

South Coast Air Quality Management District

21865 Copley Drive, Diamond Bar, CA 91765-4178
(909) 396-2000 • www.aqmd.gov

A G E N D A

MEETING, MAY 7, 2021

A meeting of the South Coast Air Quality Management District Board will be held at 9:00 A.M.

Pursuant to Governor Newsom's Executive Orders N-25-20 (March 12, 2020) and N-29-20 (March 17, 2020), the Governing Board meeting will only be conducted via video conferencing and by telephone. Please follow the instructions below to join the meeting remotely.

ELECTRONIC PARTICIPATION INFORMATION (Instructions provided at bottom of the agenda)

Join Zoom Meeting - from PC, Laptop or Phone

<https://scaqmd.zoom.us/j/93128605044>

Meeting ID: **931 2860 5044** (applies to all)

Teleconference Dial In +1 669 900 6833 or +1 253 215 8782

One tap mobile +16699006833,,97364562763# or +12532158782,,93128605044#

Spanish Language Only Audience (telephone)
Número Telefónico para la Audiencia de Habla Hispana
Teleconference Dial In/Numero para llamar: +1 669 900 6833
Meeting ID/Identificación de la reunión: 932 0955 9643
One tap mobile: +16699006833,,93209559643#

Audience will be allowed to provide public comment through telephone or Zoom connection.
PUBLIC COMMENT WILL STILL BE TAKEN

Phone controls for participants:

The following commands can be used on your phone's dial pad while in Zoom Webinar meeting:

- *6 - Toggle mute/unmute
- *9 - Raise hand

Questions About an Agenda Item

- The name and telephone number of the appropriate staff person to call for additional information or to resolve concerns is listed for each agenda item.
- In preparation for the meeting, you are encouraged to obtain whatever clarifying information may be needed to allow the Board to move expeditiously in its deliberations.

Meeting Procedures

- The public meeting of the South Coast AQMD Governing Board begins at 9:00 a.m. The Governing Board generally will consider items in the order listed on the agenda. However, any item may be considered in any order.
- After taking action on any agenda item not requiring a public hearing, the Board may reconsider or amend the item at any time during the meeting.

All documents (i) constituting non-exempt public records, (ii) relating to an item on the agenda, and (iii) having been distributed to at least a majority of the Governing Board after the agenda is posted, are available prior to the meeting at South Coast AQMD's web page (www.aqmd.gov).

Americans with Disabilities Act and Language Accessibility

Disability and language-related accommodations can be requested to allow participation in the Governing Board meeting. The agenda will be made available, upon request, in appropriate alternative formats to assist persons with a disability (Gov. Code Section 54954.2(a)). In addition, other documents may be requested in alternative formats and languages. Any disability or language-related accommodation must be requested as soon as practicable. Requests will be accommodated unless providing the accommodation would result in a fundamental alteration or undue burden to the South Coast AQMD. Please contact the Clerk of the Boards Office at (909) 396-2500 from 7:00 a.m. to 5:30 p.m., Tuesday through Friday, or send the request to cob@aqmd.gov

A webcast of the meeting is available for viewing at:

<http://www.aqmd.gov/home/news-events/webcast>

Cleaning the air that we breathe...

CALL TO ORDER

- Pledge of Allegiance
- Roll Call
- Swearing in of Chair and Vice Chair for Term May 2021 to January 2022 **Burke**
- Retirement Presentation to William A. Burke, Ed.D.
- Opening Comments: Ben Benoit, Chair
Other Board Members
Wayne Nastri, Executive Officer
- Presentation: Air Pollution Triggers Gene Expression Changes In Transgenic Alzheimer's Mice Brains **Dr. Keith Black**

PUBLIC COMMENT PERIOD – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3) The public may comment on any subject within the South Coast AQMD's authority that **does not** appear on the agenda, during the Public Comment Period. Each speaker addressing non-agenda items may be limited to a total of (3) minutes.

Staff/Phone (909) 396-

CONSENT AND BOARD CALENDAR (Items 1 through 23)

Note: Consent and Board Calendar items held for discussion will be moved to Item No. 24.

1. Approve Minutes of April 2, 2021 Board Meeting **Thomas/3268**
2. Set Public Hearings June 4, 2021 to Consider Adoption of and/or Amendments to South Coast AQMD Rules and Regulations **Nastri/3131**
 - A. Determine That Proposed Amendments to Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants, Are Exempt from CEQA, and Amend Rule 1466 **Nakamura/3105**

Proposed Amended Rule 1466 will clarify and streamline existing provisions, update monitoring requirements, enhance specific dust control measures, revise alternative provisions, and add additional notification and recordkeeping requirements. This action is to adopt the Resolution: 1) Determining that the proposed amendments to Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants, are exempt from the requirements of the California Environmental Quality Act; and 2) Amending Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants. (Reviewed: Stationary Source Committee, March 19, 2021)

B. Certification of Nonattainment New Source Review and Clean Fuels for Boilers Compliance Demonstration for 2015 8-hour Ozone Standard **Rees/2856**

South Coast Air Basin (Basin) and Coachella Valley are designated as Extreme and Severe nonattainment areas, respectively, for the 2015 8-hour ozone standard. For these nonattainment areas, U.S. EPA requires submittal of a nonattainment NSR plan or plan revision. South Coast AQMD's existing SIP-approved nonattainment NSR program, which covers both the Basin and Coachella Valley and applies to new major stationary sources or major modifications to existing sources, satisfies this requirement. Therefore, no changes to the existing NSR program are needed to comply with the 2015 ozone standard nonattainment NSR requirements. For Extreme ozone nonattainment areas, the Clean Air Act also requires the use of clean fuels or advanced control technologies for electric utility and industrial and commercial boilers that emit more than 25 tons of NO_x per year. This requirement is fulfilled through South Coast AQMD's Rule 1146, NO_x RECLAIM program (Rule 2002 and Rule 2004), and Rule 1303 which regulate NO_x emissions from existing, new or modified boilers. This action is to adopt the Resolution: 1) Certifying the Nonattainment NSR and Clean Fuels for Boilers Compliance Demonstration for 2015 8-hour Ozone Standard; and 2) Directing staff to forward the Certification to CARB for approval and subsequent submission to U.S. EPA for inclusion in the SIP. (Review: Stationary Source Committee, May 21, 2021)

C. Determine That 2021 PM₁₀ Maintenance Plan for South Coast Air Basin Is Exempt from CEQA and Approve 2021 PM₁₀ Maintenance Plan for South Coast Air Basin **Ghosh/2582**

The South Coast Air Basin was designated as attainment for the 24-hour average PM₁₀ National Ambient Air Quality Standard (NAAQS) by U.S. EPA on July 26, 2013. A PM₁₀ maintenance plan was submitted to U.S. EPA on April 28, 2010, which was approved as part of the redesignation. The Clean Air Act also requires that the State submit a subsequent maintenance plan eight years after an attainment redesignation to provide for maintenance of the NAAQS for a further 10 years after the period covered by the first maintenance plan (2023-2033). This 2021 PM₁₀ Maintenance Plan includes a maintenance demonstration that the South Coast Air Basin will continue to attain the standard, verification of continued attainment, a commitment to a future monitoring network, a contingency plan, and provisions for contingency plan implementation. This plan also includes a description of PM₁₀ sources, concentration trends, and emissions controls along with an analysis of past NAAQS exceedances during the first maintenance period. This action is to adopt the Resolution: 1) Determining that the 2021 PM₁₀ Maintenance Plan for the South Coast Air Basin is exempt from the requirements of the California Environmental Quality Act; and 2) Approving the 2021 PM₁₀ Maintenance Plan for the South Coast Air Basin, and directing staff to forward to CARB for approval and submission to U.S. EPA for inclusion in the SIP. (Review: Mobile Source Committee May 21, 2021)

Items 3 through 9 Budget/Fiscal Impact

3. Execute Contract for Global Positioning Systems Installation and Monitoring, Amend Awards for Carl Moyer and Community Air Protection Programs and Appropriate Funds for Proposition 1B - Goods Movement Emission Reduction and Lower Emission School Bus Programs **Miyasato/3249**

To enhance enforcement of projects funded under the Carl Moyer Program, Global Positioning System (GPS) units are installed on marine vessels to monitor operations in the South Coast AQMD. On August 7, 2020, the Board approved the release of a Request for Proposals (RFP #P2021-01) to solicit bids from qualified GPS vendors. This action is to execute a contract for the installation of GPS units on incentive program-funded equipment and provide GPS data monitoring services in an amount not to exceed \$400,000 from the administrative portions of the Carl Moyer Program SB 1107 Fund (32) and Community Air Protection Fund (77). This action is to also amend awards under the Carl Moyer Program and Community Air Protection Program (CAPP). Lastly, this action is to appropriate up to \$75,200 and up to \$60,300 from the administrative portions of the Prop 1B Special Revenue Fund (81) and Carl Moyer AB 923 Special Revenue Fund (80), respectively, into Information Management's FYs 2020-21 and/or 2021-22 Budgets, Professional and Special Services and/or Capital Outlays Major Objects and reimburse the General Fund (01) using administrative funds, for development of the Grant Management Systems (GMS). (Reviewed: Technology Committee, April 16, 2021; Recommended for Approval)

4. Amend Contracts to Develop and Demonstrate Zero Emission Drayage Trucks and Add Funds for Administrative Assistance **Miyasato/3249**

In March 2016, the Board approved execution of contracts for the Zero Emission Drayage Truck (ZEDT) project. CARB and South Coast AQMD staff propose to change scope and redistribute funds between Peterbilt and Volvo to assure project goals are met. This action is to authorize the Executive Officer to add \$1,254,491 to Volvo Technology of America, LLC contract to deploy two Class 8 battery electric trucks and charging infrastructure and reduce \$1,000,000 from Peterbilt Motors contract for the elimination of two Class 8 battery electric drayage trucks and add \$141,255 to a project implementation assistance contract to ensure completion of the ZEDT and Volvo LIGHTS projects, all from the Greenhouse Gas Reduction Projects Special Revenue Fund (67). (Reviewed: Technology Committee, April 16, 2021; Recommended for Approval)

5. **Recognize Revenue, Appropriate and Transfer Funds for Air Monitoring Programs, Issue RFQ and Purchase Orders for Air Monitoring Equipment and One Vehicle, and Execute Contract** **Low/2269**

South Coast AQMD is expected to receive grant funds up to \$703,945 from U.S. EPA for the PM2.5 Program and up to \$2,100,000 from the U.S. Government for the Enhanced Particulate Monitoring Program. In October 2016, the Board recognized revenue from U.S. EPA through its Science to Achieve Results (STAR) research grant program to engage, educate and empower California communities on the use and application of low-cost air monitoring sensors. These actions are to recognize revenue and appropriate funds for the PM2.5 and Enhanced Particulate Monitoring Programs, transfer up to \$350,000 between Major Objects in Science & Technology Advancement's FY 2021-22 Budget to realign expenditures for the Enhanced Particulate Monitoring Program, transfer and/or appropriate up to \$124,792 between Major Objects for the STAR program, issue an RFQ and purchase orders for air monitoring equipment and one vehicle, and execute a contract. (Reviewed: Administrative Committee, April 9, 2021; Recommended for Approval)
6. **Execute Contract to Upgrade Real-time Public Alerts of Hydrogen Sulfide Events in Coachella Valley** **Ghosh/2582**

In response to odor events related to the Salton Sea, South Coast AQMD began continuous measurements of hydrogen sulfide (H2S) at two Coachella Valley locations in November 2013. In 2017, South Coast AQMD contracted with Sonoma Technology, Inc. (STI) to implement an automated real-time email and text alert system to provide H2S exceedance notifications. To better capture H2S events, up to three additional H2S monitors are planned for the region. This action is to execute a contract with STI to perform technical upgrades, integrate data from additional monitors, and maintain a real-time alert system for H2S in the Coachella Valley at a cost not to exceed \$77,300 from the AES Settlement Projects Fund (35). (Reviewed: Administrative Committee, April 9, 2021; Recommended for Approval)
7. **Establish Lists of Prequalified Counsel to Represent and Advise South Coast AQMD on Legal Matters Related to Environmental Law and General Matters** **Gilchrist/3459**

On January 8, 2021 the Board approved issuance of an RFP to pre-qualify outside counsel having expertise in the California Environmental Quality Act, South Coast AQMD rulemaking and planning procedures, administrative law, and related issues for South Coast AQMD. The evaluation of responding firms has been completed. This action is to establish two lists of prequalified counsel - one to represent South Coast AQMD in environmental law matters, and one to represent South Coast AQMD in general governmental matters. (Reviewed: Administrative Committee, April 9, 2021; Recommended for Approval)

8. Authorize Purchase of OnBase Software Support **Moskowitz/3329**

South Coast AQMD uses OnBase software for its electronic document management system to manage critical documents and to support the Record Retention Policy. Software subscription and support for OnBase expires on July 31, 2021. This action is to obtain approval for sole source purchase of OnBase software subscription and support for one year from Information Management's FY 2020-21 Budget. Funds for this purchase (\$140,000) are conditional on approval of the Proposed FY 2021-22 Budget. (Reviewed: Administrative Committee, April 9, 2021; Recommended for Approval)

9. Approve Award Modification as Approved by MSRC **McCallon**

The Mobile Source Air Pollution Reduction Review Committee (MSRC) approved the modification of an award under the FYs 2016-18 Work Program. At this time the MSRC seeks Board approval of the modification as part of the FYs 2016-18 Work Program. (Reviewed: Mobile Source Air Pollution Reduction Committee, April 15, 2021; Recommended for Approval)

Items 10 through 15 - Information Only/Receive and File

10. Legislative, Public Affairs and Media Report **Alatorre/3122**

This report highlights the March 2021 outreach activities of the Legislative, Public Affairs and Media Office, which includes: Major Events, Community Events/Public Meetings, Environmental Justice Update, Speakers Bureau/Visitor Services, Communications Center, Public Information Center, Business Assistance, Media Relations and Outreach to Business and Federal, State and Local Government. (No Committee Review)

11. Hearing Board Report **Prussack/2500**

This reports the actions taken by the Hearing Board during the period of March 1 through March 31, 2021. (No Committee Review)

12. Civil Filings and Civil Penalties Report **Gilchrist/3459**

This reports the monthly penalties from March 1, 2021 through March 31, 2021, and legal actions filed by the General Counsel's Office from March 1 through March 31, 2021. An Index of South Coast AQMD Rules is attached with the penalty report. (Reviewed: Stationary Source Committee, April 16, 2021)

13. Lead Agency Projects and Environmental Documents Received **Nakamura/3105**

This report provides a listing of CEQA documents received by the South Coast AQMD between March 1, 2021 and March 31, 2021, and those projects for which the South Coast AQMD is acting as lead agency pursuant to CEQA. (Reviewed: Mobile Source Committee, April 16, 2021)

14. Rule and Control Measure Forecast **Rees/2856**
- This report highlights South Coast AQMD rulemaking activities and public hearings scheduled for 2021. (No Committee Review)
15. Status Report on Major Ongoing and Upcoming Projects for Information Management **Moskowitz/3329**
- Information Management is responsible for data systems management services in support of all South Coast AQMD operations. This item is to provide the monthly status report on major automation contracts and planned projects. (Reviewed: Administrative Committee, April 9, 2021)

Item 16 - Staff Presentation/Board Discussion

16. Budget and Economic Outlook Update (*Presentation in Lieu of Board Letter*) **Whynot/3104**
- Staff will provide an update on economic indicators and key South Coast AQMD metrics. (Reviewed: Administrative Committee, April 9, 2021) (Receive & File)

Items 17 through 23 - Reports for Committees and CARB

17. Administrative Committee (Receive & File) **Chair: Burke Nastri/3131**
18. Legislative Committee **Chair: Cacciotti Alatorre/3122**

Receive and file; and take the following actions as recommended:

Agenda Item	Recommendation
AB 365 (O'Donnell) Sales and use taxes: exclusion: zero-emission and near-zero-emission drayage trucks	Support
AB 762 (Lee) Hazardous emissions and substances: school sites: private and charter schools	Support
AB 1001 (C. Garcia) Environmental permitting and air pollution	Work With Author
SB 596 (Becker) Environmental permitting and air pollution	Oppose Unless Amended
HR 848 (Thompson) Growing Renewable Energy and Efficiency Now (GREEN) Act of 2021	Work With Author
HR 1512 (Pallone, Tonko, Rush) Climate Leadership and Environmental Action for our Nation's (CLEAN) Future Act	Work With Author

PUBLIC HEARINGS

- | | | |
|-----|--|---------------|
| 25. | Adopt Executive Officer's FY 2021-22 Proposed Goals and Priority Objectives, and Proposed Budget. | Jain/2804 |
| | <p>The Executive Officer's Proposed Goals and Priority Objectives, and Proposed Budget for FY 2021-22 have been developed and are recommended for adoption. The Budget and Work Program for FY 2021-22 represents input over the past several months from Board members, staff, and the public. This year's process included two meetings of the Budget Advisory Committee and two budget workshops, one for the public on April 6, 2021 and one for the Board on April 9, 2021. The Proposed Budget incorporates, pursuant to Rule 320, an increase of most fees by 4.5 percent reflecting the Consumer Price Index from last year and this year. This action is to adopt the Executive Officer's Proposed Goals and Priority Objectives, and Proposed Budget for FY 2021-22. (Reviewed: Special Board Meeting/Budget Workshop, April 9, 2021)</p> | |
| 26. | Determine That Proposed Amendments to Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, Are Exempt from CEQA, and Amend Rule 1469.1 | Nakamura/3105 |
| | <p>Proposed Amended Rule 1469.1 would further reduce hexavalent chromium emissions from chromate spray coating operations by including requirements for other related activities such as dried coating removal and demasking, enhancing the point source requirements, enhancing parameter monitoring requirements for air pollution controls, and further minimizing the release of fugitive emissions through additional requirements for building enclosure, housekeeping, and best management practices. The proposed amendments would also remove outdated definitions and provisions. This action is to adopt the Resolution: 1) Determining that the proposed amendments to Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, are exempt from the requirements of the California Environmental Quality Act; and 2) Amending Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium. (Reviewed: Stationary Source Committee, March 19, 2021)</p> | |

27. **Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions** **Rees/2856**

Proposed Rule 2305 will require warehouses greater than 100,000 square feet to directly reduce NOx and diesel PM, or to facilitate emission and exposure reductions of these pollutants. The Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program is a menu-based points system that will require warehouse operators to annually earn a specified number of points by completing actions from a menu. Menu items include acquiring or using: Near Zero Emissions (NZE) and/or Zero Emissions (ZE) on-road trucks, ZE cargo handling equipment, ZE charging/fueling infrastructure, solar panels, or particulate filters for nearby sensitive land uses. Alternatively, warehouse operators could prepare and implement a custom plan specific to their site, or they could pay a mitigation fee. Funds from the mitigation fee would be used through future solicitations and Board actions to incentivize the purchase of NZE or ZE trucks and ZE charging/fueling infrastructure in the communities near warehouses that paid the fee. Warehouse owners and operators would also have reporting and recordkeeping requirements. Proposed Rule 316 would establish fees for warehouse operators to fund South Coast AQMD compliance activities. This action is to: 1) Adopt the Resolution: A) Certifying the Final Environmental Assessment for Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program and Proposed Rule 316 – Fees for Rule 2305; B) Adopting Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program and Proposed Rule 316 – Fees for Rule 2305; C) Submitting Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program for inclusion into the SIP; 2) Establish the Rule 2305 Mitigation Fee Alternate Compliance Fund; and 3) Authorize the Executive Officer to recognize upon receipt mitigation fees paid by warehouse operators into the Rule 2305 Mitigation Fee Alternate Compliance Fund. (Reviewed: Mobile Source Committee, February 19, March 19 and April 16, 2021)

BOARD MEMBER TRAVEL – (No Written Material)

Board member travel reports have been filed with the Clerk of the Boards, and copies are available upon request.

CLOSED SESSION - (No Written Material)

Gilchrist/3459

CONFERENCE WITH LEGAL COUNSEL – EXISTING LITIGATION

It is necessary for the Board to recess to closed session pursuant to Government Code sections 54956.9(a) and 54956.9(d)(1) to confer with its counsel regarding pending litigation which has been initiated formally and to which the SCAQMD is a party. The actions are:

- Communities for a Better Environment v. SCAQMD, Los Angeles Superior Court Case No. BS161399 (RECLAIM);
- Communities for a Better Environment v. South Coast Air Quality Management District, Los Angeles Superior Court Case No. 19STCP05239 (Tesoro II);

- People of the State of California, ex rel. SCAQMD v. Exide Technologies, Inc., Los Angeles Superior Court Case No. BC533528;
- In re: Exide Technologies, Inc., U.S. Bankruptcy Court, District of Delaware, Case No. 13-11482 (KJC) (Bankruptcy Case); Delaware District Court, Case No.: 19-00891 (Appellate Case); United States Court of Appeals, Third Circuit, Case No. 20-1858;
- In re: Exide Holdings Inc., U.S. Bankruptcy Court, District of Delaware, Case No. 20-11157 (CSS) (Bankruptcy Case);
- In the Matter of SCAQMD v. Southern California Gas Company, Aliso Canyon Storage Facility, SCAQMD Hearing Board Case No. 137-76 (Order for Abatement); People of the State of California, ex rel SCAQMD v. Southern California Gas Company, Los Angeles Superior Court Case No. BC608322; Judicial Council Coordinated Proceeding No. 4861;
- In the Matter of SCAQMD v. Torrance Refining Company, LLC, SCAQMD Hearing Board Case No. 6060-5 (Order for Abatement);
- CalPortland Company v. South Coast Air Quality Management District; Governing Board of the South Coast Air Quality Management District; and Wayne Nastri, Executive Officer, and Does 1-100, San Bernardino County Superior Court, Case No. CIV DS 19258941;
- Downwinders at Risk et al. v. EPA, United States Court of Appeals, Ninth Circuit, Case No. 19-1024 (consolidated with Sierra Club, et al. v. EPA, No. 15-1465);
- SCAQMD, et al. v. Elaine L. Chao, et al., District Court for the District of Columbia, Case No. 1:19-cv-03436-KBJ;
- SCAQMD, et al. v. EPA, United States Court of Appeals, D.C. Circuit, Case No. 19-1241 (consolidated with Union of Concerned Scientists v. NHTSA, No. 19-1230);
- SCAQMD, et al. v. NHTSA, EPA, et al., United States Court of Appeals, D.C. Circuit, Filed May 28, 2020
- Association of Irrigated Residents v. U.S. EPA, SCAQMD, SJVUAPCD, et al., United States Court of Appeals, D.C. Circuit, Case No. 19-71223; and
- SCAQMD v. City of Los Angeles, Los Angeles City Council, City of LA Harbor Dept., LA Board of Harbor Commissioners, et al., Los Angeles Superior Court, Case No. 20STCP02985.

CONFERENCE WITH LEGAL COUNSEL – INITIATING LITIGATION

It is also necessary for the Board to recess to closed session pursuant to Government Code sections 54956.9(a) and 54956.9(d)(4) to consider initiation of litigation (four cases).

CONFERENCE WITH LEGAL COUNSEL – ANTICIPATED LITIGATION

Also, it is necessary for the Board to recess to closed session pursuant to Government Code section 54956.9(d)(2) to confer with its counsel because there is a significant exposure to litigation against the SCAQMD (two cases).

Letter from Steven J. Olson, O'Melveny & Myers LLP, on behalf of ExxonMobil Corporation, dated August 22, 2018.

ADJOURNMENT

*****PUBLIC COMMENTS*****

Members of the public are afforded an opportunity to speak on any agenda item before consideration of that item. Persons wishing to speak may do so remotely via Zoom or telephone. To provide public comments via a Desktop/Laptop or Smartphone, click on the "Raise Hand" at the bottom of the screen, or if participating via Dial-in/Telephone Press *9. This will signal to the host that you would like to provide a public comment and you will be added to the list.

All agendas are posted at South Coast AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, at least 72 hours in advance of the meeting. At the beginning of the agenda, an opportunity is also provided for the public to speak on any subject within the South Coast AQMD's authority. Speakers may be limited to a total of three (3) minutes for the entirety of the Consent Calendar plus Board Calendar, and three (3) minutes or less for each of the other agenda items.

Note that on items listed on the Consent Calendar and the balance of the agenda any motion, including action, can be taken (consideration is not limited to listed recommended actions). Additional matters can be added and action taken by two-thirds vote, or in the case of an emergency, by a majority vote. Matters raised under the Public Comment Period may not be acted upon at that meeting other than as provided above.

Written comments will be accepted by the Board and made part of the record. Individuals who wish to submit written or electronic comments must submit such comments to the Clerk of the Board, South Coast AQMD, 21865 Copley Drive, Diamond Bar, CA 91765-4178, (909) 396-2500, or to cob@aqmd.gov, on or before 5:00 p.m. on the Tuesday prior to the Board meeting.

ACRONYMS

AQ-SPEC = Air Quality Sensor Performance
Evaluation Center

AQIP = Air Quality Investment Program

AQMP = Air Quality Management Plan

AVR = Average Vehicle Ridership

BACT = Best Available Control Technology

BARCT = Best Available Retrofit Control Technology

Cal/EPA = California Environmental Protection Agency

CARB = California Air Resources Board

CEMS = Continuous Emissions Monitoring Systems

CEC = California Energy Commission

CEQA = California Environmental Quality Act

CE-CERT = College of Engineering-Center for Environmental
Research and Technology

CNG = Compressed Natural Gas

CO = Carbon Monoxide

DOE = Department of Energy

EV = Electric Vehicle

EV/BEV = Electric Vehicle/Battery Electric Vehicle

FY = Fiscal Year

GHG = Greenhouse Gas

HRA = Health Risk Assessment

LEV = Low Emission Vehicle

LNG = Liquefied Natural Gas

MATES = Multiple Air Toxics Exposure Study

MOU = Memorandum of Understanding

MSERCs = Mobile Source Emission Reduction Credits

MSRC = Mobile Source (Air Pollution Reduction) Review
Committee

NATTS = National Air Toxics Trends Station

NESHAPS = National Emission Standards for
Hazardous Air Pollutants

NGV = Natural Gas Vehicle

NOx = Oxides of Nitrogen

NSPS = New Source Performance Standards

NSR = New Source Review

OEHA = Office of Environmental Health Hazard
Assessment

PAMS = Photochemical Assessment Monitoring
Stations

PEV = Plug-In Electric Vehicle

PHEV = Plug-In Hybrid Electric Vehicle

PM10 = Particulate Matter \leq 10 microns

PM2.5 = Particulate Matter \leq 2.5 microns

RECLAIM = Regional Clean Air Incentives Market

RFP = Request for Proposals

RFQ = Request for Quotations

RFQQ = Request for Qualifications and Quotations

SCAG = Southern California Association of Governments

SIP = State Implementation Plan

SOx = Oxides of Sulfur

SOON = Surplus Off-Road Opt-In for NOx

SULEV = Super Ultra Low Emission Vehicle

TCM = Transportation Control Measure

ULEV = Ultra Low Emission Vehicle

U.S. EPA = United States Environmental Protection
Agency

VOC = Volatile Organic Compound

ZEV = Zero Emission Vehicle

INSTRUCTIONS FOR ELECTRONIC PARTICIPATION

Instructions for Participating in a Virtual Meeting as an Attendee

As an attendee, you will have the opportunity to virtually raise your hand and provide public comment.

Before joining the call, please silence your other communication devices such as your cell or desk phone. This will prevent any feedback or interruptions during the meeting.

For language interpretation:

Click the interpretation Globe icon at the bottom of the screen

Select the language you want to hear (either English or Spanish)

Click "Mute Original Audio" if you hear both languages at the same time.

Para interpretación de idiomas:

Haga clic en el icono de interpretación el globo terráqueo en la parte inferior de la pantalla

Seleccione el idioma que desea escuchar (inglés o español)

Haga clic en "Silenciar audio original" si escucha ambos idiomas al mismo tiempo.

Please note: During the meeting, all participants will be placed on Mute by the host. You will not be able to mute or unmute your lines manually.

After each agenda item, the Chairman will announce public comment.

Speakers may be limited to a total of 3 minutes for the entirety of the consent calendar plus board calendar, and three minutes or less for each of the other agenda items.

A countdown timer will be displayed on the screen for each public comment.

If interpretation is needed, more time will be allotted.

Once you raise your hand to provide public comment, your name will be added to the speaker list. Your name will be called when it is your turn to comment. The host will then unmute your line.

Directions for Video ZOOM on a DESKTOP/LAPTOP:

- If you would like to make a public comment, please click on the **"Raise Hand"** button on the bottom of the screen. This will signal to the host that you would like to provide a public comment and you will be added to the list.

Directions for Video Zoom on a SMARTPHONE:

- If you would like to make a public comment, please click on the **"Raise Hand"** button on the bottom of your screen.
- This will signal to the host that you would like to provide a public comment and you will be added to the list.

Directions for TELEPHONE line only:

- If you would like to make public comment, please **dial *9** on your keypad to signal that you would like to comment.

Directions for Spanish Language TELEPHONE line only:

- The call in number is the same.
- The meeting ID number is 932-0955-9643
- If you would like to make public comment, please **dial *9** on your keypad to signal that you would like to comment.

Instrucciones para la línea de TELÉFONO en español únicamente:

- El número de llamada es el mismo (+1 669900 6833 o +1 253215 8782).
- El número de identificación de la reunión es 932-0955-9643
- Si desea hacer un comentario público, marque *9 en su teclado para indicar que desea comentar.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 1

MINUTES: Governing Board Monthly Meeting

SYNOPSIS: Attached are the Minutes of the April 2, 2021 meeting.

RECOMMENDED ACTION:

Approve Minutes of the April 2, 2021 Board Meeting.

Faye Thomas
Clerk of the Boards

FT:cmw

FRIDAY, APRIL 2, 2021

Notice having been duly given, the regular meeting of the South Coast Air Quality Management District Board was conducted remotely via video conferencing and telephone. Members present:

William A. Burke, Ed.D., Chairman
Speaker of the Assembly Appointee

Mayor Pro Tem Ben Benoit, Vice Chairman
Cities of Riverside County

Supervisor Lisa A. Bartlett
County of Orange

Mayor Pro Tem Michael A. Cacciotti
Cities of Los Angeles County – Eastern Region

Senator Vanessa Delgado (Ret.)
Senate Rules Committee Appointee

Gideon Kracov
Governor's Appointee

Supervisor Sheila Kuehl
County of Los Angeles

Mayor Pro Tem Larry McCallon
Cities of San Bernardino County

Supervisor V. Manuel Perez
County of Riverside

Vice Mayor Rex Richardson
Cities of Los Angeles County – Western Region

Mayor Pro Tem Carlos Rodriguez
Cities of Orange County

Supervisor Janice Rutherford
County of San Bernardino

Member absent:

Council Member Joe Buscaino
City of Los Angeles

CALL TO ORDER: Chairman Burke called the meeting to order at 9:00 a.m.

- Pledge of Allegiance: Led by Supervisor Bartlett
- Roll Call
- Opening Comments

Mayor Pro Tem McCallon announced that the MSRC approved multiple awards for zero and near-zero emissions trucking and cargo handling equipment in Riverside and San Bernardino counties. The MSRC is seeking the Board's approval today for these contract awards. He noted that the awardees are committed to implement air pollution reduction strategies that reduce emissions from goods movement operations.

Mayor Pro Tem Cacciotti shared photos of a commercial electric lawn and garden equipment demonstration event in Yorba Linda. He commented on the surge in catalytic converter thefts and shared photos that showed where the catalytic converter was stolen from the exhaust system on his Toyota Prius.

Mayor Pro Tem Rodriguez expressed appreciation to Mayor Pro Tem Cacciotti and staff for taking the time to come to Yorba Linda for the electric lawn and garden equipment demonstration.

Supervisor Perez expressed appreciation to Dr. Jo Kay Ghosh, Director of Community Air Programs/Health Effects Officer, and staff for their efforts to educate and start collaboration with the Eastern Coachella Valley AB 617 communities and the Salton Sea authority. He stressed the need for communication and collaboration with other government agencies and non-profits. He thanked Executive Director Sylvia Paz of Alianza Coachella Valley for the organization's grassroots efforts to bring together community members, nonprofits, and government to promote environmental, health and economic issues in the Coachella Valley region.

PUBLIC COMMENT PERIOD – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3)

Elliot Gonzales, Long Beach resident, commented on the consequences of continued reliance on fossil fuels, noting its harmful effects on health and the environment. He emphasized the need to rely on clean energy to power communities, homes, buildings, and transportation systems, to create a healthy future for children.

Sarah Wiltfong, BizFed (Los Angeles County Business Federation), summarized their concerns with the warehouse Indirect Source Rule (ISR), noting that the rule is not feasible, there is no clear proof how many emission reductions will be achieved, the

legality of the mitigation fee and that the rule duplicates statewide regulations that address zero emissions goals.

Robert Benz, Benz Air Engineering, expressed concern that additional costs to implement Rule 1146 - Emissions of Oxides of Nitrogen from Industrial, Institutional and Commercial Boilers, Steam Generators, and Process Heaters, are biased against the South Coast AQMD BARCT/BACT technology. He requested that the Board agendize a technical and economic review of the rule.

Monica Heger, Earthjustice
Jan Victor Andasan, East Yard Communities for Environmental Justice (EYCEJ)/
Carson resident

Spoke in support of a strong Refinery Rule 1109.1 - NOx Reductions From Refinery and Refinery Related Equipment, for refineries to upgrade old equipment that do not have pollution controls. Expressed concerns with repeated delays. Commented on the high number of bad ozone pollution days in 2020, and the adverse health effects associated with NOx emissions from refineries. Urged the Board to adopt a 2 ppm NOx BARCT limit, which is feasible and cost effective. Requested there be no further delays to the adoption of the rule.

Michelle Lewis, Long Beach resident
Darrell Peeden, SBX Youth and Family Services/Moreno Valley USD Board Member
Faraz Rizvi, Center for Community Action and Environmental Justice (CCA EJ)
Alyssa Bell, North East Los Angeles (NELA) Climate Collective
Moses Huerta, Paramount resident
Kathy Hoang, Partnership for Working Families

Expressed support for a strong and enforceable warehouse ISR to regulate goods movement sources that release diesel emissions in environmental justice communities, and urged there be no further delays to the adoption schedule. Stated that the logistics industry can afford to invest in zero emissions technology, noting the substantial profits the industry earned during the pandemic. Noted that the warehouse ISR has the potential to move the transition to clean energy forward, as well as clean energy jobs.

Harvey Eder, Public Solar Power Coalition, expressed support for complete and equitable solar conversion. He commented on the Biden Administration's climate plan, difficulties he experienced filing legal documents in Federal Court and process problems. He requested that the election of the Board Chair and Vice Chair be agendized for a future meeting.

Yassi Kavezade, Sierra Club My Generation Campaign, emphasized the need for a warehouse ISR, noting that incentives and subsidies for near-zero equipment have not resulted in improvement in air quality. She questioned comments about the feasibility of the rule and stressed the need for bold and innovative regulatory policies that are fair, equitable and improve our livelihoods.

Emily Spokes, North East Los Angeles (NELA) Climate Collective, expressed concerns about comments made by industry in opposition to the warehouse ISR. She emphasized the need to adopt a strong warehouse rule to help prevent the suffering of women and children from environmental cancers.

Ranji George, a member of the public, requested that Chairman Burke recognize Mr. Eder for his diligence in attending South Coast AQMD meetings to promote solar energy. He also requested that staff look for creative solutions to advance the application of solar water heating.

Chairman Burke stated that over the years he has inquired about the viability of solar water heating and has acknowledged Mr. Eder's commitment as an advocate for solar energy.

Peter Herzog, NAIOP – Commercial Real Estate Development Association
Matthew Hargrove, California Business Properties Association
Mike Williams, International Warehouse Logistics Association
Rex Hime, California Business Properties Association

Expressed concerns that the warehouse ISR is complex, costly and duplicative and that it will not offer meaningful emission reductions while imposing a significant cost burden on warehouses. Noted that the potential for emission reductions and SIP credit is uncertain. Expressed concerns that the mitigation fee is a tax and questioned the legal authority of the South Coast AQMD for the proposed rule. Commented on the importance of warehouses to the supply chain, noting they have been deemed as essential businesses during the pandemic and provide a broad range of jobs for people with all levels of education and skill sets.

Julia May, Communities for a Better Environment (CBE), expressed frustration about delays in the PR 1109.1 public hearing schedule. She stated that many of the refineries with decades-old equipment that do not have modern controls are concentrated in communities of color. She emphasized the need for a strong and expeditious refinery rule, noting that the AB 617 Community Emissions Reduction Plans (CERPs) identified refineries as a high priority.

Jessica Craven, NELA Climate Collective and California Democratic Party Platform Committee, questioned comments about the costs to implement the warehouse rule, noting that the goods movement industry is earning record profits and can afford to implement the requirements. She expressed concern that there is discussion underway for less stringent requirements that would exempt a significant number of warehouses from the rule. She also expressed frustration that industry plans to meet with Board members to present their viewpoint.

Chairman Burke added that most Board members meet with all stakeholders and encouraged Ms. Craven and others to request meetings.

Florence Gharibian, Environmental Justice Network/Del Amo Action Committee, commented on the series of South Coast AQMD rules that regulate hexavalent chromium emissions from metal finishing facilities. She expressed concern for residents, schools and other sensitive receptors located close to metal finishing facilities and emphasized the importance for the regulated community to understand what each of the rules require, and how they will be implemented, enforced and work to reduce emissions.

Jessica Alvarenga, Pacific Merchant Shipping Association, reiterated many of the concerns expressed by other industry representatives and urged the Board to delay the adoption of the warehouse ISR until key issues that have been raised are adequately addressed.

Chris Chavez, Coalition for Clean Air/Wilmington, West Long Beach, Carson AB 617 Community Steering Committee member, spoke in support of a strong warehouse ISR, and questioned comments made about the infeasibility of the rule and legality of the mitigation fee. He commented on the adverse health effects of diesel particulate matter from trucks serving warehouses on communities near goods movement facilities and along transportation corridors. He stated that the outcome of the warehouse ISR will test the Board's commitment to the AB 617 communities, which identified the warehouse ISR as a strategy in their CERPS. It will also demonstrate the South Coast AQMD's ability to regulate other indirect sources.

Angie Balderas, Sierra Club/AB 617 San Bernardino, Muscoy Community Steering Committee co-host, spoke in support of the warehouse ISR, noting its importance for heavily impacted communities, especially communities of color. She expressed frustration with comments that describe the rule as complex and stated that she has met with some Board members and would like to meet with others

Mirella Deniz-Zaragoza, Warehouse Workers Resources Center
Luis Alejandro Montes Jr., Inside Sustainability

Spoke in support of the warehouse ISR. Expressed concerns that a lucrative company like Amazon is being awarded public funding for a project that is mostly for natural gas trucks. Stated that natural gas is a fossil fuel that needs to be phased out, and emphasized the need for the transition to 100 percent renewable energy. Commented on Amazon's poor worker safety record, violations of workers' rights and anti-union stance. Urged the Board to support the warehouse ISR and hold logistics companies accountable for cleaning up their contribution to air pollution.

Ivette Torres, University of Riverside (CE-CERT), expressed frustration with comments in opposition of the warehouse ISR. The rule is needed to reduce emissions because communities continue to pay the price from being exposed to NOx and particulate matter emissions. She commented on the need to push the logistics industry toward electrification of trucks instead of relying on near-zero emissions natural gas, which is a fossil fuel. She expressed concern that a highly profitable company like Amazon is being awarded public funds and that the contract award is mostly for near-zero emissions natural gas trucks.

Alexis Willis, University of Redland student, noted that the distribution and placement of industries that contribute to high pollution are mainly in low-income minority communities. She stated that the Board has the privilege to change the lives of residents in those communities by supporting the warehouse ISR.

Robina Suwol, California Safe Schools, commented on Rule 1469.1 - Spraying Operations Using Coatings Containing Chromium, and expressed appreciation to staff for facilitating a collaborative environment for the public, industry and environmentalists during the rule development process. She requested that South Coast AQMD prioritize inspections for facilities that are located within 1,000 feet of schools and residents. She thanked Chairman Burke for his years of public service and leadership and wished him well.

Todd Campbell, Clean Energy, expressed disappointment with comments that criticize near-zero emission natural gas trucks and call it a fossil fuel, noting that near-zero emission trucks that run on renewable fuel can reduce NOx emissions comparable to zero emission trucks. He also noted that renewable natural gas received low carbon fuel credits under CARB's Low Carbon Fuel Standard program. He urged support for giving near-zero emission trucks and renewable natural gas fueling stations points in the proposed warehouse ISR similar to zero emission trucks and infrastructure.

Tammy Yamasaki, Southern California Edison (SCE)/San Bernardino, Muscoy AB 617 Community Steering Community member, spoke in support of the warehouse ISR. The rule has the potential to achieve emission reductions that are needed to reach attainment as well as address local public health concerns for communities near warehouses, noting that the San Bernardino, Muscoy Community Steering Committee and residents are counting on the warehouse ISR. She stressed the importance of zero emissions technologies and stated that SCE is committed to helping identify electric infrastructure solutions to meet regulatory compliance while minimizing costs.

Carlo De La Cruz, Sierra Club, questioned comments about the infeasibility and duplicative nature of the warehouse ISR. He stated that the rule is flexible, will create SIP credit and is needed to meet federal attainment deadlines and standards. The warehouse ISR was also identified as a control strategy in the 2016 AQMP and AB 617 CERPs. He noted that battery electric or zero emissions are the only technologies to get us to a cleaner future.

Jen Simmons, Sierra Club, expressed frustration with comments that the warehouse ISR places undue financial burden on an industry that provides good jobs and an essential service that people need. She stated that passing a strong warehouse ISR will save the lives of people living in communities located near warehouses, noting that poor air quality causes respiratory illnesses and exacerbates COVID-19 morbidity.

Written Comments Submitted Re: Clean Fuels Program by:
Andris R. Abele

CONSENT CALENDAR

1. Approve Minutes of March 5, 2021 Board Meeting
2. Set Public Hearings May 7, 2021 to:
 - A. Adopt Executive Officer's FY 2021-22 Proposed Goals and Priority Objectives and Proposed Budget
 - B. Determine That Proposed Amendments to Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, Are Exempt from CEQA, and Amend Rule 1469.1

Items 3 through 9 - Budget/Fiscal Impact

3. Amend Contract for Development of Battery Powered Locomotive Project
4. Issue RFQ for Technical Assistance to Support South Coast AQMD's Technology Advancement Activities and Implementation Efforts
5. Authorize Executive Officer to Execute Agreement, Establish Special Revenue Fund, Recognize Revenue, Transfer Funds, Issue RFP and Execute Contract(s) to Develop a Real-Time Air Monitoring Network and Symptom and Incident Reporting System and Reimburse General Fund for Administrative Costs
6. Execute Contract for Biennial Audit of Motor Vehicle Registration Revenues for FYs 2017-18 and 2018-19
7. Transfer and Appropriate Funds and Execute Contracts for Short and Long-Term Systems Development, Maintenance and Support Services
8. Approve Telework Stipend Proposal for Professional Unit Employees
9. Approve Modification of Program and Reallocation of Funds, and Approve Awards as Approved by MSRC

Items 10 through 15 – Information Only/Receive and File

10. Legislative, Public Affairs and Media Report

11. Hearing Board Report
12. Civil Filings and Civil Penalties Report
13. Lead Agency Projects and Environmental Documents Received
14. Rule and Control Measure Forecast
15. Status Report on Major Ongoing and Upcoming Projects for Information Management

Board Member Kracov noted that he has no financial interest in Item No. 5 but is required to identify for the record that he is a Board Member of CARB, which is involved in this item.

Mayor Pro Tem Cacciotti noted that he has no financial interest in Item No. 5 but is required to identify for the record that he is a Deputy Attorney General for the State of California Department of Justice, which is involved in this Item.

Supervisor Kuehl noted that she has no financial interest in Item No. 5 but is required to identify for the record that she is a Supervisor for Los Angeles County, which is involved in this item.

Agenda Items No. 9 and 14 were held for comment and discussion.

9. Approve Modification of Program and Reallocation of Funds, and Approve Awards as Approved by MSRC

Shaun Martinez, Teamsters
Adan Alvarez, Teamsters (Local 396)
Andres Garcia, Peoples Collective for Environmental Justice
Elliott Gonzalez, a member of the public
Kathy Hoang, Partnership for Working Families
Iris Verduzo, EYCEJ
Michael Muñoz, Los Angeles For A New Economy
Cindy Donis, EYCEJ

Expressed concerns that public funds are being awarded to a lucrative company like Amazon and highlighted the company's poor labor record and violations of workers' rights to unionize, noting that the contract being awarded is for mostly near-zero emission natural gas trucks. Emphasized the need for funds to be prioritized for zero emission technologies and given to employers that do not violate labor laws and contribute to the community through providing good paying jobs. Noted that three years ago South Coast AQMD committed to include language in RFPs requiring that applicants disclose any labor violations. Urged the

Board to pull Agenda Item No. 9 and direct staff to fully vet the labor records of the contractors.

Chairman Burke inquired about the South Coast AQMD Board's role in approving MSRC awards, vetting the labor record of awardees, and what would happen if all of the awards were disapproved.

General Counsel Bayron Gilchrist confirmed that the Board cannot make modifications to the awards. The Board can only approve or disapprove all of the awards. The MSRC is a separate entity so if the awards are disapproved and sent back to the MSRC with recommendations, it would be at the discretion of the MSRC to make the modifications. He noted that about three years ago staff began including language in South Coast AQMD contracts requiring that companies disclose labor violations.

Chairman Burke questioned why the commenters had not articulated their concerns to the MSRC.

Ranji George, a member of the public, commented that solar energy is an environmental solution to transition toward zero emissions. He expressed disappointment about the substantial funding that MSRC has allocated to electric and battery technologies over the years. He recommended that more funding be allocated to fuel cell technologies, noting that other countries are investing in hydrogen fuel technologies.

Harvey Eder expressed support for hydrogen that comes from solar energy instead of natural gas or fossil fuels.

Mayor Pro Tem Cacciotti acknowledged that the comments were meaningful and asked whether the award to Amazon could be reduced and the remaining funds distributed to local companies.

Mr. Gilchrist explained that recommendations by the Board to modify the awards or the funding allocations are at the MSRC's discretion.

Mayor Pro Tem McCallon commented that the proposals went through the same RFP process that South Coast AQMD utilizes. Amazon's proposal met the requirements specified in the RFP and the work program was approved by the MSRC.

Todd Campbell, Clean Energy, expressed disappointment with comments describing renewable natural gas as a fossil fuel and noted that near-zero emission trucks reduce NOx emissions and can deliver carbon negative outcomes. He emphasized the need to embrace all strategies and all technologies given the immediate need to address climate change and reduce emissions in disadvantaged communities. He urged the Board to approve this item.

Mayor Pro Tem Cacciotti stated that he was pleased to see that so many proposals were submitted and commented on the need to offer incentives to transition to cleaner energy. He commended the solicitations; and requested that future solicitations focus on projects that reduce pollution emissions from diesel trucks related to goods movement in Los Angeles and Orange Counties. He expressed support for the recommended contract awards and moved to approve Agenda Item No. 9 with a friendly amendment.

MAYOR PRO TEM CACCIOTTI MOVED TO APPROVE AGENDA ITEM NO. 9 WITH A FRIENDLY AMENDMENT TO DISAPPROVE THE AMAZON CONTRACT AWARD AND REQUEST THAT THE MSRC CONSIDER REALLOCATING PART OR ALL OF THE FUNDS TO OTHER QUALIFIED APPLICANTS, AND FOR THE MSRC TO REPORT BACK TO THE BOARD ON HOW APPLICANTS WERE ASSESSED FOR COMPLIANCE WITH FAIR LABOR PRACTICES.

Mr. Gilchrist reiterated that the Board can only approve or disapprove all of the contract awards.

MAYOR PRO TEM CACCIOTTI MADE A SUBSTITUTE MOTION TO DISAPPROVE AGENDA ITEM NO. 9 WITH A REQUEST FOR THE MSRC TO RECONSIDER THE AMAZON CONTRACT AWARD AND REALLOCATE ALL OR PART OF THE FUNDS TO OTHER QUALIFIED APPLICANTS, AND RETURN TO THE BOARD AT A SUBSEQUENT MEETING FOR CONSIDERATION. THE MOTION WAS SECONDED BY SUPERVISOR PEREZ.

Vice Mayor Richardson requested that the substitute motion include directing staff to send a letter to MSRC requesting that large companies match funds invested by the MSRC.

Mayor Pro Tem McCallon stated that matching funds were a requirement in the RFP. He expressed opposition to the motion because there was a lot of work that went into the process and there may be issues with making modifications to the contracts at this stage of the process.

In response to Board Member Kracov's inquiry, Mayor Pro Tem McCallon responded that these concerns had not been expressed to the MSRC in public.

Vice Chair Benoit explained that the MSRC took a systematic approach with a lot of time spent focusing on diesel truck emissions from goods movement activities. Amazon brought forward a good proposal with matching funds and this is a great opportunity to move forward with goods movement as a priority. The projects approved by the MSRC were substantive, robust and will achieve needed emission reductions.

Mr. Nastri commented on the MSRC's commitment to focus on NOx reductions, which these projects will achieve. He also noted that provisions are included in contracts that require compliance with all applicable laws.

Dr. Matt Miyasato, Chief Technologist/Science & Technology Advancement, stated that Amazon applied for both zero and near-zero emission technologies and is providing significant cost share. The incentive programs are structured to require that applicants be well-capitalized companies. He commented on the common misperception that zero emission trucks are widely available. He emphasized the need to move forward with a 90 percent cleaner technology that is currently available and can be deployed in mass numbers to achieve high penetration. MSRC is doing a significant amount of co-funding to help with the AQMP.

Mr. Gilchrist noted that general language is included in all contracts that requires compliance with all applicable laws, but contracts directly funded by South Coast AQMD also includes language related to labor law violations. He stated that staff would look into whether South Coast AQMD has the authority to include the same language in MSRC contracts.

Supervisor Kuehl stated that she would not be supporting the substitute motion. She is supportive of labor issues but disapproving the item would delay funding for the other grantees. She added that the purpose in awarding these funds is for projects that reduce air pollution with zero and near-zero emission technologies.

Board Member Kracov stated that the projects being discussed demonstrate that the technology is available to satisfy the compliance requirements in the warehouse ISR and that South Coast AQMD knows how to spend funds in a variety of ways to get emission reductions in the near term. Taking into consideration comments from fellow Board members he moved to amend the substitute motion.

BOARD MEMBER KRACOV MOVED TO AMEND THE SUBSTITUTE MOTION TO APPROVE AGENDA ITEM NO. 9, AND DIRECT STAFF TO SEND A LETTER TO THE MSRC ADDRESSING COMPLIANCE WITH LABOR STANDARDS AND TO CONSIDER INCLUDING LANGUAGE FOR LABOR LAW VIOLATIONS IN THE CONTRACTING PROCESS. MAYOR PRO TEM CACCIOTTI WITHDREW HIS SUBSTITUTE MOTION AND SECONDED THE AMENDMENT TO HIS SUBSTITUTE MOTION.

Vice Mayor Richardson noted the importance of providing feedback to the MSRC in a letter that addresses labor concerns. He also noted the need to respect the process and not penalize other companies.

Supervisor Perez emphasized the need to address labor concerns with all applicants seeking funding.

Vice Chair Benoit stated that he would convey the messages and concerns to the MSRC.

14. Rule and Control Measure Forecast

Chris Chavez expressed disappointment that PR1109.1 is being delayed again and that the proposed amendments are being weakened. Since a refinery rule was included in the Wilmington, Carson, West Long Beach AB 617 CERP, adopting a strong rule is an opportunity to fulfill the commitment made to that community.

MOVED BY MCCALLON TO APPROVE AGENDA ITEMS 1 THROUGH 15 AS RECOMMENDED WITH THE AMENDED SUBSTITUTE MOTION BY BOARD MEMBER KRACOV FOR AGENDA ITEM NO. 9 THAT DIRECTS STAFF TO FORWARD A LETTER TO THE MSRC TO ADDRESS CONCERNS WITH LABOR LAW VIOLATIONS AND A RECOMMENDATION THAT THE MSRC CONSIDER INCLUDING LANGUAGE IN THEIR CONTRACTING PROCESS REGARDING THE REPORTING OF LABOR LAW VIOLATIONS. THE MOTION WAS SECONDED BY BENOIT AND APPROVED BY THE FOLLOWING VOTE:

AYES: Bartlett, Benoit, Burke, Cacciotti, Delgado, Kracov, Kuehl, McCallon, Perez, Richardson, Rodriguez, and Rutherford

NOES: None

ABSENT: Buscaino

Item 16 - Staff Presentation/Board Discussion

16. Budget and Economic Outlook Update (*Presentation in Lieu of Board Letter*)

Jill Whynot, Chief Operating Officer, gave an overview of the presentation on Item No. 16 to provide an update on economic indicators and South Coast AQMD metrics and economic implications.

Chairman Burke noted that the agency has done well through the pandemic and is pleased to be leaving the Board in a financially solvent position.

PRESENTATION ONLY; NO ACTION REQUIRED

Items 17 through 24 - Reports for Standing Committees and CARB

17. Administrative Committee
18. Legislative Committee
19. Special Legislative Committee
20. Mobile Source Committee
21. Stationary Source Committee
22. Technology Committee
23. Mobile Source Air Pollution Reduction Review Committee
24. California Air Resources Board Monthly Report

Agenda Item Nos. 18 and 19 were held for comment and Discussion

25. **Items Deferred from Consent and Board Calendars**

18. Legislative Committee

Supervisor Rutherford expressed concern with legislative bills in Agenda Item Nos. 18 and 19 that seek to expand the South Coast AQMD Board membership or dilute local control and authority. She did not support the Legislative Committee's recommendation to work with the authors and instead believed they should have taken the position to oppose. She requested that each bill be voted on separately to reflect her "no" vote to the Committee's recommendations.

Mayor Pro Tem McCallon concurred with Supervisor Rutherford and expressed opposition to the legislative bills in Agenda Item Nos. 18 and 19 that would increase the number of members on the Board or erode local control. He expressed concern that AB 1547 (Reyes) is an attempt to take land use authority away from local government.

Supervisor Kuehl expressed her support for the Legislative Committee's recommendations. She commented on the importance of local representation on the Board that may include those who represent a lot of people through their advocacy work. She emphasized the need to work with the authors because it provides the opportunity to have input into the process to ensure that potential appointees live in the South Coast Air District.

Supervisor Perez noted that local control is a concern but agrees that it is important to work with the authors to have a seat at the table and understand the motivation for these bills.

Vice Mayor Richardson commented on the challenges of ensuring fair representation in local government. He emphasized the importance of working with the authors to be involved in the legislative process to address concerns and ensure communities have equitable representation on the Board.

In response to Supervisor Bartlett's request to hold a separate vote on each legislative bill, Chairman Burke asked for a motion to approve Agenda Item Nos. 17 through 25, except Agenda Item Nos. 18 and 19.

MOVED BY CACCIOTTI, SECONDED BY
BARTLETT, AGENDA ITEMS 17, AND 20
THROUGH 24, APPROVED AS
RECOMMENDED, TO RECEIVE AND FILE
THE COMMITTEE, MSRC AND CARB
REPORTS, BY THE FOLLOWING VOTE:

AYES: Bartlett, Benoit, Burke, Cacciotti,
Delgado, Kracov, Kuehl, McCallon,
Perez, Richardson, Rodriguez, and
Rutherford

NOES: None

ABSENT: Buscaino

MOVED BY CACCIOTTI, SECONDED BY
KUEHL, TO RECEIVE AND FILE AGENDA
ITEM NO. 18 (LEGISLATIVE COMMITTEE
REPORT) AND APPROVE THE LEGISLATIVE
COMMITTEE'S RECOMMENDATION FOR
AB 96 (O'DONNELL) AS SET FORTH BELOW,
BY THE FOLLOWING VOTE:

AYES: Bartlett, Benoit, Burke, Cacciotti,
Delgado, Kracov, Kuehl, McCallon,
Perez, Richardson, Rodriguez, and
Rutherford

NOES: None

ABSENT: Buscaino

LEGISLATIVE COMMITTEE'S RECOMMENDATIONS

Agenda Item	Recommendation
AB 96 (O'Donnell) California Clean Truck, Bus, and Off-Road Vehicle and Equipment Technology Program	Support
AB 1296 (Kamlager) South Coast Air Quality Management District Board: Membership	No Position

19. Special Legislative Committee

MOVED BY CACCIOTTI, SECONDED BY
PEREZ, TO RECEIVE AND FILE AGENDA
ITEM NO. 19 (LEGISLATIVE COMMITTEE
REPORT); AND

1) APPROVE THE LEGISLATIVE
COMMITTEE'S RECOMMENDATION ON
AB 426 (BAUER-KAHAN) AS SET FORTH
BELOW. THE MOTION PASSED BY THE
FOLLOWING VOTE:

AYES: Burke, Cacciotti, Delgado, Kracov,
Kuehl, Perez, Richardson

Agenda Item	Recommendation
SB 342 (Gonzalez) South Coast Air Quality Management District: Board Membership	Work With Author

PUBLIC HEARING

26. Determine That Proposed Amendments to Rule 1426 – Emissions from Metal Finishing Operations, and Rule 1469 – Hexavalent Chromium Emissions from Chromium Electroplating and Chromic Acid Anodizing Operations, Are Exempt from CEQA, and Amend Rule 1426 and Rule 1469

Jillian Wong, Planning and Rules Manager, gave the staff presentation on Item No. 26.

The public hearing was opened, and the following individuals addressed the Board on Item 26.

Harvey Eder expressed concerns about the harmful health effects from natural and renewable gas, benzene and formaldehyde and the need to re-evaluate solar conversion in all rules and permitting processes.

Ranji George expressed concerns with the substantial amount of cobalt and nickel found in batteries that will contribute to emissions when they are recycled.

Jerry Desmond, Metal Finishing Association of Southern California, expressed appreciation for the consideration that staff gave to the impact that the pandemic has had on industry by allowing additional time for the building enclosure, housekeeping and best management practices requirements in the rule.

Moses Huerta, Paramount resident, thanked staff for rulemakings over the last few years that address emissions from hexavalent chromium. He commented on health issues affecting the community and urged the Board to continue supporting regulations that reduce or eliminate emissions from hexavalent chromium.

There being no further testimony on this item, the public hearing was closed.

MOVED BY MCCALLON, SECONDED BY CACCIOTTI, AGENDA ITEM NO. 26 APPROVED AS RECOMMENDED, ADOPTING RESOLUTION NO. 21-8 DETERMINING THAT PROPOSED AMENDED RULE 1426 – EMISSIONS FROM METAL FINISHING OPERATIONS AND PROPOSED AMENDED RULE 1469 – HEXAVALENT CHROMIUM EMISSIONS FROM CHROMIUM ELECTROPLATING AND CHROMIC ACID ANODIZING OPERATIONS ARE EXEMPT FROM THE REQUIREMENTS OF CEQA AND AMENDING RULE 1426 – EMISSIONS FROM METAL FINISHING OPERATIONS AND RULE 1469 – HEXAVALENT CHROMIUM EMISSIONS FROM CHROMIUM ELECTROPLATING AND CHROMIC ACID ANODIZING OPERATIONS, BY THE FOLLOWING VOTE:

AYES: Bartlett, Benoit, Burke, Cacciotti, Delgado, Kracov, Kuehl, McCallon, Perez, Richardson, Rodriguez, and Rutherford

NOES: None

ABSENT: Buscaino

OTHER BUSINESS

- Election of Chair and Vice Chair for Term May 2021 to January 2022

Chairman Burke opened the nominations for Chair and Vice Chair and nominated Vice Chair Benoit as Chair and Senator Delgado as Vice Chair. Supervisor Perez seconded the nominations.

There being no other nominations, Chairman Burke announced the election by acclamation of Vice Chair Benoit as Chair and Senator Delgado as Vice Chair for the period May 1, 2021 to January 14, 2022.

Vice Chair Benoit expressed gratitude to Chairman Burke and his fellow Board members for their support.

Chairman Burke and several Board members congratulated Vice Chair Benoit and Senator Delgado.

Harvey Eder stated his request for Supervisor Kuehl as Chair and Mayor Pro Tem Cacciotti as Vice Chair.

CLOSED SESSION

There was no closed session.

ADJOURNMENT

There being no further business, the meeting was adjourned by Vice Chairman Benoit at 12:50 p.m.

The foregoing is a true statement of the proceedings held by the South Coast Air Quality Management District Board on April 2, 2021.

Respectfully Submitted,

Faye Thomas
Clerk of the Boards

Date Minutes Approved: _____

Dr. William A. Burke, Chairman

RECLAIM = Regional Clean Air Incentives Market

RFQ = Request for Quotations

SIP = State Implementation Plan

U.S. EPA = United States Environmental Protection Agency

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 2

PROPOSAL: Set Public Hearings June 4, 2021 to Consider Adoption of and/or Amendments to South Coast AQMD Rules and Regulations:

A. Determine That Proposed Amendments to Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants, Are Exempt from CEQA; and Amend Rule 1466

Proposed Amended Rule 1466 will clarify and streamline existing provisions, update monitoring requirements, enhance specific dust control measures, revise alternative provisions, and add additional notification and recordkeeping requirements. This action is to adopt the Resolution: 1) Determining that the proposed amendments to Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants, are exempt from the requirements of the California Environmental Quality Act; and 2) Amending Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants. (Reviewed: Stationary Source Committee, March 19, 2021)

B. Certification of Nonattainment New Source Review and Clean Fuels for Boilers Compliance Demonstration for 2015 8-hour Ozone Standard

South Coast Air Basin (Basin) and Coachella Valley are designated as Extreme and Severe nonattainment areas, respectively, for the 2015 8-hour ozone standard. For these nonattainment areas, U.S. EPA requires submittal of a nonattainment NSR plan or plan revision. South Coast AQMD's existing SIP-approved nonattainment NSR program, which covers both the Basin and Coachella Valley and applies to new major stationary sources or major modifications to existing sources, satisfies this requirement. Therefore, no changes to the existing NSR program are needed to comply with the 2015 ozone standard nonattainment NSR requirements. For Extreme ozone nonattainment areas, the Clean Air Act also requires the use of clean fuels or advanced control technologies for electric utility and industrial and commercial boilers that emit more than 25 tons of NO_x per year. This

requirement is fulfilled through South Coast AQMD Rule 1146, NOx RECLAIM program (Rule 2002 and Rule 2004), and Rule 1303 which regulate NOx emissions from existing, new or modified boilers. This action is to adopt the Resolution: 1) Certifying the Nonattainment NSR and Clean Fuels for Boilers Compliance Demonstration for 2015 8-hour Ozone Standard; and 2) Directing staff to forward the Certification to CARB for approval and subsequent submission to U.S. EPA for inclusion in the SIP. (Review: Stationary Source Committee, May 21, 2021)

C. Determine That 2021 PM10 Maintenance Plan for South Coast Air Basin Is Exempt from CEQA and Approve 2021 PM10 Maintenance Plan for South Coast Air Basin

The South Coast Air Basin was designated as attainment for the 24-hour average PM10 National Ambient Air Quality Standard (NAAQS) by U.S. EPA on July 26, 2013. A PM10 maintenance plan was submitted to U.S. EPA on April 28, 2010, which was approved as part of the redesignation. The Clean Air Act also requires that the State submit a subsequent maintenance plan eight years after an attainment redesignation to provide for maintenance of the NAAQS for a further 10 years after the period covered by the first maintenance plan (2023-2033). This 2021 PM10 Maintenance Plan includes a maintenance demonstration that the South Coast Air Basin will continue to attain the standard, verification of continued attainment, a commitment to a future monitoring network, a contingency plan, and provisions for contingency plan implementation. This plan also includes a description of PM10 sources, concentration trends, and emissions controls along with an analysis of past NAAQS exceedances during the first maintenance period. This action is to adopt the Resolution: 1) Determining that the 2021 PM10 Maintenance Plan for the South Coast Air Basin is exempt from the requirements of the California Environmental Quality Act; and 2) Approving the 2021 PM10 Maintenance Plan for the South Coast Air Basin, and directing staff to forward to CARB for approval and submission to U.S. EPA for inclusion in the SIP. (Review: Mobile Source Committee May 21, 2021)

The complete text of the proposed amendments, staff report and other supporting documents will be available from the South Coast AQMD's publication request line at (909) 396-2001, or from: Mr. Derrick Alatorre – Deputy Executive Officer/Public Advisor, South Coast AQMD, 21865 Copley Drive, Diamond Bar, CA 91765, (909) 396-2432, dalatorre@aqmd.gov and on the Internet (www.aqmd.gov) as of May 5, 2021.

RECOMMENDED ACTIONS:

Set Public Hearings June 4, 2021 to: Determine that the proposed amendments to Rule 1466 are exempt from CEQA and amend Rule 1466; certify the requirements for the Nonattainment NSR and Clean Fuels for Boilers Compliance Demonstration for the 2015 8-Hour Ozone Standard; and Determine that the 2021 PM10 Maintenance Plan for the South Coast Air Basin is exempt from CEQA and approve the 2021 PM10 Maintenance Plan for the South Coast Air Basin.

Wayne Natri
Executive Officer

ft

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 3

PROPOSAL: Execute Contract for Global Positioning Systems Installation and Monitoring, Amend Awards for Carl Moyer and Community Air Protection Programs and Appropriate Funds for Proposition 1B - Goods Movement Emission Reduction and Lower Emission School Bus Programs

SYNOPSIS: To enhance enforcement of projects funded under the Carl Moyer Program, Global Positioning System (GPS) units are installed on marine vessels to monitor operations in the South Coast AQMD. On August 7, 2020, the Board approved the release of a Request for Proposals (RFP #P2021-01) to solicit bids from qualified GPS vendors. This action is to execute a contract for the installation of GPS units on incentive program-funded equipment and provide GPS data monitoring services in an amount not to exceed \$400,000 from the administrative portions of the Carl Moyer Program SB 1107 Fund (32) and Community Air Protection Fund (77). This action is to also amend awards under the Carl Moyer Program and Community Air Protection Program (CAPP). Lastly, this action is to appropriate up to \$75,200 and up to \$60,300 from the administrative portions of the Prop 1B Special Revenue Fund (81) and Carl Moyer AB 923 Special Revenue Fund (80), respectively, into Information Management's FYs 2020-21 and/or 2021-22 Budgets, Professional and Special Services and/or Capital Outlays Major Objects and reimburse the General Fund (01) using administrative funds, for development of the Grant Management Systems (GMS).

COMMITTEE: Technology, April 16, 2021; Recommended for Approval

RECOMMENDED ACTIONS:

1. Authorize the Chairman to execute a contract with CalAmp Wireless Networks Corporation to purchase, install and activate up to 250 Global Positioning Systems equipped with electronic monitoring units and provide monitoring services for incentive program-funded projects in an amount not to exceed \$400,000, including \$200,000 each from the administrative portions of the Carl Moyer Program SB 1107 Fund (32) and Community Air Protection Program Fund (77);

2. Amend awards, approved in January 2021, to Larsen Land and Cattle Co. LLC and R.A. Landreth Equipment Incorporated to increase the amount awarded from \$410,521 to \$438,882 from the Community Air Protection Program Fund (77), and from \$154,673 to \$379,982 from the Carl Moyer Program Fund (32), respectively;
3. Appropriate up to \$75,200 from the administrative portion of the Prop. 1B Goods Movement Special Revenue Fund (81) into Information Management's FYs 2020-21 and/or 2021-22 Budgets, Professional and Special Services and/or Capital Outlays Major Objects and reimburse the General Fund (01) using administrative funds for the development of the Proposition 1B Goods Movement Emission Reduction Program (Prop 1B) GMS; and
4. Appropriate up to \$60,300 from the administrative portion of the Carl Moyer Program AB 923 Special Revenue Fund (80) into Information Management's FYs 2020-21 and/or 2021-22 Budgets, Professional and Special Services and/or Capital Outlays Major Objects and reimburse the General Fund (01) using administrative funds for development of the Lower Emission School Bus Program GMS.

Wayne Nastri
Executive Officer

MMM:VW:WS

Background

South Coast AQMD administers voluntary incentive-based programs, such as the Carl Moyer Program, to reduce NOx and PM emissions from mobile sources. For marine vessel projects funded by South Coast AQMD incentive programs, including the Carl Moyer Program, Rule 2202 Air Quality Investment Program (AQIP) and Community Air Protection Program (CAPP) Incentives, South Coast AQMD requires that these marine vessels operate at least 75 percent of the time in South Coast AQMD waters, which is defined as the areas between the Northern Coastal Boundary of the Ventura and Los Angeles County border, and the Southern Coastal Boundary of the San Diego and Orange County border. As a condition of their contract, marine vessel project awardees must agree to the installation of a GPS device equipped with an electronic monitoring unit (EMU) to assist South Coast AQMD with enforcement of the 75 percent operational requirement. The basic function of the GPS unit is to determine location (latitude, longitude), time and date on a continuous or periodic basis. The EMU must be capable of storing data collected by the GPS for transmission to South Coast AQMD. Staff is also reviewing the option of expanding the use of GPS systems for locomotives and on-road heavy-duty trucks as part of an effort to devise effective strategies, such as a trade-down approach, for maximizing the use of limited incentive funds.

Requirements for GPS-EMU systems are that they accurately collect miles traveled or hours operated within South Coast AQMD boundaries and geo-fence regions, determine percent of operation within South Coast AQMD boundaries, track distance, and operate in all ambient temperatures and weather conditions in California. Monitoring data is transmitted to the South Coast AQMD in real-time and on a periodic basis.

On August 7, 2020, South Coast AQMD released RFP #P2021-01 to solicit bids from qualified vendors for the purchase, installation, tracking and monitoring of GPS devices equipped with EMUs for marine vessels, and potentially other types of vehicles and equipment.

In January 2021, the Board approved awards for “Year 22” Carl Moyer Program and SOON Provision. Staff has identified the need to adjust the funding amounts for Larsen Land and Cattle Co. LLC and R.A. Landreth Equipment, Inc. because of errors in data entry and project life determination.

In addition, the Board approved the release of Program Announcements for two incentive funding programs, including the Lower Emission School Bus Program in October 2020 and the Proposition 1B – Goods Movement Program in November 2020. To facilitate the application process for these programs, staff identified the need for an online application process and GMS. A new GMS was developed for these programs in time for the application period and greatly assisted many applicants with the application process and will maximize efficiencies with the internal review and approval processes.

Proposal

Staff recommends that the Board approve execution of a contract with CalAmp Wireless Networks Corporation in an amount not to exceed \$400,000 to purchase, install and activate GPS devices for marine vessels and other incentive program-funded equipment and provide GPS data monitoring services and GPS data reporting to South Coast AQMD to assist with enforcement of the 75 percent operational requirement within South Coast AQMD waters.

This action is also to amend two awards to Larsen Land and Cattle Co. LLC and R.A. Landreth Equipment, Inc. as specified below:

Applicant	Funding Source	Original Award (January 2021)	Recommended Award	Amount of Increase
Larsen Land and Cattle Co. LLC	AB 617 CAPP	\$410,521	\$438,882	\$28,361
R.A. Landreth Equipment, Inc.	Carl Moyer Program	\$154,673	\$379,982	\$225,309

The funding amount for Larsen Land and Cattle Co. LLC was increased by \$28,361 due to data entry errors. The project life for R.A. Landreth Equipment, Inc. was increased from two to five years as allowed by the Off-Road Regulation, and as a result, increased their award amount by \$225,309.

This action is to appropriate up to \$75,200 from the administrative portion of the Prop 1B Goods Movement Special Revenue Fund (81) and up to \$60,300 from the administrative portion of the Carl Moyer Program AB 923 Special Revenue Fund (80) into Information Management's FYs 2020-21 and/or 2021-22 Budgets, Professional and Special Services and/or Capital Outlays Major Objects, for the development of Prop 1B and Lower Emission School Bus Program GMS. This appropriation will reimburse expenses incurred for the initial development of the GMS systems that were released in time to assist and streamline the application process and to enhance efficiencies in staff review and approval processes for these programs.

Proposal Evaluation

Bids were solicited from qualified vendors for GPS-EMU systems, hardware and software providers and/or service providers that can meet the requirements discussed above. After no proposals were received by the initial November 2020 deadline, the deadline was extended to January 2021. Only one proposal was subsequently received by the closing date of the RFP.

Evaluation of the proposal was conducted by South Coast AQMD staff comprising of three panel members: two males and one female; two Asian/Pacific Islander and one Caucasian. The panel determined that CalAmp Wireless Networks Corporation met the requirements of the RFP.

Outreach

In accordance with South Coast AQMD's Procurement Policy and Procedure, a public notice advertising the RFP/RFQ and inviting bids was published in the Los Angeles

Times, the Orange County Register, the San Bernardino Sun, and Riverside County Press Enterprise newspapers to leverage the most cost-effective method of outreach to the South Coast Basin.

Additionally, potential bidders may have been notified utilizing South Coast AQMD's own electronic listing of certified minority vendors. Notice of the RFP/RFQ has been e-mailed to the Black and Latino Legislative Caucuses and various minority chambers of commerce and business associations and placed on South Coast AQMD's website (<http://www.aqmd.gov>).

Resource Impact

Total cost of the proposed contract with CalAmp Wireless Networks Corporation will be in an amount not to exceed \$400,000, including \$200,000 each from the administrative portion of the Carl Moyer Program SB 1107 Fund (32) and Community Air Protection AB 134 Fund (77).

The increase in award amounts for Larsen Land and Cattle Co. LLC and R.A. Landreth Equipment, Inc., will be from the Community Air Protection AB 134 Fund (77) and the Carl Moyer Program SB 1107 Fund (32), respectively.

Sufficient funding is available from the administrative portions of the Prop 1B Goods Movement Special Revenue Fund (81) in the amount up to \$75,200 for Prop 1B GMS development and from the Carl Moyer Program AB 923 Special Revenue Fund (80) in the amount up to \$60,300 for Lower Emission School Bus Program GMS development.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 4

PROPOSAL: Amend Contracts to Develop and Demonstrate Zero Emission Drayage Trucks and Add Funds for Administrative Assistance

SYNOPSIS: In March 2016, the Board approved execution of contracts for the Zero Emission Drayage Truck (ZEDT) project. CARB and South Coast AQMD staff propose to change scope and redistribute funds between Peterbilt and Volvo to assure project goals are met. This action is to authorize the Executive Officer to add \$1,254,491 to Volvo Technology of America, LLC contract to deploy two Class 8 battery electric trucks and charging infrastructure and reduce \$1,000,000 from Peterbilt Motors contract for the elimination of two Class 8 battery electric drayage trucks and add \$141,255 to a project implementation assistance contract to ensure completion of the ZEDT and Volvo LIGHTS projects, all from the Greenhouse Gas Reduction Projects Special Revenue Fund (67).

COMMITTEE: Technology, April 16, 2021; Recommended for Approval

RECOMMENDED ACTION:

Authorize the Executive Officer to amend the following contracts to develop and demonstrate zero emission drayage trucks using project and/or administrative funds from CARB in the Greenhouse Gas Reduction Projects Special Revenue Fund (67) as follows:

- a. Add \$1,254,491 to Volvo Technology of America, LLC contract to deploy two Class 8 battery electric trucks and charging infrastructure;
- b. Reduce \$1,000,000 from Peterbilt Motors contract for the elimination of two Class 8 battery electric drayage trucks; and
- c. Add \$141,255 to Green Paradigm Consulting, Inc. (GPCI) towards project implementation assistance for the ZEDT and Volvo LIGHTS projects.

Wayne Nastri
Executive Officer

Background

ZEDT Project

In March 2016, the Board recognized revenue from CARB and other funding partners and awarded contracts to develop and demonstrate zero emission drayage trucks (ZEDT) under CARB's Low Carbon Transportation Greenhouse Gas Reduction Fund (GGRF) investments. South Coast AQMD received four percent of the total grant for administrative funding.

The ZEDT project, a collaboration between South Coast and Bay Area AQMDs, San Joaquin Valley and San Diego APCDs, and San Diego Gas & Electric, is to develop a portfolio of commercially promising zero and near-zero emission drayage truck technologies for statewide demonstration for drayage applications in and around the Ports of Long Beach, Los Angeles, Oakland, Stockton and San Diego. The project has four original equipment manufacturers (OEMs) participating, including BYD Motors, Kenworth Truck Company, Peterbilt Motors and Volvo Technology of America, LLC.

In October 2018 and December 2019, the Board amended the four OEM contracts to reallocate funds among the project partners. CARB is extending the ZEDT project to April 15, 2022 to allow additional time for data collection and reallocate funds among the project partners.

Project Implementation Assistance for Clean Fuels Projects

Through a competitive bid process, Green Paradigm Consulting, Inc. (GPCI), has been providing technical expertise and project implementation assistance on various Clean Fuels and grant funded projects based on their expertise with alternative fuels, electric vehicles, and charging and fueling infrastructure. Additional funds are needed to continue this support.

Proposal

ZEDT Project

Peterbilt has experienced challenges in deploying and supporting additional battery electric trucks in the field due to staffing and resource issues. In order to deploy the required number of trucks for the ZEDT project, staff's proposal is for Volvo to deploy two Class 8 battery electric trucks certified by CARB at a fleet in the San Joaquin Valley. This will include funding for installation of charging infrastructure to support these trucks. Funding allocated to Peterbilt did not previously include infrastructure. CARB has approved the reallocation of funding from Peterbilt Motors to Volvo Technology of America, LLC (Volvo) and reallocation of \$254,491 in administrative funds towards the Volvo project.

Project Implementation Assistance for Clean Fuels Projects

Since 2018, GPCI has been performing project implementation assistance for the ZEDT and Volvo LIGHTS projects. Since both projects are being extended to 2022, additional

funding is required for compilation of quarterly progress reports, invoices, disbursement requests, mileage tracking, technical deliverables, and auditing recordkeeping. CARB has approved the allocation of CARB administrative funds from the ZEDT and Volvo LIGHTS projects for project implementation assistance.

This action is to authorize the Executive Officer to amend contracts from the Greenhouse Gas Reduction Projects Special Revenue Fund (67) as follows: 1) Add \$1,254,491 to Volvo Technology of America, LLC contract to deploy two Class 8 battery electric trucks and charging infrastructure; 2) Reduce \$1,000,000 from Peterbilt Motors contract for the elimination of two Class 8 battery electric drayage trucks; and 3) Add \$141,255 to Green Paradigm Consulting, Inc. in CARB administrative funding from the ZEDT and Volvo LIGHTS projects. There is no net change in CARB grant funds from these actions.

Benefits to South Coast AQMD

The ZEDT and Volvo LIGHTS projects support development and demonstration of various electric container and freight transport technologies and infrastructure, as well as to demonstrate solar and energy storage technologies to enable development and demonstration of microgrids with fleets charging heavy-duty trucks, yard tractors, and forklifts are included in the *Technology Advancement Office Clean Fuels Program 2020 Plan Update* under the categories of “Develop and Demonstrate Electric and Hybrid Vehicles,” “Develop and Demonstrate Electric Container Transport Technologies,” “Develop and Demonstrate Electric Charging Infrastructure,” and “Develop and Demonstrate Microgrids with Photovoltaic/Fuel Cell/Battery Storage/EV Chargers and Energy Management.” These projects are to develop and demonstrate zero emission heavy-duty trucks, freight handling equipment, infrastructure and solar. Successful demonstrations of such projects will contribute to the attainment of national ambient air quality standards in the South Coast Air Basin by eliminating PM and NOx emissions from replaced diesel heavy-duty trucks and off-road freight handling equipment. The project also includes installation of infrastructure powered by solar and energy storage.

Resource Impacts

The reallocation of funds will not exceed CARB project and/or administrative funds for the ZEDT or Volvo LIGHTS projects in the GHG Reduction Projects Special Revenue Fund (67). The reallocation of ZEDT funding is as follows:

Project Partner	Dec 2019 Board		Proposed	
	CARB	SCAQMD	CARB	SCAQMD
Peterbilt	\$6,733,564	\$2,342,436	\$5,733,564	\$2,342,436
Volvo	6,010,564	2,341,184	7,265,055	2,341,184
GPCI (admin funds)	161,800	0	253,055	0
Staff Time (admin funds)	939,876	0	594,130	0
Total	\$13,845,804	\$4,683,620	\$13,845,804	\$4,683,620

Sufficient funds are available in the GHG Reduction Projects Special Revenue Fund (67) to amend the Volvo and GPCI contracts from CARB funding for the ZEDT project and the GPCI contract from CARB funding for the Volvo LIGHTS project.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 5

PROPOSAL: Recognize Revenue, Appropriate and Transfer Funds for Air Monitoring Programs, Issue RFQ and Purchase Orders for Air Monitoring Equipment and One Vehicle, and Execute a Contract

SYNOPSIS: South Coast AQMD is expected to receive grant funds up to \$703,945 from U.S. EPA for the PM2.5 Program and up to \$2,100,000 from the U.S. Government for the Enhanced Particulate Monitoring Program. In October 2016, the Board recognized revenue from the U.S. EPA through its Science to Achieve Results (STAR) research grant program to engage, educate and empower California communities on the use and application of low-cost air monitoring sensors. These actions are to recognize revenue and appropriate funds for the PM2.5 and Enhanced Particulate Monitoring Programs, transfer up to \$350,000 between Major Objects in Science & Technology Advancement's FY 2021-22 Budget to realign expenditures for the Enhanced Particulate Monitoring Program, transfer and/or appropriate up to \$124,792 between Major Objects for the STAR program, issue an RFQ and purchase orders for air monitoring equipment and one vehicle, and execute a contract.

COMMITTEE: Administrative, April 9, 2021; Recommended for Approval

RECOMMENDED ACTIONS:

1. Recognize revenue in the General Fund up to \$2,803,945 and appropriate funds up to \$703,539, upon receipt, into the FYs 2020-21 and/or 2021-22 Budgets as set forth in Attachment 1 and further detailed in Attachments 2 and 3;
2. Transfer up to \$350,000 between Science & Technology Advancement's FY 2021-22 Budget, Salaries and Employee Benefits Major Object (Org 44), and Services & Supplies Major Object (Org 47), Temporary Agency Account, to realign expenditures, as needed, for the FY 2021-22 Enhanced Particulate Monitoring Program;
3. Transfer up to \$124,792 from the Services & Supplies Major Object to the Capital Outlays Major Object in Science & Technology Advancement's FYs 2020-21

Budget (Org 43) and/or appropriate up to \$124,792 to the Capital Outlays Major Object in Science & Technology Advancement's FY 2021-22 Budget (Org 43) to purchase air monitoring equipment and execute a contract for the U.S. EPA STAR program;

4. Authorize the Procurement Manager, in accordance with South Coast AQMD Procurement Policy and Procedure, to issue sole source purchase orders with Met One Instruments, Inc. for the following equipment as listed in Table 2:
 - a. Up to four Met One PM2.5 FEM Monitors not to exceed \$84,000; and
 - b. Up to four Met One E-BAM PLUS Portable Environmental PM Monitors not to exceed \$46,714.
5. Authorize the Procurement Manager, in accordance with South Coast AQMD's Procurement Policy and Procedure, to issue a purchase order, based on a solicitation process, "Prior Bid, Last Price" or cooperative agreement for one BEV or PHEV (vehicle) in an amount not to exceed \$50,000 as listed in Table 1; and
6. Authorize the Executive Officer to execute a sole source contract with Mazama Science in an amount up to \$78,078 to enhance the capabilities of open-source tools to support data access, data analysis and data visualization of air quality information by communities and citizen scientists.

Wayne Nastri
Executive Officer

MMM:JCL:RMB:AP:ld

Background

Enhanced Particulate Monitoring Program

South Coast AQMD has been providing enhanced particulate monitoring support as part of a national monitoring program since 2003. Sample collection began in February 2003 and will continue for the foreseeable future. South Coast AQMD is expected to receive up to \$2,100,000 from the U.S. Government for the annually funded Enhanced Particulate Monitoring Program.

PM2.5 Program

Since 1998, U.S. EPA has provided funds under Section 103 for a comprehensive PM2.5 Air Monitoring Program. To date, there are 19 ambient monitoring stations in the South Coast Air Basin (Basin) operating 22 Federal Reference Method (FRM) PM2.5 monitors under U.S. EPA funding and 15 other PM2.5 continuous monitors including Federal Equivalent Method (FEM) and Non-FEM monitors. In addition, U.S. EPA has supported the expansion of the network to collect ongoing PM2.5 mass and chemical speciation at several sites within the Basin. The chemical speciation of fine

particulate matter supports the characterization of PM2.5 sources, air quality conditions and health impacts. South Coast AQMD is expected to receive up to \$703,945 from U.S. EPA for the annually funded PM2.5 Program.

Science to Achieve Results (STAR) Program

On June 9, 2014, U.S. EPA, as part of its STAR Program, solicited applications proposing research on empowering communities and individuals to take action to avoid air pollution exposure, using low-cost portable air pollution sensors. South Coast AQMD's proposal to provide California communities with the knowledge necessary to appropriately select, use and maintain sensors and interpret sensor data was awarded one of these research grants. On October 7, 2016, the Board recognized and appropriated \$749,820 from the U.S. EPA for this study. As part of this program, low-cost sensors were deployed for PM2.5 measurements in 14 California communities, calibration procedures were developed to improve the quality of the collected sensor data, and a contract was issued to Mazama Science to develop a suite of open-source tools to support data access, data analysis and data visualization of air quality information by communities and citizen scientists.

Proposal

The federal revenue to be recognized and FYs 2020-21 and/or 2021-22 appropriations are summarized in Attachment 1 and further described in Attachments 2 and 3.

Enhanced Particulate Monitoring Program (FYs 2020-21 and/or 2021-22)

South Coast AQMD is expected to receive funding from the U.S. Government for the ongoing Enhanced Particulate Monitoring Program through April 30, 2022 in an amount up to \$2,100,000. This action is to recognize revenue up to \$460,594 into the FYs 2020-21 and/or 2021-22 Budgets (\$1,639,406 for Salaries, Benefits, and indirect costs was already included in the FYs 2020-21 and/or 2021-22 Budgets) and appropriate up to \$460,594 into Science & Technology Advancement's FYs 2020-21 and/or 2021-22 Budgets, Services & Supplies and Capital Outlays Major Objects, as set forth in Attachment 2.

PM2.5 Program (FYs 2020-21 and/or 2021-22)

U.S. EPA is expected to provide Section 103 Grant funding in an amount up to \$703,945 for the continuation of the PM2.5 Program through March 31, 2022. Revenue for this grant in the amount of \$461,000 for Salaries and Benefits has already been included in the budget. This action is to recognize the remaining revenue up to \$242,945 into the FYs 2020-21 and 2021-22 Budgets and appropriate up to \$242,945 into Science & Technology Advancement's FYs 2020-21 and/or 2021-22 Budgets, as set forth in Attachment 3.

STAR Program

This action is to transfer up to \$124,792 from the General Fund Services & Supplies Major Object to the Capital Outlays Major Object in Science & Technology Advancement's FYs 2020-21 Budget (43) and/or appropriate up to \$124,792 to the Capital Outlays Major Object in Science & Technology Advancement's FY 2021-22 Budget (Org 43) to purchase air monitoring equipment and execute a contract for the U.S. EPA STAR program. As part of this project, staff has been working to develop calibration procedures to improve the reliability of the data from this and other sensor networks. Staff is proposing to purchase up to four Met One E-BAM PLUS Portable Environmental PM Monitors in an amount not to exceed \$46,714 for collocated measurements at selected sensor locations. These will be used to improve the algorithms and overall calibration methodology for the sensor networks staff has developed.

Staff is proposing to execute a contract with Mazama Science in an amount up to \$78,078 to enhance the capabilities of open-source tools to support data access, data analysis and visualization of air quality information by communities and citizen scientists.

Proposed Purchases through a Solicitation Process, "Prior Bid, Last Price" or Cooperative Agreement

BEV or PHEV (Vehicle)

At the outset of the Enhanced Particulate Monitoring Program over 15 years ago, several dedicated vehicles were purchased to meet the mileage intensive needs of the program. Several of these original vehicles have more than 150,000 miles and one vehicle was recently involved in a collision and expected to be surplus. The U.S. Department of Homeland Security, which is the funding agency for this program, concurs that replacing one of these vehicles is appropriate. Staff proposes replacement of one vehicle with a BEV or PHEV at an estimated cost of \$50,000 through an RFQ process, "Prior Bid, Last Price," or a cooperative purchasing agreement. Low emission vehicles are available from vendors through cooperative purchasing under the State of California, Department of General Services, Procurement Division, and Alternative Fueled Vehicles Contract 1-18-23-23A-H. The cost of the vehicle will not exceed \$50,000 (see Table 1).

Proposed Purchases through Sole Source Purchase Orders

Met One PM2.5 Continuous FEM Monitor

The U.S. EPA Section 103 PM2.5 Grant award includes one-time funding for the purchase of up to four Met One PM2.5 FEM monitors. The Met One PM2.5 FEM monitor is the only commercially available FEM monitor that would allow South Coast AQMD to satisfy the U.S. EPA collocation requirement, which specifies that new FEM monitors added to the network must use the same monitor/method code as those already

in operation within the network. The cost of the monitors will not exceed \$84,000 (see Table 1).

Met One E-BAM PLUS Portable Environmental PM Monitor

Over the past few years, staff has been developing calibration procedures to facilitate the management of low-cost sensor networks and improve the overall reliability of the collected data. These procedures are largely based on collocation measurements conducted at specific locations where a subset of sensors is operated alongside more reliable monitors to compare their performance. This information is then used to develop calibration algorithms for the entire sensor network. To continue this important work, staff proposes to use \$46,714 to purchase up to four Met One E-BAM PLUS Portable Environmental PM Monitors for additional collocation measurements with PM sensors.

Mazama Science Contract

The proposed contract with Mazama Science would expand the capabilities of existing data analysis and visualization tools by making them sensor model/type- and pollutants-agnostic, adding further QA/QC functionality for individual sensors and sensor networks. All resulting products will be open source which makes them ideal for use by STAR Grant and other communities and organizations interested in working with sensors and sensor data.

Sole Source Justification

Sole Source Justification Section VIII.B.3 of the Procurement Policy and Procedure identifies four major provisions under which a sole source award funded, in whole or in part with federal funds, may be justified. Specifically, this request for sole source award is made under the provision B.3.a.: the item is available only from a single source. Met One, Inc. is the only manufacturer of real-time and continuous environmental PM_{2.5} FEM mass monitors that employ a unique “in-situ” sampling technique that would allow South Coast AQMD to satisfy U.S. EPA collocation requirements, which include that new FEM monitors added to the network must use the same sampler and method as those that are already in operation within the network. Met One, Inc.’s E-BAM Plus is the only commercial portable, rugged, and battery-operated real-time PM instrument which has EPA approval (FEM certification) for PM₁₀ particulate measurements and can also be used for PM_{2.5} monitoring.

Section VIII.B.3 of the Procurement Policy and Procedure identifies four major provisions under which a sole source award funded, in whole or in part with federal funds, may be justified. Specifically, this request for sole source award is made under the provision B.3.a.: The item is available only from a single source. Mazama Science has unique resources to automatically process large volumes of monitoring sensor data, produce web-based sensor data visualization tools, and generate sensor data summary reports. The Mazama Science platform uses statistical programming code they have

developed to provide community members participating in the EPA STAR Grant with a highly customizable data interface which is ideal for this community project. The project involves the use of proprietary technology and the Contractor has ownership of key assets required for project performance.

Resource Impacts

U.S. EPA Section 103 Grant funding will support the continuation of the PM2.5 Monitoring Program, including equipment and services, along with supplies necessary to meet the objectives of the PM2.5 Monitoring Program.

U.S. Government funding will support the continuation of the Enhanced Particulate Monitoring Program.

Funding from U.S. EPA will support the STAR program implementation.

Table 1
Proposed Purchase through an RFQ Process, ‘Prior Bid, Last Price,’ or
Cooperative Agreement Purchase Order

Description	Qty	Funding Source	Estimated Amount
BEV or PHEV Vehicle	1	U.S. Government FY 2021-22	\$50,000
Total			\$50,000

Table 2
Proposed Purchases through Sole Source Purchase Orders

Description	Qty	Funding Source	Estimated Amount
Met One PM2.5 FEM Monitor	Up to 4	PM2.5 FYs 2020-21 and/or 2021-22	\$84,000
Met One E-BAM PLUS Portable Environmental PM Monitor	Up to 4	U.S. EPA STAR Grant FYs 2020-21 and/or 2021-2022	\$46,714
Total			\$130,714

Capital Outlays Major Object:			
MET One PM2.5 FEM Monitor (up to 4)	77000	47500	84,000
Total Capital Outlays Major Object:			\$84,000
Total Appropriations:			\$242,945

Note: Salaries and Benefits are already included in the FYs 2020-21 and 2021-22 Budgets.

*Funds not expended by June 30, 2021 will be carried over to the FY 2021-22 Budget.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 6

PROPOSAL: Execute Contract to Upgrade Real-time Public Alerts of Hydrogen Sulfide Events in the Coachella Valley

SYNOPSIS: In response to odor events related to the Salton Sea, South Coast AQMD began continuous measurements of hydrogen sulfide (H₂S) at two Coachella Valley locations in November 2013. In 2017, South Coast AQMD contracted with Sonoma Technology, Inc. (STI) to implement an automated real-time email and text alert system to provide H₂S exceedance notifications. To better capture H₂S events, up to three additional H₂S monitors are planned for the region. This action is to execute a contract with STI to perform technical upgrades, integrate data from additional monitors, and maintain a real-time alert system for H₂S in the Coachella Valley at a cost not to exceed \$77,300 from the AES Settlement Projects Fund (35).

COMMITTEE: Administrative, April 9, 2021; Recommended for Approval

RECOMMENDED ACTION:

Authorize the Executive Officer to execute a sole-source contract with Sonoma Technology, Inc. at an initial cost not to exceed \$24,500 with an option to renew the annual operation support at an annual cost not to exceed \$16,000 in each of the next three years and an option to integrate data from up to three additional stations at a cost of \$1,600 per station for a total of \$77,300 over four years from the AES Settlement Projects Fund (35). The contractor will perform technical upgrades, integrate data from additional monitors and maintain a public alert system to provide automated alerts for H₂S.

Wayne Nastri
Executive Officer

Background

Following a widespread hydrogen sulfide (H₂S) odor event in 2012, South Coast AQMD started continuous H₂S measurements at two locations in the Eastern Coachella Valley in 2013 to improve our understanding of the processes that lead to odors and to better communicate odor events to the public.

H₂S is a product of anaerobic organic decay at the bottom of the shallow Salton Sea that occurs throughout the year and smells like rotten eggs. This process is especially active in the summer months with the abundant desert sunlight and heat. Shifting winds cause H₂S to be released from the Salton Sea and transported to communities in the Eastern Coachella Valley. While severe events like that of September 2012 are uncommon, less-extreme releases of H₂S frequently cause odors in areas near the Salton Sea. In each of the last three years (2018 – 2020), there were between 22 and 50 days where the H₂S levels at one or more stations in the Coachella Valley exceeded the 30 parts-per-billion California State H₂S standard.

Under a contract executed in 2017, Sonoma Technology, Inc. (STI) implemented a real-time H₂S alert system that uses data from two H₂S monitors maintained by South Coast AQMD. These monitors are located in Mecca and at a site along the northern shore of the Salton Sea. The previous contract included implementation of web interfaces for subscribers, as well as the administration of the subscription services and operational support.

Proposal

Staff proposes a sole-source contract with Sonoma Technology, Inc. (STI), the contractor responsible for the development of our current real-time H₂S alert system, to continue maintaining the system and implement upgrades to improve reliability and uptime. The automated alerts are available via email with subscriber signups through a web interface. The initial cost for the first year of maintenance and to facilitate the required upgrades will not exceed \$24,500 with an option to renew the annual operational maintenance support at an annual cost not to exceed \$16,000 in each of the next three years and an option to add up to three new monitoring stations at a cost of \$1,600 per station. The total cost over four years is \$77,300 if the annual operational maintenance support contract is renewed each year and data from three additional monitoring stations is integrated into the web interface.

The AES Settlement Project Funds (35) recommended for funding this effort are not restricted by applicable statutes or the settlement agreement and; this fund was used for the initial contract with STI in 2017, with a total amount of \$78,000 over four years. Prior to the STI contract, the Board had used this fund for fleet rules, but the funds can be directed to other projects, with Board approval.

Sole Source Justification

Section VIII, B.2 of the Procurement Policy and Procedure identifies four major provisions under which a sole-source award may be justified for non-federally funded procurement.

The request for a sole-source contract for the upgrade and operational support of a real-time H2S alert system is made under Section VIII, B.2.c.1 of the Procurement Policy and Procedure which states: Except for contracts funded in whole or in part with federal funds, written justification for a sole-source award must be provided documenting that the desired services are available from only the sole-source based upon one or more of the following reasons: (1) The unique experience and capabilities of the proposed contractor or contractor team.

Sonoma Technology, Inc. (STI) has unique experience and capabilities for upgrading and maintaining the H2S alert system due to their experience developing and operating the system in this location for the past four years.

Resource Impacts

Funds for this contract have been identified in the AES Settlement Projects Fund (35). This contract will require staff oversight but is not expected to have other fiscal impacts.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 7

PROPOSAL: Establish Lists of Prequalified Counsel to Represent and Advise SCAQMD on Legal Matters Related to Environmental Law and General Governmental Matters.

SYNOPSIS: On January 8, 2021 the Board approved issuance of an RFP to pre-qualify outside counsel having expertise in the California Environmental Quality Act, South Coast AQMD rulemaking and planning procedures, administrative law, general governmental law, and related issues for the South Coast AQMD. The evaluation of responding firms has been completed. This action is to establish two lists of prequalified counsel - one to represent South Coast AQMD in environmental law matters and one to represent South Coast AQMD in general governmental matters.

COMMITTEE: Administrative, April 9, 2021; Recommended for Approval

RECOMMENDED ACTIONS:

1. Approve the firms *Shute, Mihaly & Weinberger, LLP; Halpern, May, Ybarra Gelberg LLP, and Woodruff, Spradlin & Smart* as prequalified law firms having expertise in the California Environmental Quality Act, South Coast AQMD rulemaking and planning procedures, issues relating to statute and rule interpretation, air quality laws, and complex environmental litigation, that General Counsel may use to represent the South Coast AQMD in future litigation and for advice.
2. Approve the firms *Shute, Mihaly & Weinberger, LLP, Best, Best & Krieger, LLP, and Woodruff, Spradlin & Smart* as prequalified law firms having expertise in the Brown Act, administrative law, representation of government agencies, constitutional issues, and general governmental matters to provide representation and advice as required by the South Coast AQMD.
3. Authorize the Chairman of the Board or the Executive Officer, depending on whether the amount exceeds \$100,000, to execute contracts with any of the above-named firms, as the need arises, for a total not to exceed amounts authorized in the budget or by subsequent Board action annually for up to three years.

Wayne Nastri
Executive Officer

Background

On January 8, 2021, the Board approved issuance of an RFP for up to \$250,000 for South Coast AQMD to solicit proposals from outside litigation counsel having particular expertise and experience in the California Environmental Quality Act, South Coast AQMD rulemaking and planning procedures, issues relating to statute and rule interpretation, air quality laws, administrative law, representation of government agencies, constitutional issues, the Brown Act, general governmental matters, and complex environmental litigation. In the past, South Coast AQMD has faced, and likely will face in the future, litigation and other matters requiring such specialized expertise. A rapid response is needed in such situations, and it is not possible to go through the RFP process as new cases arise. Establishing prequalified lists ensures that South Coast AQMD can quickly select counsel for representation as needed.

Outreach

In accordance with South Coast AQMD's Procurement Policy and Procedure, a public notice advertising the RFP and inviting bids was published in the Los Angeles Times, the Orange County Register, the San Bernardino Sun, and Riverside County's Press Enterprise newspapers to leverage the most cost-effective method of outreach to the South Coast Basin. Also, potential bidders were notified by sending notification to various individual law firms and bar associations.

Additionally, potential bidders may have been notified utilizing South Coast AQMD's own electronic listing of certified minority vendors. Notice of the RFP has been e-mailed to the Black and Latino Legislative Caucuses and various minority chambers of commerce and business associations, and placed on South Coast AQMD's website (<http://www.aqmd.gov>).

Evaluation

Bid responses for the Environmental Law RFP were received from nine (9) law firms. A summary of the responses is provided in Attachment A. An evaluation panel was convened to evaluate proposals for the General Counsel's office. The South Coast AQMD panel consisted of three South Coast AQMD employees: three General Counsel attorneys; one male, two females; one African American, one Caucasian, and one Asian.

Proposal

Establish two lists for South Coast AQMD, valid from May 7, 2021, through May 31, 2024, of prequalified outside counsel for advice and representation in areas related to environmental law and general governmental law.

For South Coast AQMD (Environmental):

Shute Mihaly & Weinberger LLP
Halpern May Ybarra Gelberg LLP
Woodruff Spradlin & Smart

For South Coast AQMD (General):

Shute Mihaly & Weinberger LLP

Best, Best & Krieger, LLP

Woodruff Spradlin & Smart

Resource Impacts

Sufficient funds exist in the annual budget for fiscal year 2020-21 and the proposed budget for 2021-22 for outside counsel, which may be allocated to one or more selected contractors as the need arises based on future litigation, the availability of counsel, and the needs of South Coast AQMD. Selection may also be made for occasional assignments in subject areas of the firms' expertise that do not involve litigation.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 8

PROPOSAL: Authorize Purchase of OnBase Software Support

SYNOPSIS South Coast AQMD uses OnBase software for its electronic document management system to manage critical documents and to support the Record Retention Policy. Software subscription and support for OnBase expires on July 31, 2021. This action is to obtain approval for sole source purchase of OnBase software subscription and support for one year from Information Management's FY 2020-21 Budget. Funds for this purchase (\$140,000) are conditional on approval of the Proposed FY 2021-22 Budget.

COMMITTEE: Administrative, April 9, 2021; Recommended for Approval

RECOMMENDED ACTIONS:

Authorize the Procurement Manager to purchase OnBase software subscription and support for one year from Hyland Software at a cost not to exceed \$140,000 contingent on approval of this funding in Information Management's Proposed FY 2021-22 Budget, Services and Supplies Major Object, Professional and Special Services Account.

Wayne Nastri
Executive Officer

RMM:MH;hlp

Background

South Coast AQMD uses OnBase software as its electronic document management system, which has maintained South Coast AQMD documents and other critical records since 1990. Total storage to date is over three million multi-page documents. OnBase is used by many of South Coast AQMD's mission critical web applications including Online Application Filing, Asbestos Notifications, and Oil and Gas Well Electronic Notification and Reporting. OnBase is a Windows-based, menu-driven, document

management system designed to store and retrieve critical documents in electronic format. The system provides concurrent information to multiple workstations simultaneously. It has a flexible compound document structure where black-and-white or color images co-exist with text and data within a single document. It stores various types of documents such as Microsoft Word documents, Outlook emails, PDFs, videos and data files.

The system includes document routing and ad-hoc, scheduled point-to-point, and broadcast distribution of documents. It contains a complete set of markup and annotation tools that allow users to add notes, comments and drawings to pages without compromising the original document's integrity. The system has full network support so information can be distributed rapidly within an organization regardless of architecture. Finally, the system has an extensive number of features to allow the secure display of documents on South Coast AQMD's internal and external websites and on iPhone, iPad and Android mobile applications. OnBase software subscription and support expires on July 31, 2021.

Proposal

Hyland Software is the sole manufacturer and provider of OnBase software and is, therefore, the only source for its maintenance support licensing agreements. Staff recommends the purchase of OnBase software subscription and support for one year from Hyland Software at a cost of \$140,000.

Sole Source Justification

Section VIII.B.2 of the Procurement Policy and Procedure identifies circumstances under which a sole source purchase award may be justified. This request for a sole source award is made under provision VIII.B.2.c.(2) and (3). The products and services are available from only the sole source; involve the use of proprietary technology; and use key contractor-owned assets for project performance. The cost of these support services reflects General Services Administration pricing.

Resource Impacts

Sufficient funds are included in Information Management's Proposed FY 2021-22 Budget within the Services and Supplies Major Object Professional and Special Services Account.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 9

PROPOSAL: Approve Award Modification as Approved by MSRC

SYNOPSIS: The Mobile Source Air Pollution Reduction Review Committee (MSRC) approved the modification of an award under the FYs 2016-18 Work Program. At this time the MSRC seeks Board approval of the modification as part of the FYs 2016-18 Work Program.

COMMITTEE: Mobile Source Air Pollution Reduction Review, April 15, 2021;
Recommended for Approval

RECOMMENDED ACTIONS:

1. Approve modified award to the city of San Dimas, substituting the installation of bicycle detection units at intersections for the previously approved implementation of a bike sharing program, as part of approval of the FYs 2016-18 Work Program, as described in this letter; and
2. Authorize the Chairman of the Board to execute the modified contract under the FYs 2016-18 Work Program, as described above and in this letter.

Larry McCallon
Chair, MSRC

MMM:CR

Background

In September 1990, Assembly Bill 2766 was signed into law (Health & Safety Code Sections 44220-44247) authorizing an annual \$4 motor vehicle registration fee to fund the implementation of programs exclusively to reduce air pollution from motor vehicles. AB 2766 provides that 30 percent of the annual \$4 vehicle registration fee subvended to South Coast AQMD be placed into an account to be allocated pursuant to a work program developed and adopted by the MSRC and approved by the Board.

Proposals

At its April 15, 2021 meeting, the MSRC considered recommendations from the MSRC Technical Advisory Committee (MSRC-TAC) and approved the following:

FYs 2016-18 Local Government Partnership Program

As part of the FYs 2016-18 Local Government Partnership Program, the MSRC approved an award of \$50,000 to the city of San Dimas to participate in the regional bike share program to be implemented by the San Gabriel Valley Council of Governments. The city had not yet executed the contract to effectuate the award when the bike sharing program stalled for all participants due to challenges associated with social distancing and disinfecting with multiple daily use. Instead of implementing the bike sharing program, the city proposed to install bike detection camera/radar units for traffic signals. The MSRC considered and approved the city's requested modifications to the project.

At this time, the MSRC requests the Board approve the award modification as part of approval of the FYs 2016-18 AB 2766 Discretionary Fund Work Program as outlined above. The MSRC also requests the Board authorize the Board Chairman to execute all agreements described in this letter.

Resource Impacts

South Coast AQMD acts as fiscal administrator for the AB 2766 Discretionary Fund Program (Health & Safety Code Section 44243). Money received for this program is recorded in a special revenue fund (Fund 23) and the contracts specified herein will be drawn from this fund.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 10

REPORT: Legislative, Public Affairs and Media Report

SYNOPSIS: This report highlights the March 2021 outreach activities of the Legislative, Public Affairs and Media Office, which includes Major Events, Community Events/Public Meetings, Environmental Justice Update, Speakers Bureau/Visitor Services, Communications Center, Public Information Center, Business Assistance, Media Relations, and Outreach to Community Groups and Federal, State and Local Governments.

COMMITTEE: No Committee Review

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

DJA:NM:LTO:DS:DM:kv:ar

BACKGROUND

This report summarizes the activities of the Legislative, Public Affairs and Media Office for March. The report includes: Major Events; Community Events/Public Meetings; Environmental Justice Update; AB 617; Speakers Bureau/Visitor Services; Communications Center; Public Information Center; Business Assistance; Media Relations; and Outreach to Community Groups and Governments.

MAJOR EVENTS (HOSTED AND SPONSORED)

Each year, South Coast AQMD staff engage in holding and sponsoring several major events throughout South Coast AQMD's four county jurisdiction to promote, educate, and provide important information to the public regarding reducing air pollution, protecting public health, improving air quality and the economy.

A Clean Air Conversation with Community Faith Leaders

Staff hosted “A Clean Air Conversation with Community Faith Leaders: Clean Air is a Matter of Life and Breath” on March 25 for 58 attendees. Panelists included Inland Empire based faith leaders, community members, and academia representatives, who discussed the challenges created by disproportionate air quality impacts on Inland Empire communities and efforts to empower improvements.

Cesar Chavez Day of Remembrance

The 7th Annual Cesar Chavez Day of Remembrance “Yes We Can, United We Will Fight for Clean Air: Sí se puede, unidos lucharemos por aire limpio” was held on March 27 and over 200 people attended. CBSLA reporter Lesley Marin was the moderator for the event. Keynote speaker Paul F. Chavez, union organizer and President & Chairman of the Cesar Chavez Foundation, shared remarks on the legacy of Cesar Chavez’s fight for equality and environmental justice. U.S. Senator Alex Padilla was honored as the recipient of the Richard Alatorre Environmental Justice for All Award.

COMMUNITY EVENTS/PUBLIC MEETINGS

Each year, South Coast AQMD staff engage with thousands of residents and stakeholders, providing valuable information about the agency, incentive programs, and ways individuals can help reduce air pollution through events and meetings sponsored solely by South Coast AQMD or in partnership with others. Attendees typically receive the following information:

- Tips on reducing their exposure to smog and its health effects;
- Clean air technologies and their deployment;
- Invitations or notices of conferences, seminars, workshops, and other public events;
- South Coast AQMD incentive programs;
- Ways to participate in South Coast AQMD’s rules and policy development; and;
- Assistance in resolving air pollution-related problems.

South Coast AQMD staff attended and/or provided information and updates at the following March events and meetings:

All American Asphalt

On March 3, staff held a virtual community meeting on All American Asphalt for 135 community members and interested stakeholders. The meeting included presentations on air monitoring by University of California, Irvine, city of Irvine and South Coast AQMD, with updates on compliance and enforcement efforts, and permitting and source test efforts for a control device that the facility had recently installed.

Aliso Canyon Supplemental Environmental Project Fund

On March 9, staff organized and participated in a virtual Aliso Canyon Supplemental Environmental Project Fund briefing for approximately 52 attendees. Discussions focused on establishing a fund for an air quality monitoring network.

Chiquita Canyon Landfill

On March 13, staff participated in a virtual Hearing Board hearing to receive public comments related to the Chiquita Canyon Landfill. Approximately 14 residents and other interested stakeholders attended the hearing.

Western Riverside Council of Governments (WRCOG)

On March 18, staff participated in WRCOG's Technical Advisory Committee meeting. Staff provided information on Prop 1B, Mobile Source Air Pollution Reduction Review Committee requests for proposals and other programs.

San Fernando Valley Council of Governments (SFVCOG)

On March 18, staff provided updates to the SFVCOG's Transportation Committee. Updates included the Environmental Justice Community Partnership (EJCP) Who to Call Guide and the Volkswagen Environmental Mitigation Trust for zero-emission transit and shuttle buses.

ENVIRONMENTAL JUSTICE UPDATE

The following are key environmental justice related (EJ) activities in which staff participated during March. These events and meetings involve communities affected disproportionately from adverse air quality impacts.

Keeping To Our Word: Accountability to Racial Justice in the Environmental Sector

Staff attended a webinar hosted by the Environmental Law Institute on March 2. The panel discussion focused on how environmental organizations can eliminate racial disparities, which included a presentation of a brief history on racial injustice, challenges and case law.

Environmental Justice Community Partnership (EJCP) Advisory Council

Approximately 35 people participated in an EJCP Advisory Council meeting on March 3. Presentations included a review of the 2020 EJCP accomplishments and an update on AQMP activities. Road 2 Samaria provided an overview on the organization's mission, history and community engagement in the Inland Empire. Staff led a discussion on EJCP quarterly activities to gather input from Advisory Council members.

Mapping Inequality Project

On March 4, staff attended a U.S. EPA webinar featuring a collaboration by the University of Richmond and Virginia Tech titled, "The Mapping Inequality Project."

The project has digitized and made publicly available redlining maps for 200 cities. The purpose of the project is to drive positive change to impact environmental justice and help address systemic racism.

Coachella Valley Unified School District

On March 10, staff met with the Superintendent of Coachella Valley Unified School District regarding Clean Air Program for Elementary School (CAPES). Teachers in their 14 elementary schools will be encouraged to implement the program and air quality flags will be provided to the school district.

Los Feliz Charter School for the Arts

On March 10, staff met with the “Green Team Captain” parent who oversees an environmental club at Los Feliz Charter School for the Arts. Staff shared information on CAPES and participated in a “Courageous Conversations” campus event on environmental justice.

Coachella Valley Environmental Justice Enforcement Task Force Meeting

On March 24, staff participated in the Coachella Valley Environmental Justice Enforcement Task Force monthly meeting to provide updates on upcoming AB 617 meetings and other meetings. Staff also updated the group on CAPES implementation in the Coachella Valley School District and received positive feedback from several community representatives.

Monroe Elementary School, Santa Ana

On March 24, staff met with Monroe Elementary School to confirm participation of 12 teachers in the CAPES program.

AB 617 UPDATE

The following are key AB 617 related activities in which staff participated during March. These events, workshops and meetings involve AB 617 communities to support the Community Steering Committees (CSC), Community Air Monitoring Plans (CAMPs) and Community Emissions Reduction Plans (CERPs).

Southeast Los Angeles (SELA) CSC

On March 4 approximately 75 people participated in a SELA Incentive Budgeting Workshop, including Mayor Pro Tem Cacciotti. Staff gave a presentation on available incentive funds and project costs, and polled committee members to prioritize the projects they want to incentivize. Committee members stated their preference that incentive funds focus on independent truck owner-operators and small businesses.

Eastern Coachella Valley Area (ECV) CSC

Staff held a CSC meeting for ECV on March 5, with approximately 65 attendees. Riverside County Fire Department Division Chief presented on the Combustible

Materials Task Force. A budget incentives workshop was also held to receive CSC input on the priority order for projects to be funded, as well as a discussion on the CERP and CAMP timelines.

Why Healthy Air Matters (WHAM) and AB 617 Programs

On March 9, staff presented on WHAM to a ninth-grade class at San Bernardino High School. Students learned about South Coast AQMD and air quality issues in their community and region.

South Los Angeles (SLA) AB 617 Community Meeting

Approximately 65 attendees participated in the CSC formation meeting for SLA on March 11. The meeting featured historical background on SLA and information on the AB 617 program, including how to participate and a co-leadership model. There was open discussion on the program and co-leadership model for SLA.

San Bernardino/Muscoy (SBM) CSC

Approximately 40 attendees participated in an SBM CSC meeting on March 18, including Mayor Pro Tem Benoit. Staff provided an overview of the monitoring approach and presented information on available incentive funds, project costs, and potential emission reductions. Staff asked CSC members to prioritize incentive projects and provided an update on the WHAM program. Committee members inquired about monitoring and incentive funding.

ECV CSC

Approximately 30 people participated in an ECV CSC meeting on March 19. Supervisor Perez provided opening remarks. CARB staff provided an overview of the process for Community Air Protection Program incentive fund allocations. Staff recapped the Incentives Budget Workshop held on March 5. Committee members lead breakout discussions, where questions were asked about incentive programs and project types and future rulemaking efforts. Committee members ranked project priorities for discussion at the next meeting.

ECV CSC

Approximately 50 people participated in an ECV CSC meeting on March 25, including Supervisor Perez, who provided opening remarks. The Department of Pesticide Regulation presented on pesticide issues in ECV. The Office of Environmental Health Hazard Assessment gave an overview of the relationship between air pollution and health, exposure types, health effects and risk characterization. Committee members reviewed a summary of the Monitoring Working Team and Budget Working Team meetings. Staff provided the results from the incentives budget prioritization survey and initiated discussion about budgeting for the remaining Year 3 Community Air Protection Program funds.

SPEAKERS BUREAU/VISITOR SERVICES

South Coast AQMD regularly receives requests for staff to speak on air quality-related issues from a wide variety of organizations, such as trade associations, chambers of commerce, community-based groups, schools, hospitals and health-based organizations. South Coast AQMD also hosts visitors from around the world who meet with staff on a wide range of air quality issues.

There were no visits or speaker's bureau requests.

COMMUNICATION CENTER STATISTICS

The Communication Center handles calls on South Coast AQMD's main line, the 1-800-CUT-SMOG® line, the Spanish line, and after-hours calls to each of those lines. Total calls received in the month of March were:

Calls to South Coast AQMD's Main Line and 1-800-CUT-SMOG® Line	2,721
Calls to South Coast AQMD's Spanish-language Line	42
Clean Air Connections	2
Total Calls	2,765

PUBLIC INFORMATION CENTER STATISTICS

The Public Information Center (PIC) handles phone calls for general information. The PIC did not take walk-in requests in March because of the COVID pandemic. Email advisories provided information on upcoming meetings and events, program announcements and alerts on time sensitive issues. Information for the month of March is summarized below:

Calls Received by PIC Staff	1
Calls to Automated System	481
Total Calls	482

Email Advisories Sent	55,534
-----------------------	--------

SMALL BUSINESS ASSISTANCE

South Coast AQMD notifies local businesses of proposed regulations so they can participate in the agency's rule development process. South Coast AQMD works with other agencies and governments to identify efficient, cost-effective ways to reduce air pollution and shares that information broadly. Staff provides personalized assistance to small businesses both over the telephone and via virtual on-site consultation, as summarized below for March.

- Provided permit application assistance to 236 companies;
- Processed 90 Air Quality Permit Checklists; and

Types of businesses assisted:

Architecture Firms	Dry Cleaners	Restaurants
Auto Body Shops	Engineering Firms	Retail Operations
Auto Repair Centers	Gas Stations	Warehouses
Construction Firms	Manufacturing Facilities	

MEDIA RELATIONS

The Media Office handles all South Coast AQMD outreach and communications with television, radio, newspapers and all other publications, and media operations. The March reports are listed below:

Major Media Interactions	165
Press Releases	18
News Carousel	7

Major Media Topics:

- **Emergency Order on Crematoriums:** The Guardian requested an updated list of crematoriums that applied for exemption. The list was provided, and the reporter was referred to the Los Angeles County Coroner for more information. The Pacific Times submitted a list of questions regarding the Executive Order and written responses were provided.
- **Lawn and Garden Rebate Program:** Colorado Boulevard requested information on the Commercial Lawn and Garden Program and submitted questions. Written responses were provided.
- **Windblown Dust Advisories:** Pitches were sent to local news outlets on March 8, 14, 23 and 29 for windblown dust advisories resulting in coverage by various television, radio and online outlets.
- **Chairman Burke Retirement:** Beverly Hills Weekly requested a high-resolution photo of Chairman Burke, which was provided. Pitches were also sent

to local news outlets with the press release announcing the Chairman's retirement.

- **Low-Cost Monitoring Equipment:** Staff participated in an interview with Sierra Magazine, discussing the use of low-cost sensors.
- **Warehouse ISR:** IWP News requested comment on the CalTax letter regarding the WAIRE program. A copy of the response letter to CalTax will be provided once available. A student reporter from Northwestern submitted written questions on the ISR. Responses are being drafted.
- **Murphy Drill Site:** The Desert Sun requested an interview regarding missing data from leaks at the Murphy drill site in South Los Angeles. Written responses were provided.
- **End of Check Before You Burn Season:** Pitches were sent to local news outlets regarding the end of Check Before You Burn season.
- **All American Asphalt:** A student reporter with Chapman University requested an interview to discuss All American Asphalt. A written response was provided.
- **Special Air Quality Advisory:** Pitches were sent to local news outlets regarding the special air quality advisory and extension, due to prescribed burns in Ontario, resulting in coverage by various television, radio and online outlets.
- **Air Quality and COVID-19:** NBC inquired how pandemic-related stay-at-home orders had impacted air quality in 2020. A written response and link to a related presentation was provided.
- **MHF Regulations:** Drilled submitted written questions regarding the use of MHF at refineries. Written responses were provided.
- **Odors in Long Beach:** The Long Beach Post requested information regarding the source of odors reported in downtown Long Beach. Written responses were provided.
- **WHAM Goes Virtual:** Pitches were sent to local news outlets and reporters regarding the virtual expansion of the Why Healthy Air Matters curriculum.
- **Cesar Chavez Event:** CBS/KCAL requested footage from the virtual Cesar Chavez event. A link to the Zoom recording was provided.
- **Exide:** KCRW/NPR requested background information for a piece on communities impacted by the Exide battery recycling plant and environmental justice. A response is being drafted.

News Releases:

- **Under Volvo LIGHTS program, NFI reaches sustainability milestone - March 3, 2021:** Shared a Volvo press release regarding a transportation electrification milestone reached by the LIGHTS project.
- **Chairman Dr. William A. Burke Announces Retirement from South Coast AQMD Governing Board - March 5, 2021 (English and Spanish):**

Announced Chairman Burke's upcoming retirement from the South Coast AQMD Board.

- **Check Before You Burn Season Closes with 25 No-Burn Days this Winter - March 11, 2021 (English and Spanish):** Informed residents about the end of Check Before You Burn season.
- **South Coast AQMD Issues Special Air Quality Advisory and Extension Due to Prescribed Burns in Ontario – March 17-18, 2021 (English and Spanish):** Notified residents of potential smoke conditions in Ontario.
- **South Coast AQMD Issues Windblown Dust Advisory for Portions of Riverside County – March 14, 2021 (English and Spanish):** Notified residents of windblown dust conditions.
- **South Coast AQMD Air Quality Education Program Goes Virtual - March 23, 2021 (English and Spanish):** Announced the expansion of the WHAM curriculum to virtual learning.
- **South Coast AQMD Issues Windblown Dust Advisory for Portions of the South Coast Air Basin and Coachella Valley (English and Spanish) - March 8, 22, 29 2021:** Notified residents of windblown dust conditions in the South Coast Air Basin and Coachella Valley.

Social Media Notable posts:

1. **Dust Advisory (3/8):** 22,237 Twitter Impressions
2. **Dust Advisory (3/14):** 12,716 Twitter Impressions
3. **Dust Advisory (3/22):** 7,887 Twitter Impressions
4. **Chavez Reminder (3/26):** 6,719 Twitter Impressions
5. **AQ Forecast (3/31):** 7,857 Twitter Impressions

News Carousel:

6. **CARB approves South LA for Community Air Protection Program – March 5, 2021:** Provided information on the addition of South Los Angeles to the AB 617 program.
7. **Emergency Order for Crematoriums Extended for LA, Orange and Riverside Counties – March 7, 2021:** Order for crematoriums extended to March 17.
8. **SoCalGas to Assist Local Fleet Owners in Securing Incentive Funds to Transition to Cleaner Technologies – March 9, 2021:** Provided information on the Carl Moyer program.
9. **Emergency Order for Crematoriums Extended for LA, Orange & Riverside Counties – March 14, 2021:** Order for crematoriums extended to March 24.
10. **Keep up with the Latest News from South Coast AQMD - View the current edition of the Advisor newsletter – March 17, 2021:** Provided link to the current edition of the Advisor.

- 11. Emergency Order for Crematoriums Extended for LA, Orange & Riverside counties, March 24, 2021:** Order for crematoriums extended to April 4.
- 12. Join South Coast AQMD's 7th Annual Cesar Chavez Day of Remembrance – March 27, 2021:** Provided information on the Cesar Chavez Day event and directed users to the signup page.

OUTREACH TO COMMUNITY GROUPS AND FEDERAL, STATE, AND LOCAL GOVERNMENTS

Due to COVID-19, outreach was conducted virtually in March, utilizing web based and other technologies to communicate with elected officials or staff from the following cities:

Alhambra	Hermosa Beach	Rancho Palos Verdes
Altadena	Highland	Redondo Beach
Anaheim	Huntington Beach	Riverside
Arcadia	Industry	Rolling Hills
Avalon	Inglewood	Rolling Hills Estates
Azusa	Irvine	Rosemead
Baldwin Park	Irwindale	San Bernardino
Beverly Hills	La Cañada Flintridge	San Dimas
Bradbury	Laguna Niguel	San Fernando
Brea	La Habra	San Gabriel
Buena Park	Lake Forest	San Marino
Burbank	La Puente	Santa Ana
Carson	La Verne	Santa Clarita
Castaic	Lawndale	Santa Monica
Claremont	Lomita	Seal Beach
Covina	Los Angeles	Sierra Madre
Culver City	Manhattan Beach	South El Monte
Diamond Bar	Mission Viejo	South Pasadena
Duarte	Monrovia	Stanton
El Monte	Monterey Park	Temple City
El Segundo	Ontario	Torrance
Fullerton	Palos Verdes Estates	Walnut
Garden Grove	Pasadena	West Covina
Gardena	Placentia	West Hollywood
Glendale	Pomona	Yorba Linda
Glendora		
Hawthorne		

Communication conducted in March with elected officials and/or staff from the following state and federal offices:

- U.S. Senator Dianne Feinstein
- U.S. Senator Alex Padilla
- U.S. Representative Nanette Barragán
- U.S. Representative Judy Chu
- U.S. Representative Young Kim
- U.S. Representative Ted Lieu
- U.S. Representative Grace Napolitano
- U.S. Representative Jay Obernolte
- U.S. Representative Katie Porter
- U.S. Representative Adam Schiff
- U.S. Representative Maxine Waters
- Senator Ben Allen
- Senator Steven Bradford
- Senator Lena Gonzalez
- Senator David Min
- Senator Anthony Portantino
- Senator Susan Rubio
- Senator Scott Wilk
- Assembly Member Autumn Burke
- Assembly Member Ed Chau
- Assembly Member Laura Friedman
- Assembly Member Mike Gipson
- Assembly Member Chris Holden
- Assembly Member Al Muratsuchi
- Assembly Member Patrick O'Donnell
- Assembly Majority Leader Eloise Reyes
- Assembly Member Blanca Rubio
- Assembly Member Suzette Martinez Valladares

Staff represented South Coast AQMD in March and/or provided updates or a presentation to the following governmental agencies and business organizations:

Aliso Canyon Fund Community Group
Baldwin Hills Community Advisory Panel
Cal Cities (League of California Cities)
California Department of Housing and Consumer Relations
California Department of Planning and Research
California High Speed Rail Authority
CARB
Clean Cities Coalition
Commercial Real Estate Development Association
DTSC
Gateway Cities Council of Governments
Greater Ontario Business Council
Harbor Association of Commerce and Industry
Imperial Irrigation District
Industry Business Council, Los Angeles
Inland Action
Inland Empire Utilities Agency
Inland Valley Development Agency

LA Metro
Los Angeles County Board of Supervisors
Los Angeles County Department of Regional Planning
Los Angeles County Office of Sustainability
Mountain Transit
Northeast Los Angeles Neighborhood Council
Omnitrans
Ontario International Airport
Orange County Business Council
Orange County Council of Governments
Orange County Transportation Authority
Port of Long Beach
Port of Los Angeles
Public Policy Institute of California
Riverside County Board of Supervisors
Riverside County Transportation Commission
Riverside Transit Agency
San Bernardino County Board of Supervisors
San Bernardino County Department of Planning
San Bernardino County Transportation Authority
San Bernardino International Airport
San Fernando Valley Council of Governments
San Gabriel Valley City Managers Association
San Gabriel Valley Council of Governments
San Gabriel Valley Economic Partnership
San Gabriel Valley Water Company
Santa Ana Chamber of Commerce
South Bay Cities Council of Governments
South Orange County Economic Alliance
Southern California Association of Governments
Southern California Edison
Southern California Gas Company
Sunline Transit Agency
Valley Industry and Commerce Association
Western Community Energy
Westside Cities Council of Governments
Western Riverside Council of Governments

Staff represented South Coast AQMD in March and/or provided updates or a presentation to the following community and educational groups and organizations:

American Lung Association
Basset High School, La Puente
California State University, Long Beach
Clean Air Coalition
Clean Healthy Air, Clean Healthy Altadena
Ganesha High School, Pomona
Glendale High School
Harbor Interfaith Services
Huntington Beach Union School District
Physicians for Social Responsibility - Los Angeles
Rancho Santiago Community College District
Santa Ana College
Sisters of Social Service, Los Angeles
STAND-LA
Strategic Concepts in Organizing and Policy Education
University of California, Irvine
University of California, Riverside
Watts Clean Air and Energy Committee

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 11

REPORT: Hearing Board Report

SYNOPSIS: This reports the actions taken by the Hearing Board during the period of March 1 through March 31, 2021.

COMMITTEE: No Committee Review

RECOMMENDED ACTION:
Receive and file.

Julie Prussack
Chairman of Hearing Board

ft

Two summaries are attached: **March 2021 Hearing Board Cases** and **Rules From Which Variances and Orders for Abatement Were Requested in 2021**. An index of South Coast AQMD Rules is also attached.

There were no appeals filed during the period of March 1 to March 31, 2021.

Report of March 2021 Hearing Board Cases

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
1. Enwave Los Angeles Inc. Case No. 3447-74 (M. Reichert)	203(b) 1100(e)(1)(B) 1146(c)(1)(I) 1146(c)(4) 1146(e)(4) 2004(f)(1)	Petitioner requested relief from the fuel limit exemption due to unforeseen COVID-19 supply issues for new boilers and unforeseen demand on existing boilers in 2021.	Opposed/Granted	RV granted commencing 3/17/21 and continuing through 12/31/21, the FCD.	Boilers 1 & 2 (each) NOx: 2.7 lbs/day CO: 17.7 lbs/day PM: .4 lb/day VOC: .3 lb/day SOx: TBD
2. Matchmaster Dyeing & Finishing, Inc. Case No. 6110-2 (B. Tomasovic)	1100(e)(1)(B)	Additional time required for the shipment and installation of replacement boilers to meet new required NOx emissions limit.	Not Opposed/Granted	SV granted commencing 4/1/21 and continuing through 6/29/21.	NOx: 11.02 lbs/day
3. New Indy Ontario, LLC Case No. 6162-2 (M. Reichert)	203(b) 2004(f)(1) 3002(c)(1)	Additional time needed to complete repairs to air pollution control equipment following an unexpected breakdown.	Not Opposed/Granted	SV granted commencing 3/18/21 and continuing through 5/17/21.	NOx: 40.79 lbs/day CO: 24.8 lbs/day
4. South Coast AQMD vs. Chiquita Canyon Landfill, LLC Case No. 6177-1 (K. Roberts)	N/A	Required status report regarding stipulated Order. The parties requested additional odor controls based on Board ordered studies.	Stipulated/Issued	Mod. O/A issued commencing 3/13/21; the Hearing Board shall continue to retain jurisdiction over this matter until 12/9/21.	N/A
5. South Coast AQMD vs. Mission Foods Case No. 5400-4 (K. Manwaring)	N/A	Status report.	No Action	The Hearing Board shall continue to retain jurisdiction over this matter until 6/30/21.	N/A
6. South Coast AQMD vs. Ralphs Grocery Company Case No. 6166-1 (K. Roberts)	N/A	Status report. The Board modified the order to change the next status hearing to 4/27/21.	Stipulated/Issued	The Hearing Board shall continue to retain jurisdiction over this matter until 6/30/21.	N/A

Acronyms

CO: Carbon Monoxide

FCD: Final Compliance Date

Mod. O/A: Modification Order for Abatement

N/A: Not Applicable

NOx: Oxides of Nitrogen

PM: Particulate Matter

RV: Regular Variance

SOx: Oxides of Sulfur

SV: Short Variance

TBD: To Be Determined

VOC: Volatile Organic Compound

Rules from which Variances and Orders for Abatement were Requested in 2021

Rules	Jan	Feb	Mar	April	May	June	July	Aug	Sept	Oct	Nov	Dec	Total Actions
203(b)	2	3	2										7
1100(e)(1)(B)			2										2
1146(c)(1)(I)			1										1
1146(c)(4)			1										1

AGENDA NO. 13

REPORT: Lead Agency Projects and Environmental Documents Received

SYNOPSIS: This report provides a listing of CEQA documents received by the South Coast AQMD between March 1, 2021 and March 31, 2021, and those projects for which the South Coast AQMD is acting as lead agency pursuant to CEQA.

COMMITTEE: Mobile Source, April 16, 2021, Reviewed

RECOMMENDED ACTION:
Receive and file.

Wayne Natri
Executive Officer

SR:SN:JW:LS:MC

CEQA Document Receipt and Review Logs (Attachments A and B) – Each month, South Coast AQMD receives numerous CEQA documents from other public agencies on projects that could adversely affect air quality. A listing of all documents received during the reporting period March 1, 2021 to March 31, 2021 is included in Attachment A. A list of active projects for which South Coast AQMD staff is continuing to evaluate or prepare comments for the December reporting period is included as Attachment B. A total of 48 CEQA documents were received during this reporting period and 25 comment letters were sent.

The Intergovernmental Review function, which consists of reviewing and commenting on the adequacy of the air quality analysis in CEQA documents prepared by other lead agencies, is consistent with the Board's 1997 Environmental Justice Guiding Principles and Environmental Justice Initiative #4. As required by the Environmental Justice Program Enhancements for FY 2002-03, approved by the Board in October 2002, each attachment notes proposed projects where South Coast AQMD has been contacted regarding potential air quality-related environmental justice concerns. South Coast AQMD has established an internal central contact to receive information on projects

with potential air quality-related environmental justice concerns. The public may contact South Coast AQMD about projects of concern by the following means: in writing via fax, email, or standard letters; through telephone communication; and as part of oral comments at South Coast AQMD meetings or other meetings where South Coast AQMD staff is present. The attachments also identify, for each project, the dates of the public comment period and the public hearing date, if applicable. Interested parties should rely on the lead agencies themselves for definitive information regarding public comment periods and hearings as these dates are occasionally modified by the lead agency.

At the January 6, 2006 Board meeting, the Board approved the Workplan for the Chairman's Clean Port Initiatives. One action item of the Chairman's Initiatives was to prepare a monthly report describing CEQA documents for projects related to goods movement and to make full use of the process to ensure the air quality impacts of such projects are thoroughly mitigated. In response to describing goods movement, CEQA documents (Attachments A and B) are organized to group projects of interest into the following categories: goods movement projects; schools; landfills and wastewater projects; airports; general land use projects, etc. In response to the mitigation component, guidance information on mitigation measures was compiled into a series of tables relative to: off-road engines; on-road engines; harbor craft; ocean-going vessels; locomotives; fugitive dust; and greenhouse gases. These mitigation measure tables are on the CEQA webpages portion of South Coast AQMD's website at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>. Staff will continue compiling tables of mitigation measures for other emission sources.

Staff focuses on reviewing and preparing comments for projects: where South Coast AQMD is a responsible agency; that may have significant adverse regional air quality impacts (e.g. special event centers, landfills, goods movement); that may have localized or toxic air quality impacts (e.g. warehouse and distribution centers); where environmental justice concerns have been raised; and which a lead or responsible agency has specifically requested South Coast AQMD review. If staff provided written comments to the lead agency as noted in the column "Comment Status," there is a link to the "South Coast AQMD Letter" under the Project Description. In addition, if staff testified at a hearing for the proposed project, a notation is provided under the "Comment Status." If there is no notation, then staff did not provide testimony at a hearing for the proposed project.

During the period of March 1, 2021 to March 31, 2021, South Coast AQMD received 48 CEQA documents. Of the 68 documents listed in Attachments A and B:

- 25 comment letters were sent;
- 20 documents were reviewed, but no comments were made;
- 19 documents are currently under review;
- 0 documents did not require comments (e.g., public notices);
- 0 documents were not reviewed; and
- 4 documents were screened without additional review.

(The above statistics are from March 1, 2021 to March 31, 2021 and may not include the most recent “Comment Status” updates in Attachments A and B.)

Copies of all comment letters sent to lead agencies can be found on South Coast AQMD’s CEQA webpage at the following internet address:

<http://www.aqmd.gov/home/regulations/ceqa/commenting-agency>.

South Coast AQMD Lead Agency Projects (Attachment C) – Pursuant to CEQA, South Coast AQMD periodically acts as lead agency for stationary source permit projects. Under CEQA, the lead agency is responsible for determining the type of CEQA document to be prepared if the proposal for action is considered to be a “project” as defined by CEQA. For example, an Environmental Impact Report (EIR) is prepared when South Coast AQMD, as lead agency, finds substantial evidence that the project may have significant adverse effects on the environment. Similarly, a Negative Declaration (ND) or Mitigated Negative Declaration (MND) may be prepared if South Coast AQMD determines that the project will not generate significant adverse environmental impacts, or the impacts can be mitigated to less than significance. The ND and MND are written statements describing the reasons why projects will not have a significant adverse effect on the environment and, therefore, do not require the preparation of an EIR.

Attachment C to this report summarizes the active projects for which South Coast AQMD is lead agency and is currently preparing or has prepared environmental documentation. As noted in Attachment C, South Coast AQMD continued working on the CEQA documents for three active projects during March.

ACTIVE SOUTH COAST AQMD LEAD AGENCY PROJECTS
THROUGH MARCH 31, 2021

PROJECT DESCRIPTION	PROPONENT	TYPE OF DOCUMENT	STATUS	CONSULTANT
Matrix Oil is proposing to: 1) install one new flare with a maximum rating of 39 million British thermal units per hour (MMBtu/hr) at Site 3 of the Sansinena Oil Field; and 2) increase the throughput of the existing flare at Site 9 from the previous permit limit of 13.65 million standard cubic feet over a 30-day period (MMSCF/30 days) to the maximum rating of 39 MMBtu/hr which is equivalent to 25.39 MMSCF/30 days.	Matrix Oil	Mitigated Negative Declaration	The consultant provided a preliminary draft Mitigated Negative Declaration which is undergoing South Coast AQMD staff review.	Yorke Engineering
Quemetco is proposing to modify existing South Coast AQMD permits to allow the facility to recycle more batteries and to eliminate the existing daily idle time of the furnaces. The proposed project will increase the rotary feed drying furnace feed rate limit from 600 to 750 tons per day and increase the amount of total coke material allowed to be processed. In addition, the project will allow the use of petroleum coke in lieu of or in addition to calcined coke, and remove one existing emergency diesel-fueled internal combustion engine (ICE) and install two new emergency natural gas-fueled ICEs.	Quemetco	Environmental Impact Report (EIR)	A Notice of Preparation/Initial Study (NOP/IS) was released for a 56-day public review and comment period from August 31, 2018 to October 25, 2018, and 154 comment letters were received. Two CEQA scoping meetings were held on September 13, 2018 and October 11, 2018 in the community. South Coast AQMD staff is reviewing the preliminary Draft EIR and has provided comments to the consultant.	Trinity Consultants
Sunshine Canyon Landfill is proposing to modify its South Coast AQMD permits for its active landfill gas collection and control system to accommodate the increased collection of landfill gas. The proposed project will: 1) install two new low emissions flares with two additional 300-hp electric blowers; and 2) increase the landfill gas flow limit of the existing flares.	Sunshine Canyon Landfill	Subsequent Environmental Impact Report (SEIR)	South Coast AQMD staff reviewed and provided comments on the preliminary air quality analysis and health risk assessment (HRA), which are being addressed by the consultant.	SCS Engineers

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 14

REPORT: Rule and Control Measure Forecast

SYNOPSIS: This report highlights South Coast AQMD rulemaking activities and public hearings scheduled for 2021.

COMMITTEE: No Committee Review

RECOMMENDED ACTION:
Receive and file.

Wayne Natri
Executive Officer

PMF:SN:SR:AK:ZS

2021 MASTER CALENDAR

The 2021 Master Calendar provides a list of proposed or proposed amended rules for each month, with a brief description, and a notation in the third column indicating if the rulemaking is for the 2016 AQMP, Toxics, AB 617 BARCT, or Other. Rulemaking efforts that are noted for implementation of the 2016 AQMP, Toxics, and AB617 BARCT are either statutorily required and/or are needed to address a public health concern. Projected emission reductions will be determined during rulemaking.

Staff continues to move forward with rulemaking, recognizing stakeholders' resource limitations due to COVID-19. To maintain social distancing while integrating public participation in the rulemaking process, staff is connecting with stakeholders using tele- and videoconferencing. Also, staff has increased the review time for working group materials to allow stakeholders additional time to prepare for meetings. Lastly, working group meetings have been restructured to be shorter in duration to better accommodate the tele- and video-conferencing format.

The following symbols next to the rule number indicate if the rulemaking will be a potentially significant hearing, will reduce criteria pollutants, or is part of the RECLAIM transition. Symbols have been added to indicate the following:

** This rulemaking is a potentially significant hearing.
of ambient air quality standards.*

This rulemaking is part of the transition of RECLAIM to a command-and-control regulatory structure.

The following table provides a list of changes since the previous Rule Forecast Report.

445*	Wood Burning Devices
Proposed Amended Rule 445 is being moved from June to 2021 To-Be-Determined. U.S. EPA has advised that due to internal policy changes, prior adopted and current proposed rule contingency measures may not be approvable. Staff is working with EPA to address their concerns which will require additional time.	
1100#	Implementation Schedule for NOx Facilities
Proposed Amended Rule 1100 is being removed from June 2021. Staff will address clarifications of units that are shutdown in a compliance advisory.	

** Potentially significant hearing*

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 MASTER CALENDAR

Month	Title and Description	Type of Rulemaking
June		
1466	Control of Particulate Emissions from Soils with Toxic Air Contaminants Proposed amendments to Rule 1466 will clarify existing provisions, update requirements for pre-approved monitors, and streamline implementation. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
August		
1134	Emissions of Oxides of Nitrogen from Stationary Gas Turbines Proposed Amended Rule 1134 will revise startup, shutdown, and malfunction requirements and monitoring, reporting, and recordkeeping provisions to reflect amendments to rules regulating Continuous Emissions Monitoring Systems. Proposed amendments may also be needed to incorporate possible comments by U.S. EPA for approval into the SIP. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 BARCT
1135	Emissions of Oxides of Nitrogen from Electricity Generating Facilities Proposed Amended Rule 1135 will revise startup, shutdown, and malfunction requirements and monitoring, reporting, and recordkeeping provisions to reflect amendments to rules regulating Continuous Emissions Monitoring Systems. Proposed amendments may also be needed to incorporate possible comments by U.S. EPA for approval into the SIP. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 BARCT

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 MASTER CALENDAR (Continued)

Month	Title and Description	Type of Rulemaking
August (Continued)		
1147.1 ^{*+##}	NO_x Reductions for Equipment at Aggregate Facilities Proposed Rule 1147.1 will establish NO _x emission limits to reflect Best Available Retrofit Control Technology for NO _x equipment at aggregate facilities and will apply to RECLAIM and non-RECLAIM facilities.	AQMP/ AB 617 BARCT
1147 ^{*+##}	NO_x Reductions from Miscellaneous Sources Proposed Amended Rule 1147 will remove equipment that will be regulated under Proposed Rule 1147.1. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176 and Socio: Ian MacMillan 909.396.3244</i>	
September		
429.1 ^{*+##}	Start-Up and Shutdown Exemption Provisions for Oxides of Nitrogen at Petroleum Refineries and Associated Facilities Proposed Rule 429.1 will establish start-up and shutdown provisions for petroleum refineries and facilities with operations associated with petroleum refineries. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1109 ^{*+##} 1109.1 ^{*+##}	Emissions of Oxides of Nitrogen from Boilers and Process Heaters in Petroleum Refineries Reduction of Emissions of Oxides of Nitrogen from Refinery Equipment Proposed Rule 1109.1 will establish NO _x emission limits to reflect BARCT for NO _x emitting equipment at petroleum refineries and related operations, and include monitoring, reporting, and recordkeeping requirements. Rule 1109 is proposed to be rescinded. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 BARCT/ AB 617 CERP
1111	Reduction of NO_x Emissions from Natural-Gas-Fired, Fan-Type Central Furnaces Proposed amendments are be needed to address upcoming implementation dates. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1304 ^{*+##}	Exemptions Proposed Amended Rule 1304 will add a narrow exemption to address co-pollutant emissions associated with compliance with a BARCT requirement to reduce NO _x emissions. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 MASTER CALENDAR *(Continued)*

Month	Title and Description	Type of Rulemaking
October		
1115	Motor Vehicle Assembly Line Coating Operations Proposed amendments will address U.S. EPA RACT requirements. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1147.2 ^{*+ #}	NOx Reductions from Metal Melting and Heating Furnaces Proposed Rule 1147.2 will establish NOx emission limits to reflect Best Available Retrofit Control Technology for metal melting and heating furnaces and will apply to RECLAIM and non-RECLAIM facilities.	AQMP/ AB 617 BARCT
1147 ^{*+ #}	NOx Reductions from Miscellaneous Sources Proposed Amended Rule 1147 will remove equipment that will be regulated under Proposed Rule 1147.2. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	
1445*	Control of Toxic Emissions from Laser Arc Cutting Proposed Rule 1445 will establish requirements to reduce metal toxic air contaminant particulate emissions from laser arc cutting. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
Regulation XX ^{*#}	RECLAIM Proposed Amended Regulation XX will address the transition of RECLAIM facilities to a command and control regulatory structure. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
November		
118.1	Public Safety Provisions for Emergency Standby Engines Proposed Rule 118.1 will address use of emergency standby engines for essential public services and other similar entities during specific local public safety situations. <i>Jillian Wong 909.396.3176; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1118*	Control of Emissions from Refinery Flares Proposed Amended Rule 1118 will incorporate revisions to further reduce flaring at refineries, provisions for clean service flares, and facility thresholds. The AB 617 Community Emission Reduction Plan has an emission reduction target to reduce flaring by 50 percent, if feasible. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 CERP

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 MASTER CALENDAR *(Continued)*

Month	Title and Description	Type of Rulemaking
November (Continued)		
1157.1	PM 10 Emission Reductions from Concrete and Asphalt Crushing and Grinding Operations Proposed Rule 1157.1 will establish requirements to minimize PM emissions from recycled concrete and asphalt crushing and grinding operations, including storage and transfer of materials. <i>Tracy Goss 909.396.3106; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1159.1	Control of NOx Emissions from Nitric Acid Units Proposed Rule 1159.1 will establish requirements to reduce NOx emissions from nitric acid units that will apply to RECLAIM and non-RECLAIM facilities. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 BARCT
1173	Control of Volatile Organic Compound Leaks and Releases from Components at Petroleum Facilities and Chemical Plants Proposed Amended Rule 1173 will further reduce emissions from petroleum and chemical plants by requiring early leak detection approaches consistent with AB 617 Community Emission Reduction Plan. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other/ AB 617 CERP
Regulation XIII ^{*#}	New Source Review Proposed Amended Regulation XIII will revise New Source Review provisions to address facilities that are transitioning from RECLAIM to a command-and-control regulatory structure. Staff may be proposing a new rule within Regulation XIII to address offsets for facilities that transition out of RECLAIM. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1470	Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines Proposed Amended Rule 1470 will address provisions for essential public services for testing engines and additional provisions, if needed, to ensure proposed amendments meet state requirements. <i>Jillian Wong 909.396.3176; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Month	Title and Description	Type of Rulemaking
December (Continued)		
1153.1	Emissions of Oxides of Nitrogen from Commercial Food Ovens Proposed amendments to Rule 1153.1 may be needed to establish NO _x BARCT limits for the RECLAIM transition. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 BARCT
1178	Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities Proposed Amended Rule 1178 will incorporate the use of more advanced early leak detection methods and improve leak detection and repair programs for storage tanks to further reduce VOC emissions. Proposed amendments will implement one of the actions in the AB 617 Community Emission Reduction Plan. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AB 617 CERP
1426.1	Control of Hexavalent Chromium Emissions from Metal Finishing Operations Proposed Rule 1426.1 will reduce hexavalent chromium emissions from chromium tanks used in metal finishing operations that do not have a chromium electroplating or chromic acid anodizing tank. <i>Jillian Wong 909.396.3176; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1435*	Control of Emissions from Metal Heat Treating Processes Proposed Rule 1435 will establish requirements to reduce point source and fugitive toxic air contaminants including hexavalent chromium emissions from heat treating processes. Proposed Rule 1435 will also include monitoring, reporting, and recordkeeping requirements. <i>Jillian Wong 909.396.3176; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics/ AB 617 CERP
2306	Emission Reductions from Indirect Sources at Railyards Proposed Rule 2306 will reduce emissions from indirect sources associated with railyards. <i>Ian MacMillan 909.396.3244; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 CERP

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 To-Be-Determined

2021	Title and Description	Type of Rulemaking
102	Definition of Terms Proposed amendments may be needed to update and add definitions, and potentially modify exemptions. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
103	Definition of Geographical Areas Proposed amendments are needed to update geographic areas to be consistent with state and federal references to those geographic areas. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
209	Transfer and Voiding of Permits Proposed amendments may be needed to clarify requirements for change of ownership and permits and the assessment of associated fees. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
219	Equipment Not Requiring a Written Permit Pursuant to Regulation II Proposed Amendments may be needed to address issues raised by U.S. EPA for approval in the State Implementation Plan. Proposed Amendments may also be needed to identify sources that are currently exempt from permitting. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
222	Filing Requirements for Specific Emission Sources Not Requiring a Written Permit Pursuant to Regulation II Proposed Amendments may be needed to require certain equipment that is currently not permitted to register the equipment to gather information and emissions data. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
223	Emission Reduction Permits for Large Confined Animal Facilities Proposed Amended Rule 223 will seek additional ammonia emission reductions from large confined animal facilities by lowering the applicability threshold. Proposed amendments will implement BCM-04 in the 2016 AQMP. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
317	Clean Air Act Non-Attainment Fees Proposed amendments may be needed to modify CAA Section 185 fees for non-attainment. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other

* Potentially significant hearing

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
1101 [#]	Secondary Lead Smelters/Sulfur Oxides Proposed Amended Rule 1101 will update SOx emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AB 617 BARCT
1105 [#]	Fluid Catalytic Cracking Units SOx Proposed Amended Rule 1105 will update SOx emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AB 617 BARCT/ AB 617 CERP
1110.2 ^{*+##}	Emissions from Gaseous- and Liquid-Fueled Engines Proposed amendments will address use of emergency standby engines at essential public services for Public Safety Power Shutoff programs. Proposed amendments may also be needed to incorporate possible comments by U.S. EPA for approval into the SIP and address monitoring provisions for new engines. <i>Jillian Wong 909.396.3176; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP/ AB 617 BARCT
1111.1	Zero-Emission Residential Furnaces Proposed Rule 1111.1 may include provisions to encourage zero emission residential furnaces that goes beyond Rule 1111 for gas-fired furnaces. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1113	Architectural Coatings Proposed amendments may be needed to clarify applicability of the rule with respect to potential delisted compounds. <i>Dave DeBoer 909.396.2329; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1119 [#]	Petroleum Coke Calcining Operations – Oxides of Sulfur Proposed Amended Rule 1119 will update SOx emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AB 617 BARCT/ AB 617 CERP

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

[#] Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
1121*	Control of Nitrogen Oxides from Residential Type, Natural-Gas-Fired Water Heaters Proposed amendments may be needed further reduce NO _x emissions from water heaters. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1121.1	Zero Emission Residential Water Heaters Proposed Rule 1121.1 may include provisions to encourage zero emission water heaters that goes beyond Rule 1121 for gas-fired water heaters. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1133.3	Emission Reductions from Greenwaste Composting Operations Proposed Amended Rule 1133.3 will seek additional VOCs and ammonia emission reductions from greenwaste and foodwaste composting. Proposed amendments will implement BCM-10 in the 2016 AQMP. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1138	Control of Emissions from Restaurant Operations Proposed Amended Rule 1138 will further reduce emissions from char boilers. <i>Tracy Goss 909.396.3106; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	AQMP
1142	Marine Tank Vessel Operations Proposed Amended Rule 1142 will address VOC and hydrogen sulfide emissions from marine tank vessel operations, applicability, noticing requirements, and provide clarifications. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1146	Emissions of Oxides of Nitrogen from Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters Proposed amendments to Rule 1146 may be needed to incorporate comments from U.S. EPA. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1146.1 [#]	Emissions of Oxides of Nitrogen from Small Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters Proposed amendments to Rule 1146.1 may be needed to clarify provisions for industry-specific categories and to incorporate comments from U.S. EPA. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other

* Potentially significant hearing

⁺ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
1148.1*	Oil and Gas Production Wells Proposed Amendments to Rule 1148.1 may be needed to further reduce emissions from operations, implement early leak detection, odor minimization plans, and enhanced emissions and chemical reporting from oil and drilling sites consistent with the AB 617 Community Emission Reduction Plan. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other/ AB 617 CERP
1148.2	Notification and Reporting Requirements for Oil and Gas Wells and Chemical Suppliers Proposed amendments to Rule 1148.2 may be needed to improve notifications of well working activities to the community and to address other issues. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other/ AB 617 CERP
1166	Volatile Organic Compound Emissions from Decontamination of Soil Proposed Amended Rule 1166 will update requirements, specifically concerning notifications and usage of mitigation plans (site specific versus various locations). <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1168	Adhesive and Sealant Applications Staff is considering possible amendments for foam insulation applications. Other amendments may also be needed. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1176	VOC Emissions from Wastewater Systems Proposed Amended Rule 1176 will clarify the applicability of the rule to include bulk terminals under definition of "Industrial Facilities," and streamline and clarify provisions. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other/ AB 617 CERP
1180	Refinery Fenceline and Community Air Monitoring Amendments to Rule 1180 may be needed to provide additional clarity and if Proposed Rule 1180.1 is adopted, provisions may be needed to provide additional clarity. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1180.1	Fenceline and Community Monitoring Proposed Rule 1180.1 may establish fenceline and community monitoring requirements for non-petroleum refineries and facilities that are not currently included in Rule 1180 – Refinery Fenceline and Community Air Monitoring. <i>Michael Krause 909.396.2706; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
1403*	Asbestos Emissions from Demolition/Renovation Activities Proposed Amended Rule 1403 will enhance implementation, improve rule enforceability, update provisions, notifications, exemptions, and align provisions with the applicable U.S. EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) and other state and local requirements as necessary. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1404	Hexavalent Chromium Emissions from Cooling Towers Amendments may be needed to provide additional clarifications to use of process water that is associated with sources that have the potential to contain chromium in cooling towers. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1405	Control of Ethylene Oxide and Chlorofluorocarbon Emissions from Sterilization or Fumigation Processes Amendments may be needed to address ethylene oxide emissions from sterilization of medical equipment. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1415 1415.1	Reduction of Refrigerant Emissions from Stationary Air Conditioning Systems, and Reduction of Refrigerant Emissions from Stationary Refrigeration Systems Proposed Amended Rules 1415 and 1415.1 will align requirements with the proposed CARB Refrigerant Management Program and U.S. EPA's Significant New Alternatives Policy Rule provisions relative to prohibitions on specific hydrofluorocarbons. <i>David De Boer 909.396.2329; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
1420	Emissions Standard for Lead Proposed Amended Rule 1420 will update requirements to address arsenic emissions to close a regulatory gap between Rule 1420 and Rule 1407 - Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations. Other provisions may be needed to address storage and handling requirements, and revise closure requirements. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
1420.1	Emission Standards for Lead and Other Toxic Air Contaminants from Large Lead-Acid Battery Recycling Facilities Proposed Amendments are needed to update applicable test methods and provide clarifications regarding submittal of a source-test protocol. Additional amendments may be needed to address monitoring and post closure requirements. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1420.2	Emission Standards for Lead from Metal Melting Facilities Proposed Amended Rule 1420.2 will update requirements to address arsenic emissions to close a regulatory gap between Rule 1420 and Rule 1407 - Control of Emissions of Arsenic, Cadmium, and Nickel from Non-Ferrous Metal Melting Operations. Additional amendments may be needed to address monitoring and post closure requirements. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1421	Control of Perchloroethylene Emissions from Dry Cleaning Systems Proposed amendments may be needed to address implementation issues. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1450*	Control of Methylene Chloride Emissions Proposed Rule 1450 will reduce methylene chloride emissions from furniture stripping and establish monitoring, reporting, and recordkeeping requirements. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; and Socio: Ian MacMillan 909.396.3244</i>	Toxics
1455	Control of Hexavalent Chromium Emissions from Torch Cutting and Welding Proposed Rule 1455 will establish requirements to reduce hexavalent chromium emissions from torch cutting and welding of chromium alloys. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1460	Control of Particulate Emissions from Metal Cutting and Shredding Operations Proposed Rule 1460 will establish housekeeping and best management practices to minimize fugitive particulate emissions from metal cutting and shredding operations. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
1466.1	Control of Particulate Emissions from Demolition of Buildings and Structures with Equipment and Processes with Metal Toxic Air Contaminants Proposed Rule 1466.1 would establish requirements to minimize PM emissions during the demolition of buildings that housed equipment and processes with metal toxic air contaminants and pollution control equipment. <i>TBD; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1472	Requirements for Facilities with Multiple Stationary Emergency Standby Diesel-Fueled Internal Combustion Engines Proposed Amended Rule 1472 will remove provisions that are no longer applicable, update and streamline provisions to reflect the 2015 Health Risk Assessment Guidelines, and assess the need for a Compliance Plans. <i>Michael Morris 909.396.3282; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Toxics
1480	Toxics Monitoring Proposed amendments to Rule 1480 may be needed to remove fee provisions if they are incorporated in Regulation III. <i>Jillian Wong 909.396.3176; CEQA: Jillian Wong 909.396.3176 and Socio: Ian MacMillan 909.396.3244</i>	Toxics/ AB 617 CERP
2202*	On-Road Motor Vehicle Mitigation Options Proposed Amended Rule 2202 will streamline implementation for regulated entities, as well as reduce review and administration time for South Coast AQMD staff. Concepts may include program components to facilitate achieving average vehicle ridership (AVR) targets. <i>Carol Gomez 909.396.3264; CEQA: Jillian Wong 909.396.3176; Socio: Ian MacMillan 909.396.3244</i>	Other
Regulation XXIII* ⁺	Facility-Based Mobile Sources Proposed rules within Regulation XXIII would reduce emissions from indirect sources (e.g., mobile sources that visit facilities). <i>Ian MacMillan 909.396.3244; CEQA: Jillian Wong 909.396.3176 Socio: Ian MacMillan 909.396.3244</i>	AQMP/ Toxics/ AB 617 CERP

* Potentially significant hearing

2021 To-Be-Determined (*Continued*)

2021	Title and Description	Type of Rulemaking
Regulation II, III, IV, XIV, XI, XIX, XXIII, XXIV, XXX and XXXV	Various rule amendments may be needed to meet the requirements of state and federal laws, implement OEHHA's 2015 revised risk assessment guidance, changes from OEHHA to new or revised toxic air contaminants or their risk values, address variance issues, emission limits, technology-forcing emission limits, conflicts with other agency requirements, to abate a substantial endangerment to public health, additional reductions to meet SIP short-term measure commitments, to address issues raised by U.S. EPA or CARB for the SIP, compliance issues that are raised by the Hearing Board, or regulatory amendments needed as a result of the COVID-19 pandemic. Amendments to existing rules may be needed to address use of materials that contain chemicals of concern. The associated rule development or amendments include, but are not limited to, South Coast AQMD existing, or new rules to implement the 2012 or 2016 AQMP measures. This includes measures in the 2016 AQMP to reduce toxic air contaminants or reduce exposure to air toxics from stationary, mobile, and area sources. Rule adoption or amendments may include updates to provide consistency with CARB Statewide Air Toxic Control Measures, or U.S. EPA's National Emission Standards for Hazardous Air Pollutants. Rule adoption or amendments may be needed to implement AB 617 including but not limited to BARCT rules, Community Emission Reduction Plans prepared pursuant to AB 617, or new or amended rules to abate a public health issue identified through emissions testing or ambient monitoring.	Other/ AQMP/ Toxics/ AB 617 BARCT/ AB 617 CERP

* *Potentially significant hearing*

+ *Reduce criteria air contaminants and assist toward attainment of ambient air quality standards*

Part of the transition of RECLAIM to a command-and-control regulatory structure

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 15

REPORT: Status Report on Major Ongoing and Upcoming Projects for Information Management

SYNOPSIS: Information Management is responsible for data systems management services in support of all South Coast AQMD operations. This action is to provide the monthly status report on major automation contracts and planned projects.

COMMITTEE: Administrative, April 9, 2021, Reviewed

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

RMM:MAH:XC:dc

Background

Information Management (IM) provides a wide range of information systems and services in support of all South Coast AQMD operations. IM's primary goal is to provide automated tools and systems to implement Board-approved rules and regulations, and to improve internal efficiencies. The annual Budget and Board-approved amendments to the Budget specify projects planned during the fiscal year to develop, acquire, enhance, or maintain mission-critical information systems.

In light of COVID-19 and the related budget impact, we are evaluating all of our projects and delaying non-critical projects as long as possible.

Summary of Report

The attached report identifies the major projects/contracts or purchases that are ongoing or expected to be initiated within the next six months. Information provided for each project includes a brief project description and the schedule associated with known major milestones (issue RFP/RFQ, execute contract, etc.).

Attachment

Information Management Status Report on Major Ongoing and Upcoming Projects During the Next Six Months

ATTACHMENT
May 7, 2021 Board Meeting
Status Report on Major Ongoing and Upcoming Projects for Information Management

Project	Brief Description	Estimated Project Cost	Completed Actions	Upcoming Milestones
Office 365 Implementation	Acquire and implement Office 365 for South Coast AQMD staff	\$350,000	<ul style="list-style-type: none"> • Pre-assessment evaluation and planning completed • Board approved funding on October 5, 2018 • Developed implementation and migration plan • Acquired Office 365 licenses • Implemented Office 365 email (Exchange) and migrated all users • Trained staff in Office 365 Pro Plus desktop software • Implemented Office 365 Pro Plus, Office Web, and OneDrive for Business • Implemented Microsoft Teams 	<ul style="list-style-type: none"> • Implement Office 365 internal website (SharePoint) and migrate existing content
Cybersecurity Assessment	Perform a cybersecurity risk assessment that will identify any potential cybersecurity risks and recommend changes to align with industry standards and peer organizations	\$100,000	<ul style="list-style-type: none"> • RFP released March 5, 2021 	<ul style="list-style-type: none"> • Recommend Contract Award June 4, 2021 • Complete Cybersecurity Assessment September 30, 2021
Renewal of OnBase Software Support	Authorize the sole source purchase of OnBase software subscription and support for one year	\$140,000 (included in proposed FY 2021-22 budget)		<ul style="list-style-type: none"> • Request Board approval May 7, 2021 • Execute contract July 15, 2021

Project	Brief Description	Estimated Project Cost	Completed Actions	Upcoming Milestones
Permitting System Automation Phase 2	Enhanced Web application to automate filing of permit applications, Rule 222 equipment and registration for IC engines; implement electronic permit folder and workflow for internal South Coast AQMD users	\$525,000	<ul style="list-style-type: none"> • Board approved initial Phase 2 funding December 2017 • Board approved remaining Phase 2 funding October 5, 2018 • Completed report outlining recommendations for automation of Permitting Workflow • Developed application submittals and form filing for first nine of 32 400-E forms • Completed application submittals and form filing for 23 types of equipment under Rule 222 ready for User Testing • Deployed to production top three most frequently used Rule 222 forms: Negative Air Machines, Small Boilers, and Charbroilers • Completed requirements gathering for Phase II of the project (an additional 10 400-E-XX forms) • User Acceptance Testing and Deployment to production of Emergency IC Engines Form (EICE-RE) completed • Development of Phase II additional 12 400-E-XX forms completed 	<ul style="list-style-type: none"> • Complete User Acceptance Testing and Deployment to Production of first ten (10) 400-E-XX forms • Complete User Acceptance Testing and Deployment to Production of remaining 22 Rule 222 forms • Complete User Acceptance Testing and Deployment to Production of Phase II additional twelve (12) 400-E-XX forms
Phone System Upgrade	Upgrade components of the agency Cisco Unified Communications System that are past end of support	\$190,000 (not included in FY 2020-21 Budget)		<ul style="list-style-type: none"> • Request Board Approval to Release RFQ June 4, 2021 • Recommend Award September 3, 2021 • Complete upgrade December 30, 2021

Project	Brief Description	Estimated Project Cost	Completed Actions	Upcoming Milestones
South Coast AQMD Mobile Application Enhancements	Enhancement of Mobile application to incorporate FIND	\$60,000	<ul style="list-style-type: none"> • Vision and scope completed 	<ul style="list-style-type: none"> • Task Order issuance
AQ-SPEC Cloud Platform Phase II	Integrate separate data systems into the AQ-SPEC cloud-based platform to manage data and build interactive data visualizations and data dashboards for web-based viewing	\$313,350	<ul style="list-style-type: none"> • Project charter released • Task order issued, evaluated and awarded • Project kickoff completed 	<ul style="list-style-type: none"> • Requirement gathering
PeopleSoft Electronic Requisition	This will allow submittal of requisitions online, tracking multiple levels of approval, electronic archival, pre-encumbrance of budget, and streamlined workflow	\$75,800	<ul style="list-style-type: none"> • Project charter released • Task order issued, evaluated and awarded • Requirement gathering and system design completed • System setup and code development and user testing for Information Management completed • System setup and code development and User Acceptance Testing completed for Administrative and Human Resources completed • System setup for Technology Advancement Office completed 	<ul style="list-style-type: none"> • Deploy to IM and AHR Divisions • Training and Integrated User Testing for other divisions

Project	Brief Description	Estimated Project Cost	Completed Actions	Upcoming Milestones
Proposition 1B	Development of an online Grant Management System (GMS) portal for the Proposition 1B Program - Goods Movement Emission Reduction Program – Heavy-Duty Trucks	\$75,200	<ul style="list-style-type: none"> • Draft Charter Document issued • Project Initiation completed • Task order issued • Deployed Phase I to production – applicant/third party registration and application submission • Developed additional forms and customized GMS look and feel • User Acceptance Testing for additional forms completed 	<ul style="list-style-type: none"> • Develop AQMD staff evaluation module
Source Test Tracking System	Online Source Test Tracking System will keep track of timelines and quantify the number of test protocols and reports received. System will provide an external online portal to submit source testing protocols and reports, track the review process, and provide integration to all other business units. It will also provide an external dashboard to review the status of a submittal	\$250,000	<ul style="list-style-type: none"> • Project Charter approved • Project Initiation completed • Task Order issued • Project Kick-off completed • User requirements gathering for internal users Developed Full Business Process Model • Reviewed proposed automation with EQUATE group completed • Proposal for system development approved • Completed development of Sprint 1 of the Source Test Protocol and Report Tracking System • Completed development of Sprints 2, 3, 4, and 5 	<ul style="list-style-type: none"> • Develop Sprints 6, 7, and 8

Project	Brief Description	Estimated Project Cost	Completed Actions	Upcoming Milestones
VW Environmental Mitigation Action Plan Project	CARB has assigned South Coast AQMD to develop web applications for: Zero-Emission Class 8 Freight and Port Drayage Truck Project and Combustion Freight and Marine Project. The agency is also responsible for maintaining a database that will be queried for reporting	\$355,000	<ul style="list-style-type: none"> • Draft Charter Document issued • Project Initiation completed • Task order issued • Deployed Phase I to production • Phase II to production – Messaging, Evaluation, and Administration • Developed evaluation module and calculation module completed • Phase III - ZE Class 8 Application deployed to production • Developed Phase III – Ranking 	<ul style="list-style-type: none"> • User Acceptance Testing for Phase III – Ranking, Contracting, and Inspection
Lower-Emission School Bus Program	Development of an online Grant Management System (GMS) portal for the Lower-Emission School Bus Incentive Program	\$110,500	<ul style="list-style-type: none"> • Draft Charter Document issued • Project Initiation completed • Task order issued • Phase I deployed to production – applicant/third party registration and application submission • Customize GMS look and feel • Phase II AQMD staff can create new application on-line for applications received by mail 	<ul style="list-style-type: none"> • Develop staff evaluation module • Phase II Calculation, Ranking, Messaging, and Contracting

Projects that have been completed within the last 12 months are shown below.	
Completed Projects	
Project	Date Completed
Renewal of HP Server Maintenance & Support	April 30, 2021
Replace Your Ride Fund Management and Finance Integration	March 20, 2021
AER enhancements for reporting year 2020	December 30, 2020
South Coast AQMD Mobile Application Enhancements – Gridded AQI	December 9, 2020
Lower Emission School Bus Online Application Filing and Grant Management	December 9, 2020
Rule 1180 Fence Line Monitoring Web Site Enhancements II	November 6, 2020
Proposition 1B Online Application Filing and Grant Management Portal	November 6, 2020
CLASS Database Software Licensing	October 16, 2020
Flare Event Notification – Rule 1118 Phase II	October 14, 2020
Volkswagen Environmental Mitigation Administration Zero Emission Class 8	August 18, 2020
Ingres Actian X database migration	August 17, 2020
Rule 1403 Enhancement	July 1, 2020
Legal Office System	June 17, 2020
Document Conversion Services	June 30, 2020
Oracle PeopleSoft Software Support	June 5, 2020
Renewal of OnBase Software Support	May 1, 2020
Public Facing Permit Application Status Dashboard	May 1, 2020
Mobile Application Enhancement – Hourly Forecast	April 29, 2020
Renewal of HP Server Maintenance & Support	April 30, 2020
Rule 1180 Fence Line Monitoring Web Site Enhancements	April 3, 2020

Budget and Economic Outlook Update

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 17

REPORT: Administrative Committee

SYNOPSIS: The Administrative Committee held a meeting remotely, Friday, April 9, 2021. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Dr. William A. Burke, Chair
Administrative Committee

drw

Committee Members

Present: Dr. William A. Burke, Chair
Mayor Pro Tem Ben Benoit, Vice Chair
Mayor Pro Tem Michael Cacciotti

Call to Order

Chairman Burke called the meeting to order at 10:00 a.m.

DISCUSSION ITEMS:

1. **Board Members' Concerns:** There were no concerns to report.
2. **Chairman's Report of Approved Travel:** There was no travel to report.
3. **Report of Approved Out-of-Country Travel:** There was no travel to report.
4. **Review April 2, 2021 Governing Board Agenda:** There were no comments to report.
5. **Update on South Coast AQMD Inclusion, Diversity and Equity Efforts:**
Anissa (Cessa) Heard-Johnson, Diversity, Equity & Inclusion Officer, reported

on events this month. An Anti-Hate Rally, which had almost 300 participants, was in response to the anti-Asian hate movement and hate incidents taking place. The event included statements from our affinity groups to show solidarity. At a Women's History Month event, Mayor Mitchell and CARB Chair Liane Randolph participated in a panel discussion on women in the environmental justice movement. There was also an Interrupting Bias in the Workplace Workshop presentation for staff.

6. **Budget and Economic Outlook Update:** Jill Whynot, Chief Operating Officer, reported that there were more permits incoming last week than the same week in the previous year.
7. **Status Report on Major Ongoing and Upcoming Projects for Information Management:** Ron Moskowitz, Chief Information Officer/Information Management, reported that on March 24 they conducted a bidders conference for a cyber security assessment RFP and had nearly 100 attendees from about 50 different companies. The proposals are due today and staff will finalize recommendations over the next few weeks. He reported that staff finished enhancing the grant management system for Prop 1B and Cleaner School Bus Incentive programs enabling more efficient evaluation and approval of applications, and South Coast AQMD now has over 45,000 users on our mobile application. He also announced that he was inducted into the 2021 U.S. CIO Hall of Fame.

ACTION ITEMS:

8. **Recognize Revenue, Appropriate and Transfer Funds for Air Monitoring Programs, Issue an RFQ and Purchase Orders for Air Monitoring Equipment and One Vehicle, and Execute a Contract:** Jason Low, Assistant Deputy Executive Officer, Science & Technology Advancement, reported that South Coast AQMD can expect to receive grant funds of around \$700,000 from U.S. EPA for the PM 2.5 monitoring program and up to \$2.1 million from the U.S. Government for the Enhanced Particulate Monitoring program. Funds have been previously recognized by the Board for the Science to Achieve Results (STAR) program. These actions are to recognize this revenue and to appropriate funds to the PM 2.5 and Enhanced Particulate Monitoring Programs; transfer up to \$350,000 between major objects in the STA budget to rely on expenditures for the Enhanced Particulate Monitoring Program and up to \$125,000 for the STAR program; issue RFQ for air monitoring equipment and purchase orders and one vehicle; and execute a contract for data tools for citizen scientists.

Moved by Cacciotti; seconded by Benoit, unanimously approved.

Ayes: Burke, Benoit, Cacciotti
Noes: None
Absent: None

9. **Authorize purchase of OnBase Software Support:** Mr. Moskowitz reported that this item is to purchase a software subscription and support for an electronic document management system. The funds are contingent on approval of the fiscal year 2021/22 budget.

Moved by Benoit; seconded by Cacciotti, unanimously approved.

Ayes: Burke, Benoit, Cacciotti
Noes: None
Absent: None

10. **Adopt Executive Officer's FY 2021-22 Proposed Goals and Priority Objectives, and Proposed Budget:** Sujata Jain, Chief Financial Officer, Finance, requested that this item be waived, as it will be discussed at the Governing Board Budget Workshop. The Committee agreed.

11. **Execute Contract to Upgrade Real-time Public Alerts of Hydrogen Sulfide Events in the Coachella Valley:** Jo Kay Ghosh, Health Effects Officer, Planning, Rule Development & Area Sources, reported that this item is to execute a contract to continue the hydrogen sulfide monitoring network near the Salton Sea. Part of the contract is to provide technical upgrades that will enhance the performance of the system, which in addition to the monitoring also include an email subscription system, maintaining the web page to provide the public data, and provide email notifications to subscribers. The recommended action is to execute the contract with Sonoma Technology who is the existing contractor for the system, not to exceed \$77,300 from the AES Settlement Fund.

Vice Chair Benoit said this is important and noted a recent thunderstorm that pushed odors all the way out to Orange County and Los Angeles County. He asked that a press release be issued when the email system is in place. He also asked if this can be integrated into our app.

Moved by Benoit; seconded by Cacciotti, unanimously approved.

Ayes: Burke, Benoit, Cacciotti
Noes: None
Absent: None

12. **Establish a List of Prequalified Counsel to Represent and Advise South Coast AQMD on Legal Matters Related to Environmental Law and General Matters:** Bayron T. Gilchrist, General Counsel, Legal, reported that this item is to establish two lists of pre-qualified Counsel. One is to represent South Coast AQMD in environmental law matters and one is to represent South AQMD in general governmental matters.

Moved by Benoit; seconded by Cacciotti, unanimously approved.

Ayes: Burke, Benoit, Cacciotti
Noes: None
Absent: None

WRITTEN REPORTS:

13. **Local Government & Small Business Assistance Advisory Group Minutes for the February 12, 2021:** The report was acknowledged and received.

OTHER MATTERS:

14. **Other Business:** There was no other business.
15. **Public Comment:** There was no public comment.
16. **Next Meeting Date:** The next regular Administrative Committee meeting is scheduled for April 9, 2021 at 10:00 a.m.

Adjournment

The meeting adjourned at 10:15 a.m.

Attachment

Local Government & Small Business Assistance Advisory Group Minutes for February 12, 2021

South Coast Air Quality Management District

21865 Copley Drive, Diamond Bar, CA 91765-4178
(909) 396-2000 • www.aqmd.gov

LOCAL GOVERNMENT & SMALL BUSINESS ASSISTANCE ADVISORY GROUP FRIDAY, FEBRUARY 12, 2021 MEETING MINUTES

MEMBERS PRESENT:

Mayor Pro Tempore Ben Benoit, LGSBA Chairman (Board Member)
Supervisor Janice Rutherford (Board Member)
Felipe Aguirre
Mayor Rachelle Arizmendi, City of Sierra Madre
Paul Avila, P.B.A. & Associates
Geoffrey Blake, Metal Finishers of Southern California
Todd Campbell, Clean Energy
Bill LaMarr, California Small Business Alliance
Rita Loof, RadTech International
Eddie Marquez, Roofing Contractors Association
David Rothbart, Los Angeles County Sanitation Districts

MEMBERS ABSENT:

LaVaughn Daniel, DancoEN
John DeWitt, JE DeWitt, Inc.

OTHERS PRESENT:

Mark Abramowitz
Harvey Eder, Public Solar Power Coalition
Frank Forbes
Thomas Gross, Board Member Consultant (*Benoit*)
Debra Mendelsohn, Board Member Consultant (*Rutherford*)
Dan McGivney, SoCal Gas
Mark Taylor, Board Member Consultant (*Rutherford*)

SOUTH COAST AQMD STAFF:

Jill Whynot, Chief Operating Officer
Derrick Alatorre, Deputy Executive Officer
Anissa Heard-Johnson, Deputy Executive Officer
Sarah Rees, Deputy Executive Officer
Victor Yip, Assistant Deputy Executive Officer
Daphne Hsu, Senior Deputy District Counsel
Mark Henninger, Information Technology Manager
Zorik Pirveysian, Planning & Rules Manager
Hugh Heney, Air Quality Analysis & Compliance Supervisor
Brian Roche, Systems & Programming Supervisor
Anthony Tang, Information Technology Supervisor

Van Doan, Air Quality Specialist
Elaine-Joy Hills, Air Quality Specialist
Paul Wright, Senior Information Technology Specialist

Agenda Item #1 - Call to Order/Opening Remarks

Supervisor Janice Rutherford called the meeting to order at 11:30 a.m.

Agenda Item #2 – Approval of January 15, 2021 Meeting Minutes/Review of Follow-Up/Action Items

Supervisor Rutherford called for approval of the January 15, 2021 meeting minutes. The minutes were approved unanimously.

Agenda Item #3 – Review of Follow Up/Action Items

Mr. Alatorre provided a response to the action items from the previous meeting and indicated that these items will be addressed during today's Air Quality Management Plan (AQMP) presentation.

Agenda Item #4 – Update on recent Air Quality Management Plan (AQMP) Related Activities

Mr. Zorik Pirveysian provided an update of the South Coast Air Basin Attainment Plan for the 2006 24-hour Particulate Matter_{2.5} (PM_{2.5}) Standard, the Coachella Valley Extreme Area Plan for the 1997 8-hour Ozone Standard, and the 2022 AQMP development.

Mr. David Rothbart indicated that the 2016 AQMP described incentive funding needed to achieve emissions reductions. He stated that federal sources are unlikely to be clean enough to get to attainment and expressed concern about the unintended consequences of Section 185 of the Clean Air Act (CAA) that would be placed on major stationary sources for non-attainment. Mr. Rothbart indicated that Rule 317 – Clean Air Act Non-Attainment Fees might not be able to offset future penalties and would like to know how it would be possible to maintain the ability to avoid those consequences. Additionally, the California Air Resources Board (CARB) has a focus on electrification of all sources; however, it might not occur quickly enough for attainment. It appears that CARB is not looking at transition fuels and technology for immediate emissions reductions and would like to find ways to continue discussions with CARB to foster transition fuels and achieve reductions as soon as possible. Mr. Pirveysian stated that the 2016 AQMP specified a reduction of 108 tons/day of nitrogen oxide (NO_x) by 2023, which is a challenge and needs regulations or programs to achieve it. Subsequently, there was a Contingency Measures Plan (CMP) to address the 108 tons/day NO_x reduction. The CMP specified requirements for South Coast Air Quality Management District (South Coast AQMD), CARB, and the Environmental Protection Agency (EPA). Approximately 60-70 tons/day were identified to be from federal sources, such as ocean-going vessels, aircrafts, and trucks, to achieve that level of reductions. Without those emissions reductions, it would be impossible to demonstrate attainment. There is a fee equivalency provision in Rule 317 allowing offset so that the major sources don't have to pay the fee. There must be a reductions surplus to demonstrate equivalency on money spent on projects that would offset fees that major sources have to pay. In terms of near-term reductions as part of the mobile source strategies, CARB is in the process of updating the mobile source strategy and will have additional short-term reductions, such as maintenance or other programs. Dr. Sarah Rees indicated that South Coast AQMD continues to raise this issue with EPA and there are ongoing discussions. As for CARB, there is a change in leadership and we will continue to have discussions on the need to get to near-zero and on how to achieve immediate reductions. Mr. Rothbart commented on the focus on electrification and offered assistance, if needed.

Mr. Bill LaMarr expressed support for Mr. Rothbart's comments and recommended to communicate with the new administration and EPA to address sources in their jurisdiction so that businesses are not affected by Section 185. Mr. Alatorre indicated there is an ongoing effort to alert Congress of upcoming mandates and ask for assistance when needed, such as incentive funding or authority. Mr. LaMarr stated that it's only been one month since the inauguration and that previous visits were prior to that and asked

what could be done now. Mr. Alatorre replied that there is ongoing communication and the earliest return to Washington D.C. would be later this year. Chair Benoit asked to check if congressional members and the administration representatives are open to other types of meetings and suggested having virtual meetings with them, if possible. Mr. Alatorre stated that there are meetings with the members from our delegation and will work on meetings with the administration representatives. Dr. Rees indicated that the administration is in the transition period and does not have an assigned administrator yet and suggested waiting for assignment of a permanent representative. Mr. LaMarr commented that it is the time to plan. Mr. Alatorre replied that we have been prepared for 10 years and continue to do so. He also mentioned that Senator Padilla is from our region and is aware of the issues and we will have a strong voice on the Senate Committee on Environment and Public Works (EPW), which EPA reports to. We will utilize every tool we have to ensure that the administration and legislative bodies hear from us.

Ms. Rita Loof referenced slide #10 and indicated that RadTech previously provided comment on the Reasonable Available Control Technology (RACT) and that South Coast AQMD relied on outdated documents from EPA. Ms. Loof hopes the science behind these documents is updated. Mr. Pirveysian stated that a letter was submitted to EPA requesting to update the guidelines. When considering a RACT and Best Available Control Technology (BACT) analysis, the latest regulations adopted by other agencies in California or the United States (US) are reviewed to provide a benchmark of the latest technologies that other agencies have considered.

Mr. Todd Campbell commented that proposed Rule 2305 – Warehouse Indirect Source Rule would be more effective if there is more flexibility, particularly to include near-zero yard tractors. The Port of Los Angeles has 4-5 BYD Motors tractors, which don't work. If these yard tractors don't work and near-zero tractors have no point values, the ports might turn to diesel-fueled equipment.

Mr. Harvey Eder provided comment on solar power.

Agenda Item #5 – Compliance & Enforcement (C&E) Programs

Mr. Hugh Heney provided information on Compliance & Enforcement (C&E) programs, including information on inspections and enforcement actions. Mr. Brian Roche provided an overview of the Facility Information Detail (FIND) online tool.

Mr. Rothbart indicated that having routine dialog with the regulated community is very helpful and suggested having additional training courses available, possibly coordinated by a permit streamlining and permitting committee. Mr. Heney indicated that management is available to discuss training options.

Ms. Loof referenced slide #7 and asked if the training program provides small businesses with resources and information to prevent violations. If not, Ms. Loof requested for consideration. Mr. Heney stated that in the past, staff would host events at various locations within South Coast AQMD and provided assistance to small businesses. Ms. Jill Whynot indicated that there are programs for small business assistance, training courses, and website updates. There are limited resources, but South Coast AQMD strives for, continues to improve and will consider the suggested ideas. Ms. Loof suggested having links available on the website for businesses as they are reluctant to reach out to inspectors for assistance and having access to other community contacts and resources.

Mr. LaMarr referenced revenue data presented at an earlier meeting and slide #6 on air quality complaints and asked if the revenue from penalties decreased due to less inspections or high compliance

rate. Ms. Whynot replied that inspectors continue to conduct inspections, modified to meet safety requirements. As for penalties, it is difficult to determine what it is driven by as there is a large number of small penalties, but 95% of the total amount could be from 3-4 large penalties. Staff is always striving to help improve compliance rates, which is generally high. Mr. LaMarr agreed that there is a high compliance rate. Mr. LaMarr asked how long a Notice of Violation (NOV) or Notice to Comply (NC) is available on the FIND program. Mr. Roche replied that they will remain on FIND indefinitely. Mr. LaMarr referenced slide #3 and asked if a mobile fuel truck would be classified as a facility. Ms. Whynot replied that a mobile fuel truck does not meet the traditional definition of a facility, but may be subject to permitting requirements. South Coast AQMD has the authority to regulate sources even when permits are not required, such as sources subject to Rule 1113 – Architectural Coatings.

Mr. Geoffrey Blake indicated that there was an ombudsman in the past and asked if there will be one in the future. Mr. Alatorre replied that he is the Public Advisor, who is the point of contact for the public and businesses.

Agenda Item #6 –Monthly Report on Small Business Assistance Activities

No comments.

Agenda Item #7 - Other Business

None.

Agenda Item #8- Public Comment

Mr. Eder provided additional comments on solar power.

Agenda Item #9 – Next Meeting Date

The next regular Local Government & Small Business Assistance Advisory Group meeting is scheduled for Friday, March 12, 2021 at 11:30 a.m.

Adjournment

The meeting adjourned at 1:01 p.m.

 [Back to Agenda](#)

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 18

REPORT: Legislative Committee

SYNOPSIS: The Legislative Committee held a meeting remotely on Friday, April 9, 2021. The following is a summary of the meeting.

Agenda Item	Recommendation/Action
AB 365 (O'Donnell) – Sales and use taxes: exclusion: zero-emission and near-zero-emission drayage trucks	Support
AB 762 (Lee) – Hazardous emissions and substances: school sites: private and charter schools	Support
AB 1001 (C. Garcia) – Environmental permitting and air pollution	Work With Author
SB 596 (Becker) – Environmental permitting and air pollution	Oppose Unless Amended
HR 848 (Thompson) – Growing Renewable Energy and Efficiency Now (GREEN) Act of 2021	Work With Author
HR 1512 (Pallone, Tonko, Rush) – Climate Leadership and Environmental Action for our Nation's (CLEAN) Future Act	Work With Author

RECOMMENDED ACTION:

Receive and file this report, and approve agenda item as specified in this letter.

Michael A. Cacciotti, Chair
Legislative Committee

Committee Members

Present: Mayor Pro Tem Michael A. Cacciotti/Chair
Council Member Joe Buscaino/Vice Chair
Senator Vanessa Delgado (Ret.)
Supervisor V. Manuel Perez
Supervisor Janice Rutherford

Absent: Dr. William A. Burke

Call to Order

Chair Cacciotti called the meeting to order at 9:00 a.m.

ACTION ITEMS:

1. Recommend Position on Federal and State Bills:

AB 365 (O'Donnell) – Sales and use taxes: exclusion: zero-emission and near-zero-emission drayage trucks

Philip Crabbe, Public Affairs Manager, Legislative, Public Affairs & Media (LPAM), presented AB 365 (O'Donnell) which would create a state sales and use tax exemption for the purchase of a new or used zero or near-zero emission drayage truck that qualifies for specific emission reduction incentive programs.

Staff proposes an amendment to the bill that would allow the sales tax exemption to apply to new and used zero- and near-zero-emission drayage trucks that qualify for any applicable incentive program.

Staff recommended a “SUPPORT” position on this bill.

Moved by Delgado; seconded by Rutherford; unanimously approved

Ayes: Buscaino, Cacciotti, Delgado, Perez, Rutherford

Noes: None

Abstain: None

Absent: Burke

There was no public comment.

AB 762 (Lee) – Hazardous emissions and substances: school sites: private and charter schools

Mr. Crabbe presented AB 762 (Lee) which would require:

- Charter and private schools to follow the same siting requirements as public schools when evaluating a schoolsite for potential hazardous substances, emissions, or waste.

- Evaluation of a potential charter school site to follow the same CEQA process as public school site evaluations.

The bill is sponsored by the Bay Area AQMD and South Coast AQMD took a SUPPORT position on a similar bill last year that died in the Legislature.

Supervisor Perez asked if the Bay Area AQMD requested South Coast AQMD's support for this bill. Wayne Nastri, Executive Officer, confirmed the request.

Staff recommended a "SUPPORT" position on this bill.

Moved by Perez; seconded by Buscaino; unanimously approved

Ayes: Buscaino, Cacciotti, Delgado, Perez, Rutherford

Noes: None

Abstain: None

Absent: Burke

There was no public comment.

AB 1001 (C. Garcia) – Environmental permitting and air pollution

Mr. Crabbe presented AB 1001 (C. Garcia) which would require:

- Permitting agencies, including air districts, to deny new permits and permit renewals for stationary sources in disadvantaged communities, or apply conditions on that source, if they find that permit approval would cause adverse cumulative environmental or public health stressors in the overburdened community higher than those borne by other communities.
- Expansion of BARCT and BACT to all emitters. It would also require air districts that are nonattainment areas for one or more air pollutants to expedite adoption of BARCT and BACT requirements.

Staff recommended a "WORK WITH AUTHOR" position to seek amendments as outlined in the bill analysis.

Supervisor Perez inquired about existing supporters and opponents of the bill. Mr. Crabbe responded that he is not aware of any support or opposition.

Supervisor Perez asked about the motivation for the bill. Mr. Crabbe responded that Assembly Member Garcia modeled this bill after New Jersey legislation that sought to increase protections in disadvantaged communities. Supervisor Perez expressed concerns about the bill.

Senator Delgado echoed concerns about the legislation and pointed out that there is no funding mechanism to pay for the new costs created by the bill for air districts.

Council Member Buscaino commented that despite complications with the bill, he understands the spirit of the legislation to increase protections in disadvantaged communities. He agrees with the recommendation to “WORK WITH AUTHOR.”

Mr. Nastri reminded the committee that South Coast AQMD works regularly with Assembly Member Garcia on air quality issues, such as AB 617 program and funding needs. The recommended staff position would create an opportunity to better inform and work with the author.

Staff recommended a “WORK WITH AUTHOR” position on this bill.

Moved by Perez; seconded by Delgado
Ayes: Buscaino, Cacciotti, Delgado, Perez
Noes: Rutherford
Abstain: None
Absent: Burke

David Rothbart, Southern California Alliance of Publicly Owned Treatment Works, expressed concerns about this bill and impacts on essential public services which cannot relocate.

SB 596 (Becker) – Greenhouse gases: cement and concrete production.

Mr. Crabbe presented SB 596 (Becker) which would require CARB to:

- Develop a strategy for California’s cement and concrete sector to reduce the carbon intensity of their products used in the state.
- Select one or more communities located adjacent to a cement/concrete plant to become an AB 617 community.

This bill negatively impacts air districts' local authority and autonomy to select and recommend future AB 617 communities. The bill requirement to locate one or more future AB 617 communities near cement/concrete facilities could put a strain on already limited program and funding resources and cause disadvantaged communities with more compelling needs to either experience a delay or not be selected.

Staff proposed an amendment to the bill to delete the requirement that one or more selected AB 617 community(ies) should be located adjacent to a cement/concrete plant.

Supervisor Perez asked if CARB has a position on this bill. Mr. Crabbe responded that generally CARB does not take positions on State legislation.

Senator Delgado inquired about the impact of an “OPPOSE” position on this bill. Mr. Crabbe responded that an “OPPOSE UNLESS AMENDED” position would highlight that South Coast AQMD has a concern with certain provisions of the bill.

Staff recommended an “OPPOSE UNLESS AMENDED” position on this bill.

Moved by Perez; seconded by Buscaino; unanimously approved

Ayes: Buscaino, Cacciotti, Delgado, Perez, Rutherford

Noes: None

Abstain: None

Absent: Burke

There was no public comment.

HR 848 (Thompson) – Growing Renewable Energy and Efficiency Now (GREEN) Act of 2021

Lisa Tanaka O’Malley, Senior Public Affairs Manager, LPAM, presented HR 848 authored by Ways and Means Subcommittee Chairman Representative Mike Thompson. This bill may be included in the larger Transportation and Infrastructure package. The bill would enact tax incentives to reduce greenhouse gas emissions (GHGs) with co-benefits for air quality, such as:

- Extends, increases and modifies existing tax credits for renewable energy, alternative fuels, residential and commercial buildings, energy efficient appliances and equipment, and vehicles and infrastructure.
- Modifies and increases existing tax incentives for passenger vehicles and creates a new refundable credit for buyers of used plug-in electric cars.
- Creates a tax credit for manufacturers of vehicles over 14,000 pounds and extends the existing program for qualified fuel cell vehicles.
- Restores the exclusion of employer benefits related to bicycle commuting for taxable income.

Staff recommended a “WORK WITH AUTHOR” position on this bill.

Moved by Buscaino; seconded by Perez; unanimously approved

Ayes: Buscaino, Cacciotti, Delgado, Perez, Rutherford

Noes: None

Abstain: None

Absent: Burke

There was no public comment.

HR 1512 (Pallone, Tonko, Rush) – Climate Leadership and Environmental Action for our Nation’s (CLEAN) Future Act

Ms. Tanaka O’Malley, presented HR 1512 authored by Energy and Commerce Committee Chairman Frank Pallone and Subcommittee Chairmen Paul Tonko and Bobby Rush. It contains numerous titles which could complement the 2022 Air Quality Management Plan strategies for residential and commercial building efficiency and mobile sources. HR 1512 includes four bills with approved positions by the South Coast AQMD Governing Board. Those bills are “Energy Resilient Communities,” “Climate Smart Ports,” “Clean School Bus Act,” and “Public Health Air Quality Act.” The bill would:

- Require that 40-percent of funds made available by the bill benefit environmental justice (EJ) communities.
- Invest in clean and distributed energy resources, grid infrastructure and microgrids.
- Update efficiency standards, policies and funding programs for new and existing buildings, including equipment and appliances.
- Require U.S. EPA to conduct a rulemaking for GHG standards for locomotives and aircraft.
- Reauthorize the Diesel Emissions Reduction Act (DERA) at \$500 million per year versus the current \$100 million and fund electric vehicle infrastructure on a national scale for passenger and commercial vehicles.
- Create new and reauthorize grants for EJ communities.
- Prohibit issuance of new permits and permit renewals in census tracts that meet certain criteria. This provision and the “Public Health Air Quality Act” title of the bill are areas in which staff would like to work with Congressional offices to improve.
- Create a national Clean Energy and Sustainability Accelerator to provide capital to States, Territories, and local green banks.

Supervisor Perez commented that given the state of Washington, D.C., the bill is a heavy lift.

Chair Cacciotti noted that the bill contains numerous provisions that could be helpful, such as the reauthorization of DERA to \$500 million from \$100 million.

Staff recommended a “WORK WITH AUTHOR” position on this bill.

Moved by Perez; seconded by Delgado; unanimously approved

Ayes: Buscaino, Cacciotti, Delgado, Perez, Rutherford

Noes: None

Abstain: None

Absent: Burke

There was no public comment.

DISCUSSION ITEMS:

2. Update on South Coast AQMD Board membership legislation

Mr. Crabbe provided a combined update on AB 1296 (Kamlager) and SB 342 (Gonzalez), since their content is similar. These bills would increase the number of members of the South Coast AQMD Board from 13 to 15 members by adding two EJ appointees. He indicated that staff had further communications with the authors' offices and reported that:

- 1) Both bills are author-sponsored.
 - a. For AB 1296, the author was approached by constituents who said that they feel there is a lack of EJ representation on the South Coast AQMD Board.
 - b. For SB 342, there is now a list of supporters.
- 2) The authors believe these bills would empower community involvement and promote equality by adding two EJ representatives to the Board.
- 3) The definitions of EJ communities are different in each bill.
 - a. For AB 1296, the author currently has no plans to change the EJ community definition in the bill; and
 - b. For SB 342, Senator Gonzalez is working with the Senate Environmental Quality Committee to narrow the definition, which will most likely involve Cal EnviroScreen.

Supervisor Perez inquired about the cost impacts of these bills. Mr. Natri responded that the bills would have negative cost impacts related to infrastructure and staffing for South Coast AQMD. There are no cost reimbursement provisions in these bills. Supervisor Perez requested that our cost concerns be communicated to the authors.

Senator Delgado inquired if these two bills would be consolidated and staff responded that was likely.

Supervisor Rutherford expressed opposition to the bills due to the imposition of unfunded mandates and attack on local control.

Mr. Natri indicated that staff would communicate cost and other concerns regarding these bills to the authors.

There was no public comment.

3. Update on Federal Legislative Issues

South Coast AQMD's federal legislative consultants (Cassidy & Associates, Kadesh & Associates, and Carmen Group) provided written reports on key Washington, D.C. issues.

Jed Dearborn, Cassidy & Associates, informed the committee that the Biden Administration announced an over \$2 trillion infrastructure proposal. The proposal is divided into two parts, the American Jobs Plan and the American Tax Plan.

- The plan serves as policy guidance, but the package would likely narrow significantly through the Congressional proceedings.
- The package could move through Budget Reconciliation process like the American Rescue Plan (ARP) Act where only budget and spending measures could be considered and policy provisions would be left out.

Mark Kadesh, Kadesh & Associates, reported that President Biden released his preliminary "skinny" budget including a \$2 billion increase for U.S. EPA.

Gary Hoistma, Carmen Group, reported on ARP funding for State and local governments. ARP spending guidance, including calculations for resource reductions and allowable expenses, is pending release by the U.S. Department of Treasury; it is expected by early May.

There was no public comment.

4. Update on State Legislative Issues

South Coast AQMD's state legislative consultants (California Advisors, LLC, Joe A. Gonsalves & Son, Resolute,) provided written reports on key issues in Sacramento.

Jason Gonsalves, Joe A. Gonsalves & Son, reported that Governor Newsom set a target date of June 15 to fully reopen the state's economy. The reopening is contingent upon a sufficient supply of COVID vaccines and maintaining stable hospitalization rates. On April 15, eligibility for the vaccine will expand to include Californians age 16 and older.

There was no public comment.

OTHER MATTERS:

5. Other Business

There was no public comment.

6. Public Comment Period

There was no public comment.

7. Next Meeting Date

The next regular Legislative Committee meeting is scheduled for Friday, May 14, 2021 at 9:00 a.m.

Adjournment

The meeting adjourned at 9:54 a.m.

South Coast Air Quality Management District
Legislative Analysis Summary – AB 365 (O'Donnell)
Version: Introduced – 2/1/2021
Analyst: SD

AB 365 (O'Donnell)

Sales and use taxes: exclusion: zero-emission and near-zero-emission drayage trucks.

Summary: This bill would exclude from the terms “gross receipts” and “sales price” for purposes of the Sales and Use Tax Law the amount charged for the purpose of a new or used zero or near-zero emission drayage truck that qualifies, on or after January 1, 2021, for certain emission reduction programs. This exclusion does not apply to local sales and use taxes or transaction and use taxes.

Background: Drayage trucks are heavy-duty trucks that transport containers and other material to and from ports and rail facilities. According to the author’s office, an estimated 30,000 drayage trucks serve California’s ports, most of them used.

California’s diesel-fueled heavy-duty truck fleet is a significant contributor to statewide greenhouse gas (GHG) emissions and air pollution containing particulate matter, carbon monoxide, sulfur dioxide, and toxic air contaminants. These chemicals can lead to serious health consequences, including eye, throat, and lung irritation; exacerbation of asthma, allergies, and cardiovascular disease; neurological and reproductive disorders; cancer; and premature death. This pollution disproportionately affects disadvantaged communities, which are frequently located along major transportation corridors. To mitigate the effects of these vehicles and other sources of GHGs, California has set itself apart as a worldwide leader in climate policy, committing to ambitious emissions reduction goals that the state must meet over the next few decades. In addition, the federal government has designated the South Coast Air Basin as a “nonattainment area” that must meet specific air quality deadlines beginning in 2023.

The author argues that the transition to clean drayage trucks will be an uphill battle due to the price differential between diesel and newer, cleaner technologies. Used drayage trucks cost around \$50,000 while new zero-emission drayage trucks cost around \$350,000. A \$350,000 truck will be subject to approximately \$80,000 in federal, state, and local taxes and fees, about \$21,000 of which will constitute state sales and use tax. Unless the state offsets the cost of new and used zero- and near-zero-emission drayage trucks, it will be difficult for individuals and small fleets to transition to cleaner technology. Even if the state provides funding to support these purchases, the taxes on the full price of the truck may be cost prohibitive for smaller operators.

Status: 2/12/21 Referred to Asm. Comm. on REV. & TAX.

Specific Provisions: This bill would exclude sales and use tax from being charged for the purchase of a new or used zero- and near-zero-emission drayage truck that qualifies, on or before January 1, 2021, for any of the following:

- a) The California Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project funded by the Air Quality Improvement Program;
- b) The Carl Moyer Memorial Air Quality Standards Attainment Program; and
- c) The Volkswagen Environmental Mitigation Trust.

The exclusion does not apply with respect to any tax levied by a county, city, or district.

Impacts on South Coast AQMD's Mission, Operations or Initiatives: AB 365 will ease the transition to clean drayage trucks by exempting the purchase of new and used zero- and near-zero-emission drayage trucks from the state sales and use tax. This tax incentive will help in the efforts to transition the fleet of high emitting diesel trucks to cleaner technology, to reduce goods movement related emissions that are harmful to the port communities and the region. This incentive will help protect public health and facilitate attainment of federal air quality standards.

South Coast AQMD staff proposes a friendly amendment to the bill that would provide that the sales tax exemption provided for in the bill apply to new and used zero- and near-zero-emission drayage trucks that qualify for any applicable incentive program, not just the three identified by the current bill language.

CALIFORNIA LEGISLATURE—2021–22 REGULAR SESSION

ASSEMBLY BILL

No. 365

Introduced by Assembly Member O'Donnell

February 1, 2021

An act to amend Sections 6011 and 6012 of the Revenue and Taxation Code, relating to taxation, to take effect immediately, tax levy.

LEGISLATIVE COUNSEL'S DIGEST

AB 365, as introduced, O'Donnell. Sales and use taxes: exclusion: zero-emission and near-zero-emission drayage trucks.

Existing sales and use tax laws impose taxes on retailers measured by gross receipts from the sale of tangible personal property sold at retail in this state, or on the storage, use, or other consumption in this state of tangible personal property purchased from a retailer for storage, use, or other consumption in this state, measured by sales price. The Sales and Use Tax Law defines the terms "gross receipts" and "sales price."

This bill would exclude from the terms "gross receipts" and "sales price" for purposes of the Sales and Use Tax Law the amount charged for the purchase of a new or used drayage truck that qualifies, on or after January 1, 2021, for certain emission reduction programs.

The Bradley-Burns Uniform Local Sales and Use Tax Law authorizes counties and cities to impose local sales and use taxes in conformity with the Sales and Use Tax Law, and existing laws authorize districts, as specified, to impose transactions and use taxes in accordance with the Transactions and Use Tax Law, which generally conforms to the Sales and Use Tax Law. Amendments to the Sales and Use Tax Law are automatically incorporated into the local tax laws.

This bill would specify that this exclusion does not apply to local sales and use taxes or transactions and use taxes.

This bill would take effect immediately as a tax levy, but its operative date would depend on its effective date.

Vote: majority. Appropriation: no. Fiscal committee: yes.
State-mandated local program: no.

The people of the State of California do enact as follows:

1 SECTION 1. The Legislature finds and declares all of the
2 following:

3 (a) In 2020, the State Air Resources Board adopted regulations
4 to reduce greenhouse gas emissions from heavy-duty trucks and
5 drayage trucks. These regulations include a first-in-the-world rule
6 requiring truck manufacturers to transition from diesel trucks and
7 vans to electric zero-emission trucks beginning in 2024 and
8 requiring every new truck sold in California to be zero-emission
9 by 2045. The State Air Resources Board approved the “Heavy-Duty
10 Low NOx Omnibus Regulation,” which requires manufacturers
11 of heavy-duty diesel trucks to comply with tougher emission
12 standards, overhaul engine testing procedures, and further extend
13 engine warranties to ensure that emissions of oxides of nitrogen
14 are reduced to help California meet federal air quality standards
15 and critical public health goals.

16 (b) Also in 2020, Governor Gavin Newsom issued Executive
17 Order No. N-79-20, which, among other things, requires all drayage
18 trucks in the state to be zero-emission by 2035 and sets a number
19 of vehicle emissions goals for the state, including having 100
20 percent of heavy-duty vehicles in the state be zero-emission by
21 2045.

22 (c) There are an estimated 300,000 drayage trucks that service
23 California’s ports each year. Most of these are used trucks. Used
24 drayage trucks cost around \$50,000. New zero-emission trucks
25 cost \$350,000. Unless funding is provided to offset the cost of new
26 and used zero-emission trucks, it will be nearly impossible for
27 individuals and small businesses to comply with the new
28 requirement. If funding is provided to offset the cost of new and
29 used zero-emission trucks, the sales and use tax will be too high
30 for people to afford since it will be based on the full price of the
31 truck.

1 (d) Legislation is necessary to exclude zero-emission and
2 near-zero-emission drayage trucks from the state portion of the
3 sales and use tax so individuals will be able to afford these new
4 and used trucks to be in compliance with state mandates to meet
5 the state's greenhouse gas emissions and public health goals.

6 (e) The state currently exempts the following items from certain
7 state sales and use taxes:

8 (1) Zero-emission technology transit buses.

9 (2) Certain government purchases of public passenger
10 transportation vehicles.

11 (3) Certain new or remanufactured trucks, truck tractors,
12 semitrailers, or trailers that have an unladen weight of 6,000 pounds
13 or more, or new or remanufactured trailer coaches or new or
14 remanufactured auxiliary dollies, purchased from a dealer located
15 outside this state for use without this state.

16 (4) Diesel fuel consumed during the activities of a farming
17 business or food processing, as specified.

18 (5) Farm equipment, machinery, and their parts sold to or
19 purchased by specified persons engaged in the business of
20 producing and harvesting agricultural products.

21 (6) Certain equipment used in manufacturing, research and
22 development in biotechnology, and research and development in
23 the physical, engineering, and life sciences.

24 (7) Electric power generation and distribution equipment when
25 sold to or purchased by certain qualifying electric power generators
26 or distributors for use primarily in electric power generation or
27 production, or storage and distribution activities.

28 SEC. 2. Section 6011 of the Revenue and Taxation Code is
29 amended to read:

30 6011. (a) "Sales price" means the total amount for which
31 tangible personal property is sold or leased or rented, as the case
32 may be, valued in money, whether paid in money or otherwise,
33 without any deduction on account of any of the following:

34 (1) The cost of the property sold.

35 (2) The cost of materials used, labor or service cost, interest
36 charged, losses, or any other expenses.

37 (3) The cost of transportation of the property, except as excluded
38 by other provisions of this section.

39 (b) The total amount for which the property is sold or leased or
40 rented includes all of the following:

1 (1) Any services that are a part of the sale.

2 (2) Any amount for which credit is given to the purchaser by
3 the seller.

4 (3) The amount of any tax imposed by the United States upon
5 producers and importers of gasoline and the amount of any tax
6 imposed pursuant to Part 2 (commencing with Section 7301) of
7 this division.

8 (c) "Sales price" does not include any of the following:

9 (1) Cash discounts allowed and taken on sales.

10 (2) The amount charged for property returned by customers
11 when that entire amount is refunded either in cash or credit, but
12 this exclusion shall not apply in any instance when the customer,
13 in order to obtain the refund, is required to purchase other property
14 at a price greater than the amount charged for the property that is
15 returned. For the purpose of this section, refund or credit of the
16 entire amount shall be deemed to be given when the purchase price
17 less rehandling and restocking costs are refunded or credited to
18 the customer. The amount withheld for rehandling and restocking
19 costs may be a percentage of the sales price determined by the
20 average cost of rehandling and restocking returned merchandise
21 during the previous accounting cycle.

22 (3) The amount charged for labor or services rendered in
23 installing or applying the property sold.

24 (4) (A) The amount of any tax (not including, however, any
25 manufacturers' or importers' excise tax, except as provided in
26 subparagraph (B)) imposed by the United States upon or with
27 respect to retail sales whether imposed upon the retailer or the
28 consumer.

29 (B) The amount of manufacturers' or importers' excise tax
30 imposed pursuant to Section 4081 or 4091 of the Internal Revenue
31 Code for which the purchaser certifies that ~~he or she~~ *the purchaser*
32 is entitled to either a direct refund or credit against ~~his or her~~ *the*
33 *purchaser's* income tax for the federal excise tax paid or for which
34 the purchaser issues a certificate pursuant to Section 6245.5.

35 (5) The amount of any tax imposed by any city, county, city
36 and county, or rapid transit district within the State of California
37 upon or with respect to retail sales of tangible personal property,
38 measured by a stated percentage of sales price or gross receipts,
39 whether imposed upon the retailer or the consumer.

1 (6) The amount of any tax imposed by any city, county, city
2 and county, or rapid transit district within the State of California
3 with respect to the storage, ~~use~~ use, or other consumption in that
4 city, county, city and county, or rapid transit district of tangible
5 personal property measured by a stated percentage of sales price
6 or purchase price, whether the tax is imposed upon the retailer or
7 the consumer.

8 (7) Separately stated charges for transportation from the
9 retailer's place of business or other point from which shipment is
10 made directly to the purchaser, but the exclusion shall not exceed
11 a reasonable charge for transportation by facilities of the retailer
12 or the cost to the retailer of transportation by other than facilities
13 of the retailer. However, if the transportation is by facilities of the
14 retailer, or the property is sold for a delivered price, this exclusion
15 shall be applicable solely with respect to transportation which
16 occurs after the purchase of the property is made.

17 (8) Charges for transporting landfill from an excavation site to
18 a site specified by the purchaser, either if the charge is separately
19 stated and does not exceed a reasonable charge or if the entire
20 consideration consists of payment for transportation.

21 (9) The amount of any motor vehicle, mobilehome, or
22 commercial coach fee or tax imposed by and paid the State of
23 California that has been added to or is measured by a stated
24 percentage of the sales or purchase price of a motor vehicle,
25 mobilehome, or commercial coach.

26 (10) (A) The amount charged for intangible personal property
27 transferred with tangible personal property in any technology
28 transfer agreement, if the technology transfer agreement separately
29 states a reasonable price for the tangible personal property.

30 (B) If the technology transfer agreement does not separately
31 state a price for the tangible personal property, and the tangible
32 personal property or like tangible personal property has been
33 previously sold or leased, or offered for sale or lease, to third
34 parties at a separate price, the price at which the tangible personal
35 property was sold, leased, or offered to third parties shall be used
36 to establish the retail fair market value of the tangible personal
37 property subject to tax. The remaining amount charged under the
38 technology transfer agreement is for the intangible personal
39 property transferred.

(C) If the technology transfer agreement does not separately state a price for the tangible personal property, and the tangible personal property or like tangible personal property has not been previously sold or leased, or offered for sale or lease, to third parties at a separate price, the retail fair market value shall be equal to 200 percent of the cost of materials and labor used to produce the tangible personal property subject to tax. The remaining amount charged under the technology transfer agreement is for the intangible personal property transferred.

(D) For purposes of this paragraph, “technology transfer agreement” means any agreement under which a person who holds a patent or copyright interest assigns or licenses to another person the right to make and sell a product or to use a process that is subject to the patent or copyright interest.

(11) The amount of any tax imposed upon diesel fuel pursuant to Part 31 (commencing with Section 60001).

(12) (A) The amount of tax imposed by any Indian tribe within the State of California with respect to a retail sale of tangible personal property measured by a stated percentage of the sales or purchase price, whether the tax is imposed upon the retailer or the consumer.

(B) The exclusion authorized by subparagraph (A) shall only apply to those retailers who are in substantial compliance with this part.

(13) (A) *The amount charged for the purchase of a new or used drayage truck that qualifies, on or after January 1, 2021, for any of the following:*

(i) *The California Hybrid and Zero-Emission Truck and Bus Voucher Incentive Project funded by the Air Quality Improvement Program established pursuant to Section 44274 of the Health and Safety Code.*

(ii) *The Carl Moyer Memorial Air Quality Standards Attainment Program (Chapter 9 (commencing with Section 44275) of Part 5 of Division 26 of the Health and Safety Code).*

(iii) *The Volkswagen Environmental Mitigation Trust for California pursuant to Section 39614 of the Health and Safety Code.*

(B) *Notwithstanding any provision of the Bradley-Burns Uniform Local Sales and Use Tax Law (Part 1.5 (commencing with Section 7200)) or the Transactions and Use Tax Law (Part 1.6*

1 (*commencing with Section 7251*)), *the exclusion established by*
2 *this paragraph does not apply with respect to any tax levied by a*
3 *county, city, or district pursuant to, or in accordance with, either*
4 *of those laws.*

5 SEC. 3. Section 6012 of the Revenue and Taxation Code is
6 amended to read:

7 6012. (a) "Gross receipts" mean the total amount of the sale
8 or lease or rental price, as the case may be, of the retail sales of
9 retailers, valued in money, whether received in money or otherwise,
10 without any deduction on account of any of the following:

11 (1) The cost of the property sold. However, in accordance with
12 any rules and regulations as the ~~board~~ *department* may prescribe,
13 a deduction may be taken if the retailer has purchased property for
14 some other purpose than resale, has reimbursed ~~his or her~~ *its* vendor
15 for tax which the vendor is required to pay to the state or has paid
16 the use tax with respect to the property, and has resold the property
17 prior to making any use of the property other than retention,
18 demonstration, or display while holding it for sale in the regular
19 course of business. If that deduction is taken by the retailer, no
20 refund or credit will be allowed to ~~his or her~~ *its* vendor with respect
21 to the sale of the property.

22 (2) The cost of the materials used, labor or service cost, interest
23 paid, losses, or any other expense.

24 (3) The cost of transportation of the property, except as excluded
25 by other provisions of this section.

26 (4) The amount of any tax imposed by the United States upon
27 producers and importers of gasoline and the amount of any tax
28 imposed pursuant to Part 2 (*commencing with Section 7301*) of
29 this division.

30 (b) The total amount of the sale or lease or rental price includes
31 all of the following:

32 (1) Any services that are a part of the sale.

33 (2) All receipts, cash, ~~credits~~ *credits*, and property of any kind.

34 (3) Any amount for which credit is allowed by the seller to the
35 purchaser.

36 (c) "Gross receipts" do not include any of the following:

37 (1) Cash discounts allowed and taken on sales.

38 (2) Sale price of property returned by customers when that entire
39 amount is refunded either in cash or credit, but this exclusion shall
40 not apply in any instance when the customer, in order to obtain

1 the refund, is required to purchase other property at a price greater
2 than the amount charged for the property that is returned. For the
3 purpose of this section, refund or credit of the entire amount shall
4 be deemed to be given when the purchase price less rehandling
5 and restocking costs are refunded or credited to the customer. The
6 amount withheld for rehandling and restocking costs may be a
7 percentage of the sales price determined by the average cost of
8 rehandling and restocking returned merchandise during the
9 previous accounting cycle.

10 (3) The price received for labor or services used in installing or
11 applying the property sold.

12 (4) (A) The amount of any tax (not including, however, any
13 manufacturers' or importers' excise tax, except as provided in
14 subparagraph (B)) imposed by the United States upon or with
15 respect to retail sales whether imposed upon the retailer or the
16 consumer.

17 (B) The amount of manufacturers' or importers' excise tax
18 imposed pursuant to Section 4081 or 4091 of the Internal Revenue
19 Code for which the purchaser certifies that ~~he or she~~ *the purchaser*
20 is entitled to either a direct refund or credit against ~~his or her~~ *the*
21 *purchaser's* income tax for the federal excise tax paid or for which
22 the purchaser issues a certificate pursuant to Section 6245.5.

23 (5) The amount of any tax imposed by any city, county, city
24 and county, or rapid transit district within the State of California
25 upon or with respect to retail sales of tangible personal property
26 measured by a stated percentage of sales price or gross receipts
27 whether imposed upon the retailer or the consumer.

28 (6) The amount of any tax imposed by any city, county, city
29 and county, or rapid transit district within the State of California
30 with respect to the storage, ~~use~~ *use*, or other consumption in that
31 city, county, city and county, or rapid transit district of tangible
32 personal property measured by a stated percentage of sales price
33 or purchase price, whether the tax is imposed upon the retailer or
34 the consumer.

35 (7) Separately stated charges for transportation from the
36 retailer's place of business or other point from which shipment is
37 made directly to the purchaser, but the exclusion shall not exceed
38 a reasonable charge for transportation by facilities of the retailer
39 or the cost to the retailer of transportation by other than facilities
40 of the retailer. However, if the transportation is by facilities of the

1 retailer, or the property is sold for a delivered price, this exclusion
2 shall be applicable solely with respect to transportation which
3 occurs after the sale of the property is made to the purchaser.

4 (8) Charges for transporting landfill from an excavation site to
5 a site specified by the purchaser, either if the charge is separately
6 stated and does not exceed a reasonable charge or if the entire
7 consideration consists of payment for transportation.

8 (9) The amount of any motor vehicle, mobilehome, or
9 commercial coach fee or tax imposed by and paid to the State of
10 California that has been added to or is measured by a stated
11 percentage of the sales or purchase price of a motor vehicle,
12 mobilehome, or commercial coach.

13 (10) (A) The amount charged for intangible personal property
14 transferred with tangible personal property in any technology
15 transfer agreement, if the technology transfer agreement separately
16 states a reasonable price for the tangible personal property.

17 (B) If the technology transfer agreement does not separately
18 state a price for the tangible personal property, and the tangible
19 personal property or like tangible personal property has been
20 previously sold or leased, or offered for sale or lease, to third
21 parties at a separate price, the price at which the tangible personal
22 property was sold, leased, or offered to third parties shall be used
23 to establish the retail fair market value of the tangible personal
24 property subject to tax. The remaining amount charged under the
25 technology transfer agreement is for the intangible personal
26 property transferred.

27 (C) If the technology transfer agreement does not separately
28 state a price for the tangible personal property, and the tangible
29 personal property or like tangible personal property has not been
30 previously sold or leased, or offered for sale or lease, to third
31 parties at a separate price, the retail fair market value shall be equal
32 to 200 percent of the cost of materials and labor used to produce
33 the tangible personal property subject to tax. The remaining amount
34 charged under the technology transfer agreement is for the
35 intangible personal property transferred.

36 (D) For purposes of this paragraph, “technology transfer
37 agreement” means any agreement under which a person who holds
38 a patent or copyright interest assigns or licenses to another person
39 the right to make and sell a product or to use a process that is
40 subject to the patent or copyright interest.

1 (11) The amount of any tax imposed upon diesel fuel pursuant
2 to Part 31 (commencing with Section 60001).

3 (12) (A) The amount of tax imposed by any Indian tribe within
4 the State of California with respect to a retail sale of tangible
5 personal property measured by a stated percentage of the sales or
6 purchase price, whether the tax is imposed upon the retailer or the
7 consumer.

8 (B) The exclusion authorized by subparagraph (A) shall only
9 apply to those retailers who are in substantial compliance with this
10 part.

11 For purposes of the sales tax, if the retailers establish to the
12 satisfaction of the ~~board~~ department that the sales tax has been
13 added to the total amount of the sale price and has not been
14 absorbed by them, the total amount of the sale price shall be
15 deemed to be the amount received exclusive of the tax imposed.
16 Section 1656.1 of the Civil Code shall apply in determining
17 whether or not the retailers have absorbed the sales tax.

18 (13) (A) *The amount charged for the purchase of a new or used*
19 *drayage truck that qualifies, on or after January 1, 2021, for any*
20 *of the following:*

21 (i) *The California Hybrid and Zero-Emission Truck and Bus*
22 *Voucher Incentive Project funded by the Air Quality Improvement*
23 *Program established pursuant to Section 44274 of the Health and*
24 *Safety Code.*

25 (ii) *The Carl Moyer Memorial Air Quality Standards Attainment*
26 *Program (Chapter 9 (commencing with Section 44275) of Part 5*
27 *of Division 26 of the Health and Safety Code).*

28 (iii) *The Volkswagen Environmental Mitigation Trust for*
29 *California pursuant to Section 39614 of the Health and Safety*
30 *Code.*

31 (B) *Notwithstanding any provision of the Bradley-Burns Uniform*
32 *Local Sales and Use Tax Law (Part 1.5 (commencing with Section*
33 *7200)) or the Transactions and Use Tax Law (Part 1.6*
34 *(commencing with Section 7251)), the exclusion established by*
35 *this paragraph does not apply with respect to any tax levied by a*
36 *county, city, or district pursuant to, or in accordance with, either*
37 *of those laws.*

38 SEC. 4. (a) It is the intent of the Legislature to apply the
39 requirements of Section 41 of the Revenue and Taxation Code to
40 this act.

1 (b) With respect to paragraph (13) of subdivision (c) of Sections
2 6011 and 6012 of the Revenue and Taxation Code, as amended
3 by this act, the Legislature finds and declares as follows:

4 (1) The goal of paragraph (13) of subdivision (c) of Sections
5 6011 and 6012 of the Revenue and Taxation Code, as amended
6 by this act, is to help achieve California's greenhouse gas reduction
7 goals and the goal of having 100 percent of drayage trucks in
8 California be zero-emission by 2035, and also incentivize the
9 purchase of new and used zero-emission and near-zero-emission
10 drayage trucks.

11 (2) The performance indicators related to this act are as follows:

12 (A) The annual number of zero-emission and near-zero-emission
13 drayage trucks purchased.

14 (B) The annual number of purchased drayage trucks that are
15 not zero-emission or near-zero-emission drayage trucks.

16 (c) To measure the goals set forth in paragraph (1) of subdivision
17 (b), the California Department of Tax and Fee Administration shall
18 measure how many Californians used the sales and use tax
19 exclusion set forth in paragraph (13) of subdivision (c) of Sections
20 6011 and 6012 of the Revenue and Taxation Code, as amended
21 by this act, and report to the Legislature biannually on its findings
22 beginning on and after January 1, 2022. The reports shall be
23 submitted in compliance with Section 9795 of the Government
24 Code.

25 SEC. 5. This act provides for a tax levy within the meaning
26 of Article IV of the California Constitution and shall go into
27 immediate effect. However, the provisions of this act shall become
28 operative on the first day of the first calendar quarter commencing
29 more than 90 days after the effective date of this act.

South Coast Air Quality Management District
Legislative Analysis Summary – AB 762 (Lee)
Version: As Amended – 3/30/2021
Analyst: PC

AB 762 (Lee)

Hazardous emissions and substances: schoolsites: private and charter schools.

Summary: This bill would require charter schools and private schools to follow the same siting requirements as public schools for evaluating a schoolsite for potential hazardous substances, hazardous emissions, or hazardous waste.

The bill would also require the evaluation of a potential charter school site to follow the same process as public school site evaluations under the California Environmental Quality Act (CEQA).

Background: Siting schools is not an easy process. Existing law and state regulations prohibit school districts seeking state bond funds from being located on land that was previously a hazardous waste disposal site, that contains pipelines that carry hazardous substances, or that is near a freeway and other busy traffic corridors and railyards that have the potential to expose students and school staff to hazardous air emissions. Existing law also requires school districts to comply with CEQA requirements, review by DTSC, and approval by the California Department of Education (CDE) to ensure the design plans meet the academic need of the school. Charter schools are not required to comply with school siting requirements unless they receive state school bond funds. Private schools are not subject to the requirements in the Education Code unless specified, typically related to health and safety issues.

Existing law requires public schools to follow CEQA requirements before approving and building a new school. These requirements include that the governing board of the school district determine that the property is not a current or former hazardous waste or solid waste disposal site, unless the governing board of the school concludes that the waste sites have been removed; a hazardous substance release site identified by the Department of Toxic Substances Control (DTSC); or a site that contains one or more pipelines that carries hazardous substances.

CEQA requires a lead agency to prepare and certify the completion of an environmental impact report on a project that it proposes to carry out or approve that may have a significant effect on the environment, or to adopt a negative declaration if it finds that the project will not have that effect. Existing law also requires that the school district consult with the administering agency and any local air district necessary to identify facilities within the air district's authority and within the vicinity of the school property that might emit hazardous emissions, substances, or waste.

Status: 3/30/2021 - From committee chair, with author's amendments: Amend, and re-refer to Asm. Comm. on E.S. & T.M. Read second time and amended.

Specific Provisions: Specifically, this bill would:

- 1) Require charter schools and private schools to follow the same siting requirements as public schools for evaluating a schoolsite for potential hazardous substances, hazardous emissions, or hazardous waste; and
- 2) Require the evaluation of a potential charter school site to follow the same process as public school site evaluations under CEQA.

Impacts on South Coast AQMD's Mission, Operations or Initiatives: South Coast AQMD took a SUPPORT position on a very similar bill last year that died in the Legislature. This bill was recently amended to delete a new item added to the bill this year that was meant to provide extra protections for school sites by adding in a 500-foot buffer in between schools and toxic hazards.

Private schools and some charter schools are not required to meet the same siting requirements as public schools before building a new school. As a result, there are cases in California where schools have been built in a potentially unsafe location near sources of hazardous emissions, substances, or waste. Consequently, the public health and safety of all students and school employees at these schools could be at risk.

It is reasonable to provide the students of charter schools and private schools with the same protections from potential hazardous chemicals at a potential schoolsite as is afforded to students who attend public schools. In addition, this bill requires the lead agency, under CEQA, over a charter school, to complete the same evaluations as is required for a lead agency of a public school. There are thousands of known contaminated sites in California, however, there are estimates of tens of thousands of unknown contaminated sites in the state. A site may have been an industrial site in the early 1900's and been vacant for decades, and its potential of containing hazardous substances is unknown until there is an environmental assessment of the property. It is important that potential schoolsites, regardless of whether the school is a public school, private school, or charter school, be properly evaluated in order to protect the health and well-being of the future students who will attend that school.

This bill is consistent with South Coast AQMD's policy priorities to protect public health, especially within disadvantaged communities, and to promote environmental justice within the South Coast region. By adding extra protections within the school setting, this bill seeks to protect children, who are at even higher risk as sensitive receptors to pollution.

AMENDED IN ASSEMBLY MARCH 30, 2021

CALIFORNIA LEGISLATURE—2021–22 REGULAR SESSION

ASSEMBLY BILL

No. 762

**Introduced by Assembly Members Lee and Cristina Garcia
(Coauthor: Assembly Member Kalra)**

February 16, 2021

An act to amend ~~Section 17213~~ *Sections 17213, 17213.1 and 17268* of, and to add Article 3 (commencing with Section 17235) to Chapter 1 of Part 10.5 of Division 1 of Title 1 of, the Education Code, ~~and to amend Section 21151.8 of the Public Resources Code, and to amend Section 1612 of the Public Utilities Code,~~ relating to schoolsites.

LEGISLATIVE COUNSEL'S DIGEST

AB 762, as amended, Lee. Hazardous emissions and substances: schoolsites: private and charter schools.

(1) The California Environmental Quality Act (CEQA) requires a lead agency to prepare, or cause to be prepared by contract, and certify the completion of, an environmental impact report on a project, as defined, that it proposes to carry out or approve that may have a significant effect on the environment, or to adopt a negative declaration if it finds that the project will not have that effect. CEQA prohibits an environmental impact report or negative declaration from being approved for any project involving the purchase of a schoolsite or the construction of a new elementary or secondary school by a school district unless specified conditions are met, relating to, among other things, whether the property is located on a current or former hazardous waste disposal site or solid waste disposal site, a hazardous substance release site, or a site that contains a pipeline that carries specified substances, and the property's proximity to facilities that might

reasonably be anticipated to emit hazardous emissions or handle hazardous or extremely hazardous substances or waste, as provided.

~~This bill would add to those specified conditions whether the property is located on a site within 500 feet of a current or former hazardous waste disposal site or solid waste disposal site, a hazardous substance release site, or a site that contains a pipeline that carries specified substances. The bill would additionally prohibit an environmental impact report or negative declaration from being approved for a project involving the purchase of a schoolsite or the construction of a new elementary or secondary school by a charter school, unless those specified conditions are met. By imposing new requirements on school districts, charter schools, lead agencies, cities, and counties, the bill would impose a state-mandated local program.~~

(2) Existing law prohibits the governing board of a school district from approving a project for the acquisition of a schoolsite unless specified conditions are met, including, among others, that the school district, as the lead agency, determines that the property to be purchased or built upon is not the site of a current or former hazardous waste disposal site or solid waste disposal site, a hazardous substance release site, or a site that contains a pipeline that carries specified substances, and that the school district, as the lead agency, has not identified specified facilities within $\frac{1}{4}$ of one mile of the proposed schoolsite that might reasonably be anticipated to emit hazardous air emissions or handle hazardous or extremely hazardous materials, substances, or waste, as provided.

~~This bill would add to those specified conditions that the property is determined to not be located on a site within 500 feet of a freeway or other busy traffic corridor, a current or former hazardous waste disposal site or solid waste disposal site, a hazardous substance release site, or a site that contains a pipeline that carries specified substances. The bill would additionally impose that prohibition on the governing body of a charter school and would require the determination and identification described above to be made by the lead agency. The bill would impose that prohibition, and related requirements, additionally on a private school. By imposing new requirements on school districts, charter schools, lead agencies, cities, and counties, the bill would impose a state-mandated local program.~~

(3) The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that with regard to certain mandates no reimbursement is required by this act for a specified reason.

With regard to any other mandates, this bill would provide that, if the Commission on State Mandates determines that the bill contains costs so mandated by the state, reimbursement for those costs shall be made pursuant to the statutory provisions noted above.

Vote: majority. Appropriation: no. Fiscal committee: yes.
State-mandated local program: yes.

The people of the State of California do enact as follows:

1 SECTION 1. Section 17213 of the Education Code is amended
2 to read:

3 17213. (a) The governing board of a school district or the
4 governing body of a charter school shall not approve a project
5 involving the acquisition of a schoolsite by a school district or
6 charter school, unless all of the following occur:

7 (1) The lead agency, as defined in Section 21067 of the Public
8 Resources Code, determines that the property purchased or to be
9 built upon is not any of the following:

10 (A) The site of a current or former hazardous waste disposal
11 site or solid waste disposal site, unless, if the site was a former
12 solid waste disposal site, the governing board of the school district
13 or the governing body of a charter school concludes that the wastes
14 have been removed.

15 (B) A hazardous substance release site identified by the
16 Department of Toxic Substances Control in a current list adopted
17 pursuant to Section 25356 of the Health and Safety Code for
18 removal or remedial action pursuant to Chapter 6.8 (commencing
19 with Section 25300) of Division 20 of the Health and Safety Code.

20 (C) A site that contains one or more pipelines, situated
21 underground or aboveground, that carries hazardous substances,
22 extremely hazardous substances, or hazardous wastes, unless the
23 pipeline is a natural gas line that is used only to supply natural gas
24 to that school or neighborhood.

25 ~~(D) A site that is within 500 feet of the edge of the closest traffic~~
26 ~~lane of a freeway or other busy traffic corridor.~~

27 ~~(E) A site that is within 500 feet of a site specified in~~
28 ~~subparagraph (A), (B), or (C).~~

(2) The lead agency, as defined in Section 21067 of the Public Resources Code, in preparing the environmental impact report or negative declaration has consulted with the administering agency in which the proposed schoolsite is located, pursuant to Section 2735.3 of Title 19 of the California Code of Regulations, and with any air pollution control district or air quality management district having jurisdiction in the area, to identify both permitted and nonpermitted facilities within that district's authority, including, but not limited to, freeways and other busy traffic corridors, large agricultural operations, and railyards, within one-fourth of one mile of the proposed schoolsite, that might reasonably be anticipated to emit hazardous air emissions, or to handle hazardous or extremely hazardous materials, substances, or waste. The lead agency shall include a list of the locations for which information is sought.

(3) The governing board of the school district or the governing body of a charter school makes one of the following written findings:

(A) Consultation identified none of the facilities or significant pollution sources specified in paragraph (2).

(B) The facilities or other pollution sources specified in paragraph (2) exist, but one of the following conditions applies:

(i) The health risks from the facilities or other pollution sources do not and will not constitute an actual or potential endangerment of public health to persons who would attend or be employed at the school.

(ii) The governing board of a school district or the governing body of a charter school finds that corrective measures required under an existing order by another governmental entity that has jurisdiction over the facilities or other pollution sources will, before the school is occupied, result in the mitigation of all chronic or accidental hazardous air emissions to levels that do not constitute an actual or potential endangerment of public health to persons who would attend or be employed at the proposed school. If the governing board of a school district or the governing body of a charter school makes this finding, the governing board of a school district or governing body of a charter school shall also make a subsequent finding, before occupancy of the school, that the emissions have been mitigated to these levels.

1 (iii) For a schoolsite with a boundary that is within 500 feet of
2 the edge of the closest traffic lane of a freeway or other busy traffic
3 corridor, the governing board of the school district or the governing
4 body of a charter school determines, through analysis pursuant to
5 paragraph (2) of subdivision (b) of Section 44360 of the Health
6 and Safety Code, based on appropriate air dispersion modeling,
7 and after considering any potential mitigation measures, that the
8 air quality at the proposed site is such that neither short-term nor
9 long-term exposure poses significant health risks to pupils.

10 (iv) The governing board of a school district or the governing
11 body of a charter school finds that the conditions set forth in clause
12 (ii) or (iii) cannot be met, and the school district or charter school
13 is unable to locate an alternative site that is suitable due to a severe
14 shortage of sites that meet the requirements in subdivision (a). If
15 the governing board of a school district or the governing body of
16 a charter school makes this finding, the governing board of a school
17 district or the governing body of a charter school shall adopt a
18 statement of overriding considerations pursuant to Section 15093
19 of Title 14 of the California Code of Regulations.

20 (b) For purposes of this section, the following definitions apply:

21 (1) "Administering agency" means an agency designated
22 pursuant to Section 25502 of the Health and Safety Code.

23 (2) "Extremely hazardous substance" means a material defined
24 pursuant to paragraph (2) of subdivision (j) of Section 25532 of
25 the Health and Safety Code.

26 (3) "Facilities" means a source with a potential to use, generate,
27 emit, or discharge hazardous air pollutants, including, but not
28 limited to, pollutants that meet the definition of a hazardous
29 substance, and whose process or operation is identified as an
30 emission source pursuant to the most recent list of source categories
31 published by the State Air Resources Board.

32 (4) "Freeway or other busy traffic corridor" means those
33 roadways that, on an average day, have traffic in excess of 50,000
34 vehicles in a rural area, as defined in Section 50101 of the Health
35 and Safety Code, and 100,000 vehicles in an urban area, as defined
36 in Section 50104.7 of the Health and Safety Code.

37 (5) "Handle" means handle as defined in Article 1 (commencing
38 with Section 25500) of Chapter 6.95 of Division 20 of the Health
39 and Safety Code.

(6) “Hazardous air emissions” means emissions into the ambient air of air contaminants that have been identified as a toxic air contaminant by the State Air Resources Board or by the air pollution control officer for the jurisdiction in which the project is located. As determined by the air pollution control officer, hazardous air emissions also means emissions into the ambient air from any substance identified in subdivisions (a) to (f), inclusive, of Section 44321 of the Health and Safety Code.

(7) “Hazardous substance” means a substance defined in Section 25316 of the Health and Safety Code.

(8) “Hazardous waste” means a waste defined in Section 25117 of the Health and Safety Code.

(9) “Hazardous waste disposal site” means a site defined in Section 25114 of the Health and Safety Code.

SEC. 2. Section 17213.1 of the Education Code is amended to read:

17213.1. As a condition of receiving state funding pursuant to Chapter 12.5 (commencing with Section 17070.10), the governing board of a school district shall comply with subdivision (a), and is not required to comply with *paragraph (1) of subdivision (a) of Section 17213*, prior to the acquisition of a schoolsite, or if the school district owns or leases a schoolsite, prior to the construction of a project.

(a) Prior to acquiring a schoolsite, the governing board shall contract with an environmental assessor to supervise the preparation of, and sign, a Phase I environmental assessment of the proposed schoolsite unless the governing board decides to proceed directly to a preliminary endangerment assessment, in which case it shall comply with paragraph (4).

(1) The Phase I environmental assessment shall contain one of the following recommendations:

(A) A further investigation of the site is not required.

(B) A preliminary endangerment assessment is needed, including sampling or testing, to determine the following:

(i) If a release of hazardous material has occurred and, if so, the extent of the release.

(ii) If there is the threat of a release of hazardous materials.

(iii) If a naturally occurring hazardous material is present.

(2) If the Phase I environmental assessment concludes that further investigation of the site is not required, the signed

1 assessment, proof that the environmental assessor meets the
2 qualifications specified in subdivision (b) of Section 17210, and
3 the renewal fee shall be submitted to the Department of Toxic
4 Substances Control. The Department of Toxic Substances Control
5 shall conduct its review and approval, within 30 calendar days of
6 its receipt of that assessment, proof of qualifications, and the
7 renewal fee. In those instances in which the Department of Toxic
8 Substances Control requests additional information after receipt
9 of the Phase I environmental assessment pursuant to paragraph
10 (3), the Department of Toxic Substances Control shall conduct its
11 review and approval within 30 calendar days of its receipt of the
12 requested additional information. If the Department of Toxic
13 Substances Control concurs with the conclusion of the Phase I
14 environmental assessment that a further investigation of the site
15 is not required, the Department of Toxic Substances Control shall
16 approve the Phase I environmental assessment and shall notify, in
17 writing, the State Department of Education and the governing
18 board of the school district of the approval.

19 (3) If the Department of Toxic Substances Control determines
20 that the Phase I environmental assessment is not complete or
21 disapproves the Phase I environmental assessment, the department
22 shall inform the school district of the decision, the basis for the
23 decision, and actions necessary to secure department approval of
24 the Phase I environmental assessment. The school district shall
25 take actions necessary to secure the approval of the Phase I
26 environmental assessment, elect to conduct a preliminary
27 endangerment assessment, or elect not to pursue the acquisition
28 or the construction project. To facilitate completion of the Phase
29 I environmental assessment, the information required by this
30 paragraph may be provided by telephonic or electronic means.

31 (4) (A) If the Department of Toxic Substances Control
32 concludes after its review of a Phase I environmental assessment
33 pursuant to this section that a preliminary endangerment assessment
34 is needed, the Department of Toxic Substances Control shall notify,
35 in writing, the State Department of Education and the governing
36 board of the school district of that decision and the basis for that
37 decision. The school district shall submit to the State Department
38 of Education the Phase I environmental assessment and requested
39 additional information, if any, that was reviewed by the Department
40 of Toxic Substances Control pursuant to that subparagraph.

1 Submittal of the Phase I assessment and additional information,
2 if any, to the State Department of Education shall be prior to the
3 State Department of Education issuance of final site or plan
4 approvals affect by that Phase I assessment.

5 (B) If the Phase I environmental assessment concludes that a
6 preliminary endangerment assessment is needed, or if the
7 Department of Toxic Substances Control concludes after it reviews
8 a Phase I environmental assessment pursuant to this section that
9 a preliminary endangerment assessment is needed, the school
10 district shall either contract with an environmental assessor to
11 supervise the preparation of, and sign, a preliminary endangerment
12 assessment of the proposed schoolsite and enter into an agreement
13 with the Department of Toxic Substances Control to oversee the
14 preparation of the preliminary endangerment assessment or elect
15 not to pursue the acquisition or construction project. The agreement
16 entered into with the Department of Toxic Substances Control may
17 be entitled an “Environmental Oversight Agreement” and shall
18 reference this paragraph. A school district may, with the
19 concurrence of the Department of Toxic Substances Control, enter
20 into an agreement with the Department of Toxic Substances
21 Control to oversee the preparation of a preliminary endangerment
22 assessment without first having prepared a Phase I environmental
23 assessment. Upon request from the school district, the Director of
24 the Department of Toxic Substances Control shall exercise its
25 authority to designate a person to enter the site and inspect and
26 obtain samples pursuant to Section 25358.1 of the Health and
27 Safety Code, if the director determines that the exercise of that
28 authority will assist in expeditiously completing the preliminary
29 endangerment assessment. The preliminary endangerment
30 assessment shall contain one of the following conclusions:

31 (i) A further investigation of the site is not required.
32 (ii) A release of hazardous materials has occurred, and if so, the
33 extent of the release, that there is the threat of a release of
34 hazardous materials, or that a naturally occurring hazardous
35 material is present, or any combination thereof.

36 (5) The school district shall submit the preliminary
37 endangerment assessment to the Department of Toxic Substances
38 Control for its review and approval and to the State Department
39 of Education for its files. The school district may entitle a document
40 that is meant to fulfill the requirements of a preliminary

1 endangerment assessment a “preliminary environmental
2 assessment” and that document shall be deemed to be a preliminary
3 endangerment assessment if it specifically refers to the statutory
4 provisions whose requirements it intends to meet and the document
5 meets the requirements of a preliminary endangerment assessment.

6 (6) At the same time a school district submits a preliminary
7 endangerment assessment to the Department of Toxic Substances
8 Control pursuant to paragraph (5), the school district shall publish
9 a notice that the assessment has been submitted to the department
10 in a local newspaper of general circulation, and shall post the notice
11 in a prominent manner at the proposed schoolsite that is the subject
12 of that notice. The notice shall state the school district’s
13 determination to make the preliminary endangerment assessment
14 available for public review and comment pursuant to subparagraph
15 (A) or (B):

16 (A) If the school district chooses to make the assessment
17 available for public review and comment pursuant to this
18 subparagraph, it shall offer to receive written comments for a
19 period of at least 30 calendar days after the assessment is submitted
20 to the Department of Toxic Substances Control, commencing on
21 the date the notice is originally published, and shall hold a public
22 hearing to receive further comments. The school district shall make
23 all of the following documents available to the public upon request
24 through the time of the public hearing:

- 25 (i) The preliminary endangerment assessment.
- 26 (ii) The changes requested by the Department of Toxic
27 Substances Control for the preliminary endangerment assessment,
28 if any.
- 29 (iii) Any correspondence between the school district and the
30 Department of Toxic Substances Control that relates to the
31 preliminary endangerment assessment.

32 For the purposes of this subparagraph, the notice of the public
33 hearing shall include the date and location of the public hearing,
34 and the location where the public may review the documents
35 described in clauses (i) to (iii), inclusive. If the preliminary
36 endangerment assessment is revised or altered following the public
37 hearing, the school district shall make those revisions or alterations
38 available to the public. The school district shall transmit a copy
39 of all public comments received by the school district on the
40 preliminary endangerment assessment to the Department of Toxic

1 Substances Control. The Department of Toxic Substances Control
2 shall complete its review of the preliminary endangerment
3 assessment and public comments received thereon and shall either
4 approve or disapprove the assessment within 30 calendar days of
5 the close of the public review period. If the Department of Toxic
6 Substances Control determines that it is likely to disapprove the
7 assessment prior to its receipt of the public comments, it shall
8 inform the school district of that determination and of any action
9 that the school district is required to take for the Department of
10 Toxic Substances Control to approve the assessment.

11 (B) If the school district chooses to make the preliminary
12 endangerment assessment available for public review and comment
13 pursuant to this subparagraph, the Department of Toxic Substances
14 Control shall complete its review of the assessment within 60
15 calendar days of receipt of the assessment and shall either return
16 the assessment to the school district with comments and requested
17 modifications or requested further assessment or concur with the
18 adequacy of the assessment pending review of public comment.
19 If the Department of Toxic Substances Control concurs with the
20 adequacy of the assessment, and the school district proposes to
21 proceed with site acquisition or a construction project, the school
22 district shall make the assessment available to the public on the
23 same basis and at the same time it makes available the draft
24 environmental impact report or negative declaration pursuant to
25 the California Environmental Quality Act (Division 13
26 (commencing with Section 21000) of the Public Resources Code)
27 for the site, unless the document developed pursuant to the
28 California Environmental Quality Act (Division 13 (commencing
29 with Section 21000) of the Public Resources Code) will not be
30 made available until more than 90 days after the assessment is
31 approved, in which case the school district shall, within 60 days
32 of the approval of the assessment, separately publish a notice of
33 the availability of the assessment for public review in a local
34 newspaper of general circulation. The school district shall hold a
35 public hearing on the preliminary endangerment assessment and
36 the draft environmental impact report or negative declaration at
37 the same time, pursuant to the California Environmental Quality
38 Act (Division 13 (commencing with Section 21000) of the Public
39 Resources Code). All public comments pertaining to the
40 preliminary endangerment assessment shall be forwarded to the

1 Department of Toxic Substances Control immediately. The
2 Department of Toxic Substances Control shall review the public
3 comments forwarded by the school district and shall approve or
4 disapprove the preliminary endangerment assessment within 30
5 days of the district's approval action of the environmental impact
6 report or the negative declaration.

7 (7) The school district shall comply with the public participation
8 requirements of Sections 25358.7 and 25358.7.1 of the Health and
9 Safety Code and other applicable provisions of the state act with
10 respect to those response actions only if further response actions
11 beyond a preliminary endangerment assessment are required and
12 the district determines that it will proceed with the acquisition or
13 construction project.

14 (8) If the Department of Toxic Substances Control disapproves
15 the preliminary endangerment assessment, it shall inform the
16 district of the decision, the basis for the decision, and actions
17 necessary to secure the Department of Toxic Substances Control
18 approval of the assessment. The school district shall take actions
19 necessary to secure the approval of the Department of Toxic
20 Substances Control of the preliminary endangerment assessment
21 or elect not to pursue the acquisition or construction project.

22 (9) If the preliminary endangerment assessment determines that
23 a further investigation of the site is not required and the Department
24 of Toxic Substances Control approves this determination, it shall
25 notify the State Department of Education and the school district
26 of its approval. The school district may then proceed with the
27 acquisition or construction project.

28 (10) If the preliminary endangerment assessment determines
29 that a release of hazardous material has occurred, that there is the
30 threat of a release of hazardous materials, that a naturally occurring
31 hazardous material is present, or any combination thereof, that
32 requires further investigation, and the Department of Toxic
33 Substances Control approves this determination, the school district
34 may elect not to pursue the acquisition or construction project. If
35 the school district elects to pursue the acquisition or construction
36 project, it shall do all of the following:

37 (A) Prepare a financial analysis that estimates the cost of
38 response action that will be required at the proposed schoolsite.

1 (B) Assess the benefits that accrue from using the proposed
2 schoolsite when compared to the use of alternative schoolsites, if
3 any.

4 (C) Obtain the approval of the State Department of Education
5 that the proposed schoolsite meets the schoolsite selection standards
6 adopted by the State Department of Education pursuant to
7 subdivision (b) of Section 17251.

8 (D) Evaluate the suitability of the proposed schoolsite in light
9 of the recommended alternative schoolsite locations in order of
10 merit if the school district has requested the assistance of the State
11 Department of Education, based upon the standards of the State
12 Department of Education, pursuant to subdivision (a) of Section
13 17251.

14 (11) The school district shall reimburse the Department of Toxic
15 Substances Control for all of the department's response costs.

16 (b) The costs incurred by the school districts when complying
17 with this section are allowable costs for purposes of an applicant
18 under Chapter 12.5 (commencing with Section 17070.10) of Part
19 10 and may be reimbursed in accordance with Section 17072.13.

20 (c) A school district that releases a Phase I environmental
21 assessment, a preliminary endangerment assessment, or information
22 concerning either of these assessments, any of which is required
23 by this section, may not be held liable in any action filed against
24 the school district for making either of these assessments available
25 for public review.

26 (d) The changes made to this section by the act amending this
27 section during the 2001 portion of the 2001–02 Regular Session
28 do not apply to a schoolsite acquisition project or a school
29 construction project, if either of the following occurred on or before
30 the effective date of the act amending this section during the 2001
31 portion of the 2001–02 Regular Session:

32 (1) The final preliminary endangerment assessment for the
33 project was approved by the Department of Toxic Substances
34 Control pursuant to this section as this section read on the date of
35 the approval.

36 (2) The school district seeking state funding for the project
37 completed a public hearing for the project pursuant to this section,
38 as this section read on the date of the hearing.

~~SEC. 2.~~

SEC. 3. Article 3 (commencing with Section 17235) is added to Chapter 1 of Part 10.5 of Division 1 of Title 1 of the Education Code, to read:

Article 3. Private School Schoolsites

17235. (a) For purposes of this section, the following definitions apply:

(1) "Administering agency" means an agency authorized pursuant to Section 25502 of the Health and Safety Code to implement and enforce Chapter 6.95 (commencing with Section 25500) of Division 20 of the Health and Safety Code.

(2) "Extremely hazardous substance" has the same meaning as defined in paragraph (2) of subdivision (j) of Section 25532 of the Health and Safety Code.

(3) "Facilities" means a source with a potential to use, generate, emit, or discharge hazardous air pollutants, including, but not limited to, pollutants that meet the definition of a hazardous substance, and whose process or operation is identified as an emission source pursuant to the most recent list of source categories published by the State Air Resources Board.

(4) "Freeway or other busy traffic corridor" means those roadways that, on an average day, have traffic in excess of 50,000 vehicles in a rural area, as defined in Section 50101 of the Health and Safety Code, and 100,000 vehicles in an urban area, as defined in Section 50104.7 of the Health and Safety Code.

(5) "Handle" has the same meaning as defined in Section 25501 of the Health and Safety Code.

(6) "Hazardous air emissions" means emissions into the ambient air of air contaminants that have been identified as a toxic air contaminant by the State Air Resources Board or by the air pollution control officer for the jurisdiction in which the project is located. As determined by the air pollution control officer, hazardous air emissions also means emissions into the ambient air from any substances identified in subdivisions (a) to (f), inclusive, of Section 44321 of the Health and Safety Code.

(7) "Hazardous substance" has the same meaning as defined in Section 25316 of the Health and Safety Code.

(8) “Hazardous waste” has the same meaning as defined in Section 25117 of the Health and Safety Code.

(9) “Hazardous waste disposal site” has the same meaning as “disposal site,” as defined in Section 25114 of the Health and Safety Code.

(b) The governing board of a private school shall not approve the acquisition or purchase of a schoolsite, or the construction of a new elementary or secondary school, by, or for use by, a private school unless all of the following occur:

(1) The city or county determines that the property proposed to be acquired or purchased, or to be constructed upon, is not any of the following:

(A) The site of a current or former hazardous waste disposal site or solid waste disposal site, unless, if the site was a former solid waste disposal site, the city or county concludes that the wastes have been removed.

(B) A hazardous substance release site identified by the Department of Toxic Substances Control in a current list adopted pursuant to Section 25356 of the Health and Safety Code for removal or remedial action pursuant to Chapter 6.8 (commencing with Section 25300) of Division 20 of the Health and Safety Code.

(C) A site that contains one or more pipelines, situated underground or aboveground, that carry hazardous substances, extremely hazardous substances, or hazardous wastes, unless the pipeline is a natural gas line that is used only to supply natural gas to that school or neighborhood, or other nearby schools.

~~(D) A site that is within 500 feet of the edge of the closest traffic lane of a freeway or other busy traffic corridor.~~

~~(E) A site that is within 500 feet of a site specified in subparagraph (A), (B), or (C).~~

(2) (A) The governing board has notified in writing and consulted with the administering agency in which the proposed schoolsite is located, and with any air pollution control district or air quality management district having jurisdiction in the area, to identify both permitted and nonpermitted facilities within that district’s authority, including, but not limited to, freeways or other busy traffic corridors, large agricultural operations, and railyards, within one-fourth of one mile of the proposed schoolsite, that might reasonably be anticipated to emit hazardous emissions or handle hazardous or extremely hazardous substances or waste. The

1 notification by the governing board shall include a list of the
2 locations for which information is sought.

3 (B) Each administering agency, air pollution control district, or
4 air quality management district receiving written notification from
5 a governing board to identify facilities pursuant to subparagraph
6 (A) shall provide the requested information and provide a written
7 response to the governing board within 30 days of receiving the
8 notification.

9 (3) The city or county makes one of the following written
10 findings:

11 (A) Consultation identified no facilities of the type specified in
12 paragraph (2) or other significant pollution sources.

13 (B) One or more facilities specified in paragraph (2) or other
14 pollution sources exist, but one of the following conditions applies:

15 (i) The health risks from the facilities or other pollution sources
16 do not and will not constitute an actual or potential endangerment
17 of public health to persons who would attend or be employed at
18 the proposed school.

19 (ii) Corrective measures required under an existing order by
20 another agency having jurisdiction over the facilities or other
21 pollution sources will, before the school is occupied, result in the
22 mitigation of all chronic or accidental hazardous air emissions to
23 levels that do not constitute an actual or potential endangerment
24 of public health to persons who would attend or be employed at
25 the proposed school. If the city or county makes a finding pursuant
26 to this clause, it shall also make a subsequent finding, before
27 occupancy of the school, that the emissions have been so mitigated.

28 (iii) For a schoolsite with a boundary that is within 500 feet of
29 the edge of the closest traffic lane of a freeway or other busy traffic
30 corridor, the city or county determines, through analysis pursuant
31 to paragraph (2) of subdivision (b) of Section 44360 of the Health
32 and Safety Code, based on appropriate air dispersion modeling,
33 and after considering any potential mitigation measures, that the
34 air quality at the proposed site is such that neither short-term nor
35 long-term exposure poses significant health risks to pupils.

36 (C) One or more facilities specified in paragraph (2) or other
37 pollution sources exist, but conditions in clause (i), (ii), or (iii) of
38 subparagraph (B) cannot be met, and the private school is unable
39 to locate an alternative site that is suitable due to a severe shortage
40 of sites that meet the requirements in this section.

1 *SEC. 4. Section 17268 of the Education Code is amended to*
2 *read:*

3 17268. (a) The governing board of a school district that elects
4 not to receive state funds pursuant to Chapter 12.5 (commencing
5 with Section 17070.10) may not approve a project for the
6 construction of a new school building, as defined in Section 17283,
7 unless the project and its lead agency comply with the same
8 requirements specified in *paragraph (1) of subdivision (a) of*
9 Section 17213 for schoolsite acquisition.

10 (b) As a condition to receiving state funds pursuant to Chapter
11 12.5 (commencing with Section ~~17070.10~~, 17070.10), the
12 governing board of a school district may not approve a project for
13 the construction of a new school building or schoolsite on leased
14 or acquired land unless the project and the school district comply
15 with the requirements specified in Sections 17213.1 and 17213.2.

16 (c) The project shall not be subject to subdivision (b) for a minor
17 addition to a school if the project is eligible for a categorical or
18 statutory exemption under guidelines issued pursuant to Section
19 21083 of the Public Resources Code, as set forth in the California
20 Environmental Quality Act.

21 (d) “School building,” as used in this section, means any
22 building designed and constructed to be used for elementary or
23 secondary school purposes by a school district.

24 (e) The requirements of Sections 17213, 17213.1 and 17213.2
25 shall not apply to a schoolsite if the acquisition occurred prior to
26 January 1, 2000, to the extent a school district is subject to the
27 requirements set forth in those sections pursuant to a judicial order
28 or an order issued by, or an agreement with the Department of
29 Toxic Substances Control regarding that site, and the school district
30 is in full compliance with that order or agreement.

31 (f) For purposes of this section, the acceptance of construction
32 bids shall constitute approval of the project.

33 ~~SEC. 3.~~

34 *SEC. 5. Section 21151.8 of the Public Resources Code is*
35 *amended to read:*

36 21151.8. (a) An environmental impact report shall not be
37 certified or a negative declaration shall not be approved for a
38 project involving the purchase of a schoolsite or the construction
39 of a new elementary or secondary school by a school district or a
40 charter school unless all of the following occur:

1 (1) The environmental impact report or negative declaration
2 includes information that is needed to determine if the property
3 proposed to be purchased, or to be constructed upon, is any of the
4 following:

5 (A) The site of a current or former hazardous waste disposal
6 site or solid waste disposal site and, if so, whether the wastes have
7 been removed.

8 (B) A hazardous substance release site identified by the
9 Department of Toxic Substances Control in a current list adopted
10 pursuant to Section 25356 of the Health and Safety Code for
11 removal or remedial action pursuant to Chapter 6.8 (commencing
12 with Section 25300) of Division 20 of the Health and Safety Code.

13 (C) A site that contains one or more pipelines, situated
14 underground or aboveground, that carries hazardous substances,
15 extremely hazardous substances, or hazardous wastes, unless the
16 pipeline is a natural gas line that is used only to supply natural gas
17 to that school or neighborhood, or other nearby schools.

18 (D) A site that is within 500 feet of the edge of the closest traffic
19 lane of a freeway or other busy traffic corridor.

20 ~~(E) A site that is within 500 feet of a site specified in~~
21 ~~subparagraph (A), (B), or (C).~~

22 (2) (A) The lead agency in preparing the environmental impact
23 report or negative declaration has notified in writing and consulted
24 with the administering agency in which the proposed schoolsite
25 is located, pursuant to Section 2735.3 of Title 19 of the California
26 Code of Regulations, and with any air pollution control district or
27 air quality management district having jurisdiction in the area, to
28 identify both permitted and nonpermitted facilities within that
29 district's authority, including, but not limited to, freeways or other
30 busy traffic corridors, large agricultural operations, and railyards,
31 within one-fourth of one mile of the proposed schoolsite, that might
32 reasonably be anticipated to emit hazardous emissions or handle
33 hazardous or extremely hazardous substances or waste. The
34 notification by the lead agency shall include a list of the locations
35 for which information is sought.

36 (B) Each administering agency, air pollution control district, or
37 air quality management district receiving written notification from
38 a lead agency to identify facilities pursuant to subparagraph (A)
39 shall provide the requested information and provide a written
40 response to the lead agency within 30 days of receiving the

1 notification. The environmental impact report or negative
2 declaration shall be conclusively presumed to comply with
3 subparagraph (A) as to the area of responsibility of an agency that
4 does not respond within 30 days.

5 (C) If the lead agency has carried out the consultation required
6 by subparagraph (A), the environmental impact report or the
7 negative declaration shall be conclusively presumed to comply
8 with subparagraph (A), notwithstanding any failure of the
9 consultation to identify an existing facility or other pollution source
10 specified in subparagraph (A).

11 (3) The governing board of the school district or the governing
12 body of a charter school makes one of the following written
13 findings:

14 (A) Consultation identified no facilities of this type or other
15 significant pollution sources specified in paragraph (2).

16 (B) The facilities or other pollution sources specified in
17 paragraph (2) exist, but one of the following conditions applies:

18 (i) The health risks from the facilities or other pollution sources
19 do not and will not constitute an actual or potential endangerment
20 of public health to persons who would attend or be employed at
21 the proposed school.

22 (ii) Corrective measures required under an existing order by
23 another agency having jurisdiction over the facilities or other
24 pollution sources will, before the school is occupied, result in the
25 mitigation of all chronic or accidental hazardous air emissions to
26 levels that do not constitute an actual or potential endangerment
27 of public health to persons who would attend or be employed at
28 the proposed school. If the governing board of a school district or
29 the governing body of a charter school makes a finding pursuant
30 to this clause, it shall also make a subsequent finding, before
31 occupancy of the school, that the emissions have been so mitigated.

32 (iii) For a schoolsite with a boundary that is within 500 feet of
33 the edge of the closest traffic lane of a freeway or other busy traffic
34 corridor, the governing board of the school district or the governing
35 body of a charter school determines, through analysis pursuant to
36 paragraph (2) of subdivision (b) of Section 44360 of the Health
37 and Safety Code, based on appropriate air dispersion modeling,
38 and after considering any potential mitigation measures, that the
39 air quality at the proposed site is such that neither short-term nor
40 long-term exposure poses significant health risks to pupils.

1 (C) The facilities or other pollution sources specified in
2 paragraph (2) exist, but conditions in clause (i), (ii), or (iii) of
3 subparagraph (B) cannot be met, and the school district or charter
4 school is unable to locate an alternative site that is suitable due to
5 a severe shortage of sites that meet the requirements in *paragraph*
6 *(1) of* subdivision (a) of Section 17213 of the Education Code. If
7 the governing board of a school district or the governing body of
8 a charter school makes this finding, the governing board of a school
9 district or the governing body of a charter school shall adopt a
10 statement of overriding considerations pursuant to Section 15093
11 of Title 14 of the California Code of Regulations.

12 (b) For purposes of this section, the following definitions apply:

13 (1) “Administering agency” means an agency authorized
14 pursuant to Section 25502 of the Health and Safety Code to
15 implement and enforce Chapter 6.95 (commencing with Section
16 25500) of Division 20 of the Health and Safety Code.

17 (2) “Extremely hazardous substances” means an extremely
18 hazardous substance, as defined pursuant to paragraph (2) of
19 subdivision (j) of Section 25532 of the Health and Safety Code.

20 (3) “Facilities” means a source with a potential to use, generate,
21 emit, or discharge hazardous air pollutants, including, but not
22 limited to, pollutants that meet the definition of a hazardous
23 substance, and whose process or operation is identified as an
24 emission source pursuant to the most recent list of source categories
25 published by the State Air Resources Board.

26 (4) “Freeway or other busy traffic corridor” means those
27 roadways that, on an average day, have traffic in excess of 50,000
28 vehicles in a rural area, as defined in Section 50101 of the Health
29 and Safety Code, and 100,000 vehicles in an urban area, as defined
30 in Section 50104.7 of the Health and Safety Code.

31 (5) “Handle” means handle as defined in Article 1 (commencing
32 with Section 25500) of Chapter 6.95 of Division 20 of the Health
33 and Safety Code.

34 (6) “Hazardous air emissions” means emissions into the ambient
35 air of air contaminants that have been identified as a toxic air
36 contaminant by the State Air Resources Board or by the air
37 pollution control officer for the jurisdiction in which the project
38 is located. As determined by the air pollution control officer,
39 hazardous air emissions also means emissions into the ambient air

1 from any substances identified in subdivisions (a) to (f), inclusive,
2 of Section 44321 of the Health and Safety Code.

3 (7) “Hazardous substance” means a substance defined in Section
4 25316 of the Health and Safety Code.

5 (8) “Hazardous waste” means a waste defined in Section 25117
6 of the Health and Safety Code.

7 (9) “Hazardous waste disposal site” means a site defined in
8 Section 25114 of the Health and Safety Code.

9 *SEC. 6. Section 1612 of the Public Utilities Code is amended*
10 *to read:*

11 1612. Not less than 25 percent of projects funded by the
12 SRVEVR Program or SNPFA Program shall be in underserved
13 communities. The SRVEVR Program and SNPFA Program shall
14 prioritize underserved communities by ensuring that all schools
15 that are in an underserved community are offered the opportunity
16 to apply for and receive grants before those schools that are not in
17 an underserved community. Additionally, the SRVEVR Program
18 shall prioritize schools with a boundary that is within 500 feet of
19 the edge of the closest traffic lane of a freeway or other busy traffic
20 corridor or within 1,000 feet of a facility holding a permit pursuant
21 to Title V of the Clean Air Act (42 U.S.C. Section 7661 et seq.).
22 For the purposes of this section, “freeway or other busy traffic
23 corridors” has the same meaning as defined in paragraph ~~(9)~~ (4)
24 of subdivision ~~(d)~~ (b) of Section 17213 of the Education Code.

25 ~~SEC. 4.~~

26 *SEC. 7.* No reimbursement is required by this act pursuant to
27 Section 6 of Article XIII B of the California Constitution because
28 a local agency or school district has the authority to levy service
29 charges, fees, or assessments sufficient to pay for the program or
30 level of service mandated by this act, within the meaning of Section
31 17556 of the Government Code.

32 However, if the Commission on State Mandates determines that
33 this act contains costs mandated by the state, reimbursement to
34 local agencies and school districts for those costs shall be made
35 pursuant to Part 7 (commencing with Section 17500) of Division
36 4 of Title 2 of the Government Code.

ATTACHMENT 2E

South Coast Air Quality Management District
Legislative Analysis Summary – AB 1001 (C. Garcia)
Version: Amended – 3/15/2021
Analyst: DPG/PC

AB 1001 (C. Garcia)

Environmental permitting and air pollution.

Summary: This bill would require permitting agencies, including air districts, to deny new permits and permit renewals for stationary sources in disadvantaged communities, or apply conditions on construction and operation of that source, if they find that approval of the permit would cause adverse cumulative environmental or public health stressors in the overburdened community higher than those borne by other communities.

Additionally, this bill would expand the applicability of Best Available Retrofit Control Technology/Best Available Control Technology (BARCT/BACT) requirements to all emitters, rather than just those subject to CARB's Cap and Trade requirements, and require air districts that are nonattainment areas for one or more air pollutants to expedite adoption of BARCT/BACT requirements.

Background: Existing law regulates facilities with operations that would or may cause the release of pollution to the environment. Existing law requires operators of those facilities to obtain a permit or other authorization from various public agencies for the operation of those facilities.

Existing law requires each air district that has a nonattainment area for one or more air pollutants to adopt an expedited schedule for the implementation of BARCT by the earliest feasible date, but not later than December 31, 2023. Existing law provides that the adopted expedited schedule applies only to each industrial source that, as of January 1, 2017, was subject to a market-based compliance mechanism for the emissions of greenhouse gases adopted by the California Air Resources Board (CARB). Existing law requires the state board to establish and maintain a statewide clearinghouse that identifies BACT and BARCT.

The author indicates that AB 1001 is modeled after legislation that recently passed in New Jersey (NJ) which worked to prevent new stationary sources from coming into already overburdened communities.

Status: 3/16/21 Re-referred to Asm. Committee on Natural Resources.

Specific Provisions: Specifically, this bill would:

- a) Require an air district that is a nonattainment area for one or more air pollutants to, by the earliest feasible date, adopt an expedited schedule for the implementation of BACT or BARCT;

- b) Require an air district to adopt each rule implementing BARCT by January 1, 2025, for installation and operation of BACT or BARCT at each emissions unit by the earliest feasible date, but not later than December 31, 2026;
- c) Require air districts to identify all emissions units at an industrial source that emit a pollutant for which the region is in nonattainment and to determine whether those emissions units are individually permitted at BACT or BARCT stringency levels that are applicable as of the time of the review.
- d) For all reviews of what constitutes BACT or BARCT, the air district shall base its consideration of cost effectiveness of the control option for the emissions unit and air quality benefits for the surrounding community, and shall make determinations consistent with information in the statewide clearinghouse.
- e) CARB may create determinations for technologies that have been achieved in practice, and may provide technical assessments of control options, including the availability of alternative technologies for sources or source categories
- f) CalEPA shall publish and maintain and update annually on its internet website a list of overburdened communities; and notify a local municipal or county government if any part of the municipality or county has been designated as an overburdened community.
- g) For applications for an environmental permit in an overburdened facility, a permitting agency shall, on and after July 1, 2022, do the following:
 - 1. Publish a draft environmental permit for public notice, review, and comment for at least 60 calendar days before issuance;
 - 2. Respond in writing to all significant comments raised before finalization of the environmental permit; and,
 - 3. Electronically publish the public comments and responses for the draft permit before the finalization of the permit.
- h) Applications for an environmental permit for a new or existing facility located in an overburdened community shall not be considered complete, on and after July 1, 2022, unless the permit applicant does the following:
 - 1. Prepares an environmental justice impact statement that assesses the potential environmental and public health stressors associated with the proposed new or existing facility, including any adverse environmental or public health stressors that cannot be avoided if the permit is granted, and the environmental or public health

- stressors already borne by the overburdened community as a result of existing conditions located in or affecting the overburdened community;
2. Transmits the environmental justice impact statement at least 60 days in advance of the public hearing to the permitting agency and to the governing body and the clerk of the municipality in which the overburdened community is located. Upon receipt, the permitting agency shall publish the environmental justice impact statement on its internet website.
 3. Organizes and conducts a public hearing in the overburdened community.
- i) Following the public hearing, the permitting agency shall consider the testimony presented and any written comments received, and shall evaluate the issuance of, or conditions to, the environmental permit to avoid or reduce the adverse environmental or public health stressors affecting the overburdened community.
 - j) The permitting agency shall not issue a decision on an application for an environmental permit if the facility is located, or proposed to be located, in whole or in part in an overburdened community until at least 45 days after the public hearing held.
 - k) The permitting agency shall deny an environmental permit upon a finding that the approval of the environmental permit, together with other environmental or public health stressors affecting the overburdened community, cause or contribute to adverse cumulative environmental or public health stressors that are higher than those borne by other communities within the state, county, or other geographic unit of analysis.

Impacts on South Coast AQMD's Mission, Operations or Initiatives: For fiscal year 2019/2020, there are 25,984 active facilities and 67,971 active permits within South Coast AQMD's jurisdiction. A significant portion of those facilities and permits are located within disadvantaged communities impacted by the bill. This bill would have a significant negative impact on South Coast AQMD's permitting processes and expands AB 617 BARCT requirements and also BACT requirements on an expedited schedule. The bill would potentially substantially increase the number of permits applications and permit renewal applications denied throughout the South Coast region. The standard for cumulative impacts as 'compared to other communities' needs to be further refined since an increase in emissions at a facility in an overburdened community may need to meet what might be unattainable background concentrations. This may prove difficult as applicants would be expected to prepare EJ Impact statements.

The bill language would increase the number of required public hearings related to permitting to a large scale and does not align with the existing noticing process that is required of projects. The proposed public hearings/noticing requirements seem to occur on an independent path. It may result in a facility having to notice the same project twice. It

would be preferable to align the noticing requirements with Rule 212 and Title V requirements and air district existing processes, which would provide for meaningful public participation.

Finally, the bill does not provide for reimbursement of funds to air districts despite increased permitting and program workload requirements. South Coast AQMD staff proposes **working with the author** and seeking bill amendments that include, but are not limited to, the following:

- 1) Remove references to BACT since proposed language is not consistent with BACT requirements or eliminate requirement for a schedule for BACT (as BACT is required when permit is issued, not on any schedule);
- 2) Limit BARCT requirements to industrial sources under CARB greenhouse gas cap and trade program and RECLAIM sources;
- 3) Change latest implementation date for BARCT to 2030;
- 4) Limit all permitting requirements to major sources and major modifications at such sources;
- 5) Align public hearing and noticing processes with those of existing permitting processes and requirements for major sources and major modifications; and allow for public hearings to be consolidated into hearings for several different facilities at one time so that no more than one hearing per month is required;
- 6) Eliminate requirement for environmental justice impact statement and ability to deny renewal of a permit where there is no expansion of use based on a finding that the renewal would cause or contribute to adverse cumulative environmental or public health impacts (NJ statute only allows applying conditions);
- 7) Establish more stringent criteria emission or ambient air thresholds and health risks for cumulative environmental and public health stressors in overburdened communities rather than compare impacts to other communities; and
- 8) If the permit is being issued by a single-purpose agency (air, water, etc), provide for denial or addition of conditions only to address increased impacts of the type the agency has jurisdiction over.

Recommended Position: WORK WITH AUTHOR

ATTACHMENT 2F

AMENDED IN ASSEMBLY MARCH 15, 2021

CALIFORNIA LEGISLATURE—2021–22 REGULAR SESSION

ASSEMBLY BILL

No. 1001

Introduced by Assembly Member Cristina Garcia

February 18, 2021

~~An act to amend Section 71021 of the Public Resources Code, relating to the environment.~~ *An act to amend Sections 40920.6 and 40920.8 of the Health and Safety Code, and to add Section 71119 to the Public Resources Code, relating to the environment.*

LEGISLATIVE COUNSEL'S DIGEST

AB 1001, as amended, Cristina Garcia. Environmental-permitting-permitting and air pollution.

Existing law regulates facilities with operations that would or may cause the release of pollution to the environment. Existing law requires operators of those facilities to obtain a permit or other authorization from various public agencies for the operation of those facilities.

This bill would require the California Environmental Protection Agency, on or before May 1, 2022, to publish, maintain, and update a list of overburdened communities, as defined. The bill would, on or after July 1, 2022, require a permitting agency to take certain actions for an application for a new environmental permit, as defined, or the renewal of an environmental permit for a facility located in an overburdened community. The bill would require a permit applicant to prepare an environmental justice impact statement, to conduct a public hearing in the overburdened community, and to transmit the environmental justice impact statement to the permitting agency. The bill would require the permitting agency to deny the application or to apply conditions concerning the construction and operation of the

facility to protect public health if it finds that the approval of the application would, together with other environmental or public health stressors affecting the overburdened community, cause or contribute to adverse cumulative environmental or public health stressors in the overburdened community that are higher than those borne by other communities. The bill would require permitting agencies to electronically publish certain information on their internet websites. Because the bill would impose additional duties on local agencies that are permitting agencies, this bill would impose a state-mandated local program.

Existing law requires each air pollution control district and each air quality management district (air district) that has a nonattainment area for one or more air pollutants to adopt an expedited schedule for the implementation of best available retrofit control technology (BARCT) by the earliest feasible date, but not later than December 31, 2023. Existing law provides that the adopted expedited schedule applies only to each industrial source that, as of January 1, 2017, was subject to a market-based compliance mechanism for the emissions of greenhouse gases adopted by the State Air Resources Board, as provided.

This bill would additionally require those air districts to adopt an expedited schedule for the implementation of best available control technology (BACT). The bill would delete the provision applying the expedited schedule only to industrial sources that are subject to the market-based compliance mechanism. The bill would require the air districts to identify all emission units at an industrial source and to take certain actions regarding those emission units, as specified. The bill would require, by January 1, 2025, the air districts to adopt rules for the installation and operation of either BACT or BARCT at emission units by the earliest feasible date, but not later than December 31, 2026. Because this bill would impose additional duties on air districts, this bill would impose a state-mandated local program.

Existing law requires the state board to establish and maintain a statewide clearinghouse that identifies BACT and BARCT.

This bill would authorize the state board to create determinations for technologies that have been achieved in practice for sources or source categories.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that no reimbursement is required by this act for a specified reason.

~~Existing law requires the Secretary for Environmental Protection to establish an administrative process that may be used, at the request of a permit applicant for a project that requires multiple environmental permits, for the designation of a consolidated permit agency to issue a consolidate permit for the project. Existing law requires the secretary, within 30 days of the date that the request is received, to either designate a consolidated permit agency for the project or refer the designation to the California Environmental Policy Council.~~

~~This bill would shorten the time period in which the secretary is to respond to 20 days.~~

Vote: majority. Appropriation: no. Fiscal committee: yes.
State-mandated local program: ~~no~~-yes.

The people of the State of California do enact as follows:

- 1 SECTION 1. *The Legislature finds and declares all of the*
- 2 *following:*
- 3 (a) *All California residents, regardless of income, race,*
- 4 *ethnicity, color, or national origin, have a right to live, work, and*
- 5 *recreate in a clean and healthy environment.*
- 6 (b) *Historically, California's low-income communities and*
- 7 *communities of color have been subject to a disproportionately*
- 8 *high number of environmental and public health stressors,*
- 9 *including pollution from numerous industrial, commercial, and*
- 10 *governmental facilities located in those communities.*
- 11 (c) *As a result, residents in the state's overburdened*
- 12 *communities have suffered from increased adverse health effects*
- 13 *including, but not limited to, asthma, cancer, elevated blood lead*
- 14 *levels, cardiovascular disease, and developmental disorders.*
- 15 (d) *Children are especially vulnerable to the adverse health*
- 16 *effects caused by exposure to pollution, and those health effects*
- 17 *may severely limit a child's potential for future success.*
- 18 (e) *The adverse effects caused by pollution impede the growth,*
- 19 *stability, and long-term well-being of individuals and families*
- 20 *living in overburdened communities.*
- 21 (f) *The legacy of siting sources of pollution in overburdened*
- 22 *communities continues to pose a threat to the health, well-being,*
- 23 *and economic success of the state's most vulnerable residents.*

1 (g) *It is past time for the state to correct this historical injustice.*

2 (h) *No community should bear a disproportionate share of the*
3 *adverse environmental and public health consequences that*
4 *accompany the state's economic growth.*

5 (i) *The state's overburdened communities must have a*
6 *meaningful opportunity to participate in any decision to allow in*
7 *those communities certain types of facilities which, by the nature*
8 *of their activity, have the potential to increase environmental and*
9 *public health stressors.*

10 (j) *It is in the public interest for the state, where appropriate,*
11 *to limit the future placement and expansion of those facilities in*
12 *overburdened communities.*

13 SEC. 2. *Section 40920.6 of the Health and Safety Code is*
14 *amended to read:*

15 40920.6. (a) ~~Prior to~~ *Before* adopting rules or regulations to
16 meet the requirement for best available retrofit control technology
17 pursuant to Sections 40918, 40919, 40920, and 40920.5, or for a
18 feasible measure pursuant to Section 40914, districts shall, in
19 addition to other requirements of this division, do all of the
20 following:

21 (1) Identify one or more potential control options which achieves
22 the emission reduction objectives for the regulation.

23 (2) Review the information developed to assess the
24 cost-effectiveness of the potential control option. For purposes of
25 this paragraph, "cost-effectiveness" means the cost, in dollars, of
26 the potential control option divided by emission reduction potential,
27 in tons, of the potential control option.

28 (3) Calculate the incremental cost-effectiveness for the potential
29 control options identified in paragraph (1). To determine the
30 incremental cost-effectiveness under this paragraph, the district
31 shall calculate the difference in the dollar costs divided by the
32 difference in the emission reduction potentials between each
33 progressively more stringent potential control option as compared
34 to the next less expensive control option.

35 (4) Consider, and review in a public meeting, all of the
36 following:

37 (A) The effectiveness of the proposed control option in meeting
38 the requirements of this chapter and the requirements adopted by
39 the state board pursuant to subdivision (b) of Section 39610.

1 (B) The cost-effectiveness of each potential control option as
2 assessed pursuant to paragraph (2).

3 (C) The incremental cost-effectiveness between the potential
4 control options as calculated pursuant to paragraph (3).

5 (5) Make findings at the public hearing at which the regulation
6 is adopted stating the reasons for the district's adoption of the
7 proposed control option or options.

8 (b) A district may establish its own best available retrofit control
9 technology requirement based upon consideration of the factors
10 specified in subdivision (a) and Section 40406 if the requirement
11 complies with subdivision (d) of Section 40001 and is consistent
12 with this chapter, other state law, and federal law, including, but
13 not limited to, the applicable state implementation plan.

14 (c) (1) ~~On or before January 1, 2019, each~~ *Each* district that is
15 a nonattainment area for one or more air pollutants shall adopt an
16 expedited schedule for the implementation of *best available control*
17 *technology (BACT) or* best available retrofit control technology
18 (BARCT), by the earliest feasible date, ~~but in any event not later~~
19 ~~than December 31, 2023.~~ *date and in compliance with paragraph*
20 *(3) of subdivision (g).*

21 ~~(2) The schedule shall apply to each industrial source that, as~~
22 ~~of January 1, 2017, was subject to a market-based compliance~~
23 ~~mechanism adopted by the state board pursuant to subdivision (c)~~
24 ~~of Section 38562.~~

25 ~~(3)~~

26 (2) The schedule shall give highest priority to those permitted
27 units that have not modified emissions-related permit conditions
28 for the greatest period of time. The schedule shall not apply to an
29 emissions unit that has implemented *BACT or* BARCT due to a
30 permit revision or a new permit issuance since 2007.

31 (d) ~~Prior to~~ *Before* adopting the schedule pursuant to paragraph
32 (1) of subdivision (c), a district shall hold a public meeting and
33 take into account:

34 (1) The local public health and clean air benefits to the
35 surrounding community.

36 (2) The cost-effectiveness of each control option.

37 (3) The air quality and attainment benefits of each control
38 option.

39 (e) A district shall allow the retirement of marketable emission
40 reduction credits under a program which complies with all of the

1 requirements of Section 39616, or emission reduction credits which
2 meet all of the requirements of state and federal law, including,
3 but not limited to, the requirements that those emission reduction
4 credits be permanent, enforceable, quantifiable, and surplus, in
5 lieu of any requirement for best available retrofit control
6 technology, if the credit also complies with all district rules and
7 regulations affecting those credits.

8 (f) After a district has established the cost-effectiveness, in a
9 dollar amount, for any rule or regulation adopted pursuant to this
10 section or Section 40406, 40703, 40914, 40918, 40919, 40920,
11 40920.6, or 40922, the district, consistent with subdivision (d) of
12 Section 40001, shall allow alternative means of producing
13 equivalent emission reductions at an equal or lesser dollar amount
14 per ton reduced, including the use of emission reduction credits,
15 for any stationary source that has a demonstrated compliance cost
16 exceeding that established dollar amount.

17 (g) *To further implement the schedule adopted pursuant to*
18 *subdivision (c), each district subject to subdivision (c) shall take*
19 *the following actions:*

20 (1) *Identify all emissions units at an industrial source subject*
21 *to paragraph (1) of subdivision (c) that emit a pollutant for which*
22 *the region is in nonattainment to determine whether those*
23 *emissions units are individually permitted at BACT or BARCT*
24 *stringency levels that are applicable as of the time of the review*
25 *and do the following:*

26 (A) *Continue the implementation of the schedule adopted*
27 *pursuant to subdivision (c) if the district determines that the*
28 *emissions unit is subject to a rule that the district included on the*
29 *schedule for updating pursuant to subdivision (c).*

30 (B) *Add the rule to the schedule for updating to ensure that the*
31 *applicable BACT or BARCT rule applies to the emission unit if*
32 *the district determines that the emissions unit is subject to a rule*
33 *implementing BACT or BARCT that is not on the district's adopted*
34 *schedule pursuant to subdivision (c) and the rule has not been*
35 *updated or revised since 2007.*

36 (C) *Add the emissions unit to the schedule adopted pursuant to*
37 *subdivision (c) and adopt a rule to control the nonattainment*
38 *pollutant by implementing BACT or BARCT if the district*
39 *determines that the emission unit is not subject to a rule*
40 *implementing BACT or BARCT.*

1 (2) *For all reviews of what constitutes BACT or BARCT for an*
2 *emissions unit under this subdivision and subdivision (c), the*
3 *district shall base its consideration of cost effectiveness of the*
4 *control option for the emissions unit and air quality benefits for*
5 *the surrounding community, and shall make determinations*
6 *consistent with information in the clearinghouse established*
7 *pursuant to Section 40920.8 and any technical assessments issued*
8 *by the state board.*

9 (3) *The district shall adopt each rule implementing BARCT*
10 *pursuant to subdivision (c) and this subdivision by January 1,*
11 *2025, for installation and operation of BACT or BARCT at each*
12 *emissions unit by the earliest feasible date, but not later than*
13 *December 31, 2026.*

14 SEC. 3. *Section 40920.8 of the Health and Safety Code is*
15 *amended to read:*

16 40920.8. (a) (1) *The state board shall establish and maintain*
17 *a statewide clearinghouse that identifies the best available control*
18 *technology and best available retrofit control technology for criteria*
19 *air pollutants, and related technologies for the control of toxic air*
20 *contaminants.*

21 (2) (A) *The state board may create determinations for*
22 *technologies that have been achieved in practice, and may provide*
23 *technical assessments of control options, including the availability*
24 *of alternative technologies, for sources or source categories.*

25 (B) *The Administrative Procedure Act (Chapter 3.5*
26 *(commencing with Section 11340) of Part 1 of Division 3 of Title*
27 *2 of the Government Code) does not apply to the development of*
28 *technical assessments pursuant to subparagraph (A).*

29 (b) *When updating best available control technology*
30 *determinations, best available retrofit control technology rules,*
31 *and related determinations for the control of toxic air contaminants*
32 *in permits, schedules, and rules, a district shall use the information*
33 *in the statewide clearinghouse established and maintained by the*
34 *state—board: board and any technical assessments that are*
35 *developed pursuant to paragraph (2) of subdivision (a).*

36 SEC. 4. *Section 71119 is added to the Public Resources Code,*
37 *to read:*

38 71119. (a) *For purposes of this section, the following*
39 *definitions apply:*

1 (1) “Environmental or public health stressors” means sources
2 of environmental pollution, including, but not limited to,
3 concentrated areas of air pollution, mobile sources of air pollution,
4 contaminated sites, transfer stations or other solid waste facilities,
5 recycling facilities, scrap yards, and point sources of water
6 pollution, including, but not limited to, water pollution from
7 facilities or combined sewer overflows, or conditions that may
8 cause potential public health impacts, including, but not limited
9 to, asthma, cancer, elevated blood lead levels, cardiovascular
10 disease, and developmental problems in an overburdened
11 community.

12 (2) (A) “Environmental permit” means an authorization or
13 approval, or the renewal of an authorization or approval, that is
14 any of the following:

15 (i) A hazardous waste facility permit issued pursuant to Chapter
16 6.5 (commencing with Section 25001) of Division 20 of the Health
17 and Safety Code.

18 (ii) An air permit issued pursuant to Chapter 4 (commencing
19 with Section 42300) of Part 4 of Division 26 of the Health and
20 Safety Code.

21 (iii) A medical waste treatment facility permit issued pursuant
22 to Chapter 7 (commencing with Section 118130) of Part 14 of
23 Division 104 of the Health and Safety Code.

24 (iv) A well permit issued pursuant to Division 3 (commencing
25 with Section 3000).

26 (v) A solid waste facility permit issued pursuant to Part 4
27 (commencing with Section 43000) of Division 30.

28 (vi) A waste discharge requirement issued pursuant to the
29 Porter-Cologne Water Quality Control Act (Division 7
30 (commencing with Section 13000) of the Water Code).

31 (B) “Environmental permit” does not include any of the
32 following:

33 (i) An authorization or approval necessary to perform a
34 remediation.

35 (ii) An authorization or approval required for a minor
36 modification of a facility’s authorization or approval described
37 in subparagraph (A) for activities or improvements that do not
38 increase the release of a pollutant or contaminant.

1 (iii) *An authorization or approval that is a renewal of a facility's*
2 *authorization or approval described in subparagraph (A) that does*
3 *not increase the release of a pollutant or contaminant.*

4 (3) (A) *"Facility" means a facility this is required to obtain an*
5 *environmental permit.*

6 (B) *"Facility" does not include a facility that accepts regulated*
7 *medical waste for disposal, including a medical waste incinerator;*
8 *that is attendant to a hospital or university and is intended to*
9 *process self-generated regulated medical waste.*

10 (4) *"Low-income household" has the same meaning as set forth*
11 *in Section 39713 of the Health and Safety Code.*

12 (5) *"Overburdened community" means a community identified*
13 *as a disadvantaged community pursuant to Section 39711 of the*
14 *Health and Safety Code.*

15 (6) *"Permitting agency" means any of the following:*

16 (A) *The Department of Toxic Substances Control.*

17 (B) *An air quality management or air pollution control district.*

18 (C) *The State Department of Public Health.*

19 (D) *The Geologic Energy Management Division in the*
20 *Department of Conservation.*

21 (E) *The Department of Resources Recovery and Recycling.*

22 (F) *A regional water quality control board.*

23 (b) *On or before May 1, 2022, the California Environmental*
24 *Protection Agency shall publish and maintain on its internet*
25 *website a list of overburdened communities in the state. The*
26 *California Environmental Protection Agency shall update annually*
27 *the list of overburdened communities. The California*
28 *Environmental Protection Agency shall notify a local municipal*
29 *or county government if any part of the municipality or county has*
30 *been designated as an overburdened community pursuant to this*
31 *subdivision.*

32 (c) *On and after July 1, 2022, for an application for an*
33 *environmental permit for a facility located in an overburdened*
34 *community, a permitting agency shall publish a draft environmental*
35 *permit for public notice, review, and comment for at least 60*
36 *calendar days before issuance. A permitting agency shall respond,*
37 *in writing, to all significant comments raised during the public*
38 *participation process, including written comments submitted during*
39 *the public comment period and any comments raised during any*
40 *public hearing on the environmental permit before finalization of*

1 *the environmental permit. A permitting agency shall electronically*
2 *publish the public comments for the draft permit and the permitting*
3 *agency's responses to significant public comments before the*
4 *finalization of the permit. This requirement applies in addition to*
5 *any public notices required by law.*

6 *(d) (1) On and after July 1, 2022, a permitting agency shall*
7 *not consider complete for review an application for an*
8 *environmental permit for a new facility or for an existing facility,*
9 *if the facility is located, or proposed to be located, in whole or in*
10 *part, in an overburdened community, unless the permit applicant*
11 *does all of the following:*

12 *(A) Prepares an environmental justice impact statement that*
13 *assesses the potential environmental and public health stressors*
14 *associated with the proposed new or existing facility, as applicable,*
15 *including any adverse environmental or public health stressors*
16 *that cannot be avoided if the environmental permit is granted, and*
17 *the environmental or public health stressors already borne by the*
18 *overburdened community as a result of existing conditions located*
19 *in or affecting the overburdened community.*

20 *(B) Transmits the environmental justice impact statement at*
21 *least 60 days in advance of the public hearing required pursuant*
22 *to subparagraph (C) to the permitting agency and to the governing*
23 *body and the clerk of the municipality in which the overburdened*
24 *community is located. Upon receipt, the permitting agency shall*
25 *publish the environmental justice impact statement on its internet*
26 *website.*

27 *(C) (i) Organizes and conducts a public hearing in the*
28 *overburdened community. The permit applicant shall publish a*
29 *notice of the public hearing in at least two newspapers circulating*
30 *within the overburdened community, including in local non-English*
31 *language newspapers for populations comprising at least 15*
32 *percent of the overburdened community, if applicable, not less*
33 *than 60 days before the public hearing. The permit applicant shall*
34 *provide a copy of the notice to the permitting agency, and the*
35 *permitting agency shall publish the notice on its internet website.*
36 *The notice of the public hearing shall provide the date, time, and*
37 *location of the public hearing, a description of the proposed new*
38 *or expanded facility or existing facility, as applicable, a map*
39 *indicating the location of the facility, a brief summary of the*
40 *environmental justice impact statement, information on how an*

1 interested person may review a copy of the complete environmental
2 justice impact statement, an address for the submission of written
3 comments to the permit applicant, and any other information
4 deemed appropriate by the permitting agency. At least 60 days
5 before the public hearing, the permit applicant shall send a copy
6 of the notice to the permitting agency and to the governing body
7 and the clerk of the municipality in which the overburdened
8 community is located. The permit applicant shall invite the
9 municipality to participate in the public hearing. At the public
10 hearing, the permit applicant shall provide clear, accurate, and
11 complete information about the proposed new or existing facility,
12 as applicable, and the potential environmental and public health
13 stressors associated with the facility. The permit applicant shall
14 accept written and oral comments from any interested party, and
15 shall provide an opportunity for meaningful public participation
16 at the public hearing. The permit applicant shall transcribe the
17 public hearing and, no later than 10 days after the public hearing,
18 submit the transcript along with any written comments received
19 to the permitting agency. Following the public hearing, the
20 permitting agency shall consider the testimony presented and any
21 written comments received, and shall evaluate the issuance of, or
22 conditions to, the environmental permit, as necessary, to avoid or
23 reduce the adverse environmental or public health stressors
24 affecting the overburdened community.

25 (ii) Clause (i) is satisfied if a public hearing required by other
26 law regarding the permit application is conducted, and the notice
27 of the public hearing is given, in a manner that meets the
28 requirements of clause (i).

29 (2) If a permit applicant is applying for more than one
30 environmental permit for a proposed new or existing facility, the
31 permit applicant shall only be required to comply with this
32 subdivision once, unless a permitting agency, in its discretion,
33 determines that more than one public hearing is necessary due to
34 the complexity of the permit applications necessary for the
35 proposed new or existing facility. Nothing in this section shall be
36 construed to limit the authority of the permitting agency to hold
37 or require additional public hearings, as may be required by any
38 other law.

39 (e) Notwithstanding any other law, the permitting agency shall
40 not issue a decision on an application for an environmental permit

1 *for a new facility or for the expansion of an existing facility, or on*
2 *an application for the renewal of a facility's environmental permit,*
3 *if the facility is located, or proposed to be located, in whole or in*
4 *part in an overburdened community until at least 45 days after the*
5 *public hearing held pursuant to subparagraph (C) of paragraph*
6 *(1) of subdivision (d).*

7 *(f) Notwithstanding any other law, after review of the*
8 *environmental justice impact statement prepared pursuant to*
9 *paragraph (1) of subdivision (d) and any other relevant*
10 *information, including testimony and written comments received*
11 *at the public hearing, the permitting agency shall deny an*
12 *environmental permit for a new facility or for the expansion of, or*
13 *renewal of an environmental permit for, an existing facility, or*
14 *shall apply conditions concerning the construction and operation*
15 *of the facility to protect public health, upon a finding that approval*
16 *of the environmental permit or renewal, as proposed, would,*
17 *together with other environmental or public health stressors*
18 *affecting the overburdened community, cause or contribute to*
19 *adverse cumulative environmental or public health stressors in*
20 *the overburdened community that are higher than those borne by*
21 *other communities within the state, county, or other geographic*
22 *unit of analysis as determined by the permitting agency pursuant*
23 *to rule, regulation, or guidance adopted pursuant to this section.*

24 *(g) Nothing in this section shall be construed to limit the right*
25 *of a permit applicant to continue facility operations during the*
26 *process of permit renewal to the extent that right is provided by*
27 *applicable law.*

28 *(h) In addition to any other fee authorized by law, rule, or*
29 *regulation, the permitting agency shall assess each permit*
30 *applicant a reasonable fee to cover the permitting agency's costs*
31 *associated with the implementation of this section, including costs*
32 *to provide technical assistance to permit applicants and*
33 *overburdened communities as needed to comply with this section.*

34 *(i) (1) A permitting agency shall adopt rules and regulations*
35 *to implement the provisions of this section.*

36 *(2) The permitting agency may issue and publish, on its internet*
37 *website, technical guidance for compliance with this section.*

38 *(j) On or before January 1, 2024, a permitting agency shall*
39 *electronically publish, on its internet website, all authorizations*
40 *or approvals described in subparagraph (A) of paragraph (2) of*

1 subdivision (a), immediately upon issuance, in a searchable
2 database accessible to the public. The authorizations or approvals
3 issued before January 1, 2022, shall be added to the database by
4 December 31, 2024.

5 (k) A permitting agency shall promptly make information related
6 to environmental permits and permitting decisions available to
7 the California Environmental Protection Agency upon request.

8 (l) A permitting agency shall electronically publish all final
9 enforcement settlement agreements on its internet website
10 immediately upon finalization of the settlements agreements.

11 SEC. 5. No reimbursement is required by this act pursuant to
12 Section 6 of Article XIII B of the California Constitution because
13 a local agency or school district has the authority to levy service
14 charges, fees, or assessments sufficient to pay for the program or
15 level of service mandated by this act, within the meaning of Section
16 17556 of the Government Code.

17 SECTION 1. ~~Section 71021 of the Public Resources Code is~~
18 ~~amended to read:~~

19 ~~71021. (a) A permit applicant for a project may request the~~
20 ~~secretary to designate a consolidated permit agency to administer~~
21 ~~the processing and issuance of a consolidated permit for the project~~
22 ~~pursuant to this division. The secretary, in accordance with the~~
23 ~~guidelines and procedures adopted pursuant to Section 71020,~~
24 ~~shall, within 20 days of the date that the request is received, either~~
25 ~~designate a consolidated permit agency for the project or refer the~~
26 ~~designation to the council.~~

27 ~~(b) A permit applicant who requests the designation of a~~
28 ~~consolidated permit agency shall provide the secretary with a~~
29 ~~description of the project, a preliminary list of the environmental~~
30 ~~permits that the project may require, the identity of any public~~
31 ~~agency that has been designated the lead agency for the project~~
32 ~~pursuant to Chapter 4.5 (commencing with Section 65920) of~~
33 ~~Division 1 of Title 7 of the Government Code or Division 13~~
34 ~~(commencing with Section 21000), and the identity of the~~
35 ~~participating permit agencies. The secretary may request any~~
36 ~~information from the permit applicant that is necessary to make~~
37 ~~the designation under subdivision (a), and may convene a scoping~~
38 ~~meeting of the likely consolidated permit agency and participating~~
39 ~~permit agencies in order to make that designation.~~

1 ~~(e) The consolidated permit agency shall serve as the main point~~
2 ~~of contact for the permit applicant with regard to the processing~~
3 ~~of the consolidated permit for the project and shall manage the~~
4 ~~procedural aspects of that processing consistent with laws~~
5 ~~governing the consolidated permit agency and participating permit~~
6 ~~agencies, and with the procedures agreed to by those agencies in~~
7 ~~accordance with Section 71022. In carrying out these~~
8 ~~responsibilities, the consolidated permit agency shall ensure that~~
9 ~~the permit applicant has all the information needed to apply for~~
10 ~~all the component environmental permits that are incorporated in~~
11 ~~the consolidated permit for the project, coordinate the review of~~
12 ~~those environmental permits by the respective participating permit~~
13 ~~agencies, ensure that timely environmental permit decisions are~~
14 ~~made by the participating permit agencies, and assist in resolving~~
15 ~~any conflict or inconsistency among the environmental permit~~
16 ~~requirements and conditions that are to be imposed by the~~
17 ~~participating permit agencies with regard to the project.~~

18 ~~(d) This division shall not be construed to limit or abridge the~~
19 ~~powers and duties granted to a participating permit agency pursuant~~
20 ~~to the law that authorizes or requires the agency to issue an~~
21 ~~environmental permit for a project. Each participating permit~~
22 ~~agency shall retain its authority to make all decisions on all~~
23 ~~nonprocedural matters with regard to the respective component~~
24 ~~environmental permit that is within its scope of its responsibility,~~
25 ~~including, but not limited to, the determination of environmental~~
26 ~~permit application completeness, environmental permit approval~~
27 ~~or approval with conditions, or environmental permit denial. The~~
28 ~~consolidated permit agency shall not substitute its judgment for~~
29 ~~that of a participating permit agency on any of those nonprocedural~~
30 ~~matters.~~

South Coast Air Quality Management District
Legislative Analysis Summary – SB 596 (Becker)
Version: Amended – 3/4/2021
Analyst: PC

SB 596 (Becker)

Greenhouse gases: cement and concrete production.

Summary: This bill would require CARB, by December 31, 2022, to develop a comprehensive strategy for California’s cement and concrete sector to reduce the carbon intensity of concrete used in the state by at least 40% from 2019 levels by 2030 and to achieve carbon neutrality as soon as possible, but no later than 2045.

The bill would also require CARB, in developing the strategy, to do various things, including selecting one or more communities located adjacent to a cement plant for a community emissions reductions program pursuant to the AB 617 program.

Background: The California Global Warming Solutions Act of 2006 requires CARB to ensure that statewide greenhouse gas (GHG) emissions are reduced to at least 40% below the 1990 level by 2030. Cement and concrete are vital to building roads, bridges, buildings, and the infrastructure used to decarbonize the electrical grid or support low carbon public transportation options, but they are also a major source of GHG emissions. Cement production and concrete use is expected to grow by as much as 40% by 2040 in California so unless emissions from this industry are addressed, they will become a growing share of California’s total GHG emissions. Cost-effective technologies and processes exist for achieving large reductions in emissions from concrete and cement, but they have usually not been deployed at scale because there has been insufficient demand from customers or regulatory requirements to deploy these solutions. In a highly competitive industry with very tight margins, there are strong reasons not to adopt low carbon approaches if they will put a company at a competitive disadvantage.

Status: 3/18/2021 - Re-referred to Com. on E.Q. Set for hearing April 12.

Specific Provisions: Specifically, this bill would:

- 1) Require CARB, by December 31, 2022, to develop a comprehensive strategy for California’s cement and concrete sector to reduce the carbon intensity of concrete used in the state by at least 40% from 2019 levels by 2030 and to achieve carbon neutrality as soon as possible, but no later than 2045; and
- 2) Require CARB, in developing the strategy, to do various things, including:
 - a. Identify modifications to existing measures and evaluate new measures, including a low-carbon product standard for concrete or cement; and
 - b. Select one or more communities located adjacent to a cement plant for a community emissions reductions program pursuant to the AB 617 program.**

Impacts on South Coast AQMD’s Mission, Operations or Initiatives: This bill impacts air districts’ local authority and autonomy to select and recommend future communities of

need for the AB 617 program. The restriction established by the bill on which future AB 617 communities can be selected could put a strain on already limited program funding resources and cause disadvantaged communities with more compelling needs to either suffer a delay or not be selected to be part of the AB 617 program.

South Coast AQMD Proposed Amendment: Work to have the requirement in the bill that one or more communities located adjacent to a cement plant be selected for an AB 617 community be deleted from the bill.

Recommended Position: OPPOSE UNLESS AMENDED

Support:
NRDC

ATTACHMENT 2H

AMENDED IN SENATE MARCH 4, 2021

SENATE BILL

No. 596

Introduced by Senator Becker

February 18, 2021

An act to add Section 38561.5 to the Health and Safety Code, relating to greenhouse gases.

LEGISLATIVE COUNSEL'S DIGEST

SB 596, as amended, Becker. Greenhouse gases: cement and concrete production.

The California Global Warming Solutions Act of 2006, 2006 requires the State Air Resources Board to ensure that statewide greenhouse gas emissions are reduced to at least 40% below the 1990 level by 2030.

~~This bill would state the intent of the Legislature to enact subsequent legislation to reduce emissions of greenhouse gases and adverse air quality impacts from cement and concrete production, as provided.~~

This bill would require the state board, by December 31, 2022, to develop a comprehensive strategy for California's cement and concrete sector to reduce the carbon intensity of concrete used in the state by at least 40% from 2019 levels by 2030 and to achieve carbon neutrality as soon as possible, but no later than 2045. The bill would require the state board, in developing the strategy, among other things, to identify modifications to existing measures and evaluate new measure, including a low-carbon product standard for concrete or cement, to achieve those objectives.

Vote: majority. Appropriation: no. Fiscal committee: ~~no~~ yes.
State-mandated local program: no.

The people of the State of California do enact as follows:

1 *SECTION 1. (a) The Legislature finds and declares all of the*
2 *following:*

3 *(1) Climate change is an urgent threat to the health and*
4 *well-being of California's residents and economy.*

5 *(2) California is a global leader on climate action and has*
6 *committed to achieve carbon neutrality as soon as possible, and*
7 *no later than 2045, in line with the latest climate science.*

8 *(3) Achieving this objective will require advance planning,*
9 *coordination, outreach, and development of a robust set of policies*
10 *tailored to the needs and opportunities of every major emitting*
11 *sector, including cement and concrete, which is responsible for*
12 *over 7 percent of global greenhouse gas emissions.*

13 *(4) California's cement and concrete industry is well positioned*
14 *to lead and accelerate the commitments to achieve carbon*
15 *neutrality made by leading trade associations representing cement*
16 *producers globally and in the United States.*

17 *(5) A wide range of commercially available technologies and*
18 *practices exist to reduce and remove emissions of greenhouse*
19 *gases throughout the life cycle of cement and concrete production,*
20 *use, and disposal.*

21 *(6) Implementing these strategies will also reduce air pollution*
22 *and improve public health in California communities.*

23 *(7) Positioning California's cement and concrete sector to thrive*
24 *in a low-carbon economy will enhance its long-term*
25 *competitiveness and support high-quality jobs.*

26 *(b) It is the intent of the Legislature that attaining net-zero or*
27 *net-negative emissions of greenhouse gases from the cement and*
28 *concrete sector in a manner that enhances California's*
29 *competitiveness, supports high-paying jobs, improves public health,*
30 *and aligns with local community priorities becomes a pillar of the*
31 *state's strategy for achieving carbon neutrality.*

32 *SEC. 2. Section 38561.5 is added to the Health and Safety*
33 *Code, to read:*

34 *38561.5. (a) For purposes of this section, "low carbon product*
35 *standard" means a technology-neutral and performance-based*
36 *standard similar to the Low Carbon Fuel Standard (Subarticle 7*
37 *(commencing with Section 95480) of Title 17 of the California*
38 *Code of Regulations) to reduce the greenhouse gas emissions*

1 *intensity of products sold in California over time on a life-cycle*
2 *basis.*

3 *(b) By December 31, 2022, as part of, or in coordination with,*
4 *the scoping plan prepared pursuant to Section 38561, the state*
5 *board shall develop a comprehensive strategy for California's*
6 *cement and concrete sector to reduce the carbon intensity of*
7 *concrete used within the state by at least 40 percent from 2019*
8 *levels by 2030 and to achieve carbon neutrality as soon as possible,*
9 *but no later than 2045. In developing the strategy, the state board*
10 *shall do all of the following:*

11 *(1) Develop life-cycle greenhouse gas emissions reporting and*
12 *tracking mechanisms for cement and concrete used in California,*
13 *including both of the following:*

14 *(A) Life-cycle greenhouse gas intensity metrics for cement and*
15 *concrete that are comparable across different formulations and*
16 *strength classes.*

17 *(B) Standardized calculations and tools to enable the greenhouse*
18 *gas intensity of cement and concrete from each supplier and for*
19 *each product variation of a supplier to be determined and reported*
20 *in a consistent manner.*

21 *(2) Evaluate the average volume-weighted greenhouse gas*
22 *intensity of concrete used within the state during 2019 to establish*
23 *a baseline from which to measure reductions.*

24 *(3) Identify modifications to existing measures and evaluate*
25 *new measures to achieve the objectives described in this*
26 *subdivision, including, but not limited to, a low-carbon product*
27 *standard for concrete or cement.*

28 *(4) Prioritize actions that reduce adverse air quality impacts*
29 *and support economic and workforce development in communities*
30 *neighboring cement plants.*

31 *(5) Include provisions to minimize and mitigate potential*
32 *leakage.*

33 *(6) Coordinate and consult with other state agencies, districts,*
34 *and experts in academia, industry, and public health, and with*
35 *local communities.*

36 *(7) Prioritize actions that leverage federal incentives where*
37 *applicable to reduce costs and increase economic value for the*
38 *state.*

39 *(8) Evaluate measures to support the use of building materials*
40 *with low embodied greenhouse gas emissions, including*

1 *low-carbon concrete utilizing cement with net-zero or net-negative*
2 *greenhouse gas emissions.*

3 *(9) Select one or more communities located adjacent to a cement*
4 *plant for a community emissions reductions program pursuant to*
5 *subdivision (c) of Section 44391.2.*

6 ~~SECTION 1. It is the intent of the Legislature to enact~~
7 ~~subsequent legislation to reduce emissions of greenhouse gases~~
8 ~~and adverse air quality impacts from cement and concrete~~
9 ~~production by strengthening and standardizing emissions disclosure~~
10 ~~requirements, setting emissions reduction targets for the sector~~
11 ~~commensurate with California's statewide greenhouse gas~~
12 ~~emissions limits, and creating incentives to support the adoption~~
13 ~~of technologies and best practices to reduce emissions throughout~~
14 ~~the supply chain.~~

ATTACHMENT 2I

South Coast Air Quality Management District
Legislative Analysis Summary – H.R. 848
Version: As introduced, February 4, 2021
Analyst: LTO

H.R. 848 (Thompson)

Growing Renewable Energy and Efficiency Now (GREEN) Act of 2021

Summary: This bill would amend the Internal Revenue Code of 1986 to provide incentives for renewable energy and efficiency and for other purposes.

Background: On October 1, 2015, the U.S. Environmental Protection Agency (EPA) strengthened the National Ambient Air Quality Standards (NAAQS) for ground-level ozone, lowering the primary and secondary ozone standard levels to 70 parts per billion. The South Coast Air Basin is classified as an “extreme” non-attainment area and the Coachella Valley is classified as a “severe-15” non-attainment area for the 2015 Ozone NAAQS. The 2022 AQMP will be developed to address the requirements for meeting the 2015 ozone standard.

Development of control measures for the 2022 AQMP are underway through a public process, including Working Groups on Residential and Commercial Buildings and Mobile Sources. Mobile Sources encompasses heavy-duty trucks, construction and industrial equipment, ocean-going vessels, and aircraft.

Although the GREEN Act is focused on greenhouse gas emissions (GHG), incentives to increase the production and availability of renewable energy, use of renewable energy, and more efficient technologies could yield co-benefits for the reduction of nitrogen oxide and particulate matter. Incentive programs also can motivate businesses and individuals to make choices which can lead to lasting clean air behavioral changes.

Status: 2/4/2021, Introduced in House and referred to Committee on Ways and Means

Specific Provisions: The GREEN Act seeks to reduce GHGs through tax incentives. The bill is comprised of seven Titles,

- Title I – Renewable Electricity and Reducing Carbon Emissions
- Title II – Renewable Fuels
- Title III – Green Energy and Efficiency Incentives for Individuals
- Title IV – Greening the Fleet and Alternative Vehicles
- Title V – Investment in the Green Workforce
- Title VI – Environmental Justice
- VII – Treasury Report on Data from the Greenhouse Gas Reporting Program

The following analysis includes Titles and Sections which could potentially reduce criteria air pollutants.

Title I – Renewable Electricity and Reducing Carbon Emissions

Section 101. ([26 USC 45](#)). **Extension of credit for electricity produced from certain renewable resources.** The Renewable Energy Production Tax Credit (PTC) is extended through

2026 for facilities including municipal solid waste, hydropower, marine and hydrokinetic energy, geothermal, wind, and solar. The PTC is extended for facilities where construction began before 2026.

The PTC for geothermal is extended through the end of 2021. Beginning in 2021, geothermal is eligible for the Investment Tax Credit (ITC). Wind energy would remain at the current phase out level of 60-percent through 2026.

Section 102. ([26 USC 48](#)). **Extension and modification of energy credit.** The ITC is extended and allows taxpayers to claim a tax credit up to 30-percent of the qualified energy property. The full ITC is available for full value where construction begins before the end of 2026 and then scales down over the next two-years.

- *Solar* -- Extended at 30-percent through the end of 2025, phases down to 26-percent in 2026, 22-percent in 2027, and 10-percent thereafter.
- *Geothermal* – After the PTC expires for geothermal in 2021, it is synced to the ITC timeline for solar which would be 30-percent through the end of 2025. Phase down to 26-percent in 2026, 22-percent in 2027, and 10-percent thereafter.
- *Fiber-optic solar equipment, fuel cell, microturbine, combined heat and power, small wind energy, biogas, waste energy recovery, and offshore wind* – extended at 30-percent through the end of 2026. Phases down to 26-percent in 2027 and 22-percent in 2028.
- *Energy storage technology and linear generators* – newly added to the ITC and eligible for 30-percent through the end of 2026. Phases down to 26-percent in 2027 and 22-percent in 2028.

Sec. 104. **Elective payment for energy property and electricity produced from certain renewable sources.** Allows for direct payment of 85-percent of the credit to taxpayers for the PTC, ITC, or Section 45Q (Carbon Sequestration). Tribal governments receive 100-percent of the relevant credits.

Title II – Renewable Fuels

The Alternative Fuel Tax Credit would be extended through 2022 with a phase down through 2025. The tax credit would be include electric, liquified hydrogen, natural gas, propane, E85, and 20% biodiesel. ([26 USC 40A](#)).

The income and excise tax credits would be:

- Biodiesel and biodiesel mixtures -- \$1.00 per gallon through 2022, then phase credit down to \$0.75 in 2023, \$0.50 in 2024, and \$0.33 in 2025. The credit would expire in 2025.
- Agri-biodiesel -- \$0.10 per gallon small agri-biodiesel producer tax credit through 2025.
- Alternative fuels and alternative fuel mixtures -- \$0.50 per gallon through 2022, \$0.38 in 2023, \$0.25 in 2024, and \$0.17 in 2025. The credit expires at the end of 2025.
- Biofuel – second generation biofuels income tax credit extended through 2026.

Title III – Green Energy and Efficiency Incentives for Individuals

Section 301. ([26 USC 25C](#)). **Extension, increase, and modifications of nonbusiness energy property credit.** The nonbusiness energy property credit (nonrefundable personal tax credit for federal income tax purposes) applies to property in service by the end of 2025. Credits would be modified and expanded for expenditures and properties placed in service in 2022 as follows:

- Increase the percentage of credit for installing the qualified energy efficiency improvement from 10-percent of the cost to 15-percent.
- Increase lifetime cap on credits under this provision from \$500 to \$1,200 and restarts the lifetime limit beginning 2022.
- Updates various standards and associated limits such as,
 - \$600 for a hot water boiler.
 - \$300 for a furnace plus an additional \$300 if the taxpayer is converting from a non-condensing furnace to a condensing furnace.
 - Roofs and advanced main air circulating fans are removed from eligibility.
 - Credit for cost of home energy audits is increased to 30-percent up to a maximum credit of \$150.

Sec. 302. **Residential energy efficient property.** This provision would extend the credit ([26 USC 25C](#)) for the cost of qualified residential energy efficient property expenditures, including solar electric, solar water heating, fuel cell, small wind energy, and geothermal heat pumps. Extends the full 30-percent of credit for eligible expenditures through the end of 2026. Phases down to 26-percent in 2027, 22-percent in 2028, and expires at the end of 2028. The definition of eligible property would be expanded to include battery storage technology and energy efficient biomass fuel property. It also would remove biomass stoves as they would be covered under the “energy efficient biomass fuel property.”

Sec. 303. **Energy efficient commercial building deduction.** This provision would expand the [energy efficient commercial buildings deduction \(26 USC 179D\)](#). The maximum deduction of \$1.80 per square foot would be increased to \$3.00 per square foot beginning in 2022. The maximum lifetime cap would be changed to a three-year cap. Also, the bill would lower the eligibility threshold from a 50-percent reduction in energy costs to 30-percent of the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) standards as of two-years prior to date of construction.

Sec. 304. ([26 USC 45L](#)). **Extension, increase, and modifications of new energy efficient home credit.** This provision would extend the Section 45L new energy efficient home credit for eligible contractors through 2026. The provision expands the maximum credit for eligible new energy efficient homes from \$2,000 to \$2,500. It also would lower the eligibility threshold of energy expenditures to at least 15% below the expenditures of a comparable unit based on the [2018 International Energy Conservation Code](#) standards. It also would replace the eligibility

requirements for units eligible for the \$1,000 credit to correspond with the Energy Star Labeled Homes program.

Sec. 305. [\(26 USC 136\)](#). **Modifications to income exclusion for conservation subsidies.** This provision excludes conservation subsidies from gross income received from public utilities, State or local government, or storm water management providers. Exclusions include water conservation, storm water management, and wastewater management.

Title IV – Greening the Fleet and Alternative Vehicles

Sec. 401. [\(26 USC 30D\)](#). **Modification of limitations on new qualified plug-in electric drive motor vehicle credit.** This provision would expand and extend the existing tax credit for electric vehicles. Under this proposal, after a manufacturer reaches 200,000 electric vehicles sold, the tax credit would be reduced by \$500 until 600,000 vehicles sold. If a manufacturer has currently exceeded the 200,000 vehicles sold, those vehicles will not count toward the 600,000. The provision would extend the 2- and 3-wheeled plug-in electric vehicle credit through 2026.

Sec. 402. **Credit for previously owned qualified plug-in electric drive motor vehicles.** This provision would create a new refundable credit for buyers of used plug-in electric cars from date of enactment through 2026. The tax credit would be \$1,250 for the purchase of a qualified used EV with additional incentives for battery capacity. The total tax credit would be capped at the lesser of \$2,500 or 30-percent of the sale price. Criteria for eligible used EVs would include:

- Must meet the eligibility requirements in the existing Section 30D credit for new EVs.
- Sale price must not exceed \$25,000.
- Model year that is at least two years earlier than the date of sale.

The program also would allow buyers with up to \$30,000 in adjusted gross income or \$60,000 for married couples filing jointly in adjusted gross income to claim the full amount of the credit. A reduced tax credit would be available for buyers with below \$40,000 in adjusted gross income or \$70,000 for married couples filing a joint return in adjusted gross income. The vehicles are required to be purchased from a dealership for personal use and the credit cannot be claimed more than once every three years. The credit would only apply to the first resale of a used EV and includes restrictions on sales between related parties.

Sec. 403. **Credit for zero-emission heavy vehicles and zero-emission buses.** This provision would create a manufacturer credit for the sale of zero-emission vehicles weighing 14,000 pounds or more after the date of enactment through the end of 2026. Eligible manufacturers would be able to claim a tax credit of 10-percent of the eligible vehicle sales price up to a total credit of \$100,000. Qualifications for eligible vehicles would be:

- Domestic use-only.
- Weigh 14,000 pounds or more.

- Cannot include an internal combustion engine.
- Propelled solely by an electric motor which draws electricity from a battery or fuel cell.

Sec. 404. [\(26 USC 30B\)](#) **Qualified fuel cell motor vehicles.** This provision would extend the credit for the purchase of a qualified fuel cell motor vehicle through 2026. The tax credit is based on gross vehicle weight rating ranging from 8,500 pounds to more than 26,000 pounds.

Sec. 405. [\(26 USC 30C\)](#). **Alternative fuel refueling property credit.** This provision would extend the alternative fuel vehicle refueling property credit through 2026. Beginning in 2022, the provision would expand the credit for zero-emissions charging infrastructure by allowing a 20-percent credit for expenses in excess of \$100,000, if the following are met:

- Intended for general public use and either accept credit cards as a form of payment or not charge a fee; or,
- Intended for exclusive use by government or commercial vehicle fleets.

Sec. 406. [\(26 USC 132\)](#). **Modification of employer-provided fringe benefits for bicycle commuting.** This provision would restore the exclusion of employer benefits related bicycle commuting through the end of 2025. Employer fringe benefits included in the bill:

- Bikeshare (a bicycle rental operation providing for pick up and drop off);
- Low-speed electric bicycle within the definition of bicycle for purposes of the exclusion; and,
- Modifies the limitation on the exclusion to provide for a specified monthly limitation amount versus an annual limitation.

Title V – Investment in the Green Workforce

Sec. 501. [\(26 USC 48C\)](#) **Extension of the advanced energy project credit.** This provision would allocate an additional \$2.5 billion in credits for each year from 2022 through and including 2026 for qualified advanced energy projects. Qualified advanced energy project,

- Re-equips, expands, or establishes a manufacturing facility for the production of:
 - Property designed to be used to produce energy from the sun, wind, geothermal deposits or other renewable resources;
 - Fuel cells, microturbines, or an energy storage system for use with electric or hybrid-electric motor vehicles;
 - Electric grids to support the transmission of intermittent sources of renewable energy, including storage of energy;
 - Property designed to capture and sequester carbon dioxide emissions;
 - Property designed to refine or blend renewable fuels or to produce energy conservation technologies, including energy-conserving lighting technologies, smart grid technologies, or electrochromatic glass;

- New qualified plug-in electric drive motor vehicles or components which are designed specifically for use with such vehicles, including electric motors, generators and power control units; or,
- Other advanced energy property designed to reduce greenhouse gas emissions as may be determined by the Secretary and any portion of the qualified investment of which is certified by the Secretary as eligible for a credit under this section.

Qualified projects would be selected based on:

- Applicants written assurances to the Secretary that all laborers and mechanics employed by contractors and subcontractors in the performance of construction, alteration or repair work on a qualifying advanced energy project shall be paid wages at rates not less than prevailing wage on projects of a similar character in the locality
- Priority for projects which,
 - Manufacture (other than primary assembly of components) property under “qualified advanced energy projects.”
 - Have the greatest potential for commercial deployment of new applications.

Sec. 502. [\(26 USC 45U\)](#). **Labor costs of installing mechanical insulation property.** The provision provides a credit for up to 10% of the labor costs incurred by a taxpayer in installing insulation into a mechanical system within one-year. The credit is available for costs paid starting in 2022 through the end of 2026.

Sec. 503. **Labor standards for certain energy jobs.** This provision would create a certification by the Secretary of Labor for certain labor requirements for green energy and energy-related construction projects. The requirements include Davis-Bacon prevailing wages, project labor agreements, participation in registered apprenticeship programs, limits on hiring from temporary staffing agencies, limits on consideration of criminal history, a neutrality policy on collective bargaining, and disclosure of administrative merits determinations and similar judgments.

If labor requirements are met,

- Qualified projects would be eligible for a new 10-percent credit for placing in service property otherwise eligible for the [Section 48](#) Investment Tax Credit or as part of facilities eligible for the [Section 45](#) Production Tax Credit.
- [Section 30C](#) credit for alternative fuel vehicle recharging property is increased by to 40-percent of the first \$100,000 of expenses per location.
- Maximum deduction for energy efficient commercial property under [Section 179D](#) would be increased by \$0.20 per square foot.

Title VI – Environmental Justice

Sec. 601. **Qualified environmental justice program credit.** This provision creates a new program to provide eligible higher education institutions a capped refundable tax credit for a qualified environmental justice program. Higher education institutions may receive a credit of

20-percent of costs and programs with material participation from Historically Black Colleges and Universities (HBCU) and Minority Serving Institutions (MSI) may receive a higher credit of 30-percent. All credits must be expended within 5-years of their receipt. The total allocation for tax credits authorized under this program would be \$1 billion for 2022 through 2026. Qualifying EJ programs shall be designed to address or improve data about environmental stressors to improve or facilitate health and economic outcomes of individuals residing in low-income areas or communities of color. Environmental stressors include contamination of air, water, soil or food or a change relative to historical norms of the areas weather conditions. The higher education institutions would be selected by the Secretaries of Energy, Education, and Health and Human Services and the U.S. EPA Administrator based on:

- Extent of participation by faculty and students from HBCU or MSI.
- Expected effect on the health or economic outcomes of individuals residing in the areas within the U.S. that are low-income or communities of color.
- Creation or significant expansion of qualified environmental justice program.

Impacts on South Coast AQMD's Mission, Operations or Initiatives: The GREEN Act focuses on the reduction of greenhouse gases; however, there are co-benefits for criteria pollutants when employing cleaner, more efficient fuels and technologies.

The GREEN Act could provide voluntary incentives which complement South Coast AQMD's 2022 AQMP efforts related to Residential and Commercial Buildings and Mobile Sources to reduce NOx and particulate matter. Areas of interest are:

- The renewable fuel tax credit is supported by the Natural Gas Vehicle Association and other alternative fuel interests. Lower costs for alternative fuels could assist in lowering the operating costs for cleaner vehicles which could contribute clean air benefits.
- Energy efficiency tax credits for commercial and residential buildings.
- The manufacturer vehicle tax incentives for zero-emission of trucks could help lower vehicle costs for purchasers.
- Extension of the existing hydrogen fuel vehicle tax credits as follows, based on vehicle gross weight:
 - 8,500 pounds or less = \$4,000
 - 8,500 to 14,000 pounds = \$10,000
 - 14,000 to 26,000 pounds = \$20,000
 - More than 26,000 pounds = \$40,000
- Funds institutions of higher education work to assist low-income and communities of color impacted by environmental issues, including air quality.

Staff recommends a position of WORK WITH AUTHOR to discuss the co-benefits of reducing greenhouse gases and criteria pollutants, need for the reduction of criteria pollutants, and importance of incentives to transition to cleaner, more efficient technologies.

Recommended Position: WORK WITH AUTHOR

South Coast Air Quality Management District
Legislative Analysis Summary – H.R. 1512
Version: As introduced, March 2, 2021
Analyst: LTO

H.R. 1512 (Pallone, Tonko, Rush)

Climate Leadership and Environmental Action for Our Nation's (CLEAN) Future Act

Summary: This bill seeks to address the climate crisis, protecting the health and welfare of all Americans, and putting the Nation on the path to a net-zero greenhouse gas economy by 2050, and for other purposes.

Background: H.R. 1512 includes four bills with South Coast AQMD Governing Board positions related to electrification of Ports, clean microgrids, clean school buses, and air monitoring. This bill focuses on climate and energy issues and will likely be combined with Surface Transportation and Ways and Means bills to form the Transportation and Infrastructure package.

Status: 3/22/2021, Introduced and referred to:

- Committee on Energy and Commerce, Subcommittee on Environment and Climate Change
- Committee on Transportation and Infrastructure, Subcommittees on Water Resources and the Environment; Railroads, Pipelines and Hazardous Materials; Highways and Transit; Economic Development, Public Buildings, and Emergency Management; and, Aviation
- Committee on Oversight and Reform
- Committee on Education and Labor
- Committee on Ways and Means
- Committee on Natural Resources
- Committee on Armed Services
- Committee on Foreign Affairs
- Committee on Science, Space, and Technology
- Committee on Intelligence (Permanent Select)
- Committee on Financial Services

Specific Provisions: The “CLEAN Future Act” is comprised of ten (10) Titles with wide ranging topics from national climate goals to issues related to environmental justice and super pollutants. Titles and Sections related to air quality either directly or indirectly are summarized below:

Title I – National Climate Target, Subtitles A and B

Sections 101 – 111. The bill would establish an interim national climate target of a 50-percent reduction in emissions of greenhouse gases from 2005 levels by 2030 and a 100% clean economy by 2050. A study by the National Academy of Sciences would be commissioned on issues related to the national goal of achieving net-zero greenhouse gas emissions by 2050. Each federal agency would be required to develop an action plan consistent with their mission and in cooperation with the other agencies to make progress toward meeting the interim and national climate goals. Federal agency actions could include:

- Providing incentives;
- Carrying out research and development programs;

- Reducing greenhouse gas emissions of such agency itself;
- Increasing agency resilience of federal facilities and operations to climate change impacts and risks; and,
- Other appropriate measures as deemed by the head of the Federal agency deemed to reach interim and national climate goals.

Goals for the federal climate action plans would be:

- Improve public health, especially for disadvantaged and rural communities that are disproportionately vulnerable to the impacts of climate change or other pollution;
- Benefit consumers, small businesses, farmers and ranchers, and rural communities;
- Prioritize infrastructure investment that reduces emissions of greenhouse gases and other pollutants, create jobs and make communities more resilient to the effects of climate change;
- Enhance job creation and labor standards (remove policy barriers to labor organizing, protect labor agreements, apply prevailing wage, safety and health protections, and domestic content);
- Lead in clean and emerging technology to ensure U.S. companies are competitive;
- Ensure fairness and equity for workers and communities affected by the transition to a 100-percent clean economy; and,
- Prepare communities for climate change impacts and risks.

The proposed climate action plans by each agency would be available for public comment within 6 months of enactment of the bill. Interagency review, revisions every 24-months, and an annual report also would be required.

A “Clean Economy Federal Advisory Committee” (Advisory Committee) would be created with appointees that reflect diversity in gender, age, geography. The Advisory Committee would include:

- Two State officials, including one state that has adopted greenhouse gas targets;
- Two local government officials – one representing a city or county that has adopted greenhouse gas targets and one that is impacted by the transition away from fossil energy;
- One environmental non-profit member;
- Two environmental justice (EJ) members;
- Two members of climate justice organizations;
- Two representatives from Tribal communities -- one representing a city or county that has adopted greenhouse gas targets and one that is impacted by the transition away from fossil energy;
- Two members of the National Academy of Sciences;
- Four organized labor representatives – one each representing utility sector, transportation, manufacturing, and building trades;
- Two members employed by power sector – one representing the clean energy industry;

- Two members of agriculture industry – one farmer or rancher and one representing a family farm organization;
- Two transportation representatives – one must represent public transit;
- Two manufacturing members – one must represent a business committed to net-zero;
- Two commercial and residential building sector members – one must represent a business committed to improving energy efficiency;
- 1 public health expert; and,
- 1 young person involved with a climate and environmental organization.

The Advisory Committee would form Subcommittees and meet at least three times in the first year and thereafter on at least an annual basis. The Advisory Committee would sunset on December 31, 2050.

Title II – Power, Subtitle A (Clean Energy Standard)

Sections 201 - 210. H.R. 1512 would require retail electricity suppliers to provide an increasing percentage of clean energy each year from 2023 to reach 80-percent in 2030 and 100-percent in 2035. It also creates an alternative compliance payment (ACP) mechanism for suppliers to meet compliance requirements. The price of ACP increases each year and may be utilized by retail electricity suppliers in lieu of zero-emission electricity credits. In 2031, a retail electricity supplier that submits ACP for more than 10-percent of its compliance obligation may defer for up to five-years total. 25-percent of the ACP funds from a retail electricity supplier who defers must be utilized to assist their customers with their utility bills. Zero-emission electricity credits may be bought, sold and/or traded to meet compliance obligations.

Funds generated by the ACP program and any penalties from non-compliance would be utilized to create a Carbon Mitigation Fund for the following activities in States:

- Energy efficiency improvements;
- Electrification;
- Replace State and local government fossil-fueled vehicles with electric or low carbon fuel vehicles;
- Replace fossil-fueled ground airport and seaport vehicles with electric or low carbon fuel vehicles;
- Install fast charging electric vehicle infrastructure along highways and roads; or,
- Promote direct capture, permanent sequestration or utilization of carbon dioxide.

Definitions of energy generation in the bill include combined heat and power systems, renewable biomass and waste to energy. Generation of electricity through renewable biomass may not create criteria air pollutants nor hazardous air pollutants as defined by Sections [108](#) and [112\(b\)](#) of the Clean Air Act. Waste to energy generation must comply with Section [112](#) and [129](#) of the Clean Air Act. Zero-emission electricity is defined as the fraction of electricity generated by a given generating unit whose generation is not associated with the release of greenhouse gases.

The bill states that nothing prevents States from adopting or enforcing their own clean or renewable energy standards or regulations. States with more stringent programs are deemed in compliance with the federal standard.

A report by the U.S. EPA Administrator would be required no later than January 1, 2034, which evaluates and forecasts the remaining barriers to achieving 100-percent generation of electricity with no emissions of carbon dioxide by 2035.

Title II – Power, Subtitle C – Public Utility Regulatory Policies Act (PURPA) Reform

Sections 221 – 226. H.R. 1512 would establish a standard under PURPA to require States to consider energy storage systems in context with,

- Total cost and normalized life-cycle costs;
- Cost effectiveness;
- Security; and,
- System performance and efficiency.

Additionally, the bill would create a PURPA standard that requires electric utilities to offer a community solar program to all ratepayers, including low-income customers. Community solar would be defined as, “a service provided to any electric consumer that the electric utility services through which the value of electricity generated by a community solar facility may be used to offset charges billed to the electric consumer by the electric utility.”

Title II – Power, Subtitle D – Electricity Infrastructure Modernization and Resilience

Sections 230 – 236. H.R. 1512 would create the 21st Century Power Grid grant program to fund projects that improve resiliency, performance, or efficiency of the electricity grid. Eligible partners for the grants would include a State or local government, National Laboratory, institution of higher education, a Tribal government, a federal power marketing administration, or entity that develops grid technology. The program would authorize \$700 million per year from Fiscal Year (FY) 2022 through FY 2031.

The Secretary of Energy would be required to establish a program and create a national reserve to ensure that large power transformers and other critical electric grid equipment can be replaced in emergency situations. The program would also facilitate technological and design improvements to equipment to reduce vulnerabilities to attack or damage.

The bill also authorizes \$10 million per year from FY 2022 through FY 2031 to remediate sites of former fossil fuel-powered electricity generating unit in a community.

A Clean Energy Microgrids grant program would be established to provide \$50 million for technical assistance and outreach and \$1.5 billion for projects from FY 2022 through FY 2031. Priority for grants would be given for EJ communities, regions with one or more designation as severe and/or extreme under the Clean Air Act, and other criteria.

Title II – Power, Subtitle E – Clean Electricity Generation

Sections 241 – 248. H.R. 1512 would establish a program to provide loans to eligible entities to support the deployment of distributed energy systems. Loans could be used to improve grid security and resiliency, increase local renewable sources, enhance peak load management and lower energy costs for rural communities. Renewable energy resources would include biomass, geothermal energy, hydropower, landfill gas, municipal solid waste, ocean, organic waste, photosynthetic processes, photovoltaic, solar, and wind. A total of \$250 million would be authorized for the loan program over the period from FY 2022 through FY 2031.

It also would create a loan and grant program to eligible entities for the construction or installation of solar facilities for multi-family affordable housing. The program would be authorized for \$250 million per year from FY 2022 through FY 2031 to be used for solar generating equipment, job training, deployment support and/ or administrative expenses.

H.R. 1512 would establish a non-profit corporation, the “Distributed Energy Opportunity Board” to provide assistance for distributed energy installation and streamlined permitting activities. The Secretary of Energy would designate “Distributed Energy Opportunity Communities” to be eligible to receive grants on a competitive basis. Distributed Energy Opportunity Communities would be required to adopt and implement the model expedited permit-to-build protocols developed by the Secretary in consultation with trade associations and State, local and Tribal governments engaged in permitting activities. The bill would authorize \$20 million per year from FY 2022 through FY 2031.

The Secretary of Energy would be required to study equitable distribution of benefits of clean energy for frontline communities.

Title III – Efficiency, Subtitle A – Energy Saving Building Codes

Sections 301 – 312. ([42 USC 6836](#)). This title of the bill would establish national energy saving targets for model building energy codes. The targets for aggregate national energy savings of buildings would be created based on baselines established by the [2018 IECC](#) for residential buildings and [ASHRAE Standard 90.1—2016 for commercial buildings](#), as follows:

Model codes issued by:	Percentage
2023	20
2026	35
2029	50

The Secretary of Energy would be directed to support the adoption of, and compliance with, building energy codes by States, Tribes and local government. States and Tribes would be required to certify to the Secretary of Energy that they have adopted a revised building energy code which in turn is validated. The Secretary of Energy would be required to analyze and validate compliance of building energy code beginning in 2024 and every three years thereafter.

Federal financial support related to energy or buildings could be withheld from States or Indian Tribes without validated certification of model building codes or compliance. States could reference more stringent appliance standards in their building codes if it is included in a national model building code issued by model codes, standards organization, or the Department of Energy.

The bill would authorize \$200 million to remain available until expended.

Title III – Efficiency, Subtitle B – Existing Building Retrofits

Section 311 – 312. ([42 USC 15822](#)). H.R. 1512 would amend an existing grant program for State agencies responsible for developing energy conservation plans. The bill would add a reference to [ASHRAE Standard 90.1](#) as baseline for new public building construction in addition to the [International Energy Conservation Code](#). These model codes are adopted by many states and municipal governments for the establishment of minimum design and construction requirements for energy efficiency. The bill also would add benchmarking programs to enable monitoring and use of energy performance data in buildings as a eligible use of grant funds.

The bill would add a new subsection to require any local government receiving a grant to obtain third-party verification of energy efficiency improvements for buildings. The bill would authorize \$100 million per year for FY 2022 through FY 2031.

This Title also would establish a new Department of Energy (DOE) grant program to make energy improvements in public school facilities. Improvements that would qualify include:

- Measures that reduce school energy costs.
- Improved air quality, daylighting, ventilation, electrical lighting, and acoustics to improve student and teacher health.
- Installation of renewable energy technologies.

Eligible grant entities would be defined as a consortium of:

- One local educational agency; and,
- One or more,
 - Schools;
 - Nonprofit organizations;
 - For-profit organizations; or,
 - Community partners that have the knowledge and capacity to partner and assist with energy improvements.

Energy improvements would be defined as:

- Any improvement, repair, or renovation, to a school that will result in a direct reduction in school energy costs including but not limited to improvements to building envelope, air conditioning, ventilation, heating system, domestic hot water

- heating, compressed air systems, distribution systems, lighting, power systems and controls;
- Any improvement, repair, renovation or installation that leads to an improvement in teacher and student health including but not limited to indoor air quality, daylighting, ventilation, electrical lighting, and acoustics; and,
- The installation of renewable energy technologies (such as wind power, photovoltaics, solar thermal systems, geothermal energy, hydrogen-fueled systems, biomass-based systems, biofuels, anaerobic digesters, and hydropower) involved in the improvement, repair, or renovation to a school.

The DOE would be required to prioritize grants for high-need local educational agencies or rural educational agencies. Additional competitive grant criteria would include:

- Fiscal capacity of the eligible entity to meet the needs for improvements of school facilities without assistance under this section, including the ability of the eligible entity to raise funds through the use of local bonding capacity and otherwise.
- The likelihood that the local educational agency or eligible entity will maintain, in good condition, any facility whose improvement is assisted.
- The potential energy efficiency and safety benefits from the proposed energy improvements.

The bill would authorize \$100 million per year from FY 2022 through FY 2031.

Title III – Efficiency, Subtitle C – Promoting Energy Efficiency

(Sections 321 – 325). ([42 USC 6297](#)). This provision would amend existing law to suspend the federal preemption for appliance and efficiency standards when DOE misses an update deadline. The original and potentially amended version of this law does not apply to State regulation of any product not subject to an energy conservation standard.

([42 U.S.C. 13 17152\(b\)\(1\)](#)) The bill would clarify that funds provided under the Energy Efficiency and Conservation Block Grant Program’s (EECBG) could be used to deploy infrastructure for delivering alternative fuels, and projects to expand use of alternative fuels are eligible for grants awarded through the program. Authorization for the program would be \$3.5 billion per year for FY 2022 through 2031 plus an additional \$35 million per year for administrative expenses.

The bill also would require DOE to establish a pilot grant program to award up to \$200,000 to nonprofit organizations to purchase energy efficiency materials for installation in their buildings. An eligible non-profit would mean a 501(c)(3) and exempt from tax under section 501(a) of the Internal Revenue code. Energy efficiency materials would include:

- A roof or lighting system or component of the system;
- A window;
- A door, including a security door;

- A heating, ventilation, or air conditioning system or component of the system (including insulation and wiring and plumbing improvements needed to serve a more efficient system); and,
- A renewable energy generation or heating system, including a solar, photovoltaic, wind, geothermal, or biomass (including wood pellet system) or component of the system.

Eligible non-profit buildings would include:

- Hospital;
- Youth center;
- School;
- Social-welfare program;
- Facility of a faith-based organization; or,
- Any other nonresidential and noncommercial structure.

Criteria for grants would be performance-based:

- The energy savings expected to be achieved;
- The cost effectiveness of the use of the energy efficiency materials that are proposed to be purchased;
- An effective plan for evaluation, measurement, and verification of energy savings; and,
- The financial need of the applicant.

The program would be authorized \$10 million per year from FY 2022 through 2031, to remain available until expended.

The bill also would create a “Home Wildfire Risk Reduction Rebate Program” to provide rebates to homeowners to defray the costs of retrofitting an existing home to be wildfire resistant.

Rebates would be:

- \$10,000 for the retrofitting of roof features including the roof covering, vents, soffit and fascia, and gutters;
- \$20,000 for the retrofitting of exterior wall features, including sheathing and siding, doors, and windows;
- \$5,000 for the retrofitting of a deck, including the decking, framing, and fascia; and,
- \$1,500 for the retrofitting of near-home landscaping, including mulch and landscape fabric in a 5-foot zone immediately around the home and under all attached decks.

The rebate could be used for purchase of materials and installation. The total rebate could not exceed 50-percent of the cost of the retrofit. For moderate income households, the total rebate

could be up to 80-percent of the cost of the retrofit. The program would be authorized at \$500 million per year from FY 2022 through FY 2031.

Additionally, the bill would amend the existing State Energy Efficiency Appliance Rebate program to allow for the replacement of used appliances for similar purposes that is powered by electricity. It also would reauthorize the program at \$300 million for each year beginning FY 2022 through 2031.

Title III – Efficiency, Subtitle D – HOPE for HOMES

Section 331 - 346. The bill would establish the definitions for the HOPE for HOMES program which would create a workforce training program and provide grants for Home Energy Savings Retrofit Rebates.

Under the bill, Partial System Rebates would be available to homeowners or multifamily building owner for:

- \$800 for the purchase and installation of insulation and air sealing;
- \$1,500 for the purchase and installation of insulation and air sealing and replacement of an HVAC system, the heating component of an HVAC system, or the cooling component of an HVAC system.

The amount of a Partial System Rebate shall not exceed 30-percent of the cost of the project. Labor may be included in the cost, but may not exceed:

- 50-percent of the cost of insulation and air sealing; or,
- 25-percent of the cost of insulation, air sealing, HVAC system, or the heating or cooling component of HVAC system.

The installation of HVAC systems or the heating or cooling components of HVAC systems would need to be completed in accordance with standards specified by the Secretary of Energy that are at least as stringent as the applicable guidelines of the Air Conditioning Contractors of America. Duct sealing would be required when installing HVAC systems, heating components of HVAC systems or cooling components of HVAC systems.

The Home Energy Savings Retrofit Rebate Program would provide contractors with \$250 per home or multifamily building for which:

- A partial system rebate is provided for the installation of insulation and air sealing, or installation of insulation and air sealing, or installation of insulation, air sealing and replacement of HVAC system or HVAC heating or cooling component;
- The applicable homeowner has signed and submitted a release form authorizing the contractor access to information in the utility bills of the homeowner or the applicable multifamily building owner has signed and submitted an agreement with the contractor to provide whole-building aggregate information about the building's energy use; and,

- The contractor would be required to provide information for the DOE Energy Building Performance Database:
 - The energy usage for the home of a homeowner or for the household living in a multifamily building for the 12-months preceding, and 24-months following, the installation of the insulation, air sealing, or installation of insulation and air sealing and replacement of an HVAC system, the heating component of an HVAC system, or the cooling component of an HVAC system;
 - Description of installation or installation and replacement; and,
 - Total cost to the homeowner or multifamily building owner for installation or installation and replacement.

The Secretary of Energy would work with the Department of Treasury to create a federal rebate processing system including a database and information technology system that would allow homeowner and multifamily building owners to submit required forms online; and establish a website.

The Secretary of Energy would be allowed to expend not more than 50-percent of the annual appropriation on the partial system rebate program.

Additionally, the bill would create a State administered Home Energy Savings Retrofit Rebate Program. The States would be required to meet minimum criteria:

- State program would be carried out by the applicable State energy office or its designee;
- A rebate be provided under a State program only for a home efficiency retrofit, that:
 - Is completed by a contractor who meets minimum training requirements and certification requirements set forth by the Secretary of Energy;
 - Includes installation of one or more home energy efficiency retrofit measures for a home that together are modeled to achieve, or are shown to achieve, a reduction in home energy use of 20-percent or more from the baseline energy use of the home;
 - Does not include installation of any measure that the Secretary determines does not improve the thermal energy performance of the home, such as a pool pump, pool heater, spa, or EV charger; and,
 - Includes, after installation of the applicable home energy efficiency retrofit measures, a test-out procedure conducted in accordance with guidelines issued by the Secretary of such measures to ensure:
 - The safe operation of all systems after retrofit; and,
 - That all improvements are included in, and have been installed according to:
 - Manufacturers installation specifications; and,
 - All applicable State and local codes or equivalent standards approved by the Secretary.
- The Secretary of Energy would be required to approve either the software used for “modeled performance rebates” or the methods and procedures used for “measured performance rebates.”

- The State also,
 - May include an entity to serve as a rebate aggregator to facilitate the delivery of rebates to homeowners or contractors;
 - Shall include procedures for a homeowner to transfer the right to claim a rebate to the contractor performing the work or to a rebate aggregator; and,
 - Must provide a homeowner, contractor or rebate aggregator the ability to claim more than one rebate including after receiving a “partial system rebate” under the national program as long as the no two (2) rebates utilize the same baseline energy use for the home.
- A “modeled performance rebate” must reduce home energy use by at least 20-percent and shall be equal to 50-percent of the cost of the applicable energy audit of a home and home energy efficiency retrofit, including the cost of diagnostic procedures, labor, reporting, and modeling. Maximum rebates as follows for home energy reductions:
 - 20- to 40-percent = \$2,400; and,
 - Above 40-percent = \$4,000.
- A “measured performance rebate” shall be equal to 50-percent of the cost, including the cost of diagnostic procedures, labor, reporting, and energy measurement. Maximum rebates as follows for home energy reductions:
 - 20-percent, but less than 40-percent = \$2,000; and,
 - At least 40-percent = \$4,000.
- States would be encouraged to work with State agencies, energy utilities, nonprofits, and other entities on marketing, financing, implementation and installation and quality assurance programs.
- The Secretary of Energy would be responsible for review and audit of the program. States failing to comply with program rules may be subject to withholding of grants funds.

The program also would have special provisions for moderate income households. The Secretary of Energy would be required to establish procedures for certifying that household or, in the case of a multifamily building, the majority of households in the building is moderate income.

Rebates for moderate income households follow the same requirements in the below amounts:

- “Partial system rebate” would be 60-percent of the applicable purchase and installation costs:
 - Maximum of \$1,600 for installation of insulation and sealing.
 - Maximum of \$3,000 for HVAC system or heating or cooling component of HVAC.
- “Modeled performance rebate” would be 80-percent of the applicable costs:
 - 20- to 40-percent = \$4,000.
 - Above 40-percent = \$8,000.
- “Measured performance rebate” would be 80-percent of the applicable costs:
 - 20-percent, but less than 40-percent = \$4,000.
 - At least 40-percent = \$8,000.
- The Secretary would be required to conduct outreach.

Section 341. Evaluation reports to Congress.

For purposes of the Internal Revenue Code of 1986, gross income shall not include any rebate received under the Home Energy Savings Retrofit program.

The program would be authorized at \$1.6 billion for Fiscal Year 2022 through 2031, to remain available until expended. Tribal governments would receive two-percent of the authorization for a similar program. HOPE for HOMES would require that any federal funds provided should be used to supplement, not supplant state and/or local funds.

Subtitle E – Investing in State Energy

Section 351 - 352. ([42 U.S.C. 6867\(d\)](#)) This Subtitle of the bill would require the Secretary of Energy to provide weatherization and State Energy program funds to be provided within 60-days of Department receiving funds. It also would authorize States' use of federal assistance through the State Energy Program to implement, revise and review a State Energy Security Plan. Additionally, it would require a Governor to submit a plan, revision of a plan, or certification of no revisions be necessary to a plan to the Secretary of Energy annually.

Subtitle F – Federal Energy Management Program (FEMP)

Section 361. ([42 USC 91](#)). Energy and water performance requirement for federal facilities. This Subtitle of the bill would require each federal agency to reduce each year average building energy intensity by 2.5-percent relative to their respective energy intensities in 2018.

Subtitle G – Open Back Better

Section 371. H.R. 1512 would require the Secretary of Energy to allocate funds to States to make grants to:

- A public school
- A facility used to operate an early childhood education program
- A local educational agency
- A medical facility
- A local or State government building
- A community facility
- A public safety facility
- A day care center
- An institution of higher education
- A public library
- A wastewater treatment facility

Covered projects would include,

- Resiliency, including:
 - Public health and safety
 - Power outages
 - Natural disasters
 - Indoor air quality
 - Any modifications necessitated by the COVID-19 pandemic
- Energy efficiency
- Renewable energy
- Grid integration

Projects could have combined heat and power and energy storage as project components.

States could not use more than 10-percent of grant funds to provide technical assistance for the development, facilitation, management, oversight, and measurement of results of covered projects. There are no matching requirements for grants to States. However, States would be encouraged to leverage private financing for cost-effective energy efficiency, renewable energy, resiliency, and other smart-building improvements, such as by entering into an [energy service performance contract](#). The Secretary of Energy would be required to provide grants under the [AFFECT](#) program to implement the covered projects within 60-days of enactment.

The bill would require 40-percent of grant funds to implement covered projects in environmental justice communities or low-income communities.

The bill would authorize \$3.6 billion per year for the State Energy Program from FY 2022 through FY 2031. These funds would supplement existing Department of Energy weatherization assistance program funds. It would also direct the Secretary to distribute \$500 million in [Assisting Federal Facilities with Energy Conservation Technologies](#). \$1.5 billion would be authorized for Tribal organizations. The bill also would require that American iron, steel and manufactured goods are used in projects. There would be a waiver process for the Buy American provisions if the materials/goods are not available in sufficient and reasonably available quantities, satisfactory quality, and it would not increase the overall project cost by 25-percent or more.

Subtitle H – Benchmarking

Section 381 - 385. The bill would create the Commercial and Multifamily Building Benchmarking and Transparency Initiative. This Subtitle would direct the U.S. EPA Administrator to develop and carry out a benchmarking and transparency initiative for commercial and multifamily (5 or more units in building) properties to advance knowledge about building energy and water performance and inform efforts to reduce greenhouse gas emissions.

The bill would require the U.S. EPA Administrator to collect data from owners of covered properties regarding building energy and water consumption. An exemption would be provided

for covered properties that meet an approved State or local benchmarking requirement. A subset of the data would be published by the U.S. EPA Administrator.

Further, the U.S. EPA Administrator would be required to improve the Energy Star Portfolio Manager and enhance implementation. The bill would authorize \$5 million for these purposes until expended.

The bill also would require the U.S. EPA Administrator to provide technical and financial assistance to States and local government for benchmarking implementation. The program would be authorized at \$50 million per year from FY 2022 through FY 2031.

Title IV – Transportation, Subtitle A – Greenhouse gas pollution emission standards.

Section 401. The bill would require U.S. EPA to promulgate greenhouse gas emissions standards for every class or category of new nonroad engines and new nonroad vehicles, taking into the account costs, noise, safety, and energy factors.

- The regulations would apply to the useful life of the vehicles.
- U.S. EPA would be required to promulgate regulations containing standards applicable to greenhouse gas emissions from new locomotives and new engines used in locomotives. The regulations should consider:
 - Greatest degree of emission reduction achievable through the application of technology
 - Cost of applying such technology
 - Noise
 - Energy
 - Safety factors
- The regulations would ensure that successive standards for greenhouse gas emission are always in effect and provide increased reductions for each regulated class or category of new nonroad engines, new nonroad vehicles, new locomotives, and new engines used in locomotives.
- The successive emissions standards would be based on the amount of greenhouse gas emissions reductions needed to achieve the national interim goal of 50% reduction in emissions of greenhouse gases from 2005 levels by 2030; and 100% clean economy by not later than 2050.
- The EPA would be required to promulgate the regulations within 24 months of enactment of the bill.

Title IV – Transportation, Subtitle B – Cleaner Fuels

Section 411 - 413. ([42 U.S.C. 7545\(o\)](#)). The bill would seek to accelerate the U.S. EPA Administrators approval of clean fuels. This bill would require the U.S. EPA Administrator to take final action on approval or disapproval of a renewable fuel if 90-days have passed since submission of the petition; and, the combination of the fuel type, production process and

feedstock have been approved in at least one State under a program designed to reduce the carbon intensity of transportation fuel. Transportation fuel for ocean-going vessels would be excluded from existing law under this program to approve clean fuels.

[\(42 U.S.C. 7545\(o\)\(9\)\)](#) Exemptions / 42 U.S.C. 11 7545(o)(2)) Requirements. The bill would establish exemptions and annual deadlines for petitions by small refineries for renewable fuel requirements. The bill would establish June 1 of the preceding year as the deadline for small refineries to submit petitions to be exempted from renewable fuel requirements. If a small refinery fails to submit a petition by June 1, they would be ineligible for consideration or approval.

Existing law defines small refineries as “the average daily crude oil throughput for a calendar year (as determined by dividing the aggregate throughput for the calendar year by the number of days in the calendar year) does not exceed 75,000 barrels.

Section 413. [42 U.S.C. 7545\(o\)\(9\)\(B\)\)](#). The bill would make public the information in the renewable fuel requirement petition filed by a small refinery including:

- Name of small refinery
- Number of gallons of renewable fuel that will not be contained in fuel
- Compliance year for which the extension is requested

Title IV – Transportation, Subtitle C – ZEV Vehicle Development

The bill would reauthorization the Diesel Emissions Reduction Act Program (DERA) at \$500 million per year for FY 2022 through FY 2031.

The bill also would establish a pilot program for the electrification of certain refrigerated vehicles, including trucks and shore power. The program would provide a one-time authorization of \$10 million to funds grants for:

- Replacement or retrofit of existing diesel-powered transport refrigeration unit with an electric transport refrigeration unit and retiring the old unit for scrappage; and,
- A project to purchase and install shore power infrastructure or other equipment that enables transport refrigeration units to connect to electric power and operate without using diesel fuel.

Maximum grant awards would be 75-percent of truck refrigeration project costs; and 55-percent of shore power project costs. Priority for grants would be given to projects that:

- Maximize public health benefits;
- Most cost-effective; and,
- Serve communities that are most polluted by diesel motor emissions, including nonattainment or maintenance areas, particularly for ozone and particulate matter.

Eligible grant applicants would include:

- A regional, State, local or Tribal agency, or port authority, with jurisdiction over transportation or air quality;
- A non profit organization or institution, that:
 - Represents or provides pollution reduction or educational services to persons or organizations that own or operate heavy-duty vehicles or fleets of heavy-duty vehicles; or,
 - Has as its principal purpose, the promotion of air quality;
- An individual or entity that is the owner of record of a heavy-duty vehicle or a fleet of heavy-duty vehicles that operates for the transportation and delivery of perishable goods or other goods requiring climate-controlled conditions;
- An individual or entity that is the owner of a facility that operates as a warehouse or storage facility for perishable goods or other goods requiring climate-controlled conditions; or,
- A hospital or public health institution that utilizes refrigeration for storage of perishable goods or other goods requiring climate-controlled conditions.

The U.S. EPA Administrator would be required to submit a report to Congress not later than one-year after the program is established with details on grant awarded with a final report due not later than five-years after the pilot program is established.

The bill would reauthorize and amend the Clean School Bus Act. ([42 U.S.C. 16091](#)). It would reauthorize the expired program and amend it to only fund zero-emission school buses.

Applications for awards would be prioritized based on:

- Replacement of school buses that serve the highest number of students who are eligible for free or reduced-price lunch;
- Ability to complement the assistance received through the award by securing additional sources of funding through public-private partnerships with electric companies, grants from other entities, or issuance of school bonds.

The bill also specifies that awards should be made nationwide with broad geographical distribution including rural areas. Eligible applicants would include local or State government, Tribal schools, nonprofit school transportation associations, or one or more contracting entities that provide school bus service.

Grant awards could cover up to 100-percent of the replacement for clean school buses, as long as the replacement does not exceed 110-percent of the amount equal to the difference between the cost of a clean school bus and the cost of a diesel school bus. Old buses that were replaced must be scrapped.

Grant awards could also be used for:

- Acquisition and labor costs for charging or other infrastructure needed to charge or maintain clean school buses;

- Workforce development and training to support the maintenance, charging, and operations of electric school buses; and,
- Planning and technical activities to support the adoption and deployment of clean school buses.

There are also significant labor and Buy American requirements.

The total authorization would be \$2.5 billion for FY 2022 through FY 2031. Not less than \$1 billion of the authorization would be available for electric school buses to serve a community of color, indigenous community, low-income community, or any community in a non-attainment region.

This Title of the bill would authorize funding for the Clean Cities Coalition Program as follows:

- \$50 million for FY 2022;
- \$60 million for FY 2023;
- \$75 million for FY 2024;
- \$90 million for FY 2025; and,
- \$100 million for each year FY 2026 through FY 2031.

Title IV – Transportation, Subtitle D – Zero Emissions Vehicle Infrastructure Buildout, Part 1 – Electric Vehicle Infrastructure

Section 431 - 432. . The Secretary of Energy would be required to establish the Electric Vehicles Supply Equipment rebate program by January 1, 2022. The purpose of the rebates would be to cover expenses associated with publicly accessible electric vehicle supply equipment. Electric vehicle supply equipment includes any conductors, including ungrounded, grounded and equipment grounding conductors, electric vehicle connectors, attachment plugs, and all other fittings, devices, power outlets, or apparatuses installed specifically for the purpose of delivering energy to an electric vehicle. The Secretary would be required to publish and maintain a list of eligible electric vehicle supply equipment.

Eligible applicants would include:

- An individual;
- A State, local, Tribal or Territorial government;
- A private entity;
- A not-for-profit or non-profit entity; or,
- A metropolitan planning organization.

Equipment would need to be installed in the United States on:

- Property owned by the eligible entity or on which the eligible entity has the authority to install equipment; and,

- Location that is either a multi-unit housing structure, workplace, commercial location or open to the public for a minimum of 12-hours per day.

The rebate amount for first-time equipment would be the lesser of:

- 75-percent of the applicable covered expenses;
- \$2,000 for covered expenses associated with the purchase and installation of non-networked level 2 charging equipment;
- \$4,000 for covered expenses associated with the purchase and installation of networked level 2 charging equipment; or
- \$100,000 for covered expenses associated with the purchase and installation of networked direct current fast charging equipment.

The rebate amount for replacement of pre-existing equipment at a single location would be the lesser of:

- 75-percent of the applicable covered expenses;
- \$1,000 for covered expenses associated with the purchase and installation of non-networked level 2 charging equipment;
- \$2,000 for covered expenses associated with the purchase and installation of networked level 2 charging equipment; or,
- \$25,000 for covered expenses associated with the purchase and installation of networked direct current fast charging equipment.

Exceptions to the rebate would be:

- Rebates not provided for projects that do not meet the global positioning system location and technical specifications as required under paragraph (2).
- Multi-port chargers funded at 50-percent after the first for each subsequent publicly available port.
- Networked direct current fast charging would be funded at not more than 40-percent.
- Hydrogen fuel cell infrastructure would be funded as though it were networked direct current fast charging equipment or 40-percent.

The Secretary of Energy would be required to review proposed or final model building codes for electric vehicle supply equipment as follows:

- Integrating electric vehicle supply equipment into residential and commercial buildings that include space for individual vehicle or fleet vehicle parking; and,
- Integrating onsite renewable power equipment and electric storage equipment (including electric vehicle batteries to be used for electric storage) into residential and commercial buildings.

The bill would require the Assistant Secretary of Electricity Delivery and Energy Reliability (including the Smart Grid Task Force) to convene a group to assess progress in the development of standards as follows:

- Support the expanded deployment of electric vehicle supply equipment;
- Develop an electric vehicle charging network to provide reliable charging for electric vehicles nationwide, taking into consideration range and location of infrastructure to ensure an electric vehicle can travel throughout the nation; and,
- Ensure the development of an electric vehicle infrastructure network will not compromise the stability and reliability of the electric grid.

A report would be due to Congress not later than one-year after enactment of this bill.

This provision would amend Public Utility Regulatory Policies Act of 1978 (PURPA) ([16 U.S.C. 2621\(d\)](#)) to require States to:

- Consider measures encouraging deployment of electric vehicle charging stations;
- Allow utilities to recover investments to deploy electric charging vehicle charging networks from ratepayers; and,
- Exclude electric utilities entities selling electricity to the public solely through electric vehicle chargers from regulation related to the sale of electricity.

/ The Energy Policy and Conservation Act ([42 U.S.C. 6322\(d\)](#)) requires the Secretary of Energy to invite Governors to submit a State Energy Conservation Plan every three-years. There is specific guidance on what should be included in the plan and the Secretary of Energy may provide funding to the States. This provision would amend existing law to authorize:

- \$100 million for FY 2022 through 2031 for State Energy Conservation Plans; and,
- \$25 million for FY 2022 through 2031 for State Energy Transportation Plans.

This provision would enable the Secretary of Energy to provide funding for a State to develop an Energy Transportation Plan as part of the overall State energy conservation plan. The purpose of State Energy Transportation Plans would be to promote the electrification of the transportation system, reduce consumption of fossil fuels, and improve air quality. These plans should include plans to:

- Deploy a network of electric vehicle charging infrastructure for passenger and commercial vehicles to ensure operability throughout the nation. (Electric vehicle supply equipment includes conductors, including ungrounded, grounded, and equipment grounding conductors, electric vehicle connectors, attachment plugs, and all other fittings, devices, power outlets, or apparatuses installed specifically for the purpose of delivering energy to an electric vehicle);
- Promote modernization of the electric grid, including use of renewable energy to power grid, accommodate demand for power to support electric vehicle charging infrastructure, and utilize energy storage capacity provided by electric passenger and commercial vehicles.

When developing these plans, States would be required to coordinate with:

- State regulatory authorities;
- Electric utilities;
- Regional transmission organizations or independent system operators;
- Private entities that provide electric vehicle charging services;
- State transportation agencies, metropolitan planning organizations, and local governments;
- Electric vehicle manufacturers; and,
- Public and private entities that manage ports, airports, or other transportation hubs.

The bill would amend the Energy Independence and Security Act of 2007 ([42 U.S.C. 17011](#)) to update the Energy Transportation Electrification program to include:

- Ground support equipment at Ports;
- Electric airport ground support vehicles (note: equipment is already in law);
- Installation of electric vehicle supply equipment for electric vehicles, including equipment that is accessible in rural and urban areas and in underserved or disadvantaged communities and equipment for medium- and heavy-duty vehicles, including at depots and in-route locations;
- Multi-use charging hubs used for multiple forms of transportation;
- Medium- and heavy-duty vehicle smart charging management and refueling;
- Battery recycling and secondary use, including for medium- and heavy-duty vehicles; and,
- Sharing of best practices, and technical assistance provided by the Department to public utilities commissions and utilities, for medium- and heavy-duty vehicle electrification.

The bill would authorize \$2 billion for each year FY 2022 through FY 2031 for transportation electrification. The “Near-Term” Transportation Electrification program would be renamed as “Large-Scale Transportation Electrification” program and would be authorized at \$2.5 billion for FY 2022 through FY 2031.

The bill would add priority consideration for projects that provide written assurances that all laborers and mechanics employed by contractors or subcontractors during construction, alteration, or repair that is financed, in whole or in part, by a grant are paid prevailing wages.

The bill would amend existing law ([42 U.S.C. 13212](#)) to require the federal government purchase federal fleets in the following manner:

- Light-duty vehicles – beginning in 2025, all light duty-vehicles for federal fleets must be alternative fueled.
 - 50-percent shall be zero-emission or plug-in hybrids in each year 2025 – 2034;
 - 75-percent shall be zero-emission vehicles or plug-in hybrids in each year 2035 – 2049; and,

- 100-percent shall be zero-emission in 2050 and thereafter.
- Medium- and heavy-duty vehicles are required to be alternative fueled as follows:
 - 20-percent in each year 2025 – 2029;
 - 30-percent in each year 2030 – 2039;
 - 40-percent in each year 2040 – 2049; and,
 - 50-percent in each year 2050 and thereafter.

Title IV – Transportation, Subtitle D – Zero Emissions Vehicle Infrastructure Buildout, Part 2 – Expanding Electric Vehicles in Underserved and Disadvantaged Communities

Section 440A – 440C. The bill includes provisions to expand access to electric vehicles in underserved and disadvantaged communities. It would require the Secretary of Energy to conduct an assessment on the availability, opportunities, and best practices to encourage deployment of electric vehicle charging infrastructure in urban, underserved communities. The Secretary of Energy would be required to assess the availability of electric vehicle charging stations to public sector and commercial fleets. A report would be due within one-year of enactment.

The bill would establish a program to increase the deployment and accessibility of electric charging infrastructure in underserved or disadvantaged communities. Eligible entities to apply for grants or technical assistance would include:

- Individual or household;
- A State, local, Tribal or Territorial government;
- An electric utility;
- A nonprofit organization or institution;
- A public housing authority;
- An institution of higher education;
- A local small or disadvantaged business; or,
- A partnership of any of the aforementioned.

The program would be authorized at \$96 million for FY 2022 through FY 2031.

The bill would require the Secretary of Energy to ensure, to extent practicable, that the programs in this Title promote electric charging infrastructure, support clean and multi-modal transportation, provide improved air quality and emissions reductions and prioritizes the needs of underserved or disadvantaged communities.

Title IV – Transportation, Subtitle D – Zero-Emissions Vehicle Infrastructure Buildout, Part 3 – Electric Vehicle Mapping.

Section 440E – 440G. The bill would create a Zero-Emissions Vehicle Infrastructure Buildout program. For the purposes of the Zero-Emissions Vehicle Infrastructure Buildout program, eligible entities would be defined as:

- A college or university;
- Non-profit entity
- Electric cooperative
- Political subdivision of a State, including a municipally owned electric utility and an agency, authority, corporation, or instrumentality of a State;
- Tribally-owned electric utility, an agency, authority, corporation, or instrumentality of an Indian Tribe;
- An investor owned electric utility; or,
- Private entity.

The bill would require the Secretary of Energy to create the Electric Vehicle Charging Station Mapping grant program or enter into cooperative agreements with eligible entities to determine where electric vehicle charging stations will be needed to meet the current and future needs of electric vehicle drivers to guide future investments for electric charging stations.

The program would be authorized at \$2 million for FY 2022 through FY 2027.

Title IV – Transportation, Subtitle E – Promoting Domestic Advanced Vehicle Manufacturing

The bill would add plug-in electric vehicles to the Domestic Manufacturing Conversion Grant program ([42 U.S.C. 16061](#)). It would provide grants to manufacturing facilities to build the domestic production of batteries, power electronics, and other technologies for use in plug-in vehicles. The bill also would set priorities to award grants to facilities that have recently closed or are set to close in the near future. Additionally, the bill would require prevailing wage and other labor protections. The facilities would be required to continue operations for at least 10-years after receiving an award. The program would be authorized at \$2.5 billion for FY 2022 through FY 2031.

H.R. 1512 would update the existing Advanced Technology Vehicles Manufacturing Incentive Program loan program ([42 U.S.C. 17013](#)) for automobile manufacturers, efficient vehicle manufacturers, and component suppliers. In order to qualify for loans,

- Ultra-efficient vehicles, light-duty and medium-duty passenger vehicles must meet 2027 or later regulatory standards or emit zero emissions; and,
- Heavy-duty vehicles must demonstrate emissions below model year 2027 standards, comply with model year 2030 or later standards, or emit zero emissions.

The program is reauthorized for FY 2022 through FY 2031.

Title IV – Transportation, Subtitle F – Port Electrification and Decarbonization

Section 451 – 455. This title of the bill is largely the same as the “Climate Smart Ports Act of 2021” authored by Representative Nanette Barragán. The South Coast AQMD Governing Board

adopted a SUPPORT position for the “Climate Smart Ports Act.” This version preserves South Coast AQMD’s eligibility to apply for grants and maintains grant prioritization criteria. The most notable change is removal of a provision that would have created a new subcategory for the DERA program. However, another section of this bill would boost the DERA program authorization from \$100 to \$500 million per year, so the change to this provision is not significant.

Title V – Industry, Subtitle A – Industrial Technology Development, Demonstration and Deployment.

Section 501 – 504. This Title of the bill would authorize the Secretary of Energy to make grants to support manufacturing of clean energy technologies and components as well as specified industrial products such as steel and cement. The Clean Energy Manufacturing Grant program would include the following technologies:

- Renewable energy;
- Energy Storage;
- Advanced nuclear energy;
- Carbon capture;
- Electric grid;
- End-use such as Energy Star products and energy-conserving lighting;
- Electrolyzers;
- Hydrogen fuel cells and other technologies related to the transportation, storage, delivery, and use of hydrogen in residential, commercial, industrial and transportation applications;
- Zero-emission light-, medium-, and heavy-duty vehicles, components of such vehicles, and refueling equipment for such vehicles;
- Industrial energy efficiency technologies, including combined heat and power systems and waste heat to power systems;
- Pollution control equipment; and,
- Other technologies as determined by the Secretary of Energy.

Grants also could be awarded for the installation, retrofit, or conversion of equipment for a facility or to establish, retrofit, or convert a facility to enable it to produce zero- or low-emission energy-intensive industrial products.

Title V – Industry, Subtitle B – Industrial Efficiency

Section 511. The bill would create the Smart Manufacturing Leadership grant program to assist small and medium manufacturers by providing technical assistance and for other purposes.

Title V – Industry, Subtitle C – Federal Buy Clean Program.

Section 521 – 533. The bill would establish a Federal Buy Clean program targeted at reducing GHGs, as well as a voluntary labeling program to identify and promote products with

significantly lower emissions than comparable products. It also would create a Sustainable Industry Rebate program to assist non-power industrial facilities to improve energy and water efficiency and reduce GHGs.

Title VI – Environmental Justice, Subtitle A – Empowering Community Voices

Section 601- 618. The bill would amend existing law ([42 U.S.C. 7601](#)) to create a new EJ Community Technical Assistance Grant program. The program intent would be to enable a community to participate in decisions impacting the health and safety of their communities in connection with an actual or potential release of a hazardous air pollutant. Eligible grantees would be:

- A population of color, a community of color, an indigenous community, or a low-income community; and
- A community in close proximity to the site of an actual or potential release of a covered hazardous air pollutant.

Hazardous air pollutants would be defined by [Section 112 of the Clean Air Act](#).

The grants could be used to interpret information regarding the nature of the hazard, cumulative impact studies, health impact studies, remedial investigation and feasibility studies, agency decisions, remedial design, and operation and maintenance of necessary monitors; and, performing additional air pollution monitoring.

Grants could not exceed \$50,000 for any grant recipient. The EPA Administrator could waive the grant limitation based on the need of the community for technical assistance. Grants could be renewed for each step in the regulatory, removal, or remediation process.

The bill would create an Interagency Federal Working Group on EJ. Requires federal agencies to coordinate to alleviate the disproportionate impacts of pollution. It also would require federal agencies to integrate environmental justice into their respective missions, including strategies to mitigate the impacts of commercial transportation.

Additionally, the bill would establish the National EJ Advisory Council which includes representatives from community-based organizations; State, Tribal and local governments; nongovernmental and EJ organizations; and, private sector organizations. Private sector organizations include representatives from industry and businesses, and experts in socioeconomic analysis, health and environmental effects, exposure evaluation, environmental law and civil rights; and environmental health science research.

The bill would amend existing law ([42 U.S.C. 7661](#)) to prohibit new or renewed permits from being granted to a major source in an “overburdened census tract.” The definition of “overburdened census tract” would be:

- Has been identified within the National Air Toxics Assessment published by the EPA Administrator as having a greater than 100 in 1,000,000 total cancer risk; or
- Has been determined to have an annual mean concentration of PM_{2.5} of greater than 8 micrograms per cubic meter, as determined over the most recent 3-year period for which data is available.

The EPA Administrator would be required to promulgate regulations to carry out this provision. Further, the EPA Administrator would be required to publish a list of “overburdened census tracts” in the Federal Register not later than 30-days after enactment and update the list on an annual basis.

Additionally, the bill would require that State Plans for Hazardous Waste Disposal ([42 U.S.C. 6926](#)) do not create nor exacerbate disproportionate impacts on EJ communities from exposures to toxins in hazardous waste.

It also would amend the “Emergency Planning and Right-To-Know-Act” ([42 U.S.C. 11004\(b\)](#)) to require specified facilities to hold annual public meetings and within three-days after a release requiring notification.

The EJ Small Grants program and Environmental Justice Collaborative Problem-Solving Cooperative Agreement program would be reauthorized. Each program would be authorized for \$50 million for FY 2022 through FY 2031.

The bill would provide Environmental Justice Community Solid Waste Disposal Technical Assistance grants ([42 U.S.C. 6941](#)) to eligible entities to participate in decisions impacting the health and safety of their communities relating to the permitting or permit renewal of a solid waste disposal facility or hazardous waste facility.

EJ training would be required for federal employees at U.S. EPA and the Departments of Energy and Interior and the National Oceanic and Atmospheric Administration. The bill also would establish an EJ Basic Training program for communities to build capacity and to provide education on environmental issues. A public environmental justice clearinghouse for the U.S. EPA would be established to provide stakeholders access to information.

U.S. EPA would be required to hold biennial public meetings on EJ issues in each region. The meeting notices would be provided to:

- Local religious organizations;
- Civic associations and organizations;
- Business associations of people of color;
- Environmental and environmental justice organizations;
- Homeowners or tenants and neighborhood watch groups;
- Local and Tribal Governments;
- Rural cooperatives;

- Business and trade organizations;
- Community and social service organizations;
- Universities, colleges, and vocational schools;
- Labor organizations;
- Civil rights organizations;
- Senior citizens' groups; and,
- Public health agencies and clinics.

The U.S. EPA Administrator would be required to create a new grant program to build community capacity to address issues relating to EJ and to carry out any activity related to:

- Public health issues at the local level;
- Improving the ability of the environmental justice community to address issues;
- Facilitating collaboration and cooperation among various stakeholders; and,
- Supporting the ability of the environmental justice community to proactively plan and implement just sustainable community development and revitalization initiatives, including countering displacement and gentrification.

Grants could be used to:

- Create or develop collaborative partnerships;
- Educate and provide outreach services to the environmental justice community;
- Identify and implement projects to address environmental or public health concerns; or,
- Develop a comprehensive understanding of environmental or public health issues.

The program would be authorized \$25 million for FY 2022 through 2031. It also would authorize a State grant program for complimentary purposes at \$15 million for FY 2022 through FY 2031. Grants for Tribal governments would be authorized at \$25 million for FY 2022 through FY 2031. Further, a program for Community-based Participatory Research would be established to provide not more than 25 multiyear grants. Research grants could be used to:

- Address issues relating to environmental justice;
- Improve the environment of residents and workers in environmental communities; and,
- Improve the health outcomes of residents and workers in environmental justice communities.

These Community-based Participatory Research grants would be available to an accredited institution of higher education or a community-based organization. This program would be authorized \$10 million for FY 2022 through FY 2031.

The bill would require the EPA to consult with the EJ Advisory Committee to publish a proposal for a protocol for assessing and addressing the cumulative public health risks associated with multiple environmental stressors. Environmental stressors to be assessed would include:

- Impacts associated with global climate change, including extreme heat and/or temperature changes, drought, wildfires, sea level rise, flooding, storms, water and/or food shortage, eco-system disruption, and the spread of infectious diseases;
- Exposure to pollutants, emissions, discharges, waste, chemicals, or other materials subject to federal regulation; and,
- Other environmental factors as determined by the EPA Administrator.

The bill would create a small grant program for climate related activities. Grants would be limited to \$2 million per eligible recipient. The program would be authorized at \$1 billion for FY 2022 through 2031.

The bill would create an Office of Energy Equity within the DOE.

Title VI – Environmental Justice, Subtitle B – Restoring Regulatory Protections

Section 621 - 625. This title focuses on oil, coal ash and other issues. It would amend existing law ([42 U.S.C. 7412\(n\)](#)) to require the EPA Administrator to promulgate a final rule to add hydrogen sulfide to the list of hazardous air pollutants under [Section 112 of the Clean Air Act](#)

This provision would amend existing law (([42 U.S.C. 6921\(b\)](#))) and require the EPA Administrator to promulgate rules related to oil and gas exploration and production wastes.

Title VI – Environmental Justice, Subtitle D – Climate Public Health Protection

Section 641 – 645. The bill expresses the sense of Congress that climate change negatively impacts public health as well as directs the Secretary of Health and Human Services to develop in consultation with relevant federal agencies a National Strategic Action Plan to ensure public health and health care systems are prepared for the impacts of climate change.

Title VI – Environmental Justice, Subtitle E – Public Health Air Quality Infrastructure

Section 651 - 656. This title is the same as the “Public Health Air Quality Act” by Representative Lisa Blunt Rochester. The South Coast AQMD Governing Board adopted a position of WORK WITH AUTHOR on the “Public Health Air Quality Act. Per the Governing Board’s direction, staff are working with the author’s office as well as relevant Committee staff to improve this legislation.

Title VII -- Super Pollutants, Subtitle A – Methane

The bill would establish national goals for reducing methane emissions from oil and natural gas facilities. It also would amend existing law ([42 U.S.C. 7411\(b\)](#)) and ([42 U.S.C. 7411\(d\)](#)) to require the U.S. EPA Administrator to promulgate rules to establish standards for performance, implementation, and enforcement for new sources to prohibit flaring of natural gas. The U.S.

EPA Administrator also would be required to develop regulations for the existing sources to reduce GHGs from routine flaring such that:

- Nationwide flaring is reduced by at least 80-percent below 2017 levels no later than 2025; and,
- Reduce GHGs from routine flaring such that nationwide flaring is reduced 100-percent below 2017 levels no later than 2028.

Flaring for public safety purposes would be exempted from the rules.

The bill would require the Secretary of Energy to create a new Emerging Oil and Natural Gas Greenhouse Gas Emission Reduction Technologies commercialization program to reduce GHGs from the oil and natural gas sector, and to improve existing technologies and practices to reduce emissions. This program would be authorized at \$10 million to remain until expended.

It also would create a grant program to provide States assistance to offset the incremental rate increases paid by lower-income households resulting from the implementation of infrastructure replacement, repair, and maintenance programs that are approved by the rate-setting entity and designed to accelerate the necessary replacement, repair or maintenance of natural gas distribution systems. The program would be authorized at \$250 million for FY 2022 through FY 2031.

The bill would amend existing law ([42 U.S.C. 6971](#)) to require the U.S. EPA Administrator to establish a Composting and Anaerobic Digestion Food Waste-to-Energy Projects grant program for States to construct large-scale composting or anaerobic digestion food waste-to-energy projects. For States to eligible to receive grants, they would be required to:

- Have in effect a plan to limit the quantity of food waste that may be disposed of in landfills in the State;
- A written commitment that the State will comply with the [Food Recovery Hierarchy of the EPA](#); and,
- A written end-product recycling plan that provides for the beneficial use of the material resulting from any anaerobic digestion food waste-to-energy operation.

Title VII – Super Pollutants, Subtitle B – Black Carbon

Section 711 - 712. This provision would require the U.S. EPA in consultation with other federal agencies to submit a report to Congress based on a 2012 report entitled, “[Report to Congress on Black Carbon](#)” and current information including:

- An inventory of the major sources of black carbon emissions in the nation
 - An estimate of the quantity of current and projected future black carbon emissions; and,

- The net climate forcing of such emissions from sources, including consideration of co-emissions of other pollutants.
- Effective and cost-effective control technologies, operations, and strategies for additional domestic black carbon emissions reductions, such as diesel retrofit technologies on existing on-road, off-road, and stationary engines, programs to address residential cookstoves and heating stoves, programs to address forest and agriculture-based burning, and programs to address ports, international shipping, and aviation;
- Potential metrics and approaches for quantifying the climatic effects of black carbon emissions, including the radiative forcing and warming effects of such emissions, that may be used to compare the climate benefits of different mitigation strategies, including an assessment of the uncertainty in such metrics and approaches; and,
- The public health and environmental benefits associated with additional controls for black carbon emissions.
- Recommendations on:
 - The development of additional emissions monitoring techniques, modeling and other areas of study;
 - Areas of focus for additional study of technologies, operations, and strategies with the greatest potential to reduce emissions of black carbon and associated public health, economic, and environmental impacts; and,
 - Actions, that the federal government may take to encourage or require reductions in black carbon emissions.

Not later than one-year after enactment, the U.S. EPA Administrator would be required to either make a finding that regulations have been promulgated adequately to reduce black carbon emissions by 70-percent relative to 2013 levels by 2025; or, develop regulations under the Clean Air Act to meet that goal.

Title VIII – Economy-Wide Policies, Subtitle A – State Climate Plans

The bill would add a new State Climate Plan section to the Clean Air Act([42 U.S.C. 7401](#)) to require States to prepare and submit inventories of carbon dioxide and methane emissions, negative emissions, and sinks to the U.S. EPA. The bill would create deadlines for meeting standards for carbon dioxide and methane corresponding to the 2030s, and 2040s:

- By January 1, 2031 and then by January 1, 2041– reduction levels of carbon dioxide to be set by the EPA Administrator; and,
- By January 1, 2041 – reduction of emissions from methane of at least 95-percent below such State’s calendar year 2012.

The model control strategies would include:

- A climate pollution phaseout control program;
- Performance-based fuels standard;
- Carbon removal control strategies;
- Energy efficiency control programs; and,

- Provisions to adopt and enforces, pursuant to [Clean Air Act Section 177](#), California’s low-emission vehicle and zero-emission vehicle regulations.

•
The bill also would create a “Race to Net-Zero-Grant Program” to be funded by a backstop carbon fee that would be applied to specified sources of emissions in States that do not submit a Climate Plan or Plan revision as required.

Title VIII – Economy-Wide Policies, Subtitle B – Clean Energy and Sustainability Accelerator (Climate Bank)

Section 811. Clean Energy and Sustainability Accelerator. This bill would amend existing law ([Energy Policy Act of 2005](#)) to create a non-profit Clean Energy and Sustainability Accelerator (Accelerator). The Accelerator would provide financing to assist with the deployment of technologies to reduce GHG emissions. The Accelerator would directly finance projects or provide capital to State, Territorial, and local green banks. Qualified projects mean:

- Renewable energy generation including, solar, wind, geothermal, hydropower, ocean and hydrokinetic, and fuel cell;
- Building energy efficiency, fuel switching, and electrification;
- Industrial decarbonization;
- Grid technology such as transmission, distribution, and storage to support clean energy distribution, including smart-grid applications;
- Agriculture and forestry projects that reduce net GHGs;
- Clean transportation including:
 - Battery electric vehicles.
 - Plug-in hybrid vehicles.
 - Hydrogen vehicles.
 - Other zero-emissions fueled vehicles.
 - Related vehicle charging and fueling infrastructure.
- Climate resilient infrastructure;
- Any other key areas identified by the Accelerator Board as consistent with the mandate.

The bill also would authorize the Accelerator to explore establishing a loan program to support schools, metropolitan planning organizations, or nonprofit organizations seeking financing for zero-emissions vehicle fleets and related infrastructure, as well as a program to expedite the transition to zero-emissions electricity generation in the power sector.

The bill would prioritize communities disproportionately affected by the impacts of climate change and 40-percent of the Accelerator investment activity would service disproportionately affected communities.

The Board of Directors for the Accelerator would be composed of seven members including:

- Three members appointed by the President requiring Senate confirmation with no more than two belonging to the same political party; and,
- Four members elected unanimously by the three appointed members and confirmed by the Senate.

The members of the Board would be required to have collective experience in fields of:

- Clean energy, electric utilities, industrial decarbonization, clean transportation, resiliency, and agriculture and forestry practices;
- Climate change science;
- Finance and investments; and
- EJ and matters related to the energy and environmental needs of climate-impacted communities.

No officer or employee of the Federal or any level of government could be appointed or elected as a member of the Board. In addition to the Board, the Accelerator would have a 13-member Advisory Committee.

The Accelerator would be funded initially with \$50 billion and \$10 billion for each of the five succeeding years.

Title VIII – Economy-Wide Policies, Subtitle E – Ensuring Just and Equitable Climate Change

The bill would require that 40-percent of the funds made available through the CLEAN Future Act would be used to support activities that directly benefit EJ communities.

Title IX – Waste Reduction, Subtitle A – Clean Air

Section 901 - 903. The bill would require the U.S. EPA Administrator to temporarily pause the issuance of permits for certain facilities related to:

- Production of plastics or the raw materials used to produce plastics such as ethylene and propylene; or,
- Facilities that repolymerize plastics into chemical feedstocks.

The pause of permits would begin with the enactment of this legislation and end on the date that is the first date on which all regulations required are in effect.

Title IX – Waste Reduction, Subtitle C – Zero-Waste Grants

Section 921 - 927. The bill would provide grants for zero-waste projects including the purchase of zero-emission vehicles for recycling and composting collection. Entities eligible to apply for grants would include:

- A single unit of State, local, or Tribal government;
- One of more units of State, local, or Tribal government in coordination with for profit or nonprofit organizations; or,
- One or more nonprofit organizations.

Title IX – Waste Reduction, Subtitle E – Critical Minerals

Section 941- 948. The bill would establish a DOE competitive grant program for State and local governments to assist in the establishment or enhancement of programs that address the collection, recycling, reprocessing, and proper disposal of batteries. Grants may not be more than 50-percent of the total project cost. U.S. EPA would be required to work with stakeholders to develop best practices for the collection of batteries at the end of useful life. Additionally, DOE and U.S. EPA would be required to develop a voluntary labeling program to improve consumer awareness regarding proper disposal.

Competitive grants for retailers that sell batteries could be utilized to establish, implement, or improve systems for the collection, recycling, and proper disposal of batteries and to service as battery collection points. The collection of batteries would be at no cost to the public who use the system. A Task Force would be set up to develop recommendations on the design of an extended producer responsibility for producers of batteries.

The bill also would establish a Task Force on Wind and Solar Recycling to improve the recovery, recycling, and reuse of key components of wind and solar energy technologies.

DOE would be required to conduct studies on ways to reduce the environmental impacts of critical minerals lifecycle management.

A total of \$35 million would be authorized for each FY 2022 through FY 2031.

Impacts on South Coast AQMD’s Mission, Operations or Initiatives: H.R. 1512, the “CLEAN Future Act of 2021” is a comprehensive bill with programs and policies that could help address federal sources of air pollution; provide funding opportunities for South Coast AQMD either directly or indirectly through the creation of programs to assist residents, especially within EJ communities and businesses; and seek to address workforce transition and labor issues in relation to environmental policy and technological advancements. These types of activities could assist the South Coast AQMD reduce air pollution in the region to meet future NAAQS and reach attainment for ozone and particulate matter.

In particular, H.R. 1512 includes provisions which could complete the 2022 AQMP which includes residential and commercial building efficiencies as well as seeks to reduce emissions from mobile sources to reach attainment.

Staff recommends a WORK WITH AUTHOR position to engage in the legislative process to:

- Add criteria air pollutants in the Titles of the bill that only address GHGs;

- Ensure federal policies and regulations do not over-reach local and State authority;
- Ensure federal government takes responsibility for their assigned sources of air pollution and does not penalize local regions for attainment issues not within their control; and,
- Request adequate levels of funding for any policies and/or grant programs.

The Governing Board previously approved amendments for the “Public Health Air Quality Act” (Blunt Rochester). Staff will continue pursue these amendments in H.R. 1512 with the bill author, our Congressional Delegation, and the Committee process.

Additionally, staff will seek to remove the provision in the EJ Title of the bill that would prohibit new or renewed permits from being granted to a major source in an “overburdened census tract” based on cancer risk or PM2.5 concentrations. While the intent of this provision is inherently positive to reduce the impacts of air pollution on environmental justice communities, it does not consider all sources of emissions, especially mobile sources, nor other potential impacts.

It is essential for South Coast AQMD to actively participate in the development of this bill as it is likely to be combined with the Surface Transportation and Ways and Means bills to form the next Transportation and Infrastructure package.

Recommended Position: WORK WITH AUTHORS

Re: March Report

HOUSE/SENATE

The American Rescue Plan has been passed by both the Senate and the House and signed into law by President Biden. Eligible individuals will receive a \$1,400 economic impact payment, and eligible married couples will receive \$2,800 plus \$1,400 for each dependent. Economic impact payments have already started being disbursed.

The American Rescue Plan provides \$350 billion dollars in emergency funding for state, local, territorial, and Tribal governments. This includes:

- \$195 billion for states (a minimum of \$500 million for each State);
- \$130 billion for local governments (a minimum of \$1.25 billion per state is provided by the statute inclusive of the amounts allocated to local governments within the state);
- \$20 billion for tribal governments; and
- \$4.5 billion for territories.

The American Rescue Plan also provides \$10 billion for states, territories, and Tribes to cover the costs of capital infrastructure projects, like broadband infrastructure. The Capital Projects Fund addresses infrastructure shortcomings and challenges that have been laid bare by the pandemic. Also included in the American Rescue Plan is \$10 billion for the Homeowner Assistance Fund, \$21.6 billion for Emergency Rental Assistant, \$10 billion for the State Small Business Credit Initiative, extends the Employee Retention Credit and Paid Leave Credit Programs, and unemployment benefits.

The House is not in session this week, they will focus on committee work. The Senate is in session this week but will be out for recess for two weeks March 29.

Last week, the House GOP adopted a resolution lifting their conference-wide ban on earmarks. GOP members must publicly disclose their earmark requests when submitted and affirm that neither the lawmaker nor immediate family members have a financial interest in such projects. They must also provide a written explanation of their request.

New Reforms:

In addition to adhering to the House Rules (House Rules XXI and XXIII), the House Appropriations Committee is enforcing a series of important reforms to guarantee that Community Project Funding is dedicated to genuine need and not subject to abuse. These include:

Public Transparency and Accountability

- **All Requests Online:** Members are required to post every Community Project Funding request online simultaneously with their submission to the Committee. The website must be searchable. The House Appropriations Committee will establish an online “one-stop” link to all House Members’ project requests.
- **Early Public Disclosure:** To facilitate public scrutiny of Community Project Funding, the Committee will release a list of projects funded the same day as the Subcommittee markup, or 24 hours before full committee consideration if there was no Subcommittee markup.
- **No Financial Interest:** Members must certify to the Committee that they, their spouse, and their immediate family have no financial interest in the projects they request. This is an expansion beyond the underlying requirements in House Rules in order to cover immediate families of Members.

Limited Approach

- **Ban on For-Profit Recipients:** There is a ban on directing Community Project Funding to for-profit grantees. Members may request funding for State or local governmental grantees and for eligible non-profits.
- **Cap on Overall Funding:** The Committee will limit Community Project Funding to no more than 1 percent of discretionary spending, a recommendation of the bipartisan House Select Committee on the Modernization of Congress.
- **Member Requests Capped:** The Committee will accept a maximum of 10 community project requests from each member, though only a handful may actually be funded.

Rigorous Vetting

- **Mandatory Audit:** The Committee will require the Government Accountability Office to audit a sample of enacted community project funding and report its findings to Congress.

Community Support

- **Demonstrations of Community Engagement:** Members must provide evidence of community support that were compelling factors in their decision to select the

requested projects. This policy was recommended by the bipartisan House Select Committee on the Modernization of Congress.

Existing Standards

These reforms build on the requirements for accountability and transparency that are part of Rule XXI, clause 9 and Rule XXIII, clauses 16 and 17 of the Rules of the House. Those existing rules require the following:

- **No Member Financial Interest:** The rules forbid any Member from pursuing Community Project Funding to further his or her financial interest, or that of his or her spouse. Each Member requesting Community Project Funding must certify in writing that there is no such interest and make that certification available to the public. As noted above, the new Committee reforms will expand this requirement beyond existing House rules.
- **Request in Writing:** Any Member requesting Community Project Funding must do so in writing, including the Member's name, the name and location of the intended recipient, and the purpose of the spending item.
- **Committee Consideration:** When reporting legislation containing Community Project Funding, the Committee is required to identify each item (including the name of each Member requesting the item) in the corresponding committee report or joint explanatory statement and make it publicly available online in a searchable format.
- **Disclosure Before Floor Consideration:** The rules prohibit a vote on a bill or a vote on adoption of a conference report unless the chair of the committee certifies that a complete list of Community Project Funding has been publicly available for at least 48 hours.
- **Point of Order Against New Projects in Conference Reports:** A point of order may be raised against a provision of the conference report if it includes Community Project Funding that was not included in either the House or Senate bills.

Nominations: Michael S. Regan was sworn in as the 16th EPA Administrator on March 11. On his first day, Administrator Regan committed to working closely with and supporting EPA's careers staff. In one of his first public appearances, Administrator Regan reaffirmed the Agency's commitment to working collaboratively with the states and extended the formal Memorandum of Agreement reaffirming the partnership between EPA, the Environmental Council of the States, and the Association of State and Territorial Health Officials to advance cooperative initiatives in pursuit of environmental health.

Cabinet nominees include:

- Vice President: Kamala Harris
- Secretary of State: Antony Blinken (Confirmed)
- Treasury: Janet Yellen (Confirmed)
- Defense: Lloyd Austin (Confirmed)
- Attorney General: Merrick Garland (Confirmed)
- Homeland Security: Alejandro Mayorkas (Confirmed)
- Veterans Affairs: Denis McDonough (Confirmed)

- Health and Human Services: Xavier Becerra (Confirmed)
- Energy: Jennifer Granholm (Confirmed)
- Interior: Deb Haaland (Confirmed)
- Transportation: Pete Buttigieg (Confirmed)
- Commerce: Gina Raimondo (Confirmed)
- Labor: Marty Walsh (Confirmed)
- Agriculture: Tom Vilsack (Confirmed)
- Housing & Urban Dev: Marcia Fudge (Confirmed)
- Education: Miguel Cardona (Confirmed)

Cabinet-level officials

- White House Chief of Staff: Ron Klain
- White House OMB Director: not named
- Office of Science & Tech Policy Director: Eric Lander
- EPA Administrator: Michael Regan (Confirmed)
- Director of National Intelligence: Avril Haines (Confirmed)
- USTR: Katherine Tai (Confirmed)
- SBA Administrator: Isabel Guzman (Confirmed)
- Ambassador to the UN: Linda Thomas-Greenfield (Confirmed)
- Special Presidential Envoy for Climate: John Kerry

Cassidy and Associates support in March:

- Cassidy and Associates has supported SCAQMD staff in tracking legislation related to SCAQMD legislative priorities. Specifically, we are monitoring and reporting on hearings related to infrastructure. Currently all House Committees are holding hearings on legislation to address infrastructure needs. As reported to the Legislative Committee in the March meeting, the House Clean Futures Act includes four provisions that are SCAQMD priorities.
- We also are continuing to monitor incentives for clean and zero emission vehicles. As transportation infrastructure bills move through the House and Senate we will make every effort to remind staff and Members that standards for heavy-duty vehicles should be performance-based and fuel neutral.
- Cassidy also continues to monitor Presidential nominations and appointments. We are eager to create opportunities for SCAQMD leadership to meet with EPA leadership.

AGENCY RESOURCES

USA.gov is cataloging all U.S. government activities related to coronavirus. From actions on health and safety to travel, immigration, and transportation to education, find pertinent actions [here](#). Each Federal Agency has also established a dedicated coronavirus website, where you can find important information and guidance. They include: Health and Human Services ([HHS](#)), Centers of Medicare and Medicaid ([CMS](#)), Food and Drug Administration ([FDA](#)), Department of Education ([DoED](#)), Department of Agriculture ([USDA](#)), Small Business Administration ([SBA](#)), Department of Labor ([DOL](#)), Department of Homeland Security ([DHS](#)), Department of State ([DOS](#)), Department of Veterans Affairs ([VA](#)), Environmental Protection Agency ([EPA](#)), Department of the Interior ([DOI](#)), Department of Energy ([DOE](#)), Department of Commerce ([DOC](#)), Department of Justice ([DOJ](#)), Department of Housing and Urban Development ([HUD](#)), Department of the Treasury ([USDT](#)), Office of the Director of National Intelligence ([ODNI](#)), and U.S. Election Assistance Commission ([EAC](#)).

KADESH & ASSOCIATES

South Coast AQMD Report for the April 2021
Legislative Meeting covering March 2021
Kadesh & Associates

March:

The American Rescue Plan (ARP) has been signed into law. This is the \$1.9 trillion COVID response bill that includes the state and local government accounts (including a provision allowing funds to be transferred to special purpose units of government), as well as the grants for environmental justice and for activities authorized in §103 and §105 of the Clean Air Act. While implementation of this new law is underway, and vaccine rollout ramps up, infrastructure will likely be the next big push from the Biden administration. The size and scope of that effort is not set, and there remain several possible paths to enact an infrastructure bill. We would not be surprised if additional details for the Biden infrastructure plan coincide with budget information being released. We are still anticipating not receiving the full FY22 budget request until early May, but we expect to see the “skinny budget” with topline numbers next week.

The current surface transportation bill expires on September 30. Chairman DeFazio has started the bill drafting process this year and is soliciting earmark requests from his members. He has released guidance and set April 14 as the deadline for member submissions. Many members will have their own internal deadlines coming up. The House is expected to draw heavily from last year’s Moving Forward Act in crafting its new bill, which we understand Chairman DeFazio intends to markup in May. On the Senate side, Chairman Carper is in the process of soliciting input from members for portions of the bill under the EPW jurisdiction (highways) and has set Memorial Day as his target for introduction of a bill. Senate Banking (transit) and Commerce (rail) have not made similar announcements.

The House has already announced its plans for appropriations earmarks, including guidance on which accounts are eligible for earmarks, and the Republican Conference has now agreed to participate. Many members have already set their internal deadlines for earmark requests and the full committee has set an April deadline for member requests under the “Community Project Funding” initiative. We understand Senate Appropriations leaders Leahy and Shelby have reached an earmark agreement, supported by leadership on both sides, but a sizeable component of Senate Republicans are opposed to the plan. Until that impasse is resolved, Senate earmarks will continue to be moving target.

The House Energy & Commerce Committee has begun to consider its sweeping climate bill, the CLEAN Future Act, which includes numerous provisions of interest, including funding to reduce air pollution at ports and in nearby communities, and vehicle emission policy and funding. Rep. Barragán participated in a recent committee hearing on the bill’s impact on industrial sector pollution where she pursued questions about environmental justice and the impact of pollution in communities.

KADESH & ASSOCIATES

Kadesh & Associates Activity Summary-

- Continue to work with South Coast AQMD staff to prioritize and submit timely funding requests to members of Congress;
- Continue outreach to the California congressional delegation, including introductions and a presentation on our key issues to new offices;
- Building support for legislative priorities such as the Clean Corridors Act and the Climate Smart Ports Act.

Contacts:

Contacts included staff and House Members throughout the CA delegation, especially the authors of priority legislation, new members of the South Coast House delegation, and members of key committees. We have also been in touch with administration staff.

Re: Federal Update -- Executive Branch

Update on Status of Cabinet Appointments

<u>The Cabinet</u>		<u>Senate Vote</u>
Vice President	Kamala Harris	N/A
Secretary of State	Antony Blinken	78-22
Secretary of the Treasury	Janet Yellen	84-15
Secretary of Defense	Lloyd Austin	93-2
Attorney General	Merrick Garland	70-30
Secretary of the Interior	Deb Haaland	51-40
Secretary of Agriculture	Tom Vilsack	92-7
Secretary of Commerce	Gina Marie Raimondo	84-15
Secretary of Labor	Marty Walsh	68-29
Secretary of HHS	Xavier Becerra	50-49
Secretary of HUD	Marcia Fudge	66-34
Secretary of Transportation	Pete Buttigieg	86-13
Secretary of Energy	Jennifer Granholm	64-35
Secretary of Education	Miguel Cardona	64-33
Secretary of VA	Denis McDonough	87-7
Secretary of DHS	Alejandro Mayorkas	56-43
Administrator of the EPA	Michael Regan	66-34
Director of OMB	Neera Tanden <i>(Withdrawn)</i>	
Director of DNI	Avril Haines	84-10
US Trade Representative	Katherine Tai	98-0
US Ambassador to the UN	Linda Thomas-Greenfield	78-20
Chair of Economic Advisors	Cecelia Rouse	95-4
Administrator of the SBA	Isabel Guzman	81-17
Presidential Science Advisor	Eric Lander	N/A
Chief of Staff	Ron Klain	N/A

Other Notable Appointments

Todd Kim, *DOJ Asst. AG, Environment & Natural Resources Division*
(Former DOE, DOJ; DC Solicitor General; J.D., Harvard Law)

Jose W. Fernandez, *Undersec. of State for Eco. Growth, Energy & Environment*
(Former Asst. Sec. of State; Partner for Inner City Education in NY)

Dilawar Syed, *Deputy Administrator, Small Business Administration*
(Pres., Lumina, Freshworks; Ch., CA Entrepreneurship Task Force)

Proven Process. Proven Results.™

Update on the Emerging “Infrastructure” Maze: In the two short weeks since the enactment into law of the \$1.9 trillion “COVID Relief and Economic Rescue” bill – marched through Congress without a single Republican vote in either the House or the Senate – there has been a remarkably swift crystallization of the likely path forward for the Administration’s coming push for a massive “Transportation/Infrastructure/Climate Economic Recovery” bill (or bills) with a price tag still undetermined but almost certain to be in the \$3 trillion to \$5 trillion range. In essence, it is now being lined up to follow a similar path as the COVID bill: Debated, constructed and cobbled together by Democrats alone, and then muscled through to final passage with no Republican support, either through the “reconciliation” process, a changing of the rules on “reconciliation,” and/or by the watering down or outright elimination of the Senate filibuster—all of which is now not only “on the table,” but also increasingly clearly the preferred path of House and Senate Democratic leaders.

This is arguably not good for the country (or for the Congress) for many reasons, but it is what is in terms of the current political and legislative reality – stemming in no small measure as it does from the unprecedentedly bitter partisan strife stretching from the November presidential election, to the Jan 5th Senate elections in Georgia, to the Jan 6th Capitol riot, to the inaugural aspirations of “unity,” to the President’s over 50 one-sided executive orders and actions, to the February impeachment trial, and to the quick dismissal of Republican overtures for compromise on the COVID bill. And, added to that -- almost strangely -- is the apparent “bipartisan” return of congressionally directed earmarks!

For SCAQMD, no doubt this extraordinary state of affairs presents an enormous opportunity for the inclusion of more of our federal legislative agenda than was previously thought possible, including emissions reductions measures, zero-emission vehicle incentives, needed regulatory measures, corridor and port infrastructure projects, environmental justice projects, and more.... and the promise of significant funding to go with it. Now is the time for intense advocacy efforts on every front.

Soon by early April, the President’s budget will be out, along with a firmer outline of what the infrastructure bill or bills will look like, most likely coupled with major tax increases larger than anything that has been contemplated since the early Clinton administration in 1993.

Federal Agency Roundup: Meanwhile here is a summary of activity items of interest from key federal agencies:

Environmental Protection Agency

EPA Announces Funds for Environmental Justice Grants: In March, the EPA announced the availability of grant funding under two environmental justice programs. This includes \$3.2 million available under The Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program where EPA anticipates awarding two agreements of \$160,000 each within each of the 10 EPA Regions; and \$2.8 million available under The Environmental Justice Small Grants (EJSG) Program, where EPA anticipates making five grant awards per EPA region of up to \$50,000 per award.

The EJSG program also includes the EPA's Ports Initiative program which anticipates funding up to six additional projects that address clean air issues at coastal and inland ports or rail yards. Applications are due by May 7, 2021.

EPA Selects Organizations to Receive Brownfields Job Training Grants: In March, EPA selected 18 organization across the country to receive a total of \$3.3 million in grants to train a total of 900 individuals under the agency's Environmental Workforce Development and Job Training (EWDJT) Program. These grants provide funding to organizations that are working to create a skilled workforce in communities where EPA brownfields assessments and cleanups are taking place and encourage the hiring of individuals residing in and around brownfields areas. One of the award recipients was located in California: The Kern County Builders Exchange in Bakersfield.

EPA Administrator Reaffirms State-Federal Partnership Agreement: In one of his first public appearances as EPA Administrator, Michael Regan delivered the keynote address to the Environmental Council of the States (ECOS) at its virtual Spring Meeting in March. In it, he highlighted the extension of a formal Memorandum of Agreement (MOA) between the EPA, ECOS and the Association of State and Territorial Health Officials (ASTHO) to advance cooperative initiatives in pursuit of environmental health.

EPA Seeks Nominations for Its Local Government Advisory Committee: In March, EPA announced a solicitation for this year's nominations to serve on its Local Government Advisory Committee (LGAC). The agency is also accepting nominations for LGAC's Small Communities Advisory Subcommittee (SACS). Members of these will provide advice and recommendations on a range of issues including: Ensuring access to clean air and water; reducing greenhouse gas emissions; and advancing environmental justice. Candidates must be elected or appointed officials representing local, state, tribal or territorial governments. Nominations should be submitted by April 16, 2021.

EPA Reboots Climate Change Website: The new administration reports that for the first time in four years, the EPA has a website dedicated entirely to climate change information: <https://www.epa.gov/climate-change>

Department of Transportation

FHWA Awards Grants to Explore New Highway Funding Methods: In March, the Federal Highway Administration (FHWA) awarded a total of \$18.7 million for eight projects under the annual Surface Transportation Systems Funding Alternatives (STSFA) program created by the FAST Act in 2016. The goal of the program is to test within specific states possible user-based funding methods for highways and bridges to help find new ways to provide long-term support for the Highway Trust Fund. One of the eight projects selected will be based in California: Caltrans received \$2,150,000 for the Road Charge Pilots Program which will test the viability of current global positioning system technology to determine which roads are part of a public network and may be subject to a fee.

USDOT Launches “Mask Up” Campaign: The U.S. Department of Transportation in March announced an effort aimed at educating travelers and transportation providers on their responsibility to comply with wearing a mask when traveling. The “Mask Up” campaign is a joint effort by the Federal Aviation, Motor Carrier Safety, Railroad and Transit Administrations across all forms of transportation, including on buses, trains, airplanes and ferries and while at all transportation hubs. “There is a national requirement to wear a mask while traveling...and failure to comply with the requirement can result in civil penalties.”

US-Canada Transportation Departments Issue Joint Statement on Climate Change:

On February 25, Transportation Secretary Buttigieg and his Canadian counterpart issued a Joint Statement on the “Nexus Between Transportation and Climate Change.” Here is an excerpt from the statement that focuses on achieving emissions reductions in the transportation sector:

On roads, together with other federal departments and agencies, we aim toward a zero-emission vehicle future through ambitious vehicle standards to improve fuel efficiency and reduce greenhouse gases from light-duty and heavy-duty vehicles. We intend to work together to help accelerate the achievement of 100% zero-emission vehicle sales for light-duty vehicles and increase the supply of and demand for zero-emission medium- and heavy-duty vehicles. We plan to explore best practices on how to help incentivize the installation of electric charging stations, and refueling stations for clean fuels, including through the ongoing coordination of electric and alternative fuel corridors and the alignment of technical codes, standards and regulations, to enable the seamless transportation of people and goods. We also plan to work collaboratively on new innovative solutions to decrease emissions and to advance the use of cleaner fuels in rail transportation.

Department of Energy (Notable Appointment)

Karen Skelton, Senior Advisor, Office of the Secretary

(CA Gov. Brown Climate; Clinton Admin; UCLA, UC Berkeley Law)

DOE Announces Funds Available to Small Businesses for Clean Energy R&D: The Department of Energy announced in March that it was making \$115 million available for small businesses pursuing clean energy research and development projects. The projects range from grid modernization and carbon removal to renewable energy and energy storage. The funding is administered by DOE’s Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs, which were established to encourage participation of diverse communities in technological innovation, as well as to increase technology transfer between research institutions and small businesses. Applications are due by April 20, 2021.

DOE Announces Additional Funds Available for Direct Air Capture: The Department of Energy announced in March that it was making \$24 million available for research into technology that captures carbon emissions directly from the air, replicating the way plants and trees absorb carbon dioxide (CO₂). These funds are made available through DOE’s Office of Science, complimenting recent similar announced research efforts funded through of the Office of Energy Efficiency and Renewable Energy and the Office of Fossil Energy. Applications are due by May 18, 2021.

DOE Announces Project Awards to Develop Clean Hydrogen Technologies: The Department of Energy's Office of Fossil energy announced in March the award of \$2 million to four research projects aimed at advancing clean hydrogen development through the process of co-gasification, an alternative to using natural gas as the main source of hydrogen production. The process blends waste from biomass, plastic, and coal feedstocks with oxygen and steam under high pressures and temperatures. When combined with carbon capture and storage, this process may lead to net-negative emissions. One of the four \$500,000 projects selected is based in California: Electric Power Research Institute, Inc. in Palo Alto.

The White House (Notable Appointments)

Philip Giudice, *Sp. Asst. to the President for Climate Policy*

(MA Dept of Energy; Ch., Nat. Assoc. State Energy Officials)

Samantha Silverberg, *Sp. Asst. to the Pres. for Transportation & Infrastructure*

(MA Bay Transportation Authority; M.A., Harvard Kennedy School)

Tim Wu, *Sp. Asst. to the President for Technology and Competition Policy*

(Prof., Columbia Law; Counsel, NY AG; Former FTC, Justice Breyer)

Climate Agenda: Over the last month, White House National Climate Advisor Gina McCarthy played a lead role in convening and presiding over a series of virtual meetings with key players in and out of government focused on the Administration's broad climate agenda and how it factors into the workings of federal agencies and the drive toward potential new infrastructure and climate-related legislation. These meetings included the following:

- Second Meeting of the National Climate Task Force (March 18)
- First Meeting of the Interagency Working Group on Coal and Power Plant Communities and Economic Revitalization (Feb. 26)
- Automakers and Labor Leaders (Feb. 24)
- Electric Vehicle Charging Infrastructure Leaders (March 2)
- Climate Finance Leaders (March 9)
- Oil and Gas Company Leaders (March 22)

Outreach: Contacts included representatives of key business groups, including Cummins, Inc, Achates Power, the Alliance for Vehicle Efficiency, the Highway Users Alliance and the American Association of State Highway and Transportation Officials (AASHTO) on transportation and infrastructure legislation and on incentives for cleaner trucks and electric vehicles; the offices of Sen. James Inhofe, Rep. Sam Graves, the Senate Environment & Public Works Committee and the House Transportation and Infrastructure Committee on transportation, infrastructure and climate legislation.

###

CALIFORNIA ADVISORS, LLC

South Coast AQMD Report
California Advisors, LLC
April 9, 2021 Legislative Committee Hearing

General Update

In Sacramento, the legislative agenda for this year's session is starting to become clear as hundreds of "spot bills" have been amended with substantive language. Policy committees have already begun to meet and begin deliberations on these bills. One note is that last year the Legislature only had enough time for each bill to be heard in one policy committee. However, this year we are already seeing bills be double referred to two policy committees. The Legislature will begin its week-long spring recess starting on March 25th. When they return to the Capitol, the bulk of their policy committee hearings will be done in April.

The Legislature has been steadily working through policy and budget committees. On March 24th, Governor Gavin Newsom announced he has submitted to the State Legislature the nomination of Assemblymember Rob Bonta (D-Alameda) as the next California Attorney General. Bonta will fill the seat vacated by Xavier Becerra, who was recently sworn in as Secretary of the U.S. Department of Health and Human Services. The Assembly and the Senate now have 90 days to confirm him as Attorney General. Speaker Anthony Rendon has already stated that he will support this confirmation and Senate Pro Tem Toni Atkins has made similar supportive comments of Bonta's nomination.

Bonta will be the first Filipino American to serve as Attorney General. During his time in the Assembly, he has fought for major reforms that reversed long standing injustices. One of the issues highlighted in his announcement was the work he has done as a leader in the fight against climate change and how he has ensured every community equitably benefits from the state's green economy.

If he is confirmed by the Legislature, his 18th Assembly District seat will be vacated. This will start the clock on what could be the fourth scheduled special election since last November. The Governor just announced that the special election in the 54th Assembly District, which was most recently held by now-Senator Sydney Kamlager, will take place on May 18, 2021.

Budget

The Governor announced that California continues its strong economic recovery. General Fund revenues are running \$14.3 billion above January's revenue forecast, with receipts for February exceeding the month's projection by \$3.8 billion. The bulk of these revenue gains can be attributed to lower refunds caused by the later enactment of the \$600 one-time Golden State

Stimulus than expected in the budget, as well as fewer-than-expected state tax refunds due to the delayed federal and state tax filing season.

While the budget continues to improve, the pressure on the budget committees will continue to increase as calls to spend these additional revenues will grow louder through the year. The next milestone in the budget process will come when the Governor provides his May Revise and adjusts his budget proposal. The way this year has started, it looks like an increase in state spending will be expected.

FROM: Anthony, Jason & Paul Gonsalves

SUBJECT: Legislative Update – March 2021

DATE: Thursday, March 25, 2021

The Legislature is scheduled to adjourn for Spring Recess on March 25, 2021 and will return to session on April 5, 2021. Upon return, Committee hearings will ramp up to hear the 2,369 bills (1,560 in the Assembly and 809 in the Senate) introduced this year. We will continue to work with SCAQMD staff to identify bills and amendments that are of interest to the District.

The following will provide you with updates of interest to the District:

RECALL WATCH

Wednesday, March 17, 2021 was the final day for proponents of the recall on Governor Newsom to submit signatures. Proponents turned in over 2 million signatures, well over the required 1.5 million to qualify for the ballot later this year. The validation of those signatures are coming in very strong at 84% being valid. Counties have until April 29, 2021 to finish validating the signatures.

With over 2M signatures gathered at an 84% validation rate, all signs point to the recall qualifying and forcing an election later this year. The timing of the recall is decided by Lieutenant Governor Kounalakis who has 60-80 days after the final certification of signatures to schedule it.

In the meantime, Governor Gavin Newsom has been calling on his allies to defend him. The California Democratic Party invested \$250K against the recall and the Governor raised over \$538K within the first 48-hours of launching his campaign. One major

advantage the Governor has over his opponents is he has no campaign contribution limits since he is the incumbent. His opponents are limited to \$32,400 per donor.

The latest poll shows voters are split on the recall, with 42% who would vote to keep Newsom and 38% who would vote him out. 66% of Democrats would keep him and 86% of Republicans would vote to recall him.

ATTORNEY GENERAL

On March 24, 2021, Governor Newsom announced that he will submit to the State Legislature the nomination of Alameda Assemblymember Rob Bonta as the next California Attorney General, filling the seat vacated by Xavier Becerra who was recently sworn in as Secretary of the U.S. Department of Health and Human Services. The nomination is subject to confirmation by the California State Assembly and Senate within 90 days.

Bonta will become the first Filipino American to serve as California Attorney General. Throughout his career in public service, Assemblymember Bonta has taken on big fights to reverse historic injustice. He has been a leader in the fight to reform California's justice system and stand up to the forces of hate.

Assemblymember Rob Bonta was elected to the California State Assembly's 18th District in 2012 where he represents the cities of Oakland, Alameda and San Leandro. He became the first Filipino American state legislator in California's then 160-plus-year history.

Governor Newsom made the announcement at the historic International Hotel in San Francisco, a site where Asian and Pacific Islander Californians famously rallied in 1977 to save homes of elderly residents and preserve their community. The protests helped fuel a rise in AAPI political activism. Bonta's mother, who helped organize the protest at the International Hotel, was on hand today to witness the Governor making his selection.

CALIFORNIA'S FISCAL OUTLOOK

On March 22, 2021, Governor Gavin Newsom announced that General Fund revenues are running \$14.3 billion above January's revenue forecast, with receipts for February exceeding the month's projections by \$3.8 billion.

Nearly 60% of February's gain can be attributed to timing: lower refunds caused by later enactment of the \$600 one-time Golden State Stimulus than expected in the budget, as well as fewer-than-expected state tax refunds tied to a delayed federal start to the tax filing season.

The Governor's 2021-22 State Budget proposal aims to provide funding for immediate COVID-19 response and relief efforts where Californians need it most while making investments for an equitable and broad-based economic recovery. It advances direct cash supports of \$600 to millions of Californians through the Golden State Stimulus, extends new protections and funding to help keep people in their homes and invests in relief grants for small businesses. The Budget intensifies the Governor's commitment to equity in and for our schools, reflected by the highest levels of school funding in California's history.

The Budget reflects \$34 billion in budget reserves and discretionary surplus revenues that include: \$15.6 billion in the Proposition 2 Budget Stabilization Account (Rainy Day Fund) for fiscal emergencies; \$3 billion in the Public School System Stabilization Account; an estimated \$2.9 billion in the state's operating reserve; and \$450 million in the Safety Net Reserve. The state began the year with an operating surplus of \$15 billion.

The Budget continues progress in paying down the state's retirement liabilities and reflects \$3 billion in additional payments required by Proposition 2 in 2021-22 and nearly \$6.5 billion over the next three years. In addition, the improved revenue picture allows the state to delay \$2 billion in scheduled program suspensions for one year.

SPECIAL ELECTION: 54TH ASSEMBLY DISTRICT

On March 12, 2021, Governor Newsom announced the special election to fill the 54th Assembly District seat. Former Assemblymember, and now Senator, Sydney Kamlager Dove won the seat that was vacated by Senator Holly Mitchell who is now a Los Angeles County Supervisor.

Governor Newsom issued a proclamation calling for a primary election for May 18, 2021. If no candidate wins 50% plus one of the vote during that election, a special election for the top two vote-getters will be held on July 20, 2021.

Now that the election has been called, the period for candidates to file has begun. Candidates had until March 24 to file their declaration of candidacy. The field consist of 5 Democrats and one No Party Preference.

PATH TO 100% CLEAN ENERGY

On March 15, 2021, the California Energy Commission (CEC), California Public Utilities Commission (CPUC) and California Air Resources Board (CARB) released the first joint agency report and a summary document examining how the state's electricity system can become carbon free by 2045.

The report is the initial analysis called for in Senate Bill 100 (SB 100, De León, Chapter 312, Statutes of 2018), the state's landmark policy requiring that renewable and zero-carbon energy resources supply 100% of electric retail sales to customers by 2045. The

bill was signed into law in 2018 and calls for these resources to replace fossil fuels for generating electricity in the state.

The 178-page report finds that the goals of SB 100 can be achieved in different ways, but reaching them will require significant investments in new and existing technologies and an increased, sustained build-out of clean energy projects to bring new resources on-line. The report modeled various scenarios to examine sample paths to carbon-free energy. It will be followed with additional analyses of energy reliability and evolving conditions.

Highlights from the report include the following:

- To reach the 2045 target while electrifying other sectors to meet the state's economywide climate goals, California will need to roughly triple its current electricity grid capacity.
- California will need to sustain its expansion of clean electricity generation capacity at a record-breaking rate for the next 25 years. On average, the state may need to build up to 6 gigawatts (GW) of new renewable and storage resources annually.
- In addition to social benefits such as less air pollution and improved public health, transitioning to a carbon-free electric system will also create thousands of jobs such as manufacturing and installing wind turbines and solar panels and developing new clean energy technologies.
- Modeling of the core scenario for achieving 100% clean electricity showed a 6% increase in total annual electricity system costs by 2045, compared to the estimated cost of achieving 60% renewable electricity by 2030.
- Advancements in emerging technologies, increased demand flexibility and cost declines in existing technologies may decrease the total electricity resource requirements and implementation costs. These topics, along with reliability, will be examined more closely in future analyses.
- A clean electricity grid is necessary to achieve economy-wide carbon neutrality. Using clean electricity to power transportation, buildings and industrial operations helps decarbonize these sectors of the economy, which, along with electricity generation, account for 92% of the state's carbon emissions.

California has already made significant progress toward a clean energy future. Due to many efforts that promote renewable energy, energy efficiency and the storage technologies needed to retire fossil fuel resources, the state's electricity mix is already more than 60% carbon free. About 36% of that comes from renewable sources, predominantly wind and solar.

The report was developed using computer modeling and incorporates existing studies; the state's energy, climate, equity and public health priorities; and information gathered through a yearlong series of public workshops throughout the state. Although the report examines the challenges and opportunities for a carbon-free electricity system, the three agencies highlight that it is only a first step in an ongoing effort. The agencies also note that costs, performance and innovations in zero-carbon technologies will change over the next 25 years.

Currently, the CPUC, California Independent System Operator and CEC are implementing actions to prevent electricity shortages and ensure delivery of clean, reliable and affordable energy in response to the August 2020 extreme heat wave. Among the actions are expediting the regulatory and procurement processes to develop additional resources that can be on-line by summer 2021 and ensuring that the generation and storage projects under construction are completed as scheduled.

This year, CARB will also begin the process to update the Assembly Bill 32 Climate Change Scoping Plan, which will assess progress towards reducing GHG emissions 40% below 1990 levels by 2030 and chart the path to carbon neutrality by 2045. The CARB board will consider acting on the scoping plan in late 2022.

LEGISLATIVE DEADLINES

Mar. 25 - April 5 Spring Recess

Apr. 30 Last day for policy committees to meet and report to fiscal committees fiscal bills introduced in their house.

May 7 Last day for policy committees to meet and report to the floor non-fiscal bills introduced in their house.

May 10 - Governor's Budget Revise.

May 14 Last day for policy committees to meet prior to June 7.

May 21 Last day for fiscal committees to meet and report to the floor bills introduced in their house.

June 1-4 Floor session only.

June 4 Last day for each house to pass bills introduced in their house.

June 15 Budget Bill must be passed.

South Coast Air Quality Management District Legislative and Regulatory Update – March 25, 2021

❖ Important Dates

- Mar. 25 – Spring Recess begins upon adjournment of the Legislature.
- Apr. 5 – Legislature reconvenes from Spring Recess.
- Apr. 30 – Last day for policy committees to meet and report to fiscal bills introduced in their house to the Appropriations Committee.
- May 7 – Last day for policy committees to meet and report to non-fiscal bills introduced in their house to the floor.
- May 14 – Last day for policy committees to meet until June 7.
- May 21 – Last day for Appropriations Committees to meet and report to non-fiscal bills introduced in their house to the floor.
- Jun. 1-4 – Floor session only.
- Jun. 4 – Last day for each house to pass bills introduced in that house.
- Jun. 7 – Committee meetings resume.
- Jun. 15 – Budget bill must be passed by midnight.

❖ **RESOLUTE Actions on Behalf of South Coast AQMD.** RESOLUTE partners David Quintana and Jarrell Cook continued their representation of SCAQMD before the State's Legislative and the Executive branch. Selected highlights of our recent advocacy include:

- Submitted position letters on behalf of SCAQMD on AB 96 (O'Donnell) and AB 220 (Voepel); additionally, RESOLUTE maintained a line of communication with the authors' offices to monitor potential amendments and the overall status of the measures.
 - AB 96 is set to be heard in committee on April 5 with potential amendments that are being urged by the Chair, Assemblymember Friedman.
 - AB 220 was heard in Committee but not voted on as the author agreed to take amendments that would narrow it to apply to collector cars more directly.

❖ **Governor Newsom Appoints Rob Bonta as California Attorney General.** Assemblymember Rob Bonta (D-Oakland) [was appointed to the role of California Attorney General by Governor Gavin Newsom](#), filling the seat vacated by Xavier Becerra's appointment as Health and Human Services Secretary for President Biden.

Bonta is the first Filipino-American to hold the office, and his nomination comes after a string of anti-Asian violence. He has indicated that his top priority upon entering office would be to address what he called "our fundamentally broken criminal justice system." Bonta's appointment will trigger a special election for his Assembly seat.

❖ **Sydney Kamlager Wins Special Election for Senate District 30.** Assemblymember Sydney Kamlager (D-Los Angeles) won an easy victory in the race to claim the state senate seat formerly held by L.A. County Supervisor Holly Mitchell.

- ❖ **Legislature Holds a Joint Hearing on CARB Audit.** On March 16, the Joint Legislative Audit Committee, the Assembly Transportation Committee, and the Senate Transportation Committee held a joint hearing following the release of the [February 23 audit of the California Air Resources Board](#).

At the hearing, the auditor, Elaine Howell, emphasized [the conclusions from the audit](#), recommending that CARB improve its programs by (1) measuring the actual GHG benefits of its transportation programs, (2) providing the non-GHG benefits of its programs, and (3) improving its reporting on its programs to the Legislature.

CARB Has Not Done Enough to Demonstrate Its Programs' Effectiveness in Reducing GHG Emissions

For more information, see page 19 of our report.

Multiple factors contribute to CARB's GHG objectives:

CARB Has Not Demonstrated That Its Programs Achieve the Socioeconomic Benefits It Claims

For more information, see page 44 of our report.

CARB'S SOCIOECONOMIC GOALS

- Increase participants' credit scores
- Enable travel outside of communities
- Maximize economic opportunities

METRICS CARB REPORTS

Dollars spent in disadvantaged and low-income communities.

HOWEVER, CARB DOES **NOT** EVALUATE OR REPORT ON

- Successful loan repayment and access to new credit opportunities.
- Greater access to food and health care through increased mobility.
- Improvements in employment status and income due to less expensive, more reliable transportation.

- ❖ **CARB Holds Workshop on Advanced Clean Fleets Regulation.** The California Air Resources Board held two public workshops on its Advanced Clean Fleets Regulation on March 2 and March 4. The sets targets for buying electric vehicles for public fleet owners, private fleet companies, and owners of drayage trucks.

The workshop highlighted the state's challenges in reducing NO_x and PM_{2.5} emissions—especially in the San Joaquin Valley and the South Coast, noting that transportation remains the largest source of greenhouse gases by a significant margin. The workshop noted that action beyond current programs is needed by 2031, while emphasizing that CARB viewed Zero-Emissions vehicles as key to successfully reducing NO_x and GHGs.

Advanced Clean Fleets (ACF) Overview	ACF – Proposal Outline
<ul style="list-style-type: none"> ▪ Initial focus on high priority private fleets, drayage and government ▪ Applies to vehicles with a gross vehicle weight rating >8,500 lbs. ▪ Proposed implementation timeframe from 2023 to 2045 ▪ Contribute to full transition to zero-emissions where feasible ▪ Complement Advanced Clean Trucks sales requirement ▪ Prioritize benefits in disadvantaged communities ▪ First hearing December 2021 	<ul style="list-style-type: none"> ▪ General scope summary ▪ Proposed zero-emission fleet requirements <ul style="list-style-type: none"> • Public fleets* • Drayage trucks • Federal and high priority fleets ▪ Recognition for using zero-emission fleets
 25	 * Excludes federal

General Scope Summary
<ul style="list-style-type: none"> ▪ Fleet vehicles include all of the following <ul style="list-style-type: none"> • Any vehicle with a GVWR above 8,500 lbs. • Off-road yard tractors ▪ Excludes the following <ul style="list-style-type: none"> • Transit vehicles subject to the Innovative Clean Transit regulation • Military tactical vehicles as described in 13 CCR 1905 • Emergency vehicles defined in Vehicle Code Section 165 • Motorhomes for non-commercial private use • School buses
 27

The [full staff presentation](#) details CARB's proposed requirements for public fleets, drayage trucks, private and federal fleets, and the incentives to encourage hiring ZEV fleets. A recording of the workshop is available [here](#).

- ❖ **The National Renewable Energy Laboratory Releases Study to Move Los Angeles to 100% Renewable Energy.** The city of Los Angeles has released [a study](#) by the National Renewable Energy Laboratory that offers a plan to move the city to 98% clean energy within the next decade and 100% by 2035. Among the study's key findings include a recommendation that Los Angeles will need to add 470 to 730 megawatts of solar, wind and batteries every year for the next 25 years on average. The proposal advises to replace all of the city's gas plants with renewable hydrogen fuel.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 19

REPORT: Mobile Source Committee

SYNOPSIS: The Mobile Source Committee held a meeting remotely on Friday, April 16, 2021. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Dr. William A. Burke, Chair
Mobile Source Committee

SLR:ak

Committee Members

Present: Dr. William A. Burke/Chair
Supervisor Sheila Kuehl/Vice Chair
Supervisor Lisa Bartlett
Mayor Pro Tem Larry McCallon
Supervisor V. Manuel Perez
Mayor Pro Tem Carlos Rodriguez

Absent: None

Call to Order

Chair Burke called the meeting to order at 9:00 a.m.

INFORMATIONAL ITEM:

1. Update on Proposed Rule (PR) 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program and PR 316 – Fees for Rule 2305

Ian MacMillan, Assistant Deputy Executive Officer, Planning, Rule Development and Area Sources, presented an update on PR 2305. Dr. Burke asked about the inclusion of air filters in the WAIRE Menu and expressed concern that air filters do

not result in emission reductions. He asked staff to report back on how many schools and daycare centers are near warehouses.

Supervisor Kuehl suggested that the socioeconomic impact assessment should highlight the health benefits described in the executive summary, as it is especially important for county governments. Mayor Pro Tem Rodriguez requested information on the cost-effectiveness of reduction options and how it relates to other regulations. Mr. MacMillan responded that the cost-effectiveness of PR 2305 is similar to CARB mobile source measures, as documented in Table 25 of the staff report. Mayor Pro Tem Rodriguez requested examples at the public hearing using the WAIRE user calculator to show how PR 2305 would impact different sized warehouses in different counties. Supervisor Bartlett echoed the request for real world examples, including providing information prior to the public hearing and thanked staff for adding near zero emission (NZE) yard trucks to PR 2305. She also inquired why the NZE yard trucks do not receive 90 percent of the points of zero emission (ZE) yard trucks. Mr. MacMillan explained that the WAIRE Points are based on emission reductions of NOx, DPM, and the cost to implement the menu item. While NZE yard trucks yield at least 90 percent as much emission reductions as ZE yard trucks, they cost less which is reflected in their resulting points.

Supervisor Perez asked if PR 2305 would result in attaining federal air quality standards. Wayne Natri, Executive Officer, responded that the proposed rule would not on its own result in attainment, but it will contribute to meeting air quality standards by providing near term emission reductions. Supervisor Perez asked that future discussions address additional measures needed to get to attainment. Mayor Pro Tem McCallon appreciated the sunset provision in the most recent draft rule and commented on the difficulty in meeting attainment in the Coachella Valley.

Mayor Pro Tem Rodriguez asked about the potential for warehouse relocations and whether a study was conducted that evaluated the estimated costs in the staff report and socioeconomic assessment. Mr. MacMillan responded that the Board-commissioned study showed that the proposed stringency of the rule would not result in warehouses relocating and that warehousing is growing preferentially faster in our region than nearby areas. Mayor Pro Tem Rodriguez asked for clarification about the legal questions and responses from counsel regarding PR 2305. Barbara Baird, Chief Deputy Counsel responded that a memo had previously been sent to the Board addressing these questions, and that the memo could be made public. Mr. Natri added that the proposed rule is firmly within the authority of South Coast AQMD and that the regulation is not a tax, as supported by ample case evidence.

Supervisor Kuehl referenced a Guardian article on the impact of warehouses to communities, pointing out that the communities near warehouses did the least amount of online shopping and had some of the highest concentration of toxics.

The following commenters provided testimony in support of PR 2305, focusing on poor air quality due to diesel trucks going to warehouses, advocating for a stronger stringency of at least 0.005, immediate action to vote for the warehouse ISR, opposing the sunset provision, calls to meet attainment, and/or encouraging greater emphasis on zero emissions options only: Florence Gharibian and Cynthia Babich (Del Amo Action Committee), Yvonne Martinez, Angie Balderas, and Carlo De La Cruz (Sierra Club), Emily Spokes, Jessica Craven, Amy Francis, and Carolina Forni (NELA Climate Collective), Chris Chavez (Coalition for Clean Air), Regina Hsu (Earthjustice), Sari Fordham and Julie Weatherford (Riverside 350), Steven Jimenez and Karen Jakpor (American Lung Association), Susan St. Louis (Climate Crisis Committee), Janet Bernabe (Center for Community Action and Environmental Justice), Sylvia Betancourt (Long Beach Alliance for Children with Asthma), Roxana Barrera, Kareem Gongora, Michelle Lewis, Sylvester Ani, Claire Bachman, Kenny Allen, James Crisafulli, Elliott Gonzalez, Mallory Warhurst and Jesse Parks.

The following commenters provided testimony in opposition of PR 2305 expressing concerns about the increased costs to industry, concerns about rule revisions, the availability of technology, the ability of warehouses to control trucks, the belief that the mitigation fee is a tax, questioning South Coast AQMD legal authority for the proposed rule, and/or questioning the emission reductions resulting from the proposed rule: Sarah Wiltfong (LA County BizFed), Peter Herzog (NAIOP), and Mike Williams (California Chapter of the International Warehouse Logistics Association).

Additional comments were provided by Vincent Pellecchia (BYD) supporting the warehouse ISR stating that BYD has 80 ZE yard trucks in service at warehouses, railyards, and the ports with more coming. Todd Campbell and Brett Barry (Clean Energy) supported the warehouse ISR but asked for further inclusion of NZE infrastructure and a 90 percent point value for NZE technology relative to ZE technology. Terry Manies (OrangeEV) supported the warehouse ISR but opposed the inclusion of NZE yard trucks stating that ZE yard trucks such as OrangeEVs are proven technology and commercially available. Joe Sullivan (IBEW) supported the warehouse ISR and ZE standards commenting that ZE infrastructure creates skilled and trained careers. Mark Abramowitz supported a strong warehouse ISR but expressed concern over the inclusion of air filter systems. Tammy Yamasaki (SCE) supported the warehouse ISR and ZE technology and offered SCE's assistance to its customers with compliance and preparing sites for electrification.

2. Results of the Multiple Air Toxics Exposure Study V

Dr. Jo Kay Ghosh, Director of Community Air Programs/Health Effects Officer/Planning, Rule Development and Area Sources, presented a summary of MATES V.

Mayor Pro Tem McCallon commented that MATES V is an important study and suggested that the public review period be increased beyond three weeks. Mr. Nastri responded that this was discussed at the recent Technical Advisory Group meeting. Staff had committed to have the report completed before the next fiscal year and any additional time for review would push the Board presentation to August, rather than the June Board meeting. Mr. Nastri explained that if the Board supported an August presentation, the comment period could be extended. Several Board members supported an August Board date and Mr. Nastri responded that the comment period would be extended.

WRITTEN REPORTS:

3. Rule 2202 Activity Report: Rule 2202 Summary Status Report

This item was received and filed.

4. Monthly Report on Environmental Justice Initiatives: CEQA Document Commenting Update

This item was received and filed.

OTHER MATTERS:

5. Other Business

There was no other business.

6. Public Comment Period

There were no public comments.

7. Next Meeting Date

The next regular Mobile Source Committee meeting is scheduled for Friday, May 21, 2021.

Adjournment

The meeting adjourned at 11:04 a.m.

1. ECRP Compliance Option.
 2. ECRP Offset (combines ECRP w/AQIP). AQIP funds are used to supplement the ECRP AVR survey shortfall.
 3. ERS with Employee Survey to get Trip Reduction credits. Emission/Trip Reduction Strategies are used to supplement the ECRP AVR survey shortfall.
 4. Totals may vary slightly due to rounding.

BOARD MEETING DATE: May 7, 2021

AGENDA NO.

REPORT: Lead Agency Projects and Environmental Documents Received

SYNOPSIS: This report provides a listing of CEQA documents received by the South Coast AQMD between March 1, 2021 and March 31, 2021, and those projects for which the South Coast AQMD is acting as lead agency pursuant to CEQA.

COMMITTEE: Mobile Source, April 16, 2021, Reviewed

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

SR:SN:JW:LS:MC

CEQA Document Receipt and Review Logs (Attachments A and B) – Each month, the South Coast AQMD receives numerous CEQA documents from other public agencies on projects that could adversely affect air quality. A listing of all documents received during the reporting period March 1, 2021 to March 31, 2021 is included in Attachment A. A list of active projects for which South Coast AQMD staff is continuing to evaluate or prepare comments for the December reporting period is included as Attachment B. A total of 48 CEQA documents were received during this reporting period and 25 comment letters were sent.

The Intergovernmental Review function, which consists of reviewing and commenting on the adequacy of the air quality analysis in CEQA documents prepared by other lead agencies, is consistent with the Board's 1997 Environmental Justice Guiding Principles and Environmental Justice Initiative #4. As required by the Environmental Justice Program Enhancements for FY 2002-03, approved by the Board in October 2002, each attachment notes proposed projects where the South Coast AQMD has been contacted regarding potential air quality-related environmental justice concerns. The South Coast AQMD has established an internal central contact to receive information on projects with potential air quality-related environmental justice concerns. The public may

contact the South Coast AQMD about projects of concern by the following means: in writing via fax, email, or standard letters; through telephone communication; and as part of oral comments at South Coast AQMD meetings or other meetings where South Coast AQMD staff is present. The attachments also identify, for each project, the dates of the public comment period and the public hearing date, if applicable. Interested parties should rely on the lead agencies themselves for definitive information regarding public comment periods and hearings as these dates are occasionally modified by the lead agency.

At the January 6, 2006 Board meeting, the Board approved the Workplan for the Chairman's Clean Port Initiatives. One action item of the Chairman's Initiatives was to prepare a monthly report describing CEQA documents for projects related to goods movement and to make full use of the process to ensure the air quality impacts of such projects are thoroughly mitigated. In response to describing goods movement, CEQA documents (Attachments A and B) are organized to group projects of interest into the following categories: goods movement projects; schools; landfills and wastewater projects; airports; general land use projects, etc. In response to the mitigation component, guidance information on mitigation measures was compiled into a series of tables relative to: off-road engines; on-road engines; harbor craft; ocean-going vessels; locomotives; fugitive dust; and greenhouse gases. These mitigation measure tables are on the CEQA webpages portion of the South Coast AQMD's website at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>. Staff will continue compiling tables of mitigation measures for other emission sources.

Staff focuses on reviewing and preparing comments for projects: where the South Coast AQMD is a responsible agency; that may have significant adverse regional air quality impacts (e.g. special event centers, landfills, goods movement); that may have localized or toxic air quality impacts (e.g. warehouse and distribution centers); where environmental justice concerns have been raised; and which a lead or responsible agency has specifically requested South Coast AQMD review. If staff provided written comments to the lead agency as noted in the column "Comment Status," there is a link to the "South Coast AQMD Letter" under the Project Description. In addition, if staff testified at a hearing for the proposed project, a notation is provided under the "Comment Status." If there is no notation, then staff did not provide testimony at a hearing for the proposed project.

During the period of March 1, 2021 to March 31, 2021, the South Coast AQMD received 48 CEQA documents. Of the 68 documents listed in Attachments A and B:

- 25 comment letters were sent;
- 20 documents were reviewed, but no comments were made;
- 19 documents are currently under review;
- 0 documents did not require comments (e.g., public notices);
- 0 documents were not reviewed; and
- 4 documents were screened without additional review.

(The above statistics are from March 1, 2021 to March 31, 2021 and may not include the most recent “Comment Status” updates in Attachments A and B.)

Copies of all comment letters sent to lead agencies can be found on the South Coast AQMD’s CEQA webpage at the following internet address:

<http://www.aqmd.gov/home/regulations/ceqa/commenting-agency>.

South Coast AQMD Lead Agency Projects (Attachment C) – Pursuant to CEQA, the South Coast AQMD periodically acts as lead agency for stationary source permit projects. Under CEQA, the lead agency is responsible for determining the type of CEQA document to be prepared if the proposal for action is considered to be a “project” as defined by CEQA. For example, an Environmental Impact Report (EIR) is prepared when the South Coast AQMD, as lead agency, finds substantial evidence that the project may have significant adverse effects on the environment. Similarly, a Negative Declaration (ND) or Mitigated Negative Declaration (MND) may be prepared if the South Coast AQMD determines that the project will not generate significant adverse environmental impacts, or the impacts can be mitigated to less than significance. The ND and MND are written statements describing the reasons why projects will not have a significant adverse effect on the environment and, therefore, do not require the preparation of an EIR.

Attachment C to this report summarizes the active projects for which the South Coast AQMD is lead agency and is currently preparing or has prepared environmental documentation. As noted in Attachment C, the South Coast AQMD continued working on the CEQA documents for three active projects during March.

ACTIVE SOUTH COAST AQMD LEAD AGENCY PROJECTS
THROUGH MARCH 31, 2021**

PROJECT DESCRIPTION	PROPONENT	TYPE OF DOCUMENT	STATUS	CONSULTANT
Matrix Oil is proposing to: 1) install one new flare with a maximum rating of 39 million British thermal units per hour (MMBtu/hr) at Site 3 of the Sansinena Oil Field; and 2) increase the throughput of the existing flare at Site 9 from the previous permit limit of 13.65 million standard cubic feet over a 30-day period (MMSCF/30 days) to the maximum rating of 39 MMBtu/hr which is equivalent to 25.39 MMSCF/30 days.	Matrix Oil	Mitigated Negative Declaration	The consultant provided a preliminary draft Mitigated Negative Declaration which is undergoing South Coast AQMD staff review.	Yorke Engineering
Quemetco is proposing to modify existing South Coast AQMD permits to allow the facility to recycle more batteries and to eliminate the existing daily idle time of the furnaces. The proposed project will increase the rotary feed drying furnace feed rate limit from 600 to 750 tons per day and increase the amount of total coke material allowed to be processed. In addition, the project will allow the use of petroleum coke in lieu of or in addition to calcined coke, and remove one existing emergency diesel-fueled internal combustion engine (ICE) and install two new emergency natural gas-fueled ICEs.	Quemetco	Environmental Impact Report (EIR)	A Notice of Preparation/Initial Study (NOP/IS) was released for a 56-day public review and comment period from August 31, 2018 to October 25, 2018, and 154 comment letters were received. Two CEQA scoping meetings were held on September 13, 2018 and October 11, 2018 in the community. South Coast AQMD staff is reviewing the preliminary Draft EIR and has provided comments to the consultant.	Trinity Consultants
Sunshine Canyon Landfill is proposing to modify its South Coast AQMD permits for its active landfill gas collection and control system to accommodate the increased collection of landfill gas. The proposed project will: 1) install two new low emissions flares with two additional 300-hp electric blowers; and 2) increase the landfill gas flow limit of the existing flares.	Sunshine Canyon Landfill	Subsequent Environmental Impact Report (SEIR)	South Coast AQMD staff reviewed and provided comments on the preliminary air quality analysis and health risk assessment (HRA), which are being addressed by the consultant.	SCS Engineers

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 20

REPORT: Stationary Source Committee

SYNOPSIS: The Stationary Source Committee held a meeting remotely on Friday, April 16, 2021. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Ben Benoit, Chair
Stationary Source Committee

JA:cr

Committee Members

Present: Mayor Pro Tem Ben Benoit (Chair)
Supervisor Sheila Kuehl (Vice Chair)
Senator Vanessa Delgado (Ret.)
Board Member Gideon Kracov
Vice Mayor Rex Richardson
Supervisor Janice Rutherford

Absent: None

Call to Order

Chair Benoit called the meeting to order at 10:30 a.m.

INFORMATIONAL ITEMS:

1. Update on Past and Upcoming Metal Toxic Air Contaminant Rules

Susan Nakamura, Assistant Deputy Executive Officer/ Planning, Rule Development, and Area Sources, presented an overview of past and upcoming rules that address metal toxic air contaminants.

Supervisor Rutherford, Board Member Krakov, and Mayor Pro Tem Benoit asked if staff can put together a summary for each of the metal toxic rules that lists the number of affected facilities and the primary source category affected. Staff confirmed that this can be done.

Supervisor Rutherford asked if Rule 1480 was included in the presentation. Ms. Nakamura responded that it was not included and explained that Rule 1480 is the ambient monitoring rule designed to be a cost recovery rule. Before South Coast AQMD can require a facility to conduct ambient monitoring, staff would first monitor to be assured that the facility is the source of emissions. She explained that there are other criteria such as being identified as a potentially high-risk facility where the facility's emissions cause a health risk over 100 in a million affecting a sensitive receptor. To date, there are no facilities required to conduct ambient monitoring under Rule 1480.

Board Member Kracov commented on his understanding of Rule 1480 and when additional monitoring by a facility is required. Ms. Nakamura responded that currently, except for the lead rules, facilities are not required to conduct ambient monitoring and Rule 1480 requires a facility to conduct ambient monitoring after South Coast AQMD identifies the facility as the source and goes through the process outlined in Rule 1480 to designate a facility.

Board Member Kracov commented if South Coast AQMD is not relying on monitoring to ensure facilities are not impacting public health, there is a stronger reliance on compliance with rules, compliance reporting, and inspections. Ms. Nakamura responded that we also rely on source testing for compliance verification, except Rule 1469.1 where it is difficult to conduct source testing because spraying is not a continuous operation. She added that facilities are required to monitor certain parameters of the pollution controls to ensure proper operation, as well as recordkeeping, and other requirements to demonstrate ongoing compliance. Board Member Kracov asked how often source testing is required. Ms. Nakamura responded that the frequency of source testing generally varies from three to five years. Board Member Kracov asked if Rule 1480 would be triggered if source testing identified issues. Ms. Nakamura responded that it could be a reason for ambient monitoring. She explained that there are a number of steps taken before a facility is required to conduct ambient monitoring.

Jason Aspell, Acting Deputy Executive Officer/ Engineering and Permitting, stated that during a source test the parameters are set to ensure capture efficiency, which is crucial, and requirements such as enclosures and velocities of the air pollution controls are vital. He stated that these parameters are frequently monitored throughout the year. Although the source test is a snapshot, that snapshot is used throughout the year to maintain the capture efficiency to ensure that the contaminants are effectively controlled and do not escape the air pollution controls. Board Member Kracov wants to ensure that the rule requirements for data, housekeeping, and inspections provide confidence that hexavalent chromium emissions are under control since fenceline monitoring for these facilities is not required. Ms. Nakamura stated that the Rule 1469 facilities are inspected four times

a year and when issues are discovered, our response is very swift, and all divisions are involved in rule development to ensure rules are enforceable. Board Member Kracov asked how often we inspect the Rule 1426 facilities. Terrence Mann, Deputy Executive Officer/ Compliance and Enforcement, responded that facilities subject to Rule 1426 and other toxic rules are inspected annually in addition to onsite inspections based on community complaints.

Board Member Kracov commented on his participation in rule workshops. He asked if staff felt that the rules and inspection frequency are enough to protect public health from hexavalent chromium emissions. Ms. Nakamura responded that we are confident that our rules are designed for protection of public health. Board Member Kracov asked if there would be more rules for hexavalent chromium tanks. Ms. Nakamura confirmed that there would be requirements for Rule 1426 facilities that are not subject to Rule 1469.

Board Member Kracov commented on the use of more environmentally friendly alternatives and that CARB is trying to require decorative chrome platers to move away from using hexavalent chromium and potentially even change the military specifications. He asked how CARB efforts are interacting with South Coast AQMD rules. Ms. Nakamura responded that staff is participating in CARB's meetings and if CARB amends their Air Toxic Control Measure (ATCM) to ban hexavalent chromium for decorative plating, then Rule 1469 would need to be amended to be equally as stringent as the state ATCM. Board Member Kracov commented that since South Coast AQMD is adopting many metal toxic rules this year and next year, he requested annual progress reports, information on compliance, discovery of any red flags, and status of Rule 1480 facilities. He added this is an important issue for communities, particularly for AB 617 communities.

James Simonelli, California Metals Coalition (CMC), commented that their membership includes all sectors of the metals industry, except metal finishers. He commented that CMC has been participating in all rulemaking and has worked collaboratively with staff, opening facilities for emissions testing for hexavalent chromium. Mr. Simonelli commented that in addition to ensuring rules are workable, they must be based on science. He added that his members have been working through the pandemic. He explained that many of his members live in the impacted communities and provide jobs. Board Member Kracov commented that he spoke with Mr. Simonelli and everyone is working hard to ensure the rules protect public health. He added that while we should be sensitive to comments made by Mr. Simonelli, we need rules that are effective.

Florence Gharibian, Del Amo Action Committee, thanked Board Member Kracov for bringing up enforcement. She thanked Ms. Nakamura and others for sharing the information regarding inspection frequency. She requested an overview that clearly

defines the rules, what they cover and how they impact platers. She added that she participated in a meeting with CARB and that there was a large range of knowledge in the regulated community. Ms. Gharibian commented that sensitive receptors and platers near those sensitive receptors should always be a priority.

Supervisor Kuehl commented on the toxic contaminants being emitted from the different kinds of metal work. She expressed her appreciation to staff for researching the different ways metal working facilities create toxic contaminants as a byproduct. Supervisor Kuehl agreed that it is important to work with facilities on compliance and to keep contaminants out of the air. She supports staff efforts and thanked industry for their help.

Vice Mayor Richardson thanked staff and shared his experience with the North Long Beach and Paramount hexavalent chromium issue. He stated that the City of Long Beach has updated their federal legislative agenda to work with Congress on aerospace contracts, and South Coast AQMD's legislative agenda, to move away from using these chemicals. He added that companies want to do the right thing and want to be economically viable. However, taking risks and changing chemicals without a guarantee on maintaining their contracts is where the conflict is.

2. RECLAIM Quarterly Report – 10th Update

Michael Morris, Planning and Rules Manager, provided the quarterly update regarding transitioning the NO_x RECLAM program to a command-and-control regulatory structure.

Mike Carroll, Latham and Watkins, representing the Regulatory Flexibility Group and WSPA, expressed disagreement that the alternative implementation approaches to establish BARCT preclude emissions trading. Mr. Carroll stated that he would provide a written comment letter. Executive Officer Wayne Nastri responded that staff will respond once the comment letter has been received.

WRITTEN REPORTS:

3. Twelve-month and Three-month Rolling Average Price of Compliance Years 2020 and 2021 NO_x and SO_x RTCs (January – March 2021)

The report was acknowledged by the committee.

4. Notice of Violation Penalty Summary

The report was acknowledged by the committee.

OTHER MATTERS:

5. Other Business

There was no other business.

6. Public Comment Period

There were no public comments.

7. Next Meeting Date

The next Stationary Source Committee meeting is scheduled for Friday, May 21, 2021 at 10:30 a.m.

Adjournment

The meeting was adjourned at 11:28 a.m.

Twelve-Month and Three-Month Rolling Average Price of Compliance Years 2020 and 2021 NOx and SOx RTCs (January – March 2021)

April 2021 Report to Stationary Source Committee

Table I

Twelve-Month Rolling Average Price Data for Compliance Year 2020 NOx RTCs
(Report to Governing Board if rolling average price greater than \$22,500/ton)

Twelve-Month Rolling Average Price Data for Compliance Year 2020 NOx RTC					
Reporting Month	12-Month Period	Total Volume Traded with Price During Past 12-month (tons)	Total Price of Volume Traded During Past 12-month (\$)	Number of Trades with Price	Rolling Average Price ¹ (\$/ton)
Jan-20	Jan-19 to Dec-19	71.0	\$865,215	11	\$12,190
Feb-20	Feb-19 to Jan-20	111.2	\$1,197,542	14	\$10,770
Mar-20	Mar-19 to Feb-20	200.4	\$1,646,922	19	\$8,220
Apr-20	Apr-19 to Mar-20	202.4	\$1,657,101	21	\$8,186
May-20	May-19 to Apr-20	221.7	\$1,755,883	26	\$7,921
Jun-20	Jun-19 to May-20	227.6	\$1,815,483	27	\$7,975
Jul-20	Jul-19 to Jun-20	313.6	\$3,016,787	33	\$9,620
Aug-20	Aug-19 to Jul-20	326.4	\$3,192,582	36	\$9,781
Sep-20	Sep-19 to Aug-20	343.4	\$3,350,824	48	\$9,758
Oct-20	Oct-19 to Sep-20	344.4	\$3,359,824	49	\$9,755
Nov-20	Nov-19 to Oct-20	419.5	\$3,963,013	69	\$9,447
Dec-20	Dec-19 to Nov-20	396.8	\$3,812,488	65	\$9,607
Jan-21	Jan-20 to Dec-20	404.9	\$3,370,270	69	\$8,323
Feb-21	Feb-20 to Jan-21	546.4	\$4,110,708	96	\$7,523
Mar-21	Mar-20 to Feb-21	497.0	\$3,821,251	100	\$7,689
Apr-21	Apr-20 to Mar-21	503.8	\$3,875,110	103	\$7,691

1. District Rule 2015(b)(6) - Backstop Provisions provides additional "evaluation and review of the compliance and enforcement aspects of the RECLAIM program" if the average RTC price exceeds \$15,000 per ton.

Table II

Twelve-Month Rolling Average Price Data for Compliance Year 2021 NOx RTCs
(Report to Governing Board if rolling average price greater than \$22,500/ton)

Twelve-Month Rolling Average Price Data for Compliance Year 2021 NOx RTC

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 21

REPORT: Technology Committee

SYNOPSIS: The Technology Committee held a meeting remotely on Friday, April 16, 2021. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Joe Buscaino, Chair
Technology Committee

MMM:psc

Committee Members

Present: Council Member Joe Buscaino/Chair
Supervisor Lisa Bartlett
Board Member Gideon Kracov
Mayor Pro Tem Larry McCallon
Vice Mayor Rex Richardson
Mayor Pro Tem Carlos Rodriguez

Call to Order

Chair Buscaino called the meeting to order at 12:00 p.m.

ACTION ITEMS:

1. Execute Contract for Global Positioning Systems Installation and Monitoring, Amend Awards for Carl Moyer and Community Air Protection Programs and Appropriate Funds for Proposition 1B - Goods Movement Emission Reduction and Lower Emission School Bus Programs

To enhance enforcement of projects funded under the Carl Moyer Program, Global Positioning System (GPS) units are installed on marine vessels to monitor operations in the South Coast AQMD. On August 7, 2020, the Board approved the release of a Request for Proposals (RFP #P2021-01) to solicit bids from qualified GPS vendors. This action is to execute a contract for the installation of GPS units on incentive

program-funded equipment and provide GPS data monitoring services in an amount not to exceed \$400,000 from the administrative portions of the Carl Moyer Program SB 1107 Fund (32) and Community Air Protection Fund (77). This action is to also amend awards under the Carl Moyer Program and Community Air Protection Program (CAPP). Lastly, this action is to appropriate up to \$75,200 and up to \$60,300 from the administrative portions of the Prop 1B Special Revenue Fund (81) and Carl Moyer AB 923 Special Revenue Fund (80), respectively, into Information Management's FYs 2020-21 and/or 2021-22 Budgets, Professional and Special Services and/or Capital Outlays Major Objects and reimburse the General Fund (01) using administrative funds, for development of the Grant Management Systems (GMS).

Supervisor Bartlett appreciated the intended use of GPS for compliance with incentive program requirements and asked how the GPS data will be utilized. Staff responded the GPS data will be used solely by internal staff for verification purposes.

Mayor McCallon asked what happens if the 75 percent requirement in South Coast AQMD waters is not met. Staff replied that typically the contract term is extended to allow additional time to meet this requirement.

Mayor McCallon expressed concern with the need for GPS on locomotives operated in Southern California, for which staff responded that for this case, GPS would not be required.

Moved by Bartlett; seconded by Richardson; unanimously approved.

Ayes: Bartlett, Buscaino, Kracov, McCallon, Richardson, Rodriquez
Noes: None
Absent: None

2. Amend Contracts to Develop and Demonstrate Zero Emission Drayage Trucks and Add Funds for Administrative Assistance

In March 2016, the Board approved execution of contracts for the Zero Emission Drayage Truck (ZEDT) project. CARB and South Coast AQMD staff propose to change scope and redistribute funds between Peterbilt and Volvo to assure project goals are met. This action is to authorize the Executive Officer to add \$1,254,491 to Volvo Technology of America, LLC contract to deploy two Class 8 battery electric trucks and charging infrastructure and reduce \$1,000,000 from Peterbilt Motors contract for the elimination of two Class 8 battery electric drayage trucks and add \$141,255 to a project implementation assistance contract to ensure completion of the ZEDT and Volvo LIGHTS projects, all from the Greenhouse Gas Reduction Projects Special Revenue Fund (67).

Moved by McCallon; seconded by Rodriguez; unanimously approved.

Board Member Kracov commented that he does not have a financial interest or conflict of interest but is required to identify for the record that he is a Board Member for CARB, which is involved in this item.

Mayor Pro Tem Rodriguez asked if Peterbilt objected to the scope change and whether they were fulfilling their other responsibilities. Staff responded that Peterbilt agreed with the changes and are able to support their remaining project vehicles.

Ayes: Bartlett, Buscaino, Kracov, McCallon, Richardson, Rodriguez
Noes: None
Absent: None

OTHER MATTERS:

3. Other Business

There was no other business.

4. Public Comment Period

There was no public comment.

5. Next Meeting Date

The next regular Technology Committee meeting is scheduled for Friday, May 21, 2021 at noon.

Adjournment

The meeting adjourned at 12:17 p.m.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 22

REPORT: Mobile Source Air Pollution Reduction Review Committee

SYNOPSIS: The Mobile Source Air Pollution Reduction Review Committee held a meeting remotely on Thursday, April 15, 2021. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Ben Benoit
South Coast AQMD Representative
to MSRC

MMM:CR:av

Meeting Minutes Approved

The Mobile Source Air Pollution Reduction Review Committee (MSRC) approved the minutes of the December 17, 2020 meeting. The approved minutes are attached (*Attachment 1*).

Consider Opportunities to Expand the MSRC's Social Media Impact

In order to increase awareness of MSRC's programs, funding opportunities and project partners, the MSRC's Programmatic Outreach Coordinator. The Better World Group (BWG) proposed to develop regular communications assets for distribution to the MSRC-TAC members, MSRC members, and appropriate project partners so that they can have the opportunity to share and amplify on their social platforms to help grow the visibility of the MSRC's digital platforms and content. South Coast AQMD staff advised MSRC members about Brown Act implications of responding to other members' social media posts. The MSRC approved that BWG proceed and to coordinate with the appropriate communication offices at the MSRC member agencies.

Contract Modification Requests

The MSRC considered five contract modification requests and took the following actions:

1. For the City of Torrance, Contract #ML16039, which provides \$32,000 to install EV Charging Infrastructure, a one-year no-cost term extension;
2. For the City of Moreno Valley, Contract #ML16041, which provides \$20,000 to install EV Charging Infrastructure, a three-month no-cost term extension;
3. For Riverside County Transportation Commission (RCTC), which provides \$500,000 for weekend freeway service patrols, an eighteen-month no-cost term extension;
4. For the City of Aliso Viejo, Contract #ML18128, which provides \$65,460 to procure two light-duty ZEVs and install EV charging infrastructure, increased the total number of charging stations from seven to nine and reallocated costs between the limited access and public access charging categories; and
5. For the City of San Dimas, Contract #ML18148 (proposed), which provides \$50,000 to implement a bike sharing program, substitute the installation of bicycle detection units instead of implementing the originally proposed bike sharing program.

Contracts Administrator's Report

The MSRC AB 2766 Contracts Administrator's report provides a written status report on all open contracts from FY 2007-08 to the present. The Contracts Administrator's Report for March 4 through March 24, 2021 is attached (*Attachment 2*).

Attachment 1 – Approved December 17, 2020 Meeting Minutes

Attachment 2 – March 4 through March 24, 2021 Contracts Administrator's Report

**MOBILE SOURCE AIR POLLUTION REDUCTION REVIEW
COMMITTEE THURSDAY, DECEMBER 17, 2020 MEETING MINUTES**
21865 Copley Drive, Diamond, Bar, CA 91765

**All participants attended the meeting remotely pursuant
to Executive Orders N-25-20 and N-29-20**

MEMBERS PRESENT:

(Chair) Larry McCallon, representing San Bernardino County Transportation Authority (SBCTA)
(Vice-Chair) Brian Berkson, representing Riverside County Transportation Commission (RCTC)
Ben Benoit, representing South Coast AQMD
John Dutrey, representing Regional Rideshare Agency
Tim Shaw, representing Orange County Transportation Authority (OCTA)
Steve Veres, representing Los Angeles County Metropolitan Transportation Authority (Metro)
Sydney Vergis, representing California Air Resources Board (CARB)
Mark Yamarone (Alt.), representing (Metro)
Jed Leano (Alt.), representing Southern California Association of Governments (SCAG)
Ray Marquez (Alt.), representing Regional Rideshare Agency

MEMBERS ABSENT:

John Valdivia (Alt.), representing SBCTA

MSRC-TAC MEMBERS PRESENT:

MSRC-TAC Chair AJ Marquez, representing Orange County Board of Supervisors
MSRC-TAC Vice Chair Jenny Chan, representing RCTC
Derek Winters, representing CARB
Kelly Lynn, representing SBCTA
Nicole Soto, representing Regional Rideshare Agency
Rongsheng Luo, representing SCAG
Steven Lee, representing Metro
Tim Olson, Air Pollution Control Expert

OTHERS PRESENT:

Debra Mendelsohn
Lauren Dunlap
Marisa Laderach, SCAG
Tricia Almiron, Board Assistant (Benoit)

SOUTH COAST AQMD STAFF & CONTRACTORS PRESENT:

Alejandra Vega, MSRC Administrative Liaison
Cynthia Ravenstein, MSRC Contracts Administrator
Daphne Hsu, Sr. Deputy District Counsel
Erika Chavez, Sr. Deputy District Counsel
John Kampa, Financial Analyst
Leah Alfaro, MSRC Contracts Assistant
Matt Mackenzie, MSRC Contracts Assistant
Naveen Berry, Assistant Deputy Executive Officer
Patricia Kwon, Program Supervisor
Paul Wright, Information Technology Specialist
Penny Shaw Cedillo, Sr. Administrative Secretary
Ray Gorski, MSRC Technical Advisor-Contractor
Sam Cao, Air Quality Specialist
Todd Warden, Sr. Public Information Specialist

CALL TO ORDER

- MSRC Member Chair McCallon called the meeting to order at 2:00 p.m.
- Roll call was taken at the start of the meeting.
- Chair McCallon asked for opening comments.

Naveen Berry offered to provide a presentation on Item #12.

- Chair McCallon asked for disclosures.

Items #8 and #12 – MSRC Member Ben Benoit commented he does not have a financial interest, but is required to identify for the record that he is on the South Coast AQMD Governing Board as Vice Chairman which is involved in these items.

Item #8 – Ben Benoit commented he does not have a financial interest, but is required to identify for the record that he is a Board Member of SCAG which is involved in this item.

Item #12 – MSRC Member Sydney Vergis commented she is required to identify for the record that she is a committee member for CARB which is involved in this item. In addition, she has a financial interest in her employment with CARB and must recuse herself from this item.

Item #8 – MSRC Member Jed Leano commented he does not have a financial interest, but is required to identify for the record that he is a policy member of SCAG which is involved in this item.

Item #12 – MSRC Member Mark Yamarone commented he does not have a financial interest, but is required to identify for the record that he is an employee of Metro which is involved in this item.

Items #1, #8, and #10 – MSRC Member John Dutrey commented he does not have a financial interest, but is required to identify for the record that he serves on the Boards for SBCTA and Omnitrans and serves on the SCAG Transportation Committee.

Item #8 – MSRC Member Tim Shaw commented he does not have a financial interest but is required to identify for the record that he is a Regional Council Member for SCAG which is involved in this item.

Item #12 – Tim Shaw commented he does not have a financial interest but is required to identify for the record that he is employed as a professor by Rio Hondo College which is involved in this item.

Items #1, #8, #10 and #12 – Chair McCallon commented he does not have a financial interest, but is required to identify for the record that he is a Board Member for SBCTA, an alternate Board Member for Omnitrans, a Regional Council Member for SCAG and a Governing Board Member of South Coast AQMD.

CONSENT ITEMS (Items 1 through 7):

Receive and Approve Items

1. Summary of Final Reports by MSRC Contractors

The MSRC received and approved two final report summaries this month, as follows:

- San Bernardino County Transportation Authority, Contract #MS16125, which provided \$1,000,000 for traffic signal synchronization projects; and
- El Dorado National, Contract #MS18066, which provided \$100,000 to construct a Limited-Access CNG Fueling Station.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: MSRC staff will file the final reports and release any retention on the contracts.

Informational Only – Receive and File

2. MSRC Contracts Administrator's Report

The MSRC AB 2766 Contracts Administrator's Report for October 29 through December 2, 2020 was included in the agenda package.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: Staff will include the MSRC Contracts Administrator's Report in the MSRC Committee Report for the January 8, 2021 South Coast AQMD Board meeting.

3. Financial Report on AB 2766 Discretionary Fund

A financial report on the AB 2766 Discretionary Fund for November 2020 was included in the agenda package.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: No further action is required.

4. Report on Outreach Activities

A summary report was provided on outreach, communications and policy activities undertaken by the Better World Group on behalf of MSRC for Fall 2020.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: No further action is required.

For Approval – As Recommended

5. Consider Three-Month No-Cost Term Extension by City of Bellflower, Contract #ML12091 (\$100,000 – EV Charging Infrastructure)

The City indicates that COVID-19-related complications have delayed their progress. They requested a six-month term extension. Due to the short time between the December MSRC meeting and the contract expiration date, in order to minimize the potential of the contract expiring, a three-month term extension was processed administratively. Therefore, a three-month term extension would fulfill the remainder of the City's request.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: MSRC Staff will amend the above contract accordingly.

6. Consider One-Year No-Cost Term Extension by City of San Fernando, Contract #ML16075 (\$354,000 – Install Class I Bikeway)

The City requests a one-year term extension due to continuing delays associated with obtaining construction approval from the Army Corps of Engineers.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: MSRC Staff will amend the above contract accordingly.

7. Consider One-Year No-Cost Term Extension by City of Redondo Beach, Contract #ML18098 (\$89,400 – Install Six EV Charging Stations)

The City requests a one-year term extension due to delays associated with COVID-19.

Moved by Benoit; seconded by Dutrey; under approval of Consent Calendar Items #1 through #7, item unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: MSRC Staff will amend the above contract accordingly.

ACTION ITEMS (Items 8 through 12):

FYs 2016-18 Work Program

8. Consider Modified Project List and Payment Schedule and One-Year Term Extension for Southern California Association of Governments (SCAG), Contract #MS18015 (\$2,000,000 – Future Communities Partnership Program)

SCAG requests to modify the project with the City of Monrovia, substituting a pilot program to encourage bicycle transit for a program to support shared-ride transportation network company trips. SCAG also requests modifications to the Payment Schedule. A reduction in SCAG's co-funding contribution would be more than offset by an increase in the co-funding from cities and counties. Lastly, SCAG requests a one-year contract term extension due to various delays associated with the COVID-19 pandemic.

MSRC Member Brian Berkson asked if SCAG is asking for the same amount of money, but not providing as much of their own money as they were supposed to based on how the contract was written.

Cynthia Ravenstein explained that there wasn't a designation where the money was going to come from (SCAG or project partners) as long as there was a certain amount of match being provided. The total amount of match being provided is proposed to be greater and there is no specification as to where it had to come from.

Moved by Berkson; seconded by Benoit; unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: MSRC staff will amend the above contract accordingly.

9. Consider Contract Replacement for the City of Rancho Mirage, Contract #ML18133 (\$50,000 – Traffic Signal Synchronization)

Impacts associated with COVID-19 temporarily shut down some manufacturing plants and delayed their response times, which delayed completion of this project. Due to the expiration of the City's prior contract, the City requests a six-month contract replacement to complete the scope of work for this project.

Moved by Dutrey; seconded by Benoit; unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: This item will be considered by the South Coast AQMD Board at its meeting on January 8, 2021.

10. Consider Contract Replacement for Omnitrans, Contract #MS18026 (\$83,000 – Modify Maintenance Facility and Train Technicians)

Impacts of staffing allocations due to COVID-19 delayed progress on this project. Due to the expiration of Omnitrans' prior contract, they request a twelve-month contract replacement to complete the scope of work for this project.

Brian Berkson commented that he's okay with this project, but expressed concern that since this is from FYs 2016-18, he questions the aging funds that may be able to be reallocated somewhere else and giving extensions could be problematic. He asked that this be considered at some point.

Moved by Benoit; seconded by Dutrey; unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: This item will be considered by the South Coast AQMD Board at its meeting on January 8, 2021. MSRC Staff to provide a report that outlines any projects that have expired and the status of those funds for future agendas.

FYs 2018-21 Work Program**11. Consider Selection of New MSRC Website Host**

In August 2020, the MSRC authorized the release of RFP #P2021-04, seeking a contractor for the ongoing hosting and maintenance of the MSRC website. The solicitation period commenced on September 4, 2020 and closed on October 9, 2020. A total of three proposals were received.

Ben Benoit commented that \$4,000 is excessive for domain registration, but understands the need for it and highly suggested to buy all domain names related to MSRC.

Cynthia Ravenstein noted that there are several different domains that the MSRC does buy and funding includes minor modifications. Major and moderate modifications would be brought back to the Committee for approval.

Moved by Benoit; seconded by Dutrey; unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres, Vergis

Noes: None

Action: This item will be considered by the South Coast AQMD Board at its meeting on January 8, 2021.

12. Consider Proposed Partnership with South Coast AQMD and Regional Partners on Large-Scale Zero Emission Demonstration

In September 2020, the MSRC-TAC heard a preliminary overview of a proposed large scale demonstration project led by South Coast AQMD. The regional team for this zero emission drayage truck project would pursue funding which was expected to be offered by the California Air Resources Board (CARB) and the California Energy Commission (CEC). CARB and CEC have now released the anticipated solicitations, and South Coast AQMD is able to bring forward more specifics and seek the MSRC's support of the endeavor.

Chair McCallon asked if the presenter could elaborate on the solar aspect of this project.

Joseph Impullitti explained that they are doing 1 megawatt of solar at the NFI location and there will also be energy storage, so energy not used from solar would be put into storage. When trucks come in to charge it would supplement what they get from the grid and reduce their cost of charging the vehicles.

Chair McCallon asked if the chargers will be at the two facilities.

Joseph Impullitti commented they are looking into doing remote charging because the fleets want to be able to get more turns per day per truck, so they are looking at doing remote charging as well as having chargers at the facilities.

Naveen Berry added that the solicitation is fairly prescriptive about having those chargers be at the fleet location, but it does allow for one additional location to have consideration for opportunity charging, but the majority of chargers listed in the presentation will be at that fleet location.

John Dutrey asked why the infrastructure at the Ontario location cost double.

Joseph Impullitti explained that infrastructure at NFI will include the microgrid. Schneider's strategy is to see if they can use fewer chargers and have a higher utilization of those chargers by using their logistics system and communication systems and software that determines how much energy a truck will need for the next trip. Whereas NFI wants a microgrid to reduce their cost from the grid through energy storage and solar.

Naveen Berry added that it's also dependent upon the facility's specific duties.

John Dutrey asked how NFI and Schneider were selected.

Joe Impullitti explained that they worked with Gladstein, Neandross and Associates (GNA). Both NFI and Schneider have a strong interest in completely switching to zero emission vehicles. NFI is involved in the Volvo Lights project and Schneider has some experience with trucks in other projects. He added that another thing that's driving this is that a lot of their customers like Amazon and Walmart want goods delivered with zero emissions.

Naveen Berry added that because the solicitation requires 50 trucks deployed at one site location that reduces the number of fleets that would step up. These two fleets are willing to take on the risk to transition their diesel or near-zero emission fleets to full zero emission.

Chair McCallon commented that he's glad that at least one is doing the microgrid. He explained that as more fleets are added they need to isolate from the grid and have a source of power when the grid goes down, especially in the fire season.

Naveen Berry noted that CEC and CARB did a great job of envisioning that type of a need. He added that from South Coast AQMD's perspective, they will have two models to work with, one with a lesser number of chargers and one with a greater number of chargers but with energy management strategies in place, and they will be able to learn from both demonstrations individually and see what may be the best fit

for additional fleets that could replicate this type of model.

Joe Impullitti commented that they have foreseen this need coming and in the last couple of years funding has been added in the Clean Fuels Plan for infrastructure development in the area of microgrids.

John Dutrey asked if the \$8-9 million funding is for a new program or an existing program but has not been awarded.

Ray Gorski explained that the MSRC has an unallocated budget of approximately \$24 million and this funding commitment would come from that unallocated budget.

Moved by Berkson; seconded by Benoit; unanimously approved.

Ayes: Benoit, Berkson, Dutrey, Leano, McCallon, Shaw, Veres

Abstain: Vergis

Noes: None

Action: This item will be considered by the South Coast AQMD Board at its January 8, 2021 meeting.

OTHER BUSINESS:

13. Other Business

Chair McCallon asked staff to address Brian Berkson's concern on Item #10.

Cynthia Ravenstein explained that it is always subject at the MSRC's discretion whether the Committee wishes to grant extensions or not. She added that there's nothing in the MSRC policy that indicates there is a final date that a contract can't be extended any further.

Brian Berkson asked if they can be provided with a report that outlines any projects that have expired and what those funds look like and they can look to see if those funds can be utilized for future funding.

Cynthia Ravenstein agreed to provide such report.

PUBLIC COMMENT PERIOD

Public comments were allowed during the discussion of each agenda item. No comments were made on non-agenda items.

ADJOURNMENT

The meeting adjourned at 2:43 p.m.

NEXT MEETING

Thursday, February 18, 2021 at 2:00 p.m.

[Prepared by Alejandra Vega]

MSRC Agenda Item No. 2

DATE: April 15, 2021

FROM: Cynthia Ravenstein

SUBJECT: AB 2766 Contracts Administrator's Report

SYNOPSIS: This report covers key issues addressed by MSRC staff, status of open contracts, and administrative scope changes from March 4 to March 24, 2021.

RECOMMENDATION: Receive and file report

WORK PROGRAM IMPACT: None

Contract Execution Status

2016-18 Work Program

On July 8, 2016, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On October 7, 2016, the SCAQMD Governing Board approved three awards under the Event Center Transportation Program and one award for a Regional Active Transportation Partnership Program. These contracts are executed.

On January 6, 2017, the SCAQMD Governing Board approved an award for development, hosting and maintenance of a new MSRC website. This contract is executed.

On April 7, 2017, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On June 2, 2017, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On July 7, 2017, the SCAQMD Governing Board approved an award under the Event Center Transportation Program. This contract is executed.

On September 1, 2017, the SCAQMD Governing Board approved one award under the Event Center Transportation Program and one award under the Natural Gas Infrastructure Program. These contracts are executed.

On October 6, 2017, the SCAQMD Governing Board approved two awards under the Event Center Transportation Program and one award under the Natural Gas Infrastructure Program. These contracts are executed.

On December 1, 2017, the SCAQMD Governing Board approved sole source awards for a Hydrogen Infrastructure Partnership Program, for a Southern California Future Communities Partnership Program, and for electric vehicle charging infrastructure planning analysis. These contracts are executed. The MSRC has replaced the award to the California Energy Commission with a Program Opportunity Notice for the Hydrogen Infrastructure Partnership Program.

On February 2, 2018, the SCAQMD Governing Board approved one award under the Event Center Transportation Program, two awards under the Natural Gas Infrastructure Program, four awards under the Local Government Partnership Program, and two awards under the County Transportation Commission Partnership Program. These contracts are executed.

On March 2, 2018, the SCAQMD Governing Board approved one award under the Major Event Center Transportation Program, two awards under the Natural Gas Infrastructure Program, and one award under the Local Government Partnership Program. These contracts are executed.

On April 6, 2018, the SCAQMD Governing Board approved one award under the Natural Gas Infrastructure Program and eight awards under the Local Government Partnership Program. These contracts are executed.

On May 4, 2018, the SCAQMD Governing Board approved twenty-seven awards under the Local Government Partnership Program and one award under the County Transportation Commission Partnership Program. These contracts are executed.

On June 1, 2018, the SCAQMD Governing Board approved six awards under the Local Government Partnership Program, one award under the Natural Gas Infrastructure Program, and one award under the County Transportation Commission Partnership Program. These contracts are executed.

On July 6, 2018, the SCAQMD Governing Board approved nine awards under the Local Government Partnership Program. These contracts are executed.

On September 7, 2018, the SCAQMD Governing Board approved nineteen awards under the Local Government Partnership Program, three awards under the County Transportation Commission Partnership Program, one award under the Major Event Center Transportation Program, and twenty awards under the Natural Gas Infrastructure Program. These contracts are executed.

On October 5, 2018, the SCAQMD Governing Board approved forty-eight awards under the Local Government Partnership Program and one award under the Hydrogen Infrastructure Program. These contracts are with the prospective contractor for signature, with the South Coast AQMD Board Chair for signature, or executed.

On November 2, 2018, the SCAQMD Governing Board approved two awards under the Local Government Partnership Program. These contracts are executed.

2018-21 Work Program

On April 5, 2019, the SCAQMD Governing Board approved an award under the Major Event Center Transportation Program. This contract is executed.

On September 6, 2019, the SCAQMD Governing Board approved an award under the Major Event Center Transportation Program. This contract is executed.

On December 6, 2019, the SCAQMD Governing Board approved an award under the Major Event Center Transportation Program. This contract is executed.

On September 4, 2020, the SCAQMD Governing Board approved an award under the Last Mile component of the MSRC's Regional Goods Movement Program. This contract is under development.

Work Program Status

Contract Status Reports for work program years with open and/or pending contracts are attached.

FY 2010-11 Work Program Contracts

One contract from this work program year is open; and 5 are in "Open/Complete" status.

FY 2010-11 Invoices Paid

No invoices were paid during this period.

FY 2011-12 Work Program Contracts

5 contracts from this work program year are open, and 12 are in "Open/Complete" status. One contract closed during this period: City of Irvine, Contract #ML12046 – Purchase One Heavy-Duty Natural Gas Vehicle.

FY 2011-12 Invoices Paid

No invoices were paid during this period.

FYs 2012-14 Work Program Contracts

15 contracts from this work program year are open, and 26 are in "Open/Complete" status. One contract closed during this period: City of Moreno Valley, Contract #ML14049 – Purchase one Heavy-Duty Natural Gas Vehicle, Install Bicycle Racks, Construct Bicycle Lanes, and Install EV Charging Station.

FYs 2012-14 Invoices Paid

One invoice in the amount of \$60,000.00 was paid during this period.

FYs 2014-16 Work Program Contracts

34 contracts from this work program year are open, and 30 are in "Open/Complete" status. Two contracts closed during this period: City of San Dimas, Contract #ML16042 – Install EV Charging Infrastructure; and City of Palm Springs, Contract #ML16038 – Install Bicycle Lanes & Purchase 2 Heavy-Duty Natural Gas Vehicles.

FYs 2014-16 Invoices Paid

One invoice in the amount of \$474,925.00 was paid during this period.

FYs 2016-18 Work Program Contracts

102 contracts from this work program year are open, and 39 are in “Open/Complete” status. X contracts moved into “Open/Complete” status during this period: City of Gardena, Contract #ML18095 – Purchase 2 Heavy-Duty Near-Zero Emission Vehicles; City of Hemet, Contract #ML18154 – Procure 2 Light-Duty ZEVs and Install EV Charging Infrastructure; and City of Costa Mesa, Contract #ML18162 – Procure Three Light-Duty ZEVs and Install EV Charging Infrastructure.

One invoice in the amount of \$25,000.00 was paid during this period.

FYs 2018-21 Work Program Contracts

3 contracts from this work program year are open.

One invoice in the amount of \$5,350.95 was paid during this period.

Administrative Scope Changes

3 administrative scope changes were initiated during the period from March 4 to March 24, 2021:

- City of Santa Clarita, Contract #ML18090 (Install EV Charging Stations) – One-year no-cost term extension
- City of Rolling Hills Estates, Contract #ML18141 (Purchase Light Duty ZEV and Install EV Charging Stations) – One-year no-cost term extension
- City of Culver City, Contract #ML16007 (Purchase 7 Heavy-Duty CNG Vehicles and Install EV Charging Stations) – Modify description to specify 10 charging ports instead of 10 stations

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 23

REPORT: California Air Resources Board Monthly Meeting

SYNOPSIS: The California Air Resources Board held a meeting on April 22, 2021. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Gideon Kracov, Member
South Coast AQMD Governing Board

ft

The California Air Resources Board (CARB or Board) held a meeting remotely on April 22, 2021 via a web-based videoconferencing service. A key item presented is summarized below.

DISCUSSION ITEM

21-3-2: Public Hearing to Consider Proposed Mobile Source Certification and Compliance Fees

The Board adopted the Mobile Source Certification and Compliance fees regulation (regulation). The regulation updates and expands certification fees to provide for reasonable reimbursement of the agency's costs related to the certification of both new and in use mobile sources. Specifically, the regulation addresses certification fees for on road and off-road engines, evaporative components, aftermarket parts, retrofits, and at-berth control technologies. In 2018 and 2019, Assembly Bill (AB) 85, AB 2381, and Senate Bill 854 directed CARB to develop fee schedules to cover the reasonable costs of its Mobile Source Certification and Compliance programs. Staff's proposal sets up a phase-in updated fee schedule that would start in calendar year 2022 with full implementation in 2024 for most mobile source categories. Reduced fees are included in the regulation where the certification and compliance workload for CARB is lower than average and where certification supports CARB's policy to expand zero-emission technologies or to assist small businesses and companies with low California sales.

CARB April 22, 2021 Meeting Agenda

Public Meeting Agenda

Thursday, April 22, 2021

In accordance with Governor Newsom's Executive Orders [N-29-20](#) and [N-33-20](#) as well as recommendations from the California Department of Public Health, the April 22, 2021, Board Meeting will not have a physical location to attend in person. This will be a remote-only meeting.

The Board Meeting will be conducted remotely via a web-based videoconferencing service called Zoom. Members of the public who wish to comment verbally can register for the webinar.

[Register for the Webinar](#) – for those who wish to comment verbally at the hearing.

Alternatively, during the Board Meeting, members of the public can offer verbal comments by calling in via telephone. Members of the public do not have to register beforehand if they call in using the number below.

Phone Number: (669) 900-6833

Webinar ID: 858 1812 1838

To only watch the Board Meeting and not provide verbal comments, please view the webcast. The webcast is the same video stream offered by the California Air Resources Board (CARB) during normal Board Meetings. If you do not wish to provide verbal comments, we strongly recommend watching the webcast as this will free up space on the webinar for those who are providing verbal comments.

[Webcast](#) – for those who only plan to observe the hearing.

[How to Participate in the Remote Board Meeting](#)

Thursday, April 22, 2021 @ 9:00 a.m.

Discussion Items:

Note: The following agenda items may be heard in a different order at the Board meeting.

21-3-2: Public Hearing to Consider Proposed Mobile Source Certification and Compliance Fees

The Board will consider the adoption of the Mobile Source Certification and Compliance fees regulation. This regulation sets new fees for the certification and evaluation of off-road mobile sources, certification and evaluation of evaporative components, aftermarket parts,

and diesel emission control strategies, and At-Berth certification and evaluation activities. This proposal also revises the certification and compliance fees required under title 13 California Code of Regulations, sections 1990-1994 for on-road mobile sources.

Opportunity for Members of the Board to Comment on Matters of Interest

Board members may identify matters they would like to have noticed for consideration at future meetings and comment on topics of interest; no formal action on these topics will be taken without further notice.

Open Session to Provide an Opportunity for Members of the Public to Address the Board on Subject Matters within the Jurisdiction of the Board

Although no formal Board action may be taken, the Board is allowing an opportunity to interested members of the public to address the Board on items of interest that are within the Board's jurisdiction, but that do not specifically appear on the agenda. Each person will be allowed a maximum of three minutes to ensure that everyone has a chance to speak. The public will also have an opportunity to [submit written comments](#) for open session the morning of the Board Meeting.

Other Information

[Submit Comments Electronically the Day of the Board Meeting](#)

[View Submitted Comments](#)

Please Note: PowerPoint presentations to be displayed during public comment at the Board meeting must be electronically submitted via email to the Clerks' Office at cotb@arb.ca.gov no later than noon on the business day prior to the scheduled Board meeting.

If you have any questions, please contact the Clerks' Office:

1001 I Street, 23rd Floor, Sacramento, California 95814

cotb@arb.ca.gov or (916) 322-5594

CARB Homepage: www.arb.ca.gov

Special Accommodation Request

Consistent with California Government Code section 7296.2, special accommodation or language needs may be provided for any of the following:

- An interpreter to be available at the hearing;
- Documents made available in an alternate format or another language;
- A disability-related reasonable accommodation.

To request these special accommodations or language needs, please contact the Clerks' Office at cotb@arb.ca.gov or at (916) 322-5594 as soon as possible, but no later than 7 business days before the scheduled Board hearing. TTY/TDD/Speech to Speech users may dial 711 for the California Relay Service.

Acomodación Especial

Consecuente con la sección 7296.2 del Código de Gobierno de California, una acomodación especial o necesidades lingüísticas pueden ser suministradas para cualquiera de los siguientes:

- Un intérprete que esté disponible en la audiencia
- Documentos disponibles en un formato alterno u otro idioma
- Una acomodación razonable relacionados con una incapacidad

Para solicitar estas comodidades especiales o necesidades de otro idioma, por favor contacte la oficina del Consejo al (916) 322-5594 o por correo electronico al cotb@arb.ca.gov lo más pronto posible, pero no menos de 7 días de trabajo antes del día programado para la audiencia del Consejo. TTY/TDD/Personas que necesiten este servicio pueden marcar el 711 para el Servicio de Retransmisión de Mensajes de California.

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 25

PROPOSAL: Adopt Executive Officer's FY 2021-22 Proposed Goals and Priority Objectives, and Proposed Budget.

SYNOPSIS: The Executive Officer's Proposed Goals and Priority Objectives, and Proposed Budget for FY 2021-22 have been developed and are recommended for adoption. The Budget and Work Program for FY 2021-22 represents input over the past several months from Board members, staff, and the public. This year's process included two meetings of the Budget Advisory Committee and two budget workshops, one for the public held on April 6, 2021 and one for the Board held on April 9, 2021. The Proposed Budget incorporates, pursuant to Rule 320, an increase of most fees by 4.5 percent reflecting the Consumer Price Index for FY 2020-21 and FY 2021-22. This action is to adopt the Executive Officer's Proposed Goals and Priority Objectives, and Proposed Budget for FY 2021-22.

COMMITTEE: Special Board Meeting/Budget Workshop, April 9, 2021, Reviewed

RECOMMENDED ACTIONS:

1. Remove from Reserves and Designations all amounts associated with the FY 2020-21 Budget.
2. Approve appropriations in the Major Objects for FY 2021-22 of:

Salary and Employee Benefits	\$146,228,481
Services and Supplies	30,963,569
Capital Outlays	1,850,000
Transfers Out	<u>841,353</u>
Total	<u>\$179,883,403</u>

3. Approve revenues for FY 2021-22 of \$179,883,403.
4. Approve the addition of eight net authorized/funded positions as detailed in the FY 2021-22 Budget.
5. Approve the Executive Officer's FY 2021-22 Goals and Priority Objectives.
6. Approve a projected June 30, 2022 Fund Balance of the following:

Classification¹	Reserves/Unreserved Designations	Amount
Committed	Reserve for Encumbrances	\$13,200,000
Nonspendable	Reserve for Inventory of Supplies	80,000
Assigned	Designated for Enhanced Compliance Activities	883,018
Assigned	Designated for Other Post Employment Benefit (OPEB) Obligations	2,952,496
Assigned	Designated for Permit Streamlining	234,159
Assigned	Designated for Self-Insurance	2,000,000
Assigned	Designated for Unemployment Claims	80,000
Total Reserved & Unreserved Designations		\$19,429,673
Unassigned	Undesignated Fund Balance	\$62,096,338

7. Instruct staff to actively review and assess fiscal changes and report monthly to the Administrative Committee and to the Board.

Wayne Nastri
Executive Officer

SJ:JK

Background

Budget

The period covered by the FY 2021-22 budget is from July 1, 2021 to June 30, 2022. The General Fund budget is the agency's operating budget and is structured by office and account code. The accounts are categorized into three Major Objects: Salaries and Employee Benefits, Services and Supplies, and Capital Outlays. The budget is supplemented with a Work Program which estimates staff resources and expenditures along program and activity lines. A Work Program Output Justification is completed for each Work Program which identifies performance goals, measurable outputs, legal mandates, activity changes and revenue categories.

The annual expenditure and revenue budget for the General Fund is adopted on a modified accrual basis. All annual expenditure appropriations lapse at fiscal year-end if they have not been expended or encumbered. Throughout the year, budget amendments may be necessary to accommodate additional revenues and expenditure needs.

¹ The fund balance classifications of Committed, Nonspendable, Assigned, and Unassigned are established by the Government Accounting Standards Board 54.

The Executive Officer's Budget and Work Program for FY 2021-22 represents the input over the past several months from Board members, the public, executive management, and staff. This year's process included two meetings with the Budget Advisory Committee, one public consultation meeting held on April 6, 2021 and one Governing Board workshop held on April 9, 2021.

Regulation III – Fees establishes the fee rates and schedules to recover South Coast AQMD's reasonable costs of regulating and providing services to the regulated community, primarily permitted sources. The Permitted Source Program is principally supported by three types of fees permit processing fees for both facility permits and equipment-based permits, annual permit renewal fees, and emissions-based annual operating fees, all of which are contained in Rule 301. Also included in the Permitted Source Program are Rule 222 registration fees and plan fees, since these are similar to permits for the sources to which they apply. Regulation III also establishes fees and rates for other fee programs, unrelated to the Permitted Source Program, including, but not limited to, Transportation Programs fees and Area Source fees (architectural coatings). The above referenced fees comprise approximately 59.9 percent of South Coast AQMD's revenue.

South Coast AQMD continues to implement cost recovery initiatives and cost reduction efforts, including limited increases in Services and Supplies expenditures, maintaining the FY 2020-21 vacancy rate, the implementation of the California Public Employees' Pension Reform Act (PEPRA) for new employees, and the early payoff of the Diamond Bar Headquarters. In the upcoming years, the South Coast AQMD will continue to face a number of fiscal challenges and uncertainties, including global economic impacts and continued uncertainty related to the COVID-19 pandemic and resulting fluctuations in the financial market which will determine the performance of South Coast AQMD's retirement investments and thus impact pension liability, potential changes in federal and state grant funding levels, the need for major information technology and building infrastructure improvement projects, and annual variations in penalties and settlement revenue. South Coast AQMD staff will monitor funding sources, the retirement plan, and actual financial results on a continuous basis and are prepared to make timely resource allocation adjustments as warranted.

South Coast AQMD staff reports monthly to the Administrative Committee and the Board, providing the current fiscal year compared to the prior three year average of the General Fund Revenue and Expenditures, vacancy rates, current number of FTEs and permit, compliance and other relevant program-related metrics.

Proposal

Budget

The proposed budget for FY 2021-22 is a balanced budget with expenditures and revenues of \$179,883,403. Necessary one-time capital expenses are proposed in a

separate Board action to use \$1.5M from special revenue funds to help balance this budget. The proposed FY 2021-22 budget represents an increase of \$6,894,422 (4.0%) in total expenditures from the budget adopted by the Board in May 2020, primarily due to an increase in staffing, services and supplies, and capital outlays. The proposed budget includes the net addition of eight positions for FY 2021-22. In Services and Supplies, the proposal for FY 2021-22 reflects an increase of \$492,583 (1.6%) compared to the FY 2020-21 adopted budget primarily due to an increase in professional and special services expenditures. Capital Outlays are increasing by \$924,000 (99.8%) compared to the FY 2020-21 adopted budget primarily due to system enhancements and upgrades and equipment purchases.

The proposed FY 2021-22 budget represents an increase of \$6,894,422 (4.0%) in total revenue from the budget adopted by the Board in May 2020. As part of this budget package, specific fees in Regulation III – Fees will be automatically adjusted by the California Consumer Price Index (CPI) as provided for under South Coast AQMD Rule 320. The proposed budget includes a 1.7 percent CPI fee increase and a restoration of the FY 2020-21 CPI fee increase of 2.8 percent that was credited to fee payers at the time of billing.

The proposed FY 2021-22 budget assumes a 1.7 percent fee increase, consistent with Rule 320 which was adopted by the Board on October 29, 2010 to allow for an increase of fees based on the change in the California CPI. The proposed budget also adds back the CPI increase from the previous year for a total increase of 4.5 percent.

Public Process

The Budget and Work Program for FY 2021-22 represents input over the past several months from Board members, staff, and the public. This year's process included two meetings of the Budget Advisory Committee and two budget workshops, one for the public held on April 6, 2021 and one for the Board held on April 9, 2021. In accordance with Rule 320, the Draft Socioeconomic Impact Assessment for the automatic CPI-based fee increase was made available to the public on March 15, 2021.

Copies of the FY 2021-22 Proposed Budget Abstract have been transmitted to the Board and the document is also available via South Coast AQMD's web site at <http://www.aqmd.gov/nav/about/finance#Budgets>.

South Coast Air Quality Management District Board and Stakeholders

Transmittal of the Executive Officer's Fiscal Year 2021-22 Budget and Work Program

This document represents South Coast Air Quality Management District's (South Coast AQMD) proposed General Fund Budget and Work Program for FY 2021-22. The budget was developed in accordance with statutory requirements and in consultation with South Coast AQMD's executive and program staff.

The greatest uncertainties facing South Coast AQMD's budgetary outlook stem from the continued major economic disruption due to the COVID-19 global pandemic. In these challenging times, we recognize the hardships that many are experiencing. We are making accommodations in many program areas and remain committed to protecting public health and helping business. South Coast AQMD staff will monitor the financial impacts and, in the event, that there are major changes in the economic landscape, we would make adjustments to the FY 2021-22 budget being proposed.

This budget includes a multi-year financial summary of all revenues, expenditures and staffing used by each of South Coast AQMD's programs in the delivery of essential services to clean the air and to protect the health of all residents in the South Coast Air District through practical and innovative strategies. The proposed budget for FY 2021-22 is a balanced budget with expenditures and revenues of \$179.9 million and 957 positions.

The proposed FY 2021-22 level of expenditures, up four percent from the FY 2020-21 adopted budget, includes increased costs for retirement, salaries associated with new positions, expenditures for professional and special services, and capital outlay projects. There is a net increase of 11 FTEs from the FY 2020-21 adopted budget. This includes the previously approved FY 2020-21 mid-year actions adding two positions in the

Executive Office, two positions in the Legislative and Public Affairs/Media Office and deleting one position in the Science and Technology Advancement Office.

The FY 2021-22 proposed revenue budget of \$179.9 million, up four percent from the FY 2020-21 adopted budget, includes steady progress on South Coast AQMD's implementation of the Volkswagen Mitigation Action, AB 617 programs, and AB 134 programs. At \$100.1 million or 55.7 percent of the projected revenue budget, stationary source revenues account for the largest source of revenue, and in light of the continued COVID-19 impact, could be precarious. Over the past two decades, total permit fees (including permit processing, annual operating permit, and annual emissions-based fees) collected from stationary sources has increased by about 45.2 percent from \$66.8 million in FY 1991-92 to \$97 million (estimated) in FY 2020-21. When adjusted for inflation however, stationary source revenues have decreased by 13 percent over this same period.

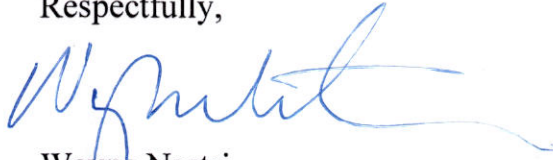

While significant efforts are put forth to develop a detailed budget for the next fiscal year, including a five-year projection, uncertain political and economic issues create challenges. These challenges include global economic impacts and uncertainty sparked by the COVID-19 outbreak and resulting fluctuations in the financial market which will determine the performance of South Coast AQMD's retirement investments and thus impact pension liability; changes in federal and state grant revenue funding levels; increased infrastructure costs due to an aging headquarters building; and Penalties and Settlement revenue that varies annually. South Coast AQMD staff will monitor funding sources, our retirement plan, and actual financial results on a continuous basis and is prepared to make timely resource allocation adjustments as warranted. Additionally, the proposed budget includes an assigned/unassigned general fund balance of 38 percent of FY 2021-22 revenues to provide a reasonable financial safety net.

The public and the business community have multiple opportunities to participate in the budget development process. This includes meetings of the Budget Advisory Committee which is made up of representatives from the business and environmental communities, a public consultation meeting to discuss the proposed budget and work program, and two meetings of the Governing Board. The public consultation meeting and Governing Board meetings are noticed to the public through direct mail and emails to permitted facilities and other stakeholders, print media, and through the South Coast AQMD website.

In summary, I am proposing a balanced budget for FY 2021-22 that allows South Coast AQMD programs to operate efficiently, transparently, and in a manner sensitive to public agencies, businesses and the public, while providing continued emission reductions and health benefit improvements. The proposed FY 2021-22 Budget and Work Program serves to ensure the continued strength and stability of the South Coast

AQMD as we make progress toward attaining the federal and state clean air mandates and further protect public health.

Respectfully,

A handwritten signature in blue ink, appearing to read 'Wayne Natri', with a long horizontal flourish extending to the right.

Wayne Natri,
Executive Officer

SJ:JK

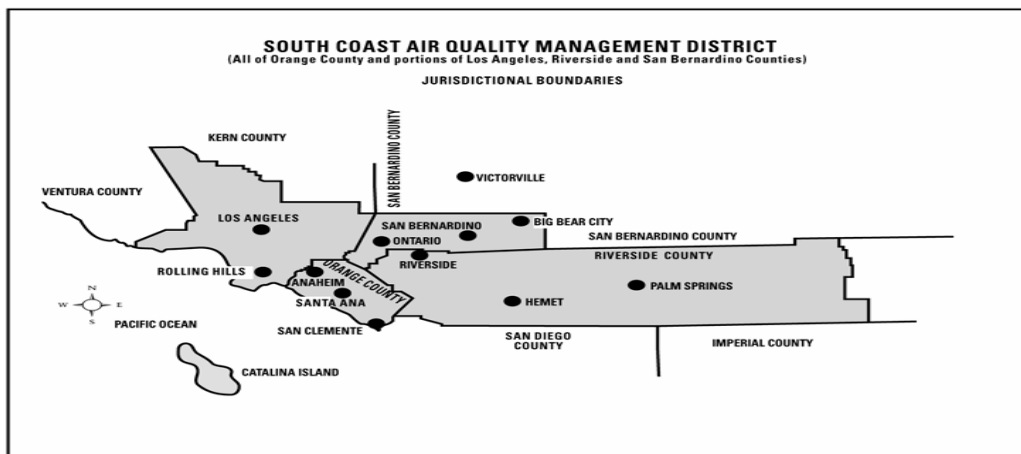

FY 2021-22 BUDGET ABSTRACT

Preface

This document represents the proposed FY 2021-22 Budget and Work Program of the South Coast Air Quality Management District (South Coast AQMD). The proposed budget is available for public review and comment during the month of April. A public consultation meeting is scheduled to discuss the proposed budget and proposed fees changes on April 6, 2021. In addition, a workshop for the Governing Board is scheduled on April 9, 2021. A final Proposed Budget and Work Program, which may include changes based on input from the public and Board, will be presented for adoption at a public hearing on May 7, 2021.

Introduction

The South Coast Air Quality Management District (South Coast AQMD) began operation on February 1, 1977 as a regional governmental agency established by the California Legislature pursuant to the Lewis Air Quality Management Act. The South Coast AQMD encompasses all of Orange County and parts of Los Angeles, San Bernardino and Riverside Counties. It succeeded the Southern California Air Pollution Control District (APCD) and its predecessor four county APCDs, of which the Los Angeles County APCD was the oldest in the nation, having been formed in 1947. The South Coast AQMD Governing Board is composed of 13 members, including four members appointed by the Boards of Supervisors of the four counties in South Coast AQMD's jurisdiction, six members appointed by cities in the South Coast AQMD's jurisdiction and three members appointed by the Governor, the Speaker of the State Assembly and the Rules Committee of the State Senate, respectively. The members appointed by the Boards of Supervisors and cities consist of one member of the Board of Supervisors of Los Angeles, Orange, Riverside, and San Bernardino Counties, respectively, and a mayor or member of the city council of a city within Orange, Riverside, and San Bernardino Counties. Los Angeles County cities have three representatives, one each from the western and eastern portions and one member representing the City of Los Angeles.

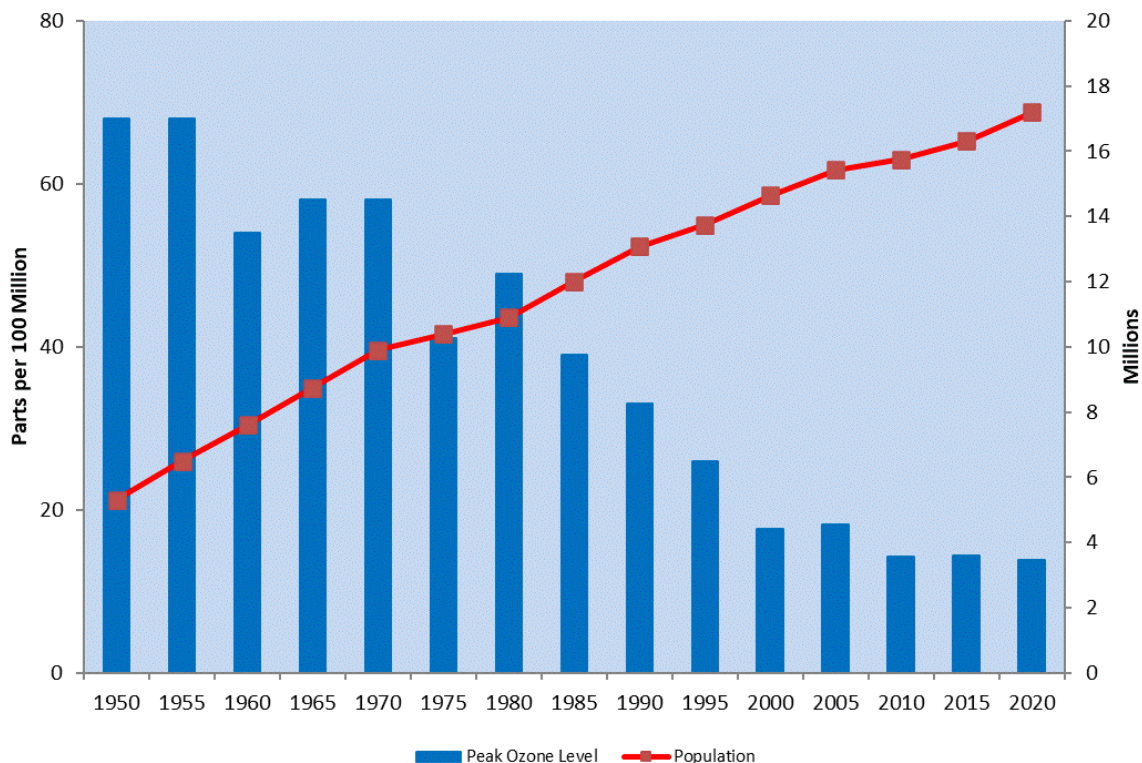

Air Quality History

The South Coast Air Basin (Basin) has suffered unhealthful air since its rapid population growth and industrialization during World War II. While air quality has improved, the residents of the Basin still breathe some of the most polluted air in the nation.

The 70-year history of the region's air pollution control efforts is, in many ways, one of the world's key environmental success stories. Peak ozone levels have been cut by almost three-fourths since air monitoring began in the 1950s. Population exposure was cut in half during the 1980s alone.

Since the late 1940s, when the war on smog began, to 2020, the region's population has more than tripled from 4.8 million to 17.2 million; the number of motor vehicles has increased more than six-fold from 2.3 million to 14.1 million; and the area has grown into one of the most prosperous regions of the world. This phenomenal economic growth illustrates that pollution control and strong economic growth can coincide.

70 Years of Progress in Reducing Ozone Levels

Mission

South Coast AQMD's mission is to clean the air and protect the health of all residents in the South Coast Air District through practical and innovative strategies. This mission is pursued through a

comprehensive program of planning, regulation, education, enforcement, compliance incentives, technical innovation and promoting public understanding of air quality issues. The South Coast AQMD has implemented a policy of working with regulated businesses to ensure their participation in making the rules which will impact them. This cooperative approach has resulted in greater business support of rulemaking efforts for air that is more healthful to breathe.

To carry out its mission, South Coast AQMD develops a set of Goals and Priority Objectives which are evaluated and revised annually and presented as part of the budget proposal. The following proposed goals have been identified as being critical to meeting South Coast AQMD's Mission for FY 2021-22:

- I. Achieve Clean Air Standards.
- II. Enhance Public Education and Equitable Treatment for All Communities.
- III. Operate Efficiently and Transparently.

These goals are the foundation for South Coast AQMD's Work Program categories. Each goal is supported by multiple activities, which target specific areas of program performance.

Air Quality

Overview

South Coast AQMD has jurisdiction over an area that includes the majority of Los Angeles, Riverside, San Bernardino, and Orange counties. There are three air basins within this region: the South Coast Air Basin, the Riverside County portion of the Salton Sea Air Basin (Coachella Valley), and the Riverside County portion of the Mojave Desert Air Basin. The South Coast Air Basin (Basin) and the Coachella Valley has some of the highest air pollution levels in the United States. The federal government has designated seven pollutants that are pervasive enough to warrant federal health standards, called National Ambient Air Quality Standards (NAAQS). Known as "criteria pollutants," these are: ozone (O₃); nitrogen dioxide (NO₂); particulates (PM₁₀); fine particulates (PM_{2.5}); carbon monoxide (CO); lead (Pb); and sulfur dioxide (SO₂).

In addition, the State of California sets ambient air quality standards for these same pollutants through the California Air Resources Board (CARB). California's standards are in some cases tighter than the U.S. Environmental Protection Agency's (U.S. EPA) standards, which strengthens the public health protection. Toxic compounds also are a potential problem. More toxic pollution is emitted into the air in the Basin than in any other region in California. The Basin's large number of motor vehicles and minor sources, including small businesses and households using ozone-forming consumer products and paints, compound the problem.

Air Quality Trends

While our air quality continues to improve, the Basin remains one of the most unhealthful areas in the nation in terms of air quality. Ozone levels have fallen by more than three-quarters since peaks in the mid-1950s. U.S. EPA revised and strengthened the 8-hour ozone NAAQS, effective December 28, 2015, from concentrations exceeding 75 parts-per-billion (ppb) to concentrations

exceeding 70 ppb. In 2020, the 2015 8-hour ozone NAAQS was exceeded in the Basin on 161 days and the former 1997 ozone NAAQS was exceeded on 102 days. The 2015 ozone NAAQS was exceeded in the Basin on 128 days in 2019 and 141 days in 2018. Note that all the air quality values for 2020 in this report are preliminary values that are subject to change during the validation process. Though the trend in ozone exceedance days has been decreasing over the past few decades, year-to-year variability can mask the underlying trends when focusing on short time periods. Year-to-year variability can be caused by enhanced photochemical ozone formation due to persistent weather patterns that limit vertical mixing and warm the lower atmosphere. Changes in the relative emissions of volatile organic compounds (VOCs) or oxides of nitrogen (NO_x) can also affect the chemistry of ozone formation and lead to marginal short-term increases in ozone concentrations as NO_x is reduced. While the ozone control strategy continued to reduce precursor emissions from man-made sources in the Basin, emissions of natural ozone precursors are not controllable. Ozone-forming emissions transported from frequent summer wildfires throughout California and year-to-year changes in the VOC emissions from vegetation resulting from dry and wet rainy-seasons affect ozone concentrations. The maximum observed ozone levels also show some year-to-year variability but have generally decreased up until the last decade where ozone concentrations have generally remained constant. The highest 8-hour ozone level in the 2020 data was 139 ppb, compared to 117 ppb in 2019 and 125 ppb in 2018. 2020 ozone was elevated due to persistent and intense heat waves, stagnant weather conditions, emissions from the most intense wildfire season on record in the State, and possibly the influence of shifting NO_x and VOC emissions from the COVID-19 pandemic.

PM_{2.5} levels have decreased dramatically in the Basin since 1999. Effective March 18, 2013, U.S. EPA strengthened the annual average PM_{2.5} standard from 15.0 µg/m³ to 12.0 µg/m³, while retaining the 24-hour PM_{2.5} NAAQS of 35 µg/m³. In 2019, the 24-hour PM_{2.5} NAAQS was exceeded on 9 days in the South Coast Air Basin. In 2020, there were 34 exceedance days, based on preliminary continuous PM_{2.5} measurements. Because the highest PM_{2.5} concentrations typically occur during the rainy-season, design values are heavily dependent on the frequency of wintertime storm systems, which increase ventilation and remove PM when rainfall is present. PM_{2.5} concentrations are also significantly influenced by wildfire smoke, which can be transported across wide distances. Smoke from historically large wildfires throughout California in the summer and fall of 2020 contributed to the majority of the exceedances of the 24-hour standard all throughout the South Coast Air Basin. When removing the influence of events that are likely to be considered exceptional by U.S. EPA and with preliminary 2020 data, the 2017-2020 24-hour design value of 35 µg/m³, measured at the Mira Loma station, meets the federal standard for the first time. The Basin's peak annual average PM_{2.5} level in 2020, 14.4 µg/m³ (preliminary data) at the Ontario-60 near road site was higher than the 2019 value, 12.8 µg/m³, which occurred at the same site. It is likely that an increased background PM_{2.5} from fires in the Western United States enhanced the annual average in 2020. Events with only a small influence on PM_{2.5} concentrations are difficult to identify and remove as small changes from these events cannot be separated from the effects of meteorology, which typically drives day to day changes in air quality.

In 2006, the U.S. EPA rescinded the annual federal standard for PM₁₀ but retained the 24-hour standard. The U.S. EPA re-designated the Basin as attainment of the health-based standard for

PM10, effective July 26, 2013. Apart from a handful of dust events caused by high winds, ambient levels of PM10 in the Basin have continued to meet the federal 24-hour PM10 NAAQS through 2020 based on preliminary data.

In November 2008, the U.S. EPA revised the lead NAAQS from a 1.5 µg/m³ quarterly average to a rolling 3-month average of 0.15 µg/m³ and added new near-source monitoring requirements. The Basin has been designated non-attainment for lead due to monitored concentrations near one facility in Los Angeles County prior to the 2012-2014 3-year design value period. However, starting with the 2012-2014 design value, the entire Basin has met the lead standard through 2019. 2020 concentrations are yet not available at the time of publication. A re-designation request to the U.S. EPA is pending.

Nitrogen dioxide, sulfur dioxide, and carbon monoxide levels have improved in the Basin and are in full attainment of the NAAQS. In 2007, the U.S. EPA formally re-designated the Basin to attainment of the carbon monoxide NAAQS. Maximum levels of carbon monoxide in the Basin have been consistently less than one-third of the federal standards since 2004. In 2010, the U.S. EPA revised the NO₂ 1-hour standard to a level of 100 ppb and the SO₂ 1-hour standard to a level of 75 ppb. In 2020, the NO₂ 1-hour standard was exceeded at two near-road sites, those by the 710 and the 60, with a maximum value of 103 ppb. However, since the 1-hour standard is based on the 98th percentile daily maximum value, the Basin still attains the standard based on preliminary data. All sites in the Basin remained in attainment of the SO₂ standard based on preliminary data.

Mandates

South Coast AQMD is governed and directed by a comprehensive federal law (Federal Clean Air Act) and several state laws that provide the regulatory framework for air quality management in the Basin. These laws require South Coast AQMD to take prescribed steps to improve air quality.

South Coast AQMD is responsible for stationary sources such as factories. CARB and U.S. EPA are primarily responsible for motor vehicles. South Coast AQMD and CARB share responsibilities with respect to area sources. South Coast AQMD and the Southern California Association of Governments (SCAG) share some responsibilities with CARB regarding certain aspects of mobile source emissions related to transportation and land use. Control of emissions from sources such as airports, harbors, and trains are shared by U.S. EPA, CARB and South Coast AQMD. Without adequate efforts by CARB and U.S. EPA to control emission sources under their sole authority, it is impossible for the region to reach federal clean air standards.

The following is a more specific summary of the laws governing South Coast AQMD.

Federal Law:

Federal Clean Air Act (CAA): The CAA requires attainment of National Ambient Air Quality Standards (NAAQS) for criteria air pollutants, i.e. pollutants causing human health impacts due to their release from numerous sources. The following criteria pollutants have been identified: ozone, particulate matter (PM10), carbon monoxide, lead, nitrogen dioxide, and sulfur dioxide. Current deadlines vary by pollutant and severity of pollution in the region.

State Implementation Plans: The CAA requires each state to develop a State Implementation Plan (SIP) to attain the NAAQS by the applicable attainment deadlines. SIPs must be approved by U.S. EPA as containing sufficient measures to timely attain NAAQS and meet other requirements described below. SIPs must contain air pollution measures in adopted, "regulatory" form within one year after approval by U.S. EPA. Upon approval by U.S. EPA, SIP requirements can be enforced against regulated sources by U.S. EPA and by any citizen. South Coast AQMD must develop and submit to CARB for review, followed by submittal to U.S. EPA, an element of the SIP referred to as the South Coast AQMD Air Quality Management Plan (AQMP) demonstrating how the Basin will achieve the NAAQS.

Among the numerous other CAA requirements are: a mandate that the region achieve a three percent annual reduction in emissions of ozone precursors (VOC and NO_x); a requirement that new sources over 10 tons per year of VOC or NO_x, and modifications to such sources, achieve lowest achievable emission rate and offset their emission increases by equal reductions elsewhere in the region and transportation control measures to reduce vehicle trips.

To date, the South Coast AQMD's Governing Board has adopted AQMPs in 1989, 1991, 1994, 1997, 1999 (amendments to the plan adopted in 1997), 2003, 2007, 2012 and 2017. The 2016 AQMP was approved in March 2017.

Sanctions, Federal Implementation Plans, and Conformity Findings: The CAA mandates that sanctions be imposed on an area if a suitable SIP is not adopted and approved by U.S. EPA. These sanctions can include loss of key federal funds and more stringent requirements on new or expanding industries. Specific requirements for South Coast AQMD's AQMP include stringent requirements plus Lowest Achievable Emission Rate (LAER) and offsets for major new sources. Federal law also requires an operating permit program for major stationary sources, known as Title V, which must be supported by permit fees. In addition, air toxics regulations adopted by U.S. EPA pursuant to Title III must be implemented by South Coast AQMD.

Motor Vehicle Emission Controls: The CAA initially required U.S. EPA to adopt emission limitations for motor vehicles. The 1990 Amendments require U.S. EPA to adopt regulations to achieve further reductions in emissions from motor vehicles, as well as from other mobile sources such as locomotives. States are preempted from adopting emission limitations for motor vehicles and certain other mobile sources. Exception: California can adopt motor vehicle standards, and standards for some --but not all-- other mobile sources, and other states can adopt the California standards.

Hazardous Air Pollutants: In addition to criteria pollutants, the CAA regulates "hazardous air pollutants," i.e., those which can cause cancer or other severe localized health effects due to emissions from a single facility. U.S. EPA is required to adopt regulations mandating that new and existing sources emitting 10 tons per year or more of such pollutants employ Maximum Achievable Control Technology (MACT) according to specified schedules. U.S. EPA is to consider further reductions in the future to eliminate any remaining unacceptable residual risk.

California Law:

The California Clean Air Act (CCAA): The CCAA establishes numerous requirements for Air District air quality plans to attain state ambient air quality standards for criteria air contaminants. For example, a plan must contain measures adequate to achieve five percent per year emission reductions or must contain all feasible measures and an expeditious adoption schedule. For Air Districts with serious air pollution, its attainment plan should include the following: no net increase in emissions from new and modified stationary sources; and best available retrofit technology for existing sources.

Toxic Air Contaminants: The Air Toxic Hot Spots Act (Health & Safety Code §§ 44300, et seq.) requires facilities emitting specified quantities of pollutants to conduct risk assessments describing the health impacts to neighboring communities created by their emissions of numerous specified hazardous compounds. If an Air District determines the health impact to be significant, neighbors must be notified. In addition, state law requires the facility to develop and implement a plan to reduce the health impacts to below significance, generally within five years. Additional control requirements for hazardous emissions from specific industries are established by the state and enforced by Air Districts.

AB 617: A requirement for Air Districts to conduct air monitoring and adopt a Community Emissions Reduction Plan for communities designated by CARB under the AB 617 statewide program.

State law also includes the following measures:

- Tanner Air Toxics Process (AB 1807) which requires CARB to adopt air toxic control measures to limit emissions of toxic air contaminants from classes of industrial facilities. Local Air Districts are required to enforce these regulations or adopt equally or more stringent regulations of their own;
- Health & Safety Code §42705.5 which requires Air Districts to deploy a community air monitoring system in selected locations and Section 42706.5 which requires Air Districts to design, develop, install, operate and maintain refinery-related community air monitoring systems;
- Authority for South Coast AQMD to adopt a command-and-control regulatory structure requiring Best Available Retrofit Control Technology (BARCT);
- A requirement for South Coast AQMD to establish an expedited schedule for implementing BARCT at pre-determined greenhouse gas and trade facilities;
- A requirement for South Coast AQMD to establish a program to encourage voluntary participation in projects to increase the use of clean-burning fuels; and
- A requirement for South Coast AQMD to adopt and enforce rules to ensure no net emission increases from stationary sources.

Air Quality Control

Developing solutions to the air quality problem involve highly technical processes and a variety of resources and efforts to meet the legal requirements of California and federal laws.

Monitoring: The first step in air quality control is to determine the smog problem by measuring air pollution levels. South Coast AQMD currently operates 43 monitoring stations in the South Coast Air Basin and a portion of the Salton Sea Air Basin in Coachella Valley. These range from fully equipped stations that measure levels of all criteria pollutants, as well as some air toxic pollutant levels, to those which measure a specific pollutant in critical areas. These measurements provide the basis of our knowledge about the nature of the air pollution problem and the data for planning and compliance efforts to address the problem.

Pollution Sources: South Coast AQMD, in cooperation with CARB and SCAG, estimates the sources of emissions causing the air pollution problem. Nature itself causes a portion of the emissions and must be considered. In general, South Coast AQMD estimates stationary and natural sources of emissions, SCAG develops the information necessary to estimate population and traffic, and CARB develops the information necessary to estimate mobile and area source emissions using the SCAG traffic data. This data is then consolidated in South Coast AQMD's AQMP for use in developing the necessary control strategies.

Air Quality Modeling: Using air quality, meteorological and emissions models, South Coast AQMD planners simulate air pollution to demonstrate attainment of the air quality standards and the impacts of sources to local and regional air quality. Due to the nature of air pollution, air quality models can be very complex. Some pollutants are not emitted directly into the air but are products of photochemical reactions in the atmosphere. For example, VOCs mix with nitrogen dioxide (NO₂) and react in sunlight to form ozone; similarly, nitrogen oxide gases from tailpipes and smokestacks can be transformed into nitrates or particulates (PM_{2.5} and PM₁₀). The planners thus must consider transport, land use characteristics and chemical reactions of emissions in the atmosphere to evaluate air quality impacts. Using model output, planners can look at different control scenarios to determine the best strategies to reduce air pollution for the lowest cost.

The considerable data required for these analyses is collected on an ongoing basis by South Coast AQMD staff. Modeling data is prepared and delivered using a geographic information system (GIS). GIS capability is used to prepare and produce data and spatial analysis maps for various needs by South Coast AQMD including rulemaking and California Environmental Quality Act (CEQA) document development.

Planning: With emissions data and an air quality model in place, planners can develop possible control strategies and scenarios. South Coast AQMD focuses most of its effort on stationary source controls. As mentioned earlier, strategies to reduce vehicle miles traveled (VMT) are developed primarily by SCAG, while mobile source standards and control programs are developed primarily by CARB and EPA. South Coast AQMD also has limited authority over mobile sources (e.g. public fleets, indirect sources).

Once a plan of emission controls to achieve the NAAQS is outlined, South Coast AQMD is required to hold multiple public meetings to present the proposed control strategies and receive public input. South Coast AQMD also conducts a socioeconomic analysis of the strategies. South Coast

AQMD maintains an ongoing and independent advisory group of outside experts for both its air quality modeling and socioeconomic assessment methodologies.

To meet federal air quality standards, the AQMPs and SIP submittals, including the 2016 AQMP, called for significant emissions reductions from projected baseline emissions in order to meet the NAAQS by the federal attainment deadlines (2019 for the 2006 24-hour PM_{2.5} NAAQS, 2025 for the 2012 annual PM_{2.5} NAAQS, 2023 for the 1979 1-hour ozone NAAQS, 2024 for the 1997 8-hour ozone NAAQS, and 2032 for the 2008 8-hour ozone NAAQS). These combined reductions, while meeting most NAAQS, will still not result in attainment of all California State ambient air quality standards or the revised 2015 8-hour ozone NAAQS. The 2012 AQMP addressed the 24-hour PM_{2.5} NAAQS. The 2016 AQMP addresses the 2008 8-hour ozone NAAQS and the 2012 annual PM_{2.5} NAAQS and demonstrates compliance with the requirements for being a “serious” non-attainment area for the 24-hour PM_{2.5} NAAQS requirements. The next AQMP will address the 2015 8-hour ozone NAAQS, with an anticipated adoption in the 2022 timeframe. Five working groups have been established to support the development of control strategies for the 2022 AQMP. South Coast AQMD will continue to improve the emissions inventories and modeling techniques for the 2022 AQMP.

Rulemaking: The regulatory process, known as rulemaking, takes the concepts of control measures outlined in the AQMP and turns them into proposed rule language. This process involves the following: extensive research on technology; site inspections of affected industries to determine feasibility; typically, a year or more of public task force and workshop meetings; in-depth analyses of environmental, social and economic impacts; and thorough review with appropriate Governing Board Committees.

This extensive process of public and policymaker participation encourages consensus in development of rule requirements so that affected sources have an opportunity for input into the rules that will regulate their operations. Once the requirements are developed, the proposed rule, along with an Environmental Assessment and a socioeconomic report, is presented to South Coast AQMD’s Governing Board at a public hearing. Public testimony is presented and considered by the Board before any rule is adopted. The adopted or amended rules are then submitted to CARB and U.S. EPA for their approval. It is not uncommon for rulemaking to include follow-up implementation studies. These studies may extend one or more years past rule adoption/amendment and prior to rule implementation. Such studies are typically submitted to the Governing Board or appropriate Governing Board Committee.

Enforcement and Education: South Coast AQMD issues permits to construct and operate equipment to companies to ensure equipment is operated in compliance with adopted rules. Follow-up inspections are made to ensure that equipment is being operated under permit conditions.

Technical Innovation: In the late 1980s, South Coast AQMD recognized that technological innovation, as well as rule enforcement, would be necessary to achieve clean air standards. Thus, the Technology Advancement Office was created to look for and encourage technical innovation to reduce emissions. The California State Legislature supported this effort by providing a \$1

surcharge on every DMV registration fee paid within the Basin. These funds have been matched at a ratio of approximately three-to-one with funds from the private sector to develop new technologies such as near-zero and zero emission vehicles, low-NO_x burners for boilers and water heaters, zero-pollution paints and solvents, fuel cells and other innovations.

An additional \$4 vehicle registration fee was authorized by the state legislature in 1990. These fees are administered through South Coast AQMD with \$1.20 going to South Coast AQMD for mobile source emissions reductions, \$1.60 subvended directly to cities and counties to support their air quality programs, and \$1.20 to the Mobile Source Air Pollution Reduction Review Committee (MSRC). The MSRC is an outside panel established by state law whose function is to make the decisions on the actual projects to be funded from that portion of the revenue.

Public Education: South Coast AQMD's efforts to clean up the air will be successful only to the extent that the public understands air quality issues and supports and participates in cleanup effort. Thus, South Coast AQMD strives to involve and inform the public through the Legislative and Public Affairs/Media Office, public meetings, publications, the press, public service announcements, and social media.

Budget Synopsis

South Coast AQMD's annual budget is adopted for the General Fund for a fiscal year that runs from July 1 through June 30. The period covered by the FY 2021-2022 budget is from July 1, 2021 to June 30, 2022. The General Fund budget is the agency's operating budget and is structured by Office and account. The accounts are categorized into three Major Objects: Salaries and Employee Benefits, Services and Supplies, and Capital Outlays. The budget is supplemented with a Work Program containing nine program categories which estimate staff resources and expenditures along program and activity lines. Each category consists of a number of Work Programs, or activities. A Work Program Output Justification form is completed for each Work Program, which identifies performance goals, quantifiable outputs, legal mandates, activity changes, and revenue categories.

The annual expenditure and revenue budget for the General Fund is adopted on a modified accrual basis. All annual expenditure appropriations lapse at fiscal year-end if they have not been expended or encumbered. Throughout the year, budget amendments may be necessary to accommodate additional revenues and expenditure needs. Any amendments due to budget increases or transfers between expenditure accounts in different Major Objects must be approved by South Coast AQMD's Governing Board. They are submitted to the Governing Board for approval at a monthly Board meeting in the format of a board letter which documents the need for the request and the source of funding for the expenditure. Budget amendments resulting from transfers between expenditure accounts within the same Major Object are approved at the Office level.

South Coast AQMD does not adopt annual budgets for its Special Revenue Funds. Special Revenue Funds are used to record transactions applicable to specific revenue sources that are legally restricted for specific purposes. All transactions in Special Revenue Funds are approved

by the Governing Board on an as-needed basis. South Coast AQMD's Comprehensive Annual Financial Report includes the General Fund and Special Revenue Funds.

Budget Process

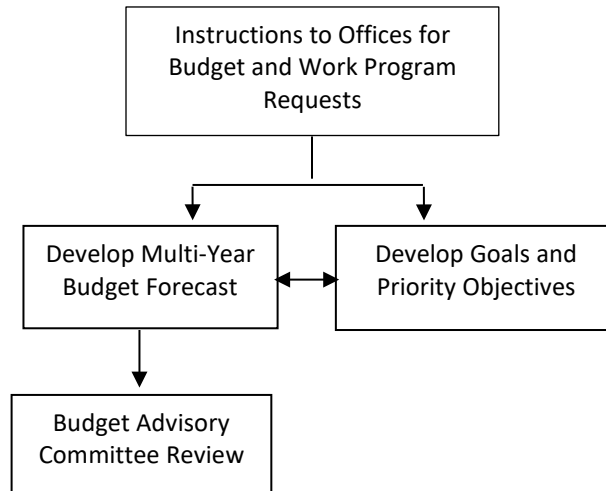

The South Coast AQMD budget process begins with the Chief Financial Officer issuing instructions and guidelines to the Offices. Under the guidance of the Executive Officer, the Chief Operating Officer, and the Chief Financial Officer, the Offices also begin establishing Goals and Priority Objectives for the fiscal year. The proposed annual budget and multi-year forecast is then developed by the Offices, Finance, Executive Council, the Chief Operating Officer, and the Executive Officer, based on the Goals and Priority Objectives as well as guidelines issued by the Executive Officer. Each Office submits requests for staffing, select Salary accounts, Services and Supplies accounts, and Capital Outlay accounts. The remaining salary and benefit costs are developed by Finance. Capital expenditure requests are reviewed by an in-house committee who prioritizes the requests. Revenue projections are developed by Finance based on input received from the appropriate Offices and incorporate any proposed changes to Regulation III - Fees. This information is integrated into an initial budget request, including a multi-year forecast, and then fine-tuned under the direction of the Chief Operating Officer and the Executive Officer to arrive at a proposed budget. The public, business community, and other stakeholders have several opportunities to participate in the budget process, up to and at the budget adoption hearing by the Governing Board, including:

- Two meetings of the Budget Advisory Committee whose members include various stakeholder representatives.
- One public consultation meeting to discuss the automatic CPI increase
- A public hearing on the Proposed Budget and Work Program

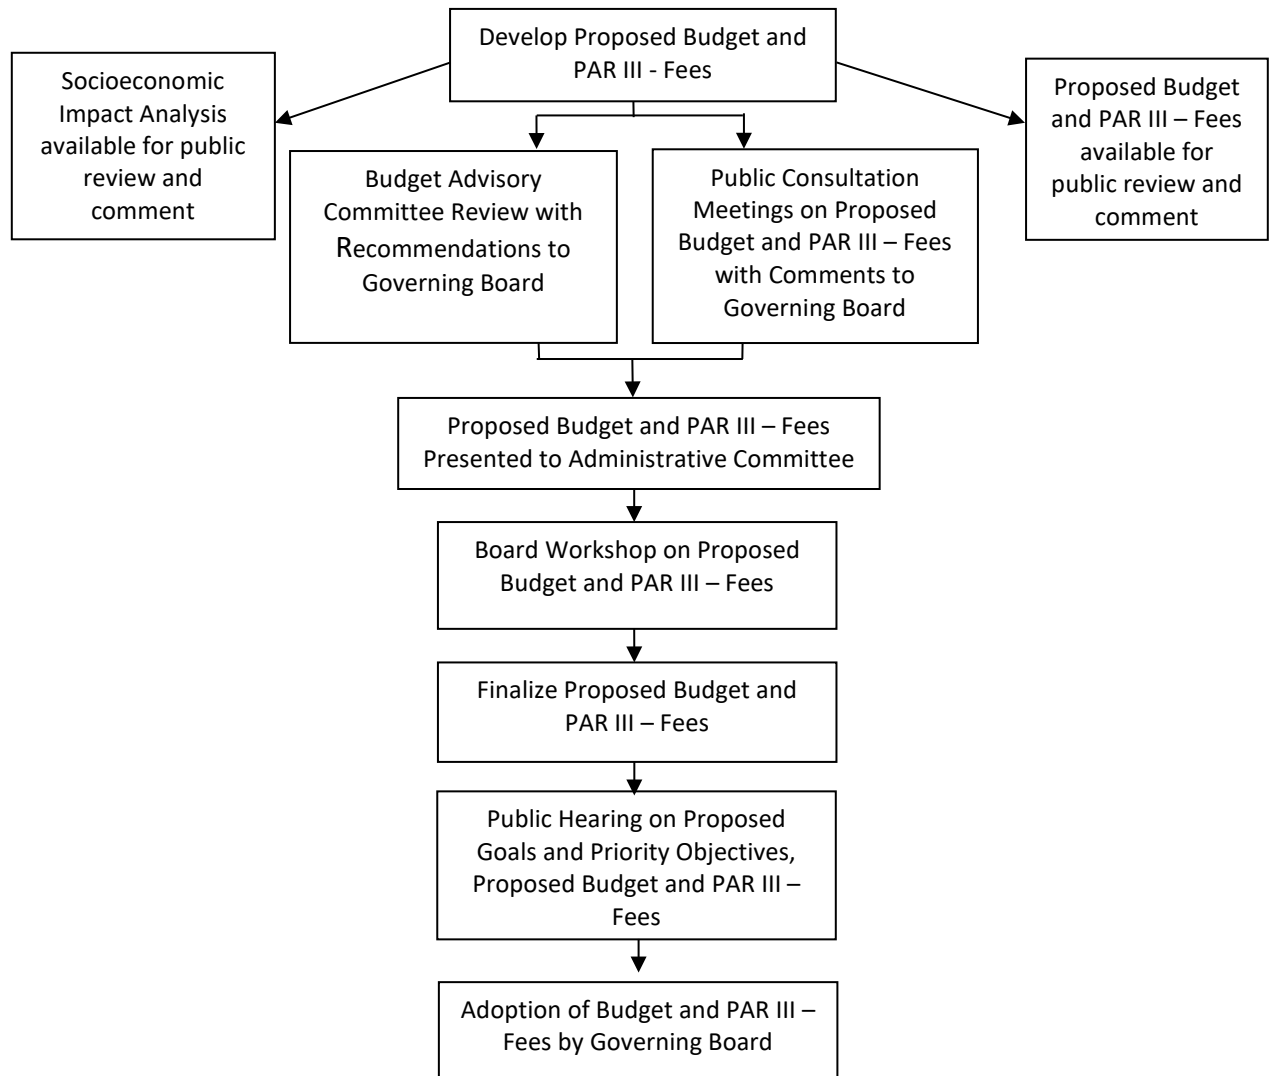

The proposed budget is presented to South Coast AQMD's Governing Board at a budget workshop and to South Coast AQMD's Administrative Committee. Any public comments and Budget Advisory Committee recommendations are submitted to the Governing Board by April 15 of each year. The proposed budget is adopted by the Governing Board and is in place on July 1 for the start of the new fiscal year.

The following flow charts represent the typical major milestones and budget processes that take place in developing South Coast AQMD's annual budget.

Preliminary Budget Process

Annual Budget Process

FY 2022 Budget Timeline	
Budget submissions received from Offices	Jan 15, 2021
Budget Advisory Committee meeting	Jan 15, 2021
Proposed budget available for public review	April 1, 2021
Budget Advisory Committee meeting on proposed budget	April 2, 2021
Public Workshop on proposed budget	April 6, 2021
Proposed budget presented to Administrative Committee	April 9, 2021
Governing Board Special Meeting	April 9, 2021
Public comments and Budget Advisory Committee recommendations submitted to Governing Board	April 15, 2021
Public Hearing & Governing Board adoption of budget	May 7, 2021

Proposed Budget & Work Program

Budget Overview

The proposed budget for FY 2021-22 is a balanced budget with revenues/transfers in and expenditures/transfers out of \$179.9 million. To compare against prior years, the following table shows South Coast AQMD's amended budget and actual expenditures for FY 2019-20, adopted and amended budgets for FY 2020-21 and proposed budget for FY 2021-22.

Description	FY 2019-20 Amended	FY 2019-20 Actual	FY 2020-21 Adopted	FY 2020-21 Amended¹	FY 2021-22 Proposed
Staffing	946	-	946	949	957
Revenue/Transfers In	\$186.0	\$188.9	\$173.0	\$176.2	\$179.9
Expenditures/Transfers Out	\$192.6	\$176.7	\$173.0	\$178.2	\$179.9

¹ Includes Board approved changes through February 2021

The FY 2021-22 proposed budget reflects an increase of \$1.7 million in expenditures/transfers out from the FY 2020-21 amended budget and an increase of \$6.9 million in expenditures/transfers out from the FY 2020-21 adopted budget. The increase in expenditures/transfers out from the FY 2020-21 adopted budget can be attributed to increases in staffing, retirement costs, Services and Supplies, and Capital Outlays. The FY 2021-22 proposed budget of 957 positions has a net increase of eight positions over the FY 2020-21 amended budget.

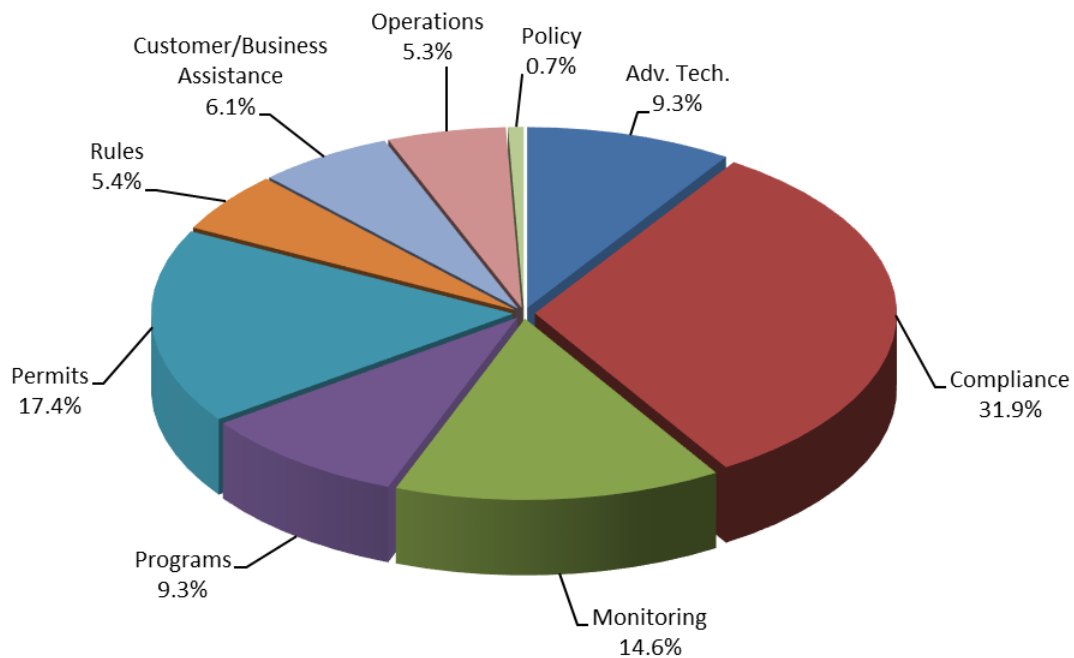

Expenditures

Work Program

South Coast AQMD expenditures are organized into nine Work Program Categories: Advance Clean Air Technology; Ensure Compliance with Clean Air Rules; Customer Service and Business Assistance; Develop Programs to Achieve Clean Air; Develop Rules to Achieve Clean Air; Monitoring Air Quality; Operational Support; Timely Review of Permits; and Policy Support. Each category consists of Work Programs, or activities, which are classified according to the nature of the activity being performed.

Each Work Program ties to the goals and objectives of the agency and identifies resources, performance measures/outputs, and legal mandates. A complete description of each program category along with a detailed work program sorted by program is included in the Goals and Priority Objectives and Work Program section. The following pie chart represents the budgeted expenditures by Program Category for FY 2021-22.

Work Program Category Expenditures

The following table compares South Coast AQMD Work Program expenditures by category for the FY 2020-21 adopted budget and FY 2021-22 proposed budget.

Work Program Categories	FY 2020-21 Adopted Budget	FY 2021-22 Proposed Budget
Advance Clean Air Technology	\$14,581,483	\$16,662,843
Customer Service and Business Assistance	12,035,187	10,903,032
Develop Programs to Achieve Clean Air	13,561,091	16,722,332
Develop Rules to Achieve Clean Air	9,871,502	9,713,071
Ensure Compliance with Clean Air Rules	56,299,951	57,377,234
Monitoring Air Quality	25,853,696	26,336,839
Operational Support	9,037,236	9,569,399
Policy Support	1,174,207	1,259,631
Timely Review of Permits	30,574,628	31,339,022
Total	\$172,988,981	\$179,883,403

Note: Fully burdened expenditures based on the Cost Allocation Schedule

Account Categories

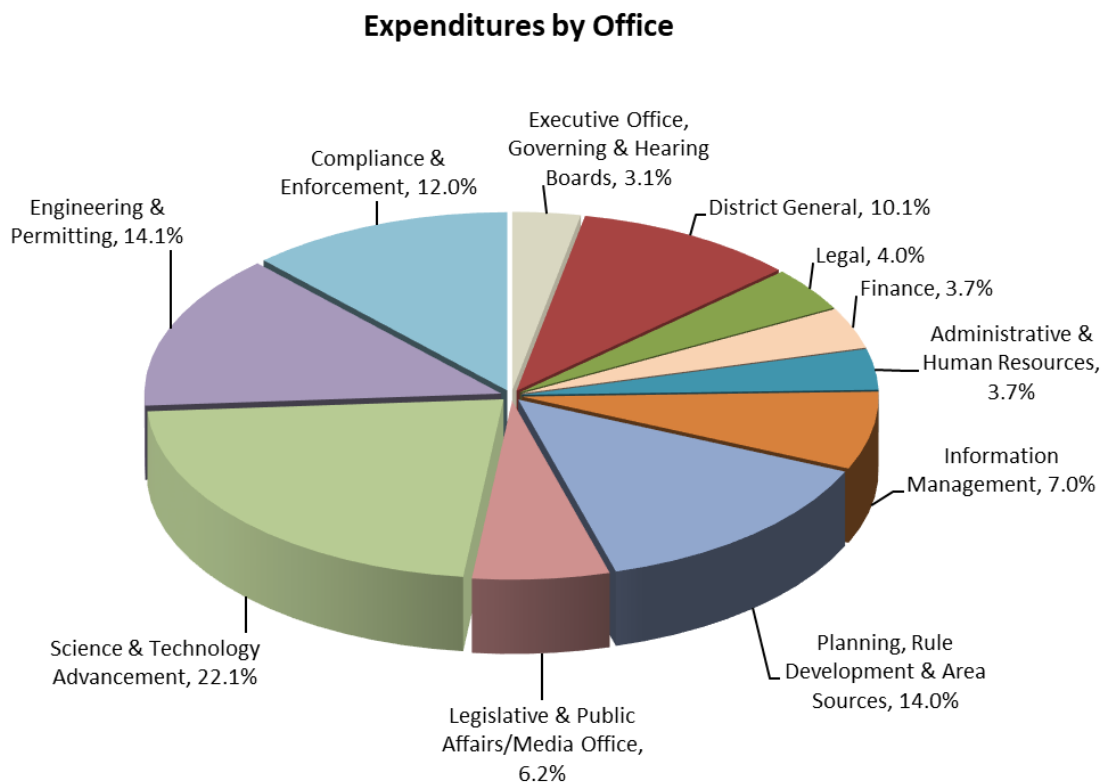

The following table compares the FY 2020-21 adopted budget and the FY 2020-21 amended budget to the proposed budget for FY 2021-22 by account category. The FY 2020-21 amended budget includes the Board-approved mid-year adjustments through February 2021.

Account Description	FY 2020-21 Adopted Budget	FY 2020-21 Amended Budget¹	FY 2021-22 Proposed Budget
Salaries/Benefits	\$140,750,642	\$140,763,607	\$146,228,481
Insurance	1,449,140	1,474,140	1,449,140
Rents	805,123	1,088,640	804,123
Supplies	3,265,442	3,746,065	3,302,458
Contracts and Services	10,656,863	13,150,445	11,145,047
Maintenance	1,813,343	2,270,010	1,837,949
Travel/Auto Expense	945,323	1,107,325	916,823
Utilities	1,989,620	1,869,630	1,967,620
Communications	907,800	949,865	898,884
Capital Outlays	926,000	1,702,487	1,850,000
Other	1,444,783	1,586,319	1,448,283
Debt Service	7,193,549	7,193,549	7,193,242
Transfers Out	841,353	1,276,989	841,353
Total	\$172,988,981	\$178,179,071	\$179,883,403

¹ Includes Board approved changes through February 2021

As mentioned previously, the proposed budget for FY 2021-22 represents an approximately \$1.7 million increase in expenditures from the FY 2020-21 amended budget. The FY 2020-21 amended budget includes mid-year increases associated with the following: monitoring equipment and vehicles for the implementation of the Rule 1180 Community and Enhanced Monitoring Program, legal counsel for specialized, environmental, and other litigation, outreach efforts for the elementary school education program, staff, services and supplies and capital outlays for critical projects and programs, and grant-related expenditures offset by revenue.

The following pie chart represents budgeted expenditures by Office for FY 2021-22.

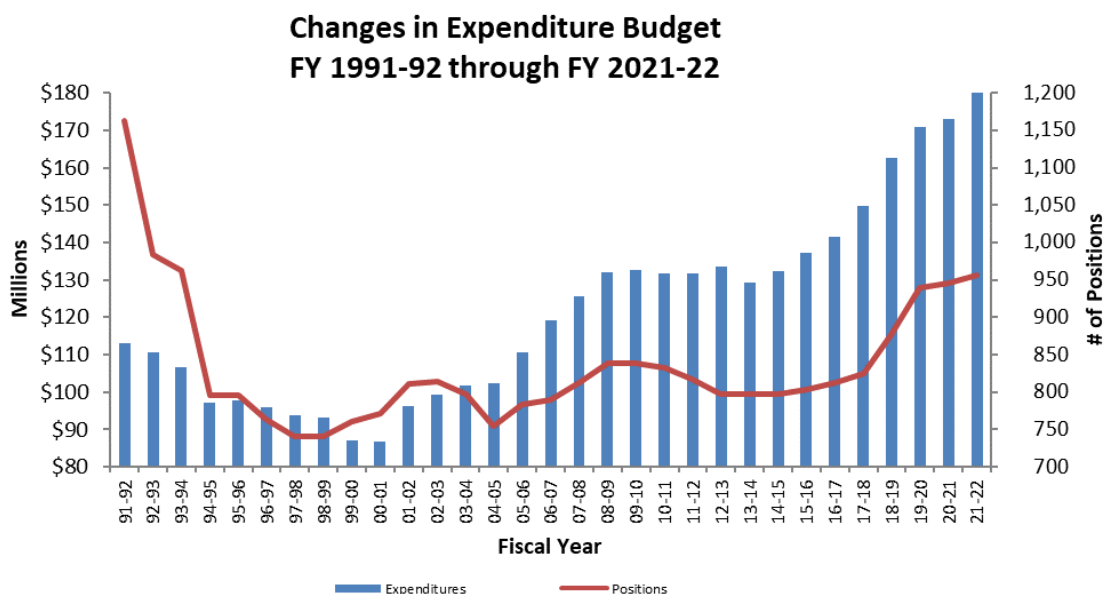

Budget Strategy

Over the years, South Coast AQMD has focused on streamlining many of its operations while still meeting its program commitments despite new federal and state mandates and increased workload complexity. The focus has been, and continues to be, on reducing or maintaining expenditure levels in the Major Object of Services and Supplies and maximizing the efficient use of staff resources to enable select vacant positions to remain vacant, be deleted, or be unfunded whenever possible. In FY 2017-18, South Coast AQMD began to receive funding from the California Air Resources Board under AB 617 to reduce exposure in neighborhoods most impacted by air pollution as well as funding under the AB 134 Community Air Protection Fund. In FY 2019-20, South Coast AQMD began receiving funding through the California Air Resources Board under the Volkswagen Mitigation Settlement Agreement. These new programs, resulting

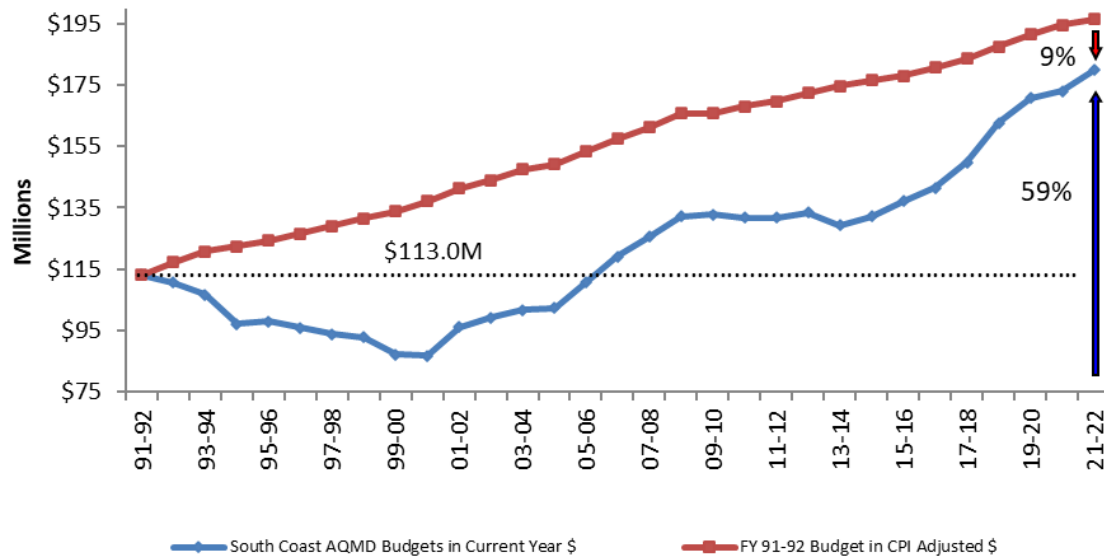

in additional funding sources, has increased South Coast AQMD's workload substantially. Nonetheless, South Coast AQMD continues to focus on the efficient use of its resources. South Coast AQMD performs an on-going review of revenues, expenditures, and staffing levels and regularly presents results to the Board. The proposed vacancy rate for FY 2021-22 is 13%, which remains the same as the rate for the FY 2020-21 amended budget.

The following charts show South Coast AQMD's staffing and budget levels starting in FY 1991-92 when staffing was at 1,163 FTEs. The proposed budget for FY 2021-22 reflects a staffing level of 957 FTEs. This staffing level is 18% (206 FTEs) below the FY 1991-92 level.

The FY 2021-22 proposed budget is 59% higher when compared to the FY 1991-92 adopted budget of \$113 million. However, after adjusting the FY 1991-92 adopted budget for CPI over the last 29 years, the FY 2021-22 proposal is 9% lower.

Inflation Impact on South Coast AQMD Budgets FY 1991-92 through FY 2021-22

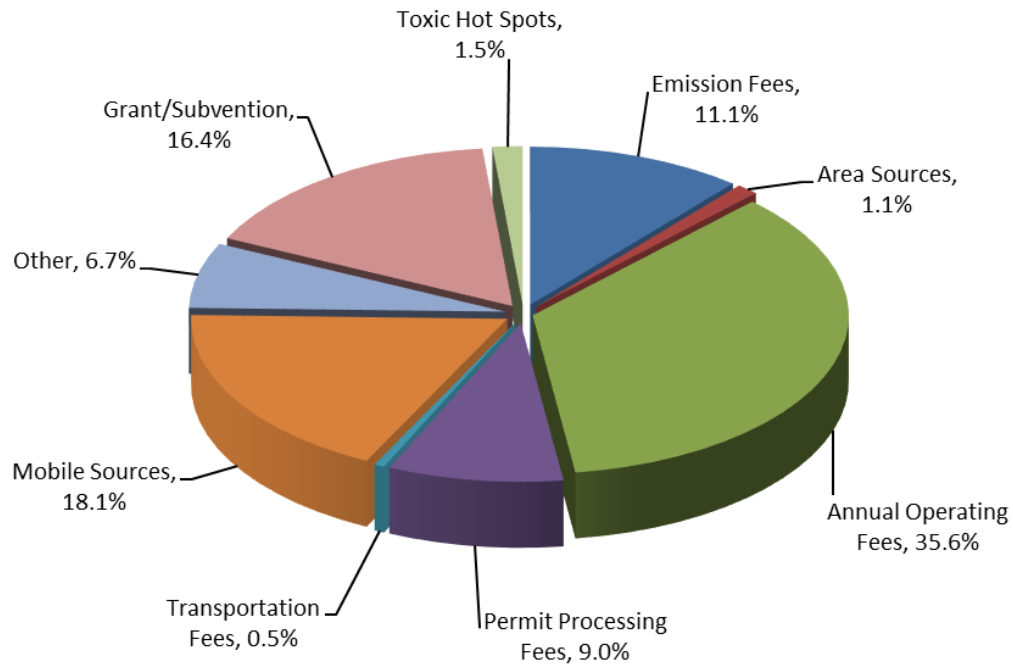

Note: CPI adjustment based on California Consumer Price Index for the preceding Calendar Year

Revenues

Revenue Categories

Each year, in order to meet its financial needs, the South Coast AQMD Governing Board adopts a budget supported by a system of annual operating and emission fees, permit processing fees, toxic “Hot Spots” fees, area sources fees, source test/analysis fees, and transportation plan fees. In FY 2021-22, these fees are projected to generate approximately \$106.5 million or 59% of South Coast AQMD revenues; of this \$106.5 million, \$100.1 million or 56% of South Coast AQMD’s projected revenues are from stationary sources. Other sources, which include penalties/settlements, Hearing Board fees, interest, and miscellaneous income, are projected to generate approximately 6% of total revenues in FY 2021-22. The remaining 35% of revenue is projected to be received in the form of federal and state grants, California Air Resources Board (CARB) subvention, and California Clean Air Act motor vehicle fees. Beginning in Fiscal Year 1978-79, the South Coast AQMD became a fee supported agency no longer receiving financial support from property taxes. The following pie chart represents revenues by Major Category for the proposed FY 2021-22 budget.

Revenues by Major Category

The following table compares the FY 2020-21 adopted revenue budget and the FY 2020-21 amended revenue budget to the proposed revenue budget for FY 2021-22. The FY 2020-21 amended revenue budget includes Board-approved mid-year changes through February 2021.

Revenue Description	FY 2020-21 Adopted Budget	FY 2020-21 Amended Budget ¹	FY 2021-22 Proposed Budget
Annual Operating Emission Fees	\$ 20,300,062	\$ 20,300,062	\$ 19,955,890
Annual Operating Permit Renewal Fees	60,881,370	60,881,370	64,041,550
Permit Processing Fees	19,744,260	19,744,260	16,141,800
Portable Equipment Registration Program	1,000,000	1,000,000	1,000,000
Area Sources	2,000,000	2,000,000	2,056,000
Grants/Subvention	24,706,150	26,549,604	29,534,960
Mobile Sources	29,489,697	29,489,697	32,470,096
Transportation Programs	950,500	950,500	934,900
Toxic Hot Spots	2,891,580	2,891,580	2,750,170
Other ²	7,847,962	7,847,962	6,790,637
Transfers In	3,177,400	4,528,400	4,207,400
Total	\$172,988,981	\$176,183,435	\$179,883,403

¹ Includes Board approved changes through February 2021

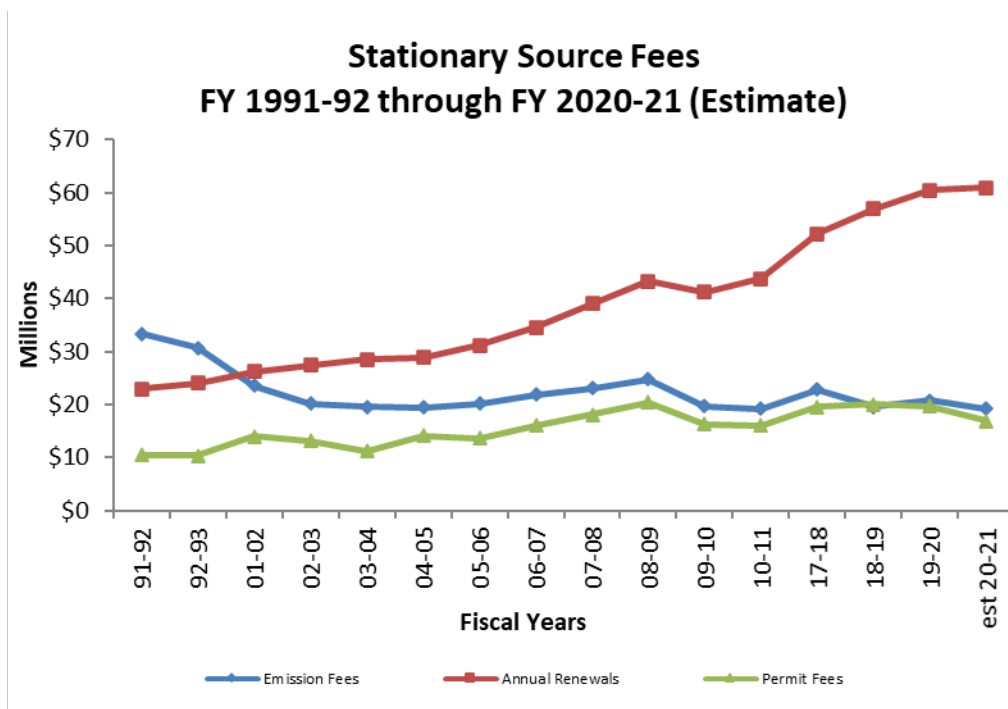

² Includes revenues from Interest, Lease Income, Source Testing, Hearing Board, Penalties/Settlements, Subscriptions, and Other

Over the past two decades, total permit fees (including permit processing, annual operating permit, and annual emissions-based fees) collected from stationary sources has increased by about 45% from \$66.8 million in FY 1991-92 to \$97.0 million (estimated) in FY 2020-21. When adjusted for inflation however, stationary source revenues have decreased by 13% over this same period.

Mobile source revenues that are subvended to the South Coast AQMD by the Department of Motor Vehicles (DMV) are projected to increase from the FY 2020-21 budgeted amounts based on vehicle registration information from the DMV and recent revenue received. In addition, this category reflects reimbursements of incentive programs (Clean Fuels, Carl Moyer, Prop 1B, VW Mitigation and AB 134) whose contract activities and revenues are recorded in special revenue funds (outside the General Fund). These incentive program costs incurred by the General Fund are reimbursed to the General Fund from the various special revenue funds (subject to any administrative caps) and are reflected under the Mobile Source revenue category.

Revenues from the federal government (Environmental Protection Agency, Department of Homeland Security, and Department of Energy) are projected to increase in FY 2021-22 from FY 2020-21 budgeted levels reflecting the anticipated level of federal funding from one-time and on-going grants in support of air quality efforts. State Subvention funding is expected to remain at the current level for FY 2020-21. Finally, the AB 617 Community Air Protection Program implementation funding from CARB is budgeted at a higher level than the FY 2020-21 budget.

The following graph tracks actual stationary source revenues by type of fee from FY 1991-92 (when CPI limits were placed on South Coast AQMD fee authority) to estimated revenues for FY 2020-21.

Debt Structure

Pension Obligation Bonds

These bonds were issued jointly by the County of San Bernardino and the South Coast AQMD in December 1995. In June 2004 the South Coast AQMD went out separately and issued pension obligation bonds to refinance its respective obligation to the San Bernardino County Employee's Retirement Association (SBCERA) for certain amounts arising as a result of retirement benefits accruing to members of the Association.

The annual payment requirements under these bonds are as follows:

Year Ending June 30	Principal	Interest	Total
2022	4,006,881	3,186,361	7,193,242
2023	3,780,000	348,736	4,128,736
2024	4,010,000	118,897	4,128,897
Total	\$11,796,881	\$3,653,994	\$15,450,875

Fund Balance

South Coast AQMD is projecting an Unreserved (Unassigned) Fund Balance for June 30, 2022 of \$62,096,338 in addition to the following Reserved and Unreserved Designated Fund Balances for FY 2021-22.

Classification	Reserves/Unreserved Designations	Amount
Committed	Reserve for Encumbrances	\$ 13,200,000
Nonspendable	Reserve for Inventory of Supplies	80,000
	Unreserved Designations:	
Assigned	For Enhanced Compliance Activities	883,018
Assigned	For Other Post Employment Benefit (OPEB) Obligations	2,952,496
Assigned	For Permit Streamlining	234,159
Assigned	For Self-Insurance	2,000,000
Assigned	For Unemployment Claims	80,000
Total Reserved & Unreserved Designations		\$ 19,429,673

Reserves are portions of the fund balance set aside for future use and are therefore not available for appropriation. These funds are made-up of encumbrances which represent the estimated amount of current and prior years' purchase orders and contract commitments at year-end and inventory which represents the value at cost of office, computer, cleaning and laboratory supplies on hand at year-end.

Unreserved Designations in the fund balance indicate plans for use of financial resources in future years. The Designation for Enhanced Compliance Activities provides funding for inspection/compliance efforts. The Designation for Other Post Employment Benefit Obligations (OPEB) provides funding to cover the current actuarial valuation of the inherited OPEB obligation for long-term healthcare costs from the County of Los Angeles resulting from the consolidation of the four county Air Pollution Control Districts (APCDs). The Designation for Permit Streamlining was established to fund program enhancements to increase permitting efficiency and customer service. South Coast AQMD is self-insured for general liability, workers' compensation, automobile liability, premises liability, and unemployment.

Long-Term Projection

South Coast AQMD continues to face a number of challenges in the upcoming years, including the economic impact from the COVID-19 pandemic, continued higher operating costs, the need for major information technology and building infrastructure improvement projects with the aging of our headquarters building, and growing program commitments while meeting air quality goals and permit processing targets. Recruiting, training and retaining the high level of technical staffing expertise necessitated by the Community Air Protection Program established in 2017 under AB 617, the Volkswagen Mitigation Settlement Projects, the Refinery Fenceline Air Monitoring Plans under Rule 1180, and additional incentive funding under AB 134, as well as for South Coast AQMD's ongoing projects and programs, will continue to be a challenge further complicated by COVID-19 and the retirement of current, long-term staff.

Increasing retirement costs and any future actions SBCERA may take due to financial market fluctuations which could significantly impact South Coast AQMD's level of expenditures remains a primary uncertainty. Any legislative action that may impact the level of federal and state funding from grant awards, particularly AB 617 funding, and subvention funds is another unknown that must be considered as South Coast AQMD plans for the future. Cost recovery within the constraints of Proposition 26 is an additional uncertainty as South Coast AQMD strives to balance program operating expenses with revenues collected from fees.

In order to face these challenges, South Coast AQMD has a five year plan in place that provides for critical infrastructure improvement projects, maintains a stable vacancy rate in order to maximize cost efficiency, better aligns program revenues with costs, and strives to keep the percentage of unreserved fund balance to revenue within the Governing Board policy of 20%.

The following table, outlining South Coast AQMD's financial projection over this time period, shows the agency's commitment to meet these challenges and uncertainties while protecting the health of the residents within the South Coast AQMD boundaries and remaining sensitive to business. Starting in FY 2023-24, South Coast AQMD will realize a \$3.1M savings in Pension Obligation Bond payments.

Fiscal 2020-21 Estimate and Five Year Projection (\$ in Millions)						
	FY 20-21 Estimate	FY 21-22 Proposed	FY 22-23 Projected	FY 23-24 Projected	FY 24-25 Projected	FY 25-26 Projected
STAFFING	949	957	957	957	957	957
REVENUES/TRANSFERS IN*	\$171.3	\$179.9	\$178.8	\$183.0	\$182.9	\$182.4
EXPENDITURES/TRANSFERS OUT	\$175.2	\$179.9	\$187.5	\$188.2	\$192.1	\$191.1
Change in Fund Balance	(\$3.9)	-	(\$8.7)	(\$5.2)	(\$9.2)	(\$8.7)
UNRESERVED FUND BALANCE (at year-end)	\$68.2	\$68.2	\$59.5	\$54.3	\$45.1	\$36.4
% of REVENUE	39%	38%	33%	30%	25%	20%
* FY 2020-21 does not include a projected CPI fee increase of 2.8% due to COVID-19; FY 2021-22 has a projected CPI increase of 1.7% and restoration of the FY 2020-21 CPI fee increase; CPI fee increases are projected as follows: FY 2022-23 – 2.8%, FY 2023-24 – 3.2%, FY 2024-25 – 3.1%, and 2025-26 – 3.0%.						

As part of the Five-Year Projection, South Coast AQMD has identified projected building maintenance and capital outlay improvement projects for its headquarters building. These projects are outlined in the following chart. In addition, the Infrastructure Improvement Special Revenue Fund was created with unanticipated one-time revenues from the General Fund for some of the capital outlay building-related improvement projects.

GENERAL FUND POTENTIAL BUILDING MAINTENANCE and CAPITAL OUTLAY PROJECTS FY 2021-22 through 2025-26
Child Care Building Roof Replacement
Patio Crack and Joint Sealing
Carpet Installation 3rd Floor
Atrium and Building Expansion Joint Waterproofing
Concrete Repair in East Courtyard & Pedestrian Areas
Guard Shack Replacement
Cafeteria Exhaust Equipment Upgrade/Replacement
Fire Life Safety System Upgrade
Air Handler Mechanical Systems Upgrade/Fan Wall Installation
Irrigation System Renovation
Building Window and Structural Joint Sealing
Saw Tooth Lab Roof Refurbishment
Parking Lot Repair and Reseal
Leibert AC Units Replacement/Data Center Enhancements
Pneumatic Controls to DDC (Direct Digital Control) Conversion
Roofing Surface Recoat
Child Care Playground Renovation
Restroom and Copy/Coffee Sink and Counter Tops Replacement
Landscape Renovation
Automatic Transfer Switch Upgrade
Building Lighting Controls Upgrade
Retrofit Fluorescent Down Lighting (LED)
Door Replacement 2 North (Administration)
Restroom Panels Refurbishment/Replacement
Conference Center Paint and Wallpaper
Computer Room UPS System Upgrade
Parking Lot Lights to LED Conversion
Aging Kitchen Equipment Replacement
Building Interior Repaint
VCT Tiles Replacement (Various Areas)
Vinyl Wall Covering Replacement (Various Areas)
Emergency Generator Upgrade
Building Energy Management System Upgrade

**SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT
PROPOSED GOALS AND PRIORITY OBJECTIVES
FOR FY 2021-2022**

MISSION STATEMENT

“To clean the air and protect the health of all residents in the South Coast Air District through practical and innovative strategies.”

GOALS AND PRIORITY OBJECTIVES

The following Goals and Priority Objectives have been identified as being critical to meeting South Coast AQMD’s Mission in Fiscal Year 2021-22.

GOAL I. Achieve Clean Air Standards.

Priority Objective		Performance Indicator	Performance Measurement
1	Development and Implementation of Air Quality Management Plans	Adherence to development, adoption and implementation schedules for rules related to Air Quality Management Plans.	Complete six rule adoptions and/or actions that result in achievements towards 2016 AQMP emissions reductions. Hold at least four AQMP advisory group meetings for 2022 AQMP development. Issue draft 2022 AQMP by Fall 2021.
2	Secure Incentive Funding for Emissions Reduction	Dollar amount of new funding sources for pollution reduction projects.	Secure \$250 million of new funding sources.
3	Implementation of AB 617 in Designated Communities	Develop air monitoring and emissions reduction plans for the 2020-designated community. Implement plans for each of the five communities designated in 2018 and 2019.	Implementation of air monitoring and emissions reduction plans for the five communities designated in 2018 and 2019, and development of these plans for the one new community.
4	Ensure Efficient Air Monitoring and Laboratory Operations	Achieve acceptable completion of valid data points out of the scheduled measurements in the South Coast AQMD air monitoring network for NAAQS pollutant before U.S. EPA deadline.	Achieve acceptable valid data completion submitted to U.S. EPA before deadline.
5	Ensure Timely Inspections of Facilities	Total number of Title V Inspections completed annually.	Complete 100% Title V Inspections.
6	Maintain progress in reducing the permit applications inventory	Number of pending permit applications.	Maintain pending permit applications inventory excluding Permits to Construct issued and RECLAIM transition applications at or near 3,000.
7	Support Development of Cleaner Advanced Technology	Amount of Clean Fuels Program projects funded.	Fund \$10 Million of Clean Fuels program projects with a 1:4 leveraging ratio.
8	Incentive Programs	% of grant money executed in contracts.	50% of grant money contracted within six months after receipt of funds.

GOAL I. Achieve Clean Air Standards. (continued)

Priority Objective		Performance Indicator	Performance Measurement
9	Complete Final Report for the fifth Multiple Air Toxics Exposure Study (MATES V) and implementation of the MATES V Advanced Monitoring projects.	Complete written report of fixed-site monitoring data, emission inventory and health risk modeling. Complete implementation of the remaining three Advanced Monitoring projects.	Complete written report of fixed-site monitoring data, emission inventory and health risk modeling. Complete implementation of the remaining three Advanced Monitoring projects.

GOAL II. Enhance Public Education and Equitable Treatment for All Communities.

Priority Objective		Performance Indicator	Performance Measurement
1	Evaluation of Low Cost Air Quality Sensors	Evaluation and posting of results of low cost air quality sensors that have reached the market.	Evaluate and post results of 75% of sensors that have reached the market.
2	Outreach	Number of large community outreach events conducted in each County and effective information distribution for South Coast AQMD programs that achieve clean air.	Conduct/participate in one large community outreach event per quarter, including one in each County, starting six months after it is safe to have large gatherings. Develop and implement SOPs to provide information to the public as quickly and accurately as possible.
3	Timely Investigation of Community Complaints	Initiate complaint investigation within two hours of complaint receipt.	During normal South Coast AQMD business hours, contact 90% of complainants within two hours of complaint receipt. Post wide spread complaints on social media.
4	Social Media Efforts	Percentage increase in number of social media followers as well as increase audience engagement through impressions (views) of shared information via outreach on South Coast AQMD events, programs and major incidents. Contract with an outside consultant to form an internal committee to develop social media recommendations for Board approval.	15% to 20% increase in social media followers. Continue efforts to increase impressions and engagement on posts and/or campaigns with a monthly average goal of 2,400 Instagram impressions /8,000 Facebook impressions/48,000 Twitter impressions on posts. Present recommendations to the Board.
5	School Educational Outreach	Number of classrooms participating in the air quality education program in environmental justice communities. Develop materials for other grade levels.	Provide curriculums to 300 high schools, 100 middle schools, and 20 elementary schools throughout the four Counties in environmental justice communities and teach at schools as requested when schools are back in session. Develop air quality teaching materials for schools. Develop curriculum that can be used by any school.

GOAL III. Operate Efficiently and Transparently.

Priority Objective		Performance Indicator	Performance Measurement
1	Ensure Transparent Governance	Percentage of Committee and Board meeting agendas with materials made available to the public one week prior to the meeting.	100% of Committee and Board meeting agendas with materials made available to the public one week prior to the meeting.
2	Ensure Transparent Governance	Percentage of Stakeholder and Working Group meeting agendas with materials made available prior to the meeting.	100% of Stakeholder and Working Group meeting agendas with materials made available to the public three days prior to the meeting. Address the ability to know meeting participants.
3	Maintain a Well Informed Staff	Number of staff information sessions offered and conducted.	Conduct 12 equity related events and six information sessions/training sessions on other topics for all staff.
4	Partner with Public Agencies, Stakeholder Groups, & Business Community	Number of meetings with Permit Streamlining Task Force subcommittee and stakeholders.	Conduct 2 meetings of the Permit Streamlining Task Force subcommittee and stakeholders.
5	Timely Financial Monitoring	Timely budgetary financial reporting.	Submit quarterly budgetary financial reports to the Governing Board within six working days of the end of the quarter for quarters 1-3. Submit the 4 th quarter report within six working days of the end of July.
6	Employee Affinity Groups	Support Employee Affinity Groups.	Establishment of Employee Affinity Groups; development of goals and objectives of these groups in alignment with agency priorities.
7	Training and Development	Develop job related equity professional development training that increases staff's awareness and cultural competency.	Conduct one training/activity per quarter.

* Includes positions added by the Board in FY 2020-21, 1 in October (BL 10/2/2020 #8) and 3 in March (BL 3/5/2021 #10). FY 21-22 additions include 7 grant funded positions.						
** CPI projections include the following: FY 21/22 – Restore the FY 20/21-2.8% and include the FY 21/22- 1.7%; FY 22/23 - 2.8%; FY 23/24 - 3.2%; FY 24/25 - 3.1%; & FY 25/26 - 3.0%.						

Rule 320 – Fee Increase

- Restoration of the FY 2020-21 CPI Fee Increase – 2.8%
- FY 2021-22 CPI Fee Increase – 1.7%

Recommended Actions:

- Adopt the Executive Officer's FY 2021-22 Proposed Goals and Priority Objectives
- Adopt the FY 2021-22 Draft Budget

BOARD MEETING DATE: May 7, 2021

AGENDA NO. 26

PROPOSAL: Determine That Proposed Amendments to Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, Are Exempt from CEQA, and Amend Rule 1469.1

SYNOPSIS: Proposed Amended Rule 1469.1 would further reduce hexavalent chromium emissions from chromate spray coating operations by including requirements for other related activities such as dried coating removal and demasking, enhancing the point source requirements, enhancing parameter monitoring requirements for air pollution controls, and further minimizing the release of fugitive emissions through additional requirements for building enclosure, housekeeping, and best management practices. The proposed amendments would also remove outdated definitions and provisions.

COMMITTEE: Stationary Source Committee, March 19, 2021, Reviewed

RECOMMENDED ACTIONS:

Adopt the attached Resolution:

1. Determining that Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, is exempt from the requirements of the California Environmental Quality Act; and
2. Amending Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium.

Wayne Natri
Executive Officer

SR:SN:JW:ML:YO

Background

Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, was adopted on March 4, 2005 and regulates hexavalent chromium emissions from chromate coating

spraying operations. Chromate coatings are typically applied as an anti-corrosion agent onto parts in the aerospace, military, and commercial industries. Rule 1469.1 includes requirements for point sources, transfer efficiency, spray booth operation, housekeeping, monitoring, reporting, and recordkeeping.

Proposed Amended Rule 1469.1 (PAR 1469.1) is needed to further reduce point and fugitive sources of hexavalent chromium emissions from chromate coating spraying operations and to establish requirements to reduce emissions of hexavalent chromium from spraying-related operations, such as those that disturb dried chromate coatings. Many of the provisions in PAR 1469.1, such as requirements for best management practices and building enclosures as well as enhanced housekeeping provisions are based on updates to other toxic metal particulate rules that have been recently adopted or amended. PAR 1469.1 also removes outdated definitions and provisions from the rule.

Public Process

Development of PAR 1469.1 has been conducted through a public process. A working group was formed to provide the public and stakeholders an opportunity to discuss important details about the proposed amended rule and provide input during the rule development process. The Working Group is composed of representatives from businesses, environmental groups, public agencies, and consultants. Staff held seven working group meetings, six of which were conducted virtually using Zoom due to COVID-19 restrictions. The meetings were held on March 4, 2020, June 10, 2020, July 22, 2020, September 9, 2020, October 22, 2020, January 13, 2021, and March 10, 2021. In addition, a Public Workshop was held on February 18, 2021 to present the proposed amended rule and receive public comment.

Proposal

PAR 1469.1 establishes requirements to further reduce hexavalent chromium emissions from facilities that conduct chromate coating spraying operations. PAR 1469.1 includes new provisions to minimize emissions from dried chromate coating removal and demasking activities. PAR 1469.1 also updates spray booth point source compliance options to require HEPA or better filtration for new or modified facilities and provides a pathway for the two facilities that are currently not required to have HEPA filtration for their spray booths to either install HEPA filtration or accept emission limits and filtration requirements based on the facility's existing approved health risk assessment. The final implementation date under PAR 1469.1 for new HEPA filtration requirements is January 1, 2026 to recognize economic impacts that these businesses have experienced under COVID-19.

PAR1469.1 requires dried chromate coating removal activities to be vented to filtration equivalent or better than HEPA. PAR 1469.1 strengthens parameter monitoring of pollution controls providing more specificity for measuring filter collection efficiencies

and performance. PAR 1469.1 enhances housekeeping provisions and adds new provisions for best management practices and building enclosures for spray booths and areas where fugitive emissions may be generated. Housekeeping requirements include more frequent cleaning requirements and specifying approved cleaning methods to prevent the accumulation of dried chromate coatings that can become fugitive emissions. Best management practices include requirements to prohibit the use of compressed air for certain activities and to mark pathways and storage areas for workpiece support equipment that may be coated with chromate coating overspray. Building enclosure requirements ensure that building openings near operations that can generate fugitive emissions are closed, and that equipment that may be a source of fugitive emissions are stored within a building.

Key Issues

Throughout the rulemaking process, staff has worked with stakeholders to address comments and resolve issues. Staff is not aware of any remaining key issues.

California Environmental Quality Act

Pursuant to the California Environmental Quality Act (CEQA) Guidelines Sections 15002(k) and 15061, the proposed project is exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3). A Notice of Exemption has been prepared pursuant to CEQA Guidelines Section 15062 and is included as Attachment H to this Board Letter. If the proposed project is approved, the Notice of Exemption will be electronically filed with the State Clearinghouse of the Governor's Office of Planning and Research to be posted on their CEQAnet Web Portal, which may be accessed via the following weblink: <https://ceqanet.opr.ca.gov/search/recent>. In addition, the Notice of Exemption will be electronically posted on South Coast AQMD's webpage which can be accessed via the following weblink: <http://www.aqmd.gov/nav/about/public-notices/ceqa-notices/notices-of-exemption/noe---year-2021>. The electronic filing and posting of the Notice of Exemption is being implemented in accordance with Governor Newsom's Executive Orders N-54-20 and N-80-20 issued on April 22, 2020 and September 23, 2020, respectively, for the State of Emergency in California as a result of the threat of COVID-19.

Socioeconomic Assessment

PAR 1469.1 would affect a total of 115 facilities (with 231 spray booths) that are mainly in manufacturing sectors. The total annual cost of the proposed amendments is expected to be approximately \$443,000 across the universe of affected facilities. The sectors of electroplating, plating, polishing, anodizing, and coloring will have the greatest share of the compliance costs (28.6 percent). The majority of estimated costs are attributable to housekeeping and parameter monitoring requirements. The regional economic impacts of PAR 1469.1 are expected to be minimal.

AQMP and Legal Mandates

Pursuant to Health & Safety Code Section 40460 (a), South Coast AQMD is required to adopt an AQMP demonstrating compliance with all federal regulations and standards. South Coast AQMD is required to adopt rules and regulations that carry out the objectives of the AQMP. PAR 1469.1 will implement an air toxics control measure (TXM-03) from the 2016 AQMP but is not a control measure for attainment of state or federal regulations. PAR 1469.1 is needed to further reduce hexavalent chromium emissions from facilities that spray coatings containing chromium.

Implementation and Resource Impact

Existing South Coast AQMD resources will be used to implement PAR 1469.1.

ATTACHMENT A

SUMMARY OF PROPOSAL

Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium

Point Source Requirements

- HEPA filtration or better for chromate spraying operations at new or modified facilities
- Provides compliance pathway for two facilities currently not required to have HEPA filtration
- Vent dried chromate coating removal activities to HEPA filtration or better

Spray Booth Parameter Monitoring

- Establishes minimum air velocity requirements
- Measure inward face air velocity at specified frequency
- Establishes maximum and minimum filter pressure drop limits
- Requires daily pressure differential gauge readings

Housekeeping Requirements

- Conduct weekly cleaning in most areas using approved cleaning methods
- Conduct daily cleaning of ground areas within 20 feet of spray booth ingresses and egresses
- Conduct weekly cleaning of floor areas within spray booths, replace all protective floor or wall coverings every six months, or replace sticky mats at spray booth entrances daily
- Visually inspect spray booth exhaust duct during final stage filter replacement, and take a photo
- Clean spray booth exhaust duct if overspray is observed or if analysis of overspray is positive for hexavalent chromium
- Store waste in closed containers

Best Management Practices

- Close enclosed spray booth doors when conducting certain activities within the spray booth
- Install a system that ensures air pollution control device operation during spraying
- Prohibit use of compressed air for demasking activities outside enclosed spray booth
- Establish and mark transit and storage areas for workpiece support equipment
- Remove personal protective equipment in a manner that minimizes fugitive emissions

Building Enclosure Requirements

- Conduct spraying operations, dried chromate coating removal activities, and demasking activities within a building enclosure
- Close building openings within 20 feet of the opening of an open face spray booth and areas where dried chromate coating removal and demasking activities occur
- Store workpiece support equipment and cleaning equipment within a building enclosure

Recordkeeping

- Maintain records to demonstrate compliance with parameter monitoring, housekeeping, best management practices, and spray booth exhaust duct cleaning
- Retain records for five years

Prohibitions

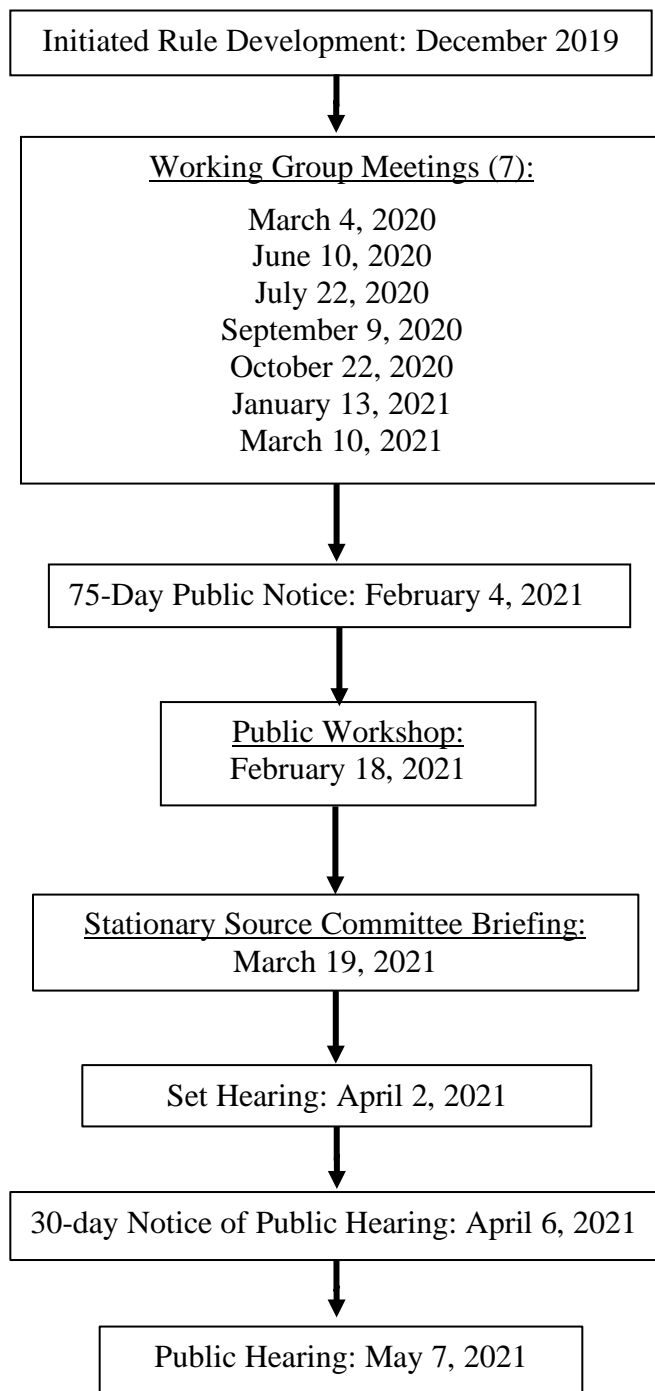

- Prohibit new open face spray booths unless located within a permanent total enclosure
- Prohibit new outdoor spray booths unless greater than 10,000 sq ft

RESOLUTION NO. 21-____

A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) determining that Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium is exempt from the requirements of the California Environmental Quality Act (CEQA).

A Resolution of the South Coast AQMD Governing Board amending Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium.

WHEREAS, the South Coast AQMD Governing Board finds and determines that Proposed Amended Rule 1469.1 is considered a “project” as defined by CEQA; and

WHEREAS, the South Coast AQMD has had its regulatory program certified pursuant to Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l) and has conducted a CEQA review and analysis of the proposed project pursuant to such program (South Coast AQMD Rule 110); and

WHEREAS, the South Coast AQMD Governing Board finds and determines after conducting a review of the proposed project in accordance with CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA, and CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA, that the proposed project is exempt from CEQA; and

WHEREAS, the South Coast AQMD Governing Board finds and determines that since the only physical modifications that may occur as a result of the proposed project are associated with implementing the building enclosure requirements, which may be achieved without involving construction or via minimal construction activities, depending on the affected facility, it can be seen with certainty that there is no possibility that proposed project may have any significant adverse effects on the environment, and is therefore, exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption; and

WHEREAS, the South Coast AQMD staff has prepared a Notice of Exemption for the proposed project that is completed in compliance with CEQA Guidelines Section 15062 – Notice of Exemption; and

WHEREAS, the South Coast AQMD staff conducted a public workshop meeting on February 18, 2021 regarding Proposed Amended Rule 1469.1; and

WHEREAS, Proposed Amended Rule 1469.1 and supporting documentation, including but not limited to, the Notice of Exemption, Final Staff Report,

ATTACHMENT E

and Socioeconomic Impact Assessment, were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the project; and

WHEREAS, the South Coast AQMD Governing Board finds and determines, taking into consideration the factors in Section (d)(4)(D) of the Governing Board Procedures (Section 30.5(4)(D)(i) of the Administrative Code), that one modification has been made to subparagraph (h)(4)(B) since the notice of public hearing was published to correct a typographical error. This correction is not so substantial as to significantly affect the meaning of Proposed Amended Rule 1469.1 within the meaning of Health and Safety Code Section 40726 because: (a) the changes do not impact emission reductions, (b) the changes do not affect the number or type of sources regulated by the rule, (c) the changes are consistent with the information contained in the notice of public hearing, and (d) the consideration of the range of CEQA alternatives is not applicable because the proposed project is exempt from CEQA; and

WHEREAS, Proposed Amended Rule 1469.1 will be not be submitted for inclusion into the State Implementation Plan; and

WHEREAS, Health and Safety Code Section 40727 requires that prior to adopting, amending or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board has determined that a need exists to adopt Proposed Amended Rule 1469.1 to reduce hexavalent chromium emissions from chromate coating operations and associated operations to further protect public health; and

WHEREAS, the South Coast AQMD Governing Board obtains its authority to adopt, amend or repeal rules and regulations from Sections 39002, 39650 et. seq., 40000, 40440, 40441, 40702, 40725 through 40728, 41508, and 41700 of the Health and Safety Code; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 1469.1 is written and displayed so that its meaning can be easily understood by the persons directly affected by it; and

ATTACHMENT E

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 1469.1 is in harmony with and not in conflict with or contradictory to, existing statutes, court decisions or state or federal regulations; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 1469.1 does not impose the same requirements as any existing state or federal regulations, and the proposed amended rule is necessary and proper to execute the powers and duties granted to, and imposed upon, South Coast AQMD; and

WHEREAS, the South Coast AQMD Governing Board, in adopting Proposed Amended Rule 1469.1, references the following statutes which the South Coast AQMD hereby implements, interprets, or makes specific: Health and Safety Code Sections 41700 and Federal Clean Air Act Sections 112 and 116; and

WHEREAS, Health and Safety Code Section 40727.2 requires the South Coast AQMD to prepare a written analysis of existing federal air pollution control requirements applicable to the same source type being regulated whenever it adopts, or amends a rule, and the South Coast AQMD's comparative analysis of Proposed Amended Rule 1469.1 is included in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Socioeconomic Impact Assessment of Proposed Amended Rule 1469.1 is consistent with the March 17, 1989 Governing Board Socioeconomic Resolution for rule adoption; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Socioeconomic Impact Assessment for Proposed Amended Rule 1469.1 is consistent with the provisions of Health and Safety Code Sections 40440.8 and 40728.5, and that Health and Safety Code Section 40920.6 is not applicable to rules regulating toxic air contaminants; and

WHEREAS, the South Coast AQMD Governing Board has determined Proposed Amended Rule 1469.1 will result in increased costs to the affected industries, yet are considered to be reasonable, with a total annualized cost as specified in the Socioeconomic Impact Assessment which is included in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board has actively considered the Socioeconomic Impact Assessment and has made a good faith effort to minimize such impacts; and

ATTACHMENT E

WHEREAS, the public hearing has been properly noticed in accordance with the provisions of Health and Safety Code Section 40725 and 40440.5; and

WHEREAS, the South Coast AQMD Governing Board has held a public hearing in accordance with all applicable provisions of law; and

WHEREAS, the South Coast AQMD specifies that the Planning and Rules Manager overseeing the rule development of Proposed Amended Rule 1469.1 as the custodian of the documents or other materials which constitute the record of proceedings upon which the adoption of the amended rules are based, which are located at the South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, California; and

NOW, THEREFORE BE IT RESOLVED, that the South Coast AQMD Governing Board does hereby determine, pursuant to the authority granted by law, that the proposed project is exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption. This information was presented to the South Coast AQMD Governing Board, whose members exercised their independent judgment and reviewed, considered, and approved the information therein prior to acting on the proposed project; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby adopt, pursuant to the authority granted by law, Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium, as set forth in the attached, and incorporated herein by reference.

CLERK OF THE BOARDS

ATTACHMENT F

(Adopted March 4, 2005) (PAR 1469.1 May 7, 2021)

PROPOSED
AMENDED
RULE 1469.1

**SPRAYING OPERATIONS USING COATINGS
CONTAINING CHROMIUM**

[Rule Index to be included after adoption]

(a) Purpose

The purpose of this rule is to reduce emissions of hexavalent chromium from spray coating and related operations.

(b) Applicability

This rule ~~shall apply~~ ies to an owner or operator conducting any operation in which spraying of chromate coatings, containing hexavalent chromium are sprayed, with the exception of thermal spraying operations. Compliance with this rule shall be in addition to other applicable rules.

(c) Definitions

For the purpose of this rule the following definitions shall apply:

- (1) APPROVED CLEANING METHOD means cleaning using a wet mop, damp cloth, wet wash, low pressure spray nozzle, HEPA VACUUM, protective coverings, or other method as approved by the Executive Officer.
- (+2) APPROVED HEALTH RISK ASSESSMENT means a health risk assessment prepared pursuant to Rule 1402 that is approved by the Executive Officer.
- (3) BENCH SPRAY BOOTH means a SPRAY BOOTH with a raised spray enclosure area typically used for smaller workpieces, in which the operator cannot stand within the enclosure.
- (4) BUILDING ENCLOSURE means a permanent building or physical structure, or a portion of a building, with a floor, walls, and a roof to prevent exposure to the elements, (e.g. precipitation, wind, run-off), with limited openings to allow access for people, vehicles, equipment, or workpieces.
- (2) ~~CAPTURE EFFICIENCY~~ is the ~~percentage of the mass of the solids fraction of overspray that is collected and directed to an air pollution control device.~~
- (35) ~~CHROMATE~~ is ~~any salt or ester of chromic acid. For the purpose of this rule, chromate means strontium ehromate~~ CHROMATE, zinc ehromate

CHROMATE, lead—~~chromate~~ CHROMATE, barium—~~chromate~~ CHROMATE, calcium ~~chromate~~ CHROMATE, and any other ~~chromate~~ CHROMATE used in ~~primers or coatings~~ COATINGS for corrosion protection or other properties.

(c) (46) COATING means ~~is~~ a material ~~that~~which is applied to a surface and ~~that~~which forms a continuous film in order to beautify and/or protect such surface and includes primers used for corrosion prevention, protection from the environment, functional fluid resistance and/or adhesion of subsequent COATINGS, adhesives, or sealants.

(5) ~~COATING APPLICATION EQUIPMENT~~ are those used for applying coating to a substrate. ~~Coating application equipment includes coating distribution lines, coating hoses, pressure pots, spray guns, and hand-application equipment, such as hand rollers, brushes, daubers, spatulas, and trowels.~~

(67) COMPLIANCE PLAN APPROVAL LETTER means ~~is~~ the official notice of approval for a compliance plan.

(7) ~~CONTROL EFFICIENCY~~ is the difference between the uncontrolled and the controlled total emissions divided by the total emissions and multiplied by 100. ~~Control efficiency is represented by the following equation:~~

$$\eta = \frac{T_u - T_c}{T_u} \times 100$$

~~Where~~ η = ~~Control Efficiency.~~

~~T_u~~ = ~~Uncontrolled Emissions of Hexavalent Chromium~~

~~T_c~~ = ~~Controlled Emissions of Hexavalent Chromium~~

(8) DEMASKING ACTIVITY means an activity in which tape or other masking material is removed from workpieces that have been coated with CHROMATE COATINGS.

(9) DRIED CHROMATE COATING REMOVAL ACTIVITY means an activity whereby dried CHROMATE COATINGS on workpieces are removed through physical or mechanical means, such as buffing, scuffing, sanding, or grinding. DRIED CHROMATE COATING REMOVAL ACTIVITY does not include DEMASKING ACTIVITY.

(810) ELECTROSTATIC APPLICATION means ~~is~~ charging of atomized paint droplets for deposition by electrostatic attraction.

- (c) (11) ENCLOSED SPRAY BOOTH means a SPRAY BOOTH with four sides that are enclosed during spraying operations and where the only openings in the SPRAY BOOTH during spraying operations are for makeup air.
- (9) ~~EQUIPMENT includes the spray gun or other application device, the booth, enclosure or other area in which the spraying process occurs, and the associated air pollution control equipment.~~
- (10) ~~12~~ EXHAUST COVERING means a material placed in front of existing filters and pre-filters, that is located on the inside of a spray enclosure and that is not part of the designed filter system.
- (11) ~~EXISTING AIR POLLUTION CONTROLS means all control equipment existing as of March 4, 2005.~~
- (12) ~~EXISTING SCHOOL means any school, public or private, kindergarten through grade 12, existing as of March 4, 2005.~~
- (13) ~~EXISTING SOURCE or SOURCE means any process where spraying primers or coatings containing chromium that is operating on or before March 4, 2005.~~
- (14) ~~13~~ FACILITY means any source or group of sources or other air contaminant-emitting activities which are located on one or more contiguous properties within the District, in actual physical contact or separated solely by a public roadway or other public right-of-way, and are owned or operated by the same person (or persons under common control), or an outer continental shelf as determined in 40 CFR Section 55.2. Such above-described groups, if non-contiguous, but connected by land carrying a pipeline, shall not be considered one ~~facility~~ FACILITY. Sources or installations involved in crude oil and gas production in Southern California Coastal or Outer Continental Shelf (OCS) Waters and transport of such crude oil and gas in Southern California Coastal or OCS Waters shall be included in the same ~~facility~~ FACILITY which is under the same ownership or use entitlement as the crude oil and gas production ~~facility~~ FACILITY onshore.
- (15) ~~14~~ HAND APPLICATION METHOD means is the application of materials by manually held, non-mechanically operated equipment. Such equipment includes paint brushes, hand rollers, caulking guns, trowels, spatulas, syringe daubers, rags, and sponges.
- (15) HEPA VACUUM means a vacuum that is both designed to be fitted and used with a filter that is individually tested and certified by the

manufacturer to have a control efficiency of not less than 99.97 percent on 0.3 micron particles.

- (c) (16) HIGH EFFICIENCY PARTICULATE ARRESTORS—AIR (HEPA) FILTER means a filter(s) that is both individually tested and certified by the manufacturer to have a control efficiency of not less than 99.97%— percent on 0.3 micron particles~~or more efficient in collecting particle sizes 0.3 microns or greater in size.~~
- (17) HIGH-VOLUME, LOW-PRESSURE (HVLP)-SPRAY ~~is~~means a material application system ~~which~~that is operated at air pressure of between 0.1 and 10 pounds per square inch gauge ~~(psig).~~
- (18) NEW SOURCE means any source spraying primers or coatings containing chromium ~~that is initially operated in the South Coast District after March 4, 2005.~~
- (19) OPEN FACE ENCLOSURE-SPRAY BOOTH means for the purpose of this rule a SPRAY enclosure-BOOTH in which one side of the ~~enclosure~~ booth is not enclosed, and air can flows through the open face horizontally. ~~Open face enclosure-OPEN FACE SPRAY BOOTH~~ does not include any ~~enclosure-SPRAY BOOTH~~ configured for downdraft ventilation.
- (20) OVERSPRAY ~~means is~~ the fraction of ~~coating~~ COATING sprayed that does not adhere to the intended surface.
- (21) PERMANENT TOTAL ENCLOSURE means a permanent building or containment structure, enclosed with a floor, walls, and a roof to prevent exposure to the elements, (e.g., precipitation, wind, run-off) that has limited openings to allow access for people and vehicles, that is free of breaks or deterioration that could cause or result in fugitive emissions, and has been evaluated to meet the design requirements set forth in U.S. EPA Method 204, or other design approved by the Executive Officer.
- (22) PRIMER ~~is a coating applied to a part for purposes of corrosion prevention, protection from the environment, functional fluid resistance and/or adhesion of subsequent coatings, adhesives, or sealants.~~
- (23) RECEPTOR ~~means any off-site location where persons may be exposed to emissions of hexavalent chromium from a source subject to this rule. Receptor locations include residential, commercial, and industrial land use areas, and other locations where sensitive populations may be located.~~

- (23) ~~RESIDENTIAL RECEPTOR means a single family dwelling or a multi-family dwelling, including but not limited to a duplex, condominium, townhome, apartment building, or other rental unit.~~
- (24) ~~RESPONSIBLE OFFICIAL means one of the following:~~
- ~~(A) For a corporation: A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities and either:~~
 - ~~(i) The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or~~
 - ~~(ii) The delegation of authority to such representative is approved in advance by the Executive Officer.~~
 - ~~(B) For a partnership or sole proprietorship: a general partner or the proprietor, respectively.~~
 - ~~(C) For a municipality, state, Federal, or other public agency: either a principal executive officer or ranking elected official. For the purposes of this part, a principal executive officer of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of the U.S. Environmental Protection Agency [U.S. EPA]).~~
 - ~~(D) For sources (as defined in this rule) applying for or subject to a Title V permit: "responsible official" shall have the same meaning as defined in District's Regulation XXX.~~
- (c) (2521) SENSITIVE RECEPTOR includes schools, public and private (kindergarten through grade 12), licensed daycare centers, hospitals, and convalescent homes. means any residence including private homes, condominiums, apartments, and living quarters; education resources such as preschools and kindergarten through grade twelve (k-12) schools; daycare centers; and health care FACILITIES such as hospitals or retirement and nursing homes. A SENSITIVE RECEPTOR includes long

term care hospitals, hospices, prisons, and dormitories or similar live-in housing.

(c) (22) SPRAY BOOTH means for the purpose of this rule any enclosure with walls and an impermeable ceiling used to contain and capture OVERSPRAY from the spray application of any CHROMATE COATINGS.

(26) ~~SPRAYING OPERATION or SPRAYING PROCESS, for the purpose of this rule, includes the equipment used to spray coatings containing chromium, and the spray enclosure in which it is sprayed. Spraying operation or spraying process includes all spraying of primers or coatings containing chromium, except for thermal spraying operations.~~

(23) STICKY MAT means a non-reusable floor mat or floor covering with an adhesive or tacky surface that removes particles from shoes, wheels, or other objects that travel over the mat or covering.

(2724) ~~THERMAL SPRAYING OPERATIONS means are~~ one of several processes in which metallic or nonmetallic surfacing materials are deposited in a molten or semi-molten condition on a substrate to form a ~~coating~~ COATING. The surfacing material may originate in the form of powder, rod, or wire before it is heated, prior to spraying and deposition. ~~Thermal spraying operations~~ THERMAL SPRAYING OPERATIONS include: detonation gun spraying, flame spraying, high-velocity oxy-fuel spraying, plasma spraying, and twin-wire electric arc spraying.

(2825) ~~TOUCH UP AND REPAIR OPERATION means is that portion of the coating operation that is the incidental application of coating~~ COATING used to cover minor coating imperfections in the coating finish or to achieve complete coverage after the main COATING operation is conducted.

(2926) ~~TRANSFER EFFICIENCY means is~~ the ratio of the weight or volume of ~~coating~~ COATING solids adhering to an object to the total weight or volume, respectively, of ~~coating~~ COATING solids used in the application process, expressed as a percentage.

(27) WORKPIECE SUPPORT EQUIPMENT means racks, stands, or other equipment used to hold or support workpieces during CHROMATE spraying operations.

(d) Point Source Requirements

- (d) (1) An owner or operator of a facility with a chromate spraying operation shall:

 - (A) Conduct chromate spraying operations in a spray booth that is vented to an air pollution control system with HEPA filters or filters individually tested and certified by the manufacturer to have a control efficiency of at least 99.97 percent on 0.3 micron or smaller particles;
 - (B) Meet the alternate point source requirements of paragraphs (e)(1) and (e)(2) until the earlier date required in subparagraph (d)(2)(B) to meet subparagraph (d)(1)(A); or
 - (C) Meet the alternate point source requirements of paragraphs (e)(3), (e)(4), and (e)(5).
- (2) An owner or operator of a facility with a chromate spraying operation that meets the alternate point source requirements pursuant to subparagraph (d)(1)(B) or fails to meet the requirements of paragraph (e)(3) for facilities that meet the alternate point source requirements pursuant to subparagraph (d)(1)(C) shall:

 - (A) On or before January 1, 2023, submit complete permit applications for a spray booth that meets the requirements of subparagraph (d)(1)(A); and
 - (B) No later than 18 months after a Permit to Construct has been issued or January 1, 2026, whichever date is earlier, meet the requirements of subparagraph (d)(1)(A).
- (3) When spraying chromate coatings, an owner or operator of a facility with a chromate spraying operation shall ensure that:

 - (A) Visible emissions do not exit the spray booth;
 - (B) All spray booth filters are free of leaks, breaks, and tears, and are properly seated; and
 - (C) Inward air flow of the spray booth is maintained:

 - (i) Before January 1, 2026, by meeting the interim inward face air velocity requirement of paragraph (o)(1); and
 - (ii) Beginning January 1, 2026, by meeting the spray booth measurement or demonstration requirements in paragraph (g)(1).

(e) Alternate Point Source Requirements for Chromate Spraying Operations With Compliance Plans or Health Risk Assessments Approved Before [Date of Rule Adoption]

- (1) Until the provisions in subparagraph (d)(1)(A) are met, an owner or operator of a facility with a chromate spraying operation with a compliance plan approved before [Date of Rule Adoption], or enforceable permit conditions resulting from a health risk assessment approved before [Date of Rule Adoption] that limit the cancer risk to 25 in a million if a facility is located more than 25 meters from a sensitive receptor or 10 in a million if a facility is located 25 meters or less from a sensitive receptor or located 100 meters or less from an existing school, shall continue to meet the conditions in the approved compliance plan.
- (2) Until the provisions in subparagraph (d)(1)(A) are met, an owner or operator of a facility with a chromate spraying operation with an approved compliance plan pursuant to paragraph (e)(1) shall:
 - (A) Mount the compliance plan approval letter so as to be clearly visible in an accessible place within 8 meters (26 feet) of the spray booth identified in the approved compliance plan, or as otherwise approved in writing by the Executive Officer for equipment not subject to a facility permit under Regulation XX or Regulation XXX; or
 - (B) Keep the compliance plan approval letter with the facility permit, or as otherwise approved in writing by the Executive Officer for equipment subject to a facility permit under Regulation XX or Regulation XXX.
- (3) On or before January 1, 2023, an owner or operator of a facility with a chromate spraying operation with a health risk assessment approved before [Date of Rule Adoption] using the 2015 OEHHA risk assessment guidance shall submit complete permit applications to modify the spray booth(s) conducting chromate spraying operations to:
 - (A) Limit the annual chromate emissions at or below the amount evaluated in the approved health risk assessment; and
 - (B) Require use of a filter that meets a minimum filter efficiency that is equal to or greater than the filter efficiency evaluated in the approved health risk assessment.

- (e) (4) Upon receiving written notification from the Executive Officer that the annual chromate emissions exceed the permit limit pursuant to subparagraph (e)(3)(A), an owner or operator of a facility with a chromate spraying operation shall:

 - (A) Submit complete permit applications for a spray booth that meets the requirements of subparagraph (d)(1)(A) within six months after the date of written notification; and
 - (B) No later than 18 months after a Permit to Construct has been issued or 36 months after the date of written notification, whichever date is earlier, meet the requirements of subparagraph (d)(1)(A).
- (5) On or before January 1, 2023, an owner or operator of a facility with a chromate spraying operation with a health risk assessment approved before [Date of Rule Adoption] using the 2015 OEHHA risk assessment guidance shall:

 - (A) Clean the spray booth duct to remove all overspray and dried coatings that may contain chromium using an approved cleaning method;
 - (B) Inspect associated exterior surfaces of the spray booth duct and remove all overspray and dried coatings that may contain chromium using an approved cleaning method; and
 - (C) Notify the Executive Officer at least 72 hours prior to the cleaning by calling 1-800-CUT-SMOG.
- (f) Point Source Requirements for Dried Chromate Coating Removal Activities

 - (1) Beginning January 1, 2026 or the date specified in subparagraph (f)(2)(B), an owner or operator of a facility with a chromate spraying operation shall ensure any dried chromate coating removal activity is:

 - (A) Conducted in a spray booth that meets the requirements of paragraph (d)(1); or
 - (B) Vented to a control device permitted for dried chromate coating removal activity that is:

 - (i) Equipped with HEPA filters, or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.97 percent on 0.3 micron or smaller particles; and
 - (ii) Operated pursuant to a South Coast AQMD permit.

- (f) (2) An owner or operator of a facility with a chromate spraying operation that is conducting any dried chromate coating removal activity without a control device or with a control device that does not meet the requirements of paragraph (f)(1) shall:

 - (A) On or before January 1, 2023, submit a complete permit application for a control device that meets the requirements of clause (f)(1)(B)(i); and
 - (B) No later than 18 months after a Permit to Construct has been issued or January 1, 2026, whichever date is earlier, vent the dried chromate coating removal activity to the permitted control device that meets the requirements of clause (f)(1)(B)(i).
- (3) An owner or operator of a facility with a chromate spraying operation conducting dried coating removal activity shall not operate a spray booth or other control device unless the filters are free of leaks, breaks, and tears, and are properly seated.
- (g) Spray Booth Requirements

 - (1) Beginning January 1, 2026 or the date specified in subparagraph (g)(2)(B), an owner or operator with a chromate spraying operation shall not conduct chromate spraying operations or dried chromate coating removal activity in a spray booth unless:

 - (A) The applicable average velocity and minimum velocity in Table 1 – Spray Booth Inward Face Air Velocity Requirements are met for the enclosed or open face spray booth using Appendix 1 – Inward Face Air Velocity Measurement Procedures; or
 - (B) The enclosed spray booth meets the design requirements of a permanent total enclosure set forth in U.S. EPA Method 204 or other design approved by the Executive Officer.

Table 1 – Spray Booth Inward Face Air Velocity Requirements

<u>Spray Booth Type</u>	<u>Measurement Location</u>	<u>Average Velocity of Measurement Points</u>	<u>Minimum Velocity at Each Measurement Point</u>
<u>Enclosed Non-Bench</u>	<u>At the filter face</u>	<u>100 feet per minute</u>	<u>75 feet per minute</u>
<u>Open Face Non-Bench</u>	<u>At the opening of the booth</u>		
<u>Enclosed Bench</u>	<u>At the filter face</u>	<u>150 feet per minute</u>	<u>125 feet per minute</u>
<u>Open Face Bench</u>	<u>At the opening of the booth</u>		

- (g) (2) An owner or operator of a facility with chromate spraying operations that does not meet the requirements of paragraph (g)(1) shall:
- (A) On or before January 1, 2023, submit complete permit applications to modify the spray booth to meet the requirements of paragraph (g)(1); and
- (B) Modify the spray booth no later than 18 months after a Permit to Construct has been issued or January 1, 2026, whichever date is earlier.
- (3) After demonstrating that a spray booth meets the requirements of paragraph (g)(1), an owner or operator of a facility with a chromate spraying operation shall demonstrate that the spray booth continues to meet the requirements of paragraph (g)(1) according to the frequency in Table 2 – Measurement or Demonstration Frequency.

Table 2 – Measurement or Demonstration Frequency

<u>Spray Booth Type</u>	<u>Frequency</u>
<u>Enclosed Non-Bench or Bench</u>	<u>At least once every 12 calendar months from the previous air velocity measurement pursuant to subparagraph (g)(1)(A) or permanent total enclosure demonstration pursuant to subparagraph (g)(1)(B)</u>
<u>Open Face Non-Bench or Bench</u>	<u>At least once every six calendar months from the previous air velocity measurement pursuant to subparagraph (g)(1)(A)</u>

- (g) (4) Beginning January 1, 2026, an owner or operator of a facility with a chromate spraying operation that fails to meet the requirements of paragraph (g)(1) shall:
- (A) Not operate the spray booth for chromate spraying operations or dried chromate coating removal activities;
 - (B) Perform necessary actions or repairs to meet the requirements of paragraph (g)(1) before operating the spray booth; and
 - (C) Notify the Executive Officer by calling 1-800-CUT-SMOG within 24 hours of knowing that the necessary actions or repairs pursuant to subparagraph (g)(4)(B) cannot be completed within 30 days of the failure to meet the requirements of paragraph (g)(1).
- (5) Prior to conducting chromate spraying or any dried chromate coating removal activity, an owner or operator of a facility with a chromate spraying operation that is required to notify the Executive Officer pursuant to subparagraph (g)(4)(C) and has met the requirements in paragraph (g)(1) shall:
- (A) Notify the Executive Officer within 24 hours of meeting the requirements of paragraph (g)(1) by calling 1-800-CUT-SMOG; and
 - (B) Demonstrate that the spray booth meets the requirements in paragraph (g)(1) and every 30 days thereafter.
- (6) After three consecutive demonstrations pursuant to subparagraph (g)(5)(B), an owner or operator of a facility with a chromate spraying operation shall demonstrate that the spray booth continues to meet the requirements of

paragraph (g)(1) according to the frequency specified in Table 2 –
Measurement or Demonstration Frequency.

(h) Requirements for Building Enclosures

- (1) An owner or operator of a facility with a chromate spraying operation shall conduct the following within a building enclosure:
 - (A) Spraying operations;
 - (B) Dried chromate coating removal activities; and
 - (C) Demasking activities.
- (2) An owner or operator of a facility with a chromate spraying operation shall store workpiece support equipment within a building enclosure.
- (3) An owner or operator of a facility with a chromate spraying operation shall store cleaning equipment used to conduct housekeeping activities pursuant to subdivision (i) within a building enclosure.
- (4) Beginning January 1, 2022, except for the movement of vehicles, equipment, or people, an owner or operator of a facility with a chromate spraying operation shall:
 - (A) Close any building openings within 20 feet of:
 - (i) The opening of an open face spray booth;
 - (ii) Areas where dried chromate coating removal activities occur;
and
 - (iii) Areas where demasking activities occur; and
 - (B) Use one ~~or~~ more of the following methods to close building openings:
 - (i) Door that automatically closes;
 - (ii) Overlapping plastic strip curtains;
 - (iii) Vestibule;
 - (iv) Airlock system; or
 - (v) Alternative method to minimize the release of fugitive emissions from the building that has been approved by the Executive Officer as an equivalent or more effective method to minimize the movement of air from within the building to the outside.

(i) Housekeeping Requirements

- (i) (1) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall use an approved cleaning method to clean, at the frequencies specified in Table 3 – Cleaning Frequencies, all open floor areas within 20 feet of:

 - (A) The opening of an open face spray booth;
 - (B) Ingresses and egresses of an enclosed spray booth located within a building enclosure;
 - (C) Areas where dried chromate coating removal or demasking activities are conducted;
 - (D) Areas where chromate coatings are mixed;
 - (E) Storage areas for equipment and materials that may contain chromates, excluding storage areas used exclusively for unopened coating containers; and
 - (F) Waste storage areas for materials that may contain chromates.
- (2) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall use an approved cleaning method to clean, at the frequencies specified in Table 3 – Cleaning Frequencies, all floor areas within:

 - (A) Workpiece support equipment transit paths and work areas identified in paragraph (j)(6); and
 - (B) Workpiece support equipment storage areas identified in paragraph (j)(7).

Table 3 – Cleaning Frequencies

<u>Applicable Provisions</u>	<u>For Areas Located Within a Permanent Total Enclosure Vented to an Air Pollution Control System with Filters that Meet the Filter Requirements of Subparagraph (d)(1)(A)</u>	<u>For All Other Areas</u>
<u>(i)(1)(A) and (i)(1)(B)</u>	<u>Once per calendar month, for any month when chromate spraying operations are conducted on one or more days</u>	<u>Once per calendar week, for any week when chromate spraying operations are conducted on one or more days</u>
<u>(i)(1)(C), (i)(1)(D), (i)(1)(E), and (i)(1)(F)</u>	<u>Once per calendar month, for any month when activities are conducted on one or more days</u>	<u>Once per calendar week, for any week when activities are conducted on one or more days</u>
<u>(i)(2)(A) and (i)(2)(B)</u>	<u>Once per calendar month, for any month when workpiece support equipment is moved on one or more days</u>	<u>Once per calendar week, for any week when workpiece support equipment is moved on one or more days</u>

- (i) (3) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall use an approved cleaning method to clean all ground areas within 20 feet of ingresses and egresses of an enclosed spray booth located outside a building enclosure once per day on days when chromate spraying operations are conducted within the spray booth.
- (4) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall use an approved cleaning method to clean spills of liquid or solid material that may contain chromates immediately but no later than one hour after being spilled.
- (5) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall use an approved cleaning method to clean all floors within a spray booth without protective coverings at least

once per calendar week, during any week when activities subject to this rule are conducted on one or more days within the spray booth.

- (i) (6) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall remove and replace all spray booth protective floor or wall coverings at least every six months.
- (7) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation that elects to use sticky mats in lieu of conducting the housekeeping requirements specified in subparagraphs (i)(1)(A) and (i)(1)(B) and paragraphs (i)(5) and (i)(6) shall ensure the sticky mats are:

 - (A) At least two feet in depth and as wide as the opening at all spray booth ingresses and egresses;
 - (B) Placed in locations such that all foot and equipment traffic into and out of the spray booth travels over the sticky mats; and
 - (C) Replaced at least once per day on days when chromate spraying operations are conducted in the spray booth. Used sticky mats shall be disposed of in a container before removal from a building. The container shall remain closed except when being filled or emptied.
- (8) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall place waste materials that may contain chromates immediately in a container. The container shall remain closed except when being filled or emptied. If waste material will be transferred to other on-site containers, the container shall be lined with removable bags.
- (9) Beginning January 1, 2022, an owner or operator of a facility with a chromate spraying operation shall ensure that when a HEPA vacuum is used:

 - (A) The HEPA filter is free of leaks, breaks, tears, or other types of damage, and securely latched and properly situated in the vacuum to prevent air leakage from the filtration system; and
 - (B) The HEPA vacuum is emptied into a container within a spray booth that meets the provisions of paragraph (d)(1). The container shall remain closed except when being filled or emptied.
 - (C) The HEPA filter shall be replaced within a spray booth that meets the provisions of paragraph (d)(1), and the used filter shall be placed in a closed container before removal from the spray booth.

(j) Best Management Practices

(1) Chromate Spraying Operations

An owner or operator of a facility with a chromate spraying operation shall:

- (A) Keep ingresses and egresses of an enclosed spray booth closed while conducting spraying operations; and
- (B) Beginning July 1, 2022 or the date specified in subparagraph (d)(2)(B) for facilities meeting the requirements in subparagraph (d)(1)(B), whichever date is later, not operate a spray booth unless a system is used to ensure that the air pollution control system for the spray booth is operating while the chromate spraying equipment is being used.

(2) Spray Booth Operations

An owner or operator of a facility with a chromate spraying operation shall:

- (A) When removing protective floor, wall, or exhaust coverings within the spray booth:
 - (i) Operate the air pollution control system;
 - (ii) Ensure that the ingresses and egresses of an enclosed spray booth are closed; and
 - (iii) Place all material that may contain chromates that are intended to be disposed of in a container before removal from the spray booth. The container shall remain closed except when being filled or emptied.
- (B) Operate the air pollution control system for a minimum of three air exchanges within the spray booth or five minutes, whichever is longer:
 - (i) After spraying operations have ceased;
 - (ii) After conducting dried chromate coating removal activities within the spray booth; and
 - (iii) After removing protective floor, wall, or exhaust coverings within the spray booth;
- (C) Beginning July 1, 2021, post on the spray booth, in a location that is clearly visible and accessible to the spray booth operator, the minimum ventilation time needed to meet the requirements of subparagraph (j)(2)(B); and

- (j) (2) (D) Not operate the air pollution control system when the final stage filters are being removed, replaced or are missing, damaged, or improperly installed.

(3) Transfer Efficiency

An owner or operator of a facility with a chromate spraying operation shall not spray chromate coatings unless the chromate coatings are applied according to operating procedures specified by the equipment manufacturer, or applicable permit conditions, and by use of one of the following methods:

(A) High-Volume, Low-Pressure Spray;

(B) Electrostatic application; or

(C) Such other alternative application methods as are demonstrated to the Executive Officer in accordance with the South Coast AQMD method (Spray Equipment Transfer Efficiency Test Procedure for Equipment User, May 24, 1989), or subsequent revisions to be capable of achieving at least equivalent transfer efficiency to the method in subparagraph (j)(3)(A) and for which written approval of the Executive Officer has been obtained.

(4) Dried Chromate Coating Removal Activities

An owner or operator of a facility with a chromate spraying operation that conducts any dried chromate coating removal activity in a spray booth shall keep ingresses and egresses of an enclosed spray booth closed and operate the air pollution control system for the spray booth pursuant to the spray booth requirements in paragraph (d)(3) and subdivision (g), and the pressure drop requirements in subdivision (k), while conducting dried chromate coating removal activities.

(5) Demasking Activities

Beginning July 1, 2021, an owner or operator of a facility with a chromate spraying operation conducting any demasking activity outside of an enclosed spray booth or a permanent total enclosure vented to an air pollution control system with HEPA filters or filters individually tested and certified by the manufacturer to have a control efficiency of at least 99.97 percent on 0.3 micron or smaller particles shall not use compressed air to clean workpieces on tables or other surface areas where demasking activity occurs.

(j) (6) Workpiece Support Equipment Used During Chromate Spraying Operations

Beginning July 1, 2021, an owner or operator of a facility with a chromate spraying operation that moves workpiece support equipment outside of a spray booth or permanent total enclosure vented to an air pollution control system with HEPA filters or filters individually tested and certified by the manufacturer to have a control efficiency of at least 99.97 percent on 0.3 micron or smaller particles shall:

(A) Establish and clearly mark transit paths and work areas outside of the spray booth or permanent total enclosure; and

(B) Transport equipment within established transit paths and work areas.

(7) Storage of Workpiece Support Equipment Used During Chromate Spraying Operations

Beginning July 1, 2021, an owner or operator of a facility with a chromate spraying operation that stores workpiece support equipment outside of a spray booth or permanent total enclosure vented to an air pollution control system with HEPA filters or filters individually tested and certified by the manufacturer to have a control efficiency of at least 99.97 percent on 0.3 micron or smaller particles shall:

(A) Establish and clearly mark storage areas used to store workpiece support equipment; and

(B) Store workpiece support equipment within established storage areas.

(8) Visual Inspections

An owner or operator of a facility with a chromate spraying operation shall perform a weekly visual inspection of the filter media subject to this rule for leaks, breaks, tears, and improper seating.

(9) Personal Protective Equipment

An owner or operator of a chromate spraying operation shall remove personal protective equipment in a manner that minimizes fugitive emissions.

(k) Pressure Drop Across Filter Media

(1) Beginning January 1, 2023 or the date specified in subparagraph (d)(2)(B) for facilities meeting the requirements in subparagraph (d)(1)(B), whichever is later, an owner or operator of a facility with a chromate spraying operation shall:

Proposed Amended Rule 1469.1 (PAR 1469.1 May 7, 2021)(Adopted March 4, 2005)

- (k) (1) (A) Install a pressure gauge to continuously monitor the pressure drop across the spray booth final stage filter media; and
- (B) Maintain the pressure drop across the spray booth final stage filter media at or below the maximum pressure drop specified in a South Coast AQMD permit or the filter manufacturer's recommended maximum pressure drop, whichever is lower.
- (2) An owner or operator of a facility with a chromate spraying operation shall maintain the pressure drop across the spray booth final stage filter media at or above the minimum pressure drop pursuant to Table 4 – Minimum Pressure Drop Across Final Stage Filters.

Table 4 – Minimum Pressure Drop Across Final Stage Filters

<u>Availability of Minimum Pressure Drop Information</u>	<u>Minimum Pressure Drop Requirement</u>	<u>Effective Date</u>
<u>Specified in a South Coast AQMD permit</u>	<u>Specified in a South Coast AQMD permit</u>	<u>[Date of Rule Adoption]</u>
<u>Not specified in South Coast AQMD permit</u>	<u>Measure pressure drop to the nearest tenth of an inch of water column while the air pollution control system is in operation to establish the minimum pressure drop across existing final stage filter media in place before January 1, 2023</u>	<u>January 1, 2023 until new final stage filter media replacement</u>
	<u>Measure pressure drop to the nearest tenth of an inch of water column while the air pollution control system is in operation to establish the minimum pressure drop across new final stage filter media replaced after January 1, 2023</u>	<u>At time of new final stage filter media installation</u>

- (3) An owner or operator of a facility with a chromate spraying operation shall not operate a spray booth:

Proposed Amended Rule 1469.1 (PAR 1469.1 May 7, 2021)(Adopted March 4, 2005)

- (k)
 - (3)
 - (A) Before January 1, 2023 if the pressure drop across the filter media is above the maximum limits specified in paragraph (o)(3); and
 - (B) Beginning January 1, 2023, if the pressure drop across the final stage filter media is above the maximum limits specified in subparagraph (k)(1)(B) or below the minimum limits specified in Table 4 – Minimum Pressure Drop Requirements.
 - (4) An owner or operator of a Facility with a Chromate spraying operation shall maintain onsite, and make available to the Executive Officer upon request:
 - (A) The filter technical specification sheets for all spray booth final stage filter media installed in a spray booth subject to this rule; and
 - (B) Any minimum pressure drop established in accordance with Table 4 – Minimum Pressure Drop Requirements.
 - (5) An owner or operator of a facility with a chromate spraying operation shall record the pressure drop as measured by the gauge required in subparagraph (k)(1)(A) or paragraph (o)(3) at least once on days when a chromate spraying operation or dried chromate coating removal activity is conducted within the spray booth.
 - (6) An owner or operator of a facility with a chromate spraying operation that elects to use a continuous data acquisition system (DAS) in lieu of recording the final filter pressure drop required by paragraph (k)(5) shall ensure the DAS is installed, operated, and maintained in accordance with manufacturer's specifications. The DAS shall:
 - (A) Record the data output from the gauge required in paragraph (k)(1)(A) at least once, and at a frequency of not less than once every sixty (60) minutes, when conducting a chromate spraying operation or dried chromate coating removal activity within the spray booth and;
 - (B) Generate a data file that contains a table of chronological date and time and the corresponding data output value from the gauge required in paragraph (k)(1)(A) in inches of water column on days when a chromate spraying operation or dried chromate coating removal activity is conducted within the spray booth. The file shall be saved in an electronic spreadsheet format or other format approved by the Executive Officer; and

- (k) (6) (C) Have an audible alarm that alerts when the pressure drop is above the maximum limit specified in subparagraph (k)(1)(B) or below the minimum limit specified in paragraph (k)(2).

(l) Spray Booth Exhaust Duct Cleaning Requirements

- (1) When replacing the final stage filter media, an owner or operator of a facility with a chromate spraying operation shall conduct a visual inspection of the spray booth duct immediately downstream of the final stage filter media for the presence of overspray or dried coatings that may contain chromium.
- (2) An owner or operator of a facility with a chromate spraying operation that observes overspray or dried coating that may contain chromium during a visual inspection conducted pursuant to paragraph (l)(1) shall:
- (A) Clean the spray booth duct, and inspect associated exterior surfaces of the spray booth duct and remove all such overspray and dried coatings using an approved cleaning method:
- (i) No later than seven days after observation; or
- (ii) Before any chromate spraying operations are conducted in the spray booth; or
- (B) Analyze the overspray or dried coating for the presence of hexavalent chromium and if found, clean the spray booth duct, and inspect associated exterior surfaces of the spray booth duct and remove all such overspray and dried coatings using an approved cleaning method:
- (i) No later than 14 days after observation; or
- (ii) Before any chromate spraying operations are conducted in the spray booth.
- (3) If an owner or operator of a facility with a chromate spraying operation receives written notification from the Executive Officer confirming the presence of hexavalent chromium in the spray booth duct and/or associated exterior surfaces, the owner or operator shall:
- (A) Not operate the spray booth until the spray booth duct and/or associated exterior surfaces are cleaned; and
- (B) Clean the spray booth duct and/or associated exterior surfaces to remove all overspray and dried coating that may contain chromium using an approved cleaning method.

- (1) (4) An owner or operator of a facility with a chromate spraying operation required to clean a spray booth duct and/or associated exterior surfaces pursuant to paragraphs (1)(2) and (1)(3) shall notify the Executive Officer at least 72 hours prior to the cleaning by calling 1-800-CUT-SMOG.

(m) Recordkeeping Requirements

(1) Coatings Usage Records

An owner or operator of a facility with a chromate spraying operation shall maintain:

- (A) Purchase records of chromate coatings used for spray coating operations;
- (B) Safety data sheets provided for the materials subject to the requirements of subparagraph (m)(1)(A) that indicate the weight percent of chromate(s) in the coating, and the density of the coating;
- (C) Daily usage records for each coating subject to subparagraph (m)(1)(A), applied or used daily; and
- (D) Application method for each coating used.

(2) Housekeeping and Best Management Practice Records

An owner or operator of a facility with a chromate spraying operation shall:

- (A) Maintain records demonstrating compliance with housekeeping requirements specified in subdivision (i) and paragraph (o)(2) and the best management practices specified in paragraphs (j)(1) through (j)(7); and
- (B) Maintain records of the visual inspections required by paragraph (j)(8), including:
 - (i) Name of the person(s) performing the visual inspection for each spray booth or other control device;
 - (ii) Identification of each spray booth, including the permit number or the device identification number listed on a South Coast AQMD permit;
 - (iii) Date and time of the visual inspection;
 - (iv) Documentation of filter media found to have any leaks, breaks, or tears, or found to be improperly installed; and
 - (v) Description of any maintenance and repair activities conducted for any spray booth or other control device.

(3) Monitoring Records

An owner or operator of a facility with a chromate spraying operation shall:

- (m) (3) (A) Maintain records of measurements or demonstrations of spray booth requirements in paragraph (g)(1) including:
 - (i) Name of the person(s) conducting the measurement or demonstration;
 - (ii) Identification of each spray booth, including the permit number or device identification number;
 - (iii) Date and time the demonstrations were conducted;
 - (iv) Description of the equipment used to conduct the measurement or demonstration;
 - (v) Calibration records for the equipment used to conduct the measurement or demonstration;
 - (vi) Results of the measurement or demonstration conducted for each spray booth; and
 - (vii) Description of any maintenance and repair activities conducted for each spray booth.
 - (B) Maintain records of spray booth pressure drop readings as required in paragraphs (k)(5) and (o)(3), or DAS data files as required in paragraph (k)(6);
 - (C) Maintain records of spray booth final stage filter media replacement, and established minimum pressure drop as required in paragraph (k)(2); and
 - (D) Maintain records of the exhaust duct visual inspections required by paragraphs (l)(1) and (l)(2) including:
 - (i) Name of the person(s) conducting the visual inspection;
 - (ii) Identification of each spray booth, including the permit number or device identification number;
 - (iii) Date and time the visual inspection was conducted;
 - (iv) A photograph of the spray booth duct taken when the visual inspection was conducted; and
 - (v) Results of analysis of overspray or dried coating for the presence of hexavalent chromium.
- (4) Records Retention
- (A) Before July 1, 2023, an owner or operator of a facility with a chromate spraying operation shall maintain all records for three years, with at least the two most recent years kept onsite, and made

available to the Executive Officer upon request. Records kept offsite shall be made available within one week of the request from the Executive Officer; and

- (m) (4) (B) Beginning July 1, 2023, an owner or operator of a facility with a chromate spraying operation shall maintain all records for five years, with at least the two most recent years kept onsite, and made available to the Executive Officer upon request. Records kept offsite shall be made available within one week of the request from the Executive Officer.

(n) Prohibitions

- (1) Beginning [Date of Rule Adoption], an owner or operator of a facility with a chromate spraying operation shall not install or construct a new open face spray booth for chromate spraying operations unless the open face spray booth is located within a permanent total enclosure that is vented to an air pollution control system with HEPA filters or filters individually tested and certified by the manufacturer to have a control efficiency of at least 99.97 percent on 0.3 micron or smaller particles.
- (2) Beginning [Date of Rule Adoption], an owner or operator of a facility with a chromate spraying operation shall not install or construct a new spray booth for chromate spraying operations unless the spray booth is located within a building enclosure. This prohibition does not apply to spray booths installed or constructed after [Date of Rule Adoption] greater than 10,000 square feet.

(o) Interim Requirements

- (1) Before January 1, 2026, an owner or operator with a chromate spraying operation that conducts spraying operations in an open face spray booth shall ensure that the average inward face air velocity in the open face spray booth is maintained at a minimum of 100 feet per minute or other minimum velocity approved by the Executive Officer.
- (2) Before January 1, 2022, an owner or operator with a chromate spraying operation shall conduct spraying and cleanup operations in a manner that minimizes fugitive emissions of atomized paint particles.
- (3) Before January 1, 2023, an owner or operator of a facility with a chromate spraying operation shall install a gauge to continuously monitor the

pressure drop across the spray booth filter media in a location that is easily visible and in clear sight of the operation or maintenance personnel. The pressure drop shall be maintained at or below the pressure drop prescribed by a permit condition, or by the manufacturer's recommended operating range if no permit condition limits pressure drop.

(p) Exemptions

- (1) The requirements of this rule shall not apply to thermal spraying operations.
- (2) The spray booth requirements of subparagraph (d)(1)(A) and paragraph (d)(3) shall not apply to operations where chromate coatings are applied only by flow coater, roll coater, dip coater, or hand application methods.
- (3) The spray booth requirements of subparagraph (d)(1)(A) and paragraphs (d)(3) and the transfer efficiency requirements in (j)(3) shall not apply to any touch up and repair operation spraying chromate coatings that is conducted outside of a spray booth, provided the touch up and repair operation is performed inside a building enclosure, and emissions and cancer risk from the touch up and repair operation have been calculated and included in an approved facility-wide health risk assessment that does not exceed a facility-wide cancer risk of 10 in a million.

(d) Requirements

~~Any person applying a coating containing chromium shall comply with all of the following requirements:~~

~~(1) Control System Capture Efficiency and Enclosure Standards~~

~~On and after July 1, 2007, a person shall not spray primers or coatings containing chromium unless such operations are conducted in a manner in which all overspray containing chromium is captured and directed to air pollution control equipment which is operating during spraying operations. Spray enclosures shall meet the following criteria:~~

- ~~(A) Exhaust from all spray enclosures shall be ventilated such that a continuous inward flow of air is maintained at all air openings during spraying operations; and~~
- ~~(B) The average inward face velocity of air through an open face enclosure a spray booth shall be a minimum of 100 feet per minute or other minimum velocity approved by the Executive Officer; and~~

- ~~(C) After spraying operations have ceased, the exhaust system shall be kept in operation to remove contaminated air within the spray enclosure for a minimum of:
 - ~~(i) three air exchanges within the spray enclosure; or~~
 - ~~(ii) five minutes.~~~~
 -)
- (2) **Transfer Efficiency**

On and after January 1, 2006, a person shall not apply primers or coatings containing chromium at a facility at which such coatings are sprayed unless they are applied according to operating procedures specified by the equipment manufacturer, or applicable permit conditions, and by use of one of the following methods:

 - (A) Flow Coater, Roll Coater, or Dip Coater; or
 - (B) Hand Application Methods; or
 - (C) High-Volume, Low-Pressure (HVLP); or
 - (D) Electrostatic Application; or
 - (E) Such other alternative application methods as are demonstrated to the Executive Officer, using District approved procedures, to be capable of achieving at least equivalent transfer efficiency to the method in subparagraph (d)(2)(C) and for which written approval of the Executive Officer has been obtained.
- (3) **Requirements for Facilities Spraying Primers or Coatings Containing Chromium**

Before July 1, 2007, the owner or operator of a facility with a one or more new or existing sources subject to this rule shall comply with one of the following:

 - (A) Provided a facility does not emit hexavalent chromium except through sources subject to this rule, the owner or operator of a facility shall demonstrate in a Compliance Plan submitted pursuant to paragraph (d)(4) that emissions of hexavalent chromium from all spraying operations do not exceed the emission limits in clause (d)(3)(A)(i) or (d)(3)(A)(ii), as appropriate, as calculated after air pollution controls, where applicable, in accordance with the procedures in Appendices 1 and 2.:
 - (i) 0.018 lbs per year, calculated from July 1 through June 30 of each year, or applicable emission limit adjusted for receptor

- ~~distance and operating schedule in Table 2-2, if a facility is located more than 25 meters (82 ft) from a residential or sensitive receptor; or~~
 - (ii) ~~0.007 lbs per year, calculated from July 1 through June 30 of each year, if a facility is located 25 meters (82 ft) or less from a residential or sensitive receptor, or located 100 meters (328 ft) or less from an existing school; or~~
 - (B) ~~Ventilate each source at a facility to air pollution control equipment with a rated particulate filtration efficiency of 99.97% or higher, for particulate matter 0.3 microns and larger; or~~
 - (C) ~~Demonstrate that facility-wide emissions of all toxic air contaminants result in a cancer risk at all receptor locations through submittal of an approved health risk assessment that reflects representative operating conditions, or submittal of a Risk Reduction Plan developed pursuant to Rule 1402 that is fully implemented prior to July 1, 2007, or submittal of evidence of enforceable permit conditions that limit cancer risk to:~~
 - (i) ~~25 in a million if a facility is located more than 25 meters (82 ft) from a residential or sensitive receptor; or~~
 - (ii) ~~10 in a million if a facility is located 25 meters (82 ft) or less from a residential or sensitive receptor, or located 100 meters (328 ft) or less from an existing school.~~
- (4) **Compliance Plan**
 - (A) ~~On or before January 1, 2006, the owner or operator of a source complying with the requirements of subparagraph (d)(3)(A), or an existing source complying with the requirements of subparagraph (d)(3)(C) that does not have an approved health risk assessment as of January 1, 2006 shall submit a Compliance Plan to the Executive Officer subject to plan fees specified in Rule 306. The compliance plan shall include the following information:~~
 - (i) ~~Facility name, address and contact person; and,~~
 - (ii) ~~SCAQMD permit numbers or application numbers for all equipment subject to this rule; and,~~
 - (iii) ~~Calculations for annual emissions of hexavalent chromium, for any twelve consecutive months of data during calendar years 2004 and 2005, except as approved by the Executive~~

- ~~Officer. Emissions shall be calculated in accordance with the procedure in Appendix 1; and,~~
- ~~(iv) Material Safety Data Sheets (MSDS) for all products which list chromium, hexavalent chromium or a chromate, used in a source subject to this rule; and,~~
 - ~~(v) Information on nearby receptors, including the distances to the nearest residence, commercial or industrial receptor, sensitive receptor and school, measured in accordance with the procedure in Appendix 2; and,~~
 - ~~(vi) Information on spraying operations, including the number of gallons sprayed per year for each product containing chromium or chromate, except as approved by the Executive Officer, and type of spray method; and,~~
 - ~~(vii) Information on emission release parameters, including height of stack for emissions released from a stack, or the dimensions and height of the building in which the spraying operation occurs, for emissions released inside of a building; and,~~
 - ~~(viii) Average inward face velocity of the spray enclosure, as required by subparagraph (d)(1)(B), and the method and instrument used to measure the average inward face velocity; and,~~
 - ~~(ix) Calculation of the length of time necessary to exhaust the volume of air required by clause (d)(1)(C)(i), if applicable; and,~~
 - ~~(x) Source test results submitted pursuant to subdivision (g), if applicable; and,~~
 - ~~(xi) Calculation of hexavalent chromium emissions from touch-up and repair operations under subdivision (h), if applicable.~~
- ~~(B) After review of the data submitted under subparagraph (d)(4)(A), the Executive Officer will notify facilities in writing whether the Compliance Plan is approved or disapproved. If a Compliance Plan is disapproved, the owner or operator shall resubmit the Compliance Plan, subject to plan fees specified in Rule 306, within 60 days after notification of disapproval of the Compliance Plan. The resubmitted Compliance Plan shall include the information required under~~

- subparagraph (d)(4)(A), and the owner or operator shall correct any deficiencies as identified in the Compliance Plan disapproval letter.
- (C) After review of the data in a Compliance Plan submitted pursuant to subparagraph (d)(4)(B), the Executive Officer will notify facilities in writing whether the Compliance Plan is approved or disapproved.
- (D) If a Compliance Plan submitted pursuant to subparagraph (d)(4)(C) is disapproved, the owner or operator shall comply with the requirements of subparagraph (d)(3)(B) within twelve months after notification that the Compliance Plan is disapproved.
- (E) Posting of Compliance Plan Approval Letter
- (i) The Compliance Plan approval letter for equipment not subject to a facility permit under Regulation XXX or Regulation XX shall be mounted so as to be clearly visible in an accessible place within 8 meters (26 feet) of the spray booth enclosure identified in the Compliance Plan submitted under paragraph (d)(4), or as otherwise approved in writing by the Executive Officer.
- (ii) The Compliance Plan approval letter for equipment subject to a facility permit under Regulation XXX or Regulation XX shall be kept with the facility permit, or as otherwise approved in writing by the Executive Officer.
- (F) The owner or operator of a facility shall comply with all conditions in an approved Compliance Plan.
- (5) Application Submittal for New Control Equipment or Permit Modification
Not later than July 1, 2006, an owner or operator of a facility shall submit to the Executive Officer complete application(s) for new control equipment or modification of existing control equipment, as specified in the Compliance Plan to meet the requirements specified in paragraph (d)(3).
- (6) Notification of Compliance
On or before July 1, 2007, the owner or operator of a source not required to submit a compliance plan pursuant to paragraph (d)(4) shall submit a Notification of Compliance to the Executive Officer. The Notification of Compliance shall include the following information:
- (A) The facility name, address and contact person; and

- ~~(B) A statement, signed by a responsible official that the facility is in compliance with the requirements of subparagraph (d)(3)(B) or (d)(3)(C), as appropriate; and,~~
- ~~(C) Evidence of compliance with subparagraph (d)(3)(B) or (d)(3)(C), including but not limited to:
 - ~~(i) Application or permit number of each source required under paragraph (d)(5); and,~~
 - ~~(ii) A copy of the approval to use source test results submitted pursuant to clause (d)(4)(A)(x), if applicable; and,~~
 - ~~(iii) The approval date and approved cancer risk of a health risk assessment demonstrating compliance with subparagraph (d)(3)(C), if applicable; and,~~
 - ~~(iv) Emissions or risk calculations from all sources subject to this rule emitting hexavalent chromium, if applicable.~~~~
- (7) Housekeeping

Effective July 1, 2005, the owner or operator of a source subject to this rule shall conduct spraying and cleanup operations in a manner that minimizes fugitive emissions of atomized paint particles, including but not limited to the criteria in subparagraphs (d)(7)(A) and (d)(7)(B).

 - (A) When removing protective floor, wall or exhaust coverings within the spray booth enclosure, the operator shall:
 - (i) Operate the ventilation system; and,
 - (ii) Ensure that the door of a fully enclosed spray booth is closed; and,
 - (iii) Encapsulate those materials contaminated with primers or coatings containing chromium that are intended to be disposed of in a bag or container before removing from the spray booth.
 - (B) The owner or operator of a source subject to this rule shall not operate the ventilation system when one or more filters, including HEPA filters are being removed or replaced.
- (e) Emissions Inventory and Health Risk Assessment
 - (1) The owner or operator of a facility complying with the requirements specified in subparagraph (d)(3)(C) that does not have an approved health

risk assessment as of January 1, 2006, shall submit to Executive Officer not later than July 1, 2006, an emissions inventory and health risk assessment prepared pursuant to Rule 1402 for existing sources, and new sources where a permit application is submitted on or before January 1, 2006.

- (2) ~~The facility wide cancer risk of a health risk assessment submitted pursuant to paragraph (e)(1) shall be calculated in accordance with the Risk Assessment Procedures referenced in Rule 1402. Health risk from chromium spraying operations shall be presented:~~

- ~~(A) With existing controls; and~~
- ~~(B) After installation of proposed controls, if appropriate, using the default filter efficiency listed in Table 1-2, or an alternate filter efficiency approved by the Executive Officer, or source test results approved by the Executive Officer, if applicable.~~

- (3) ~~After review of all data required under paragraphs (d)(4), (e)(1) and (e)(2), the Executive Officer will notify facilities in writing if the health risk assessment submitted under paragraphs (e)(1) and (e)(2) is approved or disapproved, and the approved cancer risk of the health risk assessment. If the approved health risk assessment conducted pursuant to paragraph (e)(1) results in a cancer risk that exceeds the cancer risk levels specified in subparagraph (d)(3)(C) or the health risk assessment is disapproved the owner or operator of a facility shall:~~

- ~~(A) submit an application for permit(s) to operate the control equipment required to meet subparagraph (d)(3)(B) within six months after the date of notification of the approved or disapproved health risk assessment; and~~
- ~~(B) comply with the applicable requirements of subparagraph (d)(3)(B) no later than 12 months after notification of the approved or disapproved health risk assessment.~~

- (4) ~~The owner or operator of a facility complying with the requirements of subparagraph (d)(3)(C), shall comply with enforceable conditions to ensure that the facility complies with the risk requirements specified in clauses (d)(3)(C)(i) or (d)(3)(C)(ii).~~

(f) **Addition of New Sources and Modification to Existing Sources**

- (1) ~~For permit applications submitted for new or modified existing sources after January 1, 2006 and on or before July 1, 2007, the owner or operator~~

~~of facility shall demonstrate compliance with subparagraphs (d)(3)(A), (d)(3)(B), or (d)(3)(C) on or before July 1, 2007.~~

- (2) ~~After July 1, 2007, the owner or operator of a facility that submits a permit application for a new or modified existing source subject to this rule shall demonstrate compliance with paragraph (d)(3) upon submittal of the permit application. Demonstration of compliance with paragraphs (d)(3) shall require submittal of a:~~
 - (A) ~~new compliance plan pursuant to paragraph (d)(3) if complying with the requirements of subparagraph (d)(3)(A); or~~
 - (B) ~~revised emissions inventory and health risk assessment prepared pursuant to Rule 1402, if complying with the requirements of subparagraph (d)(3)(C).~~
- (3) ~~The owner or operator of a facility submitting a permit application for a new or modified existing source subject to this rule in which there is not an increase in emissions and in which there is not an increase in health risk at any receptor location shall not be required to comply with the requirements of paragraph (f)(2).~~

(g) Source Test Results

~~Results from a source test conducted for the purpose of demonstrating mass emissions from a new or existing source subject to this rule may be used as the basis for calculating facility emissions in order to demonstrate compliance with the emission limit in subparagraph (d)(3)(A) or to calculate emissions from spraying operations under clause (d)(4)(A)(iii). Unless otherwise approved in writing by the Executive Officer, the following criteria shall be met:~~

- (1) ~~The source test protocol and source test report are approved by the Executive Officer prior to January 1, 2006; and,~~
- (2) ~~Both total chromium and hexavalent chromium were measured during the source test; and,~~
- (3) ~~The air pollution control equipment configuration is identical to the configuration when the equipment was tested; and,~~
- (4) ~~The operating parameters of all affected air pollution control equipment are identical or substantially similar to the source tested equipment; and,~~
- (5) ~~The chromate-containing primer or coating sprayed during the source test has the highest percentage by weight of chromium of any primer or coating currently sprayed at the facility.~~

(h) Exemptions

- (1) ~~The requirements of paragraph (d)(1) shall not apply to any touch up and repair operation spraying coatings containing chromium that is conducted outside of a spray enclosure, provided the touch up and repair operation is not performed outside of a building, and emissions and cancer risk from the touch up and repair operation are calculated and included in an approved Health Risk Assessment which meets the risk levels specified in subparagraph (d)(3)(C).~~
- (2) ~~The requirements of paragraph (d)(1) and (d)(2) shall not apply to any touch up and repair operation spraying coatings containing chromium that is conducted outside of a spray enclosure, provided the touch up and repair operation is not performed outside of a building; and~~
 - (A) ~~Emissions from the touch up and repair operation are calculated in an approved Compliance Plan; and~~
 - (B) ~~Total facility wide emissions of hexavalent chromium from all spraying operations are demonstrated to be less than the level in subparagraph (d)(3)(A).~~

(i) Compliance Test Methods

- (1) ~~Capture efficiency of the emissions collection system shall be determined by EPA Test Method 204—Criteria for and Verification of a Permanent or Temporary Total Enclosure, or any other method approved by the Executive Officer.~~
- (2) ~~Transfer efficiency of alternative coating application methods under subparagraph (d)(2)(E) shall be determined in accordance with the SCAQMD method "Spray Equipment Transfer Efficiency Test Procedure for Equipment User, May 24, 1989", or subsequent revisions.~~

(j) Recordkeeping Requirements

- (1) ~~Effective July 1, 2005, the owner or operator of a facility subject to this rule shall maintain records to demonstrate compliance with the applicable requirements in subdivisions (d) and (h). At a minimum, records shall include all of the following information:~~
 - (A) ~~Purchase records of primers or coatings containing chromium used for spray coating operations; and~~

- ~~(B) Material Safety Data Sheets or Technical Data Sheets provided with the materials subject to the requirements of subparagraph (j)(1)(A) that indicate the weight percent of chromate(s) in the primer or coating, and the density of the primer or coating; and~~
 - ~~(C) Daily usage records for each primer or coating subject to this requirement, applied or used daily; and~~
 - ~~(D) Application method for each primer or coating used; and~~
 - ~~(E) Calculations conducted according to the procedures outlined in Appendix 1 and Appendix 2 that demonstrate annual mass emissions from each source subject to this rule, in pounds per year.~~
 - ~~(2) The owner or operator of a facility subject to this rule shall maintain records to demonstrate compliance with the monitoring requirements of subdivision (k). The following parameters shall be recorded:~~
 - ~~(A) The name of the person(s) performing the inspection and/or maintenance operations; and~~
 - ~~(B) The date, time and results of the inspection; and~~
 - ~~(C) The date, time and description of any maintenance activity or repairs resulting from the inspection; and~~
 - ~~(D) The pressure drop across the air pollution control system filter media. Pressure drop shall be recorded once per week, for any week in which spraying operations using coatings containing chromium are conducted on one or more days.~~
 - ~~(3) Records shall be kept in a format acceptable to the District for a minimum of three years and shall be made available to District personnel upon request.~~
- (k) Monitoring Requirements**
 - (1) Weekly Inspection of Air Pollution Control Equipment**

~~The owner or operator of a facility subject to this rule shall perform a weekly visual inspection of the equipment and filter media subject to this rule for leaks, broken or torn filter media, and improperly installed filter media.~~
 - (2) Pressure Drop Across Air Pollution Control Equipment Filter Media**

~~The owner or operator of a facility shall install a gauge to continuously monitor the pressure drop across the air pollution control equipment filter media. A gauge shall be located so that it can be easily visible and in clear~~

~~sight of the operation or maintenance personnel. The pressure drop across the air pollution control equipment filter media shall be maintained at or below the pressure drop prescribed by a permit condition, or by the manufacturer's recommended operating range if no permit condition limits pressure drop.~~

~~(f)~~ **Reporting Requirements**

~~Annual Chromium Coatings Usage Report~~

~~The owner or operator of a facility with a source subject to this rule complying with subparagraph (d)(3)(A) or subparagraph (d)(3)(C) shall submit a report to the Executive Officer by September 1 each year with the following information:~~

- ~~(1) Facility name, address and contact person; and,~~
- ~~(2) Annual usage of each coating or primer containing hexavalent chromium for the previous fiscal year (July 1 through June 30), in gallons per year; and,~~
- ~~(3) Chromate content of each coating or primer containing chromium used during the previous fiscal year (July 1 through June 30); and,~~
- ~~(4) Permit number or application number of each spray booth used to spray chromium; and,~~
- ~~(5) Usage of coatings or primers containing chromium in each spray booth used to spray chromium.~~

Appendix 1 – Inward Face Air Velocity Measurement Procedures

1. Applicability

This method applies to an owner or operator of a chromate spraying operation required to measure the inward face air velocity of a spray booth to demonstrate compliance with the requirements in subdivision (g).

2. Equipment – Anemometer

The anemometer shall be capable of measuring the inward face air velocity in feet per minute (fpm) within an appropriate velocity range with an accuracy within +/- 10% of full scale.

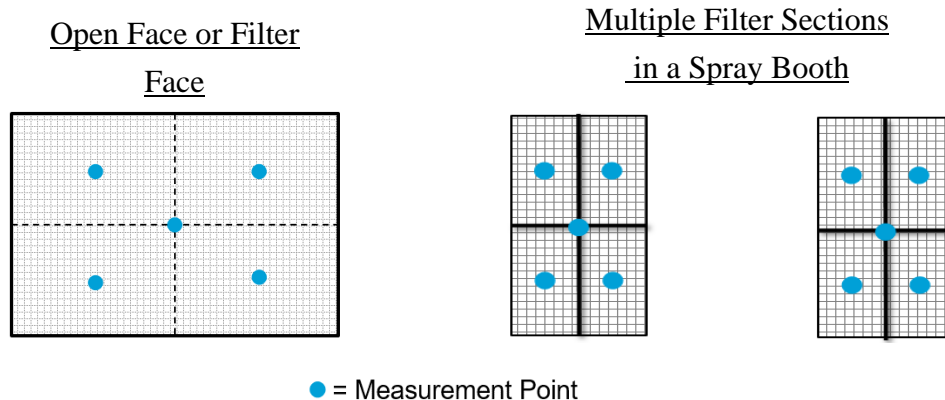

The anemometer shall be operated and calibrated per the manufacturer's recommendations.

3. Test Conditions

The inward face air velocity measurement test shall be conducted while the spray booth is in normal operation and under typical conditions representative of the facility's chromate spraying operation.

4. Procedure

The inward face air velocity measurement shall be conducted over a five-point grid pattern as shown in the below examples:

For an enclosed spray booth, the inward face air velocity measurements shall be taken between 6 and 12 inches from the exhaust filters.

For an open face spray booth, the inward face air velocity measurements shall be taken no more than one inch inside the plane of the open face.

5. Reporting

The following information shall be provided for each inward face air velocity measurement.

Proposed Amended Rule 1469.1 (PAR 1469.1 May 7, 2021)~~(Adopted March 4, 2005)~~

Appendix 1 – Emission Calculation Method

This Appendix establishes the emission calculation method that must be used in accordance with subparagraph (d)(3)(A) of Rule 1469.1, except for facility operators submitting source test results under subdivision (g), or an alternative procedure approved by the Executive Officer.

Emissions of hexavalent chromium from spraying operations must be calculated in accordance with the procedures specified.

Step 1: Identify all primers or coating that contain chromium or chromate. Examples of chromates commonly formulated in coatings include strontium chromate, zinc chromate, lead chromate, calcium chromate and barium chromate.

Step 2: Determine the percentage by weight of chromate in each primer or coating. This data can be obtained from the Material Safety Data Sheet (MSDS) for the product, or by contacting the manufacturer. Chromate percentage may be given as a single value (ex: SrCrO_4 —15%/wt), or it may be given as a range (ex: Zinc Chromate—12%/wt—22%/wt). Use the highest value to calculate emissions if chromate content in a primer or coating is given as a range.

Step 3: Determine the fraction of hexavalent chromium in the chromate. This is the molecular weight of chromium in the chromate, divided by the molecular weight of the entire chromate. All chromium in the chromate is assumed to be hexavalent. The hexavalent fraction of common chromates used in primers and coatings is given in Table 1-1.

Table 1A-1 – Hexavalent Fraction of Common Chromate Primers

Chromate	Molecular Formula	Hexavalent Fraction
Barium Chromate	BaCrO_4	0.205
Calcium Chromate	CaCrO_4	0.333
Lead Chromate	PbCrO_4	0.161
Strontium Chromate	SrCrO_4	0.255
Zinc Chromate	$\text{ZnCrO}_4 \cdot 7\text{HOH}$	0.169

Step 4: Determine the density for each primer or coating used during the year. This data may be obtained from the Material Safety Data Sheet (MSDS) or the Technical Data Sheet (TDS) supplied with each primer or coating. Density data may be given in bulk density (ex: density = 9.2 lbs/gallon) or as specific gravity (ex: s.g. = 1.15). Multiply specific gravity by 8.34 to obtain bulk density.

Proposed Amended Rule 1469.1 (PAR 1469.1 May 7, 2021)(Adopted March 4, 2005)

Step 5: Compile the annual usage for each primer or coating sprayed during the year that contains chromium or chromate. Usage is the number of gallons of each primer or coating.

Step 6: Determine the control efficiency of the filters in your air pollution control (APC) system. A source test approved by the Executive Officer may be used, if both inlet and outlet concentrations of particulate matter were measured during the source test. Use the default control efficiencies in Table 1-2 if no source test data are available. If more than one type of filter is used in series to control emissions (ex: blanket type filter followed by two stage NESHAP-compliant filters), only consider the highest rated control efficiency.

Table 1-2 – Default Control Efficiencies

Control Equipment	Control Efficiency
Conventional Spray Booth Filters	90%
Water wash Booth	
Two-stage Aerospace NESHAP-compliant Filters	
Pocket type Filters	
Accordion Filters	
Three-stage Aerospace NESHAP-compliant Filters	95%
Cartridge Filters	99%
Bag House	
High Efficiency Particulate Arrestor (HEPA) Filters (individually dioctyl phthalate (DOP) or equivalent tested)	99.97%

Note: If a filter manufacturer guarantees a control efficiency higher than the default values in Table 1-2 for the type of filter media in use (for particulate sizes greater than 0.3 microns), submit the manufacturer's test data with your Compliance Plan for consideration. The actual control efficiency used to evaluate your Compliance Plan is up to the discretion of The Executive Officer, based on the data presented.

Step 7: Calculate hexavalent chromium emissions, after existing control equipment, for each primer or coating containing chromium or chromate used during the year.

$$\begin{aligned} \text{Emissions (lbs/yr)} = & \\ & [\text{Usage (gallons/yr)}] * \\ & [\text{Coating Density (lbs/gal)}] * \\ & [\text{Chromate Content (\%/wt)}] * \end{aligned}$$

Proposed Amended Rule 1469.1 (PAR 1469.1 May 7, 2021)~~(Adopted March 4, 2005)~~

$$\begin{aligned} & \{\text{Hexavalent Fraction of Chromate}\}^* \\ & \{1 - \text{Transfer Efficiency (\%)}\}^* \\ & \{1 - \text{Filter Efficiency (\%)}\} \end{aligned}$$

~~Use 65% transfer efficiency unless another transfer efficiency has been approved by the Executive Officer. Provide a separate calculation for each primer or coating that contains chromate used at your facility during the calendar year.~~

Step 8: ~~Sum emissions from each primer or coating sprayed at your facility during the year that has chromium or chromate.~~

**~~Appendix 2—Distance-Adjusted Annual Emission Levels For Facilities
Located More Than 25 Meters (82 ft) from a Residence or Sensitive Receptor.~~**

~~Facilities complying with the facility-wide emission limit in clause (d)(3)(A) may adjust the annual emission limit, according to actual receptor distance. Use the following tables to determine the appropriate annual emissions for compliance with the limits in subparagraph (e)(3)(A), according to the distance to the nearest receptor. The nearest receptor includes commercial, industrial, sensitive and residential receptors. Use Table 2-1 for the distance measurement criteria, and use Table 2-2 to look up the emission limit for the nearest commercial/industrial receptor, and for the nearest sensitive/residential receptor. The allowable emission limit for your facility is the lower of the two values.~~

Receptor distance is measured as follows:

**Table 2-1
Measuring Receptor Distance**

Source Type	Measure From:	Measure To:
Single Stack Venting Chrome-Spraying Process(es)	Stack	Property Line of Nearest Receptor
Multiple Stacks Venting Chrome-Spraying Process(es)	Centroid of Stacks	Property Line of Nearest Receptor
Emissions Released Inside of Building	Center of Building	Property Line of Nearest Receptor

CHAPTER 1 – BACKGROUND

INTRODUCTION

Rule 1469.1 is designed to reduce hexavalent chromium emissions from the spraying of coatings that contain hexavalent chromium, referred to as “chromate coatings.” Chromate coatings typically are applied onto metal substrates as an anti-corrosion agent in the aerospace, military, and commercial industries. Proposed Amended Rule 1469.1 (PAR 1469.1) is designed to further reduce hexavalent chromium emissions from the spraying of chromate coatings. PAR 1469.1 includes requirements for chromate spraying facilities and includes requirements for related operations at those facilities, adds provisions to minimize the release of fugitive emissions, and enhances parameter monitoring of air pollution controls. PAR 1469.1 also updates requirements consistent with current toxic metal rules and removes outdated definitions and provisions.

REGULATORY HISTORY OF RULE 1469.1

Rule 1469.1 was adopted on March 4, 2005, and includes requirements for point sources, transfer efficiency, spray booth operation, housekeeping, monitoring, reporting, and recordkeeping.

Point Source Compliance Options

Rule 1469.1 provides operators with three point source compliance options: Option A: Annual Emission Limit; Option B: Air Pollution Control Device; or Option C: Facility-wide Risk Limit. The rule established a July 1, 2007 compliance date for point source requirements. Option A (Annual Emission Limit) is applicable to facilities where the only source of hexavalent chromium is chromate spraying. Under this option, the facility must demonstrate that annual emissions are below a specific emission limit. The emission limit varies based on the distance to residential and/or sensitive receptors, including existing schools. The Option A emission limits are based on the maximum allowable emissions using a Tier 2 screening risk analysis that was based on a Maximum Individual Cancer Risk (MICR) of 25-in-a-million (or 10 in a million if less than 25 meters of a residential/sensitive receptor or less than 100 meters from an existing school). These emission limits were developed before the Office of Environmental Human Hazard Analysis (OEHHA) updated their health risk guidance in 2015.¹ Based on revised 2015 OEHHA health risk guidance, the current Rule 1469.1 emission limit in clause (d)(3)(A)(i) would be reduced from 0.018 to 0.0006 pounds per year for facilities located more than 25 meters from a residential or sensitive receptor. As discussed later in this report, PAR 1469.1 is proposing to remove Option A.

Option B (Air Pollution Control Device) requires a facility to ventilate each chromate spray coating operation to air pollution control equipment with a rated particulate filtration efficiency of 99.97% or higher, for particulate matter 0.3 microns in size (the filtration efficiency of High Efficiency Particulate Air (HEPA) filters). Based on recent data, there are 115 Rule 1469.1 facilities, and nearly all comply with Option B point source requirements.

Under Option C (Facility-Wide Risk Limit), a facility is required to demonstrate that facility-wide emissions of all toxic air contaminants would not exceed a maximum cancer risk level of either 10 in-a-million or 25 in-a-million, depending on the distance to the receptor and the type of receptor. Under existing rule provisions, compliance with Option C is demonstrated either through an approved health risk assessment (HRA), approved Risk Reduction Plan, or enforceable permit

¹ Office of Environmental Health and Hazard Assessment. *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments* January 19, 2021 from <https://oehha.ca.gov/media/downloads/cmr/2015guidancemanual.pdf>

conditions. There are two large aerospace facilities currently meeting the requirements of Rule 1469.1 under Option C. Each facility has an approved health risk assessment, one approved in 2000 and one approved in 2015 using the revised 2015 OEHHA health risk guidance.

Transfer Efficiency, Spray Booth Operations, and Other Requirements

Transfer efficiency is the fraction of coating that adheres to the part when spraying techniques are used. Rule 1469.1 requires a minimum coating application transfer efficiency of 65%, which is at least equivalent to the transfer efficiency when using a high-volume, low-pressure (HVLP) spraying technique.

Rule 1469.1 also includes general requirements for spray booths operations. Specifically, exhaust from spray booths must be vented such that there is a continuous inward airflow at all air opening during spraying operations, and the average inward face velocity through an open face spray booth shall be a minimum of 100 feet per minute or other approved minimum velocity. The existing rule does not include a requirement on how to demonstrate continuous inward airflow. After spraying operations have ceased, the Rule also requires the exhaust system's continued operation to remove contaminated air within the spray booth. The rule also prohibits a spray booth ventilation system's operation when one or more spray booth filters are being replaced.

Housekeeping

Rule 1469.1 requires that spraying and cleanup operations be conducted in a manner that minimizes fugitive emissions of atomized paint particles. The rule does not include requirements for areas to be cleaned, minimum cleaning frequencies, or approved cleaning methods. The rule specifies that when protective floor, wall, and exhaust coverings are removed, the ventilation system must be operating with the doors of an enclosed booth closed. Protective coverings intended for disposal must be encapsulated inside the booth, but there are no requirements for placing collected materials within closed containers.

Monitoring

Rule 1469.1 also requires weekly visual inspections of the spray booth and filters for leaks, broken or torn filter media, and improperly installed filter media. The rule requires the use of a gauge to measure the pressure drop across the spray booth filters continuously. The pressure drop is required to be maintained at or below the maximum pressure drop established by permit conditions or manufacturer recommendations. There are no requirements for Rule 1469.1 facilities to conduct source tests.

Recordkeeping and Reporting

Rule 1469.1 establishes recordkeeping requirements for chromate coatings usage and housekeeping. There are also recordkeeping requirements for the visual inspections and pressure drop readings. Rule 1469.1 includes annual reporting requirements of chromate coating use for facilities that comply with the Annual Emissions or the Facility-wide Risk Limit compliance options.

Exemptions

Rule 1469.1 includes limited exemptions for touch up and repair operations conducted outside of a spray booth, but within a building provided emissions and cancer risk from touch up and repair,

operation are calculated and included in an approved Health Risk Assessment or compliance plan which meets the applicable risk levels.

OTHER REGULATIONS

Aerospace NESHAP

Spraying of chromate coatings at some aerospace facilities is also currently regulated under the federal National Emission Standards for Hazardous Air Pollutants for Aerospace Manufacturing and Rework Facilities (Aerospace NESHAP), 40 CFR Part 63, Subpart GG². The Aerospace NESHAP was promulgated in September 1995 and last amended in December 2015, and applies to facilities that are major sources of hazardous air pollutant emissions. The federal regulations establish filtration efficiency requirements for dry particulate filters for new and existing sources, based on the aerodynamic particle size range of paint overspray. Under the Aerospace NESHAP, new sources (construction commenced on or after October 1996) are required to pass the air stream through either a three-stage dry filter system or a HEPA filter system before exhausting it to the atmosphere. Existing sources are required to pass the air stream from chromate spraying through either a two-stage dry filtration system or a waterwash system before exhausting it to the atmosphere. When spraying coatings containing chromates, the Aerospace NESHAP requires that the filters meet a control efficiency of at least 95%.

6H NESHAP

The NESHAP for Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources, 40 CFR Part 63, Subpart HHHHHH (6H NESHAP)³ regulates the spraying of chromate coatings on metal and plastic substrates at facilities that are not major source facilities. The 6H NESHAP was promulgated in January 2008 and, in part, applies to facilities that spray coatings containing chromium and other inorganic hazardous air pollutants. The regulation requires spraying operations to be conducted in spray booths or preparation stations equipped with filters that achieve at least a 98% control efficiency, or in waterwash booths that are maintained according to manufacturer's specifications and consistent with good air pollution control practices. The 6H NESHAP also requires painters to have completed training in techniques to minimize paint overspray and has notification and recordkeeping requirements.

California Air Resources Board

The California Air Resources Board (CARB) develops Air Toxic Control Measures (ATCMs) for several mobile and stationary source categories as part of the State's air toxics program. The ATCMs are codified in the California Code of Regulations (CCR), and local air districts are required to implement the ATCMs or adopt or enforce equally effective or more stringent regulations. CARB has developed an ATCM for emissions from thermal spraying operations. Thermal spraying is not addressed in Rule 1469.1, but the South Coast AQMD has proceeded as

² United States Environmental Protection Agency. *Subpart GG—Aerospace Manufacturing and Rework Facilities: National Emission Standards for Hazardous Air Pollutants*. (2015). Retrieved 18 March 2021, from <https://www.govinfo.gov/content/pkg/FR-2015-12-07/pdf/2015-30356.pdf>.

³ United States Environmental Protection Agency. *Subpart HHHHHH—National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources*. (2008). Retrieved 23 March 2021, from <https://www.govinfo.gov/content/pkg/FR-2008-01-09/pdf/E7-24718.pdf>.

allowed by law to implement the thermal spraying ATCM through permit conditions on thermal spraying equipment. CARB has also developed an ATCM for Emissions of Hexavalent Chromium and Cadmium Motor Vehicle and Mobile Equipment Coatings. South Coast AQMD Rule 1151 – Motor Vehicle and Mobile Equipment Non-Assembly Line Coating Operations prohibits the use of automotive coating containing hexavalent chromium as part of CARB automotive coatings ATCM implementation. There are no ATCMs for chromate spray coating operations.

European Union

On June 1, 2007, the European Chemicals Agency (ECHA) adopted a REACH regulation (an acronym for Regulation, Evaluation, Authorization, and Restriction of Chemicals) to regulate all chemical substances used in industrial processes and day-to-day lives. Under REACH, companies must identify and manage the risk of substances they manufacture and market in the European Union. Eventually, the goal is to substitute the most hazardous substances with safer alternatives.

On April 17, 2013, ECHA added several of the most common forms of hexavalent chromium on its “Authorisation List,” citing them as carcinogenic and mutagenic and classifying them as “substances of high concern.” On July 22, 2017, a second group of compounds was added, including strontium chromate and potassium hydroxyoctaoxodizincatedichromate (commonly known as zinc potassium chromate or zinc chromate) which can be found in chromate coatings.

After the established sunset date, compounds placed on the Authorisation List are prohibited from use in, and importation into the EU, unless companies that produce or use them submit applications to exempt them for specific uses. If ECHA approves an application, the chemical will be permitted for use and the approval can apply to both upstream producers and downstream users. The first group of hexavalent chromium compounds' sunset date was September 21, 2017, and January 22, 2019, for the second group.

The EU's Committees for Risk Assessment and Socioeconomic Analysis has approved several authorisations or exemptions with specific conditions for the use of hexavalent chromium applied to the surface of products. These authorisations are made on behalf of several downstream users. They cover a broad range of industry sectors such as car manufacturing, aerospace, aeronautics, and the manufacture of metals and construction equipment.⁴ For more information on the EU's program and authorisations, please refer to their website at <https://echa.europa.eu/>.

HEALTH EFFECTS OF HEXAVALENT CHROMIUM

In 1986, the California Air Resources Board (CARB) identified hexavalent chromium as a human carcinogen and toxic air contaminant. A “toxic air contaminant” or TAC is defined as “an air pollutant which may cause or contribute to an increase in mortality or an increase in serious illness, or which may pose a present or potential hazard to human health” (H&SC Section 39655(a)).

Hexavalent chromium⁵ is one of the most potent carcinogens. Hexavalent chromium is a multipathway toxic air contaminant, meaning there are multiple exposure pathways for a person to be exposed, such as inhalation and ingestion. Inhalation of hexavalent chromium can cause both

⁴ European Chemicals Agency. Retrieved February 11, 2021 from <https://echa.europa.eu/>

⁵ Office of Environmental Health and Hazard Assessment. *Health Effects of Hexavalent Chromium*. Retrieved January 14, 2021 from <https://oehha.ca.gov/air/health-effects-hexavalent-chromium>.

cancer and non-cancer health effects. Inhalation of hexavalent chromium over a long period of time increases the risk of lung cancer and nasal cancer. The non-cancer effects of being exposed to hexavalent chromium at high levels over time can cause or worsen health conditions such as irritation of the nose, throat and lungs; allergic symptoms (wheezing, shortness of breath); and nasal sores and perforation of the membrane separating the nostrils.

The California Environmental Protection Agency's Office of Environmental Health Hazard Assessment (OEHHA) developed cancer potency factors to estimate cancer risk associated with hexavalent chromium exposure. Using OEHHA's methodology to determine health risk, continual exposure to 0.045 ng/m³ of hexavalent chromium for 30 years is estimated to increase cancer risk to 25 in a million. Exposure over shorter periods would be associated with lower cancer risks.

CHROMATE COATINGS

Chromate coatings are primers, topcoats, and other types of coatings that contain chromates. A chromate is any salt or ester of chromic acid and is a form of hexavalent chromium found in coatings. Typical forms of these chromates are strontium chromate, zinc chromate, and barium chromate. Chromate coatings are typically applied onto metal substrates in the aerospace, military, and commercial industries as an anti-corrosion agent. Due to their toxicity, there are ongoing attempts to find alternative coatings that are as effective but do not contain hexavalent chromium.

Alternatives to Coatings Containing Chromates

Hexavalent chromium has been widely used for corrosion protection with applications in electroplating, stainless steel production, welding, chromate painting, and wood preservation. In 1978 and 1980, numerous studies by the World Health Organization (WHO) reported the carcinogenic nature of hexavalent chromium. It is known exposure can induce nose, throat, eye and skin irritation, and significantly increase an individual's risk of lung cancer. Due to increasing health concerns, legislation, initiatives, and organizations are working on transitions to alternative solutions.

On April 8, 2009, the Department of Defense signed a memorandum to minimize hexavalent chromium use. To mitigate the health risks of hexavalent chromium, Military Departments were directed to invest in appropriate research and development for alternative solutions, explore ways to reduce hexavalent chromium by-products, authorize the use of suitable alternatives, and share knowledge and findings. This policy applies to all new program starts, new program increments, and procurement of infrastructure materials, goods, and services.

The Advanced Surface Engineering Technologies for a Sustainable Defense (ASETSDefense) is a Department of Defense initiative sponsored by the Strategic Environmental Research and Development Program (SERDP) and the Environmental Security Technology Certification Program (ESTCP). The goal is to facilitate new cost-effective, environmentally friendly technologies for surface engineering (coatings and surface treatment) while reducing or eliminating environmental safety and occupational health impacts from coatings and treatment processes that utilize hexavalent chromium, coatings that contain cadmium, and coatings that contain volatile organic compounds. SERDP and ESTCP have developed a database to provide access to background information and technical data from research, development, test, and

evaluation efforts on alternatives to products containing hexavalent chromium. ASETSDefense also conducts workshops and presentations to exchange information on alternative solutions.⁶

NEED FOR PROPOSED AMENDMENTS TO RULE 1469.1

Amendments to PAR 1469.1 are needed to update point source requirements, add control device parameter monitoring, enhance measures to reduce and contain fugitive emissions, and address emissions from dried coating removal activities.

Outdated Point Source Compliance Options

As previously discussed, nearly all facilities presently comply with the existing Rule 1469.1 control device option (Option B). No facilities are complying with Option A. Two facilities comply with Option C using approved health risk assessments that demonstrate that the facility-wide risk is below the rule's limit. Health risk assessments conducted before OEHHA's 2015 risk assessment guidance will not reflect current risk assessment methodologies that will have estimated risks that are approximately three times higher for residential or sensitive receptors even with no change in emissions. The approved health risk assessment also represents a one-time snapshot of facility operating conditions that may not reflect current conditions. Over time, chromate spray coating operating conditions may be within the established permit conditions but could be different than the actual emissions used to estimate health risk. Additionally, other TAC sources, outside of chromate spraying, could be added or modified at a facility, which may affect the overall facility-wide health risk. Moreover, the types and locations of sensitive receptors near a facility may change over time, changing a facilities' estimated health risk. There is also no requirement that the facility's operations be limited to the emissions used to estimate the health risks in the health risk assessment and no requirement to update the health risk assessment periodically as operations change or as health risk assessment procedures are updated. As discussed later in this report, PAR 1469.1 removes the Option A and Option C compliance options and preserves the control device requirement (Option B) for all new or modified facilities.

Lack of Spray Booth Parameter Monitoring

Spray booth collection or control efficiency tests are not typically conducted, and source tests are not required under 1469.1 or conducted as part of the permitting process. Source testing is a challenge at chromate spray coating operations because the tests are generally conducted over a four-hour period. Since spraying operations tend to be intermittent and not continuous, source testing spraying operations may not represent "normal" operations. Rule 1469.1 requires facilities to continuously monitor the pressure drop across the spray booth exhaust filters and ensure that the pressure drop is below the maximum value established under permit conditions. This existing requirement identifies when filters are becoming clogged and need replacement; however, other methods, such as monitoring minimum pressure drop values, can notify an operator of potential filtration system issues.

Rule 1469.1 also includes a requirement that the average inward face velocity of air through an open face enclosure be a minimum of 100 feet per minute (fpm). However, the rule does not specify a method to measure inward face velocity, and there are no requirements for facilities to

⁶ Advanced Surface Engineering Technologies for a Sustainable Defense. Retrieved February 11, 2021 from <https://www.serdp-estcp.org/assetsdefense>.

measure inward face velocity routinely. Moreover, this provision is only applicable to open face spray enclosures, and there are no similar provisions for enclosed spray booths. Requiring facilities to routinely measure inward face velocities using a specific test method can be another technique to ensure the air pollution control device is properly operating.

Minimal Fugitive Emission Control Requirements

Rule 1469.1 currently includes housekeeping requirements to control fugitive emissions. Table 1 compares housekeeping requirements in current amended and adopted South Coast AQMD toxic metal particulate rules to existing Rule 1469.1 requirements. As shown in Table 1, recently amended or adopted toxic metal particulate rules require the use of approved cleaning methods, such as wet cleaning methods, to ensure that cleaning activities do not result in the generation of fugitive emissions. Recent toxic metal particulate rules also establish routine cleaning requirements in specific areas, cleanup of spills, and procedures for waste collection and storage to reduce the potential for fugitive emissions. As presented in Table 1, Rule 1469.1 presently does not include these requirements.

Table 1 - Comparison of Housekeeping Requirements in South Coast AQMD Toxic Metal Rules

Rule Provisions	Rule 1407 Metal Melting (Cadmium, Arsenic, and Nickel)	Rule 1420 Lead Standards (Lead)	Rule 1420.1 Lead-Acid Battery Recycling (Lead, Arsenic)	Rule 1420.2 Lead Metal Melting (Lead)	Rule 1430 Metal Grinding (Various Metals)	Rule 1469 Anodizing and Plating (Hexavalent Chromium)	Rule 1469.1 Coating Spraying (Hexavalent Chromium)
Approved Cleaning Methods	Yes	Yes	Yes	Yes	Yes	Yes	No
Routine Cleaning	Yes	Yes	Yes	Yes	Yes	Yes	No
Cleaning Spills	Yes	Yes	Yes	Yes	No	Yes	No
Waste Collection and Storage	Yes	Yes	Yes	Yes	Yes	Yes	No

Improved housekeeping reduces the potential for chromate-containing materials to accumulate on surfaces and then be disturbed and re-entrained. The use of approved housekeeping methods to collect particulate matter can reduce the potential for fugitive emissions. Improved housekeeping involves properly handling these collected wastes laden with chromate coatings using closed containers and storing cleaning materials within an enclosed building.

Uncontrolled Sources

Dried Coating Removal

Many Rule 1469.1 facilities conduct operations that involve sanding or scuffing of parts previously coated with chromate coatings. These activities, referred to as dried chromate coating removal, can result in the generation of fine particles that can become airborne. Facilities may conduct dried chromate coating removal in a controlled environment, such as within a spray booth or a clean room, where particles can be collected; however, those particles can exit the facility through the exhaust if they are not vented to appropriate air pollution controls. Facilities may also conduct these activities on downdraft tables, which use negative air to capture dust particles vented to a filtration system. However, a downdraft table may not adequately capture all emissions if the part is too large to rest entirely on the table. Rule 1469.1 does not include specific requirements to control emissions from these sources, and if control devices are used at a facility, the Rule does not include any performance standards.

Demasking

Facilities may also conduct demasking activities that involve removing tape or other materials used to prevent the adhesion of coatings to portions of workpieces subject to chromate spraying. As the masking material is removed from the part, dried chromate coating particles can flake away from the masking material. While these particles may not be as small as particles generated during dried coating removal activities, there is a potential for fugitive emissions from these activities. Rule 1469.1 does not include any specific provisions for demasking activities.

PUBLIC PROCESS

Development of PAR 1469.1 is being conducted through a public process. A PAR 1469.1 Working Group has been formed to provide the public and stakeholders an opportunity to discuss important details about the proposed rule and provide South Coast AQMD staff with input during the rule development process. The PAR 1469.1 Working Group includes representatives from businesses, environmental groups, public agencies, and consultants. South Coast AQMD has held one working group meeting at the South Coast AQMD Headquarters in Diamond Bar and five working group meetings via Zoom Video Communications (Zoom). The meeting at South Coast AQMD Headquarters was held on March 4, 2020. The meetings held via Zoom were on June 10, 2020, July 22, 2020, September 9, 2020, October 22, 2020, January 13, 2021, and March 10, 2021. A Public Workshop was held on February 18, 2021, via Zoom to present the proposed amended rule and receive public comment.

CHAPTER 2 – INDUSTRY CHARACTERIZATION

PROCESS AND EQUIPMENT DESCRIPTIONS

Chromate coatings are typically sprayed inside a spray booth vented to a combination of conventional spray booth filters, multi-stage filters, and High-Efficiency Particulate Air (HEPA) filters to control and capture overspray. The workpieces may be placed on racks, stands, and other workpiece support equipment during the spraying operation. Portions of the workpieces may be protected by masking tape or other masking material to prevent the adherence of coatings. After the spraying operation is concluded, workpieces may be cured within the booth. The workpiece support equipment may be used to transport the workpieces to a separate oven or placed in another area in the facility for curing. Once the curing process is completed, masking materials are removed, and any excess dried coating may be removed through physical or mechanical means, such as buffing, scuffing, sanding, or grinding.

Chromate Coatings

Chromate coatings are typically applied onto metal substrates as an anti-corrosion agent in the aerospace, military, and commercial industries. Chromate coatings include primers, topcoats, and other types of coatings that contain chromates. Common forms of chromates found in coatings include strontium chromate, zinc chromate, and barium chromate.

Spray Booths

A spray booth is a power-ventilated structure used to control and capture overspray, vapor, and residue. Activities are conducted within a spray enclosure vented to a filtration system to capture particles before the air exits through the spray booth exhaust ducting. The negative airflow through the spray booth's enclosure is controlled by an exhaust fan. There are various configurations of spray booths. A spray booth can be enclosed or have an open face. An enclosed spray booth is enclosed on all sides during operation, where the only openings are for makeup air. An open face spray booth has one side that is not enclosed, and air flows through the open face horizontally during operation. Spray booths may be non-bench booths or bench booths. A non-bench spray booth is a typical spray booth where both the operator and workpiece are within the spray enclosure area during operations. A bench spray booth is usually used for smaller workpieces and has a raised spray enclosure area where the operator cannot stand. Bench spray booths are typically open-faced; however, there are enclosed bench spray booths with integral work gloves that the operator must use to operate the booth (similar to an abrasive blasting cabinet). Figures 1 through 4 provide examples of various spray booth configurations.

Figure 1 – Example of an Open Face Non-Bench Spray Booth**Figure 2 – Examples of Enclosed Non-Bench Spray Booths**

Figure 3 – Example of an Open Face Bench Spray Booth⁷**Figure 4 – Examples of Enclosed Bench Spray Booths**

⁷ Spray Systems Inc. *Bench Spray Paint Booths*. Retrieved February 9, 2021, from <https://www.spraysystems.com/products/bench-spray-paint-booths>

Filter Media

To meet the pollution control requirements under Option B, a spray booth where chromate coatings are sprayed must be vented to HEPA filters or better. HEPA filters are individually tested and certified by the manufacturer to have a control efficiency of not less than 99.97% on particles that are 0.3 microns in size. The HEPA filters are typically the last stage of filter media before the exhaust; a spray booth will also typically have a prefilter and one or more layers of filter media that are less expensive with lower control efficiencies upstream of the HEPA filters to capture most of the coating particles to extend the life of the more expensive HEPA filter.

When filters are loaded with overspray material, they must be replaced with new filters to prevent rupture and to allow sufficient airflow through the booth. Rule 1469.1 requires the installation of a pressure gauge at the booth to monitor the pressure drop across the filter media. A Permit to Operate may also require a spray booth to have a pressure gauge dedicated to measuring the pressure drop across the HEPA filters.

Spray Equipment

Facilities that apply chromate coatings often spray the coatings onto workpieces. Rule 1469.1, as with other South Coast AQMD coating rules, reduces overspray by requiring facilities to use high-volume low-pressure (HVLP) or electrostatic spray equipment. Figure 5 is an example of an HVLP spray gun. Facilities may also use other application methods demonstrated to have at least a 65% transfer efficiency. Transfer efficiency is the ratio of the weight of coating solids adhering to an object to the total weight of coating solids used in the application process, expressed as a percentage. Operations, where coatings are hand applied or applied by flow coater, roll coater, dip coater, are not subject to these requirements since transfer efficiency should be much higher than that of using spray method and should not lead to overspray.

Figure 5 – Example of an HVLP Spray Gun

Workpiece Support Equipment

Racks, stands, and other equipment used to hold or support workpieces during spraying and drying operations are referred to as workpiece support equipment. This equipment is often also used to transport workpieces and hold finished parts throughout the facility as part of the overall work process.

Dried Chromate Coating Removal

For the purposes of PAR 1469.1, the physical or mechanical removal of dried coatings from workpieces (e.g., buffing, scuffing, sanding, grinding) is referred to as dried chromate coating removal. Some facilities currently conduct dried chromate coating removal activities within a spray booth or under a hood to control and reduce fugitive emissions of dried coating particles. Facilities may also conduct dried coating removal activities on downdraft tables to reduce fugitive emissions. Downdraft tables are workbenches with built-in ventilation to capture dust, smoke, and fumes and draw them away from the material being worked on (see Figure 6). They typically consist of a perforated surface whose underside is connected to a ventilation or dust collection system, including filters certified as HEPA or better. South Coast AQMD requires downdraft tables and other air pollution control devices to control fugitive emissions of dried chromate coatings to be issued Permits to Operate.

Figure 6 – Example of a Downdraft Table

Demasking

Prior to applying coatings, facilities may apply masking tape or other masking materials onto particular areas of workpieces to prevent the adherence of coatings. After the coating has been sprayed on and has cured, the masking materials are removed, potentially disturbing the dried coatings that adhered onto the masking material. Demasking activities may generate larger dried coating particles than dried chromate coating removal activities and may be conducted in areas without fugitive emission controls.

SPRAY BOOTH AIR POLLUTION CONTROL OPERATING PARAMETERS

There are two critical elements of spray booth operation: collection efficiency and control efficiency.

Collection Efficiency

Collection efficiency ensures that a pollution control device is collecting coating particles. In the case of a spray booth, it ensures that coating particles are directed towards the filters at an appropriate velocity. Low collection efficiency can lead to increased fugitive emissions. An indicator of collection efficiency in a spray booth is the inward face air velocity-the measured speed of a spray booth's inlet air. The air velocity can be measured at the front of the filters or at the opening of an open face booth. Velocity measurements taken at the opening of an open face spray booth indicate that the velocity at the filter face should be at least the same or greater.

A spray booth can also demonstrate collection efficiency by meeting the criteria for a permanent total enclosure (PTE). The criteria are listed in U.S. EPA Method 204 - Criteria For and Verification of a Permanent or Temporary Total Enclosure (Method 204)⁸. The criteria are:

- Any natural draft opening (NDO) shall be at least four equivalent opening diameters from each emissions point;
- The total area of all NDOs shall not exceed 5% of the surface area of the enclosure's four walls, floor, and ceiling;
- The average facial velocity of air through all NDOs shall be at least 200 feet per minute (fpm). The direction of airflow through all NDOs shall be into the enclosure; and
- All access doors and windows that are not considered NDOs must be closed during routine operations.

Open face spray booths would likely not meet the criteria for a PTE due to the large size of their openings.

Control Efficiency

Control efficiency establishes the percent control of the pollution control device; a spray booth's control efficiency is dependent on the efficiency of the filtration system. Spray booths vented to HEPA filters have a 99.97% control efficiency on 0.3 micron particles. While source testing is the most direct way to measure a spray booth's air pollution control efficiency, there are difficulties that prevent the use of source tests at facilities with chromate spray coating operations. For example, the outlet measurements for a source test generally require four hours of continuous operation time. Since chromate spraying operations are generally not continuous over a four-hour period, requiring a source to operate for four hours would not represent typical operating conditions at the facility.

One common method to monitor filter performance is the use of a pressure differential gauge at the spray booth to measure the pressure drop across the HEPA filter media. HEPA filters have a pressure drop operating range typically specified by the manufacturer. The spray booth's South

⁸ United States Environmental Protection Agency. Method 204 - Permanent (PTE) or Temporary Total Enclosure (TTE) for Determining Capture Efficiency. (2019, January 14). https://www.epa.gov/sites/production/files/2019-06/documents/method_204_0.pdf.

Coast AQMD Permit to Operate may also specify the maximum and minimum pressure drop limits. If the pressure drop exceeds the maximum limit of the range, it indicates that the filters are clogged and must be replaced. If the pressure drop is below the minimum limit of the range, it indicates that there may be a tear, gap, or other issues with the integrity of the filter media, which would allow overspray to exit through the exhaust duct. While filter media pressure gauges are required for all spray booths where chromate coating spraying operations are conducted, a dedicated pressure gauge is needed to monitor the HEPA filters' status since they determine the highest control efficiency for the spray booth.

PATHWAYS FOR FUGITIVE EMISSIONS

There are multiple pathways that fugitive emissions can be created and discharged from facilities that conduct chromate spraying operations. If not well controlled, the accumulation of fugitive emissions in and around a facility can impact neighbors. Fugitive emissions can be generated during spraying operations and ancillary operations such as dried coating removal and demasking activities and movement of equipment and materials containing or laden with chromate coatings. Approaches to minimize fugitive emissions generally include minimizing the accumulation of chromate coatings through housekeeping procedures, containment of chromate coatings that can become fugitive, and minimizing the release of fugitive emissions through best management practices and building enclosures.

Fugitive Emissions from Overspray Exiting a Spray Booth

If a spray booth's ventilation control system is not operating properly during a chromate spraying operation, overspray may not be drawn towards the filter media and exit out the open face of an open face spray booth, as well as through any ingresses or egresses of an enclosed booth that are not closed during spraying. If the collection efficiency of the pollution controls is not adequate, there will also be a greater accumulation of overspray within the spray booth, which can be tracked out through foot traffic and movement of equipment out of the spray booth. An owner or operator conducting a spraying operation too close to a spray booth opening may also lead to overspray exiting the booth.

Dried Coatings Exiting a Spray Booth

Over time, if not cleaned regularly, the surfaces of a spray booth will accumulate dried coating particles from overspray. The removal and replacement of used filters and other activities conducted within the booth can also deposit dried coating particles onto the spray booth surfaces. The movement of people and equipment in and out of the booth can track the dried coating particles out of the booth. Facilities may also line their spray booths with protective coverings to collect overspray. If conducted improperly, the removal of these protective coverings could disturb the dried overspray, which can exit the booth.

Workpiece Support Equipment

Racks, stands, and other workpiece support equipment present in a spray booth while chromate coatings are being sprayed may become coated with overspray. Over time, a substantial accumulation of dried coating on workpieces can occur. Unlike the thin uniform layer of coating applied on workpieces, the dried coating material that builds up over time on workpiece support equipment can be uneven and rough and can protrude out from the equipment. Handling of the workpiece support equipment and the movement of the equipment around the facility can cause pieces of the dried coating material to fall off onto the ground, which can then be crushed into fine particles by foot traffic and equipment movement.

Dried Chromate Coating Removal Activities

Dried chromate coating removal activities such as grinding, buffing, and sanding directly create fine chromate coating particles that can easily become fugitive emissions if not vented to air pollution controls. Chromate particles from dried coating removal activities can also accumulate on surfaces and become a source of fugitive emissions if not cleaned.

Demasking Activities

Demasking can also be a source of fugitive emissions if not well contained. Demasking disturbs the dried coatings sprayed on the masking material, which can flake off and deposit onto the ground and other surfaces. Dried coatings associated with demasking activities are generally small chips and pieces of dried coatings. If accumulated on surfaces, they can be ground into fine particles by foot traffic and equipment movement and can become a source of fugitive emissions if not cleaned.

Improper Waste Storage

A facility's chromate spray coating operation generates various types of waste materials that may contain chromate coatings. Used filters, masking materials, spray booth protective coverings, and disposable personal protective equipment are laden with dried chromate coating particles, and if not properly disposed of in closed containers, can be potential sources of fugitive emissions.

OVERVIEW OF FACILITIES

Based on permitting data, there are approximately 115 facilities expected to be impacted by PAR 1469.1, with 231 spray booths. Of those spray booths, 100 are open face non-bench spray booths, 66 are enclosed non-bench spray booths, and 18 are bench spray booths, of which at least six are enclosed bench spray booths. Based on the available information, the configuration of the remaining booths was unclear; however, all are permitted to conduct chromate spray coating operations. With the exception of facilities that have complied with point source requirements under Option C, all spray booths permitted for chromate spray coating operations are equipped with HEPA or better filtration. Four spray booths at two facilities that comply with the Rule 1469.1 Option C facility-wide cancer risk limits are not required to be equipped with HEPA filters.

Site Visits and Facility Survey

As part of PAR 1469.1 development, staff conducted site visits at 16 facilities and observed 30 paint spray booths. Staff also distributed a survey on January 31, 2020, to the known universe of

spraying facilities to gather information about equipment, operations, and general industry practices and approaches to housekeeping and waste disposal. Thirty-one (31) facilities returned completed survey responses.

During the site visits and compliance inspections, housekeeping procedures and schedules were observed to be inconsistent across facilities. Some facilities conducted daily housekeeping procedures while others described housekeeping frequencies as weekly, or on an as-needed basis. Some facilities used vacuum equipment with HEPA filtration for housekeeping, while others used shop vacuums, which would not meet the definition of a PAR 1469.1 HEPA vacuum. Waste collection and storage procedures also varied between facilities, with some facilities immediately placing waste materials in closed containers while others allowed wastes to accumulate or placed wastes in open containers.

Staff also observed demasking activities that were conducted in different environments with varying fugitive dust-reducing measures. In some cases, demasking was conducted on a down draft table, and waste material was immediately placed into closed containers. In other instances, used masking tape containing dried chromate coatings was allowed to accumulate in the open.

Survey responses to a question regarding the frequency of housekeeping in spray booth areas corroborated that housekeeping frequency varied across the facilities. Fifteen (15) facilities conducted daily cleaning, but some cleaned less frequently: every other day, once a week, once a month, or had no set cleaning frequency. Survey responses also found that a majority of the thirty-one respondents, eighteen (18) facilities, did not conduct spray booth parameter monitoring outside of the required filter pressure drop, while the remaining facilities responded that they conducted tests for air velocity and capture efficiency. Survey responses also indicated that dried chromate coating removal activities were often conducted in spray booths, or in other controlled environments, such as clean rooms, or on downdraft tables. However, demasking activities were not conducted in controlled environments, and facilities did not indicate if they implemented any housekeeping or control measures to reduce fugitive emissions from these activities.

CHAPTER 3 – SUMMARY OF PROPOSED AMENDED RULE 1469.1

OVERALL APPROACH

The objective of PAR 1469.1 is to further reduce hexavalent chromium emissions from spraying operations and from related activities such as dried chromate coating removal activities at facilities that spray chromate coatings. PAR 1469.1 accomplishes this with updated point source requirements and control device parameter monitoring. Updated point source provisions include a requirement for a minimum of HEPA filtration for all new spray booths and a minimum of HEPA control devices for all dried coating removal activities. Amended parameter monitoring provisions include requirements to measure inward air velocity within spray booths and monitor pressure drop at the spray booth filtration system. PAR 1469.1 also includes updated housekeeping requirements and adds best management practices and building enclosure requirements. Housekeeping requirements and best management practices minimize the accumulation of materials that may contain chromates outside of spray booths that can become fugitive emissions. Building enclosure requirements prevent the migration of fugitive emissions from leaving a facility. PAR 1469.1 also includes amended provisions for visual inspections, new requirements for exhaust duct cleaning, amended recordkeeping requirements, prohibitions of new open faced spray booths, and amended exemptions.

The following is a description of PAR 1469.1 provisions.

PROPOSED AMENDED RULE 1469.1

Purpose – Subdivision (a)

The purpose of PAR 1469.1 is to reduce emissions of hexavalent chromium from spray coating, and a clarification has been added to also include operations related to spray coating.

Applicability – Subdivision (b)

The applicability of PAR 1469.1 remains unchanged in that the rule applies to facilities that spray chromate coatings. However, the language was amended to reflect the phrase “chromate coatings,” which refers to coatings containing chromates, the form in which hexavalent chromium is found in paint. The thermal spraying exemption is moved to Exemptions in subdivision (p).

Definitions – Subdivision (c)

PAR 1469.1 includes definitions for specific terms. Several definitions are based on other recent toxic metal particulate rules, while other definitions are unique to PAR 1469.1.

Table 2 provides a list of modified, new, and removed PAR 1469.1 definitions. Please refer to PAR 1469.1 for actual definitions. Key definitions are discussed in the associated rule requirement discussions.

Table 2 - Summary of Definitions

Modified Definitions	New Definitions	Removed Definitions
<ul style="list-style-type: none"> • Chromate • Coating • Compliance Plan Approval Letter • Electrostatic Application • Hand Application Method • High Efficiency Particulate Air Filter • High-Volume, Low-Pressure Spray • Open Face Spray Booth • Overspray • Sensitive Receptor • Thermal Spraying Operations • Touch Up and Repair Operation • Transfer Efficiency 	<ul style="list-style-type: none"> • Approved Cleaning Method • Bench Spray Booth • Building Enclosure • Enclosed Spray Booth • Demasking Activity • Dried Chromate Coating Removal Activity • HEPA Vacuum • Permanent Total Enclosure • Spray Booth • Sticky Mat • Workpiece Support Equipment 	<ul style="list-style-type: none"> • Capture Efficiency • Coating Application Equipment • Control Efficiency • Equipment • Existing Air Pollution Controls • Existing School • Existing Source or Source • New Source • Primer • Receptor • Residential Receptor • Responsible Official • Spraying Operation or Spraying Process

Reorganization of Rule 1469.1

Rule 1469.1 subdivision (d) includes general requirements for spray booth operation, transfer efficiency, compliance options for point source emissions, provisions for compliance plan submittal, compliance notifications, and housekeeping requirements. Subdivisions (e), (f), and (g) of the existing Rule 1469.1 establish provisions related to the compliance options described in Chapter 1. Existing Rule 1469.1 subdivisions (h), (i), (j), (k), and (l) include exemptions, compliance test methods, recordkeeping requirements, monitoring requirements, and reporting requirements, respectively. Many of the existing Rule 1469.1 requirements have been maintained or amended but have been reorganized into different subdivisions of PAR 1469.1 to be consistent with recent toxic metal particulate rules. Additionally, PAR 1469.1 includes interim requirements in subdivision (o), where the current rule provisions remain in place until new requirements become effective. Table 3 provides a summary of current rule provisions and the corresponding requirements in PAR 1469.1. A discussion of PAR 1469.1 requirements follows Table 3.

Table 3 – Prior Requirements

Rule 1469.1 Requirement	Rule 1469.1 Reference	PAR 1469.1 Requirement	PAR 1469.1 Reference
Inward Face Velocity	(d)(1)(B)	Interim Requirements for Facilities	(o)(1)
Post Spraying Ventilation	(d)(1)(C)	Best Management Practices	(j)(2)(B)
Transfer Efficiency	(d)(2)	Best Management Practices	(j)(3)
Control Device	(d)(3)(B)	Point Source Requirements	(d)(1)
Health Risk Compliance Options*	(d)(3)(A) and (d)(3)(C)	Alternate Point Source Requirements	(d)(1)(B)(d)(1)(C) and subdivision (e)
Compliance Plan Provisions*	(d)(4) to (d)(6)	Removed	-

Visual Monitoring	(k)(1)	Visual Inspections	(j)(8)
Pressure Drop Monitoring	(k)(2)	Interim Requirements for Facilities	(o)(3)
Reporting Requirements*	(l)	Removed	-

*Applicable to existing facilities with approved Health Risk Assessments.

Point Source Requirements – Subdivision (d)

Rule 1469.1 includes three point source compliance options: Option A: Annual Emission Limit; Option B: Air Pollution Control Device; or Option C: Facility-wide Risk Limit. PAR 1469.1 will remove Option A and requires all new facilities comply with current Rule 1469.1 air pollution control device requirements. PAR 1469.1 also includes provisions for the two facilities currently complying under Option C to continue to be subject to existing requirements until air pollution control device requirements can be met or the facility submits the necessary permit modifications to limit chromate emissions to what was analyzed in the approved HRA that was performed using the revised 2015 OEHHHA health risk guidance. The following paragraphs describe subdivision (d) requirements.

Air Pollution Control Device Efficiency (d)(1)

Subparagraph (d)(1)(A) establishes the requirement that chromate spray coating operations be vented to an air pollution control system equipped with HEPA filters or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.7 percent on 0.3 micron or smaller particles. As mentioned, this is an existing requirement; however, the air pollution control device description has been modified. Specifically, existing Rule 1469.1 requires the ventilation of each spraying operation to air pollution equipment with a rated particulate filtration efficiency of 99.97 percent or higher, for particulate matter 0.3 microns or larger. However, this description was intended to describe HEPA filters, but it does not allow other control technologies that surpass HEPA, such as ULPA filters. Accordingly, the control device description in subparagraph (d)(1)(A) is proposed to be modified to allow the use of HEPA or better filtration. For reference, ULPA filters are a subset of HEPA filters that are certified to achieve a higher minimum filtration of 99.9995 percent for particles sized 0.12 microns or larger.

Subparagraph (d)(1)(B) includes provisions which allow an owner or operator of an existing facility with an approved Compliance Plan or an approved Health Risk Assessment to be subject to the subdivision (e), alternate point source requirements until subparagraph (d)(1)(A) provisions are met by the earlier of the dates specified in subparagraph (d)(2)(B). As mentioned, there are two facilities that have an approved Compliance Plan or approved Health Risk Assessment.

Subparagraph (d)(1)(C) provides another compliance option if an existing facility has an approved Health Risk Assessment based on the revised 2015 OEHHA health risk guidance. Requirements for a facility to comply with subparagraph (d)(1)(C) are described under the subdivision (e).

Applicability and Timeframe for Alternate Point Source Requirement (d)(2)

Paragraph (d)(2) requires facilities meeting the alternate point source requirements to submit permit applications and install the air pollution control devices needed to comply with paragraph (d)(1)(A). This applies to the two facilities with an approved Compliance Plan or approved Health Risk Assessment. Subparagraph (d)(2)(A) requires facilities to submit a complete permit application for an air pollution control device that represents HEPA or better filtration no later than January 1, 2023. Subparagraph (d)(2)(B) requires facilities that have submitted a completed application to meet the requirements of HEPA or better filtration within 18 months after a Permit to Construct has been issued by South Coast AQMD or January 1, 2026, whichever date is earlier. Beginning January 1, 2026, a spray booth that meets the requirements of paragraphs (e)(1) and (e)(2) cannot be operated for the spraying of chromate spray coating operations until the spray booth is vented to filters that meet the requirements of subparagraph (d)(1)(A).

Spray Booth Operation (d)(3)

Paragraph (d)(3) requires that the spray booth be operated in a manner that minimizes fugitive hexavalent chromium emissions and is adequately vented. Subparagraph (d)(3)(A) requires operators to ensure visible emissions do not exit the spray booth.

Subparagraph (d)(3)(B) requires that all spray booth filters be properly seated and are free of leaks, breaks, and tears when conducting chromate spraying.

Subparagraph (d)(3)(C) establishes requirements for spray booth air flow. Specifically, clause (d)(3)(C)(i) requires spray booths to be vented with an inward flow maintained at all air openings such that the paragraph (o)(1) interim requirements for open face spray booths are met before January 1, 2026. Beginning January 1, 2026, clause (d)(3)(C)(ii) requires the applicable spray

booth measurement or PTE demonstration requirements of subdivision (g) to be met. Provisions for air velocity monitoring requirements are discussed later in this chapter under subdivision (g).

Subparagraph (d)(3)(C) requires that all spray booth filters are properly seated and are free of leaks, breaks, and tears when conducting chromate spraying.

Alternate Point Source Requirements for Chromate Spraying Operations With Compliance Plans or Health Risk Assessments Approved Before [Date of Rule Adoption] – Subdivision (e)

PAR 1469.1 establishes requirements for facilities that do not have spray booths equipped with HEPA or better filters. These alternate point source requirements only apply to existing facilities at the time of the adoption of PAR 1469.1, which have previously submitted compliance plans or an approved health risk assessment and are currently in compliance with Rule 1469.1 using those options.

Paragraphs (e)(1) and (e)(2) specify requirements for facilities while they transition into installing an air pollution control system equipped with HEPA filters or better. Paragraph (e)(1) requires facilities to continue to meet conditions in an approved Compliance Plan or any enforceable conditions until the air pollution control device requirements of subparagraph (d)(1)(A) are met. Paragraph (e)(2) requires the continued posting of Compliance Plan approval letters (clearly visible and accessible within 8 meters [26 feet] of the spray booth identified in the Compliance Plan) or with the facility permit to maintain this existing requirement until the requirements of subparagraph (d)(1)(A) are met.

Paragraphs (e)(3), (e)(4), and (e)(5) provide another compliance path if the approved health risk assessment was prepared using the revised 2015 OEHHA health risk guidance. Under paragraph (e)(3), the facility is required to submit a complete permit application by January 1, 2023, to modify permits for spray booths used to conduct chromate spraying operations. Paragraph (d)(3) requires the permit to operate be amended to include: 1) a limit on the annual chromate emissions at or below the amount evaluated in the approved health risk assessment and 2) require the use of a filter that is equal to or greater than the filter efficiency evaluated in the approved health risk assessment.

Paragraph (e)(4) specifies the requirements if a facility receives a written notification that the chromate emissions limit established under subparagraph (e)(3)(A) has been exceeded. Under subparagraph (e)(4)(A), a complete permit application to upgrade the spray booth to HEPA or better filtration is required to be submitted within six months of receipt of the written notification pursuant to paragraph (e)(4). Subparagraph (e)(4)(B) further requires the spray booth modification to HEPA or better filtration be completed within 18 months after a Permit to Construct has been issued or 36 months after the date of the written notification, whichever date is earlier.

Paragraph (e)(5) establishes requirements for duct cleaning before January 1, 2023, for a facility accepting permit conditions under paragraph (e)(3). Subparagraph (e)(5)(A) requires the spray booth exhaust duct to be cleaned to remove overspray and dried coatings using an approved cleaning method. Subparagraph (e)(5)(B) requires the inspection of associated exterior surfaces of the spray booth exhaust duct, and if any overspray or dried coating materials are found, all such overspray or dried coating materials must be removed using approved cleaning methods. Subparagraph (e)(5)(C) requires a notification to the Executive Officer at least 72 hours prior to conducting cleaning under subparagraphs (e)(5)(A) and (e)(5)(B).

Point Source Requirements for Dried Chromate Coating Removal Activities – Subdivision (f)

PAR 1469.1 adds requirements to control emissions from dried chromate coating removal activities that can be a source of fugitive emissions. Paragraph (c)(9) defines dried chromate coating removal activity as an activity whereby chromate coatings on workpieces are removed thorough physical or mechanical means, such as buffing, scuffing, sanding, or grinding. For the purposes of PAR 1469.1, the definition of dried chromate coating removal activity does not include demasking.

Control Device Requirement (f)(1)

Paragraph (f)(1) requirements are effective beginning January 1, 2026, or the date specified in subparagraph (f)(2)(B). Specifically, subparagraph (f)(1)(A) requires dried chromate coating removal activities to be vented to a spray booth that meets the requirements of paragraph (d)(1). This includes spray booths equipped with HEPA or better filters and spray booths that meet the alternate point source requirements in subdivision (e). Subparagraph (f)(1)(B) provides an option that dried chromate coating removal activities can be vented to a control device that is equipped with HEPA or better filters, provided the control devices are permitted for dried chromate coating removal, and are operated under a South Coast AQMD permit. Control device examples include a downdraft table or a sanding booth.

Control Device Permit Application (f)(2)

Paragraph (f)(2) provides a compliance pathway for facilities that conduct dried chromate coating removal activities without a control device or with a control device that does not meet the requirements of (f)(1). Specifically, subparagraph (f)(2)(A) requires these facilities to submit a complete permit application for a control device that meets the requirements of clause (f)(1)(B)(i) no later than January 1, 2023. Under subparagraph (f)(2)(B), these facilities are required to vent dried coating removal activities to the permitted control device that meets the requirements of clause (f)(1)(B)(i) within 18 months after the Permit to Construct has been issued by South Coast AQMD or by January 1, 2026, whichever date is earlier.

Control Device Performance Standard (f)(3)

Paragraph (f)(3) requires control devices for dried chromate coating removal activities to be equipped with properly seated filters and are free of leaks, breaks, and tears.

Spray Booth Requirements – Subdivision (g)***Interim Requirements Before January 1, 2026***

Rule 1469.1 includes a requirement that the average inward face velocity of air through an open face spray booth be a minimum of 100 feet per minute or other minimum velocity approved by the Executive Officer. This existing requirement is maintained in PAR 1469.1 paragraph (o)(1) until January 1, 2026, or the date specified in subparagraph (g)(2)(B).

Air Velocity or PTE Demonstration Requirements (g)(1)

PAR 1469.1 defines a spray booth as an enclosure with walls and an impermeable ceiling used to contain and collect overspray from the application of chromate coatings. The amendments establish new air velocity or PTE demonstration requirements for four types of spray booths: bench booths (open face and enclosed) and non-bench booths (open and enclosed). Bench booths are

defined in PAR 1469.1 as a spray booth with a raised spray enclosure area typically used for smaller workpieces where the operator cannot stand within the enclosure, and non-bench booths refer to structures where the operator stands within the booth. Open face booths are defined in PAR 1469.1 as spray booths with one side of the booth is not enclosed, and air flows through the open face horizontally. Enclosed booths are defined as a spray booth with four sides that are enclosed during spraying operations.

Paragraph (g)(1) requires the owner or operator to demonstrate that a spray booth meets PAR 1469.1 air velocity or PTE demonstration requirements no later than January 1, 2026, or the date specified in subparagraph (g)(2)(B). As described below, paragraph (g)(2) provides a compliance pathway that allows an owner or operator that cannot meet the PAR 1469.1 air velocity or PTE demonstration requirements to submit a permit application to modify the spray booth equipment.

Subparagraph (g)(1)(A) requires an owner or operator to demonstrate that the PAR 1469.1 Table 1 (shown below as Table 4) average and minimum velocity requirements are met using the measurement procedures specified in PAR 1469.1 Appendix 1 – Inward Face Air Velocity Measurement Procedures. Subparagraph (g)(1)(B) provides an alternative to subparagraph (d)(1)(A) that allows an owner or operator to demonstrate that the spray booth meets the criteria of a permanent total enclosure (PTE) based on U.S. EPA Method 204.

Table 4 – Spray Booth Inward Face Velocity Requirements

Spray Booth Type	Measurement Location	Average Velocity of Measurement Points	Minimum Velocity at Each Measurement Point
Enclosed Non-Bench	At the filter face	100 feet per minute	75 feet per minute
Open Face Non-Bench	At the opening of the booth		
Enclosed Bench	At the filter face	150 feet per minute	125 feet per minute
Open Face Bench	At the opening of the booth		

PAR 1469.1 Appendix 1 requires that the air velocity measurements be conducted using an anemometer with an accuracy within +/- 10 percent of full scale and operated and calibrated according to the manufacturer's specifications. Five measurements must be taken in a pattern shown in the Appendix 1 examples. For enclosed booths, the measurements must be taken within six (6) to twelve (12) inches from the exhaust filter face; enclosed booths that have more than one filter face should take five (5) measurements in front of each filter face. For open face booths, the measurements are to be taken no more than one (1) inch inside the plane of the open face. To meet the PAR 1469.1 inward face air velocity requirements, the average of all five measurements at each face must be above the PAR 1469.1 Table 1 average velocity of measurement point values with no measurement point value below the PAR 1469.1 Table 1 minimum velocities.

As mentioned, subparagraph (g)(1)(B) provides another pathway for facilities to demonstrate that a spray booth meets the spray booth requirements through demonstrating that the spray booth meets the design requirements of a PTE, per U.S. EPA Method 204 or other design as approved

by the Executive Officer. To be designated as a PTE, the total area of natural draft openings in the structure cannot exceed 5 percent of the surface area of the structure's walls, floor, and ceiling. As a result, subparagraph (g)(1)(B) applies to enclosed spray booths, as the large size of the openings of open face booths will likely disqualify open face spray booths from consideration. A summary of the EPA Method 204 criteria for meeting the definition of a PTE is included in Chapter 2.

Spray Booth Modifications to Meet Air Velocity or PTE Demonstration Requirements (g)(2)

PAR 1469.1 requires facilities to demonstrate compliance with the spray booth air velocity or PTE demonstration requirements in paragraph (g)(1) no later than January 1, 2026. If a facility determines that a spray booth will not be able to meet the PAR 1469.1 spray booth requirements, paragraph (g)(2) provides a compliance pathway for facilities to continue to operate the spray booth provided a permit application is submitted to modify the spray booth to meet the PAR 1469.1 air velocity or PTE demonstration requirements. Specifically, under subparagraph (g)(2)(A), a facility operator is required to submit a complete permit application to modify the spray booth by January 1, 2023. Subparagraph (g)(2)(B) requires facilities submitting a complete permit application to modify the spray booth within 18 months after the Permit to Construct has been issued by South Coast AQMD or by January 1, 2026, whichever date is earlier. The period from the date of rule adoption until January 1, 2023 is intended to allow facilities to conduct spray booth evaluations to determine if the spray booth can meet the PAR 1469.1 air velocity or PTE demonstration requirements.

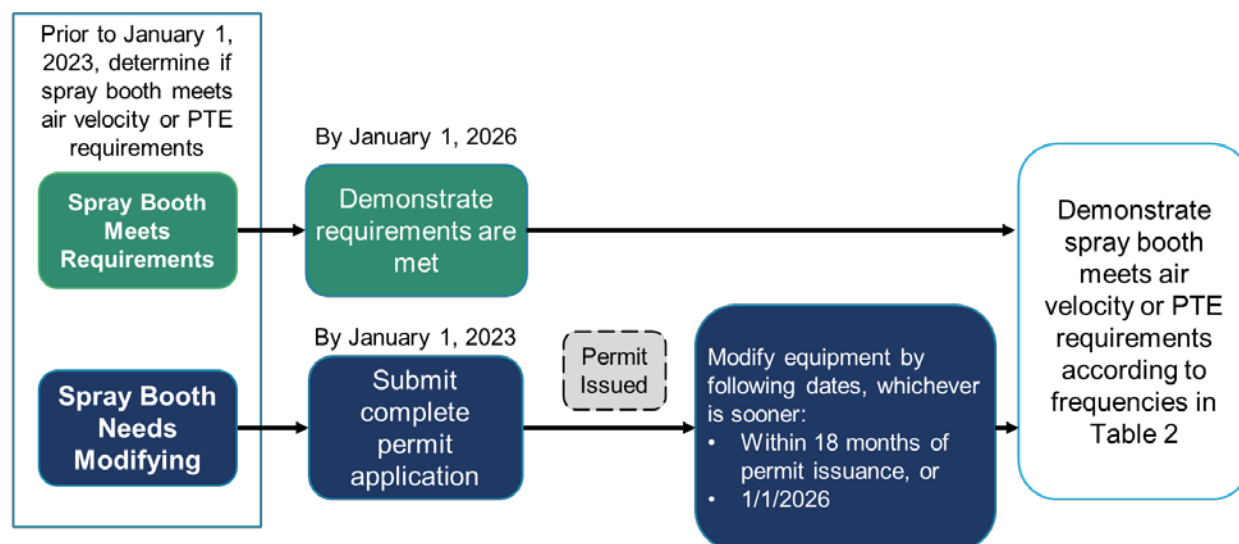

Air Velocity or PTE Demonstration Compliance after January 1, 2026 (g)(3)

Paragraph (g)(3) requires all facilities to either conduct air velocity measurements or demonstrate that the spray booth meets the requirements of a PTE in accordance with the measurement or demonstration frequency specified in PAR 1469.1 Table 2 (shown below as Table 5).

Table 5 – Measurement or Demonstration Frequency

Spray Booth Type	Frequency
Enclosed Non-Bench or Bench	At least once every 12 calendar months from the previous air velocity measurement pursuant to subparagraph (g)(1)(A) or Permanent Total Enclosure demonstration pursuant to subparagraph (g)(1)(B)
Open Face Non-Bench or Bench	At least once every six calendar months from the previous air velocity measurement pursuant to subparagraph (g)(1)(A)

Facilities with enclosed booths are required to document that the air velocity or PTE demonstration requirements are met at least once every 12 calendar months. The frequency for open face booths is a minimum of at least once every six calendar months. For the purposes of PAR 1469.1, air velocity measurements or PTE demonstrations can occur any day within the applicable calendar month. Figure 7 provides an overview of the air velocity measurement or PTE demonstration schedule.

Figure 7 – Schedule For Air Velocity Measurement or PTE Demonstration***Failure to Meet Air Velocity or PTE Demonstration Requirements (g)(4)***

Paragraph (g)(4) establishes procedures for facilities with spray booths that do not meet the air velocity or PTE demonstration requirements after January 1, 2026. Under subparagraphs (g)(4)(A) and (g)(4)(B), a spray booth that fails to meet the requirements cannot be operated for chromate spray coating operations or for dried chromate coating removal activities until necessary actions or repairs are conducted and the air velocity or PTE demonstration requirements are met. Subparagraph (g)(4)(C) specifies that if the facility cannot complete the necessary actions or repairs within 30 days, the facility is required to notify South Coast AQMD within 24 hours of knowing that the actions or repairs will take more than 30 days.

Air Velocity Measurement or PTE Demonstration Schedule After a Failure (g)(5) and (g)(6)

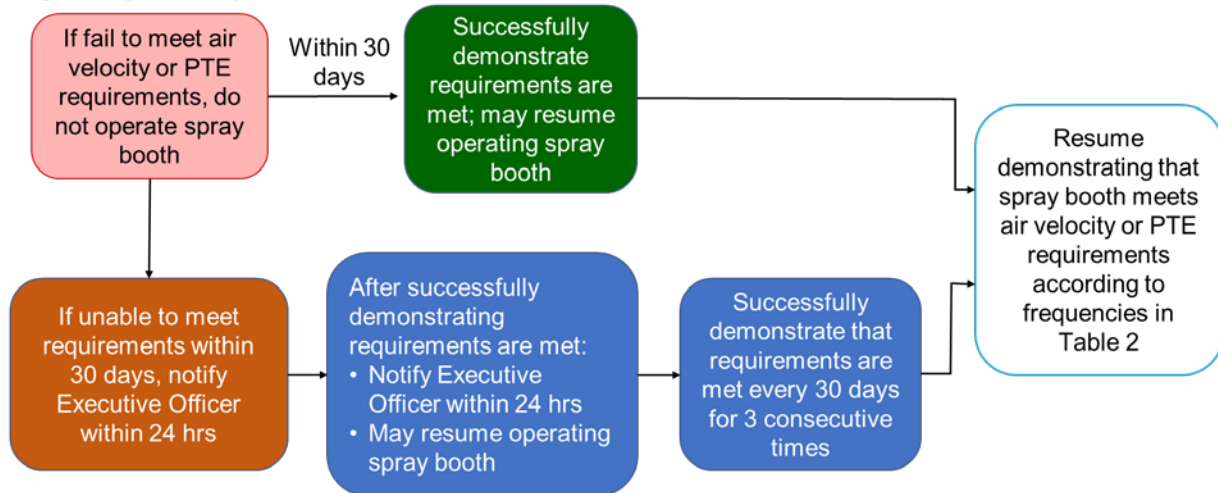

Paragraph (g)(5) includes requirements for spray booths that have met the air velocity or PTE demonstration requirements after the 30 day period in subparagraph (g)(4)(C). Subparagraph (g)(5)(A) requires a facility to notify South Coast AQMD within 24 hours of meeting the requirements only if the repairs need more than 30 days and a previous notification was required pursuant to subparagraph (g)(4)(C). A notification is not required if the repairs can be completed in 30 days or less. Subparagraph (g)(5)(B) and paragraph (g)(6) requires that three consecutive passing air velocity measurements or PTE demonstrations (either method is acceptable) be conducted once every 30 days on the spray booth before a facility is subject to the frequency schedule in PAR 1469.1 Table 2.

An owner or operator of a spray booth that fails to meet the air velocity or PTE demonstration requirements at any time after January 1, 2026, including any of the three consecutive tests conducted pursuant to subparagraph (g)(5)(B) and paragraph (g)(6), must follow the procedures in paragraph (g)(4), as well as the procedures in paragraphs (g)(5) and (g)(6), if applicable. Figure 8

provides an overview of the procedures a facility must follow after failing to meet air velocity or PTE demonstration requirements.

Figure 8 – Schedule After a Failure to Meet Air Velocity or PTE Demonstration Requirements

Beginning January 1, 2026

Requirements for Building Enclosures – Subdivision (h)

PAR 1469.1 adds requirements for spraying and spraying related activity conducted within building enclosures. A building enclosure is defined as a permanent building or physical structure with a floor, walls, and a roof to prevent exposure to the elements (e.g., precipitation, wind, runoff), with limited openings to allow access for people, vehicles, equipment, or parts.

Paragraph (h)(1) establishes that spraying operations, dried chromate coating removal activities, and demasking activities must be conducted within a building enclosure due to the potential for these activities to release fugitive emissions.

Paragraphs (h)(2) and (h)(3) establish the requirements that workpiece support equipment and cleaning equipment used for housekeeping are required to be stored within the building enclosure.

Beginning January 1, 2022, subparagraph (h)(4)(A) establishes requirements to close building openings (except for the movement of people, vehicles, or equipment) within 20 feet of open face spray booths and areas where dried chromate coating removal or demasking activities occur. Subparagraph (h)(4)(B) establishes the following as acceptable methods to close building openings:

- Door that automatically closes
- Overlapping plastic strip curtains
- Vestibule
- Airlock system
- Alternative method to minimize the release of fugitive emissions from the building subject to Executive Officer approval

The above methods for closing building openings are consistent with provisions included in other recently amended or adopted South Coast AQMD toxic metal particulate rules. The January 1, 2022, effective date is intended to provide facilities time to meet the enclosure requirements.

Housekeeping Requirements – Subdivision (i)

Interim Housekeeping Requirements Before January 1, 2022

Rule 1469.1 currently requires spraying and cleanup operations at a chromate spraying operation to be conducted in a manner that minimizes fugitive emissions of atomized paint particles. This existing requirement is maintained in PAR 1469.1 paragraph (o)(2) until January 1, 2022.

Housekeeping Requirements Beginning January 1, 2022

Paragraphs (i)(1) through (i)(9) establish housekeeping requirements that are effective beginning January 1, 2022.

Cleaning Locations and Frequencies (i)(1) and (i)(2)

Beginning January 1, 2022, PAR 1469.1 establishes enhanced housekeeping requirements and requires the use of approved cleaning methods to minimize the generation of fugitive emissions during cleaning activities. Approved cleaning methods defined in PAR 1469.1 include wet mop, damp cloth, wet wash, low pressure spray nozzle, HEPA vacuum, protective coverings, or other method as approved by the Executive Officer. A HEPA vacuum is defined in PAR 1469.1 as a vacuum that is both designed to be fitted and used with a filter that is individually tested and certified by the manufacturer to have a control efficiency of not less than 99.97 percent on 0.3 micron particles.

Paragraph (i)(1) requires routine cleaning within 20 feet of spray booth ingresses and egresses and areas used for dried chromate coating removal, demasking, paint mixing, equipment storage, and waste storage. Paragraph (i)(2) requires routine cleaning within workpiece support equipment transit paths/work areas and workpiece support equipment storage areas. Cleaning frequencies for the locations identified by paragraph (i)(1) and (i)(2) requirements are listed in PAR 1469.1 Table 3 (shown below as Table 6). The cleaning frequencies are dependent on activities within the specific areas. For example, for workpiece storage areas, PAR 1469.1 Table 3 requires cleaning once per calendar week for any week when stored workpiece support equipment is moved on one or more days. PAR 1469.1 Table 3 also establishes different cleaning frequencies for areas located within or outside of a PTE that is vented to HEPA filters or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.7 percent on 0.3 micron or smaller particles. Specifically, Table 3 of PAR 1469.1 requires weekly cleaning for areas outside a PTE and monthly cleanings for identified areas within a PTE. The PAR 1469.1 PTE definition is consistent with Rule 1469 – Hexavalent Chromium Emissions from Chromium Electroplating and Chromic Acid Anodizing Operations PTE definition.

Table 6 - Cleaning Frequencies

Applicable Provisions	For Areas Located Within a Permanent Total Enclosure Vented to an Air Pollution Control System with Filters that Meet the Filter Requirements of Subparagraph (d)(1)(A)	For All Other Areas
(i)(1)(A) and (i)(1)(B)	Once per calendar month, for any month when chromate spraying operations are conducted on one or more days	Once per calendar week, for any week when chromate spraying operations are conducted on one or more days
(i)(1)(C), (i)(1)(D), (i)(1)(E), and (i)(1)(F)	Once per calendar month, for any month when activities are conducted on one or more days	Once per calendar week, for any week when activities are conducted on one or more days
(i)(2)(A) and (i)(2)(B)	Once per calendar month, for any month when workpiece support equipment is moved on one or more days	Once per calendar week, for any week when workpiece support equipment is moved on one or more days

Outdoor Spray Booths and Spill Cleanup (i)(3) and (i)(4)

For enclosed spray booths not located within a building enclosure, paragraph (i)(3) requires daily cleaning within 20 feet of ingress and egress on days when chromate spraying operations are conducted within the booth. This requirement is only for chromate spray coating operations conducted in spray booths that are not within a building enclosure (i.e., spray booths located outside a building).

Paragraph (i)(4) requires cleanup of spills of liquid or solid material that may contain chromates within one hour after being spilled to minimize the potential to generate fugitive emissions.

Spray Booths Interior Cleaning (i)(5) and (i)(6)

Paragraph (i)(5) requires cleaning of spray booths floors that do not have protective coverings at least once per calendar week. This requirement is also based on the use of the booth for chromate coating spraying operations, and cleaning is not required on weeks where activities subject to PAR 1469.1 are not conducted.

Paragraph (i)(6) requires removing and replacing spray booth protective floor or wall coverings at least every six months.

Sticky Mat Alternative (i)(7)

During rule development, some stakeholders commented that spray booth entrance cleaning using approved cleaning methods might conflict with the current industry practice of using sticky mats or tacky mats that are intended to remove the dried coating particles from the bottoms of shoes and equipment wheels when those items pass over the sticky mats. Additionally, the use of sticky mats

in the spray booth is an effective way of ensuring that chromate paint particles stay within the spray booth. Paragraph (i)(7) has been added to address these comments by allowing facilities to use sticky mats as an alternative to weekly spray booth entrance cleaning and protective covering removal and replacement requirements. Under subparagraph (i)(7)(A), sticky mats are required at spray booth ingress and egress points and be at least two feet in depth and as wide as the opening. Under subparagraph (i)(7)(B), an owner or operator must ensure that all foot and equipment traffic pass over the mats. Subparagraph (i)(7)(C) requires the mats to be replaced each day when the booth is used for chromate spraying operations and disposed of in a closed container before removal from a building. A sticky mat is defined in PAR 1469.1 as a non-reusable floor mat or floor covering with an adhesive or tacky surface that removes particles from shoes, wheels, or other objects that travel over the mat or covering.

Waste Materials in Closed Containers (i)(8)

Paragraph (i)(8) requires the immediate placement of waste materials that may contain chromates into a closed container that is closed except when being filled or emptied. Waste materials include items including, but not limited to, used single use PPE masks, cleaning cloths, used masking material, and used filters. Paragraph (i)(8) also requires the container to be lined with a removable bag if the waste material will be transferred to another on-site container.

HEPA Vacuums (i)(9)

Subparagraph (i)(9)(A) requires that if a HEPA vacuum is used to comply with housekeeping provisions of subdivision (i), the HEPA filter must be free of leaks, breaks, tears, or other types of damage and securely latched and properly situated in the vacuum to prevent air leakage from the filtration system. An owner or operator should have a HEPA vacuum maintained and serviced per the manufacturer's recommendations to ensure the integrity of the filtration as any breakthrough passing the HEPA filter will result in metal TACs entrained into the air. Workers should follow the manufacturer's recommended precautions regarding Personal Protective Equipment when servicing the HEPA vacuum. All wastes collected and removed during filter changes or cleaning of the HEPA vacuum must be handled, stored, and disposed of as hazardous waste.

PAR 1469.1 includes a definition for a HEPA vacuum to differentiate an acceptable device versus a home or commercial "HEPA-like" vacuums, which are not tested nor intended to clean-up toxic metal TAC spills. A certification or statement from the manufacturer can demonstrate that the vacuum satisfies the PAR 1469.1 definition that the fitted HEPA filter is individually tested and certified. "HEPA-like" vacuums with filters that are lot (batch) tested do not satisfy the PAR 1469.1 definition of HEPA Vacuum. In addition, HEPA vacuums are designed to be operated for either "dry" or both "wet and dry" cleanup of materials. A HEPA vacuum operated contrary to the manufacturer's design, or recommendations may have its filters damage or compromised. Prior to obtaining a HEPA vacuum, an owner or operator should consult with their vendor to ensure that the proper HEPA vacuum is selected for the housekeeping requirements needed when dealing with solid and liquid metal TACs.

Subparagraph (i)(9)(B) requires the contents of HEPA vacuum intended for disposal to be emptied into a container while the equipment is inside a spray booth that meets the requirements of paragraph (d)(1) and that the container remains closed except when being filled or emptied.

Subparagraph (i)(9)(C) requires the HEPA filter for a HEPA vacuum to be replaced within a spray booth that meets the requirements of paragraph (d)(1) and that the used filter is placed in a closed container before removal from the spray booth.

Best Management Practices – Subdivision (j)

PAR 1469.1 includes a new subdivision, (j), for the use of Best Management Practices or BMPs. Best Management Practices prescribe how an owner or operator shall conduct chromate spray coating operations and other ancillary operations to prevent the release or generation of fugitive emissions. BMPs that may require a physical modification at a facility have future compliance dates, while other BMPs are effective on the date of rule adoption.

Operation of Enclosed Spray Booths (j)(1)(A)

Subparagraph (j)(1)(A) requires ingresses and egresses of an enclosed spray booth to be closed during chromate spray coating operations.

Spray Booth Ventilation (j)(1)(B)

Beginning July 1, 2022, or the date specified in subparagraph (d)(2)(B) for facilities complying with alternate point source requirements of subdivision (e), subparagraph (j)(1)(B) requires facilities to have an automatic system in place to ensure that the spray booth ventilation system is operating prior to conducting chromate spray coating operations. Based on stakeholder comments concerning the complexity of an interlock system, the subparagraph (j)(1)(B) requirement includes automatic systems that ensures the spray booth ventilation system is operational before chromate spraying activities begin. Examples of automatic systems include, but are not limited to, a spray booth light switch or spray gun cradle that activate a ventilation system when spray booth lights are turned on or when a spray gun is removed from the cradle. Another automated system is an interlock that prevents compressed air to the spray gun unless the ventilation system is operating which is required for new spray booths by some fire departments.

Removing Protective Covers (j)(2)(A)

Subparagraph (j)(2)(A) is a modification to existing Rule 1469.1 subparagraph (d)(7)(A) procedures for removing protective floor, wall, and exhaust covers inside a spray booth. Subparagraph (j)(2)(A) requires the ventilation system to be operated with doors closed (enclosed booths) and placement of materials intended for disposal into a container before removal from the spray booth. As with other provisions, containers are to remain closed except when being filled or emptied.

Post Spraying Ventilation (j)(2)(B), (C), and (D)

Subparagraph (j)(2)(B) is a modification to existing Rule 1469.1 subparagraph (d)(1)(C) requirements to operate a spray booth ventilation system after chromate spray coating operations have ceased. Under subparagraph (j)(2)(B), the spray booth ventilation system must be operated for a minimum of three air exchanges within the spray booth or five minutes, whichever is longer after spraying operations or dried chromate coating removal activities have ceased and after protective floor, wall or exhaust covers are removed.

Subparagraph (j)(2)(C) is a new provision that requires an owner or operator of a chromate spraying operation to post the minimum post spraying ventilation time on the spray booth no later than July 1, 2021, in a location that is clearly visible and accessible to the spray booth operator.

Subparagraph (j)(2)(D) is a modification to existing Rule 1469.1 subparagraph (d)(7)(B) requirement that prohibits the operation of a spray booth ventilation system when filters are being removed, replaced, missing, damaged, or improperly seated; however, subparagraph (j)(2)(D) is only applicable to the final stage filters.

Transfer Efficiency (j)(3)

Paragraph (j)(3) is a modification to existing Rule 1469.1 paragraph (d)(2) transfer efficiency requirements. Paragraph (j)(3) maintains requirements to use one of the following methods to apply chromate coatings: high-volume, low pressure (HVLP), electrostatic application, or an alternate application method capable of achieving at least equivalent transfer efficiency as a HVLP spray gun. Paragraph (j)(3) maintains requirements to apply the coatings per equipment manufacturer recommendations, coating manufacturer specifications, or permit conditions. PAR 1469.1 removes references to the following application methods, which are not subject to the Rule: flow coater, roll coater, dip coater, or hand application methods.

Dried Chromate Coating Removal Activities (j)(4)

Paragraph (j)(4) is a new provision that requires ingresses and egresses of enclosed spray booths to be closed and the spray booth to be operated pursuant to the spray booth requirements in paragraph (d)(3) and subdivision (g) and the pressure drop requirements of subdivision (k) when dried chromate coating removal activities are conducted in the booth.

Demasking Activities (j)(5)

Paragraph (j)(5) is a new provision that applies to demasking activities conducted outside of an enclosed spray booth or a PTE that is vented to HEPA filters or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.7 percent on 0.3 micron or smaller particles. Specifically, paragraph (j)(5) prohibits the use of compressed air to clean workpieces on tables or other surface areas where demasking occurs.

Workpiece Support Equipment (j)(6) and (j)(7)

Beginning July 1, 2021, paragraphs (j)(6) and (j)(7) apply to workpiece support equipment used during chromate spraying operations that are taken out of a spray booth or a PTE that is vented to HEPA filters or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.7 percent on 0.3 micron or smaller particles. Paragraph (j)(6) requires facilities to establish and clearly mark transit paths and work areas for this equipment and only transport equipment within identified transit paths and work areas. Paragraph (j)(7) requirements are similar but are specific to storage areas used for workpiece support equipment. Housekeeping requirements for identified transit paths/work areas and storage areas are included in PAR 1469.1, subdivision (i).

Visual Inspections (j)(8)

Paragraph (j)(8) maintains the existing Rule 1469.1 paragraph (k)(1) visual inspection requirements. As with the current Rule 1469.1 provisions, the requirement to conduct a visual inspection of the filter media does not require the removal of equipment as part of the inspection process.

Personal Protective Equipment (j)(9)

Paragraph (j)(9) is a new provision that requires the removal of personal protective equipment in a manner that minimizes fugitive emissions.

Pressure Drop Across Filter Media – Subdivision (k)***Interim Requirements Before January 1, 2023***

Rule 1469.1 currently requires a pressure gauge to be installed and maintained to continuously measure the pressure drop across the filter media of a spray booth. It requires the pressure drop not to exceed a maximum limit as specified in a permit condition or by the manufacturer's recommended operating range if no permit condition limits the pressure drop. This requirement is maintained in paragraph (o)(3) until January 1, 2023.

Pressure Gauge Requirements, Pressure Drop Limits, and Operational Requirements (k)(1), (k)(2), and (k)(3) After January 1, 2023

Paragraph (k)(1) requirements are effective on and after January 1, 2023, or the date specified in subparagraph (d)(2)(B) for facilities complying with alternate point source requirements of subdivision (e). Under subparagraph (k)(1)(A) facilities are required to monitor pressure drop only across the final stage filter media. To meet this requirement, a dedicated pressure gauge will be required for the final stage filter media. While many spray booth permits already require dedicated pressure gauges at their final stage filters, some permits only include one pressure gauge across all the filter media in the spray booth. Directly measuring the pressure drop of the final stage filters ensures that facilities can monitor the status of those filters, which establishes the highest control efficiency for a spray booth. In most cases, the final stage filters will be HEPA or better; however, for a facility complying with the alternate point source requirements under subdivision (e), this provision will apply to the last stage filter in a spray booth which includes filter systems with multiple stages of filters and the filter efficiency for all the stages is certified by the manufacturer.

Subparagraph (k)(1)(B) will require the pressure drop to be maintained at or below the maximum pressure drop specified in a permit or the filter manufacturer's recommended maximum pressure drop, whichever is lower. The maximum pressure drop limit across the final stage filter media may change depending upon the specifications of the installed filter media. It may differ from the fixed maximum limit specified in a permit. By using the lower of the two values, facilities can ensure that the maximum pressure drop does not exceed the filter media's capacity.

Paragraph (k)(2) requires that the pressure drop across the final stage filter media not fall below a specified minimum limit as established by Table 4 of PAR 1469.1 (shown below as Table 7).

Table 7 – Minimum Pressure Drop Across Final Stage Filters

Availability of Minimum Pressure Drop Information	Minimum Pressure Drop Requirement	Effective Date
Specified in a South Coast AQMD permit	Specified in a South Coast AQMD permit	[Date of Rule Adoption]
Not specified in South Coast AQMD permit	Measure pressure drop to the nearest tenth of an inch of water column while the air pollution control system is in operation to establish the minimum pressure drop across existing final stage filter media in place before January 1, 2023	January 1, 2023, until new final stage filter media replacement
	Measure pressure drop to the nearest tenth of an inch of water column while the air pollution control system is in operation to establish the minimum pressure drop across new final stage filter media replaced after January 1, 2023	At the time of new final stage filter media installation

If the minimum limit is specified in a spray booth permit, the facility must already comply with this permit condition. If a minimum limit is not specified on the permit, the facility must establish a minimum limit by measuring the pressure drop to the nearest tenth of an inch of water column while the air pollution control system is in operation. This can be done by taking a reading of the dedicated pressure gauge required in subparagraph (k)(1)(A). As of January 1, 2023, the minimum limit would be the measured pressure drop at the existing filters; facilities would not be required to replace the filters by January 1, 2023. When the filters are deemed to need replacing, the new minimum limit would then be the measured pressure drop across the new final stage filter media. Pressure drop measurements that are below the minimum limit would indicate that the flow of air is somehow bypassing the filter media before entering the exhaust duct.

Paragraph (k)(3) requires a spray booth to cease operating if the pressure drop across the filter media is above the maximum pressure drop limit or below the minimum pressure drop limit. Before January 1, 2023, the maximum pressure drop limit is established for the filter media pursuant to paragraph (o)(3). Beginning January 1, 2023, for the final stage filter, the maximum pressure drop limit is established pursuant to paragraph (k)(1), and the minimum pressure drop is established by Table 4 – minimum Pressure Drop Across Final Stage Filters.

Filter Specification Sheets – Paragraph (k)(4)

A facility is required to maintain onsite the technical specification sheets for the final stage filter media installed in a spray booth and any documentation to support the minimum pressure drop required to be established by the facility (if not specified by a permit condition). The documentation should be made available to South Coast AQMD staff upon request.

Recording the Pressure Drop – Paragraph (k)(5)

Paragraph (k)(5) requires the pressure drop across the filter media to be recorded once a day on days when a spray booth is operated for chromate spraying operations or dried chromate coating removal activities.

Data Acquisition System Alternative – Paragraph (k)(6)

PAR 1469.1 allows a facility to install a data acquisition system (DAS), equipped with an audible alarm, to continuously record the pressure drop as an alternative to manually recording pressure drop as required by paragraph (k)(5). Specifically, under paragraph (k)(6), the DAS and alarm system must be maintained according to the manufacturer's specifications. Subparagraph (k)(6)(A) requires the DAS to record the pressure drop at least once, and at a frequency of at least every sixty (60) minutes when conducting chromate spraying operations or dried chromate coating removal activities in the spray booth. Subparagraph (k)(6)(B) has requirements for the format of the data file and the information generated by the DAS. Subparagraph (k)(6)(C) requires the alarm to alert the operator when the pressure drop exceeds the maximum limit or falls below the minimum limit.

Spray Booth Exhaust Duct Cleaning Requirements – Subdivision (l)

HEPA or better spray booth filtration is highly effective, however, staff observations and testing have found materials containing chromates inside exhaust ducts downstream of final filters and on roofs at Rule 1469.1 facilities. Based on stakeholder comments on the need for duct cleaning at all facilities, PAR 1469.1 duct cleaning provisions are based on an evaluation of site-specific conditions.

Duct Inspections (l)(1)

When the final stage filters are replaced, paragraph (l)(1) requires a visual inspection of the exhaust duct downstream of the filters for the presence of overspray or dried chromate coating material that may contain chromium. If any chromate coatings have been sprayed in the booth at any time after the ducts have been installed, the overspray or dried coating material may contain chromium.

Duct Cleaning (l)(2)

If material is observed during a visual inspection, paragraph (l)(2) provides facilities with two compliance options. Subparagraph (l)(2)(A) specifies facilities can remove the material observed during a visual inspection from the spray booth duct using approved cleaning methods. Subparagraph (l)(2)(A) also requires an inspection of associated exterior surfaces of the spray booth duct and removal of all such overspray or dried coatings using an approved cleaning method. Approved cleaning methods defined in PAR 1469.1 include wet mop, damp cloth, wet wash, low pressure spray nozzle, HEPA vacuum, protective coverings, or other method as approved by the Executive Officer. Under clauses (l)(2)(A)(i) and (l)(2)(A)(ii), cleaning must be conducted no later than seven days after the observation or, prior to use of the spray booth if the cleaning cannot be conducted within seven days. Alternatively, subparagraph (l)(2)(B) allows a facility to first analyze the material for the presence of chromates. The analysis must be conducted using a laboratory analysis or a commercially available testing procedure that is able to determine the presence of hexavalent chromium. If hexavalent chromium is documented downstream of the final filter, subparagraph (l)(2)(B) requires cleaning of the spray booth duct and an inspection of associated exterior surfaces of the spray booth duct and removal of all such overspray or dried coatings using an approved cleaning method. Clauses (l)(2)(B)(i) and (l)(2)(B)(ii) require cleaning within 14 days or, prior to use of the spray booth if the cleaning cannot be conducted 14 days of the observation. The additional time to conduct duct cleaning, if cleaning is required under subparagraph (l)(2)(B), is to account for the time for a facility to receive results of testing of duct material for the presence of hexavalent chromium. For the purposes of this rule, cleaning of exterior surfaces associated

with spray booth ducts includes roofs and other areas where materials exiting through the exhaust duct can be deposited.

Required Duct Cleaning (l)(3)

Paragraph (l)(3) specifies that if a facility receives written notification from the Executive Officer confirming the presence of hexavalent chromium in the spray booth exhaust duct, the facility operator must clean, using approved cleaning methods, the spray booth duct and/or associated exterior surfaces of the spray booth duct prior to use of the booth for chromate spraying operations.

Notification of Duct Cleaning (l)(4)

Paragraph (l)(4) requires notification to South Coast AQMD at least 72 hours before conducting cleaning required by paragraphs (l)(2) and (l)(3).

Recordkeeping Requirements – Subdivision (m)

Current Rule 1469.1 includes recordkeeping requirements. PAR 1469.1 maintains these requirements; however, since additional requirements are added, such as additional parameter monitoring, there are additional recordkeeping provisions. PAR 1469.1 recordkeeping provisions are consistent with those contained in other recently adopted and amended toxic metal particulate rules.

Chromate Usage (m)(1)

Paragraph (m)(1) maintains the existing requirement in Rule 1469.1 paragraph (j)(1) for facilities to maintain records of chromate coatings. These requirements include purchase records, Safety Data Sheets (previously referred to as Material Safety Data Sheets or Technical Data Sheets), daily usage records, and application methods for chromate coatings.

Housekeeping and Best Management Practices (m)(2)

Paragraph (j)(1) of existing Rule 1469.1 requires facilities to maintain records to demonstrate compliance with subdivision (d) requirements, which includes housekeeping. PAR 1469.1 subparagraph (m)(2)(A) maintains this requirement for housekeeping requirements in subdivision (i) and paragraph (o)(2) but also requires recordkeeping to demonstrate compliance with best management practices in subdivision (j). Compliance with these recordkeeping requirements includes a demonstration that periodic activities, such as weekly cleaning requirements, are being conducted. A checklist would satisfy this requirement.

Subparagraph (m)(2)(B) requires facilities to maintain records of the visual inspections required under paragraph (j)(8).

Monitoring Records (m)(3)

Subparagraph (m)(3)(A) requires facilities to maintain records of air velocity measurements or PTE demonstrations such as date/time of the measurement or demonstration, booth identification, description of equipment used/calibration dates, and results. As previously mentioned, PAR 1469.1 Appendix 1 includes the procedures facilities must use when conducting inward face air velocity measurements.

Subparagraph (m)(3)(B) maintains the existing Rule 1469.1 recordkeeping provisions contained in subparagraph (j)(2)(D); however, it also specifies data acquisition system or DAS recordkeeping for facilities selecting that compliance option.

As mentioned, some permits for Rule 1469.1 spray booths establish a minimum pressure differential for the final stage filter. Beginning January 1, 2023, PAR 1469.1 requires facilities that do not have minimum pressure drop value on permits to establish a minimum pressure drop for final stage filters. Subparagraph (m)(3)(C) adds a new recordkeeping requirement for facilities to maintain records of spray booth final stage filter replacement and the established minimum pressure drop required under PAR 1469.1 paragraph (k)(2).

Subparagraph (m)(3)(D) requires facilities to maintain records of the exhaust duct visual inspections required under paragraph (l)(1), including a photograph of the spray booth exhaust duct when the visual inspection is conducted and results of the analysis of overspray or dried coatings for the presence of hexavalent chromium if tests are conducted under the provisions of subparagraph (l)(2)(B).

Records Retention (m)(4)

Paragraph (m)(4) modifies the existing Rule 1469.1 record retention requirements contained in subparagraph (j)(2)(C). Specifically, PAR 1469.1 subparagraph (m)(4)(A) maintains the requirement for records to be maintained for three years but clarifies that these provisions are effective before July 1, 2023. At a minimum, the most recent two years of records must be maintained on site, and that records kept offsite must be made available within one week of the request. Beginning July 1, 2023, subparagraph (m)(4)(B) is a new provision that increases the record retention requirement to five years which is consistent with other South Coast AQMD regulations. The delayed effective date allows facilities to accumulate the necessary records before being subject to the requirement to have five years of records. The requirement to keep the most recent two years of records onsite with other records available within one week of a request is also consistent with other South Coast AQMD regulations.

Prohibitions – Subdivision (n)

PAR 1469.1 adds subdivision (n) that prohibits construction or installation of new open face spray booths or outdoor enclosed spray booths for chromate spray coating operations.

Open Face Spray Booths (n)(1)

Under paragraph (n)(1), a new open face spray booth for chromate spray coating operations will be prohibited as of the date of PAR 1469.1 adoption unless the open face spray booth is located with a permanent total enclosure that is vented to HEPA filters or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.7 percent on 0.3 micron or smaller particles. Paragraph (c)(20) includes a definition of a permanent total enclosure.

Outdoor Enclosed Spray Booths (n)(2)

Paragraph (n)(2) adds a prohibition on the installation or construction of a new spray booth for chromate spray coating operations that is not located within a building enclosure. This prohibition does not apply to spray booths greater than 10,000 square feet installed or constructed after PAR 1469.1 adoption. The square footage threshold was added to clarify that the prohibition of spray booths outside of a building enclosure does not apply to specialty paint hangers intended to paint planes or other large pieces where the entire building is vented to HEPA filters or filters that are individually tested and certified by the manufacturer to have a control efficiency of at least 99.7 percent on 0.3 micron or smaller particles.

Interim Requirements for Facilities – Subdivision (o)

As discussed in prior subdivisions, many of the existing rule requirements from Rule 1469.1 have been re-organized in PAR 1469.1. Some requirements have a delayed implementation date before the owner or operator is required to comply with the new requirements. To avoid a potential regulatory gap and backsliding of existing requirements until the future implementation date, subdivision (o) incorporates prior inward face air velocity, housekeeping, and pressure drop monitoring requirements from existing Rule 1469.1. These existing requirements are effective until either January 1, 2022 (housekeeping), January 1, 2026 (inward face air velocity), and January 1, 2023 (pressure drop). A description of the requirements is included under the following Chapter 2 headings: Spray Booth Capture Efficiency - (g), Housekeeping - (i), and Pressure Drop Across Filter Media - (k).

Exemptions – Subdivision (p)

Existing Rule 1469.1 includes exemptions for touch up and repair activities in subdivision (h). Under subdivision (p), PAR 1469.1 modifies the existing touch up and repair exemption and adds exemptions for thermal spraying and non-spraying application methods to clarify rule applicability.

Thermal Spraying (p)(1)

The applicability subdivision, (b), of Rule 1469.1 currently specifies that thermal spraying operations are not subject to the rule. To be consistent with other South Coast AQMD rules, this provision has been moved from the applicability subdivision to the exemptions subdivision. Thermal spraying activities are subject to other regulatory requirements, including the CARB ATCM.

Non-Spraying Application Methods (p)(2)

Paragraph (p)(2) has been added to exempt chromate coatings applied only by flow coater, roll coater, dip coater, or hand application methods from the control device requirements of paragraph (d)(1)(A) and the spray booth operation provisions of paragraph (d)(3).

Touch Up and Repair Operations (p)(3)

Paragraph (h)(1) of existing Rule 1469.1 includes an exemption for touch up and repair activities conducted inside a building provided the emissions and cancer risk are included in an approved Health Risk Assessment that meets the applicable risk limits depending on the distance to the receptor and the type of receptor. Paragraph (h)(2) of existing Rule 1469.1 exempts touch up, and repair activities from spray booth operation and transfer efficiency requirements provided emissions are calculated in an approved compliance plan, and total facility-wide from spraying operations are demonstrated to be less than the applicable risk limits depending on the distance to the receptor and the type of receptor. PAR 1469.1 paragraph (p)(3) modifies the current provisions to clarify that for touch up and repair to be exempted, emissions are required to be calculated and included in an approved facility-wide health risk assessment that limits the cancer risk to 10 in a million.

Appendix 1 - Inward Face Air Velocity Measurement Procedures

Existing Rule 1469.1 includes a performance standard for inward face velocity but does not reference a test method or require facilities to conduct testing. Subdivision (g) of PAR 1469.1

includes requirements for facilities to conduct periodic tests to demonstrate that spray booths meet the applicable average and minimum velocities in Table 1, as determine by the procedures specified in Appendix 1.

Appendix 1 establishes minimum requirements for test equipment and spray booth conditions as well as procedures for taking and recording measurements.

Existing Rule 1469.1 Appendices 1 and 2, which established methods used to demonstrate compliance with existing Option A are no longer applicable and are proposed to be removed.

CHAPTER 4 – IMPACT ASSESSMENT

AFFECTED SOURCES

Chromate coatings are primarily applied onto metal substrates as an anti-corrosion agent in a variety of industries. PAR 1469.1 applies to those facilities that apply chromate coatings via a spraying method; facilities that do not have chromate coating spraying operations are not subject to this rule. There are approximately 115 facilities expected to be impacted by PAR 1469.1. The facilities were identified by reviewing South Coast AQMD spray booth permits and supplemented by Internet searches and trade association contacts.

The vast majority of spray booths at these facilities are equipped with HEPA filters or better, complying with Option B. Four (4) spray booths located at two (2) facilities currently use HRAs to comply with the facility-wide cancer risk limits in Option C. There are no facilities complying with Option A. As described in Chapter 3, PAR 1469.1 would require these two facilities to submit permit applications to upgrade spray booths where chromate spraying operations are conducted to be equipped with HEPA filters or accept permit conditions to limit chromate emissions and specify a minimum filter efficiency.

EMISSIONS IMPACT

PAR 1469.1 will reduce both point source and fugitive emissions of hexavalent chromium. Point source controls will reduce hexavalent chromium emissions from chromate spray coating operations and dried chromate coating removal activities through use of HEPA or better filtration. PAR 1469.1 includes enhanced parameter monitoring to ensure the air pollution control systems are operating as intended. Housekeeping, building enclosure and best management practices will reduce fugitive emissions from Rule 1469.1 facilities. Fugitive emissions are difficult to quantify but have been shown to be a contributing factor to ambient toxic air contaminant concentrations.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

Pursuant to the California Environmental Quality Act (CEQA) Guidelines Sections 15002(k) and 15061, the proposed project is exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3). A Notice of Exemption will be prepared pursuant to CEQA Guidelines Section 15062. If the proposed project is approved, the Notice of Exemption will be electronically filed with the State Clearinghouse of the Governor's Office of Planning and Research to be posted on their CEQAnet Web Portal, which may be accessed via the following weblink: <https://ceqanet.opr.ca.gov/search/recent>. In addition, the Notice of Exemption will be electronically posted on the South Coast AQMD's webpage which can be accessed via the following weblink: <http://www.aqmd.gov/nav/about/public-notices/ceqa-notices/notices-of-exemption/noe---year-2021>. The electronic filing and posting of the Notice of Exemption is being implemented in accordance with Governor Newsom's Executive Orders N-54-20 and N-80-20 issued on April 22, 2020 and September 23, 2020, respectively, for the State of Emergency in California as a result of the threat of COVID-19.

SOCIOECONOMIC ASSESSMENT

California Health & Safety Code Section 40440.8 requires a socioeconomic impact assessment for proposed and amended rules resulting in significant impacts to air quality or emission limitations.

PAR 1469.1 applies to facilities using chromate coatings that are typically sprayed inside a spray booth vented to a combination of conventional spray booth filters, multi-stage filters, and HEPA filters to control and capture overspray. Potential emissions not only occur during the spraying process, but during buffing, scuffing, sanding, or grinding activities on the workpiece to remove dried excess coating after the curing process. The proposed requirements in PAR 1469.1 with potential costs include:

- New HEPA controls on spray booths;
- New point source requirements (i.e., upgrading of certain booths or permit modification for chromate emissions limits);
- New point source requirements for dried coating removal (i.e., control devices for such activities);
- Air velocity monitoring requirements;
- Requirements for building enclosures;
- Housekeeping and best management practices (BMP) enhancements; and
- Duct cleaning

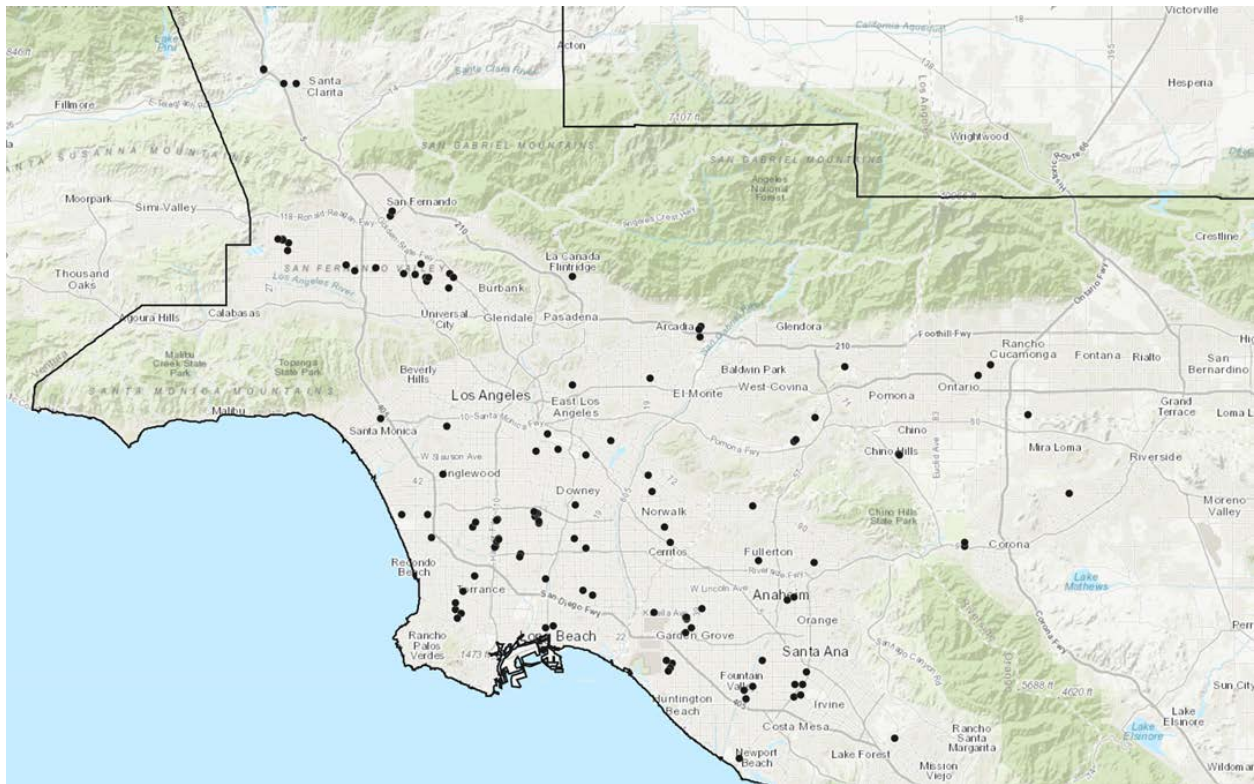

Affected Facilities and Industries

PAR 1469.1 would affect a total of 231 spray booths across 115 facilities in the South Coast AQMD jurisdiction. Based on a review of spray booth permits, an estimated 72 were enclosed, 108 were open face, and 51 were unconfirmed (20 were assumed enclosed versus 31 open based on the ratio of known enclosed/open booths). PAR 1469.1 primarily affects the electroplating, plating, polishing, anodizing, and coloring industry (NAICS 332813), other aircraft parts and auxiliary equipment manufacturing industry (NAICS 336413), and metal coating, engraving (except jewelry and silverware), and allied services to manufacturers industry (NAICS 332812). Figure 9 shows the locations of the PAR 1469.1 facilities within South Coast AQMD's jurisdiction.

Compliance Costs

For the purpose of the cost impacts analysis of PAR 1469.1, staff used facility survey responses to estimate potential compliance costs for the universe of affected facilities. The facility-specific information provided by facility operators in the written survey establishes a representative cross-section of the affected PAR 1469.1 universe, and costs were estimated accordingly. Of the 115 total estimated potential facilities affected by PAR 1469.1, staff received a 27 percent response rate (31 respondents out of 115 facilities included in the survey).⁹ For equipment estimates in which spray booth specifications were not specified (enclosed spray booth, open face spray booth, bench spray booth, etc.), ratios of known facility information were substituted to make the estimates.

⁹ Rule staff sent out a facility survey to a list of approximately 115 potentially affected facilities on January 31, 2020 via email and mail. Staff received 31 completed surveys.

Figure 9 – PAR 1469.1 Facility Locations

Spray Booth Emission Controls/Modifications (subdivisions (d), (e), and (f))

As described in Chapter 3, there are two facilities that comply with current Rule 1469.1 health risk assessment provisions and operate spray booths that are not equipped with HEPA filters. PAR 1469.1 would require these facilities to install new HEPA filtration systems (per subdivision (d)) or accept permit conditions to limit chromate emissions and specify a minimum filter efficiency (per subdivision (e)). Based on the staff estimate, one of these facilities will install two new HEPA filtration systems at a cost of \$56,000 per unit.¹⁰ The other facility is assumed to select the HRA/permit modification option in subdivision (e) for two spray booths and pay a one-time permit application fee of \$3,028 for each booth. Eleven facilities are assumed to install one downdraft table each to conduct coating removal activities. Each installation is expected to cost \$10,114.

Spray Booth Requirements (subdivision (g))

In order to meet the spray booth requirements of PAR 1469.1, all the affected 115 facilities are expected to purchase and use a hot wire anemometer at a cost of \$230 each with an annual calibration cost of \$200.

Building Enclosure Requirements (subdivision (h))

Based on the survey responses, majority of facilities are in compliance with the building enclosure requirements of the PAR 1469.1. Based on the staff estimate, 15 facilities would be required to

¹⁰ Cost for HEPA system is based on the 2005 Final Staff Report for Proposed Rule 1469.1, in which the \$40,000 per unit cost has been adjusted to 2020 dollars using the Marshall & Swift all industries index.

make minor modifications to their building enclosures. Each modification is expected to cost \$9,500 (Two 12' by 16' openings at a cost of \$13.50/sq. ft.).

Housekeeping, Recordkeeping, and Best Management Practices (subdivisions (i) and (j))

To meet the housekeeping requirements of PAR 1469.1, an estimated 41 facilities are assumed to conduct two hours per week of housekeeping activity, and 15 minutes per week of recordkeeping. Labor costs assume \$25/hour for 50 weeks per year.

Staff assumed that all facilities would be required to implement new requirements for best management practices. Staff assumed all 231 spray booths would install a 115-volt solenoid valve to meet the requirements of subparagraph (j)(1)(B). Each solenoid valve installation is estimated to cost \$1,163 (\$163 plus \$1,000 installation). To establish workpiece support equipment transport routes and storage areas and posting of post-operation ventilation time signage, a one-time cost of \$25 (one-hour labor) per facility was assumed (total of two hours per facility).

Pressure Drop Across Filter Media (subdivision (k))

PAR 1469.1 would also require daily pressure gauge readings. According to the survey responses, majority of the facilities indicated that they operate at least five days per week. For the purpose of estimating the cost for this category, staff assumed pressure gauge readings for 15 minutes per day across all facilities at \$25 per hour. According to a review of spray booth permit information, 27 spray booths currently equipped with HEPA controls are not required to have a dedicated HEPA pressure gauge. The cost of a pressure gauge is estimated to be \$63.50 each (one per spray booth) and can be installed by the facility operator. Daily recording of the minimum pressure drop readings would be done along with the daily spray booth pressure gauge readings, and annual final stage filter replacement is assumed to take one hour per spray booth per year (\$25 per hour labor).

Spray Booth Exhaust Duct Cleaning Requirements (subdivision (l))

PAR 1469.1 would also require duct cleaning for spray booths vented to filtration systems with control efficiencies that are less than that of HEPA. Spray booths with HEPA controls are assumed to not require duct cleaning. A one-time cost of \$7,459 for duct cleaning is assumed for 11 spray booths. Material testing of duct deposits is assumed to cost of \$150 (one-time), and recordkeeping upon completion of the duct cleaning assumes 15 minutes at \$25 per hour.

Total PAR 1469.1 Compliance Costs Summary

As presented in Table 8, the total annual cost of PAR 1469.1 requirements, is about \$443,000 across all affected facilities. Capital costs for purchase and installation of required equipment, signage, and other and one-time expenditures were annualized over a period of 10 years. The total one-time costs associated with PAR 1469.1 are estimated at \$82,000 annually (18.5 percent of the total). Recurring costs for various routine checks, housekeeping and recordkeeping are presented as annual costs across the entire affected universe of facilities. The total recurring cost associated with PAR 1469.1 is about \$361,000 (81.5 percent of the total). The average annual cost per facility potentially affected by PAR 1469.1 is approximately \$3,850.

Table 9 presents total annual cost of PAR 1469.1 apportioned across industry type, as well as the number of facilities in each industry. The Electroplating, Plating, Polishing, Anodizing, and Coloring industry (North American Industrial Classification System or NAICS 332813) has the greatest share (28.6 percent) of the additional compliance costs.

Table 8 – Estimated Annual Compliance Cost of PAR 1469.1

PAR 1469.1 Compliance Costs				
	Quantity (number of spray booths or facilities)	Per unit cost	Recurrence	Total Industry Cost
One-Time Costs (annualized over 10 yrs)*				
New HEPA spray booth emission controls (purchase & installation)	2 spray booths	\$56,000.00	One-time	\$13,776.00
HRA option - permit application fee	2 spray booths	\$3,028.23	One-time	\$744.94
HEPA controls for dried coating removal activities	11 downdraft tables	\$10,114.00	One-time	\$13,684.24
Closing Building Openings	15 facilities	\$5,184.00	One-time	\$9,564.48
"Interlock" system preventing use of spray equipment unless exhaust system is operating (installation and purchase)	231 spray booths	\$1,163.00	One-time	\$33,044.31
Marking workpiece support equipment transit paths and storage areas	115 Facilities	\$25.00	One-time	\$353.63
Posting post-operation minimum ventilation time per (j)(2)(C)	115 Facilities	\$25.00	One-time	\$353.63
Dedicated HEPA filter pressure gauge - all associated costs (e.g. pressure gauge, installation, permitting)	27 spray booths	\$63.50	One-time	\$210.88
Duct cleaning for spray booths without HEPA systems	11 spray booths	\$7,459.00	One-time	\$10,092.03
Total				\$81,824.14
Recurring Costs (annual cost)				
Air velocity requirements (industry-wide)	231 spray booths	--	Annual	\$35,503.35
Housekeeping (2 hrs. per week)	41 facilities	\$2,500	Annual	\$102,500.00
Recordkeeping of Housekeeping activities (15 mins per week)	115 facilities	\$312.50	Annual	\$35,937.50
Daily pressure drop readings	115 facilities	\$1,562.50	Annual	\$179,687.50
Pressure drop final stage filter replacement	231 spray booths	\$25.00	Annual	\$5,775.00
Duct deposition material testing	2 spray booths	\$150	Annual	\$300.00
Duct cleaning recordkeeping (15 minutes)	231 spray booths	\$6.25	Annual	\$1,443.75
Total				\$361,147.10
TOTAL				\$442,971

*Capital costs were annualized over 10 years using a Capital Recovery Factor of 0.123

Table 9 – Compliance Cost of PAR 1469.1 by Industry

NAICS Code	Industry Description	# of Facilities	Share of 1469.1 Cost	Industry Cost

Regional Macroeconomic Impacts

South Coast AQMD does not estimate regional macroeconomic impacts when the total annual compliance cost is less than one million current U.S. dollars as the Regional Economic Models Inc. (REMI)'s Policy Insight Plus Model is not able to reliably evaluate impacts that are so small relative to the baseline regional economy.

DRAFT FINDINGS UNDER CALIFORNIA HEALTH AND SAFETY CODE SECTION 40727**Requirements to Make Findings**

California Health and Safety Code Section 40727 requires that prior to adopting, amending or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the staff report.

Necessity

PAR 1469.1 is needed to further reduce emissions of hexavalent chromium from facilities conducting chromate spray coating and related operations. PAR 1469.1 requirements for housekeeping, best management practices and building enclosures are needed to minimize fugitive emissions.

Authority

The South Coast AQMD Governing Board has authority to adopt PAR 1469.1 pursuant to the California Health and Safety Code Sections 39002, 39650 et. seq., 40000, 40440, 40441, 40702, 40725 through 40728, 41508, and 41700.

Clarity

PAR 1469.1 is written or displayed so that its meaning can be easily understood by the persons directly affected by it.

Consistency

PAR 1469.1 is in harmony with and not in conflict with or contradictory to, existing statutes, court decisions or state or federal regulations.

Non-Duplication

PAR 1469.1 will not impose the same requirements as or in conflict with any existing state or federal regulations. The proposed amended rule is necessary and proper to execute the powers and duties granted to, and imposed upon, the South Coast AQMD.

Reference

By adopting PAR 1469.1, the South Coast AQMD Governing Board will be implementing, interpreting or making specific the provisions of the California Health and Safety Code Section 41700 (nuisance), and Federal Clean Air Act Section 112 (Hazardous Air Pollutants) and Section 116 (Retention of State authority).

COMPARATIVE ANALYSIS

California Health and Safety Code Section 40727.2 requires a comparative analysis of the proposed rule requirements with those of any Federal or South Coast AQMD rules and regulations applicable to the same equipment or source category. The following analysis compares PAR 1469.1 with federal Aerospace NESHAP (subpart GG) and 6H NESHAP requirements. Staff is

not aware of any other applicable regulations. Only the relevant provisions of the NESHAPs relating to standards, monitoring, recordkeeping and reporting have been included.

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H																
Applicability	Any operation in which chromate coatings are sprayed	Facilities engaged in the manufacture or rework of commercial, civil or military aerospace vehicles or components and that are major sources	Non-major source facilities that spray coatings containing target hazardous air pollutants to metal or plastic substrates																
Point Source Requirements: Spraying operations	<ul style="list-style-type: none">For facilities with spray booths without HEPA filters:<ul style="list-style-type: none">Upgrade to HEPA controls no later than January 1, 2026; orModify existing permits to limit chromate emissions and specify minimum filter efficiency consistent with the approved HRA using 2015 OEHHA risk assessment guidanceFor all other facilities, spraying of chromate coatings must be conducted in spray booths equipped with HEPA filters, at a minimum	<ul style="list-style-type: none">For sources constructed prior to June 6, 1994, spraying of coatings containing inorganic hazardous air pollutants are required to use waterwash system, or two-stage filters with minimum control efficiencies for:<ul style="list-style-type: none">Liquids<table><tr><th>Min. Filter Eff.</th><th>Particle Size</th></tr><tr><td>>90</td><td>>5.7 μm</td></tr><tr><td>>50</td><td>>4.1 μm</td></tr><tr><td>>10</td><td>>2.2 μm</td></tr></table>Solids<table><tr><th>Min. >10	>2.2 μm																		
Min. Filter Eff.	Particle Size																		
>90	>8.1 μm																		
>50	>5.0 μm																		
>10	>2.6 μm																		

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
		<p><u>Min. Filter Eff. / Particle Size</u></p> <p>>95 >2.0 µm</p> <p>>80 >1.0 µm</p> <p>>65 >0.42 µm</p> <p>▪ Solids</p> <p><u>Min. Filter Eff. / Particle Size</u></p> <p>>95 >2.5 µm</p> <p>>85 >1.1 µm</p> <p>>75 >0.70 µm</p> <p>• An approved equivalent to a three-stage control system</p>	
Point Source Requirements for Dried Chromate Coating Removal Activities	<p>Conduct dried chromate coating removal activities:</p> <ul style="list-style-type: none"> • In a spray booth that is equipped with HEPA filters, at a minimum, or spray booth that meets the HRA compliance option; or • Vented to a control device equipped with HEPA or HEPA-equivalent or better controls 	<p>For non-chemical depainting operations that generate inorganic hazardous air pollutant emissions from dry media blasting:</p> <ul style="list-style-type: none"> • The operation must be performed in an enclosed area or in a closed cycle depainting system; and • The air stream from the operation must pass through: <ul style="list-style-type: none"> ○ A dry filter system meeting a minimum efficiency specified in the rule; ○ A baghouse; or ○ A waterwash system before being released to the atmosphere 	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
		<ul style="list-style-type: none"> Mechanical and hand sanding are exempt from depainting requirements 	
Spray Booth Requirements: Preventing coating particles from exiting through spray booth openings	<ul style="list-style-type: none"> Do not allow visible emissions to exit the spray booth Spray booths must meet average and minimum inward face air velocity requirements or meet requirements of a PTE using Method 204 on a regular frequency of: <ul style="list-style-type: none"> Once every six months for open face spray booths; or Once every 12 months for enclosed spray booths All spray booth filters must be free of leaks, breaks, and tears, and properly seated 	Apply coatings in a booth or hangar in which air flow is directed downward onto or across the part or assembly being coated	None Specified
Building Enclosure Requirements	<ul style="list-style-type: none"> Conduct spraying operations, dried coating removal activities, and demasking activities within a building enclosure Store workpiece support equipment and cleaning equipment within a building enclosure Close building openings within 20 feet of the opening of an open face spray booth and areas where dried chromate coating removal activities and demasking activities occur 	None Specified	None Specified
Housekeeping:	<ul style="list-style-type: none"> Clean, weekly if not within a PTE vented to HEPA filters, or monthly if within a 	None Specified	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
Cleaning areas outside of spray booths	<p>PTE vented to HEPA filters, open floor areas within 20 feet of all the following:</p> <ul style="list-style-type: none"> ○ Opening of an open face spray booth ○ Ingresses and egresses of an enclosed spray booth ○ Areas where dried chromate coating removal or demasking activities are conducted ○ Areas where chromate coatings are mixed ○ Storage areas for equipment materials that may contain chromates ○ Waste storage areas for materials that may contain chromates ○ Workpiece support equipment transit paths, work areas, and storage areas ● Clean once per day on days when chromate spraying operations are conducted, within 20 feet of ingresses and egresses of an enclosed spray booth located outside of a building enclosure 		
Housekeeping: Spills	Clean spills of liquid or solid material that may contain chromates immediately but no later than hour after being spilled	The handling and storage of coatings and waste that contains organic hazardous air pollutants must be conducted in a manner that minimizes spills	None Specified
Housekeeping: Within spray booths	<ul style="list-style-type: none"> ● Clean all floors within a spray booth without protective coverings at least once per calendar week, during any week when activities are conducted within the booth 	None Specified	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
	<ul style="list-style-type: none"> • If protective coverings are used within a booth, remove and replace all spray booth protective floor or wall coverings at least every six months • Facility may elect to use sticky mats in lieu of housekeeping requirements within spray booths if sticky mats are: <ul style="list-style-type: none"> ○ At least two feet in depth and as wide as the opening at all spray booth ingresses and egresses ○ Placed such that all traffic travels over the sticky mats ○ Replaced once a day on days when operations are conducted in the booth 		
Housekeeping: Waste disposal	Place waste materials that may contain chromates immediately in a container that: <ul style="list-style-type: none"> • Remains closed unless being filled or emptied • Is lined with removeable bags if waste material will be transferred to other on-site containers 	None Specified	None Specified
Housekeeping: HEPA vacuum	If a HEPA vacuum is used: <ul style="list-style-type: none"> • HEPA filter should be free leaks, breaks, tears, or other types of damage, and securely latched and properly situated • Vacuum must be emptied into a container within a spray booth and the container must remain closed except being filled or emptied 	None Specified	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
Best Management Practices (BMP): Chromate spraying operations	<ul style="list-style-type: none"> Keep ingresses and egresses of an enclosed spray booth closed while conducting spraying operations Use a system to ensure that spray booth air pollution control system is operating while chromate spraying equipment is being used 	<ul style="list-style-type: none"> Waterwash booths shall remain in operation during coating operations Interlock for spraying equipment and pressure differential is a compliance option 	None specified
BMP: Spray booth operations	<ul style="list-style-type: none"> When removing protective spray booth floor, wall, or exhaust coverings: <ul style="list-style-type: none"> Operate air pollution control system Ensure that enclosed spray booth ingresses and egresses are closed Place waste materials that may contain chromates immediately in a container, and container should remain closed unless being filled or emptied Operate the air pollution control system for a minimum of three air exchanges within the spray booth or five minutes, whichever is longer after: <ul style="list-style-type: none"> Conducting spraying operations Conducting dried chromate coating removal activities Removing protective floor, wall, or exhaust coverings Do not operate air pollution control system when the final stage filters are being removed, replaced or are missing, damaged, or improperly installed 	None specified	Painters must be trained every 5 years in techniques to minimize paint overspray, including routine spray booth and filter maintenance

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
BMP: Transfer efficiency	Spray coatings using HVLP spray, electrostatic application, or other alternative application that meets the transfer efficiency of HVLP spray as demonstrated to the Executive Officer	Application Equipment: <ul style="list-style-type: none"> • Flow/curtain coating; • Dip coat • Roll coating; • Brush coating • Cotton-tipped swab application; • Electrodeposition (dip) coating; • High Volume Low Pressure (HVLP) spraying; • Electrostatic spray. • Other methods equivalent to HVLP or electrostatic application 	Painters must be trained every 5 years in techniques to minimize paint overspray, including: <ul style="list-style-type: none"> • Spray gun equipment selection, set up, and operation • Spray techniques to improve transfer efficiency, minimize coating usage and overspray
BMP: Dried chromate coating removal activities	When conducting dried chromate coating removal activities within a spray booth, ensure that spray booth is being operated properly, visual emissions are prevented, inward face air velocity requirements are met, and filter is operating within minimum and maximum pressure drop limits	None Specified	None Specified
BMP: Workpiece support equipment	<ul style="list-style-type: none"> • Establish and clearly mark workpiece support equipment transit paths, work areas, and storage areas outside of a spray booth or PTE • Transport/store equipment within established paths and work areas and storage areas 	None Specified	None Specified
BMP: Visual inspections	Perform weekly visual inspection of the visible filter media for leaks, breaks, tears, and improper seating	None Specified	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
BMP: Personal Protective Equipment	Remove personal protective equipment in a manner that minimizes fugitive emissions	None Specified	None Specified
Pressure Drop Across Filter Media: Pressure gauge	Install pressure gauge to continuously monitor the pressure drop across the Spray Booth final stage filter media	Install pressure gauge across filter banks	None Specified
Pressure Drop Across Filter Media: Maximum pressure drop	<ul style="list-style-type: none"> • Maintain the pressure drop across spray booth final stage filter media at or below the maximum pressure drop specified in a South Coast AQMD permit or the filter manufacturer's recommended maximum pressure drop, whichever is lower • Do not operate a spray booth if the pressure drop is above the maximum limit 	Shut down operation and take corrective action when the pressure drop exceeds or falls below the filter manufacturer's recommended limit(s)	None Specified
Pressure Drop Across Filter Media: Minimum pressure drop	<ul style="list-style-type: none"> • Maintain the pressure drop across the spray booth final stage filter media at or above the minimum pressure drop limit specified in a South Coast AQMD permit or established by taking a measurement of the pressure drop: <ul style="list-style-type: none"> ○ As of January 1, 2023, using the existing final stage filter media until replacement with new filters; and ○ When new final stage filters are installed • Do not operate a spray booth if the pressure drop is below the minimum limit 	Shut down operation and take corrective action when the pressure drop exceeds or falls below the filter manufacturer's recommended limit(s)	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
Pressure Drop Across Filter Media Maintain specifications and records	<ul style="list-style-type: none"> • Maintain filter specification sheets for spray booth final stage filter media • Maintain records of any established minimum pressure drop limits 	None Specified	None Specified
Pressure Drop Across Filter Media Recording pressure drop	<ul style="list-style-type: none"> • Record pressure drop at least once on days when conducting chromate spraying or dried chromate coating removal activity within the spray booth • In lieu of recording daily pressure drop, facility may use a DAS to continuously record the pressure drop, and must: <ul style="list-style-type: none"> ○ Record at least once every 60 minutes on days when chromate spraying operation or dried chromate coating removal activity is conducted ○ Generate a data file in a format approved by the Executive Officer ○ Have an audible alarm that alerts when the pressure drop is not within maximum or minimum limits 	<ul style="list-style-type: none"> • Continuously monitor pressure drop across the filter and read and record the pressure drop once per shift; or • Install an interlock system that automatically shuts down the coating spray application system if pressure drop exceeds or falls below filter manufacturer's recommended limits 	None Specified
Spray Booth Exhaust Duct Cleaning Requirements Based on facility observations	<ul style="list-style-type: none"> • Conduct visual inspection of spray booth duct immediately downstream of final stage filter when replacing filter media • If overspray or dried coating is observed in the spray booth duct: <ul style="list-style-type: none"> ○ Clean the duct and inspect associated exterior surfaces and remove all overspray and dried coatings no later than seven days after observation or 	None Specified	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
	<p>before any chromate spraying operations are conducted in the spray booth; or</p> <ul style="list-style-type: none"> Analyze the overspray or dried coating for the presence of hexavalent chromium, and if found, clean the duct and inspect associated exterior surfaces and remove all overspray and dried coatings no later than 14 days after observation or before any chromate spraying operations are conducted in the spray booth 		
Spray Booth Exhaust Duct Cleaning Requirements Based on agency observations	If a facility receives written notification from South Coast AQMD that confirms the presence of hexavalent chromium in the duct or associated exterior surfaces, clean the duct an surfaces, and not operate the booth until cleaning is conducted	None Specified	None Specified
Recordkeeping	<ul style="list-style-type: none"> Keep records of chromate coatings usage Keep records of visual inspection of spray booth duct when final stage filter media is replaced, including photographs of the duct Maintain records to demonstrate compliance with housekeeping and best management practices requirements Keep records of spray booth air velocity measurements or PTE demonstrations Keep records of pressure drop readings or DAS data files 	Primer and Topcoat Application Operations – Inorganic Hazardous Air Pollutant Emissions <ul style="list-style-type: none"> Record pressure drop across dry particulate filters or HEPA filters once each shift during which coating occurs. Record water flow rate through waterwash system once each shift during which coating operations occur. Include acceptable limits of pressure drop or water flow rate. 	<ul style="list-style-type: none"> Records documenting that each painter completed the training, including dates Documentation of filter control efficiency Documentation that spray gun meets transfer efficiency requirements

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
	<ul style="list-style-type: none"> • Keep records of spray booth final stage filter media replacement and established minimum pressure drop • Retain records for five years, with at least two most recent years kept onsite 	<ul style="list-style-type: none"> • Keep manufacturer-supplied filter documentation, for new facilities • Semiannual reports occurring every 6 months from date of notification of compliance status that identify: <ul style="list-style-type: none"> ○ Each exceedance of the operating parameters established for a control device under the initial performance test; ○ All times when a primer or topcoat application operation was not immediately shut down when the parameter monitoring was outside the limit(s) specified by the filter or booth manufacturer. • Annual reports beginning 12 months after date of notification of compliance status listing the number of times pressure drop or water flow rate was outside the limit(s) specified by the filter or booth manufacturer 	<ul style="list-style-type: none"> • Records of any deviation from rule requirements
Prohibitions: New spray booths	<ul style="list-style-type: none"> • Prohibit installation or construction of new open face booths unless located within a PTE vented to HEPA filters, at a minimum 	None Specified	None Specified

Rule Element	PAR 1469.1	NESHAP Subpart GG	NESHAP Subpart 6H
	<ul style="list-style-type: none"> Prohibit installation of new spray booths outside of a building enclosure, unless spray booths are greater than 10,000 square feet. 		
Interim Requirements	Existing requirements (not new rule language)	None Specified	None Specified
Exemptions	<ul style="list-style-type: none"> Rule shall not apply to thermal spraying operations Spray booth requirements do not apply to operations where chromate coatings are applied only by flow coater, roll coater, dip coater, or hand application methods Spray booth and transfer efficiency requirements do not apply to any touch up and repair operation spraying chromate coatings conducted outside of a spray booth, provided that it is performed within a building enclosure and emissions and cancer risk have been calculated in an approved health risk assessment that limits facility-wide cancer risk to 10 in a million 	<p>Spray-applied coatings do not include:</p> <ul style="list-style-type: none"> Coatings that are applied from a hand-held device with a paint cup capacity that is equal to or less than 3.0 fl. oz. and when the amount of a single coating formulation applied is no more than 3.0 fl. oz. in a single application Powder coating, hand-held, non-refillable aerosol containers, or non-atomizing application technology 	<p>Spray-applied coatings do not include:</p> <ul style="list-style-type: none"> Thermal spraying Powder coating, hand-held, non-refillable aerosol containers, or non-atomizing application technology Coatings that are applied from a hand-held device with a paint cup capacity that is equal to or less than 3.0 fl. oz.

Subject: RE: Follow-up for PAR 1469.1 Public Workshop comment

Hi Yunnies,

Well, that person would be me at this point. Thanks for the thorough presentation last Thursday. I was, frankly, disheartened by all of the new requirements that will seemingly be levied on painting operators under 1469.1. These new requirements will increase our operating costs significantly, which will be passed onto customers, which will certainly lead many to take their business elsewhere (as in not in California), with the final result that businesses in California will be forced to close down due to reduced revenue.

1-1

That said, my comment concerned the filter differential pressure requirement specified in our existing spray booth permit (R-G28879). The wording states that the maximum differential pressure we can have across our UHEPA/final filter bank is 3.0" w/c, and the max we can have across our pre-filter bank is 1.5" w/c.

As an engineer, I always thought that this was not correctly specified. The specified maximum differential pressure reading should be some value above the "clean" filter reading. If our brand new/clean filter differential pressure is 1" w/c, limiting us to a maximum of 1.5" w/c will result in our changing the filters very frequently. AQMD needs to determine the delta that they can live with, and let operators ADD that maximum delta to the clean/new filter d/p. If, for example, AQMD wants to limit the d/p to 1.5" w/c, and the clean/new d/p is 1.0" w/c, then the maximum for that system would be 2.5" w/c.

1-2

You can call me anytime for questions.

Mike Palatas
VP, Operations
GSP Metal Finishing

Responses to GSP Metal Finishing Email Correspondence, submitted 02/22/2021

- 1-1 Response: PAR 1469.1 balances the need for emissions reductions with the financial cost to industry. Based on the survey responses received from affected facilities, most spray booths are already meeting the requirements in PAR 1469.1. These requirements are intended to reduce fugitive emissions through enhanced parameter monitoring, housekeeping, and additional best management practices. PAR 1469.1 provides longer lead times if a facility needs to upgrade or install equipment; facilities with doors at building openings simply need to ensure that the doors are closed if within 20 feet of open face booths, and areas where dried chromate coating removal and demasking activities are conducted; no modifications to their buildings would be needed. Based on the Socioeconomic Impact Assessment contained in Chapter 4 of this Staff Report, it is not expected that PAR 1469.1 compliance costs will lead to a significant reduction in the number of facilities conducting chromate spraying.
- 1-2 Response: As mentioned in the PAR 1469.1 Staff Report, Rule 1469.1 currently requires the pressure drop across the air pollution control equipment filter media to be at or below the pressure drop established by permit condition or by the manufacturers recommended operating range if not specified by the permit. The provisions of PAR 1469.1 paragraph (o)(3) maintain this requirement until January 1, 2023. Beginning January 1, 2023, PAR 1469.1 subdivision (k) establishes new requirements for minimum pressure drop limits and modified maximum pressure drop limits across the final stage filter media based on the filter specifications. Unless specified in a South Coast AQMD permit, the minimum limit will be based on the recorded pressure drop for filters in place before January 1, 2023, and moving forward, when new filters are installed. The maximum pressure drop will be based on the filter specifications or the limit specified in a South Coast AQMD permit, whichever is lower. Therefore, PAR 1469.1 takes into account the “clean” filter reading when establishing the minimum pressure drop.

March 4, 2021

To: Yunnie Osias, SCAQMD

From: Steve Norris, PTI
James Unmack, Unmack Corporation
Barbara Kanegsberg, BFK Solutions
Ed Kanegsberg, BFK Solutions

Plasma Technology Incorporated (PTI) is a small business headquartered in Torrance CA. PTI has conducted high value surface coating processes for over 50 years. We appreciate the opportunity to comment on proposed Rule 1469.1.

De minimis exemption

The language of the February 17, 2021 rule does not consider a *de minimis* amount of chromium containing paint. PTI uses very low levels of strontium chromate two-part epoxy paint for touch up and repair, less than 1.5 **gallon** per year. The 2019 and 2020 SCAQMD Annual Emissions Report (AER) reported chromium emission from its paint booth that **is less than the minimum number that can be reported** (0.00001 lbs) (ref AER Reports).

2-1

Many of the requirements in Rule 1469.1 and a good deal of language in the draft Staff Report (Appendix 1) address dried coatings. PTI has found no published studies documenting adverse health effects resulting from exposure to dried chromate paint. Studies that involve soluble chromate indicate that it is readily bioavailable. The OSHA analytical method uses exhaustive extraction to recover Cr(VI) from dried paint. Given the lack of exposure studies and the fact that Cr(VI) in dried paint is tightly bound, increased costly measures to manage dried paint are not justified at this time.

PTI has investigated available information regarding dried paint in some detail. Adverse impact on health has been found for soluble chromate. Researchers (Park et al, 2004) performed a rigorous statistical analysis of the long-term health impacts of chromate exposure on a cohort of 2,372 men hired between August 1, 1950 and December 1, 1974 at a plant in Baltimore MD (1.3). The study is thorough and includes considerations of the possible impact of smoking and ethnic background. Air sampling was performed by the employer; and levels of water-soluble chromate were determined.

2-2

As far as we can determine, studies documenting adverse health impacts have all been performed using soluble chromate. We attempted to find studies documenting the health impact of dried coatings that contain Cr(VI). We conducted web searches. We reached

impact of dried coatings that contain Cr(VI). We conducted web searches. We reached out to OEHHA as well as to one of the researchers involved in the Park study. No published studies were found. The lack of such documented studies is surprising, considering the extensive use of chromate paints.

From a chemical standpoint, chromates in dried paint are far less readily extracted for analysis than soluble chromates. (Ref. Appendix 3.1) None of the studies available in the open literature identify the type of paint, whether a 2-part epoxy or an architectural one-part paint. And none of the available literature addresses the issue of Cr (VI) recovery (extractability) from the paints used in the study.

2-2
cont.

Costs

Costs associated with the proposed rule are very high, particularly considering the low level of chromate paint used by PTI. The alternative, utilizing the exemption (p-4) and moving touchup operations outside of our existing spray booth, would seem counterproductive in terms of desirable manufacturing practices and would also require a very expensive analysis to show low plant-wide risk.

Costs to meet the proposed requirements are significant, particularly considering the low level of paint used annually. We estimate the cost for design, build and maintenance of an enclosure for the PTI Paint Spray Booth in order to comply with the proposed AQMD Rule 1469.1. The costs are \$6160 to design and implement and \$3440 ongoing annual costs.

2-3

We include time and materials for a Senior Engineer and one Technician to design, procure and implement the enclosure. Initial training of two employees for proper filter monitoring in lieu of alarms is added to the initial cost. Annual on-going training and maintenance has also been calculated.

These costs are summarized in the following table,

Table: Costs to design, Implement, and Maintain Paint Booth Alarms

Item	days	\$\$	Comments
Sr. Engineer burdened rate	1	960	\$40/hr. salary
Technician burdened rate	1	600	\$25/hr. wage
Trainer daily rate	1	2000	
Design and implementation			
Obtain preliminary equipment costs	0.5	480	Engineer
Fine tune equipment design	0.5	480	Engineer
Set up new equipment	1	1560	Engineer+ technician
Initial training for employees	0.5	1600	trainer+2 technicians
New enclosure		3000	
Total to design and implement		6160	
Continuing annual expense			
Train employees update (2 x per year)	1	3200	trainer+2 technicians
Maintenance	0.25	240	Engineer
Total Annual cost		3440	

2-3

Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings
Containing Chromium (version February 17, 2021)

Preliminary Draft Staff Report
Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings
Containing Chromium

Criteria for a Recommended Standard Occupational Exposure to Hexavalent
Chromium, DHHS (NIOSH) Publication No. 2013 – 128 (revised with
minor technical changes), September 2013.

Park, R.M., J. F. Bena, L. Stayner, R.J. Smith, H.J. Gill, and P.S.J. Lees,
Hexavalent Chromium and Lung Cancer in the chromate Industry: A
Quantitative Risk Assessment, Risk Analysis, Vol. 24:5, p.1099 (2004)

Appendix 1 Excerpts from Preliminary Draft Staff Report

(Preliminary Draft Staff Report
Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings
Containing Chromium, February 202)

Exemptions (p. 4) Rule 1469.1 includes limited exemptions for touch up and repair
operations conducted outside of a spray booth, but within a building provided emissions
and cancer risk from touch up and repair operation are calculated and included in an
approved Health Risk Assessment or compliance plan which meets the applicable risk
levels.

Uncontrolled Sources (p.8)

Dried Coating Removal

Responses to Plasma Technology Incorporated Comment Letter, submitted 03/04/21

- 2-1 Response: Many of the recurring requirements in PAR 1469.1, such as housekeeping, filter pressure drop monitoring, and spray booth duct inspections, are dependent on the frequency that spraying operations or dried coating activities are conducted. Based on the information available to staff, most facilities would not be required by PAR 1469.1 to install new equipment or controls. Almost all facilities are already required to conduct spraying operations in spray booths vented to HEPA filters, and most facilities already conduct dried chromate coating removal activities within existing spray booths or other control devices.
- 2-2 Response: PAR 1469.1 was developed to reduce emissions of hexavalent chromium from chromate coating spraying and related operations. Dried chromate coatings in the form of overspray or dust from dried chromate coating removal activities contain hexavalent chromium which is a potent carcinogen. If not controlled, this can lead to the generation of fugitive emissions. Waste from chromate coating spraying and related activities also contain materials containing dried chromate coating particles and if not subject to adequate housekeeping activities, the particles can be re-suspended or ground into smaller particles by foot and vehicular traffic, resulting in fugitive emissions. South Coast AQMD relies on OEHHA's Risk Assessment Guidelines and the cancer potency factors that OEHHA developed through a public process. OEHHA has designated hexavalent chromium as a toxic air contaminant. South Coast AQMD staff has evidence from facility inspections and site visits that dried coating particles contain hexavalent chromium, therefore, PAR 1469.1 includes requirements that will reduce the emissions of hexavalent chromium from chromate spraying operations, dried coating removal activities, and demasking in order to protect public health.
- 2-3 Response: Existing Rule 1469.1 requires facilities to spray chromate coatings within an enclosure. PAR 1469.1 does not require facilities that conduct spraying operations within spray booths to construct any new enclosures. After a review of the facility, staff found that the facility is already complying with the building enclosure requirements of PAR 1469.1 and no building modifications would be needed.

The Boeing Company Email Correspondence, submitted 03/09/21

From: Pearce (US), William R
Sent: Tuesday, March 09, 2021 8:05 PM
To: Yunnies Osias <yosias@aqmd.gov>
Subject: PAR 1469.1 Comments

Please find attached comments with respect to latest proposed rule language. Appreciate previous comments that have been incorporated into the proposed rule. Still working on (e)(3)(A), but perhaps we can chat briefly in the morning if you have time about that specific item. Wanted to get the other comments to you for review.

(e)(3)(B)	Specify filter make and model evaluated in the approved health risk assessment. Filters that meet or exceed the efficiency of the specified filters may also be utilized.	3-1
(e)(5)	Unclear what is meant by “.....and associated surfaces” in the statement.	3-2
(i)(1)(E)	Sites have a number of storage areas for virgin coating product that contains chromates. There is no possibility of chromates being present in the areas, unless a can is dropped or damaged. Should that occur, rule already requires that any spill be cleaned up immediately. Language should be revised as follows: Storage areas for equipment and materials (excluding storage for unopened coating containers) that may contain chromates;	3-3
(i)(9)(B)	Reference to (A) should be removed, as other filters may be allowed. Language should be revised as follows: The HEPA vacuum is emptied into a container within a spray booth that meets the provisions of subparagraph (d)(1)(A). The container shall remain closed except when being filled or emptied.	3-4
(j)(2)(A)(iii)	It is not physically possible to place the ULPA filters that are installed in our new paint booth in containers before removal from the booth. There is very little working room between the third stage bag filters and the fourth stage ULPA filters. To create adequate space, would actually need to remove the third stage filters prior to removal of the fourth stage, which will create unnecessary fugitive dust issues. In addition, we have operated previous booths (now out of service) where the HEPA filters were actually in their own separate unit ducted from the paint booth due to space constraints. Language should be revised as follows: Place all material that may contain chromates that are intended to be disposed of in a container (where feasible) before removal from the spray booth. The container shall remain closed except when being filled or emptied.	3-5

(k)(1)(B)	For permits that have already been issued by the District, Engineering has evaluated the information supplied by the manufacturer with respect to the maximum filter pressure drop for the final stage filters. The proposed rule should not second guess values that have been determined by Engineering staff and agreed to by permit holders. Language should be revised as follows: Beginning January 1, 2023, maintain the pressure drop across the spray booth final stage filter media at or below the maximum pressure drop specified in a South Coast AQMD permit or the filter manufacturer’s recommended maximum pressure drop, whichever is lower.	3-6
(l)(2)(A)	Unclear what is meant by “.....and associated surfaces” in the statement.	3-7
(l)(3)	Unclear as to what would trigger the event of District sampling specified, but facility should be afforded the same time frame (14 days) as in (l)(2)(B) for cleaning of the duct.	3-8
(n)(2)	Language appears to prohibit the construction of any new paint hangars, where the entire building enclosure is the paint booth. Language should be revised to exclude these types of structures from prohibition.	3-9

Responses to The Boeing Company Email Correspondence, submitted 03/09/21

- 3-1 Response: PAR 1469.1 subparagraph (e)(3)(B) was revised to allow for filters with efficiencies that are greater than the filter efficiency evaluated in the approved health risk assessment.
- 3-2 Response: The rule language was revised to “associated exterior surfaces” to clarify that the provision is referring to surfaces that are exterior of the spray booth duct, such as the roof.
- 3-3 Response: PAR 1469.1 subparagraph (i)(1)(E) was revised to add the phrase “excluding storage areas used exclusively for unopened Coating containers” to clarify that those areas do not need to be cleaned according to the schedule required in paragraph (i)(1).
- 3-4 Response: PAR 1469.1 subparagraph (i)(9)(B) was revised so that a HEPA vacuum can be emptied within a spray booth that meets the requirements of paragraph (d)(1), which includes all spray booths complying with the rule.
- 3-5 Response: PAR 1469.1 clause (j)(2)(A)(iii) does not apply to filters. The disposal of filters is addressed in paragraph (i)(8), which applies to the disposal of waste materials.
- 3-6 Response: Subparagraph (k)(1)(B) addresses instances where filters installed in a spray booth have a manufacturer-specified maximum pressure drop that is lower than that of the filters submitted to South Coast AQMD during the permitting process when the maximum pressure drop was established. The intent of subparagraph (k)(1)(B) is to prevent potential filter ruptures by ensuring that the maximum pressure drop does not exceed the specified limit and to prevent permit modifications each time a different filter is used.
- 3-7 Response: See response to Comment 3-2.
- 3-8 Response: Paragraph (l)(3) is intended to address situations where the South Coast AQMD becomes aware of the presence of hexavalent chromium in a spray booth duct or on associated exterior surfaces and notifies the facility. These would likely be extreme cases where the amount of hexavalent chromium present is enough to be detected by a South Coast AQMD ambient monitor, or a situation where South Coast AQMD initiates testing of the duct or associated exterior surfaces. In these situations, staff believes that spray booths should not be operated until after cleaning is conducted. Additionally, the 14-day timeframe in clause (l)(2)(B)(i) takes into consideration the time needed for a facility to send a sample out for analysis. In paragraph (l)(3), the sample would already have been taken and analyzed prior to notifying the facility.

- 3-9 Response: The prohibition of new spray booths located outside of a building enclosure in paragraph (n)(2) was revised to exclude spray booths greater than 10,000 square feet.

The Boeing Company Email Correspondence, submitted 03/10/21

To: Yunnies Osias <yosias@aqmd.gov>

Subject: RE: PAR 1469.1 Comments

As I was listening to you go over the recent revisions to the proposed rule language, two more items for discussion. Sections (f) does not seem to allow for removal of coatings within a paint booth that takes advantage of (e)(3). Section (k) does not take into account two-stage systems and the fact that the filters are back to back. There is not a feasible method to measure the second stage separately.

4-1

4-2

Responses to The Boeing Company Email Correspondence, submitted 03/10/21

- 4-1 Response: Subparagraph (f)(1)(A) was revised to allow for dried chromate coating removal activities to be conducted a spray booth that meets the requirements of paragraph (d)(1), which includes all spray booths complying with the rule.
- 4-2 Response: The staff report clarifies in Chapter 3, under the heading Pressure Drop Across Filter Media – Subdivision (k) that final stage filter media includes filter systems with multiple stages of filters where the filter efficiency for all the stages is certified as a whole by the manufacturer.

South Coast Air Quality Management District

21865 Copley Drive, Diamond Bar, CA 91765-4178
(909) 396-2000 • www.aqmd.gov

**SUBJECT: NOTICE OF EXEMPTION FROM THE CALIFORNIA
ENVIRONMENTAL QUALITY ACT**

**PROJECT TITLE: PROPOSED AMENDED RULE 1469.1 – SPRAYING
OPERATIONS USING COATINGS CONTAINING CHROMIUM**

Pursuant to the California Environmental Quality Act (CEQA) Guidelines, the South Coast Air Quality Management District (South Coast AQMD), as Lead Agency, has prepared a Notice of Exemption pursuant to CEQA Guidelines Section 15062 – Notice of Exemption for the project identified above.

If the proposed project is approved, the Notice of Exemption will be electronically filed with the State Clearinghouse of the Governor's Office of Planning and Research to be posted on their CEQAnet Web Portal which, upon posting, may be accessed via the following weblink: <https://ceqanet.opr.ca.gov/search/recent>. In addition, the Notice of Exemption will be electronically posted on the South Coast AQMD's webpage which can be accessed via the following weblink: <http://www.aqmd.gov/nav/about/public-notices/ceqa-notices/notices-of-exemption/noe---year-2021>. The electronic filing and posting of the Notice of Exemption is being implemented in accordance with Governor Newsom's Executive Orders N-54-20 and N-80-20 issued on April 22, 2020 and September 23, 2020, respectively, for the State of Emergency in California as a result of the threat of COVID-19.

**NOTICE OF EXEMPTION FROM THE
CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)**

To: Governor's Office of Planning and Research - State Clearinghouse 1400 Tenth St, Suite 222 Sacramento, CA 95814-5502	From: South Coast Air Quality Management District 21865 Copley Drive Diamond Bar, CA 91765
---	--

Project Title: Proposed Amended Rule 1469.1 – Spraying Operations Using Coatings Containing Chromium

Project Location: The proposed project is located within the South Coast Air Quality Management District's (South Coast AQMD) jurisdiction, which includes the four-county South Coast Air Basin (all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties), and the Riverside County portion of the Salton Sea Air Basin and the non-Palo Verde, Riverside County portion of the Mojave Desert Air Basin.

Description of Nature, Purpose, and Beneficiaries of Project: South Coast AQMD is proposing amendments to Rule 1469.1 to reduce emissions of hexavalent chromium from the spraying of chromate coatings and from related activities by: 1) updating point source requirements and control device parameter monitoring to maximize and ensure capture and control of hexavalent chromium; 2) updating housekeeping requirements and adding best management practices and building enclosure requirements to minimize the accumulation of hexavalent chromium-containing materials which may become fugitive emissions; 3) proposing new requirements for conducting visual inspections and duct cleaning; 4) revising recordkeeping requirements; 5) establishing prohibitions for new open face spray booths and spray booths located outdoors; 6) updating definitions of terms; and 7) revising exemptions.

Public Agency Approving Project: South Coast Air Quality Management District	Agency Carrying Out Project: South Coast Air Quality Management District
--	--

Exempt Status: CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption

Reasons why project is exempt: South Coast AQMD, as Lead Agency, has reviewed the proposed project pursuant to: 1) CEQA Guidelines Section 15002(k) – General Concepts, the three-step process for deciding which document to prepare for a project subject to CEQA; and 2) CEQA Guidelines Section 15061 – Review for Exemption, procedures for determining if a project is exempt from CEQA. Since the only physical modifications that may occur as a result of the proposed project are associated with implementing the building enclosure requirements, which may be achieved without involving construction or via minimal construction activities, depending on the affected facility, it can be seen with certainty that implementing the proposed project would not cause significant adverse effect on the environment. Therefore, the proposed project is exempt from CEQA pursuant to CEQA Guidelines Section 15061(b)(3) – Common Sense Exemption.

Date When Project Will Be Considered for Approval (subject to change):
South Coast AQMD Governing Board Hearing: May 7, 2021

Proposed Amended Rule 1469.1

Spraying Operations Using Coatings Containing Chromium

Board Meeting
May 7, 2021

Background – Chromate Spraying Operations

- Chromate spraying is the spraying of chromate coatings onto surfaces to provide corrosion protection and is typically used to support the aerospace, military, and industrial equipment industries
 - Chromate is a form of hexavalent chromium found in coatings
- Rule 1469.1 applies to facilities conducting chromate spraying operations

Proposed Amended Rule 1469.1 (PAR 1469.1)

- PAR 1469.1 will further reduce hexavalent chromium emissions from chromate spraying and related operations through requirements for:
 - Point source controls
 - Monitoring point source control parameters
 - Housekeeping
 - Best management practices
 - Building enclosures
- PAR 1469.1 balances the need for emission reductions with economic challenges faced by facilities due to COVID-19 by allowing longer implementation lead times
- Rulemaking included seven Working Group Meetings

PAR 1469.1 – Key Requirements

Point Source Controls

- Strengthens provisions for spray booths without HEPA filters
- Adds provisions to vent fugitive emissions from dried chromate coating removal activities to HEPA filters
- Incorporates additional parameter monitoring requirements

Enhanced Housekeeping

- Clean using only approved cleaning methods
- Specify schedule for routine cleaning of specified areas
- Close waste containers at all times unless being filled or emptied

Best Management Practices and Building Enclosures

- Prohibits use of compressed air in areas where demasking occurs
- Limit workpiece support equipment to designated storage and transit areas
- Close building openings to minimize fugitive emissions

PAR 1469.1 Impacts to Facilities

- Approximately 115 facilities are covered by PAR 1469.1
- Average cost for each facility is estimated at \$4,000 per year
- Staff is not aware of any key issues

Recommended Actions

- Adopt the Resolution:
 - Determining that Proposed Amended Rule 1469.1 is exempt from California Environmental Quality Act; and
 - Amending Rule 1469.1

BOARD MEETING DATE: MAY 7, 2021

AGENDA NO. 27

PROPOSAL: Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions

SYNOPSIS: Proposed Rule 2305 will require warehouses greater than 100,000 square feet to directly reduce NOx and diesel PM, or to facilitate emission and exposure reductions of these pollutants. The Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program is a menu-based points system that will require warehouse operators to annually earn a specified number of points by completing actions from a menu. Menu items include acquiring or using: Near Zero Emissions (NZE) and/or Zero Emissions (ZE) on-road trucks, ZE cargo handling equipment, ZE charging/fueling infrastructure, solar panels, or particulate filters for nearby sensitive land uses. Alternatively, warehouse operators could prepare and implement a custom plan specific to their site, or they could pay a mitigation fee. Funds from the mitigation fee would be used through future solicitations and Board actions to incentivize the purchase of NZE or ZE trucks and ZE charging/fueling infrastructure in the communities near warehouses that paid the fee. Warehouse owners and operators would also have reporting and recordkeeping requirements. Proposed Rule 316 would establish fees for warehouse operators to fund South Coast AQMD compliance activities.

COMMITTEE: Mobile Source, February 19, March 19, and April 16, 2021, Reviewed

RECOMMENDED ACTIONS:

1. Adopt the attached Resolution:
 - a. Certifying the Final Environmental Assessment for Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305;

- b. Adopting Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305; and
 - c. Submitting Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program for inclusion into the SIP;
- 2. Establish the Rule 2305 Mitigation Fee Alternate Compliance Special Revenue Fund (86); and
 - 3. Authorize the Executive Officer to recognize upon receipt mitigation fees paid by warehouse operators into the Rule 2305 Mitigation Fee Alternate Compliance Special Revenue Fund (86).

Wayne Nastri
Executive Officer

SR:IM

Background

Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Proposed Rule 316 – Fees for Rule 2305, are new rules that seek to reduce regional and local emissions of nitrogen oxides (NO_x) and Diesel Particulate Matter (DPM) in order to assist in meeting state and federal ambient air quality standards for ozone and fine particulate matter and improve public health, especially in communities located near warehouses. Our region continues to have the worst ozone in the country, and about half of the NO_x contributing to ozone comes from the goods movement industry - with the largest source being heavy-duty diesel trucks. Warehouses are a key destination for trucks, which make up about 90 percent of the emissions associated with warehouses. NO_x emissions from the warehousing sector in 2019 (~45 tons/day) were almost the same as all stationary sources (~48 tons/day).

Our region faces many deadlines to achieve federal air quality standards in the coming years, with the 2023 and 2031 deadlines for ozone being the most prominent. If those standards are not met in time, in addition to the continuing public health impacts experienced by residents, the federal government could potentially impose significant sanctions. The 2016 Air Quality Management Plan (AQMP) includes a comprehensive approach to meeting all federal and state air quality standards, primarily through a strategy to reduce NO_x emissions. The 2016 AQMP, as approved by the California Air Resources Board (CARB) and the United States Environmental Protection Agency (U.S. EPA), requires the development of many different control measures, including

facility-based mobile source measures. PR 2305 and PR 316 would fulfill the requirement for implementing one of those facility-based measures (MOB-03).

Separately, four AB 617 Community Steering Committees identified air quality concerns related to truck traffic from warehousing as a priority. As a result, the Community Emission Reduction Plans adopted by the Board for the communities of Wilmington/West Long Beach/Carson, San Bernardino/Muscoy, East Los Angeles/Boyle Heights/West Commerce, and Southeast Los Angeles all include the development of a warehouse indirect source rule as an action.

Public Process

PR 2305 and PR 316 were developed through a thorough public process. Following the Board's approval of the 2016 AQMP, staff initiated a year-long process to identify potential voluntary measures to address emissions from warehouses that included five working group meetings. As no viable voluntary measures were identified during that process, the Board directed staff to initiate rulemaking in May 2018. Staff subsequently has conducted 12 working group meetings, two community meetings, seven updates to the Mobile Source Committee and three updates to the Board. Staff has also conducted dozens of warehouse site visits, presented updates of the proposed rule to numerous outside organizations such as Councils of Governments and trade associations, and had hundreds of meetings with individual businesses, governments and community members during development of the proposed rules.

Proposal

PR 2305 applies to both the operators and owners of warehouses greater than or equal to 100,000 square feet in size, although most requirements apply to warehouse operators. Warehouses will be phased in over a 3-year period based on their size, and stringency increases over a 3-year period. The overall structure of the rule is a menu-based points system, similar to programs like LEED for building design, or climate plans that have been used by local governments like San Bernardino County. Every year, warehouse operators covered by the rule will be required to earn a specified number of WAIRE Points using any combination of items from the WAIRE Menu, implementation of a Custom WAIRE Plan, or payment of a mitigation fee. The amount of points every warehouse operator must earn annually depends upon the number of truck trips to their warehouse during the 12-month compliance period.

The WAIRE Menu includes acquisition of, or visits from near zero emissions (NZE) and zero emissions (ZE) on-road trucks, acquiring or using ZE yard trucks, installing or using ZE charging/fueling infrastructure, installing or using solar panels, or installing particulate filters for nearby sensitive land uses. Alternatively, an operator may choose to apply to implement a site-specific Custom WAIRE Plan that incorporates actions that are not on the WAIRE Menu. Example plans could include acquiring and/or using NZE yard trucks using renewable fuels, developing onsite energy generation such as

hydrogen production and/or fuel cells, implementing energy management programs for cold storage warehouses, or developing off-site ZE charging/fueling stations.

PR 2305 includes a numerical stringency value that determines the number of WAIRE Points each warehouse operator must earn or obtain each year. The proposed stringency is 0.0025 WAIRE Points per Weighted Annual Truck Trips (WATTs) phased-in over three years. Warehouses will also be phased into the program over a three-year period based on warehouse size, beginning with the largest warehouses. This is not a trading program, however there is flexibility built into the proposed rule. Warehouse operators that over-comply during any compliance period may bank excess WAIRE Points for up to three years or may transfer WAIRE Points to another site within their operational control. WAIRE Points may also be transferred between a warehouse operator and owner, for example if a warehouse owner opts to earn WAIRE Points by installing onsite solar panels or charging infrastructure.

PR 2305 also requires warehouse owners to report basic information about their warehouse and their tenants. The first report would be due September 1, 2021, and any time there is a change to the warehouse building's square footage during a renovation, or when there is a new tenant. Warehouse operators would be required to submit a more detailed one-time report during the first compliance period at a warehouse, and annual reports after every compliance period detailing how many truck trips they had and how they satisfied their WAIRE Points Compliance Obligation (WPCO). These reports will be provided through a new online portal that would be developed if the rule is adopted. Information about program compliance will also be made available online to the public.

PR 2305 includes a sunset provision for when the lowest current federal and state standards for ozone have been achieved (currently 70 parts per billion). The deadline for achieving the federal standard is in 2038. One year prior to the anticipated achievement of that standard, the Executive Officer will provide recommendations to the Board on any potential continued need for the rule, including anti-backsliding or maintenance plan requirements.

Exemptions are provided for smaller warehouse operations. First, in multi-tenant warehouses, any operator who uses <50,000 square feet in a warehouse with $\geq 100,000$ square feet that may be used for warehousing activities is not required to earn WAIRE Points. Second, any warehouse operator with a WPCO of <10 will not be required to earn WAIRE Points. An additional exemption is included for rare cases of equipment malfunction due to manufacturer or installation defects.

PR 316 is the companion rule to PR 2305 and establishes the administrative fees that warehouse owners and operators must pay to support South Coast AQMD PR 2305 compliance activities and supporting administrative functions for the WAIRE Mitigation Program.

All mitigation fees paid by warehouse operators will go into the WAIRE Mitigation Program. This program will provide financial incentives for truck owners to purchase NZE or ZE trucks, and/or for the installation of ZE fueling and charging infrastructure. The WAIRE Mitigation Program will direct funds back to projects that will reduce emissions in the communities near the warehouses that decide to pay the fee. If sufficient projects are not identified in that community, they may be redirected to an adjacent community in the same county. All solicitations for projects and project awards will be brought to Board for approval in subsequent actions as funding becomes available. The WAIRE Mitigation Program will also include requirements that fund ZE charging infrastructure projects that utilize a skilled and trained workforce, and require trucking companies receiving funds disclose any labor law violations (consistent with other South Coast AQMD incentive programs).

This Board action also will establish the 2305 Mitigation Fee Alternate Compliance Special Revenue Fund (86) to hold the mitigation fees paid by warehouse operators, and will authorize the Executive Officer to receive those funds upon receipt. These funds will not be able to be spent without subsequent Board approval.

Key Issues

The key issues raised by the warehousing industry are that they believe South Coast AQMD does not have legal authority to adopt PR 2305, that PR 2305 is a tax, that the options included in PR 2305 are infeasible, that the costs are too high, that the rule will not result in any emission reductions or lower levels of ozone, and that the rule would not result in State Implementation Plan (SIP) credit. The natural gas industry has commented that the WAIRE Points system should be revised so that their technology receives a greater number of points and that natural gas infrastructure be allowed to earn points. Environmental and community groups have requested that the proposed rule have a higher stringency, and that the rule focus more on zero emission options.

Throughout the rulemaking process, staff worked with stakeholders to resolve issues, and the rule includes many significant revisions in response to concerns that have been raised. Staff believes that the concerns raised about legal authority and whether the proposed rule is a tax are unfounded, and have provided detailed responses to the Board and the public describing the clear authority that South Coast AQMD has to adopt PR 2305 and PR 316. CARB has also supported the position that South Coast AQMD has clear legal authority to adopt the proposed rule. Additional information about these key issues are included in Attachment B to this letter.

California Environmental Quality Act

PR 2305 and PR 316 are considered a “project” as defined by the California Environmental Quality Act (CEQA) and South Coast AQMD is the designated lead agency. Pursuant to South Coast AQMD’s Certified Regulatory Program (Public

Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l); codified in South Coast AQMD Rule 110) and CEQA Guidelines Section 15081, the South Coast AQMD has prepared a Final Environmental Assessment (EA) for PR 2305 and PR 316, which is a substitute CEQA document, prepared in lieu of an Environmental Impact Report. The environmental analysis in the Final EA concluded that PR 2305 and PR 316 would have the potential to generate significant adverse environmental impacts for the topics of: 1) aesthetics; 2) agriculture and forestry resources; 3) air quality and greenhouse gas emissions; 4) biological resources; 5) cultural resources; 6) energy; 7) geology and soils; 8) hazardous materials and solid and hazardous waste; 9) hydrology and water quality; 10) mineral resources; 11) noise; 12) transportation; and 13) utilities and service systems. The Final EA is included as an attachment to this Board package (see Attachment J).

Socioeconomic Analysis

Affected Warehouse Operators

PR 2305 is expected to require about 3,995 warehouse operators at 2,902 warehouses classified under a variety of industry codes to earn WAIRE Points. Approximately 89 percent of these warehouse operators are associated with industries belonging to the goods-movement sector, consisting of construction, manufacturing, wholesale trade, retail trade, and transportation and warehousing. An estimated 418 additional operators would only be subject to limited reporting requirements. Estimated revenue and employee data is available for 904 of the operators required to earn WAIRE Points under PR 2305. Using the range of small-business definitions from Rule 102 and the South Coast AQMD Small Business Assistance Office, small businesses are estimated to make up about 0 to 22 percent of potentially affected PR 2305 warehouse operators.

Community Profile Nearby Affected Facilities

Based on population-weighted averages, communities adjacent to PR 2305 warehouses face substantially higher burdens than those communities in the rest of the South Coast AQMD jurisdiction. This includes higher burdens from PM_{2.5} and diesel PM, and higher rates of asthma and heart attacks. Moreover, the population in communities adjacent to warehouses are more Hispanic and African American and have higher poverty rates than other communities within the South Coast AQMD jurisdiction.

Public Health Benefits

To estimate the potential impacts of PR 2305 and PR 316, emissions and cost estimates for 19 different scenarios were developed to show the range of potential compliance outcomes. This analysis acts as a bounding approach, with all operators choosing the same compliance approach for each scenario. In reality, warehouse operators are expected to choose a wide variety of options to comply with PR 2305 by using a combination of WAIRE Menu options. Based on this scenario analysis, PR 2305 is estimated to reduce NO_x by about 1.5 to 3.0 tons per day.

Monetized public health benefits for NO_x and primary PM emissions were modeled based on U.S. EPA's incidence per ton methodology and the detailed air quality and health impact modeling completed for the 2016 AQMP. PR 2305 is expected to result in 150 to 300 fewer deaths, 2,500 to 5,800 fewer asthma attacks, and 9,000 to 20,000 fewer work loss days from 2022-2031. Expected total discounted monetized public health benefits range from \$1.2 to \$2.7 billion over the compliance period of 2022-2031. On average, most scenarios modeled show about a 3:1 ratio of public health benefits compared to rule costs.

Cost Impacts

Average annual costs of complying with PR 2305, in 2018 U.S. dollars, are estimated to range from -\$12.6 million (-\$0.02/sq. ft./yr.) for the lowest cost scenario (ZE Class 6 visits from a third-party fleet) to \$979 million (\$1.21/sq. ft./yr.) for the highest cost scenario (Solar Panel Installations). Warehouse operators are expected to gravitate towards the lowest-cost options for their specific situations. The maximum cost warehouse operators would be expected to incur is about \$0.83/sq. ft./yr. from a mitigation fee-only scenario. If all warehouses pay the mitigation fee in this worst-case cost scenario, annual average costs would be about \$670 million. This level of funding in the WAIRE Mitigation Program would result in a substantial turnover of trucks, and much higher public health benefits, with emission reductions up to about 20 tons per day. However, because warehouse operators are expected to find ways to reduce their costs, it is expected that they would earn points from these incentivized trucks. A more realistic scenario showing the interaction between a mitigation fee-only scenario and the WAIRE Mitigation Program was modeled. If warehouse operators earn points from visits from trucks incentivized by the WAIRE Mitigation Program, costs could be as low as \$0.14/sq. ft./yr., similar to the costs warehouse operators would face if they took actions themselves to get NZE or ZE trucks to visit their facilities, with emission reductions of about 2.5 tons per day. While the worst case cost scenario would be equal to about 3 percent of an operator's total operating costs, for most compliance scenarios costs are anticipated to be about 0.5 percent of total operating costs.

Job Impacts

PR 2305 is projected to result in 240 jobs gained to 11,100 jobs forgone on average annually from 2022 to 2031 across all South Coast AQMD industries for the best case and worst case scenarios, compared to the baseline scenario of about 11.4 million jobs. Forgone jobs are a result of future jobs that would no longer be created due to investments shifting from typical warehouse operations to cleaner emission technologies. The best case scenario assumes all potentially affected warehouse operators comply with PR 2305 through third party visits from Class 6 zero-emission vehicles (which save money through lower total cost of ownership), while the worst case scenario assumes all potentially affected warehouse operators comply with PR 2305 by paying a mitigation fee and not receiving any benefit from the mitigation fee for future compliance with PR 2305. These projected job impacts represent about a

0.002 percent increase to a 0.10 percent decrease in total combined employment in Los Angeles, Orange, Riverside, and San Bernardino counties.

Competitiveness

The Board directed staff to oversee a third-party study on competitiveness of warehousing operations within the South Coast AQMD jurisdiction, and likelihood of warehouse operator relocation to nearby areas. The study, conducted by Industrial Economics, Inc. and peer reviewed by Kleinhenz Economics, found that no warehouses would relocate to nearby areas outside the South Coast AQMD jurisdiction due to costs imposed by PR 2305 at the currently proposed stringency. The low vacancy and continued increases in rents over the past decade support this conclusion.

Third-Party Peer Review

Following Board direction, a third-party peer review of the socioeconomic impact assessment and the warehouse relocation study was conducted by Kleinhenz Economics. Both peer reviews were supportive of the methodology and analysis performed. Suggested enhancements have been included in the final socioeconomic impact assessment (included in Attachment K.)

AQMP and Legal Mandates

Pursuant to Health & Safety Code Section 40460 (a), South Coast AQMD is required to adopt an AQMP demonstrating compliance with all federal regulations and standards. South Coast AQMD is also required to adopt rules and regulations that carry out the objectives of the AQMP. The 2016 AQMP committed South Coast AQMD to develop proposed Facility Based Mobile Source Measures (FBMSMs), one of which included MOB-03 – Emissions Reductions at Warehouse Distribution Centers, which became PR 2305 and PR 316. U.S. EPA approved the 2016 AQMP into the SIP, including control measure MOB-03. PR 2305 is needed to reduce emissions of NO_x and particulate matter to assist in meeting state and federal ambient air quality standards for ozone and fine particulate matter. The South Coast AQMD is required by the California Clean Air act, Health and Safety Code Section 40914, to adopt all feasible measures to attain air quality standards.

Implementation and Resource Impacts

Compliance activities for this program will include desktop and onsite audits, report and plan review, and administration of the WAIRE Mitigation Program. Additional staff will be required to administer the PR 2305 program and will be included in future budget actions. The cost of these staffing resources will be offset through fee revenues collected under PR 316. Additional resources that will also be needed to develop the online web portal will also be requested in future budget actions.

ATTACHMENT A SUMMARY OF PROPOSAL

Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program

Applicability

Applies to owners and operators of warehouses located in the South Coast AQMD jurisdiction with greater than or equal to 100,000 square feet of indoor floor space in a single building.

Requirements

- Facilities will be phased in over a 3-year period based on size, and stringency increases over a 3-year period.
- Operators must record annual truck trip data and calculate their WAIRE Points Compliance Obligation (WPCO)
- Operators must earn WAIRE Points by implementing items on the WAIRE Menu, implementing an approved Custom WAIRE Plan, or paying an optional mitigation fee
- Owners and operators must submit reports on the warehouse and warehouse operations

Transferring/Banking Points

- Excess WAIRE Points earned in any compliance period may be banked for up to three years in the future, or transferred to another site under the control of the operator, or transferred between a warehouse owner and operator

Exemptions

- Warehouse operators that lease less than 50,000 square feet of a $\geq 100,000$ square foot warehouse would not be required to earn WAIRE Points
- Low activity warehouses that have a WPCO of less than 10 will be exempt from the requirements of subparagraph (d)(1)
- Operators can apply for a one-time exemption for underperforming equipment due to manufacturer or installer defects

Compliance Schedule

- The first required report from warehouse owners would be due on September 1, 2021
- The first 12-month compliance period for warehouse operators in warehouses greater than or equal to 250,000 square feet, between 150,000-249,999 square feet, and between 100,000-149,999 square feet will begin January 1, 2022, January 1, 2023, and January 1, 2024, respectively. Once initiated, each warehouse phase's stringency will increase equally over a three-year period such that by the fifth year, all warehouses will be at the final stringency.

Proposed Rule 316 – Fees for Rule 2305

Applicability

Applies to owners and operators of warehouses subject to Rule 2305

Requirements

- Pay fees for each required report, notification, Custom WAIRE Plan application, and mitigation fee payment submitted pursuant Rule 2305

Exemptions

- Owners of warehouses that have less than 100,000 square feet of floor space dedicated to warehousing activities
- Warehouse operators that operate less than 50,000 square feet for warehousing activities

ATTACHMENT B

KEY ISSUES AND RESPONSES

Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program

PR 2305 Legal Authority

Staff believes that the concerns raised about our legal authority and whether the proposed rule is a tax are unfounded, and detailed responses have been provided to the Board and the public and are included in this Board Package describing the clear authority that South Coast AQMD has to adopt PR 2305 and PR 316. CARB has also supported staff's position that South Coast AQMD has clear legal authority to adopt the proposed rule.

PR 2305 Feasibility

The concerns about feasibility center first on whether warehouse operators control the trucks that visit their facilities. While many warehouse operators operate their own truck fleet and/or directly arrange for trucks to deliver goods to or from their warehouse, some do not. For those warehouse operators who do not have a direct relationship with any trucks visiting their facility, they do contract directly with goods owners to warehouse their goods, and the goods owners are the entities who arrange for trucking services. If a warehouse operator wanted to take actions to earn WAIRE Points from truck visits (which is not required), they could explore emerging three-way business models between themselves, the goods owners, and trucking companies to ensure that at least some NZE or ZE trucks would visit their warehouse. Warehouse operators are also allowed to earn WAIRE Points for NZE or ZE truck visits just by tracking any that happen to visit their facility, even without their active involvement. This mechanism can be increasingly important as more incentive funding becomes available (either with the WAIRE Mitigation Program, or other programs like Carl Moyer or the ports' anticipated updates to their Clean Truck Program) puts more NZE or ZE trucks into the overall fleet operating in South Coast AQMD. Importantly, other non-trucking options are also available in the WAIRE Menu, through Custom WAIRE Plans, and through the mitigation fee.

The second concern about feasibility focuses on the supposed unavailability of technology to earn WAIRE Points. Staff believes this concern mischaracterizes the rule by focusing only on the commercial availability of Class 8 ZE trucks today. While Class 8 ZE trucks are not widely commercially available today, they are anticipated to become more available beginning later this year, with more manufacturers beginning to offer them in 2022 and beyond. The phase-in periods in PR 2305 are designed in part to accommodate the anticipated increasing penetration of zero emission technologies into the market through time. For example, in the first compliance year in 2022, only about one third of warehouses will be required to earn WAIRE Points in 2022, and only at one-third of the final stringency. Even if Class 8 ZE trucks are not available in the first compliance year, there are at least 30 other options available for warehouse operators to earn WAIRE Points. For example, NZE trucks have been available commercially for several years (as evidenced by the more than 1,200 trucks that have been funded by the Board).

PR 2305 Costs

Due to concerns raised early in the rulemaking process about costs, they were incorporated directly into the WAIRE Point system itself along with NO_x and DPM emission reductions.

The costs of PR 2305 and PR 316 and the potential economic impacts have been thoroughly analyzed in the socioeconomic impact assessment and an accompanying Board-commissioned third-party report on warehouse relocation in response to the rules. These analyses also received third-party peer review. These analyses concluded that the public health benefits of the rule are expected to outweigh the potential costs by a ratio of about 3:1, for most compliance scenarios that were analyzed. Further, the cost-effectiveness of PR 2305 was found to be similar to the cost-effectiveness of several mobile source regulations adopted by CARB in recent years.

Duplicative approach with CARB rules, therefore PR 2305 would not reduce emissions

Stakeholders commented early in the process about the potential overlap of PR 2305 with CARB regulations. PR 2305 is designed to both achieve surplus emission reductions beyond CARB rules on its own, as well as facilitate the implementation of CARB rules by encouraging early adoption of rule requirements. To estimate the amount of surplus emission reductions, the analysis contained in the staff report quantitatively accounts for all applicable recently adopted CARB regulations. This analysis shows that for most compliance scenarios, the expected range of emission reductions beyond CARB rules is expected to be about 1.5 to 2.5 tons per day of NO_x, with emission reductions beginning as early as 2022 and reaching this level of anticipated reduction in the 2023-2024 period. These emission reductions would occur as a component of the larger 2016 AQMP strategy, which was specifically designed to reduce ozone levels.

PR 2305 would not receive SIP credit

The concern about SIP credit does not consider the full range of options normally available to fold emission reductions into the SIP inventory. These options are discussed in Appendix D of the staff report. As an example, the indirect source rule adopted by San Joaquin Valley Air District was approved into the SIP by U.S. EPA, but the approval did not include any 'SIP credit' for emission reductions. However, the emission reductions achieved by their rules are included as part of normal updates to the mobile source emissions inventory in regular updates by CARB. This is likely the primary process by which SIP creditable emissions reductions would be accounted for with PR 2305 as well. Other prospective SIP creditable emission reductions methods may be possible too with the WAIRE Mitigation Program once funds are received and the program has been established.

Insufficient time to comply with deadlines soon after Board vote

The most recent draft of PR 2305 includes additional time for compliance. The first report would be due September 1, 2021 (adding about two months compared to the previous proposal), and the first compliance period would begin January 1, 2022 (adding six months to the previous proposal).

NZE yard trucks and infrastructure should be included, and the WAIRE Points system should be revised so that NZE options get more points

The WAIRE Implementation Guidelines have been revised to allow NZE yard trucks fueled with renewable fuels to earn WAIRE Points, using a customized WAIRE plan, and a streamlined calculation has been provided, using methods consistent with the WAIRE Menu Technical Report. NZE fueling infrastructure has not been included in part to support state goals for advancing ZE technology, and because previous statements from the natural gas industry have indicated that their business model does not require government support for

fueling infrastructure, only for the trucks themselves. The current WAIRE Points system is designed to give points based on the emission reductions from an action, as well as from the cost. NZE trucks are treated equally with other technologies in the WAIRE Menu. Including the cost in the calculation is important because it serves as a proxy for an operator's level of effort to comply with the rule and it is a common metric to all WAIRE Menu items. In addition, as shown in the analysis in the staff report, when comparing NZE options with comparable ZE options (e.g., third party Class 8 truck visits), even with less points per visit, the NZE option results in lower costs and higher emissions reductions.

No sunset date even if air quality standards are met

The most recent draft of PR 2305 includes a sunset provision when the latter of the state or federal ozone standard of 70 parts per billion is attained. The Executive Officer will provide recommendations to the Board one year prior to this anticipated date with recommendations about whether to keep all or parts of the rule, including consideration of anti-backsliding or maintenance plan requirements.

Small warehouses should not be included in PR 2305

The smallest warehouse included in the rule is 100,000 square feet, and the smallest operator includes 50,000 square feet in a building with at least 100,000 square feet of warehousing activity. The most recent draft of PR 2305 includes a very low activity provision where operators with a WPCO <10 would not be required to earn WAIRE Points. This is equal to an average of about two Class 8 truck visits/day, about 1/3rd the amount of activity of a typical 50,000 square foot operator.

The rule should be more stringent

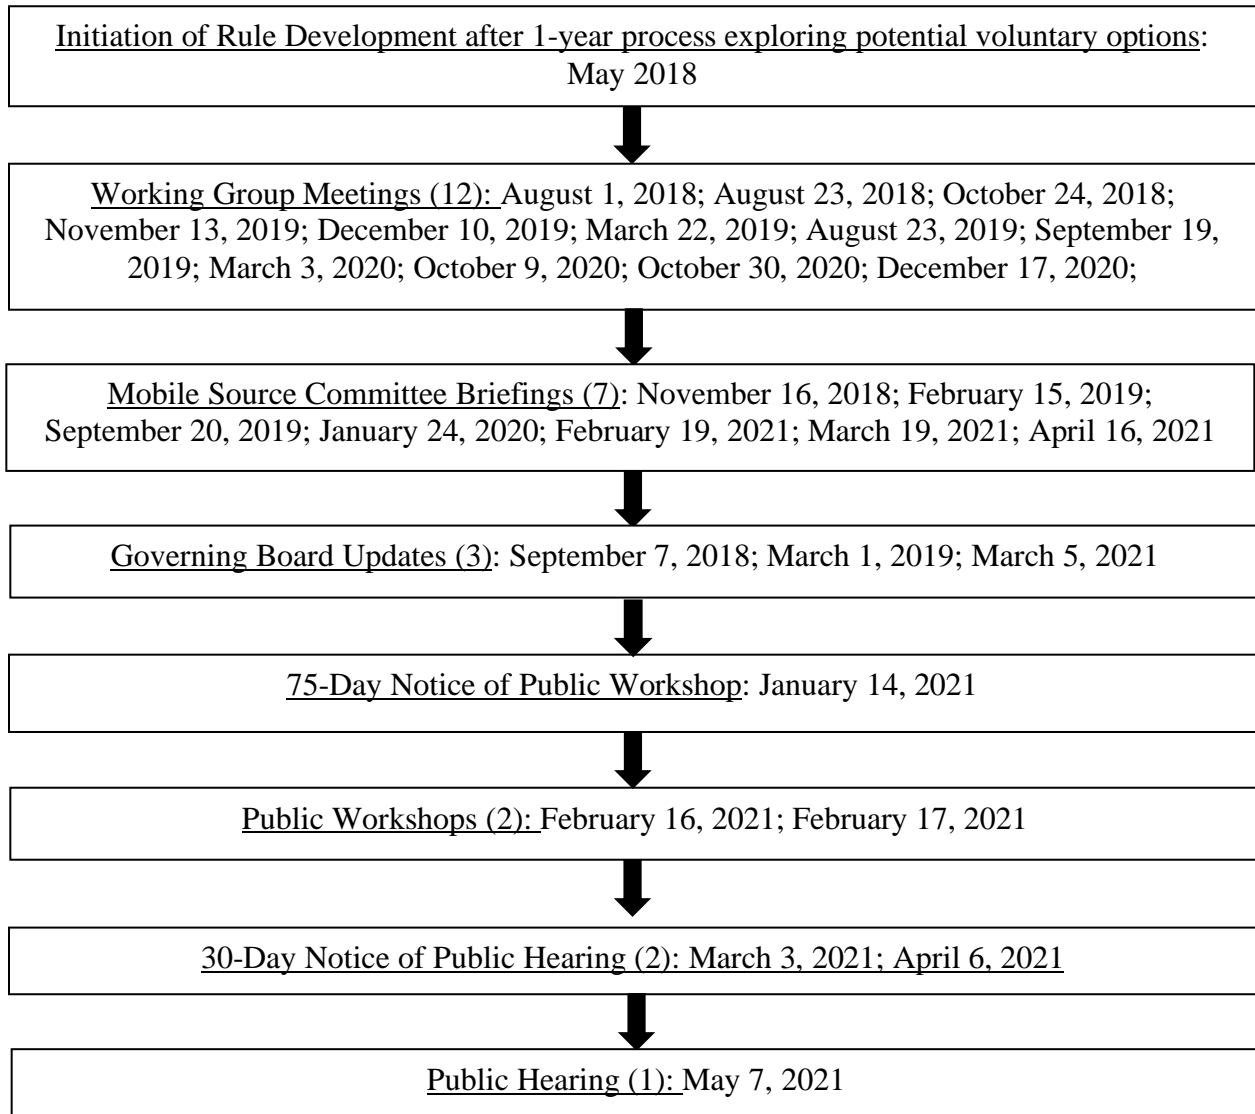

A range of potential stringencies has been considered during development of the proposed rule. A higher stringency would result in higher emission reductions and greater public health benefits, but would also impose higher costs on industry. At the highest stringency evaluated (0.005 Points per WATT), the costs for some compliance approaches may cause some warehouses relocate to nearby areas outside of South Coast AQMD. A study of the proposed stringency (0.0025 Points per WATT) found that no warehouses would be expected to leave beyond baseline conditions that exist without the rule. Because this is a new program, staff will provide annual reports on implementation of PR 2305 (if approved) to the Mobile Source Committee to evaluate how industry is responding to the rule, and will make recommendations at that time on any changes to rule stringency, if warranted.

The rule should focus more on zero emissions technologies

PR 2305 includes a mix of ZE and NZE technologies. NZE technologies have been included as these trucks are expected to be more widely available early in the life of the rule, and can provide early emission reductions more cost-effectively, a critical concern given upcoming attainment deadlines. NZE technologies have at least 90% lower NO_x than diesel trucks, and no toxic DPM. Some fleets already have begun using this technology (some in part with the assistance of South Coast AQMD incentive funds), and allowing its use in the rule would avoid stranding those assets. However, the Board Resolution includes a technology review in five years, including for ZE and NZE technologies, and staff will make recommendations to update the WAIRE Menu at that time, if warranted.

RESOLUTION NO. 21-_____

A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) certifying the Final Environmental Assessment (EA) for Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305.

A Resolution of the South Coast AQMD Governing Board adopting Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Rule 316 – Fees for Rule 2305.

A Resolution of the South Coast AQMD Governing Board submitting Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program to EPA for inclusion in the State Implementation Plan.

WHEREAS, the South Coast AQMD Governing Board finds and determines that Proposed Rule 2305 and Proposed Rule 316 are considered a “project” as defined by the California Environmental Quality Act (CEQA); and

WHEREAS, the South Coast AQMD has had its regulatory program certified pursuant to Public Resource Code Section 21080.5 and CEQA Guidelines Section 15251(1), and has conducted a CEQA review and analysis of the proposed project pursuant to such program (South Coast AQMD Rule 110): and

WHEREAS, the South Coast AQMD Governing Board has determined that the requirements for an Environmental Impact Report have been triggered pursuant to its Certified Regulatory Program and CEQA Guidelines Section 15081, and that an Environmental Assessment (EA), a substitute document allowed pursuant to CEQA Guidelines Section 15252 and South Coast AQMD’s Certified Regulatory Program, is appropriate; and

WHEREAS, the South Coast AQMD Governing Board hereby finds that Rule 316 is statutorily exempt from CEQA pursuant to Public Resources Code Section 21080(b)(8) and CEQA Guidelines Section 15273 because it finds that the fees are for the purpose of meeting operating expenses including the administration and enforcement of Rule 2305 and the WAIRE mitigation fee program; and

WHEREAS, the South Coast AQMD prepared a Draft EA pursuant to its Certified Regulatory Program and CEQA Guidelines Sections 15081 and 15252 setting forth the potential environmental consequences of Proposed Rule 2305 and Proposed Rule 316 and determined that the proposed project would have the potential to generate significant adverse environmental impacts for the topics of: 1) aesthetics; 2) agriculture and forestry resources; 3) air quality and greenhouse gas emissions; 4) biological resources; 5) cultural resources; 6) energy; 7) geology and soils; 8) hazardous

materials and solid and hazardous waste; 9) hydrology and water quality; 10) mineral resources; 11) noise; 12) transportation; and 13) utilities and service systems; and

WHEREAS, the Draft EA was circulated for a 45-day public review and comment period from January 26, 2021 to March 12, 2021, and seven comment letters were received; and

WHEREAS, the Draft EA has been revised to include the comment letters received on the Draft EA and the responses, so that it is now a Final EA; and

WHEREAS, it is necessary that the South Coast AQMD Governing Board review the Final EA prior to its certification, to determine that it provides adequate information on the potential adverse environmental impacts that may occur as a result of adopting the proposed project, including responses to the comment letters received relative to the Draft EA; and

WHEREAS, pursuant to CEQA Guidelines Section 15252(a)(2)(A), since significant adverse environmental impacts were identified, the Final EA includes an alternatives analysis and analysis of mitigation measures; and

WHEREAS, no feasible mitigation measures were identified that would reduce or eliminate the significant adverse impacts, and thus no Mitigation, Monitoring, and Reporting Plan has been prepared; and

WHEREAS, Findings pursuant to Public Resources Code Section 21081.6 and CEQA Guidelines Section 15091, and a Statement of Overriding Considerations pursuant to CEQA Guidelines Section 15093, regarding the potentially significant adverse environmental impacts that cannot be mitigated to less than significant levels, have been prepared and are included in Appendix 1 to this Resolution, which is attached and incorporated herein by reference; and

WHEREAS, the South Coast AQMD Governing Board that is voting to adopt Proposed Rule 2305 and Proposed Rule 316 has reviewed and considered the information contained in the Final EA, including the responses to the comment letters, the Findings, the Statement of Overriding Considerations, and all other supporting documentation, prior to its certification, and has determined that the Final EA, including the responses to comment letters received, has been completed in compliance with CEQA; and

WHEREAS, Proposed Rule 2305 and Proposed Rule 316 and supporting documentation including but not limited to, the Final EA, the Final Staff Report, and the Socioeconomic Impact Assessment, were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the project; and

WHEREAS, the South Coast AQMD Governing Board finds and determines that all the changes made in the Final EA after the public notice of availability of the Draft EA, were not substantial revisions and do not constitute significant new information within the meaning of CEQA Guidelines Sections 15073.5 and 15088.5, because: 1) no new, unavoidable significant environmental impacts would

result from the project or from a new mitigation measure proposed to be implemented; 2) there is no substantial increase in the severity of an environmental impact; 3) no other feasible project alternative or mitigation measure was identified that would clearly lessen the environmental impacts of the project and was considerably different from others previously analyzed, 4) the Draft EA did not deprive the public from meaningful review and comment, and 5) all changes merely clarify, amplify, or make insignificant modifications to the Draft EA, such that recirculation is therefore not required; and

WHEREAS, the Final EA reflects the independent judgement and analysis of the South Coast AQMD Governing Board; and

WHEREAS, the South Coast AQMD Governing Board finds and determines, taking into consideration the factors in Section (d)(4)(D) of the Governing Board Procedures (codified as Section 30.5(4)(D)(i) of the Administrative Code), that the modifications to Proposed Rule 2305 and Proposed Rule 316 since the notice of public hearing was published are clarifications that meet the same air quality objective and are not so substantial as to significantly affect the meaning of the proposed rule within the meaning of Health and Safety Code Section 40726 because: (a) the changes do not impact emission reductions, (b) changes do not affect the number or type of sources regulated by the rules, (c) the changes are consistent with the information contained in the notice of public hearing, and (d) the effects of Proposed Rule 2305 and Proposed Rule 316 do not exceed the effects of the range of alternatives analyzed in the CEQA document; and

WHEREAS, the South Coast AQMD Governing Board has determined that there is a problem that PR 2305 will help alleviate which is that the South Coast AQMD is not in attainment of federal and state standards for ozone, and particulate matter, a need exists to adopt Proposed Rule 2305 to reduce oxides of nitrogen and particulate matter emissions to assist in meeting state and federal air quality standards for ozone and fine particulate matter, and to facilitate emission and exposure reductions from these pollutants related to warehouse operations; and

WHEREAS, the South Coast AQMD Government Board adopted the 2016 Air Quality Management Plan to establish a path toward the goal of attainment of state and federal ambient air quality standards, which included a Facility-Based Mobile Source Measure directed at warehouses; and

WHEREAS, the South Coast AQMD Governing Board directed South Coast AQMD Staff to conduct an independent study of the impacts of a warehouse indirect source rule; and

WHEREAS, the South Coast AQMD Governing Board directed South Coast AQMD Staff to develop a warehouse indirect source rule; and

WHEREAS, the South Coast AQMD Governing Board has determined that adoption of Proposed Rule 2305 would also be consistent with Community Emission Reduction Plans adopted for the AB 617 communities in San Bernardino/Muscoy, Wilmington/Carson/West Long Beach, East Los Angeles/Boyle Heights/West Commerce, and Southeast Los Angeles; and

WHEREAS, Proposed Rule 2305 would establish a menu-based points system that would apply to owners and operators of warehouses at least 100,000 square feet in size;

WHEREAS, Proposed Rule 2305 would require warehouse operators to annually earn a prescribed number of points based on the truck trips that visit the warehouse; and

WHEREAS, Proposed Rule 2305 would allow points to be earned by acquiring or using any of the following: near-zero emission (NZE) or zero emission (ZE) trucks, NZE and ZE yard trucks, ZE charging and fueling infrastructure, solar panels, and/or installing filters in ventilations systems for nearby sensitive land uses; and

WHEREAS, Proposed Rule 2305 would allow points to be earned by developing and implementing a site-specific custom plan or paying a mitigation fee; and

WHEREAS, Proposed Rule 316 has been developed to establish fees for warehouse operators to fund the South Coast AQMD compliance activities associated with Proposed Rule 2305 pursuant to Health and Safety Code Section 40522.5 that authorizes South Coast AQMD to collect fees to recover costs associated with regulatory programs for areawide or indirect sources; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Socioeconomic Impact Assessment of Proposed Rule 2305 and Proposed Rule 316 is consistent with the March 17, 1989 Governing Board Socioeconomic Resolution for rule adoption; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Socioeconomic Impact Assessment for Proposed Rule 2305 and Proposed Rule 316 is consistent with the provisions of Health and Safety Code Sections 40440.8 and 40728.5; and

WHEREAS, the South Coast AQMD Governing Board has determined Proposed Rule 2305 and Proposed Rule 316 will result in increased costs to the affected industries, with a total annualized cost as specified in the Socioeconomic Impact Assessment; and

WHEREAS, the South Coast AQMD Governing Board has actively considered the Socioeconomic Impact Assessment and has made a good faith effort to minimize such impacts; and

WHEREAS, the South Coast AQMD staff conducted a CEQA Scoping Meeting on December 2, 2020 and a Public Workshop on February 16, 2021 for Proposed Rule 2305 and Proposed Rule 316; and

WHEREAS, Proposed Rule 2305 will be submitted to the California Air Resources Board and the United States Environmental Protection Agency for inclusion into the State Implementation Plan; and

WHEREAS, Health and Safety Code Section 40727 requires that prior to adopting, amending or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the Final Staff Report; and

WHEREAS, Proposed Rule 2305 and Proposed Rule 316 implement sections of the Federal Clean Air Act including 42 U.S.C. §§ 7410, 7416, 7502, 7511a, and 7513a. The South Coast AQMD Governing Board has determined that a need exists to adopt Proposed Rule 2305 to reduce regional and local oxides of nitrogen and diesel particulate matter emissions to assist in meeting state and federal air quality standards for ozone and fine particulate matter, and to facilitate emission and exposure reductions from these pollutants related to warehouse operations; and

WHEREAS, the South Coast AQMD Governing Board obtains its authority to adopt, amend or repeal rules and regulations from Sections 39002, 39650 et. seq., 40000, 40440, 40441, 40506, 40510, 40522, 40522.5, 40701, 40702, 40716, 40717, 40725 through 40728, 40910, 40920.5, 41508, 41511 and 41700 of the Health and Safety Code; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 2305 and Proposed Rule 316 are written or displayed so that the meaning can be easily understood by the persons directly affected by it; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 2305 and Proposed Rule 316 are in harmony with and not in conflict with or contradictory to, existing statutes, court decisions or state or federal regulations; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 2305 and Proposed Rule 316 do not impose the same requirements as any existing state or federal regulations, and the proposed rule is necessary and proper to execute the powers and duties granted to, and imposed upon, South Coast AQMD; and

WHEREAS, the South Coast AQMD Governing Board, in adopting Proposed Rule 2305 and Proposed Rule 316, references the following statutes which the South Coast AQMD hereby implements, interprets, or makes specific: Health and Safety Code Sections, 40440, 40716, 40717, 41700 and 42 U.S.C. §§ 7410 and 7416; and

WHEREAS, Health and Safety Code Section 40727.2 requires the South Coast AQMD to prepare a written analysis of existing federal air pollution control requirements applicable to the same source type being regulated whenever it adopts, or amends a rule, and the South Coast AQMD's comparative analysis of Proposed Rule 2305 and Proposed Rule 316 are included in the Final Staff Report; and

WHEREAS, a public hearing has been properly noticed in accordance with the provisions of Health and Safety Code Section 40725 and 40440.5; and

WHEREAS, the South Coast AQMD Governing Board has held a public hearing in accordance with all applicable provisions of state and federal law; and

WHEREAS, the South Coast AQMD specifies that the Planning and Rules Division Deputy Executive Officer overseeing the development of Proposed Rule 2305 and Proposed Rule 316 as the custodian of the documents or other materials which constitute the record of proceedings upon which the adoption of the proposed rules is based, which are located at the South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, California; and

NOW, THEREFORE, BE IT RESOLVED, that the South Coast AQMD Governing Board has considered the Final EA for Proposed Rule 2305 and Proposed Rule 316 together with all comments received during the public review period, and, on the basis of the whole record before it, the South Coast AQMD Governing Board: 1) finds that the Final EA, including the responses to the comment letters, was completed in compliance with CEQA and the South Coast AQMD's Certified Regulatory Program, 2) finds that the Final EA and all supporting documents were presented to the South Coast AQMD Governing Board, whose members exercised their independent judgment and reviewed, considered and approved the information therein prior to acting on Proposed Rule 2305 and Proposed Rule 316, and 3) certifies the Final EA; and

BE IT FURTHER RESOLVED, that the Governing Board does hereby adopt Findings pursuant to CEQA Guidelines Section 15091 and a Statement of Overriding Considerations pursuant to CEQA Guidelines 15093, as required by CEQA, and which are included as Appendix 1 to this Resolution and incorporated herein by reference; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby adopt, pursuant to the authority granted by law, Proposed Rule 2305 and Proposed Rule 316 as set forth in the attached, and incorporated herein by reference; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby direct the Executive Officer to develop the Warehouse Actions and Investments to Reduce Emissions (WAIRE Mitigation Program) with funds generated from mitigation fee payments from Proposed Rule 2305 and Proposed Rule 316; and

BE IT FURTHER RESOLVED, that any solicitations for projects and project awards using funds from the WAIRE Mitigation Program must be first approved by the South Coast AQMD Governing Board. Proposed solicitations and project awards shall be presented to the Technology Committee and Governing Board no less frequently than an annual basis; and

BE IT FURTHER RESOLVED, that the Governing Board hereby directs the Executive Officer to track mitigation fees paid by warehouse operators according to the Source Receptor Area and County in which they are located; and

BE IT FURTHER RESOLVED, that projects funded by the WAIRE Mitigation Program shall achieve and/or facilitate emission reductions in the same Source Receptor Areas (SRAs) and counties in which the mitigation fees were paid. If sufficient projects are not identified in each individual SRA relative to the available funding, then funds may be directed either to an adjacent SRA in the same county, or held for a subsequent funding; and

BE IT FURTHER RESOLVED, that funding from the WAIRE Mitigation Program may be combined with other incentive funding programs as allowed by the funding program to be combined; and

BE IT FURTHER RESOLVED, that any recipients of WAIRE Mitigation Program incentives that involve construction work use a skilled and trained workforce as defined in Public Contract Code section 2601 to perform such work; and

BE IT FURTHER RESOLVED, that any recipients of WAIRE Mitigation Program incentives that involve the installation of electric vehicle infrastructure shall: 1) be installed by a contractor with the appropriate license classification, as determined by the Contractors' State License Board, and at least one electrician on each crew, at any given time, holds an Electric Vehicle Infrastructure Training Program certification, and 2) meet a requirement that at least 25 percent of the total electricians working on an electric vehicle infrastructure project installing a charging port supplying 25 kW or more, at any given time, hold Electric Vehicle Infrastructure Training Program certification, consistent with the Public Utilities Code section 740.20; and

BE IT FURTHER RESOLVED, that any recipients of WAIRE Mitigation Program incentives or funding for the installation of ZE charging or fueling infrastructure for on-road vehicles that are not yard trucks must make the stations available for public use; and

BE IT FURTHER RESOLVED, that, consistent with existing South Coast AQMD funding programs, any recipients of WAIRE Mitigation Program incentives shall disclose any labor violations in the three years prior to receiving funding and during the life of the funded project; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby direct the Executive Officer to evaluate the state of technology and the WAIRE Menu every five years from the date of adoption of Proposed Rule 2305 and to report the results and make any recommendations for potential updates to the WAIRE Menu to the Mobile Source Committee; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby direct the Executive Officer to ensure that, prior to WAIRE Mitigation Program solicitations and awards, public outreach is conducted that includes community groups, local governments, and small business; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to develop an online portal for the purpose of submitting required reports and documents as required by Proposed Rule 2305 and Proposed Rule 316, as well as to

provide the public information about how warehouse operators and owners are complying with Proposed Rule 2305 and Proposed Rule 316, and how WAIRE Mitigation Program funds are spent; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to conduct outreach to applicable warehouse operators to provide training and guidance on how to comply with PR 2305 with emphasis on warehouse operators that are small businesses; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to provide annual updates on the status and progress of Proposed Rule 2305 and Proposed Rule 316 to the-South Coast AQMD Mobile Source Committee; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to forward a copy of this Resolution and Proposed Rule 2305 to the California Air Resources Board for approval and subsequent submittal to the U.S. Environmental Protection Agency for inclusion into the State Implementation Plan.

I. INTRODUCTION

The South Coast Air Quality Management District (South Coast AQMD) has developed Proposed Rule (PR) 2305 – Warehouse Indirect Source Rule - Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, to facilitate local and regional emission reductions associated with existing and new warehouses with an indoor warehouse floor space equal to or greater than 100,000 square feet within a single building and the mobile sources attracted to these warehouses. PR 2305 will be submitted into the State Implementation Plan (SIP). South Coast AQMD also developed PR 316 – Fees for Rule 2305, a fee program designed to recover administrative costs associated with PR 2305. These proposed rules were determined to be a “project” as defined by the California Environmental Quality Act (CEQA) and the Public Resources Code Section 21000 et. seq. Specifically, CEQA requires: 1) the potential adverse environmental impacts of proposed projects to be evaluated; and 2) feasible methods to reduce or avoid any identified significant adverse environmental impacts of these projects to also be evaluated. Since PR 2305 and PR 316 are South Coast AQMD-proposed rules, the South Coast AQMD has the greatest responsibility for carrying out or approving the project as a whole, which may have a significant effect upon the environment, and is the most appropriate public agency to act as lead agency. [Public Resources Code Section 21067 and CEQA Guidelines Section 15051(b)].¹

Thus, the analysis of PR 2305 and PR 316 indicated that the type of CEQA document appropriate for the proposed project is an Environmental Assessment (EA) with significant impacts. The EA is a substitute CEQA document, which the South Coast AQMD, as lead agency for the proposed project, prepared in lieu of an Environmental Impact Report (EIR) with significant impacts (CEQA Guidelines Section 15252), pursuant to the South Coast AQMD’s Certified Regulatory Program (Public Resources Code Section 21080.5, CEQA Guidelines Section 15251(l); South Coast AQMD Rule 110 – Rule Adoption Procedures to Assure Protection and Enhancement of the Environment). Therefore, as lead agency, the South Coast AQMD has prepared a Final EA with significant environmental impacts pursuant to CEQA Guidelines Sections 15089 and 15132.

When considering for approval a proposed project that has one or more significant adverse environmental effects, a public agency must make one or more written findings for each significant adverse effect, accompanied by a brief rationale for each finding (Public Resources Code Section 21081 and CEQA Guidelines Sections 15065 and 15091). The analysis in the Final EA concluded that the proposed project has the potential to generate significant adverse environmental impacts on aesthetics, agriculture and forestry resources, air quality and greenhouse gas emissions, biological resources, cultural and tribal cultural resources, energy, geology and soils, hazard materials and solid and hazardous waste, hydrology and water quality, mineral resources (during operations), noise, transportation, and utilities and service systems (during operations). For a

¹ CEQA Guidelines refers to California Code of Regulations, Title 14, Section 15000 and following.

proposed project with significant adverse environmental impacts, CEQA also requires the lead agency to balance the economic, legal, social, technological, or other benefits of a proposed project against its significant unavoidable environmental impacts when determining whether to approve the proposed project. Under CEQA Guidelines Section 15093(a), “If the specific economic, legal, social, technological, or other benefits of a project outweigh the unavoidable significant adverse environmental effects, the adverse environmental effects may be considered ‘acceptable.’” Thus, after adopting findings, the lead agency must also adopt a “Statement of Overriding Considerations” to approve a proposed project with significant adverse environmental effects.

South Coast AQMD’s certified regulatory program does not impose any greater requirements for making written findings for significant environmental effects than is required for an EIR under CEQA.

When a lead agency adopts measures to mitigate or avoid significant adverse environmental effects, a mitigation and monitoring report may be required pursuant to CEQA Guidelines Section 15097 and Public Resources Code Section 21081.6. The Final EA does not identify any CEQA mitigation measures within the authority of South Coast AQMD to adopt or implement and South Coast AQMD has no authority to impose mitigation measures on local governments, or other agencies. Therefore, no Mitigation, Monitoring, and Reporting Program is included in this document.

A. Project Summary

The proposed project is comprised of PR 2305, including a mitigation fee program component, PR 316, to recover administrative costs, and the submittal of PR 2305 into the SIP. PR 2305 has been developed to reduce emissions and facilitate local and regional emission reductions associated with existing and new warehouses with an indoor warehouse floor space equal to or greater than 100,000 square feet within a single building and the mobile sources attracted to these warehouses. Under PR 2305, operators of applicable existing and new warehouses would be subject to an annual Warehouse Actions and Investments to Reduce Emissions (WAIRE) Points Compliance Obligation (WPCO) intended to reduce regional and local NO_x and PM emissions associated with warehouses and from mobile sources attracted to warehouses. PR 2305 implements Control Measure MOB-03 – Emission Reductions at Warehouse Distribution Centers, which is one of four Facility-Based Mobile Source Measures identified in the 2016 Air Quality Management Plan (AQMP) for the warehouse and distribution sector.

To meet the WPCO, WAIRE Points can be earned by warehouse operators and/or owners by selecting from a menu of implementation measures: 1) acquiring and/or using near-zero emissions (NZE) and zero-emission (ZE) trucks; 2) acquiring and/or using ZE yard trucks; 3) installing and/or using ZE charging/fueling infrastructure (e.g., electric charger, hydrogen fuel station) for cars, trucks, and/or transport refrigeration units; 4) installing and/or using onsite energy systems

(e.g., solar panels); and 5) implementing community benefits (e.g., operation of Minimum Efficiency Reporting Value (MERV) filters or filtration systems rated MERV-16 or greater). In addition, warehouse operators may apply to earn WAIRE Points through a Custom WAIRE Plan specific to their operations that satisfy prescribed performance metrics. WAIRE Points may be earned only for “surplus” actions that go beyond existing state and federal regulations. The WAIRE Points obligation for a warehouse operator and/or owner is calculated by multiplying the number of weighted annual truck trips (WATT) by a stringency factor and an annual variable. The stringency factor is a dimensionless multiplier that determines how many points an operator needs to earn, and the annual variable is a dimensionless multiplier which controls how the stringency will phase in through time.

In lieu of earning WAIRE Points through WAIRE Menu Options or a Custom WAIRE Plan, or to supplement earned WAIRE Points to satisfy the WPCO, within each compliance year, a warehouse operator may choose to pay an optional mitigation fee to South Coast AQMD that would be used in a mitigation program implemented by South Coast AQMD to achieve or facilitate the emissions reductions. Similar to the measures used to earn WAIRE Points, the mitigation program would implement measures such as subsidizing the purchase of NZE and ZE trucks and/or the installation of charging and fueling infrastructure for ZE trucks. The mitigation program would prioritize use of the mitigation fees in areas near the warehouses using this compliance option.

Implementation of the proposed project is expected to result in long-term and permanent emission reductions of nitrogen oxides (NO_x) and particulate matter (PM) in South Coast AQMD’s jurisdiction, including diesel PM and reduced associated public health impacts from warehouse activities which will vary depending upon the implementation measures employed, reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617, and reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse. There may be additional industrial properties and warehouse operators and owners that will only be required to provide reports but will not be required to earn WAIRE Points.

PR 316 has been developed to establish fees to be paid by warehouses subject to PR 2305 to recover South Coast AQMD administrative costs associated with submittal and review of various notifications and reports, Custom WAIRE Plan evaluation, and implementing a program using mitigation fees from warehouse operators that chose to pay a mitigation fee, as well as compliance activities such as conducting desktop audits, onsite inspections, and reviewing records.

The main objectives of the proposed project are to:

- 1) Reduce NO_x and PM emissions, including DPM emissions, and reduce associated public health impacts from warehouse activities.

- 2) Facilitate local and regional reduction of emissions associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting federal and state air quality standards for ozone and PM_{2.5}.
- 3) Implement actions to reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617.
- 4) Reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse.

B. WAIRE Points Scenarios

Because of the programmatic nature of the proposed project, it is not possible to predict how each of the warehouse operators will comply with the WAIRE Program. As a result, it is not possible to forecast a particular, region-wide compliance approach for the initial 2,902 warehouses that would likely need to earn WAIRE Points in any given year. Instead, the Final EA analyzes the potential environmental impacts that would result if all warehouse operators subject to the proposed project chose one of the “scenarios” described in Table 1 as their compliance path from 2022 through 2031 to meet their WPCO. Each modeled WAIRE Points scenario assumes the entire universe of warehouses meet their WPCO only through that action in each scenario. The WAIRE Points scenarios modeled serve as a bounding analysis approach. No single scenario in this bounding analysis is expected to occur. Rather, they present possible extreme compliance outcomes, and thus provide a conservative estimate of potential impacts. In reality, a hybrid of all scenarios (or other compliance approaches encompassed within the range of scenarios analyzed) is expected to occur. This approach allows for the analysis of environmental impacts associated with each of the individual compliance options as well as the range of environmental impacts and benefits from the proposed project that could be anticipated. See Section 4.0.1.2 of the Final EA for further discussion on WAIRE Points scenario modeling.

Table 1
WAIRE Points Scenarios

SCENARIO #	DESCRIPTION
Scenario 1	NZE Class 8 truck acquisitions and subsequent visits from those trucks
Scenario 2	NZE Class 8 truck acquisitions and subsequent visits from those trucks (early purchase) ^a
Scenario 3	NZE Class 8 truck acquisitions (funded by Carl Moyer program) and subsequent visits from those trucks ^{b, c}
Scenario 4	NZE Class 8 truck visits from non-owned fleets ^c
Scenario 5	ZE Class 8 truck visits from non-owned fleet ^{c,d}
Scenario 6	Level 3 charger installations followed by ZE Class 6 & Class 8 truck acquisitions and subsequent visits from those trucks, using installed chargers ^e
Scenario 7	Pay Mitigation Fee
Scenario 7a	Pay Mitigation Fee and account for NZE trucks visiting the facility incentivized from the WAIRE Mitigation Program
Scenario 8	NZE Class 6 truck acquisitions and subsequent visits from those trucks
Scenario 9	NZE Class 6 truck visits from non-owned fleets ^c
Scenario 10	ZE Class 6 truck visits from non-owned fleets ^c
Scenario 11	Rooftop solar panel installations and usage ^f
Scenario 12	Hydrogen station installations followed by ZE Class 8 truck acquisitions and subsequent visits from those trucks, using the hydrogen station ^g
Scenario 13	ZE Class 2b-3 truck acquisitions and subsequent visits from those trucks
Scenario 14	ZE Class 2b-3 truck visits from non-owned fleets
Scenario 15	Filter System Installations
Scenario 16	Filter Purchases
Scenario 17	TRU plug installations and usage in cold storage facilities ^h
Scenario 18	ZE Hostler Acquisitions and Usage

Notes: MERV: Maximum Efficiency Reporting Value

a One additional truck is acquired earlier than required, thus increasing WAIRE Points earned from truck visits in subsequent years.

b Mitigation fees paid to earn WAIRE Points in first year of compliance.

c No WAIRE Points earned for truck acquisitions.

d ZE Class 8 trucks are assumed to not be commercially available until late 2022. Mitigation fees paid to earn WAIRE Points until then.

e Chargers provide ~30,000 kWh/year per Class 6 truck, and ~90,000 kWh/yr per Class 8 truck. Class 8 trucks only acquired if 25 Class 6 trucks had been previously purchased for one warehouse.

f Solar panel coverage limited to 50 percent of building square footage. Mitigation fees used to make up any shortfall in WAIRE Points.

g System installation in first year is followed by a truck acquisition. In subsequent years trucks are only acquired if needed to earn WAIRE Points.

h Scenario is only applied to cold storage warehouses. Plugs limited to 1:10,000 sq. ft. of building space.

Furthermore, the Industrial Economics, Incorporated (IEc) Study titled “Assessment of Warehouse Relocations Associated with the South Coast AQMD Warehouse ISR” analyzed potential warehouse relocations to neighboring real estate markets outside of the South Coast AQMD's

jurisdiction in response to the WAIRE Program. The IEc study found that up to 10 warehouses potentially would relocate to neighboring regions today, even without the proposed project in place. Under the most conservative scenario analyzed in the IEc Study, i.e., where compliance with PR 2305 costs warehouse operators \$2.00 per square foot (which translates to a stringency factor of greater than 0.0050 WAIRE Points per WATT), the IEc study concluded that the proposed rule could result in approximately six additional warehouses being built outside of the South Coast AQMD's jurisdiction. For the currently proposed rule stringency of 0.0025 WAIRE Points per WATT, the IEc study supports the conclusion that the proposed project would not result in any warehouse relocations. Nonetheless, the Final EA assumed the potential for up to three warehouse relocations as the worst-case warehouse relocation scenario for the purpose of providing a conservative analysis of the proposed project's potential impacts on operational air quality, greenhouse gas (GHG) emissions, energy, and transportation. See Section 4.0.1.3.1 of the Final EA for further discussion on potential warehouse relocations.

Additionally, the IEc Study concluded that moving to a nearby region increases the travel time by only a few hours. In contrast, moving to a different port on the east coast would be more than 10+ days²; therefore, it is not reasonably foreseeable that cargo owners will ship their goods to other ports to avoid the cost of the proposed project. However, the Final EA conservatively considered that the proposed project could contribute to some cargo growth diversion at the Ports of Los Angeles and Long Beach. Since the amount of potential cargo growth diversion associated with the proposed project is speculative and it is not possible to identify where cargo would be diverted to or predict how cargo shippers would respond to the proposed project, cargo growth diversion impacts are discussed qualitatively throughout the EA, where applicable. See Section 4.0.1.3.2 of the Final EA for further discussion on potential cargo growth diversion.

The Final EA also assumed that implementation of the proposed project does not generate an increase in the national or even international demand for trucks used in the goods movement sectors because the proposed project will not increase the amount of cargo being transported. In analyzing the potential impacts of the purchase of new NZE and ZE trucks pursuant to the proposed project, the Final EA assumed that these new trucks will be replacing older trucks. The Final EA further assumes that some of the older trucks that are replaced by NZE and ZE trucks will be retired (i.e., scrapped) and some will be sold to other operators (either within the South Coast AQMD's jurisdiction or outside of it) to replace even older, higher emissions trucks in that operator's truck fleet. These assumptions are used in the analysis of the proposed project's environmental impacts and support the conclusion that the proposed project would result in a greater turnover of diesel trucks to NZE and ZE trucks than would have occurred without its implementation.

² South Coast Air Quality Management District.2021, April. Second Draft Staff Report Proposed Rule 2305 – Warehouse Indirect Source Rule - Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program and Proposed Rule 316 – Fees for Rule 2305 (pp 55-56). <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/facility-based-mobile-source-measures/warehs-distr-wkng-grp>

II. CEQA PROVISIONS REGARDING FINDINGS

CEQA generally requires agencies to make certain written findings before approving a project with significant environmental impacts. South Coast AQMD is exempt from some of CEQA's requirements pursuant to its Certified Regulatory Program, but complies with its provisions where required or otherwise appropriate.

CEQA Guidelines Section 15091 provides:

- (a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are:
 - 1. Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.
 - 2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.
 - 3. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.
- (b) The findings required by subsection (a) shall be supported by substantial evidence in the record.
- (c) The finding in subdivision (a)(2) shall not be made if the agency making the finding has concurrent jurisdiction with another agency to deal with identified feasible mitigation measures or alternatives. The finding in subsection (a)(3) shall describe the specific reasons for rejecting identified mitigation measures and project alternatives.
- (d) When making the findings required in subdivision (a)(1), the agency shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures

must be fully enforceable through permit conditions, agreements, or other measures.

- (e) The public agency shall specify the location and custodian of the documents or other material which constitute the record of the proceedings upon which its decision is based.
- (f) A statement made pursuant to Section 15093 does not substitute for the findings required by this section.

The “changes or alterations” referred to in CEQA Guidelines Section 15091(a)(1) may include a wide variety of measures or actions as set forth in CEQA Guidelines Section 15370, including:

- (a) Avoiding the impact altogether by not taking a certain action or parts of an action.
- (b) Minimizing impacts by limiting the degree or magnitude of the action and its implementation.
- (c) Rectifying the impact by repairing, rehabilitating, or restoring the impacted environment.
- (d) Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.
- (e) Compensating for the impact by replacing or providing substitute resources or environments.

III. CALIFORNIA ENVIRONMENTAL QUALITY ACT

In conformance with the CEQA Statute and Guidelines, the South Coast AQMD’s Certified Regulatory Program (Public Resources Code Section 21080.5, CEQA Guidelines Section 15251(l), and South Coast AQMD Rule 110), South Coast AQMD conducted an extensive environmental review of the proposed project. Under its Certified Regulatory Program, the South Coast AQMD typically prepares an EA, a substitute CEQA document prepared in lieu of an EIR, for proposed projects with significant impacts (CEQA Guidelines Section 15252), to evaluate the environmental impacts for rule projects proposed for adoption or amendment.

The following describes South Coast AQMD’s environmental review process for the proposed project:

- South Coast AQMD determined that an EA would be required for the proposed project and issued a Notice of Preparation (NOP) of a Draft EA and Initial Study (IS) (collectively referred

to as “NOP/IS”) on November 12, 2020. The 32-day public review and comment period began Friday, November 13, 2020 and ended Tuesday, December 15, 2020.

- South Coast AQMD conducted a CEQA scoping meeting via video conference and by telephone on December 2, 2020 at 1:30 p.m.
- Based upon the environmental analysis in the NOP/IS, South Coast AQMD staff determined that a Draft EA should be prepared for the proposed project. The scope of the Draft EA was determined based on the NOP/IS, comments received in response to the NOP/IS, and comments received at the CEQA scoping meeting conducted by South Coast AQMD. Sections 1.2 and 4.0.1.1 of the Draft EA describe the issues identified for analysis in the Draft EA.
- South Coast AQMD prepared a Draft EA, which was made available for a 45-day public review and comment period beginning January 26, 2021 and ending Friday, March 12, 2021.
- South Coast AQMD held a public workshop on February 16, 2021 and a community meeting on February 17, 2021 regarding the proposed project during the public review and comment period for the Draft EA.
- South Coast AQMD prepared a Final EA, Findings, and a Statement of Overriding Considerations. The Final EA also contains comments received relative to the Draft EA, written responses to those comments, revisions including clarifications to the Draft EA, and appended documents.
- The Final EA, Appendix 1, and PR 2305 and PR 316 will be considered at the Governing Board Meeting (and Public Hearing) scheduled for May 7, 2021 (subject to change).

A. Responses to Comments Relative to the Draft EA

The South Coast AQMD received comment letters relative to the Draft EA, evaluated the environmental issues raised, and prepared written responses. The Final EA contains seven comment letters received relative to the Draft EA and responses to the comments, as a separate section. The responses to the comments focus on the disposition of environmental issues as raised.

None of the comments indicate that there would be a substantial increase in the severity of a previously identified environmental impact that will not be mitigated. Instead, the information presented in the responses to comments “merely clarifies or amplifies or makes insignificant modifications” in the Draft EA. These comments do not require recirculation of the Draft EA. See CEQA Guidelines Sections 15073.5 and 15088.5(b). The Draft EA has been revised to include the aforementioned modifications as part of the Final EA.

B. Revisions to the Proposed Project

After the Draft EA was circulated for public review, and in response to comments received and stakeholder input, PR 2305 was modified in the following ways:

- (a) A sunset provision was added, ending the proposed rule’s requirements once state and federal air quality standards have been reached.
- (b) “Low use” warehouse operators were exempted from compliance with the rule.
- (c) NZE yard trucks that use renewable fuels were added as an allowable option under Custom WAIRE Plans.
- (d) The compliance period was shifted by 6 months, starting January 1, 2022.

There were no changes made to PR 316. None of the revisions: 1) constitute significant new information; 2) constitute a substantial increase in the severity of an environmental impact; or, 3) provide new information of substantial importance relative to the Draft EA.

Including a sunset provision would reduce the potential environmental impacts of the proposed rule by eliminating all compliance obligations after the standards are achieved. “Low use” operators are those with a WPCO score of less than 10, meaning they receive approximately two Class 8 truck visits/day. There are not expected to be many “low use” warehouses. Exempting them from the rule would reduce the adverse environmental impacts of the proposed project because the exempt facilities would not be required to implement any compliance options, such as constructing new charging stations. The “low use” exemption could reduce the benefits of the proposed rule, but any reduction in benefit would be negligible, because there are not expected to be many “low use” warehouses and their compliance obligations would have been small to begin with. Similarly, including a sunset provision could reduce the benefits of the proposed rule, but the sunset provision is triggered only when state and federal air quality standards have been met and the need for the project benefits has therefore been reduced or eliminated. Including NZE yard trucks under the Custom WAIRE Plans could decrease air quality and GHG benefits when compared with allowing only ZE yard trucks as a compliance option but would still result in an air quality and GHG benefit with respect to baseline conditions. Additionally, allowing NZE yard trucks would also lessen the impacts of battery disposal associated with ZE yard trucks. Lastly, shifting the compliance period would result in the same impacts occurring at a later date.

The Final EA reflects revisions, clarifications, and corrections to the Draft EA as a result of changes to the proposed rule language subsequent to the public review and comment period. South Coast AQMD staff has reviewed the modifications to PR 2305 and PR 316 and has updated the CEQA analysis in the Final EA accordingly.

C. Tiering and Incorporation by Reference

South Coast AQMD's Final Program Environmental Impact Report for the 2016 Air Quality Management Plan

The EA for the proposed project tiers off of the Final Program Environmental Impact Report (EIR) for the 2016 Air Quality Management Plan (AQMP) (State Clearinghouse No. 2016071006)³ (referred to as “the 2016 AQMP Final Program EIR”), pursuant to Public Resources Code Section 21094 and CEQA Guidelines Section 15152(g). The 2016 AQMP Final Program EIR analyzed a number of air pollution control measures to be implemented by South Coast AQMD, including Control Measure MOB-03 – Emission Reductions at Warehouse Distribution Centers, which required the assessment and identification of potential actions to reduce emissions associated with mobile sources operating in and out of warehouse distribution centers. The proposed project is consistent with the 2016 AQMP, as it implements Control Measure MOB-03. The 2016 AQMP includes a Mitigation Monitoring and Reporting Plan. There are no additional mitigation measures beyond those set forth in that Plan that South Coast AQMD could implement to reduce the significant impacts of the proposed project.

CEQA encourages tiering whenever feasible (Public Resources Code Section 21093). Pursuant to CEQA, as long as a program EIR has adequately addressed a potentially significant impact, the later EIR need not provide further analysis. See CEQA Guidelines Section 15152(f); CEQA Section 21093 (“tiering is appropriate when it helps a public agency exclude duplicative analysis of environmental effects examined in previous environmental impact reports”). An impact has been adequately addressed if it has been examined at a sufficient level of detail in the prior environmental impact report to enable the lead agency and public to consider whether those effects can be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the later project. See CEQA Guidelines Section 15152(f). The 2016 AQMP Final Program EIR adequately addressed potentially significant impacts from implementation of the 2016 AQMP, including from Control Measure MOB-03, and this analysis is incorporated by reference in the EA for the proposed project (CEQA Guidelines Section 15150).

The 2016 AQMP Final Program EIR reviewed approximately 17 environmental topic areas and analyzed whether the implementation of the 2016 AQMP, including Control Measure MOB-03, would create potentially significant adverse impacts. The analysis in 2016 AQMP Final Program EIR concluded that significant and unavoidable adverse environmental impacts are expected to occur after implementing mitigation measures for the following environmental topic areas: 1) aesthetics from increased glare, construction site staging and equipment laydown areas, and from the construction and operation of catenary lines and use of bonnet technology for ships; 2) construction air quality and GHG emissions; 3) energy (due to increased electricity demand); 4)

³ South Coast Air Quality Management District. 2017, March. Final Program EIR for the 2016 AQMP. <http://www.aqmd.gov/docs/default-source/ceqa/documents/aqmd-projects/2016/2016aqmpfpeir.pdf>

hazards and hazardous materials due to: (a) increased flammability of solvents; (b) storage, accidental release and transportation of ammonia; (c) storage and transportation of liquefied natural gas (LNG); and (d) proximity to schools; 5) hydrology (water demand); 6) construction noise and vibration; 7) construction waste and operational waste from vehicle and equipment scrapping; and 8) transportation and traffic during construction and during operation on roadways with catenary lines and at the harbors.

It is important to note, however, that, because the 2016 AQMP included other measures in addition to Control measure MOB-03, not all of the conclusions of significance are applicable to the proposed project. Table 2 summarizes the significant and unavoidable adverse environmental impacts identified in the 2016 AQMP Final Program EIR and identifies which topic area applies to the proposed project in the Final EA.

Table 2
Applicability of the Significant and Unavoidable Adverse Environmental Impacts Identified in the 2016 AQMP Final Program EIR to Proposed Project for Direct Impacts

CONCLUSION OF SIGNIFICANT ENVIRONMENTAL IMPACTS IN THE 2016 AQMP FINAL PROGRAM EIR	APPLICABLE TO THE PROPOSED PROJECT?	EXPLANATION
Aesthetics from increased glare, construction site staging and laydown areas, and from the construction and operation of catenary lines and use of bonnet technology for ships	Yes	This environmental topic is applicable to the proposed project because solar panels and WPCO measures that require construction are applicable to the implementation of some of the WAIRE Points Menu actions and/or due to incentivizing increased acquisition and use of ZE trucks and yard trucks. Therefore, this conclusion is applicable to the proposed project.
Construction air quality and GHGs	Yes	The proposed project has the potential to generate direct impacts associated with construction emissions from constructing infrastructure to support NZE and ZE trucks and ZE trucks from the WAIRE Menu. Therefore, this conclusion is applicable to the proposed project.
Energy due to increased electricity demand	Yes	The proposed project would increase the penetration of ZE trucks and yard trucks resulting in an increase in electricity consumption, as well as an increased energy demand from the operation of MERV-16 or greater filters and filtration systems. Therefore, this conclusion is applicable to the proposed project.
Hazards and hazardous materials due to the increased flammability of solvents	No	Implementation of the WAIRE Points Menu actions would not require the use of solvents for their operation. Therefore, this conclusion is not applicable to the proposed project.
Hazards and hazardous materials due to the storage, accidental release and transportation of ammonia	No	Implementation of the WAIRE Points Menu actions would not require the storage and transportation of ammonia. Therefore, this conclusion is not applicable to the proposed project.

Table 2 (concluded)
Applicability of the Significant and Unavoidable Adverse Environmental Impacts Identified in the 2016 AQMP Final Program EIR to Proposed Project for Direct Impacts

Hazards and hazardous materials due to the storage and transportation of liquefied natural gas (LNG)	Yes	Since the proposed project could result in the increased use of NZE trucks, the use, storage, and transport of LNG could also increase. Therefore, this conclusion is applicable to the proposed project.
Hazards and hazardous materials due to the use of reformulated coatings, solvents, adhesives, and sealants in the proximity to schools	No	The management of hazardous materials used during the construction and operational phase of new infrastructure pursuant to the implementation of the proposed project would be regulated by federal, state, and local laws and would not be in such quantities or stored in such a manner as to pose a significant safety hazard. Therefore, impacts to nearby schools through the use and transport of hazardous materials are not expected to be significant, and this discussion is not applicable to the proposed project.
Hydrology (water demand)	No	Implementation of the WAIRE Points menu options would not utilize water for their operation. Therefore, this conclusion is not applicable to the proposed project.
Construction noise and vibration	Yes	Implementation of the proposed project could generate potential noise and vibration impacts associated with the installation of air pollution control equipment, (e.g., MERV-16 or greater filters and filtration systems), replacement of existing equipment, installation of roadway infrastructure (wayside power and catenary lines or other similar technologies), installation of, battery charging or fueling infrastructure, and the installation of solar panels. Therefore, this conclusion is applicable to the proposed project.
Construction waste and operational waste from vehicle and equipment scrapping	Yes	The proposed project could result in an increased volume of vehicles, equipment, and disposal of batteries and hydrogen fuel cells that need to be retired in a short timeframe. Furthermore, since the extent and timing of construction needed to implement the proposed project at the individual warehouses is not known or possible to predict how individual warehouse subject to the WAIRE Program will comply, the potential to exceed landfill capacities is also possible. Therefore, this conclusion is applicable to the proposed project.
Transportation and traffic during construction and during operation on roadways with catenary lines and at the harbors	No	Catenary lines and the associated transportation and traffic impacts on roadways and at the harbors are not applicable to the proposed project. Therefore, this conclusion is not applicable to the proposed project.

California Air Resources Board’s Final Environmental Assessment for the Advanced Clean Trucks Regulation

Because the WAIRE Program would incentivize the purchase and use of zero emission vehicles, some comments received on the Initial Study noted that the proposed project could lead to the construction of new manufacturing and battery recycling facilities, and improvements to the electrical grid. While it is too speculative to analyze the particular impacts of such future hypothetical development projects, the California Air Resources Board (CARB) provided a general, qualitative analysis of these potential development projects and the environmental impacts in its Final EA for the Advanced Clean Trucks (ACT) Regulation. The ACT Regulation is part of the mobile source emission reduction activities at the state level to accelerate a large-scale transition to zero emission vehicles by establishing a new requirement that manufacturers selling new medium- and heavy-duty trucks in California be required to sell zero-emission trucks at an increasing percentage by 2035.

In the Final EA for the ACT Regulation, CARB concluded that actions taken in response to the ACT Regulation could result in potential indirect physical changes to the environment from potential future development projects related to manufacturing, recycling, mining, and grid improvements. The Final EA for the proposed project acknowledged the potentially significant impacts of such development projects by incorporating by reference CARB’s Final EA for the ACT Regulation (State Clearing House No. 2018052041).

Because these impacts are indirect impacts of the proposed project, and because it would be speculative to analyze the specific impacts caused by hypothetical future construction projects whose scale and location is unknown at this time, both the CARB EA and the Final EA for this Project evaluated these impacts at a more general level of detail than the proposed project’s direct impacts. While lead agencies must use their best efforts to find out and disclose all that they reasonably can about a proposed project’s potentially significant environmental impacts, they are not required to predict the future or foresee the unforeseeable (CEQA Guidelines Section 15144).

IV. FINDINGS ON IMPACTS DETERMINED TO BE LESS THAN SIGNIFICANT

A. Impact Areas Concluded to be Less Than Significant in the Notice of Preparation/Initial Study

South Coast AQMD prepared a NOP/IS to identify the potential significant effects of the proposed project and most environmental topic areas were concluded to have no project impacts or less than significant project impacts. After comments were received on the NOP/IS, all the environmental topic areas were re-evaluated for their potential impacts in the EA. However, the following conclusions from the NOP/IS were not modified by the EA:

1. Aesthetics

The proposed project would not have a substantial direct effect on scenic vistas and scenic resources. Additionally, the proposed project would not directly alter the visual character of a project site or conflict with local regulations governing scenic quality. The proposed project would also not create a new source of substantial light or glare.

Finding. The proposed project would have less than significant direct impacts relating to aesthetics. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

2. Agriculture and Forestry Resources

The proposed project would not directly convert Farmland to non-farm use or conflict with agricultural zoning. The proposed project would not directly conflict with lands zoned as forest land or Timberland Production or result in the loss of forest land to non-forest use. The proposed project would not directly result in the loss of Farmland or forest land to non-agricultural or non-forest use.

Finding. The proposed project would have less than significant direct impacts relating to agriculture and forestry resources. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

3. Air Quality and Greenhouse Gas Emissions

The proposed project would not conflict with or obstruct the implementation of the South Coast AQMD's AQMP, and in fact implements the AQMP. The proposed project also would not diminish an existing air quality rule or future compliance requirement. The proposed project would not result in odors that adversely affect a substantial number of people.

Finding. The proposed project would have less than significant direct, indirect, and cumulative impacts relating to these air quality impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

4. Biological Resources

The proposed project would not directly impact habitat for candidate, sensitive, or special status species. The proposed project would not directly impact riparian or other sensitive habitat, including wetlands. Additionally, the proposed project would not directly impact wildlife movement. The proposed project would also not conflict with local biological resources policies or conflict with habitat conservation plans or natural community conservation plans.

Finding. The proposed project would have less than significant direct impacts to biological resources. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

5. Cultural and Tribal Cultural Resources

The proposed project would not directly impact historical resources, archeological resources, human remains, or tribal cultural resources.

Finding. The proposed project would have less than significant direct impacts to cultural and tribal cultural resources. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

6. Energy

The proposed project would not conflict with or obstruct adopted energy conservation plans, or a state or local plan for renewable energy and energy efficiency. The proposed project would comply with existing energy standards. Additionally, the proposed project would not result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation. Impacts from construction vehicles and equipment were also found to be less than significant.

Finding. The proposed project would have less than significant direct impacts for these energy impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

7. Geology and Soils

The proposed project would not directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving earthquake hazards. Additionally, the proposed project would not result in substantial soil erosion or the loss of topsoil. The proposed project would also not be affected by other geological hazards (e.g., landslides, lateral spreading, liquefaction, or subsidence) or expansive soil. The proposed project would not have impacts from septic tanks or alternative waste disposal systems. Additionally, the proposed project would not result in direct impacts to paleontological resources.

Finding. The proposed project would have less than significant direct impacts to geology and soils. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

8. Hazards and Hazardous Materials

The proposed project would not result in impacts that pose a significant safety hazard to existing and proposed schools. Implementation of the proposed project would not result in impacts associated with development of a site that is listed pursuant to Government Code Section 65962.5. The proposed project would also not result in a safety hazard for projects that are within airport safety zones including safety, noise, overflight and airspace protection. The proposed project would also not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Development pursuant to the proposed project would also not significantly increase fire hazards in areas with flammable materials.

Finding. The proposed project would have less than significant direct, indirect, and cumulative impacts relating to these hazards and hazardous materials topics. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

9. Hydrology and Water Quality

The proposed project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water. The proposed project would also not substantially decrease groundwater supplies or interfere substantially with groundwater recharge. The proposed project would not alter the existing drainage of an affected warehouse site in a manner that would increase erosion; alter the rate or amount of surface runoff; contribute to the runoff water that would exceed the capacity of the existing drainage system or provide substantial additional sources of polluted runoff; or impede or redirect flood flow. The proposed project would not result in flood hazards from tsunamis, seiche zones, or dam inundation. The proposed project would also not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The proposed project would not construct or relocate new or expanded wastewater treatment or storm drain facilities or result in impacts to the wastewater treatment system. The proposed project would not result in impacts to water supply.

Finding. The proposed project would have less than significant direct impacts relating to hydrology and water quality. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

10. Land Use and Planning

The proposed project would not divide an established community or conflict with any land use plan, policy, or regulation that was adopted for the purpose of avoiding or mitigating an environmental impact.

Finding. The proposed project would have less than significant direct, indirect, and cumulative impacts relating to land use and planning. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

11. Mineral Resources

The proposed project would not result in loss of availability of a known mineral resource that is of value to the region, residents of the state, or locally important mineral resources.

Finding. The proposed project would have less than significant direct impacts relating to mineral resources. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

12. Noise

The proposed project would not generate substantial temporary or permanent increase in ambient noise above the levels established in local general plans/ordinances. The proposed project would also not generate excessive groundborne noise or vibration. The proposed project would not expose people to excessive noise from proximity to aircraft or airport noise.

Finding. The proposed project would have less than significant direct impacts relating to noise. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

13. Population and Housing

The proposed project would not induce substantial unplanned population growth or displace substantial numbers of people or housing that would necessitate replacement housing elsewhere.

Finding. The proposed project would have less than significant direct impacts relating to population and housing. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

14. Public Services

The proposed project would not result in substantial adverse physical impacts to fire protection facilities, police protection facilities, school facilities, parks, or other public facilities.

Finding. The proposed project would have less than significant direct impacts relating to public services. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

15. Recreation

The proposed project would not increase the use of existing park or other recreational facilities or include the construction of new recreational facilities that might have an adverse physical impact on the environment.

Finding. The proposed project would have less than significant direct impacts relating to recreation. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

16. Solid and Hazardous Waste

The proposed project would not conflict with regulations related to solid and hazardous waste.

Finding. The proposed project would have less than significant impacts relating to this solid and hazardous waste topic. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

17. Transportation

The proposed project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses or result in inadequate emergency access.

Finding. The proposed project would have less than significant direct, indirect, and cumulative impacts relating to these transportation impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

18. Wildfire

The proposed project would not impair an adopted emergency response plan or emergency evacuation plan and would not exacerbate wildfire risks. Additionally, the proposed project would not be associated with wildfire prevention infrastructure that may result in temporary or ongoing impacts to the environment. People or structures would not be exposed to post-fire impacts or a significant risk of loss, injury, or death involving wildfires due to the proposed project.

Finding. The proposed project would have less than significant direct, indirect, and cumulative impacts relating to wildfire impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

B. Impact Areas Concluded to be Less Than Significant in the Final EA

This section identifies direct and indirect impacts of the proposed project determined to be less than significant within the following topic areas. This determination was based on the application of standards and/or requirements of existing regulations as detailed in Chapter 3 of the Final EA and the analysis in Chapter 4 of the Final EA. As mentioned above, the Final EA for the proposed project tiers off of and incorporates by reference the analysis from the 2016 AQMP Final Program EIR by reference. Additionally, the analysis of indirect impacts related to manufacturing, recycling, mining, and grid improvements was incorporated by reference from CARB's Final EA for the ACT Regulation.

Direct and indirect impacts of the proposed project within these topic areas that the Final EA determined to be significant are addressed in Section IV.

1. Air Quality and Greenhouse Gas Emissions

Given that all WAIRE Point scenarios, except scenarios 15 (high efficiency filtration systems) and 16 (filter purchases), would result in substantial NO_x reductions and given that the proposed project would include tracking and monitoring to ensure that the NO_x emissions reductions benefits from the WPCO Points are realized over time, the Final EA concluded that the emissions benefits from the proposed project far outweigh any potential increase from warehouse relocations.⁴ Therefore, long-term operation of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutants or expose sensitive receptors to substantial criteria pollutant concentrations. Additionally, the proposed project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases. The proposed project would also have a less than significant indirect greenhouse gas emission impact associated with the construction of new or modified manufacturing or recycling facilities or infrastructure projects.

Finding. The proposed project would have less than significant direct and indirect impacts related to the thresholds for air quality and GHG emissions. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

2. Energy

Short-term energy impacts during construction of improvements at warehouses and construction-related indirect impacts associated with new or modified manufacturing or recycling facilities or

⁴ It is unlikely that all warehouse operators would select installation of high efficiency filtration systems and filter purchases as the primary means of fulfilling their WPCO since installation of filtration systems in private properties is the second most expensive compliance option and is harder to implement since this option has the higher long-term costs for private properties owners, which would make it less likely to occur.

infrastructure projects would result in less than significant impacts to utility infrastructure and energy supply.

Finding. The proposed project would have less than significant direct and indirect impacts relating to these energy impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

3. Hazardous Materials and Solid and Hazardous Waste

Hazardous waste impacts associated with routine transport, use, or disposal of batteries are less than significant during operation.

Finding. The proposed project would have less than significant direct impacts relating to these hazardous materials and solid and hazardous waste impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

4. Transportation

Direct transportation impacts from construction activities vehicle miles traveled (VMT) and employee commute VMT from warehouse relocations that were assumed for the purpose of the environmental analysis for the proposed project would be less than significant.

Finding. The proposed project would have less than significant direct impacts relating to these transportation impacts. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

5. Other Impact Areas (Indirect Impacts)

Indirect impacts to Mineral Resources, Population and Housing, Land Use and Planning, Public Services, and Recreation due to the construction of new manufacturing and recycling facilities and improvements to the electrical grid are found to be less than significant. There would be no construction-related indirect impacts to Utilities and Service Systems. Indirect impacts to Population and Housing, Land Use and Planning, Public Services, and Recreation due to the operational phase are less than significant.

Finding. The proposed project would have less than significant indirect impacts for these environmental topics. Accordingly, no changes or alterations to the proposed project were required to avoid or substantially lessen any significant environmental impacts under those thresholds.

V. FINDINGS REGARDING POTENTIALLY SIGNIFICANT ENVIRONMENTAL IMPACTS

The following potentially significant environmental impacts were analyzed in the EA, and the effects of the proposed project were considered. Public Resources Code Section 21081(a) and CEQA Guidelines Section 15091(a) provide that a public agency shall not approve or carry out a project with significant environmental effects unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. Three potential findings can be made for potentially significant impacts:

Finding 1: Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the Final EA (Public Resources Code Section 21081(a)(1) and CEQA Guidelines Section 15091(a)(1)).

Finding 2: Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency (Public Resources Code Section 21081(a)(2) and CEQA Guidelines Section 15091(a)(2)).

Finding 3: Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or project alternatives identified in the Final EA. (Public Resources Code Section 21081(a)(3) and CEQA Guidelines Section 15091(a)(3)).

Based on the analysis in the EA, there are no feasible mitigation measures that South Coast AQMD could adopt to reduce the proposed project's potentially significant environmental impacts. Therefore, South Coast AQMD's findings are limited to Findings 2 and 3.

A. Findings on Potentially Significant Adverse Environmental Impacts that Cannot be Reduced Below a Significant Level

The following summarizes the environmental impact topic areas identified in the Final EA which were concluded to have significant and unavoidable impacts, provides a description of the mitigation measures (if applicable), explains why the environmental impacts cannot be reduced to be less than significant, and presents the South Coast AQMD's findings.

The Final EA identified potentially significant and unavoidable adverse environmental impacts for the proposed project within the following 13 topic areas: 1) aesthetics; 2) agriculture and forestry resources; 3) air quality and greenhouse gas emissions; 4) biological resources; 5) cultural and tribal cultural resources; 6) energy; 7) geology and soils; 8) hazard materials and solid and hazardous waste; 9) hydrology and water quality; 10) mineral resources (during operations); 11) noise; 12) transportation; 13) and utilities and service systems (during operations).

1. Air Quality and Greenhouse Gas Emissions

Environmental Impact: Construction-related air quality impacts and impacts during overlap of construction and operational activities from the installation of ZE truck chargers and hydrogen fueling station infrastructure would result in a cumulatively considerable net increase in criteria air pollutants for which the project region is non-attainment.

The Final EA conducted construction modeling for Scenario 6 (ZE truck charger installation) and Scenario 12 (hydrogen fueling station infrastructure), the scenarios with the highest potential construction air quality impacts. Tables 4.1-3 and 4.1-4 in the Final EA represent the potential second highest and highest construction emissions scenarios, respectively, if all warehouse operators selected these options as the single, sole compliance option to meet their WPCO in a compliance year. Because the Final EA cannot predict how each of the operators will comply with the proposed project, it is not possible to forecast a particular, region-wide compliance approach for the initial 2,902 warehouses that would likely need to earn WAIRE Points in any given compliance year. Thus, the analysis in the Final EA took a conservative scenario approach to estimating the maximum potential impacts associated with the proposed project. The peak daily emissions in Table 4.1-4 in the Final EA represent the highest potential emissions that could occur with implementation of the proposed project. Construction activities associated with the proposed project have the potential to exceed South Coast AQMD significance thresholds for NO_x and CO during the construction phase in the peak year.

The overlap of emissions for these two compliance options Scenarios are provided in Table 4.1-7 of the Final EA for the “worst-case” year and at compliance year 10 (year 2031) of proposed project implementation. The Final EA found that the peak daily emissions during the construction and operational overlap period would exceed the South Coast AQMD's regional air quality CEQA significance thresholds for NO_x for operation in the worst-case year for Scenario 6 (i.e., year 2021) and for NO_x for operation in the worst-case year for Scenario 12 (i.e., year 2024). By year 2031 the initial upfront emissions from installation would be offset by the potential emissions benefits from Scenario 6 and Scenario 12. However, because emissions modeling considers the worst-case scenario in the year where there are higher construction emissions than emissions benefits, the proposed project would temporarily result in significant adverse air quality impacts for NO_x during the “worst-case” construction and operation overlap period under the most conservative scenario.

Mitigation Measures:

The mitigation measures from the 2016 AQMP Final Program EIR, as identified in the Final EA, can be used during construction to reduce these construction-related air quality impacts, where applicable and feasible. Throughout these Findings, these mitigation measures are referred to as “AQ Construction Mitigation Measures.” Additionally, South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 AQMP is an additional resource to assist lead or

responsible agencies with identifying other potential mitigation measures. While these measures could reduce the direct air quality impacts associated with potential construction projects, South Coast AQMD does not have land use authority over those projects, and there are no other feasible mitigation measures which would reduce or eliminate this impact.

Findings:

Finding 2. South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving construction projects implementing the proposed rule, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section V of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Environmental Impact: Indirect construction-related air quality emissions associated with the construction of new manufacturing and recycling facilities, as well as infrastructure for NZE and ZE vehicles could result in a cumulatively considerable net increase in criteria pollutant for which the project region is non-attainment.

Because the proposed project incentivizes the purchase and use of NZE and ZE vehicles, it could indirectly result in the construction and operation of new manufacturing and recycling facilities, as well as infrastructure improvements to support NZE and ZE vehicles. Construction and operational activities would result in an increase in emissions; however, such facilities would be required to seek local land use approvals prior to their implementation. Part of the land use entitlement process requires that each of these projects undergo environmental review consistent with CEQA and other applicable local requirements, and that the land use authority impose feasible mitigation. Nonetheless, because South Coast AQMD does not have land use approval authority, it could not guarantee that any mitigation measures will be imposed, and there are no other feasible

mitigation measures which would reduce or eliminate this impact. Therefore, these indirect construction-related effects are significant.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be adopted by agencies approving construction projects implementing the proposed rule, where applicable and feasible. While these measures could reduce impacts, South Coast AQMD does not have land use authority over those projects, and there are no other feasible mitigation measures which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving construction projects implementing the proposed rule, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Environmental Impact: The proposed project could generate GHG emissions from operations, either directly or indirectly, that may have a significant adverse impact on the environment from the additional energy use caused by installation of MERV 16 or greater filters and filtration systems (Scenario 15) and from cargo growth diversion that were assumed for the purpose of the environmental analysis.

Implementation of the proposed project could increase energy demand and associated GHG emissions under Scenario 15, which assumes that all warehouse operators would install and operate high-efficiency filter systems or replace filters in residences, schools, daycares, hospitals, or community centers proximate to the warehouse location as the single, sole compliance option

to meet their WPCO. The Final EA identified that by the year 2031 this scenario would exceed South Coast AQMD's GHG CEQA significance threshold. Additionally, although it is not reasonably foreseeable that cargo shippers would divert to other ports to avoid the increased cost of compliance with the proposed project, because of the uncertainty of the market response, the Final EA assumes some shipping diversion. Because the cumulative area of impact for GHG emissions is global emissions, the Final EA considers emissions outside of the South Coast AQMD's jurisdiction from cargo growth diversion and impacts are significant and unavoidable.

Mitigation Measures:

There are no feasible mitigation measures that would reduce or eliminate the increase in GHG emissions from the additional energy use caused by operation of MERV 16 or greater filters and filtration systems (Scenario 15) and from potential cargo growth diversion.

Finding:

Finding 3. South Coast AQMD's Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

2. Energy

Environmental Impact: The proposed project could expedite the need for expanded electricity, natural gas, and hydrogen fuel infrastructure resulting in project-level and cumulative energy impacts.

Impacts associated with the need for new or substantially altered utility systems, new and expanded infrastructure, and effects on peak and base period electricity demands are significant and unavoidable impacts of the proposed project. Southern California Edison (SCE) plans for and accommodates the need for electrical, natural gas, and transportation fuel grid infrastructure expansions and improvements through the biennial Integrated Energy Policy Report (IEPR) and is forecasting an increase in energy demand from ZE vehicles. While the IEPR is considering the cumulative effect of N-79-20, which would ultimately shift California's transportation economy to carbon neutral energy sources, the proposed project would expedite this timeline for ZE heavy duty trucks. Since the proposed project expedites the need for electricity, natural gas fueling, and

hydrogen fueling infrastructure to accommodate the electricity demand created by the proposed project this is considered a significant impact.

Additionally, the larger transition to NZE and ZE vehicles would warrant expansion of the energy infrastructure. Public utility companies would continue to improve infrastructure and implement strategies to diversify the grid to accommodate additional electricity demand from use of NZE and ZE vehicles. Most, if not all, new or modified facilities, no matter their size and location would be required to seek local or State land use approvals prior to their development. In addition, part of the land use entitlement process for facilities proposed in California requires that each of these projects undergo environmental review consistent with the requirements of CEQA and the CEQA Guidelines. At this time, the specific location and type of construction needed is not known and would be dependent upon a variety of market factors that are not within the control of South Coast AQMD. Thus, the specific impacts to energy service providers cannot be identified with any certainty, and individual compliance responses could potentially result in significant environmental impacts for which it is unknown whether mitigation would be available to reduce the impacts. However, as stated above, while there are ongoing planning efforts and programs in place to expand hydrogen and natural gas fueling infrastructure in addition to electricity infrastructure, the proposed project would contribute to expediting the need for expansion of the various infrastructure for these energy sources. Therefore, the proposed project's cumulative contribution to impacts on energy infrastructure is cumulatively considerable.

Mitigation Measures:

The authority to determine project-level impacts and require project-level mitigation lies with land use and/or permitting agencies for individual projects. While impacts could likely be reduced to a less-than-significant level by land use and/or permitting agencies, South Coast AQMD does not have the authority to implement mitigation related to new or modified energy infrastructure and such mitigation could include a wide variety of possible measures that are too speculative for identification or analysis at this time. These measures include the AQ Construction Mitigation Measures, measures from the South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 AQMP, and the measures described in CARB's Final EA for the ACT Regulation. There are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD's Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving or implementing energy infrastructure improvement projects, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation were applicable and feasible,

adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

3. Hazardous Materials and Solid and Hazardous Waste

Environmental Impact: The proposed project could result in a substantial increase in batteries and hydrogen fuel cells that could exceed the capacity of the existing recycling infrastructure.

The increased spent battery and fuel cell waste stream could trigger the need for additional recyclers. As described previously, it is not possible to identify the incremental increase in the number of EV batteries caused by the proposed project. Batteries used by EVs would either be reused in a secondary market (e.g., battery storage) or recycled when batteries reach their end of life.⁵ As identified above, Umicore, Glencore, Inmetco, Li-Cycle, and Retriev Technologies (previously known as Toxco) have the technology to recycle NiMH, NiCad, and Li-ion batteries in the nation.⁶ The limited number of existing Li-ion battery recyclers and the fact that these existing recyclers have plans to expand battery recycling, highlights that the recycling industry is only now beginning to expand operations to accommodate EV batteries reaching their end-of-life. The cumulative burden of EV waste is substantial given the growth trajectory of the EV market.⁷ Unlike the solid waste sector, which is required to plan for or adequate safe disposal capacity for

⁷ Harper, Gavin; Sommerville, Roberto; Kendrick, Emma; Driscoll, Laura; Slater, Peter; Stolkin, Rustam; Walton, Allan; Christensen, Paul; Heidrich, Oliver; Lambert, Simon; Abbott, Andrew; Ryder, Karl; Gaines, Linda; & Anderson, Paul (Harper *et. al.*). 2019, November 6. “Recycling Lithium-ion Batteries from Electric Vehicles.” *Nature* 575, 75–86 (2019). <https://www.nature.com/articles/s41586-019-1682-5>

a minimum of 15 years or plan for new and/or expanded facilities pursuant to Assembly Bill 939, no such requirement currently exists for the recycling industry.

To meet the increased demand of refurbishing or reusing batteries and fuel cells, new facilities or modifications to existing facilities would need to be constructed to accommodate recycling activities. In the long term, implementation of the proposed project along with State standards such as the Sustainable Communities and Climate Protection Act (SB 375) and CARB's Advanced Clean Cars program and Truck and Bus Regulation would result in a shift away from petroleum-based fuels toward hydrogen or electric. California is moving in the direction of electrifying its transportation and energy systems and it is anticipated that this would result in a corresponding increase in the market demand for recycling facilities. As more EVs and solar panel systems are introduced to the transportation and energy sector increased economic incentives are anticipated to drive modifications to existing infrastructure.

However, there are no federal, state, or local regulations that require the recycling industry to forecast the capacity of infrastructure needed to meet the demand. While CalEPA formed the Lithium-Ion Car Battery Recycling Advisory Group in 2019 to advise the Legislature on policies pertaining to the recovery and recycling of lithium-ion vehicle batteries, recommendations are still forthcoming. The group is required to submit policy recommendations on or before April 1, 2022. The policy recommendations are intended to address the end-of-life issues with a goal of ensuring that “as close to 100 percent as possible of lithium-ion vehicle batteries in the state are reused or recycled.”⁸ Therefore, while it is expected that efforts are underway to ensure adequate infrastructure for the reuse, recycling, or disposal of lithium-ion batteries, implementation of the proposed project could result in the generation of spent batteries and fuel cells that exceed the current capacity of local recycling infrastructure and impacts are potentially significant.

Mitigation Measures:

The requirement to mandate that the solid waste sector, and the recycling industry, in particular, identify and plan for the potential increase in batteries in the waste stream is outside of the jurisdiction of South Coast AQMD. Similarly, impacts associated with construction of new facilities could likely be reduced to a less-than-significant level by land use and/or permitting agency conditions of approval, including AQ Construction Mitigation Measures, measures from the South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2016 AQMP, and the measures described in CARB's Final EA for the ACT Regulation. South Coast AQMD does not have the authority to implement or require such conditions. Other potential mitigation is too speculative for identification or analysis at this time. Thus, there are no feasible mitigation

⁸ CalEPA, 2021, Lithium-ion Car Battery Recycling Advisory Group, AB 2832 Advisory Group: Draft Work Plan, <https://calepa.ca.gov/climate/lithium-ion-car-battery-recycling-advisory-group/draft-workplan-for-discussion-on-12-14-20-by-the-lithium-ion-car-battery-recycling-advisory-group/>, accessed January 17, 2021.

measures that South Coast AQMD could adopt that could reduce or eliminate the impacts from the increase in battery recycling to the capacity of the existing recycling infrastructure.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by relevant permitting and regulatory agencies, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation were applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Environmental Impact: The proposed project could result in the accidental release of LNG fuel during routine transportation, use, or disposal.

LNG is non-toxic, flammable, disperses more readily in air than conventional fuels, and has more rigorous standards for transportation. It is expected that the increased use of NZE vehicles due to the implementation of the proposed project could increase facilities that receive LNG from local suppliers located in the South Coast Air Basin (Basin). Deliveries of LNG would be made by tanker truck via public roads. LNG trucks are double-walled aluminum and are designed to withstand accidents during the transport of LNG. However, accidental releases may still occur. Four accidental release scenarios were identified in the 2016 AQMP Final Program EIR as having major consequences and the adverse impacts from the four scenarios were determined (refer to section 4.3.4.7.1 of the 2016 AQMP Final Program EIR pp. 4.3-37). During transportation of LNG, it was estimated that the adverse impacts from these release scenarios would extend 0.3 mile. Because sensitive receptors may be within this distance, the accidental release of LNG during transport could cause significant adverse hazards and the increased storage and transport of LNG may substantially alter existing transportation hazards associated with mobile source fuels. Consequently, increased usage of LNG due to implementation of the proposed project could generate significant adverse hazard impacts during routine storage, disposal, use, and transport.

Mitigation Measures:

The mitigation measures from 2016 AQMP Final Program EIR, as identified in the Final EA, can be used as a reference for other agencies, where applicable and feasible, to reduce impacts related to routine storage, disposal, use, and transport LNG. However, these mitigation measures are outside of the South Coast AQMD's jurisdiction, and there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD's Governing Board finds that the mitigation measures identified above can and should be adopted by the relevant permitting or regulatory agencies, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation were applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD's Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Environmental Impact: The project-related waste from construction and scrapped vehicles and equipment could exceed the capacity of local landfills.

Implementation of the proposed project could result in the early retirement of equipment such as on-road trucks and vehicles, off-road vehicles, gasoline-fueled engines, and diesel-fueled engines. Impacts could occur since the older equipment or vehicle parts would be taken out of service in the South Coast AQMD jurisdiction and scrapped and disposed of in landfills. However, approximately 80 percent of a vehicle can be recycled and reused in another capacity. Therefore, the amount of solid waste landfilled because of the proposed project would be relatively small, since most of the parts being replaced have commercial value as scrap metal. The generation of additional waste associated with implementation of the proposed project could impact the abilities of cities and counties to further reduce wastes. However, as discussed above the increase in solid waste expected to be diverted to a landfill is small and many of the waste streams are recyclable.

The U.S. EPA has a policy to ensure that emission reductions programs seeking credit in the SIP are quantifiable, surplus (*not already required*), permanent, and enforceable. Thus, it is expected that when older vehicles are scrapped, they are put out of service permanently and there are mechanisms in place to ensure that this requirement is enforced. Even with the ability to recycle metals from vehicles, there are no guarantees that vehicles will continue to be scrapped in the future, especially if the market is saturated with a high number of vehicles being sought for turnover. So, in an abundance of caution, the potential solid and hazardous waste impacts from the retirement of equipment is concluded to be significant.

Mitigation Measures:

There are no feasible mitigation measures that could reduce or eliminate the impacts from construction and scrapped vehicle and equipment impacts to landfill capacity. Additionally, no mitigation measures were included in the 2016 AQMP Final Program EIR for the impacts of construction waste and scrapped vehicles and equipment to the capacity of local landfills and there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 3. South Coast AQMD's Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Environmental Impact: The proposed project could indirectly result in the construction of new manufacturing facilities, recycling facilities, and infrastructure improvements to support the transition to NZE and ZE vehicles, which would create significant short-term construction and long-term operational impacts regarding hazards and hazardous materials through the routine transport, use, or disposal of hazardous materials during the construction and operational phase.

Because the proposed project encourages and incentivizes the purchase and use of NZE and ZE vehicles, it could also indirectly result in the construction and operation of new manufacturing and recycling facilities, as well as infrastructure improvements to support the transition to NZE and ZE vehicles. These potential impacts were analyzed in CARB's Final EA for the ACT Regulation, and this Final EA incorporates that analysis by reference here. In summary, CARB's analysis found

that short-term construction and long-term operational effects associated with the need for new manufacturing and recycling facilities, as well as infrastructure improvements to support the transition to NZE and ZE vehicles, would create significant impacts regarding hazards and hazardous materials through the routine transport, use, or disposal of hazardous materials.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used by agencies approving new facilities, where applicable and feasible. While these measures could reduce impacts, South Coast AQMD does not have land use authority over those projects, and there are no other feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

4. Transportation

Environmental Impact: In the reasonable “worst-case” analysis for up to three warehouse relocations, which the Final EA assumed would occur for the purpose of the environmental analysis, the proposed project would result in a net increase in truck VMT during operations.

The proposed project is assumed to have the potential to affect regional VMT associated with potential warehouse relocations out of the South Coast AQMD's jurisdiction, potential cargo diversion to other ports, or as a result of a potential decrease in efficiency of goods movement in

the South Coast AQMD's jurisdiction. The WAIRE Program would require warehouse operators to satisfy an annual WPCO, which is based on the reported number of annual truck trips serving the warehouse. To meet the WPCO, WAIRE Points must be earned by completing actions and investments, which include options for acquiring and/or using NZE and ZE trucks. Warehouse operators with multiple warehouses in the South Coast AQMD's jurisdiction may satisfy the WPCO through acquiring NZE and ZE trucks and rerouting those trucks so that the usage points are accumulated by multiple warehouses. Similarly, warehouse operators may contract with trucking companies that already own NZE and ZE trucks to route those trucks to warehouses in the South Coast AQMD. As a result, there is a potential for trucks to be diverted by operators of warehouse to meet their WPCO, thus decreasing the efficiency of goods movement in the South Coast AQMD region, assuming truck routes are currently optimized for efficiency, which may not be true. The increase in truck VMT associated with the proposed project is considered significant and unavoidable.

Mitigation Measures:

There are no feasible mitigation measures that South Coast AQMD could adopt that could reduce or avoid the impacts from an increase in truck VMT and potential cargo growth diversion.

Findings:

Finding 3. South Coast AQMD's Governing Board finds that there are no feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Environmental Impact: Potential indirect transportation impacts resulting from the construction of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

Because the proposed project encourages and incentivizes the purchase and use of NZE and ZE vehicles, it could also indirectly result in the construction and operation of new manufacturing and recycling facilities, as well as infrastructure improvements to support the transition to NZE and ZE vehicles. These potential impacts were analyzed in CARB's Final EA for the ACT Regulations, and this Final EA incorporates that analysis by reference here.

In summary, CARB's analysis found that short-term construction activities would result in short-term construction traffic (primarily motorized) in the form of worker commute- and material delivery-related trips. Depending on the amount of trip generation and the location of new facilities, implementation could result in potentially significant transportation impacts. Additionally, new manufacturing and recycling facilities may affect local roadways during the operational phase potentially increasing VMT levels on nearby roadways. Local roadways may also experience additional egress/ingress points or increased traffic that would result in hazardous conditions on local roadways. Inadequate access may impede emergency vehicle access to new facilities. Therefore, the proposed project's long-term operational-related indirect transportation impacts associated with the construction of new manufacturing facilities, recycling facilities, and infrastructure improvement were also found to be potentially significant.

Mitigation Measure:

The Final EA identified the mitigation measures described in CARB's Final EA for the ACT Regulation that can be used by agencies approving these new facilities, where applicable and feasible. While these measures could reduce impacts, South Coast AQMD does not have land use authority over those projects, and there are no other feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Finding:

Finding 2: South Coast AQMD's Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD's Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

5. Other Impact Areas (Indirect Impacts)

The impact analysis for other impacts in the topic areas for Aesthetics, Agriculture and Forestry Resources, Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality, Mineral Resources (during operations), Noise, and Utilities and Service Systems (during operations), is incorporated by reference from the CARB ACT Regulation Final Environmental Analysis. Pursuant to that analysis, the following impacts associated with the proposed project are considered significant and unavoidable.

Aesthetics

Environmental Impact: Aesthetics impacts, which are indirect impacts of the proposed project, during construction and operation of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

There is uncertainty as to the exact locations of new and modified manufacturing/recycling facilities and infrastructure. Operation and construction of these facilities, though likely to occur in areas with appropriate zoning where other similar facilities may already exist, could introduce or increase the presence of non-natural appearing elements in areas with national, State, or county designated scenic vistas and/or scenic resources visible from State scenic highways. In addition, operation and construction may introduce substantial sources of nighttime lighting for safety and security purposes.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB's Final EA for the ACT Regulation that can be used by agencies approving these new facilities, where applicable and feasible. While impacts could be reduced to a less than significant level by mitigation measures prescribed by local, state, federal, or other land use or permitting agencies, South Coast AQMD does not have the authority to require implementation of mitigation measures related to new or modified facilities that would be approved by local jurisdictions. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD's Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation were applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Agriculture and Forestry Resources

Environmental Impact: Impacts to agricultural land, forest land, and timberland, which are indirect impacts of the proposed project, during construction and operation of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

There is uncertainty as to the exact locations of new and modified manufacturing and recycling facilities, improvements to the electrical grid, and lithium mining; therefore, their location in relation to agricultural land, including farmland, land zoned for agricultural use, and land under Williamson Act (Government Code Section 51200 et seq.) contract is unknown. Similarly, it is uncertain where new and modified facilities would be in relation to forest land and timberland. Construction and modification of these facilities, though likely to occur in areas with appropriate zoning that would not have agricultural or forestry uses, could result in conversion of agricultural land or forest land if they are sited in areas of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, Williamson Act conservation contracts, forest land or timberland.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible.

Potential agricultural and forest resource impacts could be reduced to a less-than-significant level by mitigation measures prescribed by local, state, federal, or other land use or permitting agencies with approval authority over the development projects. However, South Coast AQMD does not have the authority to require implementation of mitigation related to new or modified facilities that would be approved by local jurisdictions. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Biological Resources

Environmental Impact: Biological Resources impacts, which are indirect impacts of the proposed project, during construction and operations from new manufacturing facilities, recycling facilities, and infrastructure improvements to support the transition to NZE and ZE vehicles.

Construction of new recycling and manufacturing facilities and improvements to the electrical grid could require disturbance of undeveloped area which could adversely affect biological resources. Additionally, operation of a new facility could deter wildlife from the surrounding habitat or could impede wildlife movement through the area, operational activities could also cause a reduction in sensitive habitat, interference with a wildlife corridor, loss of special-status species, or conflict with a habitat conservation plan or natural community conservation plan.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible. Impacts to biological resources could be reduced to a less-than-significant level by mitigation that can and should be implemented by local agencies but is beyond the authority of South Coast AQMD and not within its purview. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Section 21081((a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Cultural Resources

Environmental Impact: Impacts to cultural resources, which could be indirectly caused by construction and operations of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

The cultural resources could potentially be affected by ground disturbance activities associated with new manufacturing and recycling facilities and improvements to the electrical grid. Impacted resources could include, prehistoric and historical archaeological sites, paleontological resources, historic buildings, structures, or archaeological sites associated with agriculture and mining, and heritage landscapes. Properties important to Native American communities and other ethnic groups, including tangible properties possessing intangible traditional cultural values, also may exist. Historic buildings and structures may also be adversely affected by demolition-related activities. Most operational activities would not have the potential to affect archaeological, paleontological, or historical resources. Operation of new facilities may, however, change the visual setting of the surrounding area, which could adversely affect historic resources and districts with a visual component.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible.

Potential construction-related and operational-related cultural resources impacts could be reduced to a less-than-significant level by mitigation that can and should be implemented by agencies but is beyond the authority of South Coast AQMD and not within its purview. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Geology and Soils

Environmental Impact: Impacts to geology and soils, which could be indirectly caused by construction and operation of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

Although it is reasonably foreseeable that construction activities could occur as a result of new or modified manufacturing and recycling facilities and improvements to the electrical grid, there is uncertainty as to the exact location of new facilities/infrastructure and, as a result, there is uncertainty as to geologic conditions at project sites. Implementation of the proposed project would not be expected to result in effects to seismicity. The level of susceptibility to geologic effects, such as erosion and landslides, varies by location and geologic conditions.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible. The impacts to geology and soil resources could be reduced to a less-than-significant level by mitigation that can and should be implemented by federal, State, and local agencies, but is beyond the authority of South Coast AQMD and not within its purview. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Hydrology and Water Quality

Environmental Impact: Impacts to hydrology and water quality, which could be indirectly caused by construction and operation of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

New and modified manufacturing and recycling facilities and improvements to the electrical grid could be in locations with a range of hydrologic conditions. Construction of buildings may exacerbate hydrologic hazards. Precise impacts cannot be determined because specific construction details, siting locations, and associated hydrology and water quality conditions are not known at this time. Furthermore, lithium mining and extraction could result in over drafting of groundwater and has substantial effects on water quality.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible. Impacts could be reduced to a less-than-significant level by mitigation that can and should be implemented by other agencies where applicable, but the identified measures are beyond the authority of South Coast AQMD and not within its purview. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Mineral Resources

Environmental Impact: Impacts to mineral resources, which could be indirectly caused during operation to support the transition to ZE vehicles.

Long-term operational compliance responses associated with the proposed project include increased mining and processing of rare materials, especially lithium and platinum. Depending on the magnitude of required materials, implementation of the proposed project could conceivably affect the availability of these mineral resources, which is an indirect impact of the proposed project if access to resources becomes impeded.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible. While these measures could reduce impacts to a less-than-significant level, South Coast AQMD does not have land use authority over those projects. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation were applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Noise

Environmental Impact: Noise impacts, which are indirect impacts of the proposed project, during construction and operation of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

Construction and modification of manufacturing and recycling facilities and improvements to the electrical grid would result in construction-related noise and vibration in excess of applicable standards or that result in a substantial increase in ambient levels at nearby sensitive receptors. Operational-related activities associated with lithium mining could produce substantial stationary sources of noise. New sources of noise associated with the implementation of the proposed project could include operation of manufacturing plants and recycling facilities. Depending on the proximity to existing noise-sensitive receptors, stationary source noise levels could exceed applicable noise standards and result in a substantial increase in ambient noise levels.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible. This impact could be reduced to a less-than-significant level by mitigation that can and should be implemented by other agencies where applicable, but these measures are beyond the authority of South Coast AQMD and not within its purview. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

Utilities and Service Systems

Environmental Impact: Impacts to utilities and service systems, which could be indirectly caused by operation of new manufacturing facilities, recycling facilities, and infrastructure improvement to support the transition to NZE and ZE vehicles.

New manufacturing plants and recycling facilities could generate substantial increases in the demand for water supply, wastewater treatment, storm water drainage, energy, and solid waste services in their local areas. Additionally, depending on the location, new facilities may require new utility service lines and connections. At this time, the specific location, type, and number of new manufacturing and recycling facilities developed is not known and the ultimate magnitude and location of demand for utilities such as water and wastewater cannot be known. Thus, the specific impacts cannot be identified with any certainty, and individual plants could potentially

result in significant environmental impacts related to procurement and delivery of utilities and public services.

Mitigation Measures:

The Final EA identified the mitigation measures described in CARB’s Final EA for the ACT Regulation that can be used as a reference for other agencies, where applicable and feasible. Potential long-term operational-related utilities and service systems impacts could be reduced to a less-than-significant level by mitigation that can and should be implemented by other agencies where applicable, but these measures are beyond the authority of South Coast AQMD and not within its purview. Therefore, there are no feasible mitigation measures that South Coast AQMD could adopt which would reduce or eliminate this impact.

Findings:

Finding 2: South Coast AQMD’s Governing Board finds that the mitigation measures identified above can and should be adopted by lead and responsible agencies approving new facilities, where applicable and feasible. However, all of these measures are within the responsibility and jurisdiction of local governments or other agencies. While these entities can and should adopt appropriate mitigation where applicable and feasible, adoption or implementation of the measures identified above is outside the responsibility and jurisdiction of South Coast AQMD.

Finding 3. South Coast AQMD’s Governing Board finds that there are no other feasible mitigation measures that have been identified, taking into consideration specific economic, legal, social, technological or other factors, that would avoid or substantially lessen this impact, and further, that specific economic, legal, social, technological, or other considerations make infeasible the alternatives identified in the EA, as discussed in Section IV of these Findings (Public Resources Code Sections 21081(a)(3); CEQA Guidelines Sections 15091(a)(3)). As described in the Statement of Overriding Considerations, South Coast AQMD has determined that this impact is acceptable because specific overriding economic, legal, social, technological, or other benefits, including regionwide or statewide environmental benefits, of the proposed project outweigh its significant effects on the environment.

VI. FINDINGS FOR ALTERNATIVES TO THE PROPOSED PROJECT

A. Alternatives Considered and Rejected During the Scoping/Project Planning Process

One public comment recommended that the EA evaluate and consider alternatives such as stricter engine emission standards to be adopted by CARB and implementation of stricter truck emission standards at the ports of Los Angeles and Long Beach. The alternatives that the comment recommended are outside the scope of the South Coast AQMD’s legal authority and ability to enforce as an air district; therefore, these alternatives are legally infeasible and have not been

included in Chapter 5, *Alternatives*, of the Final EA. South Coast AQMD does not have the authority to require CARB to adopt stricter engine emission standards nor is that in the scope of the analysis of the EA. Additionally, South Coast AQMD and the Commercial Marine Ports Working Group is currently evaluating a proposed rule to address indirect sources at the Ports. This is a separate strategy evaluated in the 2016 AQMP and not under the auspice of the proposed project. Furthermore, this alternative would not achieve the project's objectives, which include reducing public health impacts from warehouse activities.

B. Alternatives Selected for Further Analysis in the EA

The following alternatives were determined to represent a reasonable range of feasible alternatives with the potential to feasibly attain most of the basic objectives of the proposed project but avoid or substantially lessen some of the potentially significant effects of the proposed project. Additionally, when comparing the overall effects of alternatives to a project that is designed to benefit the environment such as the proposed project, it is important to consider both adverse and beneficial effects.

1. Alternative A: No Project

The No Project alternative (Alternative A) consists of what would occur if the proposed project was not approved. Alternative A allows decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project.

Alternative A assumed that the WAIRE Program would not be implemented. Therefore, existing and new warehouses located in the South Coast AQMD's jurisdiction to which the proposed project would apply would not be required to meet their WPCO under this alternative. The WPCO compliance strategies in the form of WAIRE Menu actions, a Custom WAIRE Plan, and/or the payment of the optional mitigation fee would not be implemented.

Finding:

This alternative is not capable of meeting any of the project objectives. Because it maintains the status quo, it has no direct adverse significant environmental impacts and would not result in any of the significant and unavoidable impacts associated with the proposed project. However, Alternative A will not provide the substantial emissions reductions or public health protection benefits associated with the proposed project.

Overall, Alternative A is less environmentally beneficial than the proposed project. Unlike the proposed project, it would not provide any emission reduction benefits and would be inconsistent with the 2016 AQMP. Alternative A fails to achieve any of the proposed project objectives, which are: 1) reduce NO_x and PM emissions, including DPM emissions, and reduce associated public health impacts from warehouse activities; 2) facilitate local and regional reduction of emissions

associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting federal and state air quality standards for ozone and PM_{2.5}; 3) implement actions to reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617; and 4) reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse. Because Alternative A is not environmentally superior to the proposed project and does not achieve the project objectives, South Coast AQMD's Governing Board finds it infeasible. Pub. Resources Code 21081(a)(3); *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000-1001 (upholding finding of infeasibility where agency determined alternative failed to achieve project objective).

2. Alternative B: Decreased Emission Reductions

The Decreased Emission Reductions alternative (Alternative B) consists of a version of the proposed project that would result in fewer emission reductions of NO_x and PM_{2.5} in the following three ways:

- The applicability of the WAIRE Program is narrowed to reduce the number of affected warehouses. Specifically, the warehouse size requirement is increased from “greater than or equal to 100,000 square feet” to “greater than or equal to 200,000 square feet”, such that the number of affected warehouses would decrease.
- The beginning of the initial compliance and reporting dates are delayed by one year, such that the regulated warehouses would have a longer time period to plan for and phase in any actions that they would need to undertake to meet their WPCO.
- The rule stringency is relaxed⁹, such that the rule stringency factor for this alternative is below 0.0025 WAIRE Points per WATT and could be as low as 0.0001 WAIRE Points per WATT. The WPCO compliance strategies such as the WAIRE Menu (all of the actions), a Custom WAIRE Plan, and/or the payment of optional mitigation fee would not change.

For the purpose of comparing alternatives to the proposed project Alternative B is considered to encompass all three elements (i.e., an increase in the size requirement, a delay in the initial compliance date, and a decrease in the rule stringency factor) to provide “book-ends” of the range of potential environmental impacts and a framework for understanding the greatest potential impacts when compared to the proposed project.

Finding:

Alternative B is expected to result in fewer regional and local NO_x and PM, including DPM, emission reductions than the proposed project. It would; therefore, take a longer period to achieve,

⁹ Relaxing the stringency factor results in warehouses needing to acquire fewer WAIRE Points to meet the requirements of the proposed project. The stringency factor for the proposed project is 0.0025.

or never achieve, the emission reductions that are needed to meet attainment of federal and state air quality standards for ozone and PM_{2.5} than the proposed project. Alternative B would also provide less public health protection regionally and against exposure to emissions from mobile sources in the communities in the vicinity of warehouses, such as AB 617 communities, than the proposed project.

Furthermore, reducing the number of affected warehouses and relaxing the rule stringency would result in:

- Less adverse direct impacts to air quality during construction because fewer EV chargers and hydrogen fueling stations would be installed. Overlapping of construction and operational activities would also decrease.
- Less adverse direct impacts to GHG emission since fewer MERV 16 or greater filters and filtration systems would need to be installed and used, resulting in lower electricity demands. Additionally, Alternative B would lead to less cargo growth diversion being diverted to other ports because the rule stringency factor would be lower than the proposed project.
- Lower demand for electricity since fewer warehouses would acquire ZE trucks and yard trucks and install charging stations to earn WAIRE Points resulting in less adverse direct impacts to energy.
- Less construction activities and lower acquisition of ZE and NZE trucks. This could lead to the generation of less construction waste and scrapped vehicles resulting in a less adverse direct impact on existing landfills exceeding their capacity. Additionally, the lower demand for ZE vehicles and solar panels would reduce the number of batteries that need to be recycled resulting in less adverse direct impact on the existing recycling infrastructure from exceeding their capacity. The amount, frequency, and duration of routine transport, use, or disposal of LNG fuel would also be less than the proposed project and adverse direct impacts would decrease. Therefore, Alternative B would result in less adverse direct impacts to hazardous materials and solid and hazardous wastes.
- Less truck VMT from warehouse relocations when compared to the proposed project since the lower rule stringency factor would likely lead to fewer than the three warehouse relocations that were assumed for analyzing the proposed project's transportation impacts. Therefore, Alternative B would result in less adverse direct impacts to transportation.

If the compliance date is delayed, Alternative B is expected to result in similar direct impacts compared to the proposed project because a delayed compliance date merely gives warehouses more time to meet the WPCO without changes to the impacts from the proposed project.

Additionally, the reduction in the number or intensity of development of new facilities and grid improvement would likely lead to less adverse indirect environmental impacts in the areas of Aesthetics, Air Quality and Greenhouse Gas Emission, Agriculture and Forestry Resources, Biological Resources, Cultural Resources, Energy, Geology and Soils, Hydrology and Water Quality, Hazardous Materials and Solid and Hazardous Wastes, Mineral Resources, Noise, Transportation, and Utilities than the proposed project. If the compliance date is delayed, indirect adverse environmental impacts would be similar to the proposed project because having more time to comply with the proposed project is not expected to change how warehouses will need to meet the WPCO or change the compliance actions or activities and the level of significance for indirect adverse environmental impacts that could result.

When considering the overall effects of this alternative to the proposed project, even though Alternative B could have less adverse direct and indirect environmental impacts than the proposed project, it would also have less NO_x and PM, including DPM, emissions reductions and less reduction of air pollution that disproportionately affects environmental justice communities than the proposed project. Therefore, this alternative's ongoing, long-term, and permanent air quality and public health benefits would be less when compared to the proposed project, and the alternative would satisfy project objectives to a lesser extent than the proposed project. See Section 2.4 of the Final EA (listing project objectives as: 1) reduce NO_x and PM emissions, including DPM emissions, and reduce associated public health impacts from warehouse activities; 2) facilitate local and regional reduction of emissions associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting federal and state air quality standards for ozone and PM_{2.5}; 3) implement actions to reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617; and 4) reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse). The failure to achieve project objectives to the same extent as the project renders this alternative "infeasible" under Public Resources Code section 21081(a)(3). *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000-1001 (upholding finding of infeasibility where agency determined alternative failed to achieve project objective).

3. Alternative C - Increased Emission Reductions

The Increased Emission Reductions alternative (Alternative C) consists of a version of the proposed project that would result in greater emission reductions of NO_x and PM_{2.5} in the following two ways:

- The applicability of the WAIRE Program is broadened to increase the number of affected warehouses. Specifically, the warehouse size requirement of "greater than or equal to 100,000

square feet” is removed and all warehouses, regardless of their size, will be subject to the WAIRE Program.¹⁰

- The rule stringency is increased, such that the rule stringency factor for the proposed project is above 0.0025 WAIRE Points per WATT and could be as high as 0.0050 WAIRE Points per WATT. The three-year initial compliance period and WPCO compliance strategies such as the WAIRE Menu (all of the actions), a Custom WAIRE Plan, and/or the payment of optional mitigation fee would not change.

For the purpose of comparing alternatives to the proposed project, Alternative C is considered to encompass both elements (i.e., a decrease in the size requirement and an increase in the rule stringency factor) to provide “book-ends” of the range of potential environmental impacts and a framework for understanding the greatest potential impacts when compared to the proposed project.

Finding:

Alternative C is expected to result in greater regional and local NO_x and PM, including DPM, emission reductions than the proposed project, which would help accelerate attainment of federal and state air quality standards for ozone and PM_{2.5}. This alternative would also provide greater public health protection against exposure to emissions from mobile sources in the communities in the vicinity of warehouses, such as AB 617 communities, than the proposed project. Thus, this alternative would go further in achieving the project objectives than the proposed project. See Final EA Section 2.4 (listing project objectives as: 1) reduce NO_x and PM emissions, including DPM emissions, and reduce associated public health impacts from warehouse activities; 2) facilitate local and regional reduction of emissions associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting federal and state air quality standards for ozone and PM_{2.5}; 3) implement actions to reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617; and 4) reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse).

However, increasing the number of affected warehouses and increasing the rule stringency would result in:

- Greater adverse direct impacts to air quality during construction because more EV chargers and hydrogen fueling stations would be installed. The overlap of construction and operational activities would also increase.

¹⁰ The Final Socioeconomic Impact Analysis did not quantify the additional benefits associated with Alternative C from expansion of the rule to encompass warehouses under 100,000 square feet. As currently modeled, Alternative C only affects warehouses greater than or equal to 100,000 square feet and includes a stringency of 0.0050 with a 7-year phase-in period.

- Greater adverse direct impacts to GHG emission since more MERV 16 or greater filters and filtration systems would need to be installed and used, resulting in higher electricity demands. Additionally, because this alternatives' rule stringency factor would be higher than the proposed project, and because it is not reasonably foreseeable to predict how cargo shippers would respond to the increased rule stringency factor, this analysis assumes that implementation would likely lead to more cargo growth being potentially diverted to other ports and generate greater GHG emissions than the proposed project.
- Greater demand for electricity since more warehouses would acquire ZE trucks and yard trucks and install charging stations to earn WAIRE Points resulting in more adverse direct impacts to energy.
- More construction activities and a higher acquisition of ZE and NZE trucks. This could lead to generation of more construction waste and scrapped vehicles resulting in a more adverse direct impact on existing landfills exceeding their capacity. Additionally, Alternative C would result in a higher adverse direct impact on the existing recycling infrastructure from exceeding their capacity. Furthermore, the use of LNG fuel would be more than the proposed project. Therefore, Alternative C would result in more adverse direct impacts to hazardous materials and solid and hazardous wastes.
- Although it is uncertain if smaller warehouses, i.e., warehouses of less than 100,000 square feet in size, would relocate under this alternative, it is expected that the impacts to transportation from truck VMT caused by warehouse relocations could be greater when compared to the proposed project.
- Expanding the proposed project to cover up to 52,000 additional warehouses could incur a substantial administrative burden including compliance activities, such as conducting desktop audits, onsite inspections, and reviewing records.

Additionally, the increase in the number or intensity of development of new facilities and grid improvement would likely lead to more adverse indirect environmental impacts in the areas of Aesthetics, Agriculture and Forestry Resources, Air Quality and Greenhouse Gas Emission, Biological Resources, Cultural Resources, Energy, Geology and Soils, Hydrology and Water Quality, Hazardous Materials and Solid and Hazardous Waste, Mineral Resources, Noise, Transportation, and Utilities and Service Systems than the proposed project. However, Alternative C's direct and indirect environmental impacts would be similar and continue to be less than significant when compared to the proposed project for Land Use and Planning, Mineral Resources (during construction), Population and Housing, Public Services, Recreation, and Wildfire.

When considering the overall effects of Alternative C to the proposed project, even though adverse effects on the environment could be greater than the proposed project in some areas, some of the adverse effects are indirect (e.g., associated with the development of new manufacturing, battery

recycling, and grid improvement facilities) and would result in short-term, temporary construction activities. Moreover, this alternative's beneficial effects on the environment would be long-term and permanent. Alternative C would also have greater protection against exposure to emissions from mobile sources in the communities in the vicinity of warehouse, as such AB 617 communities, than the proposed project. Therefore, this alternative is considered the environmentally superior alternative. CEQA Guidelines, section 15126.6(e)(2)

Nonetheless, this alternative would impose a significant additional administrative burden on the South Coast AQMD that would not be imposed by the proposed project. This is because Alternative C would apply to up to 52,000 warehouse facilities, whereas the proposed project would apply to approximately 3,320 warehouse facilities. This increased administrative burden is a specific economic or "other" consideration that makes this alternative "infeasible" pursuant to Public Resources Code section 21081(a)(3).

4. Alternative D: All Natural Gas Options Only

The All Natural Gas Options Only alternative (Alternative D) is based on the currently proposed applicability and rule stringency factor for the proposed project. However, Alternative D limits the number of actions on the WAIRE Menu that warehouse operators could select and implement to earn WAIRE Points. Specifically, the only actions allowed to earn WAIRE Points under this alternative are related to the use of all natural gas trucks such as the acquisition and/or use of natural gas trucks renewable natural gas (RNG) and/or LNG and equipment, and installation and/or use of natural gas infrastructure. Other WPCO compliance strategies such as a Custom WAIRE Plan and/or the payment of optional mitigation fee would still be available to use by warehouse operators to comply with the proposed project but limits the custom WAIRE Plan options to natural gas options.

Finding:

Since Alternative D does not include the acquisition and/or use of ZE trucks and yard trucks as allowable actions, it could result in fewer regional and local NO_x and PM emission reductions than the proposed project. Additionally, Alternative D would not provide protection against exposure to emissions from mobile sources in the communities in the vicinity of warehouses, such as AB 617 communities because it does not include MERV 16 or greater filters and filtration systems on the WAIRE Menu.

Furthermore, this alternative would result in:

- Less adverse direct impacts to air quality during construction since EV chargers and hydrogen fueling stations would not be included as actions available on the WAIRE Menu. The overlap of construction and operational activities would also decrease.

- Less adverse direct impacts on GHG emissions during operations than the proposed project because Alternative D would not result in increased use of MERV 16 or greater filters and filtration systems. The demands for renewable energy for RNG trucks could increase, but the use of RNG trucks, instead of diesel fueled trucks, could potentially generate more GHG emissions reductions.
- Alternative D would not use ZE trucks and yard trucks or ZE fueling infrastructure, therefore the need for additional electricity demands and energy infrastructure would not exist and adverse direct impacts to energy would be less than the proposed project.
- Alternative D would not generate batteries and hydrogen fuel cells, and the need to recycle them at the existing recycling infrastructure would not exist. Additionally, since natural gas fueling stations are already commercially available, the need for building new natural gas fueling stations and infrastructure would not be as great as for EV chargers and hydrogen fueling stations when compared to the proposed project, and the impact on local landfill would decrease. However, this alternative would accelerate and increase the use of NZE trucks such as LNG trucks. This could lead to a substantial increase in the amount, frequency, and duration of routine transport, use, or disposal of LNG fuel than the proposed project and a potentially greater adverse direct impact on hazardous materials and solid and hazardous waste.
- Because natural gas trucks and infrastructure are more commercially available and currently being deployed in the market, it is expected that it could be less costly to comply with the WPCO under Alternative D than the proposed project. Therefore, Alternative D is expected to have less adverse direct transportation impacts from truck VMT than the proposed project because it would likely lead to fewer than three warehouse relocations.

Additionally, since warehouses subject to the WAIRE Program under Alternative D would not need to use ZE technology or install EV chargers and hydrogen fueling stations, the development of new facilities, including manufacturing, recycling, and grid infrastructure facilities would not be needed. This would likely lead to less adverse indirect environmental impacts in the areas of Aesthetics, Air Quality and Greenhouse Gas Emission, Agriculture and Forestry Resources, Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality, Hazardous Materials and Solid and Hazardous Wastes, Mineral Resources, Noise, Transportation, and Utilities and Service Systems than the proposed project.

When considering the overall effects of Alternative D to the proposed project, it should be noted that even though this alternative could have less adverse direct and indirect environmental impacts than the proposed project, it could also have less NO_x and PM, including DPM, emissions reductions than the proposed project. NZE trucks result in approximately 90 percent of reductions in NO_x emissions and some PM emissions reductions while electric trucks result in 100 percent of NO_x and PM emissions reductions. Additionally, Alternative D would not provide protection

against exposure to emissions from mobile sources in the communities in the vicinity of warehouses that the proposed project provides. Alternative D does not include MERV 16 or greater filters and filtration systems on the WAIRE Menu or Custom WAIRE Plans. Therefore, this alternative's ongoing, long-term, and permanent air quality benefits as well as protection against exposure to emissions from mobile sources could be less when compared to the proposed project. As a result, this alternative is not environmentally superior to the proposed project.

Moreover, the alternative would satisfy project objectives to a lesser extent than the proposed project because it would likely result in fewer emission reductions. See Section 2.4 of the Final EA (listing project objectives as: 1) reduce NO_x and PM emissions, including DPM emissions, and reduce associated public health impacts from warehouse activities; 2) facilitate local and regional reduction of emissions associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting federal and state air quality standards for ozone and PM_{2.5}; 3) implement actions to reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617; and (4) reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse). The failure to achieve project objectives to the same extent as the project renders this alternative "infeasible" under Public Resources Code section 21081(a)(3). *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000-1001 (upholding finding of infeasibility where agency determined alternative failed to achieve project objective).

5. Alternative E: All Electric Options Only

The All Electrical Options Only alternative (Alternative E) is also based on the currently proposed applicability and rule stringency factor for the proposed project at 0.0025 WAIRE Points per WATT. However, Alternative E limits the number of actions on the WAIRE Menu that warehouse operators could select and implement to earn WAIRE Points. Specifically, the only actions allowed to earn WAIRE Points under this alternative are related to the use of all electric equipment such as the acquisition and/or use of all electric trucks and installation and/or use of ZE fueling or charging infrastructure. Other WPCO compliance strategies such as a Custom WAIRE Plan and/or the payment of optional mitigation would still be available to use by warehouse operators to comply with the proposed project.

Finding:

Alternative E is expected to result in greater regional and local NO_x and PM_{2.5} emission reductions than the proposed project, which would help accelerate attainment of federal and state air quality standards for ozone and PM_{2.5}. However, due to the current market availability of electric trucks and yard trucks within the initial compliance period, compliance with Alternative E to use only the ZE technology would be challenging for some warehouse operators at the beginning. Additionally, Alternative E would not provide protection against exposure to emissions

from mobile sources in the communities in the vicinity of warehouses, such as AB 617 communities through the use of air filtration systems on the WAIRE Menu or Custom WAIRE Plan.

Furthermore, Alternative E would result in:

- Similar air quality impacts directly resulted from construction and overlapping construction and operations to those for the proposed project.
- Although electricity uses for electric trucks and yard trucks and associated GHG emissions could increase under Alternative E, this increase could be partially offset by the reductions of electricity uses and GHG emissions associated with the use of MERV 16 or greater filters and filtration systems because filters and filtration systems would no longer be on the WAIRE Menu or Custom WAIRE Plans. Therefore, this alternative could have less adverse direct impacts on GHG emissions during operations than the proposed project.
- The magnitude of additional electricity demand and energy infrastructure would be similar to the proposed project since some of the modeled WAIRE Points scenarios already accounted for the possibility of all ZE serving the warehouses subject to the WAIRE Program. Therefore, Alternative E would have similar but likely somewhat greater than some scenarios direct impacts on energy during operations.
- The amount of spent EV batteries and hydrogen fuel cells generated by Alternative E would be similar to the proposed project since some of the modeled WAIRE Points scenarios already accounted for the possibility of all ZE serving the warehouses subject to the WAIRE Program. Therefore, the direct impacts on hazardous materials and solid and hazardous waste with regards to exceeding the capacity of the existing recycling infrastructure to meet the recycling of batteries and hydrogen fuel cells of Alternative E is similar to the proposed project. Additionally, this alternative's direct impact on hazardous materials and solid and hazardous waste from construction waste that could be characterized as potentially hazardous would not be as great as the proposed project because of the similar amount of ZE serving the warehouses, and because construction debris from installing MERV 16 or greater filters and filtration systems would not exist. Since the use of NZE trucks such as LNG trucks would not be included on the WAIRE Menu or Custom WAIRE Plans, the direct impact on hazardous materials and solid and hazardous waste from routine transport, use, or disposal of LNG fuel would not exist.
- When the only available compliance option is the ZE technology, and a market-wide commercial deployment of ZE technology, particularly in trucks, is not currently available at the time of this EA, Alternative E is likely to cause more warehouses that are not able to use the ZE technology to relocate outside the South Coast AQMD's jurisdiction, thereby resulting

in greater adverse transportation impacts on truck VMT from warehouse relocation than the proposed project.

Additionally, the indirect adverse environmental impacts on air quality and GHG emissions, energy, hazardous materials and solid and hazardous waste, and transportation could be greater for Alternative E than the proposed project. Since the only available compliance option is the ZE technology, this could lead to an increased use and demand of the ZE technology (e.g., electric trucks and yard trucks) and necessary supporting infrastructure that could indirectly lead to construction of more manufacturing and battery recycling facilities, and more improvements to the electrical grid. The increase in the development of new facilities and grid improvement would likely lead to greater adverse indirect environmental impacts in the areas of Aesthetics, Agriculture and Forestry Resources, Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality, Mineral Resources, Noise, and Utilities and Service Systems than the proposed project. As a result, this alternative is not environmentally superior to the proposed project.

Alternative E could have greater NO_x and PM, including DPM, emissions reductions than the proposed project; however, using only the ZE technology would be challenging for some warehouse operators at the beginning. This technological challenge makes this alternative “infeasible” pursuant to Public Resources Code section 21081(a)(3). When considering the overall effects of this alternative to the proposed project, this alternative is intended to further accelerate the use of ZE technology than the proposed project to make it more available and less costly. This alternative’s ongoing, long-term, and permanent air quality benefits could be greater overtime than the proposed project. However, because Alternative E does not include MERV 16 or greater filters and filtration systems on the WAIRE Menu or Custom WAIRE Plans, it would not provide protection against exposure to emissions from mobile sources in the community in the vicinity of warehouse, such as AB 617 communities that the proposed project provides. Alternative E is also likely to cause more warehouses that are not able to use the ZE technology to relocate outside the South Coast AQMD’s jurisdiction, thereby resulting in fewer emission reductions. As a result, this alternative would satisfy some project objectives to a lesser extent than the proposed project. See Section 2.4 of the Final EA (listing project objectives as: 1) reduce NO_x and PM emissions, including DPM emissions, and reduce associated public health impacts from warehouse activities; 2) facilitate local and regional reduction of emissions associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting federal and state air quality standards for ozone and PM_{2.5}; 3) implement actions to reduce air pollution that disproportionately affects environmental justice communities in accordance with AB 617; and (4) reduce exposure from emissions associated with warehouse activities for communities located in the vicinity of a warehouse. The failure to achieve project objectives to the same extent as the project renders this alternative “infeasible” under Public Resources Code section 21081(a)(3). *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1000-1001 (upholding finding of infeasibility where agency determined alternative failed to achieve project objective).

VII. FINDINGS CONCLUSION

Based on the preceding, South Coast AQMD's Governing Board finds that there are no feasible mitigation measures it could adopt which would reduce or avoid the proposed project's potentially significant environmental impacts. While the Final EA identifies certain mitigation that can or should be adopted or implemented by local governments or other agencies when acting as lead or responsible agencies, and where feasible and appropriate, these measures are within the responsibility and jurisdiction of these other agencies. In addition, South Coast AQMD's Governing Board finds that specific economic, legal, social, technological, or other considerations make infeasible the project alternatives identified in the Final EA.

VIII. STATEMENT OF OVERRIDING CONSIDERATIONS

CEQA requires decision makers to balance the benefits of a proposed project against its unavoidable environmental risks when determining whether to approve a project. If the benefits of the project outweigh the unavoidable adverse environmental effects, those effects may be considered "acceptable" (CEQA Guidelines Section 15093(a)). CEQA requires the decision-making agency to support, in writing, the specific reasons for considering a project acceptable despite its significant impacts. Such reasons must be based on substantial evidence in the Final EA or elsewhere in the administrative record (CEQA Guidelines Section 15093 (b)). The agency's statement is referred to as a Statement of Overriding Considerations.

The following provides a summary of the proposed project's significant and unavoidable adverse environmental impacts and the South Coast AQMD's statement of overriding considerations.

A. Impacts of the Proposed Project

If significant adverse environmental impacts of a proposed project remain after incorporating mitigation measures, or no measures or alternatives to mitigate the significant adverse impacts are identified or feasible, the lead agency must make a determination that the benefits of the project outweigh any significant adverse environmental effects if it is to approve the project (CEQA Guidelines Section 15093(a)). If the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project outweigh the unavoidable adverse environmental effects, the adverse effects may be considered "acceptable" (CEQA Guidelines Section 15093(a)). Accordingly, a Statement of Overriding Considerations has been prepared. This Statement of Overriding Considerations is included as part of the record of the project approval for the proposed project. Pursuant to CEQA Guidelines Section 15093(c), the Statement of Overriding Considerations will also be noted in the Notice of Decision for the proposed project.

As set forth above, in the EA, and the Second Draft Staff Report for the proposed project, the proposed project has potentially significant direct and indirect adverse impacts in the following

areas: aesthetic, agriculture and forestry resources, air quality and greenhouse gas emission, biological resources, cultural resources, energy, geology and soils, hazardous materials and solid and hazardous waste, hydrology and water quality, mineral resources (with regards to long-term, operation-related impacts), noise, transportation, and utilities and service systems (during operations).

However, the analysis of potential adverse environmental impacts incorporates a conservative approach, as follows:

- **Conservative Findings for Warehouse Relocations.** Based on the currently proposed rule stringency of 0.0025 WAIRE Points per WATT, the proposed project would not result in warehouse relocations out of South Coast AQMD's jurisdiction. Under the most conservative scenario analyzed in the IEc Study at \$2.00 per square foot (which translates to a stringency factor greater than 0.0050 WAIRE Points per WATT), the proposed project would result in a maximum of six warehouse relocations. The Final EA conservatively considers the potential for up to three warehouse relocations from the proposed project, even though no such relocations are expected based on the IEc Study, to provide a conservative analysis of the operational air quality and GHG emissions, energy, and transportation impacts. An analysis of greater relocations is provided in the Alternatives section of the EA, which includes an alternative rule that uses a stringency of 0.0050 WAIRE Points per WATT.
- **Conservative Findings for Cargo Growth Diversion.** It is speculative to identify where cargo would be diverted given the number of options of ports outside the South Coast AQMD's jurisdiction for international shipping companies. The Ports of Los Angeles and Long Beach have recently studied the potential impacts of imposing a clean truck fund rate on trucks transporting goods to and from the Ports pursuant to the Ports' Clean Truck Program. In particular, the analysis studied whether the cost of complying with that proposed update would cause cargo owners to ship their goods to other ports. The analysis concluded that it would be more cost effective for the vast majority of goods (98.6 percent) to continue using the ports of Los Angeles and Long Beach than to relocate to other ports. Furthermore, the IEc Study found that at a stringency factor of 0.0050 WAIRE Points per WATT (which is higher than the stringency factor of the proposed project) only up to six warehouses might relocate to a nearby region. Because moving to a nearby region increases the travel time by only a few hours, rather than 10+ days from moving to a different port on the east coast, it is not reasonably foreseeable that cargo owners will ship their goods to other ports to avoid the cost of the proposed project if those costs are less than or equal to the costs associated with a 0.0050 WAIRE Points per WATT stringency factor. Nevertheless, the Final EA assumed that there may be some cargo owners who decide to ship their cargo to a different port to avoid the cost of compliance. This is a conservative assumption, as it is a highly unlikely market response.

- **Conservative Analysis of Environmental Impacts Associated with the WAIRE Points Scenarios.** Because the proposed project is a rule that will govern future activities, and because the rule allows regulated parties to comply in a variety of ways, it is impossible to predict or forecast precisely what the environmental impacts of the rule would be. The WAIRE Menu has 32 compliance options, which can be combined, and an approved Custom WAIRE Plan could include compliance options that are not on the WAIRE Menu. The warehouse operator's strategies to satisfy their WPCO may vary from year to year. Since it is speculative to determine individual market actions operators will choose to comply with the proposed project, the Final EA considered the WAIRE Points scenarios to identify the environmental impacts of the WAIRE Points isolated for each individual compliance option. The WAIRE Points scenarios modeled serve as a bounding analysis approach, whereby all 2,902 warehouses were assumed to only comply with a single scenario approach from 2022 through 2031. The scenarios in the Final EA result in a conservative estimate of impacts because it is highly unlikely that all operators would choose to fulfill their WPCO through a single compliance option, every compliance year, for 10 years. No single scenario in this bounding analysis is expected to occur. Rather, they present possible extreme compliance outcomes, and thus provide a conservative, "book-end" estimate of potential impacts. The Final EA selected scenarios based on the greatest potential to result in air quality and GHG emissions, energy consumption, generation of EV batteries and fuel cells, and increase in truck VMT in order to show the range of potential environmental consequences associated with the proposed project therefore providing a very conservative estimate of the potential greatest possible impact associated with the proposed project. In reality, a hybrid of all scenarios (or other compliance approaches encompassed within the range of scenarios analyzed) is expected to occur.
- **Conservative Findings from Truck Vehicle Miles Traveled.** Neither the Office of Planning and Research's (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA (Technical Advisory) nor CEQA Guidelines Section 15064.3(a) directly address how to analyze transportation impacts associated with changes to goods movement, which is largely carried out by heavy-duty trucks. CEQA Guidelines Section 15064.3(a) specifies that VMT to be analyzed is defined as the amount and distance of automobile travel attributable to a project. The term 'automobile' refers to on-road passenger vehicles, specifically cars and light trucks. Senate Bill (SB) 743 is not intended to require the inclusion of heavy-duty truck trips, utility vehicles, or other types of vehicles in the VMT analysis. Nonetheless, to provide a conservative estimate of the potential impacts of the proposed project, the transportation analysis in the Final EA considered potential impacts from truck VMT associated with up to three warehouse relocations that were assumed for the purpose of the analysis. Goods movement generally refers to the movement of raw, semi-finished, and finished materials and products used by businesses and residents across the transportation system. Products can make their way to a business, retail store, or directly to consumers versus traditional purchases by consumers at physical retail outlets. Under this definition, goods movement in Southern California closely

resembles the transportation patterns of retail uses described in the OPR's Technical Advisory. In the Technical Advisory, the recommended significance threshold for retail projects is a net increase in total VMT. Since OPR has not identified guidance for heavy-duty trucks, the Final EA conservatively considered changes in truck VMT associated with the proposed project to be significant if implementation of the proposed project would result in a net increase in total truck VMT associated with up to three warehouse relocations that were assumed for the purpose of the analysis.

- **Conservative Findings from Indirect Impacts.** For indirect impacts, the proposed project's Final EA incorporates the analysis from the CARB's Final EA for the ACT Regulation by reference. The proposed project would likely result in fewer new facilities than CARB's ACT Regulation, given the more limited geographic scope of the proposed project (only within South Coast AQMD's jurisdiction), its more limited application (just to subject warehouses), and the alternative methods of compliance available to warehouses (e.g., installing filtration systems at nearby sensitive receptors). Nonetheless, the Final EA adopted CARB's conservative approach and concludes these potential indirect impacts, while uncertain, are significant and unavoidable.
- **Conservative Findings from Cumulative Impacts.** Cumulative impacts were assessed based on a 'worst-case' relocations analysis and were based on the highly unlikely scenario that all operators would choose to fulfill their WPCO through a single compliance option, every compliance year, for 10 years. The cumulative impact analysis also assumed that there may be some cargo owners who decide to ship their cargo to a different port to avoid the cost of compliance even though cargo shipping diversions are not reasonably foreseeable. As a result, the actual cumulative impacts are not expected to be as great as considered in the EA.

B. Benefits of the Proposed Project

The South Coast AQMD region continues to experience ozone and fine particulate matter levels that exceed federal air quality standards. This poor air quality is among the worst, if not the worst, in the nation and is a key reason why the proposed project is needed. The proposed project will bring about the following benefits:

1. **NO_x and PM Emissions Reductions.** NO_x is the primary pollutant that needs to be reduced to meet federal and state air quality standards, and mobile sources associated with goods movement make up about 52 percent of all NO_x emissions in the South Coast Air Basin. Trucks are the largest source of NO_x emissions in the air basin and for the emissions associated with warehouses. Diesel particulate matter (DPM) reductions would also help meet federal and state air quality standards for fine PM (PM_{2.5}). The main objective of the proposed project is to reduce NO_x and PM emissions, including DPM, thus contributing to reducing emissions from the goods movement sector by requiring warehouse operators to take actions to reduce

emissions directly through their own actions, or through taking actions to facilitate emissions reductions. It is expected that PR 2035 will result in 3,200 to 8,600 tons of NO_x reductions and 48 to 64 tons of PM reductions over the compliance period (2022-2031).

2. **Regional Public Health Benefits.** The Final Socioeconomic Impact Assessment for the proposed project estimated the public health benefits resulting from compliance with the proposed project. The Socioeconomic Impact Assessment estimated the proposed project would result in 150 to 300 fewer deaths, 2,500 to 5,800 fewer asthma attacks, and 9,000 to 20,000 fewer work loss days from 2022-2031. Additionally, the Socioeconomic Impact Assessment conducted a monetary valuation of reductions in adverse health outcomes (see Table 41 of the Socioeconomic Impact Assessment) for each compliance scenario summed over the entire compliance period (2022- 2031).¹¹ Total discounted monetized health benefits are expected to range from \$1.2B to \$2.7B over the compliance period.
3. **Public Health Benefits to Disadvantaged Communities.** The population within 0.5-mile of a large warehouse has a population-weighted average CalEnviroScreen 3.0 (CES 3.0) Score of 46.6 (85th percentile statewide), while the South Coast AQMD jurisdiction has a population-weighted average CES 3.0 Score of 33.9 (67th percentile statewide). The Final Socioeconomic Impact Assessment for the proposed project identified that risks posed from PM_{2.5} and diesel PM are also higher for populations located within 0.5-mile of warehousing facilities. Communities within 0.5-mile have an average asthma rate of 56 per 10,000 individuals (64th percentile) and experience heart attacks at a rate of 9.2 per 10,000 individuals (65th percentile). Comparably, the district-wide percentiles for asthma and cardiovascular incidence rates are 53rd and 57th, respectively. Warehouse-adjacent communities are 62.1 percent Hispanic and 7.6 percent African American, while the district-wide population is 45.4 percent Hispanic and 6.5 percent African American. In addition, the warehouse-adjacent communities experience poverty at a higher rate (46.7%) than non-warehouse-adjacent communities (38.2%). Trucks are the largest source of NO_x emissions in the air basin and truck activity is focused at warehouses, which as the Socioeconomic Impact Assessment identifies, are disproportionately located in disadvantaged communities. Therefore, the proposed project would have a beneficial impact on these communities.
4. **Ozone Attainment.** The primary goal of the 2016 AQMP is to reduce NO_x emissions, as one of many local, state, and federal strategies to meet the 1997 and 2008 8-hour ozone National Ambient Air Quality Standards (NAAQS). If these standards are met, then all other federal and state ozone and PM standards within South Coast AQMD should be achieved. In order to meet these air quality standards, total NO_x emissions in the SCAB must be reduced by

¹¹ South Coast Air Quality Management District, March 2021, Draft Socioeconomic Impact Assessment for Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program and Proposed Rule 316 – Fees for Rule 2305, <http://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules>, accessed March 25, 2021.

approximately 45 percent below ‘baseline’ 2023 levels, and 55 percent below ‘baseline’ 2031 levels. Existing regulations are not sufficient to meet either the 2023 or 2031 federal ozone attainment standard dates. Even newly proposed regulations from CARB and U.S. EPA will not reduce NOx emission enough to be able to meet these air quality standards on their own, and additional actions are needed. No single regulation could achieve federal air quality standards on its own, including the proposed project. However, the WAIRE Program will effectively contribute to additional emissions reductions and enhance emission reductions from other programs and is part of the collective of actions needed to meet air quality standards.

5. **Implements the Control Strategies of the AQMP.** The proposed project would implement Control Measure MOB-03, Emission Reductions at Warehouse Distribution Centers, of the 2016 AQMP. The goal of this measure is to assess and identify potential actions to further reduce emissions associated with emission sources operating in and out of warehouse distribution centers. The proposed project directly implements MOB-03, which was intended to result in emissions reductions at warehouse distribution centers. Additionally, the 2016 AQMP estimated that at least one billion dollars per year in incentive funding to clean up vehicle and engine fleets would be needed – absent any further regulations – to meet the 2023 and 2031 attainment dates. Although incentive funding has increased, it has not reached a level sufficient to turn over enough vehicles to meet air quality standards. The proposed project will work with existing and future incentive programs. The requirements in the WAIRE Program are expected to increase the industry’s interest in incentive programs in order to reduce the cost of compliance. This will help ensure that all incentive funds are spent and spread incentives to a broader segment of industry if more recipients sign up for funding. A regulatory requirement may increase requests for funding from the legislature by many stakeholders, which has the potential to further increase the amount of funding available and reduce the cost of compliance to industry.
6. **Supports Statewide Efforts to Increase the Number of NZE and ZE Vehicles (e.g., CARB’s Mobile Source Strategy and 2017 Scoping Plan Update).** The proposed project provides support for statewide policies and objectives to increase the number of NZE and ZE vehicles. There are many actions occurring across state government to increase the use of ZE vehicles to satisfy many goals, including meeting federal and state air quality standards, reducing localized air quality impacts, reducing GHG emissions, etc. The South Coast AQMD is uniquely positioned to contribute to this effort with its indirect source authority. The proposed project encourages NZE and ZE vehicle use at warehouse facilities as one of many options of compliance. By compliance year 2031, implementation of the proposed project could result in a daily reduction in diesel truck VMT above the cumulative baseline of 2,281,476 miles for Scenario 13, to 10,520 for Scenario 6. Despite the net increase in daily truck VMT from the 'worst-case' potential warehouse relocations of 11,896, this hypothetical increase would be offset by the potential emissions benefits associated with a decrease in

diesel-fueled truck VMT in the South Coast AQMD region for all scenarios except one (the WAIRE Points Scenario 6). Overall, the proposed project is expected to result in a substantial decrease in diesel-fueled truck VMT and an increase in use of NZE and ZE vehicles. Reducing VMT from diesel-fueled trucks is consistent with CARB's Mobile Source Strategy, and state's long-term GHG emissions reduction goals such as those set forth in SB 743 and the 2017 Scoping Plan Update to reduce GHG emissions and traffic-related air pollution.

7. **Ensures that State Actions to Require Cleaner Vehicles Actually Occur in the South Coast AQMD Region.** The proposed project encourages the purchase and use of cleaner vehicles within South Coast AQMD's jurisdiction. The recent ACT and Low NOx Omnibus regulations assume a certain number of new truck sales every year. However, while these regulations ensure that lower emissions will occur *if* trucks are sold, they do not require that these trucks be sold or operate within the South Coast AQMD's jurisdiction. Similarly, the upcoming Transport Refrigeration Unit (TRU) regulation is expected to require that newly manufactured trailer TRUs meet lower PM standards, yet will not mandate that fleets purchase these TRUs. The proposed project would place requirements on warehouse operators within South Coast AQMD's jurisdiction that will encourage them to use cleaner vehicle with an estimated 22,778 Class 6 and 8 trucks purchased for compliance under Scenario 6. This ensures that the potential benefits from new state regulations occur within South Coast AQMD's jurisdiction.
8. **Reduces Localized Air Pollution Proximate to Environmental Justice Communities.** In addition to the regional pollution that exceeds federal air quality standards from emission sources associated with warehouses, there are serious localized health effects from air pollution. Communities have repeatedly expressed concern about these impacts, including through the AB 617 process. An analysis of communities in South Coast AQMD shows that those living within 0.5 miles of a warehouse subject to PR 2305 rank in the 80th percentile according to CalEnviroScreen¹², whereas the average community in South Coast AQMD has much lower burden ranking in the 61st percentile. The WAIRE Program will reduce this local pollution burden on environmental justice communities. Some of these disadvantaged communities with local pollution issues were selected to be part of the AB 617 Program, and all three Year 1 communities requested that the warehouse ISR be developed due to concerns about carcinogenic DPM.¹³ Additionally, funds generated by the proposed project's mitigation fee program are expected to result in economic benefits in the surrounding community.

¹² This tool ranks communities based on their pollution burden (e.g., air pollution levels), as well as community characteristics that can make them more susceptible to impacts from pollution (e.g., socioeconomic status). Communities are given a percentile score (out of 100%) to show how they compare with the rest of the state – higher scores mean they experience higher burden. (<https://oehha.ca.gov/calenviroscreen>).

¹³ Each year AB 617 requires CARB's governing board to consider selecting communities for participation in the Community Air Protection Program. Year 1 communities include the communities CARB selected for the first year (2018) of the Community Air Protection Program.

9. **GHG Emissions Co-Benefits.** The proposed project is projected to have substantial long-term air quality benefits, which will result in GHG emissions co-benefits. By compliance year 2031, implementation of the proposed project could result in potential GHG emission reductions of up to 1,644,880 MTCO₂eq. GHG emissions co-benefits were identified for Scenario 6 (ZE truck acquisition and use), Scenario 11 (solar panel installation and usage), Scenario 12 (hydrogen fueling infrastructure and trucks), Scenario 13 (ZE Class 2b-3 truck acquisitions and visits), Scenario 14 (ZE Class 2b-3 truck visits from non-owned fleets), and Scenario 18 (ZE cargo handling equipment acquisition and use).
10. **Supports the State's Carbon Neutrality Initiatives.** The WAIRE Program incentivizes the purchase and use of NZE and ZE vehicles, the construction of alternative fuel vehicle charging stations, and the installation of solar panels. This transition to an alternative energy future is anticipated by utility providers and provides an overall energy benefit. Additionally, the expansion of hydrogen fueling infrastructure is supported through AB 8 and EO B-48-18, and state programs such as CARB's LCFS Hydrogen Refueling Infrastructure credit provision and the CEC's Grand Funding Opportunity 19-602 grant solicitation, and the CEC's Clean Transportation Program. In addition, there is also opportunity to offset grid energy impacts through installation of solar panel systems.
11. **Expedites Transition to NZE and ZE Trucks.** The WAIRE Program would allow for purchase of new NZE and ZE trucks as a way for warehouse operators to meet their WPCO. It is anticipated that these operators would replace their trucks with new NZE and ZE trucks and that the older trucks would be retired (i.e., scrapped) or transitioned to other uses or warehouses outside of the South Coast AQMD's jurisdiction for trucks that are no longer eligible to access the San Pedro Bay Ports. It is estimated that up to 22,778 Class 6 and 8 trucks would be purchased for compliance under Scenario 6. However, even where the trucks are transitioned to other uses, the Final EA reasonably assumes that they would replace even older, higher emissions trucks in an operator's truck fleet. This assumption is based on the fact that the proposed project does not generate an increase in the national or international demand for trucks used in the goods movement sector. Thus, operators that purchase the trucks replaced by NZE and ZE trucks pursuant to the proposed project would be replacing an existing truck that has aged out of or is nearing the end of its useful life. Accordingly, the proposed project would result in a greater turnover of diesel trucks to NZE and ZE trucks than would have occurred without implementation of the proposed project.
12. **Encourages Truck Efficiency.** The WAIRE Program would require warehouse operators to satisfy an annual WPCO, which is based on the reported number of annual truck trips serving the warehouse. Therefore, there is an incentive to potentially increase efficiency of truck movements to reduce the number of truck trips generated by a warehouse facility, if those truck

movements are not currently at peak efficiency. Reducing truck trips and enhancing efficiency of truck movements would be a beneficial effect of the proposed project.

C. Conclusion

In balancing the project's benefits described above against the significant unavoidable adverse environmental impacts, South Coast AQMD's Governing Board finds that the project's substantial and far-reaching environmental and health benefits, including up to 300 reduced mortalities over the ten-year compliance period, which aim to meet the goals and policies of the 2016 AQMP, outweigh and override the potentially significant unavoidable adverse environmental impacts associated with the project, and these impacts, therefore, are considered acceptable in the light of the project's benefits. South Coast AQMD's Governing Board finds that each of the benefits described above is an overriding consideration, independent of the other benefits, that warrants approval of the project notwithstanding the project's potentially significant unavoidable adverse environmental impacts.

IX. RECORD OF PROCEEDINGS

For purposes of CEQA and these Findings, the Record of Proceedings for the proposed project consists of the following documents and other evidence, at a minimum:

- The NOP/IS and all other public notices issued by South Coast AQMD in conjunction with the proposed project.
- The Final EA for the proposed project, including appendices and technical studies included or referenced in the Final EA, and all other public notices issued by South Coast AQMD for the Final EA.
- The Draft EA for the proposed project including appendices and technical studies included or referenced in the Draft EA, and all other public notices issued by South Coast AQMD for the Draft EA.
- All written comments submitted by agencies or members of the public during the public review comment period on the NOP/IS and Draft EA.
- All responses to written comments submitted by agencies or members of the public during the public review comment period on the NOP/IS and Draft EA.
- All written and verbal public testimony presented during a noticed public hearing for the proposed project.
- The reports and technical memoranda included or referenced in the Response to Comments.

- All documents, studies, EIRs/EAs, or other materials incorporated by reference and tiered off in the Draft EA and Final EA.
- The Resolution adopted by South Coast AQMD in connection with the proposed project, and all documents incorporated by reference therein, including comments received after the close of the public review and comment period and responses thereto.
- Matters of common knowledge to South Coast AQMD, including but not limited to federal, state, and local laws and regulations.
- Any documents expressly cited in these Findings.
- Any other relevant materials required to be in the record of proceedings by Public Resources Code Section 21167.6(e).

A. Custodian and Location of Records

The documents and other materials which constitute the administrative record for South Coast AQMD's actions related to the proposed project are at the South Coast AQMD at 21865 Copley Drive, Diamond Bar, California. The Deputy Executive Officer of the Planning, Rule Development, and Area Sources Division is the custodian of the administrative record for the proposed project. Copies of these documents, which constitute the record of proceedings, are and at all relevant times have been and will be available upon request. This information is provided in accordance with Public Resources Code Section 21081.6(a)(2) and CEQA Guidelines Section 15091(e).

ATTACHMENT G

(Proposed Adoption May 7, 2021)

PROPOSED RULE 2305 WAREHOUSE INDIRECT SOURCE RULE – WAREHOUSE ACTIONS AND INVESTMENTS TO REDUCE EMISSIONS (WAIRE) PROGRAM

(a) Purpose

The purpose of this rule is to reduce local and regional emissions of nitrogen oxides and particulate matter, and to facilitate local and regional emission reductions associated with warehouses and the mobile sources attracted to warehouses in order to assist in meeting state and federal air quality standards for ozone and fine particulate matter.

(b) Applicability

This rule applies to owners and operators of warehouses located in the South Coast Air Quality Management District (South Coast AQMD) jurisdiction with greater than or equal to 100,000 square feet of indoor floor space in a single building.

(c) Definitions

For the purpose of this rule, the following definitions shall apply:

- (1) **ALTERNATIVE ENERGY GENERATION EQUIPMENT** means systems at a warehouse facility capable of generating electricity without the use of diesel or gasoline.
- (2) **ALTERNATIVE-FUELED VEHICLE** means a vehicle or engine which is not powered by gasoline or diesel fuel.
- (3) **ALTERNATIVE FUELING STATION** means fuel dispensing equipment for alternative-fueled vehicles.
- (4) **CLASS 2B TRUCK** means a truck with a Gross Vehicle Weight Rating (GVWR) of 8,501 to 10,000 pounds.
- (5) **CLASS 3 TRUCK** means a truck with a GVWR of 10,001 to 14,000 pounds.
- (6) **CLASS 4 TRUCK** means a truck with a GVWR of 14,001 to 16,000 pounds.

- (7) CLASS 5 TRUCK means a truck with a GVWR of 16,001 to 19,500 pounds.
- (8) CLASS 6 TRUCK means a truck with a GVWR of 19,501 to 26,000 pounds.
- (9) CLASS 7 TRUCK means a truck with a GVWR of 26,001 to 33,000 pounds.
- (10) CLASS 8 TRUCK means a truck with a GVWR of greater than 33,001 pounds.
- (11) COLD STORAGE WAREHOUSE means a warehouse that temporarily stores perishable goods which are required to be either refrigerated or frozen.
- (12) COMPLIANCE PERIOD means the 12-month period during which a warehouse facility or land owner, or operator is required to earn Points, as specified in paragraph (d)(1).
- (13) DIESEL PARTICULATE MATTER (DPM) means the particles found in the exhaust of diesel fueled internal combustion engines. DPM is a component of fine particulate matter.
- (14) DWELL TIME means the number of hours per day a truck or tractor is parked at a warehouse.
- (15) ELECTRIC CHARGER means an electric charging station for vehicles that can operate at 208 Volts or greater. Each unique plug that can charge an individual vehicle at any time, regardless of whether other electric chargers/plugs are operating, counts as one electric charger. This equipment is also referred to as Electric Vehicle Supply Equipment (EVSE).
- (16) FUEL TYPE means the fuel used to power a vehicle, such as electricity, hydrogen, natural gas, gasoline, or diesel fuel.
- (17) MERV 16 means the minimum efficiency reporting value of filters used in heating, ventilation, and air conditioning units that remove at least 95% of particles 0.3 microns and larger as stated in the American Society of Heating, Refrigerating and Air-Conditioning Engineers Standard 52.2.
- (18) NEAR-ZERO EMISSIONS (NZE) TRUCKS means trucks or tractors with engines meeting the California Air Resources Board's lowest non-zero optional NOx standard applicable at the time of manufacture as defined in the California Code of Regulations Title 13, section 1956.8.

- (19) NITROGEN OXIDES (NO_x) mean the sum of nitric oxides and nitrogen dioxides emitted, calculated as nitrogen dioxide.
- (20) PARENT COMPANY means a company or other entity that owns a controlling interest in a company directly or through one or more subsidiaries.
- (21) STRAIGHT TRUCK means a truck that carries cargo on the same chassis as the power unit and cab.
- (22) TRACTOR means a heavy-duty Class 7 or 8 truck designed to pull a semi-trailer.
- (23) TRANSPORT REFRIGERATION UNIT (TRU) means a refrigeration system designed to control the environment of temperature sensitive products transported in trucks or trailers.
- (24) TRUCK CLASS means the size of a truck based on its GVWR.
- (25) TRUCK TRIP means the one-way trip a truck or tractor makes to or from a site with at least one warehouse to deliver or pick up goods stored at that warehouse for later distribution to other locations. A truck or tractor entering a warehouse site and then leaving that site counts as two trips.
- (26) VEHICLE MILES TRAVELED (VMT) means total annual miles of vehicle travel.
- (27) WAREHOUSE means a building that stores cargo, goods, or products on a short- or long-term basis for later distribution to businesses and/or retail customers.
- (28) WAREHOUSE FACILITY means a property that includes a warehouse as well as accessory uses such as parking areas and driving lanes for trucks, trailers, or passenger vehicles; entry and exit points for vehicles; accessory maintenance or security buildings; and fueling or charging infrastructure for vehicles.
- (29) WAREHOUSE FACILITY OWNER means the legal, beneficial, and/or equitable owner or owners of a warehouse facility.
- (30) WAREHOUSE LAND OWNER means the legal, beneficial, and/or equitable owner or owners of the land beneath a warehouse facility.
- (31) WAREHOUSE OPERATOR means the entity who conducts day-to-day operations at a warehouse, either with its employees or through the contracting out of services for all or part of the warehouse operations. A warehouse operator can be, but is not necessarily the warehouse owner.

- (32) WAREHOUSE SIZE means the indoor floor space, measured in square feet, of an individual warehouse building that may be used for warehousing activities.
- (33) WAREHOUSING ACTIVITIES means operations at a warehouse related to the storage and distribution of goods, including but not limited to the storage, labelling, sorting, consolidation and deconsolidation of products into different size packages. Supporting office administration, maintenance, manufacturing areas, or retail sales areas open to the general public, within the same warehouse building, that are physically separate from the warehouse area, are not considered warehousing activities for the purpose of this rule.
- (34) YARD TRUCK means a mobile utility vehicle, that operates as either an on- or off-road vehicle, used to carry cargo containers with or without a chassis; also commonly known as a terminal tractor, utility tractor rig, yard tractor, yard goat, or yard hostler.
- (35) ZERO-EMISSION (ZE) TRUCK has the same meaning as “zero emission vehicle” defined in California Code of Regulations, Title 13, Section 1963.

(d) Requirements

(1) WAIRE Points Compliance Obligation

Beginning with the Initial Reporting Date in Table 1, a warehouse operator shall earn the applicable WAIRE Points, for the prior 12-month period from January 1 through December 31, in the amount specified in subparagraph (d)(1)(A). WAIRE Points shall only be earned for actions and investments completed during the compliance period while the warehouse operator used the warehouse, except as specified in paragraph (d)(6). Only warehouse operators in buildings with greater than or equal to 100,000 square feet of floor area that may be used for warehousing activities and who operate at least 50,000 square feet of the warehouse for warehousing activities are required to earn WAIRE Points.

- (A) The number of WAIRE Points that a warehouse operator must earn in the applicable compliance period shall be calculated according to the following equation.

$$WPCO = WATTs \times Stringency \times \left(\frac{Annual}{Variable} \right)$$

Where:

WPCO = WAIRE Points Compliance Obligation, or the number of WAIRE Points that a warehouse operator must earn every year

WATTs = Weighted Annual Truck Trips as calculated in subparagraph (d)(1)(B) or (d)(1)(C), as applicable

Stringency = 0.0025 WAIRE Points per WATT

Annual Variable = As specified in Table 2

- (B) The Weighted Annual Truck Trips (WATTs) at a warehouse include all actual truck trips that occurred at a warehouse while the warehouse operator was responsible for warehousing activities during the compliance period. If a warehouse is used by more than one warehouse operator, the WATTs are calculated only for truck trips to or from that operator. As specified in the WAIRE Program Implementation Guidelines, actual truck trip data to a warehouse shall be collected by the warehouse operator using methods that provide a verifiable and representative record, and WATTs shall be calculated according to the following equation.

$$WATTs = [Class\ 2b\ to\ 7\ truck\ trips] + [2.5 \times Class\ 8\ truck\ trips]$$

Where:

Class 2b to 7 truck trips = All trucks or tractors entering or exiting a warehouse truck gate(s) or driveway(s) that are truck Class 2b, 3, 4, 5, 6, or 7. If truck class information is not available, Class 2b to 7 trucks are all straight trucks that entered or exited a warehouse truck gate(s) or driveway(s).

Class 8 truck trips = All Class 8 trucks or tractors entering or exiting a warehouse truck gate(s) or driveway(s). If truck class information is not available, Class 8 trucks are all

tractors that entered or exited a warehouse truck gate(s) or driveway(s).

- (C) If a warehouse operator does not have information about the number of truck trips at a warehouse due to a force majeure event such as a destruction of records from a fire, the WATTs shall be calculated according to the following equation.

$$WATTs = Days\ per\ Year \times Warehouse\ Size \times WTTR$$

Where:

Days per Year = The number of days that the warehouse operator has operational control of the warehouse during the compliance period

Warehouse Size = Warehouse size in thousand square feet (tsf), as defined in subdivision (c)

WTTR = Weighted Truck Trip Rate, where:
Warehouses $\geq 200,000$ = 0.95 trips/tsf/day
Warehouses $\geq 100,000$ = 0.67 trips/tsf/day
Cold Storage Warehouses = 2.17 trips/tsf/day

(2) Earning WAIRE Points

WAIRE Points shall only be earned through completing actions in the WAIRE Menu in Table 3 and as described in (d)(3), or by completing actions in an approved Custom WAIRE Plan as described in (d)(4), or by choosing to pay a mitigation fee as described in (d)(5), or using any combination from (d)(3), (d)(4), or (d)(5).

(3) WAIRE Points Earned Using the WAIRE Menu

WAIRE Points may be earned for actions completed in the WAIRE Menu in Table 3 and based on the point values specified therein.

- (A) WAIRE Points may not be earned from WAIRE Menu items in Table 3 if those same actions or investments are required by separate United States Environmental Protection Agency (U.S. EPA), California Air Resources Board (CARB), or South Coast AQMD rules and regulations during the compliance period in paragraph (d)(1). Actions or investments that go beyond U.S. EPA, CARB, or South Coast AQMD rules and regulations can earn WAIRE Points.

- (4) WAIRE Points Earned Using a Custom WAIRE Plan
 - (A) Warehouse facility or land owners, or operators may apply to earn WAIRE Points through a customized plan for their facility. The Custom WAIRE Plan application shall follow the WAIRE Implementation Guidelines and the criteria below.
 - (i) Custom WAIRE Plan applications must demonstrate how the proposed action will earn WAIRE Points based on the incremental cost of the action, the NO_x emission reductions from the action, and the DPM emission reductions from the action, relative to baseline conditions if the warehouse operator had not completed the action in that compliance period.
 - (ii) The methodology to determine the total WAIRE Points for an action in a Custom WAIRE Plan application shall be consistent with methods in the WAIRE Program Implementation Guidelines.
 - (iii) Any WAIRE Points earned from a Custom WAIRE Plan for emission reductions must be quantifiable, verifiable, and real as determined by the Executive Officer and consistent with the WAIRE Implementation Guidelines.
 - (iv) Custom WAIRE Plan applications must include the elements described below:
 - (I) A description of how the proposed actions will achieve quantifiable, verifiable, and real NO_x and DPM emission reductions as quickly as feasible, but no later than three years after plan approval; and
 - (II) A quantification of expected NO_x and/or DPM emission reductions from the proposed actions within the South Coast AQMD and within three miles of the warehouse; and
 - (III) A description of the method to be used to verify that the proposed actions will achieve NO_x and/or DPM emission reductions; and
 - (IV) A schedule of key milestones showing the increments of progress to complete the proposed actions; and

- (V) A description of the location and a map of where the proposed actions will occur; and
 - (VI) Any expected permits or approvals required by other private parties, or South Coast AQMD, or other federal, state, or local government agencies to implement the Custom WAIRE Plan.
 - (v) Any Custom WAIRE Plan that relies on VMT reduction must demonstrate that these reductions are surplus to what is included in the most recently approved Regional Transportation Plan (RTP) and Air Quality Management Plan (AQMP).
- (B) Review of Custom WAIRE Plan Applications
 - (i) A Custom WAIRE Plan application must be submitted at least 270 days before an Annual WAIRE Report is due for the compliance period in which the Plan will earn Points.
 - (ii) Within 30 days of receipt of the Custom WAIRE Plan, the Executive Officer will conduct an initial review of the Custom WAIRE Plan and confirm receipt.
 - (iii) The Executive Officer shall approve or reject the Custom WAIRE Plan within 90 days of submittal. If no formal approval or rejection is received by the applicant, the application is presumed rejected unless otherwise provided for by the Executive Officer in writing. Approval or rejection will be based on whether:
 - (I) The Custom WAIRE Plan was prepared consistent with paragraph (d)(4)(A) and in accordance with the WAIRE Program Implementation Guidelines; and
 - (II) The information provided was complete and accurate.
 - (iv) Within 30 days of disapproval of a Custom WAIRE Plan application as specified in (d)(4)(B)(iii), a warehouse facility or land owner, or operator may revise and resubmit a Custom WAIRE Plan application that corrects all identified deficiencies. If the Executive Officer does not approve the subsequent revised plan within 45 days of resubmission,

then no WAIRE Points may be earned from the Custom WAIRE Plan in the current compliance period.

- (v) A Custom WAIRE Plan application shall be made available by the Executive Officer for public review no less than 30 days prior to approval.
- (C) For any Custom WAIRE Plan that requires implementation beyond the subsequent Annual WAIRE Report, a progress report must be provided every 180 days after Custom WAIRE Plan approval. The progress report shall follow the WAIRE Program Implementation Guidelines and include at a minimum, all of the following:
 - (i) The key milestones from the approved Custom WAIRE Plan that were achieved and a schedule indicating dates for future increments of progress; and
 - (ii) Identification of any milestones that have been or will be achieved later than specified in the approved Custom Plan and the reason for achieving the milestones late. The progress report must describe how each late milestone will be achieved and when WAIRE Points are anticipated to be earned from that action.
- (D) If the Executive Officer determines that a warehouse facility or land owner, or operator is not making adequate progress to complete an approved Custom WAIRE Plan, then the Executive Officer may rescind approval of the plan 30 days after notifying the plan applicant of the proposed rescission. The notice to the plan applicant shall contain a description of the identified deficiencies in the Custom WAIRE Plan implementation.
 - (i) If the warehouse facility or land owner, or operator does not subsequently demonstrate to the Executive Officer's satisfaction that the deficiencies in implementing the plan have been corrected, then the Executive Officer will rescind approval of the Custom WAIRE Plan and notify the owners or operators of the rescission.
- (E) If the expected WAIRE Points from an approved Custom WAIRE Plan are not earned during the applicable compliance period, the warehouse facility or land owner, or operator whose Custom WAIRE Plan was approved shall be in violation of this rule unless

the owner or operator demonstrates that they have met their Warehouse Points Compliance Obligation by the date that they submit their Annual WAIRE Report using WAIRE Points earned through requirements in paragraphs (d)(3) or (d)(5).

(5) Mitigation Fee

In lieu of earning the required number of WAIRE Points in paragraph (d)(3) or (d)(4) a warehouse facility or land owner, or operator may choose to satisfy all or any remaining part of their WAIRE Points Compliance Obligation through payment of a mitigation fee in the amount of \$1,000 for each WAIRE Point. The mitigation fee shall be paid no later than when the applicable Annual WAIRE Report for that compliance period is due.

(6) Transferring WAIRE Points

WAIRE Points are not transferable, except as specified below.

(A) Transferring WAIRE Points to a Different Warehouse

If a warehouse operator conducts warehousing activities at more than one warehouse during any single compliance period, then WAIRE Points earned for one warehouse may be used at the other warehouse(s) under the operational control of that same warehouse operator. Only those points earned in excess of a warehouse operator's WAIRE Points Compliance Obligation at that site may be transferred, and only for the current compliance period. Any WAIRE Points transferred to a different warehouse shall be discounted as specified in the WAIRE Menu in Table 3.

(B) Transferring WAIRE Points to a Different Compliance Period

If a warehouse operator earns more WAIRE Points than is required for its annual ~~Warehouse-WAIRE~~ Points Compliance Obligation, then it may use those remaining WAIRE Points at the same warehouse to satisfy its ~~Warehouse-WAIRE~~ Points Compliance Obligation in any of the following three years.

- (i) WAIRE Points may not be transferred to a subsequent compliance period if the WAIRE Menu items used to earn WAIRE Points are required by U.S. EPA, CARB, or South Coast AQMD rules and regulations in that subsequent year.
- (ii) Warehouse facility or land owners, or operators transferring WAIRE Points to a different compliance period shall demonstrate that any onsite improvements or equipment

installations that were used to earn the WAIRE Points being transferred are still operational at that warehouse facility in the year that WAIRE Points are used.

- (iii) WAIRE Points earned prior to a warehouse operator's first compliance period pursuant to paragraph (d)(1) may be banked and transferred up to three years after the warehouse operator's first compliance period. This early compliance must be documented in an Annual WAIRE Report immediately following the year in which the action or investment was completed.

(C) Transferring WAIRE Points Between a Warehouse Facility or Land Owner and a Warehouse Operator

A warehouse facility or land owner may earn WAIRE Points during a compliance period using the methods specified in paragraphs (d)(3), (d)(4), or (d)(5) or may have WAIRE Points transferred to them from the warehouse operator at that site. The warehouse facility or land owner may transfer these WAIRE Points to any warehouse operator at the site where the WAIRE Points were earned within a three-year period after the points were earned. Points used in this three-year period are subject to clause (d)(6)(B)(ii).

(7) Reporting

(A) Warehouse Operations Notification

Warehouse facility owners shall notify the South Coast AQMD in the manner specified in paragraph (e)(1) on September 1, 2021 and subsequently thereafter when any of the following conditions occur:

- (i) Within 14 calendar days after a new warehouse operator has the ability to use at least 50,000 square feet of a warehouse that has greater than or equal to 100,000 square feet used for warehousing activities;
- (ii) Within 30 calendar days after a renovated warehouse has received a certificate of occupancy from the local land use agency such that the total warehouse space that may be used for warehousing activities has increased or decreased; or
- (iii) Within three calendar days of a request from the Executive Officer.

(B) Initial Site Information Report

Warehouse operators shall submit an Initial Site Information Report in the manner specified in paragraph (e)(2) no later than July 1 of the year that they must submit their first annual WAIRE Report for their operations at that warehouse facility, or within 30 calendar days of a written request by the Executive Officer.

(C) Annual WAIRE Report

Warehouse operators who are required to earn WAIRE Points, or warehouse facility or land owners who earn WAIRE Points as applicable, shall submit an Annual WAIRE Report in the manner specified in paragraph (e)(3) no more than 30 calendar days after January 1, beginning with the Initial Reporting Date in Table 1. The Annual WAIRE Report, in accordance with the WAIRE Program Implementation Guidelines, shall include the information described in paragraph (e)(3) to demonstrate how the warehouse operator satisfied the requirement of paragraph (d)(1) in the preceding compliance period.

(D) If a warehouse operator vacates a warehouse prior to the Annual WAIRE Report submission date in subparagraph (d)(7)(c) in any year that they must satisfy an annual WAIRE Points Compliance Obligation, then the Annual WAIRE Report shall be submitted to South Coast AQMD no later than the date that they vacate the warehouse.

(e) Reporting, Notification, and Recordkeeping Requirements

(1) Warehouse Operations Notification

The notification required pursuant to subparagraph (d)(7)(A) shall be made in the manner specified by the Executive Officer and the WAIRE Program Implementation Guidelines. The notification shall include:

- (A)** The legal name and contact information of any entity leasing at least 50,000 square feet of space at that warehouse and of the warehouse facility owner and land owner, or an affirmation if no entities lease at least 50,000 square feet of space at that warehouse;
- (B)** The duration of the current lease term, if applicable;

- (C) The warehouse size(s) and the square footage that may be used for warehousing activities by each entity leasing at least 50,000 square feet of space at a warehouse; and
- (D) The last known legal name and contact information of the previous entity or entities leasing at least 50,000 square feet of space at that warehouse and the end date of the previous entity's lease, if applicable; and
- (E) How many square feet of the warehouse is used by the warehouse facility owner for warehousing activities.

(2) Initial Site Information Report

The Initial Site Information Report required in subparagraph (d)(7)(B) shall be made in the manner specified by the Executive Officer and the WAIRE Implementation Guidelines, and shall include the following information:

- (A) Warehouse size, and the square footage that may be used for warehousing activities within their operational control.
 - (i) If the warehouse building has less than 100,000 square feet that may be used for warehousing activities, then no additional information pursuant to subparagraphs (e)(2)(B) through (e)(2)(G) is required.
 - (ii) Any operator leasing less than 50,000 square feet of warehouse space that may be used for warehousing activities is not required to report additional information pursuant to subparagraphs (e)(2)(B) through (e)(2)(G), unless the same parent company owns or controls multiple operators in the same building who collectively use greater than or equal to 50,000 square feet of warehousing space for warehousing activity.
- (B) Actual truck trip data, including:
 - (i) Number of truck trips in the previous 12-month period for the warehouse operator at that warehouse;
 - (ii) Number of truck trips anticipated for the next applicable 12-month compliance period in subdivision (d); and
 - (iii) For the purposes of this subparagraph, truck trips shall be reported in two categories. The first category shall include all trucks or tractors using a facility's truck gate or driveway that are truck Class 2b through truck Class 7, or straight

trucks if truck class information is not available. The second category shall include all trucks and tractors that are truck Class 8, or all tractors if truck class information is not available.

- (C) If the warehouse operator owns or leases on-road trucks or tractors that serve that warehouse, the Initial Site Information Report shall include fleet data, for the previous 12-month period including:
 - (i) Number of trucks and tractors in the fleet serving that warehouse, by truck class, and fuel type;
 - (ii) Total VMT by truck class and fuel type; and
 - (iii) Typical dwell time at the facility by truck class; and
 - (iv) Information about which trucks or tractors are owned or leased.
- (D) If the warehouse has an alternative fueling station(s) or electric charging station(s) located onsite, the Initial Site Information Report shall include:
 - (i) Number of electric chargers/alternative fueling stations installed and the date of installation. The report must include the level for each electric charging station. For alternative-fueling stations, the report must include the fuel type, maximum fuel dispensing rate, the maximum amount of fuel that can be dispensed daily, and the pressure of the fueling system, if applicable;
 - (ii) Types of vehicles served;
 - (iii) Total fuel dispensed and/or charging provided in the previous 12-month period.
- (E) If the warehouse operator has yard trucks that are used at that warehouse facility, the Initial Site Information Report shall include:
 - (i) Number of yard trucks used in the previous 12-month period, and indicate which of these are registered as motor vehicles under Vehicle Code section 4000, et seq.;
 - (ii) Fuel type and engine size; and
 - (iii) Total annual hours of operation of all yard trucks for the previous 12-month period.

- (F) If the warehouse has onsite alternative energy generation equipment and/or onsite energy storage equipment, the Initial Site Information Report shall include:
 - (i) The type and rated capacity of the alternative energy generation system in kilowatts and kilowatt-hours per year, and/or rated capacity of the energy storage system in kilowatt-hours, as applicable.
 - (ii) The total energy generation and/or usage of the energy storage system in kilowatt hours expected during the next applicable compliance period in subdivision (d).
- (G) The Initial Site Information Report shall include whether the warehouse operator anticipates earning WAIRE Points from the WAIRE Menu, from a Custom WAIRE Plan, or by choosing to pay a mitigation fee, or the combination thereof, for the next applicable compliance period in subdivision (d). If the warehouse operator anticipates using the WAIRE Menu, the anticipated actions in the WAIRE Menu shall be reported. The actual WAIRE Menu items used for compliance can be from the methods reported in the Initial Site Information Report, or from any other category in the WAIRE Menu, or any other method to earn WAIRE Points in paragraph (d)(2).

(3) Annual WAIRE Report

Annual WAIRE Reports required pursuant to subparagraph (d)(7)(C) or (D) shall be made in the manner specified by the Executive Officer and as specified in the WAIRE Implementation Guidelines, and shall include the following information:

- (A) The Annual WAIRE Report shall include truck trip data, including:
 - (i) Number of actual truck trips during the compliance period described in paragraph (d)(1); and
 - (ii) Truck trips shall be reported in the same manner as described in subparagraph (e)(2)(B)(iii)
- (B) The Annual WAIRE Report shall include how many WAIRE Points were earned from the WAIRE Menu specified in paragraph (d)(3), an approved Custom WAIRE Plan specified in paragraph (d)(4), from mitigation fees specified in paragraph (d)(5), or from transferred WAIRE Points specified in paragraph (d)(6).

(C) For every WAIRE Menu item used to earn WAIRE Points, the WAIRE Annual Report shall contain information about the Reporting Metric specified in Table 3.

(D) Every Annual WAIRE Report shall include current contact information for the warehouse operator.

(4) Recordkeeping

Records which document the accuracy and validity of all information submitted to the South Coast AQMD as required by this rule shall be kept by the warehouse facility or land owner, or operator as applicable, for a minimum of seven years from the reporting deadline, and made available upon request during normal business hours.

(A) A warehouse operator relying on WAIRE Points transferred from a warehouse facility or land owner pursuant to subparagraph (d)(6)(C) must possess records for how the WAIRE Points were earned if they are used to satisfy a WPCO.

(B) Records documenting how WAIRE Points were earned must have been collected contemporaneously with the action itself.

(5) All reports in this rule shall be certified by an authorized official. For purposes of reporting, an authorized official is defined as an individual who has knowledge and responsibility for actions required by this rule, and who has been authorized by an officer of the warehouse facility or land owner, or operator, as applicable, to submit and certify the accuracy of the data presented in these reports on behalf of the owner or operator, based on best available knowledge.

(f) WAIRE Implementation Guidelines

The Executive Officer shall periodically publish guidelines for implementing the WAIRE Program.

(g) Exemptions

(1) Operators In Warehouses That Have Less Than 50,000 Square Feet That They May Use For Warehousing Activities

Warehouse operators who can only use less than 50,000 square feet of a warehouse that is greater than or equal to 100,000 square feet, for warehousing activities due to terms of their lease, are not subject to the requirements in subdivision (d)(1) unless the same parent company owns or

controls multiple operators in the same building who collectively use more than 50,000 square feet of space for warehousing activity.

(2) Warehouse Operators ~~w~~With a WPCO Less ~~t~~Than 10

A warehouse operator with a WPCO that is less than 10 in any compliance period is exempt from the requirement to earn WAIRE Points in paragraph (d)(1) for that compliance period. The WPCO shall be calculated using methods in paragraph (d)(1). The warehouse operator shall document their WPCO and exemption in an Annual WAIRE Report.

(3) Unforeseen Circumstances

In instances where investments or actions completed by an owner or operator perform at a level significantly lower than anticipated due to unforeseen circumstances beyond the control of the warehouse facility or land owner, or operator and such that the anticipated WAIRE Points for that action can-not be fully earned, the owner or operator may apply for a partial or complete exemption to the Executive Officer following procedures in the WAIRE Program Implementation Guidelines. The application must specify what portion of the WPCO determined by subparagraph (d)(1) that the malfunctioning equipment would have satisfied, and relevant details about why the anticipated action was unable to earn the expected WAIRE Points.

(A) The Executive Officer shall grant an exemption from the applicable WAIRE Points requirement only if the following criteria are met:

- (i) The vehicle or equipment does not perform at the level specified by the manufacturer due to a manufacturing defect or a defect in the installation of equipment using manufacturer-approved methods, and
- (ii) The warehouse operator demonstrates that despite their good faith effort to have the vehicle or equipment repaired, either via warranty or through other manufacturer and/or installer-approved methods, that the repair was not completed in a timely manner.

(h) Sunset Date for Rule

The WPCO requirements in (d)(1) shall expire 45 days after the end of the compliance period during which the latter of (h)(1) and (h)(2) has been met.

- (1) A final action becomes effective from the U.S. EPA that finds that all air basins within the South Coast AQMD have attained the 2015 National Ambient Air Quality Standards (NAAQS) for ozone of 70 parts per billion.
- (2) Pursuant to Health and Safety Code 39608, CARB has identified that all air basins in the South Coast AQMD have attained the state ozone standard of 70 parts per billion.
- (3) All reporting requirements for warehouse facility and land owners and operators shall remain in effect for the final compliance period specified in (h), but no reporting shall be required for future compliance periods.
- (4) At least one year prior to the anticipated rule expiration in (h), the Executive Officer shall report to the South Coast AQMD Governing Board on the efficacy of Rule 2305 and recommend which portions of the rule should be retained or amended, if any. This report shall evaluate the potential need for the rule with respect to any applicable Clean Air Act requirements such as anti-backsliding and maintenance plans, other regulations from U.S. EPA and CARB, the state of the market of zero emission and near zero emission technologies serving warehouses, and the existing and anticipated emissions associated with warehouses covered by the rule.

(i) Severability

If any provision of this rule is held by judicial order to be unlawful or otherwise invalid, such order shall not affect the operation or implementation of the remainder of this rule. If any provision of this rule is held by judicial order to be inapplicable to any person or circumstance, such order shall not affect the application of such provision to other persons or circumstances. The severability provided for in this subsection shall include, but is not limited to, invalidation of any exemption in subsection (g) or any of the compliance options in subsections (d)(3), (d)(4), or (d)(5) or the actions in Table 3.

Table 1 – Initial Requirement Date

Phase	Warehouse Size (square feet)	Initial Reporting Date (Annual WAIRE Report)	Initial Compliance Period
1	$\geq 250,000$	January 31, 2023	January 1, 2022 to December 31, 2022
2	$\geq 150,000$ - $<250,000$	January 31, 2024	January 1, 2023 to December 31, 2023
3	$\geq 100,000$ - $<150,000$	January 31, 2025	January 1 2024 to December 31, 2024

ATTACHMENT H

(Proposed Adoption May 7, 2021)

PROPOSED RULE 316 FEES FOR RULE 2305

(1) Purpose

California Health and Safety Code Section 40522.5 provides authority for the South Coast Air Quality Management District to adopt a fee schedule for areawide or indirect sources of emissions which are regulated, but for which permits are not issued, to recover the costs of programs related to these sources. The purpose of this rule is to recover the South Coast AQMD's cost of implementing Rule 2305.

(a) Applicability

This rule applies to owners and operators of facilities subject to Rule 2305 that submit an Annual WAIRE Report, a Custom WAIRE Plan application, an Initial Site Information Report, a Warehouse Operations Notification, or that pay a Mitigation Fee.

(b) Definitions

For the purpose of this rule, the following definitions shall apply:

- (1) ANNUAL WAIRE REPORT is the annual report submitted by a warehouse operator or owner demonstrating how they satisfied their Warehouse Points Compliance Obligation pursuant to Rule 2305 (d)(7)(C).
- (2) CUSTOM WAIRE PLAN APPLICATION is the application submitted by a warehouse operator or owner that describes the customized method that they propose to use to satisfy their Warehouse Points Compliance Obligation pursuant to Rule 2305 (d)(4).
- (3) INITIAL SITE INFORMATION REPORT is the report submitted by a warehouse operator pursuant to Rule 2305 (d)(7)(B).
- (4) MITIGATION FEE is the fee paid by a warehouse operator or owner pursuant to Rule 2305 (d)(5).
- (5) WAREHOUSE has the same definition as in Rule 2305 (c)(27).
- (6) WAREHOUSE OPERATIONS NOTIFICATION is the report submitted by a warehouse owner with information about the warehouse building and any business leasing the warehouse pursuant to Rule 2305 (d)(7)(A).
- (7) WAREHOUSE OPERATOR has the same definition as in Rule 2305 (c)(31).

- (8) WAREHOUSE FACILITY OWNER has the same definition as in Rule 2305 (c)(29).
- (9) WAREHOUSE LAND OWNER has the same definition as in Rule 2305 (c)(30).
- (10) WAREHOUSING ACTIVITIES has the same definition as in Rule 2305 (c)(33).

(c) Annual WAIRE Fees

Warehouse operators and owners who submit reports or notifications required by Rule 2305 shall pay fees according to Table 1. These fees are due at the time that the applicable report or notification must be submitted pursuant to Rule 2305.

Table 1

Report or Notification	Fee
Annual WAIRE Report	\$392.50
Initial Site Information Report	\$140.68
Warehouse Operations Notification	\$29.51

(d) Custom WAIRE Plan Application Evaluation Fee

- (1) Warehouse owners who submit a Rule 2305 Custom WAIRE Plan Application shall be charged fees on a time and materials basis. The amount charged shall be an amount equal to the total actual and reasonable time incurred by South Coast AQMD staff for evaluation of the application, assessed at the hourly staff rate or prorated portion of \$161.25 per hour. The initial fee shall be \$806.25 for each plan, and shall be paid when the Custom WAIRE Plan application is submitted.
- (2) The adjustment to plan application evaluation fees will be determined at the time a plan is approved or rejected and may include additional fees based upon actual review and work time billed. Notification of the amount due or refund will be provided to the applicant, and any additional fees due to the adjustment to plan evaluation fees will be billed following project completion.

(e) Mitigation Program Administrative Fee

Warehouse owners or operators who pay a mitigation fee pursuant to Rule 2305 (d)(5) shall pay an additional fee to cover the reasonable costs incurred by South Coast AQMD staff and/or its consultants to administer the Mitigation Program. This administrative fee shall be equal to 6.25 percent of the mitigation fee paid by the warehouse owner or operator, and shall be paid when the mitigation fee is paid.

(f) Payment Due Date

Payment of all applicable fees in subdivision (d) shall be due at the time that the applicable report must be submitted, and in subdivision (e) hourly fees shall be due in sixty (60) days from the date of personal service or sending by mail, electronic mail, or other electronic means, of the notification of the amount due. For the purpose of this paragraph, the fee payment will be considered to be received by the South Coast AQMD if it is delivered, postmarked, or electronically paid on or before the expiration date stated on the billing notice. If the expiration date falls on a Saturday, Sunday, or a state holiday, the fee payment may be delivered, postmarked, or electronically paid on the business day following the Saturday, Sunday, or the state holiday with the same effect as if it had been delivered, postmarked, or electronically paid on the expiration date.

(g) Exemptions

- (1) Any warehouse facility owner who submits a Warehouse Operations Notification for a warehouse that has less than 100,000 square feet of floor area dedicated to warehousing activities that year is not required to pay fees described in subdivisions (d) through (g).
- (2) Any warehouse operator who operates less than 50,000 square feet of a warehouse for warehousing activities and for which Rule 2305 (e)(2)(A)(ii) applies is not required to pay fees described in subdivision (d).

INTRODUCTION

Proposed Rule (PR) 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program and PR 316 – Fees for Rule 2305 would apply to operators and owners of existing and new warehouses with floor space greater than or equal to 100,000 square feet within a single building. These warehouses are used to receive, store, and serve as a distribution point for goods. The majority of emissions associated with warehouses are from on-road vehicles such as trucks that deliver goods, and off-road vehicles such as cargo handling equipment. PR 2305 would require warehouses subject to the rule to annually take actions that either reduce emissions regionally and locally or that facilitate emission reductions.

More specifically, PR 2305 requires warehouse operators of warehouses subject to PR 2305 to earn a certain number of points each year from emission-reducing activities or payment of a mitigation fee. This program would work similarly to the LEED system by the United States Green Building Council in that actions are assigned a specified level of points based on a menu.¹ For PR 2305, the amount of points every warehouse operator must earn annually depends upon the number of truck trips to their warehouse.² Second, an operator may choose to apply to implement a site-specific custom plan that incorporates actions that are not on the menu, plan approval is required prior to being able to earn points. Custom plans could include onsite and offsite measures within the control of the operator that can be demonstrated to reduce emissions of NO_x and/or diesel PM. Third, an operator may choose to pay a mitigation fee to South Coast AQMD. The funds generated from the mitigation fee will be used to provide financial incentives for truck owners to purchase NZE or ZE trucks, or for the installation of fueling and charging infrastructure, with priority given for projects in the communities near warehouses that paid the fee. In addition, warehouse operators and owners would also have reporting and recordkeeping requirements. Finally, warehouse operators would pay fees as established by PR 316 to reimburse South Coast AQMD for administrative costs associated with ensuring compliance with PR 2305.

There are many factors that go into determining the stringency of proposed rules. For PR 2305, the draft stringency recommended here considered the following points: the need for emission reductions, the significance of emissions associated with the warehousing industry, the potential emissions reductions from PR 2305 when considering other measures, and the impact to industry. The analysis included in this Draft Staff Report and in the accompanying Draft Environmental Assessment (CEQA analysis) and Draft Socioeconomic Impact Assessment describe the information used to develop the proposed rule approach.

AIR QUALITY MANAGEMENT PLAN

The South Coast Air Quality Management District (South Coast AQMD) is the regional air quality regulatory agency for all of Orange County, and large portions of Los Angeles, Riverside, and San Bernardino counties. It is responsible for developing and enforcing air pollution control rules and regulations and implementing strategies to meet attainment standards for the South Coast Air Basin (SCAB) and the Riverside County portions of both the Salton Sea Air Basin (SSAB) and the

¹ There are two important distinctions between LEED and PR 2305. First, the point values between the two systems are completely separate and do not relate to each other. Second, PR 2305 requires annual compliance whereas LEED typically is accomplished on a one-time basis during building construction/design or during renovation.

² Point values consider regional and local emission reductions and cost, but warehouse operators do not need to calculate these values. See Chapter 2 for additional detail.

Mojave Desert Air Basin (MDAB). The federal Clean Air Act (CAA) requires the submission of State Implementation Plans (SIP) for nonattainment areas that do not meet the federal National Ambient Air Quality Standards (NAAQS). Additionally, the California Clean Air Act (CCAA) imposes further requirements on meeting state ambient air quality standards for criteria pollutants. South Coast AQMD's jurisdiction is currently classified as being in extreme nonattainment status for the federal NAAQS ozone standards, and serious nonattainment for the federal fine Particulate Matter (PM 2.5) standards.

Per the California Health and Safety Code, the South Coast AQMD is required to adopt an Air Quality Management Plan (AQMP) to demonstrate compliance with both federal and state ambient air quality standards for South Coast AQMD's jurisdiction.³ The AQMP is a blueprint for meeting federal and state air quality standards, which include the NAAQS for the South Coast AQMD jurisdiction. On March 3, 2017, South Coast AQMD's Governing Board adopted the 2016 AQMP.⁴ Based on analysis in the 2016 AQMP, in order to attain the 8-hour ozone standards by the NAAQS deadlines, the total SCAB emissions of NOx must be reduced to approximately 141 tons per day in 2023 and 96 tons per day in 2031. This represents an additional 45% reduction in NOx beyond baseline 2023 levels, and an additional 55% NOx reduction beyond baseline 2031 levels. As seen in Figure 1, approximately 80% of NOx emissions in 2023 and 2031 will be from mobile sources. The control strategy in the 2016 AQMP includes many stationary and mobile source measures that will be carried out by the South Coast AQMD and the California Air Resources Board (CARB) (Figure 2). To attain the federal ozone and PM 2.5 NAAQS, the 2016 AQMP relies on reducing regional NOx emissions as a primary strategy (NOx is a precursor to the formation of both ozone and PM 2.5), but also includes measures to reduce directly emitted PM 2.5.

CARB is committed to achieving emission reductions with its state Mobile Source Strategy (MSS) in the State Implementation Plan (SIP). However, the majority of these emission reductions come from measures titled as "Further Deployment of Cleaner Technologies" (Further Deployment Measures), which were not fully defined. The Further Deployment Measures are expected to reduce 108 tons per day of NOx emissions beyond baseline by 2023 and 88 tons per day beyond baseline by 2031.

⁴ South Coast AQMD, Final 2016 Air Quality Management Plan, March 2017. <https://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp>

Figure 1: South Coast Air Basin Baseline NO_x Emissions and Reductions Needed to Achieve Federal 8-Hour Ozone NAAQS

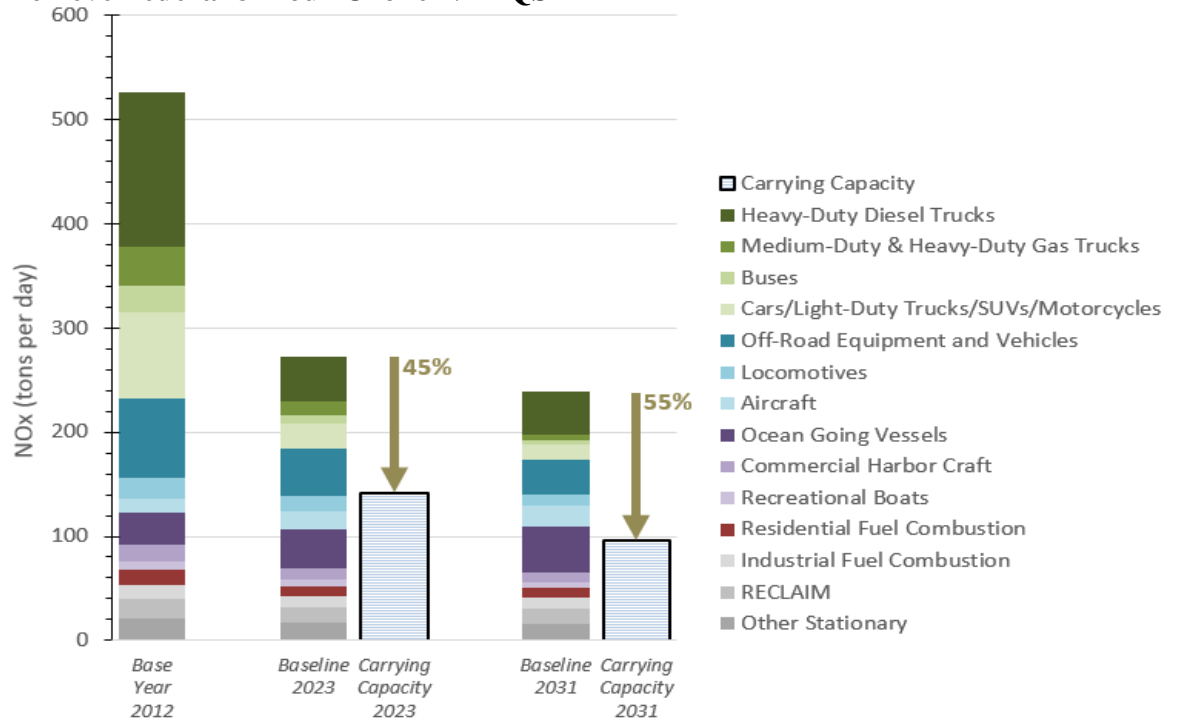

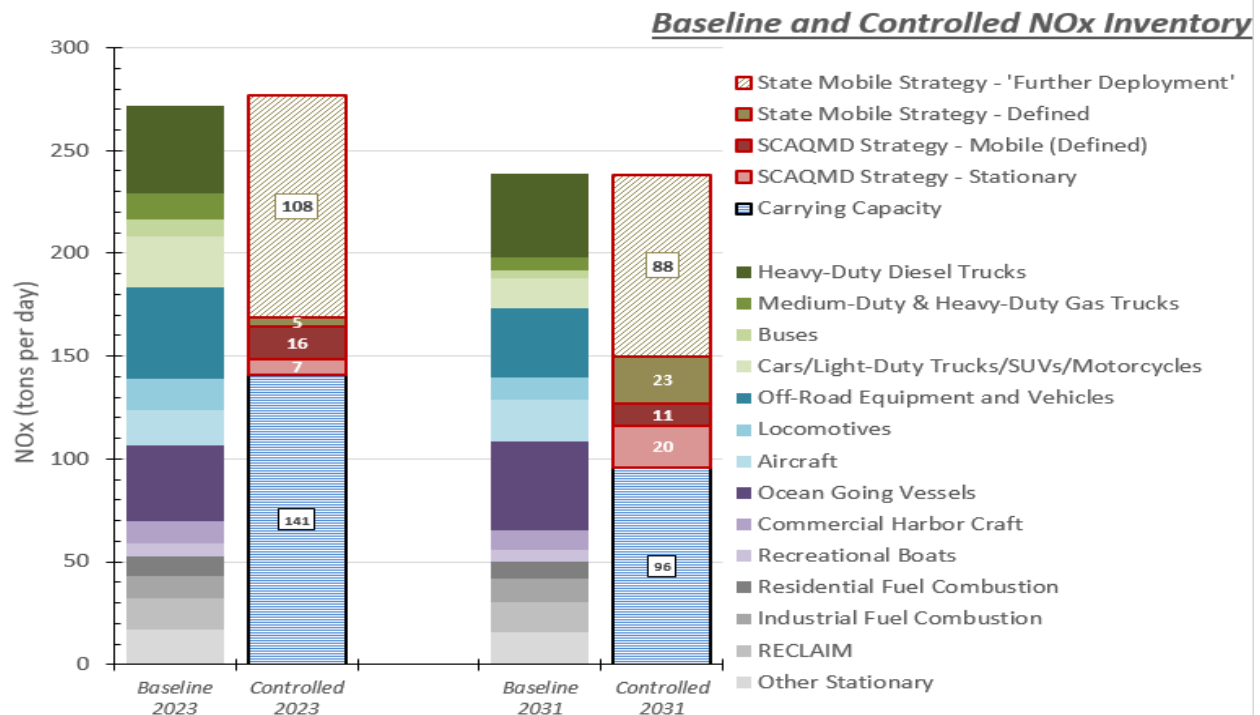

Figure 2: NO_x Control Strategy in the 2016 AQMP

RULEMAKING BACKGROUND

Implementation of the Further Deployment Measures described above is based on a combination of incentive funding and development of new regulations. In the 2016 AQMP, the South Coast AQMD committed to assist CARB and U.S. EPA in developing the Further Deployment Measures, including through the development of local Facility Based Mobile Source Measures (FBMSMs). One of the FBMSMs includes MOB-03 – Emissions Reductions at Warehouse Distribution Centers.

The 2016 AQMP described a year-long process for staff to evaluate potential emissions reduction strategies for the FBMSMs and report back to the Governing Board on the most promising approach. South Coast AQMD staff convened a working group to explore potential voluntary and regulatory approaches for warehouses,⁵ consistent with what was outlined in the 2016 AQMP for control measure MOB-03. After considering the results of that year-long process, in May 2018, the Governing Board directed staff to initiate rulemaking for a warehouse Indirect Source Rule (ISR),⁶ namely Proposed Rule (PR) 2305 and PR 316.

Other South Coast AQMD Air Quality Plans

The South Coast AQMD Governing Board has approved several other plans since adoption of the AQMP that would also benefit from adoption of PR 2305 and PR 316. These include the Contingency Measure Plan for the 1997 8-hour Ozone Standard⁷, and multiple Community Emission Reduction Plans (CERPs) prepared pursuant to Assembly Bill (AB) 617.

The Contingency Measure Plan describes the measures that must be implemented to meet the 2023 attainment deadline for the federal ozone standard. This plan lays out in greater detail many of the strategies included in the 2016 AQMP, in particular for the Further Deployment Measures. With the approval of this plan, the South Coast AQMD Governing Board committed to achieving between 14.4 and 16.4 tons per day of NOx reductions by 2023.⁸

Assembly Bill (AB) 617 is a program established to address the disproportionate burden of air pollution on environmental justice communities, by providing funding and enabling selected communities to shape the actions to reduce emissions. In December 2018, CARB approved the South Coast AQMD Year 1 admission of the communities of San Bernardino/Muscoy, East Los Angeles/Boyle Heights/West Commerce, and Wilmington/Carson/West Long Beach into the AB 617 Program. These AB 617 Year 1 communities established Community Steering Committees (CSCs) to work on the development of CERPs to serve as a road map on how to address each respective community's air quality concerns, and in September 2019, the South Coast AQMD Governing Board adopted the AB 617 CERPs. All three of the South Coast AQMD Year 1 AB 617 communities requested that a warehouse ISR be developed due to their concerns regarding air

pollution impacts from trucks and diesel PM.⁹ Similar to the Year 1 AB 617 communities, the Year 2 AB 617 community of South East Los Angeles also included in their CERP a request for continued development of the warehouse ISR to reduce emissions in their community.¹⁰

State Goals

Several state goals have focused on the need to accelerate the adoption of lower emission technologies, in particular Zero Emissions (ZE) vehicles. Two notable examples include CARB's Draft Mobile Source Strategy (MSS)¹¹ and a recent executive order from the governor.¹²

CARB's Draft MSS is an integrated planning effort designed to meet state goals for criteria pollutants, greenhouse gases, and toxics. One of the key conclusions from this analysis is that a significant portion of the existing mobile source fleet (trucks, cars, off-road equipment, etc.) will need to convert to ZE technologies quickly to meet multiple state goals, including attainment of federal air quality standards. While some strategies like the recently adopted Advanced Clean Trucks (ACT) regulation¹³ have been more clearly defined in the Draft MSS and through CARB rulemaking efforts, other strategies are still undefined and rely on unspecified "accelerated turnover" to ZE technologies, including for emissions sources associated with warehouses, such as trucks and cargo handling equipment. Further, in September 2020, the governor of California signed an executive order directing state agencies to pursue ZE goals for mobile sources. This includes a goal of a 100% ZE truck fleet by 2045, a 100% ZE drayage truck fleet (trucks that visit ports and railyards) by 2035, and 100% ZE off-road equipment operations by 2035. Although this goal sets out potential targets, it does not include any enforceable mechanism and funding programs and regulations (such as PR 2305) that are needed to achieve the targets.

Public Process

Since the South Coast AQMD Governing Board voted to initiate rulemaking in May 2018, staff has held 12 working group meetings, presented five updates to the Mobile Source Committee and two updates to the full South Coast AQMD Governing Board. Written materials include the Preliminary Draft Staff Report, this Draft Staff Report, three drafts of PR 2305 and two drafts of PR 316, and three draft technical reports on the WAIRE Menu. Dates for each of these activities is listed in Table 1.

CEQA Notice of Preparation	Nov. 13, 2020
CEQA Draft Environmental Assessment	Jan. 20, 2021

The following potential options for reducing emissions from warehouses were discussed in the Warehouse ISR Working Group:

- Facility Caps: Allow emissions at each warehouse distribution center to be capped so each warehouse distribution center would have the flexibility to individually determine how to reduce emissions.
- Local Government Measures: Local governments may decide to tailor emission reduction strategies to address local needs (e.g., through their land use authority).
- Clean Fleets Crediting/Banking Program: Allow clean fleets to generate credits that would be managed through a bank while requiring ISR facilities to regularly purchase and apply the credits to offset emissions from individual warehouse distribution centers.
- Voluntary Fleet Certification Program: Allow fleet owners to certify their fleets are cleaner than what would otherwise be required by CARB regulations while requiring facilities to use a prescribed amount of certified fleets.
- Best Management Practices (BMPs):- Allow facilities to choose from an assortment of BMPs such as utilizing ZE or NZE equipment on site, and/or installing ZE/NZE fueling and charging infrastructure, or solar energy storage.
- Mitigation Fees:- Allow facilities to pay mitigation fees if other options are not chosen and apply collected funds to subsidize the purchase and use of ZE/NZE equipment or the installation of fueling/charging infrastructure.

Of these options, only the Best Management Practices (now the WAIRE Menu and Custom WAIRE Plan option) and the Mitigation Fee options have been carried forward to PR 2305. These options were found to be the least administratively burdensome for facilities and South Coast AQMD compliance staff and ensured that emission reductions would be focused in the communities near warehouses. The menu-based approach is similar to other rules that allow multiple options of compliance, such as South Coast AQMD Rule 2202 - On-Road Motor Vehicle

Mitigation Options¹⁴ that focuses on reducing emissions from employee commutes, Rule 403 – Fugitive Dust¹⁵ that focuses on reducing particulate matter emissions from activities like earth moving. Both rules allow multiple options to comply with overall requirements in each rule. PR 2305 will also include a points-based system that is similar to programs widely used in South Coast AQMD’s jurisdiction for development projects including LEED for green building design,¹⁶ and San Bernardino’s Greenhouse Gas Reduction Plan¹⁷. Both programs assign points based on actions taken from a menu, and assign a rating based on the total number of points earned. PR 2305 will take a similar approach to these successful programs (and additionally includes many menu items that can be used in LEED and San Bernardino’s GHG Reduction Plan). PR 2305 and PR 316 are described in greater detail in Chapter 2.

EMISSIONS INVENTORY OF PR 2305 WAREHOUSES

The sources of emissions associated with warehouses include the trucks that deliver goods to and from the facilities, yard trucks located at warehouses that move trailers, transport refrigeration units (TRUs) located on trucks and trailers that keep cargo, like food, cold, and the passenger vehicles for warehouse employees. Additional emissions sources can include onsite stationary equipment (e.g., diesel backup generators or manufacturing equipment), and emissions from power plants that provide electricity for the warehouse – though these sources have not been included in the baseline emissions inventory. Most of these vehicles are diesel powered, except for passenger vehicles which are typically gasoline powered.

The emissions inventory established in the 2016 AQMP provides a platform from which to develop a baseline inventory for the universe of warehouses that would be subject to PR 2305 and PR 316. However, there are several developments that have occurred since the approval of the 2016 AQMP. First, the on-road mobile emissions inventory developed by CARB that was used in the 2016 AQMP is EMFAC 2014. However, a newer version of that model has since been approved by U.S. EPA (EMFAC 2017) with updated emission rates. Second, the CARB Board has approved two key regulations that will affect trucks that travel to warehouses called the Advanced Clean Trucks regulation¹⁸ and the Low NOx Omnibus regulation.¹⁹ Finally, CARB and U.S. EPA are continuing to develop additional regulations, but many are too speculative to consider at their current level of development. One future regulation, the Heavy-Duty Inspection and Maintenance (I/M) regulation,²⁰ is considered here as there is statutory direction for CARB to develop and adopt it²¹ and the regulation has been developed sufficiently to provide a preliminary quantification of the impact. The emissions data from these more recent regulations are included either in the META tool that CARB developed to support their Draft Mobile Source Strategy, and/or within the documentation that CARB has prepared for each regulation. The key data parameters and the associated data sources are listed in Table 2 below.

AIR QUALITY NEED

There are six key reasons why PR 2305 and PR 316 are needed. First and foremost, the SCAB region continues to experience ozone and fine particulate matter levels that exceed federal air

²² Additional details regarding the universe of PR 2305 warehouses is described in Chapter 3 and Appendix A.

²³ Baseline emissions estimates for 2023 and 2031 are lower than previous estimates. The primary difference here is how CARB's Heavy Duty I&M regulations is included. Previous drafts included Heavy Duty I&M in the emission reductions, but not in the baseline inventory.

quality standards. This poor air quality is among the worst, if not the worst in the nation.²⁴ Attaining the air quality standards yields monetized health benefits that are estimated to be about \$173 billion.²⁵ NOx is the primary pollutant that needs to be reduced to meet federal air quality standards, and mobile sources associated with goods movement make up about 52% of all NOx emissions in the SCAB.²⁶ Trucks are the largest source of NOx emissions in the air basin and also for the emissions associated with warehouses. Any diesel PM reductions brought about by PR 2305 and PR 316 will also help meet federal air quality standards for fine PM. PR 2305 and PR 316 would reduce emissions from the goods movement sector by requiring warehouse operators to take actions to reduce emissions directly or through facilitating emissions reductions.

Second, existing regulations are not sufficient to meet either the 2023 or 2031 attainment dates. Even newly proposed regulations from CARB and U.S. EPA (as shown in CARB's Draft MSS) will not be able to meet these air quality standards on their own, and additional actions are needed. No single regulation could achieve federal air quality standards on its own, including PR 2305 and PR 316. However, these proposed rules are designed to contribute their own additional emissions reductions and enhance emission reductions from other programs, and are part of the collection of actions needed to meet air quality standards.

Third, the 2016 AQMP estimated that at least \$1 billion per year in incentive funding to clean up vehicle and engine fleets would be needed – absent any further regulations – to meet the 2023 and 2031 attainment dates. Although incentive funding has increased, reaching between about \$100 to \$200 million per year over the past few years,²⁷ it has not reached a level sufficient to turn over enough vehicles to meet air quality standards. Many incentive programs are oversubscribed,²⁸ with demand far exceeding funding availability. However, some programs are undersubscribed.²⁹ PR 2305 and PR 316 are designed to work with existing and future incentive programs, and can help encourage greater levels of incentive funding and encourage applicants to apply for funding. The regulatory requirements in PR 2305 and PR 316 are expected to increase industry's interest in incentive programs in order to reduce the cost of compliance. This can help ensure that all incentive funds are spent and can potentially spread incentives to a broader segment of industry if more recipients sign up for funding. Finally, much of the incentive funding that South Coast AQMD distributes is allocated annually as part of the state legislature's budgetary process. A regulatory requirement may increase the request for funding from the legislature by many stakeholders, which has the potential to further increase the amount of funding available and reducing the cost of compliance to industry.

A fourth air quality need for PR 2305 and PR 316 is to support statewide efforts to increase the number of ZE vehicles. There are many actions occurring across state government to increase the use of ZE vehicles to satisfy many goals, including meeting federal and state air quality standards, reducing toxics and greenhouse gas emissions, encouraging manufacturing of ZE vehicles in the

²⁹ <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2020/2020-dec4-005.pdf>

state, reducing the dependence on fossil fuels and the related impacts from extracting and producing these fuels, etc.³⁰ The South Coast AQMD is uniquely positioned to contribute to this effort with its authority to regulate indirect sources. PR 2305 and PR 316 provide a mechanism to require warehouse operators to encourage ZE vehicle use at their facilities as one of many options of compliance.

A fifth air quality need is to ensure that state actions to require cleaner vehicles actually occur in the South Coast AQMD region. The recent ACT and Low NOx Omnibus regulations assume a certain amount of new truck sales every year, and also assume that the activity of those newer, cleaner trucks will occur consistent with past behavior as demonstrated in EMFAC. However, the nature of those two regulations ensures that lower emissions occur only *if* trucks are sold. It does not require any certain number of trucks to be sold, or to operate within the South Coast AQMD.³¹ Similarly, the upcoming TRU regulation is expected to have requirements for newly manufactured trailer TRUs to meet lower PM standards, yet will not mandate that fleets purchase them, nor will it direct sales in certain parts of the state.³²

For comparison, CARB mandates a certain percentage of light duty vehicle sales to be zero emission vehicles (ZEVs) or plug-in hybrid electric vehicles (PHEVs)³³ as part of its Advanced Clean Cars (ACC) regulation.³⁴ CARB has reported that all vehicle manufacturers subject to ACC are in compliance as of 2019.³⁵ However, the distribution of ZEVs and PHEVs throughout the state does not coincide with the areas with highest air pollution. Figure 3 shows county-level median Air Quality Index (AQI)³⁶ compared with the percent of the light duty vehicle population that is ZEV or PHEV³⁷. This figure shows that three of the four counties in the South Coast AQMD jurisdiction have the highest AQI in the state, and that ZEVs and PHEVs are not preferentially located in areas with higher AQI.³⁸ PR 2305 and PR 316 would place requirements on warehouse operators in South Coast AQMD that will encourage them to ensure that the potential benefits from statewide regulations occur here.

³⁰ <https://static.business.ca.gov/wp-content/uploads/2019/12/2018-ZEV-Action-Plan-Priorities-Update.pdf>, <https://www.gov.ca.gov/wp-content/uploads/2020/09/9.23.20-EO-N-79-20-text.pdf>, <https://www.ca.gov/archive/gov39/2012/03/23/news17472/index.html>, <https://www.ca.gov/archive/gov39/2018/01/26/governor-brown-takes-action-to-increase-zero-emission-vehicles-fund-new-climate-investments/index.html>, <https://www.ca.gov/archive/gov39/wp-content/uploads/2018/09/9.10.18-Executive-Order.pdf>

³¹ Neither of these regulations impose any requirements on trucks registered out of state. Warehouse operators would have the choice to use ZE or NZE technologies for out of state trucks too.

³² <https://ww2.arb.ca.gov/our-work/programs/transport-refrigeration-unit/new-transport-refrigeration-unit-regulation>

³³ ZEVs and PHEVs have lower tailpipe emissions than their conventional gasoline or diesel counterparts as they can run wholly or at least partially without using an internal combustion engine.

³⁴ <https://ww2.arb.ca.gov/our-work/programs/advanced-clean-cars-program>

³⁵ https://ww2.arb.ca.gov/sites/default/files/2020-10/2019_zev_credit_annual_disclosure.pdf

³⁶ Air Quality Index is an indicator of overall air quality and considers all criteria air pollutants measured within a geographic area. Higher values indicate worse air quality.

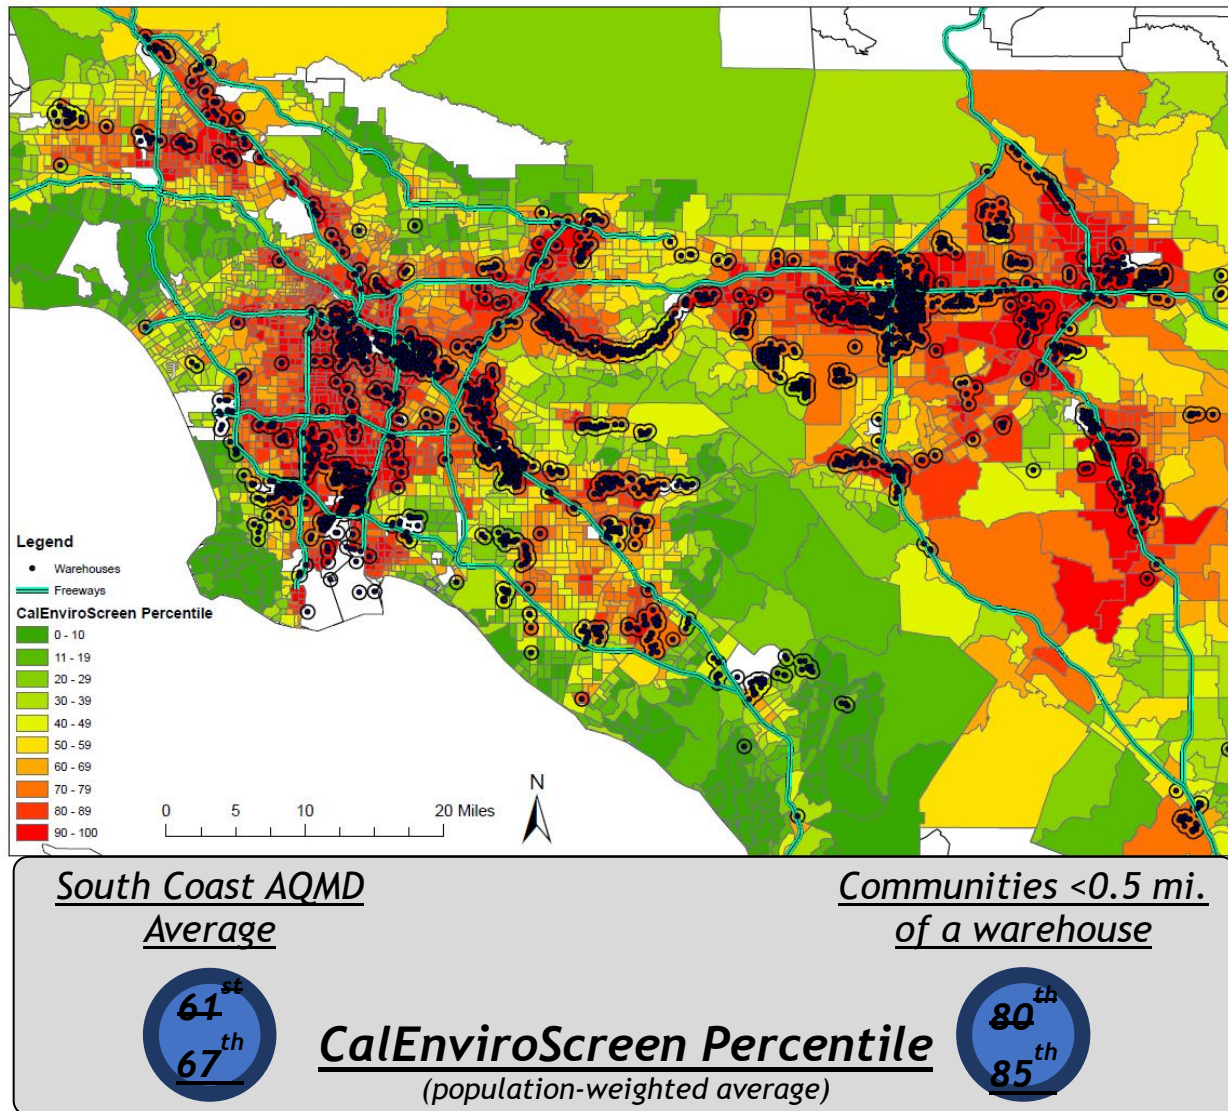

<https://www.epa.gov/outdoor-air-quality-data/air-quality-index-report>

³⁷ <https://www.energy.ca.gov/files/zev-and-infrastructure-stats-data>

³⁸ Of the 59 counties in California, Orange County ranks 6th in ZEV and PHEV share, Los Angeles County ranks 10th, Riverside County ranks 23rd, and San Bernardino County ranks 26th.

2305 and PR 316 would reduce this local pollution burden by requiring warehouse operators to take actions to reduce emissions and exposures from trucks and other emission sources associated with their facility (e.g., through NZE/ZE truck use, filters, etc.), as well as take actions to facilitate (e.g., ZE infrastructure) and enhance emission reductions from other programs (e.g., incentive programs, CARB regulations, etc.).

Figure 4: Environmental Burden on Communities Near PR 2305 Warehouses as Demonstrated by CalEnviroScreen

LEGAL AUTHORITY

The South Coast AQMD may adopt PR 2305 and PR 316 through the authority to “adopt and enforce rules and regulations to achieve the state and federal ambient air quality standards in all areas affected by emission sources under their jurisdiction...” (Health and Safety Code section

40001; *see also* section 40702.) Generally, CARB has primary authority over emissions from motor vehicles and the South Coast AQMD has primary authority over all sources in the basin, except motor vehicles. (Health and Safety Code section 40000.) However, Health and Safety Code section 40716 recognizes air districts may adopt and implement regulations that control emissions from indirect and areawide sources in order to meet state ambient air quality standards.

The key pollutants of interest for PR 2305 include nitrogen oxides (NO_x, a key precursor pollutant for ozone and fine PM) and diesel PM (a component of fine PM, and a toxic air contaminant). The South Coast AQMD is in nonattainment of the California Ambient Air Quality Standards (CAAQS) for both ozone and fine PM, referred to as PM 2.5. Notably, for ozone, the current 8-Hour CAAQS and the 2015 8-hour NAAQS are at an equivalent level and for PM 2.5, the current annual CAAQS and the 2012 annual NAAQS are also at an equivalent level. As a result, the South Coast AQMD relies on the same measures to meet both federal and state ozone and PM 2.5 standards.

In addition, the Clean Air Act allows a state to include “...as part of an applicable [state] implementation plan, an indirect source review program which the State chooses to adopt and submit as part of its plan.” (Clean Air Act section 110(a)(5)(A)(i); 42 U.S.C. §7410(a)(5)(A)(i).) An indirect source is defined as “...a facility, building, structure, installation, real property, road, or highway which attracts, or may attract, mobile sources of pollution.” (Clean Air Act section 110(a)(5)(C); 42 U.S.C. §7410(a)(5)(C).) Also, the Clean Air Act acknowledges that states and their subdivisions have the right to “adopt or enforce any standard or limitation respecting emissions of air pollutants” and also “any requirement respecting control or abatement of air pollution” so long as it is not less stringent than a federal requirement. (Clean Air Act section 116; 42 U.S.C. § 7416.)

The South Coast AQMD Governing Board approved the 2016 Air Quality Management Plan (2016 AQMP) in March of 2017. The 2016 AQMP was subsequently approved by CARB, included into the State Implementation Plan (SIP), and approved by U.S. EPA in 2019. The 2016 AQMP included MOB-03, a facility-based mobile source control measure to reduce mobile source emissions associated with warehouse distribution centers, which has resulted in PR 2305 and PR 316.

By approving MOB-03 into the 2016 AQMP, the South Coast AQMD and CARB have committed to, and the U.S. EPA has authorized, the development of an indirect source rule to achieve emission reductions from mobile sources attributed to warehouse activities, in order to assist attaining the federal ozone NAAQS in 2023 and 2031. While MOB-03 was adopted as part of the NO_x emissions reduction strategy for ozone, the 2016 AQMP also recognized that the “NO_x strategy will assist in meeting the annual PM 2.5 as “expeditiously as practicable” earlier than the attainment year of 2025.” (2016 AQMP, pg. 4-52.)

Initially, the South Coast AQMD Governing Board authorized a one-year public process to identify if MOB-03 could be achieved through voluntary or regulatory measures, and then ultimately determined, in May of 2018, that staff should pursue a regulatory approach.

A California Attorney General Opinion from 1993 determined that a district could adopt a regulation to,

“...require the developer of an indirect source to submit the plans to the district for review and comment prior to the issuance of a permit for construction by a city or county. A district may also require the owner of an indirect source to adopt reasonable post-construction measures to mitigate particular indirect effects of the facility’s operation.”

The opinion acknowledged a district may adopt a regulation requiring new and existing indirect sources to submit plans to the district to mitigate mobile indirect source emissions from both construction and operations that are attributed to the source. The Clean Air Act does not contain any prohibition on the scope of an Indirect Source Rule adopted by a state, as confirmed by the opinion and Health and Safety Code section 40716, and a state indirect source rule may include reasonable post-construction measures. The opinion further acknowledged that under Health and Safety Code section 42311, the district could adopt a regulation to collect fees to recover the costs associated with the indirect source review program. A similarly worded section, Health and Safety Code section 40522.5, specifically authorizes the South Coast AQMD to collect fees to recover costs associated with regulatory programs for areawide or indirect sources. These are the types of fees contemplated by PR 316.

Implementation of PR 2305 and PR 316 will also meet the requirement for districts in extreme nonattainment to consider all feasible measures that have been implemented in other areas in order to meet state standards. (Health and Safety Code section 40920.5(c).) While the term “feasible” is not defined in the Health and Safety Code, it is defined in another state regulation as “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors.” (14 California Code of Regulations section 15364.)

There are several examples of indirect source rules that have already been adopted in California. For example, the San Joaquin Valley Unified Air Pollution Control District adopted Rule 9510, which requires new development projects that meet certain specifications to reduce emissions of PM 10 and NOx. In addition, indirect source programs have been implemented by Mendocino County AQMD, Great Basin Unified APCD, Colusa County APCD, Placer Court APCD, Imperial County APCD, and Shasta County AQMD. As several California air districts have already adopted and implemented indirect source rules, policies, and/or the collection of reduction fees, this type of measure has been shown in a variety of areas to be “feasible.” Furthermore, the authority for air districts to set emission reduction targets from indirect sources was confirmed by the court in *NAHB v. San Joaquin Valley UAPCD* (9th Cir. 2010) 627 F.3d 730.

Health and Safety Code section 40717 further requires districts to “adopt, implement, and enforce transportation control measures for the attainment of state or federal ambient air quality standards....” The section defines transportation control measures as “any strategy to reduce vehicle trips, vehicle use, vehicle miles traveled, vehicle idling, or traffic congestion for the purpose of reducing motor vehicle emissions.” (Health and Safety Code section 40717 (g).) PR 2305 will encourage facilities to reduce motor vehicle emissions by requiring fewer points

from facilities that are able to employ certain transportation control measures, such as fewer truck trips (with additional subsequent reduced vehicle idling).

In addition to the above provisions, the South Coast AQMD may adopt rules or regulations that require “the owner or the operator of any air pollution emission source to take such action as the state board or the district may determine to be reasonable for the determination of the amount of such emission from such source.” (Health and Safety Code section 41511.) Even more specifically, under Health and Safety Code section 40701(g), the South Coast AQMD is authorized to collect information regarding a source, “...except a noncommercial vehicular source, to provide (1) a description of the source, and (2) disclosure of the data necessary to estimate the emissions of pollutants for which ambient air quality standards have been adopted, or their precursor pollutants....” These sections of the Health and Safety Code therefore authorize the South Coast AQMD to require owners and operators of warehouses to provide information that may be used to quantify emissions based on warehouse activity.

Programs reducing emissions of precursors to ozone and PM 2.5 for purposes of achieving and maintaining the NAAQS or CAAQS may also have concurrent benefits in reducing emissions of air toxics. The district may adopt rules to reduce emissions from sources that may affect public health. One of the duties imposed upon the district is the duty to enforce Health and Safety Code section 41700. That section provides:

“Except as otherwise provided in section 41705, no person shall discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.”

Accordingly, the South Coast AQMD may adopt regulations to prevent the potential health impacts from toxic air contaminants, including diesel PM, as well as to reduce the emissions of criteria air pollutants. The California Supreme Court has upheld the districts’ authority to regulate air toxic emissions from sources within their jurisdiction. (*Western Oil & Gas Assoc. v. Monterey Bay Unified Air Pollution Control Dist.* (1989) 49 Cal.3d 408.)

CHAPTER 2: SUMMARY OF PROPOSAL

INTRODUCTION

PROPOSED RULE 2305

PROPOSED RULE 316

WAIRE MITIGATION PROGRAM

INTRODUCTION

Proposed Rule (PR) 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program includes the requirements that regulated warehouse owners and operators must follow. These requirements include an obligation for applicable warehouse operators to earn a specified number of WAIRE Points every year using either a menu of options, developing and implementing a custom plan, or paying a mitigation fee. Warehouse operators that over-comply may transfer excess WAIRE Points earned in one year to a subsequent year or may transfer WAIRE Points to another site within their control. If they so choose, warehouse owners may also opt in and earn WAIRE Points and transfer them to an operator at that site. PR 2305 also requires reporting information about facility operations and recordkeeping. PR 316 is the companion rule to PR 2305 and establishes the administrative fees that PR 2305 warehouse owners and operators must pay to support South Coast AQMD compliance activities.

PROPOSED RULE 2305

Purpose – Subdivision (a)

The purpose of the proposed rule is to reduce local and regional emissions of NO_x and PM associated with warehouses in order to assist in meeting state and federal air quality standards. Actions required by PR 2305 can also work together with other regulations, incentive programs, and state policies to enhance their effect (e.g., clean air goals and zero emission vehicle goals). PR 2305 therefore also acts as a facilitating measure to achieve emission reductions from these other efforts. Reductions in NO_x and PM regionally will assist in meeting federal and state air quality standards, and concurrent reductions in diesel PM will also reduce air quality impacts to communities living near warehouses.

The proposed purpose is as follows:

The purpose of this rule is to reduce local and regional emissions of nitrogen oxides and particulate matter, and to facilitate local and regional emission reductions associated with warehouses, in order to assist in meeting state and federal air quality standards for ozone and fine particulate matter.

Applicability- Subdivision (b)

In 2014, there were approximately 32,000 industrial warehouse buildings of any size in the counties of Los Angeles, Orange, Riverside, and San Bernardino counties. PR 2305 will apply only to the largest facilities in South Coast AQMD that have more than 100,000 square feet of indoor space in a single building. Warehouse owners often do not conduct day-to-day operations, and thus PR 2305 applies to both operators and owners of these facilities, however most requirements do not apply to owners unless they opt in (see Requirements discussion below). Some large industrial properties may also have buildings that exceed the 100,000 square foot threshold, but do not conduct any warehousing activities (e.g., they may conduct manufacturing instead). Finally, some facilities may have tenants that change through time. One year may include a tenant operating a facility as a church, and the next year a new tenant may change to a warehouse operator. The applicability of the rule is therefore tied to buildings that *may* be used for warehousing activities, however only limited reporting is required by PR 2305 if warehousing activities are not actually occurring.

The proposed applicability is as follows:

This rule applies to owners and operators of warehouses located in the South Coast Air Quality Management District (South Coast AQMD) jurisdiction with greater than or equal to 100,000 square feet of indoor floor space in a single building.

Definitions – Subdivision (c)

PR 2305 includes definitions of specific terms related to the warehousing industry and mobile source technology. Some definitions are based on existing South Coast AQMD rules and regulations. There are technology terms such as electric charger levels or technology type that have range differences in the industry, but at time of inclusion were based on an existing source. Please refer to PR 2305 subdivision (c) for each specific definition.

Proposed Definitions:

Alternative Energy Generation Equipment	Yard Truck
Alternative-Fueled Vehicle	Zero-Emission (ZE) Truck
Alternative Fueling Station	
Class 2B Truck	
Class 3 Truck	
Class 4 Truck	
Class 5 Truck	
Class 6 Truck	
Class 7 Truck	
Class 8 Truck	
Cold Storage Warehouse	
Compliance Period	
Diesel Particulate Matter (DPM)	
Dwell Time	
Electric Charger	
Fuel Type	
MERV 16	
Near-Zero Emission (NZE) Trucks	
Nitrogen Oxides (NOx)	
Parent Company	
Straight Truck	
Tractor	
Transport Refrigeration Unit	
Truck Class	
Truck Trip	
Vehicle Miles Traveled (VMT)	
Warehouse	
Warehouse Facility	
Warehouse Operator	
Warehouse Facility Owner	
Warehouse Land Owner	
Warehouse Size	
Warehouse Activities	

Alternative Energy Generation Equipment: Some warehouses already operate solar panels that generate electricity. This is expected to be the dominant technology for alternative energy generation equipment at a PR 2305 warehouses. However, other onsite forms of energy generation may be possible (e.g., windmills). This definition only applies to reporting requirements, and warehouse operators will be required to specify which type of technology they operate onsite.

Alternative fueled-vehicles and fueling stations: Alternative fuels means fuels for vehicles besides diesel and gasoline. This is expected to be dominantly natural gas, electricity, and potentially other fuels like hydrogen or propane. Traditionally alternative-fueled vehicles have lower emissions than their gasoline and diesel counterparts. However, any requirements in the rule related to vehicle emissions refer to near-zero emissions or zero-emissions vehicles. These alternative-fuel definitions only apply to reporting requirements for alternative-fueling stations.

Class 2b to 8 trucks: These definitions use common classifications for trucks based on their gross vehicle weight rating.⁴² *Truck class* refers to these classes.

Cold storage warehouse: These warehouses store perishable goods (e.g., food) and typically have higher energy use due to onsite refrigeration, higher daily truck trip generation rates due to the need to move perishable goods quickly, including from trucks that have a transport refrigeration unit.

Compliance period: This is the 12-month period during which warehouse operators (and warehouse facility or land owners who opt in) need to earn WAIRE Points. These WAIRE Points are documented in the Annual WAIRE Report filed within 30 days after the compliance period ends.

Diesel Particulate Matter (DPM): DPM is the particulate matter that is emitted from diesel fueled engines that power trucks and equipment. It a component of fine PM, and also a toxic air contaminant and carcinogen.

Dwell time: This is the period of time that trucks stay parked at a warehouse.

Electric charger: This definition varies in different applications outside PR 2305. For the purposes of PR 2305, an electric charger is a plug that can be used to charge a vehicle independent of whether other plugs are operating, and that can operate at 208 Volts or greater. Some electric charging stations are designed with more than one plug, which can be concurrently attached to vehicles, however they cannot charge vehicles simultaneously. For example, high powered charging stations may not be able to deliver multiple high charges at the same time, but a station operator may not want to dedicate personnel to wait for one plug to finish before plugging in the next vehicle to charge, so multiple plugs may be plugged into vehicles, and sit idle. The station would then automatically cycle to the next plug when the first vehicle finishes charging. For purposes of PR 2305, this station would count as a single electric charger. Alternatively, if multiple plugs were able to operate simultaneously, then each plug would count as an individual electric charger.

⁴² <https://afdc.energy.gov/data/10380>

Fuel type: This refers to the different types of fuels used in vehicles and equipment.

MERV 16: This is equal to a 95% particulate matter efficiency rating for filters used in building heating, ventilation, and air conditioning systems as defined in Standard 52.2 from the American Society of Heating, Refrigerating and Air-Conditioning Engineers. WAIRE Points earned from the WAIRE Menu for filter system installations or filter replacements in residences, schools, daycares, hospitals, or community centers must meet this minimum efficiency level. Filters can reduce indoor exposure to particulate matter.

Near-zero emissions (NZE) trucks: This definition refers to the lowest optional low NO_x standard for truck engines in Title 13, Section 1956.8 of the California Code of Regulations. This level is currently set at 0.02 gram/brake horsepower-hour. CARB is proposing to change this standard to include new test cycles starting in 2024, and additionally lowering the level to as low as 0.01 g/bhp-hr in 2027 as part of its recent Low NO_x Omnibus rulemaking. The PR 2305 definition uses the Section 1956.8 definition, but slightly refines it by pointing to the “lowest non-zero optional NO_x standard applicable at the time of manufacture. This refinement is made to ensure that future lower standards are not applied to existing trucks who qualified for the near-zero definition at the time of manufacture.

Nitrogen oxides (NO_x): The definition in PR 2305 is the same definition that is used in South Coast AQMD Rule 2000.

Parent company: This term refers to the company or entity that owns another company either directly, or through a subsidiary.

Straight truck: This refers to smaller trucks that carry goods on the same chassis as the cab and engine. Typical examples include a box truck or a package delivery truck.

Tractor: This refers to larger Class 7 and 8 trucks that pull a trailer, often called “semis.”

Transport Refrigeration Unit (TRU): TRUs are typically diesel-powered refrigeration units commonly mounted on the front of a trailer near the tractor cab, or on the front of a straight truck just above the cab. The diesel engine providing power for the TRU is smaller than a truck engine, but TRUs commonly idle for long periods at a warehouse in order to keep the goods inside the straight truck or trailer at appropriate temperatures.

Truck trip: A one-way trip from a truck or tractor either from or to a warehouse. A truck entering a warehouse site, and then later leaving would count as two truck trips, and one truck visit.

Vehicle Miles Travelled (VMT): For PR 2305, this term refers to the total annual miles of travel made by trucks or tractors. VMT does not need to be tracked to earn any WAIRE Points from the WAIRE Menu. VMT only needs to be reported by warehouse operators in an Initial Site Information Report if they own a fleet that serves that warehouse.

Warehouse and Warehouse Facility: A warehouse refers to the building used to store goods, while a warehouse facility refers to the entire property that includes a warehouse, as well as the accessory uses such as the truck yard, parking, maintenance facilities, etc.

Warehouse Facility Owner and Warehouse Land Owner: These terms are separately defined because there are rare instances where the owner of the land beneath a warehouse facility is not the same as the owner of the warehouse building. Most parts of PR 2305 do not require anything of warehouse facility or land owners. However, they can opt in to certain parts of the proposed rule (e.g., they can opt in to earn WAIRE Points, and then transfer those to a warehouse operator at that site). In one instance, the Warehouse Operations Notification [see paragraph (d)(7)], there is a requirement of the warehouse facility owner that is not applicable to the warehouse land owner.

Warehouse Operator: Most of PR 2305 is applicable to the warehouse operator. The operator is the entity that has control of day-to-day operations at the site. Some operators will hire companies to take care of day-to-day operations for portions of the site, such as yard operations, or temporary laborers to load or unload trucks and trailers. In this instance, the warehouse operator is the entity that hires these companies or temporary laborers.

Warehouse Size: This term refers to the indoor floor space of a warehouse. A warehouse may have multiple floors, as well as mezzanine areas, used for warehousing activities. For example, a warehouse building may take up 100,000 square feet of ground area, and have 100,000 square feet of floor space on the first floor used for warehousing activity, and 50,000 square feet of floor space on a mezzanine, with 20,000 square feet of the mezzanine used for office space and the remainder used for warehousing activity. The warehouse size in this case would be 130,000 square feet.

Warehousing Activity: Warehousing activity refers to the activities related to the storage and distribution of goods. This can include many activities including sorting, labeling, repackaging, palletizing, applying SKUs, racking, various levels of automation, and other similar activities. There are also many different activities that can occur within the same building that would not be considered warehousing activities, including supporting office administration, manufacturing, vehicle maintenance, or ‘factory’ retail stores that are open to the general public. Standalone retail stores that are open to the general public are also not covered by PR 2305. These non-warehousing activities are not considered warehousing activity.

Yard truck: These trucks can be off-road or on-road vehicles and are used to transport trailers short distances around a warehouse facility, for example from a dock door to parking area. Some yard trucks also shuttle trailers short distances on roads to nearby warehouses.

Zero Emissions (ZE) truck: This term refers to the definition developed by CARB in its recent Advanced Clean Trucks regulation.

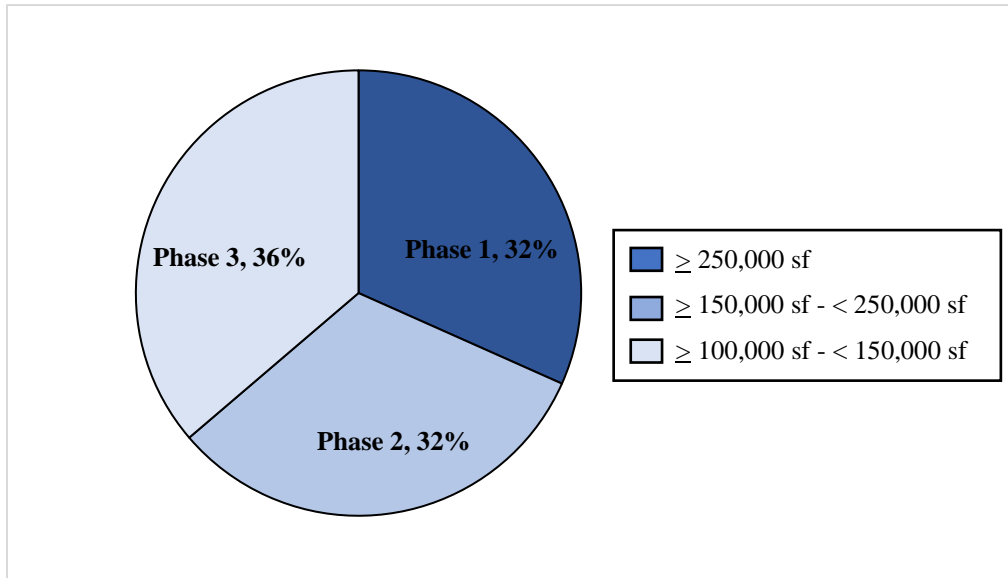

Requirements – Subdivision (d)

Subdivision (d) establishes the key requirements of the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. This includes establishing the WAIRE Points system, describing how Points can be earned or transferred, and laying out when specific reports are due.

Paragraph (d)(1)

This paragraph establishes a WAIRE Points Compliance Obligation (WPCO) for warehouse operators. Warehouse operators must earn WAIRE Points to comply with their WPCO by the initial reporting date in Table 1 of PR 2305.⁴³ Table 1 splits the universe of PR 2305 warehouses that are anticipated to earn Points into three phases, approximately one third each as shown in Figure 5 below.

Figure 5: Number of PR 2305 Warehouses Anticipated to Earn Points by Phase

Paragraph (d)(1) also describes a two-step test to determine if an operator needs to earn Points. First, operators in warehouses with greater than or equal to 100,000 sq. ft. of space that may be used for warehousing activities and who use at least 100,000 sq. ft. for warehousing activities are required to earn Points. Second, if an operator only uses a part of the warehouse, they are only required to earn Points if they operate at least 50,000 sq. ft. of that space for warehousing activities.

Paragraph (d)(1) also provides the fundamental calculations to determining the WPCO for each warehouse operator, including Equation 1 below.

$$\text{Equation 1: } WPCO = WATTs \times Stringency \times \left(\frac{\text{Annual}}{\text{Variable}} \right)$$

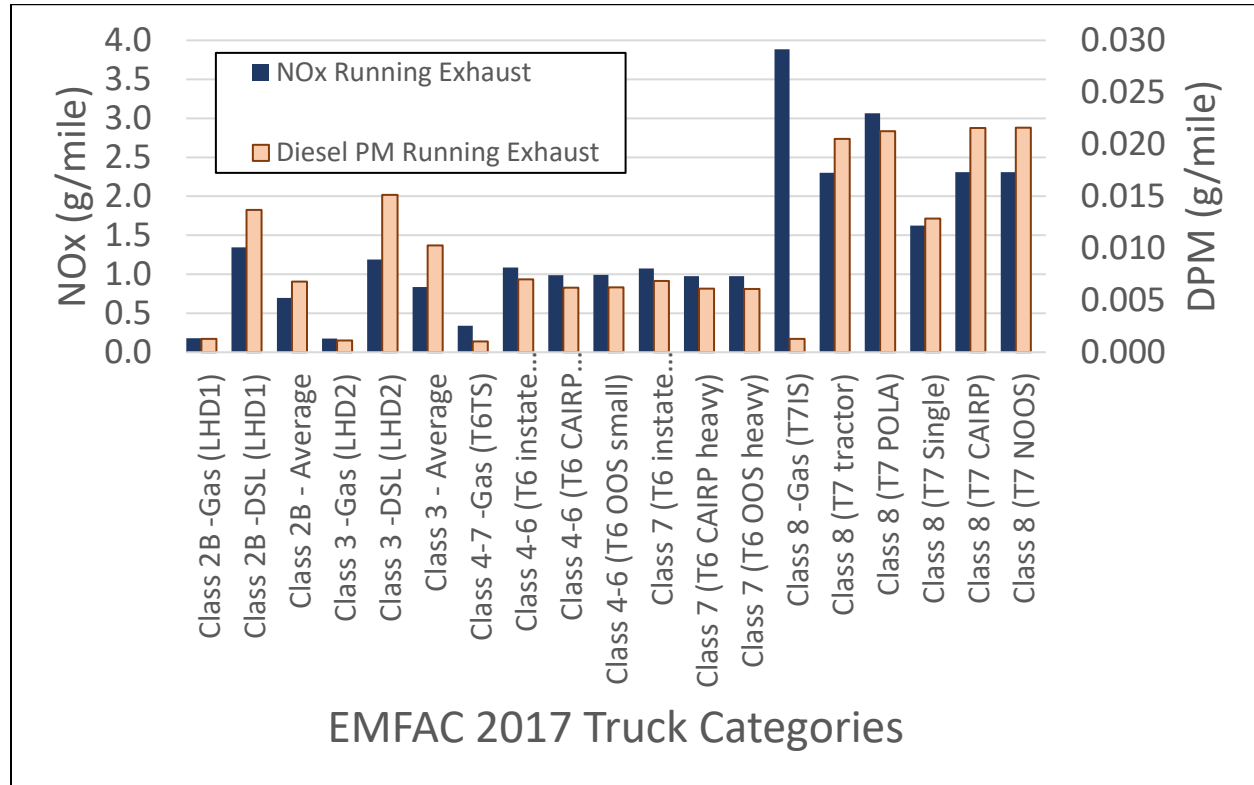

The WATTs parameter (Weighted Annual Truck Trips)⁴⁴ in Equation 1 presents the number of truck trips by truck class associated with a warehouse, and serves as a proxy for overall warehouse activity and emissions. Larger Class 8 trucks carry more goods and have higher emissions and are

⁴³ The most recent draft PR 2305 updates the compliance period to match the calendar year from January 1 through December 31. If PR 2305 is approved in May 2021, then Phase 1 warehouse operators would have more than seven months to prepare for their first compliance period.

⁴⁴ A parameter like emissions or vehicle miles travelled is not used to determine the WPCO in order to reduce the administrative burden on warehouse operators and South Coast AQMD compliance staff. Motor carriers have also expressed concern that they do not want to reveal where or how far they travel to warehouse operators or South Coast AQMD in order to keep their clients private.

thus weighted more heavily than smaller Class 2B to 7 trucks. The value of 2.5 was calculated by comparing the running exhaust emission rates of different truck classes in EMFAC that typically visit warehouses (Figure 6 below) for calendar year 2023 (after CARB's Truck and Bus rule is fully phased in). The ratio between individual truck classes varies but is approximately 2.5 overall when comparing Class 8 to Class 2B to 7.

Figure 6: NO_x and Diesel PM Emission Rates in 2023 for Different Truck Classes

Warehouse operators are required to submit actual truck trip data that is verifiable and representative of their operations to account for the amount of warehouse activity during the compliance period. Truck trip counts can be determined and accounted for by various methods such as warehouse personnel logging truck trips based on once-per month 24-hr long video surveys (one weekday and one weekend day), automated camera systems with recognition software, truck driver surveys, contractual records that provide sufficient details for truck activity, telematics systems, etc. Absent specific information about truck class, operators may simplify the analysis by just tracking straight trucks (as a proxy for Class 2b to 7) and tractors (as a proxy for Class 8). Truck trip data must be recorded and maintained, and the records and methods used to collect the truck trip data must be verifiable by South Coast AQMD compliance staff.

In the very rare case where an operator has lost their truck trip activity records due to a force majeure event (such as a fire), default truck trip rates based on truck trip generation rates from the Institute of Transportation Engineers and the Fontana Truck Trip study are also available.⁴⁵ These

⁴⁵ <http://library.ite.org/pub/a3e6679a-e3a8-bf38-7f29-2961becdd498>
<https://tampabayfreight.com/pdfs/Freight%20Library/Fontana%20Truck%20Generation%20Study.pdf>

default Weighted Truck Trip Rates (WTTR) are shown in Table 4 below. Only those trucks that use a warehouse's truck driveway must be included. Trucks that utilize the employee parking driveway for building servicing activities like mail delivery or trash pickup do not need to be included. Additional discussion of methods to record actual truck trips are provided in the WAIRE Program Implementation Guidelines (Appendix A).

Table 4: Truck Trip Generation Rates Used for Default WTTR in Case of Loss of Records due to Force Majeure

Warehouse Type	Class 8 / Tractor-Trailer / 4+ Axle (Average daily trips per 1,000 sq. ft. of warehouse building area)^	Class 2B-7 / 'Straight' Trucks / 2- and 3-Axle (Average daily trips per 1,000 sq. ft. of warehouse building area)^	Weighted Truck Trip Rate (WTTR) ($2.5 \times \text{Class 8} + \text{Class 4-7}$)
High Cube Transload & Short Term Storage ($\geq 200\text{k sf}$)	0.33	0.12	0.95
Warehouse ($100\text{k} - 200\text{k sf}$)	0.21	0.14	0.67
Cold Storage ($> 100\text{k sf}$)	0.75	0.29	2.17

The proposed stringency of PR 2305 in Equation 1 is 0.0025 WAIRE Points per WATT. The proposed stringency was developed by evaluating 18 different scenarios of potential PR 2305 compliance, described further in Chapter 3. The potential emissions benefits from this scenario analysis were evaluated alongside the potential costs and impact to industry.

The annual variable in Equation 1 is the ramp up schedule for the PR 2305 stringency. As proposed, the full stringency of 0.0025 would not be achieved until the third compliance period for each warehouse. The annual variable in Table 2 of PR 2305 is layered in with the warehouse Phases. All three Phases will be at full stringency in the fifth compliance period. New warehouses that are built after PR 2305 would be placed into the appropriate Phase based on warehouse size. The annual variable is established relative to when PR 2305 is adopted, and does not 'reset' for a new warehouse that is built after rule adoption. For example, a new warehouse built in September 2025 that is 125,000 sf with at least 100,000 sf usable for warehousing activities would need to submit its first Annual WAIRE Report 30 days after January 1, 2026. Their annual variable for their first compliance period would be 1.0.

Paragraph (d)(2)

Paragraph (d)(2) provides the three primary options available to earn WAIRE Points. This includes completing actions from the WAIRE Menu in paragraph (d)(3), completing actions from an approved Custom WAIRE Plan in paragraph (d)(4), or paying a mitigation fee from paragraph (d)(5). Points can be earned from any combination of these three options in any compliance period.

Paragraph (d)(3)

Paragraph (d)(3) and Table 3 include the WAIRE Menu option. The WAIRE Menu itself has 32 different actions or investments that can be completed. Points can be earned from any combination of Menu actions, at any level of implementation. Points can be earned only if they go beyond requirements in other U.S. EPA, CARB, or South Coast AQMD regulations in effect during that compliance period.⁴⁶ When determining if an action goes beyond requirements from another regulation, a comparison is made between the regulatory requirement on the entity itself earning Points (typically the warehouse operator), rather than requirements on a non-PR 2305 entity. For example, CARB's ACT regulation requires truck manufacturers to sell a certain fraction of ZE trucks beginning in 2024. ACT does not apply to any regulated entity covered by PR 2305. Therefore, a warehouse operator (or warehouse facility or land owner if they opt in) may earn Points for purchasing a ZE truck, regardless of any requirements in ACT. At this time, there are no regulations in place that limit what a warehouse operator or owner could implement from the WAIRE Menu. There is the potential that CARB's upcoming TRU regulation, its Advanced Clean Fleets (ACF) regulation, or potentially other regulations could impose requirements on warehouse operators or owners. Even if a new regulation comes into place that imposes requirements directly on a warehouse operator or owner, if the action is completed prior to the other regulation's mandated timeline, then Points could still be earned under PR 2305. For example, hypothetically if ACF requires a warehouse operator who owns a fleet to purchase ZE trucks by 2030, but the operator purchases ZE trucks early in 2029, then they would be able to earn WAIRE Points for that action in 2029.

Table 3 in PR 2305 includes specific WAIRE Points for each action. Warehouse operators (or owners who opt in) would earn Points relative to their level of implementation of an action with the Points associated with each annualized metric in Table 3. The basic equation that needs to be followed to earn Points from the Menu is shown in Equation 2 below. As an example, if a warehouse operator demonstrates that they had 520 ZE Class 8 truck visits⁴⁷ to their warehouse during a compliance period, they would earn 72.7 WAIRE Points for that action following the method below.

Equation 2:

WAIRE Points per Annualized Metric × Level of implementation ÷ Annualized metric = Points earned

For ZE Class 8 visits example above: 51 Points × 520 visits ÷ 365 visits = 72.7 Points

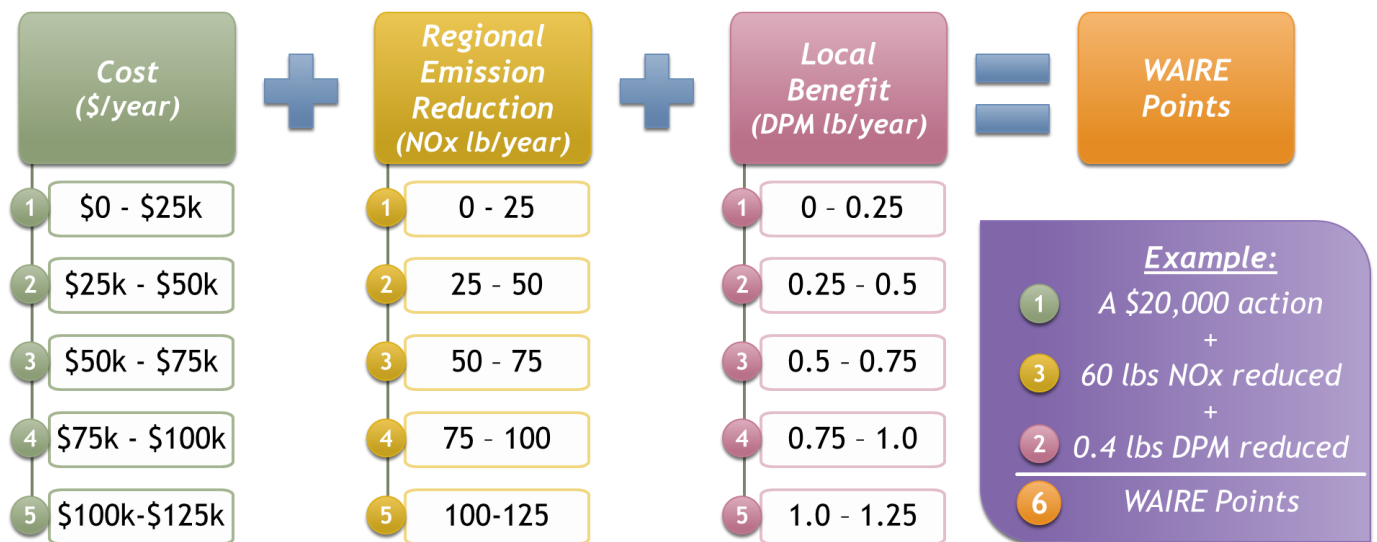

⁴⁶ Points can be earned even if local ordinances (e.g., from a city or county) or building codes include requirements for some of the actions covered by PR 2305. Local land use authorities also have the option to require higher compliance obligations under CEQA using the framework set up by PR 2305. For example, as a condition of approving a new warehouse project, a land use agency could require a warehouse operator to earn additional WAIRE Points beyond their WPCO in order to reduce air quality impacts. However there is no obligation on land use agencies under PR 2305 or PR 316 unless they are a warehouse owner or operator subject to PR 2305.

⁴⁷ 520 visits is the same as 1,040 one-way truck trips.

Figure 7 below shows the underlying calculation used to develop the number of WAIRE Points associated with each WAIRE Menu action. The details for these calculations are provided in Appendix B to this staff report. An earlier draft of this appendix was provided to the Working Group as the WAIRE Menu Draft Technical Report on March 3, 2020. This more detailed calculation approach is not used by warehouse operators or owners to earn WAIRE Points from the Menu. This approach is just the original analysis used to establish the balancing between different menu actions in PR 2305. In this approach, each WAIRE Point consists of three elements: the incremental cost to complete the action, the regional emission reduction of NO_x in lbs/year, and the local DPM emission reductions in lbs/year. Each of these elements is calculated for individual actions at a set level of implementation (i.e., the annualized metric), binned and then summed to simplify comparisons.

Actions are split primarily into two groups, one-time investments in technologies that can reduce emissions or facilitate the implementation of emission reductions, and ongoing use of these technologies. Points are earned separately for the investment and the ongoing use. Points can be earned from both a one-time investment in emission reduction technologies and use of that technology in the same compliance period. For example, a warehouse operator could install a charging station and earn Points from that action, and begin using that charging station to earn more Points in the same compliance period.

Figure 7: Approach to Develop WAIRE Points for Each WAIRE Menu Action*

**This approach is not used by warehouse operators or owners to earn Points. This is only the underlying methodology to the WAIRE Menu.*

Finally, PR 2305 does not prohibit operators from using incentive funding from South Coast AQMD, CARB, or other sources to earn WAIRE Points. However, many of these programs have express limitations in using their funds to comply with a regulation. Because these limitations are written into each specific program's requirements, they are not included in PR 2305 as those programs' requirements could change through time. Staff is unaware of any requirements in programs like Carl Moyer, AB 617 funding, or similar programs that limit the use of funds with

WAIRE Menu items associated with ongoing use (e.g., truck visits). However, there are commonly limitations in these funding programs associated with the purchase of vehicles or equipment.

Paragraph (d)(4)

Paragraph (d)(4) describes the Custom WAIRE Plan option, including the requirements for what needs to be included in a Plan and Plan application, and the process and criteria for approval or disapproval of the Plan application, or rescission of an approved Plan by South Coast AQMD. Custom WAIRE Plans are only potentially approvable if they include actions that are not already included in the WAIRE Menu in Table 3 of PR 2305. Points may only be earned from an approved Custom WAIRE Plan. The Custom WAIRE Plan only needs to describe how Points would be earned under the plan, not how all Points would be earned to meet the WPCO if the Plan only addresses part of the points compliance obligation. The methodology to calculate WAIRE Points in Custom WAIRE Plan applications is described in the WAIRE Program Implementation Guidelines, and will be consistent with the WAIRE Menu Technical Report methods in Appendix B. The general approach requires comparison of baseline conditions without the Custom WAIRE Plan to the NOx and DPM emission reductions and the incremental costs when the Plan is implemented. Emission reductions must be quantifiable, verifiable, real, and achieved as quickly as feasible, and no later than three years after Plan approval.

Key milestones need to be described in the Custom WAIRE Plan application and must be adhered to if approved. Approved plans that do not make adequate progress on these approved milestones may have their Plan approval rescinded 30 days after notification by the Executive Officer (EO) of identified deficiencies. If the deficiencies are not corrected in that period, the EO may then rescind the Plan approval. If a warehouse facility or land owner opts into the program and has a Custom WAIRE Plan approved by South Coast AQMD, then they are required to implement it. If the Plan is not implemented, then the entity who filed the Plan application shall be the entity who will be held in violation of the rule for any compliance period covered by the approved Plan for which a sufficient number of WAIRE Points was not earned as demonstrated in the Plan. If a warehouse operator (or owner who opts in) does not earn a sufficient number of WAIRE Points to satisfy their WPCO as demonstrated in a previously approved Plan, they may still satisfy their WPCO for that compliance period through the completion of actions from the WAIRE Menu, or by paying a mitigation fee pursuant to paragraph (d)(5), and document these actions in their Annual WAIRE Report.

Examples of potential Custom WAIRE Plans that some industry stakeholders have expressed potential interest in include: installing offsite charging/fueling infrastructure for ZE vehicles, installing and operating energy efficiency systems for cold storage warehouses, installing onsite ZE charging stations with higher power (i.e., above 350 kW) than is described in the WAIRE Menu, or overcompliance with upcoming CARB regulations should they be approved (such as the TRU regulation or ACF). Other custom approaches are also potentially approvable provided they meet the criteria described in paragraph (d)(4).

Custom WAIRE Plans that rely on VMT reductions will be limited to those projects that can show that these VMT reductions go beyond what is modeled in the latest Regional Transportation Plan (RTP) from the Southern California Association of Governments (SCAG). The Plan application itself would need to include the analysis showing how VMT reductions would be lower than RTP

modeled VMT. An example custom approach that may be disqualified from this includes an operator who moves operations from multiple smaller operations into a larger facility, thus reducing truck trips and VMT between the previous smaller warehouses. However, this reduction in VMT for that operator likely does not reduce VMT overall because the smaller warehouses are not expected to stay vacant given the low vacancy rates experienced by warehouses in the South Coast AQMD region.⁴⁸ Hence, while the operator's VMT declines, the region's VMT may actually increase. Similarly, a warehouse operator that demonstrates that they have a lower trip generation rate and VMT than would be calculated using default values has not demonstrated that overall VMT in the region is reduced. The RTP models average trip generation rates, and outputs average miles per trip. Some warehouses are therefore expected to be higher, and some lower than the average.

Although earning Points through VMT reduction programs may not be likely in most situations, PR 2305 is still expected to provide an additional motivation for warehouse operators to improve efficiency beyond normal market forces. Because the WPCO is tied to a warehouse's annual truck trips, if a facility can find ways to improve efficiency and reduce its number of truck trips, then its compliance obligation under PR 2305 will be lower. PR 2305 has no requirements for warehouse owners or operators to reduce or limit the number of truck trips to their facility.

Paragraph (d)(5)

If a warehouse operator does not earn a sufficient number of WAIRE Points to satisfy their WPCO from the WAIRE Menu or from an approved Custom WAIRE Plan, a warehouse operator may choose to pay a mitigation fee to the South Coast AQMD at a cost of \$1,000 per WAIRE Point. This value was determined by comparing the potential costs of implementing a variety of WAIRE Menu actions at an individual warehouse under different stringencies using methods described in the WAIRE Menu Technical Report (see Appendix B), and evaluating how many WAIRE Points were earned for each action. Although the costs vary across actions, many actions are approximately equal to \$1,000 per WAIRE Point.⁴⁹ Additional discussion about the WAIRE Mitigation Program that would spend the collected fees is included at the end of this chapter.

Paragraph (d)(6)

This paragraph describes the limited transfer of WAIRE Points under PR 2305. PR 2305 is not a credit trading system. Transferring WAIRE Points may only be allowed in three limited instances of overcompliance with rule requirements. First, if an operator conducts warehousing activities at multiple warehouses, it may be more feasible for them to make investments at a larger scale at one facility, compared to repeated smaller investments at several facilities. Under PR 2305, this operator could over-comply and earn extra Points at one warehouse, and then transfer the excess to another warehouse in their control. Because one of the purposes of PR 2305 is to reduce local emissions, the full value of any Points transferred from one warehouse to another is discounted by the amount of the WAIRE Points that were earned from local emission reductions of diesel PM.

⁴⁸ Vacancy rates in 2019 in South Coast AQMD warehouses are about 4%, about 50% lower than the vacancy rates of surrounding markets. Source: IEc Task 2 "Technical Memorandum on Real Estate Markets Neighboring the South Coast AQMD Region"

⁴⁹ Examples are shown in slides 16-19 from the March 3, 2020 Working Group.

http://www.aqmd.gov/docs/default-source/planning/fbmsm-docs/whse_isr_slides_3-3-2020.pdf

Table 3 in PR 2305 already provides the discounted Point value, and operators (or owners who opt in) do not need to determine the amount to discount other than looking up values in that table.

The second transfer method involves a warehouse operator earning excess WAIRE Points in one year and banking those Points to transfer into a subsequent year. These Points are not discounted and can be banked for up to three years. For example, excess Points earned in the compliance period from January 1, 2022 to December 31, 2022 would be usable until the end of the compliance period ending December 31, 2025, and reported in the Annual Report no later than 30 days after January 1, 2026 (pursuant to subparagraph (d)(7)(C)). This three-year period could be shorter if the action that earned Points would have already been required by another regulation in the year in which the Points would otherwise be used. WAIRE Points may also be earned prior to a warehouse operator's first compliance period. For example, an operator of a 125,000 sq. ft. warehouse could earn Points in the 2022 compliance period, even though PR 2305 does not impose a WPCO on a warehouse of this size until the 2024 compliance period. The three-year banking clock in this instance would not commence until after their first compliance period in 2024. The extra time is meant to encourage early compliance and achieve emissions reductions sooner.

The final transfer method involves transfers between a warehouse facility or land owner and a warehouse operator, and vice versa. Warehouse facility or land owners may find it advantageous to improve their properties using options within PR 2305 on their own. Any Points earned from this activity may be transferred to an operator at that site over the subsequent three-year period. Operators may also transfer Points earned in excess of their WPCO back to a warehouse facility or land owner, who may then transfer those Points to a subsequent operator at that site.

Paragraph (d)(7)

This paragraph outlines the required reports and notifications that operators and owners must submit. Warehouse facility owners (not warehouse land owners) must submit a notification on September 1, 2021 or within 14 days after a new operator has the ability to use at least 50,000 sq. ft. of a warehouse with $\geq 100,000$ sq. ft. of floor space that may be used for warehousing activity. A typical date for this would be the start date of a lease. Notification is also required after a warehouse building has been modified such that it has new square footage. A report must also be submitted within three days of the EO's request.

Warehouse operators must submit a more detailed one-time Initial Site Information Report approximately six months before their first Annual WAIRE Report must be submitted for that site. As an example, if Operator A has recently moved to a new warehouse and has not been required to submit an Annual WAIRE Report before for that site, they are then required to submit the Initial Site Information Report. This is the only Initial Site Information Report that Operator A will need to submit for that site. If Operator A moves to another warehouse and has never submitted an Annual WAIRE Report for that second warehouse, they will need to submit an Initial Site Information Report for that warehouse. Initial Site Information Reports must also be submitted within 30 days of the request from the EO.

Warehouse operators who are required to earn WAIRE Points, and warehouse facility or land owners who earn WAIRE Points as applicable, are required to submit an Annual WAIRE Report within 30 days after January 1 of every year for which they must satisfy a WPCO (in the case of

operators), or earn WAIRE Points (in the case of owners opting in). The Annual WAIRE Report is the primary mechanism by which operators demonstrate how they have earned a sufficient number of WAIRE Points for the preceding compliance period. If an operator with a WPCO departs a warehouse before the end of that compliance period (e.g., if their lease ends), they are required to submit their Annual WAIRE Report no later than the date that they vacate the warehouse. No Annual WAIRE Reports are due before the applicable Initial Reporting Date in Table 1. Because the WPCO is tied to the number of truck trips at a warehouse while the operator was responsible for warehousing activities, the operator's Annual WAIRE report in this instance only needs to demonstrate how Points were earned for the portion of the compliance period when the operator was at that warehouse.

Reporting, Notification, and Recordkeeping Requirements – Subdivision (e)

This subdivision describes the information that must be included in the various reports and notifications required by PR 2305, as well as recordkeeping requirements. An online reporting portal is anticipated to be created if PR 2305 is approved by the Governing Board that will be used for all report and notification submissions. Reporting procedures will be further documented in the WAIRE Implementation Guidelines (Appendix A).

Paragraph (e)(1)

The Warehouse Operations Notification described in this paragraph includes basic information about the warehouse facility itself, whether the warehouse facility owner is also an operator, as well as information about any entities leasing the site, and how much of the site they have leased.

Paragraph (e)(2)

The Initial Site Information Report provided by a warehouse operator must include information about how many square feet they can use for warehousing activities. There are two cases when this is the only information that needs to be provided for this report. First, if the warehouse operator is in a building where the total square footage that can be used for warehousing activities is less than 100,000 sq. ft., then no more information is required. Second, some warehouse operators may lease only a portion of a warehouse with more than 100,000 sq. ft. that can be used for warehousing activities. In this situation, if the operator only can use <50,000 sq. ft. (e.g., due to lease conditions), then they do not need to report any further information. This second case does not apply where there are multiple operators under the ownership or control of a single parent company who each operate <50,000 sq. ft., but who collectively operate more than 50,000 sq. ft.

Apart from the two cases described above, Initial Site Information Reports must include information about actual truck trip data from the previous 12-month period, and the anticipated truck trips in the following 12-month period, by truck class or truck type (e.g., tractors or straight trucks). Trucks delivering or picking up goods from a warehouse are a proxy for total activity and emissions related to a warehouse and will use a truck entrance that is different than the employee vehicle entrance (that may also have minor use for mail trucks, or refuse pickup for administrative activities at the warehouse). In order to streamline reporting, only those trucks or tractors that use a warehouse's truck driveway must be included, with the intention of focusing on truck activity most closely aligned with total warehouse activity and emissions. Occasional truck traffic that utilizes the employee parking driveway for building services activities like mail delivery or trash pickup do not need to be included.

Additional data that must be reported includes information about any trucks owned by the operator that serve that warehouse, information about any onsite alternative fueling stations, information about any yard trucks operated at the site (owned or non-owned), and information about any onsite energy generation equipment. Finally, the report must include the anticipated options that the operator plans to use to earn Points for the current compliance period. These anticipated options might not end up being the actual options used to meet the WPCO, but they do provide an early planning step for operators to consider how they will comply with their WPCO in six months.

Paragraph (e)(3)

The Annual WAIRE Report shall include actual truck trip data used to determine the WPCO pursuant to paragraph (d)(1). The report shall also include how many WAIRE Points were earned from the WAIRE Menu and details about the reporting metric from the WAIRE Menu, the Points from a Custom Plan, and the Points from mitigation fees. Finally, the report shall include current contact information for the warehouse operator.

Paragraph (e)(4)

Records which demonstrate the accuracy and validity of any information reported to South Coast AQMD must be kept for a period of seven years after the reporting deadline and made available upon request during normal business hours.

Paragraph (e)(5)

Some warehouse facility or land owners, or operators may choose to hire consultants to complete some of the reporting requirements in PR 2305. This paragraph ensures that any reports are submitted by an official authorized by an officer of the warehouse owner or operator, as applicable. This authorized official may or may not be an employee of the warehouse owner or operator. The authorized official must certify that the information reported is accurate based on their best available knowledge.

WAIRE Implementation Guidelines – Subdivision (f)

This subdivision identifies that the EO will periodically publish the WAIRE Implementation Guidelines referred to throughout PR 2305 (Appendix A of this staff report).

Exemptions – Subdivision (g)

Three limited exemptions are described in this subdivision. First, similar to paragraph (e)(2), warehouse operators who cannot use more than 50,000 sq. ft. of a warehouse that is larger than 100,000 square feet, for warehousing activities due to lease conditions (e.g., they have leased <50,000 sq. ft.), are not required to earn any WAIRE Points. This exemption does not apply if the warehouse operator is under the control of a parent company of one or more lessees in the same building, and collectively the entities under the parent company's control operate more than 50,000 sq. ft. of a building that is 100,000 square feet or greater.

The second exemption states that warehouse operators with a WPCO <10 are not required to earn any WAIRE Points.⁵⁰ This exemption reduces the burden on the smallest warehouse operations that have a low volume of truck trips. No warehouse operations in the analysis of PR 2305 were identified to have a WPCO <10, but there is a possibility that a small number of warehouse operators may qualify and utilize this exemption. The warehouse operator would not be subject to the requirement to earn WAIRE Points in paragraph (d)(1), but the warehouse operator is still subject to the reporting requirements in paragraph (d)(7).

The third exemption relates to rare, unforeseen circumstances, beyond the reasonable control of the warehouse operator, or owner, who made an investment or took action to earn WAIRE Points, but due to a defect in their investment were unable to earn WAIRE Points. For example, if a warehouse operator purchases a zero emission truck and anticipates using this same truck to earn Points, but a malfunction in the powertrain due to an equipment manufacturer defect (e.g., malfunctioning electric motor, fuel cell stack, etc.) results in an inability to use the equipment, then the operator may apply for relief for the Points that would have been earned. The exemption shall be granted if the vehicle or equipment is shown to be due to a manufacturer defect or an installation defect.

Sunset Date for Rule – Subdivision (h)

PR 2305 will sunset upon final action by the U.S. EPA (e.g., when a final rule becomes effective) finding that all air basins within South Coast AQMD have attained the 2015 NAAQS for ozone (i.e., 70 parts per billion), and when CARB has determined that South Coast AQMD has met the state ozone standard (also 70 parts per billion).⁵¹ The sunset date for the WPCO will be 45 days after the end of the compliance period during which the latter of U.S. EPA or CARB makes the relevant finding. All reporting requirements associated with this final compliance period will remain in effect, however no reporting will be required for future compliance periods.

The 2015 standard requires ozone levels in South Coast AQMD to meet the standard in 2037. Before then, the 1979 (revoked, 1-hour standard), 1997 (revoked 8-hour standard) and 2008 ozone standards must be met in 2022, 2023, and 2031, respectively. Under section 175A of the Clean Air Act, when a nonattainment area is redesignated as meeting attainment, it must prepare a maintenance plan that ensures the area will continue to meet the air quality standard for another 10 years. In addition, anti-backsliding requirements may also apply.⁵² PR 2305 could potentially be applied to maintenance plan and anti-backsliding requirements for the 1979, 1997, and 2008 ozone standards prior to its sunset. Even with the sunset, PR 2305 is expected to assist in meeting the 2015 ozone standard. At this time, it is uncertain if PR 2305 would be needed for a maintenance plan or anti-backsliding requirements when the 2015 ozone standard is met because ZE and NZE technologies may be more widespread. As such, the Executive Officer shall prepare a report for the full Governing Board one year prior to the anticipated sunset that evaluates the need for the rule in light of these and any other applicable Clean Air Act requirements. The report shall also

⁵⁰ A WPCO of 10 is approximately equal to about two class 8 truck visits per day. Using default truck trip rates, a warehouse operator in a 100,000 sf warehouse would be required to earn about 61 WAIRE Points at a stringency of 0.0025 and annual variable of one.

⁵¹ The averaging period for the federal and state standards differ, so it is possible that they may not be achieved in the same year.

⁵² Implementation of the 2008 National Ambient Air Quality Standards for Ozone: State Implementation Plan Requirements, Final Rule. <https://www.govinfo.gov/content/pkg/FR-2015-03-06/pdf/2015-04012.pdf>

evaluate the state of NZE and ZE technologies used at warehouses, the emissions inventory of warehouses, and any other U.S. EPA or CARB regulations that apply to warehouses. Based on these findings, the Executive Officer shall make a recommendation whether any portions of the rule should be retained or amended.

Severability – Subdivision (i)

In the event a court holds that a portion or portions of PR 2305 are invalid or unenforceable, subdivision (h) allows the other portions of the rule to remain fully applicable and enforceable. Similarly, if the exemptions in PR 2305 are held by judicial order to be invalid, then the warehouse operators that had been covered by the exemption shall have to comply with the requirements of PR 2305.

PROPOSED RULE 316 – FEES FOR REGULATION XXIII

Purpose – Subdivision (a)

The purpose of the Proposed Rule 316 (PR 316) is to act as a companion rule to Proposed Rule 2305 (PR 2305) – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. PR 2305 requires reporting information about facility operations and recordkeeping. PR 316 establishes the administrative fees that PR 2305 warehouse operators and owners must pay in order to recover South Coast AQMD administrative costs associated with ensuring compliance with PR 2305.

The proposed purpose is as follows:

California Health and Safety Code Section 40522.5 provides authority for the South Coast Air Quality Management District to adopt a fee schedule for areawide or indirect sources of emissions which are regulated, but for which permits are not issued, to recover the costs of programs related to these sources. The purpose of this rule is to recover the South Coast AQMD's cost of implementing Rule 2305.

Applicability- Subdivision (b)

Warehouse owners and operators routinely move into or out of warehouses. As the applicability is tied to reports that must be submitted pursuant to PR 2305, any individual company may be required to pay multiple fees under PR 316 in any one year, then potentially not be subject to fees in the following year if they are not required to submit any of the applicable reports.

The proposed applicability is as follows:

This rule applies to owners and operators of facilities subject to Rule 2305 that submit an Annual WAIRE Report, a Custom WAIRE Plan application, an Initial Site Information Report, a Warehouse Operations Notification, or that pay a Mitigation Fee.

Definitions – Subdivision (c)

PR 316 includes definitions of specific terms related to the warehousing industry and aspects of implementing PR 2305. Most definitions refer back to definitions within PR 2305. Please refer to PR 316 subdivision (c) for each specific definition.

Proposed Definitions:

Annual WAIRE Report

Custom WAIRE Plan Application

Initial Site Information Report
 Mitigation Fee
 Warehouse
 Warehouse Operations Notification
 Warehouse Operator
 Warehouse Facility Owner
 Warehouse Land Owner
 Warehousing Activities

Annual WAIRE Fees – Subdivision (d)

Fees that will be established in this subdivision will be set at a flat level that is equal to the level of effort required by South Coast AQMD staff to conduct compliance activities related to the reports for which the fees are being paid. Fees must be paid at the time that the report must be submitted pursuant to PR 2305.

Custom WAIRE Plan Application Evaluation Fee – Subdivision (e)

Custom WAIRE Plans applications are expected to be unique, and require varying levels of effort by staff to review depending on the complexity of the application. Similar to other plan review fees in South Coast AQMD Rule 306, the fees in this subdivision are set consistent with the amount of staff time needed to complete an application review. An initial fee must be paid upfront as a deposit to cover a minimal amount of staff time, and subsequent fees may be assessed if more time is required. Staff will track time spent reviewing a Custom WAIRE Plan application, and if less cost is incurred than was paid in the initial fee, a refund will be issued.

Mitigation Program Administration Fee – Subdivision (f)

PR 2305 includes an option for warehouse operators (or owners who opt in) to pay a mitigation fee to South Coast AQMD to earn WAIRE Points. These collected fees will be used for a mitigation program to incentivize near-zero and zero emissions trucks and zero emissions charging infrastructure. Funds will be directed to projects in the communities near the warehouses that paid the fees. South Coast AQMD administers many incentive programs currently, including Carl Moyer, SOON, AB 617, etc. Prolonged experience with these programs has shown that some funds are needed to ensure efficient and accurate program administration. The amount set in PR 316 is 6.25 percent of the mitigation fee a warehouse operator or owner pays, and is consistent with recent program administration requirements for similar incentive programs.⁵³ Based on South Coast AQMD experience with current funding programs like Carl Moyer and Community Air Protection Program grants (i.e., AB 617), this level of funding is needed for the significant administrative effort to conduct outreach to industry, communities, and local governments, and to administer funds and track projects at a local scale (e.g., for each of about three dozen Source Receptor Areas).

Payment Due Dates – Subdivision (g)

Payment of fees for Custom WAIRE Plans are due no later than 60 days after an invoice has been provided. Fees for Annual WAIRE Reports, Initial Site Information Reports, and Warehouse

⁵³ AB 134 (2017): http://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201720180AB134

AB 617 Incentives Guidelines:

https://ww2.arb.ca.gov/sites/default/files/2020-10/cap_incentives_2019_guidelines_final_rev_10_14_2020_0.pdf

Operations Notifications are due when the applicable report must be submitted. Requirements for payments in this subdivision are consistent with other South Coast AQMD fee programs in Rule 301.

Exemptions – Subdivision (h)

Two exemptions are provided in this subdivision. First, warehouse facility owners who submit a Warehouse Operations Notification for a warehouse that has less than 100,000 sq. ft. that can be used for warehousing activities are exempt from PR 316 fees. Second, warehouse operators who use <50,000 sq. ft. of a warehouse for warehousing activities are also exempt from PR 316 fees. The collection of this information will occur online, and no additional compliance with these components of the WAIRE Program is expected for these entities, hence staff costs are expected to be de minimis for this activity. This reported information is needed however to verify that the owner or operator does not have any further obligations under PR 2305.

WAIRE Mitigation Program

The main intent of the WAIRE Mitigation Program is to provide NO_x and DPM emission reductions for communities around warehouses that paid the mitigation fees. Any in-lieu mitigation fees paid to South Coast AQMD by a warehouse operator (or owner who opts in) would be targeted to projects in the surrounding area for NZE or ZE trucks, or ZE charging/fueling infrastructure.⁵⁴ Any solicitations for requests for funding, or funding allocations that would be spent from the WAIRE Mitigation Program must be approved by the South Coast AQMD Governing Board in a public meeting. The proposed incentives would be used toward the purchase of NZE and ZE trucks or the purchase and installation of ZE charging or hydrogen fueling infrastructure. The WAIRE Mitigation Program would be available to any applicant that has trucks domiciled and/or used in the same geographic area of the warehouses that paid the WAIRE Program mitigation fee or applicants who intend to purchase and install ZE charging or hydrogen fueling infrastructure to serve that same geographic area and county. Funds would be prioritized first to areas in the same Source Receptor Area (SRA)⁵⁵ as the warehouse. Should there be insufficient project applicants in any area for the amount of funding available, the funding may be redirected to an adjacent SRA in the same county as the primary SRA. Project funding solicitations would be issued within one year of receiving mitigation fees, and could potentially be coordinated with solicitations from other incentive programs. Incentive projects would be evaluated for cost effectiveness to maximize the potential for NO_x and DPM reductions of each incentive project. Because this funding program is wholly within the control of South Coast AQMD, funds may be combined with other incentive programs as allowable on a case-by-case basis.

⁵⁴ In order to avoid low quality workmanship and potential safety concerns, consideration may need to be made for a skilled and trained workforce. It is important that any installed infrastructure with the WAIRE Mitigation Program perform at a level that consistently meets the needs of the fleets it would serve and minimizes unnecessary impacts on the grid.

⁵⁵ <http://www.aqmd.gov/docs/default-source/default-document-library/map-of-monitoring-areas.pdf>

The WAIRE Mitigation Program incentives would be offered as a solicitation to receive enough applications similar to the existing incentive programs of Carl Moyer,⁵⁶ Proposition 1B,⁵⁷ or VW Mitigation Trust.⁵⁸ Similar to the existing incentive programs, there would be an application evaluation following the end of the solicitation. This would include evaluation of application documents, subsequent inspection of the NZE or ZE truck purchased or the ZE charging or hydrogen fueling infrastructure installed, and annual reports to follow the emission reductions of the incentive projects for the life of the incentive project contracts. The ultimate program design is not limited to matching these existing programs however, and other models may emerge after receiving stakeholder input as funding becomes available (e.g., voucher programs, a focus on grid upgrades on the utility side of the meter for some sites, consideration of small businesses, incorporation of community input and/or suggested projects that reduce NOx, etc.).

Finally, the incorporation of a well-trained and skilled workforce for ZE infrastructure installation is integral to the state's transportation electrification goals. According to a study commissioned by the state Workforce Development Board under AB 398 (2017), there is a strong relationship between high labor standards and investments in energy efficiency projects in both the installation and operations of ZE charging and fueling infrastructure. Workforce development, skilled training, and career development that addresses industry needs can lead to improved productivity and work quality, which are important considerations for PR 2305. ZE charging infrastructure projects funded by the WAIRE Mitigation Program will support equity and inclusion to ensure a well-trained and skilled workforce to comply with Public Utilities Code § 913.4(f) and the California Renewables Portfolio Standard Program. Skill standards such as specialized certifications in the installation, operation, and maintenance of zero emission technologies will be required to ensure safety and high performance.⁵⁹

Additional details to this mitigation program will be developed in a future public process as part of the development of funding solicitations. Solicitations and grant award decisions will be made by the Governing Board in public meetings, and the public will be encouraged to participate and provide feedback. In addition, the Resolution included in the Board package for PR 2305 and PR 316 will include specific language laying out requirements for the WAIRE Mitigation Program.

CHAPTER 3: IMPACT ASSESSMENT

INTRODUCTION

AFFECTED INDUSTRIES

BASELINE EMISSIONS INVENTORY

RULE STRINGENCY

SCENARIO ANALYSIS

FEASIBILITY

SOCIOECONOMIC ASSESSMENT

CALIFORNIA ENVIRONMENTAL QUALITY ACT

**DRAFT FINDINGS UNDER CALIFORNIA HEALTH AND
SAFETY CODE SECTION 40727**

COMPARATIVE ANALYSIS

INTRODUCTION

PR 2305 and PR 316 will apply to warehouses with greater than or equal to 100,000 square feet of indoor floor space. These warehouses are part of a larger goods-movement network of facilities located throughout the South Coast AQMD region that also includes marine ports, airports, rail yards, and smaller warehouses.

Warehouses serve as an intermediate storage facility for goods coming from manufacturing facilities, other warehouses, or food production sites that are ultimately destined for another location, including retail stores, other warehouses, customers (e.g., through e-commerce), or other manufacturing operations. Goods are transported to and from warehouses in trucks of a variety of sizes, including smaller Class 2b-7 trucks used for local delivery or larger Class 8 tractor trailers (typically diesel-powered) that can transport goods either locally or nationally. These trucks will back up to a warehouse's loading dock to load/unload their cargo in or out of the warehouse. Some warehouses also allow trailers to be parked within their truck yard for short periods of time. These trailers are moved around the yard or to/from a loading dock with a yard truck (typically diesel-powered).

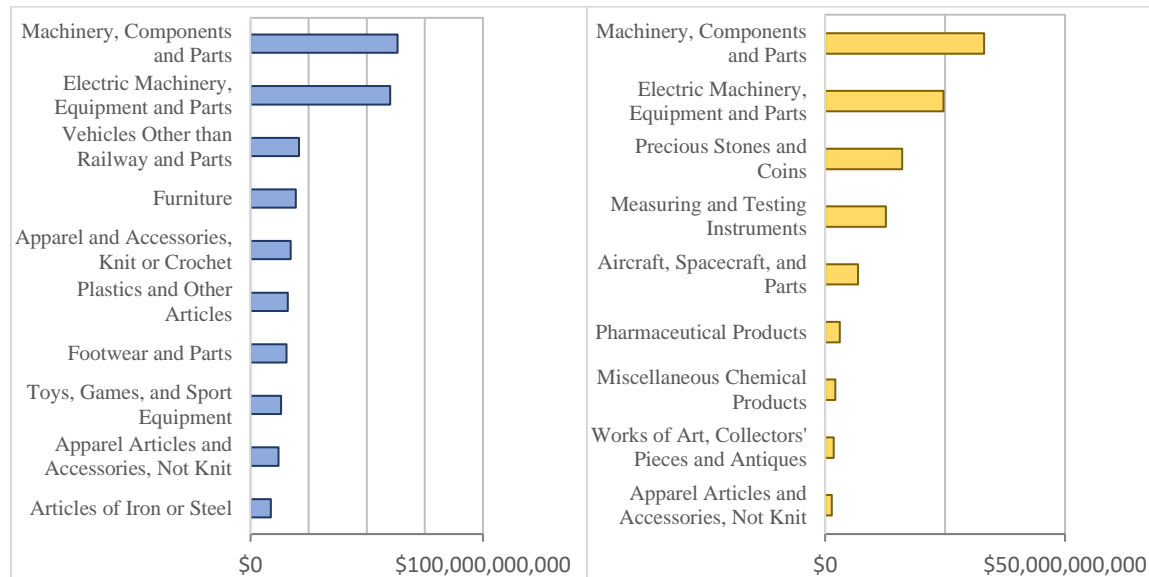

Inside the warehouse, goods are stored on storage racks that may be more than 20 feet high. The level of automation varies inside each warehouse, but, if automation is present, can include conveyor systems, robotics, and scanners. Goods are commonly moved around inside a warehouse by employees operating pallet jacks or small industrial forklifts. Additional activities include sorting, labeling, repackaging, palletizing, applying scannable bar codes (SKUs), racking, and packing/unpacking trucks. Many additional activities can be present at a facility with a warehouse including supporting office administration, manufacturing, vehicle maintenance, or retail stores that are open to the general public. Some warehouses also support cold storage, typically for food products, and will have large refrigeration systems. Trucks distributing goods to/from these cold storage warehouses typically keep goods at their appropriate temperature with a small diesel-powered transport refrigeration unit (TRU) mounted on the truck or trailer.

AFFECTED INDUSTRY

Southern California is a major gateway for goods coming from Asia. A wide variety of industries have supply chains which relies on goods moving through Southern California. Approximately \$500 billion in goods were moved through the larger Southern California Association of Governments (SCAG) region in 2016, with imports accounting for about 75%. It is unclear how much of this total flow of goods move through warehouses subject to PR 2305 and PR 316. However about 69% of imports from the ports of Los Angeles and Long Beach (LA/LB) do not go directly onto rail, and therefore are expected to utilize warehouses within the South Coast AQMD region. Figure 8 shows the top commodities traded through the ports of LA/LB and through the Los Angeles and Ontario airports in 2018.⁶⁰

⁶⁰ https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_goods-movement.pdf

Figure 8: Top Commodities Traded Through Long Beach and Los Angeles Ports (left) and Los Angeles and Ontario Airports (right)

Warehouses are operated by cargo owners or by third party logistics (3PLs) firms who manage warehouses on behalf of cargo owners.⁶¹ Warehouses are typically owned by a landlord⁶² who leases the facility for a short period (e.g., three years) either to a cargo owner or 3PL. All three groups of industries (i.e., cargo owners, 3PLs, and warehouse owners) will be affected by PR 2305 and PR 316. Some motor carriers may choose to update some of their business practices (e.g., using more NZE or ZE trucks) in response to shifting market conditions brought about by PR 2305 (or other CARB regulations or incentive programs), however they are not regulated by PR 2305.

As shown in the baseline emissions inventory below, most NOx and diesel PM emissions associated with warehouses come from trucks. Trucks are owned and/or operated by motor carriers, and their services are provided on behalf of the owner of the goods they are carrying. Warehouse operators often do not own the goods in their warehouse, and in these cases they may not be directly involved in hiring all or any motor carriers that visit the warehouse.

Industry stakeholders have indicated that the business relationships between warehouse operators, cargo owners, and motor carriers can vary widely, even in a single warehouse. Some warehouses are more vertically integrated where the operator owns the goods in the warehouse, and directly contracts with motor carriers, or uses their own fleet, to transport the goods to retail establishments.⁶³ In this situation, the warehouse operator has a relatively high level of control of

⁶¹ https://scag.ca.gov/sites/main/files/file-attachments/task4_understandingfacilityoperations.pdf

⁶² In rare instances, the land beneath a warehouse building is owned by a different entity than the warehouse building itself.

⁶³ As estimated in Appendix C to this report, up to 40% of warehouse operators subject to PR 2305 may own a fleet. The number of warehouse operators who also directly arrange for some level of trucking services to their facility is unknown, but would increase the total number of warehouses who have a direct ownership or other business relationship with at least some trucks going to their facility. Staff conversations with warehouse operators have

the trucks and cargo flowing through the warehouse.⁶⁴ Other warehouse operators may not own any goods within the warehouse, or have a direct relationship with any motor carriers visiting the warehouse, or own a fleet themselves. The warehouse operator may have very little control over the trucks calling at the warehouse in this configuration.

One common relationship between all warehouse operators is they either own the goods in the warehouse themselves, or have a direct contractual relationship with the goods owner to manage the warehousing of those goods. The specific conditions in these contracts can vary widely depending on the needs of the two parties. For example, some warehouse operators have indicated their contracts with motor carriers have included air quality goals, such as providing incentives to fleets that met EPA SmartWay standards,⁶⁵ or requiring use of zero emission (ZE) trucks. Under PR 2305, some warehouse operators may choose to include contract provisions either with motor carriers or with goods owners who contract with motor carriers, that take into account the requirements of the rule. This could include requiring or incentivizing near zero emission (NZE) or ZE truck visits, or increasing the price charged for warehousing operations so that the operator can comply with PR 2305 in other ways.

Affected Facilities

There are approximately 45,000 industrial buildings of any size located in the South Coast AQMD region, totaling about 1.6 billion square feet. Warehousing makes up a significant fraction of this industrial space, with approximately 90% of these buildings classified as distribution, light distribution, cold storage, truck terminal, or warehouse.⁶⁶ Some industrial properties also include a combination of warehousing and manufacturing uses.

Most industrial properties are smaller in size, typically less than 100,000 square feet. However, the majority of the industrial building square footage occurs in larger buildings (Figure 9). The amount of industrial building space within South Coast AQMD's region has been growing substantially over the past several decades, with most of the growth occurring in the counties of San Bernardino and Riverside since the year 2000 (Figure 10).⁶⁷ Warehousing is anticipated to continue to grow in the SCAG region at a rate of ~1.8% annually.⁶⁸

indicated that while not ubiquitous, it is not uncommon for many warehouse operators to have at least some trucking companies that they directly work with.

⁶⁴ Note that even in this instance, the supplier of some of the goods to the warehouse may arrange to transport inbound shipments without involving the warehouse operator.

⁶⁵ EPA SmartWay is a voluntary program that promotes fuel efficiency for freight carriers.

⁶⁶ www.costar.com

⁶⁷ Ibid.

⁶⁸ https://scag.ca.gov/sites/main/files/file-attachments/final_report_03_30_18.pdf

Figure 9: Industrial Building Count (left) and Square Footage (right) by Building Size in South Coast AQMD Jurisdiction

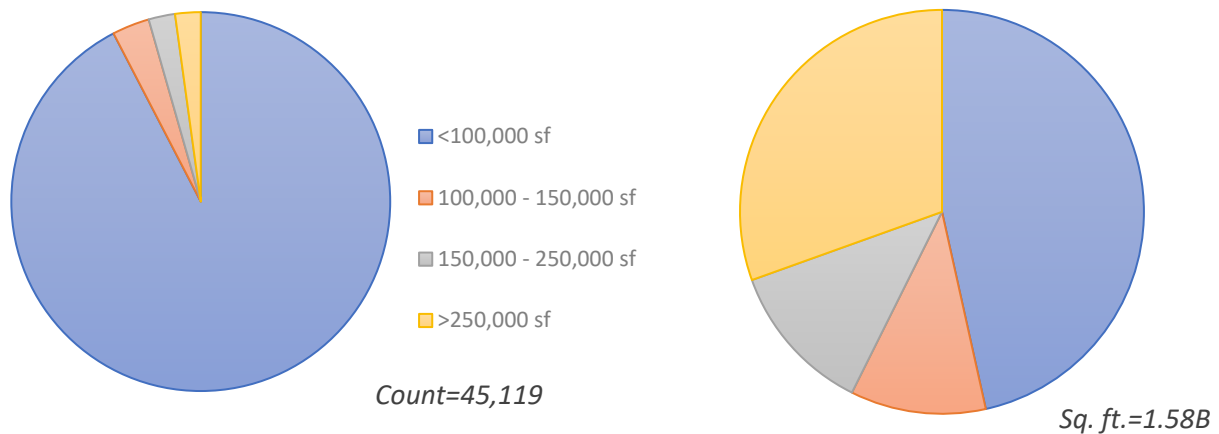

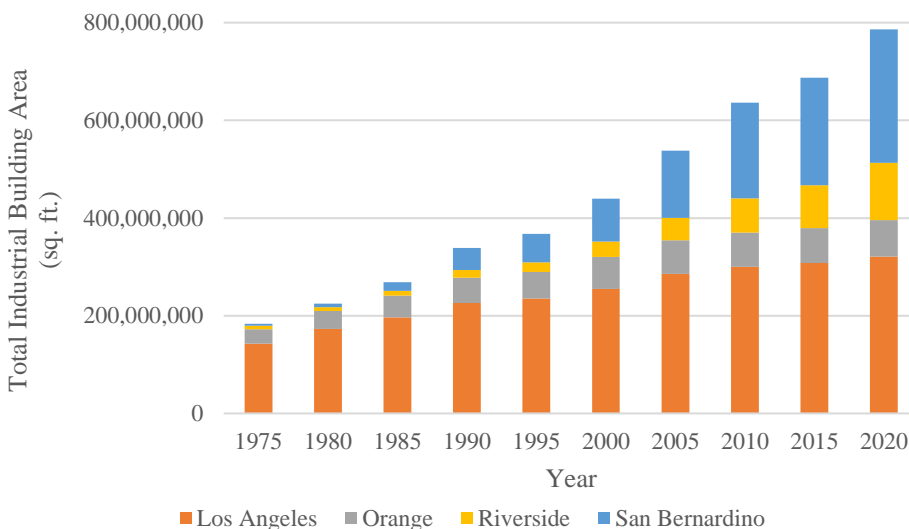

Figure 10: Industrial Building Growth by County

There are currently about 3,320 facilities with 100,000 square feet or more of building area that may be subject to PR 2305 and PR 316 (see Appendix C for a list of addresses and a discussion of how the number and type of facilities was determined). Of these facilities, an estimated 2,902 are expected to be required to earn WAIRE Points under PR 2305, with the remainder only subject to limited reporting (e.g., facilities with $\leq 100,000$ sq. ft. of warehousing activity in a building with $> 100,000$ sq. ft.). Of the warehouses expected to be required to earn WAIRE Points, about 38% may have more than one operator in a single building (yielding a total of about 4,000 operators), about 45% may own a truck fleet,⁶⁹ and about 17% may be owner occupied (with any combination thereof).

⁶⁹ Data is not available for how many trucks from operator-owned fleets serve a warehouse.

BASELINE EMISSIONS INVENTORY

The discussion below provides the method for estimating baseline emissions of NO_x and diesel PM in 2019, 2023, and 2031 for the 2,902 warehouses expected to be required to earn WAIRE Points under PR 2305.⁷⁰ The estimate presented here relies on the substantial work previously conducted to estimate vehicular-related emissions, including work performed by:

- California Air Resources Board (CARB) both for the 2016 AQMP emissions inventory⁷¹ and for the Draft Mobile Source Strategy⁷²,
- SCAG for the 2016 Regional Transportation Plan, and
- South Coast AQMD for the 2016 AQMP

South Coast AQMD also sponsored a study to evaluate warehouse activities that affect air quality, co-sponsored with the National Association for Industrial and Office Parks (NAIOP).⁷³ The study was conducted by the Institute of Transportation Engineers (ITE) to update warehouse trip generation estimates for warehouses.⁷⁴

Methodology for Estimating NO_x Emissions from Warehouses

Trip Generation Rates

Data was obtained for three categories of warehouses from CoStar⁷⁵ including warehouses $\geq 100,000$ and $< 200,000$ sq. ft., $\geq 200,000$ sq. ft., and all cold storage warehouses $\geq 100,000$ sq. ft. Current warehouse data was projected to 2023 and 2031, using growth factors derived from SCAG's Industrial Warehousing report⁷⁶.

Trip generation rates for on-road vehicles were obtained from the High-Cube Warehouse Vehicle Trip Generation Analysis⁷⁷ by ITE and supplemented with data from the City of Fontana's Truck Trip Generation Study⁷⁸.

Table 5: Trip Generation Rates in Trips/Thousand Sq. Ft.

Warehouse Category	Class 8	Class 4-7	Passenger Vehicles
$\geq 200,000$ sq. ft.	0.33	0.12	1.000
$\geq 100,000 - < 200,000$ sq. ft.	0.21	0.14	1.385
Cold Storage ($\geq 100,000$ sq. ft.)	0.75	0.29	1.282

Table 6: Warehouse Square Footage for Each Warehouse Category

Warehouse Category	2019	2023	2031
≥200,000 sq. ft.	521,727,570	562,574,867	644,269,462
≥100,000 – <200,000 sq. ft.	214,795,154	231,611,979	265,245,630
Cold Storage (≥100,000 sq. ft.)	8,188,346	8,829,431	10,111,601

Trucks

Baseline composite truck emission rates⁷⁹ (ER) were calculated from EMFAC2017 for heavy duty trucks of Class 4-7 and Class 8 for calendar years 2019, 2023, and 2031. EMFAC2017 provides activity and emission rates for all on-road vehicles that operate within California, however, the analysis presented here is limited to those categories most likely to deliver goods to and from warehouses. EMFAC categories⁸⁰ in this analysis and their relationship to truck class are shown in Table 7 below.

Table 7: EMFAC Truck Categories

EMFAC Category	Description	Truck Class
T6 CAIRP Small	Medium-Heavy Duty Diesel CA International Registration Plan Truck with GVWR≤26,000 lbs	Class 4-6
T6 Instate Small	Medium-Heavy Duty Diesel Instate Truck with GVWR≤26,000 lbs	
T6 OOS Small	Medium-Heavy Duty Diesel Out-of-State Truck with GVWR≤26,000 lbs	
T6 CAIRP Heavy	Medium-Heavy Duty Diesel CA International Registration Plan Truck with GVWR>26,000 lbs	Class 7
T6 Instate Heavy	Medium-Heavy Duty Diesel Instate Truck with GVWR>26,000 lbs	
T6 OOS Heavy	Medium-Heavy Duty Diesel Out-of-State Truck with GVWR>26,000 lbs	
T7 CAIRP	Heavy-Heavy Duty Diesel CA International Registration Plan Truck with GVWR>33,000 lbs	Class 8
T7 NNOOS	Heavy-Heavy Duty Diesel Non-Neighboring Out-of-State Truck with GVWR>33,000 lbs	
T7 NOOS	Heavy-Heavy Duty Diesel Neighboring Out-of-State Truck with GVWR>33,000 lbs	
T7 POLA	Heavy-Heavy Duty Diesel Drayage Truck in South Coast with GVWR>33,000 lbs	
T7 Tractor	Heavy-Heavy Duty Diesel Tractor Truck with GVWR>33,000 lbs	

Vehicle miles traveled (VMT) per trip of 14.2 mi/trip and 39.9 mi/trip for medium-heavy (Class 4-7) and heavy-heavy duty trucks (Class 8) respectively, were derived from SCAG's 2016 Regional Transportation Plan modeling analysis (Table 8).

⁷⁹ This is the sum of each truck category's emissions rate multiplied by its corresponding VMT, and then divided by the total sum of VMTs.

⁸⁰ <https://ww3.arb.ca.gov/msei/downloads/emfac2017-volume-iii-technical-documentation.pdf>

Table 8. Truck activity data from SCAG's Heavy-Duty Truck Regional Travel Demand Model

Truck Class	VMT (mi/day)	Trips (trip/day)	Mile/trip
Class 4-7	7,744,000	544,000	14.2
Class 8	12,060,000	302,000	39.9

Class 8 truck emissions were discounted by 22.2% to account for the trips made in between warehouses by trucks.⁸¹ Total idling emissions in the South Coast Air Basin (SCAB) for these truck classes were proportioned by the VMT estimate associated with warehouse trucking to calculate potential idling emissions associated with warehouses. The equations below show how preliminary emissions estimates were calculated.

Equation [1]:

$$VMT \text{ Associated with Warehouses} = \text{Warehouse size (ksf)} \times \text{trip rates} \left(\frac{\text{trips}}{\text{ksf}} \right) \times \frac{\text{miles}}{\text{trip}}$$

Equation [2]:

$$\begin{aligned} \text{Running Exhaust Emissions Associated with Warehouses} \\ = ER_{\text{Class 8}} \times \text{Warehouse VMT}_{\text{Class 8}} \times (1 - 0.222) \\ + ER_{\text{Class 4-7}} \times \text{Warehouse VMT}_{\text{Class 4-7}} \end{aligned}$$

Equation [3]:

$$\begin{aligned} \text{Idling Exhaust Emissions associated with Warehouses} \\ = \left(\frac{\text{Warehouse VMT}_{\text{Class 8}}}{\text{Total VMT}_{\text{Class 8}}} \right) \times \text{Idling } ER_{\text{Class 8}} (1 - 0.222) \\ + \left(\frac{\text{Warehouse VMT}_{\text{Class 4-7}}}{\text{Total VMT}_{\text{Class 4-7}}} \right) \times \text{Idling } ER_{\text{Class 4-7}} \end{aligned}$$

CARB recently approved two regulations that are expected to lower the emissions from trucks beginning with model year 2024 trucks, including the Advanced Clean Trucks Regulation and the Low NOx Omnibus Regulation. Additional emission reductions are anticipated from the upcoming Heavy Duty Inspection and Maintenance (I/M) regulation⁸². CARB modified EMFAC 2017 to account for these regulations in the META tool that supports its Draft 2020 Mobile Source Strategy. These modifications were applied to the truck categories and VMT associated with warehouses under PR 2305. The anticipated emission reductions from these regulations associated with the 2,902 warehouses expected to earn WAIRE Points under PR 2305 is shown in Table 9.

⁸¹ https://scag.ca.gov/sites/main/files/file-attachments/task4_understandingfacilityoperations.pdf (pg 3-24)

⁸² <https://ww2.arb.ca.gov/our-work/programs/heavy-duty-inspection-and-maintenance-program>

Table 9: Estimated Baseline Truck Emission (tpd) Associated with PR 2305 Warehouses Required to Earn WAIRE Points

Passenger Vehicles

Similar to the methodology described for trucks, composite emission rates for running exhaust and start exhaust emissions for light duty cars and trucks from EMFAC2017, default car trip lengths from SCAG (10.6 mi./trip), and ITE trip generation rates for each warehouse category were used to estimate emissions from passenger car travel attributed to each warehouse category. No corrections outside of default values discussed above were made for passenger cars. Baseline emissions for this category are shown in Table 10 below.

Table 10: Estimated Baseline Passenger Car Emission (tpd) Associated with PR 2305 Warehouses Required to Earn WAIRE Points

Cargo Handling Equipment

Two main types of cargo handling equipment are typically operated at warehouses. These include yard trucks and industrial trucks (including pallet jacks and forklifts). Emissions from industrial trucks are not estimated for PR 2305 warehouses.⁸³ Yard trucks operated at warehouses are typically powered by diesel engines, and can be certified as off-road (which restricts the yard truck to one warehouse's yard) or on-road (which allows for short trips to nearby warehouses). Some warehouses may have more than one yard truck operating onsite, while others may have none. Several data sources⁸⁴ were used to estimate the potential yard truck emissions associated with warehouses subject to PR 2305 including:

⁸³ Warehouses subject to PR 2305 have indoor areas that are nearly always above grade compared to the nearby truck and trailer yard to accommodate trucks backing up to a dock. Industrial trucks therefore operate almost exclusively in an indoor environment in these warehouses. During site visits, staff did not observe any industrial trucks powered by internal combustion engines (ICEs) at warehouses subject to PR 2305, and operators cited the desire to avoid operating ICEs in indoor environments.

⁸⁴ Population data for yard trucks operated at warehouses is not available from CARB.

- A business survey of warehouses commissioned by South Coast AQMD.⁸⁵ Respondents to this survey indicated that larger warehouses (>200,000 sq. ft.) operate an average of 3.6 yard trucks per million square feet of warehouse space, while smaller warehouses (100,000 to 200,000 sq. ft.) operate an average of 1.2 yard trucks per million square feet.
- Yard truck manufacturing data by calendar year was purchased from Powersys.⁸⁶ This data product includes an attrition model that estimates the retirement of older yard trucks through time. Both on-road and off-road data is available from this product.
- Activity data was provided by a yard truck manufacturer. On-road yard trucks are estimated to travel 2,145 mi/yr and off-road yard trucks are estimated to operate for 1,430 hrs/yr.
- Calendar year-specific emission rates for on-road and off-road yard trucks was obtained from the Carl Moyer Guidelines.⁸⁷

The estimated baseline NO_x and diesel PM emissions from yard trucks are presented in Table 11 below.

Table 11: Estimated Baseline Yard Truck Emissions (tpd) Associated with PR 2305 Warehouses Required to Earn WAIRE Points

	2019		2023		2031	
	NO _x	Diesel PM	NO _x	Diesel PM	NO _x	Diesel PM
Total	0.09	0.003	0.09	0.003	0.08	0.003

Transport Refrigeration Units (TRUs)

Updated emission estimates were based on CARB's current rulemaking effort affecting TRUs.⁸⁸ Half of all truck, trailer, and genset TRU emissions in the South Coast Air Basin were assumed to be associated with cold storage warehousing as refrigerated goods must travel to or from a warehouse for local delivery. This emission total was further reduced by the amount of cold storage warehousing square footage subject to PR 2305 WAIRE Point requirements relative to total cold storage warehousing in the South Coast AQMD jurisdiction (which is about 62%). Results of this analysis are presented below in Table 12.

Table 12: Estimated Baseline TRU Emissions (tpd) Associated with PR 2305 Warehouses Required to Earn WAIRE Points

Summary of Baseline Emissions

Table 13 presents a summary of total baseline emissions associated with the 2,902 warehouses expected to earn WAIRE Points under PR 2305. This emissions total represents about 19% and 28% of the South Coast AQMD carrying capacity⁸⁹ in 2023 and 2031, respectively.

Table 13: Summary of Baseline Emissions Associated With PR 2305 Warehouses Expected to Earn WAIRE Points

Emission Source	2019		2023		2031	
	NO _x	Diesel PM	NO _x	Diesel PM	NO _x	Diesel PM
Trucks	41.67	0.67	20.19	0.14	16.81	0.12
Passenger Vehicles	1.14	0.02	0.70	0.02	0.39	0.01

Total	44.72	0.774	22.61	0.227	18.89	0.192

RULE STRINGENCY

Many factors go into considering the stringency of proposed rules. For PR 2305, the draft stringency recommended here considered the following points: the need for emission reductions (discussed in Chapter 1), the significance of emissions associated with the warehousing industry (discussed above in the Summary of Baseline Emissions), the potential emissions reductions from PR 2305 when considering other measures, and the impact to industry.

Potential Emission Reductions from PR 2305 and PR 316 When Considering Other Measures

As described in the baseline emissions inventory analysis above, recent CARB regulations have been quantified to the extent possible. In addition, CARB's Draft Mobile Source Strategy (Draft MSS) is designed to consider all the other measures that may be needed across every mobile source sector to meet various state goals, including attainment of federal air quality standards. This strategy includes very aggressive targets across all sectors, and any shortfall in one sector (e.g., ocean going vessels) would need to be made up by another sector (e.g., trucks).

South Coast AQMD staff submitted comments to CARB stating the Draft MSS needs to go even further, since emission reductions modeled in CARB's Draft MSS are not sufficient to meet either of the upcoming 2023 or 2031 federal deadlines for ozone reduction. Even in the most aggressive modeling in the Draft MSS,⁹⁰ in 2023 more than 95% of heavy-duty trucks will be no cleaner than 2010 engine standards assumed for all trucks in the baseline emissions inventory from the 2016 AQMP. This scenario projects these trucks will still make up about 57% of the truck fleet in 2031.

⁸⁹ The carrying capacity is the maximum amount of NO_x emissions that are allowable in the air basin while still meeting 2023 and 2031 federal ozone standards.

⁹⁰ The Draft MSS did not explicitly consider any emission reductions from PR 2305 and PR 316.

Since the 2016 AQMP requires a 45% and 55% reduction in NO_x by 2023 and 2031 respectively, the continued presence of large fractions of 2010 MY trucks in the fleet will hamper efforts to meet these deadlines. Any additional emission reductions provided by PR 2305 and PR 316 would assist in meeting the region's federal air quality attainment needs.

Impact to Industry

Some potential impacts to industry from PR 2305 include increased costs of warehouse operations and potential imposition of competitive disadvantages relative to warehousing in other regions. The potential cost impacts are described in the 'Compliance Costs' section below, and will be analyzed further in the socioeconomic analysis that will be released for public review at least 30 days prior to the public hearing to consider adoption of PR 2305 and PR 316.

The potential imposition of competitive disadvantages from air quality regulatory costs on the goods movement industry has been analyzed in two studies. First, one study was conducted by Industrial Economics Inc. (IEC)⁹¹ and funded by South Coast AQMD to analyze the potential for PR 2305 and PR 316 to cause warehouses to relocate to nearby areas in order to avoid compliance with the rules. The second study by Davies Transportation Consulting Inc. was funded by the ports of LA/LB to analyze how the logistics industry might respond to a new truck rate for imported goods at marine terminals. These studies will be discussed in greater depth in the socioeconomic analysis, but a brief synopsis of the results is included below.

IEC Warehouse Relocation Study

The IEC study found the warehousing industry in the South Coast AQMD is robust, and has grown at faster rates than surrounding areas (see Figure 10 and Figure 11), all while experiencing consistent increases in rent that have outpaced neighboring markets (see Figure 12). Since 2010, the rent increases in South Coast AQMD have average about \$0.47 per sq. ft. annually, all while growing in capacity by about 17 million sq. ft. per year. Nearby areas outside the South Coast AQMD jurisdiction have only increased their rents about \$0.06 per sq. ft. annually over the same period.⁹²

Industry stakeholders interviewed as part of the IEC study pointed to several benefits that warehouses rely on that are unique to this area, including the highly developed transportation network of multiple ports, railways, and interstate highways, along with a large labor pool that is difficult to access in more remote regions, and proximity to the large metropolitan customer base.

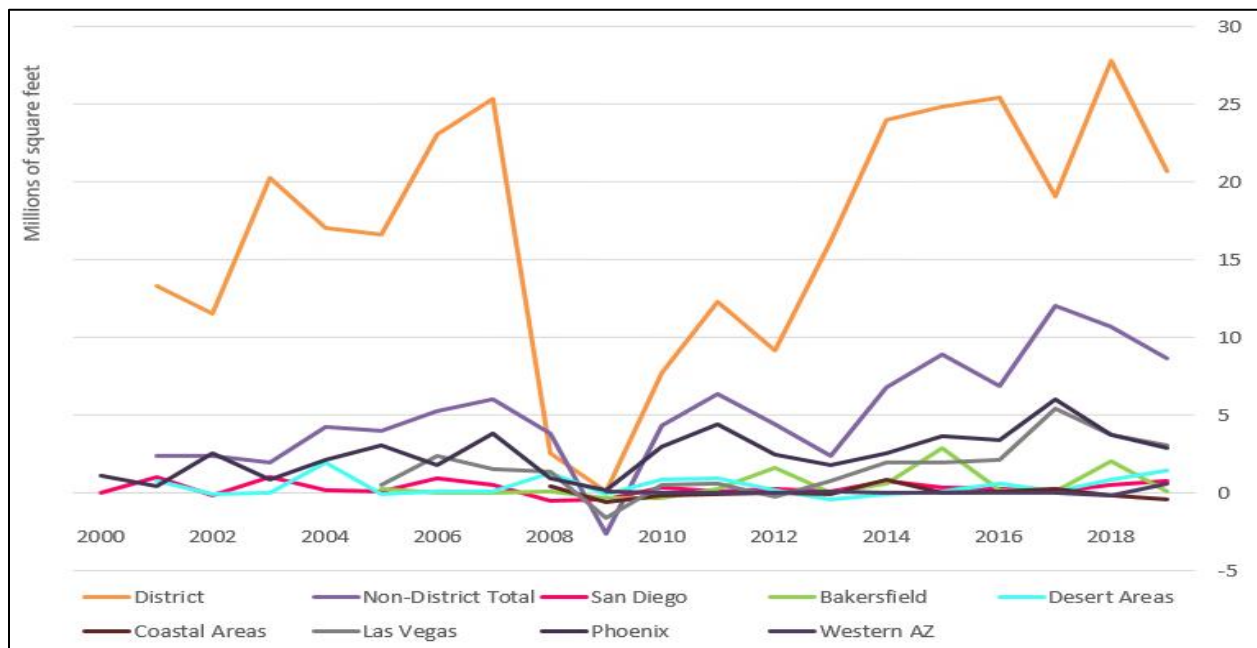

IEC modeled the potential costs that warehouses face with and without PR 2305 and PR 316 using two different methods. These analyses took into account different costs in neighboring markets such as rent, labor, utilities, transportation, etc., as well as costs associated with different potential stringencies of PR 2305 and PR 316. If costs are cheaper in a neighboring region compared to South Coast AQMD, then a warehouse would be motivated to relocate its operations. The analyses considered costs for existing building stock in neighboring areas, as well as hypothetical building stock assuming that existing vacant land that is industrially zoned could accommodate warehouses.

⁹¹ Study will be included as an appendix to the socioeconomic analysis and is also located here: www.aqmd.gov/fbmsm.

⁹² These annual \$0.47/sf increased rents result in an additional cost to industry in the South Coast AQMD jurisdiction of about \$11.4 billion from 2010-2019 compared to non-District \$0.06/sf increases in rents.

One method that assumed all warehouses serve all markets equally found that no warehouses would relocate even with compliance costs of up to \$2/sq. ft. of warehousing space. A more conservative modeling method found that up to 10 warehouses would have cheaper costs today (without PR 2305) in neighboring regions if the warehouses were solely dedicated to a single market (e.g., serving the national market only via inbound drayage trucks from the port and outbound trucking to intermodal railyards).⁹³ This same conservative model found that no additional warehouses would experience cheaper costs in neighboring areas (and hence potentially relocate) if compliance costs from PR 2305 were at or below \$1.50/sq. ft.

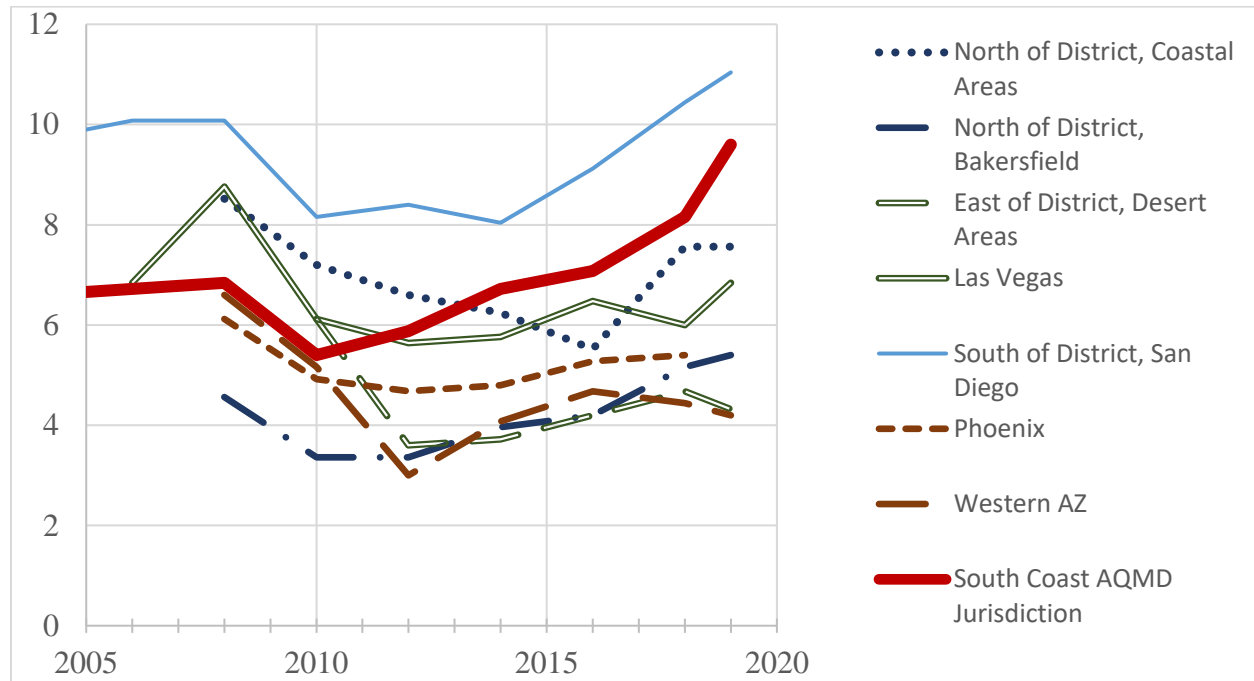

Figure 11: Annual Net Absorption⁹⁴ in Warehousing Space in South Coast AQMD Jurisdiction and Neighboring Areas

⁹³ As seen in Figure 10 and Figure 11, warehousing is preferentially growing in the South Coast AQMD jurisdiction compared to neighboring markets. One indication of the conservative nature of this modeling approach is that it finds that the opposite should be occurring in the baseline, and a small number of warehouses should relocate outside of the South Coast AQMD jurisdiction.

⁹⁴ Net absorption is a common metric used to track warehouse industry growth and is defined as the amount of warehouse space that tenants moved into minus the amount of warehouse space vacated in a given time period. Continually rising net absorption in South Coast AQMD indicates that more warehouses are being built and occupied than are being vacated. Negative net absorption indicates that more tenants are vacating warehouses than moving into warehouses during a given time period.

Figure 12: Warehousing Historical Rents in South Coast AQMD Jurisdiction and Neighboring Areas

Davies Transportation Consulting Port Study

The Davies study evaluated the potential for cargo diversion away from the ports of LA/LB if the ports implemented an update to its Clean Truck Program that would impose a new truck rate on loaded cargo containers that move through the port complex, with exemptions provided for NZE (through 2031) and ZE trucks. This study evaluated the different types and ultimate destinations throughout the country of cargo imported to the ports. A model was developed that evaluated the potential costs of using different ports, including the cost of increased time to travel from east Asia to ports in the eastern half of the United States.⁹⁵ This analysis found only a portion of goods are potentially subject to diversion to different ports, even at the maximum truck rate evaluated.⁹⁶ If the truck rate were set at \$70/TEU⁹⁷, the study found that the potential diversion of total containerized imports would only be up to 1.4%. The ports ultimately approved a truck rate of \$10/TEU,⁹⁸ though they have yet to implement the rate. Based on the Davies study, this rate level would result in 0.2% diversion of total containerized imports.

⁹⁵ As an example, the Davies study found that goods traveling from Shanghai to the New York/New Jersey port took more than 10 days longer than goods travelling from Shanghai to the ports of LA/LB.

⁹⁶ The Davies study found that 35% of imported goods would not relocate at all to a different port within the study parameters (i.e., up to \$70/TEU). These are goods that are goods destined for the local market or for markets within about an 800-mile trucking distance from the ports.

⁹⁷ Twenty-foot Equivalent Unit. Most marine containers that are trucked out of the ports are forty-foot equivalent units, equal to two TEUs.

⁹⁸ https://polb.granicus.com/MinutesViewer.php?view_id=77&clip_id=7245.

Potential Impact of PR 2305 and PR 316 on Industry Competitiveness

The two studies analyze the effect of diversion of the logistics sector away from the South Coast AQMD jurisdiction, but with important differences. The Davies study found cargo owners had limited choices if the ports implemented the Clean Truck Program. They could either pay for the cost of NZE or ZE trucks, pay the \$10/TEU rate, or relocate to a different port.⁹⁹ The study concluded that at \$70/TEU it would be more cost effective for the vast majority of goods (98.6%) to continue using the ports of LA/LB.

Because PR 2305 and PR 316 apply at warehouses, not at ports, a cargo owner has more options than simply paying the maximum cost of complying with these rules (through increased warehousing costs in the South Coast AQMD jurisdiction) or diverting their cargo to another port. Under PR 2305, cargo owners will have many options and they can implement the cheapest option for their business operation that may be significantly lower cost than the maximum cost option (see ~~Table 20: Total Cost Summary of Each Compliance Scenario (2022–2031) After Accounting for CARB’s ACT and Low NOx Omnibus Regulations~~ Table 20).

In addition, cargo owners could utilize warehouses just outside of the South Coast AQMD jurisdiction in neighboring areas, rather than shifting to a different port. The IEc study found the stringency of the rule would have to be more than \$1.50/sq. ft. for it to be more efficient to divert a small amount of cargo outside of the Basin to warehouses that are not subject to PR 2305 and PR 316. The cost of diverting cargo to other ports would be even higher than diverting it to warehouses outside the basin, due in large part to the increased travel times: moving cargo to a nearby region increases travel time by only a few hours,¹⁰⁰ rather than 10+ days from moving goods to a port on the east coast.

Finally, the Davies study and others¹⁰¹ have documented the ports of LA/LB have lost market share of containerized imports continuously since at least 2003. The reasons for this loss have been attributed to many macroeconomic causes that outweigh any increased regulatory costs in California, including labor stoppages in 2002 and 2014/2015, the widening of the Panama Canal in 2016, the recent shifting of some manufacturing from east China to southeast Asia in response to trade tensions,¹⁰² increased investments in infrastructure at competing ports, the lack of increased trade with areas outside of east Asia, etc.

Despite this longer term shift in global trade flows, containerized traffic at the ports of LA/LB has steadily increased¹⁰³ (Figure 13) and is still expected to reach 34 million TEUs by 2040.¹⁰⁴ Warehousing in the South Coast AQMD jurisdiction has grown rapidly (Figure 10 and Figure 11)

⁹⁹ The Davies study analyzed a variety of costs for goods travelling from Shanghai, China to Chicago, including from ocean shipping, rail shipping, trucking, port and rail fees, the value of time differences in shipping routes, etc.

¹⁰⁰ For example, travel time without traffic from the ports to Bakersfield is about 2.5 hours, while travel time from the ports to Ontario (located in the Inland Empire) is about 1 hour.

¹⁰¹ <https://www.pmsaship.com/wp-content/uploads/2019/12/Briefing-Paper-Loss-of-Market-Share-at-U.S.-West-Coast-Ports.pdf>

¹⁰² <https://www.freightwaves.com/news/freight-volumes-shift-east-as-supply-chains-move-out-of-china>

¹⁰³ <https://www.polb.com/business/port-statistics#latest-statistics>,
<https://www.portoflosangeles.org/business/statistics/container-statistics>

¹⁰⁴ https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_goods-movement.pdf

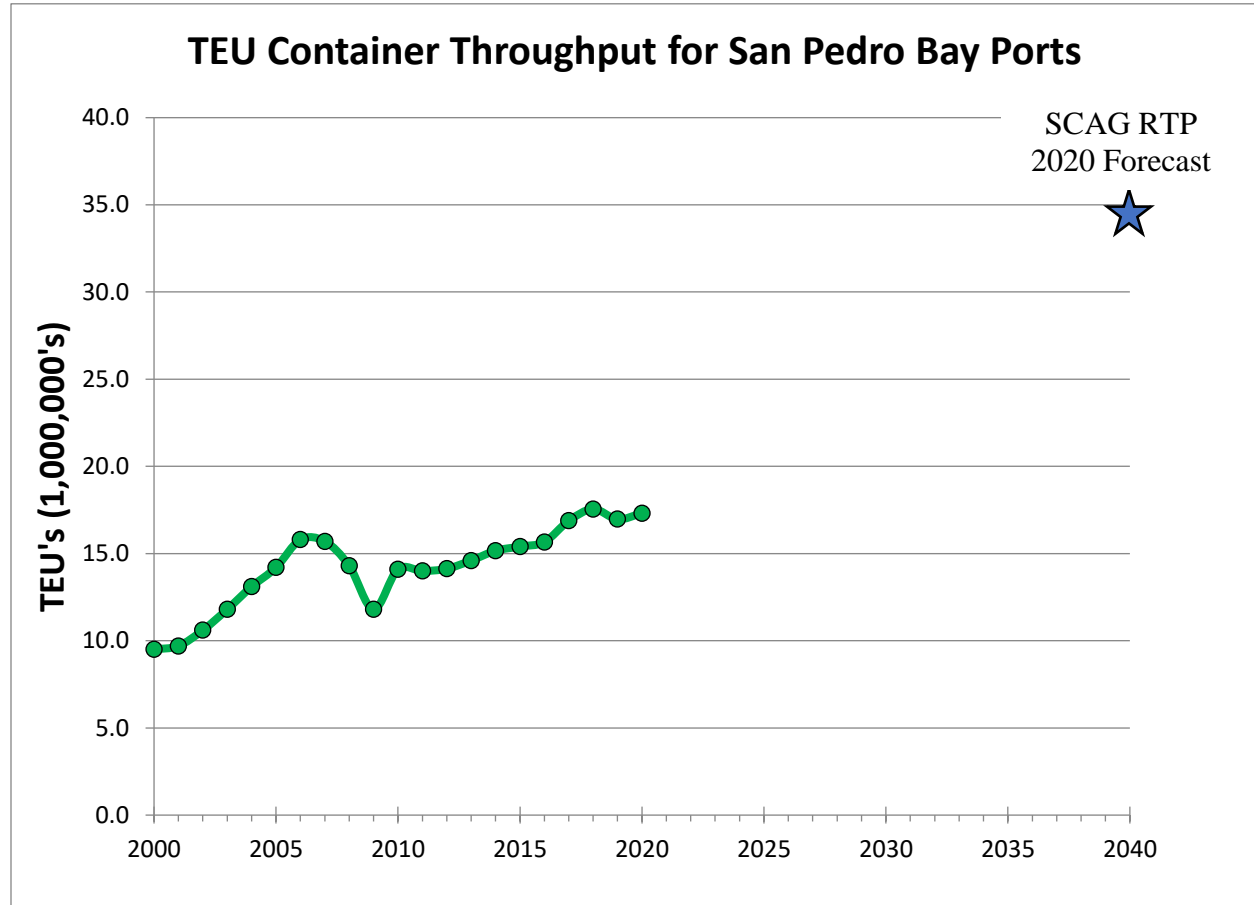

to accommodate this increased goods movement activity and is expected to continue.¹⁰⁵ Thus, even with a loss of market share, given the significant and continued growth in the logistics industry in South Coast AQMD's jurisdiction, it is not clear that any logistics activity has relocated as opposed to experiencing faster growth in other areas.¹⁰⁶ Similarly, the warehousing industry has experienced significant increased costs (Figure 12), and yet has continued to grow faster than neighboring regions (Figure 11). PR 2305 and PR 316 would also impose additional costs on the industry, however relocation of warehousing due to these rules is not expected if costs are below \$1.75 per sq. ft. Similar to the port analysis, it is possible that the growth of warehousing may change in the future in response to many factors (regulatory costs from CARB and/or South Coast AQMD, land costs, labor availability, changing market conditions, etc.)¹⁰⁷

¹⁰⁵ https://scag.ca.gov/sites/main/files/file-attachments/final_report_03_30_18.pdf

¹⁰⁶ As an example, in April 2021 Maersk (the largest container shipping line in the world, <https://www.forbes.com/sites/niallmccarthy/2021/03/29/the-world-largest-container-shipping-companies-infographic/>) increased its service for the Asia-US East Coast route, but did not reduce its service for the Asia-West Coast route (<https://www.freightwaves.com/news/maersk-adding-weekly-service-to-us-east-coast>). The stated reasons for this shift are strong market demand on the US East Coast, a desire to create a more reliable service to the US East Coast, and infrastructure bottlenecks on the US West Coast coupled, with no mention of air quality regulations.

¹⁰⁷ Although PR 2305 is not expected to result in relocation of logistics activity at the proposed level of stringency, CEQA analysis requires a different legal standard of review. To be conservative in that analysis, some relocation is therefore considered to be possible in order to evaluate any potential environmental impacts.

Figure 13: Containerized Trade Flows at the Ports of Long Beach and Los Angeles

Summary of Considerations For Determining PR 2305 Stringency

Because of the pressing need to meet federal air quality standards in 2023 and 2031, both from a public health perspective and from a public policy perspective (e.g., avoiding federal sanctions), the stringency of the rule should be set at a level that achieves emission reductions beyond what other regulations will require, and that is within South Coast AQMD's legal authority. The immediacy of the 2023 deadline also drives a need for a phase-in schedule that can achieve emission reductions early.

The logistics industry and warehousing in particular are robust in our region and have continued to grow rapidly despite experiencing headwinds such as continuously increasing rents and loss of market share to other ports. However, as demonstrated in the 'Compliance Costs' section below, there will be financial impacts to industry to implement PR 2305, and it will also require many warehouse operators and cargo owners to change their business practices to implement actions required by PR 2305. After balancing all of these factors, staff is proposing to set the stringency of PR 2305 at 0.0025 WAIRE Points per Weighted Annual Truck Trip (WATT),¹⁰⁸ phased in over

¹⁰⁸ As described in Chapter 2, warehouse operators must track their WATTs every year to determine their WAIRE points compliance obligation.

a three-year period after a warehouse operator's initial requirement date. The discussion below presents the potential impacts of PR 2305 and PR 316 based on this stringency and phase-in schedule.

SCENARIO ANALYSIS

In response to stakeholder feedback, PR 2305 provides a flexible suite of options for warehouse operators to comply. This proposed rule will require subject warehouse operators to annually earn WAIRE Points¹⁰⁹ by completing any combination of 1) implementing actions from the WAIRE Menu, 2) developing and implementing an approved Custom WAIRE Plan, or 3) paying a mitigation fee.

The WAIRE Menu includes 32 options to earn WAIRE Points, and any approved Custom WAIRE Plan would include additional options as it is limited to actions not on the WAIRE Menu. With about 4,000 warehouse operators and dozens of options available for compliance, it is not possible to determine the precise cost or emissions impact of PR 2305 and PR 316. In addition, due to annual compliance obligations, the potential compliance approach from one year may differ from the approach in a following year as technologies and markets evolve, and as early investments are utilized. Because of the variety of outcomes possible, annual updates on the implementation of PR 2305 and PR 316 will be provided to the South Coast AQMD Mobile Source Committee, and additional information will be made available on the South Coast AQMD website. This regular tracking, with opportunity for public input, will allow for timely adjustments to be made to the WAIRE Program should they be necessary.

There are other similar existing programs that also include multiple compliance options including South Coast AQMD Rule 2202 – On-Road Motor Vehicle Mitigation Options¹¹⁰ and San Joaquin Valley Air Pollution Control District (SJVAPCD) Rule 9510 – Indirect Source Review¹¹¹. Both of these rules allow facilities to comply through prescriptive measures in the respective rule, or through paying a mitigation fee¹¹². In the case of Rule 2202, approximately 8% of facilities pay the mitigation fee, and the remainder choose a different compliance option.¹¹³ In addition, Rule 9510 has shown as technologies advance, the compliance approaches change. As an example, when SJVAPCD Rule 9510 started in 2006, about 14% of projects reduced emissions using clean construction equipment, whereas the most recent report from 2020 shows 42% of projects chose this option.¹¹⁴

Notwithstanding the potential uncertain outcomes, a robust analytical approach has been conducted to estimate the potential impacts of PR 2305 and PR 316, including through the

¹⁰⁹ As described in Chapter 2 and in PR 2305 (d)(1), a facility's WAIRE Points Compliance Obligation (WPCO) is determined based on four parameters: 1) the number of truck trips to a facility in any given year, 2) the stringency of the rule, 3) an annual variable that determines how quickly the rule phases in, 4) a warehouse operator's Initial Reporting Date based on the size of the facility.

¹¹⁰ <http://www.aqmd.gov/docs/default-source/rule-book/reg-xxii/rule-2202.pdf>

¹¹¹ <http://www.valleyair.org/rules/currnrules/r9510-a.pdf>

¹¹² Called an Air Quality Investment Program fee for Rule 2202 and an Off-Site Emissions Reduction Fee for Rule 9510. Rule 9510 also allows compliance through a Voluntary Emissions Reduction Agreement that is similar to a mitigation fee.

¹¹³ <http://www.aqmd.gov/home/research/documents-reports/activity-report>

¹¹⁴ <https://www.valleyair.org/ISR/Documents/2020-ISR-Final-Annual-Report.pdf>

development of 19¹¹⁵ different scenarios designed to show the range of potential outcomes. A description of these 19 scenarios analyzed is included in Table 14 below. The scenarios were developed to show potential end-member impacts from all 32 WAIRE Menu actions,¹¹⁶ as well as using mitigation fees.¹¹⁷

Each scenario is structured to follow a series of choices a warehouse operator may make based on compliance choices from a previous year. For example, if a warehouse operator purchased an NZE Class 8 truck in their first year complying with PR 2305 to earn WAIRE Points, they were assumed to use that same truck in subsequent years to earn additional WAIRE Points.

As a bounding analysis approach, all 2,902 warehouses were assumed to only comply with a single scenario approach from 2022 through 2031. No single scenario in this bounding analysis is expected to occur. Rather, they present possible extreme compliance outcomes. In reality, a hybrid of all scenarios (or other compliance approaches encompassed within the range of scenarios analyzed) is expected to occur.

The scenario analysis included in this second draft staff report includes minor updates since the previously released draft staff report released on March 3, 2021. For these scenario analyses,¹¹⁸ all 2,902 warehouses potentially required to earn WAIRE Points were modeled for every year from 2022-2031 using their square footage and the applicable average trip generation rates¹¹⁹ to determine the amount of WAIRE Points they are required to earn in each year, referred to as their WAIRE Points compliance obligation (WPCO). The amount of warehousing space required to earn WAIRE Points was grown 1.8% per year, consistent with analysis from SCAG.¹²⁰ The prioritization steps below were used to determine how WAIRE Points would be earned for each scenario. If sufficient WAIRE Points were not earned for any of the previous steps to satisfy a warehouse operator's WPCO in a given year, WAIRE Points were assumed to have been earned from the next step.

- 1) Banked WAIRE Points earned in any of the previous three years¹²¹
- 2) WAIRE Points earned from using vehicles or equipment¹²² acquired or installed in any previous year¹²³
- 3) WAIRE Points earned from acquiring or installing vehicles or equipment

¹¹⁵ A new scenario was added since the Preliminary Draft Staff Report – Scenario 7a.

¹¹⁶ See Appendix B – WAIRE Menu Technical Report for supplemental details for each action.

¹¹⁷ Custom WAIRE Plans were not modeled as they are not expected to be used by most facilities. The potential costs and emissions impacts from Custom WAIRE Plan implementation is expected to be within the range of analysis shown for the 18 scenarios.

¹¹⁸ The updated spreadsheet that includes all calculations described here is available at: www.aqmd.gov/fbmsm

¹¹⁹ See PR 2305 (d)(1)(C)

¹²⁰ https://scag.ca.gov/sites/main/files/file-attachments/final_report_03_30_18.pdf

¹²¹ PR 2305 (d)(6)(B) allows extra WAIRE Points earned in any one compliance year to be transferred for use in any of the next three compliance years.

¹²² Trucks earning WAIRE Points were assumed to make 520 visits per year (10 per week), and travelled default distances of 39.9 miles per trip for class 8, and 14.2 miles per trip for all smaller trucks. Yard trucks were operated for 1,000 hrs/yr.

¹²³ As a simplifying assumption, the scenarios analyzed here include one half of a year's usage of equipment or vehicles in the year it was installed or acquired.

- 4) Mitigation fees were assumed paid to provide supplementary WAIRE Points if other prescribed actions within a scenario were not available or sufficient to satisfy the WPCO.

Table 14: Scenario Descriptions

#	Scenario Description	Notes
1	NZE Class 8 truck acquisitions and subsequent visits from those trucks	
2	NZE Class 8 truck acquisitions and subsequent visits from those trucks (early purchase)	One additional truck is acquired earlier than required, thus increasing WAIRE Points earned from truck visits in subsequent years.
3	NZE Class 8 truck acquisitions (funded by Carl Moyer program) and subsequent visits from those trucks	No WAIRE Points earned for truck acquisitions. Mitigation fees paid to earn WAIRE Points in first year of compliance.
4	NZE Class 8 truck visits from non-owned fleets	No WAIRE Points earned for truck acquisitions.
5	ZE Class 8 truck visits from non-owned fleets	No WAIRE Points earned for truck acquisitions. ZE Class 8 trucks are assumed to not be commercially available until late 2022. Mitigation fees paid to earn WAIRE Points until then.
6	Level 3 charger installations followed by ZE Class 6 & Class 8 truck acquisitions and subsequent visits from those trucks, using installed chargers	Chargers provide ~30,000 kWh/year per Class 6 truck, and ~90,000 kWh/yr per Class 8 truck. Class 8 trucks only acquired if 25 Class 6 trucks had been previously purchased for one warehouse.
7	Pay Mitigation Fee	
7a	Pay Mitigation Fee and account for NZE trucks visiting the facility incentivized from the WAIRE Mitigation Program	Incentivized trucks earn WAIRE Points and reduce mitigation fees paid.
8	NZE Class 6 truck acquisitions and subsequent visits from those trucks	
9	NZE Class 6 truck visits from non-owned fleets	No WAIRE Points earned for truck acquisitions.
10	ZE Class 6 truck visits from non-owned fleets	No WAIRE Points earned for truck acquisitions.
11	Rooftop solar panel installations and usage	Solar panel coverage limited to 50% of building square footage. Mitigation fees used to make up any shortfall in WAIRE Points.
12	Hydrogen station installations followed by ZE Class 8 truck acquisitions and subsequent visits from those trucks, using the hydrogen station	System installation in first year is followed by a truck acquisition. In subsequent years trucks are only acquired if needed to earn WAIRE Points.
13	ZE Class 2b-3 truck acquisitions and subsequent visits from those trucks	
14	ZE Class 2b-3 truck visits from non-owned fleets	
15	Filter System Installations	
16	Filter Purchases	
17	TRU plug installations and usage in cold storage facilities	Scenario is only applied to cold storage warehouses. Plugs limited to 1:10,000 sq. ft. of building space.
18	ZE Hostler Acquisitions and Usage	

Emission Reductions

The total potential emission reductions associated with PR 2305 and PR 316 from each scenario above are presented in and below.¹²⁴ The methods used to calculate the emission reductions are

¹²⁴ Appendix D includes a discussion of how 'SIP creditable' emission reductions can potentially be determined.

consistent with the baseline emissions inventory methodology described above, or with the WAIRE Menu Technical Report in Appendix B, as applicable.¹²⁵ Emission reductions from mitigation fees paid to earn WAIRE Points are assumed to achieve NOx emission reductions at \$100,000/ton in the year after the fee was paid (consistent with current criteria used for funding Class 8 NZE trucks). Although individual funded projects would vary in the amount of reductions and the duration over which the reductions occur, this simplified approach is sufficient to evaluate programmatic impacts of an ongoing WAIRE Mitigation Program. Emission reductions from the Mitigation Program would be lower than shown in these tables if a portion of the funding goes towards projects that facilitate emission reductions from other programs (such as ZE charging/fueling infrastructure). ~~Table 15: Total NOx Emission Reductions (tpd) for 19 Bounding Analysis Scenarios~~ ~~Table 16: Total Diesel PM Emission Reductions (tpd) for 19 Bounding Analysis Scenarios~~

As discussed in the Baseline Emissions Inventory section above, CARB regulations are expected to also reduce emissions from trucks going to PR 2305 warehouses. Tables ~~17-15~~ and ~~18-16~~ below show the ‘surplus’ emission reductions that would be expected for each scenario after taking into account emission reductions from CARB’s ACT, Low NOx Omnibus, and Heavy Duty I/M rules. As stated in the Air Quality Need section of Chapter 1, there is no requirement that the emission reductions from statewide rules will apply in the South Coast AQMD jurisdiction, and PR 2305 and PR 316 would ensure that higher emission reductions are actually achieved here, as demonstrated in Tables 15- and 16 .

Table 15: NOx Emission Reductions (tpd) for 19 Bounding Analysis Scenarios After Discounting Reductions from CARB Regulations

Scenario	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031

WAIRE Program Compliance Costs

There are five types of compliance costs warehouse operators may experience with PR 2305 and PR 316 including: 1) costs to implement actions from the WAIRE Menu, 2) costs to develop and implement a Custom WAIRE Plan, 3) optional mitigation fees, 4) administrative fees pursuant to PR 316, and 5) costs associated with reporting and recordkeeping. ~~The analysis presented here is a preliminary draft, and staff anticipates continuing to work on these estimates.~~ Costs can be analyzed in a number of ways with a rule that includes as many options as PR 2305. One approach is to calculate costs using the scenario analysis presented above. A discussion of cost estimates with this approach is below. Because of the variability in emissions estimates and cost estimates in the extreme bounding analyses presented in the scenarios, cost effectiveness calculations may appear different than typical rules and regulations that have less flexibility than PR 2305. Although the bounding analysis scenarios presented are not expected to occur, the analytic approach provides a sound methodology to estimate average costs for any warehouse operator who chooses a scenario approach, both in terms of dollars per square foot of warehouse, as well as cost effectiveness (dollars per ton NOx reduced).

Scenario Cost Analysis

~~Preliminary~~ Expected costs resulting from each of the 19 bounding compliance scenarios are discussed below. The majority of expected costs result from the capital cost associated with the

estimated number of equipment acquisitions (ZE and NZE trucks, solar panels, charger installations, etc.) and the operating and maintenance (O&M) costs associated with usage of the equipment (fuel and electricity consumption, truck maintenance, etc.) in each scenario. This analysis attempts to isolate and attribute capital and O&M costs for only the equipment incremental to current CARB regulations such as CARB's ACT and Low NOx Omnibus regulations.

~~Table 20: Total Cost Summary of Each Compliance Scenario (2022-2031) After Accounting for CARB's ACT and Low NOx Omnibus Regulations~~ Table 20_-at the end of this preliminary analysis shows discounted total costs over a ten-year compliance time horizon (2022 – 2031). The costs shown in this analysis are in 2018 dollars and have not been discounted to account for the time value of money. Unless specified otherwise in the discussion here, incremental capital and O&M cost estimates are based on the analysis in the WAIRE Menu Technical Report in Appendix B, and the references contained therein.

To facilitate the discussion of the cost calculations, scenarios are grouped based on their compliance strategy. The groupings are comprised of (1) mitigation fees only; (2) truck acquisition and associated visits; (3) truck visits from non-owned fleets; (4) equipment acquisition and associated usage, and; (5) equipment/truck acquisition and associated usage/visits.

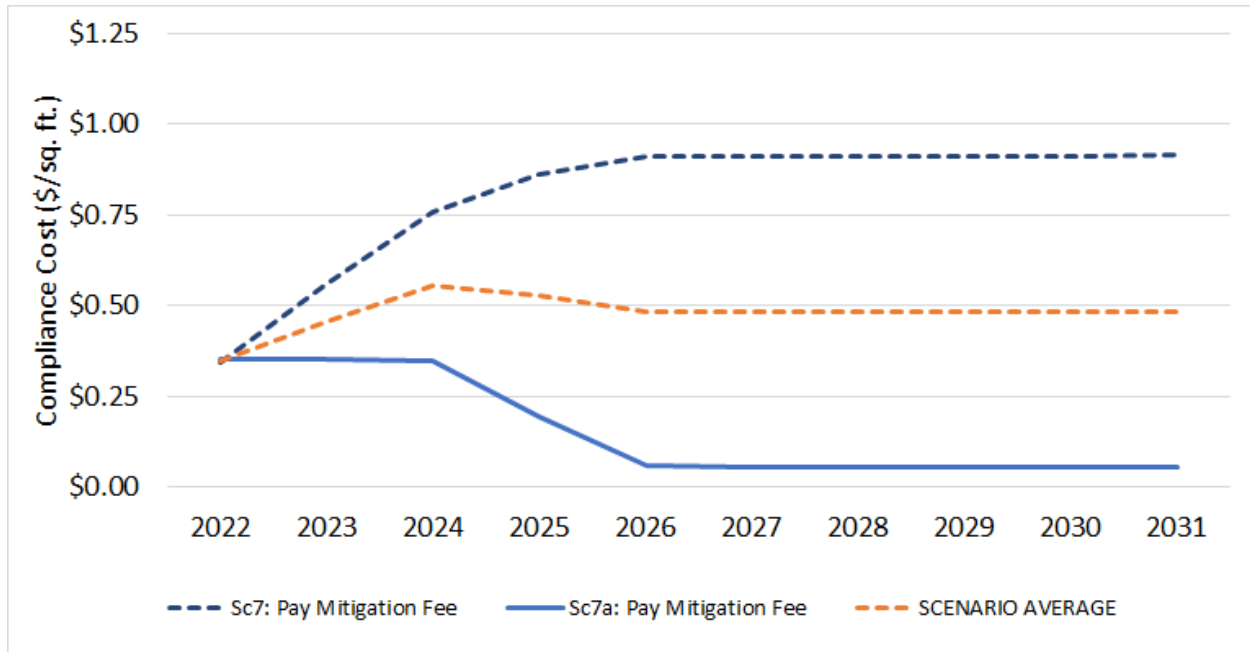

Mitigation Fees Only - Scenario 7 and 7a

The cost calculation for Scenario 7: Pay Mitigation Fee is straightforward. In lieu of earning WAIRE Points from equipment acquisitions and usage, all facilities choose to pay a fee of \$1,000 for each WAIRE Point in their WPCO attributed to their facility in every year of compliance. The total cost associated with the mitigation fee presented here does not reflect earning any Points from any other actions, such as truck acquisitions and visits resulting from CARB's ACT regulation, and should be considered a conservative high-end estimate. It is likely trucks purchased and used due to CARB's ACT regulation will be used to earn WAIRE Points to reduce the total amount of mitigation fees collected.¹¹⁵ This scenario also conservatively does not include any Points that might be earned from any trucks that are incentivized through the WAIRE Mitigation Program. Including these assumptions would significantly lower the cost, and the potential emission reductions from this scenario. This scenario is presented in all of the summary charts below as a point of comparison.

Scenario 7a assumes that facilities pay the mitigation fee and also actively track NZE truck visits from trucks funded by the mitigation fees. Facilities earn Points from visits from trucks purchased with collected mitigation fee funds. These points help to reduce a facilities' future year compliance obligation that would have otherwise been met through mitigation fee payments.

Figure 14 below presents total costs in each compliance year (2022 – 2031) for each mitigation fee scenario in dollars per square foot.

Figure 14: Potential Bounding Analysis Costs from Mitigation Fee Scenarios

Truck Acquisition and Associated Visits - Scenarios 1, 2, 3, 8, 13, and 18

Each scenario in this compliance strategy grouping relies on earning Points through purchase of clean trucks (NZE Class 8, NZE Class 6, ZE Class 2b-3, and ZE hostlers) and their subsequent usage (i.e. visits to the warehouse facility). Only those vehicle purchases and visits incremental to existing CARB regulations are considered.

~~Figure 15: Potential Bounding Analysis Costs from Truck Acquisition and Subsequent Usage Scenarios~~ Figure 15 below presents total costs (truck acquisition and usage) in each compliance year (2022 – 2031) for each scenario in dollars per square foot.

Figure 15: Potential Bounding Analysis Costs from Truck Acquisition and Subsequent Usage Scenarios

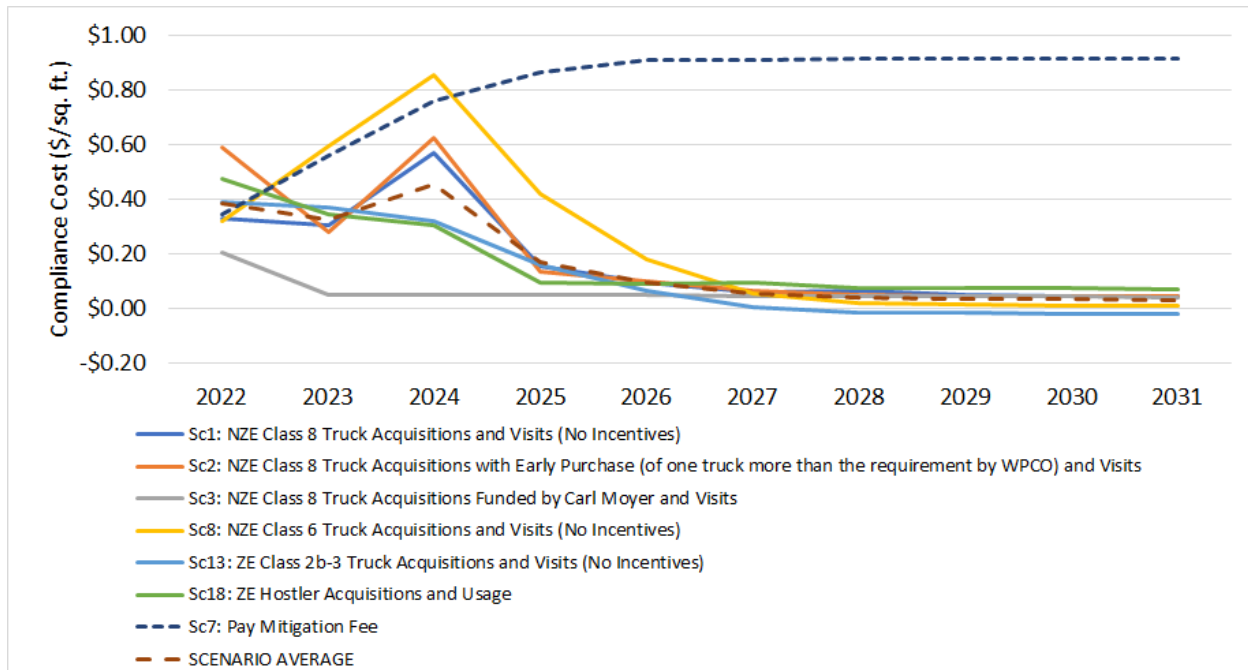

Table 17 below presents capital costs of Diesel and NZE trucks. These costs are assumed to remain constant across the entire compliance period.^{126,127} Per unit incremental costs of NZE Class 8 and Class 6 trucks are assumed to be \$65,000 and \$30,000, respectively. These costs are inclusive of state sales and federal excise taxes and based on analysis documented in the WAIRE Menu Technical Report and the references cited therein.

Capital costs of battery-electric ZE trucks are expected to decrease over time as a result of decreased battery costs. Projected capital costs over time for each ZE vehicle class can be found in Table 18: ~~Capital Cost by ZE Truck Class and Year~~ Table 18 below.^{128,129,130} The incremental acquisition cost is set equal to the difference between the capital cost of each ZE truck and it's

¹²⁶ Capital costs for diesel trucks can be found in Table C-6 of the CARB ACT Appendix C-1 – SRIA submitted to DoF: <https://ww3.arb.ca.gov/regact/2019/act2019/appc.pdf>

¹²⁷ Capital costs for NZE Class 8 trucks can be found in Table 31 of the 2018 Feasibility Assessment for Drayage Trucks: <https://cleanairactionplan.org/documents/final-drayage-truck-feasibility-assessment.pdf/>. Class 6 capital costs were calculated by taking the ratio of capital costs for NZE Class 6 and 8 trucks found in the WAIRE Menu.

¹²⁸ Capital costs for each ZE truck class (2b-3, 6, 8) for model years 2024-2030 are taken from CARB's ACT Appendix C-1 – SRIA as submitted to DoF (Table C-7): <https://ww3.arb.ca.gov/regact/2019/act2019/appc.pdf>.

¹²⁹ To fill in missing years (2022, 2023), ZE capital costs were linearized between 2018 and 2024. 2031 costs assumed to be equal to 2030.

¹³⁰ ZE Hostler capital cost projections are not available for future years. Staff applied a yearly cost multiplier based on ZE Class 2b-3 capital costs to the incremental cost of ZE Hostlers included in the WAIRE Menu. A cost multiplier is generated by taking ratio of difference in capital cost in each year (2022 -2031) to the difference in capital costs in year 1 (2022).

diesel equivalent. An 8% sales tax is also applied to each ZE truck acquisition and a 12% federal excise tax is applied to all ZE Class 8 acquisitions.

When the number of truck purchases in any compliance year for a given scenario falls below the expected number of truck purchases in CARB's EMFAC 2017 projections for that year, the incremental acquisition cost for each truck class and fuel type is used. However, if the number of truck purchases in a scenario exceeds EMFAC 2017 projections, the full capital cost associated with each truck type is used for those trucks above projections. No financing costs have been included in this analysis.

Scenario 3 assumes all trucks purchased are subsidized by Carl Moyer incentive funds and no WAIRE Points (or costs) are attributed to warehouse operators for these vehicle purchases. Because no Points are earned for NZE Class 8 truck acquisitions in Scenario 3, it is necessary for facilities to pay a mitigation fee for the additional WAIRE Points needed for compliance in each calendar year (2022 – 2031) in which visits from Moyer-funded trucks are not sufficient to meet the WPCO.

Table 17: Capital Costs for Diesel and NZE Truck Acquisitions

Vehicle Class	Diesel	NZE
Class 2b-3	\$50,000	N/A
Class 6	\$85,000	\$115,000
Class 8	\$130,000	\$195,000

Note: Capital costs for diesel trucks listed here are pre-tax.

NZE capital costs include sales taxes (Class 8 and Class 6) and federal excise taxes (Class 8 only).

Table 18: Capital Cost by ZE Truck Class and Year

Year	ZE Class 8	ZE Class 6	ZE Class 2b-3
2022	\$292,544	\$155,055	\$71,920
2023	\$246,948	\$143,904	\$68,318
2024	\$201,351	\$133,554	\$64,896
2025	\$194,134	\$128,321	\$63,635
2026	\$188,312	\$124,112	\$62,599
2027	\$183,371	\$120,563	\$61,684
2028	\$178,870	\$117,345	\$60,829
2029	\$174,809	\$114,456	\$60,035
2030	\$170,748	\$111,568	\$59,241
2031	\$170,748	\$111,568	\$59,241

Note: Capital costs for all ZE trucks listed here are pre-tax

Costs associated with the use/visits of facility-owned NZE and ZE trucks is done on a per-mile basis. Per-mile usage costs resulting from fuel consumption and other costs (including maintenance, fees, insurance, and mid-life costs) were calculated for all truck classes and fuel types and then multiplied by the expected VMT in each compliance year for each scenario.^{131,132,133} A breakdown of total usage costs for each truck class and fuel type can be found in Table 19 below. Per-mile usage costs (not considering capital costs) of Class 6 and 8 NZE trucks is slightly lower than diesel, and results in a modest net savings to facilities. Per-mile usage costs of Class 2b-3, 6, and 8 ZE trucks is significantly lower than diesel and results in a net savings to facilities. Additionally, for Scenario 18, the incremental cost associated with ZE hostler/yard truck usage is taken from the WAIRE Menu Technical Report in Appendix B (\$6,250/1000 hours), and the references therein.

Table 19: Annual Operating and Maintenance Costs by Vehicle Class and Fuel Type (in 2018 Dollars)

Vehicle Class	Fuel Type	Total Annual Fuel Cost	Total Annual Other Cost	Total Annual Miles	\$/mile
Class 8	Diesel	\$34,231	\$15,306	54000	\$0.92
	ZE	\$13,125	\$16,361	42000	\$0.70
	NZE	\$30,918	\$16,841	54000	\$0.88
Class 6	Diesel	\$12,130	\$7,844	24000	\$0.83
	ZE	\$3,923	\$7,238	24000	\$0.47
	NZE	\$9,219	\$8,525	24000	\$0.74
Class 2b-3	Diesel	\$2,418	\$4,221	15000	\$0.44
	ZE	\$1,508	\$3,843	15000	\$0.36

Truck Visits from Non-owned Fleets - Scenarios 4, 5, 9, 10, and 14

Scenarios associated with this compliance strategy grouping earn WAIRE Points solely from visits to their facilities from non-owned NZE or ZE trucks. Costs for these scenarios only include visits above and beyond those resulting from existing CARB regulations. To calculate expected costs due to PR 2305, the incremental cost associated with each visit by truck class and fuel type was calculated based on the total cost of ownership (TCO) and multiplied by the number of visits by non-owned trucks necessary to comply in all compliance years.

¹³¹ Data on maintenance costs, mid-life costs, fuel cost and fuel economy for diesel, ZE and NZE trucks is taken from the WAIRE Menu Technical Report in Appendix B.

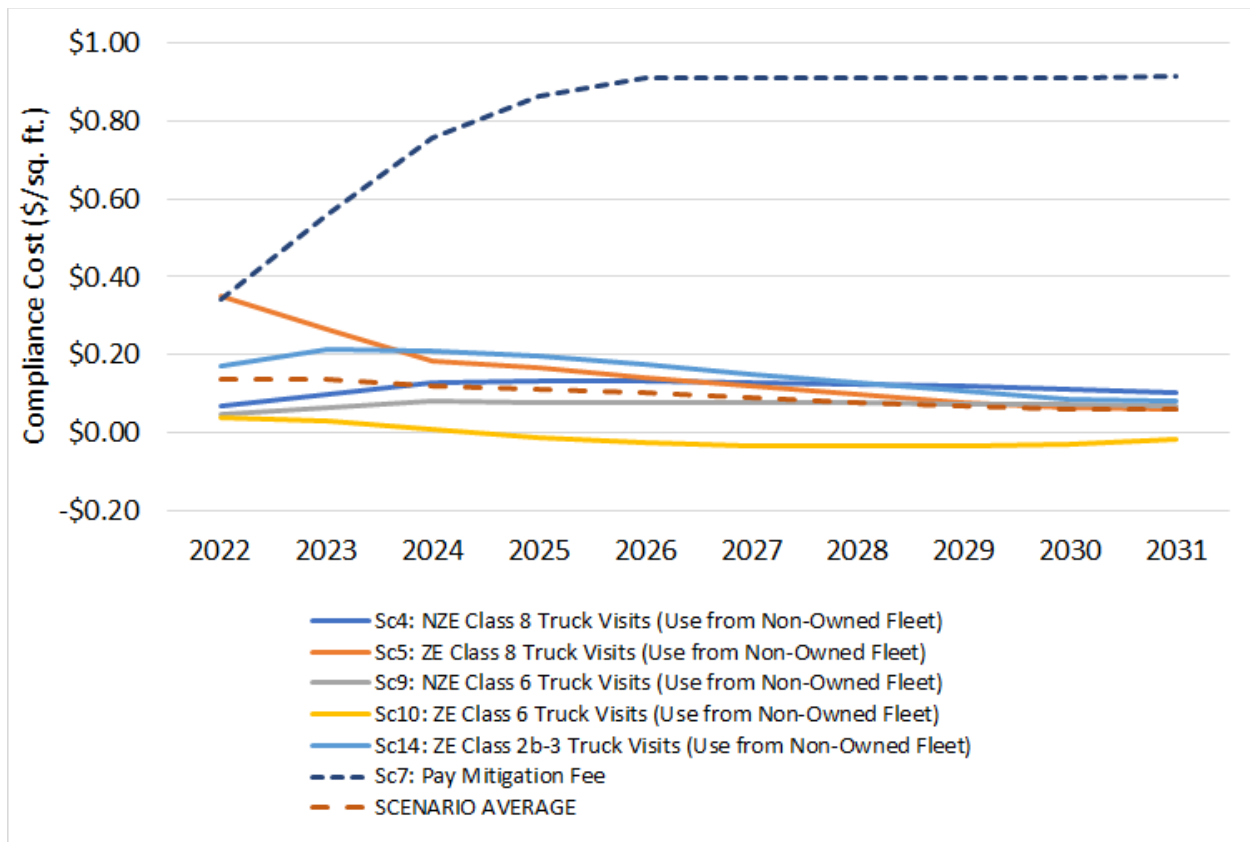

¹³² Vehicle fees for all ZE and diesel truck classes are taken from CARB's ACT Total Cost of Ownership document: <https://ww3.arb.ca.gov/regact/2019/act2019/apph.pdf>. Fees for NZE trucks are assumed to be the same as diesel trucks.

¹³³ Annual insurance costs assumed to be equal to 3% of vehicle value. Vehicle value assumed to decrease by 10% in years 2-8 and an additional 5% in years 9-11. The average annual cost is included in the per mile cost analysis.

A TCO analysis was performed for each truck class and fuel type for each compliance year using the assumed acquisition and usage costs described above. A 4% financing rate was used over a five-year financing period. A 12-year useful life is assumed for all trucks and a 4% discount rate was used to discount all costs in years beyond 2022. The TCO for all diesel and NZE trucks is constant over the compliance period and does not vary based on the year purchased. Because capital costs for ZE trucks are assumed to decline over time, the TCO does vary by purchase year. For a more detailed discussion of the TCO analysis, please see the Compliance Costs section of the PR2305 Draft Socioeconomic Impact Assessment dated April 2021.

The analysis for scenarios 9 and 10 indicates that if all warehouse operators only complied using ZE or NZE Class 6 trucks as a bounding analysis, that the total VMT associated with WAIRE Points could exceed the VMT from these Class 6 trucks in EMFAC. To account for the shortfall in this bounding analysis, the analysis does not include WAIRE Points beyond existing VMT in EMFAC, and assumes that warehouse operators earn the remaining WAIRE Points necessary for compliance by paying the mitigation fee. ~~Figure 16: Potential Bounding Analysis Costs from Truck Visits from a Non-owned Fleet~~ Figure 16 below presents total costs, including non-owned truck visits and the mitigation fee (Scenario 5 only), in each compliance year (2022 – 2031) for each scenario in \$/sq. ft.

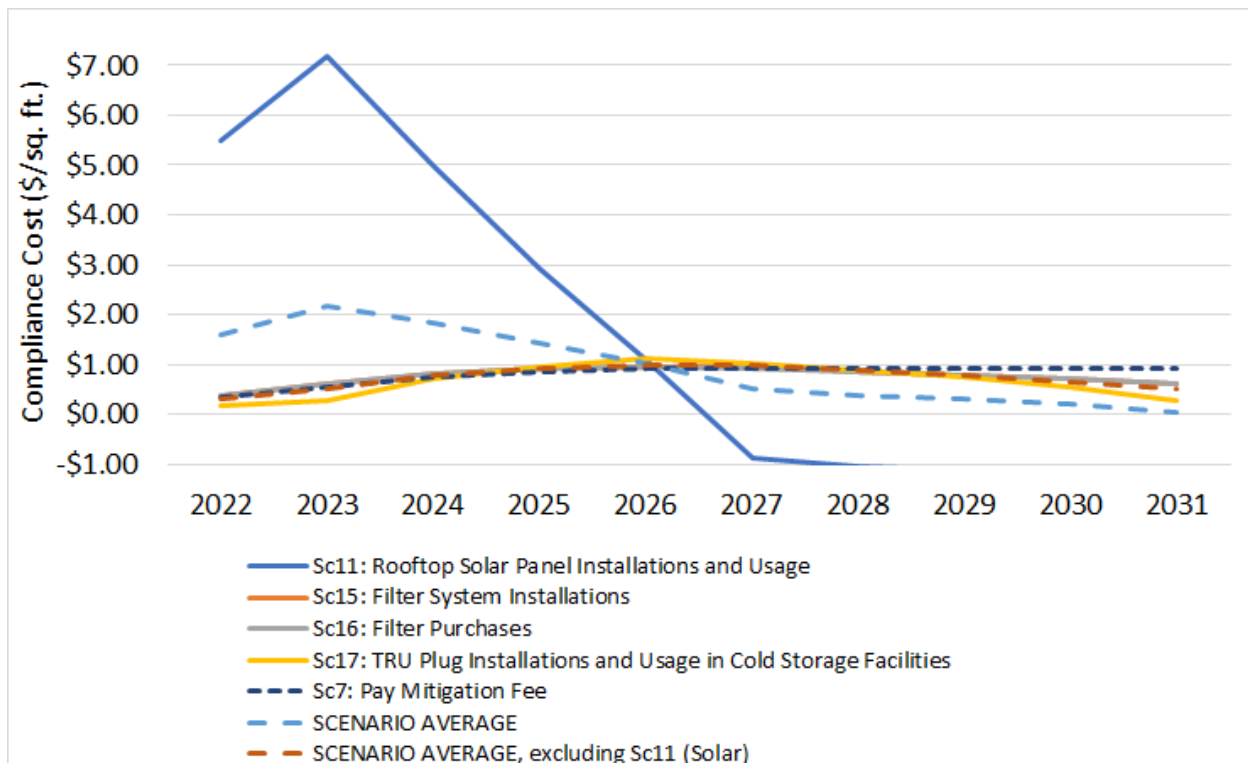

Figure 16: Potential Bounding Analysis Costs from Truck Visits from a Non-owned Fleet

Equipment Acquisition and Associated Usage - Scenarios 11, 15, 16, and 17

Facilities in these scenarios meet their WAIRE Point obligation by acquiring and using clean technologies, such as solar panels (Scenario 11), filter systems (Scenario 15), filters only (Scenario 16), and TRU plugs (Scenario 17). Costs associated with the acquisition and usage of these technologies, as well as construction and permitting costs for TRU plug installs are listed in the WAIRE Menu Technical Report in Appendix B. Usage of installed solar panels results in a cost savings equal to the assumed electricity price of \$0.17 per kWh. TRU costs were only applied to cold storage warehouses. Construction and permitting costs associated with TRU plug installations have been included. For Scenario 11 and Scenario 17 only, it is necessary for facilities to pay a mitigation fee for the additional WAIRE Points needed for compliance in each calendar years 2023⁴ – 2031. Figure 17: ~~Potential Bounding Analysis Costs from Non-truck Equipment and Associated Usage~~ Figure 17 presents total costs in each compliance year (2022 – 2031) for Scenarios 11, 15, 16, and 17 in \$/sq. ft.

Figure 17: Potential Bounding Analysis Costs from Non-truck Equipment and Associated Usage

Equipment/Truck Acquisition and Associated Usage/Visits - Scenarios 6 and 12

Scenarios 6 and 12 assume facilities use both ZE truck and charging/fueling infrastructure acquisitions and their associated usage to earn WAIRE Points. Scenario 6 combines Level 3 charger installations with Class 6 and 8 ZE truck purchases. Scenario 12 combines hydrogen station installations and Class 8 ZE truck purchases. Incremental acquisition costs for Class 6 and 8 ZE trucks can be found in Table 18. Level 3 charger and hydrogen station installation and usage

costs are also listed in the WAIRE Menu Technical Report in Appendix B, along with construction and permitting costs for charger installation projects. To avoid double-counting, no costs are accumulated for charger usage as electricity costs are already accounted for in the per-mile usage costs for Class 6 and 8 ZE trucks. This analysis also assumes hydrogen costs decline over time from roughly \$9.75/kg per in 2020 to \$6.20/kg in 2031.¹³⁴ Figure 18: Potential Bounding Analysis Costs from Equipment Acquisition (Truck and Non-Truck) and Associated Visits/Usage Figure 18 below presents total costs for both scenarios in each compliance year (2022 – 2031) in \$/sq. ft.

Figure 18: Potential Bounding Analysis Costs from Equipment Acquisition (Truck and Non-Truck) and Associated Visits/Usage

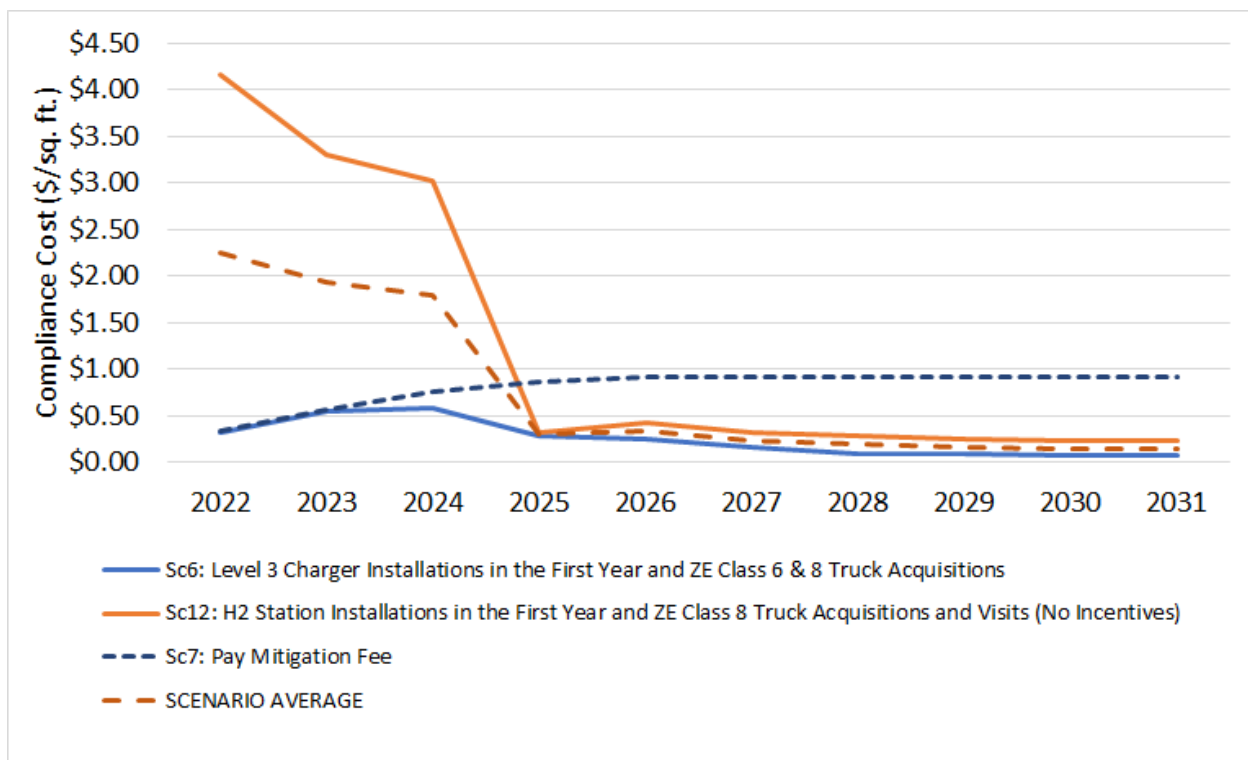

Table 20 below shows a cost summary for each compliance scenario including net present value (assuming 1% discount rate), average annual cost, and a weighted average annual cost per square foot of warehouse space after taking into account equipment acquisition from CARB’s ACT, Low NOx Omnibus. The total costs presented here are inclusive of all administrative costs and fees related to compliance. These administrative costs are explained in more detail in the next section of this report.

¹³⁴ Hydrogen cost projections can be found in CARB ACT Appendix C-1 – SRIA submitted to DoF (Figure C-5): <https://ww3.arb.ca.gov/regact/2019/act2019/appc.pdf>

The costs presented here are default calculations broadly applicable to the industry, however individual warehouse operators may identify different specific costs for their operations. Warehouse operators are assumed to gravitate towards the lowest cost options for their specific situations. As such, the maximum cost that warehouse operators would be expected to incur is about \$0.83/sq. ft./yr. resulting from the mitigation fee-only scenario. However, based on the cost analysis, it is likely that in most situations warehouse operators will identify substantially cheaper options that work within their operations.

Table 20: Total Cost Summary of Each Compliance Scenario (2022-2031) After Accounting for CARB's ACT and Low NOx Omnibus Regulations

	Equipment	Discounted Total Costs - NPV (1%) (in millions)	Discounted Total Costs - NPV (4%) (in millions)	Average Annual Cost (in millions)	Average Annual Cost (\$/sq. ft)
Sc1	NZE Class 8	\$1,225.7	\$1,102.6	\$127.2	\$0.16
Sc2	NZE Class 8	\$1,345.1	\$1,219.9	\$139.2	\$0.17
Sc3	NZE Class 8	\$430.2	\$374.4	\$45.2	\$0.06
Sc4	NZE Class 8	\$887.4	\$749.5	\$94.1	\$0.12
Sc5	ZE Class 8	\$1,067.2	\$941.8	\$111.5	\$0.14
Sc6	ZE Class 6 & 8	\$1,799.3	\$1,603.8	\$187.3	\$0.23

Sc18	Yard Trucks	\$1,152.6	\$1,028.7	\$120.0	\$0.15

WAIRE Program Administrative Costs

PR 316 Estimated Costs

PR 316 details the administrative fees that PR 2305 regulated entities must pay to fund South Coast AQMD compliance activities for PR 2305. The total annual cost for South Coast AQMD to administer and enforce the WAIRE Program was determined as a function of the fully burdened hourly rates for staff multiplied by the total staff time required to process the three types of reports required by PR 2305, including the Warehouse Operations Notification, Initial Site Information Report, and the Annual WAIRE Report – and all the associated auditing and enforcement activities for the WAIRE Program. In addition, reporting would be conducted through a new web portal, which includes an estimated \$25,000 annually to maintain. Warehouse Operations Notifications require significantly less information than the other two reports

There are 3,320 warehouse owners expected to initially submit a Warehouse Operations Notification, and about 4,000 initial warehouse operators across 2,902 warehouses that are expected to submit an Initial Site Information Report and Annual WAIRE Report during their first year that they would need to earn WAIRE Points. As described in Appendix C, an estimated 515 warehouse owners are operators who would need to submit a one-time Initial Site Information Report and Annual WAIRE Reports thereafter. The remaining warehouses are assumed to get a new operator every five years. Table 21 below shows how many reports are expected every year through 2031, including accounting for continued growth in the warehousing industry.

Table 21: Number of Reports Submitted by PR 2305 Warehouses Each Year

Year	Warehouse Operations Notification	Initial Site Information Report	Annual WAIRE Report
2021	3,320	0	0
2022	561	1,333	1,333
2023	561	1,894	2,695
2024	561	1,894	4,073
2025	578	578	4,120
2026	584	584	4,167
2027	591	591	4,214
2028	598	598	4,261
2029	604	604	4,308
2030	611	611	4,355
2031	617	617	4,402

Table 22 below shows the estimated average level of effort, burdened rates for staff, and costs for each report.

Table 22: PR 316 Fee Evaluation

Staff	Burdened Hourly Rate	Warehouse Operations Notification	Initial Site Information Report	Annual WAIRE Report
Planning & Rules Manager	\$141.29	0.05 hrs	0.1 hrs	0.2 hrs
Program Supervisor	\$126.57	0.05 hrs	0.2 hrs	0.6 hrs
Air Quality Specialist	\$110.28	0.1 hrs	1.0 hrs	1.75 hrs
Air Quality Inspector II	\$94.78	0 hrs	0.5 hrs	1.25 hrs
<i>Staff Cost per Report</i>		<i>\$24.42</i>	<i>\$135.59</i>	<i>\$387.41</i>
<i>Web Portal Cost per Report</i>		<i>\$5.09</i>	<i>\$5.09</i>	<i>\$5.09</i>
<i>Total Cost per Report¹³⁵</i>		<i>\$29.51</i>	<i>\$140.68</i>	<i>\$392.50</i>

Finally, Custom WAIRE Plan Application Evaluations will be assessed on a level of effort basis. A fee of \$161.25 will be assessed for every hour of review, consistent with plan review fees for other South Coast AQMD programs.¹³⁶ Reviews are expected to require multiple hours of staff time, and an initial fee will be assessed when the application is submitted equal to five hours of review (\$806.25). If review requires less than five hours, then a refund will be provided to the applicant.

Warehouse Operator Administrative Costs

Warehouse operators are expected to experience administrative costs associated with recordkeeping and reporting for PR 2305.¹³⁷ There are three main administrative costs that operators required to earn WAIRE Points will experience: reporting costs, total truck count costs, and NZE/ZE truck recording. The reporting associated with Initial Site Information Reports and Annual WAIRE Reports is expected to be similar to the kind of reporting required in CARB's ACT regulation, specifically for large entity reporting, and is estimated to be no more than 25 hours of work totaling \$1,250 per year.¹³⁸

The total truck count costs are associated with counting all truck trips to/from a warehouse in order to determine the WPCO. A variety of different methods exist to count trucks, such as security cameras that include a log of vehicles that pass the camera, in-road sensors which can count truck trips and identify the number of axles per truck, the use of an onsite personnel to check in all vehicles that enter, telematics systems, etc. Warehouse operators may already have measures in place for security and tracking purposes and would not experience additional costs from PR 2305 for installing new systems. To estimate administrative costs for this activity, the video recording method described in the WAIRE Implementation Guidelines is used as a default. This method allows a warehouse operator to record 24 hours of continuous video at each of their truck gates (assume an average of two per facility) one weekday and one weekend day per month that represent

¹³⁵ Similar to other South Coast AQMD fees in Regulation III, costs are expected to increase through time, consistent with the Consumer Price Index including for increased staff costs and overhead costs from inflation. All fees in PR 316 will therefore be adjusted periodically consistent with all other Regulation III fees pursuant to Rule 320.

¹³⁶ Rule 306(d)

¹³⁷ Engineering costs to implement specific WAIRE Menu actions (such as for charging infrastructure) have already been included in the compliance cost estimates above.

¹³⁸ <https://ww3.arb.ca.gov/regact/2019/act2019/isor.pdf>

a peak period during the respective days of the week. Onsite personnel could then review the video (using standard video tools on already available desktop computers, cell phones etc.), sped up so as to reduce the time needed to view, and then count truck trips over that time period. These video counts could then be applied to the rest of the days in that month to come up with the total truck traffic expected at the site. The time needed to do this work is estimated at 144 person-hours per year (48 hrs/month * 2 truck gates * 12 months/year, with video sped up between 8X-10X speed). This low technology solution to counting trucks could result in staff costs of about \$7,200 per year, however cheaper options may be used too as long as representative and verifiable methods are used.

If a warehouse operator chose to track NZE or ZE trucks that visited their facility in order to earn WAIRE Points, there are several potential methods available. If the trucks are owned by the warehouse operator, then delivery schedules or other paper records may suffice. Other methods could include telematics systems, automated license plate reader systems, contract data with trucking companies (if the operator contracts with a trucking company). This information may need to be supplemented with records that document that the truck used to earn WAIRE Points is an actual ZE or NZE truck. The simplest method could include truck driver check-ins where truckers could fill out a simple form that provides basic information about their truck, including license plate number, vehicle identification number, model year, weight rating (or class), fuel type, and trucking company name and contact information. This basic information could be compiled by onsite personnel and used as verification that a ZE or NZE truck visited the site. Supplementary information could also be kept if the operator chose to, such as photos or videos of the truck onsite. The number of ZE/NZE trucks visiting a site will vary, but a 250,000 square foot warehouse with an average truck trip rate would have about 42 Class 8 trucks visiting per day. Only five of these trucks per day would need to be NZE in order to meet that operator's WPCO at the proposed stringency of 0.0025. Onsite personnel could compile this info every week (one hour of effort) and use these records to demonstrate that they have met their WPCO. This type of reporting is expected to result in about \$2,600 in administrative costs. Other WAIRE Menu options are not expected to exceed the administrative costs listed here.

The socioeconomic impacts from administrative costs, PR 316 fees, and WAIRE Points costs are included in the Draft Socioeconomic Impact Assessment. Additional analysis of PR 2305 costs is also included below.

FEASIBILITY

The potential feasibility of PR 2305 and PR 316 have been evaluated using a variety of approaches. Staff considered the technical, economic, and market feasibility as described below. Many technical assessment studies have been conducted on NZE and ZE technologies that may be used to comply with PR 2305. These studies are referenced in the WAIRE Menu Technical Report in Appendix B. Additional information on technical feasibility was also obtained from industry sources who have used technologies in commercial service at warehouses, and results from South Coast AQMD funded projects.¹³⁹ The technical feasibility of some WAIRE Menu actions are not

¹³⁹ Examples: <http://www.aqmd.gov/docs/default-source/technology-research/clean-fuels-program/clean-fuels-advisory-agenda---september-17-2020.pdf>, <http://www.aqmd.gov/docs/default-source/technology-research/annual-reports-and-plan-updates/2019-annual-report-2020-plan-update.pdf>

considered technically feasible today (e.g., ZE Class 8 trucks), however they are expected to become commercialized in the next two years and are therefore included as a compliance option. While this one menu option is just beginning to be commercialized, most other WAIRE Menu are commercially available today, including NZE trucks (which have been available for years), smaller ZE trucks, ZE yard trucks, solar panels, charging/fueling infrastructure, and filtration systems.

Economic impacts are considered in more detail in the socioeconomic impact analysis report, however some preliminary analysis is included here. First, the proposed rule may impose annual average costs between about \$0-\$12.6 million per year and \$670 million per year,¹⁴⁰ which translates to a range of about -\$0.02 per sq. ft. to \$0.83 per sq. ft.

There are two points of comparison that illustrate the impact PR 2305 may have on industry. First, there are about \$500 billion worth of goods that flow through the SCAG region every year, with the vast majority flowing through the import and export points in the South Coast AQMD region.¹⁴¹ If only 31% of imported containerized goods at the ports of LA/LB go directly to rail, the majority of the remainder likely flows through the largest warehouses. The warehouses subject to PR 2305 include about 750 million sq. ft. of space, out of a total of about 1.2 billion sq. ft. of warehousing space in the entire SCAG region (all building sizes), or about 63%.¹⁴² Because PR 2305 warehouses include the largest facilities, an even greater fraction of goods is expected to flow through these warehouses with smaller warehouses sending or receiving goods from the larger facilities. At the low end, it is possible to estimate that the total value of goods flowing through PR 2305 warehouses is at least \$217 billion.¹⁴³ Using the ~\$670 million annual cost from the mitigation fee-only scenario (Scenario 7) as a proxy for the highest costs that could be imposed by PR 2305 at the proposed stringency, at the high end PR 2305 and PR 316 could therefore add ~0.3% to the total cost of goods handled by warehouses. The much lower cost example of a mitigation fee scenario (Scenario 7a) shows that total costs may be as low as \$114 million per year, which would be <0.05% of the total cost of goods handled by warehouses.

The potential cost effectiveness of PR 2305 is difficult to determine with the wide variety of options available for compliance. PR 2305 aims to reduce regional NOx emissions, as well as local emissions of diesel PM (to reduce regional PM and local toxics emissions), and local exposures to air pollution. Traditional cost effectiveness approaches are therefore not comparable to other programs focused solely on regional pollutant emission reductions that simply divide total cost by NOx emission reductions, or toxics rules that do not calculate cost effectiveness. Nevertheless, Table 23 below shows a cost-effectiveness in dollars per ton of NOx reduced after accounting for CARB's ACT, HD I/M, and Low NOx Omnibus regulations (using Table 20 and Table 15). These estimates are expected to be conservative because they don't account for all incentive programs that could help offset costs (e.g., Low Carbon Fuel Standard) and they only show a 10-year period (less than the useful life of a truck) of costs and

¹⁴⁰ The high end cost is set equal to the mitigation fee-only scenario.

¹⁴¹ https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_goods-movement.pdf

¹⁴² Ibid.

¹⁴³ \$500 billion * 69% (non-rail) * 63% (PR 2305 whse sq. ft./SCAG whse sq. ft.) = \$217 billion

emission reductions. As shown in Figures 16 through 18, costs are much lower in later years, and emission reductions are expected to continue past 2031.

Table 23: Preliminary Estimates of Cost Effectiveness for Regional NOx Reductions After Considering CARB ACT, HD I/M, and Low NOx Omnibus Regulations

	Equipment	Total Nox Reductions (tons)	Discounted Total Cost - NPV (1%) (millions)	Discounted Total Cost - NPV (4%) (millions)	Cost-Effectiveness (1%)	Cost-Effectiveness (4%)
Sc1	NZE Class 8	8,609	\$1,226	\$1,103	\$142,371	\$128,075
Sc2	NZE Class 8	9,353	\$1,345	\$1,220	\$143,808	\$130,420
Sc3	NZE Class 8	11,623	\$430	\$374	\$37,015	\$32,213
Sc4	NZE Class 8	8,178	\$887	\$750	\$108,507	\$91,649
Sc5	ZE Class 8	8,502	\$1,067	\$942	\$125,534	\$110,781
Sc6	ZE Class 6&8	3,702	\$1,799	\$1,604	\$485,970	\$433,179
Sc7	Mitigation Fee	52,270	\$6,298	\$5,264	\$120,490	\$100,708
Sc7a	Mitigation Fee	7,880	\$1,098	\$985	\$139,309	\$125,068
Sc8	NZE Class 6	6,211	\$1,785	\$1,627	\$287,406	\$261,983
Sc9	NZE Class 6	7,075	\$554	\$468	\$78,256	\$66,088
Sc10	ZE Class 6	7,879	-\$115	-\$87	-\$14,581	-\$11,078
Sc11	Solar	30,824	\$9,797	\$9,712	\$317,834	\$315,086
Sc12	ZE Class 8	4,509	\$8,118	\$7,445	\$1,800,480	\$1,651,413
Sc13	ZE Class 2b-3	3,218	\$803	\$753	\$249,588	\$233,930
Sc14	ZE Class 2b-3	3,578	\$1,129	\$978	\$315,529	\$273,439
Sc15	Filter System	-	\$5,986	\$5,057	-	-
Sc16	Filter	-	\$5,863	\$4,953	-	-
Sc17	TRU	579	\$54	\$46	\$93,567	\$79,083
Sc18	Yard Trucks	260	\$1,153	\$1,029	\$4,436,646	\$3,959,829

The cost effectiveness of recent mobile source regulations varies depending on the program, and depending on the timescale chosen. The table below summarizes recent key regulations from CARB and their cost effectiveness through about 2032 (dollars per ton of NOx). Costs are substantially lower for many of these regulations when considering cost savings that are projected to occur in the 2030s and beyond, however the shorter timeline is compiled here to show a similar end year as for the analysis for PR 2305 (analysis conducted through 2031). The cost effectiveness for various scenarios with PR 2305 as shown in Table 23 above is similar to the wide range of values shown in Table 24 below.

Table 24: Cost Effectiveness of CARB Regulations

CARB Regulation	Approximate Cost Effectiveness (through 2032)
Airport Shuttle Bus	\$430,000/ton NOx
Innovative Clean Transit	\$271,000/ton NOx
At Berth (Ocean Going Vessels)	\$83,000/ton NOx
Low NOx Omnibus	\$39,000/ton NOx
Advanced Clean Trucks	\$22,000/ton NOx

The market feasibility was evaluated by considering whether the proposed stringency of PR 2305 would result in a level of implementation that exceeds the potential ability of the market to respond. In an extreme hypothetical example, if the stringency of PR 2305 required ten billion miles of Class 8 ZE truck travel per year, but there is only a total of three billion miles of truck travel from all Class 8 trucks (fueled by diesel, electric, natural gas, etc.), then this would indicate that the stringency is infeasible.

The scenario analysis described above includes calculations to determine whether any bounding analysis scenario exceeded expected market conditions. The parameters that were evaluated include the number of new trucks purchased in a year, the amount miles travelled by trucks in a year, the amount of power required to charge trucks, and the amount of fossil fueled power generation in South Coast AQMD. In nearly all cases, PR 2305 would not exceed existing market capacity. In rare instances, some bounding analysis scenarios show that some new truck sales in early years of the program could be higher than is expected in EMFAC for those respective truck categories, assuming that every warehouse operator bought the same class of truck and technology (e.g., NZE or ZE) to comply with PR 2305. This is unlikely as no more than about 40% of warehouse operators are estimated to own truck fleets (and not every truck fleet owns all truck classes), and truck acquisitions to earn Points would necessarily be less than shown. Even in these extreme cases (which are not reasonably expected to occur), the amount of sales is typically no more than about double what is projected from EMFAC for our region. No scenarios were found to require total VMT for any truck class greater than what is included within EMFAC 2017. For example, no scenarios required more truck travel to earn Points than the total amount of truck travel in the air basin. Finally, the highest electricity demand for charging electric trucks (Scenario 6) is about 697 GWh per year. This level of charging is less than what CEC has preliminarily calculated for the total need for electric trucks in the South Coast AQMD region.¹⁴⁴

¹⁴⁴ As part of the development of the 2020 Integrated Energy Policy Report, CEC staff included a scenario that explicitly evaluates the electric power needed if >100,000 ZE trucks are deployed to assist in meeting 2031 ozone standards. This analysis showed the projected electricity demand from charging these trucks would be about 1,684 GWh in 2031, with a peak summer hourly load of about 164 MW for Southern California Edison, the region's largest utility. This results in about a 1-2% increase in electricity demand overall from SCE compared to the 'mid' case analysis in the 2019 IEPR, but is still within the range of expected demand as the additional load does not exceed CEC's modeled 'high' case.

Considering the many different compliance options and business models of warehouse operators, it is unlikely that any of the extreme scenarios discussed above would be expected to occur. With roughly three dozen options for earning WAIRE Points (32 Menu actions, a mitigation fee option, and additional options from Custom WAIRE Plans), it is unlikely any particular scenario modeled would be chosen by more than a small fraction of all warehouse operators in any given year. If these more realistic lower levels of implementation are assumed for each scenario, then none of the market capping conditions would be exceeded. It is also foreseeable that if some of the extreme examples discussed above began to materialize during a compliance period, with all operators choosing the same exact truck type and technology to implement, that warehouse operators would respond to these market conditions and pivot to implement other alternatives.

SOCIOECONOMIC ASSESSMENT

A draft socioeconomic analysis was prepared and released for public comment and review on March 3, 2021, more than 30 days prior to the South Coast AQMD Governing Board Public Hearing on PR 2305 and PR 316, which is anticipated to be heard on May 7, 2021. A second draft of the socioeconomic analysis will be released together with this second draft staff report. ~~This~~ The final second draft socioeconomic analysis includes updates based on a third-party peer review, among other updates.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

PR 2305 and PR 316 are considered a “project” as defined by the California Environmental Quality Act (CEQA). Pursuant to CEQA, the South Coast AQMD, as Lead Agency, prepared a Notice of Preparation (NOP) of the Draft Environmental Assessment (EA) and Initial Study (IS) to analyze environmental impacts from the project identified above pursuant to its certified regulatory program (Public Resources Code Section 21080.5, CEQA Guidelines Section 15251(l), and South Coast AQMD Rule 110). The NOP/IS was released for a 32-day public review and comment period that began Friday, November 13, 2020 and ended on Tuesday, December 15, 2020. In addition, because the proposed project could have statewide, regional or areawide significance, a CEQA Scoping Meeting was held on December 2, 2020 pursuant to Public Resources Code Section 21083.9(a)(2). The South Coast AQMD has also prepared a Draft EA (equivalent to a Draft EIR) which was and has circulated it for a 45-day public review and comment period from January 26, 2021 to ending March 12, 2021. The analysis in the Draft EA indicated that while reducing emissions is an environmental benefit, significant and unavoidable adverse environmental impacts may occur for the following environmental topic areas: 1) aesthetics; 2) agriculture and forestry resources; 3) air quality and greenhouse gas emissions; 4) biological resources; 5) cultural resources; 6) energy; 7) geology and soils; 8) hazardous materials and solid and hazardous waste;

<https://efiling.energy.ca.gov/getdocument.aspx?tn=235836>,
<https://efiling.energy.ca.gov/GetDocument.aspx?tn=230923>,
<https://efiling.energy.ca.gov/GetDocument.aspx?tn=230924>

9) hydrology and water quality; 10) mineral resources; 11) noise; 12) transportation; and 13) utilities and service systems. ~~The Draft EA can be accessed at the following address:~~
~~<http://www.aqmd.gov/home/library/documents-support-material/lead-agency-seaqmd-projects>~~

~~Seven comment letters were received relative to the Draft EA and the responses to comments have been included in Appendix E of the Final EA. If comments are submitted, the letters and responses to comments will be incorporated into the Final EA which will be included as an attachment to the Governing Board package.~~ Prior to making a decision on the adoption of PR 2305 and PR 316, the South Coast AQMD Governing Board must review and certify the Final EA, including responses to comments, as providing adequate information on the potential adverse environmental impacts that may occur as a result of adopting PR 2305 and PR 316.

DRAFT FINDINGS UNDER CALIFORNIA HEALTH AND SAFETY CODE SECTION 40727

California Health and Safety Code Section 40727 requires that prior to adopting, amending or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the staff report.

Necessity

PR 2305 and PR 316 are needed to protect public health by reducing local and regional emissions of NO_x and diesel PM associated with warehouses and the mobile sources attracted to warehouses. By reducing these emissions, PR 2305 and PR 316 will also assist in meeting state and federal air quality standards for ozone and fine PM. NO_x is a precursor to the formation of ozone and PM_{2.5}, and diesel PM is a toxic air contaminant and component of fine PM.

Authority

Authority for the South Coast AQMD Governing Board to adopt PR 2305 and PR 316 may be found in sections 39002, 39650 through 39669, 40000, 40001, 40440, 40441, 40522.5, 40701, 40702, 40716, 40717, 40725 through 40728, 40910, 40920.5, 41508, 41511, and 41700 of the Health and Safety Code.

Clarity

PR 2305 and PR 316 are written or displayed so that its meaning can be easily understood by the persons directly affected by it.

Consistency

PR 2305 and PR 316 are in harmony with and not in conflict with or contradictory to, existing statutes, court decisions, or state or federal regulations.

Non-Duplication

PR 2305 and PR 316 will not impose the same requirements as any existing state or federal regulations. The proposed rule is necessary and proper to execute the powers and duties granted to, and imposed upon, the South Coast AQMD.

Reference

In adopting these rules, the following statutes which the South Coast AQMD hereby implements, interprets or makes specific are referenced: Clean Air Act Sections 110(a)(5)(C); 116; Health & Safety Code Sections 40440, 40716, 40717, and 40522.5.

COMPARATIVE ANALYSIS

California Health and Safety Code Section 40727.2 requires South Coast AQMD to perform a comparative written analysis when adopting or amending a rule or regulation that imposes a new or more stringent emission limit or monitoring, reporting, or recordkeeping requirement. The comparative analysis is relative to any existing federal or state requirements, existing or proposed South Coast AQMD rules and air pollution control requirements and guidelines which are applicable to the same sources as identified in the proposed rule or regulation. PR 2305 regulates warehouses as an indirect source that attract mobile sources of emissions, and PR 316 is the companion fee rule for PR 2305. Under California Health and Safety Code Section 40727.2(g), PR 316 does not in itself require a comparative analysis, but is included for completeness.

There are no comparable federal or state requirements or any comparable existing or proposed South Coast AQMD rules or requirements that apply directly to warehouses. However, there are many air quality regulations at the state and federal level that focus on emissions from the mobile sources associated with warehouses. These can broadly be placed into three categories. First are regulations that aim to reduce emissions through the engine standards for new vehicles. Second are regulations that aim to replace older vehicles with newer vehicles with cleaner technologies through fleet rules. Third are regulations that focus on air quality impacts from facilities that attract mobile sources, such as employee commutes. PR 2305 and PR 316 look at the activities associated with a warehouse facility and aim to reduce air quality impacts beyond what is already required by any existing or proposed regulatory requirement. PR 2305 and PR 316 are summarized below in Table 25.

.

Table 25: Proposed Rule 2305

Rules	Rule Elements		
	Applicability	Requirements	Reporting, Notification, and Recordkeeping
PR 2305	Owners and operators of warehouses located in the South Coast AQMD jurisdiction with greater than or equal to 100,000 square feet of indoor floor space in a single building (PR 2305(b)).	Warehouse operators are required to earn WAIRE Points annually, either by completing actions off the WAIRE Menu, a Custom WAIRE plan, or paying a mitigation fee based on truck trips. (PR 2305(d)).	Periodic reports on warehouse statistics and its operations. Recordkeeping requirements for all information submitted for rule compliance (PR 2305(e)).

A comparative analysis of other regulations that focus on emissions from the mobile sources associated with warehouses is presented below in Tables 28, 29, and 30, 26, 27 and 28.

Table 26: Engine Standards

Rules	Rule Elements		
	Applicability	Requirements	Reporting, Notification, and Recordkeeping
U.S. EPA Phase 1 and CARB Phase 2 Heavy-Duty Fuel Efficiency and Greenhouse Gas (GHG) Standards ¹⁴⁵	Manufacturers, sellers, or importers of heavy-duty trucks and engines, specifically model-year 2014 tractors, vocational vehicles, heavy-duty pick-up trucks and vans, and trailers hauled by heavy-duty tractors.	GHG emission and fuel economy standards on truck and engine manufacturers. Require manufacturers to improve existing technologies or create new technologies to meet these standards.	Report emissions test data and results, technical vehicle data, and end-of-year sales information. Manufacturers will have to keep records of this information.
CARB Tractor-Trailer GHG Regulation ¹⁴⁶	Owners of 53-foot or longer trailers and heavy-duty tractors that pull them.	The tractors and trailers subject must either use U.S. EPA “SmartWay” certified tractors and trailers, or	Report applicable owners. Must keep records of compliance.

OVERVIEW

Proposed Rule (PR) 2305 is the Warehouse Indirect Source Rule (ISR) which provides the Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, a menu-based points system. The WAIRE Program determines a warehouse operator's WAIRE Points Compliance Obligation (WPCO) based on annual truck trips to each applicable new and existing warehouse that has at least 100,000 square feet of indoor floorspace within a single building that may be used for warehousing activities. Each warehouse operator must earn or obtain WAIRE Points to meet their WPCO on an annual basis. PR 316 establishes fees to fund South Coast AQMD compliance activities associated with PR 2305.

The WAIRE Program Implementation Guidelines (Guidelines) do not supersede the requirements specifically stated in PR 2305 and PR 316 but are meant to provide warehouse operators and owners with further guidance on complying with the rules. In any instance where an interpretation of requirements in these Guidelines conflicts with PR 2305 or 316, the rule language takes precedence. All owners and operators subject to PR 2305 and 316 should anticipate that the reports they submit and the records that they keep will be reviewed by South Coast AQMD staff in desktop audits and onsite field inspections, and are subject to public records act requests. Further, data regarding warehouse operator compliance will be made publicly available on South Coast AQMD's website. For any questions about this guidance document, please contact program staff at waire-program@aqmd.gov.

APPLICABILITY

Figure 1 – Applicability Flow Chart

The warehouse ISR applies to warehouse operators and owners of warehouses greater than or equal to 100,000 square feet of indoor floor space within a single building that may be used for warehousing activities. A warehouse operator or owner whose warehousing activity is not explicitly excluded from PR 2305 is presumed to be included in rule requirements. Figure 1 represents a simplified diagram of the requirements for warehouse owners and operators of applicable warehouses. Warehouse owners are only required to submit a Warehouse Operation Notification Report which detail the size and tenant status of the warehouse, further details are provided in the Reporting Section of these Guidelines. Warehouse operators are required to submit an Initial Site Information Report and are required to earn WAIRE points. Warehouse owners may choose to earn WAIRE points on behalf of the warehouse operator.

In addition to the warehouse size applicability, the warehouse ISR is implemented over time based on the applicable warehouse sizes. The warehouse size phase-in shown in Table 1, and details the date range for the Initial Compliance Period when warehouse operators must earn or obtain WAIRE Points to meet their WPCO, and also the due dates for Initial Site Information Report, and the first Annual WAIRE Report.

Table 1 – Implementation Schedule

Phase	Warehouse Size (square feet)	Initial Site Information Report Due Date	First Annual WAIRE Report Due Date	Initial Compliance Period
1	> 250,000	July 1, 2022	January 31, 2023	January 1, 2022 to December 31, 2022
2	> 150,000- <250,000	July 1, 2023	January 31, 2024	January 1, 2023 to December 31, 2023
3	> 100,000- <150,000	July 1, 2024	January 31, 2025	January 1, 2023 to December 31, 2024

CALCULATIONS¹⁵¹

The WPCO is the number of WAIRE Points a warehouse operator must earn or obtain to comply with PR 2305. Figure 2 represents a simplified diagram of how a WPCO is calculated based on the number and type of trucks that enter or exit a warehouse site.

Figure 2

Truck trips are defined as one-way trips that tractors and straight trucks make to a warehouse facility when delivering goods to or from another location.¹⁵² They are counted when a truck enters or exits a site. A single visit from a truck is equal to two trips. PR 2305 refers to the total calculated truck trips in a compliance period as Weighted Annual Truck Trips (WATTs) which is calculated by inputting the actual truck trip counts of the number and type of trucks in the following equation:

$$WATTs = [Class\ 2b\ to\ 7\ truck\ trips] + [2.5 \times Class\ 8\ truck\ trips]$$

As shown in Figure 2, the WATTs are multiplied by the Stringency factor and the Annual Variable to provide the WPCO for the warehouse. The Stringency factor is defined as 0.0025 WAIRE Points per WATTs, and the annual variable is determined by the phase-in schedule of the warehouse and is provided in Table 2.

Table 2 – Annual Variable

Annual WAIRE Report Year*	Annual Variable		
	Phase 1	Phase 2	Phase 3
2022	0.33	0	0
2023	0.67	0.33	0
2024	1.0	0.67	0.33
2025	1.0	1.0	0.67
2026 and beyond	1.0	1.0	1.0

*This is the compliance year period that for which a warehouse operator is first required to submit its Annual WAIRE Report.

¹⁵¹ The WAIRE Menu Technical Report, included as Appendix B in the PR 2305 staff report, is included as an appendix to these Implementation Guidelines to assist in determining how WAIRE Points are calculated.

¹⁵² A truck or yard truck delivering a trailer or goods from one part of a warehouse to another part of a warehouse is not considered a truck trip since it does not include delivery of goods to/from another location.

TRUCK TRIP COUNTS FOR DETERMINING WPCO

The WATTS calculation equation weighs the activity and emission contribution of a Class 2b-7 straight truck and that of a Class 8 tractor which emits approximately 2.5 times more NO_x emissions. Class 8 tractors are differentiated from Class 2b-7 straight trucks by their Gross Vehicle Weight Rating being greater than 33,001 pounds. Absent more specific data, all tractors that can pull a trailer should be counted as Class 8, and all straight trucks should be counted as Class 2b-7.

With the WPCO being closely tied to the number of actual truck trips entering and exiting the warehouse site, it is important to accurately document the total number of truck trips and whether they were Class 8 tractors or Class 2b-7 straight trucks. Truck trips must be counted and records must be verifiable, where date and time of the truck trips recorded may be tied to the compliance period records for review. Below are five examples of methods to count the number of truck trips. The key criteria for ensuring that the truck trip counts are accurate enough for determining a warehouse operator's WPCO is that the data needs to be collected using a method that provides reliable and verifiable truck trip counts that are either contemporaneous (e.g., daily) or extrapolated from a short term contemporaneous tracking during a representative peak period, as described below. Warehouse operators are responsible for maintaining data the support the truck trip count and the data must be made available to South Coast AQMD for verification. Verifiable data can be provided through the following methods:

1. Electronic Telematics Systems – These systems are used to track truck activity, typically through the use of on-board GPS systems and fleet management software. These systems can track when equipped vehicles are located at a warehouse.
2. In-Roadway or Driveway Sensors - Various sensor technologies are available to count vehicles such as pneumatic tubes, radar, or lasers installed at a driveway. These devices are used to count the number of vehicles passing a certain point and can provide truck classification data (e.g., straight trucks).
3. Video Monitoring – Many warehouse operators already employ security cameras to monitor their gates. Warehouse operators could use staff or software to identify the number and type of trucks that enter the gate and note truck Class (i.e. straight trucks vs. tractors) from video recordings. Video recordings and subsequent counts can be continuous but in no cases should be less than one weekday (Monday – Friday) per month and one weekend day (Saturday or Sunday) per month (if the warehouse is open on weekends). Each weekday and weekend day once-per-month sample must be taken at least three weeks apart from the next respective sample. With this less intensive once-per month sampling method, a representative peak weekday and weekend day must be recorded (with documentation indicating why those days of the week were chosen). The weekday count may then apply to all weekdays during that month, and the weekend count may then apply to all weekend days during that month.
4. Guardshack – Many warehouse operators employ a guard or other personnel to (incomplete sentence) Contracts or other similar records – Many warehouse operators are responsible for shipments to/from their warehouse, including with their own fleet or through third party fleets. Records such as contracts or manifests that document the loads delivered to or picked up from a warehouse can be used to determine truck trip information provided that all trips to a site are documented (which could include supplementary sources of data, such as through methods described above).

Loss of Truck Trip Count Data

In the event that there is insufficient truck trip data due to events beyond the warehouse operator's control such as with records destroyed in a fire or other force majeure event, an alternative WATTs calculation may be used as described below.¹⁵³ The WATTs must be calculated using the equation and table below.

Table 3 Weighted Truck Trip Rates (WTTR)

Warehouse Type	WTTR (trips/1,000 sf)
≥200,000 sf	0.95
>100,000 – 199,999 sf	0.67
Cold Storage (≥100,000 sf)	2.17

Example calculation for a 250,000 square foot (non-cold storage) warehouse that experienced a force majeure event and lost 30 days of records:

$$250 \text{ tsf} \times 0.95 \text{ trips/tsf} \times 30 \text{ days} = 7,125 \text{ WATTs}$$

These calculated WATTs would be added to the other WATTs counted during the rest of the compliance period to determine the warehouse operator's WPCO.

REPORTING

Report Submission

Warehouse operators and owners subject to PR 2305 are required to submit reports to South Coast AQMD to provide details on their applicable warehouse operations and compliance. PR 2305 requires that all records used to demonstrate compliance be maintained by warehouse operators or owners, as applicable, for a period of no less than seven years and made available to South Coast AQMD upon request during normal business hours in order to determine compliance. Table 3 provides an overview of the reporting requirements for PR 2305. Appendix A to these Guidelines will provide a user's guide to the WAIRE Program Online Portal (POP) through which warehouse operators and owners will submit their required reports and pay necessary fees.¹⁵⁴

¹⁵³ This alternative calculation can only be used in cases of force majeure. Normal practice requires the warehouse operator to count all truck trips. Further details on the alternative WPCO calculation are available at PR2305 (d)(1)(C).

¹⁵⁴ This appendix will be developed if the rule is approved and once the WAIRE POP has been developed. If the WAIRE POP system is not available, all reports should be submitted to waire-program@aqmd.gov.

Table 4 Reporting Overview

WAIRE Program Report	Reporting Entity	Information Required	Due Dates
Warehouse Operations Notification (WON)	Warehouse Owners	<ul style="list-style-type: none"> Warehouse size and area that may be used for warehousing activity, Warehouse operator(s) name and contact information, Lease end date (if applicable), Previous warehouse operator(s) information, Square footage used by the warehouse owner for warehousing activities 	<ul style="list-style-type: none"> <u>On or before September 1, 2021</u> Within 14 days of a new warehouse operator having access to at least of 50,000 square feet of space for warehousing activities, Within 30 days after a renovation that alters the size of the warehouse, Within 3 days of a request for the report from South Coast AQMD
Initial Site Information Report (ISIR)	Warehouse Operators*	<ul style="list-style-type: none"> Warehouse size and space used for warehousing activities,** Number of truck trips in the previous 12-month period,*** Number of truck trips anticipated during the compliance period for which the upcoming AWR must be submitted, Anticipated actions to meet the WPCO for the current compliance period, Details on the following potential onsite equipment: owned or leased truck fleet, onsite alternative fueling stations, yard trucks, and onsite energy generation systems (e.g., solar) 	<ul style="list-style-type: none"> On or before July 1 of the first compliance period when the warehouse operator must submit their first Annual WAIRE Report for that warehouse Within 30 days of a request for the report from South Coast AQMD
Annual WAIRE Report (AWR)	Warehouse Operators*	<ul style="list-style-type: none"> Truck trip counts for the compliance period, Number of WAIRE Points earned for each action, Associated metrics for the WAIRE Menu actions used to earn WAIRE Points 	<ul style="list-style-type: none"> No more than 30 days after January 1 of the compliance period If an operator vacates a warehouse before <u>the AWR submission deadline</u> in any year, they must submit an AWR <u>no later than the date they vacate the warehouse.</u>

* The warehouse owner may choose to comply on behalf of the warehouse operator, or may be required to submit the report if they are also the warehouse operator.

** If the warehouse building size is <100,000 sf, or if the warehouse operator leases <50,000 sf for warehousing activities, then no further reporting is required. Multiple warehouse operators owned or controlled by a single parent company collectively leasing ≥50,000 sf for warehousing activities in a warehouse do not qualify for this exemption from additional reporting. Also, if an activity is not expressly exempt from rule requirements, it is presumed to be subject to the rule.

*** Warehouses submitting an ISIR before July 1 2022 are only required to report truck trips since July 1, 2021.

Warehouse Operations Notification Report

The Warehouse Operations Notification (WON) must be submitted by an authorized official of the warehouse owner through the WAIRE POP online system. The applicable administrative fee listed in PR 316 must be submitted via e-check or credit card at the same time as the WON.

Warehouses owners submitting a WON for a warehouse with less than 100,000 square feet of floor area dedicated to warehousing activities are exempt from the reporting fee.

Warehouse Renovation or Size Change

In the event there is a change in the applicable 100,000 square feet or greater of indoor floor space within a single building that may be used for warehousing activities, a WON must be submitted within 30 days of receiving a certificate of occupancy from the applicable local building department. Example renovations could include expanding the size of the building to add more warehousing space, or constructing more office space within the warehouse such that the indoor floor space that may be used for warehousing activities is now less than 100,000 feet.

New Warehouse Operator

Any time a new warehouse operator takes over operational control of at least 50,000 square feet of a warehouse building with more than 100,000 square feet that may be used for warehouse activities, a WON must be submitted within 14 days to report that change. A typical example would include a new tenant's starting date for their lease.

Initial Site Information Report

The Initial Site Information Report (ISIR) must be submitted by an authorized official of the warehouse operator through the WAIRE POP online system. ISIRs are only submitted during the first compliance period a warehouse operator is occupying the warehouse¹⁵⁵, and prior to the first AWR unless requested by the South Coast AQMD Executive Officer. The applicable administrative fee listed in PR 316 must be submitted via e-check or credit card at the same time as the ISIR.

Warehouse Size

The ISIR must include the total indoor floor square footage of the applicable warehouse building and the amount of space the warehouse operator leases that may be used for warehousing activities. Typical records used to determine this information will be the operator's lease, information from the warehouse owner, and/or property tax assessment data. The warehouse operator may need to make their own determination about how much of the warehouse facility they can use for warehousing activities.¹⁵⁶ Vacant areas that may be used for warehousing activities (e.g., empty storage racks, open floor space designed for warehousing, drive paths for

¹⁵⁵ Additional ISIRs would be required to be submitted by the warehouse operator should they relocate to a different warehouse subject to PR 2305.

¹⁵⁶ Areas that may be used for warehousing activities include indoor spaces related to the storage and distribution of goods, including but not limited to the storage, labelling, sorting, consolidation and deconsolidation of products into different size packages. Supporting office administration (e.g., employee break areas, restrooms, offices, etc.), maintenance (e.g., vehicle maintenance or charging/fueling areas), manufacturing areas, or retail sales areas open to the general public, within the same warehouse building, that are physically separate from the warehouse area, are not considered warehousing activities.

pallet jacks or forklifts used in warehousing activities) must be included in the square footage calculation.

No additional reporting is required in the ISIR if 1) the total square footage that may be used for warehousing activities in that facility is less than 100,000 square feet, or 2) the warehouse operator's lease does not allow them to use more than 50,000 square feet for warehousing activities.

Truck Trips

There are two sets of truck trip data that must be reported in the ISIR. First, truck trips from the previous 12-month period must be recorded using the same types of methods used to determine the operator's WPCO (see discussion beginning on page 5). Because the ISIR is due by July 1, the typical applicable period for this reporting would be from the previous June 1 through May 31 period. Trips only need to be reported from periods when the operator occupied the warehouse. For example, if an operator's lease only began in September of that previous year, then truck trips only need to be reported from that period on.

Second, the operator must provide an estimate of the number of truck trips that will be reported during the applicable period for their upcoming Annual WAIRE Report. This estimate could just be an extrapolation of the data reported above for the previous 12-month period, or could include an estimate based on expected business through the end of the compliance period.

These two sets of truck trip data can serve as a basis for the operator to estimate their WPCO for that compliance period. However, the final WPCO used in the Annual WAIRE Report must be based on the actual truck trip counts during the compliance period itself (see discussion below).

Onsite Warehouse Equipment

The Initial Site Information Report requires information on existing onsite equipment at the warehouse for onsite fleets, ZE charging/fueling station, yard trucks, and solar panels. Baseline information on the onsite equipment is required to assist in calculating future WAIRE Points that may be potentially earned from the usage of the existing onsite equipment.

Anticipated Approach for Earning WAIRE Points

Using the truck trip data provided in the ISIR (described above) and the subsequent estimated WPCO, the warehouse operator must also submit how they anticipate meeting that WPCO for the current compliance period. This could include any combination of approaches from the WAIRE Menu, a Custom Plan, transferred Points, or the mitigation fee. This portion of the report is a planning exercise to assist the operator and the South Coast AQMD on the anticipated mechanisms that will be used for compliance. Recognizing that conditions can change, the actual approach used to earn WAIRE Points in the Annual WAIRE Report does not need to follow the approach outlined in the ISIR.

Annual WAIRE Report

An Annual WAIRE Report (AWR) must be submitted by every warehouse operator who must satisfy a WPCO for every compliance period, beginning with their Initial Compliance Period (see page 4). Warehouse owners who intend to voluntarily want to earn WAIRE Points, on

behalf of a warehouse operator, must also submit an AWR at the end of the compliance period when the Points were earned. The AWR must be submitted by an authorized official of either the warehouse operator, or owner if the WAIRE Points are earned by the owner, through the WAIRE POP online system. The applicable administrative fee listed in PR 316 must be submitted via e-check or credit card at the same time as the AWR.

Truck Trip Counts

The number of truck trips for the compliance period must be reported specifying the number of Class 2b-7 straight trucks and Class 8 tractors that entered or exited the warehouse site, following the methods described beginning on page 5. Upon entering the truck trip data for the compliance period into the WAIRE POP system, the corresponding WPCO will be displayed using the equation shown on page 5.

Earned WAIRE Points

The warehouse operator must report how the WPCO was satisfied in terms of how many WAIRE Points were earned from:

- 1) Each WAIRE Menu action, and/or
- 2) Actions in an approved Custom WAIRE Plan, and/or
- 3) Points transferred from another site, the warehouse owner, or banked from a previous year, and/or
- 4) The mitigation fee.

For WAIRE Points earned from the WAIRE Menu, the warehouse operator must report the associated level of implementation using the reporting metrics for each WAIRE Menu action (see Table 3 of PR 2305). The applicable increments of progress must be reported for actions implemented from an approved Custom WAIRE Plan. For WAIRE Points that were transferred or banked, the original method used to earn those WAIRE Points must also be reported, including who originally earned the WAIRE Points and when and how the WAIRE Points were earned.

RECORDKEEPING

Adequate records that document all reported information must be maintained for seven years after the applicable report was submitted and be available upon request during normal business hours. While summarized information is reported in the WON, ISIR, and AWR, during audits and field inspections South Coast AQMD staff will require warehouse operators and owners to provide detailed records in order to verify the accuracy of the information submitted.

WAIRE MENU

The WAIRE Menu provides flexibility in a warehouse operator's ability to comply with the WPCO. Table 3 in PR 2305 provides the WAIRE Menu showing the actions, the annual metrics, and the WAIRE Points based on the listed annual metric. The following discussion describes the factors that South Coast AQMD staff will review during audits and inspections for each WAIRE Menu option. Table 4 below provides an overview of the reporting metrics that warehouse operators must report on their AWR to earn WAIRE Points from the WAIRE Menu.

Table 4 – WAIRE Menu Item Metrics

WAIRE Menu Action/Investment	WAIRE Menu Reporting Metric for Each Compliance Period
Acquire ZE/NZE Trucks	Number of ZE/NZE Trucks Acquired by Truck Class
Visit from ZE/NZE Trucks	Number of ZE/NZE Truck Visits
Acquire ZE Yard Trucks	Number of ZE Yard Trucks Acquired
Use ZE Yard Truck	Number of Hours a ZE Yard Truck Operated
Install Onsite Solar Panel System	Kilowatt Rating of Installed System
Use Onsite Solar Panel System	Number of kWh Generated by the Solar Panel System
Install Stand-Alone MERV 16 or Greater Air Filtration Systems	Number of Stand-Alone Air Filtration Systems Installed
Replace MERV 16 or Greater Air Filters	Number of MERV 16 or Greater Air Filters Replaced

NZE/ZE Truck Acquisition

Many warehouse operators already own and operate trucks, and they may acquire NZE or ZE trucks for their fleet to earn WAIRE Points. Vehicle Identification Numbers and records verifying that the truck was acquired by the warehouse operator must be kept. Acquisition could include purchasing, leasing, or renting trucks. If a truck is leased or rented, the WAIRE Points earned for that temporary acquisition are proportional to the amount of the compliance period that the truck is leased or rented. For example, if truck is leased for 6 months of a 12-month compliance period, the number of WAIRE Points earned would be one half of the amount shown in Table 3 of PR 2305. In the case of a Class 6 NZE truck, the warehouse operator would earn 13 WAIRE Points, instead of the 26 WAIRE Points shown in the WAIRE Menu for the full annual period.

NZE trucks fueled by natural gas have been commercially available for the past few years in a variety of Classes, with engines ranging from 6.7 liters to 11.9 liters to serve both medium duty and heavy duty applications.¹⁵⁷ NZE engines are defined as the lowest non-zero optional low

¹⁵⁷ <https://www.epa.gov/sites/production/files/2021-01/documents/420f21002.pdf>,
<https://ww3.arb.ca.gov/msprog/onroad/cert/cert.php#6>,
https://www.ngvamerica.org/vehicles/availability/?vehicle_type=heavy-duty-truck-oems

NOx standard at the time of the engine’s manufacture, which is currently 0.02 g/bhp-hr. One benefit of NZE is that publicly accessible fueling infrastructure for trucks already exists throughout the region and beyond.¹⁵⁸

Many ZE trucks are also commercially available today in a variety of truck Classes, and many more are expected in the next few years.¹⁵⁹ In the near term, charging or fueling infrastructure may be installed at a warehouse facility (which also would earn WAIRE Points), or may be available from a truck leasing company. Additional ZE charging and fueling infrastructure is expected to be installed in the coming years.

If a warehouse operator earns WAIRE Points from the acquisition of ZE or NZE trucks, they will need to retain records of the purchase, lease, or rental of the truck (such as a purchase invoices, or lease agreement), and documentation (e.g., onsite video or photographs from multiple days) that the truck serves that warehouse facility (e.g., that it is domiciled at that site or regularly visits that site). The purchase, lease, or rental documentation must contain enough information to demonstrate that the truck is NZE or ZE, as well as the truck Classification (e.g., the gross vehicle weight rating).

Existing funding programs¹⁶⁰ like Carl Moyer, Proposition 1B, Hybrid Voucher Incentive Program, etc. cannot be used to purchase a truck and also earn WAIRE Points for truck acquisition due to statutory prohibitions preventing those incentive programs from being used to comply with a regulation. The warehouse operator therefore has the option of either receiving incentives to reduce the purchase price of a NZE or ZE truck or foregoing the incentives to earn WAIRE Points for the NZE/ZE truck acquisition.

NZE/ZE Truck Visits

WAIRE Points may also be earned for every visit to a warehouse by a NZE or ZE truck.¹⁶¹ It is important to note, that WAIRE Points for acquisition and visits from the same truck can be earned in the same compliance period. Trucks that were purchased using incentive funds from the previously described funding programs, can be used for crediting towards number of ZE or NZE truck visits. WAIRE Points are earned for each NZE or ZE truck visit, which includes the truck trip into and out of the facility. The number of truck trips to earn WAIRE Points can be more or less than the annualized metric in the WAIRE Menu. WAIRE Point values from the WAIRE Menu can be ratioed (for any WAIRE Menu action), as demonstrated in the following example. In the WAIRE Menu, 42 Points are earned for 365 visits from a Class 8 NZE truck. If a warehouse operator has 1,000 Class 8 NZE truck visits during their compliance period, the number of WAIRE Points earned would be:

$$\frac{42 \text{ Points}}{365 \text{ visits}} = \frac{XX \text{ Points}}{1,000 \text{ Visits}} \rightarrow 115.1 \text{ Points}$$

¹⁵⁸ https://afdc.energy.gov/fuels/natural_gas_locations.html#/analyze?region=US-CA&fuel=LNG&fuel=CNG&lng_vehicle_class=HD&show_map=true&cng_vehicle_class=HD

¹⁵⁹ <https://globaldrivetozero.org/tools/zero-emission-technology-inventory/>

¹⁶⁰ <http://www.aqmd.gov/home/programs/business/business-detail?title=vehicle-engine-upgrades>

¹⁶¹ Trucks that have been purchased through incentive programs can earn WAIRE Points at the same level as trucks that are not incentivized.

NZE and ZE truck visits can come from the warehouse operator's own fleet or by any other third party fleet (whether contracted by the warehouse operator or not). NZE and ZE truck visit counts must be made contemporaneously with the trips and records documenting the visits must be verifiable by South Coast AQMD staff. Example methods to record these truck visits are described below.

1. Trucker check-in – Many warehouses already require some type of check-in from truck drivers when they arrive onsite. As part of that check-in process, warehouse operators could fill out a short form with the following information for every ZE or NZE truck that visits the site¹⁶² (either themselves or through a form filled out by the truck driver):
 - a. The date and time that the truck arrived
 - b. Truck license plate number¹⁶³ and Vehicle Identification Number (VIN)
 - c. Truck fuel type (e.g., natural gas, electric, hydrogen)
 - d. Trucking Company Name, DOT number, and contact phone number (if not owned by the warehouse operator)
 - e. If filled out by a truck driver unaffiliated with the warehouse, the driver's name and signature confirming that the above information is accurate
2. Electronic Telematics System (ETS) – ETS systems are increasingly used to track truck activity, and warehouse operators that employ these systems can use the data it collects and supplement it with truck characteristics (i.e., items b. through d. above) to determine how many NZE and ZE visits occur.
3. Security Cameras – Cameras may be used to record the trucks entering or exiting a warehouse site and document the truck license plate number (using either manual or automated tracking), and potentially other information such as fuel type, trucking company name, and DOT number. Information from items (incomplete sentence)
4. Contractual Records – Some warehouse operators arrange for trucking services from third party fleets. Provisions within the contract requiring NZE or ZE trucks to be used (and resulting in a specified number of visits) could be used as one method of documentation. Additional documentation verifying that the NZE or ZE trucks have actually visited the warehouse must also be maintained.

ZE Yard Trucks

Yard trucks are utility trucks that can be classified as on-road or off-road vehicles and are typically used to move trailers and containers around a warehouse yard or to nearby locations. NZE yard trucks are not included as an option in the WAIRE Menu but may earn WAIRE Points in a Custom WAIRE Plan (further details are provided in the Custom WAIRE Plan section). WAIRE Points may be earned for the acquisition¹⁶⁴ as well as the use of the ZE yard truck within

¹⁶² As a point of reference, for a typical 250,000 sf warehouse that has about 42 Class 8 truck visits per day, only about 5 NZE Class 8 truck visits would be required per day on average (at a stringency of 0.0025) if this method was used to earn WAIRE Points.

¹⁶³ The license plate number of the truck/tractor, not the trailer.

¹⁶⁴ Similar to the discussion on truck acquisitions above, existing incentive programs cannot be used to acquire ZE yard trucks, due to limitations within the incentive funding programs.

the same compliance period. Proof of the acquisition of the ZE yard truck in the form of receipt, invoices, contract or similar documents must be kept by the warehouse operator.

Warehouse operators must keep records of the number of hours of ZE yard truck use during every compliance period for which it earns WAIRE Points. In most cases the operating hours for a yard truck can be obtained from an hour meter on the yard truck. If the yard truck does not have an hour meter installed, a warehouse operator could have one installed as a way to document the hours of operation needed to earn WAIRE Points, or the hours could be recorded through other means (like a time sheet). The hours of operation should be logged regularly either weekly or monthly to keep the records accurate and prevent errors in reporting the annual metric.

ZE Charging or Fueling Infrastructure

ZE charging or fueling infrastructure for on-road vehicles and yard trucks¹⁶⁵ can earn WAIRE Points when installed¹⁶⁶ and when used.¹⁶⁷ NZE fueling infrastructure installation or use is not included as an option in the WAIRE Menu and is prohibited from earning WAIRE Points in a Custom WAIRE Plan. Warehouse operators will need to consult with warehouse owners, local utilities, and local building departments prior to installing ZE infrastructure. Warehouse facility or land owners may also voluntarily install the ZE infrastructure and earn WAIRE Points, and subsequently transfer those WAIRE Points to the warehouse operator(s) at that site. Offsite installations can earn WAIRE Points, but only through a Custom WAIRE Plan.

Electric Charging Infrastructure Installation

A long lead time may be needed to install electric charging infrastructure at some sites, and WAIRE Points may be earned for several milestones that are achieved during project completion. The table below describes the milestones and examples of the documentation needed to verify that the milestone was achieved.

Electric Charger Installation Milestone	Examples of Documentation
Acquisition of the charger(s) (also called EVSE's)	Invoices and photo/video documentation that the chargers have been delivered to the site. Records of any incentives or rebates received for the chargers or charger installation.
Initiating onsite construction	Copies of permits and photo/video documentation showing that construction was initiated.

¹⁶⁵ ZE charging/fueling infrastructure installations or usage for industrial trucks used indoors (e.g., pallet jacks or forklifts) cannot earn WAIRE Points.

¹⁶⁶ In order to avoid potential problems of low quality workmanship and subsequent safety concerns, warehouse operators and owners earning WAIRE Points from installing ZE infrastructure are encouraged - though not required - to use a skilled and trained workforce as defined in Public Contract Code section 2601 for all construction work, and follow the Public Utilities Code section 740.20, subdivision (2) requirement that at least 25 percent of the total electricians working on an electric vehicle infrastructure project, at any given time, hold Electric Vehicle Infrastructure Training Program certification.

¹⁶⁷ Similar to truck acquisitions, most incentive funding programs from CARB, South Coast AQMD, and the Energy Commission cannot be used to install charging infrastructure used to earn WAIRE Points. However, utility programs like Southern California Edison's Charge Ready Transport program have different requirements and do not have the same restrictions.

The latter of final energization or permit sign-off for the system	Permit records and/or photo/video documentation of the system in use.
--	---

The WAIRE Menu only includes ZE charging infrastructure up to 350 kW. Chargers with higher ratings are not yet commercialized but are expected in the near future. Warehouse operators can earn WAIRE Points for these larger systems through a Custom WAIRE Plan. WAIRE Points can also be earned for installing chargers for Transportation Refrigeration Units (TRUs). As of February 2021, CARB is currently developing a new regulation that could mandate the installation and use of TRU chargers at cold storage warehouses covered by PR 2305. In order to earn WAIRE Points for TRU charger installations, if CARB’s proposed rule is adopted and goes into effect, warehouse operators would be required to either install more chargers than required by CARB’s rule in any given year, or install chargers before CARB’s rule requires them.

Electric Charging Infrastructure Usage

Warehouse operators earning WAIRE Points from charger usage¹⁶⁸ for on-road vehicles and/or yard trucks are required to report total kWh dispensed from charging stations at that site. Charger usage earns WAIRE Points equally for trucks owned by a warehouse operator and for third party fleets. Individual charger kWh are not required to be recorded or reported if a single master electrical meter is dedicated to all chargers and does not serve any other electrical loads (this is a common setup in charger installations). Records documenting this electrical usage would typically include electric utility bills, but could also include photo documentation of meter readouts, or charging software system reports.

Similar to the discussion above for TRU charger installation, if CARB’s proposed rule on TRU’s is approved and goes into effect, WAIRE Points may only be earned for TRU charging if it exceeds requirements in CARB’s rule. Records must be kept documenting how the usage goes beyond CARB requirements for any WAIRE Points earned in this situation.

Hydrogen Station Installation and Use

Hydrogen station installations are expected to occur on a faster timeline than electric charging infrastructure, and specific milestones are not included in the WAIRE Menu. WAIRE Points may be earned upon final station installation and availability for fueling. Records documenting the station installation can include permit records, invoices, and photo/video documentation of the station. The WAIRE Menu assigns 1,680 WAIRE Points for the installation of a hydrogen station capable of dispensing 700 kg/day for on-road vehicles and/or yard trucks. Similar to the ratio method described in the truck visit section, stations with higher or lower throughput capacities would receive proportionally more or less WAIRE Points than listed in the WAIRE Menu.

Hydrogen station use must be reported in total kilogram dispensed during the compliance period. The station can be used for the warehouse operator’s own fleet or for third party trucks. Records

¹⁶⁸ Warehouse operators may obtain Low Carbon Fuel Standard (LCFS) credits and/or revenue from those credits and still earn WAIRE Points for that dispensed electricity.

documenting this use should include a meter read-out and can also include invoices for delivered hydrogen, or other similar records.

Solar Panel System Installation and Use

Solar panel system installations can be installed either on the roof of the warehouse or as a carport configuration. Warehouse operators will need to consult with warehouse owners, local utilities, and local building departments prior to installing solar panel systems. Additionally, the warehouse facility or land owner may voluntarily install the solar panels and earn WAIRE Points that they can subsequently transfer to their warehouse operator(s). Proof of the installation of the solar panel system and its kilowatt (kW) rating in the form of receipt, invoices, contract, photos/videos, or similar documents should be maintained for future audits and inspections. WAIRE Points will be awarded upon the latter date of system energization or final permit sign-off.

The total energy produced by the solar system is typically recorded through software systems and may differ from reports provided by utilities. The total system energy production (measured in kilowatt-hours or kWh) is available to earn WAIRE Points, not just the net energy reported by the utility. Both the installation size and the system usage can be scaled using the ratio method described in the truck visits section.

Air Filtration Systems

Air filtration systems can be installed or air filters replaced at residences, schools, daycares, hospitals, or community centers within three miles of the warehouse in order to reduce exposure to particulate matter.¹⁶⁹ The minimum type of filters that can be installed or replaced are minimum efficiency reporting value (MERV) 16 or greater efficiency. Records documenting the number of systems installed or filters replaced could include invoices, contracts, photos/videos of installed systems, or similar documents. The documentation must include proof that the systems were actually installed, and not just purchased. Earning WAIRE Points with this approach will therefore require coordination with, and voluntary cooperation from other entities. Air filtration system installations and filter replacements can be scaled using the ratio method described in the truck visits section.

¹⁶⁹ Example systems are described here:

<http://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf>

CUSTOM WAIRE PLANS

PR 2305 provides the option of proposing a Custom WAIRE Plan for actions that are not on the WAIRE Menu. WAIRE Points can only be earned upon approval of the Custom WAIRE Plan, any action or investments made prior to the approval of the Custom WAIRE Plan will not be considered for WAIRE Points. The process for applying for a Custom WAIRE Plan is shown in Figure 3 below. Custom WAIRE Plan Applications must be submitted through the WAIRE POP system, or as otherwise directed by South Coast AQMD, along with the applicable fee in PR 316.

Some examples of potential Custom WAIRE Plan proposals include jointly owned off-site ZE charging or fueling infrastructure, the use of battery storage systems or energy management that reduces emissions from local natural gas fired powerplants, and the acquisition and/or usage of NZE yard trucks. NZE yard trucks may be submitted as a Custom WAIRE Plan for consideration but only if they only utilize renewable fuels such as renewable natural gas (RNG), renewable propane, or other equivalents.¹⁷⁰ The section below provides an example of a Custom WAIRE Plan calculation methodology to earn WAIRE Points for NZE yard trucks.

NZE Yard Truck WAIRE Points Calculation Example

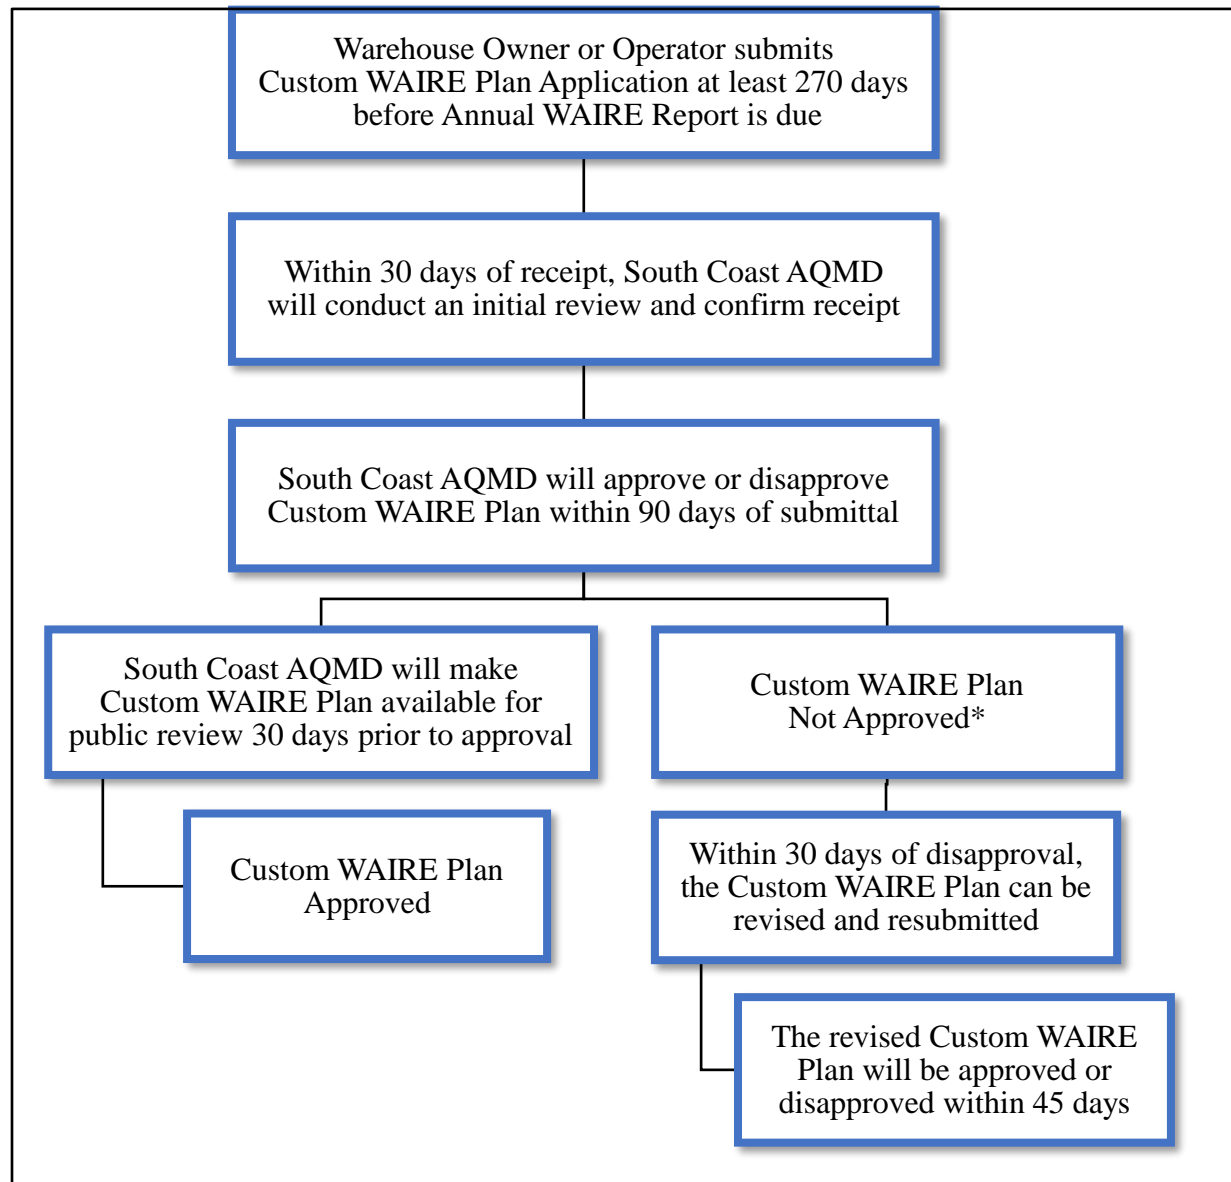

The acquisition and/or use of NZE yard trucks may be proposed as a Custom WAIRE Plan if the NZE yard truck's engine meets CARB's lowest Optional Low NOx standard (currently 0.02 g/hp-hr) applicable at the time of engine manufacture and is fueled with renewable fuels. The expected WAIRE Points for NZE yard trucks in a Custom WAIRE Plan are shown below, following the same methods as is described for ZE yard truck acquisition and usage in Appendix B – WAIRE Menu Technical Report.¹⁷¹

Acquire One NZE Yard Truck = 42 WAIRE Points

Use One NZE Yard Truck for 1,000 hrs in a year = 288 WAIRE Points

¹⁷⁰ Renewable fuels include any non-fossil fuel who carbon intensity is lower than the applicable standard for that year as determined through CARB's Low Carbon Fuel Standards program.

¹⁷¹ The following key assumptions are used here: \$50,000 incremental acquisition cost relative to diesel counterpart, \$2,250 incremental annual usage cost relative to diesel (<https://cleanairactionplan.org/documents/final-cargo-handling-equipment-che-feasibility-assessment.pdf/>), 90% of the NOx emissions benefit as a ZE yard truck, and 100% of the Diesel PM benefit of a ZE yard truck.

Figure 3 – Custom WAIRE Plan Application Process

* A disapproval will identify the deficiencies in the application that must be revised before approval can be considered. Applications that have not been explicitly approved within the review period are presumed to be disapproved.

Custom WAIRE Plan actions must meet similar criteria to the analysis conducted for the actions and investments included in the WAIRE Menu. Custom WAIRE Plan Applications must include the following elements:

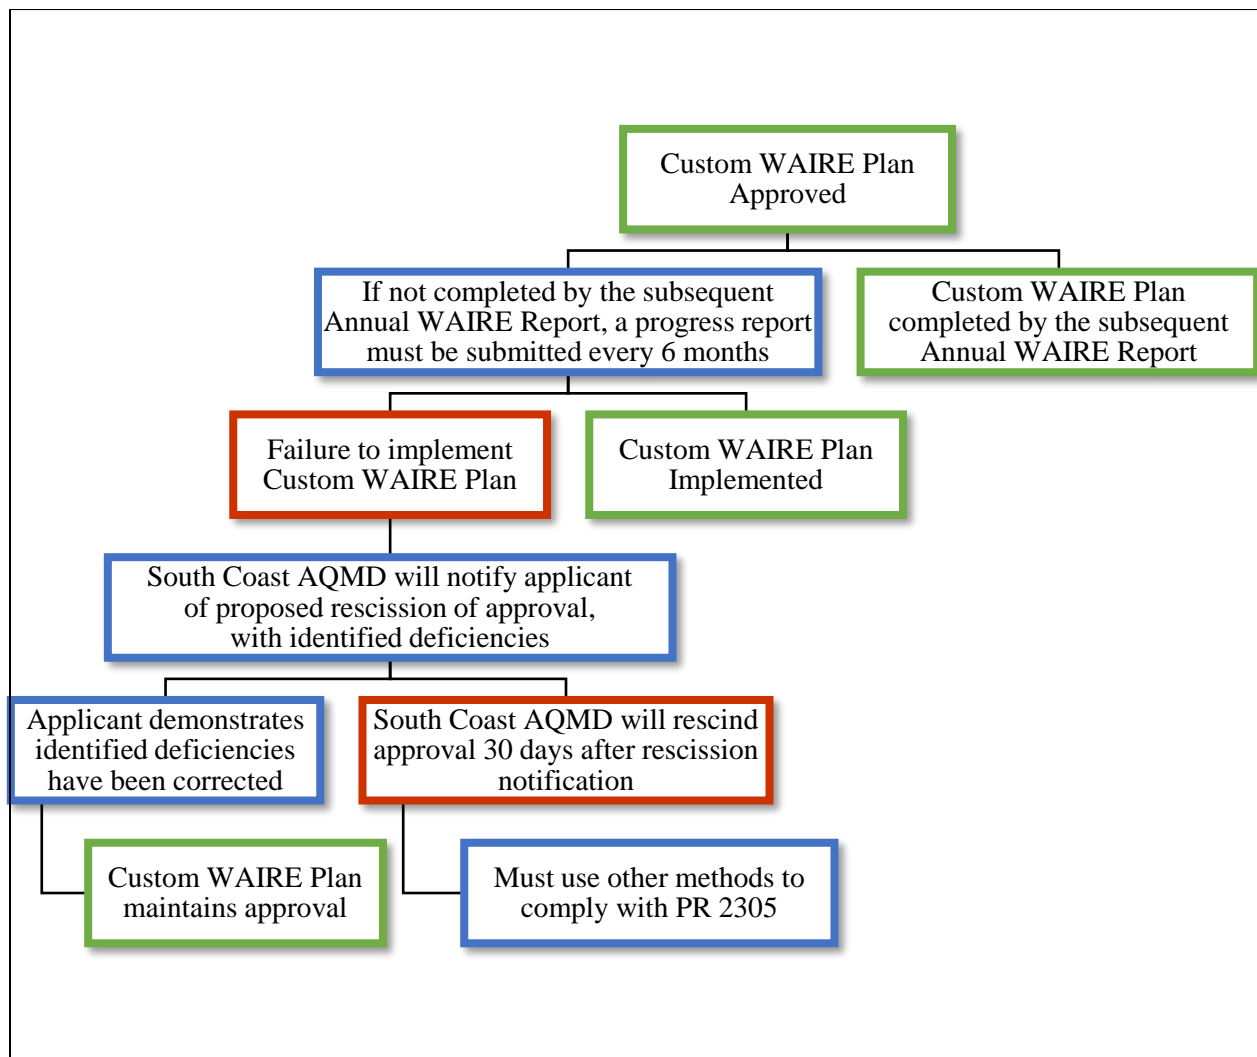

- A demonstration how the proposed action will earn WAIRE Points based on the incremental cost of the action, the NOx emission reductions from the action, and the DPM emission reductions from the action, relative to baseline conditions if the warehouse operator had not completed the action in that compliance period,
 - Baseline conditions should be calculated using the latest emissions estimation methodologies, such as those used in the most recently approved Air Quality Management Plan. The calculation of WAIRE Points from actions in a Custom WAIRE Plan should be consistent with the calculation methodologies included in the WAIRE Menu Technical Report included as Appendix B to the PR 2305 Staff Report. Emission reductions that go beyond baseline conditions must consider the effect of existing regulations that phase in through time, if applicable.
- A demonstration how WAIRE Points earned from the Custom WAIRE Plan for emission reductions are quantifiable, verifiable, and real,
- A description of how the proposed actions will achieve quantifiable, verifiable, and real NOx and DPM emission reductions as quickly as feasible, but no later than three years after plan approval,
 - All Custom WAIRE Plans must result in emission reductions, or directly facilitate emission reductions. Examples of facilitating projects could include installation of ZE charging infrastructure at an offsite location or acquisition of ZE TRUs that go beyond CARB requirements.
- A quantification of expected NOx and/or DPM emission reductions from the proposed actions within the South Coast AQMD and within three miles of the warehouse,
 - All Custom WAIRE Plan projects, including facilitating projects, must result in verifiable NOx and/or DPM emission reductions within three miles of the warehouse.
- A description of the method to be used to verify that the proposed actions will achieve NOx and/or DPM emission reductions,
 - Example methods documenting how the effectiveness of an action can be verified are included in these Guidelines for WAIRE Menu items.
- A schedule of key milestones showing the increments of progress to complete the proposed actions,
- A description of the location and a map of where the proposed actions will occur,
- Any expected permits or approvals required by other private parties, or South Coast AQMD, or other federal, state, or local government agencies to implement the Custom WAIRE Plan

Custom WAIRE Plan Milestones

The timetable of an approved Custom WAIRE Plan application allows for at least six months to implement the custom WAIRE Plan project (or three and a half months if the application was disapproved, resubmitted, and then approved). Some projects may take longer to implement and could extend beyond the compliance period when the Custom WAIRE Plan application was submitted. In these cases, a progress report must be submitted every six months after the Custom

WAIRE Plan was approved. In the event milestones are not reached, the progress report must explain the conditions that resulted in the milestone not being reached and propose a new milestone date. If in reviewing the progress report, South Coast AQMD staff determines that progress on the approved Custom WAIRE Plan is not adequate, a notice may be sent to the Custom WAIRE Plan applicant advising of the inadequate progress. The Custom WAIRE Plan approval may be rescinded 30 days after the notice if the applicant does not demonstrate how the identified deficiencies have been corrected. Figure 4 shows the Custom WAIRE Plan implementation process.

Figure 4 – Custom WAIRE Plan Implementation

WAIRE MITIGATION FEE

Warehouse operators may earn WAIRE Points by paying a mitigation fee at \$1,000 per WAIRE Point, but any of the other methods that can earn WAIRE Points (i.e., the WAIRE Menu, Custom Plans, transferring) can be used to fully satisfy a warehouse operator's WPCO so that no mitigation fees are paid. There is also an additional 6.25% administration fee charged on top of any mitigation fees paid to cover South Coast AQMD's costs of administering the WAIRE Mitigation Program. Mitigation fees and accompanying administrative fees must be submitted through the WAIRE POP system with the AWR. Payments less than \$300,000 can be made by e-check or credit card. Payments larger than this must be mailed to South Coast AQMD or submitted in person.

The WAIRE Mitigation Fee Program is expected to provide incentives toward the purchase of NZE and ZE trucks and ZE charging and fueling infrastructure. Warehouse operators may apply for the WAIRE Mitigation Fee Program funds. However, similar to other funding programs, the incentivized vehicle or equipment may not earn WAIRE Points for its acquisition, only for its subsequent use. Further, any ZE charging or fueling infrastructure funded by the WAIRE Mitigation Program must be publicly accessible and cannot solely be for the use of the operator's private fleet.

Projects funded by the WAIRE Mitigation Program will be approved annually or more often by the South Coast AQMD Governing Board and will follow the policies described in the Board Resolution that accompanies PR 2305 as well as subsequent requirements set out by the Board (e.g., in future solicitations).¹⁷²

WAIRE POINTS TRANSFERS

WAIRE Points can only be transferred under limited situations, and only WAIRE Points in excess of the warehouse operator's WPCO may be transferred. The following are the three sole instances when WAIRE Points may be transferred or banked:

1. Excess WAIRE Points transferred to a warehouse operator's other warehouses:
If a warehouse operator conducts warehousing activities at more than one warehouse during any single compliance period, then WAIRE Points earned for one warehouse may be used at the other warehouse(s) under the operational control of that same warehouse operator. Only those points earned in excess of a warehouse operator's WPCO at that site may be transferred, and only for the current compliance period. Any WAIRE Points transferred to a different warehouse shall be discounted as shown in the rightmost column in the WAIRE Menu in Table 3 of PR 2305.
2. WAIRE Points transferred between a warehouse owner and operator:
A warehouse facility or land owner may voluntarily earn WAIRE Points during a compliance Period using the WAIRE Menu, a Custom WAIRE Plan, by paying a mitigation fee, or may have WAIRE Points transferred to them from the warehouse operator at that site. The warehouse facility or land owner may then transfer these WAIRE Points to any warehouse operator at the site where the WAIRE Points were earned within a three-year period after the points were originally earned. Any warehouse operator using these transferred WAIRE Points to satisfy a WPCO during this three-year period must demonstrate that any onsite improvements or

¹⁷² A link to the resolution will be added here if the rule is approved.

equipment installations that were used to earn the WAIRE Points being transferred are still operational at that warehouse facility in the year that WAIRE Points are used.

- a. Warehouse operators that vacate a warehouse before the end of a compliance period may transfer any excess WAIRE Points to the warehouse owner. These Points may then be transferred to the next warehouse operator.
3. Excess WAIRE Points banked for future use at that site:
 WAIRE Points in excess of the warehouse operator's WPCO in one compliance period may be banked for use in any of the next three compliance periods. After this time, any remaining banked WAIRE Points will expire and can no longer be used. WAIRE Points banked for future use in this way cannot be transferred to another warehouse. WAIRE Points may not be transferred to a subsequent compliance period if the WAIRE Menu items used to earn WAIRE Points are required by U.S. EPA, CARB, or South Coast AQMD rules and regulations in that subsequent year. An example could include CARB's anticipated TRU rule that could require charging infrastructure at a future date. Installations earlier than CARB requirements could earn Points and be banked for future years. However, the banked Points can no longer be used in any year in which CARB requires those chargers to be installed. Further, if any onsite improvements or equipment installations that were used to originally earn the WAIRE Points are no longer functional, the banked WAIRE Points may not be used to satisfy a WPCO. Finally, if WAIRE Points are earned prior to a warehouse operator's first compliance period, the three-year clock on banked WAIRE Points does not begin until after their first compliance period.
 In order to use banked WAIRE Points, the WAIRE Menu item that generated the WAIRE Points must still be onsite and was used for the compliance period that the WAIRE Points are to be used to comply with the WPCO. (Incomplete sentence) For Phase 2 and 3, there is an early action provision that allows for earning WAIRE Points ahead of their initial compliance period, and include a provision for the clock on three year life of the WAIRE Points for those early action WAIRE Points to not begin until after the initial compliance period.

It is the responsibility of the warehouse operator who uses transferred or banked WAIRE Points to keep records documenting how and when the WAIRE Points were originally earned. If WAIRE Points are transferred between the warehouse owner and operator, both entities must keep records documenting the agreement to transfer the WAIRE Points. To avoid any potential disputes, the agreement should be signed by authorized officials for both entities.

EXEMPTIONS

Warehouse operators may be exempt from parts of PR 2305 in ~~two~~three limited instances. First, warehouse operators who can only use less than 50,000 sq. ft. of a warehouse for warehousing activities are not required to earn any WAIRE Points. However, if the warehouse operator has the same parent company as another warehouse operator in the same building, and collectively they may use more than 50,000 sq. ft., then the exemption does not apply.

Second, warehouse operators with a calculated WPCO <10 are not required to earn any WAIRE Points but will still need to submit required reporting. This exemption is in place to reduce the burden on small warehouse operations with only a small volume of truck trips to their warehouse.

Third, there may be rare instances when a warehouse operator invests in new technology to comply with PR 2305. If that equipment malfunctions through no fault of the operator, then they may apply for an exemption from the portion of their WPCO for which that action applies. An example could include a warehouse operator who purchases a ZE or NZE truck that experiences a significant manufacturer's defect that renders the truck inoperable for an extended period of time. Applications for this exemption should be submitted to waire-program@aqmd.gov. Applications should include a description of the investment that has the defect, relevant details about the defect, and the number of WAIRE Points anticipated during the current compliance period from that investment for which the operator is seeking an exemption. The warehouse operator's WPCO should not be assumed to be reduced unless South Coast AQMD staff submits an approval of the exemption in writing or email. The application will be reviewed based on evidence provided by the applicant that the vehicle or equipment had defects caused by the manufacturer of the vehicle or equipment, or a defect in the installation of equipment following manufacturer-approved methods. Further, the applicant must demonstrate that they made a good faith effort to have the equipment or vehicle repaired but was unable to do so or do so in a timely manner.

COMPLIANCE PROGRAM

South Coast AQMD will periodically conduct both desktop and field audits for compliance with the WAIRE Program. The South Coast AQMD staff may contact warehouse owners and operators to request further documentation or clarification on submitted WAIRE Program reports. Additionally, South Coast AQMD inspectors may conduct field visits of the warehouse facilities. South Coast AQMD inspections are generally unannounced, and a South Coast AQMD inspector may visit a warehouse facility any time during regular business hours to verify a facility is following recordkeeping requirements and other applicable requirements. Upon arrival, the South Coast AQMD inspector will present proper South Coast AQMD identification and inform a facility representative of the purpose and scope of the inspection. Most inspections are conducted to verify the information submitted on the required WAIRE Program reports. An inspector may also request a tour of the facility to verify the onsite presence of any equipment related to WAIRE Program compliance. It is helpful if a facility representative familiar with the WAIRE Program assist with the inspection, and that an organized collection of the WAIRE Program related documents be readily available either as a hardcopy or digitally.

Some of the records that a South Coast AQMD inspector could inquire about include:

- Current contact information of warehouse operator
- Truck trip count records
- WPCO calculation and plans to earn WAIRE Points
- Copy of Initial Site Information Report
- Copies Annual WAIRE Report(s)
- Copy of any approved Custom WAIRE Plan(s)
- Fleet data (invoices, vehicle registration, model year, fuel type, license plate numbers)
- Information about any onsite energy generation equipment
- Information about any onsite alternative fueling station(s)
- Information about any onsite yard truck(s)
- Information on any air filter systems or filters installed or replaced for the surrounding community

- Copies of exemption documentation
- Copies of lease agreement

If South Coast AQMD staff identify a discrepancy in the warehouse operator's WAIRE Program reporting such as a an issue with the truck trip counts, the reporting metrics submitted, or similar differences, the South Coast AQMD inspector will discuss the issue(s) with the warehouse operator to determine the cause of the issue(s) or require further documentation and enforcement action may be taken. For example, if the warehouse operator submits in the Annual WAIRE Report that there were 100 ZE tractor visits for the compliance period, and if after verifying the 100 tractor VINs the South Coast AQMD staff determines that only 50 of the truck visits were actually ZE tractors, more detail on the truck visits may be required or a further review of the method for accounting for ZE trucks would be needed. If sufficient proof cannot be provided to support the 100 ZE tractor visits reported, then the warehouse operator may need to obtain more WAIRE Points to satisfy their WPCO. Frequently updating and tabulating reporting metrics would limit discrepancies and provide more documentation to support submitted WAIRE Program reports.

Appendix B: WAIRE MENU TECHNICAL REPORT**DRAFT WAIRE Menu Technical Report****OVERVIEW**

This technical report describes the methodology used to determine how WAIRE Points are attributed to each of the actions on the WAIRE Menu provided in PR 2305. Section 1 of this report presents an overview of how the Points are determined within the Menu, while all subsequent sections presents detailed methodologies for each Menu item.

SECTION 1) WAIRE Points Calculation Methodology

This section describes the general methodology used to determine how WAIRE Points are attributed to each of the actions on the WAIRE Menu. While this methodology is used to determine the value of each WAIRE Menu action during the rulemaking process, warehouse operators and/or owners will not need to use this calculation methodology document to determine how to comply with the rule. For compliance, warehouse operators (and in some cases owners if they choose to comply on behalf of their operator) will only need to consult the WAIRE Menu itself to determine how many actions, or how much of each action to complete for compliance.

WAIRE Points may be earned in two ways, through the purchase of near-zero (NZE) and zero emission (ZE) equipment or equipment that facilitates its use, and through the usage of NZE and ZE equipment. WAIRE Points are assigned based on three key parameters, cost, regional emissions reductions, and local emissions reduction. The cost parameter is based on the incrementally higher cost a warehouse operator faces when choosing to purchase NZE/ZE equipment (compared to conventional diesel technology). The regional emissions reduction parameter is based on the reduction in nitrogen oxides (NOx) emissions from using ZE/NZE equipment. The local emissions reduction parameter is based on the reduction in Diesel Particulate Matter (DPM)¹ from using ZE/NZE equipment.

In practice, the actual costs and emission reductions of each implemented action will likely vary for each warehouse operator. Calculating these unique values on a case-by-case basis would impose a considerable administrative burden to both the regulated community and to South Coast AQMD. In order to simplify compliance and administration of PR 2305, WAIRE Points for each Menu action are determined using representative default values described in the calculation methodology summaries that follow.

Section 1a) WAIRE MENU ANNUALIZED UNITARY METRICS AND BINS
WAIRE Points values in the WAIRE Menu are determined for each action based on a single Annualized Unitary Metric (AUM). The AUM is the default level of implementation used for

¹ DPM is both a component of the criteria pollutants PM10 and PM2.5, and a toxic air contaminant. Emissions of DPM from warehouse indirect sources can contribute to high-level, localized pollutant concentrations that can significantly affect air quality and public health for populations near warehouses.

calculating each WAIRE Menu action's Points. For example, the AUM for the truck acquisition WAIRE Menu action is one truck acquired during the compliance year. The cost and regional and local emissions reductions are calculated for acquiring one truck and used to determine the default WAIRE Point value for that Menu action. Warehouse operators use these default Point values in the WAIRE Menu to determine how many Points they earned in total depending on their level of implementation. For example, the default Point value in the Menu for acquiring one ZE class 8 truck is 126 Points. If a warehouse operator acquired five ZE trucks, they would earn a total of 630 Points (126 Points for each truck acquisition). Similarly, for ZE class 8 truck visits, the AUM of 365 visits per year (one per day on average) yields 27 Points in the WAIRE Menu. If a warehouse operator only has 100 ZE class 8 truck visits during a compliance year, they would earn a total of 7.4 Points² $[(100 \div 365) \times 27 = 7.4]$. The AUM's for each WAIRE Menu action are described in the individual calculation methodology summaries that follow.

WAIRE Points are also calculated using a point binning system to simplify the merging of the cost, regional emission reduction, and local emissions reduction parameters. For the AUM, Points are earned for each \$25,000 incremental cost, 25-pound NOx regional emission reduction, and 0.25-pound DPM local emission reduction. Once these three parameters are calculated, their binned points are summed to yield the total default WAIRE Points earned for that action.

Section 1b) COSTS:

The costs for each WAIRE Menu action are based on the annualized incremental costs difference between the new ZE/NZE technology and the costs of the conventional diesel equivalent. Due to existing statutory or regulatory prohibitions, most state incentive funding programs used to offset the higher purchase price of ZE/NZE vehicles and equipment cannot be used to aid in complying with state or federal law or South Coast AQMD rules or regulations³, and incentive funds are not considered in these costs. However, WAIRE Points may be earned from the usage of incentivized vehicles/equipment. For example, if a warehouse operator owns a fleet of trucks, and they want to purchase a ZE or NZE truck, they will need to decide among two options. First, they could purchase the truck at full price and receive WAIRE Points for that action. Second, they could instead choose to receive incentive funding for that purchase but not earn any WAIRE Points for the truck purchase. In both instances, they would be allowed to receive WAIRE Points for the visits that this truck makes to their warehouse.

² WAIRE Points are calculated to no more than one decimal place.

³ California Health and Safety Codes 44281(b), 44391.4(a), 44271(c), CCR Title 13, Ch. 8.2 Sec. 2353 (c)(4), Moyer Guidelines Ch. 2, CA Beneficiary Mitigation Plan

Section 1c) REGIONAL EMISSION REDUCTIONS:

Regional emission reductions are calculated in two ways. First, NO_x reductions are calculated from using ZE/NZE vehicles and equipment for activities associated with the warehouse. Second, regional NO_x emission reduction Points are calculated for WAIRE Menu items affiliated with the acquisition of ZE/NZE vehicles/equipment at a rate of \$100,000 per ton of NO_x. This is the cost effectiveness threshold that South Coast AQMD utilizes in its Carl Moyer incentive funding program. These regional emission reduction Points are assigned to these acquisition Menu items because if a facility chose to pay that level of funding as a mitigation fee, South Coast AQMD would likely spend the funds using the same cost effectiveness threshold.

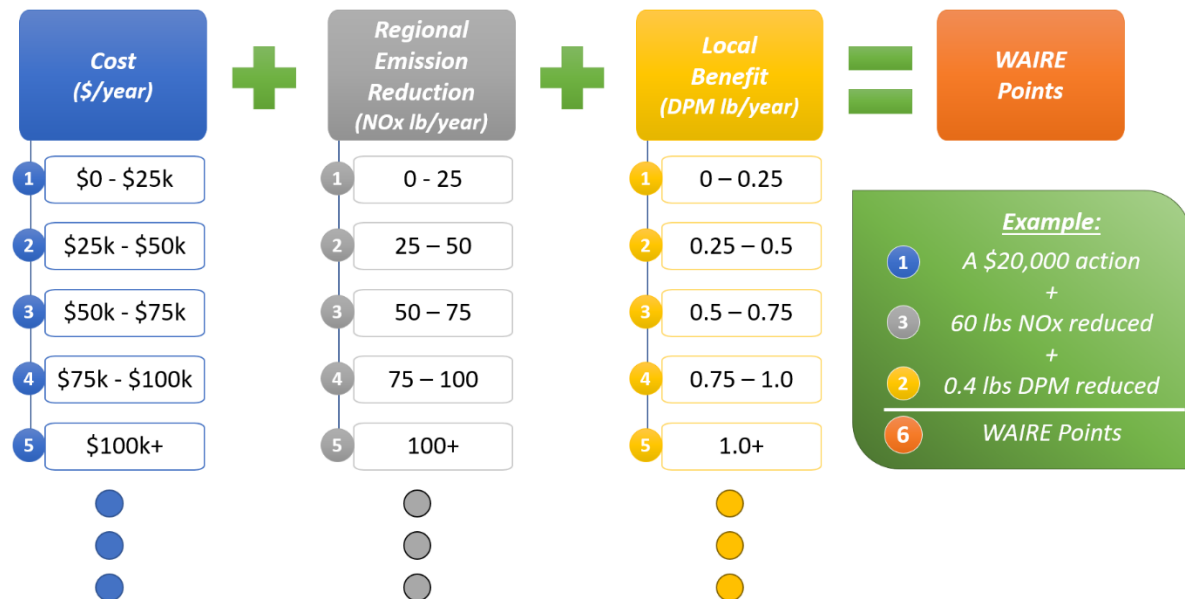

Section 1d) LOCAL EMISSION REDUCTIONS:

Local emission reductions are calculated in a similar manner as regional emission reductions, except that Diesel Particulate Matter (DPM) is used instead of NO_x.

Section 1e) EXAMPLE:

Figure 1, below, presents one example of how the calculation methods discussed above would yield the total WAIRE Points earned. In this example, an AUM would cost \$20,000 and result in a 60 lbs/year NO_x reduction, and a 0.4 lbs/year DPM reduction. Combining the three together would result in a total of 6 WAIRE Points. Specific calculations for each WAIRE Menu action are included in the following sections.

Figure 1: WAIRE Points Calculation

SECTION 2) Zero and Near-Zero Emission Truck Visits and Truck Acquisitions

Description: Two key factors affect the analysis of ZE and NZE trucks – the definitions of ZE and NZE, and the truck class. In the context of PR 2305, the definition of a ZE truck is the same as CARB’s Advanced Clean Trucks Regulation definition. At the time of this writing, CARB’s draft definition for ZE truck is one “*with a drivetrain that produces zero exhaust emission of any criteria pollutant (or precursor pollutant) or greenhouse gas under any possible operational modes or conditions.*” For PR 2305 a NZE truck is one in which the engine meets CARB’s lowest Optional Low NOx standard at the time of manufacture, which is currently 0.02 g/hp-hr NOx.

In addition to drivetrain technology, trucks are commonly classified based on their Gross Vehicle Weight Rating (GVWR). Throughout this document Class 2b-7 refers to heavy duty trucks with GVWR of 8,501 – 33,000 lbs and Class 8 trucks with GVWR of greater than 33,000 lbs. Table 1 below presents truck classifications.

Table 1. Truck Classes

Truck Class	GVWR (lbs)
Class 2b	8,501 – 10,000
Class 3	10,001 – 14,000
Class 4	14,001 – 16,000
Class 5	16,001 – 19,500
Class 6	19,501 – 26,000
Class 7	26,001 – 33,000
Class 8	33,001 & over

Commercial Availability: The ZE truck market is beginning to grow rapidly with many models entering the commercial market today and many major manufacturers announcing plans for future commercialization of battery-electric and hydrogen fuel cell electric trucks.⁴ Some notable manufacturer announcements include: Daimler Class 8 eCascadia, Navistar battery-electric Class 8, Volvo battery-electric VNR Class 8, Tesla’s long range battery-electric tractor, BYD’s battery-electric Class 6 and 8, Nikola’s and Kenworth (in conjunction with Toyota) hydrogen fuel cell tractors, Sea Electric Class 4-8 battery-electric trucks, Lion Electric’s Class 6-8 battery-electric trucks, Amazon’s order of 100,000 Rivian’s battery electric trucks, etc. NZE engines are currently available in two sizes – 11.9 liter and 8.9 liter. Major truck manufacturers offer these engines in different truck classes, including for class 8 regional haul and/or drayage truck operations.

Operation: Trucks that visit warehouses may be owned by the warehouse operator, or by a motor carrier not affiliated with that warehouse. Arrangements for truck visits to the site to deliver or pick up goods is typically made by the owner of the goods, or someone acting on their behalf. As such, each individual truck visiting a warehouse can have a unique operating profile that may not be shared by any other truck visiting that site. One truck may travel 30 miles on the inbound trip, and only two miles on the outbound trip. Another truck may be loaded with goods from multiple warehouses or stores, and determining what portion of a trip to attribute to each warehouse would be impractical. Finally, trucks may idle their engines for short periods while at the

⁴ A useful reference is the online ZETI tool. <https://globaldrivetozero.org/tools/zero-emission-technology-inventory/>

warehouse before or after the trailer is dropped off/picked up. For the emissions and cost analyses presented below, input parameters are meant to be broadly applicable and may not reflect any one individual truck trip or truck acquisition.

SECTION 2a) ZE/NZE Truck Acquisitions⁵

ZE/NZE Truck Purchase Prices: Several key references were consulted to estimate incremental purchase prices for NZE and ZE trucks relative to conventional diesel trucks including: CARB's Advanced Clean Truck Regulation (ACT), Standardized Regulatory Impact Assessment (SRIA)⁶ and Total Cost of Ownership Discussion Documents⁷, California Energy Commission's Revised Transportation Demand Forecast⁸, the Ports' Feasibility Study⁹, ICF's Intensive Literature Review for Medium and Heavy-Duty Electrification in California¹⁰, NACFE's TCO Calculator¹¹, as well as data from South Coast AQMD's Carl Moyer Grant Program and CARB's HVIP program. While cost estimates vary somewhat among these references, the single point estimates shown in Table 2 below are consistent with these previous analyses.

Table 2. Incremental Costs for NZE and ZE Truck Purchases

WAIRE Menu Item		Annualized Unitary Metric	Incremental Cost (\$/metric)
Class 8 Truck	NZE	1 truck purchased	\$65,000
Class 4-7 Truck			\$30,000
Class 8 Truck	ZE		\$150,000
Class 4-7 Truck			\$80,000
Class 2b-3 Truck			\$16,000

WAIRE Points for ZE/NZE Truck Acquisitions: Acquisition of NZE Class 8 and Class 4-7 trucks earns 3 and 2 WAIRE Points, respectively. Similarly, the acquisition of ZE Class 8, Class 4-7, and Class 2b-3 trucks earns 6, 4, and 1 WAIRE Points, respectively. In addition, using a cost-effectiveness of \$100,000 per ton of NO_x, WAIRE Points for regional emission reductions for Class 8 and 4-7 NZE truck acquisitions are 52 and 24 WAIRE Points, respectively. For ZE truck acquisitions, Class 8, 4-7, and 2b-3 earns 120, 64, and 13 WAIRE Points, respectively.

⁵ WAIRE Points can be earned from either truck purchases or truck leases. Points are calculated assuming trucks are purchased.

SECTION 2b) Truck Visits

Regional and Local Emission Reductions from ZE/NZE Truck Visits: Key parameters that can affect the emissions estimate from any one individual trip include: trip length, truck class, vehicle powertrain, and vehicle speed. Collecting all the necessary information to calculate precise emissions estimates for each trip is not feasible as it would require 1) instrumenting all trucks with telematics systems that report uniform data, 2) requiring detailed information reporting about truck loads (e.g., how much of the goods in each truck trailer is being transported to each location), and 3) conducting substantial data analysis to determine the emissions associated with each truck trip. Because of these challenges, various models are used to estimate emissions from trucking activity. In particular, CARB's EMFAC model and SCAG's Heavy-Duty Truck Regional Travel Demand model provide emissions estimates in the South Coast AQMD.

EMFAC2017 provides activity and emission rates for on-road vehicles that operate within California. EMFAC categories¹² and their relationship to truck class are shown in Table 3 below. EMFAC categorizes all truck types that are on the road, however the analysis presented here is limited to those categories that are most likely to deliver goods to and from warehouses.

Table 3. EMFAC Truck Categories

EMFAC Category	Description	Truck Class
LHD1 - DSL	Light-Heavy-Duty Trucks (GVWR 8,501-10,000 lbs)	Class 2b-3
LHD1 - GAS		
LHD2 - DSL	Light-Heavy-Duty Trucks (GVWR 8,501-10,000 lbs)	
LHD2 - GAS		
T6 CAIRP Small	Light-Heavy-Duty Trucks (GVWR 10,001-14,000 lbs)	Class 4-6
T6 Instate Small	Medium-Heavy Duty Diesel Instate Truck with GVWR<=26,000 lbs	
T6 OOS Small	Medium-Heavy Duty Diesel Out-of-State Truck with GVWR<=26,000 lbs	
T6 CAIRP Heavy	Medium-Heavy Duty Diesel CA International Registration Plan Truck with GVWR>26,000 lbs	Class 7
T6 Instate Heavy	Medium-Heavy Duty Diesel Instate Truck with GVWR>26,000 lbs	
T6 OOS Heavy	Medium-Heavy Duty Diesel Out-of-State Truck with GVWR>26,000 lbs	
T7 CAIRP	Heavy-Heavy Duty Diesel CA International Registration Plan Truck with GVWR>33,000 lbs	Class 8
T7 NNOOS	Heavy-Heavy Duty Diesel Non-Neighboring Out-of-State Truck with GVWR>33,000 lbs	
T7 NOOS	Heavy-Heavy Duty Diesel Neighboring Out-of-State Truck with GVWR>33,000 lbs	
T7 POLA	Heavy-Heavy Duty Diesel Drayage Truck in South Coast with GVWR>33,000 lbs	
T7 Tractor	Heavy-Heavy Duty Diesel Tractor Truck with GVWR>33,000 lbs	

¹² <https://ww3.arb.ca.gov/msei/downloads/emfac2017-volume-iii-technical-documentation.pdf> (Table 6.1-1)

Baseline weighted averages of NOx and PM10 emission rates¹³ for calendar year 2023 for running exhaust (RUNEX), exhaust from engine startups (STREX), and idling exhaust (IDLEX) of the above-mentioned truck categories are presented below.

Table 4. Weighted average emission rates (g/mi for RUNEX, g/trip for STREX, g/vehicle/day for IDLEX)

Truck Class	NOx			DPM			Mile/trip ¹⁴	Trip/day/truck ¹⁵
	RUNEX	IDLEX	STREX	RUNEX	IDLEX	STREX		
Class 2b-3	0.727	0.888	0.290	0.008	0.013	0	15.3	1.3
Class 4-7	1.079	2.855	2.117	0.007	0.001	0	14.2	5.9
Class 8	2.372	76.203	2.028	0.020	0.027	0	39.9	5.2

The regional and local emission reductions achieved by switching to ZE trucks relative to baseline emissions are calculated using Equation 1 below. While regional emission reductions from switching to NZE trucks is assumed to equal 90% of the reduction compared to ZE trucks, local emission reductions are assumed to be the same between ZE and NZE as NZE trucks are fueled by natural gas and do not emit DPM.

Equation [1]:

$$\begin{aligned}
 & \text{Emission Reduction } \left(\frac{\text{lb}}{\text{trip}} \right) \\
 &= \left[\left(\text{RUNEX} \left(\frac{\text{g}}{\text{mi}} \right) \times \frac{\text{mi}}{\text{trip}} \right) + \left(\text{STREX} \left(\frac{\text{g}}{\text{trip}} \right) \right) + \left(\frac{\text{IDLEX} \left(\frac{\text{g}}{\text{day.truck}} \right)}{\frac{\text{trip}}{\text{day.truck}}} \right) \right] \times \frac{1 \text{ lb}}{453.592 \text{ g}}
 \end{aligned}$$

Results of the calculation for the two truck class categories are presented in Table 5 below.

Table 5. NOx and DPM emission reductions for a single truck trip

Truck Class	ZE Truck		NZE Truck	
	NOx lb/trip	DPM lb/trip	NOx lb/trip	DPM lb/trip
Class 2b-3	0.027	0.0003	N/A	N/A
Class 4-7	0.040	0.0002	0.036	0.0002
Class 8	0.247	0.002	0.222	0.002

¹³ VMT-weighted, population-weighted and number of starts-weighted averages were computed to equalize the frequency of the values for RUNEX, IDLEX and STREX emission rates, respectively, in the data set by multiplication of each truck category emission rates to its corresponding VMT, population or number of starts and then dividing by the sum of total VMT, population or number of starts.

¹⁴ SCAG 2016 RTP mileage rates for medium-heavy (Class 4-7) and heavy-heavy trucks (Class 8)

¹⁵ Truck populations from EMFAC and trips/day from SCAG 2016 RTP. A trip is a one-way trip, while a ‘visit’ to a warehouse includes the incoming trip and the outgoing trip.

Table 6 below illustrates the method used in determining point values based on regional and local emissions reductions using results in Table 5.

Table 6. NO_x and DPM emission reductions for the Annualized Unitary Metric

WAIRE Menu Item		Annualized Unitary Metric (AUM)	Annualized Regional Emission Reductions (lb NOx/AUM)	Annualized Local Emission Reductions (lb DPM/AUM)
Class 8 Truck	NZE	365 truck visits	$0.9 \times 180.3 = 162.3$	1.3
Class 4-7 Truck			$0.9 \times 29.2 = 26.3$	0.1
Class 8 Truck	ZE		$0.247 \times 2 \times 365 = 180.3$	$0.002 \times 2 \times 365 = 1.3$
Class 4-7 Truck			$0.040 \times 2 \times 365 = 29.2$	$0.0002 \times 2 \times 365 = 0.1$
Class 2b-3	ZE		$0.027 \times 2 \times 365 = 19.7$	$0.0003 \times 2 \times 365 = 0.2$

WAIRE Points from ZE/NZE Truck Visit Emission Reductions: For the annualized regional NO_x emission reductions, 365 truck visits from Class 8 ZE and NZE trucks will earn 8 and 7 WAIRE Points. Similarly, Class 4-7 ZE and NZE will earn 2 WAIRE Points, and Class 2b-3 ZE will earn 1 WAIRE Point. The associated local DPM emission reductions will earn 6 WAIRE Points for both ZE and NZE Class 8 truck visits, 1 WAIRE Point for both ZE and NZE Class 4-7 truck visits, and 1 WAIRE Point for ZE Class 2b-3.

Costs from ZE/NZE Truck Visits: The incremental cost of a truck visit used in the WAIRE Menu is based on the total cost of ownership of a ZE or NZE truck compared to an equivalent conventional diesel truck, taking into account the estimated total number of trips that truck will take in its useful life. The total cost of ownership (TCO), assuming a 12-year life, for Class 3, 4, 6 and 8 conventional diesel, battery electric, and hydrogen fuel cell trucks were obtained from CARB's Advanced Clean Truck Total Cost of Ownership Discussion Documents. The key components of the TCO include:

- (1) Capital cost: vehicle capital cost, taxes associated with the vehicle purchase, financing costs for the vehicle
- (2) Fuel cost¹⁶: The cost of the fuel
- (3) Other cost: maintenance costs, midlife costs¹⁷, vehicle registration, and residual values at the end of the truck's operating life

Tables 7, 8, 9, and 10 below present the base TCO data used in this analysis for Class 3, 4, 6, and 8 diesel, battery-electric, and hydrogen fuel cell trucks. The total cost of ownership for Class 6

¹⁶ Low Carbon Fuel Standard credits were not included in the analysis presented here.

¹⁷ Midlife costs are the cost of rebuilding or replacing major propulsion components due to wear or deterioration. For diesel vehicles, this would be a midlife engine rebuild, for battery-electric vehicles this would be a battery replacement, and for a hydrogen fuel-cell vehicle this would be a fuel cell stack refurbishment.

CNG shown in Table 8 was estimated using a similar approach as Table 9, with modifications made to the incremental purchase cost, fuel cost¹⁸ and fuel economy^{19,20}. Maintenance cost of natural gas vehicles were assumed to be about one to two cents per mile greater than for diesel vehicles due to more frequent oil changes and inspections, and higher replacement costs for spark plugs and injectors²¹. A summary of the analyses in Tables 7, 8, 9, and 10 is shown in Table 11.

3. <https://cleanairactionplan.org/documents/final-dravage-truck-feasibility-assessment.pdf/>

Using the reported annual mileages shown in Table 11, costs were calculated on a dollar per mile basis, as shown in Equation 2.

²⁵ <https://nacfe.org/future-technology/medium-duty-electric-trucks-cost-of-ownership/>

Equation [2]:

$$TCO \left(\frac{\$}{mi} \right) = \frac{TCO (\$)}{12 (yr) * Annual Mileage \left(\frac{mi}{yr} \right)}$$

Table 12. Total Cost of Ownership calculated as \$/mi

Truck Class	Diesel	Low-NOx CNG	Battery-Electric	Hydrogen Fuel Cell
Class 3	0.54		0.67	2.28
Class 4	0.69		0.99	
Class 6	0.84	1.18	0.86	2.07
Class 8 (Ports Study)	0.73	0.76	1.30	
Class 8 (CARB TCO)	0.88		1.35	2.29

SCAG's Heavy-Duty Truck Regional Travel Demand model provides an estimate of heavy-duty truck activities within South Coast Air Basin. TCO values on a dollar per trip basis are estimated using SCAG's VMT and trip rates in Table 13.

Table 13. Truck activity data from SCAG's Heavy-Duty Truck Regional Travel Demand Model

Truck Class	VMT (mi/day)	Trips (trip/day)	Mile/trip
Class 2b-3	7,456,000	488,000	15.3
Class 4-7	7,744,000	544,000	14.2
Class 8	12,060,000	302,000	39.9

Equation 3 below illustrates the method used to determine TCOs on a dollar per trip basis using the TCOs (\$/mi) in Table 12 and SCAG's mileage rates in Table 13, with results shown in Table 13 equation [3]:

$$TCO \left(\frac{\$}{trip} \right) = TCO \left(\frac{\$}{mi} \right) \times \frac{mi}{trip}$$

Table 14. Total Cost of Ownership (\$/trip)

Truck Class	Diesel	Low-NOx CNG	Battery-Electric	Hydrogen Fuel Cell
Class 3	8.31		10.28	34.96
Class 4	9.80		13.99	
Class 6	12.00	16.77	12.24	29.42
Class 8 (Ports Study)	29.08	30.39	51.69	
Class 8 (CARB TCO)	35.19		53.82	91.47

Although the TCO analyses above assume a 12-year useful life for a truck, motor carriers may require shorter periods over which they absorb the incrementally higher costs of ZE or NZE trucks compared to diesel. The analysis here therefore assumes that this incremental cost is absorbed over a 3-year period, instead of the full 12-year useful life. The incremental cost is therefore multiplied by four ($12 \div 3 = 4$) to determine the default cost for truck visits.

Table 15. Annualized Incremental Costs

Truck Class		Annualized Unitary Metric	Annualized Incremental Cost (\$/metric)
Class 8	NZE	365 truck visits**	$(\$30.39 - \$29.08) \times 4 \times 2 \times 365 = \$3,825$
Class 4-7*			$(\$16.77 - \$12.00) \times 4 \times 2 \times 365 = \$13,928$
Class 8	ZE		$(\$53.82 - \$35.19) \times 4 \times 2 \times 365 = \$54,400$
Class 4-7*			$(\$12.24 - \$12.00) \times 4 \times 2 \times 365 = \701
Class 2b-3			$(\$10.28 - \$8.31) \times 4 \times 2 \times 365 = \$5,752$

*In this analysis, Class 6 TCOs were used for the Class 4-7 category in the WAIRE Menu

** One visit equals two one-way trips

WAIRE Points for ZE/NZE Truck Visit Costs: Based on the costs presented in Table 15, the number of WAIRE Points earned for ZE Class 8, Class 4-7, and Class 2b-3 truck visits are 3, 1, and 1, respectively. One WAIRE Point is earned for both NZE Class 8 and Class 4-7 truck visits.

Total WAIRE Points for ZE/NZE Truck Visits: The total WAIRE Points for truck visits includes Points from the cost, regional emission reductions, and local emission reductions. In addition, because most of the emissions associated with warehouses comes from trucks visits, a multiplier of three is applied to the summed Points to encourage operators to choose this option, and to promote a more rapid return on investment for the purchase of ZE/NZE trucks. For example, for 365 class 8 ZE truck visits, a warehouse would earn: 8 Points for regional, 6 Points for Local, and 3 Points for cost, with a sub-total of 17 Points. The final total for this Menu item would be 51 Points (17×3).

SECTION 3) Electric Charger Usage and Installation

Description: ZE battery electric trucks require specialized charging infrastructure. Installing this infrastructure can require facility electrical upgrades, dedication of space for electrical equipment and vehicle parking, permitting with local authorities, and plans to optimize charger usage. The charging stations themselves range in size and are typically rated based on the amount of kW that can be dispensed. Higher powered charging stations (≥ 350 kW) are just now entering the market, and may require significant construction. On the usage side, the cost of the electricity can vary depending on the time of day when trucks are charged, the kW charging level, and the level of demand charges. Utilities are introducing new rate structures for the use of these stations to address this new market need. Trucks that would use charging infrastructure at a warehouse are likely to travel to destinations unrelated to the warehouse itself, and providing this infrastructure can facilitate greater usage of ZE trucks.

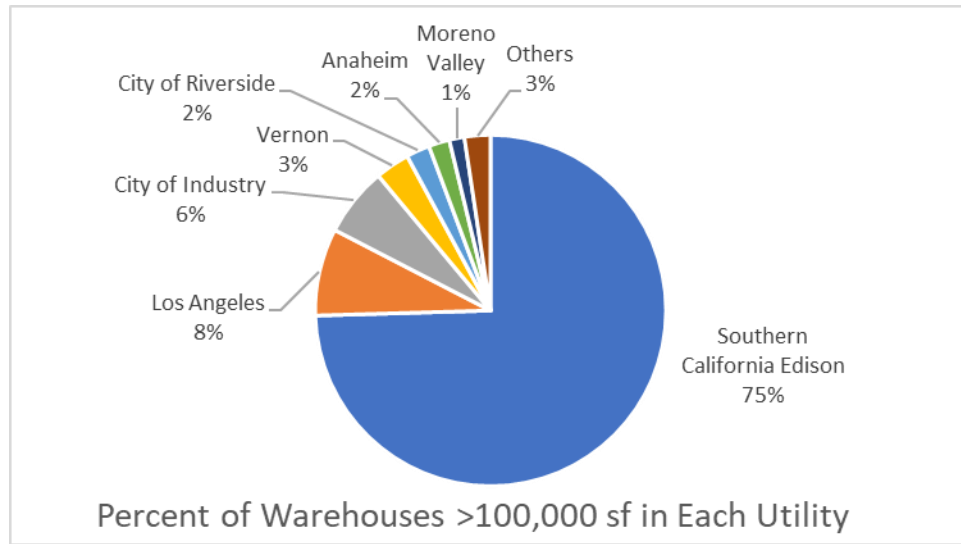

Commercial Availability: Several different manufacturers sell EVSE at a variety of power levels (e.g., Level 2, higher rate chargers, etc.), including with optional power management software that govern how trucks are charged. At the current early stage of commercialization and demonstration of electric trucks, the higher power chargers used for heavy duty vehicle charging have not yet followed a common standard, and proprietary charging systems are commonly tailored to each vehicle. This is expected to change in the near future with the development of a common High Power Charging for Commercial Vehicles standard by the CharIN²⁶ organization. In addition, local utilities and land use agencies are developing programs specifically focused on charging infrastructure upgrades. Notable examples include the Charge Ready Transport program from Southern California Edison (SCE)²⁷, the Commercial EV Charging Station Rebate Program from the Los Angeles Department of Water and Power (LADWP)²⁸, and permit streamlining efforts from many local permitting agencies²⁹. SCE and LADWP collectively provide power to $>80\%$ of warehouses that may be included in PR 2305 (see chart).

²⁶ <http://www.charinev.org/hpccv> - CharIN members include most major vehicle manufacturers as well as many major energy and charging infrastructure companies.

²⁹ <http://www.business.ca.gov/ZEVReadiness>

SECTION 3a) Charger Usage

Emissions: While charging infrastructure on its own does not reduce emissions, this equipment does facilitate emissions reductions by providing additional locations for electric vehicles to obtain power and making it possible for their increased use. However, similar to the calculations for truck acquisitions, regional emission WAIRE Points are earned at a \$100,000 per ton of NO_x cost effectiveness level. Both regional and local emission reductions Points are earned when charging stations are used. The amount of regional NO_x emissions reductions is tied to the total amount of dispensed electricity, using default electric vehicle efficiencies and emission rates. The amount of local DPM emissions reductions is set equal to six miles of travel for every charging event³⁰. The Annualized Unitary Metric (AUM) is set at 165,000 kWh, equal to about 450 kWh per day, or enough for five separate two hour-long charging events per day on a 50 kW charger, or to recharge one truck with a 500 kWh battery.

The tables and equations below illustrate the methods used to determine Point values based on regional and local emissions reductions.

Table 16. Electric Vehicle Efficiencies³¹, Emission Rates³², and Emissions Reductions

Truck Category	Efficiency	Emission Rate		Emissions Reductions	
	mile/kWh	NO _x g/mile	DPM g/mile	lb NO _x /kWh	lb DPM/kWh
Class 4-5	1.26	1.08	0.007	0.003	0.00002
Class 6-7	0.8	1.08	0.007	0.002	0.00001
Class 8	0.62	2.37	0.02	0.003	0.00003

³¹ CARB Advanced Clean Truck – Draft Standardized Regulatory Impact Assessment (SRIA), 8/8/2019
<https://ww3.arb.ca.gov/regact/2019/act2019/appc.pdf>

³² <https://www.arb.ca.gov/emfac/2017/>, emission rates are from calendar year 2023

Equation [4]: NOx reductions = (mile/kWh) × (g/mile) × 165,000 kWh/yr ÷ 453.59 (g/lb)

Equation 1 (Class 4-5): $1.26 \times 1.08 \times 165,000 \div 453.59 = 495 \text{ lb NO}_x$

Equation 1 (Class 6-7): $0.8 \times 1.08 \times 165,000 \div 453.59 = 314 \text{ lb NO}_x$

Equation 1 (Class 8): $0.62 \times 2.37 \times 165,000 \div 453.59 = 535 \text{ lb NO}_x$

Equation [5]: DPM reductions = (mile/kWh) × (g/mile) × 165,000 kWh/yr ÷ 453.59 (g/lb)

Equation 2 (Class 4-5): $1.26 \times 0.007 \times 165,000 \div 453.59 = 3.2 \text{ lb DPM}$

Equation 2 (Class 6-7): $0.8 \times 0.007 \times 165,000 \div 453.59 = 2.0 \text{ lb DPM}$

Equation 2 (Class 8): $0.62 \times 0.02 \times 165,000 \div 453.59 = 4.5 \text{ lb DPM}$

WAIRE Points from Charging Station Usage Emission Reductions: Emission reductions vary for each class of truck. For the WAIRE Menu, the regional and local emission reductions from class 8 trucks are used. Regional emission reductions therefore result in 22 WAIRE Points, while local emission reductions result in 18 WAIRE Points.

Costs of Using Charging Stations: Over the past year staff worked closely with multiple utilities to understand their new commercial EV charging rate structures and developed estimates of the average cost of electricity per kWh. As noted above, about three quarters of all warehouses potentially subject to the rule are located within SCE's jurisdiction. For this analysis, multiple scenarios were evaluated for a five concurrent two hour long charging events per day on a 50 kW chargers. Table 17 reflects the expected charging rate and the average electricity rate for two most appropriate SCE rate schedule for heavy-duty EV charging. The average cost assumes an equal amount of charging in each time window.

Table 17. Annual Average Cost of Electricity* – Two Key SCE Rate Schedules for Charging Stations South Coast AQMD Staff Analysis

Charging Window	SCE TOU-EV-9	SCE TOU-8-RTP
	\$/kWh *	\$/kWh **
On-Peak	0.34	0.28
Mid-peak	0.16	0.25
Off-peak	0.14	0.23

* Demand charges and voltage discount are zero for TOU-EV-9

**Demand charges contributes to 40% of total annual electricity cost – Voltage discount included

***These costs do not account for any LCFS revenue that a facility may receive. The LCFS value may vary depending on market conditions but can be more than \$0.10/kWh.³³

In LADWP jurisdiction the electricity rate can range between \$0.11-0.3 \$/kWh for charging heavy-duty vehicles depending on load factor, daily charging hours, and charging capacity. The provided range by LADWP staff is consistent with the rates provided in Table 5.

Using the \$0.21 \$/kWh rate above, and AUM of 165,000 kWh per year for a charging station, the total annual cost of electricity for the warehouse is \$34,650, equal to two WAIRE Points.

³³ <https://ww3.arb.ca.gov/regact/2019/act2019/appc.pdf>

SECTION 3b) Charger Installation

Costs to Install Charging Stations: Charging infrastructure costs can vary greatly from site to site. The analysis presented here was informed by staff discussions with charger providers, utilities, other industry stakeholders, data from current South Coast AQMD funded projects, and multiple studies (referenced below). Table 18 presents a summary of the range of costs for purchasing and installing different EVSEs.

Electrification projects require site-specific planning and sometimes can take more than one year to implement. Because of this potentially extended period, the charging infrastructure installation WAIRE Menu item includes project milestones to allow warehouses to earn Points for partial completion of charger installation during a compliance year. Three milestones that are common to all charging station projects include purchasing the Electric Vehicle Supply Equipment (EVSE), construction mobilization, and final permit sign off & charger energization. In order to account for splitting charger installations into two separate milestones, it is assumed that the construction mobilization milestone will require up to \$10,000 of the total installation cost, and the remaining cost is incurred during construction and prior to final permit sign-off.

Table 18. Charging Infrastructure Installation Cost Ranges, and Key Incentives/Rebates Programs

Charging Installation Activity	Charger Ranges	Cost Range ^{A-D}
		\$ per charger
EVSE Purchase	150-350 kW	60,000 – 140,000
	51-149 kW	30,000 – 60,000
	19.2-50 kW	10,000 – 30,000
	Up to 19.2 kW	3,000 – 5,000
Charger Installation ¹	19.2-350 kW	10,000 – 80,000
	Level 2	5,000 – 10,000

Notes:

1. Installation cost for one charger includes electrical service extension, permitting, labor costs, and trenching to lay cables

WAIRE Points from Charging Station Installations: Table 19 below summarizes the Points that a warehouse would earn for purchasing an EVSE and installing it. Similar to truck acquisitions, regional emission Points are assigned at a \$100,000 per ton of NOx cost effectiveness.

Table 19. Summary of WAIRE Points Earned for Installing Charging Infrastructure

Charger Installation Activity	Cost Points	Regional Emissions Points	Total WAIRE Points
1 EVSE Purchased	6	112	118
	3	48	51
	2	24	26
	1	4	5
1 construction project/ Construction Mobilization	1	8	9
	1	48	5
1 construction project/ Final Permit Sign Off & Charger Energization	3	56	59
	1	48	59

SECTION 4) Hydrogen Fueling Station Installation and Usage

Description: Hydrogen refueling stations (HRS) are used to supply fuel to vehicles with hydrogen fuel cell drivetrains. An HRS is composed of storage and dispensing units and can sometimes include a production unit if the hydrogen is produced on site. If the hydrogen is produced on site or delivered to the station at an intermediary pressure or in liquid state, intermediary storage is also needed along with a compression system.

Commercial Availability: While construction of hydrogen fueling stations has been increasing, with 43 now operating in the state³⁴, they are primarily focused on the light duty vehicle market, or in some cases for transit buses. However, some Class 8 truck manufacturers are actively pursuing the development and commercialization of hydrogen fuel cell trucks over the next few years, including Toyota, Kenworth, Hyundai, and Nikola. Fueling infrastructure will be a critical component to facilitate these new ZE trucks.

Hydrogen Station Installation Costs: Hydrogen prices are influenced by the cost of production, distribution, and sales, among other factors. In addition to AB 8 and CARB's Scoping Plan, the recently-updated Low Carbon Fuel Standard, Executive Orders B-16-2012 and B-48-18 provide strong policy drivers for accelerating commercialization of fuel cell vehicles and their associated hydrogen fuel station network.

Table 20 below presents a summary of costs associated with developing a hydrogen fueling station from literature review and discussion with stakeholders. In this context, total capital cost includes site design and engineering, permitting, equipment, project management, and labor costs.

³⁴ www.veloz.org

Table 20. Hydrogen Fueling Station Costs

	Capacity (kg/day)	Cost (\$)	\$/Capacity (\$/kg/day)	Source
			5000-10,000	CARB Total Cost of ownership Discussion Documents ³⁵
Gaseous H2 LDV fueling system at 700 bar	250	1,725,000	6,900	Moyer Granted Project for Sunline Transit- EPC Design
Gaseous H2 Station- 700 bar Cascade dispensing	700	3,065,724	4,380	Argonne National Lab Heavy Duty Refueling Model, (2016 Dollar) ³⁶
Gaseous H2 Station- 700 bar Booster compressor	700	3,140,211	4,486	
Gaseous H2 Station- 350 bar Cascade dispensing	700	2,029,488	2,899	
Liquid H2 Station- 700 bar via vaporization/compression	700	2,421,134	3,459	Argonne National Lab Heavy Duty Refueling Station Model, (2016 Dollars) ²
Liquid H2 Station- 350 bar via vaporization/compression	700	1,430,748	2,044	
Liquid H2 Station- 700 bar via LH2 pump/vaporization	700	1,541,243	2,202	
Liquid H2 Station- 350 bar via LH2 pump/vaporization	700	1,145,634	1,637	
Onsite H2 Production	7257.5	16,500,000	2,274	Industry stakeholder input
Onsite H2 Production	600	5,000,000	8,333	Industry stakeholder input

WAIRE Points for Hydrogen Station Installation: For the WAIRE Menu an onsite hydrogen fueling station with a capacity of 700kg/day with delivered hydrogen was assumed to cost \$2 million. This would yield 80 WAIRE Points. At a cost effectiveness of \$100,000 per ton of NOx, an additional 1600 Points are earned for regional emissions.

Emission Reductions from Hydrogen Usage: Annualized regional NOx emission reductions and local DPM emission reductions were set to be same as the reductions achieved by usage of onsite electric charger stations at 535 lb NOx/yr and 4.5 lb DPM/yr. Details of the calculation can be found in Section 3 of this report.

Hydrogen Fuel Costs: To determine the annualized unitary metric (AUM) for dispensed hydrogen, a back calculation was conducted based on the amount of regional NOx emissions:

Equation [6]:

$$\begin{aligned}
 \text{Total kg of Dispensed } H_2 &= 535 \left(\frac{\text{lb}}{\text{yr}} \right) \times 453.59 \left(\frac{\text{gr}}{\text{lb}} \right) \times \frac{1}{2.372 \left(\frac{\text{g}}{\text{mi}} \right) \times 16.63 \left(\frac{\text{mi}}{\text{kg } H_2} \right)} \\
 &= 6,152 \frac{\text{kg}}{\text{yr}}
 \end{aligned}$$

Where, 2.372 (g/mi) is the VMT weighted average of NOx running exhaust emission rate of Class 8 trucks considered in this analysis including T7 CAIRP, T7 NNOOS, T7 NOOS, T7 POLA and

³⁵ <https://ww3.arb.ca.gov/regact/2019/act2019/apph.pdf>

³⁶ <https://hdsam.es.anl.gov/index.php?content=hdsam>

T7 Tractor. 16.63 (mi/kg) is the reported fuel economy for a class 8 fuel cell truck³⁷. Given the total kg of dispensed hydrogen calculated above and a retail price of \$10/kg, the annual cost will be \$61,520.

WAIRE Points for Dispensed Hydrogen: Based on the emission reductions stated above, 22 and 18 Points are earned respectively for regional NOx and local DPM. Cost Points would contribute another 3 Points, for a total of 43 Points for 6,152 kg of H₂ dispensed.

³⁷ <https://ww3.arb.ca.gov/regact/2019/act2019/appc.pdf>

SECTION 5) Zero Emissions Yard Truck Acquisition and Usage

Description: Yard trucks (also called yard tractors, terminal trucks, hostlers, yard jockeys, or yard goats) move trailers and containers around warehouse facilities. Most yard trucks at warehouse facilities are diesel fueled and emit NO_x, DPM, and other pollutants. Duty cycles for yard trucks vary depending on use, with heavier use at railyards and port facilities and lighter use typically at warehouses and manufacturing plants, as defined by hours of use and diesel consumption rates. CARB has limited population data for about 1,100 yard tractors operating statewide through its DOORS reporting program for off-road vehicles, but it is unclear how many of these operate at warehouses in South Coast AQMD. In addition, many yard tractors can be on-road vehicles, which are not required to be reported through the DOORS system. For example, about two thirds of the roughly 1,600 yard tractors at the ports of Los Angeles and Long Beach are on-road vehicles.

Commercial Availability: Many battery-electric yard tractor demonstration projects have taken place in the past several years, including in the South Coast AQMD. Following these efforts, multiple manufacturers have begun offering battery-electric ZE yard trucks for sale commercially including OrangeEV, Kalmar Ottawa, and BYD.

Operation: Operation of yard trucks can be tracked by hours of use, with hourly usage varying from <1,000 hours/year up to 6,000 hours/year. The diesel reductions were calculated by using the horse power, hours of use, the load factor, and the pollutant emission factor.

SECTION 5a) ZE Yard Truck Acquisition

WAIRE Points from ZE Yard Truck Acquisition: ZE yard trucks currently cost about \$310,000 while their diesel equivalent costs about \$100,000³⁸. This incremental cost of \$210,000 would earn nine WAIRE Points per ZE yard truck purchased. Similar to the methods used for on-road truck acquisitions, at \$100,000 per ton cost effectiveness, a ZE yard truck acquisition would earn 168 Points for regional emission reductions.

SECTION 5b) ZE Yard Truck Usage

Emissions: From the DOORS data, the most common yard trucks operate a 175 hp, Tier 3 engine. Table 21 below shows the emission factors from the Carl Moyer Guidelines³⁹ for this type of yard truck. Assuming that this type of yard truck operates 1,000 hours per year, and has operated for ten years, the emission reductions from switching to a ZE yard truck are shown in Equation 7 below.

Table 21. Emission Factors for a Tier 3 Yard Truck

Pollutant	Emission Factor (EF) g/hp-hr	Deterioration Rate (DR) g/hp-hr-hr	Load Factor (LF)
NO _x	2.32	0.00003	0.39
DPM	0.088	0.0000044	

³⁸ <https://cleanairactionplan.org/documents/final-cargo-handling-equipment-che-feasibility-assessment.pdf/>

³⁹ <https://ww3.arb.ca.gov/msprog/moyer/guidelines/current.htm>

Equation [7]

$$Emissions = (hp) \times (LF) \times [((total\ hrs\ of\ use) \times (DR)) + (EF)] \times (hrs\ of\ use) \div 453.59 \left(\frac{g}{lb}\right)$$

Equation 7 NOx: $175 \times 0.39 \times [((10 \times 1,000) \times 0.00003) + 2.32] \times 1,000 \div 453.59 = 394\ lbs$

Equation 7 DPM: $175 \times 0.39 \times [((10 \times 1,000) \times 0.0000044) + 0.088] \times 1,000 \div 453.59 = 19.9\ lbs$

Costs: Although purchase prices for ZE yard trucks are higher than their diesel equivalent, once purchased the operational costs are expected to be lower. An analysis by the ports of Long Beach and Los Angeles evaluated the Total Cost of Ownership (TCO) for battery-electric ZE yard trucks in comparison to diesel⁴⁰. This analysis found a TCO for ZE yard trucks to be about \$450,000 (not including infrastructure costs) while equivalent diesel had a TCO of about \$375,000. Assuming a ~12,000 useful life of a yard truck, the annual incremental cost of operating a ZE yard truck for 1,000 hours is shown in Equation 8.

Equation [8]: $(\$450,000 - \$375,000) \times 1,000\ hrs \div 12,000\ hrs = \$6,250$

WAIRE Points from Using ZE Yard Trucks: Following the results from Equation 6, using a ZE yard truck would earn 16 Points for regional emission reductions and 80 Points for local emission reductions. One cost Point would be earned following the results of Equation 7. Similar to the approach for on-road truck visits, a multiplier of three is applied to the sum of cost, regional, and local Points. Therefore the total Points for 1,000 hours of ZE yard truck usage is: $(16 + 80 + 1) \times 3 = 291\ Points$.

⁴⁰<https://cleanairactionplan.org/documents/final-cargo-handling-equipment-che-feasibility-assessment.pdf/>

SECTION 6) Transport Refrigeration Unit Plug (TRU) Acquisition and Usage**Description:**

TRUs are truck or trailer installed refrigeration systems used at cold storage and distribution center warehouses to transport and temporarily store perishable goods and products. Most of the 7,400 truck and 166,000 trailer TRUs that operate in California are powered by diesel-fueled internal combustion engines (ICEs)⁴¹ which emit about 5.5 tons of NOx and 0.2 tons of diesel particulate matter (DPM) daily⁴². Newer TRU technology allow zero emission operations by plugging hybrid and battery electric models into TRU charging infrastructure at warehouses and other destinations. CARB is currently developing a new truck TRU regulation as well as a separate trailer TRU regulation which, among other requirements, could mandate:

- installation of charging infrastructure, and
- truck TRU fleets to annually turn over a portion of their fleet to full ZE technology.

WAIRE Points may only be earned for actions beyond any adopted rules and regulations from U.S. EPA, CARB, or South Coast AQMD. If CARB's previously proposed truck TRU regulation is adopted in the coming years,⁴³ WAIRE Points could only be earned for the installation of TRU plug infrastructure and TRU plug usage beyond CARB requirements, or potentially through a Custom WAIRE Plan thereafter that would demonstrate how actions taken go beyond CARB rules.

Commercial Availability:

Current zero emission operation capable TRUs are: plug-in and hybrid (eTRU); battery-electric; cryogenic; and hydrogen fuel cell. All except the hydrogen fuel cell technologies are commercially available, and are offered for sale commercially by such manufacturers as Advanced Energy Machines, Air Liquide, Boreas, Carrier, Electric Reefer Solutions, and Thermo King. Additionally, there are manufacturers and firms that focus solely on the electric plug-in infrastructure such as CleanFutures and Shorepower Technologies⁴⁴.

Operation: Electric zero emission trailer TRUs and truck TRUs operate using an onboard battery, or via power from the electrical grid if they are plugged into a charger. Hybrid trailer TRUs may operate via a diesel engine when in transit, and in zero emissions mode while plugged into a charger. Charger operators may claim LCFS credits for the electricity dispensed for TRUs, potentially at a level that fully offsets the cost of electricity.⁴⁵ Charger operators are therefore expected to track the total amount of kWh of charger usage for TRUs when they obtain LCFS credits. Plug usage can be tracked by hours of use, 1,460 hours of annual usage or approximately 4 hours per day of TRU plug usage was determined from the 2023 baseline of the TRU ATCM. The 4 hour average use is attributed to truck dwell time at warehouses or delivery destinations.

⁴¹ <https://ww2.arb.ca.gov/sites/default/files/classic/cc/cold-storage/documents/slidesworkshop82019.pdf>

⁴² <https://ww2.arb.ca.gov/resources/documents/2020-mobile-source-strategy>

⁴³ CARB has proposed bifurcating the TRU regulation, with rulemaking in 2021 focusing on TRU trucks, and new emission standards, and later rulemaking focusing on ZE trailers.

⁴⁴ https://ww2.arb.ca.gov/sites/default/files/classic/cc/cold-storage/documents/clean_tru_technology_webinar_slides_handout.pdf

⁴⁵ <https://ww2.arb.ca.gov/sites/default/files/2020-08/Preliminary%20TRU%20Cost%20Doc%20082020.pdf>

Diesel emission reductions were be-calculated by using the horse power, annual hours of use, the load factor, and the pollutant emission factor⁴⁶.

SECTION 6a) TRU Plug Acquisition and Installation

WAIRE Points from TRU Plug Acquisition and Installation: A TRU plug installation costs approximately \$13,600 which includes a Level 2 charger, equipment, design, construction, and installation costs⁴⁷. Using a similar methodology as is described for installing chargers for vehicles in this document, acquisition and installation of a single TRU plug could earn a total of 15 WAIRE Points, with 1 Point for each TRU plug purchased, beginning construction, and receiving final permit sign-off/charger energization. Similar to truck acquisitions, regional emission Points are assigned at a \$100,000 per ton of NOx cost effectiveness, resulting in an additional 12 Points.

SECTION 6b) TRU Plug Usage

Emissions: The 2023 calendar year weighted average emission factors for the South Coast AQMD was used in Equation 1, to calculate the default annual NOx and DPM emission reductions from trailer and truck eTRUs plugging in. The AUM is set at 10,658 kWh, equal to an eTRU plugged in 4 hours per day for 365 days and drawing 7.3 kW of power.⁴⁸

Equation [1]

$$Emissions = (annual\ hours\ of\ use) \times (Pollutant\ Emission\ factor) \div 453.59(\frac{g}{lb})$$

Equation 1 NOx: $1,460 \times 12.60 \div 453.59 = 40.6\ lbs$

Equation 1 DPM: $1,460 \times 0.53 \div 453.59 = 1.7\ lbs$

Costs: Using the AUM of 10,658 kWh, and the \$0.18/kWh rate for electricity calculated for charging station usage in this document (and not considering any potential offset from LCFS credits), the average annual cost to operate a TRU plug is shown in Equation 2.

Equation [2]: $(\$0.21 /kWh) \times 10,658\ kWh = \$2,238.18$

WAIRE Points from Using ZE TRUs: Following the results from Equation 1, using a TRU plug would earn 2 Points for regional emission reductions and 7 Points for local emission reductions. One cost Point would be earned following the results of Equation 2. Similar to the approach for other WAIRE action usage or visits, for replacing diesel-fueled equipment/vehicles, a multiplier of three is applied to the sum of cost, regional, and local Points. Therefore, the total Points for 10,658 kWh from TRU charging is: $(2 + 7 + 1) = 10\ Points$.

SECTION 7) Solar Panel System Acquisition and Usage

Description:

Solar panel systems are electric energy generation systems that are composed of the solar panels which collect and convert solar radiation to direct current (DC) power, the racking system which mount the panels and equipment to a rooftop or carport, and the inverter which convert the DC power to alternating current (AC) power. The installations of solar panel systems on warehouse rooftops and carports is an increasing trend which provide renewable power for both warehouse usage and for sale back to the grid. Many commercial buildings with significant rooftop or parking area spaces are incorporating solar panel systems into their operations for financial savings. California is leading the nation with over 600,000 commercial buildings being equipped with solar panel systems, with a solar market penetration of about 2.5%⁴⁹. In the last several years, there have been many technology advancements in solar panels that have made them lighter, more efficient, and more flexible which allows for them to be installed in more applications that have led to a decrease in overall installation costs.

Commercial Availability:

Solar panel systems have wide commercially available throughout California with hundreds of manufacturers and installers who offer a range options for system sizes and component configurations.

Operation:

To analyze the installation and use of solar panel systems, the median solar panel system size was set at 100 kW based on a literature review of Lawrence Berkeley National Laboratory's (LBNL) annual Tracking the Sun Report⁵⁰. The 100 kW solar system parameter was inputted into the National Renewable Energy Laboratory's (NREL) PVWatts⁵¹ calculator specifying a region in the South Coast AQMD jurisdiction which resulted in an annual estimated electrical generation of 165,000 kWh. The 100 kW solar panel system and the 165,000 kWh estimated electrical generation serve as the annual unitary metric (AUM) for solar panel system installation and usage, respectively.

SECTION 7a) Solar Panel System Acquisition and Installation

WAIRE Points from Solar Panel System Acquisition and Installation: Based on LBNL's Tracking the Sun study⁵² the price per kW for a rooftop solar panel system was \$2.60 per kW and a carport solar panel system was estimated to cost \$3.74⁵³. Carport solar panel systems have higher costs due to structural costs to elevate the solar panels to provide the carport or truck shade structure. WAIRE Points are calculated based on the total cost of the installation of the 100 kW solar panel system. Applying the \$2.60 per Watt costs for rooftop installation for the 100 kW solar panel system results in a total acquisition and installation cost of \$260,000. For carport solar panel system installation, the \$3.74 per Watt for carport solar panel system installation for the 100 kW

⁵⁰ <https://emp.lbl.gov/tracking-the-sun>

⁵¹ <https://pvwatts.nrel.gov/>

⁵² https://eta-publications.lbl.gov/sites/default/files/tracking_the_sun_2018_briefing.pdf

⁵³ Based on a confidential data obtained from industry source that requested non-attribution.

solar panel system which results in a total acquisition and installation cost of \$374,000. Using a similar methodology as is described for installing chargers for vehicles in this document, acquisition and installation of a rooftop solar panel system could earn 15 WAIRE Points for a 100 kW rooftop solar panel system, and 19 WAIRE Points for a 100 kW carport solar panel systems.

SECTION 7b) Solar Panel System Usage

Emissions: Using emissions data from local power plants which potentially provide power to warehouses within the South Coast AQMD jurisdiction, a peak rate NOx emission factor of 0.087 lbs/MWh was calculated⁵⁴. The combustion of natural gas at the local power plants do not generate DPM so only NOx is considered in this analysis. The calculated NOx emission factor is used with the AUM of the estimated generation of 165,000 kWh for a 100 kW solar panel system installed on a structure in the South Coast AQMD jurisdiction. Equation 1 shows the calculated the default annual NOx emission reductions from solar panel system usage.

Equation [1]

Emissions = (Power Plant NOx Emission Factor lbs/MWh) × (Total Estimated KWh generated)/1,000

Equation 1 NOx: $0.087 \times 165,000 \div 1,000 = 14.3$ lbs

Costs: No cost is considered for the operation of the solar panel system. After the initial installation costs, the minimal maintenance costs are negligible considering the cost saving from solar electric power generation in comparison to purchasing grid power.

WAIRE Points from Solar Panel System Usage: Following the results from Equation 1, using a solar panel system would earn 1 Point for regional emission reductions. There are no cost or local benefit WAIRE Points contributions.

⁵⁴ Power plant emission calculations were derived from CEMS, eGRID, and EIA data to calculate for the South Coast AQMD jurisdiction

SECTION 8) Installation of Air Filter Systems or Air Filters in Community Facilities**Description:**

The installation of air filter systems or the installation/replacement of air filters is provided on the WAIRE Menu to provide a community benefit in reducing exposure for the communities near warehouses. Air filters have been shown to successfully remove black carbon (BC) and particulate matter (PM) which include ultrafine particles (UFP) (particles with a diameter < 0.1µm), diesel particulate matter (DPM), PM_{2.5} (particles with a diameter < 2.5µm), and PM₁₀ (particles with a diameter < 10µm) of outdoor particles formed from the combustion of fossil fuels that permeate into the indoors.⁵⁵ Exposure to PM contaminants may lead to potential health hazards such as asthma, lung inflammation allergies, and other respiratory or cardiovascular problems⁵⁶. DPM is an air toxin and classified human carcinogen which account for more than 80% of the total cancer risk from air toxics in the south coast air basin (SCAB)⁵⁷. Air filters can be integrated to a heating, ventilation, and air conditioning (HVAC) system or standalone, where the use of high-performance panel filters (HP-PF) resulted in up to 90% removal of UFP, DPM, PM_{2.5}, and PM₁₀, where HP-PF used were minimum efficiency reporting value 16 (MERV 16) filters⁵⁸. The American Society of Heating, Refrigerating, and Air-Conditioning Engineers defines MERV 16 as filters used for HVAC units that remove at least 95% of particles 0.3 microns or larger.

Commercial Availability:

Air filter systems and air filters have wide commercially available throughout California with numerous manufacturers and installers who offer a range options for system sizes and air filter types.

Operation:

Air filters can be installed on existing HVAC units or as standalone units at residences, schools, daycares, hospitals, community centers, and other community locations. The integration of air filters with HVAC units does lead to a decrease in the HVAC pressure as caused by the increased resistance of the filters that captures particles. In time the air filter media becomes saturated with particles leading to further HVAC pressure decreases and decreased particle capture efficiency. For standalone systems that uses its own fan the energy demand to operate at top speed is 100 watts/hr or about 5 kWh for 10 hours of operation for a 5 day week⁵⁹. General service maintenance on the air filters involves replacement, on a set interval period or depending on the activity at the location the filters are installed.

⁵⁹ Energy draw is based on a vendor estimate for a school installation (Email dated October 11, 2019 to Victor Juan)

WAIRE Points from Air Filter or Air Filter System Installation:

With the emission reductions from the installation of air filter systems or the replacement of air filters being much less than the emission reductions associated with truck purchase, the regional WAIRE Points are related the cost effort considering the same cost effectiveness. The annual metric for the number of air filter systems with MERV 16 air filters installed is 25 systems, and the annual metric for the replacement of air filters is 200 MERV 16 air filters. With the annual metrics and the estimated emission reduction, the installation of 25 air filter systems with MERV 16 air filters equates to 55 WAIRE Points, and the installation/replacement of 200 MERV 16 air filters equates to 51 WAIRE Points.

Costs: The costs for air filter systems with MERV 16 air filters were obtained from vendors and contractors that South Coast AQMD has worked with to install air filter systems and air filters at schools and other facilities as part of mitigation and settlement projects. The estimated costs analyzed for the installation of 25 air filter systems with MERV 16 air filters is \$65,000 and cost for the replacement/installation of 200 MERV 16 air filters is \$60,000. Using the \$0.21 \$/kWh electricity rate that is used in other WAIRE Menu actions and assuming 10 hours of use each day for 365 days, the estimated electricity costs for a standalone air filter system for 365 kWh would be \$76.65.

Appendix C: WAREHOUSE POPULATION METHODOLOGY

The analysis of the population of warehouses subject to PR 2305 was compiled between February 2020 – October 2020. Sources for this population of PR 2305 warehouses include the datasets of: CoStar; Dun & Bradstreet (DNB); Fleetseek; InfoUSA; and Leonard’s List, as well as a visual review with Google Maps. CoStar was the primary dataset used to compile the population of PR 2305 warehouses;¹ this CoStar dataset was cross-referenced against the other datasets listed above, which offered additional warehouse information.

The population of PR 2305 warehouses described in this methodology is a snapshot in time, and is expected to update over time to adjust to changes such as warehouse operators moving in and out of warehouse facilities, operational changes, new warehouses construction, etc. Reporting requirements from PR 2305 will provide more detailed information about warehouse properties, operations, and their characteristics upon the adoption of PR 2305. Although there may be some differences between the statistics determined here and actual warehouse operations at every site, the analysis presented below is believed to provide a representative portrayal of the operators subject to PR 2305 and PR 316. The reporting requirements within PR 2305 will ensure that information used to ensure compliance is up to date and more accurate than can be provided from solely relying on third party commercial data products. The list of warehouses potentially subject to PR 2305 and PR 316 are included in the table following this methodology write-up. This list should not be considered exhaustive, as there may be a small number of additional warehouses that are subject to the requirements of PR 2305 that were not identified in this rulemaking analysis.

Total Population (3,320 warehouses are anticipated to submit a Warehouse Operations Notification Report)

CoStar is a subscription online database for commercial real estate information. According to CoStar data, the total number of industrial facilities potentially covered by PR 2305 could be up to 52,000 facilities, though the actual number that would be classified as warehouses is unclear. CoStar allows the user to utilize a search function to find properties, either through their “Property” search database or their “Tenant” search database. The dataset was exported from CoStar using the “Property” search. CoStar’s search function utilizes filters to help find properties or tenants with specific characteristics. The CoStar filters used to define the characteristics of warehouse facilities applicable to PR 2305’s warehouse inventory are: “Property Type” (industrial and flex), “Building Status” (existing and under renovation), Rentable Building Area, or “RBA” (greater than or equal to 100,000 square feet), “Secondary Type” (distribution, light distribution, light manufacturing, manufacturing, refrigeration/cold storage, truck terminal, and warehouse), and “Market Name” (Inland Empire (California), Orange County (California), and Los Angeles). The submarkets of Mojave River Valley, San Bernardino Outlying, Antelope Valley Industrial, East Los Angeles County Outlying Industrial, and North East Los Angeles County Outlying Industrial were excluded from the property search as they fall outside of South Coast AQMD’s jurisdiction.

¹ All CoStar data contained herein speaks only as of the date referenced, may have materially changed since such date, and was provided “as is” with no guarantee or warranty of any kind. CoStar has no obligation to update or verify any of the CoStar data contained herein. None of the CoStar data contained herein should be construed as investment, tax, accounting or legal advice from CoStar.

Tenants

The CoStar Tenant dataset was exported from CoStar using the “Tenant” search. This dataset was exported to assist in identifying operators at the 3,320 warehouses applicable to PR 2305. Filters used from CoStar to define the characteristics are the same as those selected for the “Property” search, as described above, for consistency. To the extent possible, the Tenant and Property datasets were cross-referenced with each other via the property address. Due to discrepancies and missing information (data provided in CoStar is based on reporting from brokers and researchers), not all the data from these two datasets were able to be matched.

Warehouse Operator Names

The warehouse operators for the 3,320 warehouses were derived from several data sources as each dataset provides different information on tenants, owners, businesses, and companies that differ in definition:

- “Owner Name”, “Property ID”, “Property Address”, “Property Name”, “Company Name”, “City”, and “Zip” from CoStar.
- “Company” from InfoUSA. This dataset is cross-referenced using property addresses.
- “Business Name” from DNB. This dataset is cross-referenced using property addresses.
- “Company” from Leonard’s List. This dataset is cross-referenced using property addresses.

Datasets were refined using the criteria below:

1. If CoStar had data for a property tenant, this was considered to be the correct operator name.
2. If CoStar did not have data for a property, multiple matches between InfoUSA, DNB, and Leonard’s List would be considered the correct operator name.
3. Absent CoStar property tenant data, and no matching data as described in step 2., InfoUSA, DNB, and Leonard’s List were considered the correct operator name in that order of priority.
4. CoStar “Owner Name” was considered the correct operator name if the above steps did not result in an operator.
5. If steps 1-4 did not yield an operator name, or yielded an operator name that appeared to not be a name for a company that would engage in warehousing activities (such as the name of a church), Staff used Google Maps to do a visual verification using Google Maps’ street view to determine an operator name by searching for signage with the operator name on the addressed property or building. If the Google Maps visual verification showed that the property was not for warehouse use (through the name of the property operator or the nature of the property itself, or was a vacant lot), this was considered a potentially inapplicable property for earning WAIRE Points and likely only subject to PR 2305 reporting.

Note that because this dataset was created in order to identify the single most correct operator for each warehouse, this process results in one warehouse operator identified per warehouse. Some warehouses may have multiple operators; identifying warehouses with multiple operators is discussed below.

Facilities Potentially Only Subject to Reporting Under PR 2305 (418 facilities from the total population of 3,320 warehouses)

247 facilities are expected to only need to satisfy PR 2305 reporting requirements because these facilities have less than 100,000 square feet of warehouse space in a single building after excluding CoStar-reported office space. An additional 171 facilities potentially may only be subject to reporting requirements in PR 2305 as visual review with Google Maps indicated that they may not conduct warehousing activities. For example, some facilities were considered inapplicable if they appeared to be mostly used for manufacturing, and unlikely to have 100,000 square feet dedicated to warehouse use.

To aid in this evaluation, only facilities with the “Secondary Type” column designation of “Manufacturing” and “Light Manufacturing” from CoStar were analyzed in this step. Buildings with less than one dock door per 10,000 square feet of building area were further screened out. These facilities with less than one loading docks per 10,000 square feet were visually reviewed with Google Maps to look for visual cues of warehousing use (such as dock doors) or lack thereof (such as manufacturing equipment taking up the majority of the site) to determine if on site warehousing use would be potentially applicable to PR 2305.

From the additional analysis described below, all applicable warehouse statistics considerations are out of the 2,902 applicable warehouses, unless stated otherwise.

Warehouses That Potentially Have Multiple Operators (1,093 warehouses)

CoStar identified the tenancy of warehouses as single, multiple, or unknown number of operators, and also in many cases identifies the last known tenant. However, the accuracy of the businesses identified as tenants within CoStar was not always considered reliable, as historical tenant data could not always be distinguished from multiple current tenants. Based on a review of all available information within CoStar, out of 2,902 warehouses potentially required to earn WAIRE Points, staff identified 1,093 warehouses that potentially have multiple operators, 1,777 potentially have single operators, and 32 are unknown.

Warehouses Whose Operators Potentially Own a Fleet (1,313 warehouses)

Staff identified 1,313 warehouses with operators that potentially own their own truck fleets. To determine this information, staff cross-referenced the warehouse operator names determined above with “Fleet Name” data from the Fleetseek dataset. Because the names of operators and fleets did not exactly match across the two datasets, a fuzzy lookup tool² was used that showed the similarity between operator name and fleet seek name. Operators’ potential fleet ownership was further verified by using data from the Federal Motor Carrier Safety Administration Company Snapshot tool³ and information from company websites. Examples of potential fleet matches that were excluded from the final tally include small fleets (e.g., <3 trucks) that are registered on the east coast who may only share a name with an operator of a warehouse, or fleets who carry cargo not considered likely for warehousing activities under PR 2305 (e.g., refuse).

Although this analysis shows that perhaps ~40% of warehouse operators own a fleet, it is not possible to determine the extent to which any operator’s fleet serves a particular warehouse. The

² Source: <https://www.microsoft.com/en-us/download/details.aspx?id=15011>

³ <https://safer.fmcsa.dot.gov/CompanySnapshot.aspx>

reporting requirements under PR 2305 will provide additional information about warehouse operators who own or lease trucks that serve that warehouse.

Warehouses within Phases of Rule Implementation

PR 2305 would be implemented in three phases: warehouses larger than or equal to 250,000 square feet will be required to comply with PR 2305 in Phase 1; warehouses larger than or equal to 150,000 square feet and less than 250,000 square feet will be added in Phase 2; and warehouses larger than or equal to 100,000 square feet and less than 150,000 square feet will be added in Phase 3. Using the Rentable Building Area data from CoStar, of the 2,902 warehouses potentially required to earn WAIRE Points, 919 warehouses are in Phase 1, 931 warehouses are in Phase 2, and 1,052 warehouses are in Phase 3. For the 418 facilities that are potentially only subject to PR 2305 reporting requirements there are 37 warehouses in Phase 1, 57 warehouses in Phase 2, and 324 warehouses in Phase 3.

Owner-Operators (515 warehouses)

There are 515 warehouses potentially operated by the owners of the warehouse. The applicable warehouse operated by the owners was determined by cross-referencing CoStar warehouse “Owner Name” data with DNB’s “Business Name” data for that same address.

Warehouses Near Ports (202 warehouses)

Staff identified 202 warehouses that are located near the Ports of Los Angeles and Long Beach. Warehouses determined to be Warehouses Near Ports were designated on “Submarket Name” column of the CoStar property dataset as: Carson Industrial; Long Beach South East Industrial; Long Beach South West Industrial; Rancho Dominguez Industrial; San Pedro Industrial; and Wilmington Industrial.

Warehouses with Existing Solar Panels (214 warehouses)

Staff identified 214 applicable warehouses with solar panel systems installed. Google Maps satellite view was used to identify which applicable warehouses that had solar panels systems installed. “Property Address” data from the CoStar property search were searched in Google Maps to complete a visual review of each property to determine the presence of solar panel systems.

Facilities by Secondary Type

The CoStar property search data set provided a secondary industry type designation. These designations are provided under the “Secondary Type” column in the property search dataset. The following breakdown shows the “Secondary Type” designations for the 2,902 warehouses potentially required to earn WAIRE Points under PR 2305: Distribution: 824 facilities; Light Distribution: 5 facilities; Light Manufacturing: 13 facilities; Manufacturing: 419 facilities; Refrigeration/Cold Storage: 42 facilities; Truck Terminal: 33 facilities; and Warehouse: 1,566 facilities.⁴

⁴ These ‘Secondary Types’ were one of the parameters used by IEC in their study of warehouses that may relocate with PR 2305 (“Assessment of Warehouse Relocations Associated with the South Coast Air Quality Management District Warehouse Indirect Source Rule”). That study analyzed 2,638 warehouses that were considered most likely to relocate. The Technical Memorandum on Real Estate Markets Neighboring the South Coast AQMD Region from that study describes the methodology it used relative to these datasets.

Low Floor Area Ratio (FAR) (870 warehouses)

Staff identified 870 warehouses with FARs less than 0.45. The FAR describes the ratio of indoor floor area relative to the total square footage of a property. For single story buildings, lower FARs indicate a large outdoor area, which in the case of warehouses typically indicates a large yard for truck and trailer parking. The lower the FAR, the more likely it is that space could be identified onsite for larger scale ZE charging/fueling infrastructure installations. Warehouses with FARs <0.45 were identified as this is a common value used by local land use agencies for new warehouse developments. The FAR alone is not the sole determinant if a facility can install ZE charging/fueling infrastructure. Facilities with FARs higher than 0.45 may also have the ability to install ZE charging/fueling infrastructure, and conversely some facilities with FARs <0.45 may not have sufficient access to electrical utility infrastructure connections onsite or nearby.

List of Warehouse Addresses Potentially Subject to PR 2305

Property Address	City	State	Zip	Property Address	City	State	Zip

Appendix D: POTENTIAL SIP CREDIT APPROACH FOR PR 2305

Introduction

What is the purpose of PR 2305?

As stated in PR 2305, its purpose is to reduce local and regional emissions, and to facilitate local and regional emission reductions associated with warehouses and the mobile sources attracted to warehouses in order to help achieve state and federal ambient air quality standards and to reduce exposure to diesel particulate matter.

What is the State Implementation Plan?

The federal Clean Air Act requires areas with levels of ozone, particulate matter, and other pollutants that exceed National Ambient Air Quality Standards (NAAQS) to develop State Implementation Plans (SIPs). SIPs are comprehensive plans that describe how an area will attain the NAAQS. SIPs are not single documents. They are a compilation of new and previously submitted plans, programs (such as monitoring, incentives, permitting, emissions inventory, etc.), local air district rules, state regulations, and federal controls. State law makes CARB the lead agency for all purposes related to the SIP. Local air districts prepare SIP elements and submit them to CARB for review and approval. CARB then forwards these SIP revisions to the EPA for approval.

What is 'SIP credit'?

SIP credit is the general term given for emission reductions that are creditable towards commitments in the SIP.

Why is SIP Credit needed?

The SIP contains a detailed accounting of the expected emissions inventory in future milestone years with Clean Air Act deadlines. This emissions inventory includes a baseline scenario (i.e. business-as-usual) and a control scenario (if the SIP's proposed measures are all adopted). The 2016 AQMP from South Coast AQMD and the companion State SIP Strategy from CARB includes substantial emission reductions tied to 'further deployment of cleaner technologies' control measures that are not yet fully defined. Emission reductions from these control measures are needed to both meet the NAAQS and to ensure that federal sanctions are not imposed under the federal Clean Air Act. If adopted, PR 2305 will provide emission reductions that can help meet these 'further deployment' commitments. This document provides the background for how PR 2305 emission reductions will be SIP creditable.

What are the requirements for SIP credit?

There are a variety of guidance documents¹ and regulations that address how emission reductions can be credited towards the SIP. In general, SIP creditable emission reductions must satisfy five

¹ Voluntary Mobile Source SIP Programs, www.epa.gov/sites/production/files/2016-05/documents/vmep-gud.pdf
Improving Air Quality with Economic Incentive Programs (2001),

www.epa.gov/sites/production/files/2016-05/documents/erescerem_gd.pdf

key ‘integrity elements’. Namely, the emission reductions must be quantifiable, enforceable, verifiable, surplus, and real.

Which emission source categories can achieve SIP-creditable emission reductions with PR 2305?

The emission sources that may have SIP-creditable emission reductions from PR 2305 include on-road trucks, hostlers (both on-road and off-road vehicles), Transport Refrigeration Units (TRUs), light duty vehicles, and power plants.

What is the role of scrapping in SIP-creditable mobile source measures?

Scrapping is the process by which older vehicles that are replaced by newer, cleaner vehicles are scrapped and taken out of service to ensure that the emission reductions from the newer vehicle are achieved. Scrapping ensures that the new vehicle is not just accommodating growth in the vehicle fleet. SIP-creditable emission reductions can be achieved both with and without a scrappage program. Examples of SIP-creditable programs with scrapping requirements include many voluntary incentive programs like Carl Moyer, or AB 617 funding. These programs are implemented on an individual truck basis (through grant funding contracts), and without a scrappage requirement it would not be possible to discern whether any one individual truck would result in eventual scrappage of a truck somewhere in the entire truck fleet, or if the newer, cleaner truck is actually adding emissions due to growing the truck fleet.

Other SIP-creditable measures do not require scrapping, such as CARB regulations like the Low NOx Omnibus Rule or the Advanced Clean Trucks Rule. These rules rely on assumptions about future truck sales and future truck activity (e.g., miles travelled per year). Importantly, these rules broadly affect large sections of the truck fleet instead of individual trucks, and the rulemaking analysis for these rules consider how each rule will affect the entire truck fleet, including growth and rates of vehicle turnover. These assumptions are subsequently verified through the regular updates to the EMFAC model.

What is EMFAC?

EMFAC is an emissions model developed and used by CARB to assess emissions from on-road vehicles including cars, trucks, and buses in California, and to support CARB's regulatory and air quality planning efforts to meet the Federal Highway Administration's transportation planning requirements. U.S. EPA approves EMFAC for use in the State Implementation Plan and transportation conformity analyses.

How does SIP credit work for incentive funding programs?

Programs like Carl Moyer or AB-617 funding programs provide subsidies to offset the higher purchase price of near-zero and zero emission vehicles. In some cases, these types of voluntary

Incorporating Bundled Measures in a SIP,

Diesel Retrofit SIP Programs, <http://nepis.epa.gov/Exe/ZyPDF.cgi/P100HP2S.PDF?Dockey=P100HP2S.PD>

incentive programs can result in prospective SIP creditable emission reductions.² While incentive funding programs have been included as control measures within the 2016 AQMP, they are not included in the baseline emissions inventory, nor are their effects included within EMFAC. PR 2305 is designed to work together with incentive programs. Although some incentive programs are oversubscribed³, others are undersubscribed⁴. PR 2305 can help ensure that incentive funds are fully utilized, and can also potentially spread incentives to additional vehicles by lowering the amount that vehicle purchasers are willing to accept due to the requirements within PR 2305 on warehouse operators.

Background on Obtaining SIP Credit for Mobile Source Emission Reduction Measures

SIP creditable emission reductions are typically obtained through three key processes.

- 1) Regulations adopted at the local, state, or federal level that meet the ‘integrity elements’ described above can achieve prospective SIP credit at the time that the regulation is adopted. Prospective SIP credit is a projection of how emission reductions will occur in the future due to a control measure.
 - a. Example: CARB’s Truck and Bus Regulation⁵ requires fleets to only utilize trucks that meet or exceed 2010 truck engine standards (with some limited exceptions) by 2023. Those fleets may include older, higher-emitting trucks today, but the future emission reductions from the existing regulation provides prospective SIP credit. As shown below, not all emission reduction measures can be credited towards the SIP prospectively.
- 2) For some regulations or control measures, actual emission reductions achieved may be higher or lower than originally estimated at the time the regulation was adopted. A later analysis may evaluate how a rule is actually being implemented and adjust the amount of SIP creditable emission reductions. These retrospective emission reductions evaluate how emissions changed in the past, and then project how that will affect the future.
 - a. Example: EPA’s Heavy Duty Engine Standards⁶ required all truck engine manufacturers to meet a NOx emission standard of 0.2 g/hp-hr by 2010 (with some limited exceptions). SIP creditable prospective emission reductions were assumed in the EMFAC 2007 emission model at the time assuming that engines would meet these standards in real world conditions.⁷ However, subsequent testing of these engines has shown that engines that meet the EPA standard (based on a test cycle) do not achieve the previously assumed level of emission reductions in real world conditions.⁸ One example includes during periods when the engine exhaust controls

are operating at lower temperatures than necessary to fully reduce NOx emissions.⁹ As a result, a more recent EPA-approved emissions inventory for trucks in EMFAC 2017 has subsequently been updated to incorporate this more recent real world data.¹⁰ The table below shows a comparison of NOx emission rates for the same model year truck between the EPA-approved EMFAC 2007 and EMFAC 2017 emissions inventory models. The more recent EMFAC 2017 model used more recent real-world data, and the subsequent SIP creditable emission reductions from the EPA Heavy Duty Engine Standard have been revised to incorporate real-world conditions.

Table 1: Zero-Mile NOx Emission Rates for Model Year 2015

EMFAC 2007 ¹¹	EMFAC 2017 ¹²
1.14	2.68

- 3) Finally, real-world emissions from some sources are often affected by multiple factors. For example, on-road vehicle emissions are affected by multiple regulations, market forces (e.g., the state of the economy, the price of fuel, etc.), financial incentive programs (e.g., the Carl Moyer program), and private sector policies (e.g., corporate sustainability goals). In order to account for all of these competing influences, every few years the baseline mobile source emissions inventory used for the SIP is updated, including through updates to CARB's mobile source inventories (e.g., the EMFAC model, off-road equipment inventories, etc.), updates to the Regional Transportation Plan (RTP) from the Southern California Association of Governments (SCAG), and new South Coast AQMD Air Quality Management Plans (AQMPs). Because SIP creditable emission reductions cannot always be separately assigned to each unique factor, the holistic evaluation of the on-road mobile source sector in EMFAC updates (or equivalent off-road sector updates) conducted by CARB ensures that the SIP inventory is as comprehensive, accurate, and current as possible.
 - a. Example: Every four years SCAG updates its forecast for the transportation system in the RTP. This modeling analysis includes a forecast of vehicle miles travelled in the freight sector based on a number of factors including: activity data from the ports of Los Angeles and Long Beach, national commodity flow surveys, land use patterns, developments in the roadway network, etc. These modeled outputs (e.g., vehicle miles travelled, vehicle speeds, location of vehicle activity) are combined with emission factors from EMFAC to establish the SIP creditable emissions inventory in the subsequent AQMP.

Expected Mechanisms to Obtain SIP-Creditable Emission Reductions with PR 2305

If PR 2305 is adopted, SIP-creditable emission reductions can be achieved prospectively, retrospectively, and through holistic mobile source inventory analysis. Because other existing and forthcoming mobile source measures will reduce emissions from the same sources, not all emission reductions achievable from PR 2305 can be fully quantified at time of rule adoption. As described in CARB's Mobile Source Strategy¹³, additional future measures may be developed that would affect emission sources at facilities covered by PR 2305, but it is too speculative at this stage to determine how they may or may not overlap with PR 2305.

Prospective Emission Reductions from PR 2305

Emissions reductions are expected from all of the emissions sources covered by PR 2305, however not all of the emission reductions can be fully quantified at time of rule adoption. This is primarily because some emission reductions from PR 2305 will at least partially overlap with other SIP-creditable measures. The table at the end of this section lists the key existing and future mobile source measures that also reduce emissions sources addressed by PR 2305, and describes how the overlap is addressed. Even if prospective SIP creditable emission reductions are not achievable at the time of rule adoption, other means of obtaining SIP credit are possible (see below). Further, through the implementation of the WAIRE Mitigation Program, it may be possible to develop prospective SIP creditable emission reductions at a future date.

Retrospective Emission Reductions from PR 2305

The PR 2305 WAIRE Program will be tracked by South Coast AQMD staff to evaluate how it is implemented every year, reported publicly to the Governing Board Mobile Source Committee, with results also made available on the South Coast AQMD web page. A key component of this analysis will be to evaluate which menu options are being chosen by every facility, and comparing that to the original analysis conducted during the rulemaking process. If trends emerge that show greater or lesser emission reductions than envisioned in the rulemaking analysis, then adjustment may be made in subsequent revisions to the SIP inventory (e.g., as part of a future AQMP).

Holistic Analysis of Emission Reductions from PR 2305

Some emission reductions may be attributable to PR 2305, but will not be captured in either a prospective or retrospective analysis. This could include emissions from trucks purchased to comply with PR 2305, but that make truck trips between facilities that aren't regulated under PR 2305. These truck trips are not accounted for in the rulemaking analysis, or in subsequent annual reviews of the WAIRE Program. In addition, if many warehouse operators decide to install zero emission charging/fueling infrastructure, this is expected to make it easier for truck owners to decide to switch to zero emission technologies as finding a fueling location will become less of a concern. This potential increased zero emission technology penetration into the overall truck fleet is not accounted for in the rulemaking analysis except for zero emissions truck visits to regulated facilities. Further, the assumptions included in the rulemaking analysis about other mobile source measures (e.g., CARB's Low NOx Omnibus Rule or ACT Rule) will likely be revised based on future, unknown conditions. In particular, the level of future truck sales, future activity per truck, future costs to operate trucks, etc. all may require updates as part of a normal EMFAC update. As is currently practiced, this holistic analysis will provide the mechanism to ensure that all

¹³ <https://ww2.arb.ca.gov/resources/documents/2020-mobile-source-strategy>

overlapping mobile source measures are captured across the entire truck fleet. This is the primary mechanism by which the San Joaquin Valley Air Pollution Control District receives quantifiable ‘SIP credit’ for its Indirect Source Review program (Rule 9510).¹⁴

¹⁴ When EPA approved Rule 9510 into the SIP, it specifically did not allow the rule to be used for prospective SIP credit (76 FR 26609). Notwithstanding this approach, the most recent Annual Report for Rule 9510 shows that since its inception the rule has resulted in 15,617 tons of NOx and PM10 that have been avoided, with another 12,147 tons of NOx and PM10 that has been reduced through use of its mitigation fee program (<https://www.valleyair.org/ISR/Documents/2020-ISR-Final-Annual-Report.pdf>).

Table 2: Existing and Future Measures that Have Overlapping SIP-Creditable Emission Reductions with PR 2305

Emission Reduction Measure	Measure Summary	Existing or Future Measure	Potential Overlap with PR 2305 Requirements	Calculation Method to Address Potential Overlap for Prospective SIP Credit
Incentive Funding Programs	Various state and federal programs (e.g., Carl Moyer, AB 617 funding, DERA, etc.) provide subsidies to offset the higher cost of NZE and ZE vehicles.	Existing and Future	Potential overlap for existing state and federal funding programs. Uncertain overlap for any new funding programs.	Because incentive programs are not included within EMFAC, no adjustments are made to the PR 2305 calculation.
EPA Heavy Duty Engine Standards	Requires manufacturers nationwide to only sell trucks meeting specified emission standards by 2010 (e.g., 0.2 g/hp-hr NO _x)	Existing	Partial overlap due to CARB Truck and Bus Rule.	Overlap calculated as part of CARB Truck and Bus Rule.
CARB Truck and Bus Rule	Requires truck fleets to only operate trucks meeting EPA's 2010 engine standard by 2023. Measure is phased in before 2023.	Existing	Partial overlap before 2023. No overlap after 2023.	Any emission from NZE or ZE truck activity associated with PR 2305 are compared against baseline truck emission rates that are the average for that truck type in any calendar year from EMFAC 2017 (which includes the Truck and Bus Rule).
CARB Advanced Clean Truck (ACT) Rule	Requires truck manufacturers to ensure that a portion of their new vehicle sales in CA are zero emissions. Measure phases in from 2024-2035.	Existing	No overlap before 2024. Partial overlap after 2024.	Before 2024, any ZE truck activity attributable to PR 2305 that aren't funded by Incentive Programs provide prospective SIP creditable emission reductions. As a conservative approach ¹ , after 2024 any emission reductions from ZE truck activity associated with PR 2305 will be reduced by the amount of applicable ZE truck activity

Emission Reduction Measure	Measure Summary	Existing or Future Measure	Potential Overlap with PR 2305 Requirements	Calculation Method to Address Potential Overlap for Prospective SIP Credit
				associated with ACT ² in addition to any potentially incentive funded trucks.
CARB Low NO _x Omnibus Rule	Requires manufacturers to only sell trucks in CA meeting specified emission standards. Updates warranty, useful life, certification testing procedures, etc. Measure phases in from 2024-2027.	Existing	No overlap before 2024. Partial overlap after 2024	Before 2024, any NZE truck activity attributable to PR 2305 that aren't funded by Incentive Programs provide prospective SIP creditable emission reductions. As a conservative approach ¹ , after 2024 any emission reductions from ZE truck activity associated with PR 2305 is reduced by the amount of applicable NZE truck activity associated with Low NO _x Omnibus ² in addition to any potentially incentive funded trucks.
CARB Transport Refrigeration Units (TRU) Air Toxics Control Measure (ATCM)	Requires TRUs to meet in-use particulate matter standards, phased in through 2021.	Existing	No overlap.	No adjustment necessary as rule is completely phased in.
CARB In-Use Off-Road Diesel Rule	For PR2305, this measure applies to yard trucks. This rule requires fleets to meet specified in-use emission levels, depending on fleet size. The rule is phased in from 2014-2029.	Existing	Potential overlap.	Average baseline emission rate for yard trucks is based on industry estimate of yard truck age. This age profile results in baseline emissions that are lower than the most stringent standard in the In-Use Offroad Rule. SIP-creditable emission reduction calculations for yard trucks therefore assume less emission reductions than if only considering this measure.

Emission Reduction Measure	Measure Summary	Existing or Future Measure	Potential Overlap with PR 2305 Requirements	Calculation Method to Address Potential Overlap for Prospective SIP Credit
EPA Cleaner Trucks Initiative	Proposal would require manufacturers nationwide to only sell trucks meeting specified emission standards. Level of control and timing uncertain, though it may match CARB's Low NOx Omnibus Rule in 2027.	Future	Potential overlap after any new standards go into place.	No analysis currently possible as measure has not yet been sufficiently developed or approved. SIP credit for this measure in relation to PR 2305 will be determined at a later date if PR 2305 is approved.
CARB Advanced Clean Fleets Rule	Proposal would require fleets to increasingly use ZE trucks. Goal is a 100% ZE truck fleet by 2045, with interim goals before then.	Future	Potential overlap after any new standards go into place.	No analysis currently possible as measure has not yet been sufficiently developed or approved. SIP credit for this measure in relation to PR 2305 will be determined at a later date if both PR 2305 and ACF are approved.
CARB Proposed TRU ATCM Amendments	Proposal will transition straight truck TRUs to ZE from 2024-2031. A second rule amendment will target transitioning trailer TRUs to ZE by 2035.	Future	Potential overlap after any new standards go into place.	No analysis currently possible as measure has not yet been sufficiently developed or approved. SIP credit for this measure in relation to PR 2305 will be determined at a later date if both PR 2305 and the TRU ATCM are approved. PR 2305 (d)(3)(A) also prohibits earning WAIRE Points in any year that a CARB or EPA rule applies.
CARB Proposed ZE Forklift Rule	Proposal would require fleets to phase in ZE forklifts from 2025-2040.	Future	Potential overlap after any new standards go into place.	No analysis currently possible as measure has not yet been sufficiently developed or approved. Emission reductions not calculated for forklifts in PR 2305 as these are not included in the WAIRE Menu.

Emission Reduction Measure	Measure Summary	Existing or Future Measure	Potential Overlap with PR 2305 Requirements	Calculation Method to Address Potential Overlap for Prospective SIP Credit
CARB Heavy Duty Inspection & Maintenance (HD I/M) Rule	Proposal would require truck owners to routinely test their trucks to ensure they operate within acceptable standards.	Future	Potential overlap as emission reductions from this measure are not yet accounted for in EMFAC.	Expected effect of HD I/M is calculated in CARB META tool. Baseline truck emissions (i.e. trucks that would go to warehouses absent PR 2305) will be reduced to account for HD I/M before calculating the difference due to ZE and NZE trucks visiting PR 2305 warehouses.

Notes:

- 1) There are no requirements in this measure that ensure that mandated statewide sales targets will result in emission reductions specifically in the South Coast Air Basin.
