

# South Coast Air Quality Management District

21865 Copley Drive, Diamond Bar, CA 91765-4178  
(909) 396-2000 • [www.aqmd.gov](http://www.aqmd.gov)

## A G E N D A

### MEETING, SEPTEMBER 6, 2019

A meeting of the South Coast Air Quality Management District Board will be held at 9:00 AM, in the Auditorium at South Coast AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California.

<b>Questions About an Agenda Item</b>	<ul style="list-style-type: none"> <li>Vj g'pco g'cpf "vgr j qpg'pwo dgt "qh'vj g'cr r tqr tlcvg'wchh'r gtupq'vq ecm'cf f kkpnc'phqto c'kqp'qt "vq'tguqrg"eqpegtpu'ku'kugf "hqt'gcej ci gpf c'kgo 0</li> <li>Kp'r tgr c'ekqp'hqt'vj g'o ggkpi . The agenda and documents in the agenda packet will be made available upon request in appropriate alternative formats to assist persons with a disability. Disability-related accommodations will also be made available to allow participation in the Board meeting. Any accommodations must be requested as soon as practicable. Requests will be accommodated to the extent feasible. Please telephone the Clerk of the Boards Office at (909) 396-2500 from 7:00 a.m. to 5:30 p.m. Tuesday through Friday.

All documents (i) constituting non-exempt public records, (ii) relating to an item on the agenda, and (iii) having been distributed to at least a majority of the Governing Board after the agenda is posted, are available prior to the meeting for public review at the South Coast Air Quality Management District Clerk of the Board's Office, 21865 Copley Drive, Diamond Bar, CA 91765.

**A webcast of the meeting is available for viewing at:**

*Cleaning the air that we breathe...*

## **CALL TO ORDER**

- Pledge of Allegiance
- Opening Comments: William A. Burke, Ed.D., Chair  
Other Board Members  
Wayne Nastri, Executive Officer
- Presentation of Retirement Award to Dr. Laki Tisopulos **Burke**

---

Staff/Phone (909) 396-"

## **CONSENT CALENDAR (Items 1 through 14)**

Note: Consent Calendar items held for discussion will be moved to Item No. 15

1. Approve Minutes of July 12, 2019 Board Meeting **Garzaro/2500**

### **Budget/Fiscal Impact**

2. Recognize Funds, Execute and Amend Agreements for Installation and Maintenance of Air Filtration Systems, and Reimburse General Fund for Administrative Costs **Miyasato/3249**

U.S. EPA is executing a Supplemental Environmental Project (SEP) and has asked South Coast AQMD to act as the SEP administrator to install and maintain air filtration systems at schools in environmental justice communities. This action is to recognize up to \$167,967 into the Air Filtration Fund (75). These actions are to also execute agreements to install and maintain air filtration systems in an amount not to exceed \$159,569, execute or amend access agreements with local school districts, amend contracts to purchase additional filters using unspent administrative funds, and reimburse the General Fund for administrative costs up to \$8,398 for SEP administration. (Reviewed: Technology Committee, July 26, 2019; Recommended for Approval)

3. Amend Contract for KORE Infrastructure Project **Miyasato/3249**

In March 2017, the Board approved a contract with KORE Infrastructure LLC (KORE) for a renewable natural gas commercial field test project, including construction of a pyrolysis system on SoCalGas's property in Los Angeles. The project is to test various biomass feedstocks for commercial production of renewable natural gas. While the project has experienced construction delays over the past few months, KORE has recently made significant progress towards construction. This action is to amend the contract with KORE Infrastructure LLC, extending the deadline to complete construction, commissioning and testing efforts to December 31, 2019. (No Committee Review)

4. **Adopt Resolution Recognizing Funds for FY 2018-19 Carl Moyer State Reserve Program** **Berry/2363**

In April 2019, CARB approved funding allocations for the FY 2018-19 Carl Moyer State Reserve Program using the same distribution and source categories as the previous year. The allocation for the South Coast AQMD is \$3,481,893, including 6.25% in administrative funds. The State Reserve funds must be used for off-road projects including construction, agricultural and industrial equipment that are eligible according to the 2017 Revisions of the Carl Moyer Program Guidelines. This action is to adopt a Resolution recognizing up to \$3.5 million in Carl Moyer State Reserve funds from CARB along with its terms and conditions for FY 2018-19. (Reviewed: Technology Committee, July 26, 2019; Recommended for Approval)

5. **Appropriate Funds and Amend Contracts for Legislative Representation in Sacramento, California** **Alatorre/3122**

After careful review of services that the state legislative consultants provide to South Coast AQMD, staff recommends that California Advisors, LLC and Quintana Watts & Hartmann receive an increase in their contract amount to place them at the same compensation level as the other state legislative consultant – Joe A. Gonsalves & Son. These actions are to appropriate \$79,000 from the General Fund, Undesignated Fund Balance, to the Legislative, Public Affairs & Media FY 2019-20 budget; and modify the contracts, with an increase of \$39,500 each, for California Advisors, LLC and Quintana Watts & Hartmann. (Reviewed: Administrative Committee, July 19, 2019; Recommended for Approval)

6. **Amend Contract to Implement Advanced Building Energy Management Projects** **Olvera/2309**

In October 2017, the Board approved a contract with Willdan Energy Solutions to implement pre-commercial efficiency projects for the South Coast AQMD building. These projects are being funded through a \$3,994,265 CEC award to Willdan Energy Solutions, and \$2,293,645 from South Coast AQMD. Additional funds are needed for new and contingency costs for the replacement of the building chillers and laboratory fume hood retrofits. In addition to providing much needed building upgrades, these projects will increase the efficiency of the building by over 20 percent, and provide a case study and showcase for new building infrastructure technologies. This action is to amend a contract with Willdan Energy Solutions to implement pre-commercial efficiency projects for the South Coast AQMD building in an amount not to exceed \$665,000 from the Infrastructure Improvement Fund (02). (Reviewed: Administrative Committee, July 19, 2019; Recommended for Approval)

"

7. Approve Contract Awards and Modifications as Approved by MSRC **McCallon**

"

"

As part of their FYs 2018-21 Work Program, the MSRC approved a contract for programmatic outreach services for the MSRC, approved an award to provide express bus service to the Orange County Fair in 2019 and 2020, and approved exercising the contract option with Geographics for continuation of website services for two more years. As part of their FYs 2014-16 Work Program, the MSRC approved a modification to a contract under the Local Government Match Program. At this time the MSRC seeks Board approval of the contract awards and modifications as part of the FYs 2014-16 and 2018-21 Work Programs. (Reviewed: Mobile Source Air Pollution Reduction Review Committee, June 20 and August 15, 2019; Recommended for Approval)

"

"

"

**Action Item/No Fiscal Impact**

"

8. Request Approval of Proposed Membership Rosters for AQMP Advisory Group and Scientific, Technical, and Modeling Peer Review Advisory Group **Rees/2856**

"

"

Staff is recommending membership for the AQMP Advisory Group and the Scientific, Technical, and Modeling Peer Review (STMPR) Advisory Group for a new four-year term. The current term of these Advisory Groups has expired, and they are needed to assist staff in the development of the 2022 AQMP. Staff is recommending a four-year membership term because of the length of the 2022 AQMP schedule. The AQMP Advisory Group is comprised of representatives from environmental/community groups, government agencies, academia, and business; and the STMPR Advisory Group includes experts in the fields of socioeconomic modeling, air quality modeling, air quality and meteorological monitoring, and atmospheric science. These Advisory Groups will review and make recommendations to staff regarding the implementation of the 2016 AQMP and development of the 2022 AQMP. This action is to seek approval of the proposed membership rosters for the AQMP and STMPR Advisory Groups. (No Committee Review)

"

"

"

**Items 9 through 14 - Information Only/Receive and File"**

"

9. Legislative, Public Affairs, and Media Report **Alatorre/3122**

"

"

This report highlights the June and July 2019 outreach activities of the Legislative, Public Affairs and Media Office, which includes: Major Events, Community Events/Public Meetings, Environmental Justice Update, Speakers Bureau/Visitor Services, Communications Center, Public Information Center, Business Assistance, Media Relations and Outreach to Business and Federal, State, and Local Government. (No Committee Review)

"

"

10. Hearing Board Report **Prussack/2500**

"

"

This reports the actions taken by the Hearing Board during the period of June 1 through July 31, 2019. (No Committee Review)

"

11. Civil Filings and Civil Penalties Report **Gilchrist/3459**
- This reports the monthly penalties from June 1 through June 30, 2019, and legal actions filed by the General Counsel's Office from June 1 through June 30, 2019. An Index of South Coast AQMD Rules is attached with the penalty report. (No Committee Review)
12. Lead Agency Projects and Environmental Documents Received **Nakamura/3105**
- This report provides, for the Board's consideration, a listing of CEQA documents received by the South Coast AQMD between June 1, 2019 and July 31, 2019, and those projects for which the South Coast AQMD is acting as lead agency pursuant to CEQA. (No Committee Review)
13. Rule and Control Measure Forecast **Fine/2239**
- This report highlights South Coast AQMD rulemaking activities and public hearings scheduled for 2019. (No Committee Review)
14. Status Report on Major Ongoing and Upcoming Projects for Information Management **Moskowitz/3329**
- Information Management is responsible for data systems management services in support of all South Coast AQMD operations. This action is to provide the monthly status report on major automation contracts and planned projects. (Reviewed: Administrative Committee, July 19, 2019)
15. Items Deferred from Consent Calendar

## **BOARD CALENDAR**

*Note: The July meetings of the Legislative and Mobile Source Committees were canceled. The next regular meeting of the Legislative Committee is scheduled for September 13, 2019. The next regular meeting of the Mobile Source Committee is scheduled for September 20, 2019.*

16. Administrative Committee (Receive & File) **Chair: Burke Nastri/3131**
17. Refinery Committee **Chair: McCallon Nakamura/3105**
- At the February 1, 2019 Board meeting, staff presented hazards, and key issues related to the use of hydrogen fluoride. The Board directed staff to work with both the community and industry over the next 90 days to reach resolution, present proposals to the Refinery Committee for review, with the Committee making recommendations to the full Board. Staff provided an update to the Refinery Committee on Saturday, June 22, 2019. This item includes a summary of the meeting and recommendations from the Refinery Committee. Subsequent to the meeting, both affected refineries sent letters stating their willingness to install additional mitigation measures that are designed to provide additional protection relating to the use of hydrogen fluoride, without the need for rulemaking or a memorandum of understanding. Copies of these letters are attached to the Refinery Committee Board Letter. The Board may take action on, and provide direction to staff, concerning these issues.

- |     |   |            |
|-----|---|------------|
| 22. | Recommend Communities for Year 2 Implementation for Assembly Bill 617 | Ghosh/2582 |
|-----|---|------------|

Assembly Bill (AB) 617 requires CARB, in consultation with air districts, to select communities for community air monitoring and/or the preparation of community emissions reduction programs. AB 617 specifies that the highest priority areas shall be disadvantaged communities with a high cumulative exposure burden for criteria pollutants and/or toxic air contaminants. Staff built on the technical evaluation and public process from the prior year, and has conducted additional public outreach and gathered community input to help prioritize two communities for Year 2 of this program. The first proposed community is the South East Los Angeles community of South Gate, Florence-Firestone (eastern portion), Walnut Park, Huntington Park (western portion), Cudahy, Bell Gardens (southern portion). The second proposed community is the Eastern Coachella Valley community of Indio, Coachella, Thermal, Oasis, Mecca, North Shore. This action seeks approval to submit recommendations to CARB for their consideration in selecting communities for the second-year implementation of AB 617. (Reviewed: Stationary Source Committee, July 26, 2019)

- |     |  |                |
|-----|--|----------------|
| 23. | Status Report on Regulation XIII – New Source Review | Dejbakhsh/2618 |
|-----|--|----------------|
- This report presents the federal Final Determination of Equivalency for January 2017 through December 2017. It provides information regarding the status of Regulation XIII – New Source Review, in meeting federal NSR requirements and shows that South Coast AQMD's NSR program is in compliance with applicable federal requirements from January 2017 through December 2017. (No Committee Review)

## **PUBLIC HEARINGS**

24. Certify Final Environmental Assessment and Amend Rule 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations **Nakamura/3105**

***Staff is recommending that the public hearing on this item be continued to the October 4, 2019 Board Meeting.***

Proposed Amended Rule 1407 applies to non-chromium metal melting operations and revises emission standards. In addition, the proposed amended rule enhances monitoring provisions for pollution control equipment, adds building enclosure provisions to limit fugitive emissions, and updates housekeeping, source testing, and monitoring, recordkeeping, and reporting requirements. This action is to adopt the Resolution: 1) Certifying the Final Environmental Assessment for Proposed Amended Rule 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations; and 2) Amending Rule 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations. (No Committee Review)

- 25A. Determine That Community Emissions Reduction Plan for San Bernardino, Muscoy Community Is Exempt from CEQA and Adopt Community Emissions Reduction Plan Per Assembly Bill 617 **Ghosh/2582**

Assembly Bill (AB) 617 requires air districts to prepare Community Emissions Reduction Plans (CERPs) for the Year 1 communities selected by CARB. The CERPs provide a blueprint for achieving air pollution emission and exposure reductions within each community, and are tailored to address the community's air quality priorities. The CERPs include actions to reduce emissions and/or exposures, an implementation schedule, an enforcement plan, a description of the process and outreach conducted to develop the CERP. Community partnership and engagement have been critical throughout the development of the CERPs. This action is to: 1) Determine that the AB 617 CERP for the San Bernardino, Muscoy community is exempt from the California Environmental Quality Act; and 2) Adopt the AB 617 CERP for the San Bernardino, Muscoy community. (Reviewed: Stationary Source Committee, July 26, 2019)

- "
- 25B. Determine That Community Emissions Reduction Plan for East Los Angeles, Boyle Heights, West Commerce Community Is Exempt from CEQA and Adopt Community Emissions Reduction Plan Per Assembly Bill 617 Ghosh/2582

(Reviewed: Stationary Source Committee, July 26, 2019)

"

"

26. Receive and File 2018 Annual Report on AB 2588 Program and Approve Updates to Facility Prioritization Procedure Rees/2856
- "

The Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588) requires local air pollution control districts to prepare an annual report. The report provides the public with information regarding South Coast AQMD programs to reduce emissions of toxic air contaminants. This annual update describes the various activities in 2018 to satisfy the requirements of AB 2588 and Rule 1402, such as quadrennial emissions reporting and prioritization, the preparation and review of Air Toxics Inventory Reports, Health Risk Assessments, Voluntary Risk Reduction Plans, Risk Reduction Plans, and additional South Coast AQMD activities related to air toxics. Staff is also proposing revisions to the Facility Prioritization Procedure to correct minor transcription errors. These actions are to receive and file the 2018 Annual Report on the AB 2588 Air Toxics "Hot Spots" Program and approve revisions to the Facility Prioritization Procedure. (No Committee Review)

"

"

**PUBLIC COMMENT PERIOD – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3)**

**BOARD MEMBER TRAVEL – (No Written Material)**

Board member travel reports have been filed with the Clerk of the Boards, and copies are available upon request.

**CLOSED SESSION - (No Written Material)**

Gilchrist/3459

"

" CONFERENCE WITH LEGAL COUNSEL – EXISTING LITIGATION "

It is necessary for the Board to recess to closed session pursuant to Government Code sections 54956.9(a) and 54956.9(d)(1) to confer with its counsel regarding pending litigation which has been initiated formally and to which the SCAQMD is a party. The actions are:

- In the Matter of SCAQMD v. Aerocraft Heat Treating Co., Inc. and Anaplex Corp., South Coast AQMD Hearing Board Case No. 6066-1 (Order for Abatement);
- SCAQMD v. Anaplex, Los Angeles Superior Court Case No. BC608322 (Paramount Hexavalent Chromium);
- In the Matter of SCAQMD v. Browning-Ferris Industries of California, Inc. dba Sunshine Canyon Landfill, South Coast AQMD Hearing Board Case No. 3448-14;
- Communities for a Better Environment v. SCAQMD, Los Angeles Superior Court Case No. BS161399 (RECLAIM);
- Communities for a Better Environment v. South Coast Air Quality Management District, Court of Appeals, Second Appellate District, Case No. B294732;
- People of the State of California, ex rel. SCAQMD v. Exide Technologies, Inc., Los Angeles Superior Court Case No. BC533528;
- In re: Exide Technologies, Inc., U.S. Bankruptcy Court, District of Delaware, Case No. 13-11482 (KJC) (Bankruptcy Case); Delaware District Court, Case No.: 19-00891 (Appellate Case);
- In the Matter of SCAQMD v. Southern California Gas Company, Aliso Canyon Storage Facility, South Coast AQMD Hearing Board Case No. 137-76 (Order for Abatement); People of the State of California, ex rel SCAQMD v. Southern California Gas Company, Los Angeles Superior Court Case No. BC608322; Judicial Council Coordinated Proceeding No. 4861;
- In the Matter of SCAQMD v. Torrance Refining Company, LLC, South Coast AQMD Hearing Board Case No. 6060-5 (Order for Abatement);
- State of California, et al. v. U.S. EPA, et al., U.S. Court of Appeals, D.C. Circuit, Case No. 18-1114 (mid-term evaluation for light-duty vehicles);
- People of the State of California, ex rel South Coast Air Quality Management District v. The Sherwin-Williams Company, an Ohio Corporation, and Does 1 through 50, Inclusive, Los Angeles Superior Court Case No. PSCV 00136; and

"

- SCAQMD v. City of Moreno Valley, et al., Riverside County Superior Court, Case Nos. RIC 1511213 and RIC 1601988 (World Logistics Center); Center for Community Action and Environmental Justice, et al. v. City of Moreno Valley, et al., California Court of Appeal, Fourth District, Div. 2, Case No. E067200; Albert Paulek, et al v. City of Moreno Valley, et al, California Court of Appeal, Fourth District, Div. 2, Case No. E071184.

#### CONFERENCE WITH LEGAL COUNSEL – INITIATING LITIGATION

It is also necessary for the Board to recess to closed session pursuant to Government Code section 54956.9(a) and 54956.9(d)(4) to consider initiation of litigation (two cases).

Seek leave to intervene in Association of Irrigated Residents v. U.S. EPA, Ninth Circuit No. 19-71223 (SVJ 8-hr ozone).

#### CONFERENCE WITH LEGAL COUNSEL – ANTICIPATED LITIGATION

Also, it is necessary for the Board to recess to closed session pursuant to Government Code section 54956.9(d)(2) to confer with its counsel because there is a significant exposure to litigation against the SCAQMD (two cases).

Letter from Steven J. Olson, O'Melveny & Myers LLP, on behalf of ExxonMobil Corporation, dated August 22, 2018.

Email from Somerset Perry, California Deputy Attorney General, dated March 13, 2019, regarding Notice of Violation P61321.

"

"

#### **ADJOURNMENT**

#### **\*\*\*PUBLIC COMMENTS\*\*\***

Members of the public are afforded an opportunity to speak on any agenda item before consideration of that item. Please notify the Clerk of the Board, (909) 396-2500, if you wish to do so. All agendas are posted at South Coast AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, at least 72 hours in advance of the meeting. At the end of the agenda, an opportunity is also provided for the public to speak on any subject within the South Coast AQMD's authority. Speakers will be limited to a total of three (3) minutes for the Consent Calendar and Board Calendar and three (3) minutes or less for other agenda items.

Note that on items listed on the Consent Calendar and the balance of the agenda any motion, including action, can be taken (consideration is not limited to listed recommended actions). Additional matters can be added and action taken by two-thirds vote, or in the case of an emergency, by a majority vote. Matters raised under the Public Comment Period may not be acted upon at that meeting other than as provided above.

Written comments will be accepted by the Board and made part of the record, provided 25 copies are presented to the Clerk of the Board. Electronic submittals to [cob@aqmd.gov](mailto:cob@aqmd.gov) of 10 pages or less including attachment, in MS WORD, PDF, plain or HTML format will also be accepted by the Board and made part of the record if received no later than 5:00 p.m., on the Tuesday prior to the Board meeting.

**FRIDAY, JULY 12, 2019**

Notice having been duly given, the regular meeting of the South Coast Air Quality Management District Board was held at District Headquarters, 21865 Copley Drive, Diamond Bar, California. Members present:

William A. Burke, Ed.D., Chairman  
Speaker of the Assembly Appointee

Council Member Ben Benoit, Vice Chairman  
Cities of Riverside County

Council Member Joe Buscaino (Arrived at 9:15 a.m.)  
City of Los Angeles

Council Member Michael A. Cacciotti  
Cities of Los Angeles County – Eastern Region

Senator Vanessa Delgado (Ret.)  
Senate Rules Committee Appointee

Supervisor Janice Hahn  
County of Los Angeles

Mayor Judith Mitchell  
Cities of Los Angeles County – Western Region

Council Member Dwight Robinson  
Cities of Orange County

Supervisor Janice Rutherford  
County of San Bernardino

Members absent:

Supervisor Lisa A. Bartlett  
County of Orange

Mayor Pro Tem Larry McCallon  
Cities of San Bernardino County

Supervisor V. Manuel Perez  
County of Riverside

Vacant: Governor's Appointee

**CALL TO ORDER:** Chairman Burke called the meeting to order at 9:05 a.m.

- Pledge of Allegiance: Led by Chairman Burke.
- Opening Comments

Mayor Mitchell announced that she attended, along with Mr. Nastri and staff, the University of California Institute of Transportation Studies conference at Asilomar where there were many educational sessions related to transportation electrification.

Supervisor Hahn commented on a New York Times article regarding banning MHF and referenced a letter received from the Torrance Refinery Action Alliance regarding recent action taken by the Refinery Committee. She requested clarification on the Refinery Committee's action to proceed with an MOU with the refineries and asked if rulemaking is still being considered.

Mr. Nastri explained that the Board's direction was to move forward with both a MOU and rulemaking, and work is proceeding on both efforts. The Refinery Committee provided guidance on what elements should be included in the MOU and staff is working with stakeholders, the refineries and the public on proposed rulemaking. Both the MOU and proposed rule will be brought to the Board for consideration.

Chairman Burke commented that Mayor Pro Tem McCallon has communicated to him that the Refinery Committee took action to direct staff to develop MOUs with both the Torrance and Wilmington refineries and bring the MOUs to the Board for consideration at the November 6 meeting. Mr. Nastri responded that the MOUs and consideration of the proposed rule are currently scheduled for the November Board meeting.

(Council Member Buscaino arrived at 9:15 a.m.)

Council Member Cacciotti noted that he is in the process of visiting all 35 cities within his district of Eastern Los Angeles County to share information about South Coast AQMD, shared photos from the city council meetings he has attended and added that he uses his bicycle and public transit to get to all of the meetings. He acknowledged the efforts of South Coast AQMD staff to attend and participate in meetings and events across the region.

Supervisor Rutherford announced that a groundbreaking ceremony for the new Arrow commuter line will take place on July 19, 2019 in Redlands. The 9-mile route will connect downtown San Bernardino to the University of Redlands using clean train technology. She noted that the San Bernardino Transportation Authority approved hydrogen fuel cell battery-operated trains as the preferred option. She added that there has been discussion about linking the Arrow commuter line to Union Station in the future.

"

"

Senator Delgado introduced her staff consultants and assistant.

Mr. Nastri announced that Dr. Laki Tisopulos, DEO/Engineering and Permitting, has accepted a position with the Ventura County Air Pollution Control District and acknowledged his many years of service to the South Coast AQMD.

Chairman Burke acknowledged, on behalf of the Board, Mr. Tisopulos' years of dedicated service to the South Coast AQMD and his efforts to reduce the permit backlog. Mayor Mitchell and Council Member Cacciotti also acknowledged his contributions.

Mr. Tisopulos expressed appreciation for the opportunity to serve at the South Coast AQMD.

Chairman Burke acknowledged the presence of the 2019 student interns and thanked them for their efforts.

### **CONSENT CALENDAR**

"

1. Approve Minutes of June 7, 2019 Board Meeting
2. Set Public Hearing September 6, 2019 to Consider Adoption of and/or Amendments to South Coast AQMD Rules and Regulations

Certify Final Environmental Assessment and Amend Rule 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations

"

#### **Budget/Fiscal Impact**

"

3. Recognize Revenue, Execute and Amend Contracts for Near-Zero and Zero Emission Construction Equipment and Natural Gas and Electric Trucks and Infrastructure, and Reimburse General Fund for Administrative Costs

"

"

4. Execute Contract to Evaluate Meteorological Factors and Trends Contributing to Recent Poor Air Quality in South Coast Air Basin

"

"

5. Approve Funds to Continue Year-Round Electric Lawn Mower Rebate Program

"

"

6. Amend Awards for Alternative Fuel School Bus Replacement Program

"

"

"

"

7. Transfer and Appropriate Funds, Issue Solicitations and Purchase Orders, and Add/Delete Positions for Rule 1180 Implementation and Enhanced Particulate Monitoring Programs

"  
"

8. Issue RFP for Data Cable Infrastructure Installation

"  
"

9. Execute Contract for Elevator Modernization Project

"  
"

10. Approve Position Reclassifications; Adopt New Class Specification; and Adopt Resolution Amending Salary Resolution

"  
"

11. Approve Contract Modification Approved by MSRC and Approve Fund Transfer for Miscellaneous and Direct Expenditures Costs in FY 2019-20 as Approved by MSRC

"

Mayor Pro Tem Mitchell noted that she is a Board Member of the CARB which is involved with Item Nos. 3 and 6.

Harvey Eder, Public Solar Power Coalition, addressed the Board on the Consent and Board Calendar items expressing support for zero emission vehicles, solar renewable trucks and solar equity programs for moderate-to-low income households. He noted concern for using natural gas and earthquake preparedness.

"

MOVED BY CACCIOTTI, SECONDED BY MITCHELL, AGENDA ITEMS 1 THROUGH 4 AND 6 THROUGH 11 APPROVED AS RECOMMENDED, ADOPTING RESOLUTION NO. 19-14 AMENDING SOUTH COAST AQMD'S SALARY RESOLUTION TO ESTABLISH THE SALARY FOR A NEW CLASSIFICATION, AND DELETE CLASSIFICATIONS, BY THE FOLLOWING VOTE:

AYES: Benoit, Burke, Buscaino, Cacciotti, Delgado, Hahn, Mitchell, Robinson and Rutherford

"

NOES: None

ABSENT: Bartlett, McCallon and Perez"

"  
"

"  
"

18. Item Deferred from Consent Calendar

"

5. Approve Funds to Continue Year-Round Electric Lawn Mower Rebate Program

"

Council Member Cacciotti expressed support for the Lawn Mower Rebate Program and commented that there are now many more choices for consumers. He noted that there are opportunities for increasing education, outreach and participation for electric lawn care equipment.

Chairman Burke inquired about the status of the commercial electric leaf blower program.

Derrick Alatorre, DEO/Legislative, Public Affairs and Media, explained that among other efforts, Senator Delgado would be facilitating a focus group to discuss ways to increase awareness of electric leaf blowers and lawn care equipment.

Senator Delgado noted that independent commercial gardeners have expressed concerns about the high cost of electric equipment, and she is concerned about health impacts of workers using lawn care equipment.

Chairman Burke expressed support for incentive programs to assist in the transition to electric lawn care equipment.

Mayor Mitchell stated that there are significant emission from this equipment and expressed support for funding electric lawn care equipment to reduce the VOC and NOx emissions associated with gas-powered equipment.

"

MOVED BY CACCIOTTI, SECONDED BY  
MITCHELL, AGENDA ITEM NO. 5 APPROVED  
AS RECOMMENDED, BY THE FOLLOWING  
VOTE:

AYES: Benoit, Burke, Buscaino, Cacciotti,  
Delgado, Hahn, Mitchell, Robinson  
and Rutherford

NOES: None

ABSENT: Bartlett, McCallon and Perez

"

"

"

"

"

"

"

"

**Items 12 through 17 – Information Only/Receive and File**

12. Legislative, Public Affairs and Media Report

"

"

13. Hearing Board Report

"

"

14. Civil Filings and Civil Penalties Report

"

"

15. Lead Agency Projects and Environmental Documents Received

"

"

16. Rule and Control Measure Forecast

"

"

17. Status Report on Major Ongoing and Upcoming Projects for Information Management

"

"

**BOARD CALENDAR**

19. Administrative Committee

"

21. Mobile Source Committee

"

"

22. Stationary Source Committee

"

"

23. Technology Committee

"

"

24. Mobile Source Air Pollution Reduction Review Committee

"

"

25. California Air Resources Board Monthly Report

26. Receive and File California Fuel Cell Partnership Executive Board Meeting Agenda and Activity Update

"

"

MOVED BY BENOIT, SECONDED BY CACCIOTTI, AGENDA ITEMS 12 THROUGH 26, APPROVED AS RECOMMENDED, RECEIVING AND FILING THE COMMITTEE, CaFCP UPDATE, MSRC AND CARB REPORTS, AND APPROVING THE FOLLOWING POSITION ON LEGISLATION, BY THE FOLLOWING VOTE:

AYES: Benoit, Burke, Buscaino, Cacciotti, Delgado, Hahn, Mitchell, Robinson and Rutherford

NOES: None

ABSENT: Bartlett, McCallon and Perez

"  
"

Agenda Item	Recommendation
SB 216 (Galgiani) Carl Moyer Memorial Air Quality Standards Attainment Program: used heavy-duty truck exchange	Support with Amendments

## **PUBLIC HEARINGS**

27. Determine That Proposed Amendment to Rule 301 – Permitting and Associated Fees, Is Exempt from CEQA; Amend Rule 301; and Submit Rule 301 to CARB for Inclusion into SIP

The presentation on Item No. 27 was waived. The public hearing was opened, and the following individual provided testimony on the item.

Mr. Eder expressed concern about the reported numbers for NOx and methane emissions and the effects of climate change. He expressed concern for CEQA exemptions and stated that every permit should be evaluated for solar.

There being no further testimony on this item, the public hearing was closed.

"  
"

MOVED BY MITCHELL, SECONDED BY BENOIT, AGENDA ITEM NO. 27 APPROVED AS RECOMMENDED, ADOPTING RESOLUTION NO. 19-15 DETERMINING THAT PROPOSED AMENDED RULE 301 – PERMITTING AND ASSOCIATED FEES IS EXEMPT FROM THE REQUIREMENTS OF CEQA, AMENDING RULE 301 BY ADDING A CERTIFICATION REQUIREMENT FOR EMISSION REPORTS AND SUBMITTING PROPOSED AMENDED RULE 301(e)(1)(A) AND (e)(1)(B), (e)(2), (e)(5) and (e)(8) TO THE CALIFORNIA AIR RESOURCES BOARD FOR FORWARDING TO U.S. EPA AND INCLUSION INTO THE STATE IMPLEMENTATION PLAN, BY THE FOLLOWING VOTE:

AYES: Benoit, Burke, Buscaino, Cacciotti, Delgado, Hahn, Mitchell, Robinson, and Rutherford

NOES: None

ABSENT: Bartlett, McCallon and Perez

28. Determine That Proposed Amendments to Rule 2001 – Applicability, Are Exempt from CEQA and Amend Rule 2001

The presentation on Item No. 28 was waived. The public hearing was opened, and the following individual provided testimony on the item.

Mr. Eder expressed support for complete solar conversion and noted that solar should be considered as BARCT. He added concern about drug resistant antibiotics and renewable natural gas.

There being no further testimony on this item, the public hearing was closed.

MOVED BY CACCIOTTI, SECONDED BY BENOIT, AGENDA ITEM NO. 28 APPROVED AS RECOMMENDED, ADOPTING RESOLUTION NO. 19-16 DETERMINING THAT PROPOSED AMENDED RULE 2001 – APPLICABILITY, IS EXEMPT FROM THE REQUIREMENTS OF CEQA AND AMENDING RULE 2001 -- APPLICABILITY, BY THE FOLLOWING VOTE:

AYES: Benoit, Burke, Buscaino, Cacciotti,  
Delgado, Hahn, Mitchell, Robinson,  
and Rutherford

"

NOES: None

ABSENT: Bartlett, McCallon and Perez

29. Determine That Proposed Amendments to Regulation IX – Standards of Performance for New Stationary Sources, and Regulation X – National Standards for Hazardous Air Pollutants, Are Exempt from CEQA and Amend Regulations IX and X

The presentation on Item No. 29 was waived. The public hearing was opened, and the following individual provided testimony on the item.

Mr. Eder expressed concerns about CEQA exemptions and noted that natural gas should be considered toxic. He expressed support for solar technologies because of the cost savings and emission reductions.

There being no further testimony on this item, the public hearing was closed.

MOVED BY HAHN, SECONDED BY BENOIT,  
AGENDA ITEM NO. 29 APPROVED AS  
RECOMMENDED, ADOPTING RESOLUTION  
NO. 19-17 DETERMINING THAT PROPOSED  
AMENDED REGULATION IX – STANDARDS  
OF PERFORMANCE FOR NEW STATIONARY  
SOURCES, AND PROPOSED AMENDED  
REGULATION X – NATIONAL EMISSION  
STANDARDS FOR HAZARDOUS AIR  
POLLUTANTS, ARE EXEMPT FROM THE  
REQUIREMENTS OF CEQA AND AMENDING  
REGULATION IX – STANDARDS OF  
PERFORMANCE FOR NEW STATIONARY  
SOURCES, AND REGULATION X –  
NATIONAL EMISSION STANDARDS FOR  
HAZARDOUS AIR POLLUTANTS, BY THE  
FOLLOWING VOTE:

AYES: Benoit, Burke, Buscaino, Cacciotti,  
Delgado, Hahn, Mitchell, Robinson,  
and Rutherford

"

NOES: None

ABSENT: Bartlett, McCallon and Perez

"

"

**PUBLIC COMMENT PERIOD** – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3)

Mr. Eder expressed support for renewable energy options and equitable solar-electric vehicle programs.

**CLOSED SESSION**

Mr. Eder commented that summaries should be provided to the public on cases under closed session.

Bayron Gilchrist, General Counsel, explained that closed session items are listed on the agenda according to Brown Act requirements.

The Board recessed to closed session at 10:15 a.m., pursuant to Government Code sections:

**CONFERENCE WITH LEGAL COUNSEL – EXISTING LITIGATION**

- 54956.9(a) and 54956.9(d)(1) to confer with its counsel regarding pending litigation which has been initiated formally and to which the South Coast AQMD is a party. The actions are:

In the Matter of SCAQMD v. Aircraft Heat Treating Co., Inc. and Anaplex Corp., South Coast AQMD Hearing Board Case No. 6066-1 (Order for Abatement);

SCAQMD v. Anaplex, Los Angeles Superior Court Case No. BC608322 (Paramount Hexavalent Chromium);

People of the State of California, ex rel. SCAQMD v. Exide Technologies, Inc., Los Angeles Superior Court Case No. BC533528; and

In re: Exide Technologies, Inc., U.S. Bankruptcy Court, District of Delaware, Case No. 13-11482 (KJC) (Bankruptcy Case).

Following closed session, Mr. Gilchrist announced that a report of any reportable actions taken in closed session will be filed with the Clerk of the Board's office and made available to the public upon request.

"

"

## **ADJOURNMENT**

There being no further business, the meeting was adjourned by Mr. Gilchrist at 10:40 a.m.

The foregoing is a true statement of the proceedings held by the South Coast Air Quality Management District Board on July 12, 2019.

Respectfully Submitted,

"

"

"

Denise Garzaro  
Clerk of the Boards

"

"

Date Minutes Approved: \_\_\_\_\_

---

Dr. William A. Burke, Chairman

## Report of June 2019 Hearing Board Cases

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
1. Air Liquide Large Industries US LP Case No. 5705-8 (B. Tomasovic)	203(b) 2004(f)(1) 3002(c)(1)	Petitioner requires additional time to fix leak in vent line and to take vent line temporarily out of service to install a clamp.	Not Opposed/Granted	EV granted commencing 6/11/19 and continuing through 6/14/19.	VOC: Up to 0.5 lb/hr
2. Equilon Enterprises LLC dba Shell Oil Products Case No. 4982-120 (M. Reichert)	203(b) 463(c)(2) 463(e)(4) 463(f)(1)(C) 1178(d)(2) 1178(g) 1178(h)(4) 2004(f)(1) 3002(c)(1)	Petitioner requires more than 72 hours to repair seal on contact water tank.	Not Opposed/Granted	SV granted commencing 6/19/19 and continuing through 7/31/19, or until final compliance is achieved, whichever occurs first.	VOC: 7 lbs/day
3. South Coast AQMD vs. D&D Disposal Inc., dba West Coast Rendering Co Case No. 3462-4 (D. Hsu)	415(d)(1)(B)(ii) 415(d)(1)(C)(ii) 415(e)(1) 415(e)(5) 415(e)(6)	To require Respondent to comply with provisions of rule to reduce odors.	Not Stipulated/Issued	O/A issued commencing 6/18/19 and continuing through 10/31/19. The Hearing Board shall retain jurisdiction over this matter until 10/31/19, or compliance with the terms of the Order is achieved, whichever occurs first.	N/A
4. South Coast AQMD vs. Gold Coast Baking Company, Inc. Case No. 6137-1 (T. Barrera)	N/A	Respondent requested additional production during the pendency of the Order and to change the construction schedule without modification to the FCD.	Not Stipulated/Issued	Mod. O/A issued commencing 6/18/19 and continuing through 12/1/19. The Hearing Board shall retain jurisdiction over this matter until 12/1/19.	N/A
5. South Coast AQMD vs. Sunshine Canyon Landfill Case No. 3448-14 (N. Sanchez)	N/A	Status Report.	No Action Taken	The Board received a status report and took no action to modify the O/A which is scheduled to end 6/30/19.	N/A

Case Name and Case No. (Staff Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
6. Walport Enterprises, Inc., dba Rowland Heights Mobil Case No. 6146-1 (D. Hsu)	203(a) 461(e)(5)	Petitioner requested relief from Rule 461 vapor recovery testing requirement.	Not Opposed/Granted	Ex Parte EV granted commencing 6/21/19 and ending when all applicable permits have been issued, but in no event later than 30 days.	None

IV: Interim Variance

MFCD/EXT: Modification of a Final Compliance Date & Extension of a Variance

Mod. O/A: Modification of an Order for Abatement

N/A: Not Applicable

NOx: Oxides of Nitrogen

O/A: Order for Abatement

RV: Regular Variance

SV: Short Variance

VOC: Volatile Organic Compounds

## Report of July 2019 Hearing Board Cases

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
1. Lake Arrowhead Community Services District Case No. 6142-1 (T. Barrera)	203(b)	Emergency generator exceeded annual permitted 200-hour operation limit due to inclement weather that resulted in power interruption causing failure of circuit board, repair of which was delayed by replacement part shipping error.	Not Opposed/Granted	RV granted commencing 7/31/19 and continuing through 12/31/19, the FCD.	CO: 0.4 lb/hr NOx: 0.4 lb/hr PM10: 0.02 lb/hr VOC: 0.4 lb/hr
2. South Coast AQMD vs. D&D Disposal Inc., dba West Coast Rendering Co. Case No. 3462-4 (D. Hsu)	N/A	Respondent requires additional time to meet condition requirements.	Not Stipulated/Issued	Mod. O/A issued commencing 7/9/19; the Hearing Board shall continue to retain jurisdiction over this matter until 10/31/19.	N/A
3. South Coast AQMD vs. Providence Tarzana Medical Center Case No. 6128-1 (T. Barrera)	203(a) 1470(c)(2)(C)(iv)(K)	Respondent cannot meet FCD due to unexpected design changes requested by LA County Fire Department.	Stipulated/Issued	Mod. O/A issued commencing 7/31/19; the Hearing Board shall retain jurisdiction over this matter until 9/30/19.	N/A
4. South Coast AQMD vs. Venice Baking (aka Innovative Baking) Case No. 6144-1 (S. Pruitt)	202(c) 407 1153.1 1303(a) 1303(b)	Respondent operating noncompliant baking ovens.	Stipulated/Issued	O/A issued commencing 7/24/19; the Hearing Board shall retain jurisdiction over this matter until 3/31/20.	N/A
5. South Coast AQMD vs. YMP Auto Body, Inc. Case No. 6145-1 (D. Hsu)	109(c)(1)	Respondent failed to maintain daily VOC usage records for paint spray booth.	Not Stipulated/Issued	O/A issued commencing 7/25/19; the Hearing Board shall retain jurisdiction over this matter until 12/31/19.	N/A

6. Tesoro South Coast Company, LLC Case No. 6147-1 (B. Tomasovic)	203(b) 461(c)(1)(A) 461(e)(5)	GDF failed CARB Leak Rate Test due to system configuration.	Not Opposed/Granted	Ex Parte EV granted commencing 7/3/19 and continuing until petitioner receives CARB approval to be designated as a research facility but in no event later than 8/1/19.	None

## **SOUTH COAST AQMD RULES AND REGULATIONS INDEX FOR 2019 HEARING BOARD CASES AS OF JULY 31, 2019**

### **REGULATION I – GENERAL PROVISIONS**

Rule 109      Recordkeeping for Volatile Organic Compound Emissions

### **REGULATION II – PERMITS**

Rule 201      Permit to Construct  
Rule 202      Temporary Permit to Operate  
Rule 203      Permit to Operate

### **REGULATION IV – PROHIBITIONS**

Rule 407      Liquid and Gaseous Air Contaminants  
Rule 415      Odors from Rendering Facilities  
Rule 461      Gasoline Transfer and Dispensing  
Rule 463      Organic Liquid Storage

### **REGULATION XI - SOURCE SPECIFIC STANDARDS**

Rule 1110.2    Emissions from Gaseous- and Liquid-Fueled Engines  
Rule 1147      NOx Reductions from Miscellaneous Sources  
Rule 1150.1    Control of Gaseous Emissions from Municipal Solid Waste Landfills  
Rule 1153.1    Emissions of Oxides of Nitrogen from Commercial Food Ovens  
Rule 1158      Storage, Handling, and Transport of Coke, Coal and Sulfur  
Rule 1178      Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities

### **REGULATION XIII – NEW SOURCE REVIEW**

Rule 1303      Requirements

### **REGULATION XIV – TOXICS**

Rule 1420.2    Emission Standards for Lead from Metal Melting Facilities  
Rule 1430      Control of Emissions from Metal Grinding Operations at Metal Forging Facilities  
Rule 1470      Requirements for Stationary Diesel-Fueled Internal Combustion and Other Ignition Engines

**REGULATION XX - REGIONAL CLEAN AIR INCENTIVES MARKET (RECLAIM)**

Rule 2004      Requirements

**REGULATION XXX - TITLE V PERMITS**

Rule 3002      Requirements

**CALIFORNIA HEALTH AND SAFETY CODE**

§41960.2      Maintenance of Vapor Control System

## **SOUTH COAST AQMD'S RULES AND REGULATIONS INDEX FOR JUNE 2019 PENALTY REPORT**

"

"

### **REGULATION II - PERMITS**

Rule 203 Permit to Operate

Rule 222 Filing Requirements for Specific Emission Sources Not Requiring a Written Permit Pursuant to Regulation II

### **REGULATION IV - PROHIBITIONS**

Rule 403 Fugitive Dust - Pertains to solid particulate matter emitted from man-made activities

Rule 461 Gasoline Transfer and Dispensing

### **REGULATION XI - SOURCE SPECIFIC STANDARDS**

Rule 1173 Fugitive Emissions of Volatile Organic Compounds

Rule 1176 Sumps and Wastewater Separators

Rule 1178 Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities

### **REGULATION XIV - TOXICS**

Rule 1403 Asbestos Emissions from Demolition/Renovation Activities

Rule 1430 Control of Emissions from Metal Grinding Operations at Metal Forging Facilities

### **REGULATION XX - REGIONAL CLEAN AIR INCENTIVES MARKET (RECLAIM)**

Rule 2004 RECLAIM Program Requirements

Rule 2005 New Source Review for RECLAIM

Rule 2012 Requirements for Monitoring, Reporting, and Recordkeeping for Oxides of Nitrogen (NO<sub>x</sub>) Emissions

### **REGULATION XXX - TITLE V PERMITS**

Rule 3002 Requirements for Title V Permits

### **CALIFORNIA HEALTH AND SAFETY CODE**

41960 Certification of Gasoline Vapor Recovery System

41960.2 Gasoline Vapor Recovery

"

**CALIFORNIA CODE OF REGULATIONS**

13 CCR 2460      Portable Equipment Testing Requirements

13 CCR 2485      Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor  
Vehicle Idling

**CODE OF FEDERAL REGULATIONS**

40 CFR 60, QQQ – Standards of Performance for VOC Emissions from Petroleum Refinery Wastewater

***VIA OVERNIGHT MAIL***

August 30, 2019

Honorable Mayor Larry McCallon  
Refinery Committee Chair  
Governing Board Member  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, California 91765

***Subject: Torrance Refining Company LLC Voluntary Modified Hydrofluoric Acid Alkylation Unit  
Safety Enhancement Commitments***

Dear Mayor McCallon,

As you are aware, Torrance Refining Company LLC ("TORC") has been working with the South Coast Air Quality Management District ("District") in connection with the rulemaking process for "Proposed Rule 1410, Hydrogen Fluoride Storage and Use at Petroleum Refineries" ("PR 1410"), which impacts TORC's Torrance Refinery. This process has been focused upon enhancing the safety of the Modified Hydrofluoric Acid ("MHF") alkylation catalyst technology utilized at the Torrance Refinery. Through the very rigorous PR 1410 public process, which has included the participation of various stakeholders at public Refinery Committee meetings as well as Working Group meetings with District staff, we have demonstrated that MHF continues to be safe to use at the Torrance Refinery's current operating conditions. The existing safety systems are multi-layered and redundant in order to contain and prevent any offsite release of HF and protect Refinery personnel and the community while allowing TORC to reliably produce alkylate, which is a critically important blending component that is necessary for the production of compliant California reformulated gasoline.

Based on the June 22, 2019 Refinery Committee meeting, the PR 1410 process currently involves the negotiation of a Memorandum of Understanding ("MOU") and/or rulemaking for the implementation of safety enhancements. The implementation of additional state-of-the-art safety enhancements at the MHF Alkylation Unit have been part of the ongoing discussions with the District. Continuation of the PR 1410 process will delay critical decision-making by TORC regarding the implementation of these further enhancements. Additionally, it is clear that a safer and viable alternative technology for HF and MHF currently does not exist. As communicated throughout the PR 1410 public process, even though the MHF Alkylation Unit's existing safety systems already have been successful and proven in protecting Refinery personnel and the community, TORC has devoted significant time and resources to identifying additional technological enhancements that will ensure the safest possible use of HF and MHF in the Unit. TORC has reached a critical juncture in terms of its ability to timely implement the proposed safety enhancements as currently proposed by the next scheduled unit turnaround anticipated to take place in early 2021.

In order to obviate the need for further rulemaking with respect to the use of HF and MHF at the Torrance Refinery, TORC proffers to implement the safety system enhancements set forth on **Exhibit A** beginning

Honorable Mayor McCallon, Refinery Committee Chair,  
South Coast Air Quality Management District  
August 30, 2019  
Page 2

in 2020 with anticipated completion in 2021 (the "Voluntary Safety Enhancements"), in accordance with the terms and conditions hereof and thereof. Acceptance of this proffer by the District Governing Board will be the most expeditious means of implementing the safety enhancements at the Torrance Refinery and is in the best interest of all stakeholders. It is our understanding that acceptance of this proffer by the District Governing Board will require an affirmative vote and appropriate Board direction to staff. In the event of delays in completing the implementation of the Voluntary Safety Enhancements due to circumstances that are beyond TORC's reasonable control, TORC will notify the District as soon as it is aware of possible delays.

Of course, if the District Governing Board elects not to accept this proffer on the terms and conditions hereunder, TORC will continue to participate in negotiation of an MOU under the PR 1410 process and will defer the implementation of the Voluntary Safety Enhancements until a full and complete resolution of the PR 1410 process.

\* \* \*

TORC makes this proffer in good faith as a means of expediting the implementation of safety enhancements. As required by existing law<sup>1</sup>, upon the successful implementation of the Voluntary Safety Enhancements, TORC commits to continue to explore the feasibility of inherent safety measures, including alternative alkylation catalyst technology, every five years. We hope that the Governing Board will favorably consider this proffer to provide additional near-term protection to Refinery personnel and the community.

In submitting this letter, TORC reserves the right to supplement this letter and its prior responses and comments as it deems necessary, especially if additional or different information is made available to the public for the PR 1410 process.

Please note that nothing contained in this letter is intended or should be construed as an admission or a waiver of TORC's rights and remedies, whether legal or equitable, all of which are expressly reserved.

Sincerely,

Paul Davis  
President Western Region

Enclosure (1)

cc: Trecia Canty, Senior Vice President & General Counsel  
Steve Steach, Refinery Manager

---

<sup>1</sup> See Title 8 Cal. Code of Regs. § 5189.1(l); Title 19 Cal. Code of Regs. §2762.13.

## EXHIBIT A

### Voluntary Safety Enhancements

To further enhance the existing safety systems currently employed in the Torrance Refinery's MHF Alkylation Unit, TORC will implement the following Voluntary Safety Enhancements on the MHF Alkylation Unit, to further mitigate the likelihood and potential impact of any HF/MHF release from the MHF Alkylation Unit:

- 1) **Settler Area Protective Steel Structure** – TORC will install, maintain, and operate a protective steel structure around and over the MHF Alkylation Unit's acid settler area as additional passive mitigation to the existing settler pans, and as such, the structure will be:
  - a) Designed to protect the settlers from external impacts.
  - b) Designed to provide an additional barrier and promote an HF/MHF-water mixing environment to further increase MHF rainout in the event of a HF/MHF release from the settler area.
  - c) The south side of the structure facing the interior of the MHF Alkylation Unit will be designed to serve as a barrier and allow for natural light in order for unit operators and maintenance personnel to see into the structure's interior.
  - d) For the bottom of the structure, designed to be open to allow operators and maintenance personnel safe access to the settler area and reduce the potential of creating a flammable environment.
  - e) Designed to automatically deploy upon detection necessary volumes of water within the structure to mitigate a potential HF/MHF release from the settlers.
  - f) Designed and installed in accordance with industry and TORC's engineering standards, manufacturer specifications and guarantees, and pursuant to process safety hazard analysis, and operated consistent with, the City of Torrance Consent Decree ("Torrance Consent Decree")<sup>2</sup>, American Petroleum Institute's Recommended Practice-751 ("API RP-751"), California Process Safety Management Program ("CalPSM")<sup>3</sup>, and California Accidental Release Prevention Program 4 ("CalARP")<sup>4</sup> requirements, as applied by the Torrance Fire Department ("TFD"), Los Angeles County Fire Department ("LACFD"), the California Department of the Industrial Relations ("CalOSHA"), and California Offices of Emergency Management ("CalOES"), respectively.
  - g) Designed to prevent the creation of a confined space, to avoid interference with existing MHF Alkylation Unit mitigation systems, to minimize the confinement of flammable vapors, and to continue to provide for free ingress and egress from the unit within the safety and structural and foundation limitations of the unit.
- 2) **Settler Area Water Mitigation Dome and Curtain** – TORC will install, maintain, and operate a water mitigation dome and curtain over and around the MHF Alkylation Unit's acid settlers, and such dome and curtain, as additional active mitigation, and as such, the water mitigation system will:

---

<sup>2</sup> See Los Angeles County Superior Court, Case No. C 719 9530.

<sup>3</sup> See Title 8 Cal. Code Regs. §5189.1.

<sup>4</sup> See Title 19 Cal. Code Regs. § 2762.0.1 *et seq.*

- a) Include a new high volume water mitigation system around and over the acid settlers to promote mixing of water to contain a HF/MHF release in the settler area, while also creating a water curtain at the base of the structure, and will specifically consist of:
    - i) Two additional layers of water mitigation:
      - (1) Four overhead water monitors to form an umbrella dome inside the structure (Stage One).
      - (2) Spray curtain around the base of the structure (Stage Two).
  - b) Augment the MHF Alkylation Unit's existing water mitigation systems to provide a three-stage water response (Stage Three) in the settler area.
  - c) Automate upon HF/MHF detection in the acid settler area to allow a rapid and focused water mitigation response, specifically:
    - i) Automation of the new water mitigation system will allow water application and contact with any HF/MHF release after detection.
    - ii) The MHF Alkylation Unit's existing water monitors in the settler area can then be activated manually as needed to provide a third layer of targeted water mitigation (Stage Three).
  - d) Optimize the existing water mitigation monitors to ensure sufficient water mitigation coverage for the structure and acid settler area.
  - e) Be designed, installed and operated in accordance with industry and TORC's engineering standards, manufacturer specifications and guarantees, and pursuant to process safety hazard analysis, and operated consistent with the Torrance Consent Decree, API RP-751, CalPSM, and CalARP requirements as applied by TFD, LACFD, CalOSHA, and CalOES, respectively.
  - f) Ensure that the combination of the new monitors (Stage One) in the interior of the structure, spray curtains around the structure base (Stage Two), and the existing elevated monitors (Stage Three), can contain any credible HF/MHF release within the structure by the layered water mitigation systems.
- 3) **Settler Area Enhanced HF/MHF Detection System** – TORC will install, maintain, and operate an enhanced HF/MHF detection system in and around the MHF Alkylation Unit's acid settlers area, and as such, the detection system will:
- a) Include new open path laser detectors to monitor the acid settler area, and inside the structure.
    - i) These laser detectors will help identify any potential HF/MHF release and will automatically deploy the new water mitigation system within the structure upon detection.
    - ii) These laser detectors will allow Refinery operators to rapidly track and pinpoint the location of a HF/MHF release in the acid settler area.
  - b) Include new point source detectors to enhance the unit's existing detection system.
  - c) Include a new camera installed within the structure with video replay capability to provide visual monitoring of the settler area inside the structure.
  - d) Be placed, designed and installed in accordance with industry and TORC's engineering standards, manufacturer specifications and guarantees, and pursuant to process safety hazard analysis, and operated consistent with the Torrance Consent Decree, API RP-751, CalPSM, and CalARP requirements as applied by TFD, LACFD, CalOSHA, and CalOES, respectively.

- 4) **Northern Water Mitigation Monitors** – TORC will upgrade, maintain, and operate the northern water mitigation monitors, as enhanced active mitigation, and as such, the water mitigation system will:
  - a) Automate upon targeted HF/MHF detection to allow a rapid and focused water mitigation response, specifically:
    - i) Automation of the water mitigation system will allow proactive water application and contact with an HF/MHF release after detection.
    - ii) These water mitigation monitors can also be activated manually as needed to provide targeted water mitigation.
  - b) Optimize the water mitigation monitors to ensure sufficient water mitigation coverage.
  - c) Be designed, installed and operated in accordance with industry and TORC's engineering standards, manufacturer specifications and guarantees, and operated consistent with the Torrance Consent Decree, API RP-751, CalPSM, and CalARP requirements as applied by TFD, LACFD, CalOSHA, and CalOES, respectively.
- 5) **Fluidized Catalytic Cracking Unit ("FCCU") Electrostatic Precipitator ("ESP") over-pressure mitigation** – TORC will install and maintain FCCU ESP over-pressure mitigation which will be:
  - a) Designed to minimize the potential for a large section of the FCCU ESP to detach during an over-pressurization incident by providing an anchoring system for the ESP intake ducting.
  - b) Placed, designed and installed done in accordance with industry and TORC's engineering standards, manufacturer specifications and guarantees, and pursuant to process safety hazard analysis, and operated consistent with the CalPSM and CalARP requirements as applied by TFD, LACFD, CalOSHA, and CalOES, respectively requirements.

August 30, 2019

The Honorable Larry McCallon  
South Coast Air Quality Management District  
Chairman, Refinery Committee  
21865 Copley Drive  
Diamond Bar, CA 91765

Dear Mayor McCallon,

On behalf of Ultramar Inc., owner and operator of the Wilmington Refinery (Ultramar), I am pleased to proffer Ultramar's commitment to enhance our state-of-the-art hydrofluoric alkylation mitigation systems with unprecedented additional layers of protection.

As we have maintained throughout the District's consideration of Proposed Rule 1410, Ultramar has served as an industry leader in developing and implementing state-of-the-art approaches to minimize the likelihood that a release of hydrogen fluoride (HF) could occur and to provide for rapid detection and response in the unlikely event that a release were to occur. In addition to the systems currently in place, Ultramar, working with the District and other stakeholders, has identified additional measures that we believe will support and complement our existing systems and will provide additional measures of safety.

In lieu of further rulemaking or the need for a new or modified memorandum of understanding, Ultramar will commit to implement the following:

1. ***Open Path Perimeter HF Sensors.*** In addition to the open path monitors to be installed at the fenceline of the Wilmington Refinery pursuant to Rule 1180, Ultramar will install open path perimeter HF sensors around the Alky ReVAP Unit to further facilitate early detection and prompt response to any potential release of HF. Placement, design, and installation of the sensors will be done in accordance with Ultramar's engineering standards and pursuant to process safety hazard analysis. These sensors will be installed within one year of the District accepting this proposal.
2. ***Flange Guards.*** Ultramar shall install guards on each flange in the Alky ReVAP Unit in main acid service greater than 2 inches diameter. This measure is expected to improve rain out and subsequent capture of any acid released at a flange by the water mitigation system, and thus is expected to eliminate the potential for flange leaks to result in an offsite release. Design and installation of the flange guards will be done in

- accordance with Ultramar's engineering standards and pursuant to process safety hazard analysis. Absent issues that necessitate delay that are identified at the design phase, the flange guards will be installed no later than the completion of the next scheduled Alky ReVAP turnaround; however, if issues are identified in the design and engineering phase that preclude installation of the flange guards during the next scheduled Alky ReVAP turnaround, the flange guards will be installed no later than completion of the subsequent Alky ReVAP turnaround.
3. ***Automation of Water Curtain System.*** Ultramar will complete installation of a system to automate operation of the existing water curtain system in the Alky ReVAP Unit to expedite the activation of the water curtain systems. Design, installation and operation of the curtain automation system will be done in accordance with Ultramar's engineering standards and pursuant to process safety hazard analysis. Absent issues that necessitate delay that are identified at the design phase, the water curtain automation will be installed no later than the completion of the next scheduled Alky ReVAP turnaround; however, if issues are identified in the design and engineering phase that preclude installation of the automation during the next scheduled Alky ReVAP turnaround, the automation shall be installed no later than completion of the subsequent Alky ReVAP turnaround.
  4. ***Additional Point Source Detectors.*** Ultramar will install additional point source detectors at locations optimized to further facilitate precise, rapid detection and response to any potential release of MHF. This measure is expected to facilitate rapid and accurately targeted activation of the water mitigation and acid dump systems, whether these are activated automatically or manually. Placement, design and installation of the detectors will be done in accordance with Ultramar's engineering standards and pursuant to process safety hazard analysis. These additional point source detectors will be installed by the completion of the next scheduled Alky ReVAP turnaround.
  5. ***Acid Settler Debris Grid.*** In order to reduce the potential for a release resulting from penetration of the acid unit settler by a projectile, Ultramar will evaluate and design a debris grid to mitigate impacts to the elevated section of the acid settler. The debris grid placement, design and installation will be done in accordance with Ultramar's engineering standards and pursuant to process safety hazard analysis. This debris grid will be designed to prevent the creation of a confined space, to avoid interference with existing HF mitigation systems, to minimize the confinement of flammable vapors, and to continue to provide for free ingress and egress from the unit within the safety and structural limitations of the unit. Within 180 days of the District's acceptance of this proffer, Ultramar shall develop a preliminary engineering design for the debris grid. Absent issues that necessitate delay that are identified at the design phase, the debris

grid will be installed no later than the completion of the next scheduled Alky ReVAP turnaround; however, if issues are identified in the design and engineering phase that preclude installation of the grid during the next scheduled Alky ReVAP turnaround, the grid will be installed no later than completion of the subsequent Alky ReVAP turnaround.

6. ***Acid Settler Riser/Leg Rain Out Barrier/Shroud.*** Ultramar will design, engineer, and install Rain Out Barrier/Shroud systems for the Acid Settler Risers and Legs and the Depropanizer Acid Boots to reduce the momentum of any potential release from these systems and redirect the material downward, thus enhancing rain out and capture by the water mitigation systems. These shroud systems will be similar to that already employed on the Acid Coolers within the unit. Additional barriers or shrouding will be installed on the elevated acid piping that feeds the Settler. This mitigation measure reduces the potential for an offsite release resulting from a compromise to the settler system piping by improving rainout and subsequent capture of any released material by the water mitigation systems. The Rain Out Barrier/Shroud placement, design, and installation will be done in accordance with Ultramar's engineering standards and pursuant to process safety hazard analysis. Preliminary design of the Acid Settler Riser/Leg Rain Out Barrier/Shroud and Depropanizer Acid Boot Rain Out Barrier/Shroud systems will be completed within 180 days of the District's acceptance of this proffer. Absent issues that necessitate delay that are identified at the design and engineering phase, the Acid Settler Riser/Leg Rain Out Barrier/Shroud and Depropanizer Acid Boot Rain Out Barrier/Shroud will be installed no later than the completion of the next scheduled Alky ReVAP turnaround; however, if issues are identified in the design and engineering phase that preclude installation of one or both barrier/shroud systems during the next scheduled Alky ReVAP turnaround, the Acid Settler Riser/Leg Rain Out/Barrier System and/or Depropanizer Acid Boot Rain Out Barrier/Shroud shall be installed no later than completion of the subsequent Alky ReVAP turnaround.

It is important to note that the District and Ultramar already have an existing Memorandum of Understanding from 2003 (Agreement), under which the District agreed to refrain from further regulation of HF. Nothing in this letter from Ultramar, nor the District's acceptance or rejection of this proffer, shall supersede or alter the existing Agreement. However, by accepting this proffer, the District and Ultramar will avoid the potential for litigation arising out of the Agreement.

District, Ultramar and other stakeholders have expended almost three years in considering mitigation measures and alternatives. This has taxed the resources of all those involved and resulted in no viable alternatives beyond enhanced mitigation measures described in this letter. We believe there is limited benefit from continuing on this course. Ultramar has a long history of safely operating the Wilmington HF alkylation unit and has remained in compliance with the Agreement.

The Honorable Larry McCallon  
South Coast Air Quality Management District  
Page 4

We have already installed the best mitigation systems available and continuously work to improve them. Now, we stand ready to facilitate the closure of this process by committing publicly to implement even more safety improvements.

Thank you for your consideration of our proposal.

Sincerely,

Mark Phair  
VP & General Manager  
*Ultramar Inc.*

cc: Richard Walsh, VP & Deputy General Counsel  
Elizabeth Bourbon, Sr. Managing Counsel  
Scott Folwarkow, Executive Director Governmental Affairs

*Provided by Zorik Pirveysian, South Coast AQMD - New purchases of shuttles buses operating at airports are currently subject to South Coast AQMD Rule 1194, which requires alternative fueled vehicles. CARB's Zero-emission (ZE) Airport Shuttle Buses regulation, establishes requirements for ZE conversion starting with 33% in 2027 ramping up to 100% in 2035. South Coast AQMD is also currently in the process of developing an MOU with the commercial airports in the Basin. The focus of the MOU is achieving emission reductions above and beyond existing regulations. These regulations and programs are mainly complementary to each other.*

### **July 2019 Update on Work with U.S. EPA on New Source Review Issues for the RECLAIM Transition**

At the October 5, 2018 Board meeting, the Board directed staff to provide the Stationary Source Committee with a monthly update of staff's work with U.S. EPA regarding resolving NSR issues for the transition of facilities from RECLAIM to a command and control regulatory structure. The table below summarizes key activities over the past month.

<b>Item</b>	<b>Discussion</b>
Teleconference with U.S. EPA – June 18, 2019	<ul style="list-style-type: none"><li>• Staff discussed with U.S. EPA calculation methodologies for NSR applicability and amount of offsets required</li><li>• Discussed NSR requirements for secondary pollutants</li></ul>
Adoption of Amendments to Rule 2001 – Applicability, July 12, 2019	<ul style="list-style-type: none"><li>• Board approved amendments to keep facilities in RECLAIM until all rules associated with the transition are approved into the State Implementation Plan</li><li>• RECLAIM facilities will remain subject to Rule 2005 for New Source Review throughout the transition</li></ul>

## Twelve-Month and Three-Month Rolling Average Price of Compliance Years 2018 and 2019 NOx and SOx RTCs

July 2019 Quarterly Report to Stationary Source Committee

**Table I**

Twelve-Month Rolling Average Price Data for Compliance Year 2018 NOx RTCs  
(Report to Governing Board if rolling average price greater than \$22,500/ton)

Twelve-Month Rolling Average Price Data for Compliance Year 2018 NOx RTC					
Reporting Month	12-Month Period	Total Volume Traded with Price During Past 12-month (tons)	Total Price of Volume Traded During Past 12-month (\$)	Number of Trades with Price	Rolling Average Price <sup>3</sup> (\$/ton)
Jan-18	Jan-17 to Dec-17	91.6	\$974,592	3	\$10,639
Feb-18	Feb-17 to Jan-18	91.6	\$974,592	3	\$10,639
Mar-18	Mar-17 to Feb-18	100.7	\$1,041,091	4	\$10,337
Apr-18	Apr-17 to Mar-18	51.6	\$497,246	5	\$9,643
May-18	May-17 to Apr-18	56.6	\$527,075	8	\$9,320
Jun-18	Jun-17 to May-18	53.1	\$502,575	7	\$9,473
Jul-18	Jul-17 to Jun-18	72.6	\$625,883	14	\$8,618
Aug-18	Aug-17 to Jul-18	80.0	\$660,279	19	\$8,251
Sep-18	Sep-17 to Aug-18	86.8	\$698,621	28	\$8,050
Oct-18	Oct-17 to Sep-18	104.3	\$759,871	29	\$7,287
Nov-18	Nov-17 to Oct-18	196.3	\$1,069,361	47	\$5,447
Dec-18	Dec-17 to Nov-18	167.5	\$706,811	49	\$4,219
Jan-19	Jan-18 to Dec-18	270.4	\$1,023,944	57	\$3,786
Feb-19	Feb-18 to Jan-19	521.6	\$1,460,268	87	\$2,800
Mar-19	Mar-18 to Feb-19	625.6	\$1,534,266	97	\$2,452
Apr-19	Apr-18 to Mar-19	636.4	\$1,581,537	98	\$2,485
May-19	May-18 to Apr-19	666.4	\$1,695,472	117	\$2,544
Jun-19	Jun-18 to May-19	668.6	\$1,703,114	119	\$2,547
Jul-19	Jul-18 to Jun-19	674.0	\$1,657,307	118	\$2,459

1. District Rule 2015(b)(6) - Backstop Provisions provides additional "evaluation and review of the compliance and enforcement aspects of the RECLAIM program" if the average RTC price exceeds \$15,000 per ton.

**Table II**

Twelve-Month Rolling Average Price Data for Compliance Year 2019 NOx RTCs  
(Report to Governing Board if rolling average price greater than \$22,500/ton)

Twelve-Month Rolling Average Price Data for Compliance Year 2019 NOx RTC					
Reporting Month	12-Month Period	Total Volume Traded with Price During Past 12-month (tons)	Total Price of Volume Traded During Past 12-month (\$)	Number of Trades with Price	Rolling Average Price <sup>3</sup> (\$/ton)
Jan-19	Jan-18 to Dec-18	18.2	\$103,000	5	\$5,646
Feb-19	Feb-18 to Jan-19	19.0	\$108,200	6	\$5,682
Mar-19	Mar-18 to Feb-19	19.0	\$108,200	6	\$5,682
Apr-19	Apr-18 to Mar-19	29.6	\$181,921	8	\$6,153
May-19	May-18 to Apr-19	30.2	\$186,852	9	\$6,182
Jun-19	Jun-18 to May-19	31.2	\$195,323	10	\$6,256
Jul-19	Jul-18 to Jun-19	44.3	\$278,708	14	\$6,288

1. District Rule 2015(b)(6) - Backstop Provisions provides additional "evaluation and review of the compliance and enforcement aspects of the RECLAIM program" if the average RTC price exceeds \$15,000 per ton.

**Table III**

Three-Month Rolling Average Price Data for Compliance Year 2018 NOx RTCs  
(Report to Governing Board if rolling average price greater than \$35,000/ton)

Three-Month Rolling Average Price Data for Compliance Year 2018 NOx RTC					
Reporting Month	3-Month Period	Total Volume Traded with Price During Past 3-month (tons)	Total Price of Volume Traded During Past 3-month (\$)	Number of Trades with Price	Rolling Average Price (\$/ton)
Jan-18	Oct-17 to Dec-17	38.1	\$400,092	1	\$10,500

MSRC Agenda Item No. 3

**DATE:** August 15, 2019

**FROM:** Cynthia Ravenstein

**SUBJECT:** AB 2766 Contracts Administrator's Report

**SYNOPSIS:** This report covers key issues addressed by MSRC staff, status of open contracts, and administrative scope changes from May 30 to July 24, 2019.

**RECOMMENDATION:** Receive and file report

**WORK PROGRAM IMPACT:** None

**Contract Execution Status**

**2016-18 Work Program**

On July 8, 2016, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On October 7, 2016, the SCAQMD Governing Board approved three awards under the Event Center Transportation Program and one award for a Regional Active Transportation Partnership Program. These contracts are executed.

On January 6, 2017, the SCAQMD Governing Board approved an award for development, hosting and maintenance of a new MSRC website. This contract is executed.

On April 7, 2017, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On June 2, 2017, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On July 7, 2017, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On September 1, 2017, the SCAQMD Governing Board approved one award under the Event Center Transportation Program and one award under the Natural Gas Infrastructure Program. These contracts are executed.

On October 6, 2017, the SCAQMD Governing Board approved two awards under the Event Center Transportation Program and one award under the Natural Gas Infrastructure Program. These contracts are executed.

On December 1, 2017, the SCAQMD Governing Board approved sole source awards for a Hydrogen Infrastructure Partnership Program, for a Southern California Future Communities Partnership Program, and for electric vehicle charging infrastructure planning analysis. These contracts are executed. The MSRC has replaced the award to the California Energy Commission with a Program Opportunity Notice for the Hydrogen Infrastructure Partnership Program.

On February 2, 2018, the SCAQMD Governing Board approved one award under the Event Center Transportation Program, two awards under the Natural Gas Infrastructure Program, four awards under the Local Government Partnership Program, and two awards under the County Transportation Commission Partnership Program. These contracts are executed.

On March 2, 2018, the SCAQMD Governing Board approved one award under the Major Event Center Transportation Program, two awards under the Natural Gas Infrastructure Program, and one award under the Local Government Partnership Program. These contracts are executed.

On April 6, 2018, the SCAQMD Governing Board approved one award under the Natural Gas Infrastructure Program and eight awards under the Local Government Partnership Program. These contracts are executed.

On May 4, 2018, the SCAQMD Governing Board approved twenty-seven awards under the Local Government Partnership Program and one award under the County Transportation Commission Partnership Program. These contracts are executed.

On June 1, 2018, the SCAQMD Governing Board approved six awards under the Local Government Partnership Program, one award under the Natural Gas Infrastructure Program, and one award under the County Transportation Commission Partnership Program. These contracts are with the prospective contractor for signature or executed.

On July 6, 2018, the SCAQMD Governing Board approved nine awards under the Local Government Partnership Program. These contracts are with the prospective contractor for signature or executed.

On September 7, 2018, the SCAQMD Governing Board approved nineteen awards under the Local Government Partnership Program, three awards under the County Transportation Commission Partnership Program, one award under the Major Event Center Transportation Program, and twenty awards under the Natural Gas Infrastructure Program. These contracts are under development, with the prospective contractor for signature, with the SCAQMD Board Chair for signature, or executed.

On October 5, 2018, the SCAQMD Governing Board approved forty-eight awards under the Local Government Partnership Program and one award under the Hydrogen Infrastructure Program. These contracts are under development, with the prospective contractor for signature, with the SCAQMD Board Chair for signature, or executed.

On November 2, 2018, the SCAQMD Governing Board approved two awards under the Local Government Partnership Program. These contracts are executed.

**2018-21 Work Program**

On April 5, 2019, the SCAQMD Governing Board approved an award under the Major Event Center Transportation Program. This contract is undergoing internal review.

**Work Program Status**

Contract Status Reports for work program years with open and/or pending contracts are attached.

***FY 2007-08 Work Program Contracts***

No contracts from this work program year are open; and one is in “Open/Complete” status. 3 contracts closed during this period: City of Santa Monica, Contract #ML08028 – Purchase 24 Heavy-Duty CNG Vehicles; United Parcel Service, Contract #MS08007 – Purchase 10 Natural Gas Vehicles; and United Parcel Service, Contract #MS08013 – Purchase 12 Natural Gas Yard Tractors.

***FY 2007-08 Invoices Paid***

No invoices were paid during this period.

***FY 2010-11 Work Program Contracts***

2 contracts from this work program year are open; and 20 are in “Open/Complete” status. 4 contracts closed during this period: City of Whittier, Contract #ML11021 – Purchase 7 Heavy-Duty CNG Vehicles; City of Ontario, Contract #ML11044 – Expand Existing CNG Station; EDCO Disposal Corp., Contract #MS11011 – Install New CNG Station in Signal Hill; EDCO Disposal Corp., Contract #MS11012 – Install New CNG Station in Buena Park.

***FY 2010-11 Invoices Paid***

No invoices were paid during this period.

***FY 2011-12 Work Program Contracts***

8 contracts from this work program year are open, and 23 are in “Open/Complete” status. One contract closed during this period: SuperShuttle International, Inc., Contract #MS12086 – Purchase 23 Medium-Heavy-Duty Vehicles.

***FY 2011-12 Invoices Paid***

No invoices were paid during this period.

***FYs 2012-14 Work Program Contracts***

22 contracts from this work program year are open, and 28 are in “Open/Complete” status. One replacement contract is pending execution.

***FYs 2012-14 Invoices Paid***

No invoices were paid during this period.

***FYs 2014-16 Work Program Contracts***

54 contracts from this work program year are open, and 25 are in “Open/Complete” status. One contracts passed into “Open/Complete” status during this period: City of Ontario, Contract #ML16056 – Expansion of Existing CNG Station. Two replacement contracts are pending execution.

***FYs 2014-16 Invoices Paid***

3 invoices totaling \$1,059,458.75 were paid during this period.

***FYs 2016-18 Work Program Contracts***

122 contracts from this work program year are open, and 3 are in “Open/Complete” status.

4 invoices totaling \$284,590.01 were paid during this period.

***Administrative Scope Changes***

6 administrative scope changes were initiated during the period of May 30 to July 24, 2019:

- City of Yucaipa, Contract #ML16054 (Implement “Complete Streets” Project) – Three-month term extension
- City of Ontario, Contract #ML16056 (Expand CNG Station) – Reduce value from \$150,000 to \$105,565
- City of Lawndale, Contract #MS16106 (Expand CNG Station) – Terminate contract by request
- City of Arcadia, Contract #ML18032 (Purchase One Heavy-Duty Zero Emission Vehicle and One Heavy-Duty Near-Zero Emission Vehicle) – Remove zero emission vehicle and reduce value from \$74,650 to \$24,650
- City of Redlands, Contract #ML18039 (Purchase One Heavy-Duty Zero Emission Vehicle and Install EV Charging Station) – Six-month term extension
- City of Hidden Hills, Contract #ML18019 (Purchase Two Light-Duty Zero Emission Vehicles and Install EV Charging Stations) – Remove off-road vehicle and substitute an additional on-road vehicle and one-year term extension

### LOCATION:

California Environmental Protection Agency  
California Air Resources Board  
Byron Sher Auditorium, 2nd Floor  
1001 I Street  
Sacramento, California 95814

This facility is accessible by public transit. For transit information, call (916) 321-BUSS, website:

<http://www.sacrt.com>

(This facility is accessible to persons with disabilities.)

**TO SUBMIT WRITTEN COMMENTS ON AN AGENDA  
ITEM IN ADVANCE OF THE MEETING GO TO:**

**<http://www.arb.ca.gov/lispub/comm/bclist.php>**

**Thursday  
July 25, 2019  
9:00 a.m.**

### **DISCUSSION ITEMS:**

**Note:** The following agenda items may be heard in a different order at the Board meeting.

#### **Agenda Items #**

**19-7-1: Public Hearing to Consider Proposed Amendments to Certification Procedures for Vapor Recovery Systems for Aboveground Storage Tanks at Gasoline Dispensing Facilities**

*The California Air Resources Board (CARB or Board) will hear the proposal to amend Phase II Enhanced Vapor Recovery (EVR) requirements for existing aboveground storage tanks (AST) at gasoline dispensing facilities (GDF). The amendments clarify definitions and improve cost effectiveness of the Phase II EVR equipment upgrade requirements based on annual gasoline throughput at AST GDFs. The Board will also consider adoption of the environmental analysis set forth in the Initial Statement of Reasons.*

[More Information](#)

[Staff Presentation](#)

**19-7-3: Public Meeting to Hear an Informational Update on Prescribed Burning**

*The Board will hear an update on prescribed burning, CARB's role regarding prescribed fire, new legislation and Governor's Executive Orders regarding prescribed burning, and how CARB is coordinating with partner agencies on prescribed fire. This will be a joint presentation with other state, federal, and local agencies.*

[More Information](#)

[Staff Presentation](#)

**19-7-2: Public Meeting to Hear an Informational Update on the Status of Transitioning to Zero Emission Vehicles**

*Staff will provide an update to the Board on the progress toward transitioning to zero emission vehicles, including a discussion of programs that drive zero emission vehicle uptake and potential new policies to increase zero emission vehicles in the fleet.*

[More Information](#)

[Staff Presentation](#)

**CLOSED SESSION**

The Board may hold a closed session, as authorized by Government Code section 11126(e), to confer with, and receive advice from, its legal counsel regarding the following pending or potential litigation, and as authorized by Government Code section 11126(a):

*American Fuel and Petrochemical Manufacturers, et al. v. Jane O'Keeffe, et al.*, U.S. District Court (D. Ore. Portland), Case No. 3:15-CV-00467; Plaintiffs' appeal, U.S. Court of Appeals, Ninth Circuit, Case No. 15-35834; Plaintiffs' petitions for certiorari in United States Supreme Court, Case No. 18-881.

*California Air Resources Board v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 18-1085.

*Mexichem Fluor, Inc. v. U.S. EPA*, (D.C. Cir. 2017) 866 F. 3d 451 (U.S. Court of Appeals, District of Columbia Circuit, Case Nos. 15-1328 and 15-1329).

*Rocky Mountain Farmers Union, et al. v. Corey*, U.S. District Court (E.D. Cal. Fresno), Case No. 1:09-CV-02234-LJO-DLB; ARB interlocutory appeal, U.S. Court of Appeals, Ninth Circuit, Case No. 12-15131.

*American Fuels and Petrochemical Manufacturers, et al. v. Corey, et al.*, U.S. District Court (E.D. Cal. Fresno), Case No. 1:10-CV-00163-AWI-GSA; ARB's interlocutory appeal, U.S. Court of Appeals, Ninth Circuit, Case No. 10-CV-00163. ; Plaintiffs' petitions for certiorari in United States Supreme Court, Case No. 13-1149.

*Sowinski v. California Air Resources Board, et al.*, United States District Court for the Central District of California, No. 8:15-cv-02123.

*State of California, et al. v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 18-1114.

*State of California, et al., v. United States Environmental Protection Agency* (United States District Court, Northern District of California, Case No. 4:18-cv-03237)

*State of California, et al. v. Ryan Zinke, et al.*, United States District Court, Northern District of California, Case No. 3:18-cv-5712-DMR

*State of New York, et al. v. United States Environmental Protection Agency*, U.S. District Court, District of Columbia, Case No. 1:18-cv-00773.

*State of California, et al. v. United States Environmental Protection Agency et al.*, U.S. District Court, Northern District of California, Oakland Division, Case No. 4:17-cv-6936-HSG.

*State of North Dakota, et al. v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 16-1242.

*State of North Dakota v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 15-1381.

*State of West Virginia et al. v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 15-1363.

*State of Wyoming, et al. v. United States Department of the Interior, et al.*, U.S. District Court, District of Wyoming, Case No. 16-CV-285-SWS.

*Truck Trailer Manufacturers Association, Inc. v. United States Environmental Protection Agency, et al.*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 16-1430.

*Alliance for California Business v. California State Transportation Agency, et al.*, Sacramento County Superior Court, Case No. 34-2016-80002491.

*American Coatings Association, Inc. v. State of California and California Air Resources Board*, Sacramento County Superior Court, Case No. 04CS01707.

*Dalton Trucking, Inc. v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 13-1283 (dismissed), U.S. Court of Appeals, Ninth Circuit, Case No. 13-74019.

*John R. Lawson Rock & Oil, Inc. et al. v. California Air Resources Board et al.*, Fresno County Superior Court, Case No. 14-CECG01494; ARB's appeal, Court of Appeal, Fifth District, Case No. F074003.

*Murray Energy Corporation v. United States Environmental Protection Agency*, U.S. Court of Appeals, District of Columbia Circuit, Case No. 15-1385.

*Valero Refining Co. California v. Hearing Board of the Bay Area Air Quality Management District et al.*, Court of Appeal, First Appellate District, Case No. A151004.

*Air Resources Board v. Key Disposal, Inc. and John Katangian*, Los Angeles Superior Court, Case No. BC650014.

*People v. Southern California Gas Company*, Los Angeles Superior Court, Case No. BC 602973.

*Air Resources Board v. Fiat Chrysler Automobiles N.V. and FCA US LLC*, U.S. District Court, Northern District of California, Case No. 3:17-md-02777-EMC, 3:17-cv-3446-EMC, 3:19-cv-00151-EMC.

*People v. Walgreens Co.*, Sacramento County, Case No. 34-2018-00244759.

*In re Pacific Gas and Electric Company*, U.S. Bankruptcy Court, Northern District of California, Case No. 19-30089.

*California Air Resources Board vs. Cascade Sierra*, Sacramento Superior Court, Case No. 34-2017-00223510.

*Friends of Oceano Dunes, Inc. v. California Coastal Commission, et al.*, San Luis Obispo County Superior Court, Case No. 17CV-0576; U.S. District Court for the Central District of California, Case No. 2:17-cv-8733.

*John Mahan v. California Air Resources Board*, Sacramento County Superior Court, Case No. 34-2016-80002416.

*The Two Hundred, et al. v. California Air Resources Board, et al., Fresno County Superior Court, Case No. 18CECG01494.*

### **OPPORTUNITY FOR MEMBERS OF THE BOARD TO COMMENT ON MATTERS OF INTEREST**

*Board members may identify matters they would like to have noticed for consideration at future meetings and comment on topics of interest; no formal action on these topics will be taken without further notice.*

### **OPEN SESSION TO PROVIDE AN OPPORTUNITY FOR MEMBERS OF THE PUBLIC TO ADDRESS THE BOARD ON SUBJECT MATTERS WITHIN THE JURISDICTION OF THE BOARD**

*Although no formal Board action may be taken, the Board is allowing an opportunity to interested members of the public to address the Board on items of interest that are within the Board's jurisdiction, but that do not specifically appear on the agenda. Each person will be allowed a maximum of three minutes to ensure that everyone has a chance to speak.*

### **TO ELECTRONICALLY SUBMIT WRITTEN COMMENTS ON AN AGENDA ITEM IN ADVANCE OF THE MEETING GO TO:**

<https://www.arb.ca.gov/lispub/comm/bclist.php>

(Note: not all agenda items are available for electronic submittals of written comments.)

**PLEASE NOTE:** No outside memory sticks or other external devices may be used at any time with the Board audio/visual system or any CARB computers. Therefore, PowerPoint presentations to be displayed at the Board meeting must be electronically submitted via email to the Clerk of the Board at [cotb@arb.ca.gov](mailto:cotb@arb.ca.gov) no later than noon on the business day prior to the scheduled Board meeting.

### **IF YOU HAVE ANY QUESTIONS, PLEASE CONTACT THE CLERK OF THE BOARD:**

**1001 I Street, 23<sup>rd</sup> Floor, Sacramento, California 95814**

**(916) 322-5594**

**CARB Homepage: [www.arb.ca.gov](http://www.arb.ca.gov)**

### **SPECIAL ACCOMMODATION REQUEST**

Consistent with California Government Code Section 7296.2, special accommodation or language needs may be provided for any of the following:

- An interpreter to be available at the hearing;
- Documents made available in an alternate format or another language;
- A disability-related reasonable accommodation.

To request these special accommodations or language needs, please contact the Clerk of the Board at (916) 322-5594 or by facsimile at (916) 322-3928 as soon as possible, but no later than 7 business days before the scheduled Board hearing. TTY/TDD/Speech to Speech users may dial 711 for the California Relay Service.

Consecuente con la sección 7296.2 del Código de Gobierno de California, una acomodación especial o necesidades lingüísticas pueden ser suministradas para cualquiera de los siguientes:

- Un intérprete que esté disponible en la audiencia
- Documentos disponibles en un formato alterno u otro idioma
- Una acomodación razonable relacionados con una incapacidad

Para solicitar estas comodidades especiales o necesidades de otro idioma, por favor llame a la oficina del Consejo al (916) 322-5594 o envíe un fax a (916) 322-3928 lo más pronto posible, pero no menos de 7 días de trabajo antes del día programado para la audiencia del Consejo. TTY/TDD/Personas que necesiten este servicio pueden marcar el 711 para el Servicio de Retransmisión de Mensajes de California.

### EASTERN COACHELLA VALLEY COMMUNITY MEETING

The California Air Resources Board (CARB), the South Coast Air Quality Management District, and the Leadership Counsel for Justice and Accountability, invite you to participate in a community meeting for the Community Air Protection Program. This program focuses on improving public health in communities that experience disproportionate burdens from exposure to air pollutants. You can ask questions, engage in discussions, and learn more about the Community Air Protection Program and incentive funds.

**FEBRUARY 22, 2019 5:30-7:30 PM**

North Shore Beach and Yacht Club  
99155 Sea View Drive, Mecca, CA 92254

#### More Information

Community Air Protection Program

- Visit [ww2.arb.ca.gov/our-work/programs/community-air-protection-program](http://ww2.arb.ca.gov/our-work/programs/community-air-protection-program)
- Contact Monique Davis at [monique.davis@arb.ca.gov](mailto:monique.davis@arb.ca.gov) or (916) 322-7304.

Leadership Counsel for Justice and Accountability

- Contact Rebecca Zaragoza at [rzaragoza@leadershipcounsel.org](mailto:rzaragoza@leadershipcounsel.org) or (760) 774-3528.

This meeting will be conducted in Spanish with English interpretation, and a light meal will be provided.

### VALLE DE COACHELLA

South Coast Air Quality Management District invite you to participate in a community meeting. The program focuses on exposure to air pollutants. Learn more about the program.

Consejo de Liderazgo para la Justicia y la Responsabilidad  
• Contacte Rebecca Zaragoza en [rzaragoza@leadershipcounsel.org](mailto:rzaragoza@leadershipcounsel.org) o (760) 774-3528.  
Esta reunión se realizará en español, se proporcionará interpretación en inglés, y habrá una cena ligera.

### Background

Assembly Member Cristina Garcia authored [Assembly Bill 617](#) to address the disproportionate pollution in environmental justice communities. The measure requires local air districts to reduce air pollution and toxic air contaminants from commercial and industrial sources.

Previously passed bills provide significant new funding and resources to expand South Coast based programs to reduce air pollution and protect public health, with a focus on environmental justice communities. For example, the state Legislature also adopted AB 134 to fund community air quality projects in disadvantaged communities.

Assembly Member Cristina Garcia authored [Assembly Bill 617<sup>9</sup>](#) to address the disproportionate impacts of air pollution in environmental justice communities. The measure requires local air districts to take specific actions to reduce air pollution and toxic air contaminants from commercial and industrial sources.

The primary purpose of these new efforts is to implement AB 617. South Coast AQMD will conduct extensive outreach to residents and other stakeholders to describe the program and seek input on how to implement it.

Please visit the respective links below for each community approved for Year 1 implementation for updates:

- General FAQs on the Community Steering Committees are posted below:

- South Coast AQMD is hosting a series of meetings to seek input on how to prioritize communities in our region for future air monitoring and emission reduction programs. These pages will contain meeting documents such as presentations, fact sheets, an infographic, community input and South Coast AQMD's recommendations to CARB:

## Forms

**Community Steering Committee Interest Forms:**

The Year 1 Community Steering Committees have been formed. However, primary members are encouraged to select alternate members. Below are the forms that prospective alternate members should complete to be considered. Please email forms to [AB617@aqmd.gov](mailto:AB617@aqmd.gov).

- [Community Steering Committee – Interest Form \(PDF\)](#)
- [Formulario de Interés – Comité Directivo de la Comunidad \(PDF\)](#)

### Programs Receiving AB 617 & AB 134 Funding

In 2018, South Coast AQMD received \$10.8 million in state funding to lay the groundwork for this new program. The main components of the program are:

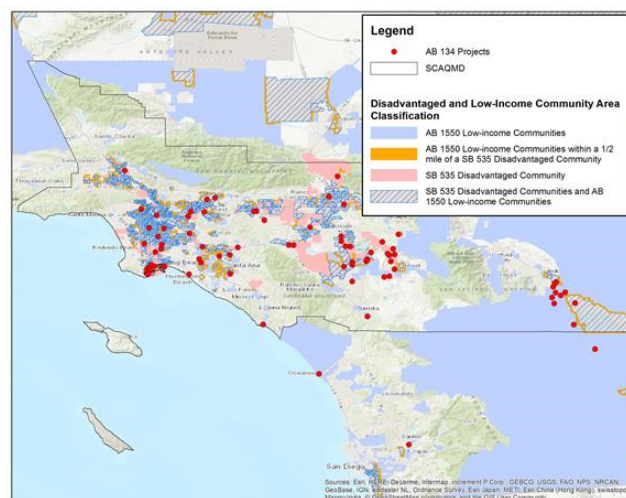

1. **Community Emissions Reduction Plans (CERP):** Residents will have the opportunity to provide recommendations for the selection of communities chosen for the development of emissions reductions plans. South Coast AQMD will use updated data to assess the communities most affected, identify key sources of pollution and develop targeted emissions reduction plans to reduce community exposures to air pollution. A small number of communities will be selected for the first year and other communities will be added over time.
2. **Community Monitoring and Analysis:** South Coast AQMD will deploy systems to monitor air quality in selected communities where this information is needed. AQMD will seek additional sources of funding to cover the added cost of these new requirements.

3. **"BARCT" Implementation:** South Coast may or amend our rules to ensure that Best Available Retrofit Technology (BART) is implemented for the greenhouse gas cap and trade program. To different air districts.

AB 617 also requires moving towards more strict liability for air pollution violations, adjusting strict liability

One of South Coast AQMD's roles is to accelerate the commercialization and deployment of zero- and near-zero-emission mobile and stationary technologies by making financial incentives and programs available. For more than 19 years, grants under the [Carl Moyer Program](#) have been used to replace older heavy-duty diesel vehicles and equipment with cleaner technologies. With the passage of AB 617 and AB 134, the South Coast AQMD expects to receive \$107.5 million in new funding for eligible projects under the Carl Moyer Program, with a majority of this funding allocated to projects that are located in environmental justice and low income communities. Projects funded by the Carl Moyer Program include heavy-duty trucks and buses, construction equipment, agricultural equipment, cargo handling equipment and marine vessels.

After evaluation of all the Carl Moyer program Year 19 applications, a total of 101 projects, totaling \$51.7 million, were approved. As shown on the map below, which is based on [CalEnviroScreen 3.0 Maps](#)<sup>2</sup>, a total of \$45.4 million or 88 percent of these projects are located in environmental justice and low-income communities.

## Image 14 – AB 617 Webpage (cont'd)

### Community Air Grants

The Districts and CARB are working hand-in-hand to implement AB 617 and improve community air quality. To support this endeavor, CARB is also offering Community Air Grants to community groups for enhancing education and outreach regarding AB 617, monitoring, and improving their air quality. This program allows flexibility for community-based organizations to participate in the AB 617 process and to build their own capacities to become active partners with government to identify, evaluate, and ultimately reduce exposure to harmful air emissions in their communities. For more information visit CARB's [Community Air Grants](#) page <sup>2</sup>.

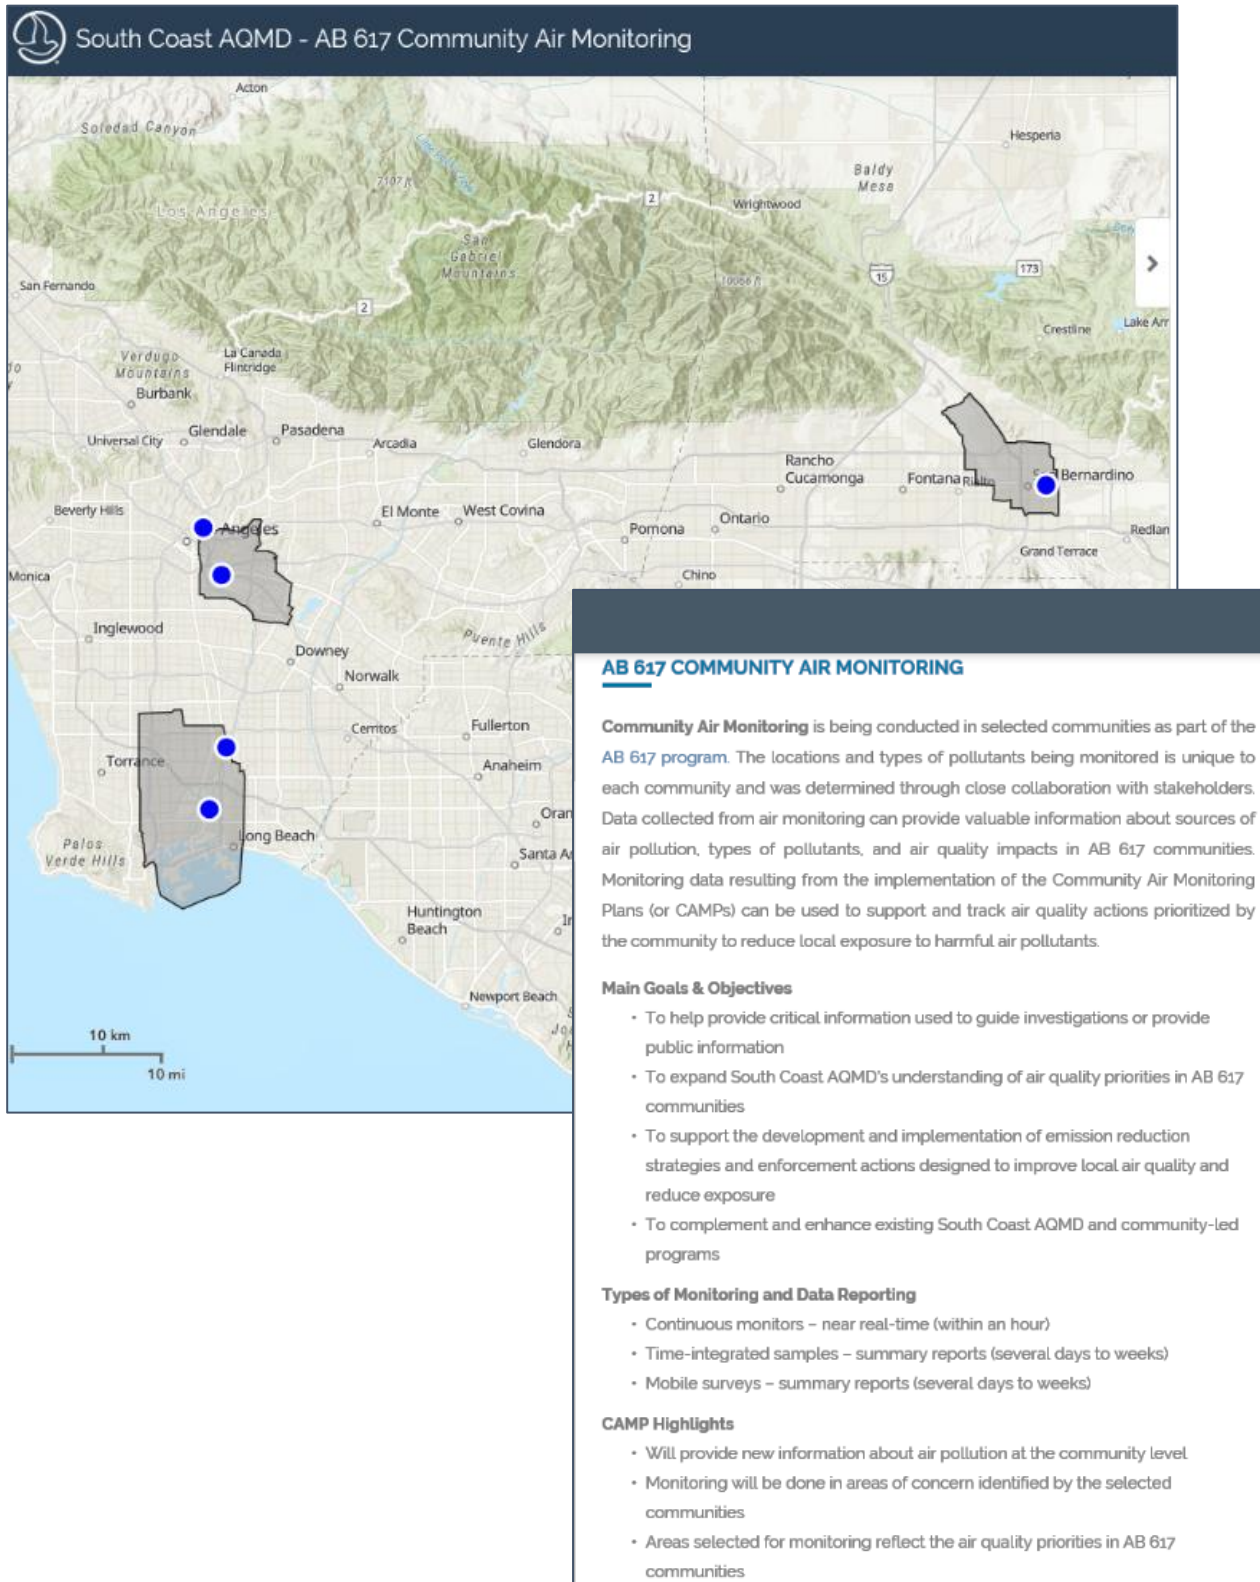

### Programs of Related Interest

- **CAPP** <sup>2</sup> - CARB's Community Air Protection Program. CARB has established a Community Air Protection Program with statewide strategies to reduce exposure in communities most impacted by air pollution. CARB has also provided a [Community Air Protection Blueprint](#) <sup>2</sup> (Blueprint) that provides guidelines for AB 617 implementation.
- **CATI** – South Coast AQMD's Community Air Toxics Initiative focused on identifying and reducing sources of hexavalent chromium and other air toxics currently in Paramount and Compton and additional communities in the future.
- **Refinery Monitoring** – Under South Coast AQMD's Rule 1180 and AB 1647, the region's eight major oil refineries will need to start real-time monitoring for pollutants at their fence lines by 2020. In addition, South Coast AQMD will conduct air monitoring being used by community groups, residents and others to gauge air pollution in their neighborhoods.
- **MATES V** – South Coast AQMD is the recipient of a prestigious STAR grant from the U.S. Environmental Protection Agency. In collaboration with [Sonoma Technology](#) <sup>2</sup> and the [UCLA Fielding School of Public Health](#) <sup>2</sup>, this study will build capacity in six California communities to select, use, and maintain low-cost air pollution sensors and to interpret sensor data.
- **AQ-SPEC** – South Coast AQMD is the recipient of a prestigious STAR grant from the U.S. Environmental Protection Agency. In collaboration with [Sonoma Technology](#) <sup>2</sup> and the [UCLA Fielding School of Public Health](#) <sup>2</sup>, this study will build capacity in six California communities to select, use, and maintain low-cost air pollution sensors and to interpret sensor data.

### News Releases

Image 15 – Interactive Map - Monitoring

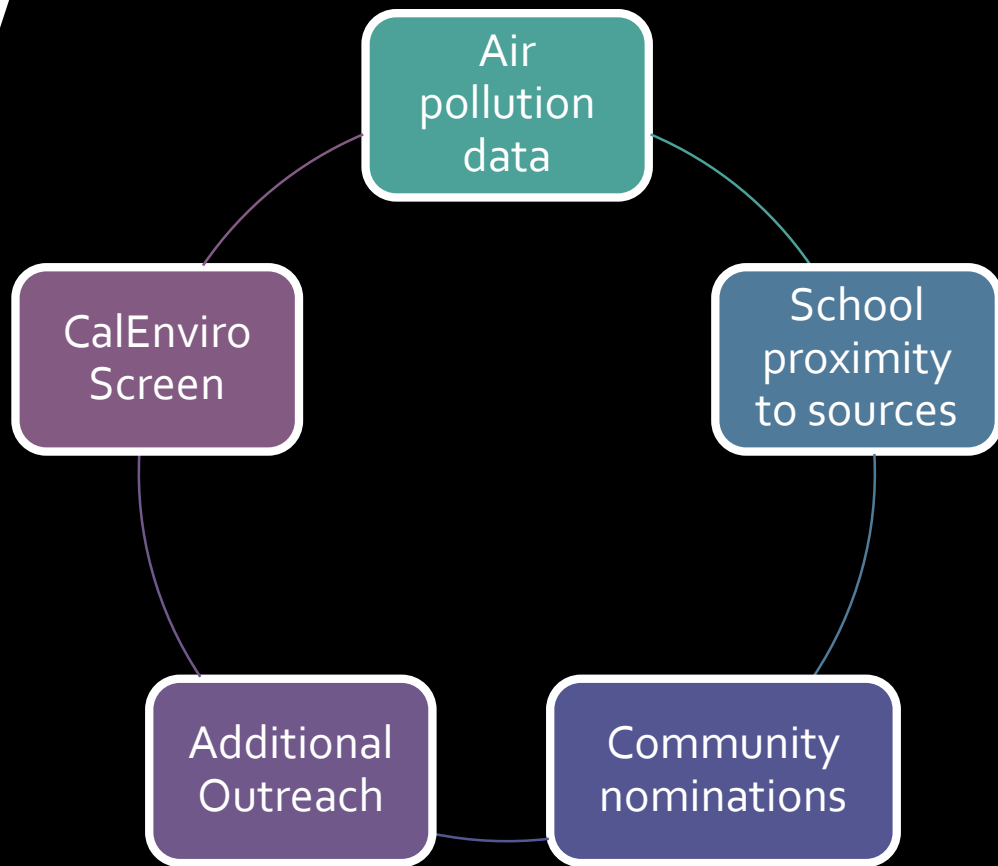

# RECOMMEND COMMUNITIES FOR ASSEMBLY BILL 617 YEAR 2 IMPLEMENTATION

**Governing Board Meeting  
September 6, 2019**

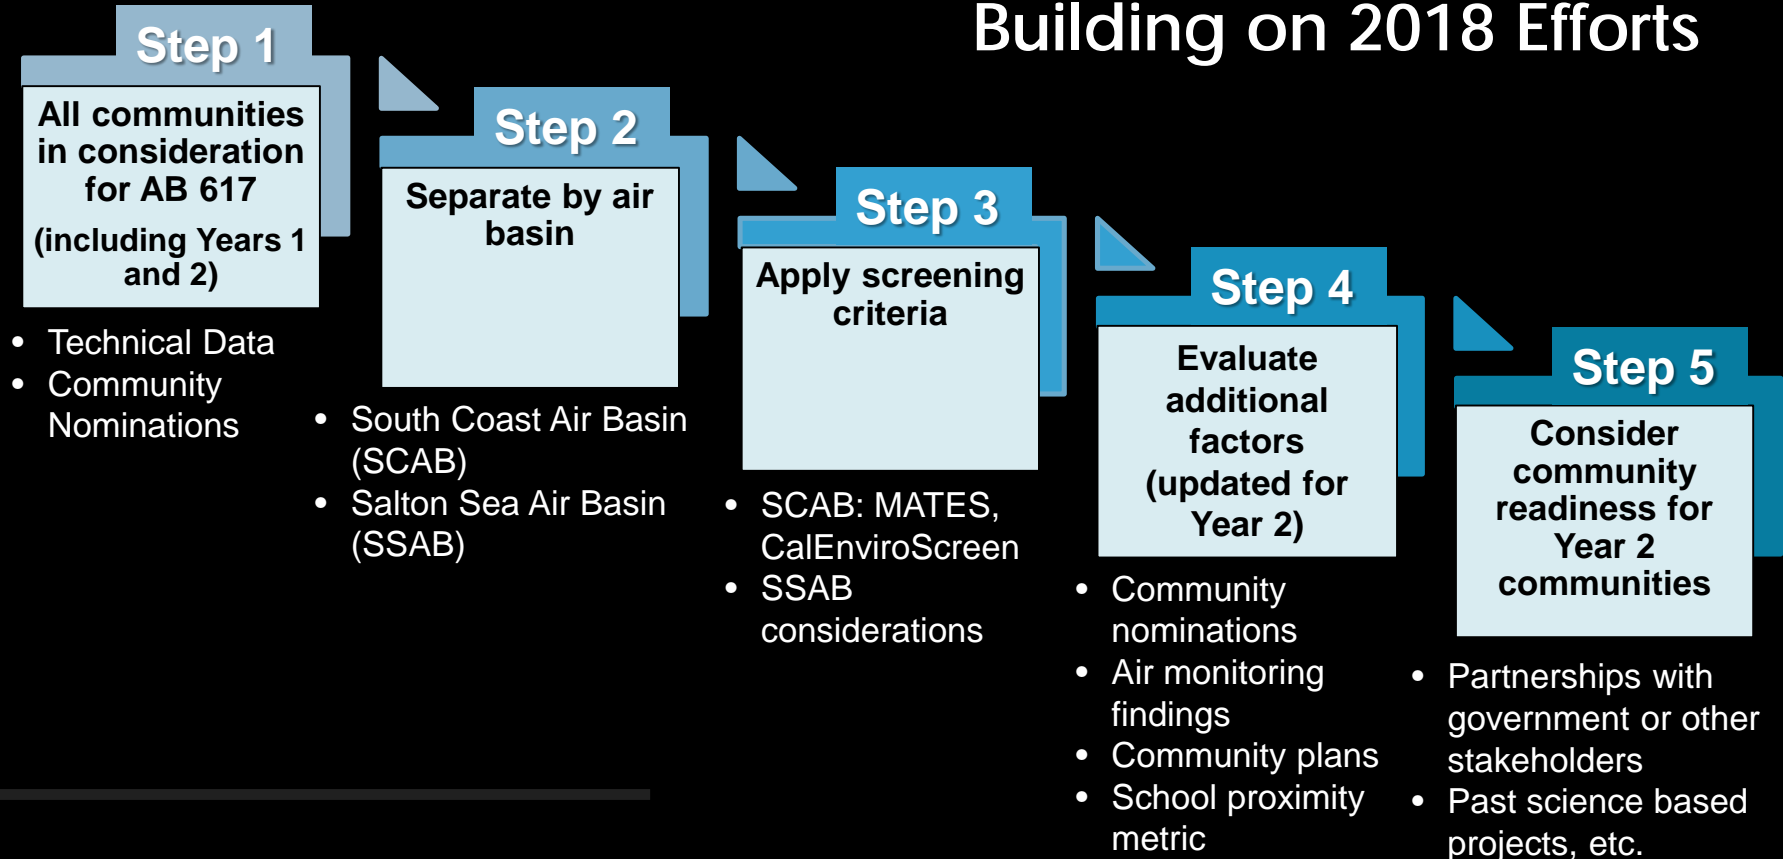

# Year 2 Community Selection

- Built upon 2018 efforts
- 6 dedicated outreach meetings: North Shore, Buena Park, Colton, Huntington Park, Jurupa Valley, South Gate
- 77 self-nominations forms received in 2019

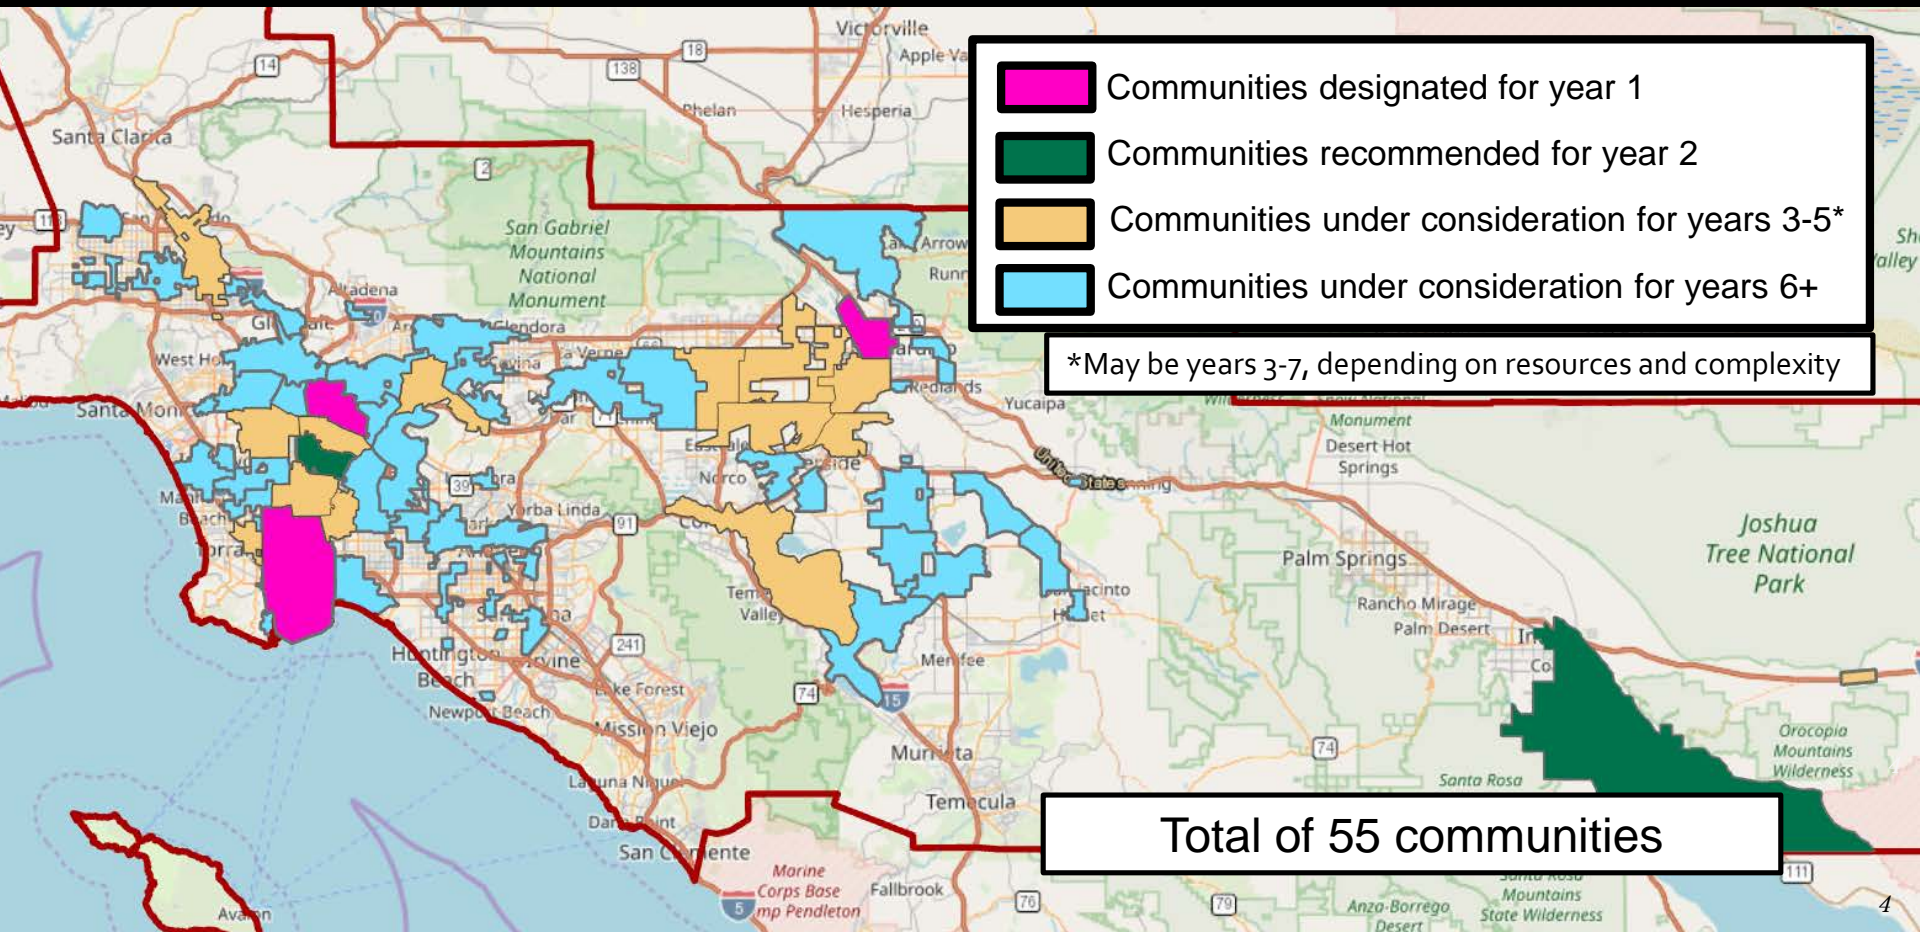

# Approach for Community Prioritization

## Building on 2018 Efforts

# Recommended Implementation Schedule

# Propose for Year 2: Eastern Coachella Valley including Indio, Coachella, Thermal, Oasis, Mecca, North Shore

## Rationale

Rural area affected by emissions from:

- Agricultural operations (e.g., biomass burning)
- Construction activities
- Unpaved roads
- Exposed Salton Sea playa

### Technical Data:

- CalEnviroScreen 3.0: 90.8<sup>th</sup> percentile

# Community Efforts in Eastern Coachella Valley

- Comite Civico del Valle partnered with South Coast AQMD on U.S. EPA STAR Grant air pollution sensors project
- Leadership Counsel for Justice & Accountability partnering with CVAG to develop the Eastern Coachella Valley's Action Plan for Climate Resilience
- Building Healthy Communities is leading a science program deploying community air and water sensors

# Propose for Year 2: South East Los Angeles including South Gate, Florence-Firestone (east), Walnut Park, Huntington Park (west), Cudahy, Bell Gardens (south)

## Rationale

- Recommended by the Board in 2018\*, but was not designated by CARB
- Densely populated community, with rail and truck traffic, and industrial facilities along Alameda Corridor and I-710

### Technical Data:

- MATES IV: 98.2<sup>nd</sup> percentile
- CalEnviroScreen 3.0: 100<sup>th</sup> percentile

\* Boundary has been modified slightly

# Community Efforts in South Gate, Florence-Firestone (east), Walnut Park, Huntington Park (west), Cudahy, Bell Gardens (south)

- LA County Public Health led a Community Risk Reduction Initiative
- South Gate Community Environmental Health Action Team (CEHAT) partnered with South Coast AQMD on low-cost sensor project
- CEHAT collaborated with several agencies to complete an Environmental Health needs assessment
- U.S. EPA Flag program implemented in local schools

# Recommendations & Next Steps

- Seeking Board approval of staff recommendations to send to CARB, along with the technical report and attachments
- December 2019 – CARB designates Year 2 communities statewide

# **Status Report on Regulation XIII – New Source Review**

Governing Board Meeting  
September 6, 2019

# NSR Status Report Overview

## Purpose:

Demonstrate South Coast AQMD's NSR program meets federal NSR offset requirements for Major Sources, as required by EPA, for sources that are exempt from offsets under South Coast AQMD's NSR rule

# NSR Status Report History

- South Coast AQMD has produced Annual NSR Status Reports since 1990
- Around 2002-2004 EPA requested South Coast AQMD to adopt a rule to memorialize equivalency demonstrations
- Rule 1315 - Federal NSR Tracking System adopted in 2006/2007 and revised February 2011
- EPA approved Rule 1315 into the SIP and it became effective on June 25, 2012

# Rule 1315

## Federal NSR Tracking System

- Rule 1315 established procedures to demonstrate equivalency with federal NSR offset requirements
  - Tracks debits from and credits to South Coast AQMD's federal internal offset account for each pollutant
  - Annual Preliminary Determination of Equivalency (PDE), Final Determination of Equivalency (FDE) and Projections
  - Balances in South Coast AQMD's federal offset account must remain positive
  - Cumulative Net Emission Increases must remain below Rule 1315(g) thresholds

# South Coast AQMD's Federal NSR Offset Accounts

## Final Determination of Equivalency (FDE)

# South Coast AQMD's Federal Offset Account Balances (1990 – 2017, and 2018-2019 Projections)

# Conclusions

- The Final Determination of Equivalency for CY 2017 shows South Coast AQMD's NSR program continued to be at least equivalent to the federal NSR offset requirements
- For CYs 2018 and 2019 it is also projected that South Coast AQMD's NSR program will continue to be at least equivalent to the federal NSR offset requirements
- The Cumulative Net Emission Increases for CY 2017 remained below the thresholds identified in Table B of Rule 1315(g)(4)
- Next Preliminary Determination of Equivalency for CY 2018 will be presented to the Board in February 2020

Diamond Bar, CA 91765

ATTN: Michael Morris  
Planning, Rule Development and Area Sources Manager

Re: SCAQMD Rule 1407 Proposed Amendments

Thank you for the opportunity to provide comments relating to the proposed amendments to SCAQMD Rule 1407 (Control of Emissions of Arsenic, Cadmium and Nickel from Non-Chromium Metal Melting Operations). Boeing requests that the following changes/clarifications be incorporated into the proposed amendments to the rule:

- With respect to the proposed language in (k)(1), current proposed language will require that all recordkeeping requirements listed in (g) be followed in order to meet the exemption requirement. Boeing requests that the language be modified to state the following:
  - 'An owner or operator of a non-chromium metal melting operation that melts no more than one ton per year of all non-chromium metals shall maintain records of raw materials processed, including ingots, scrap, and reruns and the associated records to verify these quantities on an annual basis.'
- The proposed language in (k)(9) should be modified to include other maintenance activities such as dip soldering and brazing activities. These activities, while using very small quantities of materials, are typically performed by contractors and the proposed language will result in very burdensome recordkeeping requirements in order to track these types of maintenance activities at a facility.
- Request that (e)(2)(D)(ii) be removed, as appears to be duplicative of the nearly identical requirement stated in (e)(2)(D)(i).

3/3"

3/4"

3/5"

Boeing looks forward to continuing to work with District staff in the development of the proposed amendments to SCAQMD Rule 1407. If you should have any questions or require additional information, please do not hesitate to contact me.

## Comment Letter #2

Ecrkhtpk'O gvcu'Eqrckkqp"  
Lwn' ". '423;

July 8, 2019

Mr. Mike Morris  
South Coast Air Quality Management District  
21865 East Copley Drive  
Diamond Bar, California 91765

Dear Mr. Morris:

The California Metals Coalition appreciates the opportunity to comment on the South Coast Air Quality Management District ("District" or "SCAQMD") workshop proceedings and consideration of **SCAQMD Proposed Amended Rule (PAR) 1407**.

These comments on PAR 1407 are divided into the following sections: Summary; Background on CMC; Comments on Workshop Presentation and Draft Rule Language; and Recommendations for Further Scoping and Development.

### SUMMARY

This comment letter addresses the PAR 1407 slides presented on **June 19, 2019** at the Public Workshop. At the Public Workshop, the SCAQMD provided an overview of the rulemaking, details of the rule requirements, a cost analysis, and draft rule language.

### BACKGROUND ON CMC

California is home to approximately 4,000 metalworking facilities, employing over 350,000 Californians. The average industry salary is \$66,400/year in wages and benefits.

8 out of 10 employees in the metalworking sector are considered ethnic minorities or reside in disadvantaged communities throughout Southern California. A job in the metals sector is often the only path to the middle class for many of these Californians.

Here is a breakdown of the metalworking industry's impact on the 4 counties within SCAQMD jurisdiction:

- Los Angeles County: 54,290 Direct Jobs | 52,741 Indirect Jobs | \$7 billion wages | \$26 billion economic activity

"

- **Orange County:** 25,448 Direct Jobs | 18,912 Indirect Jobs | \$2.9 billion wages | \$10.8 billion economic activity
- **San Bernardino:** 9,778 Direct Jobs | 8,378 Indirect Jobs | \$1.2 billion wages | \$4.5 billion economic activity
- **Riverside:** 6,971 Direct Jobs | 7,712 Indirect Jobs | \$957 million wages | \$3.2 billion economic activities
- **Total:** 96,487 Direct Jobs | 87,743 Indirect Jobs | \$12 billion wages | \$33.8 billion economic activity

California metal manufacturers use recycled metal (ex: aluminum, brass, iron and steel) to make parts for the aerospace industry, clean energy technologies, electric cars, biotech apparatuses, medical devices, national defense items, agriculture, infrastructure, construction machinery, household appliances, food processing and storage, movement of water, and millions of other products demanded by society.

#### COMMENTS ON WORKSHOP PRESENTATION AND DRAFT RULE LANGUAGE

##### Item #1, PAR 1407's Non-Detect Calculation and Unintended Consequences within Rule:

As currently written, a metal melting facility may be required to conduct a source test for arsenic, cadmium and nickel. If the source test results are "non-detect," the non-detect default value (100% of the detection limit) will trigger the facility to install a control device.

As currently written, the control device currently requires a 99% capture efficiency of the "non-detect" value. CMC believes the "non-detect" problem is an unintended consequence of the proposed rule. But the issue still must be addressed.

- **SUGGESTION:** The SCAQMD should align the analysis to be consistent with District R1401 guidance. In this situation, that would mean using a value of zero "0" for ND runs when computing the corresponding emission factor.
  - Once a value is established for "non-detect", CMC suggests that staff re-run the calculations from the single source test used to establish the tonnage throughput limits [Draft Rule Language (k)(3)] based on the purity limits.

4/3"

##### Item #2, Draft Rule Language Definition #25 RERUN SCRAP"

PAR 1407 currently defines Rerun Scrap as "any material that includes sprues, gates, risers, foundry returns, and similar material intended for remelting that has been generated at the facility as a consequence of a casting or forming process but has not been coated or surfaced with any material."

There will be some metal melting facilities regulated by PAR 1407 that can satisfy all parts of this definition except "generated at the facility." A common practice within the metal sector is for customers to return sprues, gates, risers, returns and similar material back to the material provider. Since it is being returned, the material is not "generated at the facility," but it meets all the quality requirements.

4/4"

"

- **SUGGESTION:** CMC suggests adding "customer returns" to the definition of Rerun Scrap. PAR 1407 can add a new requirement under recordkeeping for customer returns so that an inspector can review the material specification sheets that meet the definition of Rerun Scrap.

4/4"  
\*Eqp\0"

**Item #3: Draft Rule Language (k); Using 1402 Determination for Exemption from Emission Controls and Source Test Requirements:**

The source test requirements of PAR 1407 are measured against a cancer risk of 25 in one million. Some metal melting facilities impacted by PAR 1407 have conducted a Rule 1402 cancer risk assessment and continue to update the assessment on a quadrennial basis. Rule 1402 is as strict, and arguably more demanding, than the PAR 1407 source test.

- **SUGGESTION:** CMC suggests allowing facilities that are subject to Rule 1402 requirements, to use the 1402 results or determinations when assessing the need for a control device in PAR 1407. This exemption would not apply to any other part of the rule (ex: recordkeeping, enclosures, housekeeping) and is based on a similar exemption provided in SCAQMD Rule 1469.1.
  - Facilities are exempt from the emission control requirements in section (d)(1) though (4) and source test requirements in section (h) if either of the following conditions are met quadrennially;
    1. A facility can successfully demonstrate facility-wide emissions of all toxic air contaminants result in a cancer risk at all receptor locations through submittal of an approved health risk assessment that reflects representative operating conditions, or submittal of a Risk Reduction plan developed pursuant to Rule 1402 that is fully implemented prior to [Rule adoption date], or submittal of evidence of enforceable permit conditions that limit cancer risk to:
      - 25 in a million if a facility is located more than 25 meters from a residential or sensitive receptor; or
      - 10 in a million if a facility is located 25 meters or less than a residential or sensitive receptor, or located 100 meters or less from an existing school.
    2. if a facility has been determined to be a low priority or intermediate priority facility based on Rule 1402 Prioritization Score as established by the SCAQMD.

4/5"

**Item #4: Draft Rule Language (e)(2)(E) Actively Depositing Materials:**

PAR 1407 includes a housekeeping requirement to keep containers covered at all times "except when material is actively deposited into a receptacle." The depositing of material during the melting process is ongoing and can happen frequently. Dross and slag may be skimmed from the melt and placed in containers for recycling.

- **SUGGESTION:** CMC suggests that the language state "except when material is actively deposited into a receptacle during the melting or pouring process."

4/6"

"

**Item #5, Slides 41-42; Cost Analysis Overstates Ability to Finance Rule Requirements:**

The Workshop presentation included a cost analysis of PAR 1407. CMC strongly disagrees with costs being annualized in any manner. The cost impact of PAR 1407 will occur in year 1 of the rule and draw from the current operating budget of a business.

As an example, building a wall to enclose the building, conducting source tests, or installing a new baghouse are "cash-up-front" transactions.

The only know type of loan that might satisfy this is a "Line of Credit" against the business, which has high interest rates and strict requirements.

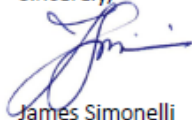

When SCAQMD staff presents a cost analysis for the SCAQMD Stationary Committee or Board, the costs should not be amortized.

4/7"

**RECOMMENDATIONS FOR FURTHER SCOPING AND DEVELOPMENT**

Thank you for your time, and for allowing CMC to participate and comment on PR 1407. We look forward to continued discussions.

Sincerely,

James Simonelli  
Executive Director

Mike Morris  
South Coast Air Quality Management District  
21865 East Copley Drive  
Diamond Bar, California 91765

Dear Mr. Morris,

Kaiser Aluminum ("Kaiser" or "the facility") appreciates the opportunity to comment on the South Coast Air Quality Management District ("District" or "SCAQMD") workshop proceedings and consideration of **SCAQMD Proposed Amended Rule 1407 (PAR 1407)**.

#### General Comment

Kaiser is an AB2588 facility and is thus subject to District Rule 1402 requirements. As a part of these requirements, the facility has previously submitted Air Toxics Inventory Report (ATIR) to the District, most recently on April 30, 2014. That most recent ATIR was approved by the SCAQMD in September 2017 and resulted in a District determination that the Kaiser facility was an Intermediate Priority facility based on a prioritization score of 2.31.<sup>1</sup> As concluded in the District's letter:

*"This demonstrates that for the toxics inventory and emissions level reported, Kaiser does not pose a significant health risk to the surrounding communities and as a result no health risk assessment is required."*

Kaiser has not materially changed its operations and thus, does not anticipate any material changes to its emissions inventory.

The annual emission thresholds (for control system exemption) and the annual throughput thresholds (for purity exemption from the rule) in the draft PAR 1407 proposal were based on a single source test conducted at the Kaiser facility in December 2015. SCAQMD has used this source test to develop emission factors<sup>2</sup> and coupled them with a number of conservative assumptions to establish the proposed emission thresholds and throughput thresholds. It appears the current PAR1407 proposal could require Kaiser to install new emission controls despite the fact that the District has already determined (under Rule 1402) that Kaiser does not pose a significant health risk to surrounding communities. We believe such an outcome conflicts with the intent of the PAR1407 rulemaking. Kaiser offers the following comments on the rule.

<sup>1</sup> Letter from SCAQMD to Edward Swistock, dated September 19, 2017 (Attachment A).

<sup>2</sup> See Comment 2 for more details.

6250 E. Bandini Blvd., Los Angeles, CA 90040

"

**Comment 1:** Rule 1407 should provide an exemption for facilities subject to Rule 1402 that have been determined not to pose a significant health impact. Such a provision could be similar to the exemption found under District Rule 1469.1.

Current draft language for PAR 1407 includes several exemptions under section k. To align PAR 1407 applicability with potential facility risk (as determined by the District), Kaiser proposes an additional exemption from the emission control requirements as well as the source testing requirements be included in Section (k) as follows:

*A facility is exempt from the emission control requirements in sections (d)(1) through (d)(4) and source test requirements in section (h) if either of the following conditions are met;*

1. *A facility can successfully demonstrate facility-wide emissions of all toxic air contaminants result in a cancer risk at all receptor locations through submittal of an approved health risk assessment that reflects representative operating conditions, or submittal of a Risk Reduction plan developed pursuant to Rule 1402 that is fully implemented prior to [Rule adoption date], or submittal of evidence of enforceable permit conditions that limit cancer risk to:*
  - a. *25 in a million if a facility is located more than 25 meters from a residential or sensitive receptor; or*
  - b. *10 in a million if a facility is located 25 meters or less than a residential or sensitive receptor, or located 100 meters or less from an existing school.*
2. *if a facility has been determined to be a low priority or intermediate priority facility based on Rule 1402 Prioritization Score as established by the SCAQMD.*

5/3"

**2. Comment 2:** Pounds per ton arsenic emission factor developed during the rulemaking process does not follow correct SCAQMD guidance. This should be revised in accordance with District R1401 guidance.

AQMD has presented a 700 tons/month or 8,400 tons/year threshold (currently proposed in PAR 1407) based on an emission factor of 1.06E-05 lb of arsenic (As) per ton of scrap processed. At Working Group Meeting #3, staff discussed the calculations used to find this as a maximum throughput required to reach cancer screening risk thresholds of 25 in a million at 100-meter receptor distance. The pounds per ton emission factor was calculated for toxic air contaminants using Kaiser's 2015 source test results. Based on source test results and emission screening levels, the arsenic emission factor drives the calculated throughput limit.

5/4"

We note that in two of the three air samples from the Kaiser 2015 data, arsenic was reported as Non-Detect. AQMD used the arsenic detection level (for these two ND runs) to calculate an emission factor. However, this methodology does not follow AQMD's Rule 1401 guidance<sup>3</sup>, which specifies that in cases where less than 10 samples are collected, and a TAC has been detected in only one sample, non-detect runs are to be assigned a value of zero. If AQMD had followed the R1401 guidance, the correct emission factor would be 2.62E-06 lb of As per ton

<sup>3</sup> SCAQMD 2018. Available at: <http://www.aqmd.gov/docs/default-source/permitting/rule-1401-risk-assessment/riskassessproc-v8-1.pdf?sfvrsn=12>.

6250 E. Bandini Blvd., Los Angeles, CA 90040

"

"

"

of scrap processed<sup>4</sup>. Kaiser believes using published guidance under Regulation XIV is appropriate for Regulation XIV rule development. Assigning detection level values to non-detect runs materially overstates emissions. Kaiser recommends that the District correct this emission factor and update all necessary calculations for the next version of the draft PAR 1407 using a 2.62E-06 lb/ton emission factor.

5/4"  
\*Eqp0"

**Comment 3:** Annual Emission Thresholds proposed under section (d) should use a tiered receptor distance approach.

Existing Rule 1407 (d)(2) states that *"The gas stream from any emission collection system shall be ducted to a control device which shall reduce the particulate emissions by 99 percent or more by weight."* This condition is slightly changed in the PAR Rule 1407. PAR 1407 (d)(3) states that *"by January 1, 2021, owners or operators of non-chromium metal melting operations shall reduce emissions from furnaces by a minimum of 99 percent or meet facility-wide annual mass emission limits as noted in (d)(4)(A), (d)(4)(B), and (d)(4)(C)."* As per these subsection conditions, annual emission limits for As, Cd and Ni are 0.095 lbs/year, 0.74 lbs/year and 12.2 lbs/year respectively, before a control equipment is required.

These annual emission thresholds were back-calculated using emission screening levels for a cancer risk of 25 in a million and a receptor placed 100 meters away from the source. This scenario is not representative of all facilities and unnecessarily imposes requirements on facilities which may not present a significant health risk. Kaiser recommends that PAR 1407 be revised to provide annual emission thresholds that are based on tiered receptor distances, as set forth in the following **Table I:**

5/5"

**Table I. PAR 1407 (d)(4)(A) – Annual Emission Thresholds**

Distance <sup>1</sup>	Toxic Air Contaminant		
	Arsenic (lbs/year)	Cadmium (lbs/year)	Nickel (lbs/year)
100	0.095	0.74	12.2
200	0.295	2.296	37.9
300	0.775	6.039	99.6
400	1.152	8.975	148.0
500	2.243	17.469	288.0

1. Screening emissions at 100 meters based on SCAQMD Rule 1401 risk assessment screening levels for a risk of 25 in a million as currently proposed in PAR 1407.

2. Emission levels at 200, 300, 400 and 500 meters based on scaling x/Q dispersion factors published in the 1401 risk guidance. Assumes a stack height between 14 and 25 feet and facility operation greater than 12 hours per day for worst case meteorology (Banning station).

**Comment 4:** Purity Exemption Thresholds also need a tiered receptor distance approach.

Draft language for PAR 1407 (i)(2) states that the Metal or Alloy Purity Exemption applies to facilities with an annual throughput of less than 8,400 tons per year<sup>5</sup> of non-chromium metal.

5/6"

<sup>4</sup> All calculations and comments in this letter use the corrected arsenic emission factor which was developed following published AQMD R1401 guidelines.

<sup>5</sup> Note, Annual allowable throughput limits should be based on an EF that is developed in accordance with the AQMD R1401 risk assessment guidance.

The annual throughput proposed is based on a cancer risk of 25 in a million for a receptor placed 100 meters away from the source. As mentioned above, this scenario is not representative of facilities with receptors at distances well beyond 100 meters and therefore may unnecessarily limit facility throughput with no corresponding health benefit. Kaiser proposes that annual throughput thresholds for purity exemption be provided as a tiered approach with receptors at various distances from the source. See **Table II** as a proposed update to PAR 1407. Under this proposal, facilities would periodically confirm their nearest receptor location (e.g., quadrennially). The thresholds shown would correlate to a risk of 25 in a million at that receptor distance. Emissions shown in Table I were used to establish these proposed throughputs.

**Table II. Proposed Annual Throughput**

Distance to Receptor (meters)	Proposed Annual Throughput Threshold (tons) <sup>1</sup>	Alternative Proposed Annual Throughput Threshold (tons) <sup>2</sup>
100	8,400	36,294
200	27,904	112,632
300	73,378	296,180
400	109,057	440,193
500	212,272	856,805

<sup>1</sup> Throughputs are calculated incorrectly assuming non-detect compound emissions are equal to the detection limit.

<sup>2</sup> Throughputs are calculated correctly assuming non-detect compound emissions are equal to 0 per SCAQMD guidance.

5/46"  
\*Eqp\0#"

**Comment 5: Draft Rule Language Definition of RERUN SCRAP should include customer returns.**

As per the definition of 'Rerun Scrap' in the current draft rule language material that has left the facility—but is returned as sprues, gates, risers, foundry returns, or similar material is not included. The district staff has expressed concern that once it leaves the facility, an outside process could add oil, coatings, or some other contaminants that could produce emissions. A common practice within the metal sector is for customers to return sprues, gates, risers, returns and similar material back to the material provider. Since it is being returned, the material is not "generated at the facility," despite meeting the quality requirements.

Additionally, there are both industry standards and regulatory definitions which control the quality of scrap returned to a foundry for reprocessing. Because of these standards and regulatory requirements, the metal quality of third-party scrap is compositionally indistinguishable from internally generated Rerun Scrap.

For example, the federal MACT regulations for secondary aluminum production (40 CFR 63 Subpart RRR) strictly regulates the types and quality of aluminum which can be introduced into foundry furnaces. Subpart RRR defines the following terms (40 CFR §63.1503):

Clean charge means furnace charge materials, including molten aluminum; T-bar; sow; ingot; billet; pig; alloying elements; aluminum scrap known by the owner or

6250 E. Bandini Blvd., Los Angeles, CA 90040

5/7"

"

"

operator to be entirely free of paints, coatings, and lubricants; uncoated/unpainted aluminum chips that have been thermally dried or treated by a centrifugal cleaner; aluminum scrap dried at 343 °C (650 °F) or higher; aluminum scrap delacquered/decoated at 482 °C (900 °F) or higher, and runaround scrap.

Customer returns means any aluminum product which is returned by a customer to the aluminum company that originally manufactured the product prior to resale of the product or further distribution in commerce, and which contains no paint or other solid coatings (i.e., lacquers).

In the case of Subpart RRR, clean charge, customer returns, and internal scrap are considered equivalent feedstocks. As such, Kaiser believes the industry standards and regulations are sufficient to protect returned materials from including oil, coatings, or other contaminants. Kaiser suggests adding "customer returns" to the definition of Rerun Scrap and adding a new recordkeeping requirement for customer return logs to be maintained at the facility to note down the material specifications that meet the definition of Rerun Scrap.

Comment 6: There are significant safety and implementation concerns with the housekeeping requirements. Housekeeping requirements currently proposed in the draft rule language require use of approved cleaning methods. APPROVED CLEANING METHODS are techniques to clean while minimizing fugitive dust emissions consisting of wet wash, wet mop, damp cloth, low pressure spray, or vacuum equipped with filter(s) rated by the manufacturer to achieve a 99.97% control efficiency for 0.3 micron particles.

Using any of the approved cleaning methods (other than a "HEPA" vacuum) would involve introducing water or moisture. There are significant safety concerns introducing moisture in high heat environments in aluminum smelting facilities.

1. Explosion possibility

Explosions have occurred in the past at aluminum smelting facilities when any water or similar liquids comes in contact with molten aluminum, including dross tubs. Kaiser's casthouse safety protocols, which conform to The Aluminum Association Molten Aluminum Handling Guidelines, precludes the use of liquids in areas which may come into contact with molten aluminum, regardless of alloy or size. Consequently, none of the suggested wet methods can be used in the casthouse area where there is any potential for exposure to molten aluminum.

2. Release of toxics

When dross comes in contact with water, there is also a significant health and safety risk of byproduct gaseous emissions that result from the exothermic reaction of dross and water. Ammonia, methane, and hydrogen can be created, with ammonia being the most prevalent. Kaiser makes considerable efforts to not allow water to come in contact with the dross.

The only remaining alternative in the proposed rule language are "HEPA" vacuums. For Kaiser, given the layout and size of the facility, using a vacuum for cleaning purposes is not a practical cleaning methodology for all areas.

Although an explosion-proof floor sweeper with "HEPA" filters could conceivably work in some of the floor areas; our initial research of that type of equipment suggests that the commercially available units may not be able to meet the removal efficiency requirements set forth in the current draft of the new rules. Additionally, much of the non-dust debris that is typically present in some areas of the cast house is of sufficient size that it would not be picked up by a vacuum device, and must be mechanically; i.e., dry swept, to be disposed of.

6250 E. Bandini Blvd., Los Angeles, CA 90040

5/7"  
\*Eqp0"

5/8"

"

Page 6 of 8

Kaiser recognizes that cleaning is important to reduce the potential release of fugitive emissions; however, the allowable cleaning techniques need to be feasible. Particularly in Kaiser's case where the metals (arsenic and cadmium, and nickel) that drive the risk assessment results are not used by Kaiser in our manufacturing operations, but are rather low level or non-detect background impurities that are not unlike native area soils. Therefore, Kaiser requests that AQMD revisit the cleaning requirements to provide cleaning options/protocols that are both practical and achievable so that Kaiser, and facilities similar to Kaiser, can continue to safely operate.

5/8"  
\*Eqp0t"

Thank you for the opportunity to comment and we would appreciate if the district considered and incorporated these in the next version of the rule.

Sincerely,

Edward E. Swistock, PE  
Project Manager

## Attachment A - SCAQMD ATIR Approval Letter

Via E-mail, Certified Mail and Return Receipt

September 19, 2017

Mr. Edward E. Swistock, P.E.  
Project Manager  
Kaiser Aluminum Fabricated Products, LLC  
6250 E. Bandini Blvd.  
Los Angeles, CA 90040

Subject: AB2588 Air Toxics Inventory Report (ATIR) Approval  
Kaiser Aluminum Fabricated Products, LLC (SCAQMD Facility ID No. 16338)

Dear Mr. Swistock:

The South Coast Air Quality Management District (SCAQMD) staff notified you by letter dated October 11, 2013 to prepare a detailed ATIR. Your ATIR submitted on April 30, 2014 for calendar year (CY) 2010 emissions has been reviewed and SCAQMD staff has updated your facility's priority score. As noted in the Facility Priority Score Form attached to this letter, the updated priority score is in the Intermediate Priority (Category B, 1 < Priority Score <= 10) specified in the "SCAQMD Supplemental Guidelines for Preparing Risk Assessments and Risk Reduction Plan for the Air Toxics 'Hot Spots' Information and Assessment Act, November 4, 2016."<sup>1</sup> Therefore, a Health Risk Assessment (HRA) is not required.

**Background**

In accordance with the State of California's Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) and SCAQMD Rule 1402, SCAQMD staff notified your facility on October 11, 2013 that it must submit a detailed ATIR because of the high priority scores from the emissions inventory report for CY 2010. The ATIR prepared pursuant to this request was submitted on April 30, 2014.

A source test for dioxin/furan emissions was conducted from September 24-26, 2014 and the report was submitted to us on October 28, 2014. The source test report was conditionally approved by

<sup>1</sup> Available here: <http://www.scaqmd.gov/home/regulations/compliance/airtox-hat-meth-ab-2588>

"

"

Page 8 of 8

Kaiser Aluminum Fabricated Products, LLC

2

September 19, 2017

SCAQMD's Source Test staff on November 14, 2014. A site visit to your facility was conducted on October 8, 2014 to understand your facility's operational activities.

A multiple metals, total chromium, hexavalent chromium and hydrogen sulfide compounds source test for the natural gas fired aluminum melting furnace (D9) was conducted from December 15-16, 2015. The source test report was submitted on February 25, 2016 and correction pages were submitted on June 9, 2016. The source test report was conditionally approved by SCAQMD's Source Test staff on June 23, 2016.

Incorporating the results of the source tests, SCAQMD staff recalculated your facility's 2010 priority score and determined it to be 2.31. Your facility's revised Priority Score demonstrates that for the toxics inventoried and the emission levels reported, your facility does not pose a significant health risk to the surrounding community and as a result no Health Risk Assessment is required. Therefore, you have complied in full with your obligations under AB 2588 Program. Please be aware that your facility is still in the "District Tracking" category of the AB 2588 Program and you are required to submit a quadrennial emissions inventory for year 2018. Your facility continues to be subject to an annual Hot Spots fee (refer to Table I of Rule 307.1) based on the results of your approved ATER. Should your facility have significant changes in activities or operations, please notify SCAQMD promptly.

We thank you for your participation in the AB 2588 program. If you have any questions regarding this letter, please contact Victoria Moavani at (909) 396-2455, or myself.

Sincerely,

Julian Wong, Ph.D.  
Planning and Rules Manager

July 10, 2019

Mr. Michael Morris  
Planning, Rule Development, and Area Sources  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

RE: Comments on Proposed Amended Rule 1407—Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations

Sent via e-mail to [mmorris@aqmd.gov](mailto:mmorris@aqmd.gov)

Dear Mr. Morris,

Los Angeles Waterkeeper (LAW) submits the following comments on Proposed Amended Rule 1407—Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations.

LAW is a nonprofit environmental organization composed of over 3,000 members that works to protect and restore the inland and coastal surface and groundwaters throughout Los Angeles County. The South Coast AQMD jurisdiction includes the South Coast Air Basin, which includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernadino counties. Los Angeles Waterkeeper and its partner organizations thus advocate for improved water quality of many waterbodies within the South Coast AQMD jurisdiction.

Aerial pollutants such as arsenic, cadmium, and nickel from industrial sources can cause or exacerbate water quality problems both directly by deposition into waterbodies and indirectly by deposition onto land and subsequent runoff into water bodies. LAW has reviewed the Proposed Amended Rule 1407 and supports eliminating Rule 1407's overly broad exemptions, such as the "metal or alloy purity" and "clean aluminum scrap" exemptions, as metals containing arsenic, cadmium, and/or nickel pose a risk to the health of surrounding communities and waterbodies.

6/3"

### Effect of Particulate Matter on Waterbodies

Air serves as a medium for metals to directly and indirectly enter inland and coastal waterbodies. Particulate matter can increase acidity and/or change nutrient balances in waterbodies, deplete nutrients in soil, contribute to acid rain effects, and affect overall ecosystem

"

diversity.<sup>1</sup> These combined effects damage ecosystem health and threaten the water quality of streams, lakes, and the oceans in the South Coast AQMD jurisdiction. Further, metal particles are not biodegradable, allowing them to remain in waterbodies and contaminate drinking water supply.<sup>2</sup>

### **The Clean Water Act, Water Quality Standards, and Air Pollution**

The federal Clean Water Act (CWA) aims to “restore and maintain the chemical, physical, and biological integrity of the Nation’s waters.”<sup>3</sup> The CWA requires states to adopt water quality standards that support the waterbody’s uses and protect the public health and welfare. The CWA presumes all water bodies should be fishable and swimmable.<sup>4</sup> States must monitor water quality and identify impaired or threatened waters. Once a state designates a waterbody as impaired, it must develop a strategy to restore the water quality. The California Water Code §13020, known as the Porter-Cologne Water Quality Act, enables the State Water Resources Control Board and Regional Water Quality Control Boards to implement the federal Clean Water Act pursuant to the California Water Code.

Airborne pollution affects this process in two ways. First, the Environmental Protection Agency has declared the direct and indirect deposition of particulate matter into waterbodies as a source of nonpoint pollution. Section 319 of the CWA requires states to develop nonpoint source pollution management programs. Additionally, stormwater runoff transports fallen particulate matter from surfaces (such as buildings and streets) into bodies of water. The CWA designates stormwater runoff as point source pollution and requires cities to implement Stormwater Management programs.

LAW therefore supports the Proposed Amended Rule 1407 with a few additional suggestions. First, we ask for more coordination between the South Coast Air Quality Management District and the Los Angeles Regional Water Quality Board in recognition that air, land, and water pollution do not respect the jurisdictional boundaries of regulatory agencies. In particular, SCAQMD should consider the effect of air pollution on waterbodies within its jurisdiction. Fugitive gases especially pose a risk of degrading water quality when metal burning operations are situated in close proximity to waterbodies such as the Los Angeles River, which suffers numerous water quality impairments. Additionally, while the Proposed Amended Rule 1407 will sunset the majority of Rule 1407’s exemptions, certain exemptions remain. For example, facilities that melt less than one ton per year are only subject to recordkeeping provisions. We request clarification to what extent fugitive emissions could pose a threat to water quality, even from relatively small sources, from facilities in close proximity to waterbodies.

<sup>2</sup> Geiger, A., & Cooper, J. (2010). Overview of airborne metals regulations, exposure limits, health effects, and contemporary research. *Environmental Protection Agency, Air Quality: Washington, DC, USA*.

<sup>3</sup> 33 U.S.C. 1251 (a)

<sup>4</sup> 33 U.S.C. 1251 (a)(2) states, “it is the national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water be achieved by July 1, 1983”

Lastly, we recommend that SCAQMD include cost savings when conducting the Socioeconomic Impact Assessment of Proposed Amended Rule 1407. Reduced emissions of arsenic, cadmium, and nickel will lead to improved health of the surrounding communities and waterbodies. This translates into economic benefits, such as lowered health care costs and lowered costs from compliance with water quality standards.<sup>5</sup> While these metrics can be difficult to calculate, they should at the very minimum be noted in the overall cost benefit analysis of the Proposed Amended Rule 1407 to ensure a more accurate socioeconomic impact analysis.

6/6"

Thank you for this opportunity to comment on the Proposed Amended Rule 1407.

Sincerely,

Kathryn Pettit  
Law Fellow,  
Los Angeles Waterkeeper

<sup>5</sup> See, for example, *The Cost of Air Pollution: Strengthening the economic case for action*, a report by the World Bank and Institute for Health Metrics and Evaluation, finding that air pollution cost the United States over \$450 billion in total welfare losses in 2013. The U.S. Office of Management and Budget reported that U.S. Environmental Protection Agency regulations issued between 2004 to 2014 to improve air quality provided between \$157 billion and \$777 billion in economic benefits to the United States.

02 August, 2019

Mike Morris  
South Coast Air Quality Management District  
21865 East Copley Drive  
Diamond Bar, California 91765

Dear Mr. Morris,

Kaiser Aluminum ("Kaiser" or "the facility") appreciates the opportunity to comment on the South Coast Air Quality Management District ("District" or "SCAQMD") workshop proceedings and consideration of **SCAQMD Proposed Amended Rule 1407 (PAR 1407)**.

## General Comment:

Kaiser previously provided comments in regards to this matter on or about 09 July, 2019 inclusive of six specific comments. We appreciate the dialogue that we have had with District staff as a result of these previous comments. In addition to the previous six comments we offer an additional three comments, and elaborate on comment #6, included below for clarity.

**Comment 6:** *There are significant safety and implementation concerns with the housekeeping requirements. Housekeeping requirements currently proposed in the draft rule language require use of approved cleaning methods. APPROVED CLEANING METHODS are techniques to clean while minimizing fugitive dust emissions consisting of wet wash, wet mop, damp cloth, low pressure spray, or vacuum equipped with filter(s) rated by the manufacturer to achieve a 99.97% control efficiency for 0.3 micron particles.*

*Using any of the approved cleaning methods (other than a "HEPA" vacuum) would involve introducing water or moisture. There are significant safety concerns introducing moisture in high heat environments in aluminum smelting facilities.*

1. Explosion possibility

*Explosions have occurred in the past at aluminum smelting facilities when any water or similar liquids comes in contact with molten aluminum, including dross tubs. Kaiser's casthouse safety protocols, which conform to The Aluminum Association Molten Aluminum Handling Guidelines, precludes the use of liquids in areas which may come into contact with molten aluminum, regardless of alloy or size. Consequently, none of the suggested wet methods can be used in the casthouse area where there is any potential for exposure to molten aluminum.*

2. Release of toxics

*When dross comes in contact with water, there is also a significant health and safety risk of byproduct gaseous emissions that result from the exothermic reaction of dross and water. Ammonia, methane, and hydrogen can be created, with ammonia being the most prevalent. Kaiser makes considerable efforts to not allow water to come in contact with the dross.*

*The only remaining alternative in the proposed rule language are "HEPA" vacuums. For Kaiser, given the layout and size of the facility, using a vacuum for cleaning purposes is not a practical cleaning methodology for all areas.*

7/3"

6250 E. Bandini Blvd., Los Angeles, CA 90040

"

*Although an explosion-proof floor sweeper with "HEPA" filters could conceivably work in some of the floor areas; our initial research of that type of equipment suggests that the commercially available units may not be able to meet the removal efficiency requirements set forth in the current draft of the new rules. Additionally, much of the non-dust debris that is typically present in some areas of the cast house is of sufficient size that it would not be picked up by a vacuum device, and must be mechanically removed; i.e., dry swept, to be disposed of.*

*Kaiser recognizes that cleaning is important to reduce the potential release of fugitive emissions; however, the allowable cleaning techniques need to be feasible. Particularly in Kaiser's case where the metals (arsenic and cadmium, and nickel) that drive the risk assessment results are not used by Kaiser in our manufacturing operations, but rather are trace level or non-detect background impurities that are not unlike native area soils. Therefore, Kaiser requests that AQMD revisit the cleaning requirements to provide cleaning options/protocols that are both practical and achievable so that Kaiser, and facilities similar to Kaiser, can continue to safely operate.*

**Update to comment #6: (#6.a):** Kaiser remains concerned with compliance on this issue. In further researching the availability of HEPA dry sweepers with a 99.97% 0.3 micron capture efficiency, there are some models that appear to be available. As a point of reference, the vendor we contacted refers to this as a "MERV 17" filtration system, using the OSHA nomenclature. In contacting these vendor(s), they do not offer explosion proof unit, which may limit their safe use for aluminum dust

We also believe that we will need to scrap and/or "dry-sweep" the floor surface to remove the larger metal pieces. These materials do not meet the definition of "dust" as contained in PAR 1407 Draft Rule Language. Since weekly housekeeping will be required using "Allowable Methods" as defined in the current rule language, we request that clarifying language be added that recognizes and allows cleaning of "non-dust" materials by other methods.

It is worth noting that this dust does not contain free elemental forms of the toxic metals in question, since the trace elements are contained in the stable aluminum alloy matrix, and are only potentially liberated in the presence of very high temperatures or purposeful chemical reactions that dissolve the aluminum matrix.

**Comment #7:** Housekeeping - e.1.C-D states the "All areas where furnace and casting operations occur... " "shall be cleaned at least weekly..." The word "All" is troublesome from an enforcement standpoint. It could be interpreted to mean the 30' ceiling, crane rails, purlins, etc. Will it be possible to use the same language that is in the cutting and grinding sections of the rule specifying floors within 20 feet?

**Comment #8:** In the definition of "Metal Cutting" in section c.18 the word "abrasively"; i.e. non-mechanical, is used in the definition. This verbiage is not included in subsequent sections where [metal] cutting is referenced. Will it be possible to be consistent in the rule language to differentiate between "abrasive" cutting and non-abrasive mechanical cutting?

7/3"  
\*Eqp0"

7/4"

7/5"

6250 E. Bandini Blvd., Los Angeles, CA 90040

"

**Comment #9:** Effective date – housekeeping. It is very unlikely that Kaiser would be able to specify and purchase the required HEPA compliant equipment within 30 days as specified in the rule. Will it be possible to change the effective date to 01 July 2020 to align with the building enclosure requirements?

7/6"

Thank you for the opportunity to comment and we would appreciate if the district considered and incorporated these in the next version of the rule.

Sincerely,

Edward E. Swistock, PE  
Project Manager  
Kaiser Aluminum Fabricated Products, LLC

### **CalEEMod Files and Assumptions – Building Enclosure Construction**

## 1407 Enclosure Improvement 2 Walls - South Coast AQMD Air District, Winter

**1407 Enclosure Improvement 2 Walls**  
**South Coast AQMD Air District, Winter****1.0 Project Characteristics****1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	4.00	1000sqft	0.09	4,000.00	0

**1.2 Other Project Characteristics**

<b>Urbanization</b>	Urban	<b>Wind Speed (m/s)</b>	2.2	<b>Precipitation Freq (Days)</b>	31
<b>Climate Zone</b>	9			<b>Operational Year</b>	2020
<b>Utility Company</b>	Southern California Edison				
<b>CO2 Intensity (lb/MWhr)</b>	702.44	<b>CH4 Intensity (lb/MWhr)</b>	0.029	<b>N2O Intensity (lb/MWhr)</b>	0.006

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - assumption: 100x100 ft building, construct 2 walls = 40% = 4,000 sf

Construction Phase - assumptions: 5 days construction

Off-road Equipment - default hp, and LF. Equipment type and hr/day are from the previous EA for R1155 assumptions. Double the unit amount since two baghouses will be installed at the same time (worst case)

Off-road Equipment - assumptions: 4hrs per day, equipment based on PAR 1420 enclosure construction

Trips and VMT - assumptions 1 hauling trips, 3 workers/day

Demolition -

Grading -

## 1407 Enclosure Improvement 2 Walls - South Coast AQMD Air District, Winter

Table Name	Column Name	Default Value	New Value
tblConstructionPhase	NumDays	100.00	5.00
tblOffRoadEquipment	HorsePower	46.00	97.00
tblOffRoadEquipment	LoadFactor	0.45	0.37
tblOffRoadEquipment	OffRoadEquipmentUnitAmount	2.00	1.00
tblOffRoadEquipment	UsageHours	6.00	4.00

## 1407 Enclosure Improvement 2 Walls - South Coast AQMD Air District, Summer

**1407 Enclosure Improvement 2 Walls**  
**South Coast AQMD Air District, Summer****1.0 Project Characteristics****1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	4.00	1000sqft	0.09	4,000.00	0

**1.2 Other Project Characteristics**

<b>Urbanization</b>	Urban	<b>Wind Speed (m/s)</b>	2.2	<b>Precipitation Freq (Days)</b>	31
<b>Climate Zone</b>	9			<b>Operational Year</b>	2020
<b>Utility Company</b>	Southern California Edison				
<b>CO2 Intensity (lb/MWhr)</b>	702.44	<b>CH4 Intensity (lb/MWhr)</b>	0.029	<b>N2O Intensity (lb/MWhr)</b>	0.006

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - assumption: 100x100 ft building, construct 2 walls = 40% = 4,000 sf

Construction Phase - assumptions: 5 days construction

Off-road Equipment - default hp, and LF. Equipment type and hr/day are from the previous EA for R1155 assumptions. Double the unit amount since two baghouses will be installed at the same time (worst case)

Off-road Equipment - assumptions: 4hrs per day, equipment based on PAR 1420 enclosure construction

Trips and VMT - assumptions 1 hauling trips, 3 workers/day

Demolition -

Grading -

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - assumption: 100x100 ft building, construct 2 walls = 40% = 4,000 sf

Construction Phase - assumptions: 5 days construction

Off-road Equipment - default hp, and LF. Equipment type and hr/day are from the previous EA for R1155 assumptions. Double the unit amount since two baghouses will be installed at the same time (worst case)

Off-road Equipment - assumptions: 4hrs per day, equipment based on PAR 1420 enclosure construction

Trips and VMT - assumptions 1 hauling trips, 3 workers/day

Demolition -

Grading -

Making Conservation  
a California Way of Life.

July 18, 2019

Barbara Radlein  
South Coast Air Quality Management District  
21865 Copley Drive  
Diamond Bar, CA 91765

File: IGR/CEQA  
12-ORA-2019-01164

Dear Ms. Radlein,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Draft Environmental Analysis (EA) for the Proposed Amended Rule (PAR) 1407 – Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability.

Proposed amendments to Rule 1407 would apply to metal melting operations such as smelting, tinning, galvanizing, and other miscellaneous processes where nonchromium, instead of non-ferrous, metals such as aluminum, brass, bronze, carbon steel, and zinc are processed in molten form. PAR 1407 revises emission standards, establishes monitoring provisions for air pollution control equipment, adds building enclosure provisions to limit fugitive emissions, and updates housekeeping, source testing, and monitoring, recordkeeping, and reporting requirements. The Draft EA indicated that while the project may further reduce fugitive emissions of arsenic, cadmium and nickel, complying with PAR 1407 may also create secondary adverse environmental impacts that would not result in significant adverse impacts to any environmental topic areas. Some facilities affected by PAR 1407 may be identified on lists compiled by the California Department of Toxic Substances Control per Government Code Section 65962.5.

PAR 1407 applies to any owner or operator of non-chromium metal melting operations, including, but not limited to, smelters, foundries, die-casters, coating processes, and other miscellaneous processes such as dip soldering, brazing and aluminum powder production. The South Coast AQMD has jurisdiction over an area of approximately 10,743 square miles, consisting of the fourcounty South Coast Air Basin (Basin) (Orange County and the non-desert portions of Los Angeles, Riverside and San Bernardino counties), and the Riverside County

*"Provide a safe, sustainable, integrated and efficient transportation system  
to enhance California's economy and livability"*

"

South Coast Air Quality Management District

Page 2

portions of the Salton Sea Air Basin (SSAB) and Mojave Desert Air Basin (MDAB). The Basin, which is a subarea of South Coast AQMD's jurisdiction, is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto mountains to the north and east. It includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The Riverside County portion of the SSAB is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley. A federal non-attainment area (known as the Coachella Valley Planning Area) is a subregion of Riverside County and the SSAB that is bounded by the San Jacinto Mountains to the west and the eastern boundary of the Coachella Valley to the east.

After reviewing the Draft EA, at this time, Caltrans does not have any comments. Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Julie Lugaro at 657-328-6368 or [Julie.lugaro@dot.ca.gov](mailto:Julie.lugaro@dot.ca.gov).

Sincerely,

Scott Shelley  
Branch Chief, Regional-IGR-Transit Planning  
District 12

# Proposed Amended Rule 1407 Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Chromium Metal Melting Operations

Governing Board Meeting  
September 6, 2019

# Background

---

- Rule 1407 was adopted in 1994
  - Implements the state Airborne Toxic Control Measure (ATCM) for Emissions of Toxic Metals from Non-Ferrous Metal Melting
- Objective is to reduce arsenic, cadmium, and nickel emissions from non-chromium metal melting operations
  - Non-chromium metal defined as any metal that contains less than 0.5% chromium
- Rule 1407 currently addresses non-ferrous metals which generally includes aluminum alloys, copper alloys, and super alloys

# General Approach

- Revise applicability from non-ferrous metals to non-chromium metals
  - Develop new rule to address chromium metal melting (Proposed Rule 1407.1)
- Proposed Amended Rule 1407
  - Revise emission standards
  - Tighten overly-broad exemptions
  - Add building enclosure provisions
  - Enhance emission control device monitoring and update housekeeping, source testing, and recordkeeping requirements
- Provisions are similar to lead melting rules (Rule 1420 series)

Alloy Type							
Al & Al Alloys (PAR 1407)	Carbon Steel (PAR 1407)	Brass (Rule 1420 or PAR 1407)	Bronze (Rule 1420 or PAR 1407)	Lead (Rule 1420)	Stainless Steel (PR 1407.1)	Alloy Steel (PR 1407.1)	Super Alloys (PR 1407.1)

# Emission Control Requirements

- For each toxic air contaminant individually:
  - Meet a control efficiency per furnace; or
  - Meet aggregate mass emission limit
- Source Testing
  - Initial source testing
  - Periodic source testing every 5 years
- Emission Control Device Monitoring
  - Demonstrate control equipment working properly

## Emission Limits

Arsenic

AND

Cadmium

AND

Nickel

99%  
reduction  
(per furnace)

OR

0.000066  
lbs/hour  
(aggregate)

99%  
reduction  
(per furnace)

OR

0.000514  
lbs/hour  
(aggregate)

99%  
reduction  
(per furnace)

OR

0.00848  
lbs/hour  
(aggregate)

Exemption from emission control requirements for facilities with:

- A Health Risk Assessment with a maximum individual cancer risk  $< 10 \times 10^{-6}$
- Air Toxics Inventory Report with a Facility Priority Score  $< 10$

# Fugitive Emission Controls

---

- Enhanced Housekeeping

## Cleaning

- Weekly cleaning
- Prohibition of use of compressed air

## Material Storage

- Enclosed storage area
- Building enclosure
- Covered container

## Other

- Remove weather caps
- Quarterly inspection of emission control devices

- Building Enclosures

- Addresses cross drafts in areas where metal melting operations occur, including metal grinding and cutting

# Exemptions

---

## Metal or Alloy Purity Exemption

- Current Rule 1407 has no throughput limitation for using the metal or alloy purity exemption
  - Despite the metals having relatively low concentrations of contaminants, facilities melting very large quantities can have significant arsenic, cadmium, and/or nickel emissions
- PAR 1407 includes a throughput limit for using the metal or alloy purity exemption

## Clean Aluminum Scrap Exemption

- Current Rule 1407 does not include concentration limits for arsenic, cadmium, or nickel when using clean aluminum scrap exemption
  - Clean aluminum scrap is free of contaminants (oil, paint, grease, etc.), but still may contain arsenic, cadmium, and nickel, which may result in emissions
- PAR 1407 phases out clean aluminum scrap exemption

# Key Issue

## *Amortization of Costs in the Socioeconomic Analyses*

Comment	Response
<ul style="list-style-type: none"><li>• Cost impact of PAR 1407 will occur in the first year after rule adoption</li><li>• The costs to facilities should not be amortized in the socioeconomic analysis</li><li>• The costs draw from the current operating budget of a business</li></ul>	<ul style="list-style-type: none"><li>• Socioeconomic analysis typically annualizes capital costs to allow for the cost of financing and the opportunity cost of capital</li><li>• Staff report includes total costs as requested by the commenter</li><li>• Between \$5.4 and \$6.4 million are one-time costs in the first year after rule adoption</li><li>• Total present worth value cost to meet the 2020 compliance date is \$43.4 million to \$59.6 million using a 4 percent or 1 percent discount rate respectively over a 21 year period</li></ul>

# Summary

---

- PAR 1407 will address emissions of arsenic, cadmium, and nickel from non-chromium metal melting operations by:
  - Limiting point source emissions from furnaces and associated cutting and grinding operations
  - Reduce fugitive emissions through enhanced housekeeping and building enclosure provisions
  - Revise overly broad exemptions that previously did not account for toxic air contaminant levels in metal processed
- Requirements in PAR 1407 are similar to recently adopted metal processing rules

# Recommended Actions

---

- Adopt the Resolution:
  - Certifying the Final Environmental Assessment
  - Amending Rule 1407

BOARD MEETING DATE: September 6, 2019

AGENDA NO. 25A

**PROPOSAL:** Determine That Community Emissions Reduction Plan for San Bernardino, Muscoy Community Is Exempt from CEQA and Adopt Community Emissions Reduction Plan Per Assembly Bill 617

**SYNOPSIS:** Assembly Bill (AB) 617 requires air districts to prepare Community Emissions Reduction Plans (CERPs) for the Year 1 communities selected by CARB. The CERPs provide a blueprint for achieving air pollution emission and exposure reductions within each community, and are tailored to address the community's air quality priorities. The CERPs include actions to reduce emissions and exposures, an implementation schedule, an enforcement plan, and a description of the process and outreach conducted to develop the CERP. Community partnership and engagement have been critical throughout the development of the CERPs.

**COMMITTEE:** Stationary Source, July 26, 2019, Reviewed

**RECOMMENDED ACTIONS:**

1. Determine that the Community Emissions Reduction Plan for the San Bernardino, Muscoy community is exempt from the requirements of the California Environmental Quality Act; and
2. Adopt the AB 617 Community Emissions Reduction Plan for the San Bernardino, Muscoy community.

Wayne Nastri  
Executive Officer

## Background

California law known as Assembly Bill (AB) 617 established new requirements for improving air quality in California communities heavily impacted by air pollution. AB 617 requires a statewide strategy with focused actions for communities heavily impacted by air pollution. These actions include developing community air monitoring plans (CAMPs) and/or community emissions reduction plans (CERPs) to reduce emissions of toxic air contaminants (TACs) and criteria pollutants.

In 2018, the California Air Resources Board (CARB) adopted the Community Air Protection Blueprint (Blueprint) to guide the development (e.g., public process), content, and implementation of CAMPs and CERPs. An overview of the process to develop these documents as described in the CARB Blueprint is provided in Figure 1 – Overview of Community Emissions Reduction Program Process.

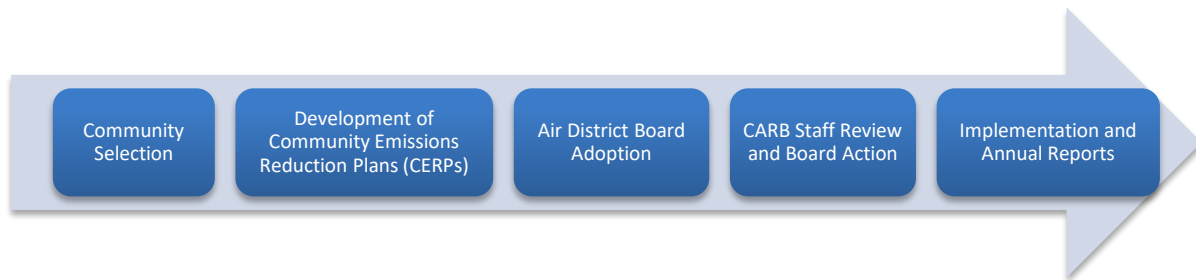

Figure 1: *Overview of Community Emissions Reduction Program Process*

On September 27, 2018 CARB designated three Year 1 communities within the South Coast AQMD for preparation of a CAMP and CERP for each community. The three communities approved by CARB were: 1) Wilmington, Carson, West Long Beach; 2) San Bernardino, Muscoy; and 3) East Los Angeles, Boyle Heights, West Commerce. The AB 617 statute directs air districts to adopt CERPs within one year of the CARB designation.

## Public Process

*Community Steering Committees, Technical Advisory Group and Public Outreach*  
Beginning October 2018, staff implemented a community-focused process to develop draft CERPs that focus on the air quality priorities for each Year 1 community. The cornerstone of this process was the formation of a Community Steering Committee (CSC) for each community. The CSCs are made up of active residents, community leaders, local business owners or workers, labor unions, community organizations, local agencies, schools, universities, hospitals, and elected officials. The CSC provided their input and guidance based on community expertise that was instrumental to developing the CERPs. CSC members also conducted their own community-level outreach to additional members within the community who may not have been able to attend our meetings. Since October 2018, a total of nine CSC meetings were held in each of the three communities, and approximately 50 – 100 people attended each meeting.

In February 2019, the AB 617 Technical Advisory Group (TAG) was established to provide a forum to discuss technical details related to source attribution, air monitoring and other technical analysis needed to develop the CAMPs and CERPs. Examples of topics discussed at TAG meetings are monitoring equipment, laboratory capabilities, and methodologies for developing emissions inventories. The TAG met in February, May, and July 2019.

In addition to the CSC and TAG meetings, staff held community workshops, and individual meetings with residents, community leaders, stakeholders, and public officials to enhance community participation and input in the development of the CERPs. South Coast AQMD staff also created a community webpage to post updates and information about the development of the CAMP and CERP.

### **Proposal**

Staff is recommending adoption of the CERP for the San Bernardino, Muscoy community. Through the CSCs and public participation at the community meetings, this community identified their highest priority air quality issues based on local sources of air pollution. The CSC worked with staff to develop a set of actions to be implemented by South Coast AQMD, in collaboration with other government agencies, organizations, businesses, and other entities. Each action is to be carried out based on a set of strategies with goals and timelines to reduce emissions or exposure. The entity (e.g., government agency, organization, or business) responsible for the actions is also identified. Some actions will be conducted within the timeframes specified in the plan, while other activities such as rules would continue to apply and be enforced beyond the implementation period of the plan.

The AB 617 Year 1 communities share some common air quality priorities that are primarily driven by the movement of goods throughout the region. For example, each CSC identified air pollution from trucks and equipment used at railyards as a community air quality priority. The need for prioritizing air pollution from these sources is not surprising, given that mobile sources are the overwhelming source of diesel particulate matter in these communities, which is the predominant contributor to air toxics cancer risk. The major diesel sources in this community are heavy-heavy duty trucks, medium-heavy duty trucks, off-road diesel equipment, and trains. Additionally, the communities expressed concerns about locations where children and populations who are more vulnerable to the effects of air pollution as an air quality priority for exposure reduction efforts.

This CERP is tailored to address the air quality priorities identified by this community. The actions to address the air quality priorities in the San Bernardino, Muscoy community are summarized below.

### *Air Quality Priorities*

The San Bernardino, Muscoy community identified neighborhood truck traffic, warehouses, the Omnitrans bus yard, railyards, concrete batch plants and asphalt/aggregate plants as air quality priorities for emission reductions actions. In addition, schools, childcare centers, community centers, and homes were priorities for exposure reduction efforts. Notable actions in the draft CERP for the San Bernardino, Muscoy community include: reducing emissions from heavy-duty trucks transiting the community by working with local land use agencies to establish designated truck routes, promoting the installation of infrastructure needed to support zero emission vehicles and equipment at warehouses, supporting a transition to zero emission transit buses, replacing older diesel-fueled equipment with cleaner technologies at railyards, and reducing children's exposure to harmful air pollutants by working with local schools to install high efficiency filtrations systems.

### **Key Issues**

#### *Emission Reduction Targets*

The CERP outlines a list of actions to address the air quality concerns prioritized by the CSC in this community. Some CSC members indicated that the CERP lacked quantifiable emission reduction targets and metrics, and strongly emphasized the importance of including metrics for emission reductions that can be quantified. Staff estimated emission reduction targets resulting from mobile source incentive projects to be 40 to 50 tons per year (tpy) of NO<sub>x</sub> and 0.5 to 0.6 tpy of diesel PM (DPM) based on historical data of past projects which replaced older diesel equipment with cleaner models. Additionally, CARB has committed to considering amendments to their rules and regulations to address the air quality priorities in this community. CARB's future Advanced Clean Truck Rule, Heavy-Duty Low NO<sub>x</sub> Rule, and the Heavy-Duty Inspection and Maintenance Rule are estimated to reduce an additional 82.6 tpy of NO<sub>x</sub> and 0.4 tpy of diesel PM in the community by 2029. The overall NO<sub>x</sub> and diesel PM emission reduction targets for this community are 75 tpy of NO<sub>x</sub> (10% reduction) and 0.9 tpy of diesel PM (10% reduction) by 2024, and 128 tpy of NO<sub>x</sub> (21% reduction) and 1.4 tpy of diesel PM (15% reduction) by 2029.

#### *Health Metrics and Outcomes*

Some CSC members have requested use of health metrics and outcomes as a tool to measure success from emission reductions under the AB 617 program. Such metrics are not, however, required or advisable. The primary metrics identified in the Blueprint focus on ways of measuring the reduction of emissions. The Blueprint recommends use of monitoring and/or modeling data. To the extent additional metrics are identified in the Blueprint, they include tracking the status of rules, the dollar amount invested in incentives, the number of various types of actions, including projects implemented, enforcement actions taken, public meetings held in community, interactions with public officials, trainings, outreach, workforce development, and technical capacity-building. (See Community Air Protection Blueprint, Appendix C, p. C33-C35.) All of these

metrics are more appropriate because they focus on items that are quantifiable and specifically tied to CERP actions. In comparison, a health metric cannot measure the success of CERP actions taken to reduce emissions because there are many factors which contribute to health outcomes and cumulative public health burdens. Moreover, short-term health benefits are difficult to assess, especially with the information that is available. One would need to conduct a study to establish a health baseline and track improvements over time. Such studies are costly and may not show the long-term health benefits achieved from the emission reductions in the CERP.

Although it is not currently feasible to use health metrics and outcomes as tools for measuring the success of the CERP, health data has been a critical part of this process. South Coast AQMD used health data in the prioritization of communities for the implementation of community plans. Health data also informed various policy decisions, including CARB's decision to focus on toxic air contaminants and PM2.5. The CERP will have positive impacts on public health, for example, by reducing emissions of diesel particulate matter, which is the primary contributor to air toxics cancer risk in the community. In addition, to bring further public health benefits to the community, the CERP includes actions to partner with local health organizations for direct public health interventions, such as asthma management programs. Similarly, the CERP includes actions to conduct school-based outreach to provide air quality information, such as the Clean Air Ranger Education (CARE) program. The CERP also includes collaborative efforts with local organizations to provide public information on how to receive air quality advisories and reduce exposure to air pollution. This type of outreach would be provided to school, childcare centers, and at community events. Finally, when CARB received a comment asking it to include tracking of health indicators, it did not agree that such tracking was appropriate. Instead, it too responded with information on the *other* ways that health data would be incorporated into the program. CARB declared: "Reducing emissions and improving air quality in overburdened communities will lessen the cumulative impacts that air pollution has on public health." (See CARB Summary of Comments – Community Air Protection Program, <https://ww2.arb.ca.gov/summary-comments-community-air-protection-program>)

### **California Environmental Quality Act (CEQA)**

Pursuant to CEQA and South Coast AQMD Rule 110, the South Coast AQMD, as lead agency for the CERP, has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense

Exemption. The proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment, because it is designed to protect or enhance the environment. Further, the CERP contains action items which qualify as feasibility or planning studies which are statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies. Additionally, the CERP may result in some minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 – New Construction or Conversion of Small Structures. The CERP involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection. The CERP also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections. Finally, the CERP relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies. South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, the proposed project is exempt from CEQA. A Notice of Exemption has been prepared pursuant to CEQA Guidelines Section 15062 – Notice of Exemption. If the project is approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties.

### **Implementation Plan/Schedule**

Implementation of the San Bernardino, Muscoy CERP is anticipated to begin in the third quarter 2019. CARB staff will begin reviewing and evaluating this CERP as soon as the third quarter 2019 and is expected to hold at least one public workshop in the South Coast AQMD prior to The CARB Board's consideration of each of the CERPs. CARB has scheduled a public hearing to approve the CERPs on March 16, 2020. The implementation of this CERP is to take place over approximately five years.

### **Benefits to South Coast AQMD**

Implementation of the San Bernardino, Muscoy CERP will help advance our mission to reduce air pollution at a community scale, especially in the most impacted and disadvantaged communities within South Coast AQMD's jurisdiction. The San Bernardino, Muscoy CAMP and CERP will serve as statewide models for AB 617 Year 2 implementation and beyond. Additionally, emissions reductions achieved through implementation of the CERPs will provide emission reduction co-benefits toward achieving state and national air quality standards.

**Resource Impacts**

The Community Air Protection incentive funds will be used toward implementing associated incentive projects. In 2019, South Coast AQMD received \$85,570,000 in total grant funding through the Community Air Protection funds, which includes 6.25% administrative funds. South Coast AQMD received \$10.8 million for the initial implementation of AB 617 and \$20 million for the first year of this program. There is no increase in the funding level for Year 2.

The anticipated resource needs for South Coast AQMD's ongoing implementation of AB 617 is \$30.7 million per year. This assumes that two to three new communities are added each year, and each community program lasts approximately five years with a maximum of 14 communities in the program simultaneously. There is no increase in the funding level for Year 2. Staff continues to work with the California state legislature to set aside sustained funding for AB 617 statewide. In June 2019, the Board approved an increase in toxics fees, which will help to provide resources for air toxics programs at South Coast AQMD, including some but not limited to AB 617 toxics-related efforts.

South Coast AQMD budget impacts for future years are dependent on the number of communities that are designated, and the amount of funding allocated by the legislature to support AB 617 implementation by the local air districts. Staff will be vigilant in monitoring all AB 617 related expenditures to ensure efficient use of resources and will use its experience and insights to plan and forecast future expenditures.

# AB 617 Community Emissions Reduction Plan for San Bernardino, Muscoy

The Community Emissions Reduction Plan (CERP) reflects the community's air quality priorities and brings new improvements to air quality in the San Bernardino, Muscoy community.

## How much air pollution will this Plan reduce?

The CERP will reduce pollution from trucks and other mobile sources. Specifically, the CERP target reductions for mobile source emissions are:

	By 2024	By 2029
NOx	75 tpy (~10% reduction)	128 tpy (~21% reduction)
Diesel PM	0.9 tpy (~10% reduction)	0.9 tpy (~15% reduction)

tpy = tons per year

The CERP will also reduce air pollution in other ways that are not yet quantifiable. This includes actions to conduct truck idling enforcement, reduce fugitive dust from certain facilities, and develop Indirect Source Rules for Warehouses and Railyards. The CSC and staff will track progress on these actions, along with the emission reductions.

## How will this Plan benefit the San Bernardino, Muscoy community?

### Incentive Funds

To accelerate replacement of old dirty trucks with technology that is cleaner than required.

### Focused Enforcement

To ensure rules are being followed, especially in the priority areas identified by the community.

### New Rule Development

To reduce emissions from mobile sources, which are the main contributors to air toxics in this community.

### Inter-agency work

To work with land use agencies to develop policies that reduce the impact of air pollution sources on residents.

### School Programs

To reduce the indoor levels of air pollution that children are breathing at school.

# What actions are in this Plan?

## Neighborhood Truck Traffic

- Idling truck sweeps and truck enforcement in priority areas
- Work with City and County to establish truck routes and parking areas
- Incentive funds for cleaner trucks
- Use data and new technology to help target incentive funding
- Develop Indirect Source Rules, Drayage Truck Rule, Advanced Clean Truck Rule, and Heavy-Duty Low NOx Rule

## Warehouses

- Develop Indirect Source Rule for Warehouses
- Enhance land use policies to reduce residents' exposure to truck emissions from warehouses (work with City and County)
- Work with local utilities to encourage zero-emission infrastructure

## OmniTrans Bus Yard

- Air monitoring near the facility to identify potential emission sources
- Support deployment of zero-emission buses and infrastructure

## Railyards

- Develop Indirect Source Rule for Railyards, Drayage Truck Rule, TRU Regulation, CHE Rule
- Work with CARB to consider new requirements on locomotives
- Work with BNSF to replace diesel equipment with cleaner technologies
- Work with local utilities to encourage zero-emission infrastructure

## Concrete Batch, Asphalt Batch, and Rock/Aggregate Plants

- Outreach to operators on best practices and rule requirements
- Focused air monitoring and inspections to identify potential emissions or violations

## Schools, Childcare Centers and Community Centers

- Clean Air Ranger Education (CARE) and Why Air Quality Matters (WHAM) programs at local schools
- Outreach to schools (partner with the SB County Public Health, CCAEJ, ChICCCAA, Safe Routes to School)
- Asthma management program (partner with Arrowhead Regional Medical Center)
- Air filtration systems
- Increase green space and plant trees

More details provided in CERP documents on this webpage:  
[www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/san-b](http://www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/san-b)

THANK YOU!

The South Coast AQMD staff thank the San Bernardino and Muscogee community members for their tireless efforts in developing this CERP.

## San Bernardino, Muscoy AB 617 Community Emissions Reduction Plan - Actions

		CERP Action Summary			Strategies						Key Entities	
AQ Priority	Action	Reduce Exposure	Reduce Emissions	Key Pollutant Type(s)	Regulations	Incentives	Enforcement	Public Info and Outreach	Air Monitoring	Collaboration	  Others	
Neighborhood Truck Traffic	<b>Action 1:</b> Reduce Emissions from Illegal Heavy-Duty Truck Idling in the Community (e.g. enforcement, idling sweeps)		●	Diesel PM, NOx			●	●		●	●	CSC members
Neighborhood Truck Traffic	<b>Action 2:</b> Reduce Emissions from Heavy-Duty Trucks Transiting the Community (e.g. incentives, truck routes, FBMSM, CARB rule development)		●	Diesel PM, NOx	●	●	●	●		●	●	City of SB, County of SB, CSC members
Neighborhood Truck Traffic	<b>Action 3:</b> Utilize Existing Traffic Information and New Technology to Identify Older Trucks for Incentive Programs		●	Diesel PM, NOx		●		●	●	●	●	City of SB, County of SB, CSC members
Warehouses	<b>Action 1:</b> Conduct Outreach to Local Governments to Encourage Avoidance of Air Quality Impacts from New Warehouse Development	●		Diesel PM, NOx				●		●		City of SB, County of SB
Warehouses	<b>Action 2:</b> Develop Proposed Indirect Source Rule for Warehouses	●	●	Diesel PM, NOx	●			●		●	●	CSC members
Warehouses	<b>Action 3:</b> Promote Installation of Infrastructure Needed to Support Zero-Emission Vehicles and Equipment		●	Diesel PM, NOx				●		●		Southern California Edison and other fueling providers
OmniTrans Bus Yard	<b>Action 1:</b> Conduct Air Monitoring to Identify the Composition and Level of Emissions Near the Omnitrans Bus Yard			Diesel PM, odors					●		●	
OmniTrans Bus Yard	<b>Action 2:</b> Support Omnitrans' Transition to Zero-Emission Buses		●	Diesel PM, NOx				●		●	●	OmniTrans
Railyards	<b>Action 1:</b> Reduce Emissions from Railyards (e.g. development of ISR, CARB regulations, incentive projects, and work with utilities on ZE infrastructure)		●	Diesel PM, NOx	●	●			●	●	●	BNSF and CSC members
Concrete Batch, Asphalt Batch, and Rock and Aggregate Plants	<b>Action 1:</b> Reduce Fugitive Dust, Particulate Matter (PM10), and Odors		●	PM10, odors			●	●	●		●	
Schools, Childcare Centers, Community Centers, and Homes	<b>Action 1:</b> Reduce Exposure to Harmful Air Pollutants through Public Outreach (e.g. school-based programs, asthma management programs)	●		PM, Diesel PM, air toxics				●	●	●	●	SB County Public Health, Arrowhead Regional Medical Center, CCAEJ, ChICCCAA, others
Schools, Childcare Centers, Community Centers, and Homes	<b>Action 2:</b> Reduce Exposure to Harmful Air Pollutants at Schools, Childcare Centers, and Community Centers (e.g. air filtration systems)	●		PM, Diesel PM, air toxics						●	●	Schools, Childcare Centers, Community Centers
Schools, Childcare Centers, Community Centers, and Homes	<b>Action 3:</b> Reduce Exposure to Harmful Air Pollutants at Homes (e.g. weatherization, home filtration systems)	●		PM, Diesel PM, air toxics		●		●			●	
Schools, Childcare Centers, Community Centers, and Homes	<b>Action 4:</b> Increase Green Space in Areas Where People Spend Time	●		General				●		●	●	CSC members
Schools, Childcare Centers, Community Centers, and Homes	<b>Action 5:</b> Replace Older School Buses		●	Diesel PM, NOx				●			●	

**SUMMARY OF CHANGES TO AB 617  
COMMUNITY EMISSIONS REDUCTION PLANS (CERPS) BASED ON COMMENTS RECEIVED**

**San Bernardino, Muscoy CERP**

- New Additions to CERP
  - Executive Summary
    - Added summary of response to comments
  - Chapter 5e: Railyards
    - Added community meeting for Railyard Indirect Source Rule (ISR)
    - Added new implementing entities
  - Appendix 3a: Community Profile
    - Added list of RECLAIM and AB 2588 facilities
  - Appendix 4: Enforcement Plan
    - Added status of enforcement actions
  - Appendix: Response to Comments
    - Added response to comments
- Revisions to CERP
  - Chapter 5a: Introduction
    - Revised emission reduction targets based on CARB measures (NOx: 128 tpy, DPM: 0.9 tpy)

## Executive Summary

This Community Emissions Reduction Plan (CERP) outlines the actions and commitments by the Community Steering Committee (CSC), the South Coast AQMD, and the California Air Resources Board (CARB) to reduce air pollution in the San Bernardino, Muscoy community. An essential piece of the AB 617 program is the partnership and collaboration with the community to ensure that the CERP addresses the community's air quality priorities. At the center of these efforts is the CSC that was established, in part, to participate in the development and implementation of these plans. The CSC is a diverse group of people who live, work, own businesses, and/or attend school within the community. Local land use agencies, the local public health department, a local utility, and representatives from local universities and elected officials who serve the community are also part of the CSC. CSC members provided guidance, insight, critique, and community wisdom, all of which were elements in the development of the CERP. The CERP is a critical part of implementing Assembly Bill 617 (AB 617), which is a California law that addresses the disproportionate impacts of air pollution in environmental justice communities. The AB 617 program aims to invest new resources and conduct focused actions in these communities to improve air quality as a step toward environmental equity.

The San Bernardino, Muscoy community identified the following air quality priorities to be addressed by this plan:

- Neighborhood truck traffic
- Warehouse on-site emissions
- Omnitrans bus yard
- Railyards
- Concrete batch, asphalt batch, and rock and aggregate plants
- Schools, childcare centers, community centers, and homes – exposure reduction

At its core, this plan seeks to address the identified priorities with actions that reduce air pollution emissions from sources within this local community as well as reduce air pollution exposures to the people in this community. The plan includes targeted actions using complementary strategies, including developing and enforcing regulations, providing incentives to accelerate the adoption of cleaner technologies, and conducting outreach to provide useful information to support the public in making informed choices. Additionally, air monitoring strategies will be used to help provide critical information to help guide investigations or provide public information. Collaborative efforts with other agencies, organizations, businesses, and other stakeholders will amplify the impact of these actions. Many of the actions will only be conducted during the time frame of this plan, there are also many actions (such as regulation, ongoing enforcement activities, and certain incentive programs) that will be ongoing activities conducted by the South Coast AQMD.

This plan focuses on improving air quality ~~seeks to bring real air quality improvements~~ in the San Bernardino, Muscoy community, through concentrated ~~focused~~ efforts and community partnerships. The CSC will continue to be engaged throughout the process of implementing the CERP and tracking its progress.

### The Reader's Guide to the CERP

The opening chapters provide background information about the AB 617 program and timeline (Chapter 1), the CSC process and community engagement (Chapter 2), and information about the air pollution sources in the community (Chapter 3).

Information about past and ongoing enforcement activities conducted by both the South Coast AQMD and CARB enforcement staff are described in Chapter 4. This information will provide insights into enforcement efforts going forward.

The specific actions to be implemented are described in Chapter 5 – Actions to Reduce Community Air Pollution. This chapter is organized by air quality priority area, and the strategies proposed for each priority area are presented in the CERP action templates. Within each CERP action, the responsible entities are identified, along with the timeframe and goals for implementing the proposed action. The CERP actions are numbered in the order in which they are presented in each section. Chapter 5 also includes a California Environmental Quality Act (CEQA) analysis based on the proposed actions within this plan.

A summary of the air monitoring approach is included in Chapter 6. These efforts are described in much greater detail in the Community Air Monitoring Plan (CAMP),<sup>1</sup> which serves as the sister document to the CERP. The actions described in Chapter 5 include specific air monitoring activities, as they relate to other specific actions in the CERP. The CAMP describes the overall air monitoring approach to address the community air quality priorities. Findings from air monitoring will help to evaluate next steps, and South Coast AQMD staff will work with the CSC to review findings and make necessary adjustments.

The Appendices ~~Appendix~~ to the CERP will include additional reference material related to the CERP content.

## Summary of Response to Comments

The CSC, South Coast AQMD and CARB closely collaborated to develop the San Bernardino, Muscoy CERP. Development of the CERP occurred over a year-long process that included 9 CSC meetings, 3 Technical Advisory meetings, 2 Community Workshops, and over 25 individual meetings. The South Coast AQMD staff received over 200 comments from industry trade organizations, businesses, government agencies, community members, environmental organizations, and other entities for the CERP. The table summarizes each comment and identifies if the commenter's request is included (●) or not included (◆) in the CERP. The table also provides a brief staff response that explains where requests that are included in the CERP can be found or why the request was not included. More detailed responses to comments can be found in Appendix RTC of the San Bernardino, Muscoy CERP.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
<b>General Concerns on the CERPs</b>				
i	Perform a community health assessment in order to have quantifiable goals and targets	Andrea Vidaurre, Ericka Flores (Center for Community Action and Environmental Justice); Christopher Chavez (Coalition for Clean Air)	◆	Reducing air pollution will have public health benefits, and the most direct method to measure plan progress is to evaluate what emission reductions have been achieved. In addition, conducting a study to establish a health baseline and track improvements over time is costly and may not show the long term health benefits achieved from the emission reductions in the CERP. In Chapter 5g, Action 1, staff includes a collaboration with Arrowhead Regional Medical Center to provide outreach to schools for asthma-related programs (i.e., Breathmobile program), which has a direct impact on improving public health. Emission reductions in the CERP provide long term benefits for public health.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ii	CERP lacks emission projections or reduction targets	Christopher Chavez (Coalition for Clean Air), Matt Abularach-Macias (California League of Conservation Voters & CLCV Ed Fund)	●	The source attribution analysis is in Chapter 3b and includes baseline and projected emissions. Emission reduction targets have been identified, where quantifiable, and are included in Chapter 5a.
iii	Support the accelerated adoption and prioritization of zero-emission technology and a robust, clean electric infrastructure	Andrea Vidaurre, Ericka Flores (Center for Community Action and Environmental Justice), Matt Abularach-Macias, California League of Conservation Voters & CLCV Ed Fund	●	The CERP prioritizes zero-emission technologies, where commercially available and technologically feasible; and where zero-emissions technology are not available, equipment will be replaced with cleaner technology (i.e., near-zero) through incentives to achieve much needed emissions reductions sooner. Incentives can be used toward infrastructure projects and is also included in the CERP.
iv	Provide an effectiveness analysis for enforcement and outreach activities	Luis Portillo (Inland Empire Economic Partnership)	●	Staff agrees that resources should be used toward actions that are effective in reducing emissions, and will discuss with the CSC any suggested adjustments to the strategy. Staff will evaluate the effectiveness and necessity of the enforcement actions based on data collected (i.e., from idling sweeps).

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
v	Actions in the CERP should go above and beyond what is already required in the region	Andrea Vidaurre, Ericka Flores (CCA EJ)	●	Actions specified in the CERP have been written to address the air pollution sources prioritized by the CSC within the San Bernardino, Muscoy community. These actions are community specific and go beyond existing efforts that are outlined in the Air Quality Management Plan (AQMP).
vi	CARB should take a more active role in the creation, implementation, and reassessment of the CERP	Andrea Vidaurre, Ericka Flores (CCA EJ)	●	CARB agrees to take an active role in providing emissions reductions in the San Bernardino, Muscoy community. CARB staff will continue to work collaboratively with the San Bernardino, Muscoy community and South Coast AQMD on the implementation of the CERP.
vii	Emission reductions should meet the State Implementation Plan (SIP) creditable criteria. However, emission reductions that do not meet these criteria should not be excluded	Christopher Chavez (Coalition for Clean Air)	●	South Coast AQMD staff continues to pursue a suite of actions to achieve emission reductions, including some that meet SIP creditable criteria, and some that do not meet the criteria but are equally important to reducing emissions in this community.
viii	CERP relies on incentive funding and does not assign responsibilities to polluters	Christopher Chavez (Coalition for Clean Air)	●	A suite of strategies are used to address the air quality priorities; however, incentive funding is only provided toward projects that reduce emissions above and beyond current requirements. Any regulations adopted by the South Coast AQMD and CARB will be applicable to those entities subject to the regulations.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ix	CERP does not mention BARCT requirements	Christopher Chavez (Coalition for Clean Air)	●	RECLAIM NOx facilities, typically larger facilities, will transition to a command-and-control regulatory structure to meet BARCT and Appendix 3a identifies one RECLAIM facility in this community. The rules affected by the RECLAIM transition will also incorporate equipment at non-RECLAIM facilities that are within the community and do not meet BARCT requirements by requiring these facilities to do so. The BARCT assessment is still currently being conducted and the list of affected non-RECLAIM facilities has not been finalized.
x	Specifics on what a “living document” means to be written in the CERP	Matt Abularach-Macias (California League of Conservation Voters & CLCV Ed Fund)	●	The CERP specifies that the document is written with built-in flexibility to allow for adjustments as new information (e.g., air monitoring data, new technology, etc.) becomes available.
xi	Language in the CERP should be user-friendly	Mary Valdemar (San Bernardino Valley College)	●	Staff has tried to make the more technical sections of the CERP to be more user-friendly by including explanations of tables, clarifying language, and improving readability of some graphs.
xii	What do the ton per year reductions represent as percentages in relation to the total emissions that are being emitted in the community?	Matt Abularach-Macias (California League of Conservation Voters & CLCV Ed Fund)	●	NOx and DPM percentage reductions have been calculated based of the community's baseline and they have been added to Chapter 5a.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
xiii	Is 1,3 butadiene being considered in the CERP?	Andreas Beyersdorf (Cal State University San Bernardino)	●	Diesel PM is the biggest contributor to the overall cancer risk in the community; therefore, a large part of the CERP is focused on addressing these emissions. In addition, the CSC has prioritized mobile sources, which are a large contributor to diesel PM. While 1,3-butadiene is not specifically a target pollutant for reduction, it is a component of diesel exhaust. Therefore, reducing diesel emissions will also reduce 1,3-butadiene emissions.
xiv	What actions are taken if polluters do not comply with rules and regulations?	Jason Martinez Chicano Indigenous Community for Culturally Conscious Advocacy & Action (ChICCCAA)	●	If polluters do not comply with South Coast AQMD rules and regulations, they will be subject to enforcement action that potentially include orders for abatement and actions for civil penalties. For the most egregious cases, referral to local criminal prosecutors is also a possibility. (see Appendix 4).
xv	Actions to reduce emissions should be based on technical review of sources contributing to community-level exposures	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB)	●	The source attribution analysis is included in Chapter 3b and identifies the baseline emissions and the source contributors to this community. The analysis supports the actions to address the sources prioritized by the CSC.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
xvi	South Coast AQMD staff should work with all stakeholders to ensure that data collection, data interpretation and communications of results will be clear, transparent, and understandable	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB)	●	Staff will continue efforts to ensure that data collection, data interpretation, and communication of results are clear, transparent, and understandable to public users. The AB 617 Community Air Monitoring website and its Data Display tool has launched and provides community air monitoring data.
xvii	South Coast AQMD should establish realistic timeframes and work with community members while developing, tracking and quantifying effective program	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB)	●	The CERP includes emission reduction goals and a course of action (i.e., step-by-step measures) with an estimated timeline. Staff will provide updates to the CSC on emissions reduction progress.
<b>Neighborhood Truck Traffic</b>				
i	Increase incentives to replace older trucks	Luis Portillo (IEEP)	●	Staff is reviewing opportunities to improve funding for programs to accelerate fleet turnover to cleaner vehicles.
ii	Identify where older trucks operate to direct existing resources more effectively	Luis Portillo (IEEP)	●	Staff will work with CARB to explore the feasibility of using the Automated License Plate Reader (ALPR) system for targeted outreach on incentives for trucks in this community (see Chapter 5B, Action 3)
iii	How can community members report idling vehicles?	Ryan Sinclair (Loma Linda University)	●	Idling vehicles can be reported to 1-800-CUT-SMOG. Chapter 5, Action 1, has also been incorporated into the CERP to provide information to the community on reporting idling trucks.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
iv	Scrappage programs should be used to maximize emission reduction programs	Priscilla Hamilton (SoCalGas)	●	Older, higher polluting trucks that are replaced with cleaner technology through the Carl Moyer Program or Prop 1B are scrapped.
v	Funding technology advancement is contrary to the purpose of AB 617 - Current year incentives should be used for available technologies	Priscilla Hamilton (SoCalGas)	●	The community has prioritized zero-emission technology where commercially available and technologically feasible; thus, funding technology advancement will expedite the development, demonstration, and commercialization of these types of technologies. Current year incentives will be used for available technologies.
vi	Incentives should prioritize technologies that can maximize emission reductions today	Priscilla Hamilton (SoCalGas)	●	The CERP prioritizes zero-emission technologies, where commercially available and technologically feasible; and where zero-emissions technology are not available, equipment will be replaced with cleaner technology (i.e., near-zero) through incentives to achieve much needed emissions reductions sooner.
vii	CERPs should include a discussion of what funds have been allocated to date and how investments will achieve quantifiable results and community benefits.	Janet Whittick, California Council for Environmental and Economic Balance (CCEEB)	●	This information will be provided in the annual progress reports, and also provided to the CSC as part of the periodic updates.
<b>Warehouses</b>				

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
i	Implement and provide updates on the Facility Based Measures and Indirect Source Rules (ISR) for warehouses	James Albert (San Bernardino resident), Andrea Vidaurre, Ericka Flores (CCA EJ), Christopher Chavez (CCA)	●	Staff will continue to develop the proposed ISR for warehouses and provide updates to the CSC as specified in Action 2 of Chapter 5c. Staff encourages CSC members to participate in the rule development process.
ii	Require green space to reduce air pollution within the community and noted green spaces have been compromised by warehouse development	Several members of the public, Valerie Dobesh, Ericka Flores and Andrea Vidaurre (CCA EJ)	●	Action 4 in Chapter 5g includes identifying new or existing sources or programs that can provide funding for tree planting. In addition, in Chapter 5c, Action 1, South Coast AQMD will work with the City of San Bernardino and San Bernardino County staff to discuss and enhance land use policies to reduce residents' exposure to emissions from trucks visiting warehouse facilities.

Railyards				
i	Environmental Railyard Research Impacting Community Health (ENRRICH) study ignores the potential impacts of other emission sources near the San Bernardino railyard and BNSF disagrees with the authors' conclusions	LaDonna DiCamillo (BNSF)	●	The ENRRICH study provided new information about public health outcomes that were identified as community priorities (e.g. asthma, cancers). Drawing conclusions about causality is complex and typically requires a comprehensive review of the scientific literature; such efforts are not the aim of the CERP.

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
ii	BNSF requests that the District consult with the railroads before conducting new fenceline and/or mobile monitoring	LaDonna DiCamillo (BNSF)	●	Staff will continue to engage all members of the CSC (including BNSF) on future air monitoring strategies through quarterly or biannual updates. If monitoring is required inside the BNSF facility, South Coast AQMD staff will work with BNSF staff to coordinate these efforts.
iii	CERP needs to commit to a strong ISR for railyards	Christopher Chavez (CCA)	●	South Coast AQMD will continue to develop the ISRs in parallel to the AB 617 efforts and provide updates to the CSC on the rule development process. Details of ISR requirements need to be conducted in the rule development process so that all stakeholders can participate in the public process.
iv	More information on current efforts to reduce emissions from railyards is needed, and railroads still need responsibilities assigned to them	Christopher Chavez (CCA)	●	Staff has added BNSF to the Implementing Agency, Organization, Business or Other Entity with responsibilities in Chapter 5e. Any rules and regulations adopted by the South Coast AQMD and CARB will be applicable to those entities subject to the rules and regulations.
v	BNSF should provide updates to the community	Andrea Vidaurre (CCA EJ)	●	BNSF will continue their participation in FBMSM workshops, work with South Coast AQMD to identify potential emission reduction opportunities within the San Bernardino BNSF Railyard, and work with South Coast AQMD to provide updates to the CSC on current and future emission reduction efforts. This has been included in Chapter 5e, Action 1, under "Implementing Agency, Organization, Business or Other Entity".

#	Comment	Commenter(s)	Included = ● Not Included = ◆	Staff Response
<b>Other</b>				
i	The CERP should anticipate emissions impacts from the San Bernardino International Airport	Christopher Chavez (CCA)	●	Although the San Bernardino International Airport is not within the community boundary, the primary concerns with the expansion include the increase in warehouse development, trucks, and truck traffic. Emissions from these air quality concerns will be addressed through actions in the CERP.
ii	Public meetings for rule development held by South Coast AQMD and CARB should follow the same model as the CSC meetings to accommodate working people	Mary Valdemar (SB Valley College)	●	The CERP includes a commitment to hold at least one public meeting for the Warehouse ISR and one public meeting for the Railyard ISR development in or near the Inland Empire. Public meetings conducted for rule development will be evaluated on a case-by-case basis to accommodate stakeholders.

---

# CHAPTER 1:

## INTRODUCTION

---

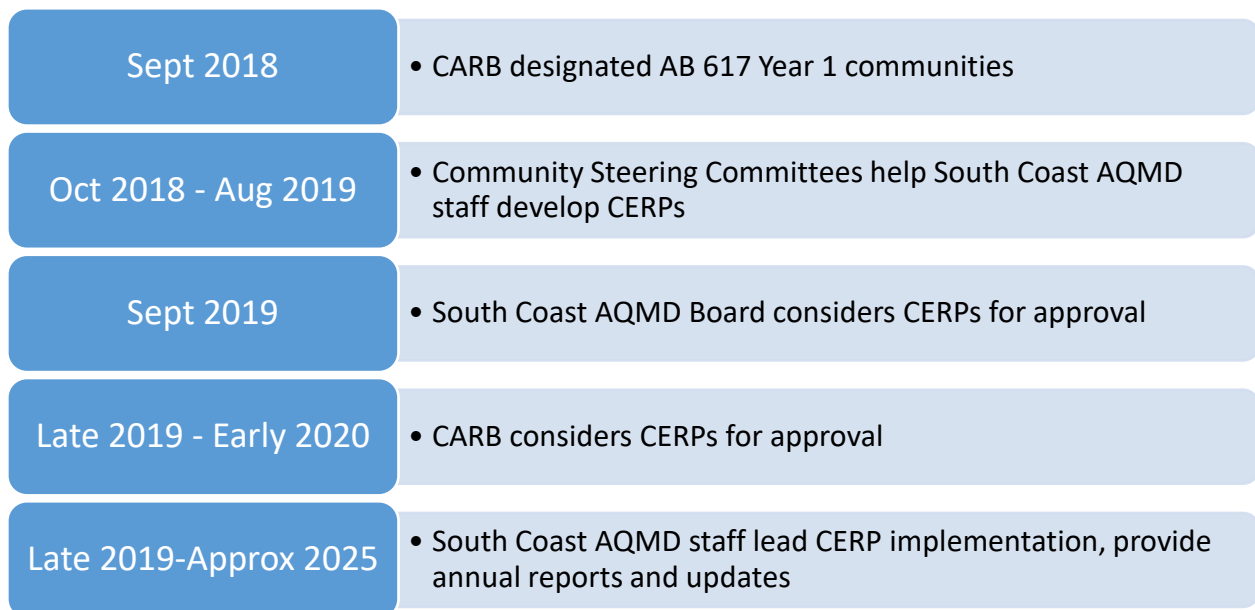

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 1 : Introduction

Assembly Bill (AB) 617 was signed into California law in July 2017 and focuses on addressing local air pollution in environmental justice (EJ) communities. The bill recognizes that while California has seen tremendous improvement in regional air quality, some communities are still disproportionately impacted by local sources. Major local sources of air pollution in EJ communities include mobile sources (trucks, trains, ships, etc.) and industrial facilities. These communities also experience social and economic disadvantages that make people more vulnerable to the health effects of pollution. The AB 617 program provides focused action and additional resources to address air quality in these communities.

On September 27, 2018, the California Air Resources Board (CARB) designated 10 communities across the state to implement community plans for the first year of the AB 617 program. Local air districts are tasked with developing and implementing community emissions reduction and/or community air monitoring plans in partnership with residents and community stakeholders. The Community Air Monitoring Plan (CAMP) includes actions to enhance our understanding of air pollution in the designated communities, and support effective implementation of the Community Emissions Reduction Plan (CERP). For the three (3) first year AB 617 communities in the South Coast AQMD, both a CAMP and a CERP are being developed. Separate documents describe the CAMP development process and the draft plan. Information is available at [www.aqmd.gov/ab617](http://www.aqmd.gov/ab617). Figure 1-1 gives a general overview of the CERP timeline.

Figure 1-1: Overview of Community Emissions Reduction Plan (CERP) Timeline for Year 1 Communities

### Purpose of the Community Emissions Reduction Plan (CERP)

The CERP is a plan for achieving air pollution emission and exposure reductions within the San Bernardino, Muscoy community, and is tailored to address this community's air quality priorities. The CERP includes actions to reduce emissions and/or exposures, an implementation schedule, an enforcement plan, a description of the process and outreach conducted to develop the CERP, as well as additional elements that are relevant to developing an effective CERP. Community partnership and engagement have been crucial throughout the process.

Because the work to implement the CERP and CAMP is dynamic, certain action items have been written with built-in flexibility to allow adjustments as new information becomes available. South Coast AQMD staff is committed to working with Community Steering Committee (CSC) members to evaluate ongoing actions and progress.

### CERP Development Process and Emphasis on Community Input

Community engagement and input to inform both the process and the actions in the CERP have been a primary element of the AB 617 program. The San Bernardino, Muscoy CSC, working with the South Coast AQMD staff, are seeking to address the community's air quality priorities through development and implementation of this CERP. In addition to public meetings, numerous conversations and communications took place among committee members, South Coast AQMD staff, individuals and small groups ~~occurred~~ to ensure that community voices were an integral part of the plan. Chapter 2 describes the CSC process and the outreach that was conducted. Throughout the process, information exchanges between all parties, including feedback and input from committee members and members of the public ensured transparency and engagement. Numerous adjustments to consolidate and incorporate feedback were made and South Coast AQMD staff continuously aims to improve community engagement on air quality issues.

### About this Community

This community includes major portions of the City of San Bernardino and all of the unincorporated community of Muscoy, both of which are located in San Bernardino County (Figure 1-2).

More than 90,000 people live within the San Bernardino and Muscoy community (Figure 1-3). Nearly three-quarters of the people living in this community are Latino (Figure 1-4). About 13.1% of the residents in this community are African American and 9.3% are White. The population in this community is younger compared to the population in the state of California, with nearly one out of every five people in this community being a child under the age of 10 years, and only 7.0% of the population being adults over the age of 65 years (Figure 1-5). These age categories are particularly important because young children and older adults can be more sensitive to the health effects of air pollution.<sup>1</sup>

Figure 1-2: Location of the San Bernardino, Muscoy community in the South Coast AQMD jurisdiction

Figure 1-3: Population of San Bernardino, Muscoy community, based on the 2010 Census

Figure 1-4. Population by Race/Ethnicity in San Bernardino, Muscoy and the state of California, based on 2010 Census

Figure 1-5. Age profile in San Bernardino, Muscoy and the state of California, based on 2010 Census

While the demographics and geography provide useful information, the members of the community are what make each community unique and distinct. Community members bring intimate familiarity with their community and the air quality concerns that affect their neighborhood. Below are some community voices describing this community.

*"I have been organizing and working with the youth and in this community for over 20 years. When I see the news about the deaths from gun violence I know that isn't the truth. It is air quality that is killing our youth. It's a conversation that is critical to the future of our community, especially the youth, and more importantly their health. They can't breathe the air. If we don't work together in this community to solve this issue, all the work we do around social justice, education and civil rights is for nothing. It is the most urgent need that our community faces."* - Mary Valdemar, Community Steering Committee Member, San Bernardino Valley College

*"I have been a resident in the San Bernardino area for over 20 years and I have seen how resilient my community is. We will fight together to clean our air. La unión hace la fuerza."* - Miguel Rivera, Community Steering Committee Member, Active Resident from Muscoy

*"I grew up as a youth in San Bernardino with asthma and I have stayed in this community, because I think it is a diamond in the rough. I am waiting for its day in the sun and I think air quality is so important to its success."* - Mathew Taylor, Community Steering Committee Member, Active Resident from San Bernardino

*"I love my community because this is where I live. My children and my grandchildren were raised here, my husband works here, and this is where my house is. I have been living here for a long time and together we have walked the streets to help the people who are the most in need. I wish we had cleaner air because there are many people who are getting sick."* - Graciela Regalado, Community Steering Committee Member, Active Resident from San Bernardino

# CHAPTER 2:

## COMMUNITY OUTREACH, COMMUNITY STEERING COMMITTEE AND PUBLIC PROCESS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 2: Community Outreach, Community Steering Committee and Public Process

### Introduction

Community engagement and a public process were critical in the Community Emissions Reduction Plan (CERP) development effort. Key features of the outreach efforts include establishing a Community Steering Committee (CSC), holding monthly meetings that were also live-streamed on the internet, during which, CSC members, and South Coast AQMD and CARB staff made presentations, provided materials via email and on the internet webpage, live-streaming all CSC meetings, and established establishing a Technical Advisory Group (TAG). In addition, numerous interactions between CSC members and South Coast AQMD staff occurred in one-on-one or small group meetings, allowing for in-depth discussions on joint development and creation of the CERP.

### Chapter 2 Highlights

- The Community Steering Committee (CSC) and Technical Advisory Group worked with South Coast AQMD staff to develop the CERP
- Monthly meetings were held in the community to engage the CSC and public
- The Community Liaison served as the point of contact
- Additional one-on-one, small group, and community meetings also played an important part in community engagement
- A Community Webpage was created as an information portal

### Community Liaisons

The South Coast AQMD Community Liaison for the San Bernardino, Muscoy (SBM) community is Daniel Wong ([dwong@aqmd.gov](mailto:dwong@aqmd.gov)). In addition, Pedro Piqueras ([ppiqueras@aqmd.gov](mailto:ppiqueras@aqmd.gov)) serves as the South Coast AQMD point of contact for CERP-related input. The Community Liaison serves as the point of contact to communicate with members of the CSC and members of the public to address concerns regarding logistics and implementation of the CERP and Community Air Monitoring Plan (CAMP) (Figure 2-1). The Community Liaison ensures communication throughout the CERP development process and works with community members to identify the

Figure 2-1: South Coast AQMD staff assisting CSC members and the public at a meeting in San Bernardino

best ways to make information accessible and user-friendly.

## Community Meetings

Community meetings were hosted by South Coast AQMD staff on an approximately monthly basis in the community. This included one kick-off meeting and a series of CSC meetings.

### Community Kick-Off Meeting

In October 2018, kick-off meetings were held in each of the communities within the South Coast AQMD designated by CARB to be included in Year 1 of the AB 617 Program. During these meetings, the role of the CSC was described by South Coast AQMD staff. Briefly, the CSC provides input and guidance to design actions for the community, for integration into the CERP as well as the CAMP. Community members had an opportunity to fill out an Interest Form during the kick-off meeting to express their interest in being a CSC member, and were then notified by mail or by phone if they were selected as a member or an alternate.

The Community Kick-Off Meeting in the San Bernardino, Muscoy community was held on Tuesday October 9, 2018 at the Ruben Campos Community Center (Figure 2-2). Approximately 60 people attended the meeting. In addition to receiving information about AB 617, attendees were invited to visit a variety of booths, which provided information about some existing South Coast AQMD programs, community air monitoring, community air measurement efforts, and incentive programs.

Figure 2-2: Community kick-off meeting at Ruben Campos Community Center, San Bernardino

### Community Steering Committee (CSC)

A Community Steering Committee (Figures 2-3 and 2-4) was formed for the San Bernardino, Muscoy community, and monthly meetings were organized. The meetings were typically held on Thursday evenings, and all CSC meetings were held in locations within the community. All meetings were open to the public.

### CSC Roster

CSC membership is comprised of stakeholders with community knowledge to help drive community action. The CSC creates a way to incorporate community expertise and direction in the development and implementation of clean air programs in each community. Staff will continue to seek recommendations and feedback from the CSC as the CERP is being implemented, and adjust the outreach approaches as needed to be even more effective.

The CSC roster for the San Bernardino, Muscoy community is provided in Table 2-1. This CSC has 23 primary members and four alternate members representing active residents, community organizations, and businesses. While 12 primary members are on the roster representing Active Residents, an additional two primary members also reside within the community (resident percentage on the CSC = 60.9%). Additionally, there are 10 primary members and eight alternate members representing agencies, schools/universities, or offices of elected officials who serve this community.<sup>i</sup> The roster with member biographies is available on the webpage: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/san-bernardino/roster-with-bios.pdf?sfvrsn=8>.

Figure 2-3: Mary Valdemar (San Bernardino Valley College), presenting outreach materials at the Community Steering Committee meeting in San Bernardino

---

<sup>i</sup> Per discussion with CARB staff, members representing agencies, schools, universities, hospitals, and offices of elected officials are not included in the calculation of resident percentage on the CSC.

Active Resident – San Bernardino	Joshua Bell	
<u>Center for Community Action and Environmental Justice (CCA EJ)</u>	<u>Ericka Flores</u>	
<u>Active Resident - Muscoy</u>	<u>Abram Gastelum</u>	

### CSC Meeting Schedule and Co-Hosts

Beginning with Meeting #2, the meetings were run by a co-host, who is a member of the CSC and lives in the community. Miguel Rivera served as a co-host from Muscoy and Angelica Balderas served as a co-host from San Bernardino. Additionally, Matt Abularach-Macias served as ~~as~~ the co-host for one meeting when the resident co-hosts were not available. The co-hosts worked closely with South Coast AQMD staff to provide input on the meeting agenda, and serve as the point of contact for community members who wished to provide testimonials during the meetings. In addition, the co-hosts conducted the meeting by setting the tone and calling on members to speak.

Figure 2-5: CSC members serving as meeting co-hosts

Table 2-2: Community Steering Committee Meetings for San Bernardino, Muscoy

Meeting #	Date and Location	Approximate # of Attendees
1	November 8, 2018 <b>Ruben Campos Community Center, San Bernardino</b>	60

10	September 19, 2019 <b>San Bernardino Valley College, San Bernardino</b>	

### CSC Charter

A charter was developed for the CSC and a draft was presented to members at the first meeting. CSC members provided comments and the feedback received was included in the revised charter. The final charter is provided on the webpage here: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/san-bernardino/charter-english.pdf?sfvrsn=8>

### Social Media Report

All CSC meetings were live-streamed using Facebook Live to further engage the community. The links to the live-stream recording were also posted on the South Coast AQMD community webpage. Each video received approximately 100 views.

### Community Webpage

A community webpage was created for the San Bernardino, Muscoy community. The webpage includes information about upcoming meetings, meeting materials (flyers, agendas, presentations, handouts, live stream links, meeting summaries), interactive maps, the CSC roster, charter, biographies, and membership process, and the CAMP and CERP documents. The community webpage is located here:

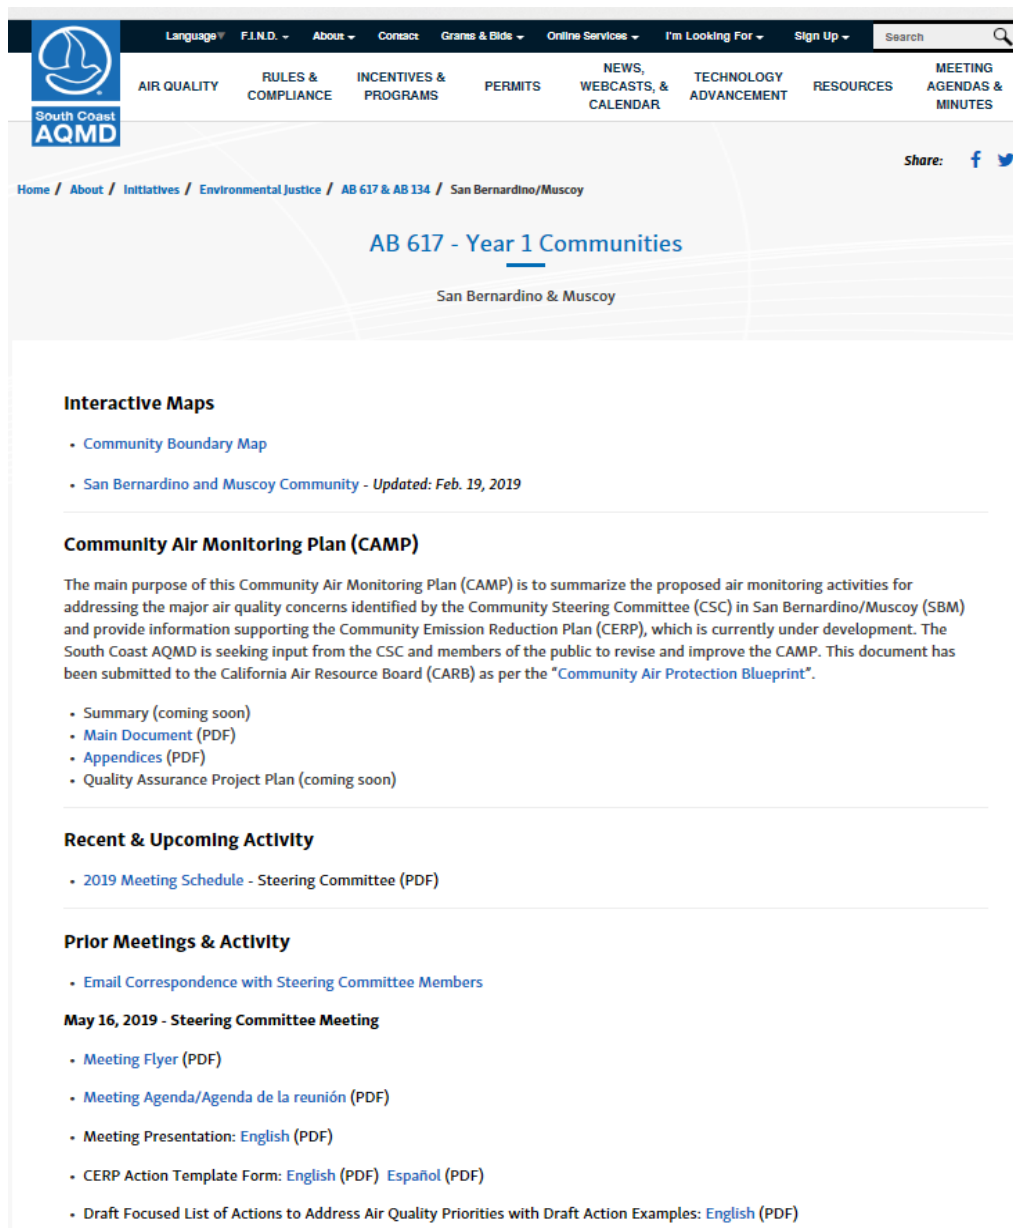

[http://www.aqmd.gov/nav/about/initiatives/environmental-justice/ab617-134/san-b.](http://www.aqmd.gov/nav/about/initiatives/environmental-justice/ab617-134/san-b)

For increased transparency, emails sent to the CSC were also posted on the webpage. All flyers, agendas, social media posts, presentations, handouts, and emails to the CSC were made available in English and Spanish. A screen shot of the community webpage is shown in Figure 2-7.

Figure 2-6: Screen shot of Facebook Live recording in San Bernardino

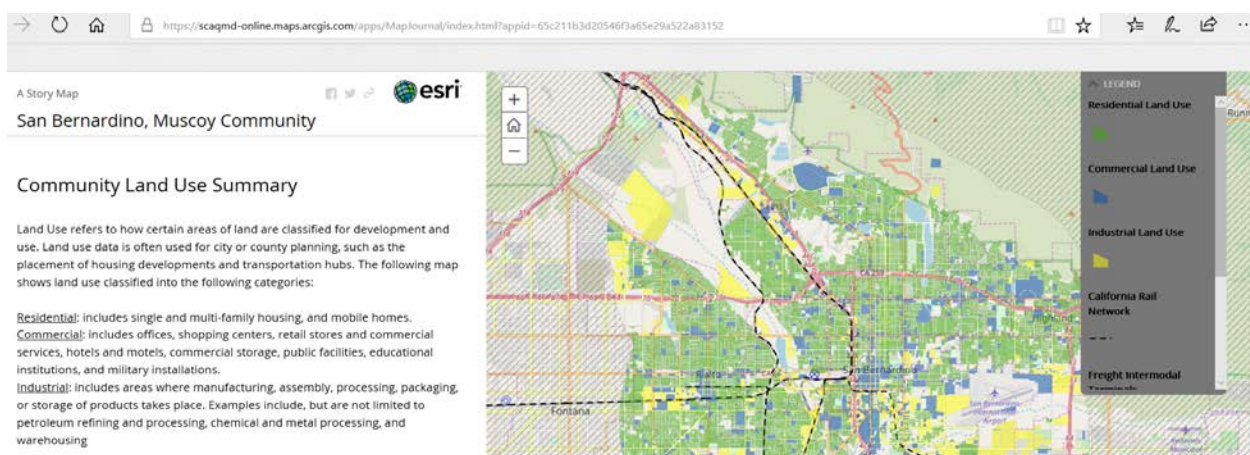

Figure 2-7: Community webpage for the San Bernardino, Muscoy community

In addition to being a portal for access to meeting materials and documents, the webpage also includes interactive maps that present data about the community.

Figure 2-8 is an example of an interactive map that was created for the San Bernardino, Muscoy community. These interactive maps provide data on land use, locations of facilities, schools, hospitals, and daycare centers, and the air quality concerns identified by the CSC and members of the public. This information was provided to help inform air quality priorities for the CERP.

Figure 2-8: Interactive map showing land use in the San Bernardino, Muscoy community

### Committee Presenters

A critical aspect of the CERP is development and implementation collaboration with CSC members and the agencies, organizations, businesses, or other entities that they represent. Committee members were invited to share their work that is complementary to the actions being developed in the CERP, such as programs carried out by their organization that help address air quality issues in the community.

At the April 2019 CSC meeting, Mary Valdemar (San Bernardino Valley College (SBVC)) discussed SBVC's Sustainability Plan, which focuses on embedding sustainability in the classroom and workplace. She expanded on the infrastructure required to achieve the adoption of zero-emission technologies.

Tammy Yamasaki (Southern CA Edison) discussed local efforts and their partnership with South Coast AQMD to share information with those who apply for electric vehicle (EV) charging stations. Their efforts focus on infrastructure development for electric charging, especially within environmental justice communities.

At the May 2019 CSC meeting, Bernadette Beltran and Mark Frees (San Bernardino County Department of Public Health) presented information on their agency's public health programs,

Figure 2-9: Bernadette Beltran and Mark Frees (San Bernardino County Department of Public Health) presented at the May 2019 CSC meeting

including the Healthy Communities program, an asthma program that is administered through the Arrowhead County Regional Center, and the Safe Routes to Schools Program.

During the May 2019 CSC meeting, Ericka Flores and Andrea Vidaurre with the Center for Community Action and Environmental Justice (CCA EJ) spoke about their organization and the importance of the AB 617 program in getting the community involved in addressing air quality and land use issues. Additionally, Anna Jaiswal (OmniTrans) provided an overview of the work that OmniTrans is doing to improve air quality, as the public transit provider for San Bernardino County. They provided information about their fleet, ~~which includes near-zero and zero-emission buses,~~ and their continued work toward adding more cleaner buses ~~zero-emission buses~~ to their fleet. Chantal Power (City of San Bernardino) discussed how the City is trying to address the concerns of the community and plans to increase outreach efforts.

In June 2019, LaDonna DiCamillo with BNSF Railway spoke about the company's efforts to reduce emissions from their locomotives and equipment used at their San Bernardino facility. She also highlighted some technology demonstration projects they are pursuing to help develop zero-emission or hybrid technologies. Suzanne Peterson from San Bernardino County Land Use Planning Department presented information about the County's code on truck parking in residential neighborhoods, and their draft policy plan on truck routes, including the Muscoy Community Action Guide. Ryan Sinclair from Loma Linda University presented information from past health research studies they have conducted in the community and some more recent work they are doing using low-cost air pollution sensors.

### Community Testimonials

Beginning in March 2019, residents from the community have been invited by the CSC to share personal stories, outlining their concerns with air pollution and how it has negatively impacted their lives and community. These community testimonials have helped provide perspective and context to frame the discussions during the CSC meetings (Figure 2-10). Community testimonials were provided by CSC members as well as other members of the community.

Figure 2-10: Community members are invited to share their personal air pollution concerns

### Technical Advisory Group

In February 2019, the AB 617 Technical Advisory Group (TAG) was established to provide a forum to discuss technical details related to source attribution (i.e., sources of monitored emissions), air monitoring and other technical analysis needed to develop the CAMPs and CERPs for AB 617 implementation. The TAG has met on an approximately quarterly basis during the CERP and CAMP development process. Topics discussed included monitoring equipment and laboratory capabilities, methodology and data sources for developing an air toxics emissions inventory at a community scale, methodology for forecasting emissions in future years, and methodology for modeling air toxics levels across geographical areas. Table 2-3 shows the 2019 TAG meeting schedule. All meetings were held at the South Coast AQMD headquarters building, which is a location approximately in the middle of the three Year 1 communities. All meetings were webcast on the South Coast AQMD's webpage ([www.aqmd.gov](http://www.aqmd.gov)), and webcast attendees could email questions to be answered during the meeting.

The majority of these technical considerations apply to all three AB 617 communities designated in Year 1 and consequently the TAG includes up to three primary and three alternate members from each CSC, and additional technical experts from academia, research institutes, and governmental agencies (the current roster is provided in Table 2-4). When additional communities are designated for the AB 617 program, representatives from those CSCs will also

be added to the TAG. The webpage for the TAG is available at this link: <http://www.aqmd.gov/nav/about/initiatives/environmental-justice/ab617-134/technical-advisory-group>.

Table 2-3: Technical Advisory Group meetings in 2019

Meeting #	Date	Approximate Attendees
1	February 27, 2019	45
2	May 29, 2019	45
3	July 18, 2019	40

Table 2-4: Roster for the AB 617 Technical Advisory Group

Participant	Affiliation	Community
Jesse Marquez	Coalition for a Safe Environment	Wilmington, Carson, West Long Beach
Flavio Mercado (Alternate for Jesse Marquez)	Active Resident from Wilmington	Wilmington, Carson, West Long Beach
Jill Johnston	University of Southern California	Wilmington, Carson, West Long Beach
Uduak-Joe Ntuk	City of Los Angeles	Wilmington, Carson, West Long Beach
Tim DeMoss (Alternate for Uduak-Joe Ntuk)	Port of Los Angeles	Wilmington, Carson, West Long Beach
Ryan Sinclair	Loma Linda University	San Bernardino, Muscoy
Andreas Beyersdorf	California State University, San Bernardino	San Bernardino, Muscoy
Tammy Yamasaki	Southern California Edison	San Bernardino, Muscoy
Hector Garcia	Our Lady of Victory	East LA, Boyle Heights, West Commerce
Marisa Blackshire	BNSF	East LA, Boyle Heights, West Commerce
Rafael Yanez	Active Resident	East LA, Boyle Heights, West Commerce
Manuel Pastor	Univ. Southern California, Sociology and American Studies & Ethnicity	Technical Expert
Madeline Wander (Alternate for Manuel Pastor)	Univ. Southern California, Sociology and American Studies & Ethnicity	Technical Expert

Participant	Affiliation	Community
Scott Fruin	Univ. Southern California, Preventive Medicine	Technical Expert
Cesunica (Sunny) Ivey	UC Riverside	Technical Expert
Luis Portillo	Inland Empire Partnership	Technical Expert
Ken Davidson	US EPA Region 9 Air Division, Air Toxics, Radiation, and Indoor Air Office	Technical Expert
Janet Whittick	California Council for Environmental and Economic Balance (CCEEB)	Technical Expert
Melissa Lunden	Aclima	Technical Expert

### Additional Community Engagement

In addition to establishing the CSC and convening monthly meetings, South Coast AQMD staff participated in one-on-one or small group meetings with members, and attended meetings led by various community organizations. These meetings gave CSC members an opportunity to communicate directly with staff. Additionally, these meetings give staff an opportunity to answer questions and clarify information requested from CSC members. Staff was able to gain a better understanding of the unique issues faced by each community by attending and participating in meetings led by community organizations.

Broader public engagement is also important to the AB 617 program. Suggestion boxes provided at the CSC meetings allow CSC members, as well as the general public, to provide input and suggestions on the AB 617 process. Staff reviews the comments after each CSC meeting, and responds as needed. Anonymous submissions are accepted. In addition, a Community Affairs Table at the CSC meetings provides a space for community members to share flyers and handouts about events and programs happening in the community (Figure 2-11).

Figure 2-11: Community table and community member handouts for CSC meeting in San Bernardino

Throughout the development of the CERP, community liaisons and other staff met with community members, environmental justice organizations, industry and other stakeholders to provide assistance and/or prompt response to concerns raised about the CSC process. Community liaisons also attended meetings from local organizations, environmental justice groups, city and county government to promote participation in the development and implementation of the CERP. Staff attended meetings hosted by other entities in this community to give presentations on AB 617 CERP development, and had more than 25 in-person or phone meetings with CSC members to discuss the CSC process and seek input on the CERP actions. South Coast AQMD staff will continue to work with the CSC to implement the CERP actions and provide periodic community updates on the progress of implementing the plan. Community engagement is essential to the success of the CERP as well as the AB 617 program as a whole, and all parties are committed to build and improve upon existing outreach efforts.

Figure 2-12: Small group meeting in San Bernardino with some CSC members and South Coast AQMD staff

---

# CHAPTER 3A:

## COMMUNITY PROFILE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

# Chapter 3a: Community Profile

## Introduction

It is essential to understand the characteristics of a community and the profile of air pollution sources in order to address community air quality priorities. The following community profile provides a general overview of the San Bernardino, Muscoy community, including the types of air pollution impacting the community, and a characterization of public health and socioeconomic factors. In addition, this section includes information about the community boundary that reflects input from the Community Steering Committee (CSC), a summary of the air pollution concerns identified by the community, and the air quality priorities based on CSC and public input. These air quality priorities are addressed in the Community Emission Reduction Plan (CERP) actions, described in Chapter 5.

### Chapter 3a Highlights

- The community profile is based upon input from the Community Steering Committee throughout the CERP development process
- The Community Steering Committee identified the top air quality priorities to be addressed in the CERP
- Data on land use, toxic air pollution impacts, public health factors, and both social and economic factors in the community provides useful background information

## Community Boundary, Air Quality Concerns and Air Quality Priorities

During the monthly CSC meetings, committee members, members of the public, and South Coast AQMD staff worked together to shape the elements and actions described in this Plan. Topics discussed with the CSC include:

- What should be the community **boundaries** for the AB 617 community plans?
- What **air quality concerns** does the community have?
- What are the top **air quality priorities** that the community would like to address through the AB 617 CERP?
- What **priority actions** should be included in the CERP?
- What should the **goals** for the priority actions include?
- ~~Any additional~~ Additional **feedback on the Draft CERP**

The process is summarized in Table 3a-1. CSC members discussed which geographic areas should be included within the community boundary, ~~shown in~~ (Figure 3a-1). The San Bernardino, Muscoy CSC established two distinct community boundaries to represent this community for the purpose of AB 617 community plan implementation. The “Impacted Community” boundary focuses on the places in the community where people community members spend time (e.g., schools, residential areas, community centers, hospitals, etc.) live, work, go to school, and spend the majority of their time. The “Emissions Study Area” boundary includes both the Impacted

Community and additional air pollution sources (e.g., facilities and major truck routes) that may affect the Impacted Community. Regions within and near either community boundary will benefit from the emissions reductions within the boundary.

The CSC and members of the public participated in an interactive mapping activity to identify community air quality concerns, which were posted on the webpage<sup>i</sup>. ~~These community air quality concerns are shown in (Figure 3a-1 and listed in Figure 3a-2).~~ Most of the concerns identified were within the Emissions Study Area. However, there were several warehouses along the Interstate 10 freeway that were also identified as concerns. While these warehouses are outside the community boundaries, the CSC stated that the trucks going to and from these warehouses drive through the community. Therefore, these trucks are within the Emissions Study Area and can be addressed through the CERP.

~~Next, the air~~ Air quality concerns were grouped into categories (e.g., truck traffic, railyards, etc.), and ~~the CSC and members, as well as~~ of the public prioritized the top air quality concerns. CSC members were invited to provide ideas and input on CERP actions and also meet with South Coast AQMD staff to draft CERP actions together. The highest priority actions were included in the ~~draft~~ CERP based on input from the CSC members.

The San Bernardino, Muscoy community also has a facility in the REgional Clean Air Incentives Market (RECLAIM) program and that facility will be evaluated for compliance with to meet Best Available Retrofit Control Technology (BARCT) requirements. Equipment at non-RECLAIM facilities within the community may also be affected by the BARCT assessment being conducted for RECLAIM facilities and; thus, subject to additional requirements. The BARCT assessment is still currently being conducted for a number of rules and the list of affected non-RECLAIM facilities is being developed. The facility that is subject to BARCT (specifically the RECLAIM facility) and additional facilities in the AB 2588 program are provided in Appendix 3a.

~~Because~~ The work to implement the CERP and the Community Air Monitoring Plan (CAMP)<sup>1</sup> is dynamic, thus certain action items have been written with built-in flexibility to permit necessary adjustments as new information becomes available. South Coast AQMD staff is committed to working with CSC members to evaluate ongoing actions and progress.

35	Ramona Alessandro Elementary	Where People Spend Time			

The following air quality priorities for the CERP were identified by the CSC and members of the public for the San Bernardino, Muscoy community:

- Neighborhood truck traffic
- Warehouse on-site emissions
- Omnitrans bus yard
- Railyards
- Concrete batch plants, asphalt batch, and aggregate plants
- Exposure reduction for sensitive populations in schools, childcare centers, community centers, and homes

Actions to address each of these air quality priorities are described in Chapter 5.

The South Coast AQMD and the California Air Resources Board (CARB) both develop and enforces air pollution regulations to reduce emissions, improve air quality, and protect public health. While CARB has primary authority over mobile sources, the South Coast AQMD has authority over stationary sources and “indirect sources”, which are facilities that attract mobile sources. Examples of indirect sources include warehouses and rail yards. Specific information about ongoing rule development that is relevant to these air quality priorities is provided in Chapter 5.

### Community Air Pollution Profile and Related Data

Understanding what air pollution sources exist in the community and what air pollutants come from these sources helps identify key sources that can be addressed through CERP actions. This section presents data based on previous cumulative impact studies<sup>ii</sup> to describe the impacts of toxic air pollutants in this community, as well as other environmental pollution, public health factors, and social and economic factors that make people more sensitive or vulnerable to the health effects of pollution.<sup>2</sup>

<sup>ii</sup> More information regarding MATES IV and the final report can be found on South Coast AQMD’s website at: <http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/matesiv>.

The San Bernardino, Muscoy community is shown in Figure 3a-1. The Impacted Community includes a land area of 17.30 square miles, and the Emission Study Area includes an area of 28.58 square miles. About 48% of this land area is used for residential living, 19% is zoned for commercial uses, 7% is zoned for industrial uses, and 7% is used for freeways, roadways, and land used for utilities and communications services (Figure 3a-3).<sup>iii</sup>

Figure 3a-3: Land use profile in San Bernardino, Muscoy

Air toxics are one group of air pollutants that can affect public health on a local community scale. These pollutants include, but are not limited to pollutants from diesel exhaust, and metal particulate air pollutants (e.g., hexavalent chromium, lead, arsenic, nickel, etc.), and gases (e.g., benzene, formaldehyde, etc.). The South Coast AQMD conducts the Multiple Air Toxics Exposure Study (MATES) every few years to understand the cumulative health impacts of air toxics in communities across the region. The most recently completed study was MATES IV, which was

<sup>iii</sup> Land use refers to how certain areas of land are classified for development and use. Land use data is often used for city or county planning, such as the placement of housing developments and transportation hubs. Land use data is derived from the 2016 Southern California Association of Governments (SCAG) Regional Transportation Plan/ Sustainable Communities Strategy, which is based on 2012 data.

conducted in 2012-2013, and used air toxics monitoring, emissions inventories, modeling, and health risk assessment techniques to calculate the cancer risk due to toxic air pollutants (“air toxics cancer risk”).<sup>iv</sup> MATES V is currently in progress. Based on MATES IV modeled data, approximately three-quarters of the air toxics cancer risk in the Basin is due to diesel particulate matter (Figure 3a-4). The average air toxics cancer risk in the San Bernardino, Muscoy community is also shown in the figure, and this risk is also dominated by diesel particulate matter.

Figure 3a-4: Air toxics cancer risk, based on MATES IV modeled data

Mobile sources include trucks, ships, trains, cars, buses, and other mobile equipment. Much of this equipment is powered by diesel, which is the air toxic pollutant with the highest impact in

<sup>iv</sup> More information regarding MATES IV and the final report can be found on South Coast AQMD's website at: <http://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/matesiv>.

this community. The community includes more than 22 miles of freeways and 5 railyards<sup>v</sup>, including a railyard that is located near residential areas (Figure 3a-5)

Figure 3a-5: Diesel mobile sources in San Bernardino, Muscoy

Understanding the community's public health and socioeconomic profile helps to provide context for the work being done through this CERP. CalEnviroScreen 3.0 is a screening tool developed by the California Office of Environmental Health Hazard Assessment (OEHHA) that is used to identify communities that are most affected by various sources of pollution, and where people are especially vulnerable ~~to the effects of pollution~~ ~~to pollution's effects~~. The CalEnviroScreen 3.0 data show that this community has public health factors, as well as social and economic factors, that make the community more sensitive and vulnerable to the harmful effects of air pollution compared to statewide averages (Figure 3a-5 and Figure 3a-6). These data show that, on average, the San Bernardino, Muscoy community has generally worse public health factors and more social and economic disadvantages compared to California as a whole. The public health factors specifically show that this community has higher rates of emergency department visits for asthma and heart disease, and more babies born with a low weight in comparison to, ~~compared to~~ statewide averages.

<sup>v</sup> Includes one intermodal railyard, and four maintenance yards. All five facilities are located west of the Interstate 215 freeway, south of W. 5th Street, and north of Rialto Avenue.

Figure 3a-5. CalEnviroScreen 3.0 scores for public health factors in San Bernardino, Muscoy compared to statewide averages

Figure 3a-6. CalEnviroScreen 3.0 scores for social and economic factors in San Bernardino, Muscoy compared to statewide averages<sup>vi</sup>

<sup>vi</sup> The statewide average may not be at the 50<sup>th</sup> percentile because it is a population-weighted average. The average depends on both the distribution of population and the distribution of the number of each factor, and both these factors are not symmetrical.

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 3b: Emissions and Source Attribution

### Introduction

In order for the Community Emission Reduction Plan (CERP) to be effective, it needs to be built on information about the type and sources of emissions. This knowledge is then used to better define CERP actions and strategies, with the ultimate goal being a reduction in harmful emissions and the associated burdens on individuals and communities. The Community Emissions Reduction Plan (CERP) needs to identify air pollution challenges that each community faces, and define strategies to reduce the exposure burden from sources of criteria air pollutants (CAPs) and toxic air contaminants (TACs).

Identifying air quality priorities for the CERP is accomplished through listening to the community's input and expertise, along with evaluating technical data on emission sources in the community.

The process for evaluating the type and sources of emissions is known as a "source attribution" analysis. CARB has created guidelines for districts to perform this necessarily technical analysis. The information below summarizes both the requirements for the analysis and the analysis itself. The analysis looked at both criteria air pollutants (CAPs) and toxic air contaminants (TACs). As discussed further below, diesel particulate matter is currently the main air toxic pollutant burdening this community. While other pollutants are present, diesel particulate is the main driver of air toxics cancer risk.

### CARB Requirements for Source Attribution Analysis

The California Health and Safety Code § 44391.1(b)(2) directed CARB to provide: "[a] methodology for assessing and identifying the contributing sources or categories of sources, including, but not limited to, stationary and mobile sources, and an estimate of their relative contribution to elevated exposure to air pollution in impacted communities..."

### Chapter 3b Highlights

- Information about the sources of air pollution in this community is presented in a "source attribution" analysis
- Diesel particulate matter is currently the main air toxic pollutant in this community, and it comes mostly from on-road and off-road mobile sources
- Other key air toxic pollutants in this community are 1,3-butadiene (mostly from the chemical industry) and hexavalent chromium (mostly from brake wear)
- Volatile organic compounds (VOCs) come primarily from consumer products (e.g., paints, cleaners, etc.)
- In future years, diesel emissions decrease substantially due to CARB regulations, but continues to be the main driver of air toxics cancer risk in this community
- Other key air toxic pollutants in this community are 1,3-butadiene (mostly from the chemical industry) and hexavalent chromium (mostly from brake wear)

The CARB guidelines recommended five potential technical approaches for the source attribution analysis. The options presented are: developing an emissions inventory, air quality modeling, targeted air monitoring/back trajectory/pollution roses/inverse modeling, chemical mass balance and positive matrix factorization. Among these options, based on the availability of data and resources, this source attribution analysis employs the emissions inventory and air quality modeling analysis approaches to identify sources contributing to air pollution levels in the community, with an emphasis on identifying sources within the community (emissions inventory). More information on source attribution methods is included in the Source Attribution Methodology report<sup>1</sup>. The most recent air quality modeling analysis was conducted as part of the Multiple Air Toxics Exposure Study (MATES IV) in 2015, which showed that Diesel Particulate Matter (DPM) was the air pollutant that contributed most to the air toxics cancer risk in the South Coast Air Basin. While the San Bernardino, Muscoy (SBM) community had slightly lower cancer risk compared to the overall average (Figure 3b-5), the SBM has some of the highest ozone levels in the Basin. A community-specific emissions inventory was developed for ~~criteria air pollutants~~ (CAPs) and TACs based on the most recent available datasets.

The SBM community contains some obvious sources of air pollution, including major freeways and major rail yards within the community that support the goods movement industry. The community also includes a wide range of industrial facilities, including asphalt, concrete and other mineral production processes, and 43 warehouses larger than 100,000 square feet, which attract heavy-duty truck traffic. The source attribution analysis highlights that in the year 2017, on-road and off-road mobile sources were the predominant sources of DPM, with the major contributors being heavy-heavy duty trucks, medium-heavy duty trucks, off-road diesel equipment, and trains. In this community, stationary and area sources contribute to the emissions of 1,3-butadiene, benzene and formaldehyde, with the chemical industry as the major source for 1,3-butadiene emissions, and fuel combustion in residential and commercial sectors as the major source of benzene and formaldehyde. The analysis presented in this chapter provides further details on the sources of NO<sub>x</sub>, VOCs and PM<sub>2.5</sub>. Projected emissions in future years show decreases in DPM emissions, although DPM continues to be the main contributor to cancer risk.

The community-level emissions and their sources are discussed in this ~~report~~ chapter. The detailed methodology to develop these emissions is provided in the Source Attribution Methodology report<sup>1</sup>. ~~The following sections contain discussions about b~~Base year emissions of CAPs and TACs ~~and are provided in section 2. Future year emissions of CAPs and TACs. A summary of the information is provided at the end of the chapter are discussed in section 3, and a summary is provided in section 4.~~

<sup>1</sup> The Methodology for Source Attribution Analyses for the first year AB 617 Communities in the South Coast Air Basin (Technical Report) can be found here: <https://www.aqmd.gov/docs/default-source/ab-617-ab-134/technical-advisory-group/source-attribution-methodology.pdf?sfvrsn=8>

## Base year emissions inventory and source attribution

### *Overall profiles of CAPs and TACs*

A variety of sources contribute to the emissions of criteria pollutants in the San Bernardino and Muscoy community, with different sources emitting different ~~types of air pollutants, air pollutant species~~ (Figure 3b-1). NO<sub>x</sub> emissions are primarily from combustion sources. On-road mobile sources are the largest emitters of NO<sub>x</sub>, with heavy-duty trucks being the largest contributor in this community. Off-road mobile sources, including trains and off-road equipment, are the second largest contributor to NO<sub>x</sub> emissions. Area sources of NO<sub>x</sub> are mainly from fuel combustion for space and water heating at commercial businesses and homes, whereas point sources of NO<sub>x</sub> include fuel combustion at industrial facilities.

VOC emissions mostly come from area sources, specifically from consumer products and outdoor paints (architectural coatings), as well as vehicle exhaust. The largest contributors to PM<sub>2.5</sub> emissions are area sources, such as commercial cooking, residential wood burning (residential fuel combustion), and paved road dust. PM is also emitted from mobile sources via vehicle exhaust and tire and brake wear. While paved road dust is also related to vehicles traveling on roads, it is considered as an area source rather than a mobile source. It is important to note that ambient PM<sub>2.5</sub> concentrations in the community have decreased steadily in the past decades due to the reductions of PM<sub>2.5</sub> precursor emissions such as NO<sub>x</sub>, SO<sub>x</sub>, and VOC. Ambient PM<sub>2.5</sub> can be either formed through chemical reactions of its precursor pollutants or be emitted directly from sources. In the South Coast Air Basin including in this community, the majority of ambient PM<sub>2.5</sub> is from secondary chemical reactions in the atmosphere rather than directly emitted from local sources. Accordingly, although local PM<sub>2.5</sub> emissions have decreased marginally over the past decade, the ambient PM<sub>2.5</sub> concentrations have been improved substantially, and the South Coast Air Basin is close to attainment of the U.S. EPA's ambient air quality standards for PM<sub>2.5</sub>.

TAC emissions from point sources were compiled from the emissions reported by facilities. TAC emissions from area, on-road, and off-road sources were calculated using chemical speciation profiles applied to PM or TOG emissions. Details on the chemical speciation profiles are provided in a separate Source Attribution Methodology report<sup>1</sup>. In total, 22 air toxic pollutants were analyzed and included in this report. This list of air toxic pollutants is consistent with the list of TACs that facilities are required to report under the South Coast AQMD Annual Emissions Reporting (AER) program, except chlorofluorocarbons (CFCs) and ammonia were not included. CFCs do not have an associated cancer risk, whereas ammonia is included in the CAPs inventory because it is a PM precursor.

Figure 3b-1: Contribution of major sources to NO<sub>x</sub> emissions, VOC emissions, PM<sub>2.5</sub> emissions in San Bernardino and Muscoy in 2017 (tons/year)

The contribution from point, area, on-road and off-road emission sources to TACs emissions in this community are presented in Figure 3b-2. Note that the emissions in the figure are weighted based on the air toxics cancer risk (hereafter referred as “cancer risk”) of each TAC relative to DPM. For example, Cr6+ has a cancer risk that is approximately 464 times higher than that of DPM. Thus, Cr6+ emissions are multiplied by 464 to estimate the cancer-risk-weighted emissions of Cr6+. The units in the cancer-risk-weighted DPM-equivalent emissions are expressed in pounds per year (lbs/year). This weighting approach enables comparisons across the contribution of each

TAC to overall cancer risk using a consistent, toxicity-weighted scale. Cancer risk factors are calculated using cancer potency and basin-average inhalation rates. Since the cancer-risk weighted factors are relative to the DPM risk factor, relative weighting factors using cancer risk should be equivalent to weighting factors calculated using cancer potency. However, due to precision and rounding errors, weighting factors using cancer risk might not be identical to the weighting factors calculated using cancer potency for some TACs. Figure 3b-2 shows that DPM is the biggest contributor to the overall cancer risk in the community, followed by 1,3-butadiene, hexavalent chromium, and benzene. Figure 3b-2 also shows the major source categories of these main TACs. Most of the DPM and  $\text{Cr}^{6+}$  is emitted from mobile sources. A detailed emission inventory by major source categories is provided in the Appendix 3b.

Figure 3b-2: Contribution of major sources to toxic air contaminant emissions in the San Bernardino and Muscoy community in 2017 (shown in lbs/year, weighted by air toxics cancer risk). Note the different scale for DPM with respect to the other air toxics.

*Stationary and area sources*

Figure 3b-2 provides a summary of the sources of VOC and PM<sub>2.5</sub> emissions from stationary and area sources in the SBM community in 2017. The largest contribution to VOC emissions is solvent evaporation from consumer products. A wide range of industries also contribute significantly to the total VOC emissions from stationary sources, with degreasing and surface coating being the second largest source, and gas stations (petroleum marketing) also being a third significant source of VOC emissions.

Direct emissions of PM<sub>2.5</sub> in the SBM community originate from a wide range of activities, including commercial cooking, residential and commercial fuel combustion, and paved road dust. In addition, emissions from various industries, including mineral processing and manufacturing, contribute to total PM<sub>2.5</sub> emissions.

Figure 3b-3: Source attribution of VOC emissions and PM<sub>2.5</sub> emissions from stationary and area sources and area in the San Bernardino and Muscoy community for the year 2017

**San Bernardino, Muscoy stationary and area VOC  
in 2017 (tons/year)**

**San Bernardino, Muscoy stationary and area  
PM<sub>2.5</sub> in 2017 (tons/year)**

Figure 3b-4 illustrates the emissions of the major TACs from stationary and area sources in the community. The emissions of each pollutant are weighted by their cancer risk relative to DPM. In this community, 1,3-butadiene is the most predominant air toxic from stationary and area sources. The major source for 1,3-butadiene emissions is industrial processes (Figure 3b-5), mostly from chemical industries.

Figure 3b-4: Toxic air contaminant emissions, weighted by cancer risk, from stationary sources in the San Bernardino and Muscoy community for the year 2017 (in lbs/year)

Figure 3b-5: Source attribution of 1,3-butadiene emissions from stationary and area sources in the San Bernardino and Muscoy community for 2017 (shown in lbs/year, weighted by air toxics cancer risk)

#### *On-road mobile sources*

In this community, passenger vehicles and light- and medium-duty vehicles contribute to the majority of VOC and PM<sub>2.5</sub> emissions (Figure 3b-6). VOC emissions are mostly from gasoline vehicles<sup>ii</sup>, and, as a result, passenger cars are the main contributor to VOC emissions because of the large number of vehicles and miles traveled by these types of vehicles. PM<sub>2.5</sub> emissions from on-road sources are from fuel combustion as well as from tire and brake wear. Light and medium duty vehicles are the main contributors to the total emissions of PM<sub>2.5</sub>, because these vehicles travel the most miles within the community. Even though heavy-duty trucks drive less than 10% of the total vehicle miles traveled in San Bernardino County, heavy-duty trucks contribute to more than 30% of the total PM<sub>2.5</sub> emissions from on-road sources<sup>iii</sup>.

<sup>ii</sup> These emissions are largely related to evaporative and running losses

<sup>iii</sup> Heavy-duty diesel vehicles tend to have higher PM exhaust and tire and brake wear emissions per mile driven compared to gasoline cars.

Figure 3b-6: Source attribution of VOC emissions and PM2.5 emissions from on-road sources in the San Bernardino and Muscoy community for 2017

Toxic emissions from on-road sources are largely dominated by DPM (Figure 3b-7). The largest contributor to DPM emissions is diesel-fueled heavy-duty trucks, so the largest impacts from on-road sources in the community are concentrated along the main goods movement corridors. The second largest contributor to cancer risk from on-road sources is hexavalent chromium, which is emitted from brake wear<sup>iv</sup> and, to a smaller extent, from fuel combustion.

Other TACs emitted from on-road sources include benzene, 1,3-butadiene and formaldehyde. The source of benzene is evaporative losses and the incomplete combustion of gasoline, whereas formaldehyde and 1,3-butadiene emissions are generated from fuel combustion.

Figure 3b-7: Distribution of air contaminant emissions from on-road sources in San Bernardino and Muscoy for 2017 (shown in lbs/year, weighted by air toxics cancer risk)

<sup>iv</sup> A small fraction of hexavalent chromium was considered to originate from vehicle brake wear. The emission factors were empirically adjusted for the MATES IV analysis. While this approach worked reasonably well for the MATES analysis, further evaluation may be required for adapting this adjustment to more recent data. For example, an adjustment may be required to reflect cleaner vehicle fuels compared to those in use during previous MATES.

Figure 3b-8: Source attribution of toxic air contaminant from on-road sources in the ~~East Los Angeles, Boyle Heights and West Commerce~~ San Bernardino, Muscoy community for the years 2017 (shown in lbs/year), weighted by air toxics cancer risk)

#### *Off-road mobile sources*

Figure 3b-9 presents the major sources of VOC and PM<sub>2.5</sub> emissions from off-road mobile sources. The largest contributor to total VOC from off-road mobile sources in the community is small off-road equipment. This category contains small off-road spark-ignition engines that include lawn and garden equipment, industrial and commercial utility equipment, golf carts, and specialty vehicles. Other significant sources of VOC include evaporative emissions from fuel storage and handling, recreational boats, recreational vehicles, and emissions from trains. Although there is no major waterway or waterbody in the SBM community, boats that are parked in the community still emit pollutants through fuel evaporation.

The largest off-road source contributing to PM<sub>2.5</sub> emissions is off-road equipment, both small commercial and large industrial equipment. The second largest contribution to PM<sub>2.5</sub> emissions from off-road sources in the community is trains. There is 1 intermodal railyard and 4 maintenance railyards within the community boundaries, and some of them are near residential areas.

Figure 3b-10 presents the contribution of TAC emissions from off-road sources in the SBM community. DPM is the toxic air contaminant that contributes the most to total cancer risk in the community from off-road mobile sources. The two main sources of DPM are trains and diesel off-road equipment (Figure 3b-11).

Figure 3b-9: Source attribution of VOC emissions and PM2.5 emissions from off-road mobile sources in the San Bernardino and Muscoy community for the years 2017

Figure 3b-10: Contribution of toxic air contaminant from off-road mobile sources in the San Bernardino and Muscoy community for 2017 (shown in lbs/year, weighted by air toxics cancer risk)

Figure 3b-11: Source attribution of DPM from off-road mobile sources in the San Bernardino and Muscoy community for 2017 (shown in lbs/year, weighted by air toxics cancer risk)

## Future year emissions inventory and source attribution

### *Trends of emission changes for CAPs and TACs*

Future emissions of CAPs and TACs in the SBM community are projected using the best available information on population growth, economic growth and emission adjustments reflecting ongoing regulations that reduce specific air pollutants. Regulations reflected in these adjustments include South Coast AQMD regulations and CARB regulations.

Heavy-duty diesel vehicles in this community will be subject to the CARB truck and bus regulation, with implementation dates after 2017. Off-road diesel equipment is also subject to existing state regulations that will reduce DPM emissions from these sources. The South Coast AQMD is developing various regulations to reduce NO<sub>x</sub> and VOC emissions since the adoption of the 2016 AQMP in March 2017. However, control factors for these future regulations and programs are still under development and not reflected in the current inventory. The current inventory for area and stationary sources reflects NO<sub>x</sub> and VOC rules adopted as of December 2015 and TACs rules adopted as of December 2017. Future versions of the emission inventory will reflect the more recently adopted regulations.

Figure 3b-12 presents the projected major CAPs emissions (NO<sub>x</sub>, VOC and PM<sub>2.5</sub>) in the SBM community in the two future milestone years 2024 and 2029, along with the base year 2017. The NO<sub>x</sub> emissions in the community are expected to decrease substantially between the year 2017 (1,140 tons/year) to the year 2024 (726 tons/year), due to the existing regulations on mobile sources and the emission reduction commitments under the RECLAIM program. The NO<sub>x</sub> emissions in 2029 are projected to continue decreasing (to 602 tons/year) despite the expected increase in industrial and mobile source activity. VOC emissions are expected to decrease by 11% between the years 2017 and 2029, mostly due to cleaner vehicle emissions. Unlike NO<sub>x</sub> and VOC emissions, PM<sub>2.5</sub> emissions increase by 2%, during the period from 2017 to 2029, due to increase in industrial and vehicle activity.

Figure 3b-12: The community total emission trends for NOx, VOC & PM2.5 (tons/year) for the year of 2017, 2024 and 2029

Trends for TAC emissions are shown in Figure 3b-13. DPM continues to dominate the TAC emissions inventory in future years, despite a significant reduction in DPM from heavy-duty trucks. DPM emissions decrease by 58% between 2017 (39,938 lbs/year) and 2024 (16,738 lbs/year), and continues to decline through 2029 (11,904 lbs/year). 1,3-butadiene is the second largest contributor to TAC, and these emissions remain relatively unchanged due to slight increases in industrial emissions offset by reductions in emissions from vehicles. The third largest contributor to TACs is hexavalent chromium, which increases slightly between 2017 and 2029, due to the increase in brake wear emissions and projected industrial activity growth. Benzene and formaldehyde emissions decrease throughout the 12-year period due to decreases in the emissions from vehicles, whereas emissions of metals such as cadmium, nickel, arsenic and lead, show a steady increasing trend due to projected industrial activity growth, and from paved road dust emission.

Figure 3b-14 presents the cumulative TAC emissions by the major categories for the base and two future milestone years. The overall cancer-risk-weighted emissions decrease between 2017 and 2029. The decrease is more pronounced in the first 7 years due to the emission reductions in diesel heavy duty trucks and off-road equipment.

It is important to note that many of the South Coast AQMD regulations addressing toxic metal pollution emissions from industrial facilities (e.g. South Coast AQMD Rule 1407 and Rule 1469) include requirements that reduce fugitive emissions from these facilities. Fugitive emissions can often account for the vast majority of the toxic metal emissions from a facility. Unfortunately, the methods available to create an emissions inventory are not able to reflect fugitive emissions

from these facilities. Therefore, while the inventory may not show an overall decrease in toxic metal emissions, the regulations result in overall decreased emissions due to reductions in fugitive emissions.

Figure 3b-13: The community total emission trends for toxic air contaminants for the years of 2017, 2024 and 2029 (shown in lbs/year, weighted by air toxics cancer risk).

Figure 3b-14: Toxic air contaminant emissions from all sources in the San Bernardino and Muscoy community, shown by major categories. Emissions are weighted based on their cancer risk relative to DPM.

### Stationary and Area Sources

The trends in total emissions of NO<sub>x</sub>, VOC and PM<sub>2.5</sub> from stationary and area sources in this community are shown in Figure 3b-15. NO<sub>x</sub> emissions are expected to decline from 2017 to 2024, due to the emission reductions from RECLAIM facilities.<sup>5</sup> VOC and PM<sub>2.5</sub> emissions are expected to grow gradually due to the projected growth in population and economic and industrial activities.

1,3-Butadiene is the largest contributor to total toxic emissions from area and stationary sources (Figure 3b-16), and its emission is expected to grow from 2017 to 2029 due to the projected industrial activity growth during the same period. The major source for 1,3-butadiene emissions is the chemical industry. Emissions of other TACs that are primarily emitted from industrial activities, i.e., formaldehyde, cadmium, arsenic, nickel, and lead, are also expected to increase due to industrial growth. Only DPM and perchloroethylene emissions are expected to decline due to on-going regulations.

Figure 3b-15: Trends in NO<sub>x</sub>, VOC and PM<sub>2.5</sub> emissions from stationary and area sources in the San Bernardino and Muscoy community. Emissions are presented in pounds per year

<sup>5</sup> NO<sub>x</sub> RECLAIM is an emission cap-and-trade program that includes larger stationary sources located in the Basin. The current regulation, Rule 2002 requires 12 tons per year of NO<sub>x</sub> emission reductions from 2016 to 2022. When the rule is fully implemented in 2022, no significant changes in NO<sub>x</sub> are expected except for a slight increase from 2024 to 2029 due to the growth in economic, industrial, and commercial activities. The 2016 AQMP includes a control measure to target an additional 5 tons per year of NO<sub>x</sub> reduction from the RECLAIM facilities by 2031. The impact of the additional “NO<sub>x</sub> shave” is not reflected in the community inventory since December 2015 was the cut off for stationary source regulations to reflect on the inventory. The rulemaking to achieve additional 5 TPD NO<sub>x</sub> is still ongoing and will be reflected on the inventory when it is finalized.

Figure 3b-16: Trends in toxic air contaminant emissions from stationary and area sources in the San Bernardino, Muscoy community (shown in lbs/year, weighted by air toxics cancer risk).

#### *On-road mobile sources*

Trends for on-road emissions are presented in Figure 3b-17. On-road emissions are expected to decline significantly between 2017 and 2024, due to the turnover of light-duty passenger vehicles and heavy-duty trucks. NO<sub>x</sub> emissions will continue decreasing after 2024 but at a slower rate, because the effect of regulations will be partially offset by the increase in vehicle activity (Table 3b-1).

VOC emissions are expected to decline for all vehicle types except for motorcycles, whose emissions grow steadily between 2017 and 2029. PM<sub>2.5</sub> emissions are expected to decline for all vehicle types between 2017 and 2024. After 2024, the effect of vehicle regulations on light-, medium- and heavy-heavy duty trucks is offset by their activity growth. Emissions of PM<sub>2.5</sub> from heavy-duty trucks are expected to increase slightly, offsetting passenger vehicle PM<sub>2.5</sub> emission reductions. As a result, overall PM<sub>2.5</sub> emissions from vehicles are expected to remain unchanged between 2024 and 2029.

Figure 3b-18 presents the trends in emissions of TACs from on-road sources. DPM is the predominant TAC in 2017, followed by hexavalent chromium. However, DPM emissions decline drastically between 2017 and 2024, due to regulations on heavy-duty diesel trucks, and continue decreasing through 2029. Hexavalent chromium emissions are predominantly from brake wear, which is directly related to VMT, with a small contribution from fuel combustion. Because VMT from vehicles are expected to increase, emissions of hexavalent chromium are also expected to increase from this source. However, it is important to note that there is uncertainty in the amount

of hexavalent chromium emissions associated with vehicular activities especially in brake wear. While the emission factors need further evaluation, the increase in VMT would still certainly contribute to the increase in vehicular emissions. Benzene emissions are projected to decline due to reductions in evaporative emissions from vehicles. Formaldehyde and 1,3-butadiene emissions are projected to decrease due to expected reductions in VOC emissions from vehicle exhaust.

Table 3b-1: Trends in vehicle miles traveled (VMT) from on-road mobile sources in the San Bernardino and Muscoy community

Year	Vehicle Categories					Total
	Light and Medium Duty	Light Heavy Duty	Medium Heavy Duty	Heavy Heavy-Duty	Buses	
2017	2,793	66	43	82	7	2,991
2024	2,855	49	57	106	7	3,074
2029	2,914	43	59	114	7	3,137

Unit in 1000 miles

Figure 3b-17: Trends in NOx, VOC and PM25 emissions from on-road mobile sources in the San Bernardino and Muscoy community. Emission values in tons per year.

Figure 3b-18: Trends in toxic air contaminant emissions from on-road sources in the San Bernardino, Muscoy community (shown in lbs/year, weighted by air toxics cancer risk)

#### *Off-road mobile sources*

Trends in emissions of NO<sub>x</sub>, VOC, and PM<sub>2.5</sub> from off-road mobile sources in the SBM community are presented in Figure 3b-19. All three pollutants are projected to decline steadily between 2017 and 2029. In general, emissions are expected to decline due to emission reductions from trains and industrial off-road equipment, due to turnover of older equipment to newer, cleaner equipment. Reductions in evaporative emissions from fuel storage handling and recreational vehicles drive the overall VOC reductions in the community.

Trends in toxic air contaminant emissions are presented in Figure 3b-20. Emissions from off-road mobile sources are still dominated by diesel emissions from trains and off-road equipment in 2024 and 2029. Off-road equipment regulations reduce the overall TACs in the community. While benzene and 1,3-butadiene decrease between 2017 and 2024, the projected increase in industrial activity through 2029 offsets the effect of regulations in the 2017-2024 period. The emissions of the rest of relevant TAC are projected to decline as a result of regulations.

Figure 3b-19: Trends in NOx, ROG and PM25 emissions from off-road mobile sources in the San Bernardino, Muscoy community. Emission values in tons per year.

Figure 3b-20: Trends in toxic air contaminant emissions from off-road mobile sources in San Bernardino and Muscoy (shown in lbs/year, weighted by air toxics cancer risk)

### Source Attribution Summary

The main sources of air pollution emissions in the SBM community are on-road traffic, trains, off-road equipment, and certain industrial activities.

NO<sub>x</sub> emissions in this community are dominated by mobile sources – both on-road and off-road – which account for more than 90% of the total emissions. Heavy-duty truck traffic, trains, and off-road equipment are the largest sources for NO<sub>x</sub>. Stationary and area sources contribute to less than 10% of NO<sub>x</sub> emissions in this community, mostly from fuel combustion in the residential, commercial, and industrial sectors.

VOC emissions are dominated by area sources, with consumer products being the largest source. Passenger vehicles and off-road equipment, such as lawn mowers and small gasoline engines, are the largest contributors to VOC from on-road and off-road mobile sources, respectively. Three quarters of PM<sub>2.5</sub> emissions are from miscellaneous area sources that include commercial cooking, residential fuel combustion, construction, and paved road dust.

TAC emissions in the SBM community are dominated by DPM from diesel fueled vehicles and equipment such as heavy-duty trucks, trains and heavy industrial off-road equipment. 1,3-butadiene is the second largest component of TACs based on cancer-risk-weighted emissions, and its major sources include chemical industry and on-road vehicles. Other significant TAC species include hexavalent chromium, predominantly from brake wear from on-road mobile sources.

Future NO<sub>x</sub> emissions in the community are expected to decrease due to the regulations on mobile sources. VOC emissions are also expected to decline, albeit at a slower pace than NO<sub>x</sub>. Emissions of DPM associated with heavy-duty trucks are also expected to decrease due to recent regulations, and CARB's in-use off-road diesel-fueled fleets regulation will also contribute to reducing DPM. Emissions of 1,3-butadiene from stationary and area sources are expected to increase slightly in the future years, due to increased industrial activity. However, in future years, DPM continues to be the main contributor to cancer risk in this community.

# CHAPTER 4:

## ENFORCEMENT SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 4: Enforcement Plan

### Introduction

This chapter describes the enforcement history and overall approach to enforcement by the South Coast AQMD and the California Air Resources Board (CARB). In addition, the Community Emissions Reduction Plan (CERP) includes focused enforcement actions, which are described within Chapter 5 (idling truck sweeps and truck enforcement in priority areas; air monitoring and inspection at plants). It is important that enforcement actions are part of the overall AB 617 program actions, which enables the program to be more effective in addressing this community's air quality priorities.

### Chapter 4 Highlights

- From 2016 to 2018, CARB has conducted over 1900 inspections and South Coast AQMD conducted approximately 99 inspections and responded to approximately 300 complaints in the San Bernardino, Muscoy community.
- Both CARB and South Coast AQMD will continue to design their programs to most effectively address sources within their respective jurisdictions.
- An enforcement approach that utilizes specialized program structures, outreach efforts in the community, use of technology, and interagency partnerships can lead to further emission reductions.

### Overview of Air Quality Related Enforcement Program - Purpose and Jurisdiction

The primary goal of enforcement activities is for regulated entities to achieve compliance with air quality rules and regulations, and to protect public health. Part of this process involves consistently identifying and resolving violations, thereby ensuring a level playing field for all regulated entities and preventing unfair advantages for violators.

Both CARB and South Coast AQMD regulate and enforce air pollution regulations. Both agencies have the right to conduct inspections of air pollution sources, and the right to issue notices of violations that can lead to penalties.<sup>i</sup>

An air pollution source can be a specific piece of equipment, a business, a government agency, or any other entity that creates air pollution. CARB is primarily responsible for enforcement of rules applying to trucks, buses, and other mobile sources, while South Coast AQMD is primarily responsible for enforcement of rules applying to facilities (e.g., stationary sources).<sup>ii</sup>

<sup>i</sup> More information about penalties is provided in the Appendix 4.

<sup>ii</sup> In some cases, CARB may have agreements that give local air districts delegated authority to enforce a particular CARB rule. Other regulations, such as CARB's truck idling regulation, expressly allow enforcement by local air quality regulators.

Table 4-1: Overview of regulatory authority for South Coast AQMD and CARB

Air Pollution Source Category	Examples	Main Regulatory Agency
<b>Mobile sources<sup>iii</sup></b>	Trucks, buses, ships, boats, cargo handling equipment	CARB
<b>Stationary sources</b>	Refineries, power plants, oil and gas facilities, manufacturing plants; indirect sources	South Coast AQMD
<b>Area-wide sources</b>	Paint used on buildings, dust	South Coast AQMD
<b>Sources of greenhouse gases</b>	Methane and volatile organic compound emissions from facilities	CARB and South Coast AQMD

### Enforcement History

Over the years, both CARB and South Coast AQMD enforcement staff have had a significant presence in the community of San Bernardino, Muscoy (SBM). This section provides the most recent 3-year enforcement history for each agency in this community.

### South Coast AQMD Enforcement History in this Community

South Coast AQMD's enforcement presence includes many different compliance-related activities including, but not limited to, investigating complaints, responding to breakdowns, and performing facility inspections.

Responding to complaints is a crucial part of South Coast AQMD's enforcement program. By taking complaints directly from members of the public, inspectors can focus their efforts to identify and address air pollution problems that matter to the community. South Coast AQMD's enforcement team gives priority to complaints and attempts to respond to every air quality complaint received. The process of responding to a complaint can be unique for each complaint, depending on factors such as whether the air quality concern is ongoing, the type of source, the time of day, and the number of complaints for that air quality concern. For example, South Coast AQMD responds to non-business-off-hour complaints based on the number of complaints that are received for a particular air quality concern. ~~Figure 4-1~~ **Figure 4-1** shows the number and types of complaints received by South Coast AQMD in this community, for the 2016 to 2018 time period. A large portion of the complaints in the SBM community are due to dust and odor concerns.

<sup>iii</sup> Railroads operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. EPA. These agencies' regulatory authority may preempt certain federal, state, and local regulatory authorities and actions.

Figure 4-1: Number of complaints (by type) in the San Bernardino, Muscoy community.

South Coast AQMD's enforcement staff perform inspection activities at facilities and other air pollution sources. These activities can include onsite inspections for permitted and non-permitted equipment, leaks, and compliance with rules, as well as surveillance activities in the community, such as to trace the source of an odor. As of May 2019, there are approximately 154 facilities permitted by the South Coast AQMD in this community.

Enforcement actions typically involve issuing one of two types of notices:

- *Notice to Comply (NC)* – requiring a facility to quickly correct a minor violation or to provide specified records; or
- *Notice of Violation (NOV)* – formally identifying a violation of particular rules or regulations, which may result in civil penalties or, in some cases, referral for criminal prosecution.

Between 2016 and 2018, South Coast AQMD conducted approximately 99 facility inspections and issued 34 NOVs in the San Bernardino, Muscogee community. Figure 4-2 shows the number of NCs and NOVs in this community during 2016 and 2018. A list of these compliance actions is available in the Appendix 4.

Figure 4-2: Number of Notices to Comply (NCs) and Notices of Violation (NOVs) issued in the San Bernardino and Muscoy community

### CARB Enforcement History in this Community

CARB's enforcement process is two-pronged, including conducting field inspections and fleet-wide audits. For field inspections, the focus has been on enforcing heavy-duty diesel vehicle (HDDV) regulations, such as the statewide truck and bus rule, off-road rule, and the heavy-duty vehicle inspection program (HDVIP); at the refineries and fueling stations enforcing fuel formulation regulations; and in the ports enforcing regulations related to shore power, ocean-going vessels, commercial harbor craft and cargo handling equipment. As Figure 4-3 shows, of the vehicles inspected in the San Bernardino, Muscoy community, compliance with CARB's regulations overall appears high, but has varied (see Appendix 4 for CARB's 2016 - 2018 Three-Year Enforcement History) annually. This is potentially dependent on a few factors, including the number of vehicles inspected, the method of selecting vehicles for inspection (e.g., targeting vehicles that might fail inspection), and a number of other factors outside the scope of this analysis. CARB's enforcement has been focused on HDDV regulations, such as the Drayage Truck and the Statewide Truck and Bus rules, as well as the Heavy-duty Vehicle Inspection Program (HDVIP) in this area, with over 1900 inspections conducted in the community in the past three years. Of those vehicles inspected, less than 90 were not in compliance with CARB's regulations. Specifically, over 1000 inspections were conducted at the railyards in 2018. Of the 1066 inspections conducted at BNSF's railyards in SBM in 2018, there were 32 violations, of which 27 were non-emissions violations (e.g., lack of labeling or reporting).

For fleet-wide audits, generally fewer heavy-duty vehicle enforcement inspections have occurred in the area during this time-frame, however beginning in 2018, CARB added the Streamlined Truck Enforcement Program (STEP) to enhance its ability to enforce the Statewide Truck and Bus regulation. Between January 2018 and May 2019, CARB audited 176 fleets in SBM. Of the 353 vehicles in the audit, CARB placed California Department of Motor Vehicles (DMV) registration holds on 198 of those vehicles. This represents a compliance rate of 44 percent with the Statewide Truck and Bus rule. The STEP and CARB's roadside inspection program complement each other. In CARB's roadside inspections, which represent a snapshot of heavy duty vehicle activity, the overall compliance rate from 2016 – 2018 was 93 percent (based on inspecting 112 vehicles). As of May 2019, owners have brought 17 of those vehicles audited in STEP into compliance. While the STEP process can assess more trucks ~~quicker~~ more quickly than in-person roadside inspections, CARB believes that compliance with the Statewide Truck and Bus regulation will continue to improve next year as compliance is tied to California DMV vehicle registration<sup>iv</sup>.

For some of CARB's regulations, enforcement staff have not yet conducted extensive enforcement activities on the concerns that the CSC has raised. However, CARB's enforcement efforts are being enhanced in this community to address community concerns.

<sup>iv</sup> Senate Bill 1 ([https://leginfo.ca.gov/faces/billTextClient.xhtml?bill\\_id=201720180SB1](https://leginfo.ca.gov/faces/billTextClient.xhtml?bill_id=201720180SB1)).

Figure 4-3: CARB Heavy-duty Diesel Vehicle Enforcement History by Program Type in the San Bernardino and Muscoy Community.

In summary, between 2016 and 2018, both CARB and South Coast AQMD have conducted a range of compliance activities in the community including more than 1900 inspections ~~by~~<sup>from</sup> CARB enforcement staff related to heavy-duty diesel vehicles. Of those inspections, the vast majority of vehicles were in compliance, with ~~less~~<sup>fewer</sup> than 90 not in compliance. South Coast AQMD enforcement staff conducted approximately 100 facility inspections, responded to approximately 300 complaints, and conducted numerous other investigation activities in SBM. South Coast AQMD issued 34 Notices of Violation. Considering that a portion of these compliance actions are focused on the same facilities, the compliance rate may not be an effective indicator of overall compliance within the area.

Due to the air pollution concerns in this community, an enforcement approach by both agencies that fully utilizes their specialized program structures, outreach efforts in the community, use of technology, and interagency partnerships can lead to further reductions in non-compliance and emissions. Both South Coast AQMD and CARB will continue to work closely with the CSC to identify and investigate air quality issues within the community.

## Enforcement Approach - Program Structures

Both CARB and South Coast AQMD have designed their programs to most effectively address sources under their respective jurisdictions.

### South Coast AQMD's Office of Compliance and Enforcement (OCE)

The structure of this group is based on teams that focus on source type, and inspectors are also assigned by geographic region. The organizational structure based on source type enables inspectors to become technical specialists on the air pollution regulations that apply to the types of industries or facilities assigned to that team. In addition, assigning inspectors by geographic area improves the agency's ability to respond in a timely manner to complaints or compliance issues in that area.

For example, an office building may have a diesel backup generator that would be inspected by the Industrial team. This team has the broad knowledge to inspect a wide variety of source types and equipment. A wastewater treatment plant may also have a diesel backup generator, but these are inspected by the Toxics & Waste Management team which has the training and personal protective equipment (PPE) to conduct inspections at facilities with Toxic Air Contaminants. However, certain facilities may be inspected by multiple teams to ensure that the approach is focused enough to address a variety of sources, yet flexible enough to handle complex facilities.

For most teams, the inspectors conduct regular inspections at their assigned facilities or within their assigned geographic regions. The frequency of regular inspections depends on the type of facility. For example, a chrome plating facility is inspected more frequently than an auto body shop. It is important to consider that there are approximately 110 chrome plating facilities in the South Coast Air Basin, compared to over 1,500 auto body facilities in the region. When considering limited resources, inspection priority is typically given to higher risk pollution sources – that is, those facilities that emit the more toxic air pollutants and/or are close to schools, hospitals, and residential areas.

The following teams operate in the SBM community:

Figure 4-5: South Coast AQMD Enforcement Program teams

The **Industrial team** focuses on the widest variety of sources, ranging from dry cleaners to large manufacturing facilities to idling truck sweeps. Inspectors in this team are assigned a geographic region and normally spend much of their time in the field. From this team, 2 inspectors regularly conduct compliance activities in SBM.

The **Major Sources team** focuses on sources that are in the REgional Clean Air Incentives Market (RECLAIM)\* program. Examples of these sources include power plants, oil production sites, and large manufacturing facilities. Inspectors in this team are assigned by facility, with each inspector assigned a set of facilities, some of which are in SBM.

The **Service Station team** Focuses on gasoline service stations that serve the public, which can emit volatile organic compounds (VOCs). Inspectors in this team are assigned a geographic region. From this team, 2 inspectors regularly conduct compliance activities in SBM.

The **Toxics team** focuses on facilities that emit Toxic Air Contaminants, including hexavalent chromium, lead, and other toxic metals. Examples of these facilities include landfills, waste treatment facilities, water treatment facilities, lead acid battery manufacturers, and chromium plating and anodizing shops. Inspectors in this team are assigned a geographic region, and 1 inspector regularly conducts compliance activities in SBM.

The following teams are a part of OCE, but do not regularly conduct compliance activities in SBM:

The **Energy team** focuses on crude oil production, energy storage sites, and bulk petroleum terminals. Inspectors in this team usually work in pairs for safety, as well as the need to operate portable equipment. Inspectors in this team are assigned by facility, with each inspector assigned a set of facilities.

The **Refinery team** focuses on all the refineries, auxiliary hydrogen plants, and marine terminals in the South Coast Air Basin. Inspectors in this team are assigned by facility, with each inspector dedicated to a refinery and auxiliary plants. This team is based full-time in the Long Beach Field Office to ensure close proximity to the refinery sources that it regulates.

\*RECLAIM, for REgional Clean Air Incentives Market, is a program that requires participating facilities to manage their total nitrogen oxides (NOx) and/or sulfur oxides (SOx) emissions (which reduce over time) by adding pollution controls, changing their equipment or processes, or buying credits from other RECLAIM facilities that have lower emissions than their cap. The allowable amount of such emissions is reduced over time. The program is currently being transitioned to a command-and-control regulatory program.

### CARB Enforcement's Program Structure

Through targeted enforcement or public complaints, CARB identifies a potential violation. CARB then contacts the responsible party to explain the enforcement process and to obtain additional information. Enforcement staff evaluates the information collected and works with CARB's Legal Office to determine violations of statutory and/or regulatory requirements. When violations are substantiated, CARB can take enforcement action, at which point the responsible party is provided an opportunity to respond to the violation.

~~This outcome includes taking~~ CARB takes appropriate enforcement action ~~within the scope of CARB's enforcement authority~~, which may include issuing cease and desist orders, Notices of Violation, mitigation, or pollution prevention actions. Cases can be resolved via civil and criminal litigation. In lieu of litigation, cases typically are settled through CARB's mutual settlement program. Penalties are sought that ~~provide adequate deterrence to deter~~ future non-compliance or public nuisance.

For example, in 2017, settlement agreements were made with Union Pacific Railroad Company (UP) and BNSF Railway regarding drayage truck regulations. Under CARB's Drayage Truck Regulation, California ports and Class I rail terminals must report non-compliant heavy-duty diesel trucks entering their facilities. For years, BNSF and UP failed to accurately report to CARB information on non-compliant trucks entering their facilities, which hampered CARB's ability to enforce the regulatory requirements. The settlements resulted in UP turning away non-compliant trucks from their facilities and BNSF accurately reporting truck data to CARB for enforcement, resulting in reduced diesel emissions from heavy-duty diesel trucks around both UP and BNSF facilities.<sup>8</sup>

During the settlement process, violators have the opportunity to allocate up to 50% of their penalties to a supplemental environmental project (SEP)<sup>v</sup>. Community-proposed projects are funded by the violators to help improve public health, reduce pollution, increase environmental compliance and bring public awareness to air pollution issues. Additional SEPs<sup>s</sup> are possible in the SBM community through the proposal process.<sup>9</sup> CARB has over 50 enforcement programs that focus on specific source types.

A few of the programs that are relevant to enforcement activity in SBM community are:

---

<sup>v</sup> Other examples of enforcement settlement cases can be found in CARB's Annual Enforcement Reports (<https://www.arb.ca.gov/enf/reports/reports.htm>).

Figure 4-6: CARB Enforcement Programs teams relevant to the SBM community

CARB conducts **idling** sweeps to ensure regulatory truck and bus idling limits are not exceeded.

**Drayage** vehicles are certified heavy-duty vehicles (HDV) that move goods. HDV that enter the port or intermodal facility are required to be certified to meet clean emission standards.

Regulations aimed at cleaning up '**off-road**' **construction equipment** such as bulldozers, graders, and backhoes. These requirements are in place to help ensure that diesel soot filters are installed on off-road equipment.

**SmartWay**: The Tractor-Trailer Greenhouse Gas Regulation requires 53-foot or longer dry van or refrigerated van trailers and the tractors that pull them on California highways to use certain equipment that meets US EPA efficiency standards.

**Transport Refrigeration Units (TRUs)**: Inspect secondary engines to ensure TRUs meet labeling and clean air requirements.

**Cargo handling equipment** investigations are led by CARB to identify opportunities to reduce emissions from idling at ports and intermodal rail yards.

For the **Heavy-Duty Vehicle Inspection Program**, CARB regularly conduct inspections for:

- Diesel Emission Fluid (DEF): a liquid used as a reductant in heavy duty diesel engines to reduce NOx emissions.
- Emission Control Label (ECL): Engine certification labeling requirements.
- Smoke/Tampering: Requires heavy duty trucks/buses to be inspected.

**Statewide Truck and Bus program** requires all vehicles with 2009 or older engines weighing over 14,000 pounds to reduce exhaust emissions by upgrading to 2010 or newer engines by 2023. Non-compliant vehicles will be denied DMV registrations.

## How the Public Helps Reduce Air Pollution

Members of the public play an important role in communicating air quality concerns to both South Coast AQMD and CARB. The complaint process helps both agencies identify issues that are directly affecting the SBM community. The most effective way to contact the agencies is through the complaint hotlines. In addition to South Coast AQMD's mobile application, both agencies can be contacted by phone and online:

<p><b>CARB - Mobile Sources</b></p> <p><b>Automobiles, Trucks, Off-road Equipment, or other Vehicles</b></p> <p>Phone: 1-800-END-SMOG</p> <p>Online: <a href="http://calepa.ca.gov/enforcement/complaints">calepa.ca.gov/enforcement/complaints</a></p>	<p><b>South Coast AQMD - Stationary Sources</b></p> <p><b>Odors, Smoke, Dust, or other Air Contaminants</b></p> <p>Phone: 1-800-CUT-SMOG</p> <p>Online: <a href="https://www.aqmd.gov/home/air-quality/complaints">https://www.aqmd.gov/home/air-quality/complaints</a></p>
---	---

Both CARB and South Coast AQMD value input from those who live and work every day in the community, and communicating air quality issues directly to the agencies with the information below is the best way to address an air pollution concern. Letting the agencies know of an issue when it is occurring rather than after the fact helps South Coast AQMD's and CARB's ability to find the source of the problem.

An effective complaint should contain information with specific details. This information helps inspectors conduct a thorough investigation and take appropriate enforcement action. The following information is valuable to a thorough complaint investigation:

- Type of air quality concern (odor, smoke, dust, etc.)
  - o Odors: description of odor
  - o Smoke: color of smoke; does the smoke disappear or hang in the air?
  - o Dust: type of dust (e.g. construction activities)
- Location of air pollution concern
- Name or address of potential source
- Time of day that the air quality issue began, and is the concern still occurring?
- Has the concern occurred before, and do other people in your community experience it as well?
- Contact information for the person reporting the complaint<sup>vi</sup>

<sup>vi</sup> Although anonymous complaints are accepted, staff have found that having contact information helps with getting additional information to help with the investigation.

## Technology

Both South Coast AQMD and CARB enforcement staff have embraced the use of technology as a means for more efficient and effective inspections. South Coast AQMD inspectors have access to advanced instruments to help identify air pollution issues in real-time. The following portable instruments are available to inspectors:

Figure 4-7: Portable instruments used by South Coast AQMD inspectors in the field

*Toxic Vapor Analyzers (TVA):* Inspectors can use TVAs to provide information about the level of certain gases in a specific area. This includes methane and volatile organic compounds (VOCs), which are emitted by petroleum sources and other types of sources.

*Infrared Cameras:* Inspectors can use specialized infrared cameras to view emissions of gases (including methane and VOCs) that would otherwise be invisible to the naked eye. This equipment enables inspectors to scan areas for emissions and quickly check for any large leaks at a facility.

*X-Ray Fluorescence (XRF):* Inspectors can use this handheld instrument to identify the types of chemicals that are on a surface or in a dust pile. This tool helps identify potential pollutants that are particles. For example, an XRF can be used to scan surfaces at a facility to identify which specific toxic metals may be deposited in that location, and which locations have the highest levels of those toxic metals.

*H<sub>2</sub>S Analyzers (Jerome Meters):* Inspectors can use this handheld instrument to measure hydrogen sulfide gas levels in the air. This information can be used to identify a potential source of rotten egg type odors.

In addition, inspectors are trained on how to collect field samples, including air samples, liquid samples, or bulk material samples. These samples can then be provided to the South Coast AQMD laboratory or contract laboratories for analysis. The results of these analyses can be used as evidence to support investigations and/or Notices of Violation issued to air pollution sources.

South Coast AQMD regulates over 25,000 facilities, receives approximately 10,000 public complaints per year, and operates a vast air quality monitoring network; and CARB regulates a significant number of mobile sources throughout the state. Analyzing the data that results from these efforts can provide insight into the trends and sources of air pollution as well as new enforcement opportunities. Both agencies use information technology to enhance the ability to conduct investigations and enforce regulations. As an example, for CARB's truck fleet enforcement program, the traditional approach was to inspect several thousand trucks annually through fleet-based inspections. Starting in January 2018, CARB began the Streamlined Truck Enforcement Process (STEP), and is now able to conduct 20,000 to 25,000 inspections per year through the use of a data-driven approach, non-compliance letters, and a scheduled settlement process. South Coast AQMD's investigation of crude oil tankers is another example of using information technology in enforcement activities. Inspectors used mapping software, weather data, and ship databases to help identify an oil tanker as a potential source of emissions. The oil tanker was later issued a Notice of Violation when it berthed at a port. These multi-faceted approaches can be applied to address other air pollution concerns in SBM. Providing transparent access to the information that both agencies possess will lead to a stronger partnership with the community.

### The Interagency Approach

CARB and South Coast AQMD are committed to working with other agencies on joint initiatives that will directly result in cleaner air. The combined resources, expertise, and legal authorities of different agencies can create a well-rounded approach to the regulatory process that leverages their respective strengths to address issues that cumulatively impact public health. For example, San Bernardino County Fire Department partnered with South Coast AQMD to conduct targeted inspections of spray booths with the Industrial team and inspections of gas stations with the Service Station team.

Figure 4-8: Examples of agencies that collaborate with South Coast AQMD and CARB

CARB partners with local agencies to create memoranda of understanding (MOUs), such as an agreement with South Coast AQMD to enforce CARB's greenhouse gas standards at certain facility types. In addition, CARB has already established partnerships with California DMV working on implementing registration

holds for non-compliant trucks and buses, California Highway Patrol (CHP) to conduct roadside inspections, and other state and regional agencies to ensure ~~the agencies~~<sup>we</sup> are supporting each other's enforcement efforts. Both South Coast AQMD and CARB have demonstrated experience working in close collaboration with other regulatory agencies, cities and counties, public health agencies, and local police and fire departments to conduct investigations and provide public information about local air pollution sources.

## Enforcement Considerations

An effective enforcement program must be flexible and adaptable to address the needs of the communities. Part of being adaptable is the ability to identify and address gaps in the enforcement process, such as previously unknown facilities or new pollutants of concern. As revealed over the course of the public process for CERP development, one such gap has been a lack of communication with members of the community, who have firsthand experience with local emissions sources and whose input can be quite valuable to enforcement efforts. South Coast AQMD has therefore prioritized outreach and added new positions to interact directly with the AB 617 communities, including dedicated compliance staff assigned in those communities. Because South Coast AQMD organizes its enforcement division both by source type for technical specialization and by geographic region, there is not a single dedicated team for AB 617; rather, the effort is spread across multiple existing teams so that a larger number of complaints and potential violations of air quality rules can be identified and addressed.

In addition, both CARB and South Coast AQMD currently maintain extensive records of compliance-related activities through the use of databases and other digital resources. OCE uses these resources to track metrics such as complaints, inspections, and enforcement actions. The data provided in this chapter and Appendix 4 are derived from those databases. The particular statistics being tracked are also routinely reevaluated. For example, OCE recently added an Agency Technical Assistance metric for instances where South Coast AQMD was asked by another agency to assist in that agency's efforts, often by way of collecting samples or providing ambient air monitoring. CARB and South Coast AQMD will both continue to evaluate new metrics that may help to track and analyze inspectors' efforts in the AB 617 communities in order to attempt to identify more effective allocations of resources and/or potential solutions to air quality issues.

Finally, enforcement mechanisms exist that are designed to promote, and, if necessary, compel, compliance by regulated sources. As discussed above, after South Coast AQMD inspectors investigate complaints and/or conduct facility inspections, they can issue notices to comply or notices of violations. While notices to comply will generally require further action by a source, notices of violation are referred to the Office of the General Counsel, where penalties are negotiated. If no settlement is reached, a civil lawsuit can ultimately be filed in superior court. Ongoing non-compliance, however, may lead to a petition for an order of abatement before the Hearing Board, which would have the authority to require

a facility to take certain actions to achieve compliance. CARB and South Coast AQMD have each had a presence in this community that has led to various enforcement actions against local facilities.<sup>vii</sup>

In sum, the compliance process seeks to ensure that all rules and regulations are followed through a fair and robust enforcement program, resulting in reduced air pollution emissions. Adaptability is crucial, whether in the programs overall, or in day-to-day operations, to ensure that community concerns are addressed quickly and that enforcement action is taken when violations are identified. Both CARB and South Coast AQMD enforcement teams will continue to search for innovative strategies, lead in community transparency, and take swift action to address non-compliance.

---

<sup>vii</sup> Additional detail on South Coast AQMD and CARB enforcement actions can be found in Appendix 4.

# CHAPTER 5A:

## ACTIONS TO REDUCE AIR POLLUTION EMISSIONS OR EXPOSURES - OVERVIEW

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5a: Actions to Reduce Community Air Pollution

### Introduction

The CERP provides an overall path to reducing air pollution in the San Bernardino, Muscoy community. Through the development of the CERP the CSC identified air quality priorities based on sources of air pollution (e.g., neighborhood truck traffic, warehouses, railyards) that are of concern to the community. To reduce air pollution from these sources, the CSC developed a set of actions to be implemented by government agencies, organizations, businesses, and other entities.

### Community Air Quality Priorities

The community of San Bernardino and Muscoy identified neighborhood truck traffic, warehouses, the ~~OmniTrans~~ bus yard, railyards, and concrete batch plants and asphalt/aggregate plants as air quality priorities. These sources of air pollution are often located close to homes, schools, and other community areas where the public can be exposed to harmful pollutants. As a result, reducing exposure to air pollution ~~exposure reduction~~ at schools, childcare centers, and homes is also a priority for the community.

### Ongoing efforts

The South Coast AQMD, CARB, and U.S. EPA have air quality regulations to reduce air pollution that apply to facilities in various source categories. The relevant agencies enforce these regulations. Additionally, the South Coast AQMD and CARB have begun the process of developing new requirements that would further reduce air pollution from sources prioritized by the community.

### Chapter 5a Highlights

- Many new actions will be taken to address the community's air quality priorities
- South Coast AQMD will use a variety of ~~many different~~ strategies, such as regulations, incentives, outreach, enforcement, monitoring, and collaboration ~~more~~
- Many actions also rely on effective collaborations with other agencies, organizations, businesses, and entities ~~others~~
- The estimated emission reduction targets resulting from incentives supported by actions in this CERP are:
  - NOx: 127.9 tons per year ~~40 to 50 tons per year~~
  - DPM: 0.91 tons per year ~~0.5 to 0.6 tons per year~~
- Additional emission reductions that may not be quantifiable at this time are achieved through actions ~~that include strategies~~, such as, rule development, air monitoring, and enhanced enforcement

### Opportunities for Action

In addition to the ongoing efforts described above, the CSC developed new actions to reduce air pollution in the community. Each action is to be carried out based on a set of strategies, goals, and timelines. The entity (e.g., government agency or organization) responsible for the actions is also identified. The actions set forth in this chapter define a path to further reduce air pollution from sources in the San Bernardino, Muscoy community and provide additional protections for children at their schools. In some instances these actions reaffirm ongoing rule development efforts and provide new commitments for localized reductions, sharing of emissions data, timelines, and other related information.

### Emissions Reductions Targets

The actions in the CERP prioritize emissions reductions in the San Bernardino, Muscoy community. The CERP includes emission reduction targets for NO<sub>x</sub> and diesel particulate matter (DPM) emissions<sup>i</sup> in the San Bernardino, Muscoy community that are based on these actions. Table 5a-1 below, provides a list of the overall emission reduction targets for the CERP and the type of actions that contribute to the targets. Baseline emissions refer to expected future emissions without any new action or regulation beyond those already adopted.

Table 5a-1: CERP Emission Reduction Targets by 2024 and 2029 (or Earlier of Feasible)

<u>Emissions<sup>a1</sup></u>	<u>NO<sub>x</sub></u>	<u>DPM</u>
<u>2017 Emissions (tpy)</u>	<u>1140</u>	<u>19.97</u>
<u>Projected 2024 Emissions Baseline (tpy)</u>	<u>726</u>	<u>8.37</u>
<u>Emission Reductions from CERP, by 2024 (tpy)</u>	<u>75.1</u>	<u>0.86</u>
<u>Emission Reductions from CERP, by 2024<sup>b</sup> (%)</u>	<u>10</u>	<u>10</u>
<u>Projected 2029 Emissions Baseline<sup>1</sup> (tpy)</u>	<u>602</u>	<u>5.95</u>
<u>Emission Reductions from CERP, by 2029 (tpy)</u>	<u>127.9</u>	<u>0.91</u>

<sup>i</sup> NO<sub>x</sub> is a precursor to secondary PM<sub>2.5</sub> formation. In addition, 90% of the total number of particles in diesel exhaust are in a median size range of about 0.02µm and most of the mass in diesel exhaust is represented by a median particle size of about 0.25µm. Therefore DPM is a subset of PM<sub>2.5</sub>. (<https://www3.epa.gov/ttnchie1/conference/ei13/mobile/hodan.pdf>). Reductions in NO<sub>x</sub> and DPM will subsequently reduce PM<sub>2.5</sub> levels both regionally and in the community.

Emission Reductions from CERP, by 2029 <sup>c</sup> (%)	<u>21</u>	<u>15</u>
---	-----------	-----------

<sup>a</sup>Per CARB guidance, the emissions baseline was estimated for 2017, and milestone years 2024 and 2029.

<sup>b</sup>Percent calculated based on 2029 emissions baseline

<sup>c</sup>Percent calculated based on 2029 emissions baseline.

### *Mobile Sources – Neighborhood Truck Traffic and Railyards*

Implementation of the CERP is estimated to reduce ~~nitrogen oxides (NOx) emissions by 127.9 tpy~~ 40 to 50 tons per year of NOx and 0.91 tpy of particulate matter (DPM) emissions from mobile sources by 0.5 to 0.6 tons per year. These emission estimates are based on future statewide mobile source measures from CARB and potential mobile source incentive projects to benefit this community as outlined by the actions in this chapter. Future statewide mobile source measures that contribute to the estimated emission reductions in this community include the CARB Advanced Clean Truck Rule, Heavy Duty Low NOx Rule, and Heavy Duty Inspection and Maintenance. These measures support actions in the CERP that address neighborhood truck traffic and railyards. Table 5a-2 below, provides a list of the statewide measures with expected decision dates, implementation periods, and estimated emission reductions.

**Table 5a-2: Estimated Emission Reductions from Statewide (CARB) Mobile Source Regulations by 2024 and 2029**

<b>Statewide Measure</b>	<b>Board Action Date<sup>a</sup></b>	<b>Implementing Entity</b>	<b>Emission Reductions Targets 2024/2029 (tpy)</b>			
			<b>NOx</b>	<b>VOC</b>	<b>DPM</b>	<b>PM2.5<sup>e</sup></b>
<u>Heavy-Duty Vehicle Inspection and Maintenance Regulation<sup>b</sup></u>	<u>2020</u>	<u>CARB</u>	<u>25/31</u>	<u>N/A</u>	<u>0.31/0.35</u>	<u>0.31/0.35</u>
<u>Advanced Clean Trucks Regulation<sup>c</sup></u>	<u>2019</u>	<u>CARB</u>	<u>0.1/1.9</u>	<u>N/A</u>	<u>&lt;0.1/&lt;0.1</u>	<u>&lt;0.1/&lt;0.1</u>
<u>Heavy-Duty Low NOx Rule<sup>d,1</sup></u>	<u>2020</u>	<u>CARB</u>	<u>5/50</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>

<sup>a</sup> Timeline based on first CARB Board hearing dates for each measure or beginning of implementation for mobile source incentives

<sup>b</sup> These Current regulations require heavy-duty vehicles operating in California to be inspected for excessive smoke and make repairs where applicable. CARB's current inspection programs include the roadside Heavy-Duty Vehicle Inspection Program and the fleet Periodic Smoke Inspection Program.

<sup>c</sup> CARB is working through a public process to develop and consider proposals for new approaches and strategies that may transition to zero emission technology those truck fleets that operate in urban centers, have stop and go driving cycles, and are centrally maintained and fueled.

<sup>d</sup> This rule would set new statewide engine standards for NOx reduction from trucks by 2026, and additional reductions including in and after 2027. More information is available at: <https://www.arb.ca.gov/msprog/hdlownox/hdlownox.htm>.

<sup>e</sup> Figure 3 in Chapter 3b shows that three quarters of PM2.5 emissions are from miscellaneous area sources that include commercial cooking, residential fuel combustion, construction, and paved road dust. These sources were not identified as air quality priorities by the CSC and thus are not part of this plan. Nonetheless, PM2.5 will be reduced by the Statewide Mobile Source Regulations.

As mentioned above, the estimated overall emissions reduction targets for this community also consider potential future mobile source incentive projects described by the actions in this chapter. For example, Subchapter 5b – Neighborhood Truck Traffic includes an action to reduce emissions from heavy-duty trucks. This action will be implemented by measures that require outreach to the owners and operators of heavy-duty trucks in the community. The CERP contains six different measures focused on outreach efforts to incentivize the replacement of older equipment with newer, less polluting equipment. These measures are coupled with commitments from South Coast AQMD staff to conduct ten public outreach events in the community to recruit potential applicants for incentives. The estimated emission reductions for

mobile source incentive projects in this community are estimated to be between 40 and 50 tpy of NO<sub>x</sub> and 0.5 to 0.6 tpy of DPM emissions.

~~These emissions estimates are based on data from past incentive projects<sup>ii</sup> (e.g., replacing heavy-duty trucks with cleaner trucks, replacing cargo handling equipment at railyards). Additionally, the estimated emissions reductions consider potential future incentive projects that are targeted by the actions in this chapter. For example, Subchapter 5b—Neighborhood Truck Traffic, includes an action to reduce emissions from heavy-duty trucks. The CERP contains measures focused on outreach efforts to incentivize the replacement of older equipment with newer, less polluting equipment. These measures are coupled with commitments from South Coast AQMD staff to conduct public outreach events in the community to recruit potential applicants for incentives.~~

~~Some actions in this chapter are likely to result in additional emissions reductions that are not quantifiable at this time. For example, Subchapter 5c—Railyards, includes an action that would reduce emissions from the BNSF railyard. The target for this action is to pursue strategies to reduce air pollution from railyards through the development of indirect source requirements. However, reductions from this action would be quantified during the rule development process for Facility Based Mobile Source Measures to provide staffan opportunity to evaluate technologies that would reduce emissions at railyards.~~

~~Based on the air quality priorities identified by the CSC, the actions in this chapter also emphasize emissions reductions from fugitive emissions sources. For Another example, the CERP includes is anthe action to address fugitive emissions and particulate matter PM from concrete batch, asphalt batch, and aggregate plantsThis action requires enhanced air monitoring along with follow up strategies (e.g., enforcement activities) target emissions reductionsfrom these sources. Based on the information available, emissions reductions from these actions cannot be estimated at this time. However, the CSC has recommended that these sources of fugitive emissions should be addressed by the CERP to improve air quality in the San Bernardino, Muscoy community.~~

~~South Coast AQMD is working with CARB to address emissions from mobile sources. CARB has committed to considering amendments to their rules and regulations within the CERP to address the air quality priorities in this community. The emissions reduction targets expected from the implementation of these rules and regulations is [CARB to insert emission reductions].~~

---

<sup>ii</sup> Data was based on 2018 incentive projects.

# CHAPTER 5B:

## NEIGHBORHOOD TRUCK TRAFFIC

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5b: Neighborhood Truck Traffic

### Background

The Inland Empire, including San Bernardino County, plays an important role in the goods movement industry, serving as a gateway between the Southern California ports and the rest of the continental United States.<sup>1</sup> The community of San Bernardino and Muscoy is home to an intermodal railyard, which includes the operation of locomotives, off-road equipment and heavy-duty trucks, that contribute to the air pollution in the community. Warehouses near the Interstate 10 freeway just south of this community also attract truck traffic, which passes through the San Bernardino, Muscoy community. Trucks are used to deliver goods to and from railyards, warehouses, and retail stores.

It is important to note that many of the industries in this community rely heavily on regional and local truck transportation,<sup>2</sup> ~~not only~~ to receive and distribute goods. The goods movement industry also, serve but also as a source of income for those who are hired to transport, store, and distribute these goods. The large volume of trucks adversely impacts the members of this community by creating diesel air pollution, congestion, accelerated deterioration of the local infrastructure (e.g., roads), and noise pollution.<sup>2</sup> Trucks often travel near and through local neighborhoods to reach their destinations, thus exposing residents to harmful air pollutants.

### Community Air Quality Priorities – Idling Trucks, Enhanced Enforcement of Existing Regulations and City Ordinances, Air Pollution from High Volume of Trucks, and Cleaner Technology Options

Diesel air pollution from trucks is an air quality priority for the San Bernardino, Muscoy community. Heavy-duty diesel trucks and vehicles that operate in the community include, heavy-duty trucks, trash trucks, transport refrigeration units, and other commercial vehicles. CSC members asked for regulations and incentives that result in the adoption of zero-emission trucks on the road as soon as possible. CSC members noted that there were many trucks driving through and idling in this community, and also noted that some trucks park for long periods of time on neighborhood streets.<sup>3</sup> CSC members recognize the limited resources of the City of San Bernardino, which impacts the City's ability to enforce local ordinances and designated truck routes. The County's policy plan is currently available for public review, which includes designating truck routes as a focus for one of its measures.<sup>4</sup> The CSC has requested that the AB 617 program increase enforcement of truck<sup>5</sup> and anti-idling<sup>6</sup> regulations, and utilize existing traffic information and available technology (e.g., ~~Automated~~ Automatic License Plate Readers (ALPRs<sup>7</sup>)) to help identify potential truck routes and incentives for replacing older, higher-emitting trucks with cleaner technologies.

To address this source, the CSC identified ways to reduce emissions from trucks, such as:

- Regulations and incentives for zero-emission trucks on the road, when commercially available

- Increased enforcement of idling rules to reduce diesel emissions (including during non-business hours)
- Gather existing traffic information from local authorities (e.g., Caltrans) and from available databases, and implement new technology such as ALPR to collect data on truck traffic and assess the potential impact of truck emissions near schools. Provide data to local land use agencies to help prioritize truck routes that need to be reclassified in the general plan<sup>1,2</sup> or the community plan<sup>3</sup>. Use data to target truck owners of older, higher-polluting trucks for incentive programs to replace trucks with cleaner technology, including zero-emissions technology when feasible and commercially available
- Additional and new incentive and financing opportunities, especially for small businesses and independent truck drivers, for truck replacements with prioritization of zero-emission technologies once they become feasible and commercially available, and near zero-emission technologies until that time
- Working with the City and County of San Bernardino on efforts to design or redesign truck routes in the community
- Improving the complaint response system to report truck idling or a violation of City or County ordinance regarding air quality
- Enhancing outreach to commercial fleets, warehouses, and other facilities that operate heavy-duty diesel trucks in the community and provide them with information on the availability of zero-emission vehicles and incentive funding opportunities that are available

### Ongoing Efforts

#### *U.S. EPA and Statewide Efforts*

CARB's Airborne Toxic Control Measure (ATCM) places limits on idling of diesel-fueled trucks.<sup>6</sup> This regulation is enforced by CARB and South Coast AQMD, and will be a focal point of the enforcement activities in AB 617 communities. CARB continues to address truck diesel emissions reductions through existing and upcoming regulations, such as the Drayage Truck Regulation<sup>8</sup> and the Truck and Bus Regulation,<sup>9,10</sup> which include emission standards ~~requirements~~. CARB is also responsible for enforcing the Commercial Vehicle Idling Regulation, where commercial vehicles (gross vehicle weight rating greater than 10,000 pounds) are prohibited from idling for more than five minutes.<sup>11</sup> In addition, to help cities address idling, CARB has developed an "Options for Cities to Mitigate Heavy-Duty Vehicle Idling" guidance document.<sup>12</sup> CARB has many new potential requirements that are ~~also~~ being considered that would further reduce emissions from trucks. Table 5-1 below illustrates the key upcoming activities from U.S. EPA and CARB.

Table 5b-1: Upcoming Rule Development/Activities from U.S. EPA and CARB

Agency	Proposed Action	Expected Decision	Expected Phase-in Period
U.S. EPA	<u>Cleaner Truck Initiative</u> <sup>13</sup> – In response to a petition from the South Coast AQMD, U.S. EPA has committed to updating its truck engine standard to reduce NOx emissions.	2020-2021	2024-?
CARB	<u>Drayage Truck Rule</u> <sup>8</sup> – Updated regulation to transition to zero-emission trucks.	2022	2026-?
CARB	<u>Advanced Clean Truck Rule</u> <sup>14</sup> – Mandate for truck manufacturers to sell zero-emission trucks and would require fleet reporting. By 2030, there will be a zero-emission truck/chassis sales requirement.	2019	2024-2030
CARB	<u>Zero-Emission Fleet Rule</u> <sup>15</sup> – Would require fleets to transition to zero-emissions.	2022	2024-?
CARB	<u>Heavy-Duty Low NOx Rule</u> <sup>16</sup> – Would set new statewide engine standards for trucks. 60-75% NOx reduction between 2024-2026. Additional reductions in 2027 and beyond.	2020	2024-?

### *South Coast AQMD Efforts*

The South Coast AQMD funds projects to help develop zero-emission technologies for heavy-duty Class 7-8 trucks<sup>i</sup> (e.g., battery electric, fuel cell). These projects are in the design and demonstration phase and the technologies are not yet commercially available. Additionally, the South Coast AQMD staff administers incentive programs for truck owners and operators to replace older more polluting trucks with ones that are cleaner than required.<sup>17</sup> For example, South Coast AQMD's Voucher Incentive Program (VIP) is designed for smaller businesses with fleets of 10 or fewer vehicles that primarily operate within California.<sup>18</sup> VIP helps truck owners with older, more-higher polluting trucks to purchase newer, lower-emission trucks reach current emissions standards. Also, the Carl Moyer Program<sup>19</sup> is another resource for truck owners to obtain trucks that are cleaner than required.

Another strategy could be the use of automated license plate readers (ALPRs), which is currently being explored by South Coast AQMD staff. These are high-speed, computer-controlled camera systems that can capture license plate numbers that come into their view. ALPR data, when cross-

<sup>i</sup> The Federal Highway Administration categorizes Class 7-8 trucks under the "Heavy Duty (>26,001 pounds (lbs))" gross vehicle weight rating

referenced with DMV data, can provide more information about vehicles (e.g., the chassis model-year and weight class for trucks) which can help build a picture of the fleet makeup that pass a specific location over time. Assumptions for relating chassis model year and engines installed on a chassis can be used to estimate emissions from heavy-duty diesel trucks. South Coast AQMD staff is exploring the possibility of using this information to notify heavy-duty diesel truck owners that may qualify for incentive programs to replace their truck with newer cleaner models. The use of an ALPR system would require the development of a policy to ensure any data collected using an ALPR system protects the privacy of the registered truck owners.<sup>20</sup>

South Coast AQMD is actively looking into the feasibility of utilizing the ALPR system to address this community's concerns but must first ~~understand~~ identify any possible issues or limitations.

### Opportunities for Action

The CSC's strategy to reduce the community's exposure to air pollution from trucks is described in the actions below.

<b>Action 1: Reduce Emissions from Illegal Heavy-Duty Truck Idling in the Community</b>	
<b>Course of Action:</b>	
<ul style="list-style-type: none"> <li>Conduct focused enforcement for idling trucks in high traffic areas with the highest priority for areas near schools and residential. Other areas prioritized by the CSC include locations near distribution centers and high traffic corridors (e.g., on Juana Street and Cabrera Street, on both streets between Fourth Street and Fifth Street, Kingman Street between Tia Juana Street and Mt. Vernon Avenue, etc.)</li> <li>Collaborate with the CSC to inform community members on how to report idling trucks</li> <li><del>Provide</del> <u>Engage in</u> community outreach on existing complaints/response systems <del>on reporting to report</del> idling trucks. If existing complaint/response system is determined to be ineffective, <u>assess and make feasible improvements.</u> <del>where improvements are feasible for the existing complaint/response system and improve, as needed.</del></li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>Enforcement</li> <li>Collaboration</li> <li>Public Information and Outreach</li> </ul>	
<b>Goals:</b>	
<ul style="list-style-type: none"> <li>Conduct, at minimum, quarterly idling sweeps and focused inspections for one calendar year, to be evaluated thereafter with community input</li> <li><del>Organize</del> <u>Engage in</u> two outreach events within <u>the during the span of the</u> implementation <del>period</del> of this CERP to inform community members how to report idling trucks</li> </ul>	

Estimated Timeline:	
<ul style="list-style-type: none"> <li>Beginning Fall of 2019, provide quarterly updates to the CSC</li> <li>Beginning Fall 2019, begin planning outreach events to inform the community members how to report idling trucks</li> <li>Beginning Fall of 2019, work with CARB's enforcement team (and CHP) to coordinate, at a minimum, quarterly idling sweeps and focused inspections for a period of one year <ul style="list-style-type: none"> <li>Beginning January 2020, based on findings from idling sweeps and CSC input, CARB will adjust enforcement in the community to address the identified concerns and report back to the CSC bi-annually for future adjustments. Based on results of the sweeps, and continued input from CSC members, adjust idling inspections accordingly</li> </ul> </li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>Conduct idling sweeps (which may require coordination with local law enforcement)</li> <li><del>Organize outreach events in collaboration with local entities</del> Collaborate with the CSC to inform community members on how to report idling trucks and conduct community outreach on existing complaints/response systems on reporting idling trucks</li> </ul>
California Air Resources Board (CARB)	<ul style="list-style-type: none"> <li>Conduct and coordinate idling truck inspections with the California Highway Patrol</li> <li>Based on findings from idling sweeps, CSC input, CARB will adjust enforcement in the community to address the identified concerns and report back to the CSC bi-annually for future adjustments</li> </ul>
CSC Members	Work with the South Coast AQMD, and other local entities to disseminate information on how to report idling trucks in the community (e.g., outreach events, flyers)
Additional information:	
<ul style="list-style-type: none"> <li>Requirements for idling trucks: <a href="https://www.arb.ca.gov/enf/diesel.htm">https://www.arb.ca.gov/enf/diesel.htm</a></li> <li>Vehicle pollution complaint lines for CARB and South Coast AQMD: <ul style="list-style-type: none"> <li>CARB: <a href="https://ww2.arb.ca.gov/our-work/programs/environmental-complaints">https://ww2.arb.ca.gov/our-work/programs/environmental-complaints</a>, and (800) END-SMOG or (800) 363-7664</li> <li>South Coast AQMD: (800) CUT-SMOG or (800) 288-7664</li> </ul> </li> </ul>	

**Action 2: Reduce Emissions from Heavy-Duty Trucks Transiting the Community****Course of Action:**

- Work with the City or the County to identify opportunities to develop enforceable truck routes and establish designated truck parking areas
- Collaborate with local businesses, agencies, and organizations to conduct outreach to truck owners and operators in this community to provide information about community ordinances, restricted truck routes, trucking regulations, and available incentive programs
- Identify South Coast AQMD and other additional incentive funding opportunities to accelerate adoption of cleaner equipment and trucks
- Continue to support the accelerated adoption and prioritization of zero-emission technology based on feasibility, availability, and cost-effectiveness
- Target incentive funds for local small businesses and independent owner/operator (e.g., Voucher Incentive Program)
- Continue to develop Facility Based Mobile Source Measures - Indirect Source Rules (see Warehouses and Railyards)
- Provide training on complaint reporting for trucks transiting the community
- Participate in CARB's rule development as an advocate for the community for future amendments to their truck regulations
- Conduct focused enforcement of CARB's Drayage Truck Rule and Truck and Bus Rule

**Strategies:**

- Incentives
- Public Information and Outreach
- Collaboration
- Rules and Regulations
- Enforcement

**Goals:**

- Organize one incentive outreach event (e.g., incentive fair, workshop) per year during the implementation period of this CERP, to be evaluated thereafter with community input
- Provide semiannual ~~biannual~~ updates on incentive outreach events and ~~and~~ CARB's and South Coast AQMD's rule development for truck regulations, and seek community input on progress
- Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a

~~Emissions Reduction Target: emissions reduced from this action contribute to the mobile source incentives target~~

~~Coordinate with CARB staff on using community priorities to focus future enforcement efforts~~

Estimated Timeline:	
<ul style="list-style-type: none"> <li>• <u>Starting 2020</u>, begin working with the City or the County to identify opportunities to develop enforceable truck routes and establish designated truck parking areas</li> <li>• First quarter 2020, begin collaborating with local businesses, agencies, and organizations to conduct outreach to truck owners and operators in this community to provide information about community ordinances, restricted truck routes, trucking regulations, and available incentive programs</li> <li>• Continue to identify other additional incentive funding opportunities to accelerate adoption of cleaner equipment and trucks</li> <li>• <u>Starting 2020</u>, when incentive programs are available, conduct incentive outreach events and provide quarterly or biannual updates to the CSC</li> <li>• Continue to develop Facility Based Mobile Source Measures - Indirect Source Rules (see Warehouses and Railyards)</li> <li>• Continue to provide training on complaint reporting for trucks transiting the community</li> <li>• 2024-2030, CARB's New Regulations phase in</li> <li>• Beginning January 2020, based on findings from idling sweeps, the CSC identified community priorities, and additional community observations/input from CSC meetings, CARB will adjust enforcement in the community to address the identified concerns and report back to the CSC biannually for future adjustments</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• <u>Work with the City or the County to identify opportunities to develop enforceable truck routes and establish designated truck parking areas</u></li> <li>• Provide targeted outreach for truck incentive programs <u>to truck owners and operators</u> in this community</li> <li>• Provide updates to the CSC about applications that are submitted for truck incentives that could reduce emissions in the community</li> <li>• Provide training to community leaders or organizations that provide application assistance for incentive programs</li> <li>• Continue development of Facility Based Mobile Source Measures – Indirect Source Rules</li> <li>• <u>Provide training to the CSC and members of the community</u> for effectively reporting complaints about heavy-duty trucks with excessive exhaust emissions</li> <li>• <u>Identify additional incentive funding opportunities to accelerate adoption of cleaner equipment and trucks and continue to support the accelerated adoption and</u></li> </ul>

	<p><u>prioritization of zero-emission technology based on feasibility, availability, and cost-effectiveness</u></p> <ul style="list-style-type: none"> <li>• <u>Reach out to small businesses and independent owners/operators to encourage them to apply for funding</u></li> <li>• <u>Target incentive funds for local small businesses and independent owners/operators</u></li> <li>• <u>Participate in CARB's rule development as an advocate for the community for future amendments to their truck regulations</u></li> </ul>
CARB	<ul style="list-style-type: none"> <li>• Continue rule development for amendments to regulations affecting trucks</li> <li>• Conduct focused enforcement of existing Drayage Truck and Truck and Bus Regulations</li> <li>• Provide training <u>to the CSC and members of the community</u> for effectively reporting complaints about heavy-duty trucks with excessive exhaust emissions</li> </ul>
<u>City and/or County of San Bernardino</u>	<ul style="list-style-type: none"> <li>• <u>Work with South Coast AQMD to– identify opportunities to develop enforceable truck routes and establish designated truck parking areas</u></li> <li>• <u>Work with South Coast AQMD to</u> provide the community with information about local truck routes, air pollution requirements for trucks, and incentives for cleaner trucks</li> <li>• Conduct outreach to local law enforcement about opportunities to enforce truck routes and reduce illegal heavy-duty truck idling</li> </ul>
CSC Members (including businesses, community organizations, and agencies)	<ul style="list-style-type: none"> <li>• Work with South Coast AQMD to conduct outreach to truck owners and operators</li> <li>• Provide application assistance to potential applicants for incentive programs. Seek funding support to provide this service, (e.g., through CARB Community Air Grants).</li> <li>• Participate in CARB and South Coast AQMD rulemaking efforts (e.g., attending working group meetings, providing comments on draft rule materials, etc.) for regulations pertaining to trucks</li> </ul>

### Action 3: Utilize Existing Traffic Information and New Technology to Identify Older Trucks for Incentive Programs

#### Course of Action:

- Gather existing traffic information from local authorities and other available databases, implement new technology (e.g., Automated License Plate Reader (ALPR)) to collect useful data on truck traffic, and assess the potential impact of truck emissions near schools and residences
  - South Coast AQMD will develop an ALPR privacy policy in compliance with Civil Code Section 1798.90.5, et seq. and hold a public hearing to provide the public an opportunity to comment on the proposed program
- Explore the possibility of using ALPR system along with DMV data to identify trucks that frequently travel through the community that may be older and more polluting than newer trucks, and contact the owner to provide information about incentive funding programs for truck replacement

#### Strategies:

- Monitoring
- Incentives

<ul style="list-style-type: none"> <li>• Public Information and Outreach</li> <li>• Collaboration</li> </ul>	
Goals:	
<ul style="list-style-type: none"> <li>• Explore the possibility of using ALPR systems in this community and prioritize locations for <u>ALPR systems deployment</u> based on community input</li> <li>• Once ALPR systems have been deployed, <u>provide ALPR data to the City and County to work towards truck routes</u><del>with City and County to provide information about the overall results</del></li> <li>• <u>Provide quarterly or biannual updates to the CSC on progress made to collect and use data from these systems</u></li> <li>• <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a</u></li> <li><del>— Emissions Reduction Target: emissions reduced from this action contribute to the mobile source incentives target</del></li> <li>• <u>Conduct targeted outreach to provide information on incentive programs</u></li> </ul>	
Estimated Timeline:	
<ul style="list-style-type: none"> <li>• <u>Starting 2020</u>, work with CARB and community to prioritize locations for these systems</li> <li>• <u>Starting 2021, — if feasible, begin implementation of ALPR systems at priority community locations, compile data and provide quarterly or biannual updates to the CSC</u></li> <li>• Once data is available, review data obtained and begin targeted outreach to owners <del>with</del> <u>of</u> older dirtier trucks and dirty trucks that frequently travel through this community to provide information on incentive programs</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Work with CSC to explore the feasibility of using ALPR systems and prioritize locations for implementation <u>by gathering existing traffic information from local authorities and other available databases</u>. Once data are received, provide incentives and targeted outreach to truck owners for incentive programs in this community</li> <li>• <u>Assess the potential impact of truck emissions near schools and residences</u></li> <li>• Provide updates to the CSC on implementation of the ALPR system</li> </ul>
CARB	Continue testing of ALPR systems to improve accuracy. Provide technical assistance to South Coast AQMD to implement these systems

City of San Bernardino and County of San Bernardino (Muscoy)	Work with South Coast AQMD to obtain necessary approvals to install <del>cameras</del> for ALPR systems
CSC members	Work with South Coast AQMD and CARB to prioritize locations for the ALPR systems
Additional information:	
<ul style="list-style-type: none"> <li>CARB's ALPR system: <ul style="list-style-type: none"> <li>-Presentation: <a href="http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/san-bernardino/presentation-may-16-2019.pdf">http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/san-bernardino/presentation-may-16-2019.pdf</a></li> <li>-CARB's ALPR Privacy and Usage Policy: <a href="https://www.arb.ca.gov/enf/arb_alpr_privacy_usage_policy_050317.pdf">https://www.arb.ca.gov/enf/arb_alpr_privacy_usage_policy_050317.pdf</a></li> <li>-Facebook Live presentation: <a href="https://www.facebook.com/southcoastaqmd/videos/1248687388632139/">https://www.facebook.com/southcoastaqmd/videos/1248687388632139/</a></li> </ul> </li> </ul>

# CHAPTER 5C:

## WAREHOUSE ON-SITE EMISSIONS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5c: Warehouses

### Background

The freight transportation system in the South Coast Air Basin facilitates the movement of goods that are traded both domestically and internationally. An integral part of the freight transportation system are warehouses that are used to store, process and distribute goods. The San Bernardino, Muscoy community contains many warehouses and consequently plays an important role in the overall success of the logistics industry and the global economy.

The San Bernardino, Muscoy community is located in the eastern part of San Bernardino County. As of early 2019, the portion of the county within the South Coast AQMD is home to approximately 780 warehouses larger than 100,000 square feet, totaling about 260 million square feet of building space. The AB 617 San Bernardino, Muscoy emissions study area includes about 43 warehouses larger than 100,000 square feet, totaling about 16 million square feet.<sup>1,i</sup> San Bernardino County is also projected to have developable, industrially-zoned land that can accommodate an estimated 119 million square feet of additional warehousing.<sup>2</sup> While the warehouse industry is a source of jobs in communities, it is also a source of impacts to the environment, especially as it relates to air quality. For example, trucks (heavy-duty diesel trucks) that transport goods to and from warehouses often travel near and through local neighborhoods to reach their destinations,<sup>3</sup> thus exposing residents to harmful air pollutants (e.g., diesel particulate matter).

Figure 5c-1. Warehouses surrounded by trucks within the San Bernardino, Muscoy community

<sup>i</sup> CoStar data (commercial real estate information) analyzed by South Coast AQMD staff.

### Community Air Quality Priority – Warehouse Development Standards and Indirect Source Rules

Air pollution from warehouse operations is an air quality priority for the San Bernardino, Muscoy community as identified by the CSC. The CSC identified potential ways to reduce emissions and residents' exposure to emissions from warehouse operations. For example, the CSC prioritized land use development standards for warehouses that could establish buffers and orient warehouse loading docks away from residences. Development standards for warehouses could reduce the community's exposure to harmful air pollutants from heavy-duty diesel trucks that operate at warehouse facilities. Additionally, the CSC prioritized the pursuit of indirect source rules that would require emission reductions from warehouse operations.

### Ongoing Efforts

A number of ongoing efforts led by the Ports, South Coast AQMD, CARB and the U.S. EPA are designed to reduce emissions from heavy-duty diesel trucks. These trucks serve warehouses throughout the South Coast Air Basin, therefore, emissions reduced from these efforts will also benefit air quality in the San Bernardino, Muscoy community.

Several CARB requirements are modernizing the trucking industry and are reducing truck-related air pollution by phasing out the oldest, dirtiest diesel trucks. The primary CARB regulation is the Truck and Bus Rule, which requires that nearly all trucks in California must be no older than a 2010 engine model year by 2023.<sup>4</sup> New trucks built in 2010 and later are required to control particulate matter and also nitrogen oxides. Also, many new requirements are being considered that would further reduce emissions from trucks (see Table 5c-1: Upcoming U.S. EPA, CARB, and Ports Actions).

South Coast AQMD administers funding for truck owners and operators to replace older polluting trucks with ones that are cleaner than required, including smaller zero emission trucks that are commercially available.<sup>5</sup> In addition to providing incentive funds for heavy-duty trucks that reduce NOx emissions by at least 90% (near-zero-emission trucks (NZE)), South Coast AQMD also funds development and demonstration projects to help develop and commercialize zero-emission technologies for heavy-duty Class 7-8 trucks<sup>ii</sup> (e.g., battery electric, fuel cell). These projects are in the design and demonstration phase. South Coast AQMD staff is currently developing strategies to reduce emissions from warehouse operations though requirements for indirect sources (e.g., emissions from trucks that serve warehouse facilities). Additionally, South Coast AQMD will develop a series of surveys to identify which warehouse(s) may have the highest air quality impact on nearby residents. This includes mobile measurements near the identified warehouses and in nearby residential areas. These type of measurements could also be used to inform approaches to reduce air quality impacts from warehouses.

---

<sup>ii</sup> The Federal Highway Administration categorizes Class 7-8 trucks under the "Heavy-Duty (>26,001 pounds (lbs))" gross vehicle weight rating

In May 2019, San Bernardino County released the Draft Muscoy Community Action Guide for public review. The Community Action Guide is a framework to create the future character and independent identity of the community through the completion of community actions. The guide is strategic in nature and provides focus and action statements from the community that led to creation of an action plan that can be implemented at the grass-roots level within the community.

CARB is also developing a Freight Facilities Handbook that identifies practices for siting, design, construction and operation of freight facilities.<sup>6, iii</sup> CARB staff anticipate holding public workshops on the Freight Facilities Handbook in 2019.

In May 2018, the Public Utilities Commission approved \$343 million for Southern California Edison (SCE) to install infrastructure to support medium- and heavy-duty electric vehicles.<sup>7, iv</sup> This decision requires SCE to install infrastructure for 870 electrical charging sites in the next five years, supporting about 8,500 vehicles and equipment. A minimum of 40% of SCE's budget for this program must be spent in disadvantaged communities, and also a minimum of 25% of the budget must serve vehicles operating at ports and warehouses. SCE is implementing this decision through its recently launched Charge Ready Transport program.<sup>8</sup> South Coast AQMD is closely coordinating with SCE to deploy infrastructure for commercially available electric school buses and electric truck demonstration projects.

### Opportunities for Action

In addition to the ongoing efforts described in this chapter, the CSC identified specific actions to address community priorities related to warehouses. The actions are described below.

#### Action 1: Conduct Outreach to Local Governments to Encourage Avoidance of Air Quality Impacts from New Warehouse Development

##### Course of Action:

- Work with the City of San Bernardino and San Bernardino County staff to discuss and enhance land use policies (e.g., development standards) that reduce residents' exposure to emissions from old diesel trucks stopping at warehouse facilities. The collaboration would focus on ways to reduce local air quality impacts from the development of warehouse facilities, such as:
  - Buffer zones between warehouses and sensitive land uses (e.g., residences);
  - Warehouse design (e.g., orientation of loading docks)
  - Truck routes and truck parking (e.g., keep trucks away from sensitive land uses)
  - Green infrastructure (e.g., electric charging and solar power)
  - Community outreach (e.g., signage that discourages unnecessary idling)

<sup>iii</sup> A summary of this action is available on page 11 of the following concepts document: [https://www.arb.ca.gov/gmp/sfti/revised\\_freight\\_facility\\_concepts\\_advance\\_materials\\_03142018.pdf](https://www.arb.ca.gov/gmp/sfti/revised_freight_facility_concepts_advance_materials_03142018.pdf)

<sup>iv</sup> A summary of the decision from California Public Utilities Commission may be found here: <http://www.cpuc.ca.gov/WorkArea/DownloadAsset.aspx?id=6442457607>

– Development of Air Quality Mitigation/Community Benefit Funds	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>• Collaboration</li> <li>• Public Information and Outreach</li> <li>• Exposure Reduction</li> </ul>	
<b>Goals:</b>	
<ul style="list-style-type: none"> <li>• Provide technical input to local land use agencies on reducing air quality impacts from warehouse land uses, (e.g., during general plan and community plan updates)</li> </ul>	
<b>Estimated Timeline:</b>	
<ul style="list-style-type: none"> <li>• Second quarter 2020, <u>begin to work with local and state entities such as the City of San Bernardino and San Bernardino County planning staff, Southern California Edison (SCE), the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC) to develop standard approaches</u> <del>begin consulting with the City of San Bernardino and San Bernardino County planning staff, industry, and community members on developing and implementing standard approaches for new warehouse development for new warehouse development</del></li> <li>• First quarter 2021, provide <del>biannual</del> <u>semiannual</u> status updates to the CSC on work with the City of San Bernardino and San Bernardino County planning staff on implementing standard approaches for warehouse development</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<del>South Coast AQMD staff will work</del> Work with local governments and stakeholders to identify and promote standard approaches for warehouse development
City of San Bernardino	Work with South Coast AQMD on developing standard approaches for warehouse development that reduce local air quality impacts
County of San Bernardino	Work with South Coast AQMD on developing standard approaches for warehouse development that reduce local air quality impacts
<b>Additional Information:</b>	
<ul style="list-style-type: none"> <li>• San Bernardino County's Draft Muscoy Community Action Guide (available for public review): <a href="http://countywideplan.com/muscoy/draft/">http://countywideplan.com/muscoy/draft/</a></li> <li>• San Bernardino County's General Plan update (available for public review): <a href="http://countywideplan.com/">http://countywideplan.com/</a></li> <li>• City of San Bernardino General Plan: <a href="http://www.sbcity.org/cityhall/community_development/planning/planning_documents.asp">http://www.sbcity.org/cityhall/community_development/planning/planning_documents.asp</a></li> </ul>	

Action 2: Develop Proposed Indirect Source Rule for Warehouses	
Course of Action:	
<ul style="list-style-type: none"> <li>Continue developing proposed Indirect Source Rule (ISR) for warehouses</li> </ul>	
Strategies:	
<ul style="list-style-type: none"> <li>Regulation</li> <li>Public Information and Outreach</li> <li>Collaboration</li> <li>Exposure reduction</li> </ul>	
Goals:	
<ul style="list-style-type: none"> <li>Provide quarterly updates to CSC on rule development for warehouses</li> <li>Bring proposed ISR for warehouses for <del>approval</del> <u>Board consideration</u></li> </ul>	
Estimated Timeline:	
<ul style="list-style-type: none"> <li>Fall 2019, hold a <u>public</u> meeting in the Inland Empire to discuss proposed ISR for warehouses</li> <li><del>Late 2019/early</del> <u>Early 2020</u>, bring proposed ISR for warehouses to South Coast AQMD Governing Board for <del>approval</del> <u>consideration</u></li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>Continue development of ISR for warehouses</li> <li>Conduct outreach to CSC for ISR working groups, workshops, meetings, and other opportunities to provide rule feedback</li> </ul>
CSC Members	<ul style="list-style-type: none"> <li>Participate in South Coast AQMD rule development process (e.g., attending working group meetings, providing comments on draft rule materials, etc.) for ISR for warehouses</li> </ul>
Additional Information:	
Warehouse ISR rule development: <a href="http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures/warehs-distr-wkng-grp">http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures/warehs-distr-wkng-grp</a>	

Action 3: Promote Installation of Infrastructure Needed to Support Zero-Emission Vehicles and Equipment
Course of Action:
<ul style="list-style-type: none"> <li>Collaborate with local governments, <del>and</del> <u>utilities, and local and state entities</u> to promote the installation of fueling infrastructure needed to support zero-emission trucks/vehicles, transport refrigeration units and cargo handling equipment. Specific efforts will include:</li> </ul>

<ul style="list-style-type: none"> <li>– Sharing information with Southern California Edison (SCE) and other applicable entities when applicants are awarded funds from South Coast AQMD for zero-emission vehicles to identify likely partners for infrastructure projects</li> <li>– Working with SCE and other entities to identify potential partners and prioritize funding for zero-emissions infrastructure within the San Bernardino, Muscoy community</li> <li>– Prioritizing zero-emission technology, when commercially available or technologically feasible</li> <li>– Working with local governments and utilities to develop design standards for medium- and heavy-duty vehicle/equipment electrical infrastructure for new warehouse projects</li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>• Public Information and Outreach</li> <li>• Collaboration</li> </ul>	
<b>Goals:</b>	
<ul style="list-style-type: none"> <li>• South Coast AQMD and SCE will provide outreach to all 43 existing warehouses within the San Bernardino, Muscoy community to encourage installation of infrastructure needed to support zero-emission vehicles and equipment</li> <li>• <del>Provide-Engage in</del> outreach to any new/planned future sites (and project partners) and determine feasibility to install zero-emission electric infrastructure, serving potential zero-emission vehicles and/or equipment in the San Bernardino, Muscoy community. South Coast AQMD and SCE will track adoption of zero-emission infrastructure and provide updates to the CSC</li> <li>• Identify sites for installation of electrical infrastructure</li> </ul>	
<b>Estimated Timeline:</b>	
<ul style="list-style-type: none"> <li>• December 2020, <u>begin to work with local and state entities such as the City of San Bernardino and San Bernardino County planning staff, Southern California Edison (SCE), the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC) to develop preliminary design standards for electrical infrastructure for new warehouse projects</u> <del>development of preliminary design standards for electrical infrastructure for new warehouse projects that local governments can use</del></li> <li>• <u>Continue to provide outreach to warehouses in the community to encourage installation of infrastructure of zero-emission infrastructure</u></li> <li>• July 2021, begin identifying potential sites for installation of electrical infrastructure</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	Work with SCE and project partners to plan for increased zero-emission vehicle infrastructure

Southern California Edison and other fueling providers	Work with South Coast AQMD, local agencies, and site owners/operators to identify potential sites for installation of zero-emission vehicle electric infrastructure
Additional Information:

# CHAPTER 5D:

## OMNITRANS BUS YARD

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5d: Omnitrans Bus Yard

### Background

Omnitrans<sup>1</sup> is a public transit agency established in 1976 that serves the San Bernardino Valley. Omnitrans operates local and express bus routes, including bus transit (sbx), shuttle (OmniGo), and a wheelchair-accessible service for people with disabilities (Access).<sup>2</sup> Omnitrans carries approximately 11 million passengers each year throughout its 480 square mile service area, covering 15 cities and portions of the unincorporated areas of San Bernardino County, and employs almost 700 people at its two operating and maintenance facilities, including one in San Bernardino and one in Montclair. An Omnitrans bus yard is located at 1700 W. 5<sup>th</sup> Street, San Bernardino (Figure 5-1). The bus yard is used to park, service and refuel 121 buses on a daily basis. The buses operate on pipeline compressed natural gas (CNG). CNG is odorless; however, Mercaptan is added to CNG as a leak-detection safety feature. People can smell Mercaptan, which contains sulfur, at very low levels.

Figure 5-1: Location of Omnitrans Bus Yard

### Community Air Quality Priority – Odors and Zero-Emission Buses

Odors detected by residents near the Omnitrans bus yard are a priority for the CSC. The CSC recommends that the South Coast AQMD work with Omnitrans to determine if the bus yard is a source of odor emissions detected by the community. Additionally, the CSC prioritized zero-emission buses (e.g., electric buses) to improve the air quality in the San Bernardino, Muscogee community.

### Ongoing Efforts

CARB's Innovative Clean Transit Regulation<sup>3</sup> is a statewide effort to transition public transit agencies to 100% zero-emission bus fleets by 2040.<sup>4</sup> To address this, Omnitrans expects to replace the total fleet with zero-emission buses at the following rate: 25% (by 2025), 50% (by 2028), and 100% (by 2040). Recent efforts by Omnitrans to transition to cleaner buses even earlier includes applying for grant funding through the Low or No Emission Grant Program.<sup>5</sup> As a collaborative effort, the South Coast AQMD provided a letter of support for Omnitrans's proposal.

Omnitrans is subject to South Coast AQMD Rule 1192 — Clean On-Road Transit Buses. Rule 1192 requires public transit fleets with 15 or more transit vehicles or urban buses to acquire alternative fuel heavy-duty vehicles when buying or leasing public transit vehicles.<sup>6</sup> Also, equipment, such as gasoline dispensing devices, emergency engines and paint spray booths that are operated at the bus yard are subject to certain South Coast AQMD rules (e.g., Rule 461 – Gasoline Transfer and Dispensing). South Coast AQMD enforcement staff conducts unannounced inspections at the facility to determine compliance with these rules.

### Identifying Opportunities for Action

The CSC identified actions to reduce emissions from Omnitrans' operations. The details of these actions are described below.

<b>Action 1: Conduct Air Monitoring to Identify the Composition and Level of Emissions Near the Omnitrans Bus Yard</b>
Course of Action:
<ul style="list-style-type: none"> <li>• <del>Air monitoring measurements</del> near the Omnitrans Bus Yard</li> <li>• Based on emissions information collected (i.e., from air monitoring, site visits, facility inspections, etc.), identify potential sources of emissions</li> <li>• <u>If persistent elevated levels of pollutants are detected at locations through air monitoring activities, conduct appropriate follow-up investigations (e.g., on site testing or other types of data review)</u></li> </ul>
Strategies:
<ul style="list-style-type: none"> <li>• <u>Air Monitoring</u></li> <li>• <del>Enforcement Collaboration</del></li> <li>• <del>Public Information and Outreach</del></li> </ul>
Goals:
<ul style="list-style-type: none"> <li>• Conduct <del>monitoring measurements</del> near Omnitrans to identify potential sources of emissions</li> <li>• Provide quarterly or <del>biannual</del> <u>semiannual</u> updates to the CSC on air <del>monitoring measurement</del> data results and information collected</li> </ul>
Estimated Timeline:

<ul style="list-style-type: none"> <li>• Third quarter 2019, begin mobile air <del>monitoring</del> <u>measurements</u></li> <li>• First quarter of 2020, begin quarterly updates to the CSC</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Conduct air <del>monitoring</del> <u>measurements</u> near the Omnitrans bus yard and in the surrounding community, <del>and</del> gather information through facility inspections and outreach <u>and follow-up with enforcement actions, as needed</u></li> <li>• Provide the updates to the CSC</li> </ul>
Additional Information:	
San Bernardino, Muscoy Community Air Monitoring Plan: <a href="https://www.aqmd.gov/docs/default-source/ab-617-ab-134/camps/sbm_camp.pdf">https://www.aqmd.gov/docs/default-source/ab-617-ab-134/camps/sbm_camp.pdf</a>	

Action 2: Support Omnitrans's Transition to Zero-Emission Buses	
Course of Action:	
<ul style="list-style-type: none"> <li>• Support Omnitrans's efforts to accelerate the deployment of zero-emission buses and supporting infrastructure (e.g., letters of support)</li> <li>• Provide Omnitrans with information on incentive opportunities for zero-emission buses and supporting infrastructure</li> </ul>	
Strategies:	
<ul style="list-style-type: none"> <li>• Public Information and Outreach</li> <li>• Collaboration</li> </ul>	
Goal:	
<ul style="list-style-type: none"> <li>• Develop proposals and apply for grants <del>opportunities that are designed to</del> accelerate the deployment of zero-emission buses and electric vehicle chargers, in collaboration with Omnitrans</li> </ul>	
Estimated Timeline:	
<ul style="list-style-type: none"> <li>• Replace the total fleet with electric buses at the following rate: 25% (by 2025), 50% (by 2028), and 100% (by 2040)</li> <li>• Provide annual updates to the CSC on work with Omnitrans to transition to zero-emission buses</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Provide Omnitrans letters of support for -grant applications that accelerate the deployment of zero-emission buses</li> <li>• Provide information to Omnitrans <del>for</del> <u>regarding</u> opportunities to seek zero-emission buses and electric vehicle chargers</li> </ul>

Omnitrans	<ul style="list-style-type: none"> <li>• Submit application materials for grants or funding towards zero-emission buses and electric vehicle chargers (e.g., the Low or No-Emission Grant Program)</li> <li>• Continue ongoing efforts to transition to a 100% zero-emission fleet by 2040 or earlier</li> </ul>
Additional Information:	
<ul style="list-style-type: none"> <li>• Omnitrans: <a href="http://www.Omnitrans.org/about/">http://www.Omnitrans.org/about/</a></li> <li>• Low or No-Emission Grant Program: <a href="https://www.transit.dot.gov/funding/applying/notices-funding/low-or-no-emission-low-no-program-fy-2019-notice-funding">https://www.transit.dot.gov/funding/applying/notices-funding/low-or-no-emission-low-no-program-fy-2019-notice-funding</a></li> </ul>

# CHAPTER 5E:

## RAILYARDS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

---

## Chapter 5e: Railyards (On-site Emissions)

### Background

Railyards are used to store, sort, or load and unload railroad cars. Common loads include containers (stacked or on trailers), tankers with chemical or petroleum products, and bulk products such as construction materials or grain. Containers can be transported to and from warehouses for storage and sorting before reaching their final destination. Regional rail volumes are projected to more than double between 2012–2040 in response to growing international trade,<sup>1</sup> however the potential amount of growth at railyards such as the BNSF San Bernardino railyard is unknown.

BNSF Railway Company (BNSF) operates many railyards<sup>2</sup> throughout California. The San Bernardino BNSF Railyard is located next to residential areas within the San Bernardino, Muscoy community and has been identified as a major air quality concern (Figure 5e-1).<sup>3</sup> The BNSF San Bernardino Railyard is located at 1535 West 4th Street in San Bernardino, and encompasses about 168 acres. Most of the railyard is located in a commercial and manufacturing area. However, several residential areas are next to the facility on the north and west sides, with some homes within 200 feet of the fenceline. The facility operates 24 hours a day, 365 days a year.<sup>4</sup>

### Community Air Quality Priority – Emissions from Railyards

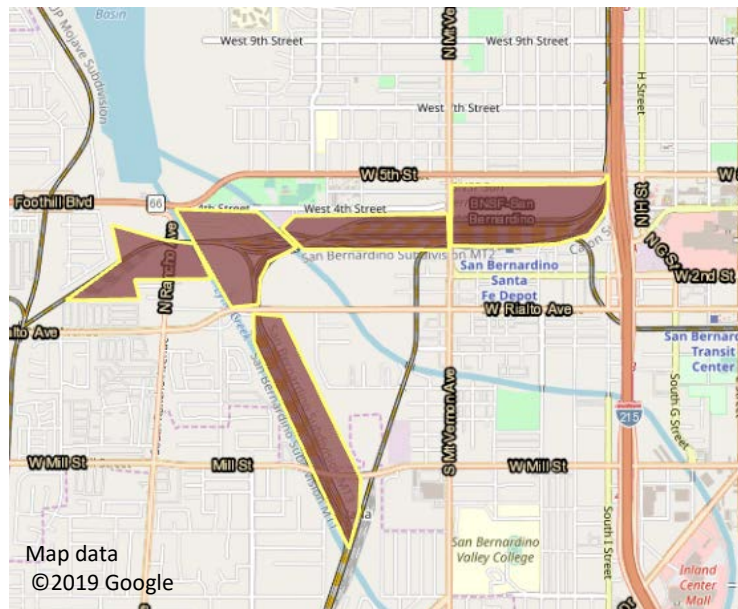

Air pollution is generated by equipment and vehicles that are used for railyard operations. These vehicles and equipment move containers and railcars into and around the railyard to load, unload, and transport goods in and out of the railyard. Emissions can also be generated during maintenance activities (e.g., track maintenance). Examples of equipment used for railyard operations include:

- Locomotives (including ‘switchers’ that build and deconstruct trains, often within railyards, and larger ‘line-haul’ locomotives that pull trains hundreds of miles between railyards)
- Drayage trucks (i.e., on-road tractors that pull trailers loaded with containers, often from the ports)
- Cargo handling equipment (e.g., gantry cranes, top picks, and off-road yard trucks)
- Transportation Refrigeration Units (e.g., truck refrigeration units and refrigerated railcars), and
- Miscellaneous equipment (e.g., fuel trucks)

The CSC prioritized addressing air pollution from the BNSF railyards in the CERP. Specifically, the CSC expressed concerns about diesel emissions from trains and other diesel equipment at the San Bernardino BNSF railyard. The CSC also cited health studies conducted in the nearby community as part of their reasoning for prioritizing this issue.<sup>5,6</sup> Potential opportunities to reduce emissions from diesel equipment used at railyards, include replacing older equipment

with newer, less polluting equipment (e.g., replacing diesel-fueled yard trucks with electric yard trucks), and ensuring that the replacement or repower of equipment is based on the cleanest technology available.

Figure 5e-1. The BNSF Railyard within the San Bernardino, Muscoy Community

## Ongoing Efforts

A short summary is provided below of the key regulations and programs that are in place or are being developed at the national, state, and local level to address emissions from railyards.

### *Federal Actions*

Railroads' operations are regulated at the federal level primarily by the Federal Railroad Administration and the Surface Transportation Board, and locomotive emissions are regulated by the U.S. EPA. These agencies' regulatory authority may preempt certain federal, state, and local regulatory authorities and actions. However, the U.S. EPA has used its authority under the Clean Air Act to require new diesel locomotives to be built to meet the cleanest emission standard (also known as Tier 4).<sup>7</sup> This requirement also applies to certain locomotives that are remanufactured.<sup>i</sup> These regulations require the installation of devices that reduce idling on newly manufactured<sup>ii,8</sup> and remanufactured locomotives<sup>9</sup> and mandate the use of ultra-low sulfur diesel fuel.<sup>10</sup> However, these regulations do not require railroads to reduce their usage of existing older, higher-emitting locomotives. Locomotives must meet federal emissions standards when they are remanufactured, and may become cleaner at that time. In 2017, CARB also petitioned

<sup>1</sup> Remanufacturing can include activities like replacing an old engine in a locomotive with a new engine. The useful life of a locomotive is typically at least ten years.

ii The U.S. EPA defines newly manufactured as freshly manufactured.

---

~~the U.S. EPA to develop a new regulation requiring engine manufacturers to meet a cleaner Tier 5 emission standard for new engines. The CARB petition is under review by the U.S. EPA. Because locomotive engines can last over 30 years, locomotive fleet turnover is slow, so even if the U.S. EPA were to develop a Tier 5 emission standard, it would not result in immediate emission reductions.~~

In 2017, the California Air Resources Board (CARB) petitioned the U.S. EPA<sup>iii</sup> to update emission standards for new and remanufactured locomotives, establishing a cleaner Tier 5 standard for new engines. The petition asked that the new emission standards go into effect in 2023 for remanufactured locomotives, and 2025 for new locomotives. South Coast AQMD supported the petition and sent a letter of support. The U.S. EPA acknowledged the receipt of the petition, but has not provided any update or plans for further action. Because locomotive engines can last over 30 years, locomotive fleet turnover is slow, so even if the U.S. EPA were to develop a Tier 5 emission standard, it would not result in immediate emission reductions.

#### *State Actions (CARB)*

CARB has two agreements<sup>11, 12</sup> with BNSF to reduce locomotive emissions in and around railyards. An agreement in 1998 required BNSF to meet a fleet average of Tier 2 locomotives in the South Coast Air Basin every year between 2010 and 2030. BNSF has met this commitment every year. The second agreement in 2005 focused on railyards and required: implementation of a locomotive idling-reduction program, maximizing the use of ultra-low sulfur diesel fuel, preparation of health risk assessments, evaluation of measures to further reduce diesel particulate emissions, and an assessment of remote sensing technology to identify high-emitting locomotives. BNSF has met the requirements from the 1998 and 2005 agreements. CARB has discussed the potential for two new regulations that would reduce emissions from locomotives, including regulation to reduce idling activity and a regulation to address non-preempted locomotive use in the state through retrofit, replacement and other actions. Also, CARB staff plans to develop amendments to the Cargo Handling Equipment Regulation, Transportation Refrigeration Unit Regulation, and its Drayage Truck Regulation to begin the transition to zero-emission technology starting in 2026.<sup>13</sup>

#### *South Coast AQMD*

South Coast AQMD previously adopted rules<sup>iv</sup> that would have required railroads to reduce idling, conduct recordkeeping, and prepare emissions inventories and health risk assessments for railyards. However, the railroads sued the South Coast AQMD, and the courts determined that the rules cannot currently be enforced as they are preempted by federal law. South Coast AQMD is evaluating potential new strategies to reduce emissions from railyards, including developing a

---

<sup>iii</sup> Even if the U.S. EPA were to update the emission standards in response to the petition, the new standards would only apply to new and remanufactured locomotive engines. Given the slow turnover of the railroads' fleet, emissions reductions would not be immediate.

<sup>iv</sup> Regulation XXXV: [http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/regulation-xxxv\\_](http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/regulation-xxxv_)

---

potential regulation affecting railyards called an Indirect Source Rule (ISR), and/or other potential partnering strategies that could reduce emissions. This ISR was initially intended to address regional air pollution, in particular through reducing NOx emissions. The CSC has made it clear that an ISR must also focus on reducing localized impacts from railyards. The railroads have participated in workshops related to Facility Based Mobile Source Measures (FBMSM) and will continue to work with District staff and the community.

South Coast AQMD funds projects to help develop technology that can lower emissions from locomotives (e.g., natural gas hybrid, battery electric, and fuel cell). These projects are in the design and demonstration phase and not yet commercially available. Additionally, the South Coast AQMD provides incentives for rail operators that purchase technologies for locomotives and cargo handling equipment that is cleaner than required.

#### Identifying Opportunities for Action

South Coast AQMD staff conducted air monitoring near SBM during the Multiple Air Toxics Exposure Study (MATES) in 2013, which identified high levels of black carbon (BC) and ultrafine particulate matter (PM) near the BNSF railyard. The community near this railyard was ~~part of the~~ one of the pilot communities ~~for~~ in the South Coast AQMD Clean Communities Plan (CCP). The CCP, ~~which~~ included significant community engagement activities, and emissions and exposure reduction efforts (e.g., air filtration projects, use of low-VOC paints, and other emission reduction measures). South Coast AQMD also funded the Environmental Railyard Research Impacting Community Health (ENRRICH) study, which consisted of a community health assessment and public health outreach project led by the late Dr. Sam Soret of Loma Linda University.

The South Coast AQMD continues to seek opportunities to reduce air pollution from railyards. The actions below have been identified by the CSC to reduce emissions from railyards.

Action 1: Reduce Emissions from Railyards
Course of Action(s):
<ul style="list-style-type: none"><li>• Pursue strategies to reduce air pollution from railyards through the development of indirect source requirements and other measures, including reducing localized emissions and exposures</li><li>• Work with CARB on the development of new requirements to reduce air pollution from railyards</li><li>• Work with local utilities and state agencies like the California Energy Commission (CEC) and the Public Utilities Commission (PUC) to encourage the installation of infrastructure needed to fuel/charge zero-emission vehicles and on-site equipment at the BNSF Railyard</li></ul>

<ul style="list-style-type: none"> <li>• Continue to support CARB’s petition<sup>v</sup> to the U.S. EPA for new national locomotive emission standards</li> <li>• Work with the BNSF railyard in the San Bernardino, Muscoy community to replace diesel-fueled equipment with cleaner technologies<sup>vi</sup></li> <li>• Conduct fenceline and/or mobile <del>monitoring</del> <u>air measurements</u> around railyards to identify activities that may cause increased levels of air pollution. <del>Air</del> <u>Mobile</u> measurements (and fixed <u>air</u> monitoring, when appropriate) will extend into the community to assess how railyard related emissions may contribute to the overall air pollution burden in this community</li> <li>• Use emissions inventory and <u>air</u> monitoring information to identify opportunities for emission reductions</li> </ul>
Strategies:
<ul style="list-style-type: none"> <li>• Rules and Regulations</li> <li>• Incentives</li> <li>• Collaboration</li> <li>• <u>Air</u> Monitoring</li> </ul>
Goals:
<ul style="list-style-type: none"> <li>• Provide <del>biannual</del> <u>semiannual</u> updates and engage the CSC on new requirements being developed by CARB and South Coast AQMD</li> <li>• Provide quarterly or annual updates to the CSC on air monitoring results</li> <li>• Replace two line haul and two switcher locomotives at the BNSF railyard through incentive funding programs</li> <li>• <u>Achieve emission reductions through mobile source incentives and statewide mobile source regulation measures as specified in Chapter 5a</u> <del>Emissions Reduction Target: emissions reduced from this action contribute to the mobile source incentives target</del></li> </ul>
Estimated Timeline:
<ul style="list-style-type: none"> <li>• 2020, South Coast AQMD to consider new ISR and/or other measures on railyards</li> <li>• Between 2020 and 2022, CARB to consider new regulations and/or other measures: <ul style="list-style-type: none"> <li>-Between 2020 and 2022, for locomotives</li> <li>-By 2020, amendments for zero-emission refrigeration units (TRUs)</li> <li>-By 2022, amendments for zero-emission drayage trucks and cargo handling equipment</li> </ul> </li> <li>• 2020, begin working with local utilities and state agencies such as CEC and PUC to encourage the installation of infrastructure for fuel/charge zero-emission vehicles and on-site equipment at the BNSF Railyard</li> </ul>

<sup>v</sup> CARB Locomotive Petition to U.S. EPA (April 2017): <https://ww2.arb.ca.gov/resources/documents/carb-petitions-us-epa-strengthen-locomotive-emission-standards>.

<sup>vi</sup> A variety of technology assessments have been conducted to assist in this effort. Examples include: <https://ww2.arb.ca.gov/resources/documents/technology-and-fuels-assessments>; <http://www.cleanairactionplan.org/documents/draft-2018-feasibility-assessment-for-cargo-handling-equipment.pdf/>.

<ul style="list-style-type: none"> <li>• <u>Continue to support CARB's petition to the U.S. EPA for new national locomotive standards</u></li> <li>• <u>2019-2020, hold a public meeting in the Inland Empire on ISR for railyards</u></li> <li>• 2020, work with BNSF railyard in the San Bernardino, Muscoy community to replace diesel-fueled equipment with cleaner technologies</li> <li>• Second half of 2019, South Coast AQMD to conduct air <del>monitoring measurements</del> at railyards and nearby communities</li> <li>• When available, use emissions inventory and <u>air</u> monitoring information to identify opportunities for emission reductions</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibilities:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Pursue indirect source requirements and other measures for railyards, and improve community access to rule development process by holding a working group meeting in or near this community. Provide updates to the CSC on the development of indirect source requirements for railyards</li> <li>• Work with CARB on the development of new requirements to reduce air pollution from railyards. Continue to support CARB's petition to U.S. EPA for new national locomotive standards</li> <li>• Work with local utilities and state agencies to encourage the installation of infrastructure for fuel/charge zero-emission vehicles and on-site equipment at the BNSF Railyard</li> <li>• Work <u>with BNSF</u> to <del>allocate incentive funding to</del> replace on-site diesel equipment with the <u>cleaner</u><del>cleanest</del> technologies <del>available</del></li> <li>• Work with BNSF to provide updates to the CSC on emission reduction progress within the San Bernardino BNSF railyard</li> <li>• Work with CARB to identify opportunities for new incentives in this community</li> <li>• Conduct air <del>monitoring measurements</del> in community areas near the BNSF railyard and provide updates to the CSC. <u>Use emission inventory and air monitoring information to identify opportunities for emission reductions</u></li> </ul>
<u>BNSF</u>	<ul style="list-style-type: none"> <li>• <u>Continue participation in FBMSM working group meetings</u></li> </ul>
CSC Members	Participate in CARB and South Coast AQMD rule development process (e.g., attending working group meetings, providing

	comments on draft rule materials, etc.) for regulations affecting railyards
CARB	<ul style="list-style-type: none"> <li>• Pursue regulations and/or other measures (e.g., incentives) to achieve additional emission reductions at railyards</li> <li>• Prioritize enforcement (e.g., for cargo handling equipment) in this community</li> </ul>
Additional Information:

# CHAPTER 5F:

## CONCRETE BATCH PLANTS, ASPHALT, AND AGGREGATE PLANTS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5f: Concrete Batch, Asphalt Batch, and Rock and Aggregate Plants

### Background

Concrete batch, asphalt batch, and rock and aggregate plants can pose dust and particulate matter (PM<sub>10</sub>) problems due to the type and size of the materials being used for the processes. Hot mix asphalt batch plants may also pose an odor nuisance from the heating of materials. Concrete is a common material used for construction and is manufactured at concrete batch plants, where it is made by combining several ingredients including water, cement, and aggregate (e.g., sand, rock, gravel). The main equipment used at concrete batch plants include mixers, bins/hoppers/silos (to hold or store concrete or aggregate), conveyors, and dust collectors (e.g., baghouses).<sup>1</sup> The ingredients for concrete are introduced into the mixer where they undergo agitation. This process is typically vented into baghouses to prevent dust emissions. Dry-concrete batch plants do not use water, which can create more dust. Wet-concrete batching usually uses aggregate material that has been washed to remove silt and clay. As a result, the material arrives in moist conditions and should not pose a dust problem.

Figure 5f-1: Concrete batch plant

Figure 5f-2: Asphalt being used for paving

hot mix asphalt. Smoke is released from the hot oil and the hot mix asphalt and can cause odor nuisances.

A hot mix asphalt batch plant heats, mixes, and combines aggregate and asphalt to create hot mix asphalt. The hot mix asphalt is usually transported by trucks to be used for paving (e.g., roads, roofing). A typical hot mix asphalt batch plant consists of a drum dryer, a screening system, weight boxes for asphalt cement and aggregate, a mixer, and conveying equipment. The moist aggregate is typically transported into the drum dryer to be dried out. This process is typically vented to a baghouse, as dried aggregate is the largest source of dust emissions from asphalt batch plants. Finally, oil is added to the aggregate to create the

Figure 5f- 3: Aggregate or rock plant

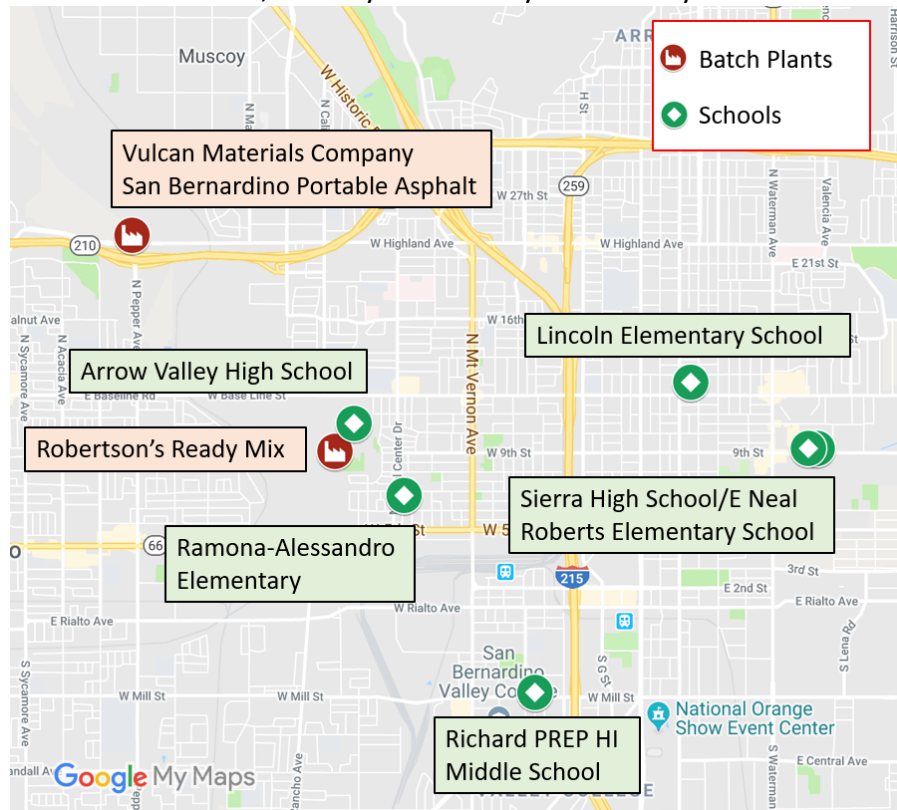

Rock and aggregate (gravel) plants supply sand and various-sized aggregates for construction and paving industries. Aggregates are processed by separating out various-sized pieces of gravel through different sized screens. Oversized aggregates can be crushed into smaller pieces. Dust is created as rocks are crushed and the dry surfaces are exposed, especially as the rocks are more finely crushed.

### Community Air Quality Priority – Fugitive Dust, Particulate Matter (PM<sub>10</sub>) Emissions, and Odors

The community of San Bernardino, Muscoy identified fugitive dust, particulate matter, and odors from concrete batch, asphalt batch, and rock aggregate batch plants as an air quality concern. There are two plants within the community boundary: Robertson's Ready Mix and Vulcan Materials Company San Bernardino Portable Asphalt (Vulcan Materials). Robertson's Ready Mix is a concrete batch plant. Vulcan Materials ~~Company San Bernardino Portable Asphalt~~ is an asphalt batch and rock and aggregate plant.

The CSC emphasized addressing fugitive dust and particulate matter emissions from batch plants within close proximity to schools (see Figure 5f-4). \_For instance, Robertson's Ready Mix borders Arroyo Valley High School and is one half of a mile from Ramona-Alessandro Elementary School. To reduce exposure to these emissions, the CSC recommended the installation of air filtration systems at schools.\_ More information on the air filtration systems at schools can be found in Chapter 5g.

Figure 5f-4: Map of Concrete Batch and Asphalt Batch and Rock and Aggregate Plants in the San Bernardino, Muscoy Community and Nearby Schools

### Ongoing Efforts

South Coast AQMD has rules to address fugitive dust and PM<sub>10</sub> emissions from concrete batch, asphalt batch, and rock and aggregate plants.

Odor nuisances from asphalt batch plants can also be addressed through South Coast AQMD Rule 402 – Nuisance.<sup>2</sup> South Coast AQMD inspectors investigate complaints and a public nuisance notice of violation for public nuisance can be issued if an inspector confirms odors with a affecting a considerable number of persons or the public.

South Coast AQMD Rule 403 – Fugitive Dust<sup>3</sup> reduces the amount of particulate matter in the air by requiring actions to prevent, reduce or mitigate fugitive dust emissions. Fugitive dust is any solid particulate matter that becomes airborne, but is not emitted from an exhaust stack. Fugitive dust can result from man-made activities, such as mining operations, agriculture, and construction activities. ~~Some of the requirements~~ Requirements to minimize fugitive dust emissions ~~can~~ include washing down vehicle undercarriages or tires, paving surfaces, or limiting the amount of track out.

South Coast AQMD Rule 1155 – Particulate Matter (PM) Control Devices,<sup>4</sup> establishes requirements for air pollution control devices that reduce particulate matter (e.g., baghouses).

This rule applies to operators of air pollution control devices venting processes (such as processes at concrete batch plants, asphalt batch plants, and rock and aggregate plants) that have direct particulate matter emissions, ~~such as concrete batch plants, asphalt batch plants, and rock and aggregate plants.~~ The requirements Requirements may include monitoring, recordkeeping, or operational standards to ensure an air pollution control device is working properly.

South Coast AQMD Rule 1157 ~~–~~ PM10 Emission Reductions from Aggregate and Related Operations,<sup>5</sup> reduces PM10 emissions from all permanent and temporary aggregate and related operations by requiring these operations to comply with certain best practices outlined in the rule (e.g., using dust suppressants).

### Identifying Opportunities for Action

The CSC identified an action to reduce emissions from concrete batch, asphalt batch, and rock and aggregate plants. Details about the action is described below.

<b>Action 1: Reduce Fugitive Dust, Particulate Matter (PM10), and Odors from Concrete Batch, Asphalt Batch, and Rock and Aggregate Plants</b>	
<b>Course of Action:</b>	
<ul style="list-style-type: none"> <li>• Provide public outreach information for the community on Rules 402, 403, 1155, and 1157 requirements, <del>which address odors, fugitive dust, and PM10 emissions from aggregate and related operations,</del> and South Coast AQMD's complaint system<sup>6</sup>, <del>which address odors, fugitive dust, and PM10 emissions from aggregate and related operations</del></li> <li>• Conduct focused air monitoring near the concrete batch, asphalt batch, and rock and aggregate plants to check for <del>elevated any potential levels of</del> emissions             <ul style="list-style-type: none"> <li>- If persistent elevated levels <u>of PM10 emissions</u> are detected at locations through air monitoring activities, conduct appropriate follow-up investigations (e.g., on site testing or other types of data review)</li> </ul> </li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>• Public Information and Outreach</li> <li>• <u>Air</u> Monitoring</li> <li>• Enforcement</li> </ul>	
<b>Goals:</b>	
<ul style="list-style-type: none"> <li>• Hold a public outreach event for the first year of the implementation period to explain the requirements of Rules 402, 403, 1155, and 1157, and the South Coast AQMD's complaint process. If necessary, determine if additional annual outreach events are needed</li> <li>• Provide quarterly or <del>semiannual</del> <u>biannual</u> updates to the CSC on enforcement activities</li> </ul>	

<ul style="list-style-type: none"> <li>Conduct air monitoring near <del>these two facilities</del> <u>Robertson's Ready Mix and Vulcan Materials</u> in <del>one</del> year <u>one</u></li> </ul>	
<b>Estimated Timeline:</b>	
<ul style="list-style-type: none"> <li>2020, hold a public outreach event for the first year on requirements for Rules 402, 403, 1155, and 1157, and the South Coast AQMD's complaint process. Reevaluate annually, if additional annual outreach events are necessary</li> <li>Fall 2019, begin air monitoring activities</li> <li>Mid-2020, begin quarterly or biannual updates to the CSC on outreach and enforcement activities, or if new information becomes available</li> </ul>	
<b>Implementing Agency, Organization, Business or Other Entity:</b>	
<b>Name:</b>	<b>Responsibilities:</b>
South Coast AQMD	<ul style="list-style-type: none"> <li>Conduct community outreach on Rules 402, 403, 1155, and 1157, and South Coast AQMD's complaint system</li> <li>Conduct <u>air</u> monitoring and follow-up with enforcement actions, as needed</li> <li>Provide updates to CSC</li> </ul>
<b>Additional Information:</b>

# CHAPTER 5G:

## EXPOSURE REDUCTION FOR SENSITIVE POPULATIONS IN SCHOOLS, CHILDCARE CENTERS, AND HOMES

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5g: Schools, Childcare Centers, Community Centers, and Homes – Exposure Reduction

### Background

The San Bernardino, Muscoy community ~~ies~~ identified children's exposure to harmful air pollutants while at school as a priority. In addition, the community ~~with a~~ focused on children in schools, childcare centers, community spaces such as parks and community centers, and homes. A major pollutant of concern in this community is diesel particulate matter (DPM), generated by truck traffic, warehouses, and the railyards. The CSC also expressed concern about emissions from concrete batch, asphalt, and aggregate plants and the Omnitrans bus yard. Like many environmental justice communities, the San Bernardino, Muscoy community may experience a disproportionately high level of exposure to harmful pollutants. Children, seniors, and people with certain medical conditions are especially sensitive to the impacts of air pollution. ~~S. However,~~ proactive steps such as installing high performance air filtration systems inside school buildings and notifying the public when air quality is unhealthy can reduce a child's exposure to harmful air pollutants.

### Community Air Quality Priority – Reducing Exposures at Schools, Childcare Centers, Preschools, Community Centers, and Homes

CSC members identified schools, including charter schools, and other places where children spend a lot of time (e.g., childcare centers, preschools, parks and community centers) as places where the South Coast AQMD should focus on reducing exposure to harmful air pollutants. The CSC provided examples of air pollution sources, such as the idling of diesel trucks, and dust from cement and asphalt batch plants, that are near schools, parks, and community centers where residents are exposed to harmful air pollutants found in diesel exhaust. The CSC members also shared instances where students and other sensitive populations near sources of air pollution experienced health problems. Table 5-1 is a list of public charter schools that are in the San Bernardino, Muscoy community, as an area to focus emission reduction efforts.

Table 5g-1. Public Charter Schools in the San Bernardino, Muscoy Community

Name of School	
Ballington Academy	PAL Charter
Hardy Brown College Prep	PAL Charter Academy
Options for Youth-I	SOAR Charter Academy
	Woodward Leadership Academy

To address community concerns about the health impacts of air pollution, CSC members prioritized installing school air filtration systems, implementing electric school buses, modifying routes for trucks to avoid schools, childcare centers, and community centers, and community outreach and engagement as ways to reduce exposure to harmful air pollutants. This includes providing information, including ~~proactive~~ steps that can be taken to reduce exposure, to schools, childcare centers, preschools, and community centers, when outdoor air pollution levels are unhealthy. The CSC expressed support for implementing an air quality flag program in schools. Other input includes increasing the amount of green space, such as planting trees around the community, specifically around warehouse centers and railyards.

The CSC identified investing in green spaces as a strategy to improve health outcomes. Green spaces may be beneficial to addressing cumulative health impacts within vulnerable communities. They can provide shade, reduce stress, encourage physical activity, and promote overall positive health outcomes.<sup>1</sup>

The CSC asked for the Community Emission Reduction Plan to focus installation of school and residential air filtration systems at locations close to major sources of diesel PM and dust. Specific locations mentioned as priorities included schools near the Omnitrans bus yard, railyards (including BNSF), concrete and asphalt batch plants, and surface quarries. Arroyo Valley High School was cited as one example of a school that experienced fugitive dust problems from a nearby concrete batch plant facility; and air filtration systems were installed in 2012.

### Ongoing Efforts

#### *School Air Filtration ~~Program~~ Efforts*

The installation of air filtration systems in schools can reduce exposure to air pollution inside school buildings. There are certain types of air filtration systems (“high efficiency air filters”) that are effective in filtering very small particles from diesel engines and other sources. Small particles can be inhaled deep into the lungs and cause health problems. These filtration systems may be beneficial to schools located near freeways, truck routes, rail yards, concrete and asphalt batch plants and other sources<sup>2</sup> of diesel emissions.

South Coast AQMD has helped ~~to~~ install air filtration systems at schools in the San Bernardino Unified School District since 2012. To date, South Coast AQMD has provided funds for the installation of these systems at four schools and one community center within the San Bernardino, Muscoy community. Figure 5-1 shows a map of the schools and community centers that have air filtration systems completed within this community, and Table 5-2 provides a list of these schools and community center.

#### *Environmental Justice Community Partnership (EJCP)<sup>3</sup> and Clean Air Ranger Education (CARE)<sup>4</sup>*

The EJCP is designed to build relationships with community members and organizations to achieve clean air and healthy, sustainable communities. The Clean Air Ranger Education (CARE)

Pilot Program is a program designed for elementary school education and includes topics on air pollution ~~and~~ ~~and~~ health, air quality flags, and zero-emission technologies.

*Why Air Quality Matters (WHAM) High School Education Program*

The South Coast AQMD is implementing Why Air Quality Matters (WHAM), a Science, Technology, Engineering, and Math (STEM) and experiential learning based curriculum, in high schools located within environmental justice communities. WHAM will increase teacher and student awareness on air quality issues in their communities and beyond through activities and experiments, including measuring PM using low-cost hand-held sensors.

*U.S. EPA STAR Grant Program<sup>5</sup>*

The South Coast AQMD Air Quality Sensor Performance Evaluation Center (AQ-SPEC) has engaged a number of schools in the San Bernardino, Muscoy area under the U.S. EPA STAR Grant, “Engage, Educate and Empower California Communities on the Use and Application of ‘Low Cost’ Air Monitoring Sensors.” Under this grant, AQ-SPEC has installed sensors for measuring particulate matter (PM<sub>2.5</sub>), nitrogen oxides (NO<sub>2</sub>) and ozone at two schools within this community: San Bernardino High School and Arroyo Valley High School.

Figure 5g-1: Map of schools and community centers in San Bernardino, Muscoy with air filtration systems installed-facilitated by South Coast AQMD through the South Coast AQMD program

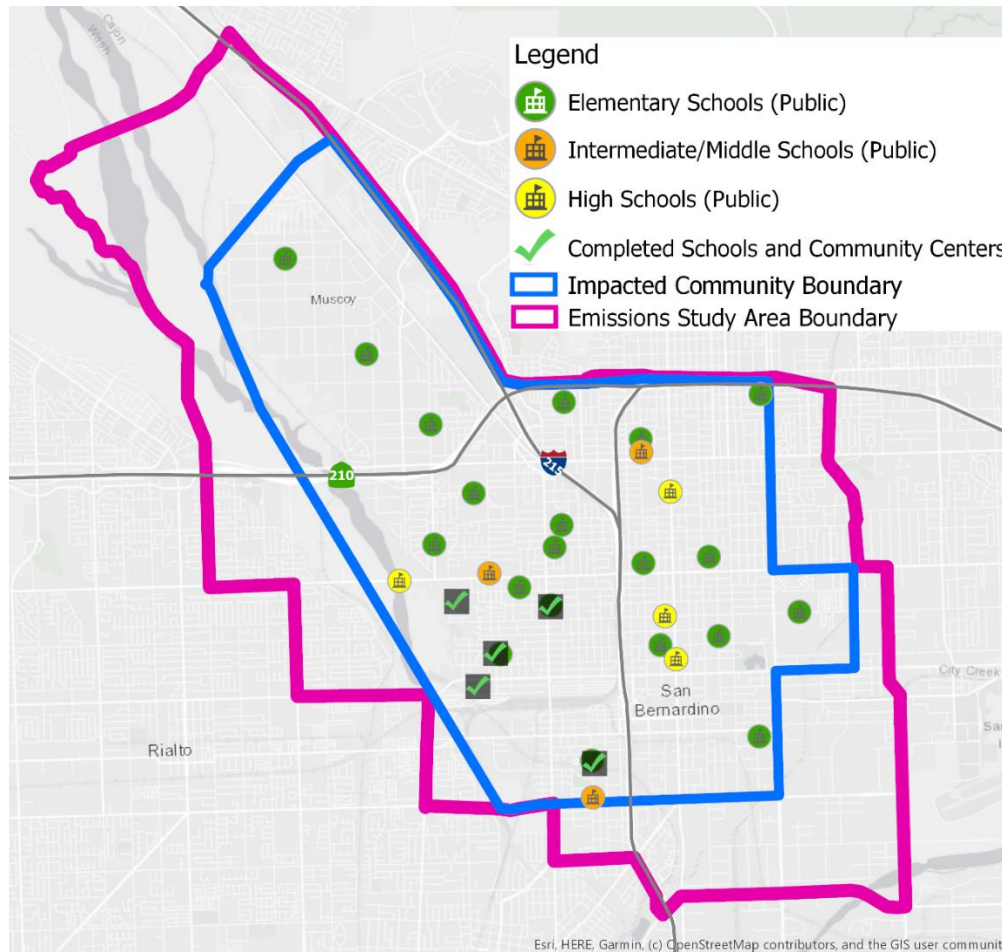

Table 5g-2: List of schools and community centers in San Bernardino, Muscoy with air filtration systems facilitated by South Coast AQMDList of schools and community centers in San Bernardino, Muscoy with air filtration systems installed through the South Coast AQMD program

Name of School or Community Center	
Arroyo Valley High School	Mt. Vernon Elementary School
Lytle Creek Elementary School	Ramona Alessandro Elementary School
Ruben Campos Community Center	

### Opportunities for Action

CSC members expressed a desire to have residential air filtration systems for homes located near major sources of pollution, such as the BNSF railyard. While the South Coast AQMD does not currently have an active program to provide residential filtration systems<sup>i</sup>, staff will work with its partners to identify potential opportunities for residential filtration systems and share this information with the CSC. In addition to air filtration systems, the CSC prioritized education and outreach as a way to reduce exposure to harmful air pollutants. In addition, in Chapter 5b: Neighborhood Truck Traffic, Action 3, describes actions to provide data on truck traffic and potential emissions near schools and residences, which may be useful to support decision-making for truck routing. CSC members also would like to replace existing school buses with near zero- or zero-emission school buses. Some existing funds for school buses may be limited to replacing buses ~~with~~ exclusively for public entities. Regardless, South Coast AQMD will continue to partner with entities to identify new or existing programs of funding to replace existing school buses with near zero- or zero-emission school buses, as seen below in Action #5.

<b>Action 1: Reduce Exposure to Harmful Air Pollutants through Public Outreach</b>	
<b>Course of Action:</b>	
<ul style="list-style-type: none"> <li>• Provide air quality related programs to schools, including the Environmental Justice Community Partnership (EJCP), Clean Air Ranger Education (CARE) program (which includes air quality flag <u>information</u>s), and Why Air Quality Matters (WHAM) program</li> <li>• Partner with the San Bernardino County Department of Public Health to provide information on how to receive air quality advisories, and how to reduce exposure to air pollution, particularly for sensitive populations</li> <li>• Partner with community-based organizations such as Center for Community Action and Environmental Justice (CCA EJ), <u>the Chicano Indigenous Community for Culturally Conscious Advocacy &amp; Action (ChICCCAA)</u> and/or Arrowhead Regional Medical Center (ARMC) to share information <del>or provide outreach</del> to schools for asthma-related programs</li> <li>• Partner with Safe Routes to School to provide information on programs such as walkability and active transportation</li> <li>• Work with appropriate parties to negotiate access to conduct school-based air monitoring <u>and conduct air monitoring</u></li> </ul>	
<b>Strategies:</b>	
<ul style="list-style-type: none"> <li>• Public Information and Outreach</li> <li>• Collaboration</li> <li>• <u>Air Monitoring</u></li> </ul>	
<b>Goals:</b>	

<sup>i</sup> The South Coast AQMD will work with CARB's Indoor Air Quality program and its contractor to identify effectiveness of and opportunities for residential filtration and share this information with the CSC.

<ul style="list-style-type: none"> <li>• Participate in six public outreach events (e.g., health fairs, community events) during the implementation period of this CERP and provide air quality related information to reduce exposure</li> <li>• <u>Provide information relating to air quality effects on young children and reducing exposure to facilities where children are located (e.g. preschools, childcare centers, charter schools, etc.). Outreach will be prioritized based on CSC input during the implementation of the CERP.</u></li> <li>• <del>Provide 11 childcare centers during the implementation period of this CERP with information relating to air quality effects on young children and reducing exposure, prioritizing centers based on CSC input</del></li> <li>• Present CARE and WHAM programs in at least two schools during the <u>implementation period of this CERP, with the possibility of continuing for up to three years</u></li> <li>• Collaborate with community-based organizations (e.g., ChICCCAA, CCAEJ) and <u>engage in co-host outreach meetings</u></li> <li>• <u>Conduct school-based air monitoring</u> <del>Work with appropriate entities to negotiate access to conduct school-based air monitoring</del></li> </ul>	
Estimated Timeline:	
<ul style="list-style-type: none"> <li>• During the 2019-2020 school year, begin working on providing air quality related programs to schools (e.g., CARE and WHAM program)</li> <li>• Fourth quarter of 2019, begin working with Department of Public Health on developing outreach materials</li> <li>• Early 2020, begin outreach efforts with community-based organizations</li> <li>• Fourth quarter of 2019, begin partnering with Safe Routes Partnership to provide information on programs</li> <li>• Late 2019, begin to conduct school-based air monitoring at or near schools</li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>• Implement EJCP CARE program and WHAM program <del>at the schools and</del> <u>provide information relating to air quality effects on young children and reducing exposure.</u> <u>Prioritize implementation based on CSC input</u></li> <li>• Partner with community-based organizations and/or local entities on asthma-based programs and air quality notifications that inform the community about proactive steps to reduce exposure to harmful air pollutants</li> <li>• <u>Collaborate with organizations to implement outreach events</u></li> <li>• <u>Collaborate with community-based organization and co-engage in outreach meetings</u></li> <li>• <u>Work with appropriate entities to negotiate access to conduct school-based air monitoring</u></li> </ul>

	<ul style="list-style-type: none"> <li>• <u>Conduct school-based air monitoring</u></li> </ul>
San Bernardino County Department of Public Health	Partner with South Coast AQMD on notifications to schools for air quality advisories
Arrowhead Regional Medical Center (ARMC) and other community-based organizations (with asthma-related programs)	Partner with South Coast AQMD to share information and/or provide outreach to schools for asthma-related programs
Additional Information:	
<ul style="list-style-type: none"> <li>• Arrowhead Regional Medical Center (ARMC)'s BreathMobile program: <a href="https://www.arrowheadmedcenter.org/srvOutBreathMobile.aspx">https://www.arrowheadmedcenter.org/srvOutBreathMobile.aspx</a></li> </ul>	

## Action 2: Reduce Exposure to Harmful Air Pollutants at Schools, Childcare Centers, and Community Centers

### Course of Action:

- Work with appropriate entities to implement the installation of high efficiency air filtration systems. ~~Works by working~~ with the community to prioritize schools, childcare centers, and community centers near truck routes, railyards, and concrete batch plants<sup>ii</sup>
- Work with appropriate agencies ~~toward to replacing~~ filters at schools with air filtration systems and installation at schools without these systems

### Strategy:

- Exposure Reduction

### Goal:

- Installation of air filtration systems in schools<sup>iii</sup>, childcare centers, and community centers with priority given to schools located in areas with high diesel PM levels and ~~in close proximity~~ close to facilities identified as a priority by the CSC

### Estimated Timeline:

<sup>ii</sup> Public schools, including charter schools, childcare centers, and public community centers, are eligible for the South Coast AQMD program.

<sup>iii</sup> Some schools or community centers have had air filtration systems previously installed; however, filter replacements may be needed. Replacement filters will continued to be provided to schools that have had air filtration systems installed. The CSC will need to prioritize ~~the which schools receive air filtration systems at schools~~ and work with local school districts to establish Memorandums of Understanding (MOUs) with the South Coast AQMD.

<ul style="list-style-type: none"> <li>Starting <del>mid-2020 through the implementation period of the CERP</del>, work with appropriate agencies to install high efficiency air filtration systems at schools and replacing filters at schools with <u>existing</u> air filtration systems <del>and installation at schools without these systems during the implementation period of this CERP</del></li> </ul>	
Implementing Agency, Organization, Business or Other Entity:	
Name:	Responsibility:
South Coast AQMD	<ul style="list-style-type: none"> <li>Implement air filtration systems and replacement filters at schools, childcare centers, and community centers</li> <li>Work with local school districts to establish Memorandums of Understanding (MOUs)</li> </ul>
CSC	Prioritize which schools receive air filtration systems
Additional Information:	
<ul style="list-style-type: none"> <li>Air filtration systems in schools: <a href="https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf">https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf</a></li> </ul>	

### Action 3: Reduce Exposure to Harmful Air Pollutants at Homes<sup>iv,v</sup>

#### Course of Actions:

- Identify new or existing technologies, programs, and funding sources that can provide the most effective air filtration systems in homes<sup>vi</sup>
- Seek potential partners or funding opportunities to improve weatherization in the homes to help improve the efficiency of the air filters

#### Strategies:

- Exposure Reduction
- Incentives
- Public Information and Outreach

#### Goals:

<sup>iv</sup> Air filtration systems will generally be less effective due to lower energy efficiency of older, pre-2006 homes typically found in Environmental Justice or disadvantaged communities. ~~due to lower energy efficiency typically found in Environmental Justice or disadvantaged communities.~~ Limited research on the efficiency of high performance air filtration systems in older homes suggests a 25% – 30% lower efficiency for PM<sub>2.5</sub> and ultrafine PM is expected, which is comparable to having open doors and windows. Most data collected on efficiency of high performance air filtration systems has been on 2006 and new homes, showing an average removal efficiency of 90% for PM<sub>2.5</sub> and ultrafine PM.

<sup>v</sup> ~~CARB has not approved AB 617 funds for r~~Residential air filtration systems. ~~have not been approved by CARB.~~ The South Coast AQMD plans to continue to work with them to establish a protocol where residential air filtration systems can be installed using CARB funds.

<sup>vi</sup> If a funding source is identified, South Coast AQMD will provide information on such funds. Homeowners should install residential air filtration based on the guidelines outlined by the funding source.

<ul style="list-style-type: none"> <li>Partner with appropriate entities to determine new or existing programs that can provide home filtration systems <u>and weatherization</u></li> <li>If funding or programs become available, share information with CSC</li> </ul>	
<b>Estimated Timeline:</b>	
<ul style="list-style-type: none"> <li>Mid-2020, consult with CSC members and appropriate stakeholders to identify any new or existing home air filtration programs</li> <li>If opportunities are identified for residential filtration systems, provide updates to the CSC</li> </ul>

# CHAPTER 5H:

## IMPLEMENTATION SCHEDULE

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5h: Implementation Schedule

The Community Steering Committee (CSC) developed a set of priorities and actions to be implemented by government agencies, organizations, businesses, and other entities to reduce air pollution in their community. The implementation period of the actions in this CERP is expected to be approximately five years. The actions will occur during the timeframe of the plan; however, some actions by South Coast AQMD will be ongoing (e.g., certain regulatory, enforcement, and incentive activities). Rules<sup>1</sup> that are adopted or amended will continue to be in effect past the implementation period of the CERP, as will enforcement of rules to ensure applicable facilities are in compliance. Additionally, some actions in the CERP are designed to allow for minor adjustments when new information becomes available. For example, based on initial air monitoring results, the CSC may refine specific strategies to focus on sources that show elevated emissions. Allowing for these types of adjustments will enable the plan to be successfully implemented.

Each action contains goals and estimated timelines. The goals include metrics designed to measure the progress of the CERP. Examples of these metrics are quarterly enforcement sweeps and emission reduction targets. Beginning in 2021, the South Coast AQMD staff will provide an annual update to the CSC on the progress of meeting these goals.

An overview of the schedule for implementing the actions in the CERP is in Figure 5h-1: Implementation Timeline for Rule Development and Implementation Activities and Figure 5h-2: Implementation Timeline for Air Monitoring, Enforcement, Outreach, and Other CERP Actions. Figure 5h-1 covers rule development activities to address air quality priorities in the CERP, and Figure 5h-2 provides a timeline for air monitoring, enforcement, incentives, outreach, and other activities.

---

<sup>1</sup> South Coast AQMD Governing Board or CARB will consider rules for adoption.

# CHAPTER 5I:

## CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) ANALYSIS SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 5i: California Environmental Quality Act (CEQA) Analysis

The California Environmental Quality Act (CEQA) requires agencies to consider the environmental impacts of a proposed project. CEQA describes and imposes specific legal requirements that agencies must follow when evaluating and making decisions about whether a project will cause a significant environmental impact. The information below describes what South Coast AQMD staff has done and determined with respect to this project – the Community Emissions Reduction Plan (CERP). The information below does contain some legal terms because that is the language contained in the law and use of that language is part of how an agency demonstrates compliance with that law. As noted below, South Coast AQMD staff has looked at all aspects of the CERP and has determined that the CERP is exempt from the requirements of CEQA. The paragraphs below identify the exemptions that apply to the CERP. If the South Coast AQMD Board agrees with staff and determines that the CERP is exempt from CEQA, and approves the CERP, a Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside, and San Bernardino counties.

Pursuant to CEQA and South Coast AQMD Rule 110, the South Coast AQMD, as lead agency for the proposed project, has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. South Coast AQMD staff has determined that it can be seen with certainty that there is no possibility that the proposed project may have a significant adverse effect on the environment. Therefore, the project is considered to be exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. Further, the overall purpose of this project is to improve the environment and health of residents of this selected community and all of the action items within the CERP to support this goal. Thus, the proposed project is also categorically exempt from CEQA pursuant to CEQA Guidelines Section 15308 – Actions by Regulatory Agencies for Protection of the Environment.

The CERP contains elements that qualify as feasibility and planning studies, because information needs to be collected to make an informed decision about further action (e.g., rule development). However, the portions of the CERP that qualify as feasibility and planning studies do not prescribe or commit to specific rule requirements, nor have future actions been approved or adopted in advance, because they require an open public process. The regulated community, stakeholders, interested parties, and the public are invited to participate in the rule development process in a public forum. Thus, the portion of the CERP that contains action items which qualify as feasibility or planning studies is statutorily exempt from CEQA pursuant to CEQA Guidelines Section 15262 – Feasibility and Planning Studies.

Additionally, some of the action items in the CERP would require minor physical modifications to existing structures or buildings, such as installing air filters or monitoring equipment, and these action items are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15303 –

New Construction or Conversion of Small Structures. A portion of the action items within the CERP involves the collection or exchange of information or data obtained from inspections and air monitoring, which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15306 – Information Collection. Another component of the action items in the CERP also involves inspections that require performance or compliance checks which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15309 – Inspections. Finally, a portion of the action items within the CERP relies on enforcement activities which are categorically exempt from CEQA pursuant to CEQA Guidelines Section 15321 – Enforcement Actions by Regulatory Agencies.

South Coast AQMD staff has determined that there is no substantial evidence indicating that any of the exceptions to the categorical exemptions apply to the proposed project pursuant to CEQA Guidelines Section 15300.2 – Exceptions. Therefore, as mentioned above, the proposed project is exempt from CEQA. ~~A Notice of Exemption will be prepared pursuant to CEQA Guidelines Section 15062 – Notice of Exemption. If the project is approved, the Notice of Exemption will be filed with the county clerks of Los Angeles, Orange, Riverside and San Bernardino counties.~~

# CHAPTER 6:

## AIR MONITORING SUMMARY

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Chapter 6: Air Monitoring Summary

Air monitoring will be conducted in the San Bernardino, Muscoy community as part of the AB 617 program. Air monitoring can provide valuable information about sources of air pollution, types of pollutants, and air quality impacts in the community. Information that is collected from air monitoring can be used to implement and track air quality actions prioritized by the community that reduce local residents' exposure to harmful air pollutants.

### Chapter 6 Highlights

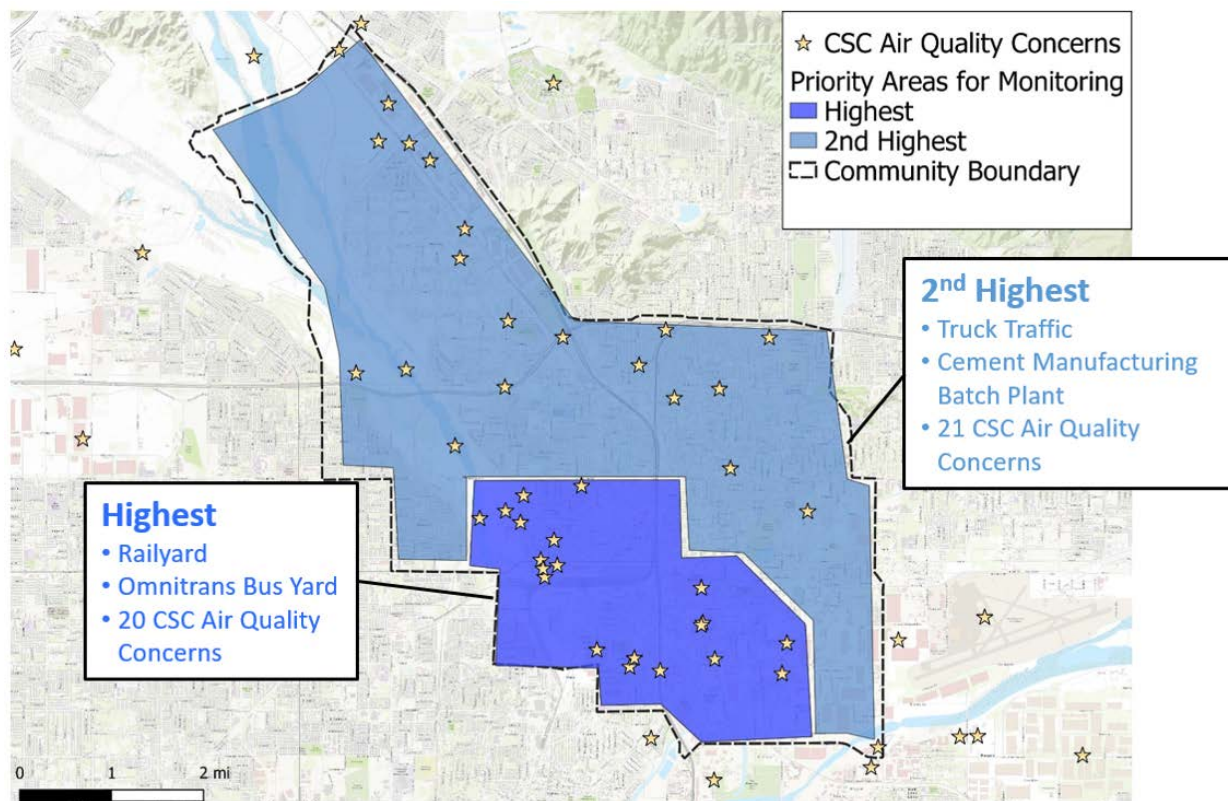

- Will provide new information about air pollution at the community level
- Monitoring will be done in areas of concern identified by the selected communities
- Areas selected for monitoring reflect the air quality priorities in AB 617 communities
- Many types of monitoring equipment will be used, from advanced techniques to low-cost sensors

The Community Air Monitoring Plan (CAMP) for the San Bernardino, Muscoy community<sup>1</sup> was developed through close collaboration between the CSC and South Coast AQMD staff. The plan outlines the objectives and strategies for monitoring air pollution in the community based on the ~~CSC's~~ air quality priorities identified by the CSC. A detailed description for these priorities is available in the CAMP Appendix B.<sup>2</sup>

The San Bernardino, Muscoy community covers a large geographical area that is affected by a variety of air pollution sources. Consequently, multiple air monitoring methods are necessary to address the community's air quality priorities. These methods include mobile, fixed and low-cost sensor air monitoring. Mobile air monitoring can be conducted using real- or near real-time instruments to allow for wide scale community air pollution mapping, and provide more detailed information about air pollution levels at specific locations at specific times (i.e. higher spatial and temporal resolution). Fixed air monitoring can be strategically placed at specific locations near one or more air pollution sources of interest better characterize emissions in the community and assess residents' exposure to air pollution. Mobile and fixed air monitoring can be further enhanced with information from air quality sensors that provide real- or near-real time air pollution information. A benefit of these sensors compared to other monitoring technologies is that they can be installed in more places in the community thereby providing more detailed real-time air quality information. However, low-cost sensors are not as accurate as traditional monitoring techniques, and only measure a limited number of pollutants.

Figure 6-1 identifies areas where air monitoring will occur within the San Bernardino, Muscoy community. ~~The areas are prioritized based on input from the CSC about~~ ~~The CSC prioritized these areas based on~~ community air quality concerns and sources of air pollution. The monitoring areas and priorities can change based on the information gathered during monitoring, input from the community, and/or newly available data from different organizations. A discussion regarding air pollutants measurements and technologies that will be deployed in these areas is provided in the CAMP. The air monitoring strategies outlined in the CAMP may be updated based on future community input, air monitoring results, and other information gathered through implementation of AB 617. Updates to air monitoring strategies will be presented to the CSC for input.

Figure 6-1. Proposed Monitoring Areas Prioritized Based on the Relative Density of Air Quality Concerns in the SBM Community

# APPENDIX 2:

## COMMUNITY OUTREACH, COMMUNITY STEERING COMMITTEE AND PUBLIC PROCESS

---

THIS PAGE IS INTENTIONALLY LEFT BLANK

## Appendix 2

The San Bernardino, Muscoy (SBM) community Outreach Summary includes an overview of the public engagement efforts and the Community Steering Committee (CSC) process that has been integral in the development of the CERP. This Appendix contains additional information on committee documents, meeting materials, and additional community engagement. Many of these materials are posted on this community's webpage:

<http://www.aqmd.gov/nav/about/initiatives/community-efforts/environmental-justice/ab617-134/san-b>

### Charter

A Charter was developed by South Coast AQMD staff with CSC member input to describe committee objectives, roles and responsibilities, meeting frequency, meeting dates, times, and locations, etc. The Charter is available here:

English: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/san-bernardino/charter-english.pdf?sfvrsn=8>

Spanish: <http://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/san-bernardino/charter-spanish.pdf?sfvrsn=8>

### Agendas

All meeting agendas are posted on the community webpage. Copies of the agendas are also attached.

### Sign-In Sheets

At every CSC meeting, members of the CSC and public were requested to sign in. Copies of the sign-in sheets are attached.

### Meeting Dates, Times, Location, and Meeting Materials

Recent and upcoming activities regarding the SBM community, including interactive maps, the discussion draft of the CERP and CAMP, all meeting invitations, presentations, materials and summary notes can be found on community webpage.

Specific links for meeting flyers, presentations, and meeting summaries are listed below:

## Interpreters

The following California Certified Interpreters were contracted to provide services at the meetings.

- Gloria Carrallo
- Patricia Chavez
- Monica Desiderio
- Astrid Estrada
- Martha Falencik
- Alejandro Franco

- Carmen Garza
- Consuelo V. Gonzalez
- Cecilia Ibarra
- Estela Moll
- Yolanda Ramirez
- Madeline Rios

### Additional Outreach

South Coast AQMD staff had more than 35 in-person or phone meetings with CSC members as well as members of the community. The list below provides some information about meetings that staff have had, as of the date of this document. Additional phone calls and conversations with CSC members and members of the committee also took place, but not all these conversations are documented here.

Date	Meeting
10/3/18	Call with SB County Dept. of Public Health
11/28/18	Call with Luis Portillo (Inland Empire Economic Partnership)
12/1/18	In-person meeting with Ericka Flores, Andrea Vidaurre and Las Chicas
1/11/19	In-person meeting with Miguel Rivera
1/30/19	Call with Andrea Vidaurre
2/7/19	Call with Miguel Rivera
2/8 /19	Call with Maria Corona
2/8/19	Call with Graciela Regalado
2/8/19	Call with Lorena Rodarte
2/8/19	Call with Ada Trujillo
3/6/19	Call with Angelica Balderas
3/21/19	Call with Jane Hunt-Ruble
3/14/19	Call with Matt Abularach-Macías
4/3/19	Call with Angelica Balderas
4/9/19	In-person meeting with Ericka Flores, Andrea Vidaurre, and Miguel Rivera
4/9/19	In-person meeting with SBDPH (Bernadette Beltran), SB City (Chantal Power) and County (Lisha Smith)
4/22/19	Call with Ericka Flores and Andrea Vidaurre
4/24/19	Presented information about AB 617 CERP development at the South Coast AQMD Young Leaders Advisory Council meeting
5/1/19	Conference call with SB City Public Works
5/2/19	Conference call with Omnitrans
5/2/19	Call with SB County DPH (Bernadette Beltran)
5/3/19	Call with Angelica Balderas

### Appendix 2-6

5/6/19	Call with Ericka Flores
5//19	In-person meeting with Tammy Yamasaki
5/16/19	Call with Jane Hunt-Ruble
5/23/19	In-person meeting with Ericka Flores, Andrea, Miguel and Las Chicas
5/?/19	Call with Mary Valdemar
5/23/19	In-person meeting with Otis Greer & co. from SBCTA
5/29/19	Call with Matthew Taylor
5/29/19	Call with Valerie Dobesh
5/31/19	Call with Angel Rodriguez
5/31/19	Small group in-person meeting with Matthew, Jason Martinez, Mary Valdemar, Ryan Sinclair, Valerie Dobesh
6/4/19	Call with James Albert
6/5/19	In-person meeting with Miguel Rivera and Abram Gastelum
6/?/19	Call with Tammy Yamasaki
6/?/19	Call with Ryan Sinclair
6/5/19	In-person meeting with B.J. Patterson
6/12/19	Conference call with Demi Espinoza
6/20/19	Call with Jane Hunt-Ruble
6/20/19	Call with Matt Abularach-Macías
7/1/19	Call with Otis Greer from SBCTA
7/1/19	Call with Ryan Sinclair from LLU
<u>8/3/2019</u>	<u>Call with Andrea Vidaurre from CCAEJ</u>
<u>8/15/2019</u>	<u>Call with Jason Martinez from ChiCCCAA</u>
<u>8/23/2019</u>	<u>Call with Graciela Regalado</u>

# Assembly Bill (AB) 617 Community Air Initiatives

## San Bernardino, Muscoy Community Steering Committee Meeting #1

Thursday, November 8<sup>th</sup>, 2018 — 6:00 p.m. - 8:00 p.m.  
Ruben Campos Community Center - 1717 W. 5th St. San Bernardino, CA 92411

Time	Item	Presenter	Why is this important?
5:45 pm	Doors open	Reception table	
6:00 pm	Welcome and Introductions	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)  Committee Members	
6:10 pm	AB 617 Program Overview, Community Steering Committee Role and Expectations	Jo Kay Ghosh (Health Effects Officer, Planning, Rule Development & Area Sources)	To know what we are working on, the timeline, and what we are expected to do.
	Air Pollution Background	Philip Fine (Deputy Executive Officer, Planning, Rule Development & Area Sources)	To be able to use the same words (terms) in our discussions, and to understand the process that we go through to clean the air. To help identify what air pollution is in this community, and what are the sources.
