, hospitals, and residential areas.

Staff from the following teams operate in the East Los Angeles, Boyle Heights, West Commerce community:

Figure 4-5: South Coast AQMD Enforcement Program

The **Energy team** focuses on crude oil production, energy storage sites, and bulk petroleum terminals. Inspectors in this team usually work in pairs for safety, as well as the need to operate portable equipment. Inspectors in this team are assigned by facility, with each inspector assigned a set of facilities.

The **Industrial team** focuses on the widest variety of sources, ranging from dry cleaners to large manufacturing facilities to idling trucks. Inspectors in this team are assigned a geographic region and normally spend much of their time in the field. From this team, inspectors regularly conduct compliance activities in ELABHWC.

The **Major Sources team** focuses on sources that are in the REgional CLean Air Incentives Market (RECLAIM)\* program. Examples of these sources include power plants, oil production sites, and large manufacturing facilities. Inspectors in this team are assigned by facility, with each inspector assigned a set of facilities, some of which are in ELABHWC.

The **Service Station team** focuses on gasoline service stations that serve the public, which can emit volatile organic compounds (VOCs). Inspectors in this team are assigned a geographic region. From this team, inspectors regularly conduct compliance activities in ELABHWC.

The **Toxics team** focuses on facilities that emit Toxic Air Contaminants, including hexavalent chromium, lead, and other toxic metals. Examples of these facilities include landfills, waste treatment facilities, water treatment facilities, lead acid battery manufacturers, and chromium plating and anodizing shops. Inspectors in this team are assigned a geographic region, and regularly conduct compliance activities in ELABHWC.

The following team is a part of OCE, but does not regularly conduct compliance activities in the community of East Los Angeles, Boyle Heights, West Commerce:

The **Refinery team** focuses on all the refineries, auxiliary hydrogen plants, and marine terminals in the South Coast Air Basin. Inspectors in this team are assigned by facility, with each inspector dedicated to a refinery and auxiliary plants. This team is based full-time in the Long Beach Field Office to ensure close proximity to the refinery sources that it regulates.

\*RECLAIM, for REgional CLean Air Incentives Market, is a program that requires participating facilities to manage their total nitrogen oxides (NOx) and/or sulfur oxides (SOx) emissions ~~(which reduce over time)~~ by adding pollution controls, changing their equipment or processes, or buying credits from other RECLAIM facilities that have lower emissions than their cap. The allowable amount of such emissions is reduced over time. The program is currently being transitioned to a command-and-control regulatory program.

### CARB Enforcement's Program Structure

Through focused enforcement or public complaints, CARB identifies a potential violation. CARB then contacts the responsible party to explain the enforcement process and to obtain additional information. Enforcement staff evaluates the information collected and works with CARB's Legal Office to determine violations of statutory and/or regulatory requirements. When violations are substantiated, CARB can take enforcement action, at which point the responsible party is provided an opportunity to respond to the violation.

~~CARB takes~~~~This outcome includes taking~~ appropriate enforcement action ~~within the scope of CARB's enforcement authority~~, which may include issuing cease and desist orders, Notices of Violation, mitigation, or pollution prevention actions. Cases can be resolved via civil and criminal litigation. In lieu of litigation, cases typically are settled through CARB's mutual settlement program. Penalties are sought that ~~deter~~ provide adequate deterrence to future non-compliance or public nuisance.

For example, in 2017, settlement agreements were made with Union Pacific Railroad Company (UP) and BNSF Railway regarding drayage truck regulations. Under CARB's Drayage Truck Regulation, California ports and Class I rail terminals must report non-compliant heavy-duty diesel trucks entering their facilities. For years, BNSF and UP failed to accurately report to CARB information on non-compliant trucks entering their facilities, which hampered CARB's ability to enforce the regulatory requirements. The settlements resulted in UP turning away non-compliant trucks from their facilities and BNSF accurately reporting truck data to CARB for enforcement, resulting in reduced diesel emissions from heavy-duty diesel trucks around both UP and BNSF facilities.<sup>8</sup>

During the settlement process, there is an opportunity to allocate up to 50% of the penalties to a supplemental environmental project (SEP)<sup>v</sup>. Community-proposed projects are funded to help improve public health, reduce pollution, increase environmental compliance and bring public awareness to air pollution issues. Additional SEPS are possible in the East Los Angeles, Boyle Heights, West Commerce community through the proposal process.<sup>9</sup> CARB has over 50 enforcement programs that focus on specific source types.

A few of the programs that are relevant to enforcement activity in East Los Angeles, Boyle Heights, West Commerce community are:

---

<sup>v</sup> Other examples of enforcement settlement cases can be found in CARB's Annual Enforcement Reports (<https://www.arb.ca.gov/enf/reports/reports.htm>).

Figure 4-6: CARB Enforcement Programs ~~teams~~ relevant to the East Los Angeles, Boyle Heights, West Commerce community

CARB conducts **idling** sweeps to ensure regulatory truck and bus idling limits are not exceeded.

**Drayage vehicles** are certified heavy-duty vehicles (HDV) that move goods. HDV that enter the port or intermodal facility are required to be certified to meet clean emission standards.

Regulations aimed at cleaning up **off-road construction equipment** such as bulldozers, graders, and backhoes. These requirements are in place to help ensure that diesel soot filters are installed on off-road equipment.

**SmartWay:** The Tractor-Trailer Greenhouse Gas Regulation requires 53-foot or longer dry van or refrigerated van trailers and the tractors that pull them on California highways to use certain equipment that meets US EPA efficiency standards.

**Transport Refrigeration Units (TRUs):** Inspect secondary engines to ensure TRUs meet labeling and clean air requirements.

**Cargo handling equipment** investigations are led by CARB to identify opportunities to reduce emissions from idling at ports and intermodal rail yards.

For the **Heavy-Duty Vehicle Inspection Program**, CARB regularly conduct inspections for:

- Diesel Emission Fluid (DEF): a liquid used as a reductant in heavy duty diesel engines to reduce NOx emissions.
- Emission Control Label (ECL): Engine certification labeling requirements.
- Smoke/Tampering: Requires heavy duty trucks/buses to be inspected.

**Statewide Truck and Bus program** requires all vehicles with 2009 or older engines weighing over 14,000 pounds to reduce exhaust emissions by upgrading to 2010 or newer engines by 2023. Non-compliant vehicles will be denied DMV registrations.

### How the Public Helps Reduce Air Pollution

Members of the public play an important role in communicating air quality concerns to both South Coast AQMD and CARB. The complaint process helps both agencies identify issues that are directly affecting the East Los Angeles, Boyle Heights, West Commerce community. The most effective way to contact the agencies is through the complaint hotlines. In addition to South Coast AQMD's mobile application, both agencies can be contacted by phone and online:

<p><b>CARB - Mobile Sources</b></p> <p><b>Automobiles, Trucks, Off-road Equipment, or other Vehicles</b></p> <p>Phone: 1-800-END-SMOG</p> <p>Online: <a href="http://calepa.ca.gov/enforcement/complaints">calepa.ca.gov/enforcement/complaints</a></p>	<p><b>South Coast AQMD - Stationary Sources</b></p> <p><b>Odors, Smoke, Dust, or other Air Contaminants</b></p> <p>Phone: 1-800-CUT-SMOG</p> <p>Online: <a href="https://www.aqmd.gov/home/air-quality/complaints">https://www.aqmd.gov/home/air-quality/complaints</a></p>
---	---

Both CARB and South Coast AQMD value input from those who live and work every day in the community, and communicating air quality issues directly to the agencies with the information below is the best way to address an air pollution concern. Letting the agencies know of an issue when it is occurring rather than after the fact helps South Coast AQMD's and CARB's ability to find the source of the problem.

An effective complaint should contain information with specific details. This information helps inspectors conduct a thorough investigation and take appropriate enforcement action. The following information is valuable to a thorough complaint investigation:

- Type of air quality concern (odor, smoke, dust, etc.)
  - o Odors: description of odor
  - o Smoke: color of smoke; does the smoke disappear or hang in the air?
  - o Dust: type of dust (e.g., construction activities)
- Location of air pollution concern
- Name or address of potential source
- Time of day that the air quality issue began, and is the concern still occurring?
- Has the concern occurred before, and do other people in your community experience it as well?
- Contact information for the person reporting the complaint<sup>vi</sup>

### Technology

Both South Coast AQMD and CARB enforcement staff have embraced the use of technology as a means for more efficient and effective inspections. South Coast AQMD inspectors have access to advanced

<sup>vi</sup> Although anonymous complaints are accepted, staff have found that having contact information helps with getting additional information to help with the investigation.

instruments to help identify air pollution issues in real-time. The following portable instruments are available to inspectors:

Figure 4-7: Portable instruments used by South Coast AQMD inspectors in the field

*Toxic Vapor Analyzers (TVA):* Inspectors can use TVAs to measure the level of certain gases in a specific area. This includes methane and volatile organic compounds (VOCs), which are emitted by petroleum sources and other types of sources.

*Infrared Cameras:*

Inspectors can use specialized infrared cameras to view emissions of gases (including methane and VOCs) that would otherwise be invisible to the naked eye. This equipment enables inspectors to scan areas for emissions and quickly check for large leaks at a facility.

*X-Ray Fluorescence (XRF):* Inspectors can use this handheld instrument to identify the types of chemicals that are on a surface or in a dust pile. This tool helps identify potential pollutants that are particles. For example, an XRF can be used to scan surfaces at a facility to identify which specific toxic metals may be deposited in that location, and which locations have the highest levels of those toxic metals.

*H<sub>2</sub>S Analyzers (Jerome Meters):* Inspectors can use this handheld instrument to measure hydrogen sulfide gas levels in the air. This information can be used to identify a potential source of rotten egg type odors.

In addition, inspectors are trained on how to collect field samples, including air samples, liquid samples, and bulk material samples. These samples can then be provided to the South Coast AQMD laboratory or contract laboratories for analysis. The results of these analyses can be used as evidence to support investigations and/or Notices of Violation issued to air pollution sources.

South Coast AQMD regulates over 25,000 facilities, receives approximately 10,000 public complaints per year, and operates a vast air quality monitoring network; and CARB regulates a significant number of mobile sources throughout the state. Analyzing the data that results from these efforts can provide

insight into trends and sources of air pollution as well as inform where inspections should be focused. Both agencies use information technology to enhance the ability to conduct investigations and enforce regulations. As an example, for CARB's truck fleet enforcement program, the traditional approach was to inspect several thousand trucks annually through fleet-based inspections. Starting in January 2018, CARB began the Streamlined Truck Enforcement Process (STEP), and is now able to conduct 20,000 to 25,000 inspections per year through the use of a data-driven approach, non-compliance letters, and a scheduled settlement process. South Coast AQMD's investigation of crude oil tankers is another example of using information technology in enforcement activities. Inspectors used mapping software, weather data, and ship databases to help identify an oil tanker as a potential source of emissions. The oil tanker was later issued a Notice of Violation when it berthed at a port. These multi-faceted approaches can be applied to address other air pollution concerns in the East Los Angeles, Boyle Heights, West Commerce community. Providing transparent access to the information that both agencies possess will lead to a stronger partnership with the community.

### The Interagency Approach

CARB and South Coast AQMD are committed to working with other agencies on joint initiatives that will directly result in cleaner air. The combined resources, expertise, and legal authorities of different agencies can create a well-rounded approach to the regulatory process that leverages their respective strengths to address issues that cumulatively impact public health. For example, the Los Angeles City Attorney's Office partnered with South Coast AQMD to conduct inspections at specific facilities, including auto-body shops, in the city of Los Angeles.

Figure 4-8. Examples of agencies that routinely collaborate with South Coast AQMD and CARB

CARB partners with local agencies to create memoranda of understanding (MOUs), such as an agreement with South Coast AQMD to enforce CARB's greenhouse gas standards at certain types of facilities. In addition, CARB has already established partnerships with California DMV working on implementing registration holds for non-compliant trucks and buses, California Highway Patrol (CHP) to conduct roadside inspections, and other state and regional agencies to ensure ~~we~~ the agencies are supporting each other's enforcement efforts. Both South Coast AQMD and CARB have experience working in close

collaboration with other regulatory agencies, cities and counties, public health agencies, and local police and fire departments to conduct investigations and provide public information about local air pollution sources.

## Enforcement Considerations

An effective enforcement program must be flexible and adaptable to address the needs of the communities. Part of being adaptable is the ability to identify and address gaps in the enforcement process, such as previously unknown facilities or new pollutants of concern. As revealed over the course of the public process for CERP development, one such gap has been a lack of communication with members of the community, who have firsthand experience with local emissions sources and whose input can be quite valuable to enforcement efforts. South Coast AQMD has therefore prioritized outreach and added new positions to interact directly with the AB 617 communities, including dedicated compliance staff assigned in those communities. Because South Coast AQMD organizes its enforcement division both by source type for technical specialization and by geographic region, there is not a single dedicated enforcement team for AB 617; rather, the effort is spread across multiple existing teams so that a larger number of complaints and potential violations of air quality rules can be identified and addressed.

In addition, both CARB and South Coast AQMD currently maintain extensive records of compliance-related activities through the use of databases and other digital resources. OCE uses these resources to track metrics such as complaints, inspections, and enforcement actions. The data provided in this chapter and Appendix 4 are derived from those databases. The particular statistics being tracked are also routinely reevaluated. For example, OCE recently added an Agency Technical Assistance metric for instances where South Coast AQMD was asked by another agency to assist in that agency's efforts, often by way of collecting samples or providing ambient air monitoring. CARB and South Coast AQMD will both continue to evaluate new metrics that may help to track and analyze inspectors' efforts in the AB 617 communities in order to attempt to identify more effective allocations of resources and/or potential solutions to air quality issues.

Finally, enforcement mechanisms exist that are designed to promote, and, if necessary, compel, compliance by regulated sources. As discussed above, after South Coast AQMD inspectors investigate complaints and/or conduct facility inspections, they can issue notices to comply or notices of violations. While notices to comply will generally require further action by a source, notices of violation are referred to the Office of the General Counsel, where civil penalties are negotiated. If no settlement is reached, a civil lawsuit may ultimately be filed in superior court. Ongoing non-compliance, however, may lead to a petition for an order of abatement before the South Coast AQMD Hearing Board, which would have the authority to require a facility to take certain actions to achieve compliance. CARB and South Coast AQMD have each had a presence in this community that has led to various enforcement actions against local facilities.<sup>vii</sup>

---

<sup>vii</sup> Additional detail on South Coast AQMD and CARB enforcement actions can be found in Appendix 4.

In sum, the compliance process seeks to ensure that all rules and regulations are followed through a fair and robust enforcement program, resulting in reduced air pollution emissions. Adaptability is crucial, whether in the programs overall, or in day-to-day operations, to ensure that community concerns are addressed quickly and that enforcement action is taken when violations are identified. Both CARB and South Coast AQMD enforcement teams will continue to search for innovative strategies, lead in community transparency, and take swift action to address non-compliance.

---

# CHAPTER 5A:

## ACTIONS TO REDUCE AIR POLLUTION EMISSIONS OR EXPOSURES - OVERVIEW

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5a: Actions to Reduce Community Air Pollution

### Introduction

The CERP provides an overall path to reducing air pollution in the East Los Angeles, Boyle Heights, West Commerce community. Through the development of the CERP the CSC identified air quality priorities based on sources of air pollution (e.g., neighborhood truck traffic, warehouses, railyards) that are of concern to the community. To reduce air pollution from these sources, the CSC developed a set of actions to be implemented by government agencies, organizations, businesses, and other entities.

### Community Air Quality Priorities

The community of East Los Angeles, Boyle Heights, West Commerce identified neighborhood and freeway traffic from trucks and automobiles, railyards, metal processing facilities, rendering facilities, and auto body shops as air quality priorities. These sources of air pollution are often located close to homes, schools, and other community areas where the public can be exposed to harmful pollutants. As a result, reducing exposure to air pollution at exposure reduction at schools and childcare centers is also a priority for the community. The community also cited general concerns about industrial facilities in the community, including waste transfer stations.

### Ongoing efforts

The South Coast AQMD, CARB, and U.S. EPA have air quality regulations to reduce air pollution from sources such as trucks, autobody shops, and metal processing facilities. The relevant agencies enforce these regulations. Additionally, the South Coast AQMD and CARB have begun the process of developing new requirements that would further reduce air pollution from sources prioritized by the community.

### Chapter 5a Highlights

- Many new actions will be taken to address the community's air quality priorities
- South Coast AQMD will use a variety of many different strategies, such as regulation, incentives, outreach, enforcement, monitoring, and collaboration more
- Many actions also rely on effective collaborations with other agencies, organizations, businesses, and others
- The estimated emission reduction targets resulting ~~from incentives supported by~~ actions in this CERP are:
  - NOx: 377.140 to 50 tons per year
  - DPM: 0.5 to 0.61.5 tons per year
- Additional emission reductions are achieved through actions that include strategies may not be quantifiable at this time, such as, rule development and enhanced enforcement

### Opportunities for Action

In addition to the ongoing efforts described above, the CSC developed 16 new actions to reduce air pollution in the community. Each action is to be carried out based on a set of strategies, goals, and timelines. The entity (e.g., government agency or organization) responsible for the actions is also identified. The actions set forth in this chapter define a path to further reduce air pollution from sources in the East Los Angeles, Boyle Heights, West Commerce community and provide additional protections for children at schools. In some instances these actions reaffirm ongoing rule development efforts and provide new commitments for localized reductions, sharing of emissions data, timelines, and other related information.

### Emissions Reduction Targets

The actions in the CERP prioritize emissions reductions in the East Los Angeles, Boyle Heights, West Commerce community. The CERP includes emission reduction targets for NOx, and diesel particulate matter (DPM) emissions in the East Los Angeles, Boyle Heights, West Commerce community that are based on these actions. Table 5a-1 below provides a list of the overall emission reduction targets for the CERP and the types of actions that contribute to these targets. Baseline emissions refers to expected future emissions without any new action or regulation beyond those already adopted.

Table 5a-1: Overall CERP Emission Reduction Targets by 2024 and 2029 (or Earlier if Feasible)

<u>Emissions<sup>a</sup></u>	<u>NOx</u>	<u>DPM</u>
<u>2017 Emissions (tpy)</u>	<u>2,710</u>	<u>34.8</u>
<u>Projected 2024 Emissions Baseline (tpy)</u>	<u>1,841</u>	<u>13.2</u>
<u>Emission Reductions from CERP, by 2024 (tpy)</u>	<u>143</u>	<u>1.2</u>
<u>Emission Reductions from CERP, by 2024 (%)</u>	<u>8</u>	<u>9</u>
<u>Projected 2029 Emissions Baseline<sup>a</sup> (tpy)</u>	<u>1,851</u>	<u>11.2</u>
<u>Emission Reductions from CERP, by 2029 (tpy)</u>	<u>377</u>	<u>1.4</u>
<u>Emission Reductions from CERP, by 2029 (%)</u>	<u>20</u>	<u>13</u>

<sup>a</sup>Per CARB guidance, the emissions baseline was estimated for 2017, and milestone years 2024 and 2029.

Mobile Sources – Neighborhood and Freeway Traffic from Trucks and Automobiles, and Railyards

Implementation of the CERP is estimated to reduce 377.1 tpy of nitrogen oxides (NOx) and emissions by 40 to 50 tons per year and particulate matter (PM) emissions by 0.5 to 0.61.4 tons per year tpy of DPM emissions from mobile sources. These emission estimates are based on future statewide mobile source measures from CARB and potential mobile source incentive projects to benefit this community as outlined by the actions in this chapter. Future statewide mobile source measures that contribute to the estimated emission reductions in this community include the CARB Advanced Clean Car 2 Rule, Advanced Clean Trucks Rule, Heavy-Duty Low NOx Rule, and Heavy-Duty Inspection and Maintenance. These measures support actions in the CERP that address emissions from neighborhood and freeway traffic from trucks and automobiles, as well as emissions associated with railyards. Table 5a-2 below, provides a list of the statewide measures with expected decision dates, implementation periods, and estimated emission reductions.

Table 5a-2: Estimated Emission Reductions from Statewide (CARB) Mobile Source Regulations

<u>Statewide Measure</u>	<u>Action Date<sup>c</sup></u>	<u>Implementing Entity</u>	<u>Emission Reductions Targets</u> <u>2024/2029 (tpy)</u>			
			<u>NOx</u>	<u>VOC</u>	<u>DPM</u>	<u>PM2.5<sup>a</sup></u>
<u>Advanced Clean Car 2</u>	<u>2020-2021</u>	<u>CARB</u>	<u>N/A</u> <u>/2.6</u>	<u>N/A/</u> <u>0.8</u>	<u>N/A</u> <u>/0.002</u>	<u>N/A</u> <u>/0.05</u>
<u>Heavy-Duty Vehicle Inspection and Maintenance<sup>b</sup></u>	<u>2020</u>	<u>CARB</u>	<u>81/123</u>	<u>N/A</u>	<u>0.7/0.8</u>	<u>0.7</u> <u>/0.8</u>

<u>Heavy-Duty Low NOx Rule<sup>d</sup></u>	<u>2020</u>	<u>CARB</u>	<u>16/198</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>

<sup>a</sup> Figure 3b-3 in Chapter 3b shows that three quarters of PM2.5 emissions are from miscellaneous area sources that include commercial cooking, residential fuel combustion, construction, and paved road dust. These sources were not identified as air quality priorities by the CSC and thus are not part of this plan. Nonetheless, PM2.5 will be reduced by the Statewide Mobile Source Regulations

<sup>b</sup> CARB's current inspection programs include the roadside Heavy-Duty Vehicle Inspection Program and the fleet Periodic Smoke Inspection Program. These regulations require heavy-duty vehicles operating in California to be inspected for excessive smoke and make repairs where applicable.

<sup>c</sup> CARB is working through a public process to develop and consider proposals for new approaches and strategies that may transition to zero emission technology those truck fleets that operate in urban centers, have stop and go driving cycles, and are centrally maintained and fueled.

<sup>d</sup> This rule would set new statewide engine standards for NOx reduction from trucks by 2026, and additional reductions including and after 2027. More information available at: <https://www.arb.ca.gov/msprog/hdlownox/hdlownox.htm>

As mentioned above, the estimated overall emissions reduction targets for this community also consider potential future mobile source incentive projects described by the actions in this chapter. For example, Subchapter 5b – Neighborhood and Freeway Traffic from Trucks and Automobiles includes an action to reduce emissions from heavy-duty trucks. This action will be implemented by measures that require outreach to the owners and operators of heavy-duty trucks in the community. The CERP contains four different measures focused on outreach efforts to incentivize the replacement of older equipment with newer, less polluting equipment. -These measures are coupled with commitments from South Coast AQMD staff to conduct ten public outreach events in the community to recruit potential applicants for incentives. The estimated emission reductions for mobile source incentive projects in this community are estimated to be between 40 and 50 tpy of NOx and 0.5 to 0.6 tpy of DPM emissions.

~~These emissions estimates are based on data from past incentive projects<sup>e</sup> (e.g., replacing heavy-duty trucks with cleaner trucks, replacing cargo handling equipment at railyards). Additionally, the estimated emissions reductions consider potential future incentive projects that are targeted by the actions in this chapter. For example, Subchapter 5b – Neighborhood and Freeway Traffic from Trucks and Automobiles, includes an action to reduce emissions from heavy-duty trucks. The CERP contains measures focused on outreach efforts to incentivize the replacement of older equipment with newer, less polluting equipment. These measures are coupled with commitments from South Coast AQMD staff to conduct public outreach events in the community to recruit potential applicants for incentives.~~

~~Some actions in this chapter are likely to result in additional emissions reductions that are not quantifiable at this time. For example, Subchapter 5c – Railyards, includes an action that would reduce emissions from railyards in this community. The target for this action is to pursue strategies to reduce air pollution from railyards through the development of indirect source requirements. However, reductions from this action would be quantified during the rule development process for Facility Based Mobile Source Measures to provide staff an opportunity to evaluate technologies that would reduce emissions at railyards.~~

~~Based on the air quality priorities identified by the CSC, the actions in this chapter also emphasize emissions reductions from fugitive emissions sources. For example, the CERP includes an action to address fugitive emissions and particulate matter from metal processing facilities and auto-body shops. This action requires enhanced air monitoring along with follow-up strategies (e.g., enforcement activities) to target emissions reductions from these sources. Based on the information available, emissions reductions from these actions cannot be estimated at this time. However, the CSC has recommended that these sources of fugitive emissions should be addressed by the CERP to improve air quality in the East Los Angeles, Boyle Heights, West Commerce community.~~

---

<sup>e</sup>Data was based on 2018 incentive projects.

~~South Coast AQMD is working with CARB to address emissions from mobile sources. CARB has committed to considering amendments to their rules and regulations within the CERP to address the air quality priorities in this community. The emissions reduction targets expected from the implementation of these rules and regulations is [CARB to insert emission reductions].~~

# CHAPTER 5B:

## NEIGHBORHOOD AND FREEWAY TRAFFIC (TRUCKS AND AUTOMOBILES)

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5b: Neighborhood and Freeway Traffic from Trucks and Automobiles

### Background

A complex network of freeways, including the East Los Angeles Interchange (i.e., 5, 10, 60 and 101 Freeways), San Bernardino Split (i.e., 5, 10 and 101 Freeways) and Long Beach Freeway (i.e., 710 Freeway) pass through the East Los Angeles, Boyle Heights, West Commerce community. These freeways carry large volumes of traffic on a daily basis, for example, on a peak day the East Los Angeles Interchange carries over a half-million vehicles.<sup>1</sup>

The East Los Angeles Interchange also serves as a vital transportation corridor that facilitates the movement of goods from the Ports of Los Angeles and Long Beach (Ports) by heavy-duty trucks. Approximately seven percent of the total volume of vehicles that travel through the East Los Angeles Interchange is comprised of heavy-duty truck traffic. Warehouses, railyards, and retail stores also attract truck traffic to the commercial and industrial corridors in the East Los Angeles,<sup>2</sup> Boyle Heights,<sup>3</sup> West Commerce<sup>4</sup> community. Community members report that trucks often travel near and through local neighborhoods to reach their destinations. The volume of vehicle traffic on freeways in this community impacts the local residents by exposing them to harmful air pollutants emitted by heavy-duty diesel trucks, passenger cars, and other vehicles.

Figure 5b-1: Aerial view of East Los Angeles Interchange

The amount of freeway and neighborhood truck traffic in the East Los Angeles, Boyle Heights, West Commerce community is likely to increase as a result of the expected increase in goods movement activities in Southern California. These activities are largely driven by the anticipated growth in the volume of goods that are imported and exported through the Ports.<sup>5</sup> This growth may lead to additional community air quality impacts resulting from increases in traffic volumes through local neighborhoods and freeway corridors.

### Community Air Quality Priorities – Idling Trucks, Monitoring High Volume Roadways, Enhanced Enforcement of Existing Regulations and City Ordinances, Congestion, and Cleaner Technology Options

The East Los Angeles, Boyle Heights, West Commerce CSC identified air pollution from heavy-duty diesel trucks and passenger cars traveling on local neighborhood streets and freeways as an air quality priority. This priority is based on both community observations and data<sup>6</sup> that shows the contribution of air pollution impacts from traffic volumes in the East Los Angeles, Boyle Heights, West Commerce community. To address these air quality impacts, the CSC prioritized the following:

- Increased enforcement of CARB’s Truck and Bus and Idling Rules to reduce diesel emissions (including during non-business hours),
- Traffic data collection (e.g., Automated License Plate Reader)<sup>7</sup> at high traffic roadways to improve mobile source emissions information and provide data that could be used to identify potential new truck routes,
- Air measurements on roadways in and around the community to provide data that could be used to evaluate mobile emissions information,
- Establishing or improving signage for designated truck routes
- Improving the complaint systems designed to report illegal truck idling or truck travel on local roadways,
- Additional and new incentive funding opportunities to replace heavy-duty diesel trucks with zero-emission technologies once they become available, and near-zero emission technologies until that time,
- New regulations that require the use of zero-emission trucks, when they are available, and
- Enhancing outreach to commercial fleets, warehouses, and other facilities that operate heavy-duty diesel trucks in the community prioritizing zero-emission vehicles once they become available, and near-zero emission technologies until that time.

### Ongoing Efforts

#### U.S. EPA and Statewide Efforts

CARB’s Airborne Toxic Control Measure (ATCM) places limits on idling of diesel-fueled trucks. This regulation is enforced by CARB and South Coast AQMD, and will be a focal point of the enforcement activities in AB 617 communities. CARB continues to address truck diesel emission reductions through existing and upcoming regulations, such as the Drayage Truck Regulation<sup>8,9</sup> and the Truck and Bus Regulation,<sup>10,11</sup> which include emission standard requirements. CARB is also responsible for enforcing the Commercial Vehicle Idling Regulation, where commercial vehicles (gross vehicle weight rating greater than 10,000 pounds) are prohibited from idling for more than five minutes.<sup>12</sup> In addition, to help cities address idling, CARB has developed an “Options for Cities to Mitigate Heavy-Duty Vehicle Idling” guidance document which includes options for cities to address heavy-duty vehicle idling emissions in their communities.<sup>13</sup>

CARB continues to work towards reducing residual public health risk from Transport Refrigeration Units (TRU)<sup>14</sup> near distribution centers and other facilities where TRU activity is focused as well as achieve emission reductions while in transit, especially near the most impacted communities. Improving freight efficiency and transitioning to zero-emission technologies will help reduce toxic air contaminant emissions, criteria pollutant emissions, and greenhouse gas emissions. CARB has created advisories<sup>15</sup> and forms<sup>16</sup> to assist TRU owners in understanding compliance requirements as well as to ensure that all regulated entities (e.g., TRU owners, TRU operators, facilities that support TRU use, etc.) are aware of their responsibilities under this regulation.

CARB has many new requirements that are also being considered that would further reduce emissions from trucks and TRUs. Table 5b-1 below illustrates the key upcoming activities from U.S. EPA and CARB.

Table 5b-1: Upcoming Rule Development/Activities from U.S. EPA and CARB

Agency	Proposed Action	Expected Decision	Expected Phase-in Period
U.S. EPA	Cleaner Truck Initiative <sup>17</sup> – In response to a petition from the South Coast AQMD, U.S. EPA has committed to updating its truck engine standard to reduce NOx emissions.	2020-2021	2024-?
CARB	Transport Refrigeration Unit Regulation <sup>11</sup> – Measure to reduce residual risk from TRUs by transitioning to zero-emission technologies.	2019	2025-2030
CARB	Drayage Truck Rule <sup>9</sup> – Updated regulation to transition to zero-emission trucks.	2022	2026-?
CARB	Advanced Clean Truck Rule <sup>18</sup> – Mandate for truck manufacturers to sell zero-emission trucks. By 2030, zero-emission truck/chassis sales would need to be 50% of class 4 – 8 ‘straight’ trucks sales and 15% of all other truck sales. Also requires fleet reporting.	2019	2024-2030
CARB	Zero-Emission Fleet Rule <sup>19</sup> – Would require fleets to transition to zero-emissions.	2022	2024-?
CARB	Heavy-Duty Low NOx Rule <sup>20</sup> – Would set new statewide engine standards for trucks. 60-75% NOx reduction between 2024-2026. Additional reductions in 2027 and beyond.	2020	2024-?

### South Coast AQMD Efforts

South Coast AQMD funds projects to help develop zero-emission technologies for heavy-duty Class 7-8 trucks<sup>i</sup> (e.g., battery electric and fuel cell). These projects are in the design and demonstration phase, and the technologies are not yet commercially available. Additionally, South Coast AQMD administers incentive programs for truck owners and operators to replace older polluting trucks with trucks that are cleaner than required.<sup>21</sup> For example, South Coast AQMD's Voucher Incentive Program (VIP) is designed for smaller businesses with fleets of 10 or fewer vehicles that primarily operate within California.<sup>22</sup> The VIP is a streamlined approach for small fleets to reduce emissions by replacing old, high-polluting vehicles with newer, lower-emission compliant models. VIP helps truck owners with older trucks to purchase newer trucks meeting the current emissions standards. The Carl Moyer Program<sup>23</sup> is another resource for truck owners to obtain cleaner trucks that would achieve emission reductions that are surplus to the regulations.

Another strategy could be the use of Automated License Plate Readers (ALPRs), which is currently being explored by South Coast AQMD staff in collaboration with CARB. These are high-speed, computer-controlled camera systems that can capture license plate numbers that come into their view. ALPR data, when cross-referenced with DMV data, can provide more information about vehicles (e.g., the chassis model-year and weight class for trucks), which can help build a picture of the fleet makeup that pass a specific location over time. Assumptions for relating chassis model year and engines installed on a chassis can be used to estimate emissions from heavy-duty diesel trucks. South Coast AQMD staff is exploring the possibility of using this information to notify heavy-duty diesel truck owners that may qualify for incentive programs to replace their truck with newer cleaner models. Moreover, the use of an ALPR system to collect this type of data would require the development of a policy that protects the privacy of the registered truck owners.<sup>7</sup> South Coast AQMD is actively looking into the feasibility of utilizing the ALPR system to address this community's concerns but must first ~~understand~~ any possible issues or limitations.

### Opportunities for Action

The CSC's strategy to reduce the community's exposure to air pollution from trucks and other vehicles is described in the actions below.

Action 1: Reduce Truck Idling
Course of Action:
<ul style="list-style-type: none"> <li>Conduct <del>mobile air monitoring</del> measurements near warehouse uses (e.g., warehouse clusters) and adjacent residential areas to identify potential hotspots resulting from heavy-duty truck activities (e.g., idling)</li> </ul>

<sup>i</sup> The Federal Highway Administration categorizes Class 7-8 trucks under the "Heavy Duty (>26,001 pounds (lbs))" gross vehicle weight rating

<ul style="list-style-type: none"> <li>Conduct focused enforcement for idling trucks in high traffic areas, prioritizing areas near schools and residential areas <ul style="list-style-type: none"> <li>Other areas prioritized by the CSC include areas near distribution centers and high traffic corridors such as Soto Street, 4<sup>th</sup> Street, and Whittier Blvd</li> </ul> </li> <li>Collaborate with the CSC to inform community members how to report idling trucks</li> <li>Provide community outreach (e.g., outreach events, flyers, etc.) on existing city, county, CARB, and South Coast AQMD complaint systems <u>to report on reporting</u> idling trucks <ul style="list-style-type: none"> <li>If existing complaint/response system is determined to be ineffective, assess <u>and make feasible improvements</u> <del>where improvements are feasible</del></li> </ul> </li> <li>Work with local cities and the county to install <u>adequate</u> signage that prohibits truck idling in certain locations (e.g., near schools <u>and sensitive receptors</u>) <ul style="list-style-type: none"> <li>Work with the CSC to prioritize locations for signage</li> </ul> </li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>Enforcement</li> <li>Collaboration</li> <li>Public Information and Outreach</li> <li><u>Air</u> Monitoring</li> </ul>	
<b>Goal(s):</b>	
<ul style="list-style-type: none"> <li>Conduct, at minimum, quarterly idling sweeps and focused inspections for one year, to be evaluated thereafter with community input</li> <li>Engage in two outreach events within the implementation period of this CERP to inform community members how to report idling trucks</li> </ul>	
<b>Estimated Timeline(s):</b>	
<ul style="list-style-type: none"> <li><u>Beginning July 1, 2019, begin mobile air measurements</u></li> <li>Beginning fall 2019, provide quarterly updates to the CSC on air monitoring activities</li> <li>Beginning fall 2019, work with CARB's enforcement team (and California Highway Patrol (CHP)) to coordinate, at a minimum, quarterly idling sweeps and focused inspections for a period of one year <ul style="list-style-type: none"> <li>Based on results of the sweeps, and continued input from CSC members, adjust idling inspections accordingly</li> </ul> </li> <li><del>Beginning</del> <u>Starting</u> Spring 2020, work with local cities and county to address signage for truck idling, prioritizing locations identified by the CSC</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<ul style="list-style-type: none"> <li><u>Conduct mobile air measurements</u></li> <li>Conduct idling sweeps (which may require coordination with local law enforcement)</li> <li><u>Organize</u> outreach events in collaboration with local entities</li> </ul>

	<ul style="list-style-type: none"> <li>• <u>Collaborate with CSC for outreach on how to report idling trucks</u></li> <li>• <u>Work with CSC and community to assess existing complaint/response system</u></li> </ul>
CARB	<ul style="list-style-type: none"> <li>• Coordinate idling truck inspections with the California Highway Patrol</li> </ul>
<u>County of Los Angeles, City of Los Angeles, City of Commerce</u>	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD to install signage that prohibits truck idling in certain locations</u></li> </ul>
CSC	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD and other local entities to disseminate information on how to report idling trucks in the community (e.g., outreach events and flyers)</u></li> <li>• <u>Work with South Coast AQMD to provide ongoing input and feedback for new locations where trucks idle and where signage should be placed</u></li> <li>• <u>Work with South Coast AQMD to inform community members how to report idling trucks</u></li> </ul>
Additional Information:	
<ul style="list-style-type: none"> <li>• CARB requirements for idling trucks: <a href="https://www.arb.ca.gov/enf/diesel.htm">https://www.arb.ca.gov/enf/diesel.htm</a></li> </ul>	

## Action 2: Reduce Emissions from Heavy-Duty Trucks

### Course of Action:

- Work with the city or the county to evaluate potential designated truck routes and identify resources to enforce these routes
- Collaborate with local businesses, agencies, and organizations to ~~engage in~~ conduct outreach to truck owners and operators in this community to provide information about community ordinances, restricted truck routes, trucking regulations, and available incentive programs
- Identify South Coast AQMD and other additional incentive funding opportunities to accelerate adoption of cleaner equipment and trucks
- Target incentive funds for local small businesses and independent owner/operator (e.g., Voucher Incentive Program)
- Participate in CARB's rule development for future amendments to their truck regulations
- Continue to develop Facility Based Mobile Source Measures (see Warehouse and Rail)
- Conduct focused enforcement of CARB's TRU Regulation, Drayage Truck Rule, and Truck and Bus Rule

### Strategies:

<ul style="list-style-type: none"> <li>• Incentives</li> <li>• Public Information and Outreach</li> <li>• Collaboration</li> <li>• Rules and Regulations</li> <li>• Enforcement</li> </ul>	
<b>Goal(s):</b>	
<ul style="list-style-type: none"> <li>• Organize two incentive outreach events per year and provide biannual updates to the CSC</li> <li>• Provide biannual updates on CARB's rule development for truck regulations, and seek community input on progress</li> <li>• Coordinate with CARB staff on using community priorities to focus future enforcement efforts</li> <li>• <u>CARB will conduct enhanced roadside inspections utilizing CSC input to locate areas of concern</u></li> <li>• <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a</u></li> </ul>	
<b>Estimated Timeline(s):</b>	
<ul style="list-style-type: none"> <li>• <u>Starting 2020</u>, when incentive programs are available, begin conducting incentive outreach events and provide quarterly or biannual updates to the CSC</li> <li>• Beginning January 2020, based on findings from idling sweeps, the CSC identified Community Priorities List, and additional community observations/input from CSC meetings, CARB will adjust enforcement in the community to address the identified concerns and report back to the CSC bi-annually for future adjustments</li> <li>• CARB's New Regulations phase in 2024-2030</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<ul style="list-style-type: none"> <li>• Provide incentives and targeted outreach for truck incentive programs in this community</li> <li>• Provide updates to CSC</li> <li>• Present truck incentive projects that have been submitted and are being considered for Community Air Grants incentive funding</li> <li>• <u>Provide training to CSC and members of the community leaders or organizations that provide application assistance for incentive programs</u></li> <li>• <u>Participate in CARB's rule development for future truck regulations</u></li> <li>• <u>Continue to develop Facility Based Mobile Source Measures</u></li> <li>• <u>Conduct focused enforcement of CARB's rules and regulations</u></li> </ul>

CARB	<ul style="list-style-type: none"> <li>Continue rule development for amendments to the Drayage Truck Regulation</li> <li>Conduct enhanced roadside enforcement of existing Drayage Truck and Truck and Bus Rules</li> </ul>
City and County Los Angeles, City of Commerce	<ul style="list-style-type: none"> <li><u>Collaborate with South Coast AQMD to evaluate potential designated truck routes and identify sources to enforce these routes</u><del>TBD</del></li> </ul>
CSC members (including businesses, community organizations, and agencies)	<ul style="list-style-type: none"> <li>Work with South Coast AQMD to conduct outreach to truck owners and operators</li> <li>Provide application assistance to <u>small business, independent owner/operators, and other potential applicants</u> for incentive programs</li> <li>Seek funding support to provide this service, e.g., through CARB Community Air Grants</li> </ul>
Additional Information:	
<ul style="list-style-type: none"> <li>CARB Drayage Truck Regulation: <a href="http://www.arb.ca.gov/drayagetruck">www.arb.ca.gov/drayagetruck</a></li> <li>CARB Community Air Grants: <a href="https://ww2.arb.ca.gov/our-work/programs/community-air-protection-program/community-air-grants">https://ww2.arb.ca.gov/our-work/programs/community-air-protection-program/community-air-grants</a></li> <li>CARB Truck and Bus Regulation: <a href="https://arb.ca.gov/msprog/onrdiesel/onrdiesel.htm">https://arb.ca.gov/msprog/onrdiesel/onrdiesel.htm</a></li> <li>City general plans: <ul style="list-style-type: none"> <li>City of Los Angeles, Boyle Heights Community Draft Plan: <a href="http://www.bhplan.org/">http://www.bhplan.org/</a></li> <li>City of Commerce General Plan: <a href="http://www.ci.commerce.ca.us/DocumentCenter/Home/View/152">http://www.ci.commerce.ca.us/DocumentCenter/Home/View/152</a></li> <li>Los Angeles County East Los Angeles Community Plan: <a href="http://planning.lacounty.gov/view/east%20los%20angeles%20community%20plan">http://planning.lacounty.gov/view/east los angeles community plan</a></li> </ul> </li> </ul>	

### Action 3: Utilize Existing Traffic Information and New Technology to Identify Older Trucks for Incentive Programs

#### Course of Action:

- Gather existing traffic information from local authorities and other available databases, implement new technology (e.g., ALPR) to collect useful data on truck traffic, and assess the potential impact of truck emissions near schools and residences
  - South Coast AQMD will develop an ALPR privacy policy in compliance with Civil Code Section 1798.90.5, et seq. and hold a public hearing to provide the public an opportunity to comment on the proposed program

<ul style="list-style-type: none"> <li>• Work with CSC to prioritize specific locations, understanding that there may be some restrictions in terms of where such a system can be placed</li> <li>• Explore the possibility of using ALPR <u>and</u> PEAQS system along with DMV data to identify trucks that frequently travel through the community that may be older and more polluting than newer trucks, and contact the owner to provide information about incentive funding programs for truck replacement</li> <li>• Conduct initial air measurements from mobile platforms to look at pollution in the areas of traffic concern for a review with traffic information</li> </ul>	
Strategies:	
<ul style="list-style-type: none"> <li>• Traffic Data Collection</li> <li>• Air Monitoring</li> <li>• Incentives</li> <li>• Public Information and Outreach</li> <li>• Collaboration</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>• Explore the possibility of using ALPR <u>and</u> PEAQS systems in this community and prioritize locations for deployment based on community input</li> <li>• Once ALPR <u>and</u> PEAQS systems have been deployed, <u>provide ALPR and PEAQS data to the City and County to work towards truck routes</u> <del>with City and County to provide information about the overall results</del></li> <li>• <u>Conduct initial set of air measurements using mobile platforms</u></li> <li>• <u>Conduct a pilot study to test suitability of PEAQS system to support directing incentive funds and/or CARB enforcement actions</u></li> <li>• <u>Provide quarterly or biannual updates to the CSC on progress made to collect and use data from these systems</u></li> <li>• <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a</u></li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>• <u>Starting 2020</u>, work with CARB and community to prioritize locations for these systems</li> <li>• <u>Starting 2021, if feasible</u>, begin implementation of ALPR <u>and</u> PEAQS systems at priority community locations, compile data, and provide quarterly or biannual updates to the CSC</li> <li>• Once data is available, review data obtained and begin targeted outreach to owners of <u>with</u> older, higher emitting trucks that frequently travel through this community to provide information on incentive programs</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Work with CSC to explore the feasibility of using ALPR systems and prioritize locations for implementation. Once</u></li> </ul>

	<p>data are received, provide incentives and targeted outreach to truck owners for incentive programs in this community</p> <ul style="list-style-type: none"> <li>• <u>Work with local authorities to gather data on truck traffic</u></li> <li>• <u>Work with CARB to conduct pilot measurements in this community</u></li> <li>• <u>Assess the potential impact of truck emissions near schools and residences</u></li> <li>• <u>Provide updates to the CSC on implementation of the ALPR system</u></li> <li>• <u>Explore the possibility of using ALPR and PEAQS systems</u></li> <li>• <u>Conduct initial air measurements to look at pollution in areas of traffic concern</u></li> </ul>
CARB	<ul style="list-style-type: none"> <li>• <u>Continue testing of ALPR and PEAQS systems to improve accuracy. Provide technical assistance to South Coast AQMD to implement ALPR and PEAQS systems</u></li> <li>• <u>Continue to provide technical assistance to South Coast AQMD (e.g., receiving post ALPR data, pair with DMV data, and return with aggregated data, but not specific operator information)</u></li> <li>• <u>Coordinate with South Coast AQMD on process, roles, and commitments</u></li> </ul>
City and County of Los Angeles, City of Commerce	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD to obtain necessary approvals to install cameras for ALPR system</u></li> </ul>
CSC members	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD and CARB to prioritize locations for the ALPR systems</u></li> </ul>
References:

## Action 4: Encourage Replacement of Older Polluting Vehicles with Cleaner Vehicles, including Zero-Emission Vehicles

### Course of Action:

- Conduct targeted outreach through local organizations, businesses, utilities, and/or schools (e.g., colleges or universities) to provide information to the community about battery electric, fuel cell, and hybrid options and incentives available to encourage replacement of older polluting vehicles with cleaner vehicles, and to install chargers at homes and in the community
- Work with partners to develop ideas for the best way to disseminate this information, such as through a community showcase, participation in community events, or other outreach venues
- Work with partners to increase the availability of publicly accessible electric vehicle charging stations in the community

### Strategies:

- Incentives
- Public Information and Outreach
- Collaboration

### Goal(s):

- Engage in two incentive outreach events per year and provide biannual updates to the CSC
- Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a

### Estimated Timeline(s):

- 2020, begin public outreach events and updates to the CSC

### Implementing Agency, Organization, Business or Other Entity:

Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Work with partners to engage in outreach events</u> to provide information and incentives for cleaner vehicles and EV charging stations</li> <li>• <u>Work with partners on ideas for the best way to disseminate information about incentive programs</u></li> </ul>
CARB	<ul style="list-style-type: none"> <li>• Provide information about the Clean Vehicle Rebate Program</li> </ul>
City and County of Los Angeles, City of Commerce	<ul style="list-style-type: none"> <li>• Partner with South Coast AQMD to conduct outreach and identify potential locations for publicly accessible charging stations</li> </ul>

# CHAPTER 5C:

## RAILYARDS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5c: Railyards (On-site Emissions)

### Background

Railyards are used to store, sort, or load and unload railroad cars. Common loads include containers (stacked or on trailers), tankers with chemical or petroleum products, and bulk products such as construction materials or grain. Containers can be transported to and from warehouses for storage and sorting before reaching their final destination. Regional rail volumes are projected to increase between 2012-2040 in response to growing international trade,<sup>1</sup> however the potential amount of growth at railyards in this community is unknown.

BNSF Railway Company (BNSF) and Union Pacific (UP) Railroad Company, operate many railyards<sup>2</sup> throughout California. There are five major railyards in the ELABHWC Emissions Study Area: Union Pacific Railroad Los Angeles Transportation Center Railyard (UP LATC Railyard), Union Pacific Commerce Railyard, BNSF Hobart Railyard, BNSF Commerce Eastern Railyard, and BNSF Sheila Mechanical railyard (see Figure 5-1 for a map of railyards in this community). There are also several additional smaller rail facilities operated by BNSF and UP, as well as stations and maintenance facilities for passenger rail services run by LA Metro, Amtrak, and Metrolink.

### Community Air Quality Priority – Emissions from Railyards

Air pollution is generated by equipment and vehicles that are used for railyard operations. These vehicles and equipment move containers and railcars into and around the railyard to load, unload, and transport goods in and out of the railyard. Emissions can also be generated during maintenance activities (e.g., load testing). Examples of equipment used for railyard operations include:

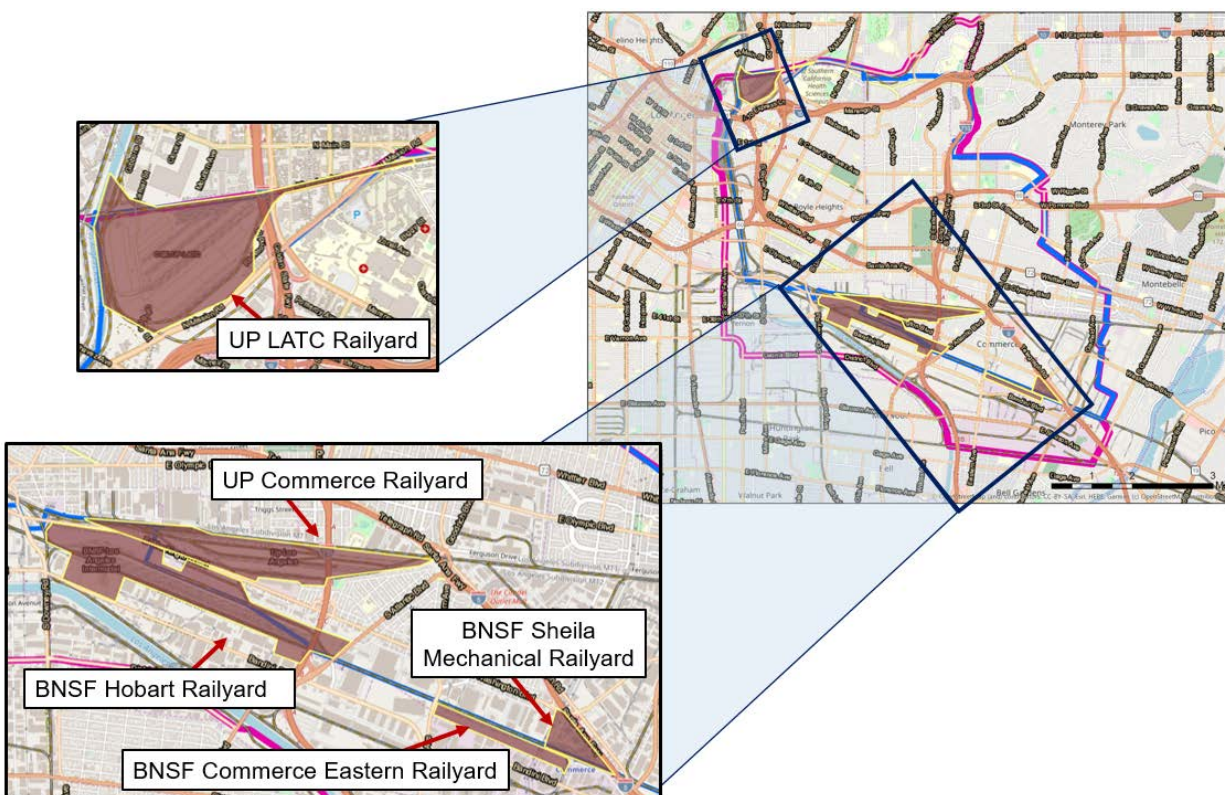

- Locomotives (including ‘switchers’ that build and deconstruct trains, often within railyards, and larger ‘line-haul’ locomotives that pull trains hundreds of miles between railyards)
- Drayage trucks (i.e., on-road tractors that pull trailers loaded with containers, often from the ports)
- Cargo handling equipment (e.g., gantry cranes, top picks, and off-road yard trucks)
- Transportation Refrigeration Units (e.g., truck refrigeration units and refrigerated railcars), and
- Miscellaneous equipment (e.g., fuel trucks)

The CSC prioritized addressing air pollution from railyards in the CERP. Specifically, the CSC expressed concerns about diesel emissions from trains and other diesel equipment at the UP LATC Railyard~~Union Pacific Railroad Los Angeles Transportation Center Railyard~~, Union Pacific Commerce Railyard, BNSF Hobart Railyard, BNSF Commerce Eastern Railyard, and BNSF Sheila

Mechanical railyards. Potential opportunities to reduce emissions from diesel equipment used at railyards include replacing older equipment with newer less polluting equipment (e.g., replacing diesel-fueled yard trucks with lower or zero-emission yard trucks, capturing and controlling emissions from locomotive load testing), and ensuring that the replacement or repower of equipment is based on the cleanest technology commercially available.

Figure 5c-1: Five Railyards within the East Los Angeles, Boyle Heights, West Commerce Community

### Ongoing Efforts

A short summary is provided below of the key regulations and programs that are in place or are being developed at the national, state, and local level to address emissions from railyards.

#### *Federal Actions*

Railroad operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. EPA. These agencies' regulatory authority may preempt certain federal, state, and local regulatory authorities and actions. However, U.S. EPA has used its authority under the Clean Air Act to require new diesel locomotives to be built to meet the cleanest emission standard (also

known as Tier 4).<sup>3</sup> This requirement also applies to certain locomotives that are remanufactured.<sup>i</sup> These regulations require the installation of devices that reduce idling (i.e., require idling limits with exceptions) on newly manufactured and remanufactured locomotives<sup>4</sup> and mandate the use of ultra-low sulfur diesel fuel.<sup>5</sup> However, these regulations do not require railroads to reduce their use of existing older, higher-emitting locomotives. Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time. In 2017, CARB also petitioned U.S. EPA to develop a new regulation requiring engine manufacturers to meet a cleaner Tier 5 emission standard for new engines. The U.S. EPA has not yet acted on this petition. Locomotive fleet turnover is slow as locomotive engines can last over 30 years, so even if the U.S. EPA were to develop a Tier 5 emission standard, it would not result in immediate emission reductions.

#### *State Actions (CARB)*

CARB has two agreements<sup>6</sup> with BNSF and UP to reduce locomotive emissions in and around railyards. An agreement in 1998 required BNSF and UP to meet a fleet average of Tier 2 locomotives in the South Coast Air Basin every year between 2010 and 2030. Both railroads have met this commitment every year. The second agreement in 2005 focused on railyards and required implementation of an idling-reduction program, maximizing the use of ultra-low sulfur diesel fuel, preparation of health risk assessments, evaluation of measures to further reduce diesel particulate emissions, and an assessment of remote sensing technology to identify high-emitting locomotives. CARB has discussed the potential for two new regulations that would reduce emissions from locomotives, including regulation to reduce idling activity and a regulation to address non-preempted locomotive use in the state through retrofit, replacement and other actions. Also, CARB staff plans to develop amendments to the Cargo Handling Equipment Regulation, Transportation Refrigeration Unit Regulation, and its Drayage Truck Regulation to begin the transition to zero-emission technology starting in 2026.<sup>7</sup>

#### *South Coast AQMD*

South Coast AQMD previously adopted rules<sup>8</sup> that would have required railroads to reduce idling, conduct recordkeeping, and prepare emissions inventories and health risk assessments for railyards. However, the railroads sued the South Coast AQMD, and the courts determined that the rules are preempted by federal law and cannot currently be enforced. South Coast AQMD is evaluating potential strategies to reduce emissions from railyards, including developing a potential regulation affecting railyards called an Indirect Source Rule (ISR), and/or other potential partnering strategies that could reduce emissions.<sup>9</sup> The ISR was initially intended to address regional air pollution, in particular through reducing NOx emissions. However, most of the measures that would reduce NOx would also reduce diesel PM emissions, which have a more localized impact on the surrounding communities. The CSC has made it clear that an ISR should

---

<sup>i</sup> Remanufacturing can include activities like replacing an old engine in a locomotive with a new engine. The useful life of a locomotive is typically at least ten years.

also focus on reducing localized impacts from railyards. The railroads have participated in workshops related to Facility Based Mobile Source Measures and reported they will continue to work with South Coast AQMD staff and the community.

South Coast AQMD funds projects to help develop technology that can lower emissions from locomotives (e.g., natural gas, hybrid, battery electric, and fuel cell). These projects are in the design and demonstration phase and not yet commercially available. Additionally, the South Coast AQMD provides incentives for rail operators that purchase technologies for locomotives<sup>10</sup> and cargo handling equipment<sup>11</sup> that is cleaner than required.

### Opportunities for Action

The South Coast AQMD continues to seek opportunities to reduce air pollution from railyards. The actions below have been identified by the CSC to reduce emissions from railyards.

Action 1: Reduce Emissions from Railyards
<p>Course of Action(s):</p> <ul style="list-style-type: none"> <li>• Continue to pursue strategies to reduce air pollution from railyards through the development of an indirect source rule and/or other measures, including reducing localized emissions and exposures</li> <li>• Work with CARB on the development of new requirements to reduce air pollution from railyards</li> <li>• Work with local utilities and state agencies like the California Energy Commission and the Public Utilities Commission to encourage the installation of infrastructure needed to fuel/charge zero emissions vehicles and equipment, and onsite equipment at the railyards</li> <li>• Continue to support CARB's petition<sup>12</sup> to U.S. EPA for new national locomotive emission standards</li> <li>• Work with the railyards in the East Los Angeles, Boyle Heights, West Commerce community to replace diesel-fueled equipment with cleaner technologies<sup>ii</sup></li> <li>• Conduct fenceline and/or mobile <u>air monitoring measurements</u> around railyards to identify activities that may cause increased levels of air pollution. Mobile <u>air</u> measurements (and fixed <u>air</u> monitoring, when appropriate) will extend into the community to assess how railyard related emissions may contribute to the overall air pollution burden in this community             <ul style="list-style-type: none"> <li>- Collaborate with railyards on <u>an air</u> monitoring protocol</li> </ul> </li> <li>• Use emissions inventory and <u>air</u> monitoring information to identify opportunities for emission reductions</li> </ul>
Strategies:

<sup>ii</sup> A variety of technology assessments have been conducted to assist in this effort: <https://ww2.arb.ca.gov/resources/documents/technology-and-fuels-assessments>

<ul style="list-style-type: none"> <li>• Rules and Regulations</li> <li>• Incentives</li> <li>• Collaboration</li> <li>• <u>Air Monitoring</u></li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>• Provide bi-annual updates and engage the CSC on new requirements and/or other measures being developed by CARB and South Coast AQMD</li> <li>• Provide quarterly or annual updates to the CSC on air monitoring results</li> <li>• <u>Replace <del>XX pieces of</del> diesel equipment at the railyards through incentive funding programs</u></li> <li>• <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a</u></li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>• In the second half of 2019, South Coast AQMD to conduct <u>air monitoring measurements</u> at railyards and nearby communities</li> <li>• In 2020, South Coast AQMD to consider new ISR and/or other measures on railyards</li> <li>• Between 2020 and 2022, CARB to consider new regulations and/or other measures for locomotives</li> <li>• By 2020, CARB to consider amending its regulation for zero-emissions refrigeration units (TRUs)</li> <li>• Second quarter 2020, South Coast AQMD will provide incentive information to railyards to work towards replacing diesel-fueled equipment with cleaner technologies at railyards located in the Wilmington, Carson, West Long Beach community</li> <li>• Use emissions inventory and <u>air monitoring</u> information to identify opportunities for emission reductions, when available</li> <li>• By 2022, CARB to consider amending its regulations for zero-emission drayage trucks and cargo handling equipment</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Continue to pursue an indirect source rule and/or other measures for railyards, and improve community access to rule development process by holding a working group meeting in or near this community</u></li> <li>• <u>Work with CARB to develop new requirements to reduce air pollution from railyards</u></li> <li>• <u>Work with local utilities and state agencies to encourage the installation of infrastructure needed to fuel/charge zero emissions vehicles and equipment at the railyards</u></li> <li>• <u>Provide the CSC with updates on the development of the indirect source rule and/or other measures for railyards</u></li> </ul>

	<ul style="list-style-type: none"> <li>• <u>Continue to support CARB's petition to U.S. EPA for new national locomotive emission standards</u></li> <li>• Work with railroads to provide updates to the CSC on emission reduction progress within the Union Pacific Railroad Los Angeles Transportation Center Railyard (UP LATC Railyard), Union Pacific Commerce Railyard, BNSF Hobart Railyard, BNSF Commerce Eastern Railyard, and BNSF Sheila Mechanical Railyard</li> <li>• Work to allocate incentive funding to replace on-site diesel equipment with the cleanest technologies, based on commercial availability</li> <li>• <u>Conduct air monitoring in communities near the railyards and provide updates to the CSC</u></li> <li>• <u>Work with railyards to develop an air monitoring protocol</u></li> <li>• <u>Work with CARB to identify opportunities for new financial incentives in this community</u></li> <li>• <u>Use emissions inventory and air monitoring information to identify opportunities for emission reductions</u></li> </ul>
<u>BNSF</u>	<ul style="list-style-type: none"> <li>• <u>Continue participation in FBMSM working group meetings</u></li> </ul>
<u>CSC Members</u>	<ul style="list-style-type: none"> <li>• Participate in the CARB and South Coast AQMD rulemaking process (e.g., attending working group meetings, providing comments on draft rule materials, etc.) for regulations affecting railyards</li> </ul>
CARB	<ul style="list-style-type: none"> <li>• Pursue regulations and/or other measures to achieve additional emission reductions at railyards</li> <li>• Prioritize enforcement and identify opportunities for new financial incentives in this community</li> </ul>
<b>Additional Information:</b>	
<ul style="list-style-type: none"> <li>• Indirect Source Rule: <a href="http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures/rail-fac-wkng-grp">http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures/rail-fac-wkng-grp</a></li> <li>• Carl Moyer Program: <a href="http://www.aqmd.gov/home/programs/business/business-detail?title=heavy-duty-engines&amp;parent=vehicle-engine-upgrades">http://www.aqmd.gov/home/programs/business/business-detail?title=heavy-duty-engines&amp;parent=vehicle-engine-upgrades</a></li> <li>• CARB's proposed regulations to reduce emissions from locomotives: <a href="https://ww2.arb.ca.gov/resources/documents/evaluation-and-potential-development-regulations-reduce-emissions-locomotives">https://ww2.arb.ca.gov/resources/documents/evaluation-and-potential-development-regulations-reduce-emissions-locomotives</a><sup>13</sup></li> <li>• <u>CARB's actions to minimize community health impacts from freight and estimated timelines is available at : <a href="https://www.arb.ca.gov/board/books/2019/032119/19-3-2pres.pdf">https://www.arb.ca.gov/board/books/2019/032119/19-3-2pres.pdf</a></u></li> </ul>

# CHAPTER 5D:

## METAL PROCESSING FACILITIES

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5d: Metal Processing Facilities

### Background

Metal processing facilities include a wide variety of operations such as metal finishing (e.g., plating, anodizing, metal spray coating), heat treating, plasma arc cutting, and other operations. These facilities produce parts that are commonly used in the automotive, aerospace, oil and gas, and other industries. There are sixteen (16) metal processing facilities in the East Los Angeles, Boyle Heights, West Commerce community. Certain operational activities at these facilities can be sources of toxic metal emissions.

Nine (9) of the 16 metal processing facilities within the East Los Angeles, Boyle Heights, West Commerce community are metal finishing facilities. An example of the type of metal finishing

Figure 5d-1: Chrome Plated Car Parts

facilities that can be found in the East Los Angeles, Boyle Heights, West Commerce community is decorative chromium electroplating (or decorative chromium plating). One of the key processes at these facilities is placing parts into industrial baths that contain chromic acid ("chromium tanks"). A thin layer of chromium metal (measured in millionths of an inch) is deposited on the part, resulting in a decorative and protective metal finish (Figure 5-1). Examples of parts that are processed at these decorative chromium plating facilities include furniture parts, bathroom fixtures (e.g., handles, and faucets), and automotive bumpers and wheels. Decorative chromium plating facilities are subject to South Coast AQMD Rule 1469, which includes provisions for reducing hexavalent chromium emissions from tanks used for decorative chromium electroplating. The rule also requires building enclosures, housekeeping, and best management practices that minimize the release of fugitive hexavalent chromium emissions. Other metal emissions (e.g., nickel and cadmium) from these facilities are addressed by South Coast AQMD Rule 1426. Additional information on metal processing facilities are available in the Appendix 5d~~[available in the next draft release]~~.

### Community Air Quality Priority – Reduce Exposure to Fugitive Emissions

The East Los Angeles, Boyle Heights, West Commerce CSC identified exposure to fugitive emissions from metal processing facilities as a community air quality priority. To address this

priority, the CSC identified actions that could be effective at reducing the community's exposure to fugitive emissions from metal processing facilities, such as:

- Pursuing air monitoring and focused enforcement;
- Pursuing incentives for emission controls that reduce fugitive metal emissions; and
- Providing outreach to workers, business owners (especially small business owners), trade organizations, and community members about air quality and land use regulations that affect metal processing facilities.

### Ongoing Efforts

South Coast AQMD has a set of existing rules to address toxic metal emissions from metal processing operations. Many of these rules include requirements for air pollution controls, building enclosures, and housekeeping practices. A list of the rules is provided below.<sup>i</sup>

- Rule 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations
- Rule 1420 – Emission Standard for Lead
- Rule 1420.1 – Emission Standards for Lead and Other Toxic Air Contaminants from Large Lead Acid Battery Recycling Facilities
- Rule 1420.2 – Emission Standards for Lead from Metal Melting Facilities
- Rule 1426 – Emissions from Metal Finishing Operations
- Rule 1430 – Control of Emissions from Metal Grinding Operations at Metal Forging Facilities
- Rule 1469 – Hexavalent Chromium Emissions from Chromium Electroplating and Chromic Acid Anodizing Operations
- Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium

Additionally, South Coast AQMD staff is currently working to develop new rules<sup>ii</sup> and amend existing rules that cover metal processing facilities, including:

- Proposed Amended Rule 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations;
- Proposed Rule 1407.1 – Emissions of Toxics Air Contaminants from Chromium Alloy Melting Operations;
- Proposed Amended Rule 1426 – Reduction of Toxic Air Contaminants from Metal Finishing Operations;
- Proposed Amended Rule 1430 – Control of Emissions from Metal Grinding Operations at Metal Forging Facilities;

---

<sup>i</sup> These rules are available at: <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/regulation-xiv>.

<sup>ii</sup> The latest updates for these rule development activities are available at: <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules>.

- Proposed Rule 1435 – Control of Emissions from Metal Heat Treating Processes;
- Proposed Rule 1445 – Control of Toxic Emissions from Laser Arc Cutting;
- Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium; and
- Proposed Rule 1480 – Air Toxics Metals Monitoring

### Opportunities for Action

The East Los Angeles, Boyle Heights, West Commerce CSC developed the actions below to address the air quality priorities for metal processing facilities.

<b>Action 1: Identify Areas to Conduct Air Monitoring for Fugitive Toxic Metal Emissions from Metal Processing Facilities</b>	
<b>Course of Action(s):</b>	
<ul style="list-style-type: none"> <li>• Identify sources of elevated levels of toxic metal emissions</li> <li>• If persistent elevated levels of toxic metal emissions are detected at locations through air monitoring activities, <u>determine the source of emissions, collection additional measurements, inspect nearby facilities, and/or request records from the facilities</u> <del>conduct follow-up investigations at those locations using additional techniques</del></li> <li>• Determine if additional actions (e.g., focused enforcement and rule development) are needed to address elevated levels</li> </ul>	
<b>Strategies:</b>

Additional Information:	

## Action 2: Reduce Emissions from Metal Processing Facilities through Outreach, Best Management Practices and Incentives

### Course of Action(s):

- Conduct targeted outreach to metal processing facilities in the community and provide information on the South Coast AQMD's Small Business Assistance Program, permitting process, and applicable rules and regulations
- Provide training to facility operators on best management practices and South Coast AQMD rules that address metal processing facilities
- Pursue incentive funds to reduce emissions from metal processing facilities (e.g., transitioning hexavalent chromium electroplating operations to trivalent chromium or installing air pollution controls to reduce emissions where emission reductions exceed rule requirements)

### Strategy:

- Public Information and Outreach
- Rules and Regulations
- Incentives

### Goal(s):

- Facilitate three training sessions to educate business owners and workers on applicable facility rules and best management practices
- Distribute information about the Small Business Assistance Program through targeted outreach to facilities and through community based events
- Provide the CSC with biannual or quarterly updates on public outreach events and incentive opportunities

### Estimated Timeline(s):

- Mid-2020 through 2022, conduct training sessions for business owners on source-specific rules and best management practices

<ul style="list-style-type: none"> <li>• Mid-2020 through 2022, engage in outreach events to distribute information about Small Business Assistance Program</li> <li>• Mid-2020, provide quarterly updates to the CSC on these activities</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Provide outreach materials to business owners on Small Business Assistance Program, best practices, and available incentives</li> <li>• Prepare and deliver training materials for facility owners and operators <u>on South Coast AQMD's permitting process, and applicable rules and regulations</u></li> <li>• <u>Conduct training and Engage in</u> outreach events</li> <li>• <u>Pursue incentive funds to reduce emissions from metal processing facilities (e.g., installing air pollution controls to reduce emissions where emission reductions exceed rule requirements)</u></li> </ul>

# CHAPTER 5E:

## RENDERING FACILITIES

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5e: Rendering Facilities

### Background

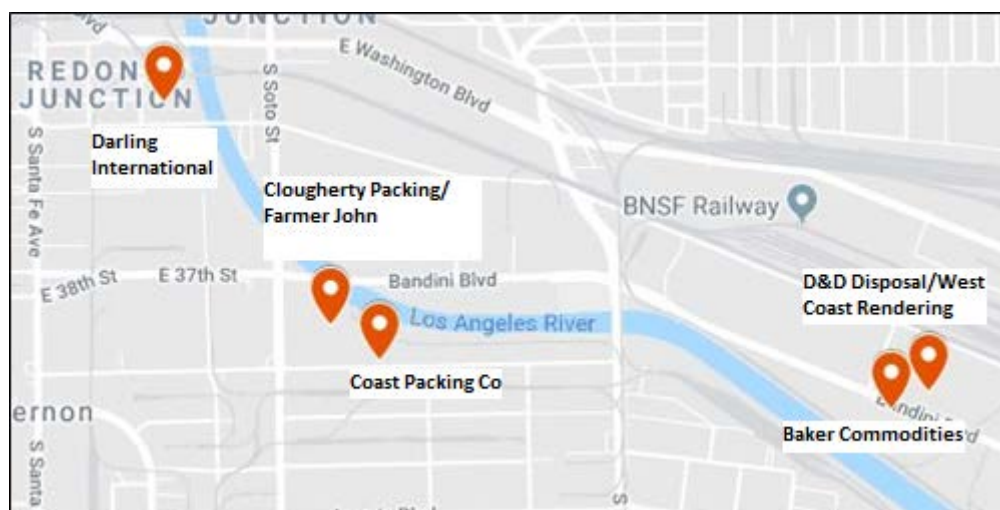

Rendering is a process that converts waste animal tissue into useful materials, such as grease, tallow, and meat meal. These materials are used to make finished products such as biofuels, animal feed, pet food, lubricants, soap, cosmetics, and fertilizer. The raw material that is rendered includes animal carcasses, slaughter waste and trimming, and out-of-date supermarket stock. Because animal carcasses are generally not allowed to be put in landfills, these materials must go to rendering facilities to be processed.

### Community Air Quality Priority – Odors from Rendering Facilities

Several processes within rendering facilities can emit odors. The processes include raw material receiving, raw material size reduction, cooking, fat processing, and wastewater treatment.

Odors from rendering facilities located in the Vernon area can impact the quality of life for the East Los Angeles, Boyle Heights, West Commerce community. There are five rendering facilities located in the Vernon area, including Baker Commodities, Darling International, D&D Disposal/West Coast Rendering, Clougherty Packing/Farmer John, and Coast Packing Co (see Figure 5e-1). It is often difficult to identify which facility is the source of an odor detected in the community because these rendering facilities are located close to one another.

Figure 5e-1: Map of Rendering Facilities

### Ongoing Efforts

Rule 415 – Odors from Rendering Facilities<sup>1</sup> was adopted by South Coast AQMD in November 2017 to reduce odors from rendering facilities. The rule requires emission controls, best management practices, and signs posted at the facility that provide contact information to the public for odor complaints. Rule requirements, such as odor best management practices, were

to have been implemented by facilities within 90 days of the rule's adoption. The installation of emission controls is required to be completed by 2022 or sooner.

### Opportunities for Action

In addition to implementing Rule 415, the CSC identified reducing odors from rendering facilities as a priority. The actions to reduce odors from rendering facilities are described below.

Action 1: Reduce Odors from Rendering Facilities	
Course of Action:	
<ul style="list-style-type: none"> <li>• <del>Engage in and provide</del> Provide public outreach information for the community on Rule 415 requirements, which address odors from rendering facilities</li> <li>• Continue response to odor complaints and update complainants on a timely basis             <ul style="list-style-type: none"> <li>– Provide CSC with periodic summaries of findings, such as whether odors were confirmed and traced back to a specific site/source, and any enforcement actions taken<sup>i</sup></li> </ul> </li> <li>• Conduct mobile <del>air monitoring</del> measurements<sup>ii</sup> for volatile organic compounds (VOCs) near each rendering facility in the community and make <u>air</u> monitoring data publicly available</li> <li>• Conduct facility inspections to evaluate compliance with Rule 415, and follow-up with enforcement action, where appropriate             <ul style="list-style-type: none"> <li>– Make referrals to other regulatory agencies and local health department, as appropriate</li> </ul> </li> </ul>	
Strategy(ies):	
<ul style="list-style-type: none"> <li>• Public Information and Outreach</li> <li>• Enforcement</li> <li>• Air Monitoring</li> <li>• Collaboration</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>• Engage in two public outreach events to explain the requirements of Rule 415, and how the public can report odor complaints</li> <li>• Conduct mobile <u>air</u> monitoring near each of the five facilities</li> <li>• Conduct inspections of each rendering facility in the community, and provide information about inspection results to CSC</li> </ul>	

<sup>i</sup> Specific or detailed information from ongoing enforcement investigations will not be able to be shared until Notices of Violation, if any, are settled or closed.

<sup>ii</sup> As described in the Community Air Monitoring Plan Appendix B ([http://www.aqmd.gov/docs/default-source/ab-617-ab-134/camps/appendix-a-and-b\\_elabhwc.pdf](http://www.aqmd.gov/docs/default-source/ab-617-ab-134/camps/appendix-a-and-b_elabhwc.pdf)), South Coast AQMD staff will use specialized equipment that is capable of detecting VOCs at very low concentrations. However, most sources of odors are difficult to measure, even with modern ~~air monitoring~~ measurement techniques, and, at times, the human nose can detect odors better than air measurement equipment.

<ul style="list-style-type: none"> <li>• Provide quarterly or biannual <u>air</u> monitoring and enforcement updates to the CSC and engage community stakeholders (e.g., community organizations) to attend CSC updates</li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>• First quarter of 2020, begin outreach to provide information on Rule 415 requirements</li> <li>• <u>Continue response to odor complaints and update complainants on a timely basis and facility inspections to evaluate compliance with Rule 415</u></li> <li>• Second half of 2019, begin mobile <u>air monitoring measurements</u> for VOCs near rendering facilities</li> <li>• Mid-2020, begin quarterly or biannual updates to the CSC on <u>air</u> monitoring and enforcement actions, as needed</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Engage in</u><del>Conduct</del> <u>community outreach and provide information</u> on Rule 415 and how to file odor complaints</li> <li>• <u>Conduct inspections on compliance with Rule 415</u> and provide facilities with information on Best Management Practices, with enforcement follow-up as needed</li> <li>• <u>Conduct air monitoring measurements for VOCs</u>, and make data publicly available</li> <li>• Refer appropriate issues identified at these sites to other regulatory agencies and/or local health department</li> <li>• Provide updates to CSC <u>on summaries of findings and any enforcement actions taken</u></li> </ul>
Additional Information:	
Requirements for Rule 415 (Rendering Facilities): <a href="http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-415">http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-415</a>

# CHAPTER 5F:

## AUTO BODY SHOPS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5f: Auto Body Shops

### Background

Auto body shops specialize in repairing vehicles by fixing paint or body damage from scratches, dents, and collisions. The paints or coatings used at auto body shops may cause odors and emit air pollutants, including volatile organic compounds (VOCs) or toxic air contaminants, such as metals. The emissions and odors may come from solvents evaporating from paint and solvent applications, clean-up of parts, and storage.

Figure 5f-1: Auto body repair shop painting a motor vehicle

Other operations conducted at auto body shops, such as sanding and grinding, can result in emissions of fine dust from metal compounds (e.g., chromium and nickel).<sup>1</sup> The fine dust containing metal compounds can collect in indoor areas, and can become re-suspended and escape into the outdoor environment, where it can impact the neighboring community.

### Community Air Quality Priority – Emissions from Auto Body Shops

The CSC identified emissions from a number of auto body shops along specific corridors and main streets in the East Los Angeles, Boyle Heights, West Commerce community as an air quality priority. The CSC recognizes that auto body or repair shops are typically small local businesses that may face difficulty complying with existing regulations (e.g., unpermitted open spraying and poor housekeeping practices), potentially contributing to increased emissions and odors.

Based on the South Coast AQMD Facility Information Detail (FIND)<sup>2</sup> database, there are 16 auto body shops with spray booth permits in this community. Additional unpermitted businesses may also exist in this community. Facilities operating without permits or not following rule requirements or permit conditions can lead to excess emissions and increased odors and dust, along with creating an unfair advantage over businesses that comply with the rules.

### Ongoing Efforts

The South Coast AQMD's Small Business Assistance Program<sup>3</sup> offers small business owners and operators free technical assistance, including information on which rules apply to their facilities and operations and how to meet the rule requirements. Among other services, the Small Business Assistance Program can help provide information to auto body shop owners or operators about compliance with the applicable rules described below.

Rule 1151 – Motor Vehicle and Mobile Equipment Non-Assembly Line Coating Operations,<sup>4</sup> reduces VOCs and toxic air contaminants from automotive coatings or paints applied to motor vehicles or parts. Rule requirements include VOC limits for automotive coatings or installing an emission control system, following best practices for applying coatings, and recordkeeping.

Rule 1171 – Solvent Cleaning Operations,<sup>5</sup> reduces VOCs and toxic air contaminants from the use, storage, and disposal of solvents. Solvents are often used in auto body or repair shops to clean parts, tools, and machinery.

Some products used by auto body and repair shops, such as spray paints and solvents, contain VOCs. In addition, over the last decade, water-based automotive coatings with lower VOCs and lower VOC solvents have become available. However, the VOCs from these products can still cause odors that can travel downwind. South Coast AQMD’s Rule 402 – Nuisance,<sup>6</sup> addresses issues such as odors or annoyances (e.g., sanding dust and paint overspray) from nearby business operations. Individuals can file a complaint by calling 1-800-CUT-SMOG or can fill out an online form.<sup>7,8</sup> South Coast AQMD inspectors follow up on complaints by investigating whether an alleged source is in compliance with rule and permit requirements. A public nuisance violation can be issued if there are confirmed reports of odors from a considerable number of persons.

Auto body and repair shops may use products that are flammable or present a fire hazard. Local fire agencies require permits for the use or storage of hazardous materials.<sup>9</sup> They may require auto body shops to follow permit conditions with ventilation requirements, use spray booths, and store flammable liquids in appropriate containers. Fire departments inspect businesses to ensure compliance with permit conditions and other appropriate regulations.

### Opportunities for Action

Input provided from the CSC led to the actions described below to reduce emissions from auto body shops.

Action 1: Reduce Emissions from Auto Body Shops
Course of Action:
<ul style="list-style-type: none"> <li>• Conduct targeted outreach to auto body shop owners and operators in the community, including providing information on the South Coast AQMD’s Small Business Assistance Program, permitting process, and applicable rules and regulations</li> <li>• Provide public outreach on South Coast AQMD’s complaint system (1-800-CUT-SMOG and online form) in this community</li> <li>• Provide information to the community on the requirements of Rule 402, which address nuisance (e.g., odor and fugitive dust) and Rules 1151 and 1171, which reduce emissions from motor vehicle coating and solvent cleaning operations at auto body shops and related businesses</li> </ul>

<ul style="list-style-type: none"> <li>Collaborate with local fire departments to inspect possible unpermitted auto body shops and provide information on pertinent fire safety and hazardous waste storage regulations</li> <li>Conduct air <del>monitoring measurements</del> near auto body shops and if persistent elevated levels are found through <u>air</u> monitoring conduct follow-up investigations and/or enforcement actions, where appropriate</li> </ul>	
Strategy(ies):	
<ul style="list-style-type: none"> <li>Public Information and Outreach</li> <li>Air Monitoring</li> <li>Enforcement</li> <li>Collaboration</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>Engage in two public outreach events to distribute information about the South Coast AQMD's Small Business Assistance Program</li> <li>Distribute outreach materials on an annual basis to auto body shops in this community to explain the requirements of Rules 402, 1151, and 1171 and South Coast AQMD's complaint system</li> <li>Collaborate with local fire departments to inspect unpermitted auto body shops in the community and distribute pertinent outreach materials during the implementation period of this CERP</li> <li>Provide the CSC quarterly or biannual updates on enforcement or outreach activities</li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>Mid-2020, begin outreach to the community on information about applicable rules and regulations, permitting process, South Coast AQMD's Small Business Assistance Program, and the South Coast AQMD's complaint system</li> <li>Mid-2020, begin quarterly or biannual updates to the CSC on outreach and enforcement activities, or if new information becomes available</li> <li>Mid-2020, coordinate with local fire departments and develop plan to inspect unpermitted auto body shops and distribute outreach materials</li> <li>Early 2020, begin air monitoring near auto body shops</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>Provide information to auto body shops, <del>and</del> related businesses, <del>and members of</del> in this community <del>about</del> on the South Coast AQMD's complaint system, the permitting process, and <del>about</del> compliance with Rules 402, 1151, and 1171</li> <li>Collaborate with local fire departments to inspect possible unpermitted auto body shops and provide information on pertinent safety regulations</li> <li>Conduct mobile <u>air</u> monitoring as described in the CAMP</li> </ul>

	<ul style="list-style-type: none"> <li>• Conduct targeted enforcement activities, as needed</li> </ul>
CSC members	Collaborate with South Coast AQMD to help distribute information in this community
Los Angeles City Fire Department	Provide outreach information to the community regarding fire safety regulations pertinent to auto body shops and update South Coast AQMD if any unpermitted auto body shops are found
Additional Information:	
<ul style="list-style-type: none"> <li>• South Coast AQMD's Complaint System: <a href="http://www3.aqmd.gov/webappl/complaintsystemonline/NewComplaint.aspx">http://www3.aqmd.gov/webappl/complaintsystemonline/NewComplaint.aspx</a></li> <li>• Small Business Assistance: <a href="https://www.aqmd.gov/docs/default-source/small-business-assistance/free-help-for-small-businesses.pdf">https://www.aqmd.gov/docs/default-source/small-business-assistance/free-help-for-small-businesses.pdf</a></li> <li>• Requirements for Rule 402 (Nuisance): <a href="http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-402.pdf">http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-402.pdf</a></li> <li>• Requirements for Rule 1151 (Motor Vehicle Coating Operations): <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1151.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1151.pdf</a></li> <li>• Requirements for Rule 1171 (Solvent Coating Operations): <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1171.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1171.pdf</a></li> </ul>

# CHAPTER 5G:

SCHOOLS, CHILDCARE CENTERS,  
COMMUNITY CENTERS, LIBRARIES,  
AND PUBLIC HOUSING PROJECTS –  
EXPOSURE REDUCTION

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5g: Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects – Exposure Reduction

### Background

The East Los Angeles, Boyle Heights, West Commerce community identified children's exposure to harmful air pollutants as a priority with additional focus on childcare centers, community spaces (such as community centers), and public housing developments. A major pollutant of concern in this community is diesel particulate matter (PM), generated by neighborhood and freeway truck traffic, and the railyards. The CSC also expressed concern about emissions from metal processing facilities, fugitive dust from general industrial sources, and auto body shops. Children, seniors, and people with certain medical conditions are especially sensitive to the impacts of air pollution. However, proactive steps such as installing high performance air filtration systems inside school buildings and notifying the public when air quality is unhealthy can reduce the public's exposure to harmful air pollutants.

### Community Air Quality Priority – Reducing Exposures at Schools, Childcare Centers, Community Centers, Libraries, and a Public Housing Project

CSC members identified schools and other places where children spend a lot of time (e.g., childcare centers, libraries, and community centers) as places where the South Coast AQMD should focus on reducing exposure to harmful air pollutants. Table 5g-1 lists childcare centers, community centers, libraries, parks, and a public housing project identified by the CSC. The CSC provided examples of air pollution sources, such as the idling of diesel trucks, and dust from metal processing facilities and other general industrial sources that are near schools and community centers. CSC members also shared instances where students and other sensitive populations near sources of air pollution experienced health problems.

~~To address community concerns about the health impacts of air pollution,~~ CSC members prioritized installing school air filtration systems, modifying routes for trucks to minimize movement through residential neighborhoods, and partnerships with community-based organizations for outreach and engagement efforts as ways to reduce exposure to harmful air pollutants. This includes providing information on pollutants of concern within this community, and proactive steps that can be taken to reduce exposure at schools, childcare centers, and community centers, when outdoor air pollution levels are unhealthy.

The CSC asked for the Community Emissions Reduction Plan (CERP) to focus installation of school air filtration systems at locations close to major sources of diesel PM and dust from industrial sources. Specific locations mentioned as priorities included schools near major traffic sources, such as freeways and truck routes, railyards, and metal processing facilities.

Table 5g-1: List of CSC identified childcare centers, community centers, libraries, parks, and a public housing project in the East Los Angeles, Boyle Heights, West Commerce community

CSC Identified Locations Where Children Spend Time	
Atlantic Branch Library	Garcia Park
Bandini Park	Ramona Head Start/State-Pre School
Boys and Girls Club (Ramona Gardens) <sup>i,ii,iii</sup>	Rosewood Park and Library
Bristow Park and Library	Volunteers of America Humphreys Head Start
City of Commerce Teen Center	

### Ongoing Efforts

#### *School Air Filtration ~~Program~~ Efforts*

The installation of air filtration systems in schools can reduce exposure to air pollution inside school buildings. There are certain types of air filtration systems (“high efficiency air filters”) that are effective in filtering very small particles from diesel engines and other dust sources. Small particles can be inhaled deep into the lungs and cause health problems. These filtration systems may be beneficial to schools located near freeways, truck routes, rail yards, metal processing facilities, auto body shops plants, and other sources<sup>1</sup> of PM emissions.

South Coast AQMD has helped install air filtration systems at schools in the Los Angeles Unified School District since 2006, including 20 schools and one community center within the East Los Angeles, Boyle Heights, West Commerce community. Figure 5g-~~122~~ shows a map of the schools and community centers with South Coast AQMD installed air filtration systems. Table 5g-~~2~~ provides a list of these schools and community centers.

<sup>i</sup> Ramona Gardens is a public housing project and would require funding sources or programs to be identified for a residential air filtration system. Residential air filtration systems have not been approved by CARB. South Coast AQMD plans to continue to work with CARB to establish a protocol where residential air filtration systems can be installed.

<sup>ii</sup> Air filtration systems will generally be less effective in older, pre-2006 homes due to lower energy efficiency typically found in Environmental Justice or disadvantaged communities. Limited research on the efficiency of high performance air filtration systems in older homes suggests a 25% - 30% lower efficiency for PM<sub>2.5</sub> and ultrafine PM is expected, which is comparable to having open doors and windows. Most data collected on efficiency of high performance air filtration systems has been on 2006 and new homes, showing an average removal efficiency of 90% for PM<sub>2.5</sub> and ultrafine PM.

<sup>iii</sup> The South Coast AQMD will work with CARB’s Indoor Air Quality program and its contractor to identify effectiveness and opportunities for residential filtration and share this information with the CSC.

Figure 5g-21: Map of completed and potential schools for air filtration systems in the East Los Angeles, Boyle Heights, West Commerce

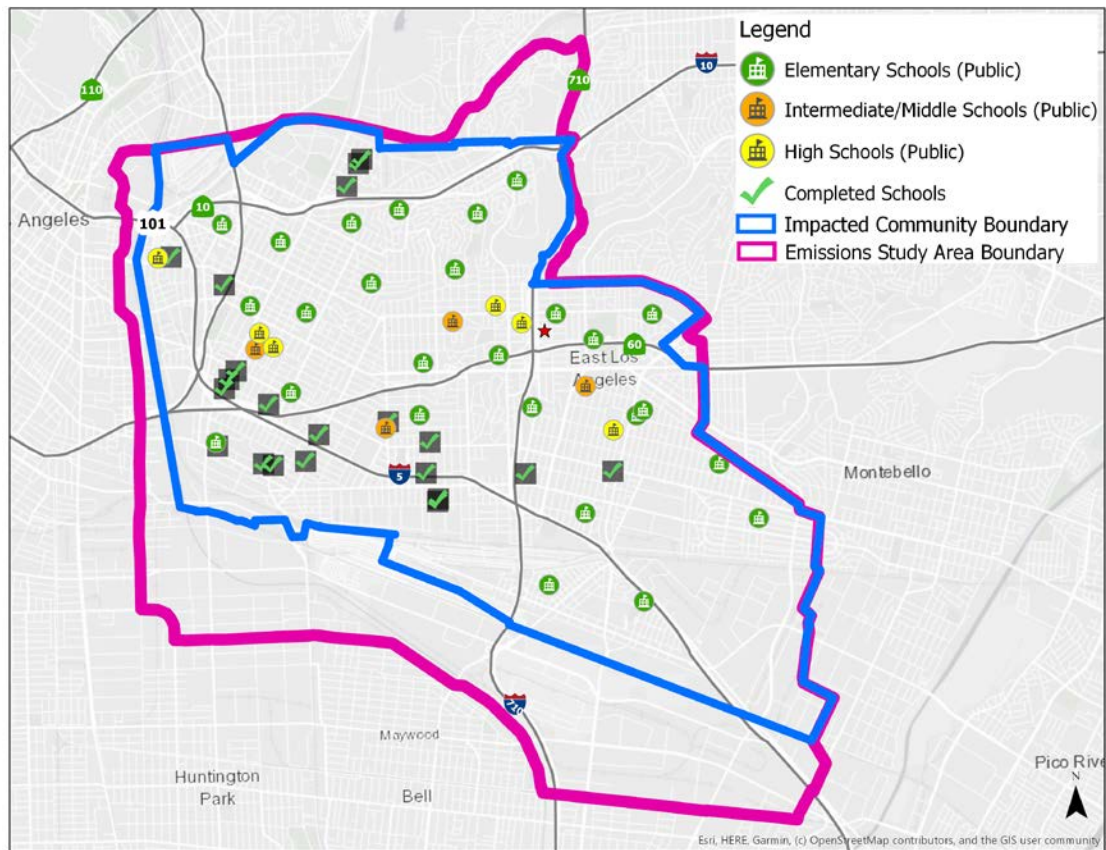

Table 5g-2: List of schools in the East Los Angeles, Boyle Heights, West Commerce community with air filtration systems ~~facilitated by~~ installed through the South Coast AQMD program

Schools and Community Center with Air Filtration Systems	
Amanecer Primary Center	Murchison Elementary School
Carmen Lomas Garza Primary Center	Plaza Community Services
Christopher Dena Elementary School	Resurrection Elementary School
Dacotah Early Elementary Center	Salesian High School
Eastman Avenue Early Education Center	Santa Isabel Elementary School
Ford Boulevard Elementary School	Santa Teresita Elementary School
Kipp Academy of Innovation	Second Street Elementary School
Las Flores Preschool	Soto Street Elementary School
Lorena Street Elementary School	Sunrise Elementary School
Murchison Early Education Center	Utah Street Elementary School

*Environmental Justice Community Partnership (EJCP)<sup>2</sup> Clean Air Ranger Education (CARE)<sup>3</sup>*

The EJCP is designed to build relationships with community members and organizations to achieve clean air and healthy, sustainable communities. The Clean Air Ranger Education (CARE) Pilot Program is a program designed for elementary school education and includes topics on air pollution and health, air quality advisories, air quality flags, and zero-emission technologies.

*Why Air Quality Matters (WHAM) High School Education Program*

The South Coast AQMD is implementing ~~Why Air Quality Matters (WHAM)~~, a Science, Technology, Engineering and Math (STEM) and experiential learning based curriculum, in high schools located within environmental justice communities. WHAM will increase teacher and student awareness on air quality issues in their communities and beyond through activities and experiments, including measuring PM using low-cost, hand-held sensors.

**Opportunities for Action**

In addition to air filtration systems, the CSC prioritized education and outreach as a way to reduce exposure to harmful air pollutants. In addition, Chapter 5b: Neighborhood Truck Traffic describes actions to provide data on truck traffic and potential emissions near schools, which may be useful to support decision-making for truck routing.

**Action 1: Reduce Exposure to Harmful Air Pollutants through Public Outreach****Course of Action:**

- Provide information about air quality-related programs to schools, including the Environmental Justice Community Partnership (EJCP), Clean Air Ranger Education (CARE) and ~~Why Air Quality Matters (WHAM)~~ programs
- Partner with AltaMed, Council of Mexican Federations (COFEM), and other community-based organizations to provide information on how to receive air quality advisories, and how to reduce exposure to air pollution, particularly for sensitive populations
- Partner with community-based organizations such as AltaMed and COFEM to share information or provide outreach to schools for asthma related programs
- Work with appropriate parties to negotiate access to conduct school-based air monitoring to provide air quality information at that location for limited-term assessments

**Strategy(ies):**

- Public Information and Outreach
- Collaboration
- Air Monitoring

**Goal(s):**

- Collaborate with community-based organizations (e.g., AltaMed and COFEM) to provide information to the public on how to receive air quality advisories, and how to reduce exposure to air pollution, particularly for sensitive populations
- Participate in at least two public outreach events (e.g., health fair, Earth Week event) during the implementation period of this CERP at schools or childcare centers to provide information relating to air quality and reducing exposure
- Provide information relating to air quality effects on young children and reducing exposure to facilities where children are located (e.g., schools, childcare centers, community centers, libraries, etc.), prioritizing based on CSC input during the implementation period of this CERP
- Implement CARE and WHAM programs at least two schools in 2020, with possibility of continuing for up to three years<sup>iv</sup>
- Work with appropriate entities to negotiate access to conduct school-based air monitoring for limited-term assessments

**Estimated Timeline(s):**

- Beginning 2020 through 2022, implement CARE and WHAM programs at schools
- Fourth quarter of 2019, begin working with AltaMed on developing health messaging for advisories

<sup>iv</sup> Number of schools and duration of program is contingent upon renewing funding source for subsequent years.

<ul style="list-style-type: none"> <li>Beginning 2020 through 2022, participate in public outreach events on reducing exposure to air pollution</li> <li>Early 2020, begin outreach efforts with community-based organizations (e.g., AltaMed)</li> <li>Installation of air monitoring <u>equipment</u> at schools<sup>v</sup>, childcare centers, libraries, and community centers<sup>vi</sup> prioritized by CSC , as necessary</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>Implement the CARE and WHAM programs to schools</li> <li>Partner with community-based organizations on asthma-based programs and air quality notifications that inform the community about proactive steps to reduce exposure to harmful air pollutants</li> <li>Collaborate with organizations to implement outreach events</li> <li>Work with appropriate entities to negotiate access to conduct school-based air monitoring</li> <li>Participate in AltaMed Environmental Health Working Group to identify and address local air quality issues</li> </ul>
Community-Based Organizations (e.g., AltaMed, COFEM)	Partner with South Coast AQMD to develop health messaging and share information and/or provide outreach to schools for air quality, public health, <u>and</u> asthma-related programs
Additional Information:	
<ul style="list-style-type: none"> <li>COFEM: <a href="https://www.cofem.org/">https://www.cofem.org/</a></li> <li>AltaMed: <a href="https://www.altamed.org/">https://www.altamed.org/</a></li> </ul>	

<sup>v</sup> Some schools or community centers have had air filtration systems previously installed; however, filter replacements may be needed. Replacement filters will continue to be provided to schools that have had air filtration systems installed. Given that these projects are dependent on available funding, the CSC will need to prioritize schools for air filtration systems.

<sup>vi</sup> Installation of air filtration at childcare centers, libraries, and community centers is dependent upon having contacts at locations identified by CSC members who would be able to assist in the placement of air monitoring equipment, and may be dependent on the functionality of existing HVAC systems.

## Action 2: Reduce Exposure to Harmful Air Pollutants at Schools, Childcare Centers, Libraries and Community Centers

### Course of Action:

- Work with Los Angeles Unified School District, other local school districts, and CSC members to prioritize schools, childcare centers, libraries, and community centers near truck routes, railyards, and other industrial sources identified by the CSC<sup>vii</sup> that may benefit from installation of air filtration systems
- Work with appropriate agencies toward replacing filters at schools that have existing air filtration systems and installing systems at schools, childcare centers, libraries and community centers that do not have these systems

### Strategy(ies):

- Exposure Reduction

### Goal(s):

- Install air filtration systems at -schools<sup>viii</sup>, childcare centers, libraries, and community centers
- Facilitate input from the CSC on locations to install air filtration systems

### Estimated Timeline(s):

- Mid-2020, work with appropriate agencies toward the installation of high efficiency air filtration systems, replacing filters at schools with air filtration systems and installation at schools without these systems during the implementation period of this CERP

### Implementing Agency, Organization, Business or Other Entity:

Name:	Responsibility:
South Coast AQMD	Implement air filtration systems at prioritized schools, childcare centers, libraries and/or community centers without these systems and replacement filters at existing locations
Los Angeles Unified School District and other local school districts	Partner with South Coast AQMD on the installation of air filtration systems at schools at prioritized locations
Appropriate Entities (e.g., cities and county)	Partner with South Coast AQMD on the installation of air filtration systems at libraries and community centers, if these community spaces are prioritized by the CSC

<sup>vii</sup> Public schools, including charter schools, childcare centers, and public community centers, are eligible for the South Coast AQMD program.

<sup>viii</sup> Some schools or community centers have had air filtration systems previously installed; however, filter replacements may be needed. Replacement filters will continue to be provided to schools that have had air filtration systems installed. Given that these projects are dependent on available funding, the CSC will need to prioritize schools for air filtration systems.

**Additional Information:**

School air filtration program:

<https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf>**Action 3: Reduce Exposure to Harmful Air Pollutants at Homes<sup>ix,x</sup>****Course of Actions:**

- Identify new or existing technologies, programs, and funding sources that can provide the most effective air filtration systems in homes<sup>xi</sup>
- Seek potential partners or funding opportunities to improve weatherization in the homes to help improve the efficiency of the air filters

**Strategy(ies):**

- Exposure Reduction
- Incentives
- Public Information and Outreach

**Goal(s):**

- Partner with appropriate entities to determine new or existing programs that can provide home filtration systems
- If funding or programs become available, share information with CSC

**Estimated Timeline(s):**

- Mid-2020, consult with CSC members and appropriate stakeholders to identify any new or existing home air filtration programs
- If opportunities are identified for residential filtration systems, provide updates to the CSC

**Implementing Agency, Organization, Business or Other Entity:****Name:**South Coast AQMD**Responsibility:**

- Identify new or existing sources or programs that can provide home air filtration resources or home weatherization resources

<sup>ix</sup> Air filtration systems will generally be less effective in older, pre-2006 homes due to lower energy efficiency typically found in Environmental Justice or disadvantaged communities. Limited research on the efficiency of high performance air filtration systems in older homes suggests a 25% - 30% lower efficiency for PM<sub>2.5</sub> and ultrafine PM is expected, which is comparable to having open doors and windows. Most data collected on efficiency of high performance air filtration systems has been on 2006 and new homes, showing an average removal efficiency of 90% for PM<sub>2.5</sub> and ultrafine PM.

<sup>x</sup> Residential air filtration systems have not been approved by CARB. The South Coast AQMD plans to continue to work with them to establish a protocol where residential air filtration systems can be installed.

<sup>xi</sup> If a funding source is identified, South Coast AQMD will install residential air filtration based on the guidelines outlined by the funding source.

	<ul style="list-style-type: none"><li>• <u>Conduct outreach and share information with CSC members, if this becomes available</u></li></ul>
<u>Additional Information:</u>

# CHAPTER 5H:

## GENERAL CONCERNS ABOUT INDUSTRIAL FACILITIES, INCLUDING WASTE TRANSFER STATIONS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5h: General Concerns about Industrial Facilities, including Waste Transfer Stations

### Background

The CSC members for the East Los Angeles, Boyle Heights, West Commerce community expressed concerns regarding the large number of industrial facilities and the cumulative impact of all these facilities on the community. The CSC members also expressed concern about odors from industrial facilities, including waste management transfer stations.

These facilities typically require permits from South Coast AQMD as well as other agencies, such as Department of Toxic Substances Control, CalRecycle, and Los Angeles County Sanitation District. While some of the concerns identified by the CSC are outside the regulatory authority of South Coast AQMD, concerns about fugitive dust and odors from these facilities are addressed through existing South Coast AQMD regulations.

### Community Air Quality Priorities –Improved Access to Facility Information, Cumulative Impacts, Odors, and Fugitive Dust Emissions

The East Los Angeles, Boyle Heights, West Commerce CSC identified areas within the community where there are concentrations of industrial facilities, and emphasized the importance of being able to find credible information about these facilities. Specifically, the community would like to be able to search and filter the South Coast AQMD facility database by the type of facility, rather than just by name or a specific location. This feature would allow the community to better understand the specific types of facilities in their area, and obtain emissions information about those facilities. This type of information may be useful to inform land use decisions and facility permitting requirements, if local city ordinances and policies allow for consideration of such additional information.

The CSC also identified concerns about odors in the community, and the lack of community awareness about how to make air quality complaints. CSC members noted that many people in this community do not use the internet or smart phones. The CSC identified the Republic Services East Los Angeles Transfer Station as a particular odor concern, especially because it is located near homes. Other waste transfer stations, such as the Waste Management Los Angeles Transfer Station and the Republic Services Innovative Waste Control Transfer Station, are also located in the community. In addition to odors, these types of facilities can also release fugitive dust, which could impact neighboring residents.

### Ongoing Efforts

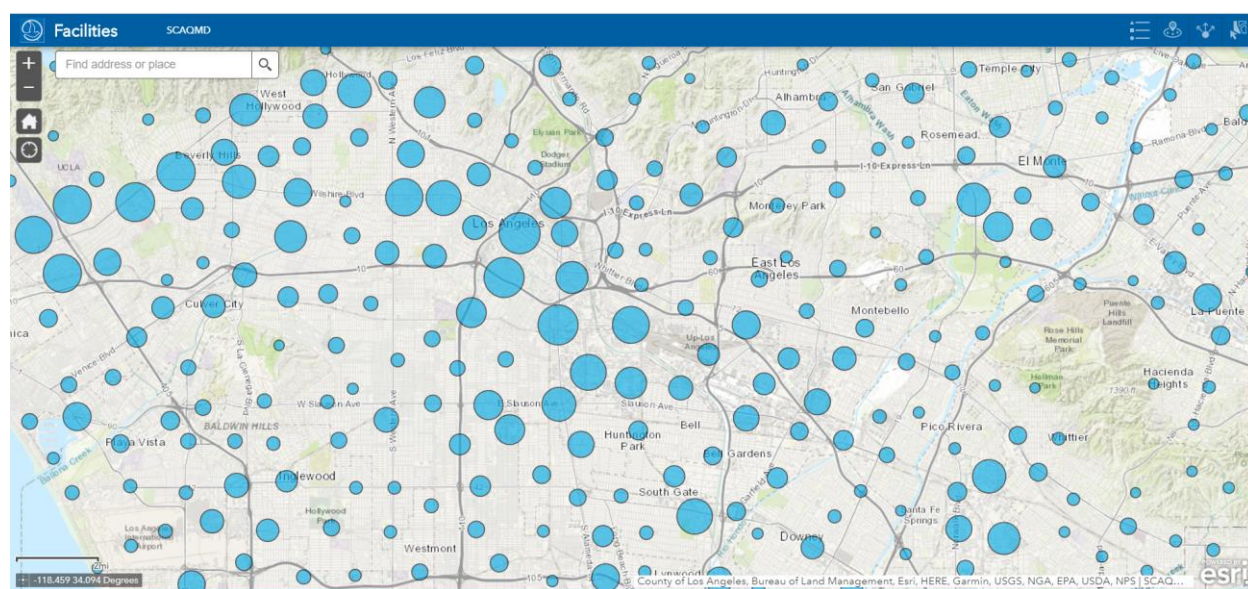

#### *South Coast AQMD Facility Information Detail (FIND)*

South Coast AQMD has a web application where users can search for permitted facilities by name and location. The FIND tool provides detailed information for each facility, including equipment lists, facility air pollution emissions information on key enforcement actions (Notices of Violation,

Notices to Comply, Hearing Board cases), and other documents. The information in FIND is updated daily.<sup>i</sup>

In 2019, South Coast AQMD added an improved interactive map to the FIND tool (Figure 5h-1), so that users can use a map to locate facilities and link to information about those facilities. Users can also search for addresses and place names, and the tool will show a list of active facilities close to that address (Figure 5h-2). Users can also click a link to access more detailed information about the facility.<sup>ii</sup> Additional enhancements to the FIND tool will soon provide detailed information about the status of new permit applications submitted to South Coast AQMD.

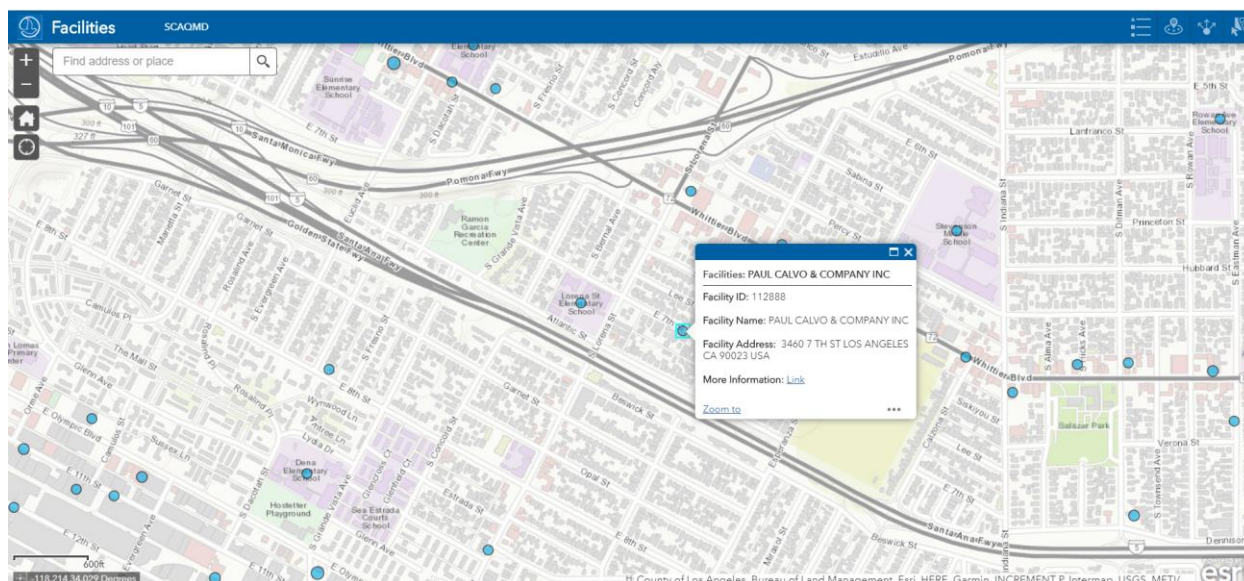

Figure 5h-1: South Coast AQMD FIND interactive map showing location of active facilities; A larger blue dot represents a larger number of facilities in that area

<sup>i</sup> FIND can be accessed by going to <http://www.aqmd.gov/> and clicking the “FIND” menu at the top of the page, or by following this link: <https://xappprod.aqmd.gov/find>.

<sup>ii</sup> The interactive facility map can be accessed by going to <http://www.aqmd.gov/> and selecting “GIS Open Data” under the “Online Services” menu at the top of the page, or by following this link: <https://arcg.is/1Drmjn>.

Figure 5h-2: South Coast AQMD FIND interactive map showing pop-up information about a specific facility; Users can click on a link to access more detailed information about the facility

### *Los Angeles County Department of Regional Planning Green Zones Program<sup>iii</sup>*

The Los Angeles County Department of Regional Planning launched the Green Zones Program in 2015, focusing efforts on disproportionate environmental and health impacts in disadvantaged communities. The Green Zones Program focuses on land use policies, zoning regulations, collaboration with various regulatory agencies, and supporting businesses' to become better neighbors in order to help minimize exposure to toxic pollutants in neighborhoods.<sup>1</sup>

Several existing South Coast AQMD rules address odors, fugitive dust, and other emissions from facilities, including waste transfer stations.

Rule 402 – Nuisance<sup>2</sup> was adopted in 1976, and requires that a person shall not discharge air contaminants that cause injury, detriment, a nuisance, or annoyance to the public.

Rule 403 – Fugitive Dust<sup>3</sup> was amended by South Coast AQMD in 2005 to reduce the amount of particulate matter that may be emitted into the air as a result of man-made dust sources. The rule requires actions to prevent, reduce, or mitigate fugitive dust emissions.

Rule 410 – Odors from Transfer Stations and Material Recovery Systems<sup>4</sup> was adopted by the South Coast AQMD in 2006 to reduce odors from certain municipal solid waste transfer stations and material recovery facilities. The rule requires best odor management practices and requirements.

<sup>iii</sup> The Los Angeles County Green Zones Program applies to the unincorporated area of Los Angeles County in this community.

Rule 415 – Odors from Rendering Facilities was adopted by South Coast AQMD in November 2017 to reduce odors from rendering facilities. The rule requires emission controls, best management practices, and signs posted at the facility that provide contact information to the public for odor complaints.

### Opportunities for Action

South Coast AQMD is seeking to collaborate more closely with land use agencies to identify additional opportunities to reduce fugitive dust and minimize odors. The actions below have been identified by the CSC as strategies that address air quality concerns about industrial facilities more generally in this community, including improving access to facility emissions information, ensuring that facilities have correct permits and working with land use agencies to develop enhanced permit requirements, improving public awareness of how to file air quality complaints, and addressing odors and fugitive dust from waste transfer stations, which could serve as models for other similar facilities.

<b>Action 1: Improve Public Outreach and Accessibility to Facility Information</b>	
<b>Course of Action(s):</b>	
<ul style="list-style-type: none"> <li>Gather community input on features and enhancements that would be useful to include in the South Coast AQMD Facility INformation Detail (FIND) web tool               <ul style="list-style-type: none"> <li>Examples of enhancements could include adding the ability to search by facility type, and whether a facility is in certain regulatory programs (e.g., AB 2588)</li> </ul> </li> <li>Make improvements to the FIND tool to address the community's highest priority requests</li> <li>Conduct community training on how to use the improved FIND tool, when available</li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>Public Information and Outreach</li> <li>Collaboration</li> </ul>	
<b>Goal(s):</b>	
<ul style="list-style-type: none"> <li>Hold a community meeting biannually to gather feedback on enhancements to the FIND tool</li> <li>Demonstrate revised FIND database at events 4 to provide training and increase awareness of FIND as a public information tool</li> </ul>	
<b>Estimated Timeline(s):</b>	
<ul style="list-style-type: none"> <li>Second half of 2020 to first half of 2021, conduct community outreach to gather input on the FIND tool</li> <li>2021, implement updates to FIND tool</li> <li>2022, conduct community training on improved FIND tool</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibility:</b>

South Coast AQMD	<ul style="list-style-type: none"> <li><del>Gather public feedback, make priority improvements to FIND tool, and conduct community training on how to use the FIND tool</del><u>Gather community input on feedback to enhance the FIND web tool (e.g., the ability to search by facility)</u></li> <li><u>Make improvements to FIND tool to address community's highest priority requests</u></li> <li><u>Conduct community training on how to use improved FIND tool</u></li> </ul>
<u>CSC</u>	<ul style="list-style-type: none"> <li><u>Provide South Coast AQMD with feedback to enhance the FIND web tool</u></li> <li><u>Work with South Coast AQMD on community training for how to use improved FIND</u></li> </ul>
Additional Information:	
For FIND web tool: <a href="https://www.arcgis.com/apps/webappviewer/index.html?id=b6c6c754c96648fea71b0cbcb0fca48d">https://www.arcgis.com/apps/webappviewer/index.html?id=b6c6c754c96648fea71b0cbcb0fca48d</a>	

## Action 2: Improve Public Awareness about How to File an Air Quality Complaint

### Course of Action(s):

- Work with local community centers and organizations to provide outreach and training on how to file air quality complaints by phone, web, or mobile app. This outreach would include information about what complaints are handled by South Coast AQMD and CARB (see also Action 4 below)
- Seek opportunities for funding to increase advertising for South Coast AQMD's 1-800-CUT-SMOG complaint line

### Strategies:

- Public Information and Outreach

### Goal(s):

- Identify community partners (e.g., community centers, organizations, etc.) to assist with outreach
- ~~Engage in at least~~Conduct 2 outreach events in this community to provide information and training on how to file air quality complaints by phone, web, or mobile app (See also Action 4 below)
- If funding is obtained, conduct targeted advertising in this community for the 1-800-CUT-SMOG complaint line

### Estimated Timeline(s):

<ul style="list-style-type: none"> <li>• First quarter of 2020, work with CSC to identify community partners that would benefit from education on how to file an air quality complaint</li> <li>• 2020-2022, <del>engage in</del> <del>conduct</del> outreach at a variety of venues</li> <li>• 2020-2022, seek funding opportunities for advertising 1-800-CUT-SMOG</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <del>Work with community partners to conduct outreach on how to</del> <u>file an air quality complaint by phone, web, or mobile app</u></li> <li>• <del>and seek funding for advertising complaint line</del> <u>South Coast AQMD's 1-800-CUT-SMOG complaint line</u></li> </ul>
Additional Information:	
<ul style="list-style-type: none"> <li>• How to file air quality complaint: <a href="https://www.aqmd.gov/home/air-quality/complaints">https://www.aqmd.gov/home/air-quality/complaints</a></li> <li>• South Coast AQMD mobile app: <a href="https://www.aqmd.gov/nav/online-services/smartphone">https://www.aqmd.gov/nav/online-services/smartphone</a></li> </ul>	

### Action 3: Work with Land Use Agencies to Identify Facilities that Require a South Coast AQMD Permit

#### Course of Action(s):

- Collaborate with city and county planning departments to conduct annual permit cross-checks for facilities in this community for, to ensure that any facility with a conditional use permit also has an air district permit, where required
  - Work with city and county planning departments to develop a list of relevant facility types that would be included in the permit cross-check efforts
- Conduct Small Business Assistance outreach to identified facilities to provide information about permit applications
  - Follow-up with compliance inspections and enforcement action for facilities not in compliance with South Coast AQMD permit requirements
- Consult with land use agencies to develop guidelines (e.g., design guidelines) that could reduce air pollution impacts from facilities prioritized by this community
- Work with local planning agencies to develop a process for identifying new or renewal permit applications that may warrant South Coast AQMD review for potential air quality impacts

#### Strategies:

- Public Information and Outreach
- Enforcement
- Collaboration

#### Goal(s):

- For every facility identified that requires a permit but does not yet have one, work with the facility to obtain appropriate South Coast AQMD permits

<ul style="list-style-type: none"> <li>Publish guidelines for land use agencies on building and property features that could reduce air pollution impacts from common facility types in this community</li> <li>If the Green Zones ordinance is adopted, develop a system to provide technical consultation pertaining to reducing facility air pollution emissions to LA County Planning on permit applications and renewals<sup>iv</sup></li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>First half of 2020, develop a list of relevant facility types for permit cross-check, and a list of common facility types for guideline development.</li> <li>Second half of 2020, begin conducting annual permit cross-checks with land use agencies</li> <li>2020-2021, develop guidelines for building and property features for the list of common facility types</li> <li>2021, if Green Zones ordinance is adopted, develop criteria and implement the system to provide technical consultation on permit applications or renewals that meet the criteria</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li><u>Work with city and county planning departments to conduct annual permit cross-checks</u></li> <li><u>Work with city and county planning departments to develop a list of relevant facility types that would be included in the permit cross-check process</u></li> <li><u>Conduct Small Business Assistance outreach to identify facilities to provide information about permit applications</u></li> <li><u>Follow-up with South Coast AQMD compliance inspections and enforcement actions for facilities not in compliance with permit regulations</u></li> <li><u>Consult with city and county planning departments to develop design guidelines that could reduce air pollution impacts</u></li> <li><u>Work with city and county planning departments to develop process to identifying new or renewal permit applications that may warrant South Coast AQMD review for potential air quality impacts</u> <del>Work with appropriate land use authorities to provide guidance to ensure that land uses with potentially negative air quality impacts are informed of relevant South Coast AQMD rules, and assist in outreach for land use developments that involve public process and engagement</del></li> </ul>
Los Angeles County Department of Regional Planning and other	<ul style="list-style-type: none"> <li>Work with South Coast AQMD to develop a list of relevant facilities <u>would be included in permit cross-check efforts</u> <del>and conduct permit cross-checks</del></li> </ul>

collaborating agencies and cities	<ul style="list-style-type: none"> <li>• <u>Develop a Green Zones<sup>4</sup> ordinance in consultation with South Coast AQMD, relevant agencies, and the public to help further reduce air pollution impacts from facilities through enhanced building and property features and other permit requirements</u></li> <li>• <u>Work with South Coast AQMD to develop design guidelines that could reduce local air pollution impacts</u></li> <li>• <u>Work with South Coast AQMD to develop a process for identifying new or renewal permit applications that may warrant South Coast AQMD review for potential air quality impacts</u></li> </ul>
<b>Additional Information:</b>	
<ul style="list-style-type: none"> <li>• South Coast AQMD, Small Business Assistance: <a href="http://www.aqmd.gov/home/programs/business/business-detail?title=small-business-assistance">http://www.aqmd.gov/home/programs/business/business-detail?title=small-business-assistance</a></li> <li>• Los Angeles County Department of Regional Planning, Green Zones Program: <a href="http://planning.lacounty.gov/greenzones">http://planning.lacounty.gov/greenzones</a></li> </ul>	

#### Action 4: Reduce Odors and Dust from Waste Transfer Stations

##### Course of Action(s):

- Provide public outreach information for the community on how to file odor complaints, and what rules apply to waste transfer stations (Rules 402, 403, and 410) (see also Action 2 above)
- Conduct a training course for transfer station facility operators on best management practices and rules that address odors and fugitive dust
- Conduct unannounced inspections at waste transfer stations in the community
- Respond to odor complaints, conduct appropriate follow-up investigations and enforcement activities, where appropriate, and provide periodic updates to CSC
- Conduct initial screening using air measurement equipment to help identify potential facilities that may be responsible for fugitive dust emissions and odor emissions

##### Strategies:

- Public Information and Outreach
- Enforcement
- Air Monitoring

##### Goal(s):

- Host one training course in the community and invite operators of each of the transfer stations; additional training courses can be organized if necessary

<ul style="list-style-type: none"> <li>• <del>Conduct</del> <u>Engage in at least 2</u> outreach events in this community to provide information and training on how to file air quality complaints by phone, web, or mobile app             <ul style="list-style-type: none"> <li>- Outreach will include information about rules that apply to waste transfer stations (see also Action 2 above)</li> </ul> </li> <li>• Provide the CSC quarterly or biannual updates on outreach, enforcement, and monitoring activities</li> <li>• Conduct initial screening using air measurement equipment to identify potential facilities that may be responsible for fugitive dust emissions and odor emissions             <ul style="list-style-type: none"> <li>- If persistent elevated levels are found and traced to a facility, notify facility operator and conduct additional follow-up monitoring to track progress with reducing emissions</li> </ul> </li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>• First half of 2020, conduct a training course in the community for transfer station operators</li> <li>• Beginning 2020 through 2022, <u>engage in at least</u><del>conduct</del> 2 outreach events at a variety of venues within this community</li> <li>• Mid-2020, begin quarterly or biannual updates to the CSC</li> <li>• Second half of 2019, conduct initial mobile <u>air monitoring</u><del>measurements</del> to evaluate air quality in the community and identify, if any, facilities that may be emitting high levels of pollutants</li> <li>• First half of 2020, begin follow-up <u>air monitoring</u><del>measurements</del> near facilities, that are determined to be the source of persistent elevated levels of emissions</li> <li>• Ongoing, respond to odor complaints, and conduct unannounced inspections</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Provide public outreach for community on how to file odor complaints</u></li> <li>• <u>Conduct training course for transfer station facility operators</u></li> <li>• <u>Conduct unannounced inspections at waste transfer stations</u></li> <li>• <u>Respond to odor complaints, conduct appropriate follow-up investigations and enforcement activities</u></li> <li>• <u>Conduct initial screening using air measurements to help identify potential facilities that may be responsible for fugitive dust emissions and odor emissions</u><del>Conduct community outreach, conduct facility training, conduct initial air measurements, and inspect facilities and conduct enforcement action where appropriate. Provide periodic updates to CSC</del></li> </ul>
<u>CSC</u>	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD to effectively disseminate information on how to file odor related air quality complaints</u></li> </ul>

	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD to identify waste transfer stations of highest priority within the community to conduct inspections</u></li> </ul>

# CHAPTER 51:

## IMPLEMENTATION SCHEDULE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5i: Implementation Schedule

The Community Steering Committee (CSC) developed a set of priorities and actions to be implemented by government agencies, organizations, businesses, and other entities to reduce air pollution in their community. The implementation period of the actions in this Community Emissions Reduction Plan (CERP) is expected to be approximately five years. The actions will occur during the timeframe of the plan; however, some actions by South Coast AQMD will be ongoing (e.g., certain regulatory, enforcement, and incentive activities). Rules that are adopted or amended will continue to be in effect past the implementation period of the CERP, as will enforcement of rules to ensure applicable facilities are in compliance. Additionally, some actions in the CERP are designed to allow for minor adjustments when new information becomes available. For example, based on initial air monitoring results, the CSC may refine specific strategies to focus on sources that show elevated emissions. Allowing for these types of adjustments will enable the plan to be successfully implemented.

Each action contains goals and estimated timelines. The goals include metrics designed to measure the progress of the CERP. Examples of these metrics are quarterly enforcement sweeps and emission reduction targets. Beginning in 2021, the South Coast AQMD staff will provide an annual update to the CSC on the progress of meeting these goals.

An overview of the schedule for implementing the actions in the CERP is in Figure 5i-1: Implementation Timeline for Rule Development and Implementation Activities and Figure 5i-2: Implementation Timeline for Air Monitoring, Enforcement, Outreach, and Other CERP Actions. Figure 5i-1 covers rule development activities to address air quality priorities in the CERP, and Figure 5i-2 provides a timeline for air monitoring, enforcement, incentives, outreach, and other activities.

# CHAPTER 5J:

## CEQA ANALYSIS SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5j: California Environmental Quality Act (CEQA) Analysis

The California Environmental Quality Act (CEQA) requires agencies to consider the environmental impacts of a proposed project. CEQA describes and imposes specific legal requirements that agencies must follow when evaluating and making decisions about whether a project will cause a significant environmental impact. The information below describes what South Coast AQMD staff has done and determined with respect to this project – the Community Emissions Reduction Plan (CERP). The information below does contain some legal terms because that is the language contained in the law and use of that language is part of how an agency demonstrates compliance with that law. As noted below, South Coast AQMD staff has looked at all aspects of the CERP and has determined that the CERP is exempt from the requirements of CEQA. The paragraphs below identify the exemptions that apply to the CERP. If the South Coast AQMD Board agrees with staff and determines that the CERP is exempt from CEQA, and approves the CERP, a Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside, and San Bernardino counties.

Pursuant to CEQA and South Coast AQMD Rule 110, the South Coast AQMD, as lead agency for the proposed project, has reviewed the proposed project pursuant to:– 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, the overall purpose of this project is to improve the environment and health of residents of this selected community and all of the action items within the CERP to support this goal. Thus, the proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment.

The CERP contains elements that qualify as feasibility and planning studies, because information needs to be collected to make an informed decision about further action (e.g., rule development). However, the portions of the CERP that qualify as feasibility and planning studies do not prescribe or commit to specific rule requirements, nor have future actions been approved or adopted in advance, because they require an open public process. The regulated community, stakeholders, interested parties, and the public are invited to participate in the rule development process in a public forum. Thus, the portion of the CERP that contains action items which qualify as feasibility or planning studies is statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies.

Additionally, some of the action items in the CERP would require minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, and these action items are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 –

New Construction or Conversion of Small Structures. A portion of the action items within the CERP involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection. Another component of the action items in the CERP also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections. Finally, a portion of the action items within the CERP relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies.

South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, as mentioned above, the proposed project is exempt from CEQA. ~~A Notice of Exemption will be prepared pursuant to CEQA Guidelines Section 15062 – Notice of Exemption. If the project is approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties.~~

# CHAPTER 6:

## AIR MONITORING SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 6: Air Monitoring Summary

Air monitoring will be conducted in the East Los Angeles, Boyle Heights, West Commerce community as part of the AB 617 program. Air monitoring can provide valuable information about sources of air pollution, types of pollutants, and air quality impacts in the community. Information that is collected from air monitoring can be used to track air quality prioritized by the community that reduce local resident's exposure to harmful air pollutants.

### Chapter 6 Highlights

- Will provide new information about air pollution at the community level
- Monitoring will be done in areas of concern identified by the selected communities
- Areas selected for monitoring reflect the air quality priorities in AB 617 communities
- Many types of monitoring equipment will be used, from advanced techniques to low-cost sensors

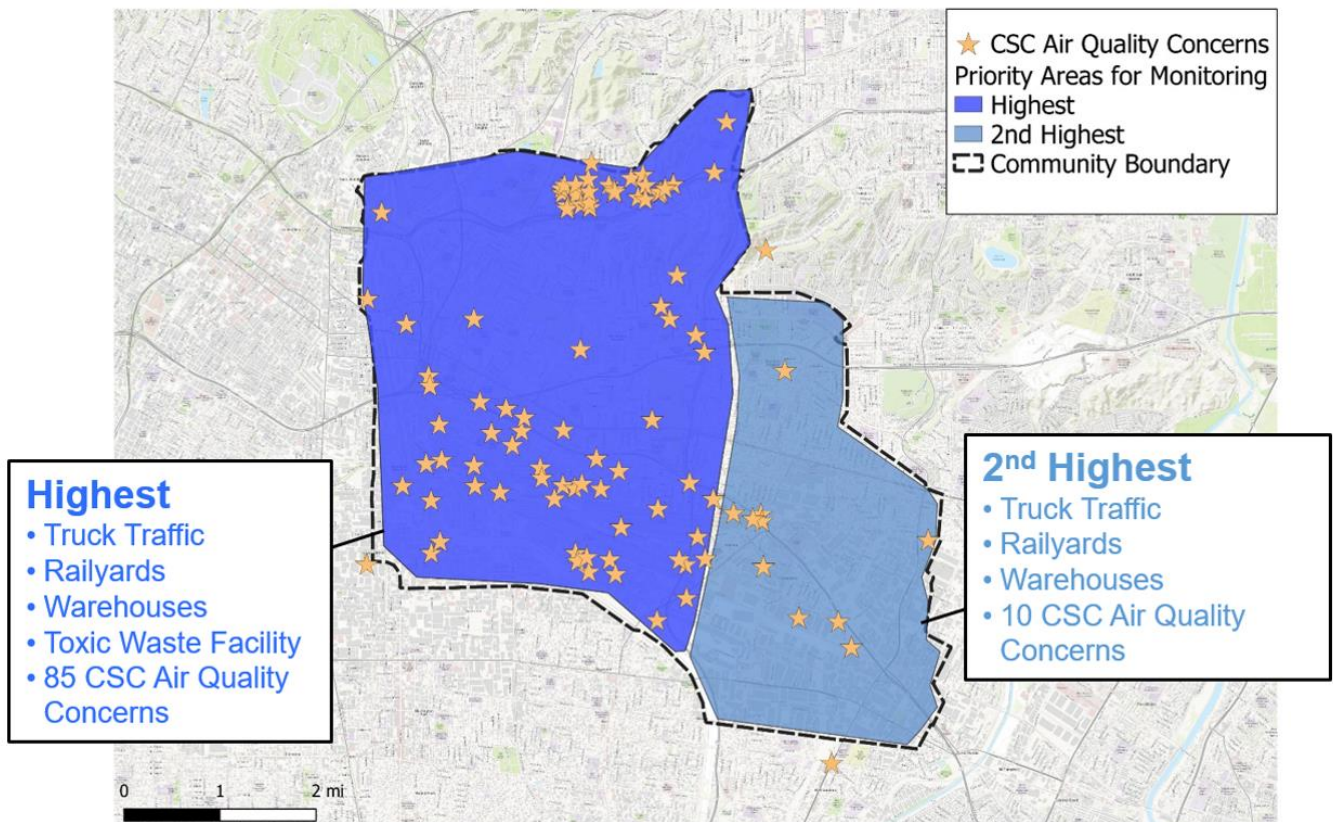

The Community Air Monitoring Plan (CAMP) for the East Los Angeles, Boyle Heights, West Commerce community<sup>1</sup> was developed through close collaboration between the CSC and South Coast AQMD staff. The plan outlines the objectives and strategies for monitoring air pollution in the community based on the air quality priorities identified by the CSC. A detailed description for these priorities is available in the CAMP Appendix B.<sup>2</sup>

The East Los Angeles, Boyle Heights, West Commerce community covers a large geographical area that is affected by a variety of air pollution sources. Consequently, multiple air monitoring methods are necessary to address the community's air quality priorities. These methods include mobile, fixed, and low-cost sensor air monitoring. Mobile air monitoring can be conducted using real- or near-real-time instruments to allow for wide scale community air pollution mapping, and provide more detailed information about air pollution levels at specific locations at specific times (i.e., higher spatial and temporal resolution). Fixed air monitoring can be strategically placed at specific locations near one or more air pollution sources of interest to fully characterize emissions in the community and assess residents' exposure to air pollution. Mobile and fixed air monitoring can be further enhanced with information from air quality sensors that provide real- or near-real-time air pollution information. A benefit of these sensors compared to other monitoring technologies is that they can be installed in more places in the community thereby providing more detailed real-time air quality information. However, low-cost sensors are not as accurate as traditional monitoring techniques, and only measure a limited number of pollutants.

Figure 6-1 identifies areas where air monitoring will occur within the East Los Angeles, Boyle Heights, West Commerce community. The areas are prioritized based on input from the CSC

about community air quality concerns and sources of air pollution. The monitoring areas and priorities can change based on the information gathered during monitoring, input from the community, and/or newly available data from different organizations. A discussion regarding air pollutants measurements and technologies that will be deployed in these areas is provided in the CAMP. The air monitoring strategies outlined in the CAMP may be updated based on future community input, air monitoring results, and other information gathered through implementation of AB 617. Updates to air monitoring strategies will be presented to the CSC for input.

Figure 6-1: Proposed monitoring areas prioritized based on the relative density of air quality concerns in the East Los Angeles, Boyle Heights, West Commerce community

# Assembly Bill (AB) 617 Community Air Initiatives

Boyle Heights, East Los Angeles, West Commerce  
Community Steering Committee Meeting #1

Wednesday, November 28<sup>th</sup>, 2018 — 6:00 p.m. - 8:00 p.m.  
Resurrection Church  
3324 Opal St.  
Los Angeles, CA 90023

Time	Item	Presenter	Why is this important?
5:45 pm	Doors open	Reception table	
6:00 pm	Welcome and Introductions	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)  Committee Members	
6:10 pm	AB 617 Program Overview, Community Steering Committee Role and Expectations	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)	To know what we are working on, the timeline, and what we are expected to do.
	Air Pollution Background	Philip Fine (Deputy Executive Officer, Planning, Rule Development & Area Sources)	To be able to use the same words (terms) in our discussions, to understand air pollution and the process that we go through to clean the air and to help identify air pollution sources in this community.
6:25 pm	Air Quality Concerns Mapping Activity	SCAQMD Staff, Committee Members, and Members of the Public	To help us understand this community's air quality concerns
7:00 pm	Community Boundaries	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)	To help guide where we focus resources from the AB 617 program
7:10 pm	Clean Air Incentives	Dinh Quach (California Air Resources Board)  Mei Wang (Program Supervisor, Science and Technology Advancement)	To show some of the work we are already doing in this community to help clean the air, and to let people know how to submit ideas on how to spend incentive money to make facilities cleaner.
	Steering Committee Charter and Considerations	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)  Committee Members	To talk about the CSC charter and other things to make this committee more effective.
7:35 pm	Public Comment		
	Next Steps	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)	
8:00 pm	Adjourn

## Appendix 2

The East Los Angeles, Boyle Heights, and West Commerce (ELABHWC) community Outreach Summary includes an overview of the public engagement efforts and the Community Steering Committee (CSC) process that has been integral in the development of the CERP. This Appendix contains additional information on committee documents, meeting materials, and additional community engagement. Many of these materials are posted on this community's webpage:

<http://www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/east-la>

### CHARTER

A Charter was developed by South Coast AQMD staff with CSC member input to describe committee objectives, roles and responsibilities, meeting frequency, meeting dates, times, and locations, etc. The Charter is available here:

English: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/east-la/charter-english.pdf?sfvrsn=8>

Spanish: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/east-la/charter-spanish.pdf?sfvrsn=8>

### AGENDAS

All meeting agendas are posted on the community webpage. Copies of the agendas are also attached.

### SIGN-IN SHEETS

At every CSC meeting, members of the CSC and public were requested to sign in. Copies of the sign-in sheets are attached.

### MEETING DATES, TIMES, LOCATION, AND MEETING MATERIALS

Recent and upcoming activities regarding the ELABHWC community, including interactive maps, the discussion draft of the CERP and CAMP, all meeting invitations, presentations, materials and summary notes can be found on community webpage.

Specific links for meeting flyers, presentations, and meeting summaries are listed below:

#### INTERPRETERS

The following California Certified Interpreters were contracted to provide services at the meetings.

- Gloria Carrallo
- Patricia Chavez
- Monica Desiderio
- Astrid Estrada
- Martha Falencik
- Alejandro Franco
- Carmen Garza
- Consuelo V. Gonzalez
- Cecilia Ibarra

- Estela Moll
- Yolanda Ramirez
- Madeline Rios

#### ADDITIONAL OUTREACH

South Coast AQMD staff had more than 35 in-person or phone meetings with CSC members as well as members of the community. The list below provides some information about meetings that staff have had, as of the date of this document. Additional phone calls and conversations with CSC members and members of the committee also took place, but not all these conversations are documented here.

Date	Meeting
12/21/18	Call with Jason Patrick Douglas (City of LA Planning Department)
2/10/19	In-person meeting with Evelyn Nuno (Assemblymember Cristina Garcia)
2/14/19	Call with Joe Gonzalez (Active Resident – Boyle Heights)
2/20/19	Call with Johncito Active Resident – City of Commerce)
4/11/19	Conference Call with Los Angeles Department of Regional Planning
3/12/19	Call with Jackie Rodriguez (Legacy LA)
3/22/19	In-person meeting with David Juarez (Assemblymember Miguel Santiago)
4/11/19	Conference Call with LA County Department of Regional Planning
4/16/19	In-person meeting with Wendy Gutschow (USC)
4/23/19	In-person meeting with LACDPH
5/3/19	In-person meeting with Evelyn Nuno (Assemblymember Cristina Garcia)
5/6/19	Call with Corina Martinez (AltaMed)
5/14/19	Call with Anabella Bastida (COFEM)
5/14/19	Call with Johncito (Active Resident – City of Commerce)
5/15/19	Conference Call with LA City Planning Department
5/20/19	Call with Wendy Gutschow (USC)
5/24/19	Call with CalTrans
5/29/19	In-person meeting with Rafael Yanez (Active Resident – ELA)
5/31/19	In-person meeting with Annabella Bastida and Leoda Valenzuela (COFEM)
6/5/19	In-person meeting with City of Commerce
6/5/19	In-person meeting with COFEM
6/5/19	Call with Rudy and Carina (Active Residents – ELA)
6/6/19	In-person meeting with Brian Johnston (White Memorial Medical Center)
6/6/19	In-person meeting with Corina Martinez, Hector Garcia (AltaMed, Our Lady of Victory)
6/14/19	Call with Irene Burga (LA City Mayor’s Office)
6/19/19	Conference Call with LA County Dept. Public Health
7/2/19	In-person meeting with Joseph Martinez (1st Supervisor Hilda Solis’ office)
7/24/19	Call with LACDPH
7/30/19	Call with LACDPH

# APPENDIX 3A:

## COMMUNITY PROFILE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Appendix 3a: Community Profile

### Information on the Best Available Retrofit Control Technology and AB 2588 Program

AB 617 requires air districts to implement Best Available Retrofit Control Technology (BARCT) for facilities in the state greenhouse gas cap-and-trade program by December 31, 2023. The East Los Angeles, Boyle Heights, West Commerce community has facilities that are subject to BARCT, specifically larger facilities that are in the REgional CLean Air Incentives Market (RECLAIM) program. In addition, CARB's Blueprint states that facilities located within the community with Risk Reduction Plans under the Assembly Bill (AB) 2588 program must be identified. Descriptions of the facilities that are subject to BARCT (specifically RECLAIM facilities) and the AB 2588 program are provided below.

### Best Available Retrofit Control Technology (BARCT)

#### *RECLAIM facilities*

Facilities within the RECLAIM program are typically larger facilities that have NO<sub>x</sub> emissions greater than four tons per year. The RECLAIM program<sup>1</sup> uses a market-based approach to achieve emission reductions from facilities for nitrogen oxides (NO<sub>x</sub>) and sulfur oxides (SO<sub>x</sub>) in the aggregate. However, an analysis of the RECLAIM program has shown that the ability to achieve NO<sub>x</sub> emission reductions using a market-based approach has diminished; therefore, pursuant to Board direction, RECLAIM NO<sub>x</sub> facilities will transition<sup>i</sup> to a command-and-control regulatory structure to ensure facilities meet BARCT. RECLAIM facilities that are also in the State greenhouse gas cap-and-trade program are subject to the BARCT requirements of AB 617. South Coast AQMD staff completed an analysis of the equipment at each RECLAIM facility, giving higher priority to older, higher polluting units that will need to install retrofit controls. The higher polluting units at RECLAIM facilities will be or have been evaluated for BARCT and will be subject to the following South Coast AQMD rules: Rules 1109.1,<sup>2</sup> 1110.2,<sup>3</sup> 1117,<sup>4</sup> 1118.1,<sup>5</sup> 1134,<sup>6</sup> 1135,<sup>7</sup> 1146, 1146.1, 1146.2,<sup>8</sup> 1147, 1147.1,<sup>9</sup> and 1147.2.<sup>10</sup> A BARCT assessment includes an evaluation of emission limits for existing units, South Coast AQMD regulatory requirements, other regulatory requirements, and pollution control technologies. Table Appendix 3a-1 lists the RECLAIM facilities that may be subject to BARCT and whether they are in the State cap-and-trade program.

---

<sup>i</sup> For more information on the RECLAIM transition please see: <http://www.aqmd.gov/home/rules-compliance/reclaim-transition>.

Table Appendix 3a-1: List of NOx RECLAIM facilities within the East Los Angeles, Boyle Heights, West Commerce community

RECLAIM Facility Name	Facility Address	Cap-and-Trade Facility (Yes/No)
BAKER COMMODITIES INC	4020 BANDINI BLVD., VERNON	No
CALMAT CO	2715 E WASHINGTON BLVD, LOS ANGELES	No
D&D DISPOSAL INC, WEST COAST RENDERING CO	4105 BANDINI BLVD, VERNON	No
DARLING INGREDIENTS INC.	2626 E 25TH ST, LOS ANGELES	No
EXIDE TECHNOLOGIES	2700 S INDIANA ST, VERNON	Yes
KAISER ALUMINUM FABRICATED PRODUCTS, LLC	6250 E BANDINI BLVD, LOS ANGELES	No
MEDICLEAN	4500 DUNHAM ST, COMMERCE	No
SMITHFIELD PACKAGED MEATS CORP	3049 E VERNON AVE, VERNON	No
THE NEWARK GROUP, INC.	6001 S EASTERN AVE, COMMERCE	Yes

#### *Non-RECLAIM facilities*

As a result of the BARCT assessment conducted for RECLAIM facilities, some equipment at non-RECLAIM facilities will also be affected and will be required to meet BARCT NOx emissions. The BARCT assessment is still currently being conducted for a number of rules and the list of affected non-RECLAIM facilities that may be subject to additional requirements is being developed.

#### [AB 2588 Program](#)

The AB 2588 Program<sup>11</sup> is a statewide program that requires air districts to establish emissions inventory of air toxics from individual facilities.<sup>ii</sup> The AB 2588 program is implemented in South Coast AQMD through Rule 1402 - Control of Toxic Air Contaminants from Existing Sources<sup>12</sup> which requires certain facilities to conduct Health Risk Assessments to assess the health risk (long-term versus short-term) to the surrounding community. Facilities are required to submit Health Risk Assessments<sup>13</sup> based upon the toxicity and volume of toxic air contaminants released within proximity to potential receptors (e.g., hospitals, residences, work sites). Depending on the risk, facilities may be required to do public notices and hold a public meeting. If a facility is determined to exceed the significant risk level, as determined by each air district, they are required to reduce this risk by submitting a Risk Reduction Plan (RRP).<sup>14</sup> The RRP outlines what measures (e.g., high-efficiency particulate air (HEPA) filters) the facility will incorporate to reduce their risk. (Some facilities may be subject to the AB 2588 program, but do not exceed the action risk threshold and

<sup>ii</sup> The South Coast AQMD's AB 2588 Program incorporates the requirements of the state AB 2588 program, as well as additional and/or more stringent requirements.

therefore are not required to submit a RRP.) Some facilities may also choose to voluntarily reduce their risk by submitting a voluntary RRP (VRRP).<sup>iii</sup> If a facility has an approved VRRP, the risks will be reduced below the voluntary risk threshold. Table Appendix 3a-2<sup>iv</sup> shows facilities within the East Los Angeles, Boyle Heights, West Commerce community that are currently in the AB 2588 program in the South Coast AQMD. This table includes the facility name, location address, and the most recent status under the AB 2588 program. Facilities in the AB 2588 program without a RRP or VRRP will have the prioritization level (High, Intermediate, or Low)<sup>v</sup> and what year the prioritization was conducted listed as the status. Prioritization is based on reporting every four years.

Table Appendix 3a-2: List of facilities in the AB 2588 program within the East Los Angeles, Boyle Heights, West Commerce community

Facility Name	Facility Address	Status within the AB 2588 Program
UNIVERSITY SO CALIFORNIA,HEALTH SCIENCES	2011 ZONAL AVE, LOS ANGELES	Prioritization from 2017 - Low
ELLIS PAINTS CO/PACIFIC COAST LACQUER	3150 E PICO BLVD, LOS ANGELES	Prioritization from 2017 - Intermediate
WHITE MEMORIAL MEDICAL CENTER	1720 CESAR CHAVEZ AVE, LOS ANGELES	Prioritization from 2017 - Intermediate
LAC/USC MEDICAL CENTER	1200 N STATE ST, LOS ANGELES	Prioritization from 2015 - Low
RAMCAR BATTERIES INC	2700 CARRIER AVE, COMMERCE	Prioritization from 2016 - Low
KECK HOSPITAL OF USC	1500 SAN PABLO ST, LOS ANGELES	Prioritization from 2018 - Low
ELITE COMFORT SOLUTIONS	4542 E DUNHAM ST, COMMERCE	VRRP under review
GROVER PROD. CO (EIS USE)	3424 E OLYMPIC BLVD, LOS ANGELES	Prioritization from 2015 - Low
AMVAC CHEMICAL CORP	4100 E WASHINGTON BLVD, LOS ANGELES	Prioritization from 2015 - Low
CERTIFIED ENAMELING INC	3340-42 EMERY ST, LOS ANGELES	Prioritization from 2017 - Low

<sup>iii</sup> Some facilities may have submitted applications for a VRRP; however, if the facility is found to be already under the voluntary risk threshold, no further reduction measures are required.

<sup>iv</sup> Facilities listed in the table are reducing risk or in the process of reducing risk.

<sup>v</sup> Facilities designated as high priority are required to submit Health Risk Assessments to assess the risk to their surrounding community. Facilities ranked as Intermediate priority are required to submit a complete toxics inventory once every four years. Facilities ranked as low priority are exempt from reporting.

### Technology Clearinghouse

South Coast AQMD staff have been conducting Best Available Control Technology (BACT) analyses and working closely with CARB to provide data for the Technology Clearinghouse. Requirements for Toxics-Best Available Control Technology (T-BACT) are established through the adoption and amendment of rules affecting air toxics (i.e., Regulation XIV). Staff will reference the Technology Clearinghouse and applicable air toxic rule requirements (inclusive of state Air Toxic Control Measures (ATCMs) and federal National Emission Standards for Hazardous Air Pollutants (NESHAPs), when available, to evaluate for potential tightening of rules through the rule development process. Permit considerations for both new and modified sources throughout the district are based on rule requirements.

# APPENDIX 4:

## ENFORCEMENT SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Appendix 4: Enforcement

### Authority and Legal Right to Issue Violations and Penalties

~~CARB and South Coast AQMD both have authority to conduct inspections of alleged air pollution sources, and the right to issue violations that can lead to civil and criminal penalties. CARB civil penalties can be up to \$250,000 per day; South Coast AQMD civil penalties can be up to \$75,000 per day for individuals and up to \$1,000,000 per day for corporations.<sup>i</sup> In cases with potential criminal violations, South Coast AQMD's Office of Compliance and Enforcement (OCE) may refer matters to federal, state, and local prosecuting agencies. Inspection warrants also may be obtained if necessary when access to facilities or potential emissions sites is denied.~~

### South Coast AQMD Hearing Board

CARB and South Coast AQMD both have authority to conduct inspections of alleged air pollution sources, and the right to issue notices of violations that can lead to civil and criminal penalties. Civil penalties can be up to \$25,000 per day for individuals and up to \$1,000,000 per day for corporations.<sup>ii</sup> In cases with potential criminal violations, South Coast AQMD may refer matters to federal, state, and local prosecuting agencies. Inspection warrants also may be obtained if necessary when access to facilities or potential emissions sites is denied.

The Hearing Board is a quasi-judicial panel authorized to provide relief from South Coast AQMD regulations under certain circumstances and to order business to take specific actions to come into compliance with regulations. As state law requires, Hearing Board members are appointed by, but act independently of, the South Coast AQMD Governing Board.

The Hearing Board is authorized to hear:

- Petitions by companies for variances.
- Petitions for abatement orders. An abatement order requires a company operating out of compliance to take specific actions or to shut down its operation. This is a severe remedy normally reserved for serious violations.
- Appeals by companies regarding granting of permits, permit conditions, permit denials and suspensions, denials of emission reduction credits, and denials of pollution control plans.
- Appeals by third parties.

<sup>i</sup> Fines and penalties are cited at the maximum amounts for willful and intentional emissions of air contaminants that results in great bodily harm or death. CARB: [www.arb.ca.gov/enf/policy2017/final\\_enforcement\\_policy\\_october2017.pdf](http://www.arb.ca.gov/enf/policy2017/final_enforcement_policy_october2017.pdf)  
South Coast AQMD: [www.aqmd.gov/nav/about/authority/enforcement](http://www.aqmd.gov/nav/about/authority/enforcement)

<sup>ii</sup> Fines and penalties are cited at the maximum amounts for willful and intentional emissions of air contaminants that results in great bodily harm or death. See Health and Safety Code § 42402.3(c); CARB website, [www.arb.ca.gov/enf/policy2017/final\\_enforcement\\_policy\\_october2017.pdf](http://www.arb.ca.gov/enf/policy2017/final_enforcement_policy_october2017.pdf); South Coast AQMD website, [www.aqmd.gov/nav/about/authority/enforcement](http://www.aqmd.gov/nav/about/authority/enforcement).

The Hearing Board is not authorized to:

- Modify rules.
- Exempt a business from complying with a rule.
- Grant a variance from a violation of the public nuisance law, such as one that creates an odor problem or threatens public health or property.
- Review a violation notice in any way.

After hearing all sides of a case in which individuals or companies come into conflict with South Coast AQMD rules, the Hearing Board weighs the evidence and reaches a decision.

The following sections contain information regarding the compliance histories of facilities regulated by South Coast AQMD and CARB in this community. South Coast AQMD's section includes a list of all active facilities with active or expired permits, a summary of all complaints received, a list of all inspections conducted, and a list of all enforcement actions taken. CARB's section includes: lists of individual field inspections in 2016, 2017, 2018 and an enforcement activities map. The Hearing Board is a quasi-judicial panel authorized to provide relief from South Coast AQMD regulations under certain circumstances. As state law requires, Hearing Board members are appointed by, but act independently of, the South Coast AQMD Governing Board.

The Hearing Board is authorized to hear:

- Petitions by companies for variances.
- Petitions for abatement orders. An abatement order requires a company operating out of compliance to take specific actions or to shut down its operation. This is a severe remedy normally reserved for serious violations.
- Appeals by companies from the regarding granting of permits, permit conditions, permit denials and suspensions, denials of emission reduction credits, and denials of pollution control plans.
- Appeals by third parties.

The Hearing Board is not authorized to:

- Modify rules.
- Exempt a business from complying with a rule.
- Grant a variance from a violation of the public nuisance law, such as one that creates an odor problem or threatens public health or property.
- Review a violation notice in any way.

After hearing all sides of a case in which individuals or companies come into conflict with South Coast AQMD rules, the Hearing Board weighs the evidence and reaches a decision.

South Coast AQMD Compliance History in ELA<sup>BHWC</sup>, January 2016 to December 2018

## List of All Active Facilities with Active or Expired Permits

This table contains all of the facilities that are considered active and have valid or expired permits. Expired permits are included to ensure that any facilities that are still in operation but had not paid fees at the time of the query were still included.

Summary of All Complaints Received<sup>iii</sup>

This table contains a summary of the number of complaints received by complaint type and sorted by their disposition between January 2016 and December 2018.

Complaint Disposition	Asbestos	Dust	Odors	Open Fire	Overspray	Residential Wood Burning	Service Stations	Smoke	Other	Total
Notice of Violation Issued		6	2					1		9
Notice To Comply Issued	13	23	17		8		1	1	6	69
Referred to Another Agency	1	5	11		2	1		1	10	31
No Enforcement Action Taken <sup>iv</sup>	63	165	571	1	30	2	7	48	33	920
Investigation in Progress; Disposition Pending	3	3	2					1		9

<sup>iii</sup> The information below is based on the following Zip Codes: 90012, 90013, 90021, 90022, 90031, 90032, 90040, 90058, 90201, 90640, 91754, 91803, 90023, 90033, and 90063.

<sup>iv</sup> *No Enforcement Action Taken* means that the complaint investigation has concluded but did not result in any formal enforcement action. For example, an alleged air pollution source may have been operating in compliance at the time of the inspection or the event underlying the complaint was no longer occurring.

Total	80	202	603	1	40	3	8	52	49	1038

## CARB Supplemental Environmental Project Process

During the settlement process, violators have the opportunity to allocate up to 50% of their penalties to a supplemental environmental project (SEP). Community-proposed projects are funded by the violators to help improve public health, reduce pollution, increase environmental compliance and bring public awareness to air pollution issues. Additional SEPS are possible in the ELACELABHWC community through the proposal process.

Proposals of projects that meet the following four requirements: reducing direct/indirect air emissions or exposure to air pollution, relates to the violation, does not benefit the violator, and goes above and beyond regulatory requirements can be submitted for consideration for future settlements through the SEP proposal form (<https://calepa.ca.gov/sep-proposal-form>). Six SEPs have been funded in South Coast AQMD's jurisdiction including paid environmental education internships, planting trees, writing articles to inform community about air pollution and resources, conducting research (e.g., air monitoring, truck traffic survey), and school air quality education programs and filtration systems.

## Further Information on Technology Used for Compliance Investigations

### Toxic Vapor Analyzer (TVA)

Using a Flame Ionization Detector (FID) or Photoionization Detector (PID), this instrument is capable of detecting a wide variety of organic and inorganic compounds. The unit must be calibrated to identify specific compounds. Any day that the instrument is used for conducting compliance inspections, a trained inspector calibrates the equipment to a set calibration standard depending on the inspection type. For example, in an oil and gas process leak inspection to identify VOCs, a 3-Point Methane Calibration Curve is used.

This instrument displays concentrations of the gas it is calibrated to in parts per million (ppm), also known as the number of molecules of that gas per one million molecules of air. Inspectors can use TVAs to identify organic and inorganic vapors according to a standard set by the US Environmental Protection Agency (EPA) Method 21 – Determination of Volatile Organic Compound Leaks.<sup>vii</sup> This document from EPA sets the standard for the specifications and performance criteria of the instrument, as well as the process of identifying a leak.

### Infrared Cameras

Using infrared cameras equipped with Optical Gas Imaging (OGI) technology, inspectors can detect hydrocarbon leaks at a variety of facilities, including those in the oil and gas industry. The device uses a non-contact technology which identifies the infrared energy (heat) of a specific gas and converts it into an electronic signal. This signal is processed into an image, giving inspectors the ability to view emissions that would otherwise be invisible to the naked eye.

---

<sup>vii</sup> <https://www.epa.gov/emc/method-21-volatile-organic-compound-leaks>

Using Infrared OGI cameras enables inspectors to scan areas for emissions and quickly gain an overall representation for any large leaks there may be at a facility. The technology generally used by OCE is specifically calibrated to methane, enabling users to visibly identify VOC leaks. Inspectors can follow up with a TVA to quantify the leak. Inspectors who use this equipment have training through a multi-day course to understand the technology, uses, and limitations.

#### *X-Ray Fluorescence (XRF)*

A handheld instrument which uses a non-destructive method to determine the chemistry of a sample. The device sends an x-ray to the sample that displaces the electrons, causing a release of energy. The energy released is measured by the special detector to analyze the chemistry of the sample. Inspectors can scan surfaces for the presence of toxic metals to identify sources of contamination and fugitive emissions.

#### *H<sub>2</sub>S Analyzer (Jerome Meters)*

A handheld instrument that can detect hydrogen sulfide in the air. This device takes in a small sample of air and provides a reading on the amount of H<sub>2</sub>S within a few seconds, down to levels in the parts per billion (ppb) range. This instrument serves as a safety tool for inspectors conducting an inspection in an area with potential H<sub>2</sub>S.

#### *CARB Statewide Truck and Bus Regulation*

CARB is achieving compliance with the Statewide Truck and Bus (STB) Regulation, section 2025 of Title 13, California Code of Regulations ~~CCR~~-(STB) by 2023 via a streamlined auditing process. STB requires diesel trucks with a Gross Vehicle Weight Rating (GVWR) greater than 14,000 pounds that operate in California to install diesel particulate filters or replace older engines with cleaner engine technology on a phased-in schedule based on the model year of the engine and GVWR. CARB staff process data from vehicle registration, compliance reporting, and inspection databases to identify potentially non-compliant fleets and prioritize them for enforcement action.

In April 2017, the Governor signed Senate Bill 1 (SB1) into law which included a provision that, beginning in 2020, a vehicle must demonstrate compliance with the STB regulation before it can be registered with the Department of Motor Vehicles (DMV). Beginning in 2020, the DMV, in conjunction with data provided by CARB, will deny vehicle registration to non-compliant heavy-duty diesel vehicles (HDDV) based on the model year of the HDDV, so that by the end of 2023, 100% compliance will be achieved for the truck and bus rule.

#### *Summary*

Both South Coast AQMD and CARB are committed to working closely with the CSC to identify and investigate ~~area~~ <sup>air</sup> quality issues in the community. For the mobile sources regulated by CARB, this will include actively enhancing enforcement activities through a combination of improved complaint reporting, more focused inspections, and report-back meetings to update the CSC on the status of inspections and to obtain additional areas of mobile source concern. CARB plans to have, at a minimum, annual meetings with the CSC in order to prioritize strategies and identify possible locations where non-compliant vehicles are present. CARB will report-back to the community with the number of inspections

performed and the number of citations and/or Notices of Violations (NOVs) issued. Further information about CARB's and South Coast AQMD's commitments can be found in Chapter 5.

---

# APPENDIX 5D:

## Metal Processing Facilities

---

## Appendix 5d – Metal Processing Facilities

South Coast AQMD regulates metal processing facilities in the South Coast Air Basin. Table [Appendix 5d-1](#) identifies specific South Coast AQMD rules that apply to metal processing facilities. This table provides the rule number and title, date of rule adoption or most recent amendment, and a link to the rule language. In addition to the rules listed in Table [Appendix 5d-1](#), metal processing facilities are required to comply with other applicable South Coast AQMD regulations (e.g., Regulation V – Prohibitions).

South Coast AQMD staff continues to update existing rules and propose new rules. Table [Appendix 5b-2](#) lists rules that are currently under development. They include existing South Coast AQMD rules that are being amended and newly proposed rules.<sup>1</sup>

Table [Appendix 5b-1](#): South Coast AQMD Rules that Apply to Metal Processing Facilities

Rule Number	Rule Title	Date of Adoption or Last Amendment	Rule Language
1407	Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations	Adopted July 8, 1994	<a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1407.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1407.pdf</a>
1420	Emission Standard for Lead	Amended December 1, 2017	<a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420.pdf</a>
1420.1	Emission Standards for Lead and Other Toxic Air Contaminants from Large Lead Acid Battery Recycling Facilities	Amended September 4, 2015	<a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420-1.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420-1.pdf</a>
1420.2	Emission Standards for Lead from Metal Melting Facilities	Adopted October 2, 2015	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/Rule-1420-2rev.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/Rule-1420-2rev.pdf</a>

<sup>1</sup> Rule development is an ongoing process; rules listed under development will change over time as proposed amendments to existing rules or newly proposed rules are adopted. Information about proposed rules, rule amendments and supporting documentation, including staff reports, presentations, meeting notices, etc. is available at: <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules>

Rule Number	Rule Title	Date of Adoption or Last Amendment	Rule Language
1426	Emissions from Metal Finishing Operations	Adopted May 2, 2003	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1426.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1426.pdf</a>
1430	Control of Emissions from Metal Grinding Operations at Metal Forging Facilities	Adopted March 3, 2017	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1430.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1430.pdf</a>
1469	Hexavalent Chromium Emissions from Chromium Electroplating and Chromic Acid Anodizing Operations	Amended November 2, 2018	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469.pdf</a>
1469.1	Spraying Operations using Coatings Containing Chromium	Adopted March 4, 2005	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469-1.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469-1.pdf</a>

Table Appendix 5b-2: South Coast AQMD Proposed and Proposed Amended Rules to Address Emissions from Metal Processing Facilities<sup>2</sup>

Regulation Number	Rule Title	Proposed (New) or Proposed Amended
1407	Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations	Proposed Amended
1407.1	Emissions of Toxic Air Contaminants from Chromium Alloy Melting Operations	Proposed
1420.2 <sup>3</sup>	Emission Standards for Lead from Metal Melting Facilities	Proposed Amended

<sup>2</sup> Additional information about these proposed rules, rule amendments and supporting documentation, including staff reports, presentations, meeting notices, etc. is available at: <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules>

<sup>3</sup> Additional information about these rules is provided in the Rule and Control Measure Forecast Report, available at: <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2019/2019-feb1-015.pdf?sfvrsn=8>

Regulation Number	Rule Title	Proposed (New) or Proposed Amended
1426	Reduction of Toxic Air Contaminants from Metal Finishing Operations	Proposed Amended
1435	Control of Emissions from Metal Heat Treating Processes	Proposed
1445 <sup>3</sup>	Control of Toxic Emissions from Laser Arc Cutting	Proposed
1480	Air Toxics Metals Monitoring	Proposed

## Appendix 5d – Metal Processing Facilities

South Coast AQMD regulates metal processing facilities in the South Coast Air Basin. Table 1 identifies specific South Coast AQMD rules that apply to metal processing facilities. This table provides the rule number and title, date of rule adoption or most recent amendment, and a link to the rule language. In addition to the rules listed in Table 1, metal processing facilities are required to comply with other applicable South Coast AQMD regulations (e.g., Regulation V – Prohibitions).

South Coast AQMD staff continues to update existing rules and propose new rules. Table 2 lists rules that are currently under development. They include existing South Coast AQMD rules that are being amended and newly proposed rules.<sup>1</sup>

Table 1: South Coast AQMD Rules that Apply to Metal Processing Facilities

Rule Number	Rule Title	Date of Adoption or Last Amendment	Rule Language
1407	Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations	Adopted July 8, 1994	<a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1407.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1407.pdf</a>
1420	Emission Standard for Lead	Amended December 1, 2017	<a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420.pdf</a>
1420.1	Emission Standards for Lead and Other Toxic Air Contaminants from Large Lead Acid Battery Recycling Facilities	Amended September 4, 2015	<a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420-1.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1420-1.pdf</a>
1420.2	Emission Standards for Lead from Metal Melting Facilities	Adopted October 2, 2015	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/Rule-1420-2rev.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/Rule-1420-2rev.pdf</a>

<sup>1</sup> Rule development is an ongoing process; rules listed under development will change over time as proposed amendments to existing rules or newly proposed rules are adopted. Information about proposed rules, rule amendments and supporting documentation, including staff reports, presentations, meeting notices, etc. is available at: <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules>

1426	Emissions from Metal Finishing Operations	Adopted May 2, 2003	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1426.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1426.pdf</a>
1430	Control of Emissions from Metal Grinding Operations at Metal Forging Facilities	Adopted March 3, 2017	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1430.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1430.pdf</a>
1469	Hexavalent Chromium Emissions from Chromium Electroplating and Chromic Acid Anodizing Operations	Amended November 2, 2018	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469.pdf</a>
1469.1	Spraying Operations using Coatings Containing Chromium	Adopted March 4, 2005	<a href="https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469-1.pdf">https://www.aqmd.gov/docs/default-source/rule-book/reg-xiv/rule-1469-1.pdf</a>

Table 2: South Coast AQMD Proposed and Proposed Amended Rules to Address Emissions from Metal Processing Facilities<sup>2</sup>

Regulation Number	Rule Title	Proposed (New) or Proposed Amended
1407	Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations	Proposed Amended
1407.1	Emissions of Toxic Air Contaminants from Chromium Alloy Melting Operations	Proposed
1420.2 <sup>3</sup>	Emission Standards for Lead from Metal Melting Facilities	Proposed Amended
1426	Reduction of Toxic Air Contaminants from Metal Finishing Operations	Proposed Amended
1435	Control of Emissions from Metal Heat Treating Processes	Proposed

<sup>2</sup> Additional information about these proposed rules, rule amendments and supporting documentation, including staff reports, presentations, meeting notices, etc. is available at: <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules>

## Public Meeting Comments (CSC Meeting #7 – June 27, 2019)

### Public Meeting Comment #1: Evelyn Nuño – Field Representative for Assemblymember Cristina Garcia

1-1: Ms. Nuño would like to see monitoring of trucks that are idling categorized under indirect sources, such as warehouses. She mentioned that this section was not very clear, but that this was important as this issue is a significant concern.

#### Response to Public Meeting Comment 1-1

South Coast AQMD is proposing a series of actions to reduce emissions from trucks in Chapter 5b of the Community Emissions Reduction Plan (CERP) for the East Los Angeles, Boyle Heights, West Commerce (ELABHWC) community. Action 1 in Chapter 5b describes the course of action to reduce emissions from idling trucks, including conducting mobile air measurements near warehouses and nearby residential areas. Staff have added clarifying language into that action to specify the timeline for when this monitoring will begin, and to clarify that South Coast AQMD is the responsible entity to conduct this action. Mobile air monitoring already began in July 2019 and will continue on a recurring basis. Since South Coast AQMD only has one mobile platform to conduct such mobile air measurements in all its AB 617 communities, it might take some time before measurements will be conducted at certain specific locations. Nevertheless, the mobile monitoring will include coverage of areas such as warehouses with many idling trucks.

### Public Meeting Comment #2: Johncito Peraza-Romero – Active Resident of West Commerce

2-1: Mr. Peraza felt that South Coast AQMD needed to elaborate on enforcement actions to be taken to reduce onsite diesel emissions at railyards. He also mentioned that the Port of Oakland is now requiring that locomotives meet Tier 4 standards. He would like South Coast AQMD to address both concerns.

#### Response to Public Meeting Comment 2-1

The U.S. EPA, CARB, and South Coast AQMD all have actions to reduce emission from railyards. As described in Chapter 5c of the CERP for the ELABHWC community, there are multiple entities involved in regulating emissions from railyards. First, rules from the U.S. EPA are given primacy in regulating emissions from locomotives as federal law preempts some regulations from state or local entities on this matter. The U.S. EPA requires that new diesel locomotives be built to meet the cleanest emission standards (Tier 4), while remanufactured locomotives do not need to meet the standard, and can instead be built to a lower emission standard (e.g. Tier 0+, Tier 1+,

etc.).<sup>1</sup> The rule also sets limits on idling for new and remanufactured locomotives. However, this idling limit does not apply to older, higher-polluting locomotives currently in operation. Since most engines last for over 30 years, this slow turnover rate results in long time frames before emission reductions from these rules are realized.

Next, CARB has taken several actions of their own to reduce emissions from locomotives including agreements with BNSF and Union Pacific (UP) for locomotives within the South Coast Air Basin to meet Tier 2 standards or better until the year 2030; both companies have complied. CARB also has another agreement with BNSF and UP requiring locomotives to maximize the use of ultra-low sulfur diesel fuel. CARB has also petitioned the U.S. EPA to develop a new, cleaner Tier 5 standard for locomotives. U.S. EPA has yet to act on this request, although they have acknowledged the receipt of this petition. Nevertheless, CARB will continue to take action where appropriate by conducting routine inspections at railyards to enforce other diesel regulations such as those involving drayage trucks, cargo handling equipment, and transportation refrigeration units. CARB also has a settlement agreement with UP requiring them to turn away all noncompliant drayage trucks.

Finally, South Coast AQMD previously adopted rules to reduce emissions from railroads. However, the agency was sued by the railroad companies and a judge determined that rules regarding railroads were preempted by federal law. South Coast AQMD is currently working to develop an Indirect Source Rule (also referred to as “Facility Based Mobile Source Measures”) to reduce emissions from railyards, and the railroad companies have been involved in the rule development process by participating in working group meetings and continuing to work with the agency on this matter. Any rule that is adopted by the Board will be enforced. Also, South Coast AQMD will continue to support CARB’s petition to the U.S. EPA for the more stringent Tier 5 emission standards for locomotives. Staff will investigate initiatives by the part of Oakland for feasibility and applicability here, and share its findings with Port of Los Angeles (POLA) and Port of Long Beach (POLB).

### Public Meeting Comment #3: Oralía Rebollo – Councilmember of the City of Commerce

- 3-1: Councilmember Rebollo stated that the City of Commerce receives many phone calls about idling trains and would like to see this problem addressed as it is an ongoing problem which should not be occurring. She also wanted to know where incentive funding for cleaner diesel equipment was coming from and expressed frustration that the City of Commerce had very little money for such initiatives as funding is often allocated on a per

---

<sup>1</sup> U.S. EPA (2008). “Final Rule for Control of Emissions of Air Pollution From Locomotive Engines and Marine Compression-Ignition Engines Less Than 30 Liters per Cylinder”. <https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-control-emissions-air-pollution-locomotive>

capita basis (which affects Commerce as it has a low nighttime population that is disproportionately impacted due to the presence of railyards and freeways). She also wanted to know how project funding was determined.

Response to Public Meeting Comment 3-1

The funding for AB 617 incentives is allocated by the California legislature and guidance for expenditures is developed by CARB. The first-year funding allocated for incentives for the AB 617 program was \$250 million statewide, of which \$107.5 million was allocated to the South Coast AQMD. Second-year funding was reduced to \$245 million statewide, of which approximately \$85.6 million was allocated to the South Coast AQMD. Staff will continue to work toward higher levels of funding, as there is clearly a need for this incentive funding to bring much-needed emission reductions in AB 617 designated communities. South Coast AQMD utilizes an open bidding process to invite proposals, which are then evaluated based on several criteria. This includes evaluating where the emission reductions from that project would be located, assessing the amount of emission reductions that would be achieved, as well as conducting a cost-effectiveness analysis. Incentive projects are not awarded on a per capita basis.

The U.S. EPA has idling limits on newly manufactured and remanufactured locomotives, but this provision does not apply to older locomotives currently in operation. Since locomotives last for over 30 years, it can take a while before the benefits from this regulation are realized.

In 2005, CARB signed agreements with the railroads requiring the implementation of an idling-reduction program, but this agreement has since expired. CARB is currently discussing additional regulations intended to reduce idling by locomotives. Furthermore, CARB has petitioned the U.S. EPA to adopt cleaner Tier 5 emission standards for locomotives, an action supported by the South Coast AQMD. The U.S. EPA has yet to act upon this petition, although they have acknowledged receipt of the request. Nevertheless, CARB will continue to take action where appropriate by conducting routine inspections at railyards to enforce other diesel regulations such as those involving drayage trucks, cargo handling equipment, and transport refrigeration units. CARB also has a settlement agreement with UP railroad requiring them to turn away all noncompliant drayage trucks, which they will continue to enforce, as appropriate.

Public Meeting Comment #4: Evelyn Nuño – Field Representative for Assemblymember Cristina Garcia

4-1: Ms. Nuño wanted to know whether the results from the mobile air monitoring measurements will be posted online and if so, when those results would be ready for public view.

Response to Public Meeting Comment 4-1

The South Coast AQMD is currently processing, analyzing, and mapping the data from the mobile air monitoring measurements that have been conducted in this community. This will be posted online during the fall of 2019 once it has been fully validated. A representative number of measurements have been completed and processed. As additional measurement become available they will be posted online. Staff will provide quarterly updates to the CSC to summarize the measurements conducted and related findings, particularly if elevated levels of pollutants are detected that warrant a follow up by Enforcement/Compliance teams.

Public Meeting Comment #5: Johncito Peraza-Romero – Active Resident of West Commerce

5-1: Although the Discussion Draft CERP had identified sensitive groups such as children to be particularly vulnerable to health effects from air pollution, Mr. Peraza-Romero expressed concern that South Coast AQMD had not made references to any parks in the document as it had for nearby schools.

Response to Public Meeting Comment 5-1

Although not specifically mentioned in the Discussion Draft CERP for the ELABHWC community, the South Coast AQMD considered both parks and libraries in the CERP development process. The list already includes some community centers that are located within parks, but the name of the park is not always associated with the name of the community center. Nevertheless, Table 5g-1 in Chapter 5g of the CERP now addresses this concern and identifies specific parks and libraries within the ELABHWC community where children tend to spend time.

Public Meeting Comment #6: Member of the public

6-1: A member from the community commented if it would be worth considering a tax write-off for businesses which emit high levels of pollution to incentivize them to go beyond current compliance standards. He also suggested that South Coast AQMD coordinate with different chambers of commerce in order to develop a consensus within the ELABHWC business community as to which pollutants should be targeted and to then develop an advertising campaign around that. Such a campaign could involve many facets of the community including area chambers of commerce, cities, local community groups, and even local media organizations such as newspapers.

Response to Public Meeting Comment 6-1

South Coast AQMD does not have the authority to give businesses a reduction in their taxes. Nevertheless, staff will continue to work with the business community, including working with chambers of commerce, to increase compliance with our rules and encourage actions that go above and beyond rule requirements.

## Public Meeting Comments (CSC Meeting #8 – July 25, 2019)

### Public Meeting Comment #7: Brian Johnston, MD – Physician at Adventist Health White Memorial

7-1: Dr. Johnston wanted to gain a better understanding and perspective regarding the degree to which progress is being made in reducing NOx and PM emissions in the ELABHWC community.

#### Response to Public Meeting Comment 6-1

Chapter 5a of the CERP for the East Los Angeles, Boyle Heights, West Commerce (ELABHWC) community discusses emission reduction targets both from the mobile source incentive projects (implemented by South Coast AQMD) as well as from CARB regulations that address the air quality priorities in this CERP. Based on data from previous incentive projects, South Coast AQMD estimates new emission reductions of approximately 40 - 50 tons per year (tpy) in nitrogen oxides (NOx) and 0.5 – 0.6 tpy in diesel particulate matter (DPM) in the ELABHWC community from the proposed actions to implement mobile source incentives. Staff have also added the emission reduction targets from CARB rule development efforts for the following programs: Advanced Clean Car 2, Advanced Clean Truck, Heavy-Duty Inspection and Maintenance, and Heavy-Duty Low NOx Engine Standard. Combined, these actions will result in 1.4 tpy reduction in DPM and 377.1 tpy reduction in NOx within the ELABHWC community by the year 2029.

Because the emission reductions from the incentive projects are expected to persist into the future, and because CARB's new or amended regulations, if adopted, would be phased in over time, staff calculated the expected additional benefit that these CERP actions would have above and beyond the existing baseline conditions presented in Chapter 3b. The South Coast AQMD and CARB emission reductions represent a 20% additional NOx reduction and a 13% additional DPM reduction by the year 20 in this community.

Also, it is important to emphasize that emission reductions that occur within the community will have an even greater benefit for those living in close proximity to these emission sources.

### Public Meeting Comment #8: Veronica Polanco – Active Resident of Boyle Heights

8-1: Ms. Polanco wanted to know why NOx monitoring was not occurring at Resurrection Church if that was one of the emission targets. She also wanted to know how frequently mobile air monitoring cars were being sent out.

#### Response to Public Meeting Comment 8-1

Nitrogen oxides are currently being monitored at Resurrection Church and the data is available online (<http://xappprod.aqmd.gov/AB617CommunityAirMonitoring/Home/Index>). Initially, there was not enough electrical power which has now been addressed. It should be noted that South Coast AQMD also conducts continuous, long-term air monitoring of ambient NOx levels at its Central Los Angeles site located just north of the boundary for the ELABHWC community as shown in Figure 2 of the Community Air Monitoring Plan (CAMP) for the ELABHWC community. The CAMP states that mobile air monitoring efforts will occur on a recurring basis in order to help identify pollution sources and track progress of emission reductions. So far, such efforts have been occurring once to twice each week since July 1, 2019.

Staff will be tracking NOx and/or DPM reductions through the implementation of the incentive funding projects, which will specify the type of new equipment being acquired using incentive funds, and the type of old equipment that is being replaced or repowered. Additionally, CARB staff will track the reductions associated with their rule development efforts.

Public Meeting Comment #9: Wendy Gutschow – Project Coordinator at Keck School of Medicine at USC

9-1: Ms. Gutschow had questions about the siting and distribution of air monitoring stations throughout the ELABHWC community to make sure that the community was adequately covered.

Response to Public Meeting Comment 9-1

Current air monitoring efforts by South Coast AQMD are being used to assess air pollution hot spots and guide where fixed-monitoring stations need to be located in the future. Information is currently being gathered in order to evaluate when and where long-term air monitoring efforts should occur. Also, Figure 2 of the CAMP shows current air monitoring locations in the ELABHWC community. An air monitoring site was established at Resurrection Church, in Boyle Heights, and the data is available online (<http://xappprod.aqmd.gov/AB617CommunityAirMonitoring/Home/Index>).

Long-term, continuous measurements of criteria pollutants, among other air contaminants, are conducted by South Coast AQMD at the Central Los Angeles site just north of the ELABHWC community boundary. Additionally, South Coast AQMD is also measuring ambient lead (Pb) and arsenic (As) levels around the Exide Technologies plant in the City of Vernon. Exide operates multiple fenceline lead air monitors as well.

Public Meeting Comment #10: Jennifer Lahoda – President of Boyle Heights Chamber of Commerce

10-1: Ms. Lahoda stated that she thinks that pollutants with emission reduction targets as described in the CERP should be the focus of air monitoring efforts and that creating data from air monitoring efforts should be tied to specific CERP goals.

Response to Public Meeting Comment 10-1

Progress toward emission reduction targets will be tracked in several ways. Monitoring is one tool that will be used to help track changes in ambient pollution levels, not just for the pollutants that are outlined in the emission reduction targets, but also key pollutants associated with the priority sources. Specific reductions of NOx and DPM will be tracked through the implementation of mobile source incentive projects, which will specify the type of equipment being changed out and the type of new equipment that is being purchased. Staff will be tracking the emissions reductions associated with the incentive projects that are funded and implemented.

The CAMP discusses the air monitoring strategies planned for this community, including the purposes that air monitoring will serve. One primary purpose is to track progress of air quality improvements, including improvements resulting from CERP actions. Another important purpose is to take air measurement near the priority concerns of the community and evaluate if there are previously unknown significant sources of pollution that may be affecting the local communities. Staff will continue to work in consultation with CSC members and members of the community in the implementation and measurement results of these plans.

Public Meeting Comment #11: Veronica Polanco – Resident of Boyle Heights

11-1: Ms. Polanco asked whether the Facility INformation Detail (FIND) web tool details whether violations by a given facility are categorized by either nuisance or a more serious emission violation that endangers public health. She also asked whether the FIND tool shows the violation history of a given facility and if there was a link to submit violations.

Response to Public Meeting Comment 11-1

The FIND tool already shows any past and pending Notices of Violation (NOV) or Notices to Comply (NTC) for any South Coast AQMD-regulated facility, the details behind such violations, and whether the violation has been resolved. While the NOVs are not explicitly categorized by type (e.g. administrative, emissions violation, nuisance, etc.), the description of the NOV provides information that conveys the type of violation that occurred. The public can access the FIND tool to search for information about South Coast AQMD-regulated facilities at: <https://www.aqmd.gov/nav/FIND>.

Air quality complaints, including complaints of excessive odors, smoke, dust, or other contaminants can be submitted online (<http://www3.aqmd.gov/webappl/complaintsystemonline/NewComplaint.aspx>), over the phone (1-800-CUT-SMOG), or through the South Coast AQMD mobile app.

Staff appreciates the system improvements being suggested for the FIND tool and will work with the CSC to identify and implement improvements as part of the CERP efforts. These efforts are encompassed in Chapter 5h, Action 1.

#### Public Meeting Comment #12: Jennifer Lahoda – President of Boyle Heights Chamber of Commerce

12-1: Ms. Lahoda asked whether it was possible to know the severity of a given NOV and why emissions are not displayed for many facilities in the FIND tool. She also wants to know how information can be submitted in the tool and whether it has been received and applied within the system.

#### Response to Public Meeting Comment 12-1

The severity of the NOV is not specified in the FIND tool, although a description of the NOV is provided. Information provided in the FIND tool specifies which section of a given South Coast AQMD rule that a facility has violated. Regarding facility emissions data, the South Coast AQMD has rules that specify which facilities need to report their emissions. This includes the requirements for annual reporting under the Annual Emissions Reporting (AER) program, and additional requirements for quadrennial reporting under the AB 2588 Air Toxics Hot Spots program, if applicable. These programs require reporting from facilities that typically have higher levels of emissions or pose elevated risk to the community. The facility emissions data that appear in the FIND tool are submitted to South Coast AQMD through a web reporting portal.

Staff appreciates the system improvements being suggested for the FIND tool and will work with the CSC to identify and implement improvements as part of the CERP efforts. These efforts are encompassed in Chapter 5h, Action 1.

#### Public Meeting Comment #13: Wendy Gutschow - Project Coordinator at Keck School of Medicine at USC

13-1: Ms. Gutschow said that there should be a filter that lets FIND users know which facilities have Notices of Violations (NOVs) and asked how the FIND tool interfaces with or reflects non-prosecution agreements (NPAs) between South Coast AQMD and a given facility.

Response to Public Meeting Comment 13-1

The FIND database does include information about enforcement actions at a facility, including NOVs, Notices to Comply, and Hearing Board cases. However, the tool does not currently have a feature which allows filtering of listed or displayed facilities by these criteria.

As stated above, staff appreciates the system improvements being suggested for the FIND tool and will work with the CSC to identify and implement improvements as part of the CERP efforts. These efforts are encompassed in Chapter 5h, Action 1.

Public Meeting Comment #14: Carina Sanchez – Active Resident of East Los Angeles

14-1: Asked how to file a complaint when searching for a business using the FIND tool if one finds or suspects that a facility's emissions are not what is being reported.

Response to Public Meeting Comment 14-1

Currently, the FIND tool cannot be used to file a complaint. If a member of the public suspects that a facility is in violation of a South Coast AQMD rule or permit condition, they can submit complaints online (<https://www.aqmd.gov/home/air-quality/complaints>), through the mobile app, or call 1-800-CUT-SMOG to report the problem. In the case of a potential problem with a facility emissions report, staff would consider the concerns of the complainant and evaluate the facility's reported emissions. If there are errors or missing data, staff will work to correct the data and ensure that the reported emissions are accurate. Staff would also evaluate whether a South Coast AQMD rule had been violated by the facility in reporting their emissions data and issue a NOV or refer the matter to legal counsel for prosecution, if appropriate.

Public Meeting Comment #15: Community Member

15-1: A member of the community recommended investing funds to purchase low-NOx trucks. She thinks that such investments should prioritize those communities that have high levels of diesel truck traffic.

Response to Public Meeting Comment 15-1

Chapter 5b of the CERP for the ELABHWC community prioritizes a number of strategies to reduce emissions from heavy-duty trucks, including new incentive funding opportunities to replace heavy-duty diesel trucks with zero-emission technologies once they become available and near-zero emission technologies until that time.

## Public Meeting Comments (CSC Meeting #9 – August 22, 2019)

### Public Meeting Comment #16: Jill Johnston – University of Southern California

16-1: Dr. Johnston asked whether the emission reduction targets that were presented represent targets specifically to the ELABHWC community or for all AB 617 communities under South Coast AQMD's jurisdiction. She also asked whether these expected reductions in emissions were due to existing CARB rules that are already in place or were the reductions because of actions from the CERP. She then suggested including baseline emission values to give perspective about the emission reductions. Lastly, although CARB's Heavy-Duty Low NOx Rule is intended to target trucks, she noted that it is important to consider how this rule can be applied towards railyards and the amount of associated emission reductions, especially considering the number of railyards present in ELABHWC community.

#### Response to Public Meeting Comment 16-1

The expected emissions due to existing CARB and South Coast AQMD rules that are already in place is what is reflected in Chapter 3b (Source Attribution report). The projected emission reductions in this community that would be achieved through the CERP is what is presented in Chapter 5a. To help clarify the number presented, staff have added language and tables in Chapter 5a to present the CERP-related emission reductions in the context of the baseline emission values, to give perspective as to the degree to which emissions are being reduced. Some of the emission reductions (40 – 50 tons per year (tpy) for NOx; 0.5 – 0.6 tpy for DPM) will come from South Coast AQMD incentive programs. The other emission reductions from the CERP will come primarily from four CARB regulations on mobile sources: Advanced Clean Car 2, Heavy-Duty Vehicle Inspection and Maintenance, Advanced Clean Trucks Regulation, and Heavy-Duty Low NOx Rule. Implementing the CERP will result in NOx and DPM reductions of 377.1 tpy (20% additional reduction) and 1.5 tpy (13% additional reduction), respectively, by 2029. Staff agree that emission reductions resulting from CARB's Heavy-Duty Low NOx Rule would reduce emissions from trucks that operate near railyards, and would be a benefit for this community.

### Public Meeting Comment #17: Rafael Yanez – Active Resident of East Los Angeles

17-1: Mr. Yanez expressed concern that the plans that were presented did not discuss measuring emissions from trucks, considering the large volume of truck traffic in the community. He noted that to measure truck emissions would help evaluate whether the emission reduction targets are being achieved. He pointed out that while the Portable Emissions AcQuisition System (PEAQs) system is still being tested, he was disappointed

that it was not included in the plan. He asked for the PEAQS system to be included in the CERP, to be used when the technology is available for use. He would like this technology to be brought to the Board's attention, so that they may be able to allocate funding to further develop the PEAQS system to make it ready to be used in the field.

Response to Public Meeting Comment 17-1

Staff has updated Chapter 5b of the CERP to state that South Coast AQMD will explore the possibility of using Automated License Plate Reader (ALPR) and PEAQS systems in the community and choose monitoring locations based on feedback from the community. South Coast AQMD's goal is to conduct a pilot study to test the suitability of the PEAQS system to support directing incentive funds and/or CARB enforcement actions, as stated in Action 3 of Chapter 5b. Emissions from truck traffic are a high priority to address in this community, and tracking the progress of emissions reductions will be done through a variety of methods, including using monitoring strategies as well as tracking emissions reductions that are achieved through implementing incentive projects and rule development.

Public Meeting Comment #18: Evelyn Nuño – Representative for Assemblywoman Cristina Garcia

18-1: Ms. Nuño asked how written comments for the CERP that were submitted after the August 9, 2019 deadline would be addressed since they will not be included in the CERP. Also, on Chapter 5b of the CERP, on the second page, she noticed language that suggested that South Coast AQMD would monitor mobile emissions on roadways using technology similar to the PEAQS system, a system which South Coast AQMD had mentioned earlier in the meeting as being in its infancy and not something to necessarily base future monitoring efforts. Or do plans to implement PEAQS need to be incorporated in the CAMP?

Response to Public Meeting Comment 18-1

Staff has updated Chapter 5b of the CERP to state that South Coast AQMD will explore the possibility of using ALPR and PEAQS systems in the community and choose monitoring locations based on feedback from the community. South Coast AQMD's goal is to conduct a pilot study to test the suitability of the PEAQS system to support directing incentive funds and/or CARB enforcement actions, as stated in Action 3 of Chapter 5b.

At the time this verbal comment was made, staff stated that even if comments were submitted after the August 9<sup>th</sup> deadline, every effort would be made to address those concerns. Staff attempted to address all concerns or comments received in the CERP or in the Response to Comments section of this document.

Public Meeting Comment #19: Brian Johnston – White Memorial Medical Center

19-1: Dr. Johnston identified specific locations of concern (e.g., schools, etc.) that are affected by air pollution from traffic and wants to know if there will be ongoing monitoring efforts around such locations to observe whether air pollution levels are getting better or worse over the course of the AB 617 program. Also, he wants to know whether the data from the mobile air monitoring measurements will be made available, particularly in these areas of concern, such as schools.

Response to Public Meeting Comment 19-1

Mobile air monitoring efforts began on July 1, 2019 and will occur once to twice each week on a recurring basis as stated in the CAMP and will be used to determine future air monitoring efforts in consultation with the CSC members and the ELABHWC community. The South Coast AQMD is currently processing, analyzing, and mapping these data and the data will be posted online during the fall of 2019 once they have been fully validated. The results from subsequent measurements will be posted online as they become available. Also, Action 1 in Chapter 5g of the CERP states that South Coast AQMD will work with local schools to conduct air measurements at schools for limited-term assessments.

Public Meeting Comment #20: Leoda Valenzuela – COFEM

20-1: Ms. Valenzuela seconds Jill Johnston’s earlier comment about including baseline values in the emission reduction targets to give perspective as to the degree to which progress is being made. She could not find the baseline values or the values that were presented in Chapter 3 of the CERP.

Response to Public Meeting Comment 20-1

The projected emission reduction targets with baseline emissions are presented in Chapter 5a of the CERP.

Public Meeting Comment #21: Evelyn Nuño – Representative for Assemblywoman Cristina Garcia

21-1: Ms. Nuño wanted to know how the data from mobile monitoring measurements could account for differences in seasonal effects and weather patterns which have a lot of variation and thus affect such measurements.

Response to Public Meeting Comment 21-1

As mentioned in the CAMP, mobile air monitoring measurements will be used to assess locations for future stationary air monitoring efforts to account for variations in daily and seasonal weather

conditions which might affect air pollution levels at a given location which the mobile monitoring platform might not necessarily be able to capture.

Public Meeting Comment #22: Rafael Yanez – Active Resident of East Los Angeles

22-1: Mr. Yanez asked that South Coast AQMD consider other external factors when conducting mobile air monitoring measurements such as traffic patterns and the time of day. Some examples of this include morning/evening rush hour (which might lead to higher emissions of pollutants which are not necessarily indicative of normal background levels), whether measurements occur during summer months (which might have fewer emissions since there are fewer students traveling to/from school), or even the international trade issues which may affect emissions around railyards due to fewer cargo loads, etc.

Response to Public Meeting Comment 22-1

The mobile air measurement efforts will take into consideration external factors such as traffic patterns and time of day when interpreting air measurement data. Also, as mentioned in the CAMP, mobile air monitoring measurements will be used to assess locations for future stationary air monitoring efforts to account for variations in daily and seasonal weather conditions, among other factors, which might affect air pollution levels at a given location which the mobile air monitoring platform might not necessarily be able to capture.

**Comments (Unlimited Size) \***  
**On subchapter 5H (waste transfer stations):**

Is there any way to limit the amount of cars (employees) and waste collection trucks these businesses can have?  
 For example, City Terrace Recycling & Waste Transfer Station just got their permit to expand approved. This is going to add more cars and waste collection trucks to the neighborhood which will cause more pollution.

Such facilities need to be fully enclosed. Some of these facilities in our communities are not. How can we make them fully enclosed?

1-1

### Response to Comment Letter 1-1

South Coast AQMD implements Rule 2202 – On Road Motor Vehicle Mitigation Options, which requires facilities with 250 employees or more to reduce emissions from employee commute trips or provide comparable emission reductions from other sources. If the employer chooses the trip reduction option, employees are encouraged to carpool; thus, reducing traffic and emissions. However, state law prohibits applying this rule to facilities with fewer than 250 employees.

Transfer Stations and Material Recovery Systems are subject to South Coast AQMD Rule 402 – Nuisance and Rule 410 – Odors from Transfer Stations and Material Recovery Facilities. South Coast AQMD Rule 410 is designed to complement Rule 402. Rule 402 prohibits the discharge of air contaminants or other material which can cause nuisance or annoyance to any considerable number of people or to the public or which endanger the comfort or repose of any such persons, or the public. Historically, facilities within the South Coast Air Basin that emit odors causing a public nuisance have been cited for violation of Rule 402. Rule 410 establishes minimum requirements for transfer stations and Material Recovery Facilities (MRFs) and offers a proactive approach to minimizing odors. Odors from transfer stations and MRFs are very site-specific, and depend upon a number of different factors, including the type of waste (e.g., municipal solid

waste, green waste, construction and demolition materials, etc.), and types of odor controls at a facility, among other factors. In addition, facility operators use a variety of operating practices to minimize offsite odors.

The City Terrace Recycling & Waste Transfer Station, located at 1511-1533 Fishburn Avenue in East Los Angeles is a Large Volume Transfer Station. Operational conditions for this facility are permitted by CalRecycle, under the California Environmental Protection agency. The Local Enforcement Agency that ensures compliance with this permit is the County of Los Angeles Department of Public Health.

CalRecycle outlines the design and operation of the City Terrace Recycling Material Recovery Facility and Transfer Station. The permit conditions and facility plan described by CalRecycle pertaining to employee cars and waste collection trucks, and facility enclosures are addressed in this permit. Staff will address odors by working with these types of facilities and local agencies to identify measures to mitigate odors, such as establishing full enclosures.

#### Neighborhood and Freeway Traffic

- **5-2 Increased enforcement of CARB's Truck and Bus Idling Rules to reduce diesel emissions**
  - Ensure adequate signage in areas prone to idling and near sensitive receptors
  - Use clear and deterrent language (i.e. "no truck idling" instead of "no stopping)
  - Partner with sensitive receptor staff to use complaint system to report idling and identify new areas being affected, and areas that need new signage
- **5-2 Improving complaint systems designed to report illegal truck idling or truck travel on local roadways**
  - By incentivizing community member action (e.g. monetary compensation or other compensation for reporting)
  - By funding marketing to create awareness in highly affected communities, especially Latino and other underserved populations about the complaints system
  - By funding enough capacity for complaints system personnel to have follow up with individual callers who reported and air quality concern in the highly affected areas
  - Ensuring information is easily accessible for different age groups (i.e. paper flyers in senior centers or neighborhoods, phone app codes to send you directly to complaint system, link on conspicuous place on website, social media newspaper, radio etc.)
  - Ensuring information is language accessible
  - Awareness on impacts of idling trucks and truck travel on local roadways alongside complaint system marketing
- **5-7 Participate in CARB's rule development for future amendments to their truck regulations**
  - Include in representation at least one community organization to be at rule development meetings, support local organizations in capacity funding to be able to participate and share the information with the community, conduct focus groups and collect further feedback from community members/residents on new rules
- **5-9 Work with CSC to explore the feasibility for using ALPR systems...**
  - Begin public information and outreach on incentives to switch to cleaner trucks regardless of ALPR system feasibility or success.
  - Maintain transparency with the community on progress made with this action through continual reporting on ALPR system project status, outreach conducted, number of contact attempts made to truck owners to incentivize switching to newer trucks, areas dominantly impacted by change (positively), areas still in need of more outreach (gaps) based on air measurements, and ongoing strategy adjustment to ensure incentive program is successful

2-1

2-2

2-3

#### Metal Processing

- **5-3 Course of Action**
  - Add action taken if elevated levels are toxic metal emissions are found after follow up, how will this be addressed (fines etc.)

2-4

#### Rendering Facilities

- **5-2 respond to odor complaints on an expedited basis**
  - Define expedited basis, how long will this take approximately, set goal to reach.
  - Send monitoring data updates to community stakeholders (i.e. community orgs etc.)

2-5

#### Response to Comment Letter 2-1

Staff is collaborating with appropriate agencies to identify areas in the community to implement no idling/no truck zones, and signage. Please see page 4 of Chapter 5b – Neighborhood and Freeway Traffic from Trucks and Automobiles. Action 1 “Course of Action”, South Coast AQMD aims to work with cities and counties to install adequate signage prohibiting truck idling in certain locations, and working with the CSC to determine those locations. Action 1 of Chapter 5b includes a commitment to work with the CSC to conduct outreach (e.g., filing effective complaints) for reporting idling trucks using the existing complaint system, and assess where improvements are feasible if the existing complaint system is determined to be ineffective.

In addition to Chapter 5b, Action 1 of Chapter 5h – General Concerns about Industrial Facilities, including Waste Transfer Stations includes additional commitments to work with local community centers and organizations to provide outreach and training on how to file air quality complaints, either by phone, web, or mobile app, and seek opportunities to advertise South Coast AQMD’s 1-800-CUT-SMOG complaint line. This targeted outreach on how to file an air quality complaint will apply to any air quality related complaint. Depending on the input from the CSC, South Coast AQMD staff will work to provide materials and outreach that is accessible to languages that are prominent in this community. Action 1 of Chapter 5g – Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects includes goals to collaborate with community based organizations on how to reduce exposure for sensitive populations, and working with community based organizations to develop informational tools that highlight impacts of idling trucks and residential truck traffic, and how the community can minimize their exposure.

South Coast AQMD Compliance and Enforcement Staff have adopted best practices to provide complainants follow-up information, and to let them know the initial result of the inspector’s investigation (excluding any details that may jeopardize potential enforcement action). If an individual files a complaint with South Coast AQMD and provides a phone number, staff will follow up with them.

#### Response to Comment Letter 2-2

CARB welcomes and needs representation from community organizations during its rule development process and holds a number of public workshops during the development of new or amended regulations. Most workshops are webcast and recorded to promote a broader public process. Additionally, draft language is also provided for public comment prior to consideration by the CARB Board. The AB 617 Community Air Grants are available for community groups to support their work to help increase residents’ engagement in the AB 617 process. South Coast AQMD will provide quarterly updates to CSC members for CARB rule development process meetings, when available.

#### Response to Comment Letter 2-3

Action 3 of Chapter 5b includes a commitment from South Coast AQMD to explore the possibility of using the ALPR in this community, and to provide quarterly or biannual updates to the CSC on progress made. South Coast AQMD will develop an ALPR privacy policy in compliance with Civil Code Section 1798.90.5, *et seq.* and hold a public hearing to provide the public an opportunity to comment on the proposed program.

South Coast AQMD will provide updates made in assessing the feasibility of the ALPR system. If the ALPR systems are installed, South Coast AQMD staff will update the CSC on the outreach efforts at locations identified by the CSC. If adjustments to selected locations need to be made based on findings from the ALPR or input from the CSC, South Coast AQMD staff will work with the appropriate entities.

Action 2 of Chapter 5b includes a commitment from South Coast AQMD to conduct outreach to truck owners and operators in the community regarding incentive opportunities and programs. This commitment will be implemented regardless of ALPR actions related to incentives. Beginning 2020, South Coast AQMD staff will provide the CSC with quarterly updates on community outreach efforts for incentives.

#### Response to Comment Letter 2-4

The actions that South Coast AQMD takes to address elevated levels of toxic metal emissions are case specific. The particular response typically depends on the toxic metal type(s) identified and the corresponding, detected level(s). Generally speaking, however, staff may take the following steps to address elevated toxic emission levels: (a) conduct surveillance, perform onsite inspections, use technology to perform metals screening (e.g., XRF), collect samples to evaluate if emissions are coming from known potential sources of the metal and, based on concentrations detected by monitoring equipment and meteorological data, attempt to identify any other, currently unknown potential sources; (b) request records and information from facilities, potentially through the issuance of Notices to Comply; (c) after determining the likely source(s) of the metal, review permit conditions and all applicable rules; and (d) upon identifying violations of applicable rules and/or permit conditions, issue Notices of Violation or take other appropriate enforcement action. A Notice of Violation typically requires the facility to pay an associated civil penalty.

#### Response to Comment Letter 2-5

South Coast AQMD's goal is to respond to all complaints received on the complaint hotline (1-800-CUT-SMOG) within two hours. Inspectors assigned to investigate rendering odors are generally assigned to specific geographic areas which can encompass multiple cities. Therefore, the timing of complaint response depends on multiple factors, such as available personnel and ongoing inspections already in progress at the time the complaint was received. However, for rendering facilities, odor complaints will be addressed on an expedited basis. This means that in the absence of an ongoing, high-risk investigation – for example, responding to a gas leak at a

school or inspecting a known toxics facility – available inspectors will attempt to respond within two hours to these complaints.

Updates for monitoring efforts within this community will be provided quarterly or biannually. South Coast AQMD Monitoring staff plans to compile, organize, and distribute monitoring information through data summaries and reports. The frequency of these reports will depend on the air quality concern; staff plans to work with the CSC to determine the frequency of the updates.

**Comments (Unlimited Size) \***

BNSF appreciates serving on the Steering Committee, and we offer the following comments on behalf of BNSF Railway and Union Pacific Railroad.

1. We suggest the following edit in the Federal Actions section on page 5-2 to clarify U.S. EPA's role in regulating locomotive emissions: "Railroads operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. Environmental Protection Agency."
  2. On page 5-3, the draft states: "[the EPA] regulations do not require railroads to reduce their use of existing older, higher-emitting locomotives." Please add "Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time."
  3. Page 5-3 states: "[EPA's] regulations limit idling for both new and remanufactured locomotives..." EPA regulations do not limit idling, but instead require the installation of devices that reduce idling on newly manufactured and remanufactured locomotives.
  4. On page 5-3, the draft states: "In 2017, CARB also petitioned EPA to develop a new regulation requiring engine manufacturers to meet a cleaner Tier 5 emission standard for new engines." Please add "The CARB petition is under review by the EPA."
  5. Page 5-3 states that the District "...is evaluating potential strategies to reduce emissions from railyards, including developing a potential regulation affecting railyards called an Indirect Source Rule (ISR), and/or other potential partnering strategies that could reduce emissions." The railroads have participated in workshops related to Facility Based Mobile Source Measures and will continue to engage with District staff and the community. Any ISR proposals must be within the District's legal authority.
  6. Page 5-5 states: "Conduct fenceline and/or mobile monitoring around railyards to identify activities that may cause increased levels of air pollution. Mobile measurements (and fixed monitoring, when appropriate) will extend into the community to assess how railyard related emissions may contribute to the overall air pollution burden in this community." BNSF requests that the District consult with the railroads before conducting new fenceline and/or mobile monitoring so that we may share our insights and expertise with the District as it develops its monitoring protocols.
  7. The railroads are updating emissions inventories for several southern California railyards which show significant reductions. We are reviewing these with District staff.
  8. UP and BNSF have a multi-decade track record of improving air quality within the District and appreciate the District's successful efforts to partner with us to provide incentives to develop and test new, cleaner locomotives and technology used in railyards.
  9. Again, thank you for the opportunity to be a member of the Steering Committee. Please call or email with questions.
- Marisa Blackshire  
BNSF Railway

Para más información contáctese con: [ab617@aqmd.gov](mailto:ab617@aqmd.gov)

Based on these comments, staff has provided appropriate changes to the following

Response to Comment Letter 3-1

Staff included a sentence on page 5c-2 to read “Railroad operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. EPA”.

Staff added a sentence reading “Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time”.

Staff adjusted the sentence to read “These regulations require the installation of devices that reduce idling (i.e., require idling limits with exceptions on newly manufactured and remanufactured locomotives, and mandate the use of ultra-low sulfur diesel fuel”.

Response to Comment Letter 3-2

In 2017, the California Air Resources Board (CARB) petitioned the U.S. EPA<sup>2</sup> to update emission standards for new and remanufactured locomotives, establishing a cleaner Tier 5 standard for new engines. The petition asked that the new emission standards go into effect in 2023 for remanufactured locomotives, and 2025 for new locomotives. South Coast AQMD issued a letter of support for the petition. The U.S. EPA acknowledged the receipt of the petition, but has not provided any update or plans for further action.

Response to Comment Letter 3-3

Staff thanks BNSF for their continued effort in participating in the process to develop Facility Based Mobile Source Measures and their commitment to continue to engage with South Coast AQMD and the community on these efforts.

Response to Comment Letter 3-4

Staff plans to use multiple tools to conduct mobile and/or fixed monitoring outside of the BNSF facility and in the surrounding community. If monitoring inside of the BNSF facility is needed South Coast AQMD staff will work with BNSF staff to coordinate these efforts. South Coast AQMD staff appreciates the opportunity to collaborate with BNSF to interpret results of these measurement efforts, and consult on where to locate South Coast AQMD monitoring equipment.

Response to Comment Letter 3-5

Staff thanks BNSF for their commitment to updating their emission inventories for several Southern California railyards, and continues to be committed to reviewing the data provided by BNSF. Staff also thanks Union Pacific and BNSF for their partnerships in developing, and testing new, cleaner locomotives and technology used in railyard.

---

<sup>2</sup> Even if the U.S. EPA were to update the emission standards in response to the petition, the new standards would only apply to new and remanufactured locomotive engines. Given the slow turnover of the railroads’ fleet, emissions reductions would not be immediate.

Staff thanks BNSF for their participation and engagement on the Community Steering Committee and looks forward to collaborating with BNSF on future strategies to reduce air pollution.

In the Mobile Monitoring, please make sure that Diesel PM is being tracked in the northern part of City Terrace (industrial park, north of the 10-freeway)

4-1

## Appendix RTC-28

Response to Comment Letter 4-1

The Community Air Monitoring Plan includes a section that outlines the commitment to monitoring areas that were identified by the CSC and members of the community as areas with air quality concerns. Staff plans on conducting measurements of black carbon, which is an indicator of diesel PM. These measurements will be conducted in the City Terrace area, north of the Interstate 10 (I-10) freeway based on the air quality concerns reported to South Coast AQMD staff.

It should be mandatory for all industrial businesses to be part of the FIND database -- this would be a good start to becoming a "good neighbor"

We need air filters in our homes -- that is a fast, effective, and direct way to start reducing toxic air exposure in our neighborhoods. This is a MUST. The toxic air outside our homes gets trapped indoors -- this indoor air can have higher concentrations of toxins! How can the county/state help in that? Can we get a voucher/credit to purchase one? How about we use some of that CARB settlement money towards the funding of home air filters? Can we discuss this at our next meeting?

#### Response to Comment Letter 6-1

The South Coast AQMD Facility INformation Database (FIND) tool includes facilities permitted by the South Coast AQMD. CARB continues to develop regulations that may expand the number and type of facilities that are required to report emissions.

#### Response to Comment Letter 6-2

Staff has added an additional action in Chapter 5g—Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects – Exposure Reduction. Action 3 of Chapter 5g commits South Coast AQMD to identifying existing programs or funding sources that may provide home filtration systems.

#### Response to Comment Letter 6-3

The Floricanto Center for the Performing Arts is listed as air quality concern #99 in Table 3a-2 of Chapter 3a and is categorized as a location where people in this community spend time. Chapter 5g (Page 5g-1) describes areas that CSC members identified where people spend time, and where South Coast AQMD should focus on reducing exposure.

Appendix RTC-37

East Los Angeles, Boyle Heights, West Commerce  
Draft Final

**Comments (Unlimited Size) \***

I am Soyeon Choi with Los Angeles County Department of Regional Planning. We have a couple of comments and questions:

1. In Chapter 5h, under the Green Zones Program, please change ‘...DRP launched the Green Zones...’ to ‘... started developing the Green Zones’ as the program is currently in development stage.
2. We also have a general question about the overall initiative. Does any part of CERP include any financial support for the local industrial businesses with, i.e., replacement of older equipment with newer, less polluting equipment? If there are more details about this possible actions, we would like to learn more and discuss further on ways to coordinate.

We appreciate your work in the communities and the opportunity to provide comments. We look forward to continued collaboration with your agency on promoting EJ in the focus communities in the unincorporated areas.

Thank you.

7-2

**Response to Comment Letter 7-1**

Staff changed the sentence to read “The Los Angeles County Department of Regional Planning started developing the Green Zones Program in 2015, focusing efforts on disproportionate environmental and health impacts in disadvantaged communities”.

**Response to Comment Letter 7-2**

South Coast AQMD provides incentive funding for specific types of equipment replacement. Generally, incentive funding is only provided if facilities go above and beyond existing requirements, and are not provided just for compliance. Some existing programs are described below:

Voluntary Incentive Program: South Coast AQMD is seeking to incentivize stationary source projects that will result in emission reductions of NOx, VOC, and PM and in some cases, assist in implementation of the approved control strategy in the 2016 Air Quality Management Plan (AQMP). The incentives would be issued for emission mitigation, reduced toxics exposure, and

new technology development and deployment. More information on qualifications and requirements for eligibility can be found here: <https://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/voluntary-incentive-program>.

Financial Incentive Grant Program: The South Coast AQMD's dry cleaning Rule 1421, offers a limited amount of money, distributed on a first come, first serve basis for business owners who are phasing out the use of perchloroethylene in dry cleaning equipment, and switching to cleaner technologies. In addition, the AB 617 Community Air Protection Program incentive funds include a few categories of stationary source incentives. Senate Bill 856 allows Community Air Protection incentives to be distributed to owners of qualifying stationary sources. The funding is intended to provide replacement equipment with technologies that will result in direct emission reductions of toxic air contaminants, such as hexavalent chromium, and criteria air pollution, including zero-emission technologies.

If other stationary source incentive funding becomes available, staff will provide quarterly or biannual updates to the CSC.

Comment Letter #8: Priscilla R. Hamilton – Southern California Gas Company (SoCal Gas)

Philip Fine, Ph.D.  
Deputy Executive Officer  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

**RE: Assembly Bill 617 (AB 617) Community Emission Reduction Plans (CERPs)**

Dear Dr. Fine,

Thank you for the opportunity to comment on the South Coast Air Quality Management District's (SCAQMD) AB 617 efforts. Southern California Gas Company (SoCalGas) has participated in numerous Community Steering Committees (CSCs) and would like to commend SCAQMD staff on moving this monumental effort forward. SoCalGas looks forward to working with and assisting SCAQMD in the future. To that end, SoCalGas would like to submit the following comments on AB 617 and the Community Emission Reduction Plans (CERPs).

### **I. INCENTIVES**

Incentives are integral to achieving emission reductions from Class 7 and 8 Heavy-Duty trucks. However, there are not enough incentives available to turn over the number of trucks needed to meet state, regional, and community emission reduction goals. Therefore, incentives need to be used wisely and cost-effectively to achieve the greatest amount of emission reductions today.

#### **Scrappage programs should be used to maximize emission reductions**

The most effective approach to reducing emission reductions with incentives is to require scrappage. While it is important to get clean trucks into service, it is equally important to remove older, dirtier trucks operating in disadvantaged communities. Without removing a dirtier truck through scrappage, there is no way to ensure that truck will no longer operate in communities as the fleet expands. Scrapping trucks ensures that emission reductions will be maximized. Voucher programs with no scrappage requirements, such as the Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project (HVIP), are also integral in moving the existing statewide fleet to alternative fuels, however, emission reductions in targeted areas should utilize scrappage programs to maximize emission reductions. SoCalGas recommends that incentive funding be prioritized for scrappage programs like Carl Moyer and Prop 1B.

8-1

**Funding technology advancement is contrary to the purpose of AB 617 – Current year incentives should be used for available technologies**

The purpose of AB 617 is to reduce emissions in disadvantaged communities within the five-year Community Emission Reduction Plan (CERP) time frame. While some have called for the use of incentives for demonstrations and pilots, this approach does not achieve the immediate emission reductions required by the AB 617 statute.<sup>1</sup> There are many other technology advancement programs locally and statewide that fund demonstrations and pilots for advancing technologies, such as the Low Carbon Transportation Pilots and Demonstrations, Zero and Near-Zero Emission Freight Facilities (ZANZEFF) and others. Those seeking funding for those types of projects should be directed to those programs. SoCalGas recommends that CERP incentives should focus solely on available technologies that can achieve tangible emission reductions.

8-2

**Incentives should prioritize technologies that can maximize emission reductions today**

Due to the current state of development, advanced technologies, such as battery electric class 7 and 8 trucks, have significant operating limitations, including but not limited to:

- **Range:** The California Air Resources Board (ARB) has stated that a technology is commercially available if it can be included in the HVIP eligibility list, as there is a robust process for a vehicle to be eligible for an HVIP voucher. Currently, there is only one Class 8 heavy-duty truck applicable for goods movement on the list. This truck has a maximum advertised range of 124 miles per charge. This is considerably less mileage than what the existing diesel fleet can achieve. This limited range also prohibits a one-to-one replacement of an older truck, limits how much a truck can be used, and thus limits its emission reduction potential.
- **Charging time:** Battery electric trucks can take several hours to charge. This is a significant operational difference between today's existing fleet, which requires only several minutes to refuel. Down time for charging will limit the hours a truck can be used in a day, which also limits its emission reduction potential.
- **Infrastructure availability:** The availability of infrastructure in the region is a major concern for battery electric technologies. While some may argue that charging stations can be slowly built out, there is a broader concern of finding land to accommodate charging and parking for these trucks. Due to charging, these trucks will be relegated to "return to base" operations and charging lots will need to be built nearby. In this case, it would be in or near an AB 617 community. AB 617 communities have stated various concerns with congestion and parking for trucks and placing charging lots in or near the communities would exacerbate the situation.

8-3

While these limitations may be overcome in the future, it is unrealistic to think that they will be resolved within the five-year CERP window. These limitations, and others, currently prevent battery electric technologies from doing all the things that the existing diesel fleet can do, therefore limiting the reductions that can be achieved. Natural gas trucks that meet ARB's

<sup>1</sup> See [https://leginfo.ca.gov/faces/billTextClient.xhtml?bill\\_id=201720180AB617](https://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=201720180AB617)

Optional Low nitrogen oxides standard<sup>2</sup> (Low-NOx trucks) can achieve significant emission reductions and can operate just like its diesel counter parts. Low-NOx trucks have similar range, power, and fuel time. They have been thoroughly tested, are available today, and can truly be a one-to-one replacement for diesel trucks.

8-3  
Cont.

#### Emission Reduction Effectiveness

Low-NOx trucks are the most effective solution in reducing emissions from heavy duty trucking. If SCAQMD used \$100 million of \$107 million in AB 617 incentives for low-NOx trucks, the emissions impact between the number of battery electric trucks versus Low-NOx trucks would be staggering.

*What could \$100 million of incentives get?*

Technology	Incentive Amount	Number of Trucks
Battery Electric	*\$332,500 <sup>3</sup>	300
Low NOx	\$100,000 <sup>4</sup>	1,000

*\*not including the \$50,000 per charger needed, an additional \$15 million total*

As shown above, \$100 million of incentives would result in 300 battery electric trucks or 1,000 Low NOx Trucks. In scrappage programs, this would also result in removing 1,000 diesel trucks from disadvantaged communities when funding Low NOx Trucks, compared to just 300 when funding battery electric trucks.

8-4

Both zero-tailpipe technologies and alternative fuel technologies would eliminate diesel particulate matter. For NOx, if all units were deployed at the same time, 300 battery electric trucks would reduce NOx emissions by 738 tons over the five-year CERP life, while 1,000 Low NOx trucks deployed at the same time would reduce NOx emissions by 2,406 tons over the same period. The significant discrepancy in emission reductions is due to the large difference in the number of Low-NOx trucks that can be turned over with \$100 million and the limited range<sup>5</sup> of battery electric trucks which results in substantially more emission reductions for Low-NOx trucks. In addition to achieving more emission reductions, it is important to point out that investing incentives into Low-NOx Trucks also removes 700 more older trucks from public roads, which would otherwise continue to emit.

As shown below, the emission difference is substantial even though the same amount of incentives would be used in each scenario. To utilize incentives most effectively, SCAQMD

<sup>2</sup> 0.02 grams of NOx per brake horsepower hour

<sup>3</sup> Based on a \$350,000 truck and a 95% funding from the Carl Moyer Program

<sup>4</sup> Based on Prop 1B scrappage and comparable to current Carl Moyer Program

<sup>5</sup> Battery Electric annual mileage of 37,448 based on BYD T8 advertised range of 124 miles per day for 302 days per year), Low NOx truck annual mileage of 44,558 based on EMFAC 2014 T7POLA category.

must get as many clean trucks on the road as possible, remove as many dirty trucks as possible, and prioritize technologies that can be used in all applications.

NOx Emissions from 1,000 Trucks on the Road Today	
2,548 tons	
NOx Emission Reductions from Using \$100 million to replace with:	
Battery Electric (300 trucks)	738 tons
Low NOx (1,000 trucks)	2,406 tons
Remaining NOx emissions from Replacing Diesel Trucks	
Battery Electric (300 trucks)	1,721 (300 battery and 700 diesel trucks remain)
Low NOx (1,000 trucks)	53 (1,000 Low NOx and zero diesel trucks remain)

8-4  
Cont.

Page 5

## II. ENERGY EFFICIENCY TECHNOLOGY ADVANCEMENTS FOR AB 617 COMMUNITIES

Below are near-term technologies SoCalGas is working on that could improve energy efficiency in AB 617 communities and reduce the amount of fuel combusted for space and water heating.

### Gas-Fired Absorption Residential Heat Pump

SoCalGas has been working with Stone Mountain Technologies Inc. and the Gas technology Institute (GTI), to demonstrate a high-efficiency Gas-fired Absorption residential Heat Pump (GAHP) water heater with an Energy Factor >1.3, 11,000 Btu/hr output, and 60-80-gallon storage capacity. The GAHP is already certified by the SCAQMD and meets the 10 ng NOx/Joule regulation limit in Rule 1121. This would be a drop-in replacement for standard water heaters in existing homes.

8-5

### Residential Fuel Cell Units

SoCalGas has partnered with AQMD to demonstrate a Residential Fuel cell to be used in conjunction with solar arrays and battery storage. The solar and fuel cell will both have the ability to power the home directly while simultaneously charging the battery. The unit also has the ability to recover heat for water and/or space heating needs, which increases overall efficiency. This technology is widely used in Europe and can be an ideal solution for reducing emissions from combustion of natural gas for space and water heating in homes.

## III. Conclusion

SoCalGas appreciates your consideration of our comments. We look forward to working with staff and other stakeholders in future meetings. If you have any questions, please do not hesitate to contact me.

Sincerely,

Priscilla R. Hamilton  
Environmental Affairs Manager  
Southern California Gas Company

Cc:

JoKay Ghosh, Ph.D.  
Dan Garcia  
Dan McGivney  
Kevin Maggay  
Edith Moreno

Response to Comment Letter 8-1

The CERPs for all three Year 1 communities include actions to address emissions for neighborhood trucks. The CERP prioritizes zero-emission technologies, where commercially available and technologically feasible; and where zero-emissions technology are not available, equipment will be replaced with cleaner technology (i.e., near zero) through incentives to achieve much needed emission reductions sooner. While the South Coast AQMD is currently testing and evaluating a broad range of zero-emission capable heavy-duty trucks, including battery electric and fuel cell, the only commercially available technology is the near zero-emission (0.02 g/bhp-hr NO<sub>x</sub>) 9L and 12L engines for Class 7 and 8 trucks. Therefore, as is the case with all South Coast AQMD implemented incentive programs (e.g., Carl Moyer, Prop 1B), an emphasis on cost-effectiveness will continue to be placed to maximize the NO<sub>x</sub> emission reductions, providing local and regional air quality benefits. Scrapping requirements are an integral part of many incentive programs to ensure that the emission reductions are real and permanent.

Response to Comment Letter 8-2

Incentives focus on currently available technologies, such as the near zero-emission (0.02 g/bhp-hr NO<sub>x</sub>) 9L and 12L engines for Class 7 and 8 trucks. The CSCs have prioritized zero-emission technology, where commercially available and technologically feasible. Zero-emission technologies are not commercially available at this time for heavy-duty trucks. The development, demonstration, and commercialization of cleaner technologies helps to expedite cleaner technologies prioritized by the CSC. Current year AB 617 incentives will be used for available technologies. South Coast AQMD is funding and/or cost-sharing various zero-emission capable, heavy-duty truck projects to ascertain performance and needs to varying duty cycles, including range, charging time, and infrastructure availability. As demonstration projects with truck original equipment manufacturers (OEMs) are completed, including Daimler Trucks of North America and Volvo Trucks, OEMs plan to incorporate any necessary design changes and implement these into more robust commercial projects, expected to be available in small commercial scale in 2021. South Coast AQMD will consider providing incentives to these zero-emission trucks upon commercialization and meeting incentive guidelines.

Response to Comment Letter 8-3

The CERPs include actions to implement the technologies commercially available today and maximize the use of available incentive funds to ensure the greatest emission reductions. South Coast AQMD staff is working closely with CARB on lowering the heavy-duty engine standard in California and has petitioned the U.S. EPA to establish a near zero-emission NO<sub>x</sub> truck standard for the nation.

Response to Comment Letter 8-4

South Coast AQMD is uncertain as to the cost estimates included in the comment, or the basis for the posited incentive amounts, but as indicated in Responses to Comment 20-1 and 20-3, the CERPs include actions to implement the technologies commercially available today and maximize

the use of the available incentive funds to ensure the greatest emission reductions, using cost-effectiveness as one of the key criteria. For mobile source projects, the incentive funds are to be implemented consistent with Carl Moyer or Prop 1B guidelines.

Response to Comment Letter 8-5

Thank you for your comment on gas-fired absorption residential heat pumps and residential fuel cell units. AB 617 focuses on reducing emissions from the sources of pollution prioritized by the community. These air quality priorities include refineries, ports, neighborhood truck traffic, oil drilling and production, railyards, and exposure reduction at schools, childcare centers, and homes. South Coast AQMD appreciates SoCal Gas's effort to provide information on technology that improves energy efficiency.

## Appendix RTC-47

## Comment Letter #9

	<b>Community and Field Services Division</b> Metropolitan Los Angeles – SPA 4	<b>Submitted By</b> Cristin Mondy, Regional Health Officer-SPA 4 Tiffany Romo, Sr. Public Health Analyst
<b>Actions</b>	<b>Potential gaps</b>	<b>DPH recommendations to address gaps</b>
<u>Community Engagement</u>	CERP draft lacks a clear plan for ongoing community engagement during implementation of CERP actions.	DPH recommends providing a clear strategy and timeline for continuous community engagement during implementation. The plan states that the CSC will be engaged on a quarterly or bi-annual basis; however, how will updates and information be shared with the broader community? Are there expectations that the CSC members will disseminate information broadly to impacted communities? Additionally, a marketing strategy to inform the public about meetings and other outreach efforts should be created to promote awareness and increase community representation during outreach activities.
<u>Outreach Events</u>	Minimal outreach events planned	In Chapter 5, several outreach goals state there will be 2 outreach events conducted during a 2-year timeframe (2020-2022). DPH recommends that outreach efforts are expanded to at least 1 outreach event in each of the communities per year (minimum 3 outreaches per year). Leverage existing meetings or events to ensure information dissemination to all impacted communities.
<u>Community Steering Committee</u>	Frequently missing members	Based on our attendance at CSC meetings, several CSC primary or alternate members are not present. Approximately 15 members do not show based on unclaimed tent cards. DPH recommends improving CSC attendance by engaging with missing members to confirm their commitment and, if needed, recruiting new members. Also, reporting the number of CSC attendees and meeting minutes from each meeting in Table 2-2 for transparency and accountability purpose is important.

1

LACDPH CFS-SPA 4 AB617 CERP Review 8-8-19

### Response to Comment Letter 9-1

The implementation period for the CERP for the ELABHWC community spans over five years. Action 1 of Chapter 5g – Schools, Childcare Centers, Community Centers, Libraries, and Public Housing Projects includes goals to collaborate with community based organizations on how to reduce exposure for sensitive populations, and working with community based organizations to develop informational tools. Depending on input from CSC members, staff will work with collaborating organizations to conduct outreach and develop informational tools, such as infographics, flyers, trainings, or frequently asked question sheets.

During the implementation phase, South Coast AQMD staff will continue to convene the CSC on a regular basis. Quarterly meetings will commence beginning in January 2020 and the frequency may change to biannual at a later date. CSC members are strongly encouraged to share information and materials discussed at CSC meetings with their respective networks. However,

## Appendix RTC-48

East Los Angeles, Boyle Heights, West Commerce  
Draft Final

as noted above, staff will also work with other organizations to provide updates to the community as a whole.

Response to Comment Letter 9-2

Chapter 5g mentions two different types of outreach events (e.g. public outreach events, school-based programs), and staff will try to distribute these events across the three areas (Boyle Heights, East Los Angeles, West Commerce). Where resources allow, staff will conduct additional outreach in this community.

Response to Comment Letter 9-3

Staff will work to address challenges regarding CSC participation and attendance.

Comment Letter #10: Chris Chavez –Coalition for Clean Air

August 9, 2019

Dr. William Burke and Board Members  
South Coast Air Quality Management District (SCAQMD)  
21865 Copley Drive  
Diamond Bar, CA 91765

**Re: Comments on AB 617 Community Emission Reduction Plans (CERP) for the East Los Angeles/Boyle Heights/West Commerce (ELABHWC) Community**

Dear Chair Burke and the SCAQMD Board Members,

The Coalition for Clean Air (CCA) is writing to provide comments regarding the draft CERP for the ELABHWC community. Since its passage in 2017, CCA has been actively involved with the implementation of AB 617 (C. Garcia) at both the statewide and air district level. CCA staff has participated in most of the AB 617 meetings hosted by the California Air Resources Board (CARB) and SCAQMD. It's important to note we offer these comments not to speak for the local community or the Community Steering Committee (CSC), but rather to protect public health, improve air quality and prevent climate change. We hope SCAQMD uses this opportunity to begin righting decades of environmental injustice by committing to developing the strongest possible emissions reduction plan and empowering the local community.

- **The ELABHWC CERP still lacks a direct nexus to health outcomes. Reductions of toxic air contaminants from future rulemakings should be conveyed to the CSC.**

The various members of the CSC have been very clear in their request to see specific emission reduction targets that include a nexus with community health outcomes. Yet, the projected emissions reduction targets in the CERP continue to lack this nexus. The draft CERP anticipates incentive programs will result in a 40-50 tons per year (tpy) reduction of oxides of nitrogen (NOx – a criteria pollutant rather than a toxic air contaminant) and a .5-.6 tpy reduction in particulate matter (PM). The draft CERP does not include any projections regarding reductions in toxic air contaminants. While we recognize that diesel particulate matter (DPM) will be reduced along with other particulates, the specific DPM reduction is not quantified.

Appendix RTC-50

East Los Angeles, Boyle Heights, West Commerce  
Draft Final

Again, we point to the text of AB 617 and its mandate for emission reduction targets. Section 44391.2(c)(3) of the Health and Safety Code (HSC) states, “[T]he community emissions reduction programs shall be consistent with the state strategy and include emissions reduction targets, specific reduction measures, a schedule for the implementation of measures, and an enforcement plan.” While we understand that emissions reductions from future rulemakings are not available, we urge SCAQMD to include some toxic air contaminant emission reductions and a nexus to community health in the finalized CERP. Additionally, the final CERP should commit to informing the CSC of any future anticipated emissions reduction from the rulemaking process.

10-1  
Cont.

- **To the greatest extent possible, all proposed emission reductions should meet State Implementation Plan (SIP) creditable criteria (quantifiable, surplus, enforceable and permanent). However, emission reductions that don’t meet these criteria (e.g., working with local agencies to rectify bad land use decisions) should not be excluded.**

10-2

The emission reductions achieved by the CERP should be real, measurable, and verifiable. The closer they are to meeting the criteria for being SIP creditable, the more confidence the community will have in the effectiveness of the Community Air Protection program. “Paper” compliance threatens to undermine the effectiveness of the CERP and reduce the benefit to the local communities. At the same time, we recognize that not every important reduction measure lends themselves to meeting these criteria. Other opportunities which are not as easily measured but still have a positive community-level impact should not be ignored.

- **The ELABHWC CERP relies heavily on incentive funding and does not adequately assign responsibilities to polluters.**

As with the other draft CERPs, the ELABHWC CERP relies heavily on incentive funding to the possible detriment of more stringent rules and enforcement. While incentives should be included as part of the final CERP, other strategies need prioritization. For example, creating strong Indirect Source Rules (see pages 3 and 4), mandating on-site mitigation and requiring, rather than just incentivizing, zero-emissions warehouse and railyard equipment are clear examples where tighter rules will yield emissions reductions. Additionally, rules must be enforced in order to be effective. As such, SCAQMD should include tougher penalties as authorized by Section 9 of AB 617 along with greater enforcement efforts as part of its overall strategy.

10-3

Further, the lack of a specific implementing agency or firm deadlines undercuts the effectiveness of incentive programs. Regarding Action 2 of Neighborhood and freeway traffic (trucks and automobiles), “Reduce Emissions from Heavy-Duty Trucks,” SCAQMD has again failed to establish measurable goals for reducing emissions from trucks. The first goal states the following, “Organize [insert number] of incentive outreach events per year and provide biannual updates to the CSC.” SCAQMD should at least provide an anticipated number of outreach events it intends to conduct about incentive funding for trucks, instead of leaving this information blank for CSC members to fill in. At minimum (and considering the health impacts of trucks emissions and the necessity of meeting Clean Air Act goals for the South Coast Basin), SCAQMD should be providing at least monthly outreach events to trucking companies and truck drivers on incentive funding. Anything less would be irresponsible.

10-3  
Cont.

In addition to requiring greater enforcement, the draft CERP should assign requirements and responsibilities to the polluters themselves. In the draft CERP, all the major pollution sources are assigned few, if any, responsibilities. Considering these sources, which include railyards, autobody shops, metal plating facilities and rendering plants have long impacted the community’s health and quality of life, it is only right they share in the responsibility of implementation. As such, the ELABHWC CERP should, as appropriate, assign responsibilities to the other emissions sources identified in the CERP.

- **Clarity over the implementation of Best Available Retrofit Control Technology (BARCT) requirements is needed, especially considering the heavy industrial presence in the region.**

While the ELABHWC draft CERP references several current and future rules and amendments, the document does not specifically reference BARCT. This omission is problematic, given the large number of industrial sources in the region. The community would benefit greatly from knowing what BARCT is and how it's being implemented in the ELABHWC community. As a result, BARCT should be specifically referenced in the final CERP, along with a description of how it’s being implemented in all covered industrial sources. Lastly, BARCT requirements should be implemented according to the 2022 timeframe identified by SCAQMD and no later than the 2023 deadline created by Health and Safety Code §40920.6(c)(1).

10-4

- **The CERP needs to commit to a strong Indirect Source Rule (ISR) for railyards, warehouses and other pollution magnets.**

Though the CSC prioritized freeway traffic, a major contributor to the ELABHWC community's air pollution challenges are warehouses and facilities that attract trucks. Similarly, the railyards have brought in pollution from trains and cargo handling equipment for decades. As such, the finalized CERP should commit SCAQMD to developing a strong ISR to address these pollution magnets. While we applaud SCAQMD for including the development of a railyard ISR within the CERP, the CERP should go into greater detail as to what the rules would look like. This includes requiring on-site mitigation, near-zero and zero-emissions cargo handling equipment, plug-in technology and other emissions reduction and exposure-reduction strategies, as well as firm deadlines.

10-5

- **More information on current efforts to reduce emissions from railyards is needed, and railroads still need responsibilities assigned to them.**

The draft CERP still does not provide any information regarding the railyards' compliance with the second agreement in 2005 between CARB, BNSF and Union Pacific. This information should be provided to the CSC and a summary of what the railroads have done to comply with the second rule should be included in the CERP.

Further, there are still NO responsibilities assigned to the railroads themselves. Once the indirect source requirements are implemented, the railroads should have the responsibility of complying with the indirect source requirements themselves. Regarding Action 1 of Railyards, "Reduce Emissions from Railyards," and as stated in our prior comments, it makes no sense that the railroads themselves are not listed as one of the "Implementing Agency, Organization, Business or Other Entity" that will work to reduce emissions from railyards. Surely it cannot be beyond the power of SCAQMD to mention that BNSF and Union Pacific will have to be involved in any action or policy taken to reduce emissions at their associated railyards. The railroads are certainly aware that the CERP is being developed and that this goal is being included. Referencing the railroads themselves in the CERP as an implementing business entity is essential for this goal to be finalized.

10-6

We appreciate the opportunity to submit these comments for your consideration. CCA acknowledges and commends the thousands of staff-hours put into the implementation of AB 617, and understands this is a living, evolving process and document. However, the draft ELABHWC CERP still needs much work and strengthening if it is going to live up to the promise of bringing cleaner, healthier air to California's most polluted, vulnerable communities.

10-7

Sincerely,

Christopher Chavez  
Deputy Policy Director

#### Response to Comment Letter 10-1

Additional emission reduction targets have been identified and incorporated, where quantifiable, into Chapter 5a. These emission reduction targets are based upon historical incentive data and certain CARB regulations. In addition, mobile source incentive projects that replace older, higher polluting diesel trucks and equipment with cleaner technology will also reduce diesel PM emissions in the community. These emission reductions are quantified in Chapter 5g and also presented below.

Some actions in the CERP will result in emissions reductions that are not currently quantifiable. For example, Chapter 5d – Metal Processing Facilities, includes an action that would reduce toxic metal emissions. Emission reductions from fugitive emissions cannot be estimated until monitoring and other actions occur to identify potential emissions. Some rules and regulations require the rule development process to occur before emissions reductions can be quantified.

South Coast AQMD is working with CARB to address emissions from mobile sources. CARB has committed to considering amendments to their rules and regulations within the CERP to address the air quality priorities in this community, specifically heavy-duty trucks which is a main contributor of DPM. CARB has quantified emissions reduction targets, where available, for certain rules and regulations. The emissions reduction targets quantified to date are specified in the table below:

Table 5a-1: List of CARB emissions reduction targets (tons per year) by 2029 associated with CARB rule development pertaining to this community’s CERP priorities. Emission reductions reflect only those emissions estimated to originate within this community.

<b>Rules and Regulations (CARB)</b>	<b>PM2.5</b>	<b>Diesel PM</b>	<b>NOx</b>	<b>VOC</b>
Advanced Clean Car 2	0.05	0.002	2.6	0.8

<b>Rules and Regulations (CARB)</b>	<b>PM2.5</b>	<b>Diesel PM</b>	<b>NOx</b>	<b>VOC</b>
Advanced Clean Truck	0.2	0.02	8	N/A
Heavy Duty-Inspection and Maintenance	0.8	0.8	123	N/A
Low NOx Engine Standard	N/A	N/A	198	N/A

#### Response to Comment Letter 10-2

South Coast AQMD staff continues to pursue a suite of actions, including some that meet SIP creditable criteria, and some that do not meet these criteria but are equally important to reducing emissions in the community. All these actions have been carefully drafted to maximize emission reductions and to address the CSC's air quality priorities.

#### Response to Comment Letter 10-3

All actions written in the CERP will be implemented to ensure that all air quality priorities are addressed. In addition to incentives and outreach, the CERP uses a combination of strategies to address the air quality priorities and reduce emissions, such as monitoring, enforcement, and regulation. Incentives are only provided to projects that would reduce emissions above and beyond current rules and regulations. The ISR for railyards is still undergoing the rule development process. While these efforts are ongoing, incentives for equipment that go above and beyond current rules and regulations will achieve much needed emission reductions sooner for this community. Actions will be prioritized, and updates will be provided to the CSC periodically on the implementation process of all actions included in the CERP. Timelines for each action are specified in the implementation schedule (Chapter 5i).

The incentive outreach event specified in the CERP is in addition to the other ongoing incentive outreach efforts conducted by the South Coast AQMD. The CERP specifies that South Coast AQMD will conduct two incentive outreach events per year. Staff will strategically conduct outreach events when the incentive program is accepting applications. Also by allowing reevaluation of these efforts, the CERP process provides the community additional opportunity for input and built-in flexibility on how outreach for incentives can be the most effective.

Until a railroad ISR or FBMSM is developed, BNSF has been listed in the implementing agency portion of Chapter 5c, Action 1 to continue participation in FBMSM working group meetings.

#### Response to Comment Letter 10-4

As an ongoing effort, South Coast AQMD is currently discontinuing the Regional Clean Air Incentives Market (RECLAIM) program, because the ability to achieve NOx emission reductions using a market-based approach has diminished. These RECLAIM NOx facilities, typically larger facilities, will transition to a command-and-control regulatory structure to ensure these facilities meet BARCT. As a part of this effort an analysis of the equipment at each RECLAIM facility is being

conducted and is giving priority to older, higher polluting equipment that need to install retrofit controls. Appendix 3a identifies nine RECLAIM facility in the East Los Angeles, Boyle Heights, West Commerce community. As part of the BARCT process, the following South Coast AQMD Rules will be evaluated or have been evaluated: 1109.1, 1110.2, 1117, 1118.1, 1134, 1135, 1146, 1146.1, 1146.2, 1147, 1147.1, and 1147.2. The BARCT assessment is still currently being conducted for a number of rules and the list of affected non-RECLAIM facilities has not been finalized.

#### Response to Comment Letter 10-5

South Coast AQMD will continue to develop the ISRs in parallel to the AB 617 efforts and provide updates to the CSC on the rule making process. Details of ISR requirements needs to be determined by the rule development process so that all stakeholders can participate. Proposed rule concepts and input provided by the CSC during the development of the CERP will be considered. Staff encourages CSC members to actively participate in the South Coast AQMD rule development process for ISR. All proposed rule concepts must fall within South Coast AQMD's legal authority.

#### Response to Comment Letter 10-6

One of the strategies South Coast AQMD is evaluating to reduce emissions from railyards is through Indirect Source Rules (ISR). The development of ISRs was initially intended to address regional air pollution, specifically nitrogen oxides (NOx) emission reductions, and to attain the National Ambient Air Quality Standards as required by the Clean Air Act. However, the CSC has made it clear that an ISR must also focus on reducing localized impacts.

South Coast AQMD staff has recently received an updated emissions inventory for the Hobart, Sheila Mechanical, and Commerce Eastern Railyards that BNSF has voluntarily prepared. This information will show key changes and emission reductions that have occurred since the 2005 agreement between CARB and BNSF. In addition, BNSF indicated in their presentation that a number of emission sources have lower emissions than they did for the 2005 inventory prepared for CARB. The slide showed that, as of 2017, diesel PM emissions have been reduced by 23% from freight locomotives and 90% from non-locomotive equipment since 2005. Staff will work with BNSF to review the data and will provide updates to the community in the coming months.

Staff acknowledges that BNSF plays a key role in reducing emissions within the East Los Angeles, Boyle Heights, West Commerce community. BNSF has been added to the Implementing Agency, Organization, Business or Other Entity to reflect the following responsibilities:

- Provide updates on emission reduction activities that take place within the BNSF railyard
- Work with South Coast AQMD to replace old locomotives through incentive programs

#### Response to Comment Letter 10-7

Staff appreciates CCA's comments on the East Los Angeles, Boyle Heights, West Commerce CERP.

Comment Letter #11: Janet Whittick – California Council for Environmental and Economic Balance (CCEEB)

## Comment Letter #11

**California Council for Environmental and Economic Balance**

101 Mission Street, Suite 805, San Francisco, California 94105

Dr. Philip Fine, Deputy Executive Officer  
Dr. Jo Kay Ghosh, Health Effects Officer  
South Coast Air Quality Management District  
Submitted Electronically to <https://onbase-pub.aqmd.gov>

RE: AB 617 Draft Community Emissions Reduction Plans and  
Community Air Monitoring Plans

Dear Drs. Fine and Ghosh,

On behalf of the members of the California Council for Environmental and Economic Balance (CCEEB), we appreciate the opportunity to submit comments on the South Coast Air Quality Management District (SCAQMD or "District") draft community emissions reduction plans (CERPs) and draft community air monitoring plans (CAMPs). The SCAQMD has been a leader in developing AB 617 programs and policies, and its work in the communities of Wilmington-Long Beach-Carson, Boyle Heights-East Los Angeles-West Commerce, and San Bernardino-Muscoy serves as a model statewide for achieving targeted and effective emissions and exposure reductions in overly burdened communities. CCEEB members operate in each of these three "first-year" communities, and many are active in the District's Community Steering Committee (CSC) process, as well as related activities and proceedings at the District related to AB 617 implementation.

Individual CCEEB members have been engaging with the District and other community members at the community-level, offering perspective and expertise as part of the plan development process. CCEEB has been engaging on a broader level, through its participation in the SCAQMD AB 617 Technical Advisory Group and the Air Resources Board (ARB) AB 617 Consultation Group. Our comments reflect this broader perspective, but are based on consultation with and feedback from our membership. Our intent is to help support successful program development, both in the three "first-year" communities as well as looking forward to the continued and expanded implementation of AB 617 in future communities.

Our main point is as follows:

Appendix RTC-57

East Los Angeles, Boyle Heights, West Commerce  
Draft Final

- **Emission reduction actions should be based on technical review of those sources that contribute most to community-level exposures.** However, detailed community inventories and data on source apportionment have not yet been released, and only a high-level discussion of community impacts has occurred at community meetings. CCEEB believes the draft plans should be re-evaluated by the District and community stakeholders as more detailed and localized emissions data becomes publicly available.

AB 617 specifies that the statewide strategy to reduce criteria pollutant and toxic air contaminant emissions must include assessment of sources or source categories contributing to high cumulative exposure burdens, including the relative contribution of each source. AB 617 further specifies that air district community emissions reduction plans (CERPs) must be consistent with the statewide strategy. Yet draft actions have been developed *ahead of* the requisite technical analysis, putting the proverbial cart before the horse. For example, the Source Attribution section of the Community Profiles for Wilmington-Long Beach-Carson and San Bernardino-Muscoy will not be ready until after comments have been received on the draft CERPs. Moreover, localized air monitoring data, meant to measure and validate sources of concern to local communities, will not be available until a much later date and are not available to help establish baseline conditions or set reduction targets.

11-1

CCEEB acknowledges that much of the timing problem lies outside staff control given the accelerated implementation schedule set by the Legislature, as well as work that must be done by ARB to develop the on-road and off-road mobile inventories. However, the lack of technical background creates process concerns that will need to be addressed as new information becomes available. For example, in the Wilmington-Long Beach-Carson CERP, two of three refinery actions focus on flaring, yet no analysis has been done to show the degree to which flaring contributes to overall pollutant concentrations or that it even poses significant health risks. As such, it is difficult to evaluate whether these actions should be priorities as compared to other sources or actions, both refinery and non-refinery.

While high-level data has been presented to the CSCs, it has not been granular enough to indicate clear areas of focus. As such, identified concerns have been based on anecdotal experience and perceptions, without scientific validation. Moreover, a narrow focus in the plans on limited District authority omits a much needed discussion of how the SCAQMD, communities, and ARB can and should be partnering on strategies that tackle mobile source impacts, including diesel particulate matter. For example, while staff recognizes risks from on-road and off-road mobile sources under ARB authority, it has not yet specified the relative risk from different source types.

CCEEB recommends that the draft CERPs be revisited once technical data is available, and urges staff to provide scientific evidence validating community concerns and justifying recommended actions. CCEEB also recommends that the District and

community stakeholders engage ARB so that it is demonstrably responsible for community sources under its authority, as specified in the Health and Safety Code Section 44391.2(c)(6).

11-1  
Cont.

In addition to our main point about the technical analysis needed to support the CERPs, we offer these additional recommendations on other areas of the CERPs and CAMPs.

- SCAQMD air monitoring programs are robust and seem to be well aligned with the data collection needs of AB 617 communities.** CCEEB appreciates the tremendous amount of advance work that has been done to secure appropriate instrumentation and expertise, both in-house and through outside contractors. Moving forward, it will be important that the District work with all stakeholders to ensure that data collection, data interpretation, and communication of results will be clear, transparent, and understandable to public users. Context is key. CCEEB believes that the three Community Steering Committees and the AB 617 TAG can assist with this work and provide valuable insight to District staff. Additionally, the District will need to establish how different types of monitoring data can be used for different purposes, e.g., mobile monitoring such as FluxSense can be valuable as a screening tool, but most often more precise measurements are needed as a basis for regulatory actions.
- Effective program metrics are important, yet will be a challenge to develop, track and quantify.** CCEEB believes program success should be measured based on sound data directly related to emissions and exposure reductions, to the extent feasible, while recognizing that some actions will take time to achieve desired results. Thus, it is important for the District to establish realistic timeframes, working with community members to set expectations.
- Incentives and grants will play a major role in reducing emissions and exposures in AB 617 communities.** The CERPs should include a discussion of what funds have been allocated to date, how investments will achieve quantifiable results and community benefits, and what more needs to be done, particularly how groups can help support sustained funding efforts.

11-2

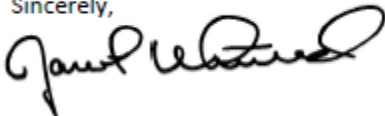

11-3

11-4

In closing, CCEEB wants to recognize the full spectrum of AB 617 activity at the District, much of which lies outside the community plans. This includes but is not limited to work to accelerate implementation of best available retrofit control technology (BARCT), the parallel process to sunset the Regional Clean Air Incentives Market, advocacy at the Legislature and with the Governor's Office to secure nearly \$700 million in incentive funding statewide for AB 617 communities, and substantial technical assistance to ARB and other agencies on issues such as emissions reporting, air monitoring, deployment of low-cost sensors, and development of scientifically sound community inventories based on monitoring and modeling data. While our comments here are specific to the first-year community draft plans, we want to express our appreciation for the totality of

SCAQMD work implementing AB 617 and for its leadership statewide in advancing effective solutions that reduce community exposures and air pollution burden. Across all these efforts, CCEEB commits to continuing our support of the District in its implementation of the landmark AB 617 legislation.

Sincerely,

Janet Whittick  
CCEEB Policy Director

cc: Ms. Karen Magliano, Director of the Office of Community Air Protection, ARB  
Ms. Frances Keeler, CCEEB Vice President and South Coast Air Project Manager  
Mr. Bill Quinn, CCEEB President  
Members of the CCEEB South Coast Air Project

#### Response to Comment Letter 11-1

Chapter 3b – Source Attribution Analysis for the ELABHWC CERP was released July 12, 2019. The analysis supports the need for the actions in the Draft Final CERP that address sources prioritized (e.g., neighborhood and freeway traffic from trucks and automobiles and metal processing facilities) by the CSC.

#### Response to Comment Letter 11-2

The South Coast AQMD staff will continue efforts to work with all stakeholders to ensure that data collection, data interpretation, and communication of results are clear, transparent, and understandable to public users. The South Coast AQMD has launched its AB 617 Community Air Monitoring website and its Data Display tool featuring air quality data reporting from selected fixed community air monitoring stations. The primary goal of this tool is to share preliminary continuous monitoring data in near real time and finalized results of laboratory analyses and mobile platform survey monitoring.

South Coast AQMD staff presented initial results from air monitoring conducted for the AB 617 CAMPs at the CSC meeting held on August 22, 2019. Several actions in the CERP include a commitment from staff to continue to provide similar updates. For example, Action 1 of Chapter 5g, includes a commitment from South Coast AQMD staff to provide CSC members quarterly or biannual updates on efforts for air monitoring beginning the third quarter of 2020.

Response to Comment Letter 11-3

The Draft Final CERP includes emission reduction goals and a course of action (i.e., step by step measures) with an estimated timeline. For example, the Draft Final CERP includes a goal to truck idling. This overall emission reduction goal is supported by four different actions to reduce emissions from idling trucks. The actions include step by step measures to address truck emissions, timelines and an estimate of emission reductions that contribute to the overall emission reduction goals for the Draft Final CERP. The South Coast AQMD staff will update the CSC on emission reduction progress.

Response to Comment Letter 11-4

Approximately \$101 million were allocated to projects in the South Coast Air basin that were funded by AB 134, of which 89% were located in disadvantaged and low-income communities. Of the total allocation \$319,622 was awarded to emission reduction projects located in the East Los Angeles, Boyle Heights, West Commerce community. Also, \$21,925,447 was awarded to emission reduction projects located in the San Bernardino, Muscoy community and \$9,036,563 to the Wilmington, Carson, West Long Beach community. Clean off-road equipment and near-zero emission trucks are two examples of the kinds of projects that the allocation funded.

The emission reduction targets in Chapter 5a for mobile source incentives are based on mobile source projects that have historically been incentivized in the Year 1 communities. Based on this information the estimated emission reductions for mobile source incentive projects in the Year 1 communities are between 40 and 50 tpy of NOx and 0.5 to 0.6 tpy of DPM emissions. The CERPs include actions to work with other entities to identify new funding opportunities.

**ATTACHMENT D**  
**RESOLUTION NO. 19 \_\_\_\_\_**

**A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) determining that the Community Emissions Reduction Plan for the East Los Angeles, Boyle Heights, West Commerce community (ELABHWC CERP) is exempt from the requirements of the California Environmental Quality Act (CEQA).**

**A Resolution of the South Coast AQMD Governing Board Adopting the Community Emissions Reduction Plan for the East Los Angeles, Boyle Heights, West Commerce community.**

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the ELABHWC CERP is considered a “project” pursuant to CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and

**WHEREAS**, the South Coast AQMD has had its regulatory program certified pursuant to Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l), and has conducted a CEQA review and analysis of the proposed project pursuant to such program (South Coast AQMD Rule 110); and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines after conducting a review of the proposed project in accordance with CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA, and CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA, that the proposed project is determined to be exempt from CEQA; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that it can be seen with certainty that there is no possibility that the proposed project may have any significant effects on the environment, and is therefore, exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, because the proposed project is designed to further protect or enhance the environment; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project contains action items which qualify as feasibility or planning studies which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project may result in some minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections; and

**WHEREAS**, the South Coast AQMD Governing Board finds and determines that the proposed project relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies; and

**WHEREAS**, the South Coast AQMD Governing Board has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions; and

**WHEREAS**, the South Coast AQMD staff has prepared a Notice of Exemption for the proposed project that is completed in compliance with CEQA Guidelines Section 15062 – Notice of Exemption; and

**WHEREAS**, the ELABHWC CERP, and other supporting documentation, were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the project; and

**WHEREAS**, Assembly Bill (AB) 617 directs the California Air Resources Board (CARB) to select locations around the state for preparation of

community emissions reduction programs; and

**WHEREAS**, in 2018, the South Coast AQMD Governing Board recommended communities to CARB for the AB 617 program; and

**WHEREAS**, in 2018, CARB selected the community of East Los Angeles, Boyle Heights, West Commerce as one of the communities for which a Community Emissions Reduction Plan shall be prepared; and

**WHEREAS**, the AB 617 statute specifies that the air district must adopt the Community Emissions Reduction Plan within one year of the state board's selection of the community; and

**WHEREAS**, the ELABHWC CERP is a planning document designed to assist future regulatory programs and rule development efforts, and to reduce emissions of and exposure to air toxics and other pollutants; and

**WHEREAS**, the ELABHWC CERP is required by AB 617 and it builds upon existing criteria pollutant and air toxic programs, with greater emphasis on cumulative and localized impacts, and

**WHEREAS**, although the results of MATES IV show regional reductions in health risk from exposure to toxic air contaminants, some communities such as East Los Angeles, Boyle Heights, West Commerce are disproportionately impacted by air toxics, and other environmental pollution, as well as social and economic burdens; and

**WHEREAS**, the East Los Angeles, Boyle Heights, West Commerce Community Steering Committee has worked with staff to develop the Community Emissions Reduction Plan to reflect the community's air quality priorities and strategies to address these priorities; and

**WHEREAS**, the Community Emissions Reduction Plan aims to reduce air toxics and other pollutants in the East Los Angeles, Boyle Heights, West Commerce community.

**NOW, THEREFORE BE IT RESOLVED**, that the South Coast AQMD Governing Board does hereby determine, pursuant to the authority granted by law, that the ELABHWC CERP is exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, the ELABHWC CERP contains action items which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies. The proposed project contains action items that are also categorically exempt from CEQA pursuant to, CEQA Guidelines

Section 15303 – New Construction or Conversion of Small Structures, CEQA Guidelines Section 15306 – Information Collection, CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, CEQA Guidelines Section 15309 – Inspections, and CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies. No exceptions to the application of the categorical exemptions set forth in CEQA Guidelines Section 15300.2 – Exceptions, apply to the proposed project. This information was presented to the South Coast AQMD Governing Board, whose members reviewed, considered and approved the information therein prior to acting on the proposed project; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing finds that the ELABHWC CERP meets the requirements of AB 617 and will advance the mission of cleaning the air at a community scale in the East Los Angeles, Boyle Heights, West Commerce community and will provide emission reduction co-benefits toward achieving state and national air quality standards; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing Board does hereby approve the ELABHWC CERP; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing Board directs staff to periodically report to the Stationary Source Committee on the implementation of the ELABHWC CERP, including updates on the actions within the plan and the emissions reductions achieved; and

**BE IT FURTHER RESOLVED**, that the South Coast AQMD Governing Board authorizes staff to make any necessary, non-substantive edits which do not have any material impact on the environment to the ELABHWC CERP prior to submission to CARB for approval; and

**BE IT RESOLVED**, that the South Coast AQMD Governing Board adopts the ELABHWC CERP, dated September 2019.

Denise Garzaro, Clerk of the Boards

## NOTICE OF EXEMPTION FROM THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

---

**To:** County Clerks  
Counties of Los Angeles, Orange,  
Riverside, and San Bernardino

**From:** South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

---

**Project Title:** Community Emissions Reduction Plan for the East Los Angeles, Boyle Heights, and West Commerce Community per Assembly Bill 617

---

**Project Location:** The project is located at the following community within the South Coast Air Quality Management District (South Coast AQMD) jurisdiction: the unincorporated area of East Los Angeles within the County of Los Angeles, the Boyle Heights neighborhood of the City of Los Angeles, and the neighborhood of West Commerce within the City of Commerce referred to herein as East Los Angeles, Boyle Heights, and West Commerce (ELABHWC) in Los Angeles County.

---

**Description of Nature, Purpose, and Beneficiaries of Project:** In accordance with Assembly Bill (AB) 617, which was signed into state law in 2017, and the California Air Resources Board's (CARB) Community Air Protection Program which implements AB 617, the South Coast AQMD is required to take specific actions to reduce air pollution and toxic air contaminants from commercial and industrial sources to address the disproportionate impacts of air pollution in environmental justice communities. Implementation of the specific actions is expected to occur over several years, and AB 617 specifies that the highest priority areas shall be disadvantaged communities with a high cumulative exposure burden for criteria pollutants and toxic air contaminants. After conducting extensive public outreach and data analysis, South Coast AQMD staff identified ELABHWC as one of three communities qualifying as a high priority area for implementation where the first efforts to implement community monitoring and emission reduction plans pursuant to AB 617 will occur. The purpose of this project is to implement a Community Emissions Reduction Plan (CERP) for the ELABHWC community per AB 617. The beneficiary of the project is the identified community and the nearby areas, but the entire region within South Coast AQMD's jurisdiction will also benefit. The CERP contains the following action items which have been tailored for the ELABHWC community's identified air quality concerns as they relate to:

Truck and Automobile Traffic (including trucks from railyards and warehouses): 1) conduct idling enforcement sweeps with CARB; 2) partner with the City of the Los Angeles, the County of Los Angeles, and the City of Commerce on land use planning issues and restrictive truck routes; 3) collaborate with the appropriate agency on restrictive truck routes and improvements to complaint and response systems; 4) expand truck traffic outreach efforts (e.g., fairs and workshops) to distribute incentive information to equipment owners; and 5) partner with CARB to identify older trucks in community as targets for incentives.

Rail: 1) continue the ongoing development of Facility-Based Mobile Source Measures (e.g., Indirect Source Rule) for rail; 2) support CARB's petition to the U.S. EPA for new national locomotive emission standards; and 3) incentivize the replacement of older diesel equipment (e.g., locomotives).

Metal Processing: 1) conduct outreach and educating workers and small businesses on best management practices and South Coast AQMD rules applicable to metal processing facilities; 2) collaborate with the City of Los Angeles on permit cross-checks for metal finishing facilities; 3) conduct No Fault inspections and outreach to businesses on best management practices at metal processing facilities; and 4) conduct mobile monitoring at metal processing facilities to determine where stationary monitoring or where enforcement follow-up may be needed.

Rendering Facilities: 1) conduct outreach on existing rules and the 1-800-CUT-SMOG program for rendering facilities; and 2) conduct enforcement follow-up, where needed at rendering facilities.

Auto Body Shops: 1) conduct No Fault inspections and outreach to businesses on best management practices and available low Volatile Organic Compound (VOC) or zero-VOC coatings or solvents for use by auto body shops; and 2) collaborate with the City of Los Angeles on permit cross-checks for auto body shops.

Schools/Hospitals/Parks/Community Centers: 1) install school air filtration systems and providing training on proper filter use; 2) install residential air filtration systems and providing training on proper use; and 3) collaborate with the Los Angeles County Department of Public Health and AltaMed on air quality advisories and/or asthma related programs.

---

**Public Agency Approving Project:**  
South Coast Air Quality Management District

**Agency Carrying Out Project:**  
South Coast Air Quality Management District

**Exempt Status:**

CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption  
 CEQA Guidelines Section 15262 – Feasibility and Planning Studies  
 CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures  
 CEQA Guidelines Section 15306 – Information Collection  
 CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment  
 CEQA Guidelines Section 15309 – Inspections  
 CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies

**Reasons why project is exempt:** In accordance with the California Environmental Quality Act (CEQA), South Coast AQMD staff has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. Because the physical changes that may occur as a result of implementing portions of the proposed project would only require minimal construction activities and cause negligible physical impacts, South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that any physical actions that may be associated with the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, because the overall purpose of this project is to improve the environment of the ELABHWC community and nearby areas, and all of the action items within the ELABHWC CERP support this goal, the action items are also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment.

The ELABHWC CERP contains an element that qualifies as a feasibility and planning study, because the collection of information is needed in order to make an informed decision about whether to take further action (e.g., future rule development). However, the portion of the ELABHWC CERP that qualifies as a feasibility and planning study does not prescribe or commit to specific details about the future actions that may occur, nor have the future actions been approved or adopted in advance, because they require an open public process. Specifically, after the portion that qualifies as a feasibility or planning study is completed, and if it results in a decision to go forward with future rule development, the regulated community, stakeholders, interested parties, and the public will be invited to participate in the rule development process in a public forum. For these reasons, the following action item for the ELABHWC CERP is statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies:

- Continuing the ongoing development of Facility-Based Mobile Source Measures (e.g., Indirect Source Rule) for rail.

The following action items within the ELABHWC CERP involve minor physical modifications to existing structures or buildings which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures:

- Installing school air filtration systems; and
- Installing residential air filtration systems.

The following action items within the ELABHWC CERP involve information collection activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection:

- Collaborating with appropriate agency to identify potential restrictive truck routes and improvements to complaint and response systems;
- Partnering with CARB to identify older trucks in community as targets for incentives;
- Collaborating with the City of Los Angeles to gather information for permit cross-checks at metal finishing facilities;
- Conducting mobile monitoring at metal processing facilities to determine where stationary monitoring or where enforcement follow-up may be needed;

- Conducting No Fault inspections and outreach to businesses on best management practices and available low VOC or zero-VOC coatings or solvents at auto body shops;
- Collaborating with the City of Los Angeles to gather information for permit cross-checks for auto body shops; and
- Collaborating with Los Angeles County Department of Public Health and AltaMed to obtain and distribute information on air quality advisories and/or asthma related programs.

The following action items within the ELABHWC CERP involve inspection activities that check for performance or compliance are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections:

- Conducting idling enforcement sweeps with CARB;
- Conducting No Fault inspections and outreach to businesses on best management practices at metal processing facilities;
- Conducting mobile monitoring at metal processing facilities to determine where stationary monitoring or where enforcement follow-up may be needed;
- Conducting No Fault inspections and outreach to businesses on best management practices and available low VOC or zero-VOC coatings or solvents at auto body shops; and
- Collaborating with the City of Los Angeles on permit cross-checks for auto body shops.

The following action items within the ELABHWC CERP involve enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies:

- Conducting idling enforcement sweeps with CARB;
- Collaborating with the City of Los Angeles on permit cross-checks at metal finishing facilities;
- Conducting mobile monitoring at metal processing facilities to determine where stationary monitoring or where enforcement follow-up may be needed; and
- Collaborating with the City of Los Angeles on permit cross-checks for auto body shops all potentially involve enforcement of South Coast AQMD regulations or regulations by other agencies such as CARB.

Further, South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, the proposed project is exempt from CEQA.

# AB 617 Community Emissions Reduction Plan for East Los Angeles, Boyle Heights, West Commerce

---

GOVERNING BOARD MEETING

SEPTEMBER 6, 2019

# AB 617 Year 1 Communities

## September 2018, CARB designated:

- San Bernardino, Muscoy
- East Los Angeles, Boyle Heights, West Commerce
- Wilmington, Carson, West Long Beach

## Extensive Community Engagement:

- 3 Community Steering Committees (CSCs)
- 27 CSC meetings
- 60 + individual meetings
- 2 community bus tours
- 3 Technical Advisory Group meetings
- 6 community workshops

# Community Steering Committee

- ❖ Community cohosts
- ❖ Committee member presentations
- ❖ Community testimonials

# Community-Driven Efforts to Develop the CERPs

## CERP Development

AQ  
Priorities

Strategies,  
Metrics

Actions,  
Steps

## CERP Actions

- 49 actions (approx. 160 steps) across the 3 CERPs
- 28 are emission reduction actions
- Each action includes:
  - Suite of strategies
  - Steps
  - Timeline/milestones
  - Metrics to track progress
  - Collaborating entities

- Plans are flexible to adapt to new information

# New Efforts and Approaches in the CERPs

## Rules and Regulations

- 7 new South Coast AQMD rule efforts
- 8 regulations to be considered by CARB
- Increased engagement and ISR efforts (e.g. Working Group meetings in communities)

## Collaboration

- Community-led monitoring
- Agency collaborations on permit cross-checks, trucking regulations, public communication

## Enforcement

- Focus on areas identified by the communities
- Improved communication for complaint response

## Public Information and Outreach

- Small business outreach to increase compliance
- School-based programs

## Incentives

- Focused efforts to generate incentive proposals in these communities
- Use technology to identify older trucks for incentive programs (e.g. ALPR)

## Air Monitoring

- Advanced monitoring technologies to provide new, purposeful data
- Data will inform compliance efforts and provide public information

# Air Quality Priorities

## East Los Angeles, Boyle Heights, West Commerce Community

**Neighborhood and Freeway Truck and Automobile Traffic**

**Railyards**

**Metal Processing Facilities**

**Rendering Facilities**

**Auto Body Shops**

**Schools, Childcare Centers, Community Centers, Libraries and Public Housing Projects**

**General Industrial Facilities, etc.**

# Actions to Reduce Mobile Source Emissions

## East Los Angeles, Boyle Heights, West Commerce Community

**Neighborhood and Freeway Truck and Automobile Traffic**

- Truck idling sweeps & inspections
- Incentives & outreach for cleaner heavy-duty trucks
- Collaborate with cities and county on truck routes and enforcement
- Rule development: CARB Advanced Clean Car 2, Advanced Clean Truck, Heavy-Duty Low NOx, Heavy-Duty Vehicle Inspection & Maintenance

**Railyards**

- Work with CARB to develop new requirements to reduce railyard emissions
- Incentives for cleaner equipment
- Rule development: Railyard ISR

# Mobile Source Emission Reduction Targets

## East Los Angeles, Boyle Heights, West Commerce

Mobile Source Measure	Timeline	Regulatory Entity	Emission Reductions Targets (tpy) by 2029	
			NOx	DPM
Advanced Clean Car 2 Rule	2020-2021	CARB	2.6	<1
Heavy-Duty Vehicle Inspection and Maintenance Rule	2020	CARB	123	<1
Advanced Clean Trucks Rule	2019	CARB	8.1	<1
Heavy-Duty Low NOx Rule	2020	CARB	198	N/A
Mobile Source Incentives resulting from the CERP Actions	2020	South Coast AQMD	40-50	0.5-0.6

Timeline based on first CARB Board hearing dates for each measure or beginning of implementation for mobile source incentives

tpy = Tons per year

# Mobile Source Emission Reduction Targets

## East Los Angeles, Boyle Heights, West Commerce

BASELINE DPM EMISSIONS

WITH CERP (SOUTH COAST AQMD AND CARB ACTIONS)

**CERP Reductions in 2024 and 2029:**

# Actions to Reduce Stationary Source Emissions

## East Los Angeles, Boyle Heights, West Commerce Community

**Metal Processing  
Facilities**

**Rendering  
Facilities**

**Auto Body  
Shops**

**General Industrial  
Facilities, etc.**

- Mobile air measurements, follow-up inspections
- Outreach and training for local business owners

- Mobile air measurements, follow-up inspections
- Community training on air quality complaints

- Small Business Assistance Program outreach
- Work with fire departments to inspect auto body shops
- Mobile air measurements, follow-up inspections

- Community training on air quality complaints
- Collaborate with land use agencies on permit cross-checks and enhanced permit requirements

# Actions to Reduce Exposure and Provide Public Information

## East Los Angeles, Boyle Heights, West Commerce

**Schools, Childcare Centers,  
Community Centers, Libraries  
and Public Housing Projects**

### Public Outreach and Community Organization Collaboration

- Asthma management programs
- School-based programs
- Improve health messaging and conduct outreach

### Reduce exposure to air pollutants

- Air filtration systems

**General Industrial  
Facilities, etc.**

### Improve FIND tool

- Improve public access to facility information
- Provide community training

## Metrics to Track Progress

- Outreach events completed
  - Participation & feedback
- Air filtration systems implemented

Targets and Baseline	<ul style="list-style-type: none"><li>• Staff included baseline emissions in the CERP (Chapter 3b)</li><li>• Staff quantified emission reduction targets based on CERP actions (Chapter 5a)</li><li>• Although not easily quantified, CERP actions reduce fugitive emissions, and progress will be tracked</li></ul>
Health Study	<ul style="list-style-type: none"><li>• CERP focuses on emission reductions, which will provide benefits to public health</li><li>• To address desire for additional health improvements, there are additional actions toward improving public health, e.g. asthma management programs</li><li>• Community health study is costly and may not show the long term health benefits associated with the emission reductions in the CERP</li><li>• Health studies are outside scope and resources of CERP process</li></ul>

# Next Steps for East Los Angeles, Boyle Heights, West Commerce – Community Emissions Reduction Plans (CERP)

---

# Staff Recommendations

- Determine that the Community Emissions Reduction Plan for the East Los Angeles, Boyle Heights, West Commerce community is exempt from CEQA
- Adopt the Community Emissions Reduction Plan for East Los Angeles, Boyle Heights, West Commerce

BOARD MEETING DATE: September 6, 2019

AGENDA NO. 25C

**PROPOSAL:** Determine That Community Emissions Reduction Plan for Wilmington, Carson, West Long Beach Community Is Exempt from CEQA and Adopt Community Emissions Reduction Plan Per Assembly Bill 617

**SYNOPSIS:** Assembly Bill (AB) 617 requires air districts to prepare Community Emissions Reduction Plans (CERPs) for the Year 1 communities selected by CARB. The CERPs provide a blueprint for achieving air pollution emission and exposure reductions within each community, and are tailored to address the community's air quality priorities. The CERPs include actions to reduce emissions and/or exposures, an implementation schedule, an enforcement plan, and a description of the process and outreach conducted to develop the CERP. Community partnership and engagement have been critical throughout the development of the CERPs.

**COMMITTEE:** Stationary Source, July 26, 2019, Reviewed

**RECOMMENDED ACTIONS:**

1. Determine that Community Emissions Reduction Plan for Wilmington, Carson, West Long Beach is exempt from the requirements of the California Environmental Quality Act; and
2. Adopt the AB 617 Community Emissions Reduction Plan for the Wilmington, Carson, West Long Beach community.

Wayne Natri  
Executive Officer

## Background

California law known as Assembly Bill (AB) 617 established new requirements for improving air quality in California communities heavily impacted by air pollution. AB 617 requires a statewide strategy with focused actions for communities heavily impacted by air pollution. These actions include developing community air monitoring plans (CAMPs) and community emissions reduction plans (CERPs) to reduce emissions of toxic air contaminants and criteria pollutants.

In 2018, CARB approved the Community Air Protection Blueprint (Blueprint) to guide the development (e.g., public process), content, and implementation of CAMPs and CERPs. An overview of the process to develop these documents as described in the CARB Blueprint is provided in Figure 1 – Overview of Community Emissions Reduction Program Process.

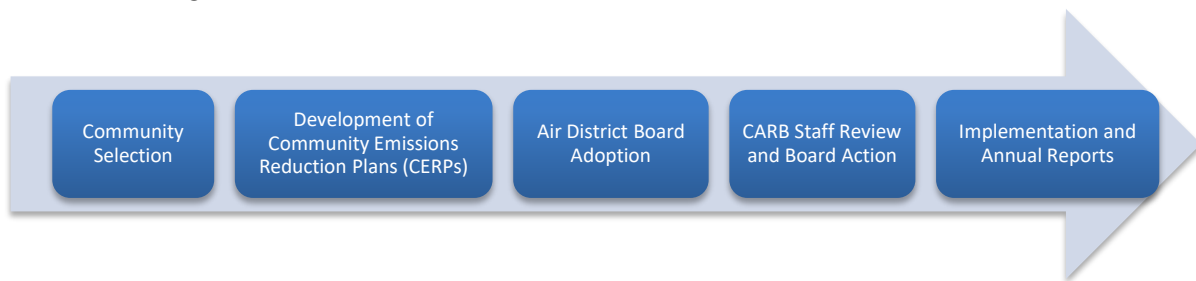

Figure 1: Overview of Community Emissions Reduction Program Process

On September 27, 2018 CARB designated three Year 1 communities within the South Coast AQMD for preparation of a CAMP and CERP for each community. The three communities designated by CARB were: 1) Wilmington, Carson, West Long Beach; 2) San Bernardino, Muscoy; and 3) East Los Angeles, Boyle Heights, West Commerce. The AB 617 statute directs air districts to adopt CERPs within one year of the CARB designation.

## Public Process

*Community Steering Committees, Technical Advisory Group, and Public Outreach*  
Beginning October 2018, staff implemented a community-focused process to develop draft CERPs that focused on the air quality priorities for each Year 1 community. The cornerstone of this process was the formation of a Community Steering Committee (CSC) for each community. The Wilmington, Carson, West Long Beach CSC is made up of residents, community leaders, local businesses, labor unions, community organizations, agencies, schools, universities, hospitals, and elected officials. The CSC provided input and guidance based on community expertise that was instrumental to developing the CERPs. CSC members also conducted their own community-level outreach to additional community members that were not available to attend meetings. Since October 2018, a total of nine CSC meetings were held in each of the three communities, and approximately 50 to 100 people attended each meeting. Most

meetings were held in the evenings or during school hours at the request of the CSC, and Spanish translation was provided to promote full participation and inclusion of the community.

In February 2019, the AB 617 Technical Advisory Group was established to provide a forum to discuss technical details related to source attribution, air monitoring and other technical analysis needed to develop the CAMPs and CERPs. Examples of topics discussed at Technical Advisory Group meetings are monitoring equipment, laboratory capabilities, and methodologies for developing emissions inventories. The Technical Advisory Group met in February, May, and July 2019.

In addition to the CSC and Technical Advisory Group meetings, staff held community workshops, and individual meetings with residents, community leaders, stakeholders, and public officials to enhance community participation and input in the development of the CERPs. South Coast AQMD staff also created a community webpage to post updates and information about the development of the CAMPs and CERPs.

### **Proposal**

Staff is recommending adoption of the CERP for the Wilmington, Carson, West Long Beach community. The CERP includes actions to address the highest priority air quality issues that the CSC identified based on pollution sources impacting their community which included refineries, marine ports, neighborhood truck traffic, oil drilling and production wells, and railyards. Another air quality priority the CSC identified was reducing exposure where sensitive populations spend time such as schools, childcare centers, hospitals, etc.

The actions in the CERP are designed to address these high priority air quality issues in the community and include a variety of strategies such as advanced air monitoring techniques to detect and address VOC leaks from refineries, reducing leaks from oil tankers using optical gas imaging technology, reducing truck idling through focused enforcement, monitoring oil wells and conducting follow-up investigations, replacing older diesel-fueled equipment with cleaner technologies at railyards, and increasing use of high efficiency air filtration systems at schools to reduce children's exposure to harmful air pollutants. Within each action, there are a set of strategies with goals and timelines to reduce emissions and/or exposure, and identification of the entities that will help implement each strategy such as the South Coast AQMD, CARB, other agencies, organizations, or businesses.

### **Key Issues**

#### *Emission Reduction Targets*

The CERP includes actions and a set of strategies to address the air quality concerns prioritized by the CSC. Some CSC members indicated that the CERP lacked quantifiable emission reduction targets and metrics, and strongly emphasized the importance of including metrics for emission reductions that can be quantified. The

CERP includes emission reduction targets and goals. Staff estimated emission reduction targets resulting from mobile source incentive projects to be 40 to 50 tons per year (tpy) of NO<sub>x</sub> and 0.5 to 0.6 tpy of diesel PM based on historical data of past projects which replaced older equipment with cleaner models. The CERP has a target of 50% reduction of NO<sub>x</sub>, SO<sub>x</sub>, and VOCs and other associated toxics emissions from refineries in this community by the year 2030. Additionally, CARB has committed to consider amendments to their rules and regulations to address the air quality priorities in Wilmington, Carson, West Long Beach community. The future amendments to rules and regulations are projected to bring further emissions reductions in the community. CARB's proposed statewide measures to address mobile source emission reductions that are related to this community's air quality priorities are expected to reduce diesel PM and NO<sub>x</sub> by approximately 20 tpy and 1,677 tpy, respectively, by the year 2029.<sup>1</sup> The combined mobile source emission reduction targets from CARB regulatory efforts and South Coast AQMD incentive projects represent a 35% additional reduction in NO<sub>x</sub> by 2029 and a 22% additional reduction in diesel PM by 2029, compared to baseline mobile source emissions.

The overall emission reduction targets for this community that can be quantified at this time are: 606 tpy NO<sub>x</sub> (7% reduction), 20.6 tpy VOCs (<1% reduction), and 9 tpy diesel PM (10% reduction) by 2024. By 2030, emission reduction targets are: 3,207 tpy NO<sub>x</sub> (35% reduction), 11 tpy SO<sub>x</sub> (<1% reduction), 64 tpy VOCs (<1%), and 20 tpy diesel PM (22% reduction).<sup>2</sup> Additional reductions in VOC emissions from refineries have yet to be quantified, although the CERP describes a method to establish that baseline and then reduce the emissions by 50%.

Other emission reductions outlined in the CERP may be achieved through rule development and focused enforcement efforts. Other actions that are expected to result in emission reductions, but cannot be quantified at this time are fugitive emissions from oil drilling and production wells or VOC leaks from oil tankers.

### *Health Metrics and Outcomes*

Some CSC members have requested the use of health metrics and outcomes as a tool to measure success under the AB 617 program. Although it is not currently feasible to use health metrics and outcomes as tools for measuring the success of the CERP, health data has been a critical part of this process. South Coast AQMD used health data in the prioritization of communities for the implementation of community plans. Health data

---

<sup>1</sup> Per CARB guidance, the emissions baseline was estimated for 2017, and milestone years 2024 and 2029. Due to the complexity of the efforts, the emission reductions discussed below target a 2030 completion date. While the baseline emissions were not calculated for 2030, the emissions are expected to be similar to the 2029 estimates (details presented in Appendix 3b).

<sup>2</sup> These percentages were calculated based on the 2029 emissions baseline. The NO<sub>x</sub> emission reduction targets are based on maximum NO<sub>x</sub> emissions reductions that may be reduced from Action 5 in Chapter 5b that is designed to achieve further reductions from refinery equipment through adoption of Rule 1109.1 – Refinery Equipment.

also informed various policy decisions, including CARB's decision to focus on toxic air contaminants and PM2.5. As actions and strategies are implemented in the CERP, staff will assess the emission reductions to understand the overall air quality and health benefits to the community.

CARB's Blueprint requires clear metrics for tracking progress and measuring success of the CERP. Staff believes that a health metric will not provide a direct measurement of the success of the AB 617 program as there are many factors which contribute to health outcomes and cumulative public health burdens. In addition, it is difficult to quantify which health benefits are attributed to implementation of a specific action or strategy in the CERP. Consistent with CARB's Blueprint<sup>3</sup>, the CERP includes a series of specific metrics to directly measure implementation of the strategies for each of the actions. Key metrics include emission reduction goals for refinery emissions within the community, reduction of flaring, commitments for air measurements, and rule development to address fugitive VOC emissions. Other metrics to monitor implementation of the CERP will also be tracked such as the dollar amount invested in incentives, the number of various types of actions such as air filtration projects, implementation air quality education programs at schools, outreach efforts, enforcement actions taken, and public meetings. These metrics are more appropriate to measure the progress and success of implementing the CERP because they focus on items that are quantifiable and specifically tied to CERP actions and strategies.

CARB has commented that there are *other* ways that health data would be incorporated into the program and "Reducing emissions and improving air quality in overburdened communities will lessen the cumulative impacts that air pollution has on public health." (See CARB Summary of Comments – Community Air Protection Program, <https://ww2.arb.ca.gov/summary-comments-community-air-protection-program>). The CERP will have positive impacts on public health, for example, by reducing emissions of diesel particulate matter, which is the primary contributor to air toxics cancer risk in the community. In addition, to bring further public health benefits to the community, the CERP includes actions to partner with local health organizations for direct public health interventions, such as asthma management programs. Similarly, the CERP includes actions to conduct school-based outreach to provide air quality information, such as the Clean Air Ranger Education (CARE) program. The CERP also includes collaborative efforts with local organizations to provide public information on how to receive air quality advisories and reduce exposure to air pollution. This type of outreach would be provided to schools, childcare centers, and at community events, and will be tracked.

### *Buffer Zone Near Oil and Gas Wells*

---

<sup>3</sup> Community Air Protection Blueprint, Appendix C, p. C33-C35.

CSC members have requested that the South Coast AQMD explicitly support the development of a 2,500 foot buffer zone for oil drilling operations under consideration at the City of Los Angeles. Accordingly, the City of Los Angeles Office of Petroleum and Natural Gas Administration & Safety recently prepared a report<sup>4</sup> with a recommendation to the Los Angeles City Council to outline the feasibility of a physical setback distance of 600 feet from sensitive receptors on existing oil and gas wells, associated production facilities, and drill sites. The report also recommends to outline the feasibility of a 1,500 foot setback from sensitive receptors on future oil and gas development. The report recognized that a setback distance is not an absolute measure of health protection and additional engineering and operational controls can add further layers of protection for the community.

The CERP includes an action that is based on engineering and operational controls that focuses on oil drilling and production that can complement land-use related efforts that the City of Los Angeles or other local jurisdictions implement. These control strategies are designed to improve early leak detection, reduce fugitive emissions from leaking wells, use of advanced air measurement technologies to screen wells, and follow-up investigation and enforcement activities to ensure leaks are fixed. This action includes rule development for Rule 1148 series and Rule 1173 to reduce VOC emissions and improve reporting. The South Coast AQMD staff will monitor the City of Los Angeles' efforts on this issue.

### **California Environmental Quality Act (CEQA)**

Pursuant to CEQA and South Coast AQMD Rule 110, the South Coast AQMD, as lead agency for the CERP, has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. The proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, because it is designed to protect or enhance the environment. Further, the CERP contains action items which qualify as feasibility or planning studies which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies. Additionally, the CERP may result in some minor physical modifications to existing structures or buildings, such as installing air filters or

---

<sup>4</sup> City of Los Angeles, 2019. "Council File No 17-0447 – Feasibility of Amending Current City Land Use Codes in Connection With Health Impacts at Oil and Gas Wells and Drill Sites." July 29, 2019.

monitoring equipment, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures. The CERP involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection. The CERP also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections. Finally, the CERP relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies. South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, the proposed project is exempt from CEQA. A Notice of Exemption has been prepared pursuant to CEQA Guidelines Section 15062 – Notice of Exemption. If the project is approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties.

### **Implementation Plan/Schedule**

Implementation of the Wilmington, Carson, West Long Beach CERP is anticipated to begin in the third quarter 2019. CARB staff will begin reviewing and evaluating this CERP as soon as the third quarter 2019 and is expected to hold at least one public workshop in the South Coast AQMD prior to the CARB Board's consideration of each of the CERPs. CARB has scheduled a public hearing to approve the CERPs on March 16, 2020. The implementation of this CERP is to take place over approximately five years.

### **Benefits to South Coast AQMD**

Implementation of the Wilmington, Carson, West Long Beach CERP will help advance our mission to reduce air pollution at a community scale, especially in the most impacted and disadvantaged communities within South Coast AQMD's jurisdiction. The Wilmington, Carson, West Long Beach CAMP and CERP will serve as statewide models for AB 617 Year 2 implementation and beyond. Additionally, emissions reductions achieved through implementation of this CERP will provide emission reduction co-benefits toward achieving state and national air quality standards.

### **Resource Impacts**

South Coast AQMD received \$10.8 million for the initial implementation of AB 617 and \$20 million for the first year of this program. Community Air Protection incentive funds will be used toward implementing associated incentive projects. In 2019, South Coast AQMD received \$85,570,000 in total grant funding through the Community Air Protection funds, which includes 6.25% administrative funds.

The anticipated resource needs for South Coast AQMD's ongoing implementation of AB 617 is \$30.7 million per year. This assumes that two to three new communities are added each year, and each community program lasts approximately five years with a maximum of 14 communities in the program simultaneously. There is no increase in the funding level for Year 2. Staff continues to work with the California state legislature to set aside sustained funding for AB 617 statewide. In June 2019, the Board approved an increase in toxics fees, which will help to provide resources for air toxics programs at South Coast AQMD, including but not limited to some AB 617 toxics-related efforts.

South Coast AQMD budget impacts for future years are dependent on the number of communities that are designated, and the amount of funding allocated by the legislature to support AB 617 implementation by the local air districts. Staff will be vigilant in monitoring all AB 617 related expenditures to ensure efficient use of resources and will use its experience and insights to plan and forecast future expenditures.

# AB 617 Community Emissions Reduction Plan for Wilmington, Carson, West Long Beach

The Community Emissions Reduction Plan (CERP) reflects the community's air quality priorities and brings new improvements to air quality in the Wilmington, Carson, West Long Beach community.

## How much air pollution will this Plan reduce?

The CERP will reduce pollution from refineries as well as trucks and other mobile sources. Specifically, the CERP target reductions are:

	By 2024	By 2030
NOx	606 tpy (~7% reduction)	3207 tpy (~35% reduction)
Diesel PM	9 tpy (~10% reduction)	20 tpy (~22% reduction)

tpy = tons per year

Refinery emissions reduction goals (by 2030):

- 50% reduction in NOx, SOx and VOC emissions

The CERP will reduce air pollution in other ways that are not yet quantifiable. This includes actions to conduct truck idling enforcement and develop an Indirect Source Rule for Railyards. The CERP includes other actions that benefit the community, such as air filtration, school-based programs and community training. The CSC and staff will track progress on these actions, along with emission reductions.

Note: Emission reduction goals are subject to future assessments and regulatory analyses

## How will this Plan benefit the Wilmington, Carson, West Long Beach community?

### Incentive Funds

To accelerate replacement of old trucks, harbor craft, and equipment with technology that is cleaner than required.

### Focused Enforcement

To ensure rules are being followed, especially in the priority areas identified by the community.

### New Rule Development

To reduce emissions from refineries, oil wells, and mobile sources.

### Air Measurements

To identify, quantify, and address potential leaks from refineries and oil wells.

### School Programs

To reduce the indoor levels of air pollution that children are breathing at school.

# What actions are in this Plan?

## Refineries

- Develop rules to reduce emissions from flares, storage tanks, boilers, heaters, and other equipment
- Air measurements using advanced technology to find potential leaks
- Follow-up investigation and enforcement to ensure leaks are fixed
- Improve flare notifications

## Neighborhood Truck Traffic

- Idling truck sweeps and truck enforcement in priority areas
- Work with cities to establish truck routes
- Incentive funds for cleaner trucks
- Outreach to truck owners on regulations and incentives
- Develop Ports Facility-Based Mobile Source Measure, Drayage Truck Rule, Advanced Clean Truck Rule, and Heavy-Duty Low NOx Rule

## Ports

- Oil tanker surveillance, air measurements, and enforcement, where needed
- Develop At-Berth Rule, Rule 1142, Ports Facility-Based Mobile Source Measure
- Implement CAAP
- Incentives for cleaner ships, harbor craft, and cargo handling equipment

## Railyards

- Develop Indirect Source Rule for Railyards, Drayage Truck Rule, TRU Regulation, CHE Rule
- Work with CARB to consider new requirements on locomotives
- Work with railyards to replace diesel equipment with cleaner technologies
- Work with local utilities to encourage zero-emission infrastructure

## Oil Drilling & Production

- Screen all wells using advanced air measurement technology and collaboration with community organizations
- Follow-up investigation and enforcement to ensure leaks are fixed
- Develop rule requirements to reduce emissions and improve reporting
- Improve notifications and conduct community training

## Schools, Childcare Centers and Community Centers

- Clean Air Ranger Education (CARE) and Why Air Quality Matters (WHAM) programs at local schools
- Outreach to schools (partner with the LA County Public Health, LB Public Health)
- Asthma management programs
- Air filtration systems
- Increase green space and plant trees

More details provided in the CERP Chapter 5 on this webpage:  
[www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/wilm](http://www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/wilm)

THANK YOU!

The South Coast AQMD staff thank the Wilmington, Carson, West Long Beach community members for their tireless efforts in developing this CERP.

# AB 617 ACTIONS TO ADDRESS REFINERY, OIL + GAS SOURCES

Actions in the Community Emissions Reduction Plan (CERP) will reduce air pollution and bring benefits to the Wilmington, Carson, West Long Beach community above and beyond existing programs

## HOW THIS PLAN REDUCES REFINERY, OIL + GAS EMISSIONS AND IMPACTS

**Community Steering Committee**  
identified oil & gas sources among the top priorities

### Oil well emissions

- Advanced air measurement tools and partnership with community organizations to find potential leaks
- Follow-up investigation and enforcement to ensure leaks are fixed.
- New rule development for Rule 1148 series and Rule 1173

### Refinery emissions

- New rule development on PR1109.1, PAR1118, PAR1178 to reduce emissions from flares, storage tanks, boilers, heaters, and other equipment
- Advanced air measurement tools to identify potential leaks
- Follow-up investigation and enforcement to ensure leaks are fixed

### Community notification systems

- Work with the community and public health agencies to develop more user-friendly notifications
- Provide community training

### Oil tanker emissions

- New technologies and surveillance activities will help identify potential VOC leaks
- Use enforcement actions where needed

# METRICS AND TARGETS FOR REFINERY, OIL + GAS EMISSION REDUCTIONS

Refinery emissions: **50% emissions reduction goal** for NO<sub>x</sub>, SO<sub>x</sub> and VOCs from refinery equipment by 2030, or earlier. Includes a 50% reduction goal for flaring emissions.

Conduct air measurements at **all 5 refineries** and **all accessible active, idle, and abandoned oil wells** in the community. Conduct follow-up inspections and enforce requirements.

**Rules 1178, 1173, 1142, and 1148** series address fugitive VOC emissions. Initiate rule development in 2020 and 2021.

CERP progress on other actions (e.g. outreach, training, etc) will also be tracked to help measure the success of the program.

Note: Emission reduction goals are subject to future assessments and regulatory analyses

## TIMELINE FOR CERP ACTIONS ADDRESSING REFINERY, OIL + GAS AIR QUALITY PRIORITIES

**2019**

- Conduct **air measurements around refineries** to identify and address significant leaks impacting the community
- Begin **oil tanker leak surveillance**
- Continue work on **Proposed Rule 1109.1** to achieve NO<sub>x</sub> emissions from refineries

**2020**

- Initiate rulemaking for **Rule 1118, 1148 series, and 1173**
- Conduct **air measurements around oil wells**, based on community priorities
- Conduct **air monitoring and measurements around refineries**
- Develop **informational materials** for notifications

**2021**

- Initiate rulemaking for **Rule 1178 and 1142**
- Implement oil drilling & production **notification system improvements**
- Provide **community training** on flare and oil well notification systems
- Establish **2020 emissions baseline** for fugitive VOCs from refineries

**2022  
-  
2030**

- Continue rule development, implementation, and enforcement efforts

Throughout the process:

- **Collaborate** with community organizations, local agencies, and businesses
- Provide the Community Steering Committee with **periodic updates on progress and findings**

# Wilmington, Carson, West Long Beach AB 617 Community Emissions Reduction Plan - Actions

		CERP Action Summary			Strategies							Key Entities		
Air Quality Priority	Action	Reduce Exposure/ Provide	Other Public Benefit	Reduce Emissions & Exposure	Key Pollutant Type(s)	Regulations	Incentives	Enforcement	Public Info and Outreach	Air Monitoring	Collaboration	 South Coast AQMD	 CALIFORNIA AIR RESOURCES BOARD	Others
Refineries	<b>Action 1:</b> Improve Refinery Flaring Notifications	●							●		●	●		LA County Public Health, LB Public Health, CSC
Refineries	<b>Action 2:</b> Conduct Refinery Air Measurements to Identify and Address VOC Leaks (including establishing a 2020 emissions baseline for fugitive VOCs)			●	VOC			●		●		●		Refineries and related facilities
Refineries	<b>Action 3:</b> Initiate Rule Development to Amend Rule 1118 – Control of Emissions from Refinery Flares			●	NOx, SOx, VOC	●						●		Refineries and related facilities, CSC
Refineries	<b>Action 4:</b> Initiate Rule Development to Amend Rule 1178 – Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities			●	VOC	●		●		●		●		Refineries and related facilities, CSC
Refineries	<b>Action 5:</b> Achieve Further NOx Emission Reductions from Refinery Equipment Through Adoption of Rule 1109.1 – Refinery Equipment (e.g. BARCT)			●	NOx	●						●		Refineries and related facilities, CSC
Ports	<b>Action 1:</b> Reduce Leaks from Oil Tankers			●	VOC			●		●	●	●	●	Tenants of the Ports
Ports	<b>Action 2:</b> Reduce Emissions from Ships and Harbor Craft			●	Diesel PM	●	●		●			●	●	Ports
Ports	<b>Action 3:</b> Reduce Emissions from Port Equipment (Cargo-Handling Equipment) and Drayage Trucks			●	Diesel PM	●	●	●			●	●	●	Ports
Neighborhood Truck Traffic	<b>Action 1:</b> Reduce Truck Idling (e.g. enforcement, idling sweeps)			●	Diesel PM			●	●		●	●	●	CSC
Neighborhood Truck Traffic	<b>Action 2:</b> Reduce Emissions from Heavy-Duty Trucks (e.g. incentives, truck routes, FBMSM, CARB rule development)			●	Diesel PM	●	●	●	●		●	●	●	Cities of LA, LB, and Carson, CSC
Oil Drilling and Production	<b>Action 1:</b> Reduce Air Pollution Leaks from Oil Wells and Associated Activity at these Facilities (e.g. mobile air measurements, inspections)			●	VOC			●		●	●	●		CSC, City of LA, DOGGR, CBOs, Oil and Gas Well Operators
Oil Drilling and Production	<b>Action 2:</b> Improved Public Information and Notifications on Activities at Oil Drilling and Production Sites	●							●		●	●		Public Health Departments
Oil Drilling and Production	<b>Action 3:</b> Evaluate Feasibility to Amend Rule 1148 Series and Rule 1173 to Reduce Emissions and Require Additional Reporting			●	VOC, Diesel PM	●						●		CSC
Railyards	<b>Action 1:</b> Reduce Emissions from Railyards (e.g. development of ISR, CARB regulations, incentive projects, and work with utilities on ZE infrastructure)			●	Diesel PM	●	●			●	●	●	●	CSC, BNSF Watson and UP Intermodal Container Transfer Facility (ICTF)/Dolores
Schools, Childcare Centers, and Homes	<b>Action 1:</b> Reduce Exposure to Harmful Air Pollutants through Public Outreach to Schools and Childcare Centers (e.g. school programs, asthma programs)	●							●		●	●		LA County Public Health, LB Public Health, CBOs
Schools, Childcare Centers, and Homes	<b>Action 2:</b> Reduce Exposure to Harmful Air Pollutants at Schools (e.g. air filtration programs)	●										●		School Districts
Schools, Childcare Centers, and Homes	<b>Action 3:</b> Reduce Exposure to Harmful Air Pollutants at Homes	●					●		●			●		Homeowners
Schools, Childcare Centers, and Homes	<b>Action 4:</b> Increase Green Space in Areas Where People Spend Time	●							●			●		CSC
NOTE: Reductions in NOx and DPM will subsequently reduce PM2.5 levels both regionally and in the community.														

NOTE: Reductions in NOx and DPM will subsequently reduce PM2.5 levels both regionally and in the community.

**SUMMARY OF CHANGES TO AB 617  
COMMUNITY EMISSIONS REDUCTION PLANS (CERPS) BASED ON COMMENTS RECEIVED**

**Wilmington, Carson, West Long Beach CERP**

- New Additions to CERP
  - Executive Summary
    - Added summary of response to comments
  - Chapter 5b: Refineries
    - Added goal to achieve 50% reduction in NOx, SOx, and VOCs from refineries
    - Action 2, added development of quantification method for VOC emissions baseline
    - Action 3, added quantification of emission reductions for amendment to Rule 1118
    - Action 5, added new action to reduce emissions through Rule 1109.1 - Refinery Equipment
  - Appendix 3a: Community Profile
    - Added list of RECLAIM and AB 2588 facilities
  - Appendix 4: Enforcement Plan
    - Added status of enforcement actions
  - Appendix 5b: Refineries
    - Added list of boilers/heaters, criteria air pollutants, and toxic air contaminants by refinery
  - Appendix: Response to Comments
    - Added response to comments
- Revisions to CERP
  - Chapter 5a: Introduction
    - Revised emission reduction targets based on CARB measures and refinery actions (NOx: 3,027 tpy, SOx: 11 tpy, VOCs: 64 tpy, DPM: 20 tpy)

# EXECUTIVE SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Executive Summary

This Community Emissions Reduction Plan (CERP) outlines the actions and commitments by the Community Steering Committee (CSC), the South Coast AQMD, and the California Air Resources Board (CARB), to reduce air pollution in the Wilmington, Carson, West Long Beach community. An essential piece of the Assembly Bill (AB) 617 program is the partnership and collaboration with the community to ensure that the CERP addresses the community's air quality priorities. At the center of these efforts is the CSC that was established, in part, to participate in the development and implementation of these plans. The CSC is a diverse group of people who live, work, own businesses, and/or attend school within the community. Local land use agencies and public health agencies that serve the community are also part of the CSC. CSC members provided guidance, insight, critique, and community wisdom, all of which were elements in the development of the CERP. The CERP is a critical part of implementing ~~Assembly Bill 617~~ (AB 617), which is a California law that addresses the disproportionate impacts of air pollution in environmental justice communities. The AB 617 program aims to invest new resources and conduct focused actions in these communities to improve air quality as a step toward environmental equity.

The Wilmington, Carson, West Long Beach community identified the following air quality priorities to be addressed by this plan:

- Refineries
- Ports
- Neighborhood Truck Traffic
- Oil Drilling and Production
- Railyards
- Schools, Childcare Centers, and Homes

At its core, this plan seeks to address the identified priorities with actions that reduce air pollution emissions from sources within this local community as well as reduce air pollution exposures to the people in this community. This plan includes targeted actions using many complementary strategies, including developing and enforcing regulations, providing incentives to accelerate the adoption of cleaner technologies, and conducting outreach to provide useful information to support the public in making informed choices. Additionally, air monitoring strategies will be used to help provide critical information to help guide investigations or provide public information. Collaborative efforts with other agencies, organizations, businesses, and other stakeholders will amplify the impact of these actions. Many of the actions will only be conducted during the timeframe of this plan; however, there are also many actions (such as regulation, ongoing enforcement activities, and certain incentive programs) that will be ongoing activities conducted by the South Coast AQMD.

This plan focuses on improving air quality ~~seeks to bring real air quality improvements~~ in the Wilmington, Carson, West Long Beach community, through concentrated~~focused~~ efforts and community partnerships. The CSC will continue to be engaged throughout the process of implementing the CERP and tracking its progress.

### The Reader's Guide to the CERP

The opening chapters provide background information about the AB 617 program and timeline (Chapter 1), the CSC process and community engagement (Chapter 2), and information about the air pollution sources in the community (Chapter 3).

Information about past and ongoing enforcement activities conducted by both the South Coast AQMD and CARB enforcement staff are described in Chapter 4. This information will provide insights into enforcement going forward.

The specific actions to be implemented are described in Chapter 5 – Actions to Reduce Community Air Pollution. This chapter is organized by air quality priority area, and the strategies proposed for each priority area are presented in the CERP action templates. Within each CERP action, the responsible entities are identified, along with the timeframe and goals for implementing the proposed action. The CERP actions are numbered in the order in which they are presented in each section. Chapter 5 also includes a California Environmental Quality Act (CEQA) analysis based on the proposed actions within this plan.

A summary of the air monitoring approach is included in Chapter 6. These efforts are described in much greater detail in the Community Air Monitoring Plan (CAMP),<sup>1</sup> which serves as the sister document to the CERP. The actions described in Chapter 5 include specific air monitoring activities, as they relate to other specific actions in the CERP. The CAMP describes the overall air monitoring approach to address the community air quality priorities. Findings from air monitoring will help to evaluate next steps, and South Coast AQMD staff will work with the CSC to review findings and make necessary adjustments.

The ~~Appendices~~Appendix to the CERP will include additional reference material related to the CERP content.

### Summary of Response to Comments *[THIS SECTION WAS ADDED FOR THE DRAFT FINAL CERP]*

The CSC, South Coast AQMD and CARB closely collaborated to develop the Wilmington, Carson, West Long Beach CERP. Development of the CERP occurred over a year-long process that included 9 CSC meetings, 3 Technical Advisory Group (TAG) meetings, 2 Community Workshops, and over 25 individual meetings. The South Coast AQMD staff received over 200 comments from industry trade organizations, businesses, government agencies, community residents, environmental organizations, and other entities for the CERP. The table summarizes each comment and identifies if the commenter's request is included (●) or not included (◆) in the CERP. The table also provides a brief staff response that explains where requests that are included in the CERP can be found or why the request was not included. More detailed responses to comments can be found in Appendix RTC of the Wilmington, Carson, West Long Beach CERP.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
<b>General Comments on the CERP</b>				
i	The CERP needs to include quantifiable emission reduction targets (e.g., in tons per year, percentages per year), or a method for quantifying emissions	Alicia Rivera (Communities for a Better Environment, CBE), Dulce Altamirano (Wilmington Active Resident), Jill Johnston (University of Southern California (USC))	●	Estimated emission reductions have been included in Chapter 5a, which specifies the tons per year reductions that will be achieved through mobile source incentives, mobile source regulation measures (CARB), and stationary source regulations. Staff has added emission reduction goals and a VOC quantification method for refineries in Chapter 5b. Staff will commit to the further development of a VOC methodology through the Technical Advisory Group (TAG).

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ii	Source attribution should include baseline emissions, facility specific data, and source-specific data, including refinery-specific data. Data should also determine the pollutants driving exposure risk and areas where concentrations are highest, and identify equipment contributing to air pollution, what controls are available, and additional efforts being made.	Alyssa Beltran (Los Angeles County DPH), Alicia Rivera (CBE), McKina Alexander (City of Carson), Maribel Alejandre (SBCC Thrive LA), Chris Chavez (Coalition for Clean Air, CAA), Susan Stark (Marathon Petroleum)	●	Source attribution data is provided in Chapter 3b and includes baseline emissions and source-specific data. Emissions data for each refinery in the community is provided in Appendix 5b. Diesel PM is the main air toxics risk driver in the community as a whole, and the CERP includes specific actions to reduce diesel PM. Additionally, the source attribution analysis identifies refineries to be significant sources of NOx and VOCs, and the CERP includes actions to address these sources as well. A thorough analysis of the emission sources and controls will be conducted as a part of the rule development process.
iii	Develop goals, metrics, and a step-by-step plan, establish timeframes and deadlines, and track progress (annual reports).	Jesse Marquez (CFASE), Janet Whittick (California Council for Environmental and Economic Balance, CCEEB), Alicia Rivera (CBE), Alyssa Beltran (LA County DPH), Chris Chavez (CCA), Sylvia Arredondo (Wilmington Active Resident)	●	A step-by-step plan for each action has been incorporated within the “Course of Action”. Each action contains goals and estimated timelines. The goals include metrics designed to measure the progress of the CERP. As outlined in the Blueprint, annual progress reports will be a part of the AB 617 process for the CERP to demonstrate progress towards meeting these goals.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
iv	Emission reductions should meet the State Implementation Plan (SIP) creditable criteria. However, emission reductions that do not meet these criteria should not be excluded.	Christopher Chavez (CCA)		South Coast AQMD staff continues to pursue a suite of actions to achieve emission reductions, including some that meet SIP creditable criteria, and some that do not meet the criteria but are equally important to reducing emissions, providing outreach and education, or reducing exposure to emissions in this community.
v	Perform a community health assessment to have quantifiable goals and targets	Alicia Rivera (CBE), Chris Chavez (CCA), Sylvia Betancourt (LBACA), Jill Johnston (USC), Florence Gharibian (Del Amo Action Committee)		<p>Conducting a health study to establish a health baseline and track improvements will not provide a direct measurement of the success of the AB 617 program as there are many factors which contribute to health outcomes. Emission reductions in the CERP will provide long-term benefits for public health. Consistent with CARB's Blueprint, the CERP includes a series of specific metrics to directly measure implementation of the strategies for each of the actions. Key metrics include emission reduction goals for refinery emissions within the community, reduction of flaring, commitments for air measurements, and rule development to address fugitive VOC emissions.</p> <p>The overall goal of AB 617 and the CERP is to improve public health from air quality related issues within the community. The CERP includes actions and strategies to meet this goal. Chapter 5g includes actions for direct public health improvement programs (e.g., asthma management programs).</p>

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
vi	Use District expertise to determine air quality priorities and not solely on public input	Alicia Rivera (Communities for a Better Environment), Chris Chavez (CCA)		The CERP focuses on air quality concerns prioritized by the CSC, and staff provided input and ideas on strategies and actions that can be taken to address those concerns. The actions in the CERP are a product of the work of the CSC and staff together.
vii	Few actions include actual regulations that are above and beyond due to AB 617. There should be more regulations with direct emission reductions are included in the CERP.	Alicia Rivera (Communities for a Better Environment)		Actions specified in the CERP have been written to address the air pollution sources prioritized by the CSC. These actions are community-specific and go beyond existing South Coast AQMD efforts as outlined in the Air Quality Management Plan (AQMP). The CERP includes rule development on South Coast AQMD Rules 1118, 1142, 1148 series, 1173, 1178, and 1109.1, along with Facility-Based Mobile Source Measures (FBMSM). Additional CARB rule development is also included in the CERP.
viii	Complete a facility specific risk reduction audit	Alyssa Beltran (LA County DPH)		Facility specific risk assessments are conducted through the AB 2588 Air Toxics “Hot Spots” Program. Facilities within the Wilmington, Carson, West Long community that are currently in the AB 2588 program at the South Coast AQMD have been identified in Appendix 3a. Those facilities that have been identified as a high priority would have either been notified to reduce their risk or have already reduced their risk such that they may no longer rank high on the prioritization list.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
ix	CERP does not mention BARCT requirements or provide an update on the status of the Technology Clearinghouse	Alicia Rivera (CBE); Chris Chavez (CCA); Bridget McCann (Western States Petroleum Association, WSPA)		<p>RECLAIM NOx facilities, facilities with annual emissions over 4 tons, will transition to a command-and-control regulatory structure to meet BARCT. This includes the rule development efforts for PR 1109.1, which will specify BARCT requirements for refinery equipment (see Chapter 5b, Action 5 for more detail). Appendix 3a identifies all the RECLAIM facilities in this community.</p> <p>Before facilities can transition out of RECLAIM, a corresponding command-and-control rule for each piece of equipment is needed. As a result, the South Coast AQMD staff is conducting a BARCT assessment for all NOx rules that are part of the RECLAIM transition. If the BARCT assessment lowers the NOx emission limit in an existing command-and-control rule, non-RECLAIM facilities will also be impacted and will need to make further emission reductions. The BARCT assessment for a number of NOx proposed and proposed amended rules is still currently being conducted and the list of affected non-RECLAIM facilities is not currently known. South Coast AQMD is working closely with CARB to provide data for the Technology Clearinghouse and is expected to be fully implemented by the end of the implementation period of this CERP. Information regarding the Technology Clearinghouse schedule for each air district is on the CARB website.</p>

#	Comment	Commenter(s)	Included = ● <u>Not</u> Included= ◆	Staff Response
x	CERPs should include a discussion of what funds (i.e., incentives) have been allocated to date and how investments will achieve quantifiable results and community benefits	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB), McKina Alexander (City of Carson)	●	This information will be provided in the annual progress reports, and also provided to the CSC as part of the periodic updates.
xi	CERP should not rely only on incentives measures, because they are not required reductions. Actions need direct emission reductions or enforcement.	Sylvia Arredondo (Wilmington Active Resident), Chris Chavez (CCA), Alicia Rivera (CBE)	●	Incentives are among the strategies used in the CERP because they can bring expedited emissions reductions above and beyond current requirements. However, the CERP does not rely on any one type of strategy, and instead uses a combination of strategies to reduce emissions, including regulation, enforcement, air monitoring, outreach and incentives. The totality of these actions will bring emission reductions to this community, as quantified in Chapter 5a.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
xii	Toxics need to be part of the CERP discussion and targets in the CSC. The CSC should remain informed about how these rules result in emissions reductions in their community.	Chris Chavez (CCA)		Actions in the CERP have been included to address criteria pollutant and toxic air contaminants. There are six actions that will reduce diesel particulate emissions from ships, harbor craft, port equipment, trucks, railyards and oil drilling and production sites. In addition, there are five actions that target VOC emissions from refineries, oil wells, and oil tankers that will concurrently reduce other toxic air contaminant emissions such as benzene, toluene, ethylbenzene, and xylene. South Coast AQMD is committed to informing the CSC of any rule development updates during the scheduled quarterly CSC meetings.
xiii	Require zero-emission technologies as soon as possible for all priorities.	Jesse Marquez (CFASE)		Zero-emission technologies that are commercially available and technologically feasible will be prioritized; however, where zero-emission technologies are not available or feasible, cleaner technology (i.e., near zero) will be prioritized.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
<b>Oil Drilling and Production</b>				
i	Support a 2,500 buffer zone, or setback, between residents and oil and gas operations.	Alicia Rivera (CBE), Chris Chavez (CCA), McKina Alexander (City of Carson), Sylvia Arredondo (Wilmington Active Resident)		The South Coast AQMD is aware that the City of Los Angeles is looking at the feasibility of establishing setbacks for sensitive receptors within a specified distances of an existing or a new oil and gas well. The City of Los Angeles' report recognized that other engineering and operational controls can provide additional public health protection. The CERP includes an action that is based on engineering and operational controls that focuses on oil drilling and production that can complement efforts at the City of Los Angeles or other local jurisdictions. These control strategies are designed to improve early leak detection, reduce fugitive emissions from leaking wells, use of advanced air measurement technologies to screen wells, and follow-up investigation and enforcement activities to ensure leaks are fixed. This action includes rule development for Rule 1148 series and Rule 1173 to reduce emissions and improve reporting. The South Coast AQMD staff will monitor the City of Los Angeles' efforts on this issue.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
ii	Add measures to capture emissions at oil and gas sites	Uduak-Joe Ntuk (LA City, OPNGAS)		<p>Staff will monitor or inspect these sites during well rework and maintenance activities as resources are available. If elevated levels are observed through the monitoring efforts detailed in the CAMP, monitoring staff may remain at a location of concern for a longer period of time or compliance staff may follow up with an investigation to identify and address the emissions being generated during well rework and maintenance activities.</p> <p>The City of Los Angeles July 29, 2019 report “Council File No 17-0447 – Feasibility of Amending Current City Land Use Codes in Connection With Health Impacts at Oil and Gas Wells and Drill Sites” suggested that one possible way to improve health oversight is to have “Los Angeles County deputize the Los Angeles City Fire Department with health officer authority for oversight and inspections of oil and gas facilities within the City. This action would be proactive for future incidents and move away from a more reactive model of oversight while empowering our local emergency services agency, LAFD, to have more oversight related to oil and gas operation.”</p>
iii	Provide relocation assistance for industrial uses within residential neighborhoods	Marie Cobian (City of Los Angeles)		Relocation of industrial uses would be outside of the South Coast AQMD’s authority.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
iv	Maintain event and chemical reporting data for oil and gas in one integrated dataset that can be used by other agencies	Uduak-Joe Ntuk (LA City, OPNGAS)		Staff will evaluate the feasibility of maintaining all reported datasets in a usable format to be used by other agencies.
v	Develop a plan with zero-emission technologies to eliminate the need for oil refineries and oil drilling and phase out fossil fuels over time.	Alicia Rivera (Communities for a Better Environment)		The CERP includes actions to address the replacement of mobile source equipment (e.g., heavy-duty diesel trucks) with zero-emission technologies once they become available, and near-zero emission technologies until that time; thus, reducing the reliance on fossil fuels. Staff believes that any policy that aims to phase-out the use of fossil fuels needs to be coordinated with a number of state agencies, including the Public Utilities Commission (PUC), the California Energy Commission (CEC), and CARB. State law (SB 100, 2018) calls for a phase out of fossil fuels (zero-carbon goal) in the electricity generating sector by 2045. According to the Energy Information Administration, almost all petroleum used in California is used in the transportation sector. Under both the Clean Air Act and state law, South Coast AQMD does not have authority over the composition of motor vehicle fuels; so, the South Coast AQMD could not phase out fossil fuel use in motor vehicles.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
vi	CERP should be linked to the Los Angeles County Department's Community Health Improvement Plan (CHIP) to prioritize protecting public health near oil and gas facilities	Ray Cheung (SmartAir LA)		The Los Angeles County Department of Public Health is currently developing the new CHIP (2019-2025) and the details of the CHIP have not been finalized. Staff can commit to reviewing the finalized CHIP and incorporate air quality related information to address or mitigate emissions from oil drilling and production sites.
<b>Refineries</b>				
i	Refineries are not a high contributor to exposure levels in this community. Assess existing and available measures for reducing emissions from other contributing source categories.	Bridget McCann (WSPA)		In addition to refineries, the CERP includes actions for ports, neighborhood truck traffic, oil drilling and production, and railyards. Emissions from petroleum refineries, however, do account for a significant portion of the community total emissions. Refinery VOC emissions account for a substantial portion of emissions in the community, as supported by the source attribution data.
li	Establish a moratorium on refineries, drilling expansions, and crude oils	Alicia Rivera (Communities for a Better Environment), Sylvia Betancourt (LBACA)		South Coast AQMD has a number of regulations limiting emissions from refinery operations and other stationary sources. All new and modified equipment is subject to Regulation XIII which requires that best available control technology (BACT). If a project meets the requirements of South Coast AQMD rules, staff is required to issue permits for the project.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
iii	Include a more comprehensive list of applicable regulations for refineries	Bridget McCaan (WSPA)		Appendix 5b was revised to include a more comprehensive list of applicable regulations.
iv	Reduce flaring (including accidental), require flaring minimization plans, set a VOC standard, require optical remote sensing for flares and provide flare data online as BAAQMD does (daily). Evaluate the cumulative impact of flaring.	Sylvia Betancourt (LBACA) Alicia Rivera (CBE), Sylvia Arrendondo (Wilmington – Active Resident)		Accidental or unplanned flaring events may be addressed through the rule development process for Rule 1118. (Chapter 5b, Action 3). Suggestions will be assessed as a part of the rule development process.
v	Phase out modified hydrofluoric acid (MHF), but not through a MOU	Alicia Rivera (Communities for a Better Environment), Chris Chavez (CCA)		South Coast AQMD is currently considering the issue of the storage and use of MHF at the two local refineries through the Proposed Rule 1410 rule development process.
vi	Require wet scrubbers for oil refinery fluid catalytic cracking units (FCCU) to be similar to BAAQMD	Alicia Rivera (Communities for a Better Environment)		The PM10 emission limits required by Rule 1105.1 are the most stringent in the nation. Refineries can install electrostatic precipitators (ESPs), wet electrostatic precipitators (WESPs) or wet gas scrubbers or use more than one of these technologies to meet the Rule 1105.1 emission limits. The CERP commits South Coast AQMD staff to monitor the progress of the BAAQMD's rulemaking effort to assess whether additional PM emission reductions from FCCUs are feasible (see page 5b-4 of the CERP).

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
vii	Provide an inventory of boilers, heaters, and equipment specifications for refineries. Assess if all boilers and heaters meet BACT and require boilers and heaters to meet requirements beyond RECLAIM	Alicia Rivera (Communities for a Better Environment)		Staff has included this list in Appendix 5b.
viii	Provide an inventory of storage tanks. Include Fluxsense study results as part of the emissions inventory (i.e., VOC and benzene) to require tighter regulations.	Alicia Rivera (Communities for a Better Environment)		Staff added Action 4 to Chapter 5b to initiate rule development for amending Rule 1178 – VOC Emissions from Storage Tanks at Petroleum Facilities. Staff will reevaluate the emissions inventory to assess VOC and benzene impacts during the rule development process.
ix	Collect inventory data (monthly and annual volumes and characteristics) of crude oils for refineries.	Alicia Rivera (Communities for a Better Environment)		The refineries consider specific information regarding the types of crude oils processed by their facilities to be confidential trade secret information. Although the South Coast AQMD does not collect that information, there are other entities, such as the California Energy Commission (CEC) that do. The CEC collects various types of information, such as total crude oil from the California refineries, and publishes the total crude oil capacity for each refinery on its website: <a href="https://ww2.energy.ca.gov/almanac/petroleum_data/refineries.html">https://ww2.energy.ca.gov/almanac/petroleum_data/refineries.html</a> .

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
x	Provide a list of all technologies (including technologies for vapor recovery systems) and their efficiencies that can help reduce emissions at refineries. Identify all places these technologies can be applied, and then mandate these technologies	Jesse Marquez (CFASE), William Koons (Carson Active Resident)		<p>All available technologies are reviewed during the rule development process and BARCT assessment; therefore the specific list of technologies cannot be provided until the rule development process occurs. Proposed Rule 1109.1 is currently undergoing the rule development process to evaluate BARCT for refinery equipment and a list of applicable boilers and at refineries and related processes may be found in Appendix 5b.</p> <p>Current technologies for vapor recovery can be addressed through the rule development process through amendments to Rule 1118, including the feasibility of replacing all gas pilot lights with non-gas pilot lighters.</p>
xi	Address smoke stacks at the refineries	Flavio Mercado (Wilmington Active Resident)		Refinery smokestacks are regulated by South Coast AQMD's Rule 401 – Visible Emissions, through opacity. In addition, Rules 1180 and 1118 will provide near-real time air quality information through fenceline and community air monitoring systems (Rule 1180) or through flare video monitors (Rule 1118).

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
<b>Ports</b>				
i	Ports should be subject to an Indirect Source Rule (ISR) instead of a MOU and require the Ports to meet air quality attainment goals and not just the Clean Air Action Plan (CAAP).	Jesse Marquez (CFASE), Chris Chavez (CCA)	◆	Per Governing Board direction, staff is currently working with the Ports of Los Angeles and Long Beach (Ports) staff to develop a MOU. In the event that the MOU approach with the Ports is not successful and emission reductions are not achieved, staff would recommend a regulatory approach, such as an ISR, to the Governing Board.
ii	CERP should be more aggressive in reducing air pollution from port sources	Chris Chavez (CCA)	●	Chapter 5c includes several major actions that will reduce emissions from port sources. These include working to support CARB's rule development for the At-Berth, Commercial Harbor Craft, Cargo Handling Equipment, and Drayage Truck Regulations, developing an MOU to implement the Ports' CAAP, and conducting focused enforcement activities on trucks and oil tankers.
iii	Allocate AB 617 funds for collaborative projects, such as utilizing funds to detect violations with aerial monitoring systems.	Alex Spataru (The Adept Group)	●	CARB believes there is merit in pursuing aerial monitoring of noncompliant vessels as a potential compliance screening tool. However, aerial monitoring in the European Union is used only as a screening tool to detect potentially non-compliant vessels and not as a direct method for enforcing fuel regulation. Sampling fuels on the vessels is the only way to determine whether a ship is compliant with that regulation.

#	Comment	Commenter(s)	Included = ● <u>Not</u> Included = ◆	Staff Response
<b>Neighborhood Truck Traffic</b>				
i	South Coast AQMD must complete Facility Based Mobile Source Measures (FBMSM) by the second quarter of 2020.	Chris Chavez (CCA)	●	Staff is committed to the development of FBMSM and will continue to hold working group meetings. South Coast AQMD's goal is to develop an MOU with the Ports in early 2020.
ii	Indirect Source Rules (ISR) should be included in neighborhood truck traffic	Chris Chavez (CCA)	●	Facility Based Mobile Source Measures (FBMSM) (which can include an ISR or an MOU) has been added to the Chapter 5d to address emissions from neighborhood truck traffic.
iii	Collaborations should be established with local government to move trucks away from sensitive receptors	Chris Chavez (CCA)	●	In Chapter 5d, Action 2, staff will work with the local cities to evaluate potential designated truck routes away from sensitive receptors and identify resources to enforce these routes.
iv	Work with Los Angeles Department of Transportation (LADOT) to establish physical barriers to prevent trucks from entering residential neighborhoods	Marie Cobian (City of LA)	●	South Coast AQMD will work with the appropriate agencies to evaluate the feasibility of this suggestion. This suggestion has been added in Chapter 5d, Action 2.

#	Comment	Commenter(s)	Included = ● <u>Not</u> Included = ◆	Staff Response
v	Add or replace sound walls along truck impacted corridors	McKina Alexander (City of Carson)	●	Sounds walls are typically the purview of Caltrans or the Los Angeles County Metropolitan Transportation Authority. South Coast AQMD recognizes the potential exposure reduction benefit of sound walls along truck corridors, and can work with agencies to provide data on locations within the community that have high truck pollution impacts. This action has been added to Chapter 5d, Action 2.
vi	Requested a complaint line for truck idling caused by truck traffic	William Koons (Carson Active Resident)	●	City transportation departments may have data to track traffic. Traffic flow issues and congestion are not within the South Coast AQMD's expertise, but South Coast AQMD can partner with appropriate agencies and entities on air quality issues under South Coast AQMD's purview. Truck idling is allowed in certain situations, such as being stuck in traffic, queuing, or mechanical failure. Truck idling complaints can be submitted to 1-800-CUT-SMOG or 1-800-END-SMOG.
vii	There should also be smoking truck patrols at the port area	Greg Roche (Clean Energy)	●	CARB intends to conduct enhanced roadside inspections in the areas surrounding the Ports of Los Angeles and Long Beach to identify and cite vehicles out of compliance with CARB regulations by using CSC input to locate areas where the community has expressed concern with smoking and idling vehicles. CARB will conduct roadside inspections within areas where they can enforce (e.g., cannot pull vehicles over on freeways, but can on surface streets for inspections). In addition to gathering CSC's input, CARB and South Coast AQMD staff are regularly in the field

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
				conducting other enforcement efforts, and plan to document idling and smoking vehicles to further support the enhanced roadside inspection program.
viii	More “no truck idling” signage is needed	Florence Gharibian (Del Amo Action Committee)	●	In Chapter 5d, Action 1 staff will work with local entities or agencies to establish “no truck idling” signage with locations prioritized by the CSC and work with the appropriate city agencies or entities to assess the feasibility of sign placement.
ix	CARB should collaborate with the South Coast AQMD and City agencies to identify and regularly monitor truck traffic impacted areas. Compliance with idling and clean vehicle standards.	McKina Alexander (City of Carson),	●	Chapter 5d, Action 1 commits to conducting focused enforcement for idling trucks in high traffic areas with the highest priority for areas near schools and residential areas. In addition, Chapter 5d, Action 2 commits the Cities in the Wilmington, Carson, West Long Beach community to collaborate with South Coast AQMD to evaluate potential designated truck routes and identify resources to enforce these routes. Furthermore, CARB commits to conducting enhanced roadside enforcement of existing Drayage Truck and Truck and Bus regulations and considering amendments to rules for heavy-duty trucks.
x	Funding technology advancement is contrary to the purpose of AB 617 - Current year incentives should be used for available technologies	Priscilla Hamilton (So Cal Gas),	●	The community has prioritized zero-emission technology where commercially available and technologically feasible; thus, funding technology advancement will expedite the development, demonstration, and commercialization of these types of technologies. Current year incentives will be used for available technologies.

#	Comment	Commenter(s)	Included = ● <u>Not</u> Included = ◆	Staff Response
xi	Scrappage programs should be used to maximize emission reduction programs	Priscilla Hamilton (So Cal Gas)	●	Older, more polluting trucks that are replaced with cleaner technology through the Carl Moyer Program or Prop 1B are scrapped.
xii	Incentives should prioritize technologies (i.e., heavy-duty trucks) that can maximize emission reductions today. Existing diesel truck fleets should be replaced with cleaner technologies available now.	Priscilla Hamilton (So Cal Gas), Kevin Maggay (So Cal Gas), Greg Roche (Clean Energy), Alyssa Beltran (LA County DPH)	●	The CERP prioritizes zero-emission technologies, where commercially available and technologically feasible; and where zero-emissions technology are not available, equipment will be replaced with cleaner technology (i.e., near-zero) through incentives to achieve much needed emissions reductions sooner.
<b>Railyards</b>				
i	Add sources or polluters (i.e., ports, railroad) as Implementing Agency and include roles and responsibilities (i.e., updates on status of emission reductions)	Sylvia Arredondo (Wilmington Active Resident), Chris Chavez (CCA), Alyssa Beltran (LA Country DPH)	●	BNSF and Union Pacific have been added as Implementing Entities to Action 1 of Chapter 5f – Railyards, to continue to participate in FBMSM working groups. The Ports are listed as implementing agencies for Action 2 of Chapter 5 – Ports. Based on this Action, the Ports and South Coast AQMD are responsible for working together to hold one outreach event per year to provide equipment owners and operators information about incentives (e.g., opportunities for cleaner ships and harbor craft).

#	Comment	Commenter(s)	Included = ● <u>Not</u> Included= ◆	Staff Response
<b>Exposure Reduction – Schools, etc.</b>				
i	Assess feasibility to add green space in the community (e.g., partner with agencies to increase tree canopy, evaluate potential to use abandoned well sites for greenspace, or transform sidewalks, use greenspace to focus on buffer zones, idling free zones, etc.)	McKina Alexander (City of Carson), Marie Cobian (City of LA), Sylvia Arredondo (Wilmington Active Resident), Ray Cheung (SmartAir LA)	●	Chapter 5g, Action 4 is included in the CERP to identify new or existing sources or programs that can provide funding for tree planting and other forms of green space expansions. South Coast AQMD is looking to partner with appropriate entities, organizations or entities to encourage greenbelts through tree planting, enforcing truck idling free zones, reducing diesel freight traffic from schools when children are present, and the development of land-use plans that limit pollution-emission activities.
ii	Provide timeline, collaborating organizations, and metrics (baseline and improvements) to install filtration systems at schools	McKina Alexander (City of Carson)	●	Chapter 5g, Action 2 addresses exposure reduction at schools through the installation of school filtration systems, which will involve collaborating with the local school districts. The current number of schools with air filtration systems installed will be the “baseline”; these schools are listed in Chapter 5g, Ongoing Efforts (see Tables 5g-1 and 5g-2). The metric that will be tracked for this action is the number of school filtration systems that have been installed. Staff will provide updates to the CSC semiannually on the progress of this action, which will include whether funding has been identified, the progress of the installations, and the overall number of systems that have been installed.

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
iii	Air filtration systems should be mandatory in all schools	William Koons (Carson Active Resident)		South Coast AQMD cannot mandate that schools have air filtration systems. However, staff will work with the local school districts to install air filtration systems at schools prioritized by the CSC.
<b>Other Comments</b>				
i	Address CSC member attendance at CSC meetings	Alyssa Beltran (Los Angeles County Department of Public Health)		Generally, the WCWLB CSC meetings are well attended and the number of attendees for each CSC meeting in the WCWLB community ranges from 60 to 100 attendees. On average, about 25 (out of 34) CSC members attended the meetings. Staff will consider the suggestions for improving CSC member attendance.
ii	Staff should use black carbon (BC) or ultrafine as a marker for diesel rather than only using PM and identify a marker that will be used for fugitive emissions and how to follow this marker over time. Benzene should also be monitored.	Jill Johnston (USC)		The AB 617 efforts will include monitoring for BC and ultrafine particles as indicators of diesel PM, and these levels can be compared to previous data from MATES studies. Benzene will be directly monitored to help track progress. Recurring measurements of total VOCs will also be conducted to help track progress. Staff will use the appropriate marker or surrogate for the specific fugitive emissions identified.

#	Comment	Commenter(s)	Included =  Not Included = 	Staff Response
iii	Maintain an online presence written in layman's terms and work with all stakeholders to ensure data collection, interpretation, communications of results will be clear, transparent, and understandable	McKina Alexander (City of Carson), Janet Whittick (CCEEB), Jill Johnston (USC)		Staff will continue efforts to ensure that data collection, data interpretation, and communication of results are clear, transparent, and understandable to public users. Staff will aim to continue to share data and information with the CSC in layman's terms. As an example, staff recently launched the AB 617 Community Air Monitoring website, which includes a Data Display tool to display community air monitoring data in an interactive and visual format.
iv	Community involvement is needed for air monitoring	Jesse Marquez (CFASE)		South Coast AQMD will collaborate with community organizations for community air monitoring, where appropriate. For example, Chapter 5e, Action 1 specifies that community-based organizations will conduct air monitoring that is complementary to South Coast AQMD community monitoring efforts.
v	Provide information on South Coast AQMD's input to date for California Environmental Quality Act (CEQA) actions and how South Coast AQMD can leverage its existing role in the CEQA process to reduce air emissions and exposures	Alyssa Beltran (LA County DPH)		The South Coast AQMD has an obligation to implement CEQA as a lead and commenting agency and ensures a proper analysis in accordance with CEQA requirements. As a responsible agency, the South Coast AQMD verifies CEQA compliance before issuing air quality permits, and as a commenting agency, South Coast AQMD staff review the air quality analysis from other lead agencies' CEQA documents, and when necessary, submits comments and suggestions (e.g., feasible mitigation measures to reduce air emissions and toxic exposures).

#	Comment	Commenter(s)	Included =  <u>Not</u> Included = 	Staff Response
vi	Prioritize enforcement strategies and include goals for compliance	Alyssa Beltran (LA County DPH)		Enforcement strategies will be prioritized based on CSC input and availability of resources. Past enforcement actions for facilities within this community have been identified in Appendix 4. Goals and timelines have been incorporated into the CERP actions for each of the air quality priorities.
vii	Determine or analyze rule effectiveness	Jesse Marquez (CFASE), Alyssa Beltran (LA County DPH)		Actions are included in the CERP to conduct rule development to help achieve emission reductions. The specific amount of emission reductions achieved by each rule will be analyzed as part of the rule development process. In addition, staff will evaluate the data collected from inspections and enforcement actions in the community (i.e., from idling sweeps) and assess whether rule amendments may be necessary.
viii	Clarify whether South Coast AQMD can set pollution prevention requirements in rules before finishing air monitoring efforts, and identify new requirements to achieve specific emission reductions.	Alicia Rivera (Communities for a Better Environment)		Rule development efforts will be occurring concurrently with air monitoring efforts. However, there are some situations where air monitoring data may inform rule development. Any new requirements will be required to undergo the rule development process to allow for more focused meetings with all stakeholders to assess feasibility of proposed requirements or updated emission standards.

# CHAPTER 1:

## INTRODUCTION

---

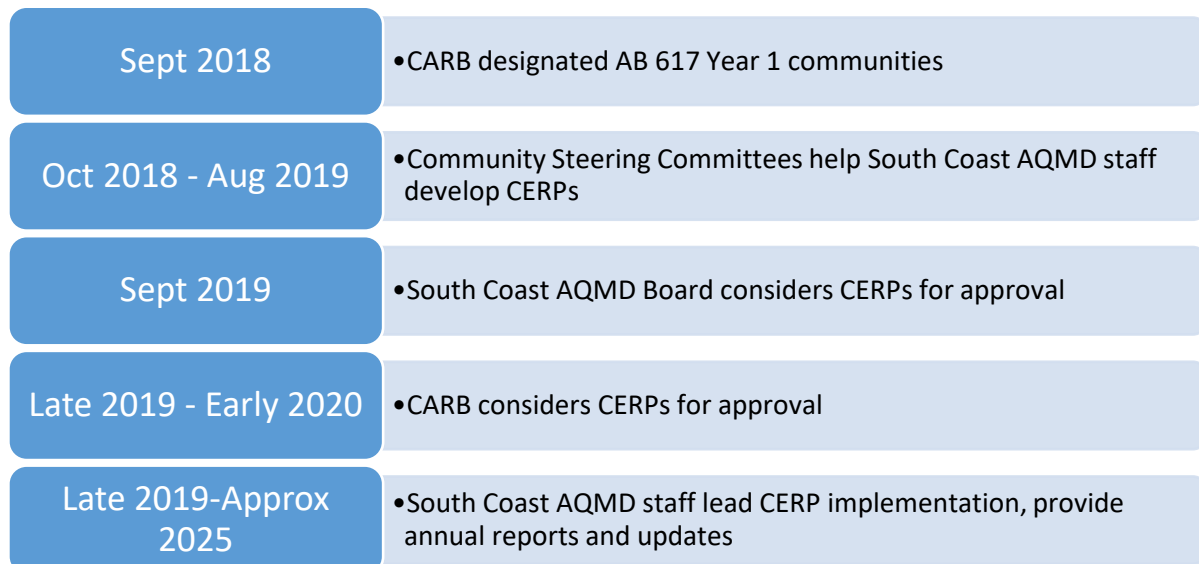

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 1: Introduction

Assembly Bill (AB) 617 was signed into California law in July 2017 and focuses on addressing local air pollution in environmental justice (EJ) communities. The bill recognizes that while California has seen tremendous improvement in regional air quality, some communities are still disproportionately impacted. Many communities in the South Coast AQMD experience impacts from sources of air pollution located near places where people live. Major sources of air pollution in EJ communities include mobile sources (trucks, trains, ships, etc.) and industrial facilities. These communities also experience social and economic disadvantages that add to their cumulative burdens. The AB 617 program provides accelerated action and additional resources to address air quality in these communities.

On September 27, 2018, the California Air Resources Board (CARB) designated 10 communities across the state to implement community plans for the first year of the AB 617 program. Local air districts are tasked with developing and implementing community emissions reduction and/or community air monitoring plans in partnership with residents and community stakeholders. The Community Air Monitoring Plan (CAMP) includes actions to enhance our understanding of air pollution in the designated communities, and support effective implementation of the Community Emissions Reduction Plan (CERP). For the three (3) first year AB 617 communities in the South Coast AQMD, both a CAMP and a CERP are being developed. Separate documents describe the CAMP development process and the draft plan. Information is available at [www.aqmd.gov/ab617](http://www.aqmd.gov/ab617). Figure 1-1 gives a general overview of the CERP timeline.

Figure 1-1: Overview of Community Emissions Reduction Plan (CERP) Timeline for Year 1 Communities

### Purpose of the Community Emissions Reduction Plan (CERP)

The CERP is a plan for achieving air pollution emission and exposure reductions within the Wilmington, Carson, West Long Beach community, and is tailored to address this community's air quality priorities.

The CERP includes actions to reduce emissions and/or exposures, an implementation schedule, an enforcement plan, a description of the process and outreach conducted to develop the CERP, as well as additional elements that are relevant to developing an effective CERP. Community partnership and engagement have been crucial throughout the process.

Because the work to implement the CERP and CAMP is dynamic, certain action items have been written with built-in flexibility to allow adjustments as new information becomes available. South Coast AQMD staff is committed to working with Community Steering Committee (CSC) members to evaluate ongoing actions and progress.

#### CERP Development Process and Emphasis on Community Input

Community engagement and input to inform both the process and the actions in the CERP have been a primary element of the AB 617 program. The Wilmington, Carson, West Long Beach CSC, working with the South Coast AQMD staff, are seeking to address the community's air quality priorities through development and implementation of the CERP. In addition to public meetings, numerous conversations and communications took place among committee members, South Coast AQMD staff, individuals and small groups—~~occurred~~ to ensure that community voices were an integral part of the plan. Chapter 2 describes the CSC process and the outreach that was conducted. Throughout the process, information exchanges between all parties, including feedback and input from committee members and members of the public ensured transparency and engagement. Numerous adjustments to consolidate and incorporate feedback were made and South Coast AQMD staff continuously aims to improve community engagement on air quality issues.

#### About this Community

This community includes the neighborhood of Wilmington within the City of Los Angeles, the City of Carson, and the neighborhood of West Long Beach within the City of Long Beach. The community is located in the southern portion of Los Angeles County (Figure 1-2).

Figure 1-2: Location of the Wilmington, Carson, West Long Beach community in the South Coast AQMD jurisdiction

Figure 1-3: Population of the Wilmington, Carson, West Long Beach community, based on 2010 Census

Figure 1-4: Population by Race/Ethnicity in Wilmington, Carson, West Long Beach and the state of California, based on 2010 Census<sup>i</sup>

More than 300,000 people live within the Wilmington, Carson, West Long Beach community (Figure 1-3). More than half of the people living in this community are Latino (Figure 1-4). About 17.6% of the residents in this community are Asian and 16.6% are African American. The population in this community is slightly younger compared to the population in the state of California, with about 14.5% children under the age of 10 years and 10.4% adults over the age of 65 years (Figure 1-5). These age categories are particularly important because young children and older adults can be more sensitive to the health effects of air pollution.<sup>1</sup>

Figure 1-5: Age profile in Wilmington, Carson, West Long Beach and the state of California, based on 2010 Census

<sup>i</sup> Definitions of races are the same as CalEnviroScreen 3.0.

While the demographics and geography provide useful information, the members of the community are what make each community unique and distinct. Community members bring intimate familiarity with their community and the air quality concerns that affect their neighborhood. Below are some community voices describing this community.

*"When I open the front door of my house, the first thing I smell is gas. When I go shopping, to the clinics, El Super, I see a lot of garbage and dirtiness. When I drive, I see that many trucks pollute the environment by what comes out of the pipes. Sometimes ash falls from the sky due to the activities of the refineries. Despite having these environmental problems, Wilmington has a positive attitude. I like that we are a small city. We all know each other and we greet each other. I would like to continue being a positive community, and I hope that does not change because of the contamination of the environment." – Dulce Altamirano, Wilmington Resident*

*"The City of Carson is different from many cities because it is almost equal parts residential, heavy industrial, and commercial. This creates ~~competing-different~~ interests which are sometimes at odds with one another. And given the lack of political representation from the South and no representation from the East portions of the city these communities especially suffer the effects of pollution. Most of the heavy industrial land use is on the South and East side of the city. This is also where you would find the Carson refineries, oil storage facilities, and the Carousel neighborhood which was built over an abandoned oil tank farm. Carson also receives the brunt of trade coming to ~~or~~ and out of the Ports of Los Angeles and Long Beach. Cargo that travels to or from the ports can travel by rail that runs ~~n~~North and ~~s~~South on our ~~e~~East border. ~~Or~~ And cargo ~~can~~ that is ~~be~~ loaded on trucks which, in addition to polluting our air, tear up our side streets. Carson is also unique in that not only are we almost completely boxed in by freeways, the 405 freeway intersects our city down the middle. While we cannot get rid of the ports, the rail lines, and the freeways, as AB 617 committee members we should be doing everything we can to mitigate the pollution to provide a safer environment for those who work and live in our community." – Joseph Luis Piñon, Carson Resident*

*“One definition of ‘community’ is a group of people living and working together in the same area. The Wilmington, Carson, West Long Beach community is a culturally rich and diverse group of people who live here, work here, play here. Marathon Petroleum has been a long-time member of this community and we are glad to be a part of the AB 617 Community Steering Committee.” – Olga G. Chavez, Marathon Petroleum Company*

*“Communities like Wilmington, West Long Beach and Carson should be defined by their people, not their problems. Yet, diesel exhaust, odors from refineries and air pollution are a part of daily life. Through AB 617, we have the opportunity to bring the clean air our communities deserve.” – Christopher Chavez, Coalition for Clean Air*

*“My community is predominantly of Hispanic working class. Our community air quality is heavily impacted by several sources of pollution. Yet, these sources are the economic engines that contribute to our community’s economy and workforce. Making Wilmington unique and...“The Heart of the Harbor!”- Maribel Alejandre, SBCC Thrive LA*

*“I/We live in the mists of the largest port complex in the United States, the Port of Los Angeles and the Port of Long Beach and in the shadows of four major oil refineries in our community. We have few clear skies days and never a pollution free day due to air pollution from ships, trucks, trains, cargo handling and oil refining.” – Jesse Marquez, Coalition For A Safe Environment*

*“Serving on the CSC for Wilmington, Carson, and West Long Beach has given both residents, community groups and businesses an opportunity to learn and understand various impacts to air quality. Our efforts will create a path forward to reduce emissions and sustain healthy and economically vibrant communities.” – Lupe Valdez, Union Pacific Railroad*

# CHAPTER 2:

## COMMUNITY OUTREACH, COMMUNITY STEERING COMMITTEE AND PUBLIC PROCESS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 2: Community Outreach, Community Steering Committee and Public Process

### Introduction

Community engagement and a public process were integral parts of the Community Emissions Reduction Plan (CERP) development effort. Key features of the outreach efforts include establishing a Community Steering Committee (CSC), holding monthly meetings that were also live-streamed on the internet, during which, South Coast AQMD and CARB staff, and CSC members made presentations, provided providing materials via email and on the internet a webpage, live streaming all CSC meetings, and established establishing a Technical Advisory Group. In addition, numerous interactions between CSC members and South Coast AQMD staff occurred in one-on-one or small group meetings allowing for in-depth discussions on joint development and creation of the CERP.

### Chapter 2 Highlights

- The Community Steering Committee and Technical Advisory Group worked with staff to develop the CERP
- Monthly meetings were held in the community to engage the CSC and public
- The Community Liaison served as the point of contact
- Additional one-on-one, small group, and community meetings also played an important part in community engagement
- A Community Webpage was created as an information portal

### Community Liaisons

A Community Liaison from the South Coast AQMD was designated for the Wilmington, Carson, ~~and~~ West Long Beach community. The Community Liaison served as the point of contact to communicate with members of the CSC and members of the public to address any concerns regarding logistics and implementation of the CERP and Community Air Monitoring Plan (CAMP) (Figure 2-1). Community Liaisons ensure communication throughout the process of designing and implementing the Program and to work with community members to identify the best ways to make information accessible and user-friendly. The South Coast AQMD Community Liaison for this community is Ryan Stromar ([rstromar@aqmd.gov](mailto:rstromar@aqmd.gov)). In addition, Nicole Silva

Figure 2-1: Community liaisons assisting CSC members of the public

([nsilva@aqmd.gov](mailto:nsilva@aqmd.gov)) and Dianne Sanchez ([dsanchez@aqmd.gov](mailto:dsanchez@aqmd.gov)) serve as the South Coast AQMD staff contacts for CERP-related input.

## Community Meetings

Community meetings were hosted by South Coast AQMD staff on an approximately monthly basis in the community. This included one kick-off meeting, and a series of CSC meetings.

### Community Kick-Off Meeting

In October 2018, kick-off meetings were held in each of the communities within the South Coast AQMD designated by CARB to be included in Year 1 of the AB 617 Program. During these meetings, the role of the CSC was explained by South Coast AQMD staff. The CSC provides input and guidance to design actions for the community, for integration into the Community Emissions Reductions Plan (CERP) as well as the Community Air Monitoring Plan (CAMP). Community members had an opportunity to fill out an Interest Form during the kick-off meeting to express their interest in being a CSC member, and were then notified by mail or by phone if they were selected as a member or an alternate.

The Community Kick-Off Meeting in the Wilmington, Carson, West Long Beach community was held on Tuesday October 2, 2018 at the Wilmington Senior Center (Figure 2-2).

Approximately 120 people attended the meeting. In addition to information about AB 617, attendees were invited to visit a variety of information booths, which provided information about some existing South Coast AQMD programs, including refinery fenceline and community air monitoring, community air measurement efforts, and incentive programs. Staff from Aclima, Inc.

([www.aclima.io](http://www.aclima.io), a technology company that is conducting air monitoring in the community), as well as representatives from the local YMCA and Rotary Club, also provided information at the kick-off meeting booths.

Figure 2-2: Community kick-off meeting in Wilmington

### Community Steering Committee (CSC)

A steering committee (Figure 2-3 and Figure 2-4) was formed for the Wilmington, Carson, West Long Beach community, and monthly meetings were organized, typically on Thursday evenings, in locations within the community. All meetings were open to the public.

### CSC Roster

CSC membership is comprised of stakeholders with community knowledge to help drive community action. The CSC creates a way to incorporate community expertise and direction in the development and implementation of clean air programs in each community. Staff will continue to seek recommendations and feedback from the CSC as the CERP is being implemented, and adjust the outreach approaches as needed to be even more effective.

Figure 2-3:- Community Steering Committee in Wilmington

Figure 2-3:- Community Steering Committee meeting in West Long Beach

The CSC roster for the Wilmington, Carson, and West Long Beach community is provided in ~~Table 2-1~~ ~~Table 2-1~~ below. This CSC has 34 primary members, and 21 alternate members. While 12 primary and 5 alternate members are on the roster representing Active Residents, an additional 8 primary and 2 alternates also reside within the community. The roster with member biographies is available on the webpage: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/wilmington/roster-with-bios.pdf>. The attendance at each CSC meeting is reflected in the Meeting Summaries that are posted on the webpage.

Table 2-1: CSC Roster for Wilmington, Carson, West Long Beach Community

Affiliation	Primary Member	Alternate Member
<b><u>Community Organization</u></b>		
Century Villages at Cabrillo	Jeffery Tate	
Coalition for a Safe Environment	Jesse Marquez	Rick Pulido
Communities for a Better Environment	Alicia Rivera	Ashley Hernandez
Long Beach Alliance for Children with Asthma	Sylvia Betancourt	Maria Reyes
Los Cerritos Neighborhood Association	Gary Hamrick	Joe Hower
Philippine Action Group for the Environment	Fe P. Koons	Jesse Koons
SBCC Thrive LA	Maribel Alejandre	Leticia Herrera
<b><u>Active Resident (city indicated below)</u></b>		
Carson	Daniel Toledo	
Carson	Sergio Franco	
Carson	Joseph Luis Piñon	Yasaman Houshang
Carson	William Koons	
West Long Beach	Christopher Chavez	Pastor Anthony Quezada
West Long Beach	Jacob Broderick	Emelio Ramirez
West Long Beach	Ron Batiste	
West Long Beach	Whitney Amaya	
Wilmington	Salvador Lara	Victor Ibarra
Wilmington	Flavio Mercado	
Wilmington	Dulce Altamirano	
Wilmington	Magali Sanchez-Hall	Sylvia Arredondo
<b><u>Agency, School, University or Hospital</u></b>		
City of Carson	Saied Naaseh	McKina Alexander
City of Los Angeles	Uduak-Joe Ntuk	Erica Blyther
Gulf Avenue Elementary School	Linda Bassett	Esperanza Romero
LA County Public Health	Matt Baca	Janet Scully
Long Beach Public Health	Nelson Kerr	Judeth Luong
Long Beach Unified School District	Brooke Murray	

Port of Los Angeles	Tim DeMoss	Conor Langlois (previously Amber Colusso)
University of Southern California	Jill Johnston	
<b>Business, Business Organization, or Labor Organization</b>		
Carson Chamber of Commerce	John Wogan	Kenneth Dami
Long Beach Area Chamber of Commerce	Jeremy Harris	Brissa Sotelo
Wilmington Chamber of Commerce	Dan Hoffman	Cecilia Moreno
Refinery – Marathon	Olga Chavez	Susan Stark
Rail - Union Pacific	Lupe Valdez	<u>Peter Okurowski</u>
Trucking - Yusen Logistics	Cameron D. Smith	Nikki Nguyen
Labor - USW Local 675	Pat Patterson	

## CSC Meeting Schedule

Table 2-2: Meeting Schedule for Wilmington, Carson, West Long Beach CSC

Meeting #	Date and Location	Approximate # of Attendees
1	October 30, 2018 <b>Wilmington Senior Center, Wilmington</b>	100
2	January 10, 2019 <b>Carson Community Center, Carson</b>	60
3	February 12, 2018 <b>Wilmington Senior Center, Wilmington</b>	100
4	March 14, 2019 <b>Wilmington Senior Center, Wilmington</b>	80
5	April 11, 2019 <b>Villages at Cabrillo, Long Beach</b>	85
6	May 9, 2019 <b>Carson Event Center, Carson</b>	80
7	June 2019 <del>Location</del> <b><u>Wilmington Senior Center, Wilmington</u></b>	<u>100</u>
8	July 2019 <del>Location</del> <b><u>Wilmington Senior Center, Wilmington</u></b>	<u>150</u>
9	August 2019 <del>Location</del> <b><u>Carson Community Center, Carson</u></b>	<u>100</u>
10	September 2019 <del>Location</del> <b><u>Wilmington Senior Center, Wilmington</u></b>	

### CSC Charter

A charter was developed for the CSC and a draft was presented to members at Meeting #1. CSC members provided comments and the feedback received was included in the revised charter. The final charter is provided on the webpage here: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/wilmington/charter-english.pdf?sfvrsn=8>

### Meeting Facilitator

Beginning in March 2019, the CSC meetings were facilitated by Valerie Martinez of VMA Communications ([www.vmapr.com](http://www.vmapr.com)). VMA staff also attended meetings to help with meeting facilitation.

### Social Media Report

Staff received a suggestion from one CSC member to live-stream meetings on social media in order to engage youth who use this technology, and who may not be able to attend the meetings in person. All CSC meetings were subsequently live-streamed using Facebook Live shown in [Figure 2-5](#). The links to the live-stream recording were also posted on the community webpage, so that members who could not attend or view the meeting live could view the recorded video of the meeting. Each video received approximately more than 100 views.

Figure 2-5: Screen shot of Facebook Live recording in Wilmington

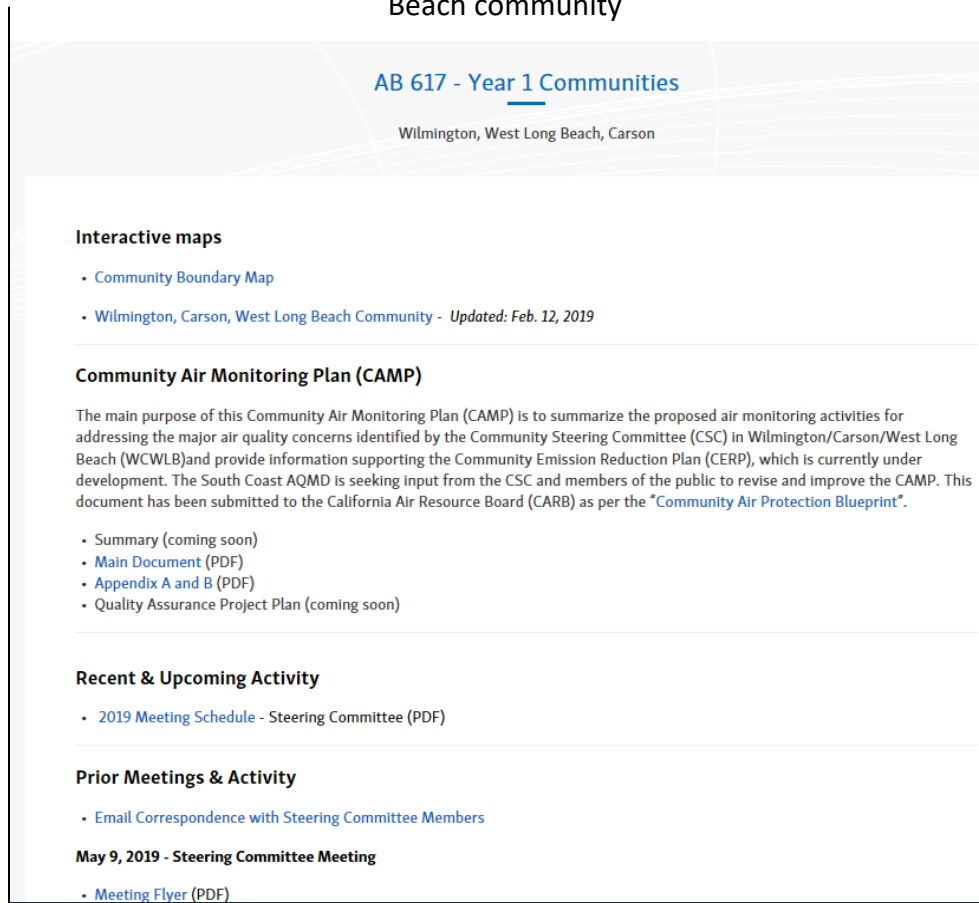

## Community Webpage

A community webpage was created for the Wilmington, Carson, West Long Beach AB 617 community. The webpage included information about upcoming meetings, meeting materials (flyers, agendas, presentations, handouts, live stream links, meeting summaries), interactive maps, the CSC roster, charter bios, and membership process, and the CAMP and CERP documents. Webpage: <http://www.aqmd.gov/nav/about/initiatives/environmental-justice/ab617-134/wilm>

For increased transparency, emails sent to the CSC were also posted on the webpage. All flyers, agendas, social media posts, presentations, handouts, and emails to the CSC were made available in English and Spanish. A screen shot of the community webpage is shown in [Figure 2-6](#).

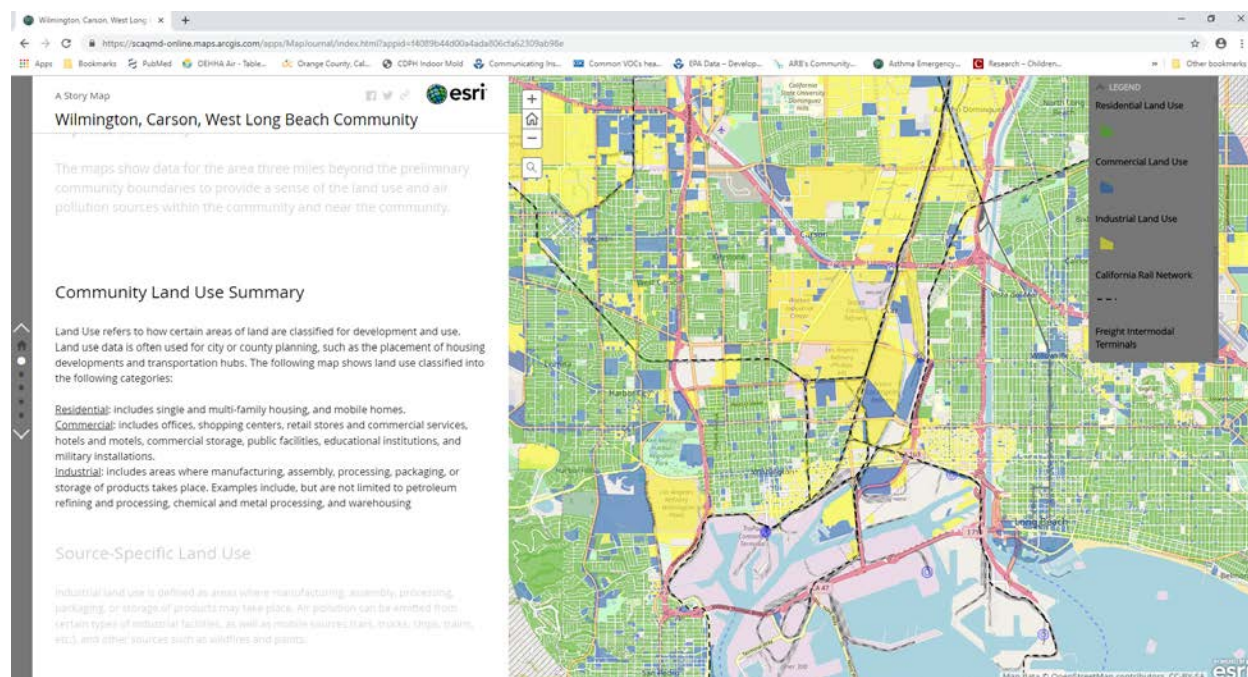

Figure 2-6:- Community webpage for the Wilmington, Carson, West Long Beach community

In addition to being a portal for access to meeting materials and documents, the webpage also includes interactive maps that present data about the community. [Figure 2-7](#) is an example of an interactive map that was created for the Wilmington, Carson, West Long Beach community.

These interactive maps provide data on land use, locations of facilities, schools, hospitals, and daycare centers, and the air quality concerns identified by the CSC and members of the public. This information was provided to help inform air quality priorities for the CERP.

Figure 2-7: Interactive map showing land use in the Wilmington, Carson, West Long Beach community

### Community Bus Tour and Committee Presenters

A critical part of CERP is development and implementation collaboration with CSC members and the agencies, organizations, businesses, or other entities that they represent. A Community Bus Tour was organized as a collaboration between CSC members and South Coast AQMD staff. The tour took place on August 9, 2019. Approximately forty participants attended, including CSC members, South Coast AQMD staff, and CARB staff (see Figure 2-8). The tour engaged participants in learning the effects of air pollution and the environmental justice in this community by visiting neighborhoods that are directly impacted by industrial facilities and transportation corridors.

Figure 2-8: Wilmington, Carson, West Long Beach Community Bus Tour with CSC members, South Coast AQMD, and CARB

Committee members were also invited to share their work that is complementary to the actions being developed in the CERP, such as programs carried out by their organization that help address air quality issues in the community.

At the April 2019 CSC Meeting, Uduak-Joe Ntuk (City of Los Angeles) presented information about the City's work to address resident concerns about neighborhood oil drilling sites.

At the May 2019 CSC Meeting, Dulce Altamirano (Wilmington resident) opened the meeting with an "icebreaker" that she invented, where committee members paired off and gave each other an item to keep. The committee members described their experience in this exchange and the fun of finding a small object they had with them in the moment. Alicia Rivera (Communities for a Better Environment) and Christopher Chavez (Coalition for Clean Air) made presentations highlighting their

Figure 2-89: Alicia Rivera presented at the May 2019 CSC meeting

Figure 2-9: Chris Chavez presented at the May 2019 CSC meeting

organizations' efforts to address air quality concerns in the community (Figures 2-9 and 2-10). ~~Figure 2-8 and Figure 2-9).~~

At the June 2019 CSC Meeting, Tim DeMoss (Port of Los Angeles) presented on the Port's clean air efforts and the Clean Air Action Plan. Additionally, Jesse Marquez (Communities for a Safe Environment) discussed community air monitoring efforts.

At the July 2019 CSC meeting, Susan Stark (Marathon Petroleum) discussed Marathon's role in the community and its clean air efforts.

## Technical Advisory Group

In February 2019 the AB 617 Technical Advisory Group (TAG) was established to provide a forum to discuss technical details related to source attribution, air monitoring and other technical analysis needed to develop the Community Air Monitoring Plans and Community Emissions Reduction Plans for AB 617 implementation. The TAG meets on an approximately quarterly basis during the CERP and CAMP development process. Topics discussed include air monitoring equipment and laboratory capabilities, methodology and data sources for developing an air toxics emissions inventory at a community scale, methodology for forecasting emissions in future years, and methodology for modeling air toxics levels across geographical areas. Table 2-3 shows the 2019 TAG meeting schedule. All meetings were held at the South Coast AQMD headquarters building, which is a location approximately in the middle of the three Year 1 communities. All meetings were webcast on South Coast AQMD's webpage at the [www.aqmd.gov](http://www.aqmd.gov) webpage, and webcast attendees could email questions to be answered during the meeting.

The majority of these technical considerations apply to all three AB 617 communities designated in Year 1 and consequently the Technical Advisory Group includes up to 3 members from each CSC, and additional technical experts from academia, research institutes, and governmental agencies (the current roster is provided in Table 2-4 below). When additional communities are designated for the AB 617 program, representatives from those CSCs will also be added to the Technical Advisory Group. The webpage for the Technical Advisory Group is available at this link:

<http://www.aqmd.gov/nav/about/initiatives/environmental-justice/ab617-134/technical-advisory-group>

Table 2-3: Technical Advisory Group meetings in 2019

Meeting #	Date	Approximate Attendees
1	February 27, 2019	45
2	May 29, 2019	45
3	July 18, 2019	40

Table 2-4: Roster for the AB 617 Technical Advisory Group

Participant	Affiliation	Community
Jesse Marquez	Coalition for a Safe Environment	Wilmington, Carson, West Long Beach
Flavio Mercado (Alternate for Jesse Marquez)	Active Resident from Wilmington	Wilmington, Carson, West Long Beach
Jill Johnston	University of Southern California	Wilmington, Carson, West Long Beach
Uduak-Joe Ntuk	City of Los Angeles	Wilmington, Carson, West Long Beach
Tim DeMoss (Alternate for Uduak-Joe Ntuk)	Port of Los Angeles	Wilmington, Carson, West Long Beach
Ryan Sinclair	Loma Linda University	San Bernardino, Muscoy
Andreas Beyersdorf	California State University, San Bernardino	San Bernardino, Muscoy
Tammy Yamasaki	Southern California Edison	San Bernardino, Muscoy
Hector Garcia	Our Lady of Victory	East LA, Boyle Heights, West Commerce
Marisa Blackshire	BNSF	East LA, Boyle Heights, West Commerce
Rafael Yanez	Active Resident	East LA, Boyle Heights, West Commerce
Manuel Pastor	Univ. Southern California, Sociology and American Studies & Ethnicity	Technical Expert
Madeline Wander (Alternate for Manuel Pastor)	Univ. Southern California, Sociology and American Studies & Ethnicity	Technical Expert
Scott Fruin	Univ. Southern California, Preventive Medicine	Technical Expert
Cesunica (Sunny) Ivey	UC Riverside	Technical Expert

Participant	Affiliation	Community
Luis Portillo	Inland Empire Partnership	Technical Expert
Ken Davidson	US EPA Region 9 Air Division, Air Toxics, Radiation, and Indoor Air	Technical Expert
Janet Whittick	California Council for Environmental and Economic Balance (CCEEB)	Technical Expert
Melissa Lunden	Aclima	Technical Expert

## Additional Community Engagement

In addition to establishing the CSC and convening monthly meetings, South Coast AQMD staff conducts one-on-one or small group meetings with members, and attends meetings led by various community organizations. These meetings give CSC members an opportunity to provide input or address concerns directly with staff. Additionally, these meetings give staff an opportunity to answer questions and clarify information requested from CSC members. By attending meetings led by community organizations, staff can gain a better understanding of the unique issues faced by each community.

Broader public engagement is also important to the AB 617 program. Suggestion boxes provided at the CSC meetings allows CSC members, as well as the general public, to provide input and suggestions on the AB 617 process (Figures 2-11 and 2-12~~Figure 2-10~~). Staff reviews the comments after each CSC meeting, and responds as needed. Anonymous submissions are accepted. In addition, a Community Affairs Table at the CSC meetings provides a space for community members to share flyers and handouts about events and programs happening in the community.

Figures 2-11 and 2-12~~2-10~~:- Suggestion box and signs for a CSC meeting in West Long Beach

Throughout the development of the CERP, community liaisons and other staff met with community members, environmental justice organizations, industry and other stakeholders to

provide assistance and/or prompt response to concerns raised about the CSC process. Community liaisons also attended invited meetings from local organizations, environmental justice groups, city and county government to promote participation in the development and implementation of the CERP. Staff attended more than 5 meetings hosted by other entities in this community to give presentations on AB 617 CERP development, and had more than 35 in-person or phone meetings with CSC members to discuss the CSC process and seek input on CERP actions. South Coast AQMD staff will continue to work with the CSC to implement the CERP actions and provide periodic community updates on the progress of implementing the plan. Community engagement is essential to the success of the CERP as well as the AB 617 program as a whole, and all parties are committed to build and improve upon existing outreach efforts in the coming months and years.

THIS PAGE IS INTENTIONALLY LEFT BLANK

# CHAPTER 3A:

## COMMUNITY PROFILE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

# Chapter 3a: Community Profile

## Introduction

It is essential to understand the characteristics of a community and the profile of air pollution sources in order to address community air quality priorities. The following community profile provides a general overview of the Wilmington, Carson, West Long Beach community, including the types of air pollution impacting the community, and a characterization of public health and socioeconomic factors. In addition, this section includes information about the community boundary that reflects input from the Community Steering Committee (CSC); a summary of the air pollution concerns identified by the community; and the air quality priorities based on CSC and public input. These air quality priorities are addressed in the Community Emissions Reduction Plan (CERP) actions described in Chapter 5.

Chapter 3a Highlights

- The community profile is based upon input from the Community Steering Committee throughout the CERP development process
- The Community Steering Committee identified the top air quality priorities to be addressed in the CERP
- Data on land use; toxic air pollution impacts; public health factors; and both social and economic factors in the community provide useful background information
- Information about the sources of air pollution in the community is presented in a “source attribution” analysis (Chapter 3b)

## Community Boundary, Air Quality Concerns, and Air Quality Priorities

During monthly CSC meetings, committee members, members of the public, and South Coast AQMD staff worked together to shape the elements and actions described in this Plan. Topics discussed with the CSC include:

- What should be the community **boundaries** for the AB 617 community plans?
- What **air quality concerns** does the community have?
- What are the top **air quality priorities** that the community would like to address through the AB 617 CERP?
- What **priority actions** should be included in the CERP?
- What should the **goals** for the priority actions include?
- Additional **feedback on the Draft CERP**

The process is summarized in Table 3a-1. CSC members discussed which geographic areas should be included within the community boundary (Figure 3a-1). The Wilmington, Carson, West Long Beach CSC preferred to have a single community boundary line, which includes air pollution sources (e.g., facilities and major truck routes) as well as places where children, people with existing health problems, and other community members spend time (e.g., schools, residential areas, community centers, hospitals, etc.). Regions within and near the community boundary will benefit from the emissions reductions within the boundary.

The CSC and members of the public participated in an interactive mapping activity to identify community air quality concerns which were posted on the webpage.<sup>i</sup> CSC members also provided additional air quality concerns by email and other conversations; these concerns were added to the map shown (Figure 3a-1) and listed (~~Figure 3a-2~~ Table 3a-2). A list of additional concerns were posted to the webpage.

Air quality concerns were grouped into categories (e.g., refineries, truck traffic, oil and gas extraction, etc.) and CSC members, as well as the public prioritized the top air quality concerns to be addressed through AB 617 community plans. CSC members were invited to provide ideas and input on CERP actions and also meet with South Coast AQMD staff to draft CERP actions together. The highest priority actions were included in the draft CERP based on input from the CSC members.

The work to implement the CERP and Community Air Monitoring Plan (CAMP)<sup>1</sup> is dynamic, thus certain action items have been written with built-in flexibility to permit necessary adjustments as new information becomes available. South Coast AQMD staff is committed to working with CSC members to evaluate ongoing actions and progress.

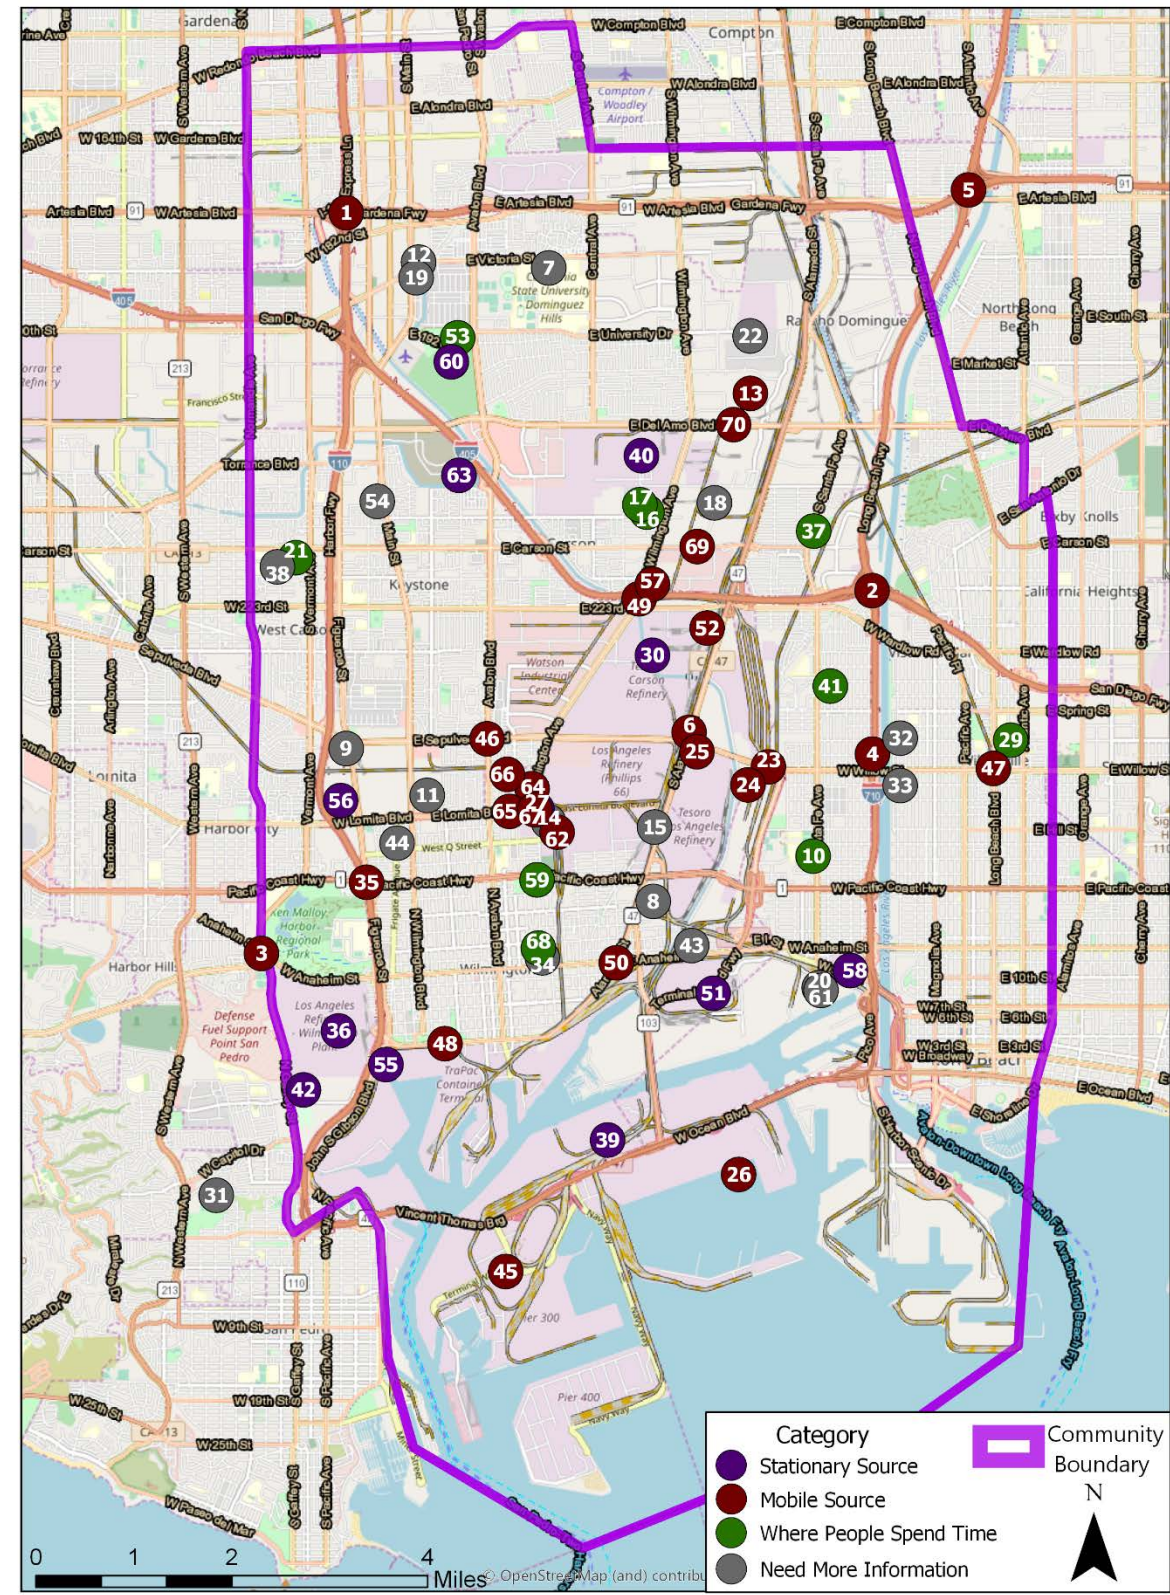

---

<sup>i</sup> Interactive map of air quality concerns in the Wilmington, Carson, West Long Beach community: <https://scaqmd-online.maps.arcgis.com/apps/View/index.html?appid=534f48ca127c430abb1a5f4f6e86cf00&extent=-118.5536,33.6686,-117.8945,33.9359>

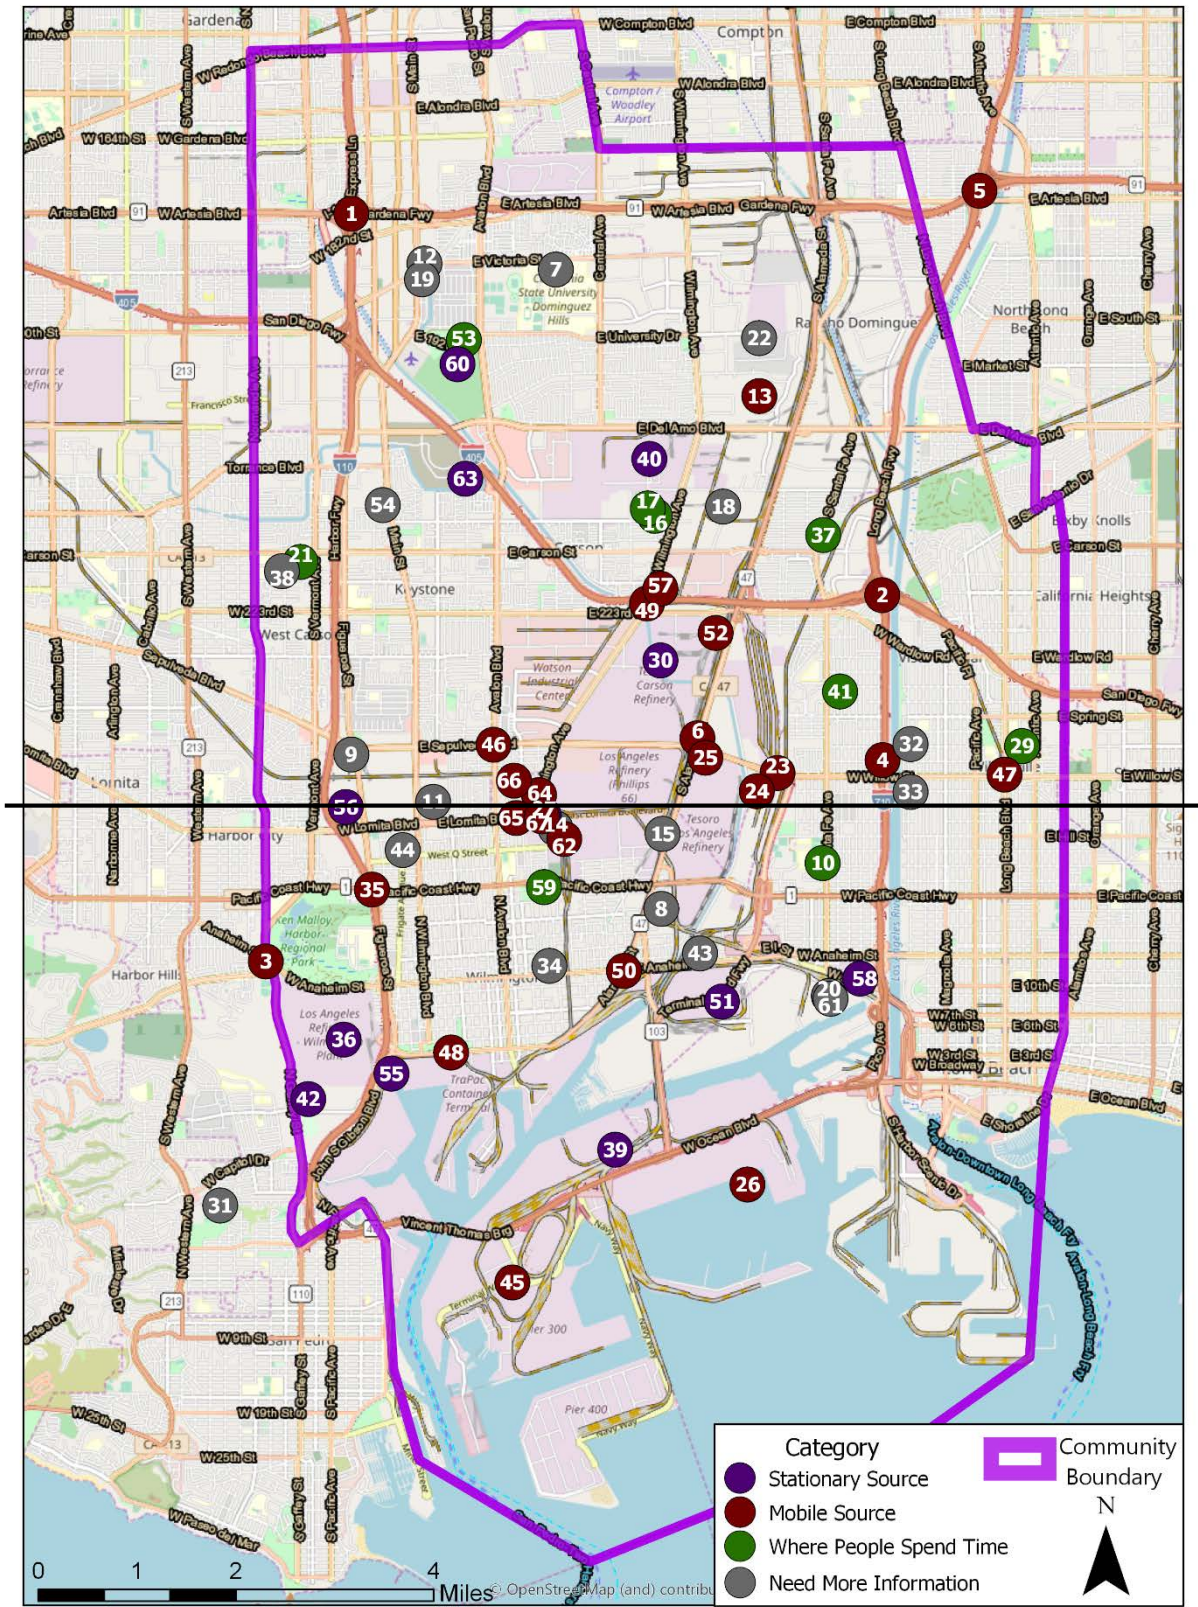

Table 3a-1: Process of CSC input on CERP elements

CSC Meeting	Discussion Topic(s)	CSC Input	How this CSC input was used in the CERP development process?
#1 November 2018	Community Air Quality Concerns and Community Boundary	Refined community <b>boundaries</b> . Identified community air quality <b>concerns</b> . <u>Outcome</u> : List of air quality concerns	<b>Boundaries</b> were used to define focus area for CERP actions (see Meetings #4-5). <b>Concerns</b> were prioritized for inclusion in Plans (see Meeting #3).
#2 January 2019	Community Boundary	Refined <b>community boundaries</b> . <u>Outcome</u> : Community boundary	<b>Boundaries</b> were used to define focus area for CERP actions (see Meetings #4-5).
#3 February 2019	Air Quality Concern Prioritization	Prioritized which concerns would be addressed in Plans. <u>Outcome</u> : Air quality priorities	Actions were developed for <b>air quality priorities</b> (Meetings #4 and #5).
#4 March 2019	Strategies & Proposed Actions (Part 1)	Ideas for <u>possible CERP actions</u> were <u>discussed</u> <del>can be written into the Plans</del> . Staff <del>will</del> <u>worked</u> with CSC members to write CERP actions.	Feedback on actions were used to develop the list of <b>priority actions</b> (Meeting #6).
#5 April 2019	Strategies & Proposed Actions (Part 2), Draft CAMP, and Draft CERP Table of Contents & Action Template	<u>Outcome</u> : Draft focused list of actions for CERP	
#6 May 2019	Focused list of CERP Actions (“priority actions”)	Provided feedback on which <b>priority actions</b> should be included in CERP. <u>Outcome</u> : List of priority actions for CERP	Feedback on actions were used to finalize the list of <b>priority actions</b> to be included in the <b>Draft CERP</b> .
#7 June 2019	Draft CERP, Goals for each CERP Action (Part 1)	Feedback on <b>Draft CERP</b> . Ideas for specific goals for each CERP action. <u>Outcome</u> : Revised Draft CERP	Feedback on <b>Draft CERP</b> and ideas for specific goals will be used to inform the <b>Draft Final CERP</b> in the Board package.
#8 July 2019	Goals for each CERP Action (Part 2)		
#9 August 2019	Final Discussion of Draft CERP	<b>Final revisions</b> for Draft CERP before it is submitted to South Coast AQMD Board for consideration. <u>Outcome</u> : Draft Final CERP and Appendices	Final comments to be addressed in <b>Draft Final CERP</b> that is part of the Board package.

~~The South Coast AQMD develops and enforces air pollution regulations to reduce emissions, improve air quality, and protect public health. Many South Coast AQMD rules are related to a specific type of operation or pollution source. Figure 3a-3~~ Figure 3a-2 describes the number of facilities in this community that are subject to some key South Coast AQMD rules to control emissions from facilities processing metals. The figure also includes information about facilities that are in ~~key~~ important state and federal programs, which includes major sources of air pollution or other types of environmental pollution. Appendix 3a lists the RECLAIM facilities in this community that may be subject to Best Available Retrofit Control Technology (BARCT) and whether they are in the State cap-and-trade program. Appendix 3a also provides a list of facilities in the community that are in the ~~have prior and/or ongoing AB 2588 risk reduction plans program.~~

Figure 3a-32: Key stationary sources in the Wilmington, Carson, West Long Beach community, by regulatory program

	2 Facilities subject to Rule 1407 and/or 1420	<p><b>Rule 1407</b> reduces emissions of arsenic, cadmium, and nickel from metal melting operations</p> <p><b>Rule 1420</b> reduces emissions of lead from facilities</p>
	4 Facilities subject to Rule 1426	<b>Rule 1426</b> reduces emissions from facilities performing chromium, nickel, cadmium, lead or copper electroplating operations, or chromic acid anodizing
	10 Facilities subject to Rule 1469	<b>Rule 1469</b> reduces hexavalent chromium emissions from chromium electroplating and chromic acid anodizing operations
	54 Facilities in the AB2588 program	<b>Assembly Bill 2588</b> (AB2588) is a statewide program that focuses on reducing air toxics pollution from facilities, and requires facilities above certain levels to disclose and/or reduce risks
	78 Facilities subject to U.S. EPA Title V	The <b>U.S. EPA Title V program</b> is a permitting program that includes all major sources across the United States
	3 Sites in U.S. EPA Superfund program	The <b>U.S. EPA Superfund</b> program conducts environmental clean ups of some of the most contaminated land, and responds to environmental emergencies, oil spills, and natural disasters

The following air quality priorities for the CERP were identified by the CSC and members of the public for the Wilmington, Carson, West Long Beach community:

- Refineries
- Ports
- Neighborhood Truck Traffic
- Oil Drilling and Production
- Railyards
- Schools, Childcare Centers, and Homes – Exposure Reduction

Actions to address each of these air quality priorities are described in Chapter 5.

The South Coast AQMD and the California Air Resources Board (CARB) both develop and enforce air pollution regulations to reduce emissions, improve air quality, and protect public health. While CARB has primary authority over mobile sources, the South Coast AQMD has authority over stationary sources and “indirect sources”, which are facilities that attract mobile sources. Examples of indirect sources include warehouses and railyards. Specific information about ongoing rule development that is relevant to these air quality priorities is provided in Chapter 5.

### Community Air Pollution Profile and Related Data

Understanding what air pollution sources exist in the community and what air pollutants come from these sources helps identify key sources that can be addressed through CERP actions. This section presents data based on previous cumulative impact studies<sup>ii</sup> to describe the impacts of toxic air pollutants in this community, as well as other environmental pollution, public health factors, and social and economic factors that make people more sensitive or vulnerable to the health effects of pollution.<sup>2</sup>

The Wilmington, Carson, West Long Beach community is shown in Figure 3a-1. The land area of this community is 71.86 mi<sup>2</sup>. About 25% of this land area is used for residential living, 25% is zoned for industrial uses, and 23% is used for freeways, roadways, and land used for utilities and communications services (Figure 3a-4Figure 3a-3).<sup>iii</sup>

Figure 3a-43: Land use profile in Wilmington, Carson, West Long Beach

Air toxics are one group of air pollutants that can affect public health on a local community scale. ~~This includes~~ These pollutants include, but are not limited to from diesel exhaust, and metal particulate pollutants (e.g., hexavalent chromium, lead, arsenic, nickel, etc.), and gases (e.g., benzene, formaldehyde, etc.). The South Coast AQMD conducts the Multiple Air Toxics Exposure Study (MATES) every few years to understand the cumulative health impacts of air toxics in communities across the region. The most recently completed study was MATES IV, which was conducted in 2012-2013, and used air toxics monitoring, emissions inventories, modeling, and health risk assessment techniques to

<sup>ii</sup> More information regarding MATES IV and the final report can be found on South Coast AQMD's website at: <http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/matesiv>.

<sup>iii</sup> Land use refers to how certain areas of land are classified for development and use. Land use data is often used for city or county planning, such as the placement of housing developments and transportation hubs. Land use data is derived from the 2016 Southern California Association of Governments (SCAG) Regional Transportation Plan/ Sustainable Communities Strategy, which is based on 2012 data.

calculate the cancer risk due to toxic air pollutants (“air toxics cancer risk”).<sup>iv</sup> MATES V is currently in progress. Based on MATES IV modeled data, approximately three-quarters of the air toxics cancer risk in the Basin is due to diesel particulate matter (Figure 3a-5Figure 3a-4). The air toxics cancer risk in the Wilmington, Carson, West Long Beach community is much higher than the average in the Basin, and it is also dominated by diesel particulate matter.

Figure 3a-54: Air toxics cancer risk, based on MATES IV modeled data

Mobile sources include trucks, ships, trains, cars, buses, and other mobile equipment. Much of this equipment is powered by diesel, which is the air toxic pollutant with the highest impact in this community. The community includes more than 40 miles of freeways, 2 marine ports (which are the two largest container ports in the United States), and 9 railyards,<sup>v</sup> including two railyards that are located near residential areas (Figure 3a-56).

<sup>iv</sup> More information regarding MATES IV and the final report can be found on South Coast AQMD's website at: <http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/matesiv>.

<sup>v</sup> Includes rail terminals, railroad facilities, and freight and passenger maintenance facilities.

Figure 3a-65: Diesel mobile sources in Wilmington, Carson, West Long Beach

Understanding the community's public health and socioeconomic profile helps to provide context for the work being done through this CERP. CalEnviroScreen 3.0 is a screening tool developed by the California Office of Environmental Health Hazard Assessment (OEHHA) that is used to identify communities that are most affected by various sources of pollution, and where people are especially vulnerable to the effects of pollution. The CalEnviroScreen 3.0 data show that this community has public health factors, as well as social and economic factors, that make the community more sensitive and vulnerable to the harmful effects of air pollution compared to statewide averages (~~Figure 3a-7~~ Figures 3a-6 and Figure 3a-8 3a-7). These data show that, on average, the Wilmington, Carson, West Long Beach community has generally worse public health factors and more social and economic disadvantages compared to California as a whole. The public health factors specifically show that this community has higher rates of emergency department visits for asthma and heart disease, and more babies born with a low weight in comparison to statewide averages.

Figure 3a-76: CalEnviroScreen 3.0 scores for public health factors in Wilmington, Carson, West Long Beach compared to statewide averages

Figure 3a-78: CalEnviroScreen 3.0 scores for social and economic factors in Wilmington, Carson, West Long Beach compared to statewide averages<sup>vi</sup>

# CHAPTER 3B:

## COMMUNITY PROFILE SOURCE ATTRIBUTION

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 3b: Emissions Inventory and Source Attribution

### Introduction

The Community Emission Reduction Plan (CERP) identifies air quality priorities based on community input and from evaluating technical data on emission sources in the community. The Community Emissions Reduction Plan (CERP) needs to identify air pollution challenges that each community faces, and defines actions and strategies to reduce the emissions and exposure burden from sources of criteria air pollutants (CAPs) and toxic air contaminants (TACs). Identifying air quality priorities for the CERP is accomplished through listening to the community's input

and expertise, along with evaluating technical data on emission sources in the community. To accurately determine emission reductions from these actions and strategies, a baseline reference needs to be established. The baseline reference can be achieved through an emissions inventory that includes A rigorous accounting of sources and their resulting emissions is needed to produce an accurate emissions inventory that will serve as a baseline reference from which emission reductions can be measured. This rigorous accounting of sources, their emissions and their contribution to the cumulative exposure burden is what the CARB guidelines identify as the source attribution analysis. Per the direction in the CARB guidelines, source attribution is required to meet the following AB 617 statutory requirements:

### Chapter 3b Highlights

- Information about the sources of air pollution in this community is presented in a "source attribution" analysis
- Diesel particulate matter is currently the main air toxic pollutant in this community, and it comes mostly from on-road and off-road mobile sources
- Other key air toxic pollutants in this community are 1,3-butadiene (mostly from the chemical industry) and hexavalent chromium (mostly from brake wear)
- Volatile organic compounds (VOCs) come primarily from petroleum refining and marketing
- In future years, overall diesel emissions increase due to increases in Ocean-Going Vessel (OGV) emissions, and continues to be the main driver of air toxics cancer risk in this community

*California Health and Safety Code § 44391.2 (b) (2) directs CARB to provide "[a] methodology for assessing and identifying the contributing sources or categories of sources, including, but not limited to, stationary and mobile sources, and an estimate of their relative contribution to elevated exposure to air pollution in impacted communities..."*

The CARB guidelines recommended five potential technical approaches for the source attribution analysis. The options presented are: developing an emissions inventory, air quality modeling, targeted air monitoring/back trajectory/pollution roses/inverse modeling, chemical mass balance, and positive matrix factorization. Among these options, based on the availability of data and resources, this source attribution analysis employs the emissions inventory and air quality modeling analysis approaches to identify sources contributing to air pollution levels in the community, with an emphasis on identifying sources within the community (emissions

inventory). More information on source attribution methods is included in the Source Attribution Methodology report.<sup>1i</sup> The most recent air quality modeling analysis was conducted as part of the Multiple Air Toxics Exposure Study (MATES IV) in 2015, which showed that Diesel Particulate Matter (DPM) was the air pollutant that contributed most to the air toxics cancer risk in the South Coast Air Basin, with the Wilmington, Carson, West Long Beach (WCWLB) community having a higher air toxics cancer risk compared to the overall average (Figure 3b-5). A community-specific emissions inventory was developed for ~~criteria air pollutants (CAPs)~~ and TACs based on the most recent available datasets.

The WCWLB community contains some obvious sources of air pollution, including Ports of Los Angeles and Long Beach, which accommodates ocean-going vessels, commercial harbor craft, locomotives, cargo handling equipment and drayage trucks. More than 40 miles of freeways and nine rail yards are located within the community. This community also encompasses large stationary industrial sources, including five petroleum refineries, one sulfur recovery plant, and two hydrogen production plants. The source attribution analysis highlights that in the year 2017, off-road mobile sources were the predominant sources of DPM, with the major contributors being ocean-going vessels, off-road diesel equipment, heavy-heavy duty trucks, medium-heavy duty trucks, and trains. In this community, 1,3-butadiene has the second largest contribution to the community-wide air toxics cancer risk. 1,3-butadiene is emitted from point, area, off-road mobile and on-road mobile sources with industrial processes in point and area sources being the largest single industrial sector emitting this air toxic compound. Hexavalent chromium is the third largest contributor to community air toxics cancer risk, and the main sources are on-road mobile and fuel combustion process from petroleum refining among point sources. The analysis presented in this chapter provides further details on the sources of VOCs and PM<sub>2.5</sub>. Projected emissions in future years show decreases in DPM emissions, although DPM continues to be the main contributor to air toxics cancer risk. 1,3-butadiene, hexavalent chromium and benzene are the next major contributors in this community.

The community-level emissions and their sources are discussed in this ~~chapter report~~. The detailed methodology to develop these emissions is provided in the Source Attribution Methodology report<sup>ii</sup>.<sup>1</sup> ~~The following sections contain discussions about base~~Base year emissions ~~of CAPs and TACs and future year emissions of CAPs and TACs are provided in section 2. A summary of the information is provided at the end of the chapter. Future year emissions of CAPs and TACs are discussed in section 3, and a summary is provided in section 4.~~

## Base Year Emissions Inventory and Source Attribution

### *Overall profiles of CAPs and TACs*

A variety of sources contribute to the emissions of criteria pollutants in the WCWLB community, with different sources emitting different types of air pollutant-species (Figure 3b-1). In this community, off-road mobile sources are the largest emitters of NO<sub>x</sub> (45%), with ocean-going vessels (OGV) being the largest contributor (Figure 3b-1). Point sources are the second largest contributors (29%) due to the presence of large facilities such as petroleum refineries, sulfur recovery plant and hydrogen production plants. On-road mobile sources also contribute significantly to NO<sub>x</sub> emissions, with the largest contribution from heavy duty trucks associated with goods transport across this community.

VOC emissions are mostly from area and point sources. Typically, consumer product is the largest single source of VOC emissions in the South Coast Air Basin, however, petroleum refining industry is the largest VOC emitter in this community. Approximately 32% of the total VOC emissions in this community are attributed to processes related to petroleum refining. The second largest contributor to the community VOC emission is consumer product. Off-road and on-road mobile sources account for marginal portions of the total VOC.

The largest contribution to PM<sub>2.5</sub> emissions in the WCWLB community originates from point sources, mostly from fuel combustion in industrial and petrochemical processes. Miscellaneous area sources, like commercial cooking, residential fuel combustion and paved road dust, also contribute to a large portion of PM<sub>2.5</sub> emissions. PM is also emitted from mobile sources via fuel combustion exhaust and tire and brake wear. It is important to note that ambient PM<sub>2.5</sub> concentrations in the community have decreased steadily in the past decades due to the reductions of PM<sub>2.5</sub> precursor emissions such as NO<sub>x</sub>, SO<sub>x</sub>, and VOC. Ambient PM<sub>2.5</sub> can be either formed through chemical reactions of its precursor pollutants or be emitted directly from sources. In the South Coast Air Basin, including in this community, the majority of ambient PM<sub>2.5</sub> is formed by secondary chemical reactions in the atmosphere rather than directly emitted PM<sub>2.5</sub> from local sources. Accordingly, although PM<sub>2.5</sub> emissions has decreased marginally over the past decade, the ambient PM<sub>2.5</sub> concentrations have been improved substantially.

TAC emissions from point sources were compiled from the emissions reported by facilities. TAC emissions from area, on-road mobile, and off-road mobile sources were calculated using chemical speciation profiles applied to PM or TOG emissions. Details on the chemical speciation profiles are provided in a separate Source Attribution Methodology report. In total, 22 air toxic compounds were analyzed and included in this report. These compounds are consistent with the basic TACs that facilities subject to Annual Emissions Reporting (AER) requirements report to South Coast AQMD annually, except for chlorofluorocarbons (CFCs) and ammonia. CFCs do not have an associated cancer risk, and ammonia is a PM precursor, and therefore included in the CAPs emissions table.

Figure 3b-1: Contribution of major sources to NO<sub>x</sub> emissions, VOC emissions, PM<sub>2.5</sub> emissions in the Wilmington, Carson, West Long Beach community in 2017. Emissions are shown in tons/year

PM<sub>2.5</sub> in 2017 (tons/year)

The contribution from point, area, on-road mobile and off-road mobile emission sources to TAC emissions in this community are presented in Figure 3b-2. Note that the emissions in the figure are weighted based on the air toxics cancer risk (hereafter referred to as cancer risk) of each TAC relative to the cancer risk for diesel PM (DPM). For example, Cr<sub>6+</sub> has a cancer risk that is approximately 464 times higher than that of DPM. Thus, Cr<sub>6+</sub> emissions are multiplied by 464 to estimate the cancer-risk-weighted emissions of Cr<sub>6+</sub>. The units in the cancer-risk-weighted DPM-equivalent emissions are expressed in pounds per year (lbs/year). This weighting approach

enables comparisons across the contribution of each TAC to overall cancer risk using a consistent, toxicity-weighted scale. Cancer risk factors are calculated using cancer potency and basin-average inhalation rates. Since the cancer-risk weighted factors are relative to the DPM risk factor, relative weighting factors using cancer risk should be equivalent to weighting factors calculated using cancer potency. However, due to precision and rounding errors, weighting factors using cancer risk might not be identical to the weighting factors calculated using cancer potency for some TACs. -Figure 3b-2 shows that DPM is the biggest contributor to the overall cancer risk in the community, followed by 1,3-butadiene, hexavalent chromium and benzene. Figure 3b-2 also shows the major source categories of these main TACs. DPM emissions in this community are almost entirely from mobile sources. A significant portion of Cr6+ is also emitted from on-road mobile sources, likely from brake wear. A detailed emissions inventory by major source categories is provided in Appendix 3b.

Figure 3b-2: Contribution of major sources to toxic air contaminant emissions in the Wilmington, Carson, West Long Beach community in 2017 (shown in lbs/year, weighted by air toxics cancer risk). Note the different scale for DPM with respect to the other air toxics.

#### *Stationary and area sources*

Figure 3b-3 indicates the sources where VOC and PM<sub>2.5</sub> emissions are originated from in the stationary and area source sectors in the WCWL community in 2017. The largest contribution to VOC emissions are from petroleum production and marketing, due to presence of several petroleum refineries in this community. Solvent evaporation from consumer products and industrial processes is the second largest source of VOCs, and various industries also contribute significantly to total VOC emissions.

Direct emissions of PM<sub>2.5</sub> in the WCWL community originate from a wide range of activities, with fuel combustion associated with the refinery industry as the largest contributor. Other important source categories contributing to PM<sub>2.5</sub> emissions include commercial cooking, residential and commercial fuel combustion, and paved road dust.

Figure 3b-4 illustrates the emissions of the major toxic air pollutants from stationary and area sources in the community. The emissions of each pollutant are weighted by their cancer risk relative to DPM. In this community, 1,3-butadiene and hexavalent chromium are the predominant air toxics from stationary sources. 1,3-butadiene is mostly emitted from industrial processes (Figure 3b-5), especially in the chemical industry, whereas the major source for

hexavalent chromium emissions is from fuel combustion in manufacturing and from the coatings industry.

### *2.3 On-road mobile sources*

Figure 3b-6 presents the contribution of different vehicle classes to total VOC and PM<sub>2.5</sub> emissions. In general, passenger vehicles and light- and medium-duty vehicles contribute to the

majority of VOC and PM<sub>2.5</sub> emissions, with 88% and 68% of the total VOC and PM<sub>2.5</sub> emissions, respectively. VOC emissions are mostly from gasoline vehicles<sup>iii</sup>,<sup>iv</sup> and, as a result, passenger cars are the main contributor to VOC emissions because of the large ~~the~~ number of vehicles and miles traveled by these types of vehicles in this community. Heavy-duty trucks are the second largest emitters of VOCs and PM<sub>2.5</sub>. Heavy-duty diesel vehicles tend to have higher PM exhaust and tire and brake wear emissions per mile driven compared to gasoline cars, and despite contributing to less than 10% of the total vehicle miles traveled in Los Angeles County, heavy-duty vehicles contribute to more than 25% of the total PM<sub>2.5</sub> emissions from on-road sources<sup>v</sup>.<sup>vi</sup>

Air toxics emissions from on-road sources are largely dominated by DPM (Figure 3b-7). The largest contributor to DPM emissions is diesel fueled heavy-duty trucks (Figure 3b-8), as the largest impacts from on-road sources in the community are concentrated along the main goods movement corridors. The second largest TAC~~—species~~ from on-road sources is hexavalent chromium, which is likely emitted from brake wear and, to a smaller extent, from fuel combustion.<sup>vii</sup>

Other TACs emitted from on-road sources include benzene, 1,3-butadiene and formaldehyde. Benzene is generated from evaporative losses and from the incomplete combustion of gasoline, whereas formaldehyde and 1,3-butadiene emissions are generated from fuel combustion.

---

<sup>iii</sup> ~~These emissions are largely related to evaporative and running losses~~

<sup>iv</sup> ~~These emissions are largely related to evaporative and running losses~~

<sup>\*</sup> ~~Heavy-duty diesel vehicles tend to have higher PM exhaust and tire and brake wear emissions per mile driven compared to gasoline cars.~~

<sup>vi</sup> ~~Heavy-duty diesel vehicles tend to have higher PM exhaust and tire and brake wear emissions per mile driven compared to gasoline cars.~~

<sup>vii</sup> ~~A small fraction of hexavalent chromium was considered to originate from vehicle brake wear. The emission factors were empirically adjusted for the MATES IV analysis. While this approach worked reasonably well for the MATES analysis, further evaluation may be required for adapting this adjustment to more recent data. For example, an adjustment may be required to reflect cleaner vehicle fuels compared to those in use during previous MATES.~~

Figure 3b-8: Source attribution of DPM emissions from on-road mobile sources in the Wilmington, Carson, West Long Beach community for 2017 (shown in lbs/year)

#### *2.4 Off-road mobile sources*

Figure 3b-9 provides the source attribution of VOC and PM<sub>2.5</sub> emissions from off-road sources. The emissions from small off-road equipment contribute to nearly half of the total VOC emissions in this community. This category contains small off-road spark-ignition engines that include lawn and garden, industrial, airport ground support, and commercial utility equipment, golf carts, and specialty vehicles. Port-related activities account for a significant portion of the VOC emissions in the community. OGV and commercial harbor craft emissions combined account for approximately 20%, while recreational boats, including both exhaust emissions and evaporative losses, account for 22% of the community total VOC emissions. OGVs are the largest emitters of PM<sub>2.5</sub> from off-road sources. The second largest contribution to direct PM<sub>2.5</sub> emissions is commercial and industrial off-road equipment.

Similarly to the source attribution results for on-road mobile sources, DPM is the largest contributor to TAC emissions from off-road mobile sources in the WCWLB community (Figure3b-10). DPM mainly originates from OGVs (44%) and industrial off-road equipment (41%) (Figure 3b-11).

Figure 3b-9: Source attribution of VOC emissions and PM2.5 emissions from off-road sources in the Wilmington, Carson, West Long Beach community for 2017

Figure 3b-11: Source attribution of DPM emissions from stationary and area sources in the Wilmington, Carson, West Long Beach community for 2017 (shown in lbs/year, weighted by air toxics cancer risk)

## Future Year Emissions Inventory and Source Attribution

### *~~3.1~~ Trend of emission change for CAPs and TACs*

Future emissions of CAPs and TACs in the WCWL community are projected using the best available information on socio-economic growth and emission adjustments reflecting ongoing regulations that reduce specific air pollutants. Regulations reflected in these adjustments include South Coast AQMD regulations and CARB regulations.

Based on available information, to date, there are two (2) facilities within the community boundary subject to Rule 1407 (which regulates toxic emissions from metal melting operations) and/or Rule 1420 (which regulates toxic emissions from lead processing facilities); four (4) facilities subject to Rule 1426 (which regulates toxic emissions from electroplating operations); ten (10) facilities subject to Rule 1469 (which regulates toxic emissions from electroplating and chromic acid anodizing operations).

Furthermore, heavy-duty diesel vehicles in this community will be subject to the CARB truck and bus regulation<sup>viii</sup>, with implementation dates after 2017; this rule will result in reduced DPM emissions from these engines. Off-road diesel equipment is also subject to existing state regulations that will reduce DPM emissions from these sources.

South Coast AQMD and CARB are continuing to develop regulations and programs to reduce NOx and VOC emissions, since the adoption of the 2016 AQMP in March 2017. However, control factors for future regulations and programs that are still under development are not reflected in the current inventory. The current inventory for area and stationary sources reflects NOx and VOC rules adopted as of December 2015 and TACs rules adopted as of December 2017. Future versions of the emission inventory will reflect the more recently adopted regulations.

Figure 3b-12 presents the projected major CAPs emissions (NOx, VOC and PM<sub>2.5</sub>) in the WCWL community in the two future milestone years of 2024 and 2029, along with the base year 2017. The NOx emissions in the community are expected to decrease substantially from 2017 (10,614 tons/year) to 2024 (8,819 tons/year), mainly due to the strict regulations on mobile sources and the emission reduction commitments under the Regional Clean Air Incentives Market (RECLAIM) program. The total NOx emissions in 2029 are projected to rise slightly (9,250 tons/year) due to the increase in industrial and on-road mobile source activities. VOC emissions are expected to decrease by 7% during this 12 year period, mostly due to on-road and off-road emission reductions. Unlike NOx and VOC emissions, PM<sub>2.5</sub> emissions remain virtually constant from 2017 to 2024, and then increase by less than 2% by 2029.

Trends for TAC emissions are displayed in Figure 3b-13. DPM continues to dominate the TACs emission inventory in the future years despite a significant reduction in DPM from heavy-duty trucks. DPM emissions decrease by 16% between 2017 and 2024, but increases by 9% between

---

<sup>viii</sup> CARB's Truck and Bus Regulations: <https://ww2.arb.ca.gov/our-work/programs/truck-and-bus-regulation>

2024 and 2029. Tables showing detailed emissions of CAPs and TACs are provided in the Appendix 3b. The increasing trend after 2024 for DPM is mainly driven by the increase in ports activity and associated OGV emissions. The second largest contributor to TACs is Cr<sup>6+</sup>, whose emissions increase from 2017 to 2029 due to increases in brake wear emissions and projected industrial activity growth. 1,3-butadiene is the third largest compounds of TACs, and its emissions decline slightly due to reductions in emissions from vehicles. Benzene and formaldehyde emissions decrease during the 12 year period due to decreases in the emissions from vehicles, whereas emissions from metals (i.e., cadmium, nickel, arsenic and lead), show a slight increasing trend due to projected industrial activity growth.

Figure 3b-14 presents the cumulative TAC emissions by the major categories for the base and two future milestone years. The overall cancer-risk-weighted emissions decreased between 2017 and 2024, but the overall emissions increased between 2024 and 2029. In particular, diesel heavy duty trucks and off-road equipment decreased substantially over the first 7 years, driving the downward trend of the overall TAC emissions. However, the steady increase in emissions from ships brings the overall emissions up after 2024.

Figure 3b-12: The community total emission trends for NOx, VOC and PM (tons/year) for the years 2017, 2024 and 2029

Figure 3b-13: The community total emission trends for toxic air contaminants for the years of 2017, 2024 and 2029 (shown in lbs/year, weighted by air toxics cancer

Figure 3b-14<sup>ix</sup>: Toxic air contaminant emissions from all sources in the Wilmington, Carson, West Long Beach community, shown by major categories. Emissions are weighted based on their cancer risk relative to DPM

<sup>ix</sup> Numbers may not add up due to rounding

### 3.2 Stationary and Area Sources

The trends in total emissions of NO<sub>x</sub>, VOC and PM<sub>2.5</sub> from stationary and area sources in this community are shown in Figure 3b-15. NO<sub>x</sub> emissions are expected to decline from 2017 to 2024 due to the emission reductions from RECLAIM facilities\*.<sup>xi</sup> VOC and PM<sub>2.5</sub> emissions are expected

to grow gradually due to the projected growth in population and economic and industrial activities.

Figure 3b-15: Trends in NO<sub>x</sub>, VOC and PM<sub>2.5</sub> emissions from stationary and area sources in the Wilmington, Carson, West Long Beach community. Emissions are shown in tons per year

While the total amount of emissions change in the future years, the relative contributions from the various industrial source categories to the total emissions are not expected to change significantly. In this community, petroleum refining and marketing and fuel combustion are expected to continue as the dominant sources of VOC and PM<sub>2.5</sub> emissions, respectively, in both future milestone years.

Emissions of 1,3-butadiene and hexavalent chromium are the largest contributors to total air toxics emissions from area and stationary sources (Figure 3b-16), and are expected to rise between 2017 and 2029 due to industrial activity growth during the period. Emissions of other TACs that are primarily emitted from industrial activities, i.e., formaldehyde, cadmium, arsenic, nickel, and lead, are also expected to increase due to industrial growth. Only PAHs, benzene, and perchloroethylene emissions decrease. Similar to 2017, the main source of 1,3-butadiene emissions is from industrial processes, or more specifically, emissions attributed to the chemical industry.

<sup>xi</sup> NO<sub>x</sub> RECLAIM is an emission cap-and-trade program that includes larger stationary sources located in the Basin. The current regulation, Rule 2002 requires 12 tons per year of NO<sub>x</sub> emission reductions from 2016 to 2022. When the rule is fully implemented in 2022, no significant changes in NO<sub>x</sub> are expected except for a slight increase from 2024 to 2029 due to the growth in economic, industrial, and commercial activities. The 2016 AQMP includes a control measure to target an additional 5 tons per year of NO<sub>x</sub> reduction from the RECLAIM facilities by 2031. The impact of the additional “NO<sub>x</sub> shave” is not reflected in the community inventory since December 2015 was the cut off for stationary source regulations to reflect on the inventory. The rulemaking to achieve additional 5 TPD NO<sub>x</sub> is still ongoing and will be reflected on the inventory when it is finalized.

Figure 3b-16: Trends in toxic air contaminant emissions from stationary and area sources in the Wilmington, Carson, West Long Beach community (shown in lbs/year, weighted by air toxics cancer risk)

### 3.3 On-road mobile sources

Trends for on-road emissions of CAPs are presented in Figure 17. On-road emissions are expected to decline significantly between 2017 and 2024, due to the turnover of light-duty vehicles and heavy duty trucks to cleaner vehicles. After 2024, passenger vehicles continue to become cleaner and overall emissions continue to decline, despite a continuous increase in vehicle miles traveled (VMT) for all vehicle types through the year 2029 (Table 3b-1). On the other hand, increases in heavy-duty truck activity offsets the gains from regulations on heavy-duty trucks after 2024. As a result, overall NO<sub>x</sub> emissions from on-road sources increase slightly between 2024 and 2029. VOC emissions are expected to decline for all vehicle types except for motorcycles, whose emissions grow steadily between 2017 and 2029. PM<sub>2.5</sub> emissions are expected to decline for all vehicle types between 2017 and 2024. After 2024, the effect of vehicle regulations on light-, medium- and heavy-heavy duty trucks will be offset by their activity growth (Table 3b-1), resulting in an increase in emissions of PM<sub>2.5</sub> from heavy-duty trucks, while passenger vehicle emissions of PM<sub>2.5</sub> continue to decline. As a result, overall emissions of PM<sub>2.5</sub> from all vehicles combined remain unchanged between 2024 and 2029.

Figure 3b-17: Trends in NOx, VOC and PM2.5 emissions from on-road mobile sources in the Wilmington, Carson, West Long Beach community. Emissions are shown in tons per year

While NOx and VOC emissions decrease substantially with time, PM2.5 emissions decrease at a slower rate. On-road mobile PM2.5 emissions come from two separate processes – exhaust from fuel combustion and tire and brake wear. Emissions from tail pipe exhaust decrease due to regulations. However, tire and brake wear emissions are proportional to vehicle miles traveled (VMT), which are expected to increase during this time period due to economic and population growth. Therefore, the contribution of tire and brake wear to total PM emissions is expected to grow in the future. This growth in PM emissions from tire and brake wear offsets the decreases in PM emissions from vehicle exhaust due to regulation.

Table 3b-1. Trends in VMT (vehicle miles traveled) from on-road mobile sources in the Wilmington, Carson, West Long Beach community

	Vehicle Categories					
Year	Light Medium Duty	and Light-Heavy Duty	Medium- Heavy Duty	Heavy- Heavy Duty	Buses	Total
2017	9,978	248	214	334	80	10,854
2024	10,029	244	259	409	77	11,017
2029	10,710	275	311	512	83	11,891

Unit in 1000 miles

The trends in TAC emissions from on-road sources within the WCWLB community is shown in Figure 3b-18. In 2017, DPM is the major contributor to air toxics cancer risk, followed by hexavalent chromium. However, regulations on heavy-duty diesel trucks reduce the on-road DPM emissions drastically between 2017 and 2024. Beyond 2024, the decreases in DPM emissions due to regulations levels off, and DPM emissions are expected to increase slightly due to continued increases in VMT. Hexavalent chromium emissions are predominantly from tire and

brake wear, which is directly related to VMT, with a small contribution from fuel combustion. Because VMT from vehicles are expected to increase, emissions of hexavalent chromium are also expected to increase from this source. However, it is important to note that there is uncertainty in the amount of hexavalent chromium emissions associated with vehicular activities, especially in brake wear. While the emission factors need further evaluation, the increase in VMT would still certainly contribute to the increase in vehicular emissions. Benzene and 1,3-butadiene emissions are projected to decline due to reductions in evaporative emissions and in vehicle exhaust emissions, respectively.

Figure 3b-18: Trends in toxic air contaminant emissions from on-road mobile sources in the Wilmington, Carson, West Long Beach community (shown in lbs/year, weighted by air toxics cancer risk)

### 3.4 Off-road mobile sources

Trends in emissions of NO<sub>x</sub>, VOC, and PM<sub>2.5</sub> from off-road sources in the WCWL community are presented in Figure 3b-19. The increase in NO<sub>x</sub> emissions is mainly driven by the projected increase in port activities, and, in particular, from OGVs. VOC and PM emissions associated with OGVs are also expected to increase over this time period. However, due to the steady decrease of VOC and PM emissions from commercial and industrial off-road equipment over this time period, the overall VOC and PM<sub>2.5</sub> emissions from off-road sources decrease between 2017 and 2024 and increase between 2024 and 2029.

Figure 3b-19: Trends in NOx, VOC and PM2.5 emissions from off-road mobile sources in the Wilmington, Carson, West Long Beach community. Emissions are shown in tons per year

The relative contribution of the various off-road sources remain relatively stable from 2017 to 2029. OGV emissions continue being the largest contributor to total PM2.5 emissions in the community throughout 2029, and off-road equipment continues to be the largest source of VOC emissions throughout 2029.

Trends in TACs emission from off-road sources are presented in Figure 3b-20. Emissions of TAC from off-road sources in 2024 and 2029 are still expected to be dominated by DPM emissions, primarily from OGVs and off-road equipment. DPM emissions will decrease between 2017 and 2024 and increase from 2024 to 2029, due to the combined effects of increased OGV activity and decreased emissions from off-road equipment. Emissions of hexavalent chromium, arsenic, formaldehyde, lead and cadmium are expected to increase due to increased OGV activity. While benzene and 1,3-butadiene emissions decrease between 2017 and 2024, ~~the projected increase in industrial activity through 2029 offsets the effect of regulations shown in the 2017-2024 period.~~ The emissions of the rest of relevant TACs are projected to decline as a result of regulations mostly due to decrease in the emissions from recreational boats.

OGV emissions included in the Wilmington, Carson, West Long Beach community reflects the updates introduced after the publication of the Final 2016 AQMP. The updates include updated growth project of the ports activity and delayed penetration of cleaner Tier 3 engine in OGV. These adjustments are included in the current version of the California Emissions Projection Analysis Model (CEPAM).<sup>2</sup>

Currently, CARB staff is working on at-berth ocean-going vessels regulation that is expected to be considered for adoption in December 2019. Through the process of developing the new regulation, CARB has updated the baseline emissions from OGV at berth. Updates include changes in vessel activity, fleet mix, and emission factors. As a result of the latest adjustment,

baseline NOx emissions from OGV at berth decrease from 2,184 tons per year to 2,017 tpy in the year 2017. Similarly, PM2.5 and VOC emissions are also reduced due to the adjustments. These reductions in the baseline emissions propagate to the baseline inventories for 2024 and 2029. However, these updates are not yet reflected in the inventory for the Wilmington, Carson, West Long Beach community, as the regulation has not been adopted yet.

Figure 3b-20: Trends in toxic air contaminant emissions from off-road sources in the Wilmington, Carson, West Long Beach community (shown in lbs/year, weighted by air toxics cancer risk)

### Summary

The WCWLB community is the home of the busiest international ports in United States. The main sources of air pollution emissions in this community are from goods movement activities, including OGVs, off-road diesel equipment, heavy-duty trucks, trains and cargo handling equipment. This community also includes several refineries and other large industries, which contribute to the overall emissions of criteria air pollutants and toxic air contaminants.

The source attribution analysis shows that DPM from diesel exhaust is the largest contributor to TAC emissions in WCWLB community. DPM is emitted mostly from off-road and on-road mobile sources, with OGVs and heavy-duty trucks being the largest emitters. The second largest component of TAC emissions is hexavalent chromium, mainly from on-road and off-road mobile sources. 1,3-butadiene, mainly from the chemical industry. ~~Hexavalent chromium~~ is also an important TAC in this community, being emitted largely by the chemical industry. DPM emissions associated with heavy-duty trucks are expected to decrease due to existing regulations. However, due to the projected increase in OGV emissions from port-related activities, overall DPM emissions are expected to increase in future years. Overall hexavalent chromium emissions are also expected to increase due to increased OGV emissions, whereas overall ~~Moreover, 1,3-butadiene emissions are expected to decrease due to decreases in on-road emissions, despite an and hexavalent chromium emissions from stationary and area sources are expected to increase slightly due to in area and point sources due to projected industrial growth.~~

NO<sub>x</sub> emissions in this community are dominated by off-road sources, with OGVs being the largest contributor. VOC and TOG emissions are dominated by petroleum productions and marketing from area and stationary sources. Consumer products is the second largest source of VOCs from area and stationary sources. Passenger vehicles and off-road equipment (e.g., lawn mowers, commercial and industrial equipment) are the largest contributor to VOC emissions from on-road and off-road mobile sources, respectively. The largest contributors to PM<sub>2.5</sub> emissions from point sources are fuel combustion and petroleum refining. Commercial cooking and residential fuel combustion are the largest sources of PM<sub>2.5</sub> from areas sources. Passenger vehicles and OGV are the largest contributors to on-road and off-road sources, respectively.

Future NO<sub>x</sub> emissions in this community are expected to decrease due to regulations on mobile sources and emission reduction commitments for point sources, including reductions from the RECLAIM program.

# CHAPTER 4:

## ENFORCEMENT SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 4: Enforcement Plan

### Introduction

This chapter describes the enforcement history and overall approach to enforcement by the South Coast AQMD and the California Air Resources Board (CARB). In addition, the Community Emissions Reduction Plan (CERP) includes focused enforcement actions, which are described in Chapter 5 (air monitoring, mobile air measurements, idling truck sweeps and truck enforcement in priority areas). It is important that enforcement actions are part of the overall AB 617 program actions, which enables the program to be more effective in addressing this community's air quality priorities.

### Chapter 4 Highlights

- From 2016 to 2018, CARB has conducted over 2,200 ~~3,500~~ inspections and South Coast AQMD conducted approximately 800 inspections and responded to approximately 2,600 complaints in the Wilmington, Carson, West Long Beach community.
- Both CARB and South Coast AQMD have designed their programs to most effectively address sources within their respective jurisdictions.
- An enforcement approach that utilizes specialized program structures, outreach efforts in the community, use of technology, and interagency partnerships can lead to higher compliance rates and further emission reductions.

### Overview of Enforcement Program – Purpose and Jurisdiction

The primary goal of enforcement activities is for regulated entities to achieve compliance with air quality rules and regulations, and to protect public health. Part of this process involves consistently identifying and resolving violations, thereby ensuring a level playing field for all regulated entities and preventing unfair advantages for companies that do not comply with rules and permit conditions.

Both CARB and South Coast AQMD regulate and enforce air pollution regulations. Both agencies have the right to conduct inspections of air pollution sources, and the right to issue notices of violations that can lead to penalties.<sup>i</sup>

An air pollution source can be a specific piece of equipment, a business, a government agency, or any other entity that creates air pollution. CARB is primarily responsible for enforcement of trucks, buses, and other mobile sources, while South Coast AQMD is primarily responsible for enforcement relating to stationary sources (e.g., facilities).<sup>ii</sup>

<sup>i</sup> More information about penalties is provided in the Enforcement Appendix 4.

<sup>ii</sup> In some cases, CARB may have agreements that give local air districts delegated authority to enforce a particular CARB rule. For example, South Coast AQMD has an agreement with CARB to be able to enforce CARB's greenhouse gas standards. Other regulations, such as CARB's truck idling regulation, expressly allow enforcement by local air quality regulators.

Table 4-1: Overview of regulatory authority for South Coast AQMD and CARB

Air Pollution Source Category	Examples	Main Regulatory Agency
<b>Mobile sources<sup>iii</sup></b>	Trucks, buses, ships, boats, cargo handling equipment	CARB
<b>Stationary sources</b>	Refineries, power plants, oil and gas facilities, manufacturing plants	South Coast AQMD
<b>Area-wide sources</b>	Paint used on buildings	South Coast AQMD
<b>Sources of greenhouse gases</b>	Methane and volatile organic compound emissions from facilities	CARB and South Coast AQMD

### Enforcement History

Over the years, both CARB and South Coast AQMD enforcement staff have had a significant presence in the community of Wilmington, Carson, and West Long Beach (WCWLB). This section provides the 3-year enforcement history for each agency in this community.

### South Coast AQMD's Enforcement History in this Community

South Coast AQMD's enforcement presence includes many different compliance-related activities, such as investigating complaints, responding to breakdowns, and performing facility inspections.

Responding to complaints is a crucial part of South Coast AQMD's enforcement program. By taking complaints directly from members of the public, inspectors can focus their efforts to identify and address air pollution problems that matter to the community. South Coast AQMD's enforcement team gives priority to incoming complaints. Further, they attempt to respond to every air quality complaint received. The process of responding to a complaint can be unique for each instance, depending on factors such as whether the air quality concern is ongoing, the type of source, the time of day, and the number of complaints for that particular concern. For example, South Coast AQMD responds to ~~off~~ non-business hour complaints based on the number of complaints that are received for a specific facility or location. Figure 4-1 shows the number and types of complaints received by South Coast AQMD in this community, for the time period 2016-2018. The large number of complaints in the WCWLB community is due to the large number of air pollution sources—including oil and gas production sites, diesel truck traffic, and refineries.

<sup>iii</sup> Railroads operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. EPA. These agencies' regulatory authority may preempt certain federal, state, and local regulatory authorities and actions.

Figure 4-1: Number of complaints (by type) in the Wilmington, Carson, West Long Beach community

Additionally, South Coast AQMD's enforcement staff perform inspection activities at facilities and other air pollution sources. Those activities can include onsite inspections for permitted and non-permitted equipment, leaks, and compliance with rules, as well as surveillance activities in the community, such as to trace the source of an odor. As of May 2019, South Coast AQMD has approximately 940 permitted facilities in this community and conducted approximately 800 facility inspections from 2016 to 2018. A list of these inspections is available in the Enforcement Appendix 4.

Enforcement actions typically involve issuing one of two types of notices:

- *Notice to Comply* (NC) – requiring a facility to quickly correct a minor violation or to provide specified records
- *Notice of Violation* (NOV) – formally identifying a violation of particular rules or regulations, which may result in civil penalties or, in some cases, referral for criminal prosecution.

Between 2016 and 2018, South Coast AQMD has issued 214 NOVs in the Wilmington, Carson, West Long Beach community. Figure 4-2 shows the number of NCs and NOVs in this community during the time period 2016-2018.

Figure 4-2: Number of Notices to Comply (NCs) and Notices of Violation (NOVs) issued in the Wilmington, Carson, West Long Beach community

#### CARB Enforcement History in this Community

CARB's enforcement process is two-pronged, including conducting field inspections and fleet-wide audits. For field inspections, the focus has been on enforcing heavy-duty diesel vehicle (HDDV) regulations, such as the statewide truck and bus rule, off-road rule, and the heavy-duty vehicle inspection program (HDVIP); at the refineries and fueling stations enforcing fuel formulation regulations; and in the ports enforcing regulations related to shore power, ocean-going vessels, commercial harbor craft and cargo handling equipment. As Figures 4-3 and 4-4 show, of the vehicles inspected, fuels tested, and marine enforcement conducted at the Ports of Los Angeles and Long Beach, compliance with CARB's regulations has been high. CARB's enforcement has been focused on fuels and port regulations in this area with over 700 fuel inspections and almost 1,450~~2,900~~ marine-related inspections in the community in the past three years.

For fleet-wide audits, generally fewer heavy-duty vehicle enforcement inspections have occurred in the area during this time-frame, however, beginning in 2018 CARB added the Streamlined Truck Enforcement Program (STEP) to enhance its ability to enforce the Statewide Truck and Bus regulation. Between January 2018 and May 2019, 286 fleets were audited in WCWLB. A total of 859 vehicles were part of this audit with California Department of Motor Vehicles (DMV) registration holds placed on 389 of those vehicles. As of May 2019, sixty-three of those vehicles audited have been brought into

compliance. For some of CARB's regulations, enforcement staff have not yet conducted many enforcement activities on the issues that concern the community, however, CARB's enforcement efforts are being enhanced in this community to address community concerns.

Figure 4-3: CARB Heavy-duty Diesel Vehicle and Fuels Enforcement History 2016 – 2018 in the Wilmington, Carson, and West Long Beach Community

Figure 4-4: CARB Marine Enforcement History 2016 – 2018 in the Wilmington, Carson, West Long Beach community

In summary, from 2016 to 2018, both CARB and South Coast AQMD have conducted a range of compliance activities in the community. This includes more than 2,200 inspections from by CARB enforcement staff related to port vessels and equipment, heavy-duty vehicles, and fuels. Of those inspections, the vast majority were in compliance, with less fewer than 50 not in compliance and 19 cases pending. South Coast AQMD enforcement staff conducted approximately 800 facility inspections, responded to approximately 2,600 complaints, and conducted numerous other investigatory activities in WCWLB. South Coast AQMD issued 214 Notices of Violation. A compliance rate may not be an effective predictor of overall compliance within the area, since a portion of compliance actions are against the same facilities.

Due to the large number of potential air pollution sources in this community, an enforcement approach by both agencies that fully utilizes their specialized program structures, outreach efforts in the community, use of technology, and interagency partnerships can lead to further reductions in non-compliance and emission reductions. Both South Coast AQMD and CARB will continue to work closely with the CSC to identify and investigate air quality issues within the community.

### Enforcement Approach - Program Structures

Both CARB and South Coast AQMD have designed their programs to most effectively address sources within their respective jurisdictions.

#### South Coast AQMD's Office of Compliance and Enforcement (OCE)

The structure of this group is based on teams that focus on source type. Inspectors are also assigned by geographic region. The organizational structure based on source type enables inspectors to become technical specialists on the air pollution regulations that apply to the types of industries or facilities assigned to that team. In addition, assigning inspectors by geographic area improves the agency's ability to respond to complaints or compliance issues in that area.

For example, gas stations have underground gasoline storage tanks, which are inspected by the Retail Service Station Team. This team has the specialized knowledge and procedures to be able to cover the thousands of gas stations across the South Coast Air Quality Management District. Refineries also have underground gasoline storage tanks, but these are inspected by the Refinery Team, which has a full time employee assigned to inspect each refinery. The inspectors in the Refinery team specialize in enforcing regulations that apply to all refinery equipment, including the Alkylation or Crude Units, underground gasoline storage tanks, and many other pieces of equipment. However, certain facilities may be inspected by inspectors from multiple teams. This ensures that the approach is focused enough to address a variety of sources, yet flexible enough to handle complex facilities.

For most teams, the inspectors conduct regular inspections at their assigned facilities or within their assigned geographic regions. The frequency of regular inspections depends on the type of facility. For example, a chrome plating facility is inspected more frequently than an auto body shop. It is important to consider that there are approximately 110 chrome plating facilities in the South Coast Air Basin, compared to over 1,500 auto body facilities in the region. When considering limited resources, priority for inspections is typically given to higher risk pollution sources – that is, those facilities that emit the more toxic air pollutants and/or are close to schools, hospitals, and residential areas.

Staff from the following teams operate in the Wilmington, Carson, West Long Beach community:

Figure 4-5: South Coast AQMD Enforcement Program teams

The **Energy team** focuses on crude oil production, energy storage sites, and bulk petroleum terminals. Inspectors in this team usually work in pairs for safety, as well as the need to operate portable equipment. Inspectors in this team are assigned by facility, with each inspector assigned a set of facilities, some of which are in WCWL B.

The **Industrial team** focuses on the widest variety of sources, ranging from dry cleaners to large manufacturing facilities to idling truck sweeps. Inspectors in this team are assigned a geographic region and normally spend much of their time in the field. From this team, inspectors regularly conduct compliance activities in WCWL B.

The **Major Sources team** focuses on sources that are in the REgional Clean Air Incentives Market (RECLAIM)\* program. Examples of these sources include power plants, oil production sites, and large manufacturing facilities. Inspectors in this team are assigned by facility, with each inspector assigned a set of facilities, some of which are in WCWL B.

The **Refinery team** Focuses on all the refineries, auxiliary hydrogen plants, and marine terminals in the South Coast Air Basin. Inspectors in this team are assigned by facility, with each inspector dedicated to a refinery and auxiliary plants. From this team, inspectors regularly conduct compliance activities in WCWL B. This team is based full-time in the Long Beach Field Office to ensure close proximity to the refinery sources that it regulates.

The **Service Station team** Focuses on gasoline service stations that serve the public, which can emit volatile organic compounds (VOCs). Inspectors in this team are assigned a geographic region. From this team, inspectors regularly conduct compliance activities in WCWL B.

The **Toxics team** focuses on facilities that emit Toxic Air Contaminants, including hexavalent chromium, lead, and other toxic metals. Examples of these facilities include landfills, waste treatment facilities, water treatment facilities, lead acid battery manufacturers, and chromium plating and anodizing shops. Inspectors in this team are assigned a geographic region, and regularly conduct compliance activities in WCWL B.

\*RECLAIM, for REgional Clean Air Incentives Market, is a program that requires participating facilities to manage their total nitrogen oxides (NOx) and/or sulfur oxides (SOx) emissions ~~(which reduce over time)~~ by adding pollution controls, changing their equipment or processes, or buying credits from other RECLAIM facilities that have lower emissions than their cap. The allowable amount of such emissions is reduced over time. The program is currently being transitioned to a command-and-control regulatory program.

### CARB Enforcement's Program Structure

Through ~~targeted~~ focused enforcement or public complaints, CARB identifies a potential violation. CARB then contacts the responsible party to explain the enforcement process and to obtain additional information. Enforcement staff evaluates the information collected and works with CARB's Legal Office to determine violations of statutory and/or regulatory requirements. When violations are substantiated, CARB can take enforcement action, at which point the responsible party is provided an opportunity to respond to the violation.

~~CARB takes This outcome includes taking appropriate enforcement action within the scope of CARB's enforcement authority, which may include issuing cease and desist orders, Notices of Violation, mitigation, or pollution prevention actions. Cases can be resolved via civil and criminal litigation. In lieu of litigation, cases typically are settled through CARB's mutual settlement program. Penalties are sought that deter provide adequate deterrence to future non-compliance or public nuisance.~~

For example, in 2017, settlement agreements were made with Union Pacific Railroad Company (UP) and BNSF Railway regarding drayage truck regulations. Under CARB's Drayage Truck Regulation, California ports and Class I rail terminals must report non-compliant heavy-duty diesel trucks entering their facilities. For years, BNSF and UP failed to accurately report to CARB information on non-compliant trucks entering their facilities, which hampered CARB's ability to enforce the regulatory requirements. The settlements resulted in UP turning away non-compliant trucks from their facilities and BNSF accurately reporting truck data to CARB for enforcement, resulting in reduced diesel emissions from heavy-duty diesel trucks around both UP and BNSF facilities.<sup>8</sup>

During the settlement process, there is an opportunity to allocate up to 50% of the penalties to a supplemental environmental project (SEP)<sup>iv</sup>. Community-proposed projects are funded to help improve public health, reduce pollution, increase environmental compliance and bring public awareness to air pollution issues. Additional SEPs are possible in the Wilmington, Carson, West Long Beach community through the proposal process.<sup>9</sup>

CARB Enforcement's structure is based on over 50 enforcement programs that focus on specific source types. A few of the programs that are relevant to enforcement activity in WCWLB community are:

---

<sup>iv</sup> Other examples of enforcement settlement cases can be found in CARB's Annual Enforcement Reports (<https://www.arb.ca.gov/enf/reports/reports.htm>).

Figure 4-6: CARB Enforcement Programs ~~teams~~ relevant to the WCWLB community

CARB conducts **Idling Sweeps** to ensure regulatory truck and bus idling limits are not exceeded.

**Drayage** vehicles are heavy duty vehicles (HDV) that move goods. HDV that enter the port or intermodal facility are required by CARB to be certified to meet clean emission standards.

CARB's **Ocean Going Vessels** regulation is designed to reduce particulate matter (PM), nitrogen oxides (NOx), and sulfur oxides (SOx) from ocean-going vessels.

**Shore Power** reduces emissions from auxiliary diesel engines on passenger, cargo, and refrigerated-cargo ships through CARB's At-Berth regulation.

CARB's **Commercial Harbor Craft** regulation is intended to reduce particulate matter (PM) and NOx from diesel engines on commercial harbor craft operated within 24 nautical miles of the CA coast. The regulation includes requirements for new and in-use (existing) engines.

**Cargo Handling Equipment** investigations are led by CARB to identify opportunities to reduce emissions from idling at ports and intermodal rail yards.

For the **Heavy-duty Vehicle Inspection Program**, CARB regularly conduct inspections for:

- Diesel Emission Fluid (DEF): a liquid used as a reductant in heavy duty diesel engines to reduce NOx emissions.
- Emission Control Label (ECL): Engine certification labeling requirements.
- Smoke/Tampering: Requires heavy duty trucks/buses to be inspected .

CARB's **Statewide Truck and Bus** program requires all vehicles with 2009 or older engines weighing over 14,000 pounds to reduce exhaust emissions by upgrading to 2010 or newer engines by 2023. Non-compliant vehicles will be denied DMV registrations.

### How the Public Helps Reduce Air Pollution

Members of the public play an important role in communicating air quality concerns to both South Coast AQMD and CARB. The complaint process helps both agencies identify issues that are directly affecting the WCWL community. The most effective way to contact the agency is through the complaint hotlines. In addition to South Coast AQMD's mobile application, both agencies can be contacted by phone and online:

<p><b>CARB - Mobile Sources</b></p> <p><b>Automobiles, Trucks, Off-road Equipment, or other Vehicles</b></p> <p>Phone: 1-800-END-SMOG</p> <p>Online: <a href="http://calepa.ca.gov/enforcement/complaints">calepa.ca.gov/enforcement/complaints</a></p>	<p><b>South Coast AQMD - Stationary Sources</b></p> <p><b>Odors, Smoke, Dust, or other Air Contaminants</b></p> <p>Phone: 1-800-CUT-SMOG</p> <p>Online: <a href="https://www.aqmd.gov/home/air-quality/complaints">https://www.aqmd.gov/home/air-quality/complaints</a></p>
---	---

Both CARB and South Coast AQMD value input from those who live and work every day in the community, and communicating air quality issues directly to the agencies with the information above is the best way to address an air pollution concern. Letting the agencies know of an issue when it is occurring rather than after the fact really helps our ability to find the source of the problem.

An effective complaint should contain information with specific details. This information helps inspectors conduct a thorough investigation and take appropriate enforcement action. The following information is valuable to a thorough complaint investigation:

- Type of air quality concern (odor, smoke, dust, etc.)
  - o Odors: description of odor
  - o Smoke: color of smoke; does the smoke disappear or hang in the air?
  - o Dust: type of dust (e.g., dust from construction sites or from wood cutting operations)
- Location of air pollution concern
- Name or address of potential source
- Time of day that the air quality issue began, and is the concern still occurring?
- Has the concern occurred before, and do other people in your community experience it as well?
- Contact information for the person reporting the complaint<sup>v</sup>

### Technology

Both South Coast AQMD and CARB enforcement staff have embraced the use of technology as a means for more efficient and effective inspections. South Coast AQMD inspectors have access to advanced

<sup>v</sup> Although anonymous complaints are accepted, staff have found that having contact information helps with getting additional information to help with the investigation.

instruments to help identify air pollution issues in real-time. The following portable instruments are available to inspectors:

Figure 4-7: Portable instruments used by South Coast AQMD inspectors in the field

*Toxic Vapor Analyzers (TVA):* Inspectors can use TVAs to provide information about the level of certain gases in a specific area. This includes methane and volatile organic compounds (VOCs), which are emitted by petroleum sources and other types of sources.

*Infrared Cameras:* Inspectors can use specialized infrared cameras to view emissions of gases (including methane and VOCs) that would otherwise be invisible to the naked eye. This equipment enables inspectors to scan areas for emissions and quickly check for any large leaks at a facility.

*X-Ray Fluorescence (XRF):* Inspectors can use this handheld instrument to identify the types of chemicals that are on a surface or in a dust pile. This tool helps identify potential pollutants that are particles. For example, and XRF can be used to scan surfaces at a facility to identify which specific toxic metals may be deposited in that location, and which locations that have the highest levels of those toxic metals.

*H<sub>2</sub>S Analyzers (Jerome Meters):* Inspectors can use this handheld instrument to measure hydrogen sulfide gas levels in the air. This information can be used to identify a potential source of rotten egg type odors.

In addition, inspectors are trained on how to collect field samples, including air samples, liquid samples, or bulk material samples. These samples can then be provided to the South Coast AQMD laboratory or contract laboratories for analysis. The results of these analyses can be used as evidence to support investigations and/or Notices of Violation issued to air pollution sources.

South Coast AQMD regulates over 25,000 facilities, receives approximately 10,000 public complaints per year, and operates a vast air quality monitoring network; and CARB regulates mobile sources throughout the state. Analyzing the data that results from these efforts can provide insight into the trends and

sources of air pollution as well as new enforcement opportunities. Both agencies use information technology to enhance the ability to conduct investigations and enforce regulations. As an example, for CARB's truck fleet enforcement program, the traditional approach was to inspect several thousand trucks annually through fleet-based inspections. Starting in January 2018, CARB began the Streamlined Truck Enforcement Process (STEP), and is now able to conduct 20,000 to 25,000 inspections per year through the use of a data-driven approach, noncompliance letters, and a scheduled settlement process. South Coast AQMD's investigation of crude oil tankers is another example of using information technology in enforcement activities. Inspectors used mapping software, weather data, and ship databases to help identify an oil tanker as a potential source of emissions. The oil tanker was later issued a Notice of Violation when it berthed at a port near this community. These multi-faceted approaches can be applied to address other air pollution concerns in WCWL. Providing transparent access to the information that both agencies possess will lead to a stronger partnership with the community.

### The Interagency Approach

CARB and South Coast AQMD are committed to working with other agencies on joint initiatives that will directly result in cleaner air. The combined resources, expertise, and legal authorities of different agencies can create a well-rounded approach to the regulatory process that leverages their respective strengths to address issues that cumulatively impact public health. For example, the Los Angeles County Oil and Gas Strike Team is a group of multiple agencies that conducted crude oil production (oil well) inspections throughout Los Angeles County. Representatives from multiple agencies conducted inspections together, covering not only compliance with air, but also water, public health, and code enforcement.

Figure 4-8: Examples of agencies that routinely collaborate with South Coast AQMD and CARB

CARB partners with local agencies to create memoranda of understanding (MOUs), such as an agreement with South Coast AQMD to enforce CARB's greenhouse gas standards. In addition, CARB has already established partnerships with California DMV working on implementing registration holds for non-compliant trucks and buses, California Highway Patrol (CHP) to conduct roadside inspections, and other state and regional agencies to ensure we the agencies are supporting each other's enforcement efforts. Both South Coast AQMD and CARB have demonstrated experience working in close collaboration with

other regulatory agencies, cities and counties, public health agencies, and local police and fire departments to conduct investigations and provide public information about local air pollution sources.

### Enforcement Considerations

An effective enforcement program must be flexible and adaptable to address the needs of the communities. Part of being adaptable is the ability to identify and address gaps in the enforcement process, such as previously unknown facilities or new pollutants of concern. As revealed over the course of the public process for CERP development, one such gap has been a lack of communication with members of the community, who have firsthand experience with local emissions sources and whose input can be quite valuable to enforcement efforts. South Coast AQMD has therefore prioritized outreach and added new positions to interact directly with the AB 617 communities, including dedicated compliance staff assigned in those communities. Because South Coast AQMD organizes its enforcement division both by source type for technical specialization and by geographic region, there is not a single dedicated team for AB 617; rather, the effort is spread across multiple existing teams so that a larger number of complaints and potential violations of air quality rules can be identified and addressed.

In addition, both CARB and South Coast AQMD currently maintain extensive records of compliance-related activities through the use of databases and other digital resources. OCE uses these resources to track metrics such as complaints, inspections, and enforcement actions. The data provided in this chapter and Appendix 4 are derived from those databases. The particular statistics being tracked are also routinely reevaluated. For example, OCE recently added an Agency Technical Assistance metric for instances where South Coast AQMD was asked by another agency to assist in that agency's efforts, often by way of collecting samples or providing ambient air monitoring. CARB and South Coast AQMD will both continue to evaluate new metrics that may help to track and analyze inspectors' efforts in the AB 617 communities in order to attempt to identify more effective allocations of resources and/or potential solutions to air quality issues.

Finally, enforcement mechanisms exist that are designed to promote, and, if necessary, compel, compliance by regulated sources. As discussed above, after South Coast AQMD inspectors investigate complaints and/or conduct facility inspections, they can issue notices to comply or notices of violations. While notices to comply will generally require further action by a source, notices of violation are referred to the Office of the General Counsel, where penalties are negotiated. If no settlement is reached, a civil lawsuit can ultimately be filed in superior court. Ongoing non-compliance, however, may lead to a petition for an order of abatement before the Hearing Board, which would have the authority to require a facility to take certain actions to achieve compliance. CARB and South Coast AQMD have each had a presence in this community that has led to various enforcement actions against local facilities.<sup>vi</sup>

In sum, the compliance process seeks to ensure that all rules and regulations are followed through a fair and robust enforcement program, resulting in reduced air pollution emissions. Adaptability is crucial, whether in the programs overall, or in day-to-day operations, to ensure that community concerns are

---

<sup>vi</sup> Additional detail on South Coast AQMD and CARB enforcement actions can be found in Appendix 4.

addressed quickly and that enforcement action is taken when violations are identified. Both CARB and South Coast AQMD enforcement teams will continue to search for innovative strategies, lead in community transparency, and take swift action to address non-compliance.

# CHAPTER 5A:

## ACTIONS TO REDUCE AIR POLLUTION EMISSIONS OR EXPOSURES - OVERVIEW

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5a: Actions to Reduce Community Air Pollution

### Introduction

The Community Emission Reduction Plan (CERP) provides an overall path to reducing air pollution in the Wilmington, Carson, West Long Beach community. Through the development of the CERP the Community Steering Committee (CSC) identified air quality priorities based on sources of air pollution (e.g., refineries, marine ports, and railyards) that are of concern to the community. To reduce air pollution from these sources, the CSC developed a set of actions to be implemented by government agencies, organizations, businesses, and other entities.

### Community Air Quality Priorities

The community of Wilmington, Carson, West Long Beach identified refineries, oil drilling, marine ports, trucks, and railyards as air quality priorities. These sources of air pollution are often located close to homes, schools, and other community areas where the public can be exposed to harmful pollutants. As a result, reducing exposure to air pollution at schools ~~is~~ are also a priority for the community.

### Ongoing Efforts ~~efforts~~

The South Coast AQMD, CARB, and U.S. EPA have existing air quality regulations to reduce air pollution ~~that apply to facilities~~ from sources such as trucks and refineries. The relevant agencies enforce these regulations. Additionally, the South Coast AQMD and CARB have begun the process of developing new requirements that would further reduce air pollution from sources prioritized by the community.

### Chapter 5a Highlights

- Many new actions will be taken to address the community's air quality priorities
- South Coast AQMD will use a variety of ~~many different types of~~ strategies, such as regulations, incentives, outreach, enforcement, monitoring, and collaboration ~~more~~
- Many actions also rely on effective collaborations with other agencies, organizations, businesses, and entities ~~others~~
- The estimated emission reduction targets resulting from ~~mobile source incentives supported by~~ actions in this CERP are:
  - NOx: ~~40 to 50~~ 2,832 to 3,207 tons per year (tpy)
  - VOC: 64 tons per year
  - SOx: 11 tons per year
  - DPM: ~~0.5 to 0.6 tons per year~~ 20 tons per year
- ~~Additional emission reductions are achieved through actions that include strategies, such as, rule development and enhanced enforcement~~

### Opportunities for Action

In addition to the ongoing efforts described above, the CSC developed 18 new actions to reduce air pollution in the community. Each action is to be carried out based on a set of strategies, goals, and timelines. The entity (e.g., government agency or organization) responsible for the actions is also identified. The actions set forth in this chapter define a path to further reduce air pollution from sources in the Wilmington, Carson, West Long Beach community and provide additional protections at schools to reduce the amount of harmful air pollution exposure for the children who spend time at those schools. In some instances these actions reaffirm ongoing rule development efforts and provide new commitments for localized reductions, sharing of emissions data, timelines, and other related information.

### Emissions Reduction Targets

The actions in the CERP prioritize emissions reductions in the Wilmington, Carson, ~~and~~ West Long Beach community. The CERP includes emission reduction targets for nitrogen oxides (NOx), volatile organic compounds (VOC), sulfur oxides (SOx), and diesel particulate matter (DPM) emissions in the Wilmington, Carson, West Long Beach community that are based on these actions. Table 5a-1 below, provides a list of the overall emission reduction targets for the CERP and the type of actions that contribute to the targets.- Baseline emissions refers to expected future emissions without any new action or regulation beyond those already adopted.

Although past monitoring in this community has shown levels below the 24-hour and annual health standards for PM2.5, the actions in this plan will reduce PM2.5 even further. Directly emitted PM2.5 will be addressed through actions to reduce flaring and the actions to reduce PM from mobile sources. Examples include Action 3 in Chapter 5b to reduce flaring emissions from refineries and Action 2 in Chapter 5d to reduce emissions from heavy-duty trucks by replacing older, higher polluting trucks with newer, cleaner technology. In addition, precursors to PM2.5, such as NOx, SOx, and VOC will be addressed through actions to address community air quality priorities related to petroleum refineries as outlined in Table 5a-2.

Table 5a-1: CERP Emission Reduction Targets by 2024 and 2030 (or Earlier of Feasible)

<u>Emissions<sup>i</sup></u>	<u>NO<sub>x</sub></u>	<u>SO<sub>x</sub></u>	<u>VOC</u>	<u>DPM</u>
<u>2017 Emissions (tpy)</u>	<u>10,614</u>	<u>1,437</u>	<u>5,641</u>	<u>120</u>
<u>Projected 2024 Emissions Baseline (tpy)</u>	<u>8,819</u>	<u>1,659</u>	<u>5,306</u>	<u>86</u>
<u>Emission Reductions from CERP, by 2024 (tpy)</u>	<u>606</u>	<u>--</u>	<u>20.6</u>	<u>9</u>
<u>Emission Reductions from CERP, by 2024 (%)</u>	<u>7</u>	<u>--</u>	<u>&lt;1</u>	<u>10</u>
<u>Projected 2029 Emissions Baseline (tpy)</u>	<u>9,250</u>	<u>1,715</u>	<u>5,256</u>	<u>93</u>
<u>Emission Reductions from CERP, by 2030 (tpy)</u>	<u>3,207<sup>ii</sup></u>	<u>11</u>	<u>64</u>	<u>20</u>
<u>Emission Reductions from CERP, by 2030<sup>iii</sup> (%)</u>	<u>35%<sup>iv</sup></u>	<u>&lt;1%</u>	<u>&lt;1%</u>	<u>22%</u>

Refineries and Oil Drilling

The CSC identified five (5) different actions to address community air quality priorities related to petroleum refineries. These actions address sources at petroleum refineries, such as, flares, storage tanks, boilers, heaters, fluid catalytic cracking units (FCCUs), sulfur recovery units, and a coke calciner. Emission reductions from these sources will contribute to the overall emission reduction targets for the CERP and a target to reduce NO<sub>x</sub>, SO<sub>x</sub>, and VOC emissions from the refineries that are located in this community by 50%. Table 5a-2 below, provides a list of actions that will result in emission reductions from refineries and contribute to the overall emission reduction targets for the CERP by 2030.

<sup>i</sup> Per CARB guidance, the emissions baseline was estimated for 2017, and milestone years 2024 and 2029. However, the emission reductions in this table target a 2030 completion date, due to the complexity of the efforts. While the baseline emissions were not calculated for 2030, staff expect the emissions to be similar to the 2029 estimates (details presented in Appendix 3B)

<sup>ii</sup> Based on maximum NO<sub>x</sub> emissions reductions that may be reduced from Action 5 in Chapter 5b that is designed to achieve further reductions from refinery equipment through adoption of Rule 1109.1 – Refinery Equipment

<sup>iii</sup> Based on maximum NO<sub>x</sub> emissions reductions that may be reduced from Action 5 in Chapter 5b that is designed to achieve further reductions from refinery equipment through adoption of Rule 1109.1 – Refinery Equipment

<sup>iv</sup> Percent calculated based on 2029 emissions baseline

Table 5a-2: Estimated Emission Reductions from Refinery and Oil Drilling Actions by 2030

Title of Action	Timeline <sup>va</sup>	Implementing Entity	Emission Reduction Targets (tpy) <sup>vib</sup>		
			NOx	SOx	VOC
<u>Initiate Rule Development to Amend Rule 1118 – Control of Emissions from Refinery Flares</u>	<u>beginning 2020</u>	<u>South Coast AQMD</u>	<u>19</u>	<u>11</u>	<u>1</u>
<u>Initiate Rule Development to Amend Rule 1178 - Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities</u>	<u>beginning 2021</u>	<u>South Coast AQMD</u>	<u>N/A</u>	<u>N/A</u>	<u>TBD</u>
<u>Achieve Further Reductions through Adoption of Proposed Rule 1109.1 – Refinery Equipment</u>	<u>beginning 2019</u>	<u>South Coast AQMD</u>	<u>1,095 to 1,460</u>	<u>N/A</u>	<u>N/A</u>
<u>Evaluate the Feasibility to Amend Rule 1148 Series and Rule 1173 to Reduce Emissions and Require Additional Monitoring</u>	<u>beginning 2020</u>	<u>South Coast AQMD</u>	<u>N/A</u>	<u>N/A</u>	<u>TBD</u>

Several actions in this chapter also emphasize emission reductions from fugitive emissions sources. For example, an action to reduce leaks from oil wells require enhanced air monitoring along with follow-up strategies (e.g., rule development and enforcement activities) to quantify and target reductions from fugitive emissions. Based on the information currently available, the resulting emission reductions from these actions cannot be estimated at this time. However, the CSC has determined that these sources of fugitive emissions should be addressed by the CERP to improve air quality in the Wilmington, Carson, West Long Beach community.

#### Mobile Sources – Neighborhood Truck Traffic, Ports and Railyards

Implementation of the CERP is estimated to reduce ~~from 40 to 50 tons per year~~ 1,700 tons per year (tpy) of NOx and from 0.5 to 0.6 tons per year 20 tpy of DPM emissions from mobile sources. These emissions estimates are based on future statewide mobile source measures from CARB and potential mobile source incentive projects to benefit this community as outlined by the actions in this chapter. ~~data from past mobile source incentive projects (e.g., replacing heavy-duty trucks with cleaner trucks and repowering marine engines with cleaner engine technologies).~~ Additionally, the estimated emissions reductions consider potential future mobile

<sup>va</sup>Please refer to Chapters 5b and 5e for details on the timeline for each action

<sup>vi</sup>Emission reduction targets that are TBD will be determined upon implementation of the action and based on available information, such as, air monitoring data gathered from the Wilmington, Carson, West Long Beach Community Air Monitoring Plan

~~source incentive projects that are targeted by the actions in this chapter. For example, Subchapter 5d – Neighborhood Truck Traffic, includes an action to reduce emissions from heavy-duty trucks. This action will be implemented by measures that require outreach to the owners and operators of heavy-duty trucks in the community. The CERP contains six different measures focused on outreach efforts to incentivize the replacement of older equipment with newer, less polluting equipment. These measures are coupled with commitments from South Coast AQMD staff to conduct ten outreach events in the community to recruit potential applicants for incentives.~~Future statewide mobile source measures that contribute to the estimated emission reductions in this community include the CARB Shore Power for Ocean-going Vessels At-Berth Rule, Advanced Clean Truck Rule, Heavy-Duty Low NOx Rule, and Heavy Duty Inspection and Maintenance. These measures support actions in the CERP that address Neighborhood Truck Traffic, Ports, and Railyards. Table 5a-2 below, provides a list of the statewide measures with expected decision dates, implementation periods, and estimated emission reductions.

**Table 5a-2: Estimated Emission Reductions from Mobile Source Incentives and Statewide Mobile Source Regulations by 2024 and 2030**

<u>Mobile Source Measure</u>	<u>Timeline<sup>vii</sup></u>	<u>Implementing Entity</u>	<u>Emission Reduction Targets 2024/2030 (tpy)</u>			
			<u>NOx</u>	<u>VOC</u>	<u>DPM</u>	<u>PM2.5<sup>viii</sup></u>
<u>Shore Power for Ocean-going Vessels At-Berth<sup>ix</sup></u>	<u>2019</u>	<u>CARB</u>	<u>431.2/1,268</u>	<u>20.6/62</u>	<u>7.2/19</u>	<u>6.7/28.0</u>
<u>Heavy-Duty Vehicle Inspection and Maintenance<sup>x</sup></u>	<u>2020</u>	<u>CARB</u>	<u>108/153</u>	<u>N/A</u>	<u>0.9/1.3</u>	<u>0.93/1.3</u>
<u>Advanced Clean Trucks Regulation<sup>xi</sup></u>	<u>2019</u>	<u>CARB</u>	<u>0.4/10.1</u>	<u>N/A</u>	<u>0.0/0.3</u>	<u>0.011/.22</u>
<u>Heavy-Duty Low NOx Rule<sup>xii</sup></u>	<u>2020</u>	<u>CARB</u>	<u>22/246</u>	<u>N/A</u>	<u>N/A</u>	<u>-/-</u>
<u>Mobile Source Incentives resulting from the CERP Actions</u>	<u>2020</u>	<u>South Coast AQMD</u>	<u>40-50/40-50</u>	<u>N/A</u>	<u>0.5-0.6/0.5-0.6</u>	<u>-/-</u>

As mentioned above, the estimated overall emissions reduction targets for this community also consider potential future mobile source incentive projects described by the actions in this chapter. For example, Chapter 5d – Neighborhood Truck Traffic includes an action to reduce

<sup>vii</sup>Timeline based on first CARB Board hearing dates for each measure or beginning of implementation for mobile source incentives.

<sup>viii</sup>Figure 3 in Chapter 3b shows that over three quarters of PM2.5 emissions are from fuel combustion, miscellaneous processes, and petroleum production and marketing. Not all of these sources were not identified as air quality priorities by the CSC. Nonetheless, PM2.5 will be reduced by the Statewide Mobile Source Regulations.

<sup>ix</sup>CARB's existing At-Berth Regulation already requires a large number of ships to connect to shore power when at-berth; hence, reducing emissions impacting the community. CARB is working through a public process to consider further reducing ship emissions at-berth by strengthening the regulation to cover more vessel visits and types of ships.

<sup>x</sup>CARB's current inspection programs include the roadside Heavy-Duty Vehicle Inspection Program and the fleet Periodic Smoke Inspection Program. These regulations require heavy-duty vehicles operating in California to be inspected for excessive smoke and make repairs where applicable.

<sup>xi</sup>CARB is working through the public process to develop and consider proposals for new approaches and strategies that may transition zero-emission technology to those truck fleets that operate in urban centers, have stop and go driving cycles, and are centrally maintained and fueled.

<sup>xii</sup> This rule would set new statewide engine standards for NOx emission reductions from trucks by 2026, and additional reductions including and after 2027. More information is available at: <https://www.arb.ca.gov/msprog/hdlownox/hdlownox.htm>.

emissions from heavy-duty trucks. This action will be implemented by measures that require outreach to the owners and operators of heavy-duty trucks in the community. The CERP contains six different measures focused on outreach efforts to incentivize the replacement of older, higher polluting equipment with newer, lesser polluting equipment. These measures are coupled with commitments from South Coast AQMD staff to conduct ten public outreach events in the community to recruit potential applicants for incentives. The estimated emission reductions for mobile source incentive projects in this community are estimated to be between 40 and 50 tpy of NOx and 0.5 to 0.6 tpy of DPM emissions.

~~Some actions in this chapter are likely to result in emissions reductions that are not quantifiable at this time. For example, Subchapter 5b — Refineries, includes an action that would require methods to reduce refinery flaring emissions through amendments to Rule 1118 — Control of Emissions from Refinery Flares. The target for this action is to reduce flaring by 50%, if feasible. However, reductions from this action would be quantified during the rule development process for Rule 1118 to provide staff an opportunity to evaluate technologies that provide emissions benefits to the community.~~

~~Based on the air quality priorities identified by the CSC, the actions in this chapter also emphasize emissions reductions from fugitive emissions sources. For example, the CERP includes actions to reduce leaks from refinery equipment, oil tankers, and oil wells. These actions require enhanced air monitoring along with follow up strategies (e.g., rule development and enforcement activities) to target emissions reductions from these fugitive emissions sources. Based on the information available, emissions reductions from these actions cannot be estimated at this time. However, the CSC has determined that these sources of fugitive emissions should be addressed by the CERP to improve air quality in the Wilmington, Carson, and West Long Beach community.~~

# CHAPTER 5B:

## REFINERIES

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5b: Refineries

### Background

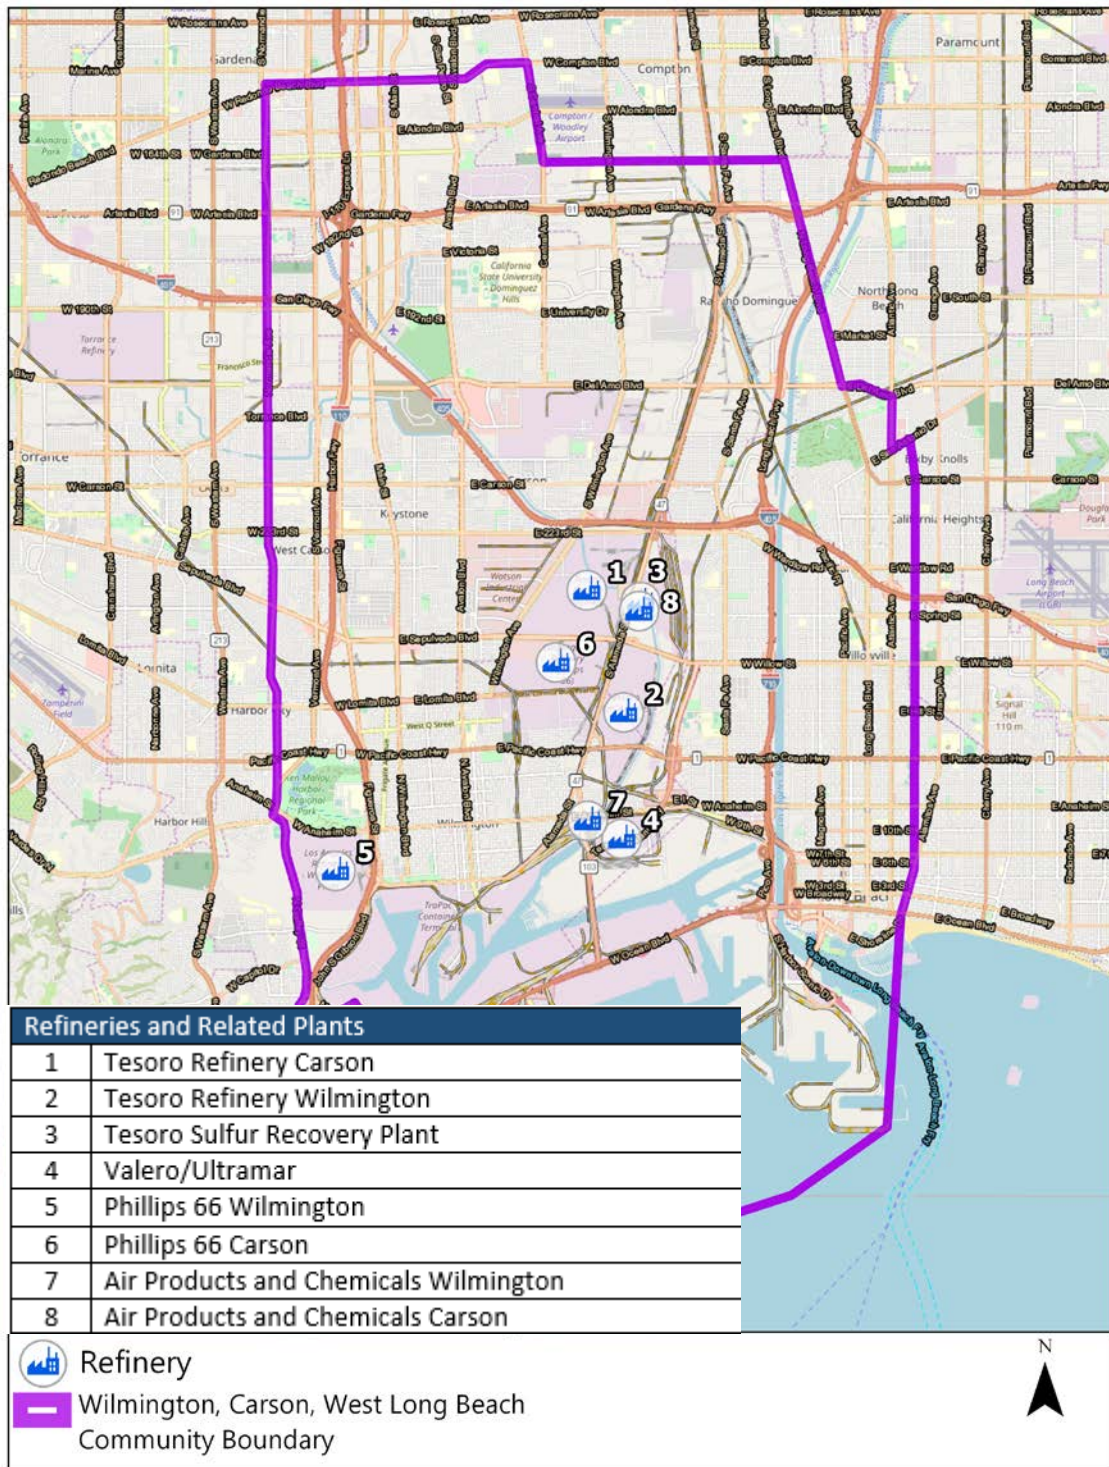

Petroleum refineries are among the largest stationary sources of air pollution in the South Coast Air Basin (SCAB). These sources process crude oil into various products, such as gasoline, diesel fuel, aviation fuel, and other products. Petroleum refineries also have other related processes at their facilities, for example, sulfur recovery and hydrogen production. Sulfur recovery plants convert hydrogen sulfide to elemental sulfur used for other industrial processes. Hydrogen production plants generate hydrogen, which is used in the refining and other processes.

The Wilmington, Carson, West Long Beach community includes five petroleum refineries, one sulfur recovery plant, and two hydrogen production plants. A general overview of the location and type of facilities is provided in Table 5b-1: Petroleum Refineries and Related Facilities in the Wilmington, Carson, and West Long Beach Community. Petroleum refineries, sulfur recovery plants, and hydrogen production plants are subject to rules and regulations adopted by the South Coast AQMD and other regulatory agencies. A list of South Coast AQMD regulations that apply to these facilities is provided in Appendix 5b.

Table 5b-1: Petroleum Refineries and Related Facilities in the  
Wilmington, Carson, West Long Beach Community

Valero/Ultramar	Refinery	Wilmington

Figure 5b-1: Petroleum Refineries and Related Facilities within the Wilmington, Carson, West Long Beach Community

5b-2

### Community Air Quality Priority – Flaring Events and Refinery Process Equipment

~~Two~~ Three main air quality priorities related to refinery emissions were identified by the Wilmington, Carson, West Long Beach Community Steering Committee (CSC): (1) emissions from flaring events, ~~and~~ (2) emissions and leaks from refining process equipment and storage tanks, and (3) further emission reductions from refinery equipment. To address these priorities, the CSC has identified the potential need for additional regulation that requires more stringent air pollution controls on refinery process equipment and flaring, air monitoring to assess the feasibility of further reductions of fugitive VOC emissions, and an improved process for notifying the public of refinery flaring events and associated air emissions. Details for these actions are described below.

Figure 5b-3: A photograph of a flaring event at a refinery

Rule 1118 – Control of Emissions from Refinery Flares,<sup>1</sup> requires refineries to notify South Coast AQMD of all flaring events above a specified threshold. The CSC identified ways to improve the notification process for Rule 1118 and the need for additional information that would be important to community members during flaring events. For example, providing real-time air quality information could help community members make more informed decisions about outdoor activities during these events (e.g., outdoor exercise, etc.) to reduce exposure to emissions from these sources.

South Coast AQMD regulates emissions from refinery processes, including major process units, storage tanks, boilers and heaters. The CSC recommended more stringent requirements for refineries through implementing Best Available Retrofit Control Technology (BARCT) and other command-and-control regulations. The CSC has also noted NOx emissions from boilers, and heaters, and fugitive VOC emissions from storage tanks and possibly from other equipment (i.e., fugitive emissions leaks) as a priority.

### Ongoing Efforts

Ongoing rule development and air monitoring efforts by South Coast AQMD will help address some of these air quality priorities in the Wilmington, Carson, West Long Beach community. For example, South Coast AQMD staff is developing Proposed Rule 1109.1 – Reduction of Emissions of Oxides of Nitrogen from Refinery Equipment.<sup>2</sup> In the rule development process for Proposed Rule 1109.1, South Coast AQMD staff is working with stakeholders to evaluate BARCT to further reduce NOx emissions from refinery equipment (e.g., boilers, heaters, coke calciners, fluid catalytic cracking units, gas turbines). The BARCT analysis includes a technology assessment for each class and category of equipment that considers actual emissions achieved, available technologies, and technologies on the forefront. The BARCT analysis will establish a NOx concentration limit for each class and category of equipment, taking into consideration the cost-effectiveness (dollars per ton of NOx reduced) of the different technology options, provided they are technologically feasible and cost-effective. The proposed rule may also incorporate emission limits to further reduce emissions.

Another example of ongoing efforts, is the implementation of Rule 1118 – Control of Emissions from Refinery Flares. Rule 1118 requires refineries and related facilities to notify the South Coast AQMD about flaring events that exceed specified limits. These notifications are part of the Flaring Event Notification System (FENS). FENS is being updated to include a user-friendly map identifying current flaring events, and to provide information regarding any upcoming and past flaring events.

Additionally, Rule 1180 – Refinery Fenceline and Community Air Monitoring,<sup>3</sup> requires petroleum refineries to conduct real-time fenceline air monitoring and provide fees to fund refinery-adjacent community air monitoring systems. These air monitoring systems will provide nearby communities with real-time air quality data for the most important pollutants that are associated with refineries. Information from these systems can also be used by refineries to identify and resolve potential leaks more quickly. Additional information on refinery fenceline and community air monitoring through Rule 1180, including the air monitoring plans, can be found on the South Coast AQMD's website: <https://www.aqmd.gov/home/rules-compliance/rules/support-documents/rule-1180-refinery-fenceline-monitoring-plans>.

Rule 1105.1 - Reduction of PM 10 and Ammonia Emissions from Fluid Catalytic Cracking Units (FCCUs)- was adopted in 2003 to control PM from the largest potential PM source at the refineries within this community. The rule established the strictest PM BARCT limits on this equipment, and those limits continue to be the strictest requirements anywhere in the country, both for new and existing FCCUs. To comply with Rule 1105.1, the refineries installed either electrostatic precipitators (ESPs) or scrubbers to meet the PM emissions standard and continue to operate these controls today. The Bay Area Air Quality Management District is conducting rulemaking activities for FCCUs. South Coast AQMD staff will continue to monitor the progress of that rulemaking effort to assess whether additional PM emissions reductions from FCCUs are feasible.

#### Opportunities for Action to Reduce Emissions from Oil Refineries

In addition to the ongoing ~~rule development and air monitoring~~ efforts described in this chapter, the CSC identified specific actions to address community priorities related to petroleum refineries. The actions will contribute to the overall emission reduction goals for refineries in this community presented in Table 5b-2.

These overall emission reduction goals for criteria pollutants and associated air toxic pollutants (e.g., reductions in benzene as part of VOCs) in this community are consistent with other basin-wide planning measures adopted by the South Coast AQMD.<sup>4</sup> The details for all refinery-related CERP actions are described below.

Table 5b-2: Refinery Emission Reduction Goals by 2030

<u>Pollutant(s)</u>	<u>Minimum Emission Reduction Goal by 2030 (or earlier if feasible)*</u>	<u>Actions and Notes</u>
<u>NO<sub>x</sub></u>	<u>50%</u>	<u>Reductions primarily from Proposed Rule 1109.1. Some reductions from flaring under Proposed Amended Rule 1118.</u>
<u>VOCs (and associated air toxics such as benzene)</u>	<u>50%</u>	<u>Applies to fugitive emissions, flaring, and unidentified leaks. Baseline emissions to be assessed by advanced air monitoring techniques, and the progress identified as the ratio of baseline and future measurements using the same methods. Reductions to be achieved through amendments to Rules 1178, 1118, and/or 1173, as well as more rapid Leak detection and response enabled by advanced air measurements.</u>
<u>SO<sub>x</sub></u>	<u>50%</u>	<u>Applies to flaring emissions (Rule 1118). SO<sub>x</sub> RECLAIM program re-assessment may also contribute to additional reductions.</u>

\* The NO<sub>x</sub> emission reduction goals are consistent with the estimated emission reductions from refinery facilities in the Wilmington, Carson, West Long Beach community based on the 2016 AQMP measure CMB-05. NO<sub>x</sub>, SO<sub>x</sub>, and VOC Emission reduction goals are subject to future assessments and regulatory analyses.

### Action 1: Improve Refinery Flaring Notifications

#### Course of Action:

- Work with stakeholders, including the CSC, to gather input on identifying specific information fields to include in the notifications (e.g., access to fence line and community air monitoring data, and ways to reduce exposure to flaring emissions)
- Work with local public health departments to develop informational outreach materials for the community to describe the risks posed by emissions from refinery flaring, and how to reduce exposures
- Hold workshops in the community to provide information on flaring and training on how to use these notification systems
- Provide flare emissions data in a user-friendly format on the South Coast AQMD's website and/or the mobile application
- Collaborate with the CSC (e.g., community-based organizations and others) on community air monitoring efforts

<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>Public Information and Outreach</li> <li>Collaboration</li> </ul>	
<b>Goal(s):</b>	
<ul style="list-style-type: none"> <li>Work with stakeholders to gather input on <u>information fields</u> to incorporate into flare notifications</li> <li>Develop informational public health outreach materials that provide guidance on reducing exposure to refinery flaring emissions</li> <li>Implement flare notification improvements</li> <li>Hold community workshops to provide training on how to use notification systems</li> <li>Provide quarterly or biannual updates to the CSC on progress</li> </ul>	
<b>Estimated Timeline(s):</b>	
<ul style="list-style-type: none"> <li><u>Second half of 2019, provide a summary of flare emissions data from the Rule 1118 quarterly reports</u></li> <li>First quarter of 2020, initiate process to work with the California Energy Commission (CEC) and other stakeholders, on additional improvements to refinery flaring notifications</li> <li>Second quarter of 2020, initiate process to work with the local public health departments to develop outreach materials</li> <li>Third quarter of 2020, begin providing quarterly or biannual updates to CSC on efforts on refinery flaring event notifications</li> <li>2021, hold community workshops to provide training on how to use the notification system</li> <li><del>Second half of 2019, provide a summary of flare emissions data from the Rule 1118 quarterly reports</del></li> <li>Continue collaborating with CSC on community air monitoring</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<ul style="list-style-type: none"> <li>Improve flaring event notifications for the public, host community workshops for training on updated notification system</li> <li>Provide informational outreach for materials developed with Departments of Public Health</li> <li>Provide summaries of flare emissions data from the Rule 1118 quarterly reports</li> </ul>
Los Angeles Department of Public Health	Collaborate with South Coast AQMD to develop outreach materials for communities to distribute at key locations, such as schools, civic centers, and activity centers

Long Beach Department of Public Health	<del>Collaborate with South Coast AQMD to develop outreach materials for communities to distribute at key locations, such as schools, civic and activity centers</del>
CSC Members	Conduct community air monitoring that is complementary to South Coast AQMD community <u>air</u> monitoring efforts
Additional Information:	
Requirements for 1118 (Refinery Flaring Activities): <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1118.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1118.pdf</a>	

## Action 2: Conduct Refinery Air Measurements ~~Monitoring~~ to Identify and Address VOC Leaks

### Course of Action:

- Conduct periodic mobile air measurement surveys and FLIR gas imaging in and around refineries
- ~~Follow-up with inspections, as needed~~ Utilize more efficient and effective leak detection systems known as advanced measurement techniques (Smart LDAR), such as Fourier transform infrared spectroscopy (FTIR), Ultraviolet Differential Optical Absorption Spectroscopy (UV-DOAS), Solar Occultation Flux (SOF) and infrared cameras, to identify, quantify, and locate VOC leaks in real time, allowing for faster repair in a manner that is less time consuming, labor intensive, and potentially more comprehensive than traditional LDAR

### Strategies:

- Air Monitoring
- Enforcement

### Goals:\*

- ~~Use Begin initial periodic mobile monitoring~~ air measurement surveys -at for each of the eight facilities (petroleum refinery as described in the course of action above to:
  - Identify leaks from storage tanks and other equipment to characterize and mitigate potential leaks
  - Follow-up on previously identified leaks
- If data collected from periodic mobile air measurements, FLIR gas imaging or fence line air monitoring suggests persistent elevated VOC levels of health or compliance concern then conduct on-site refinery air monitoring, and inspect facility equipment for compliance with South Coast AQMD rules
- Establish Smart LDAR techniques to identify, quantify, and locate leaks in real-time allowing for faster repair of equipment

\* Emission reduction goals are subject to future assessments and regulatory analyses.

- Establish a 2020 emissions baseline for fugitive VOCs from all refineries in this community using a combination of various technologies, methods, and activities including:
  - Periodic mobile optical remote sensing (ORS) measurement surveys;
  - Analysis of Rule 1180 refinery fenceline and community air monitoring data;
  - Analysis of refinery LDAR program records;
  - Refinery emission information collected during previous South Coast AQMD studies; and
  - FLIR gas imaging cameras information
- Work with the CSC to perform an assessment to determine the feasibility of reducing fugitive VOC emissions from refineries below the 2020 baseline emission levels by:
  - 25% beginning in 2024, and
  - 50% beginning in 2030
- Develop a strategy to reduce fugitive emissions to achieve the VOC emission goals stated above including amendments to Rules 1178 and 1173, as appropriate
- Provide quarterly or biannual updates to the CSC on progress of the above goals
- ~~Conduct follow-up inspections on an as-needed basis~~
- ~~Provide quarterly or biannual updates to the CSC on progress~~

**Estimated Timeline:**

- ~~Summer~~ Third quarter of 2019, begin conducting mobile monitoring air measurement surveys at refineries, and conduct follow-up inspections as needed
- Third quarter of 2019, begin providing quarterly or biannual updates to the CSC on refinery monitoring air measurement efforts to identify and address VOC leaks
- Beginning January 2020 to January 2021, conduct periodic VOC measurements to obtain one full year of data and establish an emissions baseline
- First quarter of 2020, explore Smart LDAR technologies and programs, begin evaluating Rule 1180 fenceline air monitoring results, and begin working with refineries to develop a fugitive emission reduction plan to achieve VOC emission reduction goals of:
  - 25% by 2024
  - 50% by 2030
  - ~~Begin evaluating Rule 1180 monitoring results~~
  - ~~If data suggest persistent elevated levels, conduct on-site refinery monitoring and equipment compliance inspections, and take enforcement actions where appropriate~~
  - ~~Identify whether Rule 1180 fenceline or community monitoring locations need to be modified to capture air pollution levels in critical areas~~
  - Explore Smart LDAR technologies and programs

Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>Conduct mobile <del>monitoring</del> <u>air measurements</u>, and <u>emission measurements</u>, evaluate data, evaluate Smart LDAR, and conduct follow-up inspections as needed, and enforcement action where appropriate</li> </ul>
Refineries and related <del>plants</del> <u>facilities</u> (see Figure 5b-1)	<ul style="list-style-type: none"> <li>Work with South Coast AQMD staff to develop protocols (e.g., safety protocols) to conduct <u>air monitoring</u> (e.g., mobile <del>monitoring</del> <u>air measurements</u>) inside refineries and related plants, if fenceline or community <u>air monitoring</u> systems show ongoing elevated emissions levels</li> <li>Work with South Coast AQMD on enhanced leak detection and repair programs</li> <li><u>Provide South Coast AQMD with the LDAR program and other relevant records required to establish the baseline fugitive emission levels in 2020</u></li> <li><u>Address all identified leaks</u></li> </ul>

### Action 3: Initiate Rule Development to Amend Rule 1118 – Control of Emissions from Refinery Flares ~~Evaluate and Require Methods to Reduce Refinery Flaring Emissions through Amendments to Rule 1118~~

#### Course of Action:

- Compile the number of Rule 1118 flare events at each refinery from 2008 to 2018 and share results with CSC
- Evaluate additional methods and practices to further reduce flaring events (e.g., methods to reduce power failures), including the consideration of existing scoping documents submitted for Rule 1118 requirements

<ul style="list-style-type: none"> <li>• <u>Develop Amendments to Rule 1118 to further reduce flaring, for example, consider additional requirements/provisions that could be considered are require:</u> <ul style="list-style-type: none"> <li>– <u>Lower performance targets and/or increased penalties or mitigation fees;</u></li> <li>– <u>Increased capacity of vapor recovery systems to store gases during shutdowns;</u></li> <li>– <u>Header modification for gas diversion with process controls;</u></li> <li>– <u>Back-up power systems for key process units;</u></li> <li>– <u>Remote optical sensing for flare emissions characterization;</u></li> <li>– <u>Lower-emission flaring technologies; and</u></li> <li>– <u>Additional flare minimization plans for all refineries</u></li> </ul> </li> <li>• <u>Develop an improved system for refineries to submit flare emission data, and to be able to display data on South Coast AQMD's webpage for easy user/public access</u></li> <li>• <u>Emission Reduction Target: reduce flaring by 50%, if feasible</u></li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>• Rules and Regulations</li> </ul>	
<b>Goals:*</b>	
<ul style="list-style-type: none"> <li>• <u>Reduce flaring events and/or emissions by 50%, if feasible</u><del>If determined to be feasible, reduce refinery flaring emissions by at least 50%</del></li> <li>• <u>Contribute to the overall refinery emission reduction goals of a 50% reduction in NOx, VOCs, and SOx by 2030 (approximately 19 tpy NOx, 11 tpy SOx, and 1 tpy VOC)</u></li> </ul>	
<b>Estimated Timeline:</b>	
<ul style="list-style-type: none"> <li>• <u>By first quarter 2020, begin compiling the number of Rule 1118 flare events at each refinery from 2008 to 2018</u></li> <li>• <u>First half of 2020, initiate rule development activities</u><del>and hold first working group meeting</del></li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<ul style="list-style-type: none"> <li>• Evaluate the feasibility of requirements to reduce emissions from refinery flaring</li> <li>• Conduct rule development</li> </ul>
CSC Members	<ul style="list-style-type: none"> <li>• Participate in the South Coast AQMD rule development process (e.g., attending working group meetings, providing comments on draft rule materials, etc.)</li> </ul>
<u>Refineries and related facilities</u>	<ul style="list-style-type: none"> <li>• <u>Participate in the South Coast AQMD rule development process</u></li> </ul>
<b>Additional Information:</b>	
<b>Requirements for Rule 1118 (Refinery Flaring Activities):</b> <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1118.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1118.pdf</a>	

\* Emission reduction goals are subject to future assessments and regulatory analyses.

## Action 4: Initiate Rule Development to Amend Rule 1178 – Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities

### Course of Action:

- Compile storage tank information (e.g., universe, volume, content, etc.) and share results with CSC
- Based on results of the air monitoring conducted as part of Action #2, Evaluate the feasibility to of improving leak detection and repair programs using {Smart LDAR}, such as, infrared cameras and optical remote sensing for earlier detection and quicker programs for repair of leaks from storage tanks at refineries through amendments to Rule 1178
- Develop proposed amendments to Rule 1178 that consider the following requirements to further VOC emission reductions from refinery storage tanks:
  - Increase frequency of visual inspections of seals and gaskets;
  - Require use of enhanced leak detection tools (e.g., forward-looking infrared (FLIR) cameras and optical remote sensing) to further identify more quickly and mitigate leak emissions from storage tanks at refineries;
  - Annual third party audits (to be selected by the South Coast AQMD); and
  - Other leak prevention and emission reduction technologies including domed roofs
- Explore opportunities to incorporate new, advanced tools to modernize and improve LDAR programs for storage tanks at refineries

### Strategies:

- Rules and Regulations
- Air Monitoring
- Enforcement

### Goals:\*

- Amend Rule 1178 to improve LDAR programs to further reduce emissions from storage tanks at refineries. Contribute to the overall 50% VOC emission reduction goal

### Estimated Timeline:

- First quarter of 2021 complete one year (2020) of refinery fenceline air quality monitoring (pursuant to Rule 1180) as well as advanced air monitoring pursuant to Action #2
  - 2020, begin assessment of sources, and identify additional tools for early detection and proactive measures
- 2021, establish baseline emissions based on air monitoring and initiate rule development for amendments to Rule 1178 and hold the first working group meeting

\* Emission reduction goals are subject to future assessments and regulatory analyses.

Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>Evaluate the feasibility of requirements to <u>identify and mitigate</u> <del>reduce</del> fugitive <u>VOC</u> emissions from storage tanks at refineries</li> <li>Conduct rule development</li> </ul>
CSC Members	<ul style="list-style-type: none"> <li>Participate in the South Coast AQMD rule development process (e.g., attending working group meetings, providing comments on draft rule materials, etc.)</li> </ul>
<u>Refineries and related facilities</u>	<ul style="list-style-type: none"> <li>Participate in the South Coast AQMD rule development <u>process</u></li> </ul>
Additional Information:	
Requirements for Rule 1178 (Storage Tanks at Petroleum Facilities): <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1178.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1178.pdf</a>	

### Action 5: Achieve Further NO<sub>x</sub> Emission Reductions from Refinery Equipment Through Adoption of Rule 1109.1 – Refinery Equipment

#### Course of Action:

- Evaluate the technical feasibility and cost-effectiveness of BARCT to reduce NO<sub>x</sub> emissions from refinery equipment including existing boilers, heaters, gas turbines, fluid catalytic cracking units, sulfur recovery units, incinerators, and a coke calciner
- Require the installation of BARCT through the adoption of Rule 1109.1
- Explore opportunities to replace older equipment with newer, more efficient, and less emitting equipment with pollutant co-benefits
- Incorporate new, advanced tools to assist in more efficient operation of equipment at refineries
- Engage the CSC in the rulemaking process, with regular updates to the CSC and possible rule working group meetings in the community

#### Strategies:

- Rules and Regulations

#### Goals:\*

- By December 31, 2023 require refineries to demonstrate compliance with NO<sub>x</sub> emission limits<sup>1</sup>

\* Emission reduction goals are subject to future assessments and regulatory analyses.

<sup>1</sup>The compliance date of December 31, 2023 is estimated and may be longer. Compliance period takes into consideration the number of pieces of equipment at a facility, installation of pollution controls on an existing piece of equipment versus equipment replacement, facility modernization projects where a group of equipment are replaced, and permitting, construction, installation, commissioning, and testing of equipment.

<ul style="list-style-type: none"> <li>• <u>Achieve the majority of the overall goal of the overall 50% NOx emission reduction target (approximately 3-4 tpd or 1,095 to 1,460 tpy)</u></li> </ul>	
<u>Estimated Timeline:</u>	
<ul style="list-style-type: none"> <li>• <u>2019 and first half of 2020, continue with site visits, vendor meetings, stakeholder working group meetings and expert consultation on rule development</u></li> <li>• <u>By first quarter of 2020, hold one stakeholder working group meeting in the Wilmington, Carson, West Long Beach community</u></li> <li>• <u>By third quarter of 2019, provide an inventory of refinery boilers and heaters, size, fuel type, emissions, if the unit has CEMS, the type of pollution controls, and if the unit is being considered for BARCT</u></li> <li>• <u>Consider Adoption of Proposed Rule 1109.1 in 2020 with an implementation schedule established during rule development</u></li> </ul>	
<u>Implementing Agency, Organization, Business or Other Entity:</u>	
<u>Name:</u>	<u>Responsibilities:</u>
<u>South Coast AQMD</u>	<ul style="list-style-type: none"> <li>• <u>Evaluate the technical feasibility (e.g., equipment availability, reasonable space constraints) and cost-effectiveness of control technology to reduce emissions from refinery equipment</u></li> <li>• <u>Establish BARCT limits</u></li> <li>• <u>Adopt proposed rule and enforce requirements</u></li> </ul>
<u>CSC Members</u>	<ul style="list-style-type: none"> <li>• <u>Participate in the South Coast AQMD rule development process (e.g., attending working group meetings, providing comments on draft rule materials, etc.)</u></li> </ul>
<u>Refineries and related facilities</u>	<ul style="list-style-type: none"> <li>• <u>Participate in the South Coast AQMD rule development process</u></li> </ul>
<u>Additional Information:</u>	
<u>Rule development for Rule 1109.1 (Refinery Equipment):</u> <a href="http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/proposed-rule-1109-1">http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/proposed-rule-1109-1</a>

# CHAPTER 5C:

## PORTS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5c: Ports

### Background

The Ports of Los Angeles and Long Beach (Ports) combined are the busiest ports in the United States and the ninth busiest port complex in the world. Almost 40% of containers imported to the United States pass through the Ports. As a result, the Ports are important to the local and regional economy and support hundreds of thousands of jobs.

Cargo is delivered to and from the Ports by ships, trucks, and trains. In 2018 the Ports handled 48,000 containers (i.e., twenty-foot container units) of goods per day (or 17.5 million containers per year). Containerized volume of goods has grown by almost 11% between 2012 and 2016. The overall volume of cargo activity at the Ports is expected to increase more than 200 % by 2035.

Figure 5c-1: Satellite view of the Ports of Los Angeles and Long Beach

### Community Air Quality Priorities – Zero- and Near-Zero Technology, Oil Tanker Leaks, and Targeted Enforcement

The Wilmington, Carson, West Long Beach community identified the Ports as an air quality priority. Sources of air pollution at the Ports include, ocean-going vessels, commercial harbor craft (e.g., ferries, tugboats, fishing boats), cargo handling equipment (e.g., yard trucks, forklifts, reach stackers), drayage trucks, and other equipment. The Community Steering Committee (CSC) recommended the following to reduce emissions from these sources:

- Implementation of zero- (preferred when available) and near-zero emission technologies through incentive opportunities and regulation,
- Targeted or enhanced enforcement of existing CARB regulations (e.g., Drayage Truck and Ocean-Going Vessels Fuel Regulation), and
- Detection of leaks from oil tankers at-berth.

### Ongoing Efforts

Ongoing efforts to reduce emissions from the Ports, include CARB regulations and measures in the Ports 2017 Clean Air Action Plan (CAAP). Information about these efforts is provided below.

#### South Coast AQMD's Facility-Based Mobile Source Measure (FBMSM)

South Coast AQMD staff has ~~initiated~~<sup>initiated</sup> a public process to develop a Memorandum of Understanding (MOU) with the Ports. The MOU is intended to reduce emissions from

implementing elements of the 2017 CAAP and requires approval by the South Coast AQMD Governing Board and the Port's ~~Boards~~.

### Annual Emissions Reporting

The Ports each develop an annual emissions inventory. These inventories serve as the primary tool to track the Ports' efforts to reduce emissions through the implementation of state, federal, and international regulations and measures in the Ports CAAP. The emissions inventories cover port-related mobile sources including ocean-going vessels, cargo handling equipment, commercial harbor craft, heavy-duty trucks, and locomotives. The Port of Los Angeles has conducted an annual emissions inventory since 2005 starting with a 2001 baseline.<sup>1</sup> The Port of Long Beach has also conducted an annual emissions inventory since 2005 and also did a special baseline report for 2002.<sup>2</sup>

### State Actions (CARB)

#### CARB's Drayage Truck Regulation<sup>3</sup>

This regulation reduces air toxics and criteria pollutant emissions from drayage trucks. A drayage truck is any in-use on-road vehicle with a gross vehicle weight rating of greater than 26,000 pounds used for transporting cargo to and from ports and intermodal railyards. The regulation requires all drayage trucks to operate with an engine that is a 2007 model year or newer. Drayage trucks must also meet the requirements of the CARB Truck and Bus Regulation, which requires that all drayage trucks must have 2010 model year or newer engines by January 1, 2023.

Figure 5c-2: Example of a drayage truck

#### CARB's Mobile Cargo Handling Equipment (CHE) Regulation<sup>4</sup>

The Mobile Cargo Handling Equipment Regulation was developed to reduce diesel particulate matter (PM) and nitrogen oxides (NOx) emissions from diesel-fueled mobile CHE at California's ports and intermodal railyards. This equipment can be used to lift or move containers, bulk or liquid cargo, or to perform routine or predictable maintenance and repair activities. CHE includes equipment such as yard trucks, top handlers, side handlers, reach stackers, forklifts, rubber-tired gantry cranes, aerial lifts, and other types of equipment used in maintenance operations. The existing CHE regulation, which was fully implemented in December 2017, required cleaner diesel equipment for existing fleets of equipment.

In March 2018, CARB presented a plan to begin developing a new regulation to minimize emissions and further reduce community health impacts from CHE. CARB is assessing the availability and performance of zero-emission technologies. The new regulation is expected to be considered for adoption in 2022. These regulatory updates would potentially take effect in

2026. CARB would prioritize the earliest implementation in or adjacent to the communities most impacted by air pollution.

Figure 5c-3: Mobile cargo handling equipment

#### CARB's Commercial Harbor Craft Regulation<sup>5</sup>

The Commercial Harbor Craft Regulation reduces NO<sub>x</sub> and PM emissions from diesel engines on commercial harbor craft vessels. The regulation applies to all commercial harbor craft vessels including, but not limited to, ferries, excursion vessels, tugboats (including ocean-going tugs), towboats, push boats, crew and supply vessels, barge and dredge vessels, work boats, pilot vessels, and commercial and charter fishing boats. The existing regulation requires certain existing commercial harbor craft to meet specific engine standards

Figure 5c-4: Example of a tugboat (commercial harbor craft)

established by U.S. EPA (e.g., Tier 2 or Tier 3 standard) for main and auxiliary engines. A number of harbor craft operating at the Ports have been voluntarily repowered with cleaner engines through incentive funding programs designed to reduce emissions (e.g., Carl Moyer program<sup>6</sup>).

#### CARB's At-Berth (Shore Power) Regulation<sup>7</sup>

The At-Berth (Shore Power) Regulation reduces PM and NO<sub>x</sub> emissions from auxiliary engines on ocean-going vessels while at-berth at California ports. Fleets affected by the regulation include those composed of container vessels, passenger vessels, or refrigerated cargo vessels. The At-Berth Regulation phased in over time and fleets were required to meet 50% reductions in 2014, and 70% reductions in 2017. By January 1, 2020, more stringent requirements will be in effect, reaching 80% reductions.

Fleets at-berth must limit or reduce emissions with one of two options: the Reduced Onboard Power Generation Option (relies on the use of shore-based electrical power), or the alternative Equivalent Emissions Reduction Option. Under the Reduced Onboard Power Generation Option,

fleets must reduce their total auxiliary engine power at-berth by 80% with shore power, while also using shore power on at least 80% of their vessel calls. Under the Equivalent Emission Reduction Option, fleets must reduce their total NO<sub>x</sub> and PM emissions at-berth by 80% with shore power or another approved alternative technology. These control measures include the use of one or more emission control techniques, such as grid-based shore power, natural gas-fueled engines, emission controls installed on the vessels (e.g., particulate control traps, selective catalytic reduction units, alternative fuels, etc.), or emission controls installed at the wharf (e.g., a bonnet emission capture and treatment system).

CARB staff is currently developing a replacement regulation for Ships At-Berth that would require more stringent compliance rates for regulated vessels and the addition of other vessel types.

### [CARB's Ocean-Going Vessels - Fuel Rule<sup>8</sup>](#)

Ocean-Going Vessels - Fuel Rule requires the use of low sulfur marine distillate fuels in order to reduce PM, diesel PM, NO<sub>x</sub>, and SO<sub>x</sub> from ocean-going vessels within 24 nautical miles of the California coast. The sulfur content limits for marine fuels used in ocean-going vessel main (propulsion) diesel engines, auxiliary diesel engines, and auxiliary boilers were phased in from 2009 to the current limit of 0.1% sulfur which went into effect in January 2014.

### [San Pedro Bay Ports Clean Air Action Plan \(CAAP\)<sup>9</sup> - Port of Long Beach and Port of Los Angeles](#)

Since the adoption of the original CAAP in 2006, the CAAP strategies in conjunction with state, federal and international regulations have reduced PM, NO<sub>x</sub>, and SO<sub>x</sub> emissions from the Ports. The recently updated 2017 CAAP provides new strategies to further reduce pollution from sources operating in and around the Ports (e.g., ships, trucks, trains, harbor craft, and cargo handling equipment). Ships are the largest source of NO<sub>x</sub> emissions at the Ports. To address ship emissions, the Ports provide financial incentives for ships with the cleanest engines or ships equipped with emission-reducing technologies. The Ports also provide funding for ships participating in a technology demonstration program through the joint Technology Advancement Program (TAP).<sup>10</sup> In addition, the Ports implement the Vessel Speed Reduction (VSR) Program<sup>11, 12</sup> by providing financial incentives for ships to reduce speeds within 40 nautical miles of Point Fermin which results in less emissions from the ship's main engines.

The 2017 CAAP includes a Clean Trucks Program. Beginning in 2020, under this program, all heavy-duty trucks will be charged a rate to enter the Ports' terminals, with exemptions for trucks that are certified to meet or exceed the near-zero standard. By 2035, only trucks that are certified to meet zero-emissions will be exempt from the rate. Initiation of the truck rate is contingent on certain elements (e.g., an economic study to establish the rate).<sup>13</sup> Implementation of this rate will provide a source of funding to further invest in clean trucks, as well as provide incentives for truck owner/operators to use cleaner vehicles. The Ports will also work with terminal operators through the terminals' procurement planning process to promote and require the use of near zero and zero-emission terminal equipment. CARB will also be considering a Zero-

Emissions Drayage Truck Rule<sup>14</sup> in 2022.<sup>15</sup> The implementation of this rule will likely begin in 2026 or later.

#### *Additional Efforts by The Ports*

The Ports have several near-zero and zero-emission demonstration projects in progress. The South Coast AQMD and both ports are co-funding several on- and off-road vehicles and equipment technology demonstration projects (e.g., zero-emission locomotives, Daimler's Zero-Emission Heavy-Duty Trucks). The Ports have also received grants from CARB and CEC for other technology demonstration projects. Additionally, the Port of Long Beach and Southern California Edison are collaborating on pilot electric infrastructure projects on terminals.

#### Opportunities for Action

In addition to the ongoing efforts described in this chapter, the CSC identified specific actions to address community priorities related to addressing the committee's concerns around emissions from sources at the Ports. The actions are described below.

Action 1: Reduce Leaks from Oil Tankers
Course of Action(s):
<ul style="list-style-type: none"> <li>Use optical gas imaging technology, air <del>monitoring</del><u>measurements</u>, and other available emissions information to identify potential fugitive emission leaks from oil tankers and conduct targeted enforcement of Rule 1142 – Marine Tank Vessel Operations</li> <li>Evaluate opportunity to amend South Coast AQMD Rule 1142 to require marine vessels to calibrate and maintain pressure relief devices and require recordkeeping, with the goal of minimizing fugitive emission leaks</li> </ul>
Strategies:
<ul style="list-style-type: none"> <li><u>Air</u> Monitoring</li> <li>Enforcement</li> <li>Collaboration</li> </ul>
Goal(s):
<ul style="list-style-type: none"> <li>Conduct surveillance and air <del>monitoring</del><u>measurements</u> that focuses on looking at coastal sources of pollution and evaluate data on a regular basis to identify potential leaking vessels</li> <li>Provide quarterly or <del>biannual</del><u>semiannual</u> updates to the CSC on South Coast AQMD enforcement activities regarding fugitive emission leaks from oil tankers</li> <li>Collaborate with CARB and United States Coast Guard to evaluate pressure relief valve calibration and maintenance methods, and effectiveness in preventing fugitive emission leaks</li> </ul>
Estimated Timeline(s):

<ul style="list-style-type: none"> <li>Beginning mid-2020, provide the CSC with quarterly updates on surveillance <u>and monitoring air measurement</u> activities for oil tanker leaks</li> <li>Beginning 2020, commence evaluation of pressure relief valve calibration and maintenance methods for possible rule amendment</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	Use optical gas imaging technology to identify oil tankers with fugitive leaks and board marine vessels to evaluate potential violations with Rule 1142. <u>Evaluate opportunities to improve (if a large number of Rule 1142 through a violations are found, assess potential rule amendment.)</u>
CARB	Conduct enhanced inspections to ensure compliance with CARB's regulations
<u>Tenants of the Ports</u> (Los Angeles and Long Beach)	Work with South Coast AQMD, CARB, and the Ports' tenants to facilitate contact between the regulatory agencies and tenants to arrange inspections of the terminals
Additional Information:	
Requirements for Rule 1142 (Marine Tank Vessel Operations): <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1142.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1142.pdf</a>	

Action 2: Reduce Emissions from Ships and Harbor Craft	
Course of Action(s):	
<ul style="list-style-type: none"> <li><del>Conduct</del> Work with the Ports to engage in outreach activities to shipping lines and harbor craft owners to provide information about existing and new incentive programs for cleaner technologies for ships and harbor craft</li> <li>Identify additional incentive funding opportunities to accelerate adoption of cleaner technologies for ships and harbor craft</li> <li>Conduct demonstration projects for retrofit technologies for ships and harbor craft to inform the development of new incentive programs</li> <li>Support CARB's rule development for the proposed At-Berth Regulation and future updates to Commercial Harbor Craft Regulation</li> </ul>	
Strategies:	
<ul style="list-style-type: none"> <li>Incentives</li> <li>Public Information and Outreach</li> <li>Rules and Regulations</li> </ul>	
Goal(s):	

<ul style="list-style-type: none"> <li>• <del>Conduct-Engage in</del> one outreach event per year in the Ports area to provide information about incentives</li> <li>• Complete technology demonstration for retrofitting ships (ocean-going vessels, OGVs)</li> <li>• Work with authorities in Asia to collaborate on a Pacific Rim clean vessel incentive program</li> <li>• Participate in CARB rule development</li> <li>• Emissions Reductions Target: emissions reduced from this action contribute to the mobile source incentives <u>and statewide mobile source regulation measures target</u></li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>• Beginning 2020, <del>conduct-engage in</del> incentive outreach events, when incentive programs are open for applications</li> <li>• Beginning 2019, <del>conduct-engage in</del> outreach for a Pacific Rim clean vessel incentive program (PRIMER initiative)</li> <li>• By 2020, sign agreement for joint clean vessel incentive program with Asian ports</li> <li>• December 2019, provide updates on demonstration projects for ships and harbor craft</li> <li>• <u>CARB regulations:</u> <ul style="list-style-type: none"> <li>- 2020, CARB's Commercial Harbor Craft Regulation</li> <li>- December 2019, CARB's At-Berth Regulation</li> </ul> </li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Provide incentives for cleaner ships and harbor craft through the Carl Moyer Program and AB 617-related incentive funds, <u>and work with Ports on outreach</u></li> <li>• Identify additional incentive funding opportunities</li> <li>• Conduct technology demonstration projects <u>for retrofit technologies for ships and harbor craft</u></li> <li>• <u>Support CARB's rule development of the proposed At-Berth Regulation and updates to the Commercial Harbor Craft Regulation</u></li> </ul>
Pacific Rim authorities and Ports	<del>Partner with South Coast AQMD to incentivize cleaner ships on shared shipping routes</del>
Ports	<u>Work with South Coast AQMD to conduct outreach and education regarding new technologies and fuels available to reduce emissions in the operations of ocean going vessels</u>
CARB	Continue rule development for the proposed At-Berth Regulation and future updates to Commercial Harbor Craft Regulation
Additional Information:	

PRIMER program is currently under development, additional information is available at: [http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/AgendaItems/4\\_primer.pdf?](http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/AgendaItems/4_primer.pdf?)

### Action 3: Reduce Emissions from Port Equipment (Cargo Handling Equipment) and Drayage Trucks

#### Course of Action(s):

- Support CARB's rule development for future updates to Cargo Handling Equipment Regulation, Drayage Truck Regulation, development of a mandatory near-zero standard for heavy-duty trucks, and encourage CARB to adopt zero-emission requirements by 2035 or sooner.
- Support Ports' implementation of Clean Air Action Plan (CAAP) measures for trucks and cargo handling equipment
- Enforcement of existing Drayage Truck Regulation
- Identify additional incentive funding opportunities to accelerate adoption of cleaner port equipment and drayage trucks
- Continue developing Facility Based Mobile Source Measure (FBMSM) for Ports through a Memorandum of Understanding (MOU)

#### Strategies:

- Rules and Regulations
- Incentives
- Collaboration
- Enforcement

#### Goal(s):

- Provide ~~semiannual~~biannual updates on CARB's rule developments for drayage trucks and cargo handling equipment, Ports' CAAP measures, and FBMSM for Ports, and seek community input on progress

#### Estimated Timeline(s):

- Beginning 2022, support CARB's Drayage Truck Regulation and CARB's Cargo Handling Equipment Regulation
- Beginning 2020, implement Ports' Clean Truck Program as described in the CAAP (based on feasibility assessment study for trucks and truck rate study and the promulgation of near zero-emissions manufacturing standards by CARB)
- Beginning in 2020, implement Ports' clean cargo handling equipment purchasing program as described in the CAAP (based on feasibility assessment study for cargo handling equipment)
- Beginning in Fall 2019, update the CSC on CARB's enforcement of the existing Drayage Truck Regulation

<ul style="list-style-type: none"> <li>Beginning in Fall 2019, identify additional incentive funding opportunities for cleaner port equipment and drayage trucks</li> <li>Continue development of FBMSM for Ports through a MOU</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li><u>Support CARB's rule development for Cargo Handling Equipment Regulation and Drayage Truck Regulation</u></li> <li><u>Support CARB's development of a mandatory near-zero standard for heavy-duty trucks and encourage CARB to adopt zero-emission requirements by 2035 or sooner</u></li> <li><u>Support Ports' implementation of the CAAP</u></li> <li><u>Identify additional incentive funding opportunities to accelerate adoption of cleaner port equipment and drayage trucks</u></li> <li>Continue development of FBMSM through a MOU and <del>conduct</del> <u>engage in</u> outreach to CSC for FBMSM working groups, workshops, and meetings</li> </ul>
CARB	<ul style="list-style-type: none"> <li>Conduct enhanced enforcement of existing Drayage Truck Regulation</li> <li>Continue rule development for Cargo Handling Equipment and Drayage Truck Regulations</li> <li><del>Conduct</del> <u>Engage in</u> outreach to CSC for rule update workshops</li> </ul>
Ports	<ul style="list-style-type: none"> <li>Solicit input from the CSC on when and where dray-offs are occurring and conduct targeted enforcement sweeps based on the input</li> <li>Implement the <u>Clean Truck Program and</u> clean cargo handling equipment purchasing program as described in the <del>CAAP</del> <u>Clean Air Action Plan</u> (based on feasibility assessments for trucks and cargo handling equipment and truck rate study)</li> </ul>

# CHAPTER 5D:

## NEIGHBORHOOD TRUCK TRAFFIC

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5d: Neighborhood Truck Traffic

### Background

The community of Wilmington, Carson, West Long Beach is home to the Port of Long Beach and Port of Los Angeles (Ports). The Ports serve as a gateway for the world's markets through the movement of goods. These goods are transported to and from the Ports by ships, trains, and heavy-duty trucks. Trucks are not only used to deliver goods directly to and from the Ports, but also to railyards, warehouses, and retail stores. Trucks travel along freeways (e.g., I-710, I-110, I-405, and I-91) that pass through the Wilmington, Carson, and West Long Beach community. Also, trucks often travel near and through local neighborhoods to reach their destinations thus exposing residents to harmful air pollutants.

The amount of freeway and neighborhood truck traffic in the Wilmington, Carson, West Long Beach community is likely to increase as a result of the expected increase in goods movement activities in Southern California. These activities are largely driven by the anticipated growth in the volume of goods that are imported and exported through the Ports.<sup>1</sup> This growth may lead to additional community air quality impacts resulting from increases in traffic volumes through local neighborhoods and freeway corridors.

### Community Air Quality Priorities – Idling Trucks, Enhanced Enforcement of Existing Regulations, Air Pollution from High Volume of Trucks and Cleaner Technology Options

The Wilmington, Carson, West Long Beach Community Steering Committee (CSC) identified air pollution from heavy-duty diesel trucks and passenger cars traveling on local neighborhood streets and freeways as an air quality priority. To address these air quality impacts, the CSC prioritized the following:

- Increased enforcement of CARB's Truck and Bus<sup>2</sup> and Idling<sup>3</sup> Rules to reduce diesel emissions (including during non-business hours);
- Accountability for truck owners and truck drivers, when trucks violate CARB idling regulations;
- Additional outreach to commercial fleets, warehouses, and other facilities that operate heavy-duty diesel trucks and additional incentives for truck retrofits or truck replacements with zero-emission technologies once they become feasible, and near-zero technologies until that time;
- Evaluate designated truck routes;
- Improving the complaint systems designed to report illegal truck idling or truck travel on local roadways;
- New regulations that require the use of zero-emission trucks as soon as they become available.

## Ongoing Efforts

### U.S. EPA and Statewide Efforts

CARB's Airborne Toxic Control Measure (ATCM) places limits on idling of diesel-fueled trucks.<sup>3</sup> This regulation is enforced by CARB and South Coast AQMD, and will be a focal point of the enforcement activities in AB 617 communities. CARB continues to address truck diesel emission reductions through existing and upcoming regulations, such as the Drayage Truck Regulation<sup>4</sup> and the Truck and Bus Regulation,<sup>5,2</sup> which include emission standards~~requirements~~. CARB is also responsible for enforcing the Commercial Vehicle Idling Regulation, where commercial vehicles (gross vehicle weight rating greater than 10,000 pounds) are prohibited from idling for more than five minutes.<sup>6</sup> In addition, to help cities address idling, CARB has developed an "Options for Cities to Mitigate Heavy-Duty Vehicle Idling" guidance document which includes options for cities to address heavy-duty vehicle idling emissions in their communities.<sup>7</sup>

CARB continues to work towards reducing residual public health risk from Transport Refrigeration Units (TRU)<sup>8,9</sup> near distribution centers and other facilities where TRU activity is focused, and achieve emission reductions while in transit, especially near the most impacted communities. Improving freight efficiency and transitioning to zero-emission technologies will help reduce toxic air contaminant emissions, criteria pollutant emissions, and greenhouse gas emissions. CARB has created advisories<sup>10</sup> and forms<sup>11</sup> to assist TRU owners in understanding compliance requirements and to ensure that all regulated entities (e.g., TRU owners, TRU operators, facilities that support TRU use) are aware of their responsibilities under this regulation.

Several requirements from the Ports and from CARB have modernized the port trucking industry and reduced truck-related air pollution by phasing out the oldest, dirtiest trucks. The three main requirements<sup>i</sup> include: 1) no truck can enter the ports with an engine older than 2007,<sup>4</sup> 2) nearly all trucks in California must be no older than 2010 by 2023,<sup>5</sup> 3) new trucks entering the Ports' Drayage Truck Registry must have a 2014 engine model year or newer.<sup>12</sup>

Many new requirements are also being considered that would further reduce emissions from trucks. The table below illustrates the key upcoming activities from U.S. EPA, CARB, and the Ports.

---

<sup>i</sup> The vehicle's drive engine must be certified to a particular emission standard that is noted by the engine's model year.

Table 5d-1: Upcoming Rule Development/Activities from U.S. EPA, CARB, and the Ports

Agency	Upcoming Action	Expected Decision	Expected Phase-in Period
U.S. EPA	Cleaner Truck Initiative <sup>13</sup> – In response to a petition from South Coast AQMD, EPA has committed to updating its truck engine standard to reduce NOx emissions.	2020-2021	2024
CARB	Transport Refrigeration Unit Regulation <sup>8</sup> – Measure to reduce residual risk from TRUs by transitioning to zero-emission technologies.	2019	2025-2030
CARB	Drayage Truck Rule <sup>4</sup> – Updated regulation to transition to zero-emission trucks.	2022	2026
CARB	Advanced Clean Truck Rule <sup>14</sup> - Requires truck manufacturers to sell an increasing percentage of zero-emission trucks by 2030 (up to 15% or 50%, depending on truck type). Also will require one-time fleet reporting for large businesses.	2019	2024-2030
CARB	Zero-Emission Fleet Rule <sup>15</sup> – Would require fleets to transition to zero-emissions.	2022	2024
CARB	Heavy-Duty Low NOx Rule <sup>16</sup> – Would set new statewide engine standards for NOx reduction from trucks by 2026, and additional reductions including and after 2027.	2020	2024
Ports	Clean Truck Program <sup>12</sup> – Will establish a rate that trucks need to pay to enter the Ports beginning in 2020 if they are not near-zero emissions. Only zero-emission trucks will be exempt from payment of the rate by 2035.	2019	2020-2035

### South Coast AQMD Efforts

The South Coast AQMD also funds projects to help develop zero-emission technologies for heavy-duty Class 7-8 trucks<sup>ii</sup> (e.g. battery electric, fuel cell). These projects are in the design and demonstration phase and the technologies are not yet commercially available. Additionally, the South Coast AQMD administers incentive programs for truck owners and operators to replace older more polluting trucks with ones that are cleaner than required.<sup>17</sup> For example, South Coast AQMD's Voucher Incentive Program (VIP) is designed for smaller businesses with fleets of 10 or fewer vehicles that primarily operate within California.<sup>18</sup> VIP helps truck owners with older trucks to purchase newer trucks meeting the current emissions standards. The Carl Moyer Program<sup>19</sup> is another resource for truck owners to obtain cleaner trucks that would achieve emission reductions that are above and beyond the regulations.

<sup>ii</sup> The Federal Highway Administration categorizes Class 7-8 trucks under the "Heavy Duty (>26,001 lbs)" gross vehicle weight rating

### Identifying Opportunities for Action

The CSC's strategy to reduce the community's exposure to air pollution from trucks is described in the actions below.

Action 1: Reduce Truck Idling	
Course of Action:	
<ul style="list-style-type: none"> <li>Conduct focused enforcement for idling trucks in high traffic areas with the highest priority for areas near schools and residential areas               <ul style="list-style-type: none"> <li>Other areas prioritized by the CSC include areas near distribution centers, high traffic corridors on Wilmington Avenue, Lomita Boulevard, Santa Fe Avenue, Figueroa Street, Pacific Coast Highway, Anaheim Street, Harry Bridges Boulevard, the Alameda corridor, and Lakme Avenue</li> </ul> </li> <li>Collaborate with the CSC to inform community members how to report idling trucks</li> <li><del>Provide</del> <u>Engage in</u> community outreach on existing city, CARB, and South Coast AQMD complaint systems on reporting idling trucks               <ul style="list-style-type: none"> <li>If existing complaint/response system is determined to be ineffective, assess where improvements are feasible</li> </ul> </li> <li><u>Work with CARB and local entities or agencies to establish "no truck idling" signage with locations prioritized by the CSC and work to assess the feasibility of sign placement</u></li> </ul>	
Strategies:	
<ul style="list-style-type: none"> <li>Enforcement</li> <li>Collaboration</li> <li>Public Information and Outreach</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>Conduct, at minimum, quarterly idling sweeps and focused inspections for one calendar year, to be evaluated thereafter with community input</li> <li><del>Organize</del> <u>Engage in</u> two outreach events within the span of implementation of this plan to inform community members how to report idling trucks</li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li><u>Beginning Fall of 2019, provide quarterly updates to the CSC</u></li> <li><u>Beginning Fall 2019, begin planning outreach events to inform the community members how to report idling trucks</u></li> <li>Beginning Fall of 2019, work with CARB's enforcement team (and CHP) to coordinate, at a minimum, quarterly idling sweeps and focused inspections for a period of one year               <ul style="list-style-type: none"> <li><u>Beginning January 2020, based on findings from idling sweeps, the CSC identified Community Priorities List, and additional community observations/input from CSC meetings, CARB will adjust enforcement in the</u></li> </ul> </li> </ul>	

<u>community to address the identified concerns and report back to the CSC bi-annually for future adjustments</u> <u>—Beginning Fall 2019, work to establish “no truck idling” signage with locations prioritized by the CSC</u> <ul style="list-style-type: none"> <li>• <del>Based on results of the sweeps, and continued input from CSC members, adjust idling inspections accordingly</del></li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Conduct idling sweeps (which may require coordination with local law enforcement), focusing on high priority areas</u></li> <li>• <u>Collaborate with the CSC to inform community members how to report idling trucks</u></li> <li>• <u>Engage in community outreach on complaint systems on reporting idling trucks</u></li> <li>• <u>Work with local entities and CARB to establish “no truck idling” signage</u></li> </ul>
California Air Resources Board (CARB)	<ul style="list-style-type: none"> <li>• <u>Conduct and cCoordinate idling truck inspections with the California Highway Patrol</u></li> <li>• <u>Based on findings from idling sweeps, the CSC identified Community Priorities List, and additional community observations/input from CSC meetings, CARB will adjust enforcement in the community to address the identified concerns and report back to the CSC bi-annually for future adjustments</u></li> <li>• <u>Work with South Coast AQMD to establish “no truck idling” signage</u></li> </ul>
CSC	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD and other local entities to disseminate information on how to report idling trucks in the community (e.g., outreach events and flyers)</u></li> <li>• <u>Prioritize locations for “no truck idling” signage</u></li> </ul>
Additional Information:	
<ul style="list-style-type: none"> <li>• CARB requirements for idling trucks: <a href="https://www.arb.ca.gov/enf/diesel.htm">https://www.arb.ca.gov/enf/diesel.htm</a></li> <li>• City of Los Angeles - Trucks on Residential Streets: <a href="https://ladot.lacity.org/what-we-do/operations/neighborhood-services/trucks-residential-streets">https://ladot.lacity.org/what-we-do/operations/neighborhood-services/trucks-residential-streets</a></li> <li>• City of Carson - Truck Routes and Truck Parking Areas: <a href="http://ci.carson.ca.us/publicworks/truckroutes.aspx">http://ci.carson.ca.us/publicworks/truckroutes.aspx</a></li> <li>• City of Long Beach - Oversized Vehicle Restrictions: <a href="http://longbeach.gov/press-releases/public-notice-oversized-vehicle-restrictions/">http://longbeach.gov/press-releases/public-notice-oversized-vehicle-restrictions/</a></li> </ul>	

## Action 2: Reduce Emissions from Heavy-Duty Trucks

### Course of Action:

- Collaborate with local businesses, agencies, and organizations and ~~Conduct~~ engage in outreach to truck owners and operators in this community to provide information about available incentive programs, community ordinances, restricted truck routes, and trucking regulations
- Identify ~~South Coast AQMD and other~~ additional and new incentive funding opportunities to replace and accelerate adoption of cleaner ~~port equipment and heavy-duty trucks (including drayage trucks)~~, prioritizing zero-emission technologies when technologically feasible and commercially available, and near-zero emission technologies until that time
- Participate in CARB's rule development for future amendments to their truck regulations
- Continue to develop Facility Based Mobile Source Measures (see Chapter 5c - Ports and Chapter 5f - Railyards), including an Indirect Source Rule (ISR) for warehouses
- Work with the local city or the county agencies to evaluate potential designated truck routes away from sensitive receptors (e.g., schools, residents) and identify resources to enforce these routes
- Work with local agencies to provide data on locations within the community with high truck pollution impacts
- Identify the appropriate agency (e.g., Los Angeles Department of Transportation) to collaborate on assessing the feasibility of physical interventions to prevent truck traffic from entering residential neighborhoods
- ~~Collaborate with local businesses, agencies, and organizations to conduct outreach to truck owners and operators in this community to provide information about community ordinances, restricted truck routes, trucking regulations, and available incentive programs~~
- ~~Additional and new incentive funding opportunities to replace heavy-duty diesel trucks with zero-emission technologies once they become available, and near-zero emission technologies until that time~~
- Target incentive funds for local small businesses and independent owner/operator (e.g., Voucher Incentive Program)
- Conduct focused enforcement of CARB's TRU Regulation, Drayage Truck Regulation, and Truck and Bus Regulation

### Strategies:

- Incentives
- Public Information and Outreach
- Collaboration
- Rules and Regulations

<ul style="list-style-type: none"> <li>Enforcement</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li><del>Organize Engage in</del> two incentive outreach events and provide <del>biannual</del> <u>semiannual</u> updates to the CSC</li> <li>Provide <del>biannual</del> <u>semiannual</u> updates on CARB's rule development for truck regulations, and seek community input on progress</li> <li>Coordinate with CARB staff on using community priorities to focus future enforcement efforts</li> <li><u>Identify agencies with the jurisdiction to implement physical barriers to neighborhood truck traffic</u></li> <li><u>Provide quarterly or biannual semiannual updates to the CSC</u></li> <li><del>Emissions Reduction Target: emissions reduced from this action contribute to the m</del> <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a target</u></li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li><u>Beginning 2020, when incentive programs are available, begin conducting engaging in incentive outreach events and collaborating with local businesses, agencies, and organizations to provide information about incentive programs, community ordinances, restricted truck routes, and trucking regulations. and provide quarterly or biannual updates to the CSC</u></li> <li><del>Beginning January 2020, based on findings from idling sweeps, the CSC identified Community Priorities List, and additional community observations/input from CSC meetings, CARB will adjust enforcement in the community to address the identified concerns and report back to the CSC bi-annually for future adjustments</del></li> <li><u>Continue to identify additional and new incentive funding opportunities to replace and accelerate the adoption of cleaner heavy-duty trucks</u></li> <li><u>Continue to develop Facility Based Mobile Source Measures (see Chapters 5c - Ports and 5f – Railyards), including an ISR for warehouses</u></li> <li><u>Beginning first quarter of 2020, work with the city or the county to evaluate potential designated truck routes and identify resources to enforce these routes and identify agencies to collaborate with on feasibility of physical barriers to mitigate neighborhood truck traffic</u></li> <li><u>Beginning 2020, when incentive programs are available target incentive funds for small businesses and independent owner/operator</u></li> <li>CARB's New Regulations phase-in: 2024-2030</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li><u>Collaborate with local businesses, agencies, and organizations</u> <del>Provide incentives and engage in</del> <u>targeted outreach for truck incentive programs, community</u></li> </ul>

	<p><u>ordinances, restricted truck routes, and trucking regulations in this community</u></p> <ul style="list-style-type: none"> <li>• <u>Identify other additional or new funding opportunities to accelerate the adoption of cleaner heavy-duty and drayage trucks</u></li> <li>• <u>Support CARB on rule development for future truck amendments</u></li> <li>• <u>Continue to develop Facility Based Mobile Source Measures</u></li> <li>• <u>Work with the local city or county agencies to evaluate potential designated truck routes and identify resources to enforce these routes</u></li> <li>• <u>Work with local agencies to provide data on locations within the community with high truck pollution impacts</u></li> <li>• <u>Identify agencies with jurisdiction over physical barriers for truck traffic</u></li> <li>• <u>Identify incentive funds for local small businesses and independent owner/operator and encourage the submission of applications</u></li> <li>• <u>Provide updates to CSC, including truck incentive projects that have been submitted and are being considered for Community Air Grants incentive funding</u></li> <li>• <del>Present truck incentive projects that have been submitted and are being considered for Community Air Grants incentive funding</del></li> <li>• Provide training to community leaders or organizations that provide application assistance for incentive programs</li> </ul>
CARB	<ul style="list-style-type: none"> <li>• Continue rule development for amendments to <u>truck regulation</u><del>the Drayage Truck Regulation</del></li> <li>• Conduct enhanced roadside enforcement of existing Drayage Truck, <u>TRU, and</u> <del>and</del> Truck and Bus regulations</li> </ul>
Cities of Los Angeles, Long Beach, and Carson	<ul style="list-style-type: none"> <li>• <u>Collaborate with South Coast AQMD to evaluate potential designated truck routes and identify resources to enforce these routes</u> <del>TBD</del></li> </ul>
CSC members (including businesses, community organizations, and agencies)	<ul style="list-style-type: none"> <li>• Work with South Coast AQMD to <del>conduct</del> <u>engage in</u> outreach to truck owners and operators</li> <li>• Provide application assistance to potential applicants for incentive programs <ul style="list-style-type: none"> <li>– Seek funding support to provide this service, (e.g., through CARB Community Air Grants)</li> </ul> </li> </ul>

# CHAPTER 5E:

## OIL DRILLING AND PRODUCTION

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5e: Oil Drilling and Production

### Background

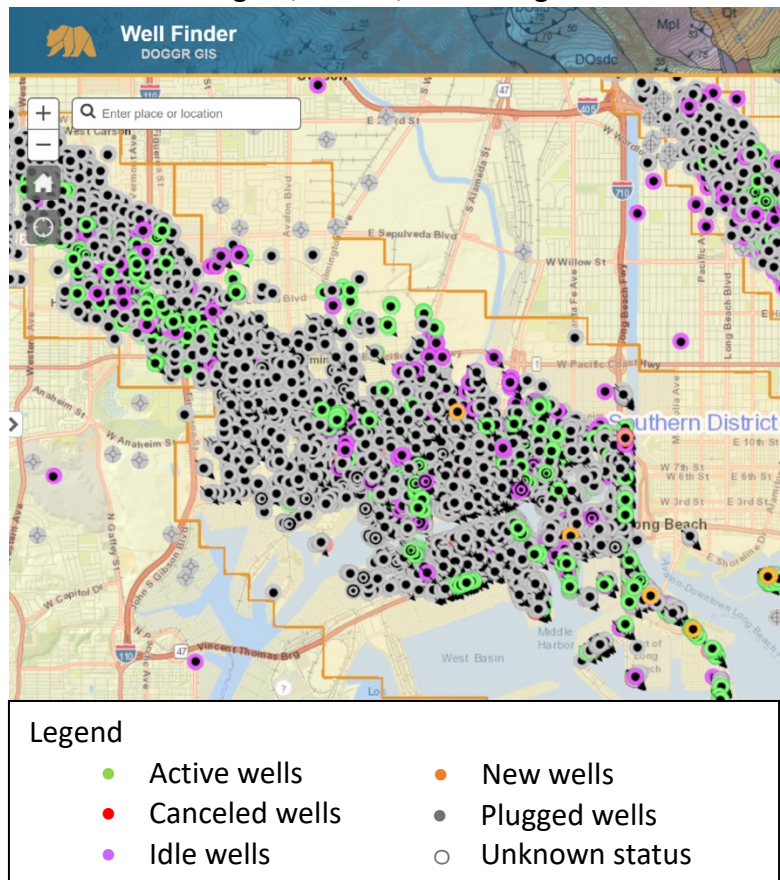

The oil and gas industry has existed in Southern California for over a hundred years. This industry, which includes oil drilling and production, has hundreds of facilities that are subject to requirements set-forth by city agencies, local air districts (e.g., South Coast AQMD), and state agencies (e.g., CARB and the California Department of Conservation, through its Division of Oil, Gas, and Geothermal Resources (DOGGR)).

South Coast AQMD has specific regulations on oil wells, including the Rule 1148 series (1148<sup>1</sup>, 1148.1<sup>2</sup>, 1148.2<sup>3</sup>), and other rules that reduce emissions of volatile organic compounds (VOCs).<sup>4,5</sup> CARB recently adopted an Oil and Gas Regulation<sup>6</sup> to reduce methane emissions from oil and gas production, processing, storage, and transmission compressor stations, which accounts for four percent of methane emissions in California.<sup>7</sup>

There are 242 facilities operating approximately 4,320 onshore oil and gas wells in the District.<sup>i</sup> Due to the geography of the region, these wells are often located in urban areas, and sometimes located within close proximity to residential and other sensitive receptors, as is the case within the Wilmington, Carson, West Long Beach community.

DOGGR requires owners and operators of oil and gas facilities to report the status of their wells. The data are available through a database of active, idle, and abandoned wells throughout the state of California.<sup>8</sup> Based on records from DOGGR's database (updated in 2015), there are approximately 6,100 oil, gas, and geothermal wells that are active or idle in the Los Angeles, Riverside, San Bernardino, and Orange County regions. DOGGR's program

Figure 5e-1: Screen shot of DOGGR Well Finder GIS tool of the Wilmington, Carson, West Long Beach area

<sup>i</sup> Based on an evaluation of records associated with the South Coast AQMD's Rule 222 - Filing Requirements for Specific Emission Sources Not Requiring a Written Permit Pursuant to Regulation II filing requirements for the "Oil Production Well Group" category in 2015

includes idle, abandoned, geothermal and water injection wells, which are not registered by South Coast AQMD.<sup>9</sup> Active oil wells are the only ones actively withdrawing oil, and this process has the potential to develop leaks (fugitive emissions).

In 2015, South Coast AQMD staff conducted a five-week project to characterize and quantify emissions from small stationary sources, including oil wells, in the Los Angeles Basin using multiple Optical Remote Sensing (ORS) techniques. The findings from this study are available in the final report.<sup>10</sup>

Community Air Quality Priorities – Target Focused Air Measurements Monitoring and Inspections to Address Leaks and Odors, Improved Outreach and Notifications, Establish a Baseline of Emissions, Zero-Emission Technology On-Site

Four main air quality priorities related to oil drilling and production were identified by the Wilmington, Carson, West Long Beach Community Steering Committee (CSC): (1) ~~targeted~~ focused near-facility ~~monitoring~~ air measurements and inspections to address leaks and odors from oil drilling and production; (2) improved public outreach and notifications; (3) additional requirements for oil production sites to submit annual reports to develop an accurate inventory of emissions and chemicals used; and (4) require zero-emission technology at drilling sites. Details for these actions are described below.

Many homes in this community are located close to oil and gas facilities, which may include drilling, production, and well sites. Residents have identified odors and leaks from operating and abandoned oil wells as concerns. The CSC requested increased air monitoring efforts pertaining to these wells and facilities, particularly when drilling activities are occurring. The CSC also requested that this information be made available to the public to establish a baseline for tracking emissions reductions. Using air ~~monitoring~~ measurements to identify potential leaks, conducting follow-up investigations, and collaborating with other agencies would help reduce emissions from these facilities. Because VOCs are the main air pollutants from petroleum-based sources, VOC measurements would help to identify potential leaks. In addition, the drilling activities at these sites can generate fugitive dust, which could impact the nearby community. Air monitoring efforts led by community based organizations, that are complementary to South Coast AQMD ~~monitoring~~ efforts, can help provide real-time data on particulate matter levels in the community when drilling activity is occurring at a nearby facility.

CSC members stated that the current South Coast AQMD notifications for oil wells (Rule 1148.2<sup>3</sup>) could provide more useful information to the community. The CSC requested that the South Coast AQMD program provide more efficient notifications with improved outreach to the public to explain the chemicals, toxicity, and health impacts related to oil drilling activities. The CSC requested that outreach materials include letters, flyers, lists, or infographics, since not all community members have access to computers.

CSC members requested a better inventory of emissions from this industry, beyond the current reporting requirements in South Coast AQMD Rule 1148.2. Members suggested requiring a

chemical survey or annual reports on a facility’s oil production, chemicals used, and emissions inventories to provide information that is relevant to community air pollution exposures.

CSC members recognized that these sites use diesel-powered equipment on-site, and would like to see electrification of this equipment and/or requirements for using cleaner fuels for on-site operations.

### Ongoing Efforts

South Coast AQMD staff continue to conduct regular inspections and respond to complaints for oil drilling and production facilities. South Coast AQMD regulates oil and gas facilities through several Rule 1148 rules which pertain to oil wells (Rule 1148<sup>1</sup>, Rule 1148.1<sup>2</sup>, Rule 1148.2<sup>3</sup>), Rule 1173 (VOC leaks)<sup>4</sup> and Rule 1176 (wastewater systems).<sup>5</sup> There are over 30 facilities with multiple wells on site that are inspected annually under existing regulatory programs.

CARB is implementing the Study of Neighborhood Air near Petroleum Sources (SNAPS) program to better understand potential impacts of criteria pollutants and toxic air contaminants in neighborhoods near oil and gas activities. The program includes limited-term, intensive air quality ~~monitoring measurements~~ with a particular focus on production facilities.<sup>11</sup> Although the SNAPS program is not currently conducting monitoring in the Wilmington, Carson, West Long Beach community, the information from the SNAPS effort from other communities may be informative for this community.

### Opportunities for Action

In addition to the ongoing efforts described in this chapter, the CSC identified specific actions to address community priorities related to addressing the committee’s concerns at oil drilling and production sites. The actions are described below.

<b>Action 1: Reduce Air Pollution Leaks from Oil Wells and Associated Activity at these Facilities</b>
<b>Course of Action:</b>
<ul style="list-style-type: none"> <li>• Use data from South Coast AQMD and DOGGR to identify active, inactive, and abandoned oil wells in this community</li> <li>• Work with the CSC to identify priority locations for <del>monitoring</del><u>air measurements</u>, and aim to conduct <del>monitoring</del><u>air measurements</u> at these locations during well workover events</li> <li>• Conduct mobile <del>monitoring</del><u>air measurements</u> around active, idle, and abandoned oil drilling sites (or fenceline and more traditional <u>air</u> monitoring activities, if necessary) to identify potential leaks</li> <li>• Make <del>monitoring</del><u>air measurement</u> data from these actions available online in a user-friendly format on the South Coast AQMD website (<a href="http://www.aqmd.gov">www.aqmd.gov</a>)</li> </ul>

<ul style="list-style-type: none"> <li>• Share <del>monitoring</del> <u>air measurement</u> data with partner agencies to help inform their efforts</li> <li>• If persistent elevated levels are detected at locations through <u>air measurement</u><del>monitoring</del> activities, conduct follow-up investigations at those locations using appropriate field measurement equipment <ul style="list-style-type: none"> <li>– <del>Monitoring</del> <u>Air measurements</u> of active and abandoned oil wells will be prioritized based on proximity to sensitive receptors, repeat violations, or complaints received</li> <li>– If elevated levels are found around abandoned wells, make a referral to DOGGR</li> </ul> </li> <li>• Respond to odor complaints and update complainants on an expedited basis</li> <li>• Provide CSC with periodic summaries of findings, such as whether odors were confirmed and traced back to a specific site/source, and any enforcement actions taken<sup>ii</sup></li> </ul>
Strategies:
<ul style="list-style-type: none"> <li>• <u>Air</u> Monitoring</li> <li>• Enforcement</li> <li>• Collaboration</li> </ul>
Goal(s):
<ul style="list-style-type: none"> <li>• Conduct screening measurements around all accessible active, idle, and abandoned oil wells to identify leaking wells</li> <li>• Identify the highest priority locations in the community for <del>monitoring</del> <u>air measurements</u> during a well workover event</li> <li>• Conduct follow-up inspections if <u>air measurements indicate</u> persistent elevated levels <del>are found through monitoring</del>, and take enforcement action where appropriate</li> <li>• Make <del>monitoring</del> <u>air measurement</u> data available publicly</li> <li>• Provide quarterly or <del>biannual</del> <u>semiannual</u> updates to the CSC on progress and findings</li> </ul>
Estimated Timeline(s):
<ul style="list-style-type: none"> <li>• Fourth quarter of 2019, begin to use data from DOGGR to identify the active, idle, and abandoned wells in this community</li> <li>• First quarter of 2020, work with CSC to identify the top priority oil drilling and production locations in this community</li> <li>• Second quarter of 2020, begin mobile <del>monitoring</del> <u>air measurements</u> around the oil drilling and production locations, prioritizing the locations identified by the CSC. Post data on a dedicated webpage on the South Coast AQMD website within 30 days</li> <li>• Third quarter of 2020, begin providing CSC members quarterly or <del>biannual</del> <u>updates</u> <u>semiannual updates</u> on efforts for <del>monitoring</del> <u>air measurements</u> and inspection or complaint investigations on fugitive emissions and odors from oil drilling and production sites</li> </ul>

<sup>ii</sup> Specific or detailed information from ongoing enforcement investigations will not be able to be shared until Notices of Violation, if any, are settled or closed

Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Collaborate with DOGGR to identify active, inactive, and abandoned oil wells in the community</u></li> <li>• <u>Work with the CSC to identify priority locations for air measurements</u></li> <li>• Conduct mobile <del>monitoring</del> <u>air measurements</u> around active, idle, and abandoned oil drilling sites to identify potential leaks, and screen for elevated ambient air levels in nearby communities</li> <li>• Perform inspections, and respond to complaints</li> <li>• Provide <del>monitoring</del> <u>air measurement data</u> <del>and to CSC and partner agencies</del> <u>and make air measurement data from these actions available online</u></li> <li>• <u>Make a referral to DOGGR, if elevated levels are found around abandoned wells</u></li> <li>• <u>Provide periodic air measurement and enforcement updates to CSC</u></li> </ul>
CSC Members	Prioritize oil drilling and production locations in the community that are the top concerns
City of Los Angeles	<ul style="list-style-type: none"> <li>• <u>Collaborate with South Coast AQMD to identify active, inactive, and abandoned oil wells in the community</u></li> <li>• May conduct follow-up inspections of oil drilling and production sites</li> <li>• Refer appropriate issues identified at these sites to South Coast AQMD</li> </ul>
Division of Oil, Gas, and Geothermal Resources (DOGGR)	<ul style="list-style-type: none"> <li>• Refer appropriate issues identified at these sites to South Coast AQMD</li> <li>• Follow up on referrals from other agencies to DOGGR</li> </ul>
Community-Based Organizations	Conduct community air monitoring that is complementary to South Coast AQMD community monitoring efforts
Additional Information:	
DOGGR: <a href="https://www.conservation.ca.gov/dog/Pages/Index.aspx">https://www.conservation.ca.gov/dog/Pages/Index.aspx</a>	

## Action 2: Improved Public Information and Notifications on Activities at Oil Drilling and Production Sites

### Course of Action:

- Develop fact sheets or info-graphics summarizing findings from ~~monitoring~~ air measurement data, complaint response, and inspections of oil drilling and production facilities in this community
- Work with local public health departments on health-related messaging on risks posed by these oil drilling and production facilities (e.g., water pollution, hazardous waste storage, etc.) and measures to reduce exposure to risks from oil drilling and production sites
- Work with local public health departments to distribute fact sheets or info-graphics to the community
- Review the Los Angeles County Department of Public Health's finalized Community Health Improvement Plan (CHIP) and incorporate air quality related information to address or mitigate emissions from oil drilling and production sites
- Work with stakeholders to identify and implement key areas for improvement for the Rule 1148.2 information and notifications
- Provide community workshops and training on how to subscribe to and use notifications

### Strategies:

- Public Information and Outreach
- Collaboration

### Goal(s):

- Develop fact sheets and info-graphics that provide guidance on reducing exposure to oil drilling and production site activities, and summaries of the findings from ~~monitoring~~ air measurements and inspection activities
- Provide the CSC with semiannual updates regarding the South Coast AQMD's role in the CHIP
- Improve Rule 1148.2 notifications based on stakeholder input, e.g. to include health-related messaging
- Hold two community workshops to provide training on how to use notification systems
- Provide quarterly or semiannual ~~biannual~~ updates to the CSC on progress

### Estimated Timeline(s):

- First quarter of 2020, begin working with stakeholders to identify improvements for Rule 1148.2 notifications
- Third quarter of 2020, begin working with local public health departments to develop fact sheets, info-graphics, and messaging for notifications

<ul style="list-style-type: none"> <li>• <u>When finalized, review the Los Angeles County Department of Public Health's finalized CHIP and incorporate air quality related information to address or mitigate emissions from oil drilling and production sites</u></li> <li>• 2021, implement improvements to notifications and organize community workshops and training</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Work with Public Health Departments to develop outreach materials <u>(e.g., fact sheets or info-graphics)</u> and improvements to notifications <u>for health-related messaging</u></li> <li>• <u>Review the Los Angeles County Department of Public Health's finalized CHIP and incorporate air quality related information to address or mitigate emissions from oil drilling and production sites</u></li> <li>• Work with stakeholders to improve notifications</li> <li>• Organize and host public workshops and training</li> </ul>
Public Health Departments	<ul style="list-style-type: none"> <li>• Collaborate with South Coast AQMD to develop outreach materials for communities to distribute at key locations, such as schools, civic and activity centers, and other locations to provide public information</li> <li>• <u>Provide finalized CHIP (Los Angeles County Department of Public Health)</u></li> </ul>
Additional Information:	
Requirements for Rule 1148.2 (Oil and Gas Notifications): <a href="http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1148-2.pdf">http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1148-2.pdf</a>	

### Action 3: Evaluate Feasibility to Amend Rule 1148 Series and Rule 1173 to Reduce Emissions and Require Additional Reporting

#### Course of Action:

- Utilize ~~monitoring~~ air measurement data from Community Air Monitoring Plan (CAMP) efforts and CARB's Study of Neighborhood Air near Petroleum Sources (SNAPS) program to identify possible additional emissions reductions or areas where annual reporting would be beneficial for establishing a more accurate emissions inventory
- Evaluate additional methods and practices to further reduce leaks, and whether additional chemicals should be added to the required list for reporting
- Consider amendments to Rule 1148 series and Rule 1173 to reduce emissions and improve emissions reporting from oil drilling and production sites. Examples of ~~additional~~ considerations may include:

<ul style="list-style-type: none"> <li>– <u>Additional provisions for new oil and gas wells located near sensitive land uses</u></li> <li>– <u>Real-time fenceline air monitoring for certain air pollutants (e.g., VOCs, criteria pollutants and hazardous air pollutants) and meteorological stations to aid in community notifications</u></li> <li>– <u>Vapor recovery systems</u></li> <li>– Leak detection technologies and programs</li> <li>– Lowering allowable emissions from on-site equipment (e.g., emission concentrations)</li> <li>– Improving emissions controls during well rework and maintenance activities</li> <li>– Lower-emission or zero-emission equipment for on-site operations <u>(e.g., assess feasibility to require cleaner engines)</u></li> <li>– Annual reporting of emissions</li> <li>– Improving reporting of chemicals used on-site <u>(e.g., combine event and chemical reporting information, correct Chemical Abstracts Service Registry Number, automate some data quality checks)</u></li> <li>– Conducting root-cause analysis and implementing odor minimization plans when odors are traced back to a facility</li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>• Rules and Regulations</li> </ul>	
<b>Goal(s):</b>	
<ul style="list-style-type: none"> <li>• If a rule amendment is determined to be necessary and feasible, pursue rule development to reduce emissions from leaks and operations and enhance reporting requirements</li> <li>• Work with stakeholders to gather input on elements to incorporate in reporting</li> <li>• Provide quarterly or <del>biannual</del> <u>semiannual</u> updates to the CSC on progress</li> </ul>	
<b>Estimated Timeline(s):</b>	
<ul style="list-style-type: none"> <li>• Second half of 2020, initiate rule development activities and hold first working group meeting</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Evaluate the feasibility of amending rules to add requirements for reducing emissions, reporting emissions, and reporting chemicals used at oil drilling and production sites</u></li> <li>• <u>Use air measurement data from CAMP and CARB's SNAPS program to identify areas where annual reporting would be beneficial for establishing a more accurate emissions inventory</u></li> <li>• <u>Evaluate additional methods and practices to further reduce leaks and whether additional chemicals should be added to the required list for reporting</u></li> </ul>

CSC Members	Participate in the South Coast AQMD rule development process (e.g., attending working group meetings, providing comments on draft rule materials, etc.)
Additional Information:	
<ul style="list-style-type: none"><li>• Details about the requirements for the Rule 1148 Series (1148<sup>1</sup>, 1148.1<sup>2</sup>, 1148.2<sup>3</sup>) and Rule 1173<sup>4</sup> are available on South Coast AQMD's website</li><li>• Community Air Monitoring Plan (CAMP): <a href="http://www.aqmd.gov/docs/default-source/ab-617-ab-134/camps/wcwlb_camp.pdf">http://www.aqmd.gov/docs/default-source/ab-617-ab-134/camps/wcwlb_camp.pdf</a></li><li>• CARB SNAPS: <a href="https://ww2.arb.ca.gov/our-work/programs/study-neighborhood-air-near-petroleum-sources/about">https://ww2.arb.ca.gov/our-work/programs/study-neighborhood-air-near-petroleum-sources/about</a></li></ul>

# CHAPTER 5F:

## RAILYARDS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5f: Railyards (On-site Emissions)

### Background

Railyards are used to store, sort, or load and unload railroad cars. Common loads include containers (stacked or on trailers), tankers with chemical or petroleum products, and bulk products such as construction materials or grain. Containers can be transported to and from marine terminals for import and export, or to and from warehouses for storage and sorting before reaching their final destination. Regional rail container volumes are projected to increase between 2012-2040 in response to growing international trade.<sup>1</sup>

**Figure 5f-1: Union Pacific Intermodal Container Transfer Facility (ICTF)/Dolores**

BNSF Railway Company (BNSF) and Union Pacific (UP) Railroad Company, operate many railyards<sup>2</sup> throughout California. Two are located next to residential areas within the Wilmington, Carson, West Long Beach community including, BNSF Watson and UP Intermodal Container Transfer Facility (ICTF)/Dolores (Figures 5f-1 and 5f-12: Two off-port railyards within the Wilmington, Carson, West Long Beach). Several other on-dock railyards operate at the ports of Los Angeles and Long Beach at various marine terminals.<sup>1,3</sup>

### Community Air Quality Priority – Emissions from Railyards

Air pollution is generated by equipment and vehicles that are used for railyard operations. These vehicles and equipment move containers and railcars around the railyard to load, unload, and transport goods in and out of the railyard. Emissions can also be generated during maintenance activities (e.g., load testing of locomotives). Examples of equipment that is used for railyard operations include:

- Locomotives (including ‘switchers’ that build and deconstruct trains, often within railyards, and larger ‘line-haul’ locomotives that pull trains hundreds of miles between railyards)
- Drayage trucks (i.e., on-road tractors that pull trailers loaded with containers, often from the ports)

<sup>1</sup> Port of Los Angeles railyards are located at Berth 200, Pier 300, Pier 400, TraPac, West Basin Container Terminal, and Everport/Yusen terminals (TICTF) (<https://www.portoflosangeles.org/business/supply-chain/rail>). Port of Long Beach railyards are located at Pier A, Pier B, Pier E/Middle Harbor, Pier G, Pier J, and Pier T. (<http://www.polb.com/civica/filebank/blobdload.asp?BlobID=13281>). These railyards are addressed as part of the Ports actions.

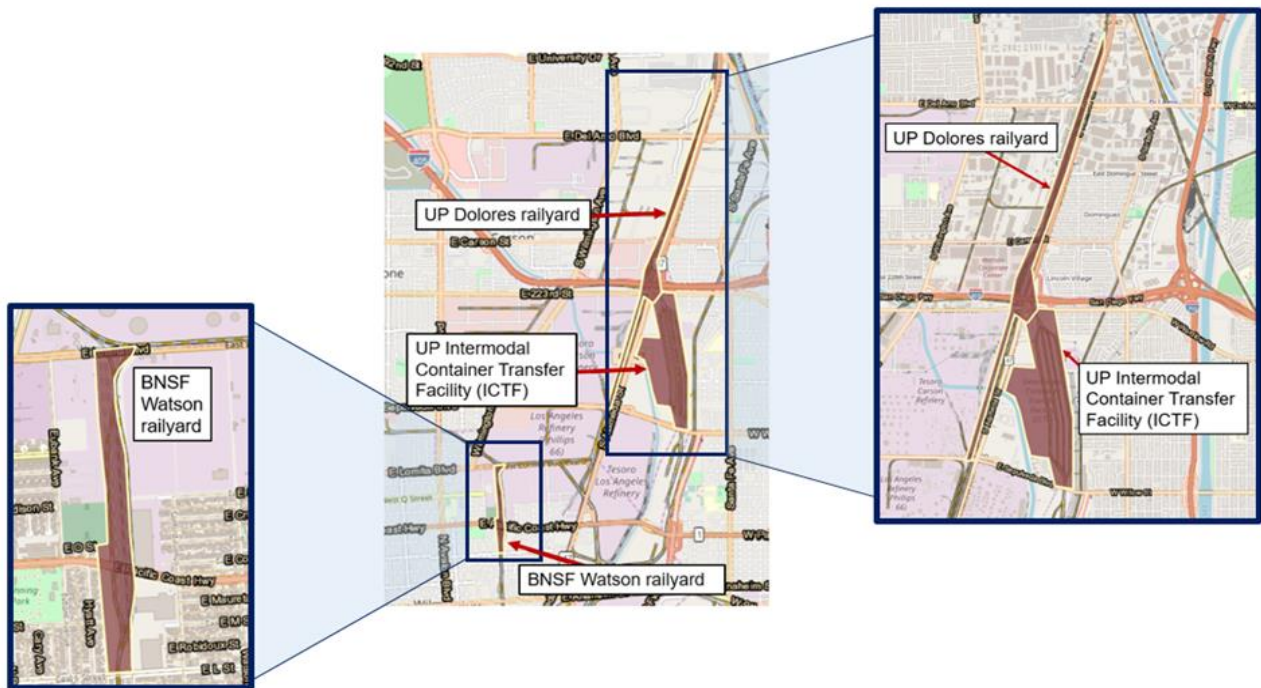

- Cargo handling equipment (e.g., gantry cranes, top picks, and off-road yard trucks)
- Transportation Refrigeration Units (e.g., truck refrigeration units and refrigerated railcars),~~and~~
- Miscellaneous (e.g., fuel trucks)

~~Appendix 5f – Railyards, provides additional information about on-road and off-road equipment at railyards and related emissions.~~

The Community Steering Committee (CSC) prioritized air pollution from railyards within the community based on concerns about diesel particulate emissions from trains and other diesel equipment at the BNSF Watson<sup>ii</sup> and UP ICTF/Dolores railyards. Potential opportunities to reduce emissions from diesel equipment used at railyards include replacing older equipment with newer less polluting equipment (e.g., replacing diesel-fueled yard trucks with electric yard trucks), and ensuring that the replacement or repower of equipment is based on the cleanest technology available.

Figure 5f-24: Two off-port railyards within the Wilmington, Carson, West Long Beach

### Ongoing Efforts

A short summary is provided below of the key regulations and programs that are in place or are being developed at the national, state, and local level to address emissions from railyards.

<sup>ii</sup> The BNSF Watson yard does not have drayage trucks, cranes, top picks, or off-road yard trucks.

### *Federal Actions*

Railroad operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, while locomotive emissions are regulated by the U.S. EPA. These agencies' regulatory authority preempt certain federal, state, and local regulatory authorities. However, U.S. EPA has used its authority under the Clean Air Act to require new diesel locomotives to be built to meet the cleanest emission standard (also known as Tier 4).<sup>4</sup> This requirement also applies to certain locomotives that are remanufactured.<sup>iii</sup> These regulations require the installation of devices that reduce idling on newly manufactured<sup>iv,5</sup> and remanufactured locomotives.<sup>6</sup> These regulations do not require railroads to reduce their usage of older, higher-emitting locomotives. Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time. In 2017, CARB also petitioned U.S. EPA to develop a new regulation requiring engine manufacturers to meet a cleaner Tier 5 emission standard for new engines.

In 2017, CARB petitioned the U.S. EPA to update emission standards for new and remanufactured locomotives, establishing a cleaner Tier 5 standard for new engines.<sup>7,v</sup> The petition asked that the new emission standards go into effect in 2023 for remanufactured locomotives, and 2025 for new locomotives. South Coast AQMD supported the petition by sending a letter of support. The U.S. EPA acknowledged the receipt of the petition, but has not provided any update or plans for further action. Because locomotive engines can last over 30 years, locomotive fleet turnover is slow, so even if the U.S. EPA were to develop a Tier 5 emission standard, it would not result in immediate emission reductions. The CARB petition<sup>7</sup> is under review by the U.S. EPA.

### *State Actions (CARB)*

CARB has two agreements<sup>8,9</sup> with BNSF and UP to reduce locomotive emissions in and around railyards. An agreement in 1998 required BNSF and UP to meet a fleet average of Tier 2 for their locomotive engines operated in the South Coast Air Basin every year between 2010 and 2030. Both railroads have met this commitment every year. The second agreement in 2005 focused on railyards and required: implementation of an idling-reduction program, maximizing the use of ultra-low sulfur diesel fuel, preparation of health risk assessments, evaluation of measures to further reduce diesel particulate emissions, and an assessment of remote sensing technology to identify high-emitting locomotives. Both railroads have met the requirements from the 1998 and 2005 agreements. CARB has discussed the potential for two new regulations that would reduce emissions from locomotives, including regulation to reduce idling activity and a regulation to

---

<sup>iii</sup> Remanufacturing can include activities like replacing an old engine in a locomotive with a new engine. The useful life of a locomotive is typically at least ten years.

<sup>iv</sup> The U.S. EPA defines newly manufactured as freshly manufactured.

<sup>v</sup> Even if the U.S. EPA were to update the emission standards in response to the petition, the new standards would only apply to new and remanufactured locomotive engines. Given the slow turnover of the railroads' fleet, emissions reductions would not be immediate.

address non-preempted locomotive use in the state through retrofit, replacement and other actions. Also, CARB staff plans to develop amendments to the Cargo Handling Equipment Regulation, Transportation Refrigeration Unit Regulation, and its Drayage Truck Regulation to begin the transition to zero-emission technology starting in 2026.<sup>10</sup>

#### *South Coast AQMD*

South Coast AQMD previously adopted rules<sup>11</sup> that would have required railroads to reduce idling, conduct recordkeeping, and prepare emissions inventories and health risk assessments for railyards. However, the railroads sued South Coast AQMD, and the courts determined that the rules cannot currently be enforced as they are preempted by federal law. South Coast AQMD is evaluating potential strategies to reduce emissions from railyards, including developing a potential regulation affecting railyards called an Indirect Source Rule (ISR), and/or other potential partnering strategies that could reduce emissions.<sup>12</sup> This ISR was initially intended to address regional air pollution, in particular through reducing NOx emissions. The CSC has made it clear that an ISR must also focus on reducing localized impacts from railyards. The railroads have participated in workshops related to Facility Based Mobile Source Measures (FBMSM) and will continue to work with South Coast AQMD staff and the community.

South Coast AQMD also funds projects to help develop technology that can lower emissions from locomotives (e.g., natural gas hybrid, battery electric, and fuel cell). These projects are in the design and demonstration phase and not yet commercially available. Additionally, the South Coast AQMD provides incentives for rail operators that purchase technologies for locomotives<sup>13</sup> and cargo handling equipment<sup>14</sup> that is cleaner than required.

#### Opportunities for Action

The South Coast AQMD continues to seek opportunities to reduce air pollution from railyards. The actions below have been identified by the CSC to reduce emissions from railyards.

Action 1: Reduce Emissions from Railyards
Course of Action:
<ul style="list-style-type: none"> <li>• <del>Continue to pursue</del> Pursue strategies to reduce air pollution from railyards through the development of <del>Indirect Source Rule (ISR)</del> <u>Indirect Source Rule (ISR)</u> requirements, including reducing localized emissions and exposures</li> <li>• Work with CARB on the development of new requirements to reduce air pollution from railyards</li> <li>• Work with local utilities and state agencies <del>like the</del> <u>(e.g., California Energy Commission and the Public Utilities Commission)</u> to encourage the installation of infrastructure needed to fuel/charge zero-emissions vehicles and equipment</li> </ul>

<ul style="list-style-type: none"> <li>• Continue to support CARB's petition<sup>vi</sup> to the U.S. EPA for new national locomotive emission standards for near zero and zero-emission locomotives</li> <li>• Work with railyards in the Wilmington, Carson, West Long Beach community to replace diesel fueled equipment with cleaner technologies<sup>vii</sup></li> <li>• Use emissions inventory and <u>air</u> monitoring information to identify opportunities for emission reductions</li> </ul>
Strategies:
<ul style="list-style-type: none"> <li>• Rules and Regulations</li> <li>• Incentives</li> <li>• Collaboration</li> <li>• <u>Air Monitoring</u></li> </ul>
Goal(s):
<ul style="list-style-type: none"> <li>• Provide <del>bi-annual</del> <u>semiannual</u> updates on new requirements being developed by CARB and South Coast AQMD to the CSC</li> <li>• Prioritize reducing air pollution from railyards located in environmental justice communities, such as, Wilmington, Carson, West Long Beach</li> <li>• Replace diesel equipment at railyards through incentive funding programs</li> <li>• <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a</u></li> </ul>
Estimated Timeline(s):
<ul style="list-style-type: none"> <li>• In 2020, South Coast AQMD to consider new ISR on railyards</li> <li>• Between 2020 and 2022, CARB to consider new regulations <u>and/or other measures:</u> <del>for locomotives</del> <ul style="list-style-type: none"> <li>– <u>Between 2020 and 2022, for locomotives</u></li> <li>– By 2022, CARB to consider amending its regulations for zero-emission drayage trucks and cargo handling equipment</li> <li>– <u>By 2020, CARB to consider amending its regulation for zero-emission transport refrigeration units (TRUs)</u></li> </ul> </li> <li>• <u>2020, begin working with local utilities and state agencies (e.g., California Energy Commission and the Public Utilities Commission) to encourage the installation of infrastructure needed to fuel/charge zero-emissions vehicles and equipment</u></li> <li>• <u>Continue to support CARB's petition to the U.S. EPA for new national locomotive standards</u></li> <li>• Second quarter 2020, South Coast AQMD will provide incentive information to railyards to work towards replacing diesel-fueled equipment with cleaner</li> </ul>

<sup>vi</sup> CARB Locomotive Petition to U.S. EPA (April 2017): <https://ww2.arb.ca.gov/resources/documents/carb-petitions-us-epa-strengthen-locomotive-emission-standards>.

<sup>vii</sup> A variety of technology assessments have been conducted to assist in this effort. Examples include: <https://ww2.arb.ca.gov/resources/documents/technology-and-fuels-assessments> and <http://www.cleanairactionplan.org/documents/draft-2018-feasibility-assessment-for-cargo-handling-equipment.pdf>

<p>technologies at railyards located in the Wilmington, Carson, West Long Beach community</p> <ul style="list-style-type: none"> <li>• <u>When available, Use emissions inventory and air monitoring information to identify opportunities for emission reductions, when available</u></li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <del>Continue to p</del>Pursue indirect source requirements for railyards, and improve community access to rule development process by holding a working group meeting in this community</li> <li>• <u>Work with CARB on the development of new requirements to reduce air pollution from railyards</u></li> <li>• <u>Work with local utilities and state agencies to encourage the installation of infrastructure needed to fuel/charge zero-emissions vehicles and equipment</u></li> <li>• <u>Continue to support CARB's petition to the U.S. EPA for new national locomotive emission standards</u></li> <li>• <del>Provide the CSC with updates on the development of indirect source requirements for railyards</del></li> <li>• Allocate incentive funding to replace on-site diesel equipment with zero-emission technologies</li> <li>• <u>Use emissions inventory and air monitoring information to identify opportunities for emission reductions</u></li> <li>• <u>Provide the CSC with updates on the development of indirect source requirements for railyards</u></li> </ul>
<u>CSC Members</u>	Participate in <del>the</del> CARB and South Coast AQMD rulemaking process (e.g., attending working group meetings, providing comments on draft rule materials, etc.) for regulations affecting railyards
CARB	<ul style="list-style-type: none"> <li>• Pursue regulations to achieve additional emission reductions at railyards</li> <li>• Prioritize enforcement and seek new financial incentives for railyards</li> </ul>
<u>BNSF Watson and UP Intermodal Container Transfer Facility (ICTF)/Dolores</u>	<u>Participate in the CARB and South Coast AQMD rulemaking process</u>

# CHAPTER 5G:

## SCHOOLS, CHILDCARE CENTERS, AND HOMES

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5g: Schools, Childcare Centers, and Homes – Exposure Reduction

### Background

The Wilmington, Carson, West Long Beach community identified children’s exposure to harmful air pollutants while at school and childcare centers as a priority. A major pollutant of concern in this community is diesel particulate matter (DPM), which can cause health problems. Many environmental justice communities experience a disproportionately high level of exposure to these pollutants, especially when there are schools, homes, and other locations where people spend a lot of time (e.g., parks) that are close to air pollution sources. Children, seniors, and people with certain medical conditions are especially sensitive to the impacts of air pollution. ~~Steps~~ However, ~~proactive steps~~ such as installing high performance air filtration systems ~~in schools~~ inside school buildings<sup>i</sup> and notifying the public when air quality is unhealthy can reduce a child’s exposure to harmful air pollutants.

### Community Air Quality Priorities – Reducing Exposures at Schools, Childcare Centers, Homes, or Where Sensitive Populations Spend Time

Community Steering Committee (CSC) members identified hospitals, senior centers, and schools as places where the South Coast AQMD should focus on reducing exposure to harmful air pollutants. The CSC provided examples, such as the idling of diesel trucks and locomotives near schools or parks that provide exposure to harmful air pollutants found in diesel exhaust. The CSC members also shared instances where students and other sensitive populations near sources of air pollution experienced health problems.

To address community concerns about the health impacts of air pollution, the CSC members prioritized community outreach and engagement as a way to reduce exposure to harmful air pollutants. This includes providing information to schools, childcare centers, and when outdoor air pollution levels are unhealthy, and suggest ~~proactive~~ steps that can be taken to reduce exposure when air quality is unhealthy. Other input received includes increasing the amount of green space, such as planting trees around the community.

The CSC also identified school and residential air filtration as another effective way to reduce exposure to air pollution, particularly for residents who live in areas close to major sources of diesel emissions. The South Coast AQMD does not currently have a program to provide residential filtration systems<sup>i</sup>; however, the agency will work with its partners to identify opportunities for residential filtration systems and share this information with the CSC.

---

<sup>i</sup> The South Coast AQMD will work with CARB’s Indoor Air Quality program and its contractor to identify effectiveness and opportunities for residential filtration and share this information with the CSC.

## Ongoing Efforts

### *School Air Filtration*

The installation of air filtration systems in schools can reduce exposure to air pollution inside school buildings. There are certain types of air filtration systems (“high efficiency air filters”) that are effective in filtering very small particles like those from diesel engines. These small particles can be inhaled deep into the lungs and cause health problems. These filtration systems may be beneficial to schools located near freeways, truck routes, ports, rail yards, and other sources<sup>1</sup> of diesel emissions.

South Coast AQMD has administered the installation of air filtration systems at schools in the Los Angeles Unified School District since 2006. To date, these systems have been installed at 24 schools within the Wilmington, Carson, West Long Beach community. Figure 5g-1 and Table 5g-1 summarizes the location and list of schools that have air filtration systems installed within this community. The map and table show only include schools that have had air filtration systems installed through ~~programs-funds~~ administered by the South Coast AQMD. Other school districts may have installed high efficiency air filtration systems through other ~~programs-or~~ funding sources. For example, Long Beach Unified School District received funding from the Port of Long Beach to install stand-alone air filtration systems. Table 5g-2 lists the schools in West Long Beach that have had air filtration systems installed through funding from the Port of Long Beach.

### *Environmental Justice Community Partnership (EJCP)<sup>2</sup> Clean Air Ranger Education (CARE)<sup>3</sup>*

The EJCP is designed to build relationships with community members and organizations to achieve clean air and healthy, sustainable communities. The Clean Air Ranger Education (CARE) Pilot Program is a program designed for elementary school education and includes topics on air pollution and health, air quality flags, and zero-emissions equipment demonstrations.

### ~~*Kids Making Sense Program<sup>4</sup>*~~

~~Low-cost sensor technology allows the South Coast AQMD to implement a new program for high school teachers and students in environmental justice communities by combining science, technology, engineering, and math education with air quality coursework.~~

### *Why Air Quality Matters (WHAM) High School Education Program*

The South Coast AQMD is implementing Why Air Quality Matters (WHAM), a Science, Technology, Engineering and Math (STEM) and experiential learning based curriculum, in high schools located within environmental justice communities. WHAM will increase teacher and student awareness on air quality issues in their communities and beyond through activities and experiments, including measuring particulate matter using low-cost, hand-held sensors.

Figure 5g-1: Map of schools in Wilmington, Carson, West Long Beach with air filtration systems installed through programs/funds administered by the South Coast AQMD

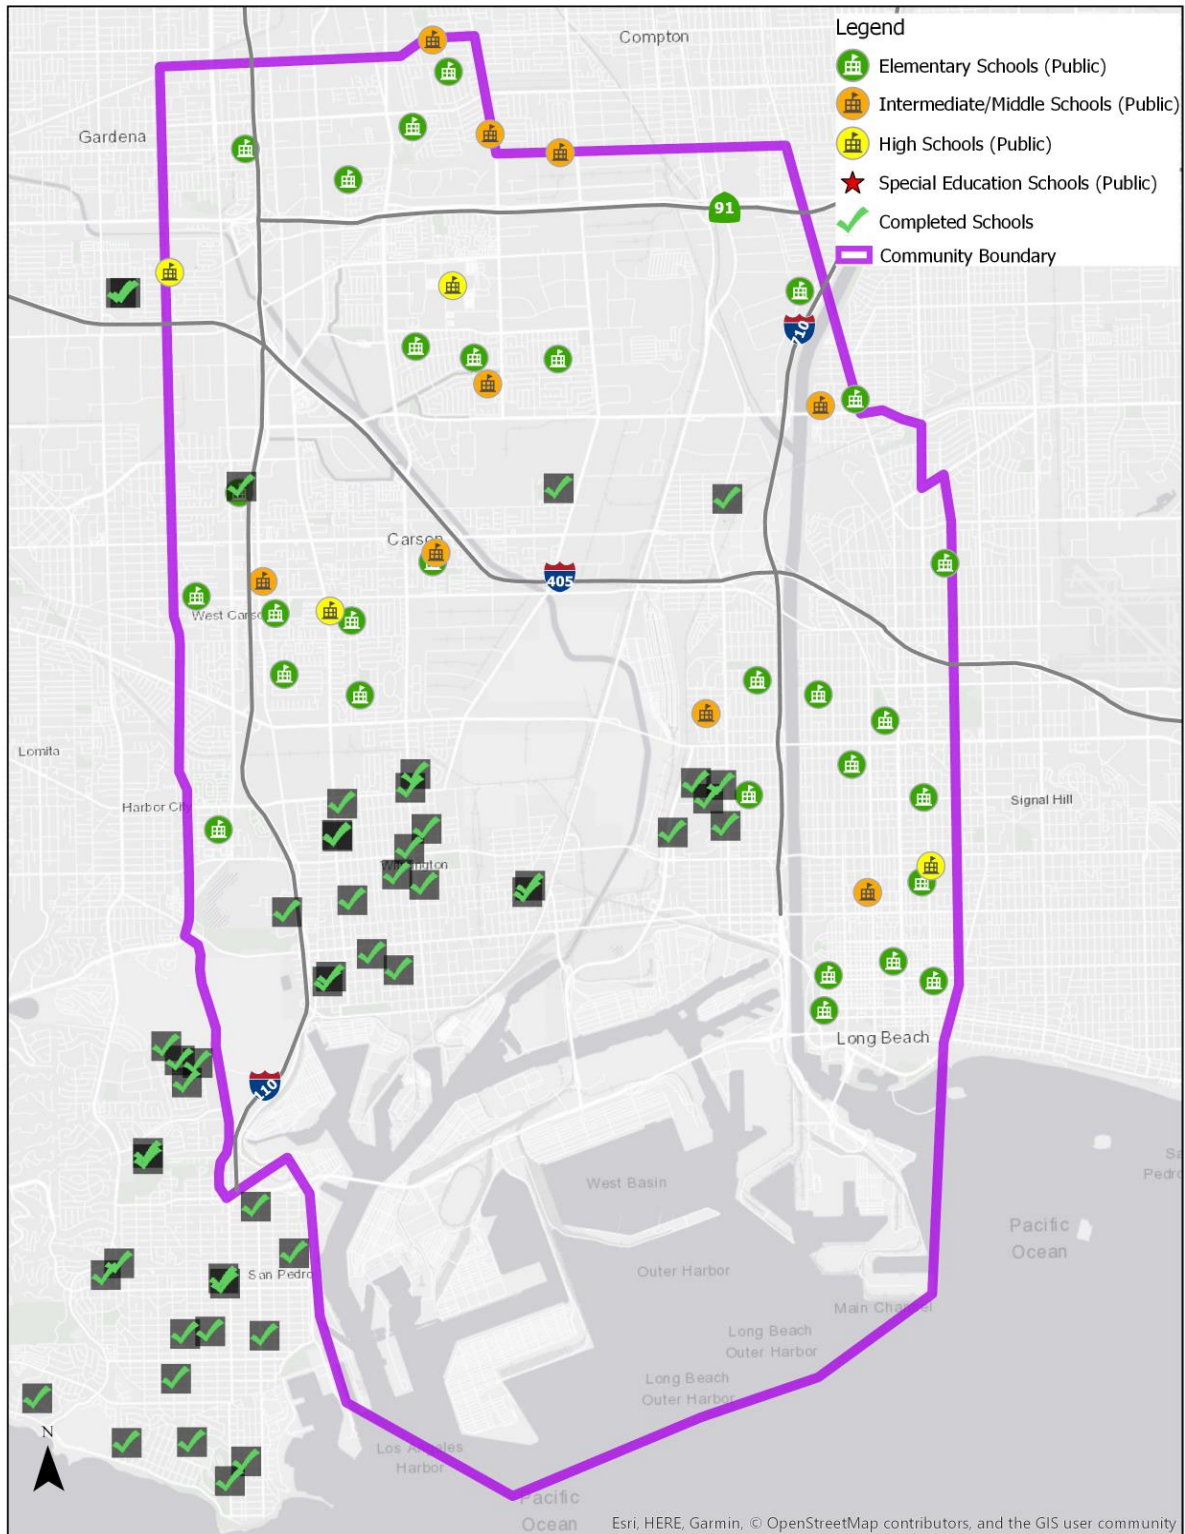

Table 5g-1: List of schools in Wilmington, Carson, West Long Beach with air filtration systems installed through ~~programs~~ funds administered by the South Coast AQMD

Name of School	
Avalon High School	Hawaiian Ave Early Education Center
Bethune Elementary School	Hawaiian Ave Elementary School
Broad Ave Elementary School	Hudson Elementary School

Name of School	
Birney Elementary School	Los Cerritos Elementary School
Edison Elementary School	Muir K-8
Garfield Elementary School	Robinson K-8
George Washington Middle School	Stephens Middle School
Lafayette Elementary School	Webster Elementary School

### Opportunities for Action

In addition to filtration systems at schools, the CSC prioritized education and outreach as a way to reduce exposure to harmful air pollutants. Strategies to reduce the exposure to these pollutants are described below.

#### Action 1: Reduce Exposure to Harmful Air Pollutants through Public Outreach to Schools and Childcare Centers

##### Course of Action:

- Provide air quality related programs to schools, including the Environmental Justice Community Partnership (EJCP); Clean Air Ranger Education (CARE) program; and Why Air Quality Matters (WHAM)~~Kids Making Sense~~ program
- Partner with local school districts to provide information on programs such as Safe Routes to School or ridesharing
- Partner with community-based organizations such to share information or ~~provide~~ engage in outreach to schools for asthma related programs
- If funding sources and partnering agencies are identified, work with appropriate agencies to implement direct public health interventions (e.g., asthma management programs)
- Partner with the Los Angeles County and City of Long Beach Departments of Public Health on providing information on how to receive air quality advisories, and how to reduce exposure to air pollution, particularly for sensitive populations. Work with the school districts to provide this information to local schools and childcare centers

##### Strategies:

- Public Information and Outreach
- Collaboration

##### Goal(s):

- ~~Participate-Engage in two~~ Engage in two public outreach events (e.g., health fairs, Earth week event) at schools or childcare centers on information relating to air quality and reducing exposure
- ~~Provide 2 childcare centers with~~ Provide 2 schools with information relating to air quality effects on young children and reducing exposure to facilities where children are located (e.g., schools, childcare centers, etc.). Outreach will be prioritized, prioritizing centers based on CSC input during the implementation period of this CERP
- Implement EJCP CARE program and ~~Kids Making Sense~~ WHAM programs in at least at two schools, with the possibility of continuing for up to three years<sup>ii</sup>
- Collaborate with community-based organizations to ~~co-host~~ engage in outreach meetings

<sup>ii</sup> Number of schools and duration of program is contingent upon renewing funding source for subsequent years.

<ul style="list-style-type: none"> <li>Encourage school districts to reduce the number of vehicle miles traveled and/or participate in programs such as Safe Routes to Schools</li> </ul>	
<b>Estimated Timeline(s):</b>	
<ul style="list-style-type: none"> <li>Early 2020, begin outreach efforts with school districts to provide air quality related programs to schools</li> <li>Early 2020, begin outreach efforts with school districts to provide information on programs, such as, Safe Routes to School or ridesharing</li> <li>Early 2020, begin outreach efforts with community-based organizations</li> <li>Fourth quarter of 2019, begin working with health departments on developing outreach materials</li> <li><u>Continue to identify funding sources or partnering agencies to work on direct public health interventions</u></li> </ul>

<del>Long Beach Department of Public Health</del>	<del>Partner with South Coast AQMD on developing notifications to schools for air quality advisories</del>

Community Based Organizations (with asthma related programs)	Partner with South Coast AQMD to share information and/or <del>provide-engage in</del> outreach to school districts for asthma-related programs
Additional Information:	
<ul style="list-style-type: none"> <li>Clean Air Ranger Education (CARE) Program: <a href="http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/2019-ejcp-agenda-june-5.pdf">http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/2019-ejcp-agenda-june-5.pdf</a></li> <li>Kids Making Sense Program: <a href="https://kidsmakingsense.org/">https://kidsmakingsense.org/</a></li> </ul>	

Action 2: Reduce Exposure to Harmful Air Pollutants at Schools	
Course of Action:	
<ul style="list-style-type: none"> <li>Continue the installation of school air filtration systems<sup>iii</sup> with priority given to schools near truck routes, railyards, and/or major freeways</li> <li>Explore opportunities for additional schools and funding to provide filter replacements for schools already equipped with high efficiency filtration systems</li> </ul>	
Strategy:	
<ul style="list-style-type: none"> <li>Exposure Reduction</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>Installation of air filtration systems in schools identified by CSC members.<sup>iv</sup> Schools with priority given to schools near truck routes, railyards, and/or major freeways</li> <li>Provide filter replacements for up to a five year period</li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li><u>Starting in mid-2020, through the implementation of the CERP, begin installation of air filtration systems in schools</u></li> <li>2019 through 2025, extend replacement filters at schools with existing high efficiency replacement systems</li> <li><u>Beginning 2020, provide CSC with semiannual updates on number of schools that have had filtration systems installed</u></li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>Installation of air filtration systems in schools</li> </ul>

<sup>iii</sup> Some schools or community centers have had air filtration systems previously installed; however, filter replacements may be needed. Replacement filters will continue to be provided to schools that have had air filtration systems installed. Given that these projects are dependent on available funding, the CSC will need to prioritize which schools receive air filtration systems.

<sup>iv</sup> Public schools, including charter schools, childcare centers, and public community centers, are eligible for the South Coast AQMD program.

	<ul style="list-style-type: none"> <li>• <u>Explore opportunities for additional schools and funding to provide filter replacements for schools already equipped with high efficiency filtration systems</u></li> <li>• <u>Provide CSC with updates on school filtration systems</u></li> </ul>
School Districts within the Wilmington, Carson, West Long Beach community	Partner with South Coast AQMD on installation of school air filtration systems and/or filter replacement programs
Additional Information:	
Air filtration <u>systems</u> in schools: <a href="https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf">https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf</a>	

Action 3: Reduce Exposure to Harmful Air Pollutants in Homes <sup>v,vi</sup>	
Course of Action(s):	
<ul style="list-style-type: none"> <li>• Identify new or existing technologies, programs, and funding sources that can provide the most effective air filtration systems in homes<sup>vii</sup></li> </ul>	
Strategies:	
<del>Exposure Reduction</del> <ul style="list-style-type: none"> <li>• Incentives</li> <li>• Public Information and Outreach</li> </ul>	
Goal(s):	
<ul style="list-style-type: none"> <li>• Identify and partner with other entities to determine new or existing programs that can provide home filtration systems</li> <li>• If funding or programs become available, share information with CSC members</li> </ul>	
Estimated Timeline(s):	

<sup>v</sup> Air filtration systems will generally be less effective due to lower energy efficiency in older, pre-2006 homes typically found in Environmental Justice or disadvantaged communities. Limited research on the efficiency of high performance air filtration systems in older homes suggests a 25% - 30% lower efficiency for PM<sub>2.5</sub> and ultrafine PM is expected, which is comparable to having open doors and windows. Most data collected on efficiency of high performance air filtration systems has been on 2006 and new homes, showing an average removal efficiency of 90% for PM<sub>2.5</sub> and ultrafine PM.

<sup>vi</sup> CARB has not approved AB 617 funds for residential air filtration systems. The South Coast AQMD plans to continue to work with CARB to establish a protocol where residential air filtration systems can be installed using CARB funds.

<sup>vii</sup> If a funding source is identified, South Coast AQMD will provide information on such funds. Homeowners should install residential air filtration based on the guidelines outlined by the funding source.

<ul style="list-style-type: none"> <li>Mid-2020, consult with CSC members and appropriate stakeholders to identify any new or existing air filtration programs in homes</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>Identify new or existing sources or programs that can provide resources for air filtration in homes</li> <li><del>Conduct</del> <u>Engage in</u> outreach and share information with CSC members, <u>when opportunities are available</u></li> </ul>
<u>Homeowners</u>	<u>When funding sources or programs are identified and available, apply for and install air filtration systems based on the guidelines outlined by the funding source</u>
Additional Information:	
<u>Not applicable</u>	

Action 4: Increase Green Space in Areas Where People Spend Time	
Course of Action(s):	
<ul style="list-style-type: none"> <li>Identify new or existing sources or programs that can provide funding for tree planting <u>and the expansion of green space using native, drought tolerant plants</u></li> </ul>	
Strategies:	
<ul style="list-style-type: none"> <li>Public Information and Outreach</li> </ul>	
Goals(s):	
<ul style="list-style-type: none"> <li>Partner with other <u>agencies or entities</u> (e.g., Los Angeles County Department of Public Health) to determine new or existing sources or programs that can provide funding to coordinate tree planting (prioritizing areas with sensitive populations) <u>and increase green space with native, drought tolerant plants</u></li> <li>If funding or programs become available, share information with CSC members</li> </ul>	
Estimated Timeline(s):	
<ul style="list-style-type: none"> <li>Mid-2020, consult with CSC members and appropriate stakeholders to identify any existing funding sources for tree planting or increasing green space</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li><del>Identify</del> <u>Partner with agencies or entities to identify</u> new or existing sources or programs that can provide funding for tree planting <u>and green space expansion</u></li> <li><del>Conduct</del> <u>Engage in</u> outreach and share information with CSC members, when opportunities are available</li> </ul>

<u>Local city or county agencies/entities (e.g., Los Angeles Department of Public Health)</u>	<u>Work with South Coast AQMD to identify new or existing sources or programs that can provide funding for tree planting and green space expansion</u>

# CHAPTER 5H:

## IMPLEMENTATION SCHEDULE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5h: Implementation Schedule

The CERP addresses air quality priorities identified by the Wilmington, Carson, West Long Beach Community Steering Committee (CSC). To reduce air pollution from sources that contribute to these priorities, the CSC developed a set of actions to be implemented by government agencies, organizations, businesses, and other entities. The implementation period of the actions in this CERP is expected to be approximately five years. The actions will occur during the timeframe of the plan; however, some actions by South Coast AQMD are ongoing (e.g., certain regulatory, enforcement, and incentive activities). Rules that are adopted or amended will continue to be in effect beyond the implementation period of the CERP and will continue to be enforced to ensure that facilities maintain compliance.- Additionally, some actions in the CERP are designed to allow for minor adjustments when new information becomes available. For example, based on initial air monitoring results, the CSC may refine specific strategies to focus on sources that show elevated emissions. Moreover, allowing these types of adjustments will facilitate successful implementation.

Each action in the CERP provides goals ~~to~~ that include metrics designed to measure the progress of the CERP. Examples of these metrics are quarterly enforcement sweeps and emission reduction targets. Beginning in 2021, the South Coast AQMD staff will provide an annual update to the CSC on the goals for each action in the CERP.

An overview of the schedule for implementing the actions in the CERP is shown in Figure 5h-1: Implementation Timeline for Rule Development and Implementation Activities and Figure 5h-2: Implementation Timeline for Air Monitoring, Enforcement, Outreach, and Other CERP Actions. Figure 5h-1 covers rule development activities to address air quality priorities in the CERP, and Figure 5h-2 provides a timeline for air monitoring, enforcement, incentives, outreach, and other activities.

# CHAPTER 5I:

## CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) ANALYSIS SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5i: California Environmental Quality Act (CEQA) Analysis

The California Environmental Quality Act (CEQA) requires agencies to consider the environmental impacts of a proposed project. CEQA describes and imposes specific legal requirements that agencies must follow when evaluating and making decisions about whether a project will cause a significant environmental impact. The information below describes what South Coast AQMD staff has done and determined with respect to this project – the Community Emissions Reduction Plan (CERP). The information below does contain some legal terms because that is the language contained in the law and use of that language is part of how an agency demonstrates compliance with that law. As noted below, South Coast AQMD staff has looked at all aspects of the CERP and has determined that the CERP is exempt from the requirements of CEQA. The paragraphs below identify the exemptions that apply to the CERP. If the South Coast AQMD Board agrees with staff and determines that the CERP is exempt from CEQA, and approves the CERP, a Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside, and San Bernardino counties.

Pursuant to CEQA and South Coast AQMD Rule 110, the South Coast AQMD, as lead agency for the proposed project, has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, the overall purpose of this project is to improve the environment and health of residents of this selected community and all of the action items within the CERP to support this goal. Thus, the proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment.

The CERP contains elements that qualify as feasibility and planning studies, because information needs to be collected to make an informed decision about further action (e.g., rule development). However, the portions of the CERP that qualify as feasibility and planning studies do not prescribe or commit to specific rule requirements, nor have future actions been approved or adopted in advance, because they require an open public process. The regulated community, stakeholders, interested parties, and the public are invited to participate in the rule development process in a public forum. Thus, the portion of the CERP that contains action items which qualify as feasibility or planning studies is statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies.

Additionally, some of the action items in the CERP would require minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, and these action items are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 –

New Construction or Conversion of Small Structures. A portion of the action items within the CERP involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection. Another component of the action items in the CERP also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections. Finally, a portion of the action items within the CERP relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies.

South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, as mentioned above, the proposed project is exempt from CEQA. ~~A Notice of Exemption will be prepared pursuant to CEQA Guidelines Section 15062 – Notice of Exemption. If the project is approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties.~~

# CHAPTER 6:

## AIR MONITORING SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 6: Air Monitoring Summary

Air monitoring will be conducted in the Wilmington, Carson, West Long Beach community as part of the AB 617 program. Air monitoring can provide valuable information about sources of air pollution, types of pollutants, and air quality impacts in the community. Information that is collected from air monitoring can be used to implement and track air quality actions prioritized by the community that reduce local resident's exposure to harmful air pollutants.

### Chapter 6 Highlights

- Will provide new information about air pollution at the community level
- Monitoring will be done in areas of concern identified by the selected communities
- Areas selected for monitoring reflect the air quality priorities in AB 617 communities
- Many types of monitoring equipment will be used, from advanced techniques to low-cost sensors

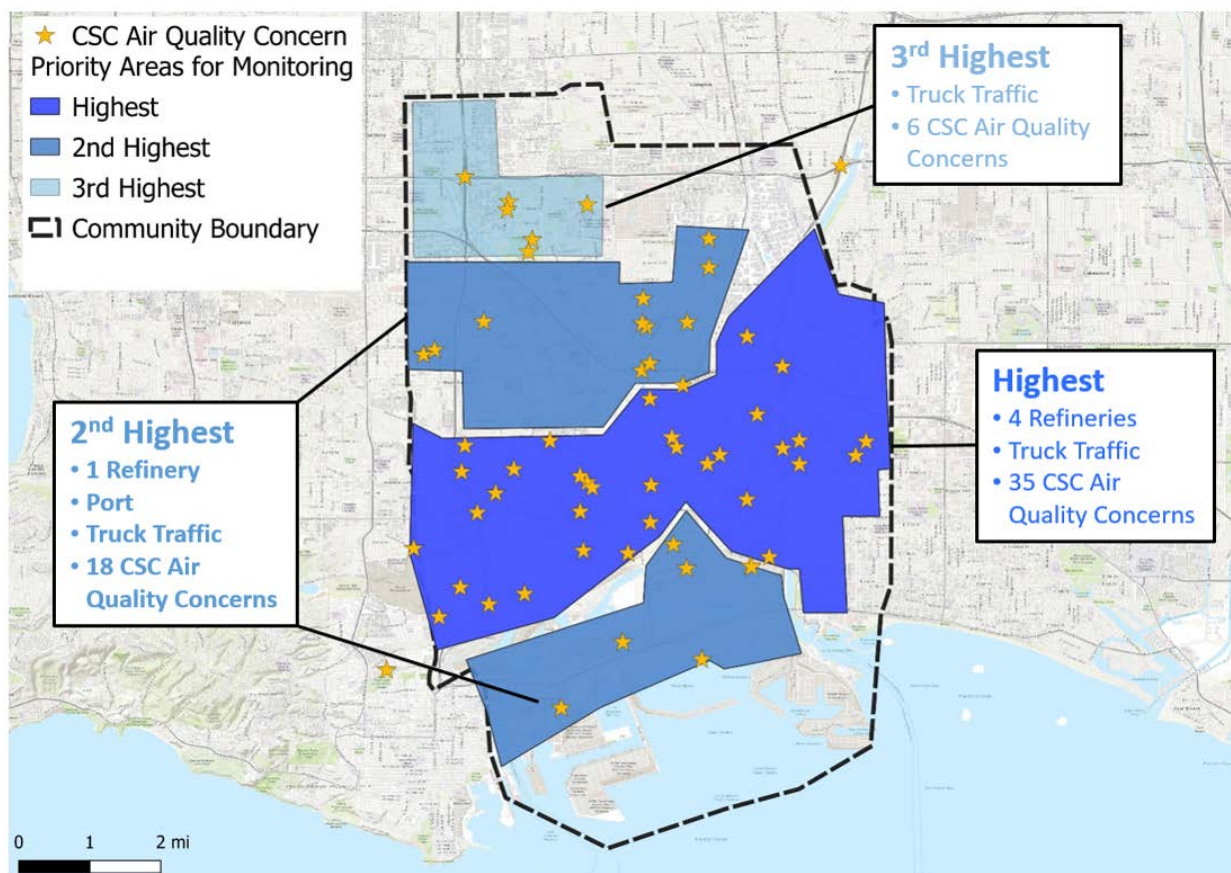

The Community Air Monitoring Plan (CAMP) for the Wilmington, Carson, West Long Beach community<sup>1</sup> was developed through close collaboration between the CSC and South Coast AQMD staff. The plan outlines the objectives and strategies for monitoring air pollution in the community based on the air quality priorities identified by the CSC. A detailed description for these priorities is available in the CAMP Appendix B.<sup>2</sup>

The Wilmington, Carson, West Long Beach community covers a large geographical area that is affected by a variety of air pollution sources. Consequently, multiple air monitoring methods are necessary to address the community's air quality priorities. These methods include mobile, fixed and low-cost sensor air monitoring. Mobile air monitoring can be conducted using real- or near-real-time instruments to allow for wide scale community air pollution mapping, and provide more detailed information about air pollution levels at specific locations at specific times (i.e., higher spatial and temporal resolution). Fixed air monitoring can be strategically placed at specific locations near one or more air pollution sources of interest to fully characterize emissions in the community and assess residents' exposure to air pollution. Mobile and fixed air monitoring can be further enhanced with information from air quality sensors that provide real- or near-real time air pollution information. A benefit of these sensors compared to other monitoring technologies is that they can be installed in more places in the community thereby providing more detailed real-time air quality information. However, low-cost sensors are not as accurate as traditional monitoring techniques, and only measure a limited number of pollutants.

Figure 6-1 identifies areas where air monitoring will occur within the Wilmington, Carson, West Long Beach community. The areas are prioritized based on input from the CSC about community

air quality concerns and sources of air pollution. The monitoring areas and priorities can change based on the information gathered during monitoring, input from the community, and/or newly available data from different organizations. A discussion regarding air pollutants measurements and technologies that will be deployed in these areas is provided in the CAMP. The air monitoring strategies outlined in the CAMP may be updated based on future community input, air monitoring results, and other information gathered through implementation of AB 617. Updates to air monitoring strategies will be presented to the CSC for input.

Figure 6-1: Proposed monitoring areas prioritized based on the relative density of air quality concerns in the Wilmington, Carson, West Long Beach community

# APPENDIX 2:

## COMMUNITY OUTREACH, COMMUNITY STEERING COMMITTEE AND PUBLIC PROCESS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Appendix 2

The Wilmington, Carson, West Long Beach (WCWLB) community Outreach Summary includes an overview of the public engagement efforts and the Community Steering Committee (CSC) process that has been integral in the development of the CERP. This Appendix contains additional information on committee documents, meeting materials, and additional community engagement. Many of these materials are posted on this community's webpage: <http://www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/wilm>

### Charter

A Charter was developed by South Coast AQMD staff with CSC member input to describe committee objectives, roles and responsibilities, meeting frequency, meeting dates, times, and locations, etc. The Charter is available here:

<http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/wilmington/charter-english.pdf?sfvrsn=8>

### Sign In Sheets

At every CSC meeting, members of the CSC and public were requested to sign in. Copies of the sign-in sheets are attached.

### Agendas

All meeting agendas are posted on the community webpage. Copies of the agendas are also attached.

### Meeting Dates, Times, Locations, and Meeting Materials

Recent and upcoming activities regarding the WCWLB community, including interactive maps, the discussion draft of the CERP and CAMP, all meeting invitations, presentations, materials and summary notes can be found on community webpage.

Specific links for meeting flyers, presentations, and meeting summaries are listed below:

### Additional Outreach

South Coast AQMD staff had more than 35 in-person or phone meetings with CSC members as well as members of the community. The list below provides some information about meetings that staff have had, as of the date of this document. Additional phone calls and conversations with CSC members and members of the committee also took place, but not all these conversations are documented here.

Date	Meeting
11/2/18	Call with Magali Sanchez-Hall
1/9/19	In-person meeting with Sylvia Betancourt
3/14/19	Call with City of Long Beach staff about their general plan update
4/12/19	In-person meeting with Whitney Amaya
4/25/19	Attended community meeting where Dulce Altamirano gave a presentation
5/17/19	In-person meeting with Tim DeMoss from Port of Los Angeles
5/21/19	In-person meeting with Sylvia Betancourt
4/19/19	Call with Fe Koons
5/30/19	Call with Maribel Alejandre
5/24/19	Call with Joseph Pinon
5/28/19	Call with Chris Chavez
5/30/19	Call with Jacob Broderick
4/?/19	Call with Salvador Lara

Appendix 2-5

4/?/19	Call with Saied Naaseh
4/?/19	Call with Linda Bassett
4/?/19	Call with Jill Johnston
4/?/19	Attended Best Start Wilmington community meeting
4/25/19	In-person meeting with Dulce Altamirano
5/14/19	Call with Rick Pulido
5/23/19	Call with Dan Hoffman
5/23/19	Call with Cameron Smith
6/6/19	Call with Morgan Caswell, Port of Long Beach
6/25/19	In-person meeting with Dulce Altamirano
<u>8/6/19</u>	<u>Call with Christopher Chavez, Jesse Marquez, and Julia May</u>
