A G E N D A

HYBRID GOVERNING BOARD MEETING JUNE 7, 2024

A meeting of the South Coast Air Quality Management District Board will be held at 9:00 a.m. on Friday, June 7, 2024 through a hybrid format of in-person attendance in the Dr. William A. Burke Auditorium at the South Coast AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, and/or virtual attendance via videoconferencing and by telephone. Please follow the instructions below to join the meeting remotely.

Please refer to South Coast AQMD's website for information regarding the format of the meeting, updates, and details on how to participate at: <http://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

Electronic Participation Information (Instructions provided at the bottom of the agenda)

Join Zoom Meeting - from PC, Laptop or Phone

<https://scaqmd.zoom.us/j/93128605044>

Meeting ID: **931 2860 5044** (applies to all)

Teleconference Dial In +1 669 900 6833 or +1 253 215 8782

One tap mobile +16699006833,,93128605044# or

+12532158782,,93128605044#

Spanish Language Only Audience (telephone)

Número Telefónico para la Audiencia que Habla Español

Teleconference Dial In/Numero para llamar: +1 669 900 6833

Meeting ID/Identificación de la reunión: **932 0955 9643**

One tap mobile: +16699006833,,93209559643

Public Comment Will Still Be Taken

Audience will be allowed to provide public comment in person and through Zoom connection or telephone. Comments are limited to three (3) minutes per person for all items on the Consent and Board Calendars and may be further limited by the Chair to ensure all can be heard.

Phone controls for participants:

The following commands can be used on your phone's dial pad while in meeting: *6 (Toggle mute/unmute); *9 - Raise hand

Questions About an Agenda Item

- The name and telephone number of the appropriate staff person to call for additional information or to resolve concerns is listed for each agenda item.
- In preparation for the meeting, you are encouraged to obtain whatever clarifying information may be needed to allow the Board to move expeditiously in its deliberations.

Meeting Procedures

- The public meeting of the South Coast AQMD Governing Board begins at 9:00 a.m. The Governing Board generally will consider items in the order listed on the agenda. However, any item may be considered in any order.
- After taking action on any agenda item not requiring a public hearing, the Board may reconsider or amend the item at any time during the meeting.

All documents (i) constituting non-exempt public records, (ii) relating to an item on the agenda, and (iii) having been distributed to at least a majority of the Governing Board after the agenda is posted, are available prior to the meeting for public review at South Coast AQMD's Clerk of the Boards Office, 21865 Copley Drive, Diamond Bar, CA 91765 or web page at www.aqmd.gov

Americans with Disabilities Act and Language Accessibility

Disability and language-related accommodations can be requested to allow participation in the Governing Board meeting. The agenda will be made available, upon request, in appropriate alternative formats to assist persons with a disability (Gov. Code Section 54954.2(a)). In addition, other documents may be requested in alternative formats and languages. Any disability or language-related accommodation must be requested as soon as practicable. Requests will be accommodated unless providing the accommodation would result in a fundamental alteration or undue burden to the South Coast AQMD. Please contact the Clerk of the Boards Office at (909) 396-2500 from 7:00 a.m. to 5:30 p.m., Tuesday through Friday, or send the request to cob@aqmd.gov.

A webcast of the meeting is available for viewing at:
<http://www.aqmd.gov/home/news-events/webcast>

CALL TO ORDER

- Pledge of Allegiance
- Roll Call
- Opening Comments: Vanessa Delgado, Chair
Other Board Members
Wayne Nastri, Executive Officer

Staff/Phone (909) 396-

PUBLIC COMMENT PERIOD – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3) The public may comment on any subject within the South Coast AQMD’s authority that does not appear on the agenda, during the Public Comment Period. Each speaker addressing non-agenda items may be limited to a total of (3) minutes.

CONSENT AND BOARD CALENDAR (Items 1 through 22)

Note: Consent and Board Calendar items held for discussion will be moved to Item No. 23.

Item 1 and 2 – Action Items/No Fiscal Impact

1. Approve Minutes of May 3, 2024 **Thomas/3268**
2. Set Public Hearing August 2, 2024 to Consider **Nastri/3131**
Adoption of and/or Amendments to South Coast AQMD
Rules and Regulations:
 - A. Determine That Proposed Amended Rule 1148.1 – Oil and Gas Production Wells, Is Exempt from CEQA and Amend Rule 1148.1 **Krause/2706**

Rule 1148.1 – Oil and Gas Production Wells applies to facilities that operate oil and gas wells. Proposed Amended Rule (PAR) 1148.1 will address objectives of the Wilmington, Carson, and West Long Beach and South Los Angeles AB 617 communities. PAR 1148.1 requires the use of enhanced leak detection technology, equipment that uses produced gas to meet specific NOx limits, and workover rigs to use Tier 4 Final diesel engines. PAR 1148.1 also bans the use of odorants and updates signage requirements. This action is to adopt the Resolution: 1) Determining that Proposed Amended Rule 1148.1 – Oil and Gas Production Wells, is exempt from the requirements of the California Environmental Quality Act, and 2) Amending Rule 1148.1. (Reviewed: Stationary Source Committee, May 17, 2024)

- B. Determine That Proposed Rule 2306 – Freight Rail Yards Does Not Require a New Environmental Document; Determine That Proposed Rule 316.2 – Fees for Rule 2306, Is Exempt From CEQA; and Adopt Proposed Rules 2306 and 316.2

MacMillan/3244

Proposed Rule 2306 seeks to reduce NOx emissions associated with freight rail yard operations by requiring operators of freight rail yards to meet or exceed emission reduction targets. The proposed rule will ensure that emission reductions will be proportional or greater in the South Coast AQMD relative to reductions throughout California from implementation of state regulations. Additionally, any state or local government agency contracting with the owner or operator of a freight rail yard in relation to its lease, construction, or operation will be required to include requirements for rule compliance in new, renewed, or amended contracts. Proposed Rule 316.2 will establish fees for owners and operators of freight rail yards to recover costs incurred by South Coast AQMD for implementation of Proposed Rule 2306. If adopted, Proposed Rule 2306 will be submitted to CARB for their consideration and transmittal to U.S. EPA. (Reviewed: Mobile Source Committee, January 19, April 19, and June 21, 2024)

Items 3 through 9 – Budget/Fiscal Impact

3. Recognize Revenue, Appropriate Funds and Issue Solicitation and Purchase Order for Laboratory Equipment

Low/2269

South Coast AQMD is expected to receive grant funds up to \$270,006 from U.S. EPA for the NATTS Monitoring Program. This action is to recognize revenue, appropriate funds and issue a sole source purchase order for Laboratory equipment. (Reviewed: Administrative Committee, May 9, 2024; Recommended for Approval)

4. Appropriate Funds, Issue Solicitation and Purchase Orders to Meet Operational Needs for Rule 1180 Air Monitoring Program

Low/2269

Rule 1180 established a fee schedule to fund community air monitoring stations to provide air quality information and notification to the public on refinery emissions in neighboring communities. The FY 2023-24 budget for this program includes approximately \$4.6 million in annual fees from refineries for community air monitoring. These actions are to appropriate up to \$199,000 from the General Fund Undesignated (Unassigned) Fund Balance to Monitoring and Analysis' FY 2023-24 and/or FY 2024-25 Budget, issue a solicitation and purchase orders to meet operational needs of the Rule 1180 Air Monitoring Program. (Reviewed: Administrative Committee, May 9, 2024; Recommended for Approval)

5. Authorize Purchase of OnBase Software Support

Moskowitz/3329

South Coast AQMD uses OnBase software for its electronic document management system to manage critical documents and to support South Coast AQMD's Record Retention Policy. The software subscription and support for OnBase expires on July 31, 2024. This action is to obtain approval for sole source purchase of OnBase software subscription and support for one year from Information Management's FY 2024-25 Budget. Funds for this purchase (\$200,000) are conditional on approval of the Proposed FY 2024-25 Budget. (Reviewed: Administrative Committee, May 9, 2024; Recommended for Approval)

6. Issue RFP for Legislative Representation in Washington, D.C.

Alatorre/3122

The current contracts for federal legislative representation in Washington, D.C. expire on January 14, 2025. This action is to issue an RFP for federal legislative representation and consulting services for South Coast AQMD in Washington, D.C. for 2025. The RFP will also indicate that the contract(s) may be extended for up to two additional one-year extensions. (Reviewed: Administrative Committee, May 9, 2024; Recommended for approval)

7. Appropriate Funds from the General Fund Undesignated (Unassigned) Fund Balance for Administrative and Human Resources Related Expenditures, and Approve Amending Contracts with Outside Labor and Employment Counsel

Olvera/2309

This action is to appropriate \$800,000 from the General Fund Undesignated (Unassigned) Fund Balance to the District General – Administrative and Human Resources FY 2023-24 and/or FY 2024-25 Budget in the amount of \$625,000, and the Administrative and Human Resources FY 2023-24 and/or FY 2024-25 division budget in the amount of \$175,000. This action is also to approve amending contracts with prequalified labor and employment counsel to add funds, up to \$200,000, as necessary. (Reviewed: Administrative Committee, May 9, 2024; Recommended for Approval)

8. Appoint Regular and Alternate Attorney and Engineer Members to South Coast AQMD Hearing Board for July 1, 2024 to June 30, 2027

Thomas/3268

The terms of office for the Hearing Board Attorney and Engineer Members, as well as their alternates, expire on June 30, 2024. In November 2023, a recruitment was opened to seek candidates for the new term of July 1, 2024 through June 30, 2027. As required by state law, a Hearing Board Advisory Committee appointed by five members of the Governing Board is responsible to review and make recommendations to the Administrative Committee in making appointments to the Hearing Board. On April 19, 2024, the Advisory Committee recommended that the Administrative Committee interview three candidates for the Regular and

Alternate Attorney Member positions, two candidates for the Regular Engineer Member position, and two candidates for the Alternate Engineer Member position. The Administrative Committee interviewed the candidates at its meeting on May 9, 2024 and made final recommendations to the Governing Board. (Reviewed: Administrative Committee, May 9, 2024; Recommended for Approval)

9. Approve Contract Modification as Approved by MSRC

McCallon

As part of their FYs 2016-18 Work Program, the MSRC approved a contract with the City of Paramount under their Local Government Partnership Program. The MSRC seeks Board approval of the contract award as part of the FYs 2016-18 Work Program. (Reviewed; Mobile Source Air Pollution Reduction Review Committee, May 16, 2024; Recommended for Approval)

Items 10 through 16 – Information Only/Receive and File

10. Legislative, Public Affairs and Media Report

Alatorre/3122

This report highlights the April 2024 outreach activities of the Legislative, Public Affairs and Media Office, which includes: Major Events, Community Events/Public Meetings, Environmental Justice Update, Speakers Bureau/Visitor Services, Communications Center, Public Information Center, Business Assistance, Media Relations and Outreach to Business and Federal, State and Local Government. (No Committee Review)

11. Hearing Board Report

Verdugo-Peralta

This reports the actions taken by the Hearing Board during the period of March 1 through April 30, 2024. (No Committee Review)

12. Civil Filings and Civil Penalties Report

Gilchrist/3459

This report summarizes monthly penalties and legal actions filed by the General Counsel's Office from April 1, 2024 through April 30, 2024. An Index of South Coast AQMD Rules is attached with the penalty report. (Reviewed: Stationary Source Committee, May 17, 2024)

13. Intergovernmental Review of Environmental Documents and CEQA Lead Agency Projects

Krause /2706

This report provides a listing of CEQA documents received by South Coast AQMD between April 1, 2024 and April 30, 2024, and those projects for which South Coast AQMD is acting as lead agency pursuant to CEQA. (Reviewed: Mobile Source Committee, May 17, 2024)

14. Rule and Control Measure Forecast **Rees/2856**
- This report highlights South Coast AQMD rulemaking activities and public hearings scheduled for 2024. (No Committee Review)

15. Report of RFQs/RFPs Scheduled for Release in June **Jain/2804**
- This report summarizes the RFQs/RFPs for budgeted services over \$100,000 scheduled to be released for advertisement for the month of June. (Reviewed: Administrative Committee, May 9, 2024)

16. Status Report on Major Ongoing and Upcoming Projects for Information Management **Moskowitz/3329**
- Information Management is responsible for data systems management services in support of all South Coast AQMD operations. This action is to provide the monthly status report on major automation contracts and planned projects. (Reviewed: Administrative Committee, May 9, 2024)

Items 17 through 22 -- Reports for Committees and CARB

The May 17, 2024 Technology Committee was cancelled. The next regularly scheduled Technology Committee meeting is June 21, 2024.

17. Administrative Committee (Receive & File) Chair: Delgado **Nastri/3131**
18. Legislative Committee Chair: Cacciotti **Alatorre/3122**
- Receive and file; and take the following actions as recommended:

Agenda Item	Recommendation
AB 2851 (Bonta) Metal shredding facilities: fence-line air quality monitoring.	Support if Amended
SB 1054 (Rubio) Climate Pollution Reduction in Homes Initiative: natural gas: customer credit	Support
SB 1095 (Becker) Cozy Home Clean Up Act: building standards: gas-fuel-burning, appliances	Support
SB 1298 (Cortese) Certification of thermal powerplants: data centers.	Oppose

19. Mobile Source Committee (Receive & File) Chair: Kracov **Rees/2856**
20. Stationary Source Committee (Receive & File) Chair: McCallon **Aspell/2491**
21. Mobile Source Air Pollution Reduction Review Committee Report (Receive & File) Board Rep.: Hagman **Katzenstein/2219**
22. California Air Resources Board Monthly Report (Receive & File) Board Rep.: Kracov **Thomas/3268**

23. Items Deferred from Consent and Board Calendar

PUBLIC HEARINGS

24. Determine That Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards Is Not Considered Subject to CEQA; and Adopt Rule 317.1

Krause/2706

Section 185 of the federal Clean Air Act (CAA) requires areas that are classified as “severe” or “extreme” that do not attain the NAAQS for ozone by their assigned attainment dates to pay fees based upon a prescribed formula each year until the NAAQS is attained. Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards (PR 317.1) would implement these CAA requirements for the 1997 and 2008 8-hour ozone standards. The provisions of PR 317.1 would address when and how the CAA nonattainment fees would be assessed and collected. This action is to adopt the Resolution: 1) Determining that Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards, is not considered a project subject to the requirements of the California Environmental Quality Act; and 2) Adopt Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards. (Reviewed: Stationary Source Committee, April 19, and May 17, 2024)

25. Certify Final Environmental Assessment for Proposed Amended Rule 463 – Organic Liquid Storage; and Amend Rule 463

Krause/2706

Proposed Amended Rule 463 (PAR 463) establishes enhanced leak detection using optical gas imaging, more stringent control requirements to dome external floating roof tanks, and other requirements. Additionally, PAR 463 will include contingency measures for both the Coachella Valley and the South Coast Air Basin, which will require more frequent use of optical gas imaging, if triggered. This action is to adopt the Resolution: 1) Certifying the Final Environmental Assessment for Proposed Amended Rule 463 – Organic Liquid Storage; and 2) Amending Rule 463 – Organic Liquid Storage. (Reviewed: Stationary Source Committee, April 19, 2024)

26. Determine That Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters Does Not Require a New Environmental Document; and Amend Rule 1146.2

Krause/2706

Rule 1146.2 applies to units that are between 75,000 and 2,000,000 Btu/hour that are exempt from permitting. Proposed Amended Rule 1146.2 (PAR 1146.2) proposes to require a zero- NOx emission limit for new installations of applicable large water heaters, small boilers, and process heaters based on future effective dates, implementing a 2022 AQMP Control Measure necessary to meet the NAAQS ozone standards. PAR 1146.2 proposes zero-emission limits for existing units after the unit reaches a specific age, with an allowance for units installed at residential structures and small businesses to

comply with the zero-emission limits upon natural replacement, and provides alternative compliance options and a low-use exemption to address challenges transitioning to zero-emission technologies. In addition, PAR 1146.2 clarifies existing rule language, removes obsolete provisions, and is a later activity within scope of Final Program Environmental Impact Report for 2022 AQMP such that no new environmental document will be required. This action is to adopt the Resolution: 1) Determining that Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters, is a later activity within the scope of the Final Program Environmental Impact Report for the 2022 AQMP such that no new environmental document will be required; and 2) Amending Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters. (Reviewed: Stationary Source Committee, March 15, April 19 and May 17, 2024)

27. Determine That South Coast Air Basin Attainment Plan for 2012 Annual PM2.5 Standard Does Not Require a New Environmental Document; and Adopt South Coast Air Basin Attainment Plan for 2012 Annual PM2.5 Standard

Rees/2856

The South Coast Air Basin is in “serious” nonattainment for the 2012 annual PM2.5 National Ambient Air Quality Standard. A plan to attain this standard was originally submitted to U.S. EPA in 2017 but U.S. EPA delayed acting on the plan. In the meantime, near-road air quality monitoring data became eligible for inclusion in SIP attainment demonstrations, and the plan was withdrawn in 2023 to account for this new data and to satisfy other SIP requirements. A Draft PM2.5 Plan was developed that demonstrates attainment of the 2012 annual PM2.5 standard by 2030 in the South Coast Air Basin. This plan also includes limited additional controls for PM2.5 and its precursors to satisfy Clean Air Act Section 188(e) requirements. (Reviewed: Mobile Source Committee, October 20, 2023 and March 15, 2024, Reviewed)

BOARD MEMBER TRAVEL – (No Written Material)

Board member travel reports have been filed with the Clerk of the Boards, and copies are available upon request.

CLOSED SESSION -- (No Written Material)

Gilchrist/3459

CONFERENCE WITH LEGAL COUNSEL – EXISTING LITIGATION

It is necessary for the Board to recess to closed session pursuant to Government Code sections 54956.9(a) and 54956.9(d)(1) to confer with its counsel regarding pending litigation which has been initiated formally and to which the South Coast AQMD is a party. The actions are:

- In the Matter of South Coast Air Quality Management District v. Southern California Gas Company, Aliso Canyon Storage Facility, South Coast AQMD Hearing Board Case No. 137-76 (Order for Abatement); People of the State of California, ex rel South Coast Air Quality Management District v. Southern California Gas Company, Los Angeles Superior Court Case No. BC608322; Judicial Council Coordinated Proceeding No.4861;

- South Coast Air Quality Management District, et al. v. EPA, United States Court of Appeals, D.C. Circuit, Case No. 19-1241 (consolidated with Union of Concerned Scientists v. NHTSA, No. 19-1230);
- South Coast Air Quality Management District, et al. v. NHTSA, EPA, et al., United States Court of Appeals, D.C. Circuit, Case No. 20-1173 (consolidated with Competitive Enterprise Institute, et al. v. NHTSA, No. 20-1145);
- Natural Resources Defense Council, et al. v. City of Los Angeles, et al., San Diego Superior Court, Case No. 37-2021-00023385-CU-TT-CTL (China Shipping Case) (transferred from Los Angeles Superior Court, Case No. 20STCP02985); Fourth District Court of Appeal, Division One, No. D080902;
- California Trucking Association v. South Coast Air Quality Management District; the Governing Board of the South Coast Air Quality Management District; and Does 1 through 25, inclusive, U.S. District Court for the Central District of California, Case No. 2:21-cv-06341;
- In the Matter of South Coast Air Quality Management District v. Baker Commodities, South Coast AQMD Hearing Board Case No. 6223-1 (Order for Abatement); Baker Commodities, Inc. v. South Coast Air Quality Management District Hearing Board; South Coast Air Quality Management District; South Coast Air Quality Management District Hearing Board Members: Cynthia Verdugo-Peralta, Robert Pearman, Micah Ali, and Allan Bernstein, DPM MBA, in their official capacities only; and 100 Does and Roes, Los Angeles County Superior Court, Case No. 22STCP03597;
- South Coast Air Quality Management District v. EPA, U.S. District Court for the Central District of California, Case No. 2:23-cv-02646;
- East Yard Communities for Environmental Justice, et al. v. South Coast Air Quality Management District, the Governing Board of the South Coast Air Quality Management District, the California Air Resources Board, and Does 1 through 25, Inclusive, U.S. District Court for the Central District of California, Case No. 2:23-cv-06682;
- Western States Trucking Association, Inc. v. EPA, et al., United States Court of Appeals, D.C. Circuit, Case No. 23-1143 (amicus brief); and
- Legislature of the State of California, et al. v. Weber (Hiltachk), Supreme Court of California Case No. S81977 (amicus brief).

CONFERENCE WITH LEGAL COUNSEL – INITIATING LITIGATION

It is also necessary for the Board to recess to closed session pursuant to Government Code section 54956.9(a) and 54956.9(d)(4) to consider initiation of litigation (two cases).

CONFERENCE WITH LEGAL COUNSEL – ANTICIPATED LITIGATION

Also, it is necessary for the Board to recess to closed session pursuant to Government Code section 54956.9(d)(2) to confer with its counsel because there is a significant exposure to litigation against the South Coast AQMD (two cases).

ADJOURNMENT

*****PUBLIC COMMENTS*****

Members of the public are afforded an opportunity to speak on any agenda item before consideration of that item. Persons wishing to speak may do so in person or remotely via Zoom or telephone. To provide public comments via a Desktop/Laptop or Smartphone, click on the “Raise Hand” at the bottom of the screen, or if participating via Dial-in/Telephone Press *9. This will signal to the host that you would like to provide a public comment and you will be added to the list.

All agendas are posted at South Coast AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, and website, <http://www.aqmd.gov/home/news-events/meeting-agendas-minutes>, at least 72 hours in advance of the meeting. At the beginning of the agenda, an opportunity is also provided for the public to speak on any subject within the South Coast AQMD's authority. Speakers may be limited to a total of three (3) minutes for the entirety of the Consent Calendar plus Board Calendar, and three (3) minutes or less for each of the other agenda items.

Note that on items listed on the Consent Calendar and the balance of the agenda any motion, including action, can be taken (consideration is not limited to listed recommended actions). Additional matters can be added and action taken by two-thirds vote, or in the case of an emergency, by a majority vote. Matters raised under the Public Comment Period may not be acted upon at that meeting other than as provided above.

Written comments will be accepted by the Board and made part of the record. Individuals who wish to submit written or electronic comments must submit such comments to the Clerk of the Board, South Coast AQMD, 21865 Copley Drive, Diamond Bar, CA 91765-4178, (909) 396-2500, or to cob@aqmd.gov, on or before 5:00 p.m. on the Tuesday prior to the Board meeting.

ACRONYMS

AQ-SPEC = Air Quality Sensor Performance
Evaluation Center

AQIP = Air Quality Investment Program

AQMP = Air Quality Management Plan

AVR = Average Vehicle Ridership

BACT = Best Available Control Technology

BARCT = Best Available Retrofit Control Technology

Cal/EPA = California Environmental Protection Agency

CARB = California Air Resources Board

CEMS = Continuous Emissions Monitoring Systems

SOON = Surplus Off-Road Opt-In for NOx

SULEV = Super Ultra Low Emission Vehicle

TCM = Transportation Control Measure

ULEV = Ultra Low Emission Vehicle

U.S. EPA = United States Environmental Protection
Agency

VOC = Volatile Organic Compound

ZEV = Zero Emission Vehicle

INSTRUCTIONS FOR ELECTRONIC PARTICIPATION

Instructions for Participating in a Virtual Meeting as an Attendee

As an attendee, you will have the opportunity to virtually raise your hand and provide public comment.

Before joining the call, please silence your other communication devices such as your cell or desk phone. This will prevent any feedback or interruptions during the meeting.

For language interpretation:

Click the interpretation Globe icon at the bottom of the screen

Select the language you want to hear (either English or Spanish)

Click "Mute Original Audio" if you hear both languages at the same time.

Para interpretación de idiomas:

Haga clic en el icono de interpretación el globo terráqueo en la parte inferior de la pantalla

Seleccione el idioma que desea escuchar (inglés o español)

Haga clic en "Silenciar audio original" si escucha ambos idiomas al mismo tiempo.

Please note: During the meeting, all participants will be placed on Mute by the host. You will not be able to mute or unmute your lines manually.

After each agenda item, the Chair will announce public comment.

Speakers may be limited to a total of 3 minutes for the entirety of the consent calendar plus board calendar, and three minutes or less for each of the other agenda items.

A countdown timer will be displayed on the screen for each public comment.

If interpretation is needed, more time will be allotted.

Directions to provide public comment on ZOOM from a DESKTOP/LAPTOP or SMARTPHONE:

Click on the "Raise Hand" feature at the bottom of the screen.

This will signal to the host that you would like to provide a public comment and you will be added to the list.

Directions to provide public comment via TELEPHONE:

Dial *9 on your keypad to signal that you would like to comment.

Directions for Spanish Language TELEPHONE line only:

- The call in number is the same (+1 669 900 6833)
- The meeting ID number is 928-3000-3925
- If you would like to make public comment, please dial *9 on your keypad to signal that you would like to comment.

Instrucciones para la línea de TELÉFONO en español únicamente:

- El número de llamada es el mismo (+1 669900 6833 o +1 93209559643)
- El número de identificación de la reunión es 928-3000-3925
- Si desea hacer un comentario público, marque *9 en su teclado para indicar que desea comentar.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 1

MINUTES: Governing Board Monthly Meeting

SYNOPSIS: Attached are the Minutes of the May 3, 2024 Board Meeting.

RECOMMENDED ACTION:

Approve the May 3, 2024 Board Meeting Minutes.

Faye Thomas
Clerk of the Boards

FT

FRIDAY, MAY 3, 2024

Notice having been duly given, the regular meeting of the South Coast Air Quality Management District Board was conducted in a hybrid format (in person and remotely via videoconferencing and telephone). Members present:

Senator Vanessa Delgado (Ret.), Chair
Senate Rules Committee Appointee

Councilmember Michael A. Cacciotti, Vice Chair
Cities of Los Angeles County – Eastern Region

Supervisor Andrew Do
County of Orange

Gideon Kracov
Governor's Appointee

Mayor Pro Tem Larry McCallon
Cities of San Bernardino County

Supervisor V. Manuel Perez
County of Riverside

Councilmember Nithya Raman
City of Los Angeles

Councilmember Carlos Rodriguez
Cities of Orange County

Mayor José Luis Solache
Cities of Los Angeles County – Western Region

Absent: Mayor Patricia Lock Dawson
Cities of Riverside County

Supervisor Curt Hagman
County of San Bernardino

Supervisor Holly J. Mitchell
County of Los Angeles

Board Member Veronica Padilla-Campos
Speaker of the Assembly Appointee

For additional details of the Governing Board Meeting, please refer to the recording of the [Webcast](#) at: [Live Webcast \(aqmd.gov\)](#)

CALL TO ORDER: Chair Delgado called the meeting to order at 9:04 a.m.

- Pledge of Allegiance: Led by Supervisor Andrew Do
- Roll Call

Councilmember Rodriguez arrived at 9:05 and Councilmember Raman arrived at 9:07 a.m.

- Opening Comments

Councilmember Cacciotti shared photos of the following: South Coast AQMD employee BreTania Chase-Young and commended her handling of 1-800-CUT-SMOG calls; the son of a South Pasadena employee to highlight the medical equipment he carries around due to having severe asthma; and Earth Day activities with students from the Institute for the Redesign of Learning.

Supervisor Perez thanked staff for meeting with the Coachella Valley Association of Governments to discuss dust mitigation and concerns about the adverse impact of dust emissions to public health, quality of life, and economy in the Coachella Valley. He explained the significance of Cinco de Mayo to the histories of Mexico and the United States, and wished everyone a happy Cinco de Mayo.

Executive Officer Wayne Nastri provided information about the Board Retreat; the Legislative and Administrative Committee meetings on May 9 in Rancho Mirage; and the status of the Governing Board Student Internship Program. He announced that to celebrate May as National Clean Air Month, South Coast AQMD employee volunteers would be working with Habitat for Humanity in Riverside and invited others to join them.

PUBLIC COMMENT PERIOD – (Public Comment on Non-Agenda Items, Pursuant to Government Code Section 54954.3)

The Public Comment Period on Non-Agenda Items was opened. There being no requests to speak, the Public Comment Period on Non-Agenda Items was closed.

Zan Dubin, ZDS Communications

CONSENT AND BOARD CALENDAR

Items 1 and 2 – Action Items/No Fiscal Impact

1. Approve Minutes of April 5, 2024 Board Meeting
2. Set Public Hearings June 7, 2024 to Consider Adoption of and/or Amendments to South Coast AQMD Rules and Regulations
 - A. Determine That Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards Is Not Considered Subject to CEQA; and Adopt Rule 317.1
 - B. Certify Final Environmental Assessment for Proposed Amended Rule 463 – Organic Liquid Storage; and Amend Rule 463
 - C. Determine That South Coast Air Basin Attainment Plan for 2012 Annual PM2.5 Standard Does Not Require A New Environmental Document; and Adopt South Coast Air Basin Attainment Plan for 2012 Annual PM2.5 Standard

Items 3 through 11 – Budget/Fiscal Impact

3. Transfer Funds Between Major Objects, Issue Solicitations and Purchase Orders for AQ-SPEC Program
4. Recognize Revenue, Appropriate and Transfer Funds, Issue Solicitation and Purchase Order for One Vehicle
5. Recognize Funds, Execute Agreements for School Air Filtration Systems in Environmental Justice Communities, and Reimburse General Fund for Administrative Costs

6. Recognize Revenue, Transfer Funds, Execute Contract for Electrification of Balboa Island Ferries and Installation of Supporting Charging Infrastructure, and Reimburse General Fund for Administrative Costs
7. Execute Contracts for Short and Long-Term Systems Development, Maintenance and Support Services
8. Authorize Purchase of Videotelephony Service
9. Approve Compensation Adjustments for Board Member Assistants and Board Member Consultants for FY 2024-25
10. Execute Agreement with California High-Speed Rail Authority Setting Forth Framework for Development of Future Contract to Reduce Construction Emissions and Satisfy General Conformity for Palmdale to Burbank Project Section of California High-Speed Rail Project
11. Issue RFP and Approve Contract Modification as Approved by MSRC

Items 12 through 19 – Information Only/Receive and File

12. Legislative, Public Affairs and Media Report
13. Hearing Board Report
14. Civil Filings and Civil Penalties Report
15. Intergovernmental Review of Environmental Documents and CEQA Lead Agency Projects
16. Rule and Control Measure Forecast
17. Annual Audited Financial Statements for FY Ended June 30, 2023
18. Status Report on Major Ongoing and Upcoming Projects for Information Management
19. Annual Meeting of the Health Effects of Air Pollution Foundation

Items 20 through 27 – Reports for Committees and CARB

20. Administrative Committee
21. Climate Change Committee
22. Legislative Committee
23. Mobile Source Committee
24. Stationary Source Committee
25. Technology Committee
26. Mobile Source Air Pollution Reduction Review Committee
27. California Air Resources Board Monthly Report (*No report; CARB meeting cancelled*)
28. Items Deferred from Consent and Board Calendar

SB 1095 (Becker) was pulled from Agenda Item No. 22 for discussion.

Disclosures

Board Member Kracov recused himself from Agenda Item No. 2A because of a financial interest in Disney, which is materially affected by this item; and reported that he had no financial interest in Agenda Item No. 6 but is required to identify for the record that he is a Board Member of the California Air Resources Board, which is involved in this item.

Supervisor Perez reported that he had no financial interests in Agenda Item No. 5 but is required to identify for the record that he is a Supervisor for the County of Riverside, which is involved in this item; and that he had no financial interests in Agenda Item No 6 but is required to identify for the record that he is a Board Member for the California Air Resource Board, which is involved in this item.

Supervisor Do reported that he had no financial interests in Agenda Item No. 5 but is required to identify for the record that he is a Supervisor for the County of Orange, which is involved in this item.

Vice Chair Cacciotti made a motion to approve Agenda Item Nos. 1 through 27 and Supervisor Perez seconded the motion. Councilmember Rodriguez announced that he was abstaining from Agenda Item No. 22. For additional details, please refer to the [Webcast](#) beginning at 18:13.

Item Pulled for Discussion – SB 1095 in Agenda Item No. 22

Councilmember Rodriguez commented on the role of the Western Manufactured Housing Communities Association (WMA) and California Manufactured Housing Institute (CMHI) in helping to address California's affordable housing crisis, and inquired about the WMA and CMHI's concerns and reasons for opposing SB 1095 (Becker). For additional details, please refer to the [Webcast](#) beginning at 19:36.

Philip Crabbe, Senior Public Affairs Manager, confirmed that WMA and CHMI opposed SB 1095; however, the bill is supported by CAPCOA and other air districts. For additional details, please refer to the [Webcast](#) beginning at 21:04.

Councilmember Rodriguez recommended pulling SB 1095 from consideration until more information is obtained to understand the concerns of the WMA and CHMI. Given the dire housing crisis in California, he questioned whether the bill may be unintentionally undermining the ability to bring affordable housing to the housing market. For additional details, please refer to the [Webcast](#) beginning at 21:38.

Mr. Nastri clarified the intent of the bill. He added that staff recently became aware of the opposition and will look into it further. For additional details, please refer to the [Webcast](#) beginning at 22:34.

Councilmember Rodriguez offered a friendly amendment to pull SB 1095 from Agenda Item No. 22 to send it back to the Legislative Committee for additional information and review. Vice Chair Cacciotti accepted the amendment. For additional details, please refer to the [Webcast](#) beginning at 23:27.

The public comment period was opened for Agenda Item Nos. 1 through 27. There being no requests to speak, the public comment period was closed for Agenda Item Nos. 1 through 27.

Board Action (Items 1-27)

MOVED BY CACCIOTTI AND SECONDED BY PEREZ TO APPROVE AGENDA ITEM NOS. 1 THROUGH 27 AS RECOMMENDED, WITH BOARD MEMBER KRACOV RECUSING FROM ITEM 2A AND COUNCILMEMBER RODRIGUEZ ABSTAINING FROM ITEM NO. 22, AND TO:

RECEIVE AND FILE THE REPORTS FOR THE BOARD COMMITTEES AND MSRC AND ADOPT THE POSITIONS ON LEGISLATIONS AS SET FORTH BELOW; AND

ADOPT RESOLUTION NO. 24-12 REGARDING THE WINDING UP AND DISSOLUTION OF THE HEALTH EFFECTS OF AIR POLLUTION FOUNDATION.

THE MOTION PASSED BY THE FOLLOWING VOTE:

AYES: Cacciotti, Delgado, Do, Kracov (except Item 2A), McCallon, Perez, Raman, Rodriguez (except Item 22), and Solache

NOES: None

ABSTAIN: Rodriguez (Item 22 only)

RECUSE: Kracov (Item 2A only)

ABSENT: Lock Dawson, Hagman, Mitchell, and Padilla-Campos

<u>Legislation/Agenda Item</u>	<u>Recommended Action</u>
AB 1857 (Jackson) State Air Resources Board: air quality regulation: valleys.	Oppose
AB 2561 (McKinnor) Local public employees: vacant positions	Oppose Unless Amended
SB 1095 (Becker) Cozy Homes Cleanup Act: building standards: gas fuel burning appliances.	Support (THIS ITEM WAS PULLED FROM CONSIDERATION)
SB 1193 (Menjivar) Airports: leaded aviation gasoline	Support

PUBLIC HEARING

29. Determine That Proposed Amendments to Regulation III – Fees Are Exempt from CEQA; Amend Regulation III – Fees; and Adopt Executive Officer's Proposed Goals and Priority Objectives, and Proposed Budget for FY 2024-25

Sujata Jain, Chief Financial Officer/Deputy Executive Officer, gave the staff presentation on the Executive Officer's Proposed Goals and Priority Objectives, and Proposed Budget for FY 2024-25; and Mike Krause, Assistant Deputy Executive Officer/Planning, Rule Development and Implementation, gave the staff presentation on the proposed amendments to Regulation III.

Mayor McCallon expressed his reservations about drawing from the reserves to balance the budget. For additional details, please refer to the [Webcast](#) beginning at 30:24.

Mayor Pro Tem Rodriguez recommended that staff works to ensure that the agency does not go below the 20 percent threshold for the reserves and supported the comments from Mayor McCallon. Ms. Jain explained that staff provides quarterly budget numbers so the Board stays informed about the budget. Mr. Nastri commented about the conservative forecasting of the fifth-year projection. For additional details, please refer to the [Webcast](#) beginning at 31:42.

Vice Chair Cacciotti, Supervisor Perez, and Chair Delgado supported Mayor McCallon's and Mayor Rodriguez's comments and Executive Officer Nastri's comments. For additional details, please refer to the [Webcast](#) beginning at 33:51.

The public comment period was opened for Agenda Item No. 29 and the following individuals addressed the Board.

Harvey Eder, Public Solar Power Coalition, was cut off because he was speaking off topic. For additional details, please refer to the [Webcast](#) beginning at 40:05.

Rita Loof, RadTech International, commented on UV/EB/LED processes and thanked the Board for their willingness to engage in technical discussions that involve complex issues related to air quality policies that have been in place for decades and do not easily accommodate new pollution prevention technologies. She expressed support for the Rule 301 proposal, noting that it will help companies who invest in new technologies. For additional details, please refer to the [Webcast](#) beginning at 41:35.

There being no further requests to speak, the public comment period was closed for Agenda Item No. 29.

Mayor Solache commented on the need to be mindful of the concerns of small businesses when proposing fee increases. For additional details, please refer to the [Webcast](#) beginning at 43:32.

Board Action (Item 29)

MOVED BY MCCALLON AND SECONDED BY CACCIOTTI TO APPROVE AGENDA ITEM NO. 29 AS RECOMMENDED AND SET FORTH BELOW:

- 1) ADOPT RESOLUTION NO. 24-13:
 - A. DETERMINING THAT THE PROPOSED AMENDMENTS TO REGULATION III – FEES, WHICH INCLUDE PROPOSED AMENDED RULE 301 – PERMITTING AND ASSOCIATED FEES, PROPOSED AMENDED RULE 303 – HEARING BOARD FEES, PROPOSED AMENDED RULE 304 – EQUIPMENT, MATERIALS AND AMBIENT AIR ANALYSES, PROPOSED AMENDED RULE 304.1 – ANALYSES FEES, PROPOSED AMENDED RULE 306 – PLAN FEES, PROPOSED AMENDED RULE 307.1 – ALTERNATIVE FEES FOR AIR TOXICS EMISSIONS INVENTORY, PROPOSED AMENDED RULE 308 – ON-ROAD MOTOR VEHICLE MITIGATION OPTIONS FEES, PROPOSED AMENDED RULE 309 – FEES FOR REGULATION XVI AND REGULATION XXV, PROPOSED AMENDED RULE 311 – AIR QUALITY INVESTMENT PROGRAM (AQIP) FEES, PROPOSED AMENDED RULE 313 – AUTHORITY TO ADJUST FEES AND DUE DATES, PROPOSED AMENDED RULE 314 – FEES FOR ARCHITECTURAL COATINGS, PROPOSED AMENDED RULE 315 – FEES FOR TRAINING CLASSES AND LICENSE RENEWAL, AND PROPOSED AMENDED RULE 316 – FEES FOR RULE 2305, ARE EXEMPT FROM THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; AND
 - B. AMENDING REGULATION III – FEES, WHICH INCLUDES PROPOSED AMENDED RULES 301, 303, 304, 304.1, 306, 307.1, 308, 309, 311, 313, 314, 315, AND 316.
- 2) APPROVE THE EXECUTIVE OFFICER'S PROPOSED GOALS AND PRIORITY OBJECTIVES, AND PROPOSED BUDGET FOR FY 2024-25;
- 3) REMOVE FROM RESERVES AND DESIGNATIONS ALL AMOUNTS ASSOCIATED WITH THE FY 2023-24 BUDGET;

4) APPROVE APPROPRIATIONS IN THE MAJOR OBJECTS FOR FY 2024-25 OF:

Salary and Employee Benefits	\$174,519,397
Services and Supplies	31,492,598
Capital Outlays	3,418,500
Transfers Out	<u>2,000,000</u>
Total	<u>\$211,430,495</u>

5) APPROVE REVENUES FOR FY 2024-25 OF \$209,545,500;

6) APPROVE THE DELETION OF TWO NET AUTHORIZED/FUNDED POSITIONS AS DETAILED IN THE FY 2024-25 BUDGET; AND

7) APPROVE A PROJECTED JUNE 30, 2025 FUND BALANCE OF THE FOLLOWING:

Classification ¹	Reserves/Unreserved Designations	Amount
Committed	Reserve for Encumbrances	\$19,900,000
Nonspendable	Reserve for Inventory of Supplies	80,000
Assigned	Designated for Enhanced Compliance Activities	883,018
Assigned	Designated for Other Post Employment Benefit (OPEB) Obligations	2,952,496
Assigned	Designated for Permit Streamlining	234,159
Assigned	Designated for Self-Insurance	2,000,000
Assigned	Designated for Unemployment Claims	80,000
Total Reserved & Unreserved Designations		\$26,129,673
Unassigned	Undesignated Fund Balance	\$75,607,207
¹ The fund balance classifications of Committed, Nonspendable, Assigned, and Unassigned are established by the Government Accounting Standards Board 54.		

THE MOTION PASSED BY THE FOLLOWING VOTE:

AYES: Cacciotti, Delgado, Do, Kracov, McCallon, Perez, Raman, Rodriguez, and Solache

NOES: None

ABSENT: Lock Dawson, Hagman, Mitchell, and Padilla-Campos

CLOSED SESSION

The Board recessed to closed session at 9:42 a.m. pursuant to Government Code sections:

CONFERENCE WITH LEGAL COUNSEL – EXISTING LITIGATION

- 54956.9(a) and 54956.9(d)(1) to confer with its counsel regarding pending litigation which has been initiated formally and to which the SCAQMD is a party. The action is:

In the Matter of South Coast Air Quality Management District v. Baker Commodities, South Coast AQMD Hearing Board Case No. 6223-1 (Order for Abatement); Baker Commodities, Inc. v. South Coast Air Quality Management District Hearing Board; South Coast Air Quality Management District; South Coast Air Quality Management District Hearing Board Members: Cynthia Verdugo-Peralta, Robert Pearman, Micah Ali, and Allan Bernstein, DPM MBA, in their official capacities only; and 100 Does and Roes, Los Angeles County Superior Court, Case No. 22STCP03597; and

South Coast Air Quality Management District v. EPA, U.S. District Court for the Central District of California, Case No. 2:23-cv-02646.

CONFERENCE WITH LEGAL COUNSEL – INITIATING LITIGATION

- 54956.9(a) and 54956.9(d)(4) to consider initiation of litigation in one case.

Following closed session, Bayron Gilchrist, General Counsel, announced that there were no reportable actions taken in closed session.

ADJOURNMENT

There being no further business, the meeting was adjourned by Mr. Gilchrist at 10:57 a.m.

The foregoing is a true statement of the proceedings held by the South Coast Air Quality Management District Board on May 3, 2024.

Respectfully Submitted,

Faye Thomas
Clerk of the Boards

Date Minutes Approved: _____

Vanessa Delgado, Chair

ACRONYMS

AQMP = Air Quality Management Plan
CAPCOA = California Air Pollution Control Officers Association
CARB = California Air Resources Board
CEQA = California Environmental Quality Act
FY = Fiscal Year
MSRC = Mobile Source Air Pollution Reduction Review Committee
UV/EB/LED = Ultraviolet/Electron Beam/Light-Emitting

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 2

PROPOSAL: Set Public Hearings August 2, 2024 to Consider Adoption of and/or Amendments to South Coast AQMD Rules and Regulations:

A. Determine That Proposed Amended Rule 1148.1 – Oil and Gas Production Wells, Is Exempt from CEQA; and Amend Rule 1148.1

Rule 1148.1 – Oil and Gas Production Wells applies to facilities that operate oil and gas wells. Proposed Amended Rule (PAR) 1148.1 will address objectives of the Wilmington, Carson, and West Long Beach and South Los Angeles AB 617 communities. PAR 1148.1 requires the use of enhanced leak detection technology, equipment that uses produced gas to meet specific NOx limits, and workover rigs to use Tier 4 Final diesel engines. PAR 1148.1 also bans the use of odorants and updates signage requirements. This action is to adopt the Resolution: 1) Determining that Proposed Amended Rule 1148.1 – Oil and Gas Production Wells, is exempt from the requirements of the California Environmental Quality Act, and 2) Amending Rule 1148.1. (Reviewed: Stationary Source Committee, May 17, 2024)

B. Determine That Proposed Rule 2306 – Freight Rail Yards Does Not Require a New Environmental Document; Determine That Proposed Rule 316.2 – Fees for Rule 2306 Is Exempt From CEQA; and Adopt Proposed Rules 2306 and 316.2

Proposed Rule 2306 seeks to reduce NOx emissions associated with freight rail yard operations by requiring operators of freight rail yards to meet or exceed emission reduction targets. The proposed rule will ensure that emission reductions will be proportional or greater in the South Coast AQMD relative to reductions throughout California from implementation of state regulations. Additionally, any state or local government agency contracting with the owner or operator of a freight rail yard in relation to its lease, construction, or operation will be required to include requirements for rule compliance in new, renewed, or amended contracts. Proposed Rule 316.2 will establish fees for owners and operators of freight rail yards to recover costs incurred by South Coast AQMD for implementation of Proposed Rule

2306. If adopted, Proposed Rule 2306 will be submitted to CARB for their consideration and transmittal to U.S. EPA. (Reviewed: Mobile Source Committee, January 19, 2024, April 19, 2024, and June 21, 2024)

The complete text of the proposed and proposed amended rules, staff report and other supporting documents will be available from the South Coast AQMD's Public Information Center at (909) 396-2001, or Mr. Derrick Alatorre – Deputy Executive Officer/Public Advisor, South Coast AQMD, 21865 Copley Drive, Diamond Bar, CA 91765, (909) 396-2432, dalatorre@aqmd.gov and on the Internet (www.aqmd.gov) as of July 2, 2024.

RECOMMENDED ACTIONS:

Set Public Hearings August 2, 2024 to: 1) Determine That Proposed Amended Rule 1148.1 – Oil and Gas Production Wells, Is Exempt from CEQA; and Amend Rule 1148.1; and 2) A. Determine That Proposed Rule 2306 – Freight Rail Yards Does Not Require a New Environmental Document; Determine That Proposed Rule 316.2 – Fees for Rule 2306 Is Exempt From CEQA; and Adopt Proposed Rules 2306 and 316.2

Wayne Nastri
Executive Officer

FT

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 3

PROPOSAL: Recognize Revenue, Appropriate Funds and Issue Solicitation and Purchase Order for Laboratory Equipment

SYNOPSIS: South Coast AQMD is expected to receive grant funds up to \$270,006 from U.S. EPA for the NATTS Monitoring Program. This action is to recognize revenue, appropriate funds and issue a sole source purchase order for Laboratory equipment.

COMMITTEE: Administrative, May 9, 2024; Recommended for Approval

RECOMMENDED ACTIONS:

1. Recognize revenue upon receipt, and appropriate up to \$93,245 (\$176,761 is recognized in FY 2024-25 Budget for Salaries, Employee Benefits, and Indirect Costs) into the Monitoring and Analysis' (MAD) FY 2024-25 Budget as set forth in Attachment 1; and
2. Authorize the Procurement Manager, in accordance with South Coast AQMD's Procurement Policy and Procedure, to issue a sole source purchase order for laboratory equipment as listed in Table 1.

Wayne Nastri
Executive Officer

JCL:AP:RMB:ld:ir:eq

Background

There are currently 188 hazardous air pollutants (HAPs), or air toxics regulated under the Clean Air Act that are associated with a wide variety of adverse health effects including cancer and neurological effects. The NATTS Program was developed to fulfill the need for long-term national HAP monitoring data. In 2007, U.S. EPA expanded the NATTS Program and awarded Section 103 funds to conduct monitoring for toxic air contaminants at two existing monitoring sites, Central Los Angeles, and Rubidoux. The air toxics data serves as a continuum between past and future air toxic measurement programs, such as MATES, and allows for more ongoing evaluation of toxic trends on a regional basis using the most robust air measurement methods. South Coast AQMD is expected to receive up to \$270,006 from U.S. EPA for the annually funded NATTS

Program for the operation and maintenance of the monitoring program for FY 2024-25. Revenue for this grant in the amount of \$176,761 has already been included in the FY 2024-25 Budget.

Proposal

This action is to recognize, upon receipt, the remaining grant revenue up to \$93,245 not included in the FY 2024-25 Budget, appropriate it into MAD's FY 2024-25 Budget as set forth in Attachment 1, and issue sole source purchase order as described below.

The procurement of a Milestone TraceClean Acid Steam Cleaning System is critical to maintain the laboratory's operational capacity and ensure ongoing compliance with NATTS program requirements. The current acid cleaning system used for NATTS metals analysis is outdated, being more than 15 years old and no longer supported by the manufacturer. This system is the sole means for acid cleaning in the laboratory, and if it fails that will halt the laboratory's ability to perform metals analysis as required as part of the NATTS program. To address this, the laboratory proposes the purchase of the Milestone TraceClean Acid Steam Cleaning System at an estimated cost of \$25,000 as listed in Table 1. The purchase will be made as a sole source purchase followed by the issuance of a purchase order.

Sole Source Justification

Section VIII.B.3 of South Coast AQMD's Procurement Policy and Procedure identifies four major provisions under which a sole source award funded in whole or in part with federal funds, may be justified. Specifically, this request for sole source award is made under provision VIII.B.3.a., the item is available only from a single source. The Milestone TraceClean Acid Steam Cleaning System is a unique acid steam cleaning system that can operate safely without the use of a fume hood and eliminates the operator's exposure to vapors throughout the cleaning process.

Resource Impacts

U.S. EPA funding will support the continuation of the NATTS Monitoring Program.

Table 1
Proposed Purchase through Sole Source Purchase Order

Description	Qty	Funding Source	Estimated Amount
Milestone TraceClean Acid Steam Cleaning System	1	U.S EPA NATTS FY 2024-25	\$25,000
Total			\$25,000

Attachment

Proposed NATTS Expenditures for FY 2024-25

Attachment 1
Proposed NATTS Expenditures for FY 2024-25

Account Description	Account Number	Program Code	Estimated Expenditures*
Services & Supplies Major Object:			
Maintenance of Equipment	67600	47468	\$30,000
Travel	67800	47468	\$6,000
Laboratory Supplies	68050	47468	\$30,000
Office Expense	68100	47468	\$1,033
Small Tools, Instruments, Equipment	68300	47468	\$1,212
Total Services & Supplies Major Object:			\$68,245
Capital Outlay Major Object:			
Milestone TraceClean Acid Steam Cleaning System (1)*	77000	47468	\$25,000
Total Capital Outlay Major Object:			\$25,000
Total Appropriations			\$93,245

*Expenditures may be appropriated in Services and Supplies and/or Capital Outlays Major Objects as warranted.

Note: Salaries, Benefits, and Indirect Costs are included in the FY 2024-25 Budget.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 4

PROPOSAL: Appropriate Funds, Issue Solicitation and Purchase Orders to Meet Operational Needs for Rule 1180 Air Monitoring Program

SYNOPSIS: Rule 1180 established a fee schedule to fund community air monitoring stations to provide air quality information and notification to the public on refinery emissions in neighboring communities. The FY 2023-24 budget for this program includes approximately \$4.6 million in annual fees from refineries for community air monitoring. These actions are to appropriate up to \$199,000 from the General Fund Undesignated (Unassigned) Fund Balance to Monitoring and Analysis' FY 2023-24 and/or FY 2024-25 Budget, issue a solicitation and purchase orders to meet operational needs of the Rule 1180 Air Monitoring Program.

COMMITTEE: Administrative, May 9, 2024; Recommended for Approval

RECOMMENDED ACTIONS:

1. Appropriate up to \$199,000 from the General Fund Undesignated (Unassigned) fund balance for Rule 1180 activities into the Monitoring and Analysis' (MAD) FY 2023-24 and/or 2024-25 Budget (Org 42), Capital Outlays (up to \$119,000), and Services & Supplies (up to \$80,000) Major Object as indicated in Tables 1 and 2;
2. Authorize the Procurement Manager, in accordance with South Coast AQMD Procurement Policy and Procedure, to issue a solicitation, and based on the results of the solicitation, issue a purchase order for installed safety railings and ladders at Rule 1180 community air monitoring shelters, where needed, in an amount not to exceed \$81,000, as listed in Table 1; and
3. Authorize the Procurement Manager, in accordance with South Coast AQMD's Procurement Policy and Procedure, to issue sole source purchase orders for the following items in support of Rule 1180 community air monitoring as listed in Tables 1 and 2:
 - a. One hydrogen sulfide/sulfur dioxide (H₂S/SO₂) analyzer from Teledyne Advanced Pollution Instrumentation (Teledyne) in an amount not to exceed \$25,000;
 - b. One air conditioning system including installation from KLM HVAC and Refrigeration (KLM HVAC) in an amount not to exceed \$13,000;

- c. Up to ten liquid nitrogen microdosing systems from FluxSense, Inc. (FluxSense) in an amount not to exceed \$50,000; and
- d. Up to three specialized optical fibers including installation from FluxSense in an amount not to exceed \$30,000.

Wayne Natri
Executive Officer

JCL:AP:OP:ld:ir:kdl

Background

Rule 1180 - Refinery Fenceline and Community Air Monitoring was adopted by the Board in December 2017 and requires all seven major refineries in the South Coast Air Basin (Basin) to measure the ambient levels of various air pollutants at their fenceline, and notify the public if the concentration of any pollutant is above pre-determined threshold levels. Rule 1180 also established a fee schedule for these refineries to fund the installation, operation, and maintenance of community air monitoring stations (operated by South Coast AQMD) to provide air quality information and notifications to the public.

The requirements of Rule 1180 apply to the following seven facilities:

- Tesoro Refining & Marketing Company, LLC, Carson;
- Tesoro Refining & Marketing Company, LLC, Wilmington;
- Torrance Refining Company, LLC, Torrance;
- Chevron Products Company, El Segundo;
- Phillips 66 Company, Los Angeles Refinery, Carson;
- Phillips 66 Company, Los Angeles Refinery, Wilmington; and
- Valero Wilmington Refinery (permitted as Ultramar, Inc.), Wilmington.

The Rule 1180 refinery fenceline and community air monitoring network has been in operation since January 2020. To satisfy the Rule requirements, novel optical remote sensing (ORS), automated gas chromatography, and traditional analyzers have been installed at fenceline and community air monitoring sites, making this network the first of its kind in terms of complexity and technologies deployed.

Proposal

This action is to appropriate up to \$199,000 from the General Fund Undesignated (Unassigned) Fund Balance for Rule 1180 activities into the MAD FY 2023-24 and/or 2024-25 Budget (Org 42) Capital Outlays and Services & Supplies Major Object, as indicated in Tables 1 and 2. This action is also to issue a solicitation and purchase orders to meet operational needs of the Rule 1180 Air Monitoring Program, as shown in Tables 1 and 2.

Proposed Purchase through Solicitation

Safety Railings and Ladders for Air Monitoring Containers

Rule 1180 community air monitoring stations are housed in office containers or trailers. There is a need to outfit the containers with safety railings and ladders to maintain a safe workspace for staff while conducting maintenance and quality assurance activities. This action is to issue a solicitation, and based on the results of this solicitation, issue a purchase order for installation of safety railings and ladders in an amount not to exceed \$81,000.

Proposed Purchases through Sole Source

H2S/SO2 Analyzer

H2S/SO2 multi-pollutant analyzers are deployed at all Rule 1180 community air monitoring sites. The technical specifications of an H2S/SO2 analyzer manufactured by Teledyne is consistent with the equipment already operating within the South Coast AQMD community network for Rule 1180, and other community and federal air monitoring programs. One additional unit is needed for quality assurance and equipment verification purposes. This sole source purchase of one H2S/SO2 multi-pollutant analyzer from Teledyne will not exceed \$25,000 as listed in Table 1.

Air Conditioning System

Air conditioning systems are used to maintain stable temperature conditions inside the Rule 1180 community air monitoring stations and need to be replaced every three to five years. This community air monitoring network has been in operation for more than four years, and one spare air conditioning system is needed in case one of the existing air conditioning units experiences a failure. KLM HVAC is a local business in Long Beach that has an extensive expertise in the installation, service, and repair of air conditioning systems in South Coast AQMD air monitoring stations. KLM HVAC has an in-depth understanding of controlled-environment requirements to operate air monitoring instrumentation and is uniquely qualified to select and install the appropriate air conditioning equipment. The cost to purchase and install an air conditioning system will not exceed \$13,000 as listed in Table 1.

Liquid Nitrogen Microdosing Systems

Fourier Transform InfraRed (FTIR) optical multi-pollutant analyzers have been in constant operation at ten Rule 1180 community air monitoring stations since January 2020. Liquid nitrogen microdosing systems, that are part of FTIR analyzers, ensure uninterrupted FTIR detector cooling, and need to be replaced approximately every five years. FluxSense is the sole source provider of FTIR optical analyzers, including the liquid nitrogen microdosing systems. The cost to purchase and install up to ten liquid nitrogen microdosing systems from FluxSense will not exceed \$50,000 as listed in Table 2.

Specialized Optical Fibers

Optical multi-pollutant analyzers have been in constant operation at ten Rule 1180 community air monitoring stations since January 2020. Optical fibers are critical components of the optical multi-pollutant analyzers, and three spare fibers are needed in case one of the existing units experiences a failure. FluxSense is the sole source provider of optical multi-pollutant analyzer and specialized optical fibers. The cost to purchase and install up to three specialized optical fibers will not exceed \$30,000 as listed in Table 2.

Sole Source Justification

Section VIII.B.2 of the Procurement Policy and Procedure identifies four major provisions under which a sole source award may be justified. The request for sole source purchases of H2S/SO2 analyzers from Teledyne and liquid nitrogen microdosing systems and specialized optical fibers from FluxSense are made under Sections VIII.B.2.c (1): The unique experience and capabilities of the proposed contractor; VIII.B.2.c (2): The project involves the use of proprietary technology; and VIII.B.2.d (6): Projects requiring compatibility with existing specialized equipment. There are no other vendors who can provide this equipment, supplies, and installation meeting all required specifications and that are compatible with existing specialized equipment already in operation.

The request for sole source purchase of an air conditioning system from KLM HVAC is made under Section VIII.B.2.d (6): Projects requiring compatibility with existing specialized equipment. KLM HVAC is a local business that is an established vendor with South Coast AQMD, has been providing air conditioning systems compatible with existing air monitoring stations and equipment, and has provided reliable services to support air monitoring efforts for the last decade.

Benefits to South Coast AQMD

Funding for the implementation of Rule 1180 will allow South Coast AQMD to fulfill the requirements of this fenceline and community air monitoring program, which will result in benefits to environmental justice communities and others working and residing in the Basin near refineries.

Resource Impacts

Rule 1180 annual fees will provide resources for ongoing community air monitoring operation and maintenance. Sufficient funding is available in the Undesignated (Unassigned) Fund Balance from Rule 1180 prior year budget savings to support the activities outlined in this Board letter.

Table 1
FYs 2023-24 and/or 2024-25
Proposed Capital Outlays Expenditures for Rule 1180

Description	Qty	Appropriation from Prior Years Budget Savings	Procurement Method
Safety Railings and Ladders for Air Monitoring Containers*	Up to 9	\$81,000	Solicitation
H2S/SO2 Multi-pollutant Analyzer*	1	\$25,000	Sole Source
Air Conditioning System*	1	\$13,000	Sole Source
Total		Up to \$119,000	

*Expenditures may be appropriated as Capital Outlays or Services & Supplies Major Object, as warranted.

Table 2
FYs 2023-24 and/or 2024-25
Proposed Services and Supplies Expenditures for Rule 1180

Description	Qty	Appropriation from Prior Years Budget Savings	Procurement Method
Liquid Nitrogen Microdosing Systems*	Up to 10	\$50,000	Sole Source
Specialized Optical Fibers*	Up to 3	\$30,000	Sole Source
Total		Up to \$80,000	

*Expenditures may be appropriated as Services & Supplies or Capital Outlays Major Object, as warranted.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 5

PROPOSAL: Authorize Purchase of OnBase Software Support

SYNOPSIS South Coast AQMD uses OnBase software for its electronic document management system to manage critical documents and to support South Coast AQMD's Record Retention Policy. The software subscription and support for OnBase expires on July 31, 2024. This action is to obtain approval for sole source purchase of OnBase software subscription and support for one year from Information Management's FY 2024-25 Budget. Funds for this purchase (\$200,000) are conditional on approval of the Proposed FY 2024-25 Budget.

COMMITTEE: Administrative, May 9, 2024; Recommended for Approval

RECOMMENDED ACTION:

Authorize the Procurement Manager to purchase OnBase software subscription and support for one year from Hyland Software at a cost not to exceed \$200,000 contingent on approval of this funding in Information Management's Proposed FY 2024-25 Budget, Services and Supplies Major Object, Professional and Special Services Account.

Wayne Nastri
Executive Officer

RMM:HL;mf

Background

South Coast AQMD uses OnBase software as its electronic document management system, which has maintained South Coast AQMD documents and other critical records since 1990. Total storage to date is over three million multi-page documents. OnBase is used by many of South Coast AQMD's mission critical web applications including Online Application Filing, Asbestos Notifications, and Oil and Gas Well Electronic Notification and Reporting. OnBase is a Windows-based, menu-driven, document

management system designed to store and retrieve critical documents in electronic format. The system provides concurrent information to multiple workstations simultaneously. It has a flexible compound document structure where black-and-white or color images co-exist with text and data within a single document. It stores various types of documents such as Microsoft Word documents, Outlook emails, PDFs, videos and data files.

The system includes document routing and ad-hoc, scheduled point-to-point, and broadcast distribution of documents. It contains a complete set of markup and annotation tools that allow users to add notes, comments and drawings to pages without compromising the original document's integrity. The system has full network support so information can be distributed rapidly within an organization regardless of system architecture. Finally, the system has an extensive number of features to allow the secure display of documents on South Coast AQMD's internal and external websites and on iPhone, iPad and Android mobile applications. The OnBase software subscription and support expires on July 31, 2024.

Proposal

Hyland Software is the sole manufacturer and provider of OnBase software and is, therefore, the only source for its maintenance support licensing agreements. Staff recommends the purchase of OnBase software subscription and support for one year from Hyland Software at a cost of \$200,000.

Sole Source Justification

Section VIII.B.2 of the Procurement Policy and Procedure identifies circumstances under which a sole source purchase award may be justified. This request for a sole source award is made under provision VIII.B.2.c.(2) and (3). The products and services are available from only Hyland Software; involves the use of proprietary technology; and uses key contractor-owned assets for project performance. The cost of these support services reflects General Services Administration pricing.

Resource Impacts

Sufficient funds are included in Information Management's Proposed FY 2024-25 Budget within the Services and Supplies Major Object Professional and Special Services Account.

 [Back to Agenda](#)

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 6

PROPOSAL: Issue RFP for Legislative Representation in Washington, D.C.

SYNOPSIS: The current contracts for federal legislative representation in Washington, D.C. expire on January 14, 2025. This action is to issue an RFP for federal legislative representation and consulting services for South Coast AQMD in Washington, D.C. for 2025. The RFP will also indicate that the contract(s) may be extended for up to two additional one-year extensions.

COMMITTEE: Administrative, May 10, 2024; Recommended for Approval

RECOMMENDED ACTION:

Approve release of RFP #P2024-10 to solicit proposals for legislative representation in Washington, D.C. at a cost not to exceed \$665,000 for the initial one-year period.

Wayne Nastri
Executive Officer

DJA:LTO:EJH

Background

South Coast AQMD is responsible for air quality issues on an order of magnitude that is unlike any other region in the nation. It is critical for South Coast AQMD to have a consistent and actively engaged presence in Washington, D.C. to advocate for policies and funding to support attainment of federal standards under the Clean Air Act. South Coast AQMD is also looked to as a leader in air quality issues and is an important contributor to national policymaking discussions. This effort includes policy development for air quality-related legislation, Clean Air Act implementation, subvention funding and special grants, incentive funding, and other issues.

Therefore, it is appropriate to continue direct federal representation to advocate for South Coast AQMD in support of Governing Board priorities in Washington, D.C. The current contracts for legislative representation in Washington, D.C. expires on January 14, 2025.

The 2025 South Coast AQMD Legislative Guiding Principles and Policy Priorities in Washington, D.C. will focus on policy and funding, especially for mobile sources impacting the South Coast region. The federal representatives will be required to engage with the Administration, Congress, industry, environment and health organizations, labor, federal agencies, and other stakeholders. South Coast AQMD will conduct advocacy trips on our own and potentially with other government agencies, community-based organizations, industry, and other stakeholders. The 2025 legislative priorities will likely include the following:

Air Quality Funding (Authorization of Program/Policies and Appropriations of Funds)

Increase and protect existing and seek new funding sources that support South Coast AQMD programs and priorities to reach attainment of state and federal ambient air quality standards and reduce hazardous air pollutants to protect public health. Examples of programs are, but not limited to, Targeted Airshed Grants, Diesel Emissions Reduction Act, Clean Ports, Port Infrastructure Development Program, National Electric Vehicle Infrastructure, Charging and Fueling Infrastructure Grants for Corridors and Communities, Clean Heavy-Duty Trucks, Reduction of Emissions at Port, Section 103/105, annual Appropriations, and other programs.

South Coast AQMD Authority / Policy Implementation

Defend and ensure adequate South Coast AQMD authority for implementation of the Board's clean air policies and programs, including those required by the federal Clean Air Act and other federal and state laws to support AQMPs and SIPs.

Federal Support – Clean Air Act, National Ambient Air Quality Standards (NAAQS), and SIPs

Work to ensure the federal government (Administration, Agencies and Congress) do their fair share to reduce air pollution with a focus on mobile sources, within the South Coast region through funding, regulations, and administration actions. In particular, South Coast AQMD requires federal action to: 1) Maximize funding opportunities under the Bipartisan Infrastructure Law, Inflation Reduction Act, and other public laws; 2) Provide incentive funding, policies, and develop regulatory actions sufficient to, in combination with state and local actions, attain ozone and PM 2.5 NAAQS in the South Coast Air Basin, and if standards are not attained due to lack of federal actions, ensure that the Basin is not punished by sanctions, fees or any other penalties; 3) Provide support for and protect state and local regulatory authority for nonattainment areas to meet NAAQS for upcoming federal deadlines, and South Coast AQMD to implement AQMPs and attain federal ozone and particulate matter standards; and, 4) Protect science-driven and health-based determinations of NAAQS, and efforts to streamline and provide flexible implementation of SIP requirements, as needed, to reach attainment.

Surface Transportation & Goods Movement

Pursue the adoption of legislation and/or policies which will reduce or eliminate air quality impacts from mobile sources with an emphasis on the goods movement sector including, but not limited to, medium- and heavy-duty vehicles, oceangoing vessels, locomotives, aircraft, and non-road equipment such as cargo handling and construction equipment.

Technology Advancement

Expand and secure funding, policies, and tax incentives for advanced clean technology research, development, demonstration, and deployment programs, including those related to:

- Technologies for zero-emission (ZE) and the cleanest vehicles such as heavy- and medium-duty trucks, locomotives, oceangoing vessels, aircraft, and non-road technologies and the cleanest stationary sources such as heaters, boilers, furnaces, engines, etc.), with prioritization of ZE technologies;
- Charging and fueling infrastructure for zero-emission technologies;
- Renewable energy and alternative energy, energy storage, microgrids and other programs, especially as related to electric and hydrogen infrastructure for transportation and clean back-up power;
- Technologies, systems and/or processes which reduce ambient concentrations of air pollutants and/or toxic air emissions;
- Establishing programs or policies that incentivize the federal government to purchase and use advanced clean technologies with prioritization for ZE; and,
- Incentivizing individuals, businesses, states, and local governments to purchase and use ZE technologies.

Environmental Justice

Support legislation and regulatory action that promotes environmental justice initiatives to reduce localized health risks, develop clean air technologies that directly benefit disproportionately impacted communities, and enhance community participation in decision-making.

Reduction of Toxic Emissions

Pursue efforts through legislative and administrative programs, to reduce toxic emissions, and the public's exposure to toxic emissions, within the South Coast region.

Climate Change

Seek to influence climate change initiatives and facilitate their implementation at local levels, including funding, to promote co-benefits with pollutants needed to achieve NAAQS and to reduce air toxic emissions, consistent with the Board's policy.

Business, Jobs Creation & Economy

Support legislation, policies or administrative actions that support and assist the regulated community in complying with rules and regulations in the most efficient and cost-effective manner that protects and encourages job retention and creation, and promotes economic growth, while working toward attainment of clean air standards.

Addressing Impacts of Natural and Manmade Events

Support and advocate for legislative and administrative policies, programs, and funding that reduce and/or mitigate air quality-related public health impacts within the South Coast region caused by wildfires, dust/sandstorms, odors, or other events.

Administrative Operations

Support and seek legislative and administrative policies, programs, funding and/or actions that ensure that South Coast AQMD can meet its administrative and operational needs related to human resources, health and safety or other.

Proposal

South Coast AQMD seeks the service(s) of a contractor(s) to support the Board's goals and objectives for 2025 in Washington D.C. The selected firm(s) will be expected to provide a variety of services consistent with the Board's direction. Funding for the initial year shall be up to a maximum amount of \$665,000. The contract(s) may include options for two annual renewals, contingent on satisfactory performance and approval of subsequent budgets, at the Board's discretion.

Bid Evaluation

Proposals received will be initially evaluated by a diverse panel of technically qualified individuals according to the criteria described in the attached RFP #P2024-10. The Legislative Committee is expected to conduct oral interviews with the most highly qualified bidders and will make a recommendation to the full Board for approval.

Outreach

In accordance with South Coast AQMD's Procurement Policy and Procedure, a public notice advertising the RFP and inviting bids will be published in the Los Angeles Times, the Orange County Register, the San Bernardino Sun, Riverside County Press Enterprise, Politico and The Hill newspapers to leverage the most cost-effective method of outreach.

Additionally, potential bidders may be notified utilizing South Coast AQMD's electronic listing of certified minority vendors. Notice of the RFP will be emailed broadly including, but not limited to, the Congressional Black, Hispanic, Asian Pacific Islander Caucuses and various minority chambers of commerce and business associations and placed on South Coast AQMD's website where it can be viewed by making the selection "Grants & Bids."

Resource Impacts

The funding for the first year is available in the Legislative & Public Affairs FY 2024-25 Budget. Funding for the two optional one-year extensions is contingent upon Board approval for the respective fiscal years.

Attachment

RFP #P2024-10 for Legislative Representation in Washington, D.C.

**SOUTH COAST AIR QUALITY MANAGEMENT
DISTRICT REQUEST FOR PROPOSALS
FOR LEGISLATIVE REPRESENTATION IN
WASHINGTON, D.C.**

P2024-10

South Coast Air Quality Management District (South Coast AQMD) requests proposals for the following purpose according to terms and conditions attached. In the preparation of this Request for Proposals (RFP) the words "Proposer," "Contractor," "Consultant," "Bidder" and "Firm" are used interchangeably.

PURPOSE

South Coast AQMD requires representation in Washington, D.C. to ensure that South Coast AQMD's input and policy priorities are conveyed in a timely and effective manner during the federal legislative and policy-setting process. It is critical that South Coast AQMD be involved in policy development relating to federal air quality legislation, federal Clean Air Act implementation, subvention funding and special grants, and other related issues, and that all these issues are closely monitored.

The purpose of this Request for Proposals (RFP) is to contract with outside representative(s) knowledgeable in air quality-related issues to provide assistance with and representation of South Coast AQMD policy positions and funding needs before the Congress, the White House and federal agencies. Consultant(s) shall be paid on a monthly basis for services rendered at an agreed upon Flat Monthly Fee and actual costs incurred for out-of-pocket expenses. The current South Coast AQMD contracts for legislative representation in Washington, D.C. expire on January 14, 2025.

The selected firm(s) will be expected to provide a variety of services, to be outlined in the work statement, and consistent with South Coast AQMD Governing Board direction. Total funding for the initial year shall be up to a maximum amount of **\$665,000**. The contract may include an option for two annual renewals, contingent on satisfactory performance and approval of subsequent budgets, upon approval of the Board.

INDEX – The following are contained in this RFP:

Attachment A - Participation in the Procurement Process	
Attachment B - Certifications and Representations	

SECTION I: BACKGROUND/INFORMATION

South Coast AQMD is the air pollution control agency for all of Orange County and the urban portions of Los Angeles, Riverside, and San Bernardino counties, the smoggiest region of the U.S. As a regulatory agency, South Coast AQMD is committed to protecting the health of residents of the four-county area from the harmful effects of air pollution, while remaining sensitive to businesses and the economic vitality of the region.

From time to time, South Coast AQMD requires the assistance of outside counsel having special expertise and experience as one of the largest air quality regulatory agencies in the United States and a leader in air quality innovations, South Coast AQMD is an important contributor to the national policymaking discussions relevant to air quality related issues. Given the fluid activity in Congress, the Administration and within federal agencies on air quality matters, our mandates to achieve National Ambient Air Quality Standards, and the large portion of federally regulated sources of pollution that challenge our ability to achieve attainment in the South Coast region, it is imperative that South Coast AQMD maintain a strong presence in Washington, D.C. Thus, South Coast AQMD seeks a contractual agreement with consultant(s) to support the South Coast AQMD Governing Board's Federal Legislative goals and objectives for 2025 in Washington D.C., in accordance with the requirements of this RFP.

Much of the 2025 South Coast AQMD legislative guiding principles and policy priorities in Washington, D.C. will depend on the outcome of the 2024 legislative session. However, many of 2024's program elements are expected to continue, and it is anticipated that there will be a need to build upon them in the coming 2025 legislative session in Washington, D.C. This ongoing presence at the federal level is essential for the achievement of meaningful progress. The 2025 South Coast AQMD legislative goals and objectives in Washington, D.C. will be focused on policy and funding, especially for mobile sources impacting the South Coast region. The federal representatives will be required to engage with the Administration, Congress, industry, environment and health organizations and other stakeholders. The 2025 legislative priorities will likely include the following:

South Coast AQMD Authority / Policy Implementation

Defend and ensure adequate South Coast AQMD authority for implementation of the Board's clean air policies and programs, including those required by the federal Clean Air Act and other federal and state laws to support Air Quality Management Plans (AQMP) and State Implementation Plans.

Federal Support – Clean Air Act, NAAQS, and State Implementation Plan (SIP)

Work to ensure the federal government (Administration, Agencies and Congress) do their fair share to reduce air pollution with a focus on mobile sources, within the South Coast region through funding, regulations, and administration actions. In particular, South Coast AQMD requires federal action to: 1) Maximize funding opportunities under the Bipartisan Infrastructure Law, Inflation Reduction Act, and other public laws 2) Provide incentive funding, policies, and require regulatory actions sufficient to, in combination with state and local actions, attain NAAQS for ozone by 2031 and 2037 in the South Coast Air Basin, and if standards are not attained due to lack of federal actions, ensure that the Basin is not punished by sanctions, fees or any other penalty

for failure to timely attain; 3) Provide support for and protect state and local regulatory authority for nonattainment areas to meet NAAQS for upcoming federal deadlines, and the South Coast AQMD to implement AQMPs and attain federal ozone and particulate matter standards; and, 4) Protect science-driven and health-based determinations of NAAQS, and efforts to streamline and provide flexible implementation of SIP requirements, as needed, to reach attainment.

Surface Transportation & Goods Movement

Pursue the adoption of legislation and/or policies which will reduce or eliminate air quality impacts from mobile sources with an emphasis on the goods movement sector including, but not limited to, medium- and heavy-duty vehicles, oceangoing vessels, locomotives, aircraft, and non-road equipment such as cargo handling and construction equipment.

Technology Advancement

Expand and secure funding, policies, and tax incentives for advanced clean technology research, development, demonstration, and deployment programs, including those related to:

- Technologies for zero-emission (ZE) and the cleanest vehicles such as heavy- and medium-duty trucks, locomotives, oceangoing vessels, aircraft, and non-road technologies and the cleanest stationary sources such as heaters, boilers, furnaces, engines, etc.), with prioritization of ZE technologies;
- Charging and fueling infrastructure, prioritizing zero-emission technologies where available;
- Renewable energy and alternative energy, energy storage, microgrids and other programs, especially as related to electric and hydrogen infrastructure for transportation and emissions reductions from sources such as back-up generators;
- Technologies, systems and/or processes which reduce ambient concentrations of air pollutants and/or toxic air emissions;
- Establishing programs or policies that incentivize the federal government to purchase and use advanced clean technologies with prioritization for ZE; and,
- Incentivizing individuals, businesses, states, and local governments to purchase and use ZE technologies.

Environmental Justice

Support legislation and regulatory action that promotes environmental justice initiatives to reduce localized health risks, develop clean air technologies that directly benefit disproportionately impacted communities, and enhance community participation in decision-making.

Reduction of Toxic Emissions

Pursue efforts through legislative and administrative programs, to reduce toxic emissions, and the public's exposure to toxic emissions, within the South Coast region.

Climate Change

Seek to influence climate change initiatives and facilitate their implementation at local levels, including funding, to promote co-benefits with pollutants needed to achieve NAAQS and to reduce air toxic emissions, consistent with the Board's policy.

Business, Jobs Creation & Economy

Support legislation, policies or administrative actions that support and assist the regulated community in complying with rules and regulations in the most efficient and cost-effective manner that protects and encourages job retention and creation, and promotes economic growth, while working toward attainment of clean air standards.

Addressing Impacts of Natural and Manmade Events

Support and advocate for legislative and administrative policies, programs, and funding that reduce and/or mitigate air quality-related public health impacts within the South Coast region caused by wildfires, dust/sandstorms, odors, or other events.

Administrative Operations

Support and seek legislative and administrative policies, programs, funding and/or actions that ensure that South Coast AQMD can meet its administrative and operational needs related to human resources, health and safety or other.

The 2025 legislative priorities for South Coast AQMD will be further refined and presented to the Board's Legislative Committee and the full Board for approval later in the year, as determined by the course of events in 2024.

SECTION II: CONTACT PERSON:

Questions regarding the content or intent of this RFP or on procedural matters should be addressed to:

Lisa Tanaka-O'Malley
Assistant Deputy Executive Officer
Legislative and Public Affairs
South Coast AQMD
21865 Copley Drive
Diamond Bar, CA 91765-4178
(909) 396-3327

SECTION III: SCHEDULE OF EVENTS

Date	Event
June 7, 2024	RFP Released
July 9, 2024	Proposals Due to South Coast AQMD - No Later Than 1:00 pm
July 9-July 16, 2024	Proposal Evaluations
September 13, 2024	Interviews, if required
October 4, 2024	Governing Board Approval
December 6, 2024	Anticipated Contract Execution

SECTION IV: PARTICIPATION IN THE PROCUREMENT PROCESS

It is the policy of South Coast AQMD to ensure that all businesses including minority business enterprises, women business enterprises, disabled veteran business enterprises and small businesses have a fair and equitable opportunity to compete for and participate in South Coast AQMD contracts. Attachment A to this RFP contains definitions and further information.

SECTION V: STATEMENT OF WORK/SCHEDULE OF DELIVERABLES

A. Statement of Work

Under the direction of the South Coast AQMD Executive Officer or Deputy Executive Officer of Legislative & Public Affairs, and, as appropriate, in coordination with South Coast AQMD's staff, the Consultant(s) will gather information, provide advice and assistance, and/or advocate positions on legislative/regulatory matters in Washington, D.C., on behalf of South Coast AQMD as it directly pertains to air quality-related issues, energy and climate issues, transportation issues, the federal Clean Air Act, and related issues.

The selected Consultant(s) will perform services on legislative/regulatory matters, including but not necessarily limited to the following:

1. Preparation of a strategic plan for the upcoming legislative year by no later than January 31, 2025, to ensure maximizing South Coast AQMD Board and staff participation and involvement, with an emphasis on increasing federal air quality program funding for the South Coast Air Basin; protecting the legal authorities of South Coast AQMD; promoting South Coast AQMD federal policy priorities, and reducing emissions from federally- controlled mobile sources;
2. Securing the support of South Coast AQMD's mission and positions by the decision- makers in the legislative and administrative bodies of the United States government;
3. Advising South Coast AQMD on federal issues as requested or as deemed necessary;
4. Advocating positions as directed by South Coast AQMD, on all identified and/or drafted legislation and administrative and other policy proposals; providing testimony at committee and other special hearings; and providing written communications to legislators, key administrative officials, and other staff regarding such legislation;
5. Assisting in the development of South Coast AQMD positions on identified air quality- related federal legislative proposals;
6. Producing materials destined for strategic distribution or inclusion in South Coast AQMD legislative committee/Board proceedings;
7. Reviewing and providing editorial and technical revisions and quality control for legislative materials destined for distribution or inclusion in South Coast AQMD legislative committee/Board proceedings;
8. Aiding South Coast AQMD in making appropriate contact(s) as the Agency participates directly in federal legislative negotiations, including securing additional federal funds for South Coast AQMD's clean air programs and activities;
9. Advising/assisting South Coast AQMD in presentation of requests to U.S. EPA or other federal agencies on policy matters impacting South Coast AQMD operations or its ability to meet the federal clean air standards;

10. Coordination of meetings for South Coast AQMD Board members and their executive or legislative staff with federal legislators and/or officials, as well as gathering proper briefing materials for each meeting;
11. Attending and participating in meetings exclusively on behalf of South Coast AQMD with legislative representatives and administration members and appointees;
12. Assisting with the development of a national stakeholder network and/or coalition to help facilitate national support for South Coast AQMD policy and funding priorities; and
13. Assisting with coordination, as needed, with any South Coast AQMD conferences, forums, symposia, meetings and/or briefings that are held in Washington, D.C. or otherwise related to federal issues.

B. Schedule of Deliverables

1. A written strategic and tactical implementation plan for 2025;
2. Written and/or oral communications to South Coast AQMD, in a timely manner, on federal legislation or policy matters having a potential to affect South Coast AQMD objectives;
3. Written analyses on federal legislation having a potential to affect air quality objectives;
4. Oral and/or written reports on federal legislative/policy meetings attended or monitored on behalf of South Coast AQMD;
5. Oral and/or written briefings to the South Coast AQMD Legislative Committee and/or Governing Board on federal legislation or policy, as determined by South Coast AQMD. These briefings may take place in person, by teleconference, or in writing;
6. Oral and/or written recommendations regarding South Coast AQMD positions on, and strategies for, federal air quality-related legislation or policies within 14 days of a request by South Coast AQMD;
7. Oral and/or written recommendations regarding ways to increase federal appropriations or other funding opportunities for clean air efforts in the Southern California region;
8. Written communications to legislators and key administrative officials conveying South Coast AQMD positions on various bills and administrative actions;
9. Preparing and presenting testimony before Congressional committees and/or federal agency hearings;
10. Attending and participating in meetings exclusively on behalf of South Coast AQMD with legislative representatives and administration members and appointees;
11. Negotiating bill language, policies or other federal agency provisions related to environmental, transportation or air quality issues;
12. A monthly written briefing covering pertinent administrative/legislative activities;
13. Written quarterly reports, a year-end report, and a year-end presentation delineating and summarizing relevant administrative and legislative actions;
14. An original signed confidentiality agreement; and

15. Maintaining records from which the correctness of all written records and filings can be verified. These records are to be open to inspection by South Coast AQMD or its representatives during normal business hours.

SECTION VI: REQUIRED QUALIFICATIONS

- A. Persons or firms proposing to bid on this proposal must be qualified and experienced in representing and advising governmental agencies and must submit qualifications demonstrating this ability in cases involving as many as possible of the following areas:
 1. Political and legislative analysis of the federal Clean Air Act;
 2. Preparing policy positions on environmental and air quality issues;
 3. Legislative monitoring and bill tracking;
 4. Congressional appropriations process;
 5. Preparing and presenting testimony before Congressional committees and/or federal agency hearings;
 6. Negotiating bill language, policies or other federal agency provisions related to environmental, transportation, energy or air quality issues;
 7. Ability to work proactively and productively with all political affiliations and points of view; and
 8. Demonstrated ability in successfully seeking and securing funding for represented clients.
- B. Proposer must submit the following:
 1. Resumes or similar statement of qualifications of person or persons who may be designated as lead Consultant for South Coast AQMD projects.
 2. List of representative clients.
 3. Summary of proposer's general qualifications to meet required qualifications and fulfill statement of work, including additional Firm personnel and resources beyond those of the designated lead Consultant.

SECTION VII: PROPOSAL SUBMITTAL REQUIREMENTS

Submitted proposals must follow the format outlined below and all requested information must be supplied. Failure to submit proposals in the required format will result in elimination from proposal evaluation. South Coast AQMD may modify the RFP or issue supplementary information or guidelines during the proposal preparation period prior to the due date. Please check our website for updates (<http://www.aqmd.gov/grants-bids>). The cost for developing the proposal is the responsibility of the Contractor and shall not be chargeable to South Coast AQMD.

Each proposal must be submitted in three separate volumes:

- Volume I - Technical Proposal
- Volume II - Cost Proposal
- Volume III - Certifications and Representations included in Attachment B to this RFP, must be completed and executed by an authorized official of the Contractor.

A separate cover letter including the name, address, and telephone number of the contractor, and signed by the person or persons authorized to represent the Firm should accompany the proposal submission. Firm contact information as follows should also be included in the cover letter:

1. Address and telephone number of office in, or nearest to, Diamond Bar, California.
2. Name and title of Firm's representative designated as contact.

A separate Table of Contents should be provided for Volumes I and II.

VOLUME I - TECHNICAL PROPOSAL

DO NOT INCLUDE ANY COST INFORMATION IN THE TECHNICAL VOLUME

Summary (Section A) - State overall approach to meeting the objectives and satisfying the scope of work to be performed, the sequence of activities, and a description of methodology or techniques to be used.

Program Schedule (Section B) - Provide projected milestones or benchmarks for completing the project (to include reports) within the total time allowed.

Project Organization (Section C) - Describe the proposed management structure, program monitoring procedures, and organization of the proposed team. Provide a statement detailing your approach to the project, specifically address the Firm's ability and willingness to commit and maintain staffing to successfully complete the project on the proposed schedule.

Qualifications (Section D) - Describe the technical capabilities of the Firm. Provide references of other similar studies or projects performed during the last five years demonstrating ability to successfully complete the work. Include contact name, title, and telephone number for any references listed. Provide a statement of your Firm's background and related experience in performing similar services for other governmental organizations.

Assigned Personnel (Section E) - Provide the following information about the staff to be assigned to this project:

1. List all key personnel assigned to the project by level, name, and location. Provide a resume or similar statement describing the background, qualifications and experience of the lead person and all persons assigned to the project. The substitute of project manager or lead personnel will not be permitted without prior written approval of South Coast AQMD.

2. Provide a spreadsheet of the labor hours proposed for each labor category at the task level.
3. Provide a statement indicating whether or not 90% of the work will be performed within the geographical boundaries of South Coast AQMD.
4. Provide a statement of education and training programs provided to, or required of, the staff identified for participation in the project, particularly with reference to management consulting, governmental practices and procedures, and technical matters.
5. Provide a summary of your Firm's general qualifications to meet required qualifications and fulfill statement of work, including additional Firm personnel and resources beyond those who may be assigned to the project.

Subcontractors (Section F) - This project may require expertise in multiple technical areas. List any subcontractors that will be used, identifying functions to be performed by them, their related qualifications and experience and the total number of hours or percentage of time they will spend on the project.

Conflict of Interest (Section G) - Address possible conflicts of interest with other clients affected by actions performed by the Firm on behalf of South Coast AQMD. South Coast AQMD recognizes that prospective Contractors may be performing similar projects for other clients. Include a complete list of such clients for the past three (3) years with the type of work performed and the total number of years performing such tasks for each client. Although the Proposer will not be automatically disqualified by reason of work performed for such clients, South Coast AQMD reserves the right to consider the nature and extent of such work in evaluating the proposal.

Additional Data (Section H) - Provide other essential data that may assist in the evaluation of this proposal.

VOLUME II - COST PROPOSAL

Name and Address - The Cost Proposal must list the name and complete address of the Proposer in the upper left-hand corner.

Cost Proposal - South Coast AQMD anticipates awarding a fixed price contract. Cost information must be provided as listed below:

1. Detail must be provided by the following categories:
 - A. Labor - The Cost Proposal must list the fully-burdened hourly rates and the total number of hours estimated for each level of professional and administrative staff to be used to perform the tasks required by this RFP. Costs should be estimated for each of the components of the work plan.
 - B. Subcontractor Costs - List subcontractor costs and identify subcontractors by name. Itemize subcontractor charges per hour or per day.
 - C. Travel Costs - Indicate amount of travel cost and basis of estimate to include trip destination, purpose of trip, length of trip, airline fare or mileage expense, per diem costs, lodging and car rental.
 - D. Other Direct Costs - This category may include such items as postage and mailing expense, printing and reproduction costs, etc. Provide a basis of estimate for these costs.

2. It is the policy of the South Coast AQMD to receive at least as favorable pricing, warranties, conditions, benefits and terms as other customers or clients making similar purchases or receiving similar services. South Coast AQMD will give preference, where appropriate, to vendors who certify that they will provide "most favored customer" status to the South Coast AQMD. To receive preference points, Proposer shall certify that South Coast AQMD is receiving "most favored customer" pricing in the Business Status Certifications page of Volume III, Attachment B – Certifications and Representations.

VOLUME III - CERTIFICATIONS AND REPRESENTATIONS

(see Attachment B to this RFP)

SECTION VIII: PROPOSAL SUBMISSION

All proposals must be submitted according to specifications set forth in the section above, and this section. Failure to adhere to these specifications may be cause for rejection of the proposal.

Signature - All proposals must be signed by an authorized representative of the Proposer.

Due Date - **All proposals are due no later than 1:00 p.m., July 9, 2024, and should be directed to:**

Procurement Unit
South Coast Air Quality
Management District 21865 Copley
Drive
Diamond Bar, CA 91765-
4178 (909) 396-3520

Submittal - Submit eight (8) complete copies of the proposal in a sealed envelope, plainly marked in the upper left-hand corner with the name and address of the Proposer and the words "Request for Proposals P2024-10."

Late bids/proposals will not be accepted under any circumstances.

Grounds for Rejection - A proposal may be immediately rejected if:

- It is not prepared in the format described, or
- It is signed by an individual not authorized to represent the Firm.

Modification or Withdrawal - Once submitted, proposals cannot be altered without the prior written consent of South Coast AQMD. All proposals shall constitute firm offers and may not be withdrawn for a period of ninety (90) days following the last day to accept proposals.

SECTION IX: PROPOSAL EVALUATION/CONTRACTOR SELECTION CRITERIA

- A. Proposals will be evaluated by a panel of three to five South Coast AQMD staff members familiar with the subject matter of the project. The panel shall be appointed by the Executive Officer or his designee. In addition, the evaluation panel may include such outside public sector or academic community expertise as deemed desirable by the Executive Officer. The panel will make a

recommendation to the Executive Officer and/or the Governing Board of South Coast AQMD for final selection of a contractor and negotiation of a contract.

- B. Each member of the evaluation panel shall be accorded equal weight in his or her rating of proposals. The evaluation panel members shall evaluate the proposals according to the specified criteria and numerical weightings set forth below.

a. R&D Projects Requiring Technical or Scientific Expertise, or Special Projects Requiring Unique Knowledge or Abilities

Understanding the Problem	20
Technical/Management Approach	20
Contractor Qualifications	20
Previous Experience on Similar Projects	10
Cost	<u>30</u>
TOTAL	100

b. Additional Points

Small Business or Small Business Joint Venture	10
DVBE or DVBE Joint Venture	10
Use of DVBE or Small Business Subcontractors	7
Zero or Near-Zero Emission Vehicle Business	5
Local Business (Non-Federally Funded Projects Only)	5
Off-Peak Hours Delivery Business	2
Most Favored Customer	2

The cumulative points awarded for small business, DVBE, use of small business or DVBE subcontractors, Zero or Near-Zero emission vehicle business, local business, and off-peak hours delivery business shall not exceed 15 points. Most Favored Customer status incentive points shall be added, as applicable for a total of 17 points.

Self-Certification for Additional Points

The award of these additional points shall be contingent upon Proposer completing the Self-Certification section of Attachment B – Certifications and Representations and/or inclusion of a statement in the proposal self-certifying that Proposer qualifies for additional points as detailed above.

1. To receive additional points in the evaluation process for the categories of Small Business or Small Business Joint Venture, DVBE or DVBE Joint Venture or Local Business (for non-federally funded projects), the proposer must submit a self-certification at the time of proposal submission certifying that the proposer meets the requirements set forth in Attachments A and B. To receive points for the use of DVBE and/or Small Business subcontractors, at least 25 percent of the total contract value must be subcontracted to DVBEs and/or Small Businesses. To receive points as a Zero or Near-Zero Emission Vehicle

Business, the proposer must demonstrate to the Executive Officer, or designee, that supplies and materials delivered to South Coast AQMD are delivered in vehicles that operate on clean-fuels. To receive points as a Local Business, the proposer must affirm that it has an ongoing business within the South Coast AQMD at the time of bid/proposal submittal and that 90% of the work related to the contract will be performed within the South Coast AQMD. Proposals for legislative representation, such as in Sacramento, California or Washington D.C. are not eligible for local business incentive points. Federally funded projects are not eligible for local business incentive points. To receive points as an Off-Peak Hours Delivery Business, the proposer must submit, at proposal submission, certification of its commitment to delivering supplies and materials to South Coast AQMD between the hours of 10:00 a.m. and 3:00 p.m. To receive points for Most Favored Customer status, the proposer must submit, at proposal submission, certification of its commitment to provide most favored customer status to the South Coast AQMD. The cumulative points awarded for Small Business, DVBE, use of Small Business or DVBE Subcontractors, Local Business, Zero or Near- Zero Emission Vehicle Business, Off-Peak Hour Delivery Business and Most Favored Customer shall not exceed 17 points.

2. For procurement of Research and Development (R & D) projects or projects requiring technical or scientific expertise or special projects requiring unique knowledge and abilities, technical factors including past experience shall be weighted at 70 points and cost shall be weighted at 30 points. A proposal must receive at least 56 out of 70 points on R & D projects and projects requiring technical or scientific expertise or special projects requiring unique knowledge and abilities, in order to be deemed qualified for award.
 3. The lowest cost proposal will be awarded the maximum cost points available and all other cost proposals will receive points on a prorated basis. For example if the lowest cost proposal is \$1,000 and the maximum points available are 30 points, this proposal would receive the full 30 points. If the next lowest cost proposal is \$1,100 it would receive 27 points reflecting the fact that it is 10% higher than the lowest cost (90% of 30 points = 27 points).
- C. During the selection process the evaluation panel may wish to interview some proposers for clarification purposes only. No new material will be permitted at this time. Additional information provided during the bid review process is limited to clarification by the Proposer of information presented in his/her proposal, upon request by South Coast AQMD.
 - D. The Executive Officer or Governing Board may award the contract to a Proposer other than the Proposer receiving the highest rating in the event the Governing Board determines that another Proposer from among those technically qualified would provide the best value to South Coast AQMD considering cost and technical factors. The determination shall be based solely on the Evaluation Criteria contained in the Request for Proposal (RFP), on evidence provided in the proposal and on any other evidence provided during the bid review process.
 - E. Selection will be made based on the above-described criteria and rating factors. The selection will be made by and is subject to Executive Officer or Governing Board approval. Proposers may be notified of the results by letter.

- F. The Governing Board has approved a Bid Protest Procedure which provides a process for a Bidder or prospective Bidder to submit a written protest to South Coast AQMD Procurement Manager in recognition of two types of protests: Protest Regarding Solicitation and Protest Regarding Award of a Contract. Copies of the Bid Protest Policy can be secured through a request to South Coast AQMD Procurement Department.
- G. The Executive Officer or Governing Board may award contracts to more than one proposer if in (his or their) sole judgment the purposes of the (contract or award) would best be served by selecting multiple proposers.
- H. If additional funds become available, the Executive Officer or Governing Board may increase the amount awarded. The Executive Officer or Governing Board may also select additional proposers for a grant or contract if additional funds become available.
- I. Disposition of Proposals – Pursuant to South Coast AQMD’s Procurement Policy and Procedure, South Coast AQMD reserves the right to reject any or all proposals. All proposals become the property of South Coast AQMD and are subject to the California Public Records Act. One copy of the proposal shall be retained for South Coast AQMD files. Additional copies and materials will be returned only if requested and at the proposer’s expense.
- J. **If proposal submitted is for a Public Works project as defined by State of California Labor Code Section 1720, Proposer is required to include Contractor Registration No. In Attachment B. Proposal submittal will be deemed as non-responsive and Bidder may be disqualified if Contractor Registration No. Is not included in Attachment B. Proposer is alerted to changes to California Prevailing Wage compliance requirements as defined in Senate Bill 854 (Stat. 2014, Chapter 28), and California Labor Code Sections 1770, 1771, 1725, 1777, 1813, and 1815.**

SECTION X: FUNDING

The total funding for the work contemplated by this RFP will be a maximum **\$665,000** for the base year with an option to renew the contract for two additional one-year terms. The funding for the base year is available in the Legislative & Public Affairs FY 2024-25 budget. Funding for the two optional one-year extensions is contingent upon performance and Board approval of the budget for the respective fiscal years.

SECTION XI: SAMPLE CONTRACT

A sample contract to carry out the work described in this RFP is available on South Coast AQMD’s website at <http://www.aqmd.gov/grants-bids> or upon request from the RFP Contact Person (Section II).

ATTACHMENT A

PARTICIPATION IN THE PROCUREMENT PROCESS

- A. It is the policy of South Coast Air Quality Management District (South Coast AQMD) to ensure that all businesses including minority business enterprises, women business enterprises, disabled veteran business enterprises and small businesses have a fair and equitable opportunity to compete for and participate in South Coast AQMD contracts.

B. Definitions:

The definition of minority, women or disadvantaged business enterprises set forth below is included for purposes of determining compliance with the affirmative steps requirement described in Paragraph G below on procurements funded in whole or in part with federal grant funds which involve the use of subcontractors. The definition provided for disabled veteran business enterprise, local business, small business enterprise, Zero or Near-Zero emission vehicle business and off-peak hours delivery business are provided for purposes of determining eligibility for point or cost considerations in the evaluation process.

1. "Women business enterprise" (WBE) as used in this policy means a business enterprise that meets all of the following criteria:
 - a. a business that is at least 51 percent (51%) owned by one or more women, or in the case of any business whose stock is publicly held, at least 51 percent (51%) of the stock is owned by one or more or women.
 - b. a business whose management and daily business operations are controlled by one or more women.
 - c. a business which is a sole proprietorship, corporation, or partnership with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign-based business.
2. "Disabled veteran" as used in this policy is a United States military, naval, or air service veteran with at least 10 percent (10%) service-connected disability who is a resident of California.
3. "Disabled veteran business enterprise" (DVBE) as used in this policy means a business enterprise that meets all the following criteria:
 - a. is a sole proprietorship or partnership of which at least 51 percent (51%) is owned by one or more disabled veterans or, in the case of a publicly owned business, at least 51 percent (51%) of its stock is owned by one or more disabled veterans; a subsidiary which is wholly owned by a parent corporation but only if at least 51 percent (51%) of the voting stock of the parent corporation is owned by one or more disabled veterans; or a joint venture in which at least 51 percent (51%) of the joint venture's management and control and earnings are held by one or more

disabled veterans.

- b. the management and control of the daily business operations are by one or more disabled veterans. The disabled veterans who exercise management and control are not required to be the same disabled veterans as the owners of the business.
 - c. is a sole proprietorship, corporation, or partnership with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, firm, or other foreign-based business.
4. "Local business" as used in this policy means a company that has an ongoing business within geographical boundaries of South Coast AQMD at the time of bid or proposal submittal and performs 90 percent (90%) of the work related to the contract within the geographical boundaries of South Coast AQMD and satisfies the requirements of subparagraph H below. Proposals for legislative representation, such as in Sacramento, California or Washington D.C. are not eligible for local business incentive points.
5. "Small business" as used in this policy means a business that meets the following criteria:
 - a. 1) an independently owned and operated business; 2) not dominant in its field of operation; 3) together with affiliates is either:
 - A service, construction, or non-manufacturer with 100 or fewer employees, and average annual gross receipts of ten million dollars (\$10,000,000) or less over the previous three years, or
 - A manufacturer with 100 or fewer employees.
 - b. Manufacturer means a business that is both of the following:
 - 1) Primarily engaged in the chemical or mechanical transformation of raw materials or processed substances into new products.
 - 2) Classified between Codes 311000 and 339000, inclusive, of the North American Industrial Classification System (NAICS) Manual published by the United States Office of Management and Budget, 2007 edition.
6. "Joint ventures" as defined in this policy pertaining to certification means that one party to the joint venture is a DVBE or small business and owns at least 51 percent (51%) of the joint venture.
7. "Zero or Near-Zero Emission Vehicle Business" as used in this policy means a company or contractor that uses Zero or Near-Zero emission vehicles in conducting deliveries to South Coast AQMD. Zero or Near-Zero emission vehicles include vehicles powered by electric, compressed natural gas (CNG), liquefied natural

gas (LNG), liquefied petroleum gas (LPG), ethanol, methanol and hydrogen and are certified to 90 percent (90%) or lower of the existing standard.

8. "Off-Peak Hours Delivery Business" as used in this policy means a company or contractor that commits to conducting deliveries to South Coast AQMD during off- peak traffic hours defined as between 10:00 a.m. and 3:00 p.m.
9. "Benefits Incentive Business" as used in this policy means a company or contractor that provides janitorial, security guard or landscaping services to South Coast AQMD and commits to providing employee health benefits (as defined below in Section VIII.D.2.d) for full time workers with affordable deductible and co-payment terms.
10. "Minority Business Enterprise" as used in this policy means a business that is at least 51 percent (51%) owned by one or more minority person(s), or in the case of any business whose stock is publicly held, at least 51 percent (51%) of the stock is owned by one or more or minority persons.
 - a. a business whose management and daily business operations are controlled by one or more minority persons.
 - b. a business which is a sole proprietorship, corporation, or partnership with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign-based business.
 - c. "Minority person" for purposes of this policy, means a Black American, Hispanic American, Native-American (including American Indian, Eskimo, Aleut, and Native Hawaiian), Asian-Indian (including a person whose origins are from India, Pakistan, and Bangladesh), Asian-Pacific-American (including a person whose origins are from Japan, China, the Philippines, Vietnam, Korea, Samoa, Guam, the United States Trust Territories of the Pacific, Northern Marianas, Laos, Cambodia, and Taiwan).
11. "Most Favored Customer" as used in this policy means that the South Coast AQMD will receive at least as favorable pricing, warranties, conditions, benefits and terms as other customers or clients making similar purchases or receiving similar services.
12. "Disadvantaged Business Enterprise" as used in this policy means a business that is an entity owned and/or controlled by a socially and economically disadvantaged individual(s) as described by Title X of the Clean Air Act Amendments of 1990 (42 U.S.C. 7601 note) (10% statute), and Public Law 102-389 (42 U.S.C. 4370d)(8% statute), respectively;
 - a Small Business Enterprise (SBE);
 - a Small Business in a Rural Area (SBRA);
 - a Labor Surplus Area Firm (LSAF); or
 - a Historically Underutilized Business (HUB) Zone Small Business Concern, or
 - a concern under a successor program.

C. Under Request for Quotations (RFQ), DVBEs, DVBE business joint ventures,

small businesses, and small business joint ventures shall be granted a preference in an amount equal to 5 percent (5%) of the lowest cost responsive bid. Zero or Near-Zero Emission Vehicle Businesses shall be granted a preference in an amount equal to 5 percent of the lowest cost responsive bid. Off-Peak Hours Delivery Businesses shall be granted a preference in an amount equal to 2 percent (2%) of the lowest cost responsive bid. Local businesses (if the procurement is not funded in whole or in part by federal grant funds) shall be granted a preference in an amount equal to 2 percent (2%) of the lowest cost responsive bid. Businesses offering Most Favored Customer status shall be granted a preference in an amount equal to 2 percent (2%) of the lowest cost responsive bid.

- D. Under Request for Proposals, DVBEs, DVBE joint ventures, small businesses, and small business joint ventures shall be awarded ten (10) points in the evaluation process. A non-DVBE or large business shall receive seven (7) points for subcontracting at least 25 percent (25%) of the total contract value to a DVBE and/or small business. Zero or Near-Zero Emission Vehicle Businesses shall be awarded five (5) points in the evaluation process. On procurements which are not funded in whole or in part by federal grant funds local businesses shall receive five (5) points. Off-Peak Hours Delivery Businesses shall be awarded two (2) points in the evaluation process. Businesses offering Most Favored Customer status shall be awarded two (2) points in the evaluation process.
- E. South Coast AQMD will ensure that discrimination in the award and performance of contracts does not occur on the basis of race, color, sex, national origin, marital status, sexual preference, creed, ancestry, medical condition, or retaliation for having filed a discrimination complaint in the performance of South Coast AQMD contractual obligations.
- F. South Coast AQMD requires Contractor to be in compliance with all state and federal laws and regulations with respect to its employees throughout the term of any awarded contract, including state minimum wage laws and OSHA requirements.
- G. When contracts are funded in whole or in part by federal funds, and if subcontracts are to be let, the Contractor must comply with the following, evidencing a good faith effort to solicit disadvantaged businesses. Contractor shall submit a certification signed by an authorized official affirming its status as a MBE or WBE, as applicable, at the time of contract execution. South Coast AQMD reserves the right to request documentation demonstrating compliance with the following good faith efforts prior to contract execution.
 - 1. Ensure Disadvantaged Business Enterprises (DBEs) are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For Indian Tribal, State and Local Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.
 - 2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitations for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.

3. Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For Indian Tribal, State and Local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.
 4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
 5. Using the services and assistance of the Small Business Administration and the Minority Business Development Agency of the Department of Commerce.
 6. If the prime contractor awards subcontracts, require the prime contractor to take the above steps.
- H. To the extent that any conflict exists between this policy and any requirements imposed by federal and state law relating to participation in a contract by a certified MBE/WBE/DVBE as a condition of receipt of federal or state funds, the federal or state requirements shall prevail.
- I. When contracts are not funded in whole or in part by federal grant funds, a local business preference will be awarded. For such contracts that involve the purchase of commercial off-the-shelf products, local business preference will be given to suppliers or distributors of commercial off-the-shelf products who maintain an ongoing business within the geographical boundaries of South Coast AQMD. However, if the subject matter of the RFP or RFQ calls for the fabrication or manufacture of custom products, only companies performing 90 percent (90%) of the manufacturing or fabrication effort within the geographical boundaries of South Coast AQMD shall be entitled to the local business preference. Proposals for legislative representation, such as in Sacramento, California or Washington D.C. are not eligible for local business incentive points.
- J. In compliance with federal fair share requirements set forth in 40 CFR Part 33, South Coast AQMD shall establish a fair share goal annually for expenditures with federal funds covered by its procurement policy.

Business Information Request

Dear South Coast AQMD Contractor/Supplier:

South Coast Air Quality Management District (South Coast AQMD) is committed to ensuring that our contractor/supplier records are current and accurate. If your firm is selected for award of a purchase order or contract, it is imperative that the information requested herein be supplied in a timely manner to facilitate payment of invoices. In order to process your payments, we need the enclosed information regarding your account. **Please review and complete the information identified on the following pages, remember to sign all documents for our files, and return them as soon as possible to the address below:**

**Attention: Accounts Payable, Accounting Department
South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, CA 91765-4178**

If you do not return this information, we will not be able to establish you as a vendor. This will delay any payments and would still necessitate your submittal of the enclosed information to our Accounting department before payment could be initiated. Completion of this document and enclosed forms would ensure that your payments are processed timely and accurately.

If you have any questions or need assistance in completing this information, please contact Accounting at (909) 396-3777. We appreciate your cooperation in completing this necessary information.

Sincerely,

Sujata Jain
Chief Financial Officer

BUSINESS STATUS CERTIFICATIONS

Federal guidance for utilization of disadvantaged business enterprises allows a vendor to be deemed a small business enterprise (SBE), minority business enterprise (MBE) or women business enterprise (WBE) if it meets the criteria below.

- is certified by the Small Business Administration or
- is certified by a state or federal agency or
- is an independent MBE(s) or WBE(s) business concern which is at least 51 percent owned and controlled by minority group member(s) who are citizens of the United States.

Statements of certification:

As a prime contractor to South Coast AQMD, _____ (name of business) will engage in good faith efforts to achieve the fair share in accordance with 40 CFR Section 33.301, and will follow the six affirmative steps listed below **for contracts or purchase orders funded in whole or in part by federal grants and contracts.**

1. Place qualified SBEs, MBEs, and WBEs on solicitation lists.
2. Assure that SBEs, MBEs, and WBEs are solicited whenever possible.
3. When economically feasible, divide total requirements into small tasks or quantities to permit greater participation by SBEs, MBEs, and WBEs.
4. Establish delivery schedules, if possible, to encourage participation by SBEs, MBEs, and WBEs.
5. Use services of Small Business Administration, Minority Business Development Agency of the Department of Commerce, and/or any agency authorized as a clearinghouse for SBEs, MBEs, and WBEs.
6. If subcontracts are to be let, take the above affirmative steps.

Disabled Veteran-Owned Business Enterprise means a business that meets all of the following criteria:

- is a sole proprietorship or partnership of which is at least 51 percent owned by one or more disabled veterans, or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more disabled veterans; a subsidiary which is wholly owned by a parent corporation but only if at least 51 percent of the voting stock of the parent corporation is owned by one or more disabled veterans; or a joint venture in which at least 51 percent of the joint venture's management and control and earnings are held by one or more disabled veterans.
- the management and control of the daily business operations are by one or more disabled veterans. The disabled veterans who exercise management and control are not required to be the same disabled veterans as the owners of the business.
- is a sole proprietorship, corporation, partnership, or joint venture with its primary headquarters office located in the United States and which is not a branch or subsidiary of a foreign corporation, firm, or other foreign-based business.

Joint Venture means that one party to the joint venture is a DVBE and owns at least 51 percent of the joint venture. In the case of a joint venture formed for a single project this means that DVBE will receive at least 51 percent of the project dollars.

Local Business means a business that meets all of the following criteria:

- has an ongoing business within the boundary of South Coast AQMD at the time of bid application.
- performs 90 percent of the work within South Coast AQMD's jurisdiction.

Minority-Owned Business Enterprise means a business that meets all of the following criteria:

- is at least 51 percent owned by one or more minority persons or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more minority persons.
- is a business whose management and daily business operations are controlled or owned by one or more minority person.
- is a business which is a sole proprietorship, corporation, partnership, joint venture, an association, or a cooperative with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign business.

"Minority" person means a Black American, Hispanic American, Native American (including American Indian, Eskimo, Aleut, and Native Hawaiian), Asian-Indian American (including a person whose origins are from India, Pakistan, or Bangladesh), Asian-Pacific American (including a person whose origins are from Japan, China, the Philippines, Vietnam, Korea, Samoa, Guam, the United States Trust Territories of the Pacific, Northern Marianas, Laos, Cambodia, or Taiwan).

Small Business Enterprise means a business that meets the following criteria:

- a. 1) an independently owned and operated business; 2) not dominant in its field of operation; 3) together with affiliates is either:
 - a. **A service, construction, or non-manufacturer with 100 or fewer employees, and average annual gross receipts of ten million dollars (\$10,000,000) or less over the previous three years, or**
 - b. A manufacturer with 100 or fewer employees.
- b. Manufacturer means a business that is both of the following:
 - 1) Primarily engaged in the chemical or mechanical transformation of raw materials or processed substances into new products.
 - 2) Classified between Codes 311000 to 339000, inclusive, of the North American Industrial Classification System (NAICS) Manual published by the United States Office of Management and Budget, 2007 edition.

Small Business Joint Venture means that one party to the joint venture is a Small Business and owns at least 51 percent of the joint venture. In the case of a joint venture formed for a single project this means that the Small Business will receive at least 51 percent of the project dollars.

Women-Owned Business Enterprise means a business that meets all of the following criteria:

- is at least 51 percent owned by one or more women or in the case of any business whose stock is publicly held, at least 51 percent of the stock is owned by one or more women.
- is a business whose management and daily business operations are controlled or owned by one or more women.
- is a business which is a sole proprietorship, corporation, partnership, or a joint venture, with its primary headquarters office located in the United States, which is not a branch or subsidiary of a foreign corporation, foreign firm, or other foreign business.

Most Favored Customer as used in this policy means that the South Coast AQMD will receive at least as favorable pricing, warranties, conditions, benefits and terms as other customers or clients making similar purchases or receiving similar services.

Form
(Rev. October 2018)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

► Go to www.irs.gov/FormW9 for instructions and the latest information.

Give Form to the
requester. Do not
send to the IRS.

1 Name (as shown on your income tax return). Name is required on this line; do not leave this line blank.

2 Business name/disregarded entity name, if different from above

3 Check appropriate box for federal tax classification of the person whose name is entered on line 1. Check only **one** of the following seven boxes.

☐ Individual/sole proprietor or single-member LLC

☐ Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=Partnership) ►

☐ Other (see instructions) ►

☐ C Corporation

☐ S Corporation

☐ Partnership

☐ Trust/estate

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any) _____

Exemption from FATCA reporting code (if any) _____

(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.

6 City, state, and ZIP code

7 List account number(s) here (optional)

8 Requester's name and address (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number

____ - ____ - _____

or

Employer identification number

____ - _____

Part II Certification

Under penalties of perjury, I certify that:

- The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
- I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
- I am a U.S. citizen or other U.S. person (defined below); and
- The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to www.irs.gov/FormW9.

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (Interest earned or paid)

- Form 1099-DIV (dividends, including those from stocks or mutual funds)
 - Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
 - Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
 - Form 1099-S (proceeds from real estate transactions)
 - Form 1099-K (merchant card and third party network transactions)
 - Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
 - Form 1099-C (canceled debt)
 - Form 1099-A (acquisition or abandonment of secured property)
- Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See *What Is backup withholding*, later.

By signing the filled-out form, you:

1. Certify that the TIN you are giving is correct (or you are waiting for a number to be issued),
2. Certify that you are not subject to backup withholding, or
3. Claim exemption from backup withholding if you are a U.S. exempt payee. If applicable, you are also certifying that as a U.S. person, your allocable share of any partnership income from a U.S. trade or business is not subject to the withholding tax on foreign partners' share of effectively connected income, and
4. Certify that FATCA code(s) entered on this form (if any) indicating that you are exempt from the FATCA reporting, is correct. See *What is FATCA reporting*, later, for further information.

Note: If you are a U.S. person and a requester gives you a form other than Form W-9 to request your TIN, you must use the requester's form if it is substantially similar to this Form W-9.

Definition of a U.S. person. For federal tax purposes, you are considered a U.S. person if you are:

- An individual who is a U.S. citizen or U.S. resident alien;
- A partnership, corporation, company, or association created or organized in the United States or under the laws of the United States;
- An estate (other than a foreign estate); or
- A domestic trust (as defined in Regulations section 301.7701-7).

Special rules for partnerships. Partnerships that conduct a trade or business in the United States are generally required to pay a withholding tax under section 1446 on any foreign partners' share of effectively connected taxable income from such business. Further, in certain cases where a Form W-9 has not been received, the rules under section 1446 require a partnership to presume that a partner is a foreign person, and pay the section 1446 withholding tax. Therefore, if you are a U.S. person that is a partner in a partnership conducting a trade or business in the United States, provide Form W-9 to the partnership to establish your U.S. status and avoid section 1446 withholding on your share of partnership income.

In the cases below, the following person must give Form W-9 to the partnership for purposes of establishing its U.S. status and avoiding withholding on its allocable share of net income from the partnership conducting a trade or business in the United States.

- In the case of a disregarded entity with a U.S. owner, the U.S. owner of the disregarded entity and not the entity;
- In the case of a grantor trust with a U.S. grantor or other U.S. owner, generally, the U.S. grantor or other U.S. owner of the grantor trust and not the trust; and
- In the case of a U.S. trust (other than a grantor trust), the U.S. trust (other than a grantor trust) and not the beneficiaries of the trust.

Foreign person. If you are a foreign person or the U.S. branch of a foreign bank that has elected to be treated as a U.S. person, do not use Form W-9. Instead, use the appropriate Form W-8 or Form 8233 (see Pub. 515, Withholding of Tax on Nonresident Aliens and Foreign Entities).

Nonresident alien who becomes a resident alien. Generally, only a nonresident alien individual may use the terms of a tax treaty to reduce or eliminate U.S. tax on certain types of income. However, most tax treaties contain a provision known as a "saving clause." Exceptions specified in the saving clause may permit an exemption from tax to continue for certain types of income even after the payee has otherwise become a U.S. resident alien for tax purposes.

If you are a U.S. resident alien who is relying on an exception contained in the saving clause of a tax treaty to claim an exemption from U.S. tax on certain types of income, you must attach a statement to Form W-9 that specifies the following five items.

1. The treaty country. Generally, this must be the same treaty under which you claimed exemption from tax as a nonresident alien.
2. The treaty article addressing the income.
3. The article number (or location) in the tax treaty that contains the saving clause and its exceptions.
4. The type and amount of income that qualifies for the exemption from tax.
5. Sufficient facts to justify the exemption from tax under the terms of the treaty article.

Example. Article 20 of the U.S.-China Income tax treaty allows an exemption from tax for scholarship income received by a Chinese student temporarily present in the United States. Under U.S. law, this student will become a resident alien for tax purposes if his or her stay in the United States exceeds 5 calendar years. However, paragraph 2 of the first Protocol to the U.S.-China treaty (dated April 30, 1984) allows the provisions of Article 20 to continue to apply even after the Chinese student becomes a resident alien of the United States. A Chinese student who qualifies for this exception (under paragraph 2 of the first protocol) and is relying on this exception to claim an exemption from tax on his or her scholarship or fellowship income would attach to Form W-9 a statement that includes the information described above to support that exemption.

If you are a nonresident alien or a foreign entity, give the requester the appropriate completed Form W-8 or Form 8233.

Backup Withholding

What is backup withholding? Persons making certain payments to you must under certain conditions withhold and pay to the IRS 24% of such payments. This is called "backup withholding." Payments that may be subject to backup withholding include interest, tax-exempt interest, dividends, broker and barter exchange transactions, rents, royalties, nonemployee pay, payments made in settlement of payment card and third party network transactions, and certain payments from fishing boat operators. Real estate transactions are not subject to backup withholding.

You will not be subject to backup withholding on payments you receive if you give the requester your correct TIN, make the proper certifications, and report all your taxable interest and dividends on your tax return.

Payments you receive will be subject to backup withholding if:

1. You do not furnish your TIN to the requester,
2. You do not certify your TIN when required (see the Instructions for Part II for details),
3. The IRS tells the requester that you furnished an incorrect TIN,
4. The IRS tells you that you are subject to backup withholding because you did not report all your interest and dividends on your tax return (for reportable interest and dividends only), or
5. You do not certify to the requester that you are not subject to backup withholding under 4 above (for reportable interest and dividend accounts opened after 1983 only).

Certain payees and payments are exempt from backup withholding. See *Exempt payee code*, later, and the separate instructions for the Requester of Form W-9 for more information.

Also see *Special rules for partnerships*, earlier.

What is FATCA Reporting?

The Foreign Account Tax Compliance Act (FATCA) requires a participating foreign financial institution to report all United States account holders that are specified United States persons. Certain payees are exempt from FATCA reporting. See *Exemption from FATCA reporting code*, later, and the Instructions for the Requester of Form W-9 for more information.

Updating Your Information

You must provide updated information to any person to whom you claimed to be an exempt payee if you are no longer an exempt payee and anticipate receiving reportable payments in the future from this person. For example, you may need to provide updated information if you are a C corporation that elects to be an S corporation, or if you no longer are tax exempt. In addition, you must furnish a new Form W-9 if the name or TIN changes for the account; for example, if the grantor of a grantor trust dies.

Penalties

Failure to furnish TIN. If you fail to furnish your correct TIN to a requester, you are subject to a penalty of \$50 for each such failure unless your failure is due to reasonable cause and not to willful neglect.

Civil penalty for false information with respect to withholding. If you make a false statement with no reasonable basis that results in no backup withholding, you are subject to a \$500 penalty.

Criminal penalty for falsifying information. Willfully falsifying certifications or affirmations may subject you to criminal penalties including fines and/or imprisonment.

Misuse of TINs. If the requester discloses or uses TINs in violation of federal law, the requester may be subject to civil and criminal penalties.

Specific Instructions

Line 1

You must enter one of the following on this line; **do not** leave this line blank. The name should match the name on your tax return.

If this Form W-9 is for a joint account (other than an account maintained by a foreign financial institution (FFI)), list first, and then circle, the name of the person or entity whose number you entered in Part I of Form W-9. If you are providing Form W-9 to an FFI to document a joint account, each holder of the account that is a U.S. person must provide a Form W-9.

a. **Individual.** Generally, enter the name shown on your tax return. If you have changed your last name without informing the Social Security Administration (SSA) of the name change, enter your first name, the last name as shown on your social security card, and your new last name.

Note: ITIN applicant: Enter your individual name as it was entered on your Form W-7 application, line 1a. This should also be the same as the name you entered on the Form 1040/1040A/1040EZ you filed with your application.

b. **Sole proprietor or single-member LLC.** Enter your individual name as shown on your 1040/1040A/1040EZ on line 1. You may enter your business, trade, or "doing business as" (DBA) name on line 2.

c. **Partnership, LLC that is not a single-member LLC, C corporation, or S corporation.** Enter the entity's name as shown on the entity's tax return on line 1 and any business, trade, or DBA name on line 2.

d. **Other entities.** Enter your name as shown on required U.S. federal tax documents on line 1. This name should match the name shown on the charter or other legal document creating the entity. You may enter any business, trade, or DBA name on line 2.

e. **Disregarded entity.** For U.S. federal tax purposes, an entity that is disregarded as an entity separate from its owner is treated as a "disregarded entity." See Regulations section 301.7701-2(c)(2)(iii). Enter the owner's name on line 1. The name of the entity entered on line 1 should never be a disregarded entity. The name on line 1 should be the name shown on the income tax return on which the income should be reported. For example, if a foreign LLC that is treated as a disregarded entity for U.S. federal tax purposes has a single owner that is a U.S. person, the U.S. owner's name is required to be provided on line 1. If the direct owner of the entity is also a disregarded entity, enter the first owner that is not disregarded for federal tax purposes. Enter the disregarded entity's name on line 2, "Business name/disregarded entity name." If the owner of the disregarded entity is a foreign person, the owner must complete an appropriate Form W-8 instead of a Form W-9. This is the case even if the foreign person has a U.S. TIN.

Line 2

If you have a business name, trade name, DBA name, or disregarded entity name, you may enter it on line 2.

Line 3

Check the appropriate box on line 3 for the U.S. federal tax classification of the person whose name is entered on line 1. Check only one box on line 3.

IF the entity/person on line 1 is a(n) . . .	THEN check the box for . . .
• Corporation	Corporation
• Individual • Sole proprietorship, or • Single-member limited liability company (LLC) owned by an individual and disregarded for U.S. federal tax purposes.	Individual/sole proprietor or single-member LLC
• LLC treated as a partnership for U.S. federal tax purposes, • LLC that has filed Form 8832 or 2553 to be taxed as a corporation, or • LLC that is disregarded as an entity separate from its owner but the owner is another LLC that is not disregarded for U.S. federal tax purposes.	Limited liability company and enter the appropriate tax classification. (P= Partnership; C= C corporation; or S= S corporation)
• Partnership	Partnership
• Trust/estate	Trust/estate

Line 4, Exemptions

If you are exempt from backup withholding and/or FATCA reporting, enter in the appropriate space on line 4 any code(s) that may apply to you.

Exempt payee code.

- Generally, individuals (including sole proprietors) are not exempt from backup withholding.
- Except as provided below, corporations are exempt from backup withholding for certain payments, including interest and dividends.
- Corporations are not exempt from backup withholding for payments made in settlement of payment card or third party network transactions.
- Corporations are not exempt from backup withholding with respect to attorneys' fees or gross proceeds paid to attorneys, and corporations that provide medical or health care services are not exempt with respect to payments reportable on Form 1099-MISC.

The following codes identify payees that are exempt from backup withholding. Enter the appropriate code in the space in line 4.

- 1—An organization exempt from tax under section 501(a), any IRA, or a custodial account under section 403(b)(7) if the account satisfies the requirements of section 401(f)(2)
- 2—The United States or any of its agencies or instrumentalities
- 3—A state, the District of Columbia, a U.S. commonwealth or possession, or any of their political subdivisions or instrumentalities
- 4—A foreign government or any of its political subdivisions, agencies, or instrumentalities
- 5—A corporation
- 6—A dealer in securities or commodities required to register in the United States, the District of Columbia, or a U.S. commonwealth or possession
- 7—A futures commission merchant registered with the Commodity Futures Trading Commission
- 8—A real estate investment trust
- 9—An entity registered at all times during the tax year under the Investment Company Act of 1940
- 10—A common trust fund operated by a bank under section 584(a)
- 11—A financial institution
- 12—A middleman known in the investment community as a nominee or custodian
- 13—A trust exempt from tax under section 664 or described in section 4947

The following chart shows types of payments that may be exempt from backup withholding. The chart applies to the exempt payees listed above, 1 through 13.

IF the payment is for . . .	THEN the payment is exempt for . . .
Interest and dividend payments	All exempt payees except for 7
Broker transactions	Exempt payees 1 through 4 and 6 through 11 and all C corporations. S corporations must not enter an exempt payee code because they are exempt only for sales of noncovered securities acquired prior to 2012.
Barter exchange transactions and patronage dividends	Exempt payees 1 through 4
Payments over \$600 required to be reported and direct sales over \$5,000 ¹	Generally, exempt payees 1 through 5 ²
Payments made in settlement of payment card or third party network transactions	Exempt payees 1 through 4

¹ See Form 1099-MISC, Miscellaneous Income, and its instructions.

² However, the following payments made to a corporation and reportable on Form 1099-MISC are not exempt from backup withholding: medical and health care payments, attorneys' fees, gross proceeds paid to an attorney reportable under section 6045(f), and payments for services paid by a federal executive agency.

Exemption from FATCA reporting code. The following codes identify payees that are exempt from reporting under FATCA. These codes apply to persons submitting this form for accounts maintained outside of the United States by certain foreign financial institutions. Therefore, if you are only submitting this form for an account you hold in the United States, you may leave this field blank. Consult with the person requesting this form if you are uncertain if the financial institution is subject to these requirements. A requester may indicate that a code is not required by providing you with a Form W-9 with "Not Applicable" (or any similar indication) written or printed on the line for a FATCA exemption code.

A—An organization exempt from tax under section 501(a) or any individual retirement plan as defined in section 7701(a)(37)

B—The United States or any of its agencies or instrumentalities

C—A state, the District of Columbia, a U.S. commonwealth or possession, or any of their political subdivisions or instrumentalities

D—A corporation the stock of which is regularly traded on one or more established securities markets, as described in Regulations section 1.1472-1(c)(1)(i)

E—A corporation that is a member of the same expanded affiliated group as a corporation described in Regulations section 1.1472-1(c)(1)(i)

F—A dealer in securities, commodities, or derivative financial instruments (including notional principal contracts, futures, forwards, and options) that is registered as such under the laws of the United States or any state

G—A real estate investment trust

H—A regulated investment company as defined in section 851 or an entity registered at all times during the tax year under the Investment Company Act of 1940

I—A common trust fund as defined in section 584(a)

J—A bank as defined in section 581

K—A broker

L—A trust exempt from tax under section 664 or described in section 4947(a)(1)

M—A tax exempt trust under a section 403(b) plan or section 457(g) plan

Note: You may wish to consult with the financial institution requesting this form to determine whether the FATCA code and/or exempt payee code should be completed.

Line 5

Enter your address (number, street, and apartment or suite number). This is where the requester of this Form W-9 will mail your information returns. If this address differs from the one the requester already has on file, write NEW at the top. If a new address is provided, there is still a chance the old address will be used until the payor changes your address in their records.

Line 6

Enter your city, state, and ZIP code.

Part I. Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. If you are a resident alien and you do not have and are not eligible to get an SSN, your TIN is your IRS individual taxpayer identification number (ITIN). Enter it in the social security number box. If you do not have an ITIN, see *How to get a TIN* below.

If you are a sole proprietor and you have an EIN, you may enter either your SSN or EIN.

If you are a single-member LLC that is disregarded as an entity separate from its owner, enter the owner's SSN (or EIN, if the owner has one). Do not enter the disregarded entity's EIN. If the LLC is classified as a corporation or partnership, enter the entity's EIN.

Note: See *What Name and Number To Give the Requester*, later, for further clarification of name and TIN combinations.

How to get a TIN. If you do not have a TIN, apply for one immediately. To apply for an SSN, get Form SS-5, Application for a Social Security Card, from your local SSA office or get this form online at www.SSA.gov. You may also get this form by calling 1-800-772-1213. Use Form W-7, Application for IRS Individual Taxpayer Identification Number, to apply for an ITIN, or Form SS-4, Application for Employer Identification Number, to apply for an EIN. You can apply for an EIN online by accessing the IRS website at www.irs.gov/Businesses and clicking on Employer Identification Number (EIN) under Starting a Business. Go to www.irs.gov/Forms to view, download, or print Form W-7 and/or Form SS-4. Or, you can go to www.irs.gov/OrderForms to place an order and have Form W-7 and/or SS-4 mailed to you within 10 business days.

If you are asked to complete Form W-9 but do not have a TIN, apply for a TIN and write "Applied For" in the space for the TIN, sign and date the form, and give it to the requester. For interest and dividend payments, and certain payments made with respect to readily tradable instruments, generally you will have 60 days to get a TIN and give it to the requester before you are subject to backup withholding on payments. The 60-day rule does not apply to other types of payments. You will be subject to backup withholding on all such payments until you provide your TIN to the requester.

Note: Entering "Applied For" means that you have already applied for a TIN or that you intend to apply for one soon.

Caution: A disregarded U.S. entity that has a foreign owner must use the appropriate Form W-8.

Part II. Certification

To establish to the withholding agent that you are a U.S. person, or resident alien, sign Form W-9. You may be requested to sign by the withholding agent even if item 1, 4, or 5 below indicates otherwise.

For a joint account, only the person whose TIN is shown in Part I should sign (when required). In the case of a disregarded entity, the person identified on line 1 must sign. Exempt payees, see *Exempt payee code*, earlier.

Signature requirements. Complete the certification as indicated in items 1 through 5 below.

1. Interest, dividend, and barter exchange accounts opened before 1984 and broker accounts considered active during 1983. You must give your correct TIN, but you do not have to sign the certification.

2. Interest, dividend, broker, and barter exchange accounts opened after 1983 and broker accounts considered inactive during 1983. You must sign the certification or backup withholding will apply. If you are subject to backup withholding and you are merely providing your correct TIN to the requester, you must cross out item 2 in the certification before signing the form.

3. Real estate transactions. You must sign the certification. You may cross out item 2 of the certification.

4. Other payments. You must give your correct TIN, but you do not have to sign the certification unless you have been notified that you have previously given an incorrect TIN. "Other payments" include payments made in the course of the requester's trade or business for rents, royalties, goods (other than bills for merchandise), medical and health care services (including payments to corporations), payments to a nonemployee for services, payments made in settlement of payment card and third party network transactions, payments to certain fishing boat crew members and fishermen, and gross proceeds paid to attorneys (including payments to corporations).

5. Mortgage interest paid by you, acquisition or abandonment of secured property, cancellation of debt, qualified tuition program payments (under section 529), ABLE accounts (under section 529A), IRA, Coverdell ESA, Archer MSA or HSA contributions or distributions, and pension distributions. You must give your correct TIN, but you do not have to sign the certification.

What Name and Number To Give the Requester

For this type of account:	Give name and SSN of:
1. Individual	The individual
2. Two or more individuals (joint account) other than an account maintained by an FFI	The actual owner of the account or, if combined funds, the first individual on the account ¹
3. Two or more U.S. persons (joint account maintained by an FFI)	Each holder of the account
4. Custodial account of a minor (Uniform Gift to Minors Act)	The minor ²
5. a. The usual revocable savings trust (grantor is also trustee)	The grantor-trustee ¹
b. So-called trust account that is not a legal or valid trust under state law	The actual owner ¹
6. Sole proprietorship or disregarded entity owned by an individual	The owner ³
7. Grantor trust filing under Optional Form 1099 Filing Method 1 (see Regulations section 1.671-4(b)(2)(i)(A))	The grantor ⁴
For this type of account:	Give name and EIN of:
8. Disregarded entity not owned by an individual	The owner
9. A valid trust, estate, or pension trust	Legal entity ⁴
10. Corporation or LLC electing corporate status on Form 8832 or Form 2553	The corporation
11. Association, club, religious, charitable, educational, or other tax-exempt organization	The organization
12. Partnership or multi-member LLC	The partnership
13. A broker or registered nominee	The broker or nominee

For this type of account:	Give name and EIN of:
14. Account with the Department of Agriculture in the name of a public entity (such as a state or local government, school district, or prison) that receives agricultural program payments	The public entity
15. Grantor trust filing under the Form 1041 Filing Method or the Optional Form 1099 Filing Method 2 (see Regulations section 1.671-4(b)(2)(i)(B))	The trust

¹ List first and circle the name of the person whose number you furnish. If only one person on a joint account has an SSN, that person's number must be furnished.

² Circle the minor's name and furnish the minor's SSN.

³ You must show your individual name and you may also enter your business or DBA name on the "Business name/disregarded entity" name line. You may use either your SSN or EIN (if you have one), but the IRS encourages you to use your SSN.

⁴ List first and circle the name of the trust, estate, or pension trust. (Do not furnish the TIN of the personal representative or trustee unless the legal entity itself is not designated in the account title.) Also see *Special rules for partnerships*, earlier.

***Note:** The grantor also must provide a Form W-9 to trustee of trust.

Note: If no name is circled when more than one name is listed, the number will be considered to be that of the first name listed.

Secure Your Tax Records From Identity Theft

Identity theft occurs when someone uses your personal information such as your name, SSN, or other identifying information, without your permission, to commit fraud or other crimes. An identity thief may use your SSN to get a job or may file a tax return using your SSN to receive a refund.

To reduce your risk:

- Protect your SSN,
- Ensure your employer is protecting your SSN, and
- Be careful when choosing a tax preparer.

If your tax records are affected by identity theft and you receive a notice from the IRS, respond right away to the name and phone number printed on the IRS notice or letter.

If your tax records are not currently affected by identity theft but you think you are at risk due to a lost or stolen purse or wallet, questionable credit card activity or credit report, contact the IRS Identity Theft Hotline at 1-800-908-4490 or submit Form 14039.

For more information, see Pub. 5027, Identity Theft Information for Taxpayers.

Victims of identity theft who are experiencing economic harm or a systemic problem, or are seeking help in resolving tax problems that have not been resolved through normal channels, may be eligible for Taxpayer Advocate Service (TAS) assistance. You can reach TAS by calling the TAS toll-free case intake line at 1-877-777-4778 or TTY/TDD 1-800-829-4059.

Protect yourself from suspicious emails or phishing schemes.

Phishing is the creation and use of email and websites designed to mimic legitimate business emails and websites. The most common act is sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft.

The IRS does not initiate contacts with taxpayers via emails. Also, the IRS does not request personal detailed information through email or ask taxpayers for the PIN numbers, passwords, or similar secret access information for their credit card, bank, or other financial accounts.

If you receive an unsolicited email claiming to be from the IRS, forward this message to phishing@irs.gov. You may also report misuse of the IRS name, logo, or other IRS property to the Treasury Inspector General for Tax Administration (TIGTA) at 1-800-366-4484. You can forward suspicious emails to the Federal Trade Commission at spam@uce.gov or report them at www.ftc.gov/complaint. You can contact the FTC at www.ftc.gov/idtheft or 877-IDTHEFT (877-438-4338). If you have been the victim of identity theft, see www.IdentityTheft.gov and Pub. 5027.

Visit www.irs.gov/IdentityTheft to learn more about identity theft and how to reduce your risk.

Privacy Act Notice

Section 6109 of the Internal Revenue Code requires you to provide your correct TIN to persons (including federal agencies) who are required to file information returns with the IRS to report interest, dividends, or certain other income paid to you; mortgage interest you paid; the acquisition or abandonment of secured property; the cancellation of debt; or contributions you made to an IRA, Archer MSA, or HSA. The person collecting this form uses the information on the form to file information returns with the IRS, reporting the above information. Routine uses of this information include giving it to the Department of Justice for civil and criminal litigation and to cities, states, the District of Columbia, and U.S. commonwealths and possessions for use in administering their laws. The information also may be disclosed to other countries under a treaty, to federal and state agencies to enforce civil and criminal laws, or to federal law enforcement and intelligence agencies to combat terrorism. You must provide your TIN whether or not you are required to file a tax return. Under section 3406, payers must generally withhold a percentage of taxable interest, dividend, and certain other payments to a payee who does not give a TIN to the payer. Certain penalties may also apply for providing false or fraudulent information.

TAXABLE YEAR

CALIFORNIA FORM

2021 Withholding Exemption Certificate**590**

The payee completes this form and submits it to the withholding agent. The withholding agent keeps this form with their records.

Withholding Agent Information

Name

Payee Information

Name

☐ SSN or ITIN ☐ FEIN ☐ CA Corp no. ☐ CA SOS file no.

Address (apt./ste., room, PO box, or PMB no.)

City (If you have a foreign address, see instructions.)

State

ZIP code

Exemption Reason**Check only one box.**

By checking the appropriate box below, the payee certifies the reason for the exemption from the California income tax withholding requirements on payment(s) made to the entity or individual.

☐ **Individuals — Certification of Residency:**

I am a resident of California and I reside at the address shown above. If I become a nonresident at any time, I will promptly notify the withholding agent. See instructions for General Information D, Definitions.

☐ **Corporations:**

The corporation has a permanent place of business in California at the address shown above or is qualified through the California Secretary of State (SOS) to do business in California. The corporation will file a California tax return. If this corporation ceases to have a permanent place of business in California or ceases to do any of the above, I will promptly notify the withholding agent. See instructions for General Information D, Definitions.

☐ **Partnerships or Limited Liability Companies (LLCs):**

The partnership or LLC has a permanent place of business in California at the address shown above or is registered with the California SOS, and is subject to the laws of California. The partnership or LLC will file a California tax return. If the partnership or LLC ceases to do any of the above, I will promptly inform the withholding agent. For withholding purposes, a limited liability partnership (LLP) is treated like any other partnership.

☐ **Tax-Exempt Entities:**

The entity is exempt from tax under California Revenue and Taxation Code (R&TC) Section 23701 (insert letter) or Internal Revenue Code Section 501(c) (insert number). If this entity ceases to be exempt from tax, I will promptly notify the withholding agent. Individuals cannot be tax-exempt entities.

☐ **Insurance Companies, Individual Retirement Arrangements (IRAs), or Qualified Pension/Profit-Sharing Plans:**

The entity is an insurance company, IRA, or a federally qualified pension or profit-sharing plan.

☐ **California Trusts:**

At least one trustee and one noncontingent beneficiary of the above-named trust is a California resident. The trust will file a California fiduciary tax return. If the trustee or noncontingent beneficiary becomes a nonresident at any time, I will promptly notify the withholding agent.

☐ **Estates — Certification of Residency of Deceased Person:**

I am the executor of the above-named person's estate or trust. The decedent was a California resident at the time of death. The estate will file a California fiduciary tax return.

☐ **Nonmilitary Spouse of a Military Servicemember:**

I am a nonmilitary spouse of a military servicemember and I meet the Military Spouse Residency Relief Act (MSRRA) requirements. See instructions for General Information E, MSRRA.

CERTIFICATE OF PAYEE: Payee must complete and sign below.To learn about your privacy rights, how we may use your information, and the consequences for not providing the requested information, go to ftb.ca.gov/forms and search for **1131**. To request this notice by mail, call 800.852.5711.

Under penalties of perjury, I declare that I have examined the information on this form, including accompanying schedules and statements, and to the best of my knowledge and belief, it is true, correct, and complete. I further declare under penalties of perjury that if the facts upon which this form are based change, I will promptly notify the withholding agent.

Date

2021 Instructions for Form 590

Withholding Exemption Certificate

References in these instructions are to the California Revenue and Taxation Code (R&TC).

General Information

California Revenue and Taxation Code (R&TC) Section 18662 requires withholding of income or franchise tax on payments of California source income made to nonresidents of California. For more information, See General Information B, Income Subject to Withholding.

Registered Domestic Partners (RDPs) – For purposes of California income tax, references to a spouse, husband, or wife also refer to a California RDP unless otherwise specified. For more information on RDPs, get FTB Pub. 737, Tax Information for Registered Domestic Partners.

A Purpose

Use Form 590, Withholding Exemption Certificate, to certify an exemption from nonresident withholding.

Form 590 does not apply to payments of backup withholding. For more information, go to ftb.ca.gov and search for **backup withholding**.

Form 590 does not apply to payments for wages to employees. Wage withholding is administered by the California Employment Development Department (EDD). For more information, go to edd.ca.gov or call 888.745.3886.

Do not use Form 590 to certify an exemption from withholding if you are a **seller of California real estate**. Sellers of California real estate use Form 593, Real Estate Withholding Statement, to claim an exemption from the real estate withholding requirement.

The following are excluded from withholding and completing this form:

- The United States and any of its agencies or instrumentalities.
- A state, a possession of the United States, the District of Columbia, or any of its political subdivisions or instrumentalities.
- A foreign government or any of its political subdivisions, agencies, or instrumentalities.

B Income Subject to Withholding

Withholding is required on the following, but is not limited to:

- Payments to nonresidents for services rendered in California.
- Distributions of California source income made to domestic nonresident partners, members, and S corporation shareholders and allocations of California source income made to foreign partners and members.
- Payments to nonresidents for rents if the payments are made in the course of the withholding agent's business.
- Payments to nonresidents for royalties from activities sourced to California.

- Distributions of California source income to nonresident beneficiaries from an estate or trust.
- Endorsement payments received for services performed in California.
- Prizes and winnings received by nonresidents for contests in California.

However, withholding is optional if the total payments of California source income are \$1,500 or less during the calendar year.

For more information on withholding, get FTB Pub. 1017, Resident and Nonresident Withholding Guidelines. To get a withholding publication, see Additional Information.

C Who Certifies this Form

Form 590 is certified (completed and signed) by the payee. California residents or entities exempt from the withholding requirement should complete Form 590 and submit it to the withholding agent before payment is made. The withholding agent is then relieved of the withholding requirements if the agent relies in good faith on a completed and signed Form 590 unless notified by the Franchise Tax Board (FTB) that the form should not be relied upon.

An incomplete certificate is invalid and the withholding agent should not accept it. If the withholding agent receives an incomplete certificate, the withholding agent is required to withhold tax on payments made to the payee until a valid certificate is received. In lieu of a completed exemption certificate, the withholding agent may accept a letter from the payee as a substitute explaining why they are not subject to withholding. The letter must contain all the information required on the certificate in similar language, including the under penalty of perjury statement and the payee's taxpayer identification number (TIN).

The certification does not need to be renewed annually. The certification on Form 590 remains valid until the payee's status changes. The withholding agent must retain a copy of the certification or substitute for at least five years after the last payment to which the certification applies. The agent must provide it to the FTB upon request.

If an entertainer (or the entertainer's business entity) is paid for a performance, the entertainer's information must be provided. **Do not** submit the entertainer's agent or promoter information.

The grantor of a grantor trust shall be treated as the payee for withholding purposes. Therefore, if the payee is a grantor trust and one or more of the grantors is a nonresident, withholding is required. If all of the grantors on the trust are residents, no withholding is required. Resident grantors can check the box on Form 590 labeled "Individuals — Certification of Residency."

D Definitions

For California nonwage withholding purposes:

- **Nonresident** includes all of the following:
 - Individuals who are not residents of California.
 - Corporations not qualified through the California Secretary of State (CA SOS) to do business in California or having no permanent place of business in California.
 - Partnerships or limited liability companies (LLCs) with no permanent place of business in California.
 - Any trust without a resident grantor, beneficiary, or trustee, or estates where the decedent was not a California resident.
- **Foreign** refers to non-U.S.

For more information about determining resident status, get FTB Pub. 1031, Guidelines for Determining Resident Status. Military servicemembers have special rules for residency. For more information see General Information E, Military Spouse Residency Relief Act (MSRRA), and FTB Pub. 1032, Tax Information for Military Personnel.

Permanent Place of Business:

A corporation has a permanent place of business in California if it is organized and existing under the laws of California or it has qualified through the CA SOS to transact intrastate business. A corporation that has not qualified to transact intrastate business (e.g., a corporation engaged exclusively in interstate commerce) will be considered as having a permanent place of business in California only if it maintains a permanent office in California that is permanently staffed by its employees.

E Military Spouse Residency Relief Act (MSRRA)

Generally, for tax purposes you are considered to maintain your existing residence or domicile. If a military servicemember and nonmilitary spouse have the same state of domicile, the MSRRA provides:

- A spouse shall not be deemed to have lost a residence or domicile in any state solely by reason of being absent to be with the servicemember serving in compliance with military orders.
- A spouse shall not be deemed to have acquired a residence or domicile in any other state solely by reason of being there to be with the servicemember serving in compliance with military orders.

Domicile is defined as the one place:

- Where you maintain a true, fixed, and permanent home.
- To which you intend to return whenever you are absent.

A military servicemember's nonmilitary spouse is considered a nonresident for tax purposes if the servicemember and spouse have the same domicile outside of California and the spouse is in California solely to be with the servicemember who is serving in compliance with Permanent Change of Station orders.

California may require nonmilitary spouses of military servicemembers to provide proof that they meet the criteria for California personal income tax exemption as set forth in the MSRR.

Income of a military servicemember's nonmilitary spouse for services performed in California is not California source income subject to state tax if the spouse is in California to be with the servicemember serving in compliance with military orders, and the servicemember and spouse have the same domicile in a state other than California.

For additional information or assistance in determining whether the applicant meets the MSRR requirements, get FTB Pub. 1032.

The payee must notify the withholding agent if any of the following situations occur:

- The individual payee becomes a nonresident.
- The corporation ceases to have a permanent place of business in California or ceases to be qualified to do business in California.
- The partnership ceases to have a permanent place of business in California.
- The LLC ceases to have a permanent place of business in California.
- The tax-exempt entity loses its tax-exempt status.

If any of these situations occur, then withholding may be required. For more information, get Form 592, Resident and Nonresident Withholding Statement, Form 592-B, Resident and Nonresident Withholding Tax Statement, [Form 592-PTE](#), Pass-Through Entity Annual Withholding Return, Form 592-Q, Payment Voucher for Pass-Through Entity Withholding, and Form 592-V, Payment Voucher for Resident or Nonresident Withholding.

Specific Instructions

Payee Instructions

Enter the withholding agent's name.

Enter the payee's information, including the TIN and check the appropriate TIN box.

You must provide a valid TIN as requested on this form. The following are acceptable TINs: social security number (SSN); individual taxpayer identification number (ITIN); federal employer identification number (FEIN); California corporation number (CA Corp no.); or CA SOS file number.

Private Mail Box (PMB) – Include the PMB in the address field. Write "PMB" first, then the box number. Example: 111 Main Street PMB 123.

Foreign Address – Follow the country's practice for entering the city, county, province, state, country, and postal code, as applicable, in the appropriate boxes. Do not abbreviate the country name.

Exemption Reason – Check the box that reflects the reason why the payee is exempt from the California income tax withholding requirement.

Withholding Agent Instructions

Do not send this form to the FTB. The certification on Form 590 remains valid until the payee's status changes. The withholding agent must retain a copy of the certificate or substitute for at least five years after the last payment to which the certificate applies. The agent must provide it to the FTB upon request.

**Certification Regarding
Debarment, Suspension, and Other Responsibility Matters**

The prospective participant certifies to the best of its knowledge and belief that it and the principals:

- (a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;
- (b) Have not within a three year period preceding this proposal been convicted of or had a civil judgement rendered against them or commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or local) transaction or contract under a public transaction: violation of Federal or State antitrust statute or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
- (c) Are not presently indicted for or otherwise criminally or civilly charged by a government entity (Federal, State, or local) with commission of any of the offenses enumerated in paragraph (b) of this certification; and
- (d) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State, or local) terminated for cause or default.

I understand that a false statement on this certification may be grounds for rejection of this proposal or termination of the award. In addition, under 18 USC Sec. 1001, a false statement may result in a fine of up to \$10,000 or imprisonment for up to 5 years, or both.

Typed Name & Title of Authorized Representative _____

☐ I am unable to certify to the above statements. My explanation is attached.

CAMPAIGN CONTRIBUTIONS DISCLOSURE: PROJECT PARTICIPANTS

In accordance with California law, a person or entity with a financial interest in a proceeding or particular governmental decision, who is not a party but who actively supports or opposes a particular decision, qualifies as a “participant” in that proceeding for purposes of California Code of Regulations Section 84308. Participants are prohibited from contributing more than \$250 to an officer of the agency while the proceeding is pending and for 12 months thereafter. A “financial interest” in a proceeding generally means that it is reasonably foreseeable that the proceeding or governmental decision within the proceeding, will have a material financial effect (of a positive or negative nature) on one or more of your economic interests. Relevant economic interests include your interest in business entities, real property, sources of income, sources of gifts, and personal finances. A material financial effect may include a change in revenue or expenses, or it may achieve, defeat, aid, or hinder a purpose or goal of the source of income and the participant or their spouse receives or is promised the income for achieving the purpose or goal. For additional information, please consult the Fair Political Practices Commission. See [Parties, Participants, Agents, and Section 84308 \(ca.gov\)](#) and [Informal Advice \(ca.gov\)](#). A participant has both a financial interest in the proceeding and communicates with the agency or an officer of the agency for purposes of influencing the proceeding.

In addition, SCAQMD Board Members or members/alternates of the MSRC or MSRC-TAC must abstain from voting on a contract or permit if they have received a campaign contribution from a party or participant to the proceeding, or agent, totaling more than \$250 in the 12-month period prior to the consideration of the item by the Governing Board or the MSRC or MSRC-TAC.

Gov’t Code §84308(c).1

The list of current SCAQMD Governing Board Members can be found at the SCAQMD website (www.aqmd.gov). The list of current MSRC or MSRC-TAC members/alternates can be found at the MSRC website (<http://www.cleantransportationfunding.org>).

SECTION I.

DEFINITIONS

Parent, Subsidiary, or Otherwise Related Business Entity (2 Cal. Code of Regs., §18703.1(d).)

- (1) Parent subsidiary. A parent subsidiary relationship exists when one corporation directly or indirectly owns shares possessing more than 50 percent of the voting power of another corporation.
- (2) Otherwise related business entity. Business entities, including corporations, partnerships, joint ventures and any other organizations and enterprises operated for profit, which do not have a parent subsidiary relationship are otherwise related if any one of the following three tests is met:
 - (A) One business entity has a controlling ownership interest in the other business entity.
 - (B) There is shared management and control between the entities. In determining whether there is shared management and control, consideration should be given to the following factors:
 - (i) The same person or substantially the same person owns and manages the two entities;
 - (ii) There are common or commingled funds or assets;
 - (iii) The business entities share the use of the same offices or employees, or otherwise share activities, resources or personnel on a regular basis;
 - (iv) There is otherwise a regular and close working relationship between the entities; or
 - (C) A controlling owner (50% or greater interest as a shareholder or as a general partner) in one entity also is a controlling owner in the other entity.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 7

PROPOSAL: Appropriate Funds from the General Fund Undesignated (Unassigned) Fund Balance for Administrative and Human Resources Related Expenditures, and Approve Amending Contracts with Outside Labor and Employment Counsel

SYNOPSIS: This action is to appropriate \$800,000 from the General Fund Undesignated (Unassigned) Fund Balance to the District General – Administrative and Human Resources FY 2023-24 and/or FY 2024-25 Budget in the amount of \$625,000, and the Administrative and Human Resources FY 2023-24 and/or FY 2024-25 division budget in the amount of \$175,000. This action is also to approve amending contracts with prequalified labor and employment counsel to add funds, up to \$200,000, as necessary.

COMMITTEE: Administrative, May 9, 2024; Recommended for Approval

RECOMMENDED ACTIONS:

1. Appropriate \$625,000 from the General Fund Undesignated (Unassigned) Fund Balance to District General – Administrative and Human Resources’ FY 2023-24 and/or FY 2024-25 Budget, Services and Supplies Major Object as follows:
 - a. Insurance Account in the amount of \$425,000; and
 - b. Professional and Special Services Account in the amount of \$200,000.
2. Appropriate \$175,000 from the General Fund Undesignated (Unassigned) Fund Balance to the Administrative and Human Resources FY 2023-24 and/or FY 2024-25 Budget, Services and Supplies Major Object; and
3. Authorize the Executive Officer to amend contracts with employment and labor relations legal counsel to add funding up to \$200,000 from the District General – Administrative and Human Resources Professional and Special Services Account, as necessary.

Wayne Nastri
Executive Officer

Background

The FY 2023-24 Budget for District General – Administrative and Human Resources (DG-AHR), Services and Supplies Major Object, Insurance Account provides funding for general South Coast AQMD overhead expenses. Accounts associated with general operations of South Coast AQMD are budgeted and tracked in District General.

Expenses paid from these accounts include such items as retirement payouts, principal and interest payments, insurance, utilities, taxes, housekeeping, security, and building maintenance and improvements.

Division budgets are allocated for expenditures specific to the operations and programs of the division. For Administrative and Human Resources (AHR), the division budget covers items relating to training, recruitment, safety measures, and specialized services contractors.

Due to unanticipated labor and employment related expenses and increased costs for ongoing items, such as insurance premiums, there is a need to transfer budget funds in order to pay for expenses incurred or to be incurred before the end of FY 2023-24.

Proposal

This item requests a transfer of \$625,000 from the General Fund Undesignated (Unassigned) Fund Balance to District General – Administrative and Human Resources' FY 2023-24 and/or FY 2024-25 Budget, Services and Supplies Major Object. Part of the transfer (\$200,000) will be directed to the Professional and Special Services Account to cover outside legal counsel expenses for employment and labor relations matters. These expenses provide South Coast AQMD with legal advice and counsel on labor negotiations, workplace issues, and new laws and regulations. To implement this allocation of funding, staff seeks authority for the Executive Officer to amend existing contracts with previously Board-approved law firms to add funding.

The remainder of the transfer amount (\$425,000) will go to the Insurance Account of District General – Administrative and Human Resources' FY 2023-24 and/or FY 2024-25 Budget, Services and Supplies Major Object. These funds will be used to cover increased costs for liability insurance premiums and for payments related to ongoing workers' compensation claims.

This action is also to appropriate \$175,000 from the General Fund Undesignated (Unassigned) Fund Balance to AHR's FY 2023-24 and/or FY 2024-25 Budget, Services and Supplies Major Object. For FY 2023-24, expenditures from this account include implementing new training programs (such as, de-escalation and situational awareness), adding employee development resources (LinkedIn Learning, for example), initiating engagement events, and continuing costs related to the implementation of South Coast AQMD's Covid Prevention Plan. In order to cover costs to be incurred for similar

employee resources for the remainder of the fiscal year, a budget transfer is requested for funding of additional training, services for health and safety services providers, recruitment software, and temporary employee costs to cover employees out on long-term medical leave.

Resource Impacts

Sufficient funds are available from the General Fund Undesignated (Unassigned) Fund Balance.

 [Back to Agenda](#)

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 8

PROPOSAL: Appoint Regular and Alternate Attorney and Engineer Members to South Coast AQMD Hearing Board for July 1, 2024 to June 30, 2027

SYNOPSIS: The terms of office for the Hearing Board Attorney and Engineer Members, as well as their alternates, expire on June 30, 2024. In November 2023, a recruitment was opened to seek candidates for the new term of July 1, 2024 through June 30, 2027. As required by state law, a Hearing Board Advisory Committee appointed by five members of the Governing Board is responsible to review and make recommendations to the Administrative Committee in making appointments to the Hearing Board. On April 19, 2024, the Advisory Committee recommended that the Administrative Committee interview three candidates for the Regular and Alternate Attorney Member positions, two candidates for the Regular Engineer Member position, and two candidates for the Alternate Member Engineer position. The Administrative Committee interviewed the candidates at its meeting on May 9, 2024 and made final recommendations to the Governing Board.

COMMITTEE: Administrative, May 9, 2024; Recommended for Approval

RECOMMENDED ACTION:

Reappoint the incumbents, Robert Pearman (Attorney Member); Adrienne Konigar Macklin (Alternate Attorney Member); Mohan Balagopalan (Engineer Member); and Dr. Maria Slaughter (Alternate Engineer Member) to the South Coast AQMD Hearing Board for the terms commencing July 1, 2024 and ending June 30, 2027.

Wayne Nastri
Executive Officer

Background

The Hearing Board is a quasi-judicial body comprised of five members appointed by, but acting independently of, the Governing Board to provide relief from South Coast AQMD regulations under certain circumstances. The five members include one attorney, one engineer, one medical doctor and two public members. Each member, as well as their alternates, serve a term of three years. The terms have staggered start dates to ensure continuity on the Hearing Board.

The current term for the Attorney Member and Engineer Member expires on June 30, 2024. A recruitment was opened from November 15, 2023 to January 10, 2024 to seek candidates for the new term that commences July 1, 2024 through June 30, 2027. At the close of the recruitment period, there were eight candidates for the attorney member position and eight candidates for the engineer member position who met the minimum qualifications. The incumbents for these positions are seeking reappointment.

Health and Safety Code Section 40501.1(b) requires that five members of the South Coast AQMD Governing Board appoint an Advisory Committee responsible for reviewing candidates for Hearing Board appointments and providing recommendations through the appropriate Governing Board committee, which is the Administrative Committee. The Hearing Board Advisory Committee is composed of one representative appointed by each of the Governing Board members representing the Counties of Los Angeles, Orange, Riverside and San Bernardino, and the City of Los Angeles.

The Advisory Committee individually scored the applicants, using an evaluation criteria they reviewed and approved. At the request of the Advisory Committee, a three-member panel of South Coast AQMD executive staff members individually evaluated the applicants, which the Advisory Committee used only for cross reference and comparison. The scores from each Advisory Committee member were compiled and used to rank the applicants. On April 19, 2024, three members of the Advisory Committee met to discuss the scores and rankings. The following is the Advisory Committee's unanimous recommendation regarding which candidates move forward for interviews with the Administrative Committee.

Regular and Alternate Attorney Members

The three top-ranking applicants were recommended to be interviewed. The three candidates listed in alphabetical order are: Adrienne Konigar Macklin, (incumbent alternate member), Robert Pearman, (incumbent regular member) and Anne Shultz. These candidates expressed an interest in serving as either the regular or alternate member.

Regular Engineer Member

Of the three top-ranking candidates, two were selected to be interviewed for the regular member position: Mohan Balagopalan (incumbent regular member) and Robert Pease. Both candidates expressed their interest only for the regular position. The third ranked candidate, Dr. Maria Slaughter (incumbent alternate member), is interested only in the alternate position.

Alternate Engineer Member

Dr. Maria Slaughter and Qinling Jenny Lu were recommended to be interviewed for the Alternate Engineer Member. Although Ms. Lu applied to serve as either the regular or alternate member, it was recommended that she be interviewed for the alternate position.

Proposal

On May 9, 2024, the Administrative Committee conducted interviews. Robert Pearman was the only candidate interviewed for the Regular and Alternate Attorney Member positions because Adrienne Konigar Macklin and Anne Shultz were not available for the interviews. Mohan Balagopalan and Robert Pease were interviewed for the Regular Engineer Member position, and Qinling Jenny Lu and Dr. Maria Slaughter were interviewed for the Alternate Engineer Member position. After interviewing the five candidates, the Administrative Committee recommended reappointing Mr. Pearman as the Regular Attorney Member; reappointing Ms. Konigar Macklin, based on her experience and service on the Hearing Board since July 2021, as the Alternate Attorney Member; reappointing Mr. Balagopalan as the Regular Engineer Member; and reappointing Dr. Slaughter as the Alternate Engineer Member for the terms commencing July 1, 2024 and ending June 30, 2027.

Fiscal Impacts

Sufficient funds are budgeted each year to compensate those who serve on the Hearing Board.

January 4, 2024

Department Administrator
South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, California, 91765

Re: Hearing Board Member (Attorney and Engineer Appointments)

Dear Administrator:

I am writing in response to the opening for a Hearing Board Member (permanent and alternate) with the Air Quality Management District in Diamond Bar, California, posted on your website. I have an extensive and solid legal background, highlighted on the attached resume, which I believe illustrates that I have the skill, experience, and knowledge to serve and that I would be an excellent choice for you to consider for this position.

For more than three decades, I have served as a lawyer, general counsel, hearing officer and certified mediator/dispute resolution professional. I have served as an Administrative Law Judge for the State of California, and as a hearing officer for numerous public agencies, including the City of Los Angeles. I am a graduate of U.C. San Francisco College of Law (formerly Hastings College of Law), and I am licensed to practice law in the State of California, the United States Central District Court and before the United States Supreme Court.

In my capacity as an Administrative Law Judge II, I routinely ascertained and reviewed and weighed pertinent evidence, prepared summaries of fact, and rendered decisions. I was also assigned to analyze difficult and complex legal problems in state taxation cases and applied legal principles and precedents to particular sets of facts concerning federal and state law, regulations to render a decision and adopt a decisive course of action.

Prior to my work as an Administrative Law Judge, I served as a hearing officer and settlement officer for various public agencies, presiding over quasi-judicial hearings as provided under the Administrative Procedure Act and other state and federal statutes. I was responsible for conducting fair and impartial hearings while controlling the course of the hearing in a manner that would secure confidence and respect. I was also responsible for applying principles of law, ruling on the relevance or admissibility of evidence as provided by law, issuing subpoenas, receiving, and reviewing evidence, examining testimony, preparing decisions containing findings of facts and conclusions of law and advising administrative agencies on the application of law, policies, and regulatory compliance with issued decisions.

As the General Counsel for several public agencies, I have experience handling environmental legal issues as well as significant experience in establishing and maintaining cooperative relations with those with whom I work. My former position(s) allowed me to develop an administrative skill set applicable to developing and ensuring levels of efficiency. In addition to my legal and adjudication skills, I have served as a school board president and member for over 11 years. This position is also relevant to the skill set needed to serve as an Attorney Board Member, as I am often required to interface with the public, hear issues and complaints and administer opinions while working in concert with other board members.

I have the temperament, communication skills and patience to interact with members of the public who appear. My strong work ethic is evidenced by my work history and references which are indicated on the application as requested. As a dedicated public servant, I believe I would make a solid addition to the board as the Attorney Member or Alternate.

I welcome the opportunity to further discuss the possibility of becoming the newest attorney board member (or alternate) and I am available for an interview at your convenience. Thank you for your time and attention.

Sincerely,

Adrienne Konigar-Macklin

ROBERT PEARMAN

HEARING BOARD MEMBER - ATTORNEY APPLICATION

ROBERT C. PEARMAN

Supplemental Information: Dispute Resolution/Administrative Hearings Practice

American Arbitration Association, Roster of Neutrals – Commercial, Construction, Government Contracts, Health Care panels. Sole or panelist Arbitrator in dozens of disputes since 2005.

Certified Member of the State of California Public Works Contract Arbitration Panel. This is a statewide panel for arbitrations for state public works contract disputes, and certain local agency public works disputes, under the State Contract Act and related regulations.

Member of Caltrans Dispute Resolution Board (DRB). Caltrans utilizes DRB members on panels to facilitate dispute resolution on significant projects and as Dispute Resolution Advisors.

FINRA Arbitrator Roster (Public)

Appointed by Speaker Atkins of the California Assembly to the California Architects Board (2016-2018). Appointed by the California Senate to the California Architects Board (2018-). The Board is a regulatory body charged with protecting public health and safety through licensing and oversight of the profession. In his role, Mr. Pearman makes important decisions on agency policies, and approves regulations and helps guide licensing, enforcement, public education and consumer protection activities. The Board handles disciplinary actions against professionals who violate state consumer protection laws – various cost sanctions, license suspension, probation and revocation options are considered after administrative hearing processes.

In appointments to the Assessment Appeals Boards in two southern California counties - adjudicated appeals of disputed county property tax assessments, including value allocation, appraisal reviews, new construction and exemption issues. Adjudicated 100s of matters dealing with a variety of commercial, industrial, and residential properties. Experience chairing three-person panels. Some appeals were multiple day presentations. Written findings and rationale were often required. Taxpayers presented cases with accounting, finance, real estate and legal personnel, and the county assessor and county counsel represented the taxing agency.

Contracted as a County Hearing Officer: adjudicate various administrative actions involving real property owners (e.g., nuisance abatement, illegal uses) and businesses (e.g., licensing decisions, marijuana dispensary uses), and governmental cost recovery actions. Hearings involve sworn testimony; legal counsel; evidentiary rulings; consideration of asserted violations in the context of applicable County codes and State law; mitigating factors and corrective measures; and the

affect on the public of alleged nuisances. Also was selected as a City Administrative Appeals Hearing Officer (2018 - 9) engaged to preside over parking citation and other appeal hearings pursuant to California Vehicle Code and City Municipal Code.

Former Vice Chair of a municipality's Transportation Commission, hearing issues related to traffic signals and devices, municipal airport, and transportation engineering and sciences.

Counsel for parties involved in arbitrating public works disputes regarding the compliance with certain technical traffic engineering equipment and software and its compliance with plans and specifications, and in mediating construction management and inspection services in public works.

Selected AAA arbitration matters handled:

Design, landscaping and administrative services for a large housing development (276-unit residential apartment project), issues of cost of completion, delay damages and diminution in value were involved.

Dispute between an owner and contractor regarding breach of construction contract and non-payment re petroleum project facilities.

Claims of payment for services, and counterclaims for professional negligence, surveying and utility line mapping errors. The defective engineering and surveying work allegedly resulted in the need for relocation of improvements including utility facilities

Grading/excavation subcontractor and a general contractor dispute involving payment issues, grading, footings and soil removal issues, and interpretation of geologic soils reports, costs to complete allegedly defective or incomplete work.

Training Courses include:

2023 Air Pollution Control District Variance and Hearing Board Training - ARB

2015 and 2016 American Arbitration Association Arbitrator II Training - Advanced Case Management Issues Workshop.

American Arbitration Association - Arbitration Awards: Safeguarding, Deciding & Writing Awards

2017 Caltrans Dispute Resolution Advisor and Dispute Resolution Board Training

ROBERT C. PEARMAN

Board Member (1994-2019), National Housing Law Project – Chairman

DISPUTE RESOLUTION ROLES:

American Arbitration Association, Roster of Neutrals - Commercial and Construction Law, Government Contracts, Health Care panels

Certified Member of the State of California Public Works Contract Arbitration Panel

Member of Caltrans Dispute Resolution Board

FINRA Arbitrator Roster (Public)

**SIGNIFICANT
PROJECTS &
CLIENTS:**

Montebello Unified School District, Center for Natural Lands Management, Los Angeles Housing Department, Housing Authority of the City of Los Angeles, LACTC/MTA Metro Rail, MTA Union Station Gateway Headquarters Project, City of Fresno/BNSF Franchise and Grade Crossing, California High-Speed Rail Authority, Metro Gold Line Foothill Extension Construction Authority, Exposition Metro Line Construction Authority, LAX Security Enhancement Program and Advanced Master Plan, Community Redevelopment Agency/Los Angeles, San Diego Gas & Electric

**EXEMPLAR
ENVIRONMENTAL/
PUBLIC AGENCY
LAW WORK:**

Member of the State Inspection & Maintenance Review Committee. IMRC advised the Air Resources Board, the Bureau of Automotive Maintenance, and the Legislature on the vehicular smog check program in California, focusing on mobile source emissions (passenger cars and light duty trucks). In that capacity I participated in reviews of the progress toward goal attainment in the State Implementation Plan, and those plans for regional air districts such as SCAQMD and their strategies for mobile source and consumer products. IMRC also examined, inter alia, new technologies, emission reduction credits, retrofitting of vehicles, and accelerated retirement of older polluting sources. Participated in AQMD Ultrafine Particles Conference.

Advised the Los Angeles County Metropolitan Transportation Authority on a variety of environmental matters including liability issues concerning leaking underground storage tanks, and handling, transporting, storage and disposal of hazardous waste on the Metro Rail Project; and ADA issues, environmental remediation, groundwater basins.

As special counsel to the MTA Permit desk, tasks included examining local and state law and regulation. The issues pertained to the interface of existing and planned projects with local land use controls and with existing development. Examined local permitting processes and authorities, authority of the agency--a state created organization with countywide responsibilities, and specific Government Code exemptions from certain local building and zoning ordinances, State Government Code sections dealing with zoning, development, fees and exactions, etc

Represented the MTA in construction claims litigation involving the Union Station terminus for the Metro Red Line Subway, including work performed by an asbestos abatement subcontractor.

Assisted the LA Housing Dept. in disputes and contracts regarding asbestos and lead abatement, related funding and construction contracts and disposal issues.

Represented the Union Oil Company of California; activity included representing the client with respect to claims involving soil remediation work at its oil refinery.

In the capacity of special counsel to the Gold Line, and deputy counsel to the

Exposition Line, led the firm's work with respect to the EIRs applicable to those projects. This work included agreements with third parties for implementation of required mitigation measures, comprehension of the EIR statements with respect to subsequent real property activity, and analysis of the EIR material in connection with litigation involving the projects.

General Counsel to public agencies -advise on Brown Act, contracts, risk assessment, and penalties, among others.

Robert C. Pearman, Esq.

Attorney at Law

Cover Letter to SCAQMD Hearing Board-Attorney Member Position

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT
21865 Copley Drive
Diamond Bar, CA. 91765
Attn.: Faye Thomas, Clerk of the Boards

Dear Ms. Thomas:

The responsibilities and qualifications for the Attorney Member of the SCAQMD hearing board panel dovetail with my experiences and interests.

I am nearing the end of my initial term as the Attorney Member of the hearing board. I've also been the vice chair for two years. In those roles I've gained valuable experience and understanding of the workings of the board, knowledge of the history of matters that may be ongoing, and played a role in developing and updating the board rules and policies. I assisted the chair in pre hearing conferences designed to afford more efficient hearings. I would like to pursue another term - to provide more transparency on our proceedings, to the public and participants, allow more efficient and effective hearings minimizing board and staff time, and continuing the board role in ensuring a cleaner and healthier environment for all within its jurisdiction.

Prior to my appointment, I gained knowledge of the subject matter within the SQAQMD jurisdiction from my legal practice, which included environmental, permitting and licensing, and land use work, as well as related litigation, for over 35 years. Furthermore, my service on the State of California Inspection and Maintenance Review Committee provided a wealth of relevant experience. As a gubernatorial appointee to that Committee, issues examined were: analysis of emissions, vehicle inspection and testing, measures to curb efforts to avoid the inspection process, and advising on Air Resources Board methodologies for emissions reductions calculations, among other things.

During my initial term as attorney member, I've taken training seminars on procedural and substantive aspects of the work of the District.

As the attached material demonstrates, I have substantial experience in the public agency hearing and due process environment. This includes dealing with abatement, nuisances, disciplinary action,

regulatory violations, and monetary sanctions. My roles as a member of the California Architects Board, Assessment Appeals Boards and as a local hearing officer evidence my skills in those areas.

These hearings involve the presentation of evidence by a respondent/applicant and the public body, often with attorney involvement; sworn testimony; consideration of asserted violations in the context of applicable law and regulation; mitigation and corrective measures; and the affect on the public.

I also understand the geographic breadth of the District, as I have worked on matters over the years on the Metro Rail system including Metrolink and its multi-county reach, and had construction and real estate clients from Orange County to the Inland Empire.

I am adept at conducting hearings, rendering decisions and issuing findings in complex situations. I have arbitrated dozens of matters for the American Arbitration Association since 2005, some as a solo decision-maker, some on a three-person panel. Cases arbitrated have involved various forms of requested relief – injunctive, interim and final awards. I am also a member of the State's Public Works Contract Appeals Board which deals with public agency construction contracts, and am on various other recognized dispute resolution panels.

I have a proven hearing tribunal style: fair, impartial, examine each matter with a clean slate; can absorb new issues quickly; emphasis on focused evidence on key points needed for efficient decision-making.

I have provided a number of references who know me from varied circles, that can provide more evidence of my suitability for this position.

My record shows a history of Public Service appointments and volunteering, as I believe that commitment is something that members of the legal profession should do as a matter of course.

I appreciate your consideration.

Sincerely,

A handwritten signature in black ink, appearing to read "Robert C. Pearman". The signature is fluid and cursive, with a large initial "R" and a stylized "P".

Robert C. Pearman, Esq.

Re: Application for Hearing Board Attorney Member

To Whom It May Concern:

Enclosed herewith please find my application for the position of SCAQMD Hearing Board Attorney Member. As detailed in my application, I most recently worked for the SCAQMD as Principal Deputy District Counsel with the District Prosecutor's Office. I greatly enjoyed my work for the SCAQMD and found my position to be incredibly rewarding. I am very proud of the work I completed for the SCAQMD and for the relationships I forged within the Prosecutor's Office, the Hearing Board (including Hearing Board clerks Rosalinda Diaz and Altheresa Rothschild), and District staff. Unfortunately, when I became pregnant with twins and my pregnancy was deemed high-risk, I opted to resign my position. I subsequently took time off to raise my daughters and now feel driven to return to the work I found so incredibly rewarding.

Prior to joining the SCAQMD, I worked for six years as an environmental attorney specializing in air and water quality compliance matters. Throughout my practice, I worked extensively with the SCAQMD in a variety of different contexts including rule development work, Hearing Board matters (including permit appeals, enforcement actions, and more than 100 variance requests), and air permitting matters.

As a result of my extensive experience in working with the SCAQMD, I learned a great deal about the goals, policies, and procedures of the agency. I believe I have the legal skills and agency knowledge required to serve as the Attorney Member of the Hearing Board. I am extremely enthusiastic about the position and look forward to the opportunity for a formal interview.

Respectfully,

Anne Martorano Shultz

Anne Martorano Shultz

Hearing Board Attorney Member

Experience

South Coast Air Quality Management District

Principal Deputy District Prosecutor

November 2003 - August 2005

- Tasked with assisting the Chief Prosecutor in the daily management of the Prosecutor's Office.
- Reviewed the terms and conditions of variance and abatement orders prepared by District Prosecutors and advised on especially consequential cases.
- Attended meetings of the Governing Board and reported back to the Chief Prosecutor on important action items.
- Coordinated with District Counsel on important rule-making matters and anticipated rule changes.
- Represented the District Prosecutor's Office in public hearings and panel discussions throughout the SCAQMD.

Weston, Benshoof, Rochefort, Rubalcava, & MacCuish (now Alston and Bird)

Associate

January 1999 - November 2003

- Counseled public entities and private industry clients on compliance with air quality rules and regulations and assisted clients in the SCAQMD rule-making process.
- Represented public entities and private industry clients before the SCAQMD Hearing Board. Specific responsibilities included counseling clients as to the particular type of coverage required, drafting variance petitions, and attending hearings before the SCAQMD Hearing Board.
- Counseled clients in obtaining necessary air and water permits.
- Counseled clients concerning hazardous release reporting and property remediation matters.
- Counseled clients in connection with Proposition 65 compliance and litigation.

Parker, Milliken, Clark, O'Hara & Samuelian

Associate

January 1997 - November 1999

Summer Associate

Summer 1996

- Assisted in the defense and prosecution of several Superfund and common law cost recovery actions. Participated in all phases of litigation from inception through trial and related appellate work.
- Environmental compliance work included assistance in the cleanup of two separate properties suffering from environmental contamination; also counseled regulated clients concerning hazardous release reporting.

The Honorable Peter A. Nowinski, Federal Magistrate Judge for the Eastern District of California

Judicial Extern

Summer 1995

- Conducted research in a variety of areas including contract and labor law. Attended court hearings, discussed proceedings with Judge Nowinski, and prepared draft opinions.

Education

University of California, Davis School of Law

- *Juris Doctor*: May 1997
- Honors: Received American Jurisprudence Award in Criminal Procedure and Federal Taxation
- Activities: Published article for Environs, the UC Davis Environmental Law & Policy Journal entitled “Protecting Natural Resources Under Scalia’s Incidental Effects Test.”

University of California, Santa Barbara

- *Bachelor of Arts*: June 1994, Graduated with High Honors
- *Majors*: Double major, Business Economics (with an Emphasis in Accounting), and Law & Society

Admitted

- State Bar of California and United States District Court for the Central District of California, December 1997

MOHAN BALAGOPALAN

Mohan Balagopalan

January 5, 2024

Ms. Thomas
Clerk of the Board
South Coast Air Quality Management District
21865 Copley Drive, Diamond Bar, CA 91765

Dear Ms. Thomas:

I am writing to express my interest in being considered for reappointment as a full-time Hearing Board (HB) Engineering member. Having had the privilege of serving in this position for the past two terms, (2018-2021, & 2021-2024), I am eager to continue contributing my skills and expertise to uphold the principles of justice and fairness following the procedures of the California Health & Safety Code and the Rules and Regulations of South Coast AQMD.

Over the course of my tenure (2018-2024), I have presided over a wide range of cases, including Orders of Abatement, Permit Appeals and Variances (Interim, Short and Regular). My commitment to impartiality, thorough understanding of administrative law and the Rules and Regulations, the permitting process and dedication to upholding the highest standards of ethical conduct have allowed me to make fair and well-informed decisions that respect the rights of all parties involved.

I meet the desirable qualifications to serve as I have an undergraduate degree in Mechanical Engineering and over 37 years of practical engineering experience, 32 years at South Coast AQMD in the Permitting Division, prior to my retirement in 2017. The last four years prior to my retirement, I served as the Senior Permitting Manager for the Mechanical and Chemical teams, and Permit Streamlining & Administration Team. I have also taught classes on air pollution permitting and dispersion modeling at UC Riverside Extension program and at Loma Linda University, School of Public Health.

In my 32 years as a permit engineer/manager I worked with and helped different businesses to understand and comply with SCAQMD's Rules and Regulations. I continue to update my skills and knowledge by attending seminars, webinars, and online courses. I have also taken several courses with the National Judicial College on Ethics and Biases. Lastly, I would like to thank the Governing Board for giving me the opportunity to serve.

Sincerely,

Mohan Balagopalan

Mohan Balagopalan

Encl: Resume

Mohan Balagopalan

Professional Summary

Hearing Board Engineering Member, South Coast AQMD, (July 2018- June 2024). A solid foundation in engineering principles, relevant administrative law, a keen understanding of relevant statutes and rules and regulations and 32 years of permitting experience at South Coast AQMD. Passionate about sharing knowledge and information on air quality issues.

Key attributes that I bring to this role include:

Engineering Expertise: Ability to understand and relate to various engineering issues and problems faced by Petitioners in the cases brought before the Hearing Board.

Analytical Skills: Proven ability to analyze complex issues, weigh evidence objectively, and deliver well-reasoned and impartial decisions.

Communication Skills: Demonstrated ability to listen, ask relevant questions and make motions to grant or deny an Order of Abatement, Variance, or Appeal cases. Responsible for training new board members on the hearing board process and procedures.

Professionalism: A commitment to maintaining the highest standards of professionalism, ethics, and integrity in all aspects of the hearing process, and to render impartial and fair decisions.

WORK EXPERIENCE

Hearing Board Engineering Member, South Coast AQMD, 2018-2024.

Instructor, UCLA Labor Occupational Safety & Health Program-2021-2022.
Modified and updated the online course on Computer-Aided Management of Emergency Operations (CAMEO®).

National Air Compliance Training (NACT) April 2017-June 2018.
Instructor-Air Quality Permitting and Controls at different air pollution agencies outside California.

South Coast Air Quality Management (SCAQMD) 1985 to 2017
Senior Permitting Manager. Worked for 32 years on air quality permitting related activities, of which the last 4 years as a Senior Permitting Manager for the Mechanical and Chemical Permitting teams, Permit Streamlining & Administration teams. Participated in Permit Streamlining Task Force meetings and offered solutions and developed workflows and templates to improve Permit Streamlining.

Instructor, University of California Riverside (UCR), Extension Program, Air Quality Permitting for the Certified Permitting Professionals (CPP) Program, 1989-2018

Education

- ❖ Bachelor of Mechanical Engineering, National Institute of Technology (NIT), Madras University, India, 1978.
- ❖ Master's Business Administration (MBA), Azusa Pacific University, 1985.
- ❖ Certificate, Hazardous Materials Management University of California Riverside, 1987.
- ❖ Certificate in Six Sigma-Yellow Belt, California State University Fullerton.
- ❖ Certificate in Geographic Information System (GIS), ongoing, .University of California Riverside,
- ❖ Online Courses, The National Judicial College, Ethics for Administrative Law Judge and Role of Administrative Law Judge and other courses.

Additional Qualifications/Skills

- ❖ Engineer-in-training license (EIT), 1984.
- ❖ Clinical Instructor, School of Public Health, Loma Linda University, 2012- 2023
- ❖ USEPA Certified instructor on Computer Aided Management of Emergency Operations (CAMEO).
- ❖ University of California, Riverside Extension Design Thinking Advisory Board, 2020
- ❖ Ham Radio Operator, Technician, General, & Amateur Extra licenses, AJ6XF
- ❖ Community Emergency Response Team/Auxiliary Communication Services, City of Rancho Cucamonga. 2019 Ready RC Volunteer of the Year, City of Rancho Cucamonga
- ❖ Climate Realty Leadership Training, Pittsburgh 2017
- ❖ OSHA 40-hour Hazmat Training and 8-hour Supervisory Training, 2017.
- ❖ Board Member & Past President of West Coast Section of Air & Waste Management Association (A&WMA).
- ❖ Past President of Southern California Society of Risk Analysis (SCSRA).
- ❖ Proficient in Microsoft office (Word, Excel, PowerPoint).
- ❖ Working with Geographic Information System (GIS) for mapping and geocoding.

January 9, 2024

Ms. Thomas
Clerk of the Board
South Coast Air Quality Management District
21865 Copley Drive, Diamond Bar, CA 91765

Dear Ms. Thomas:

I am interested in serving as the Hearing Board (HB) Engineering Member. I meet the desirable qualifications to serve as I have over 26 years' engineering experience in the environmental field and I have a chemical engineering degree from California State Polytechnic University, Pomona. I worked as a Regulatory Compliance Manager at Sanmina Corporation before I retired in 2018. I am very familiar with SCAQMD rules and regulations. I was a Certified Permitting Profession from SCAQMD and a Professional Engineer when I worked at Sanmina Corporation.

I believe that my 26 years as a regulatory compliance manager understanding and complying with SCAQMD's Rules and Regulations should make me an effective member of the HB. I had participated in SCAQMD rule making process. As a result, my suggestion was adopted into Rule 219 by SCAQMD engineers.

I believe in fairness. From the business / public point of view, I understand that we need to comply with rules and regulations. Yet, the rules and regulations should be reasonable and feasible. I also understand from the regulator point of view that rules and regulations are made for the good of the public and businesses should comply with them. Because my experience working with SCAQMD staffs and understanding both business and SCAQMD point of view, I believe that I could be a fair HB member.

My enclosed resume will give you a better understanding of my background and skills.

Sincerely,

Qingling Lu

Qingling Jenny Lu

Encl: Resume

QINGLING JENNY LU

OBJECTIVE

To utilize my experience and special skills towards a challenging position.

KEYWORD SUMMARY

Highly motivated, more than 26 years engineering experience in environmental field, work well with people, have very good working relationship with regulatory agencies, excellent communication skills, extensive knowledge and experience in environmental and safety management, and computer savvy.

- Established and managed worldwide ISO14001 system (50 facilities);
- Experienced in managing the environmental and safety department;
- Familiarization with the South Coast Air Quality Management District's Rules and Regulations and applying them into the daily practice;
 - Assisted in development of Rule 219;
- Analyze Federal, State and Local regulations;
- Work with attorneys regarding real estate transitions and ground water issues.

EXPERIENCE

Southern California SCUT Alumni

03/06 – present

Board Director

- Organize and attend events;
- Work at the events;
- Attend board member meetings;
- Assist alumni with their needs when needed

Sanmina-SCI Corporation, Costa Mesa, CA

08/91 – 03/18

Regulatory Compliance Manager

Responsible for environmental and safety compliance

- Managed the environmental and safety department.
- Prepared and submit all air quality permit applications to South Coast Air Quality Management District;
- Obtained all other necessary regulatory permits from the city, county, state and federal agencies;
- Successfully interfaced with all regulatory agencies to build a friendly working relationship with their representatives to insure ease of process;
- Prepared and submitted air emission reports, waste waster discharge reports, waste disposal reports and all other environmental regulatory reports;
- Engineering designed air emission control equipment and wastewater treatment systems and seeing projects through installation;
- Established, implemented and managed ISO 14001 Environmental Management System worldwide (more than 50 facilities):
 - ISO 14001 Certification in less than a year;
 - Provided on-going trainings and guidance to all facilities.

Managing facility closure and ground water clean-up projects.

- Oversaw facility closure projects, managing contractors during building demolition, obtaining necessary permits, and hazardous waste disposal;
- Strategized with consultants in ground water clean up project, including meetings with the Water Quality Control Board, site visits, and clean-up approval;

EDUCATION

- Bachelor of Science, Chemical Engineering from California State Polytechnic University, Pomona, CA (1991)
- Certificate of Hazardous Material Management from University of California, Irvine, CA (1994)
- Numerous environmental and safety management trainings, including extensive air pollution control trainings.

AFFILIATIONS

Board Member of Southern California SCUT Alumni.

ROBERT PEASE

15 November 2023

Clerk of the Boards
SCAQMD
21865 Copley Drive
Diamond Bar, CA 91765

Good Day,

Attached is my resume and application for the regular Engineer position on the SCAQMD Hearing Board. My unique portfolio of air quality experience, planning and government experience, and education make me an ideal candidate for this position. My education includes a Bachelor's and Master's Degree in Chemical Engineering as well as an MBA Degree. I am also a licensed professional Chemical Engineer in the state of California.

Prior to joining the SCAQMD in 1983 as an Engineer I, I worked in private consulting writing research reports for the Electric Power Research Institute, leading field source test teams, and directing laboratory testing on new and innovative technology. My SCAQMD experience includes positions in permitting, compliance, rule development, small business assistance, technology advancement, air toxics, and planning. I managed the original contract on market-based approaches that led to the RECLAIM program. While directing the small business assistance group, I established satellite field locations to facilitate the permitting requirements for small businesses. My rule development work included developing and amending command and control, fee, and NSR rules. My permitting experience included reviewing applications and managing permit processing teams. I also helped prepare cases for and testified before the SCAQMD Hearing Board.

As the Chairman of the City of Yorba Linda Planning Commissioner, I participate in and chair public meetings, events, and workshops; serve as an ambassador for the city; and facilitate community input and involvement in formal public hearings. As part of a five-member body, I work collaboratively with my fellow commissioners on our review of proposed projects. Through my affiliation, I have received additional training and experience in land use issues, planning, and CEQA requirements. Serving on the commission requires community outreach, research, and detailed preparation for and review of each item on our agenda.

My responsibilities as the Renewable Energy Program Manager for the County of Orange, Orange County Waste and Recycling, encompassed air quality permitting and compliance activities at the landfills. Moreover, I prepared and filed variance petitions, as well as testified before the SCAQMD Hearing Board in support of the variance applications. Further, I developed and managed renewable energy projects to ensure the beneficial use of landfill gas while minimizing the environmental footprint. These efforts required a deep technical and engineering background as well as an in-depth knowledge of the SCAQMD permitting process, current and proposed rules, and hearing board procedures.

My background and experience have provided me with an excellent platform to perform successfully as the Engineer member of the Hearing Board. I'm excited at the possibility of applying my considerable expertise and experience to help the Hearing Board work through its complex cases.

Thank you for your consideration of my application and I look forward to hearing from you.

Sincerely,

Robert R. Pease II

Education:

- MBA, Cal Poly Pomona, June 2006 (overall GPA 3.90)
- Master of Engineering, Cal Poly Pomona
- B.S. (Cum Laude) Chemical Engineering, Cal Poly Pomona
- Additional professional education in land use planning, CEQA, tax, ethics, accounting, supervision, management, and communication

Selected Accomplishments:

- Responsible for air quality permitting and rule compliance including variances for County of Orange Landfills. Developed Renewable Energy Guidelines for County of Orange Landfills.
- Responsible for budget projections, contract monitoring and performance, development of project parameters and timelines, and preparation of contracting documents for County of Orange Landfills.
- Supervised/Managed staff responsible for air quality permitting, compliance, and rule development relating to resource recovery projects including LFG-to-energy projects
- Performed legislative outreach/lobbying with local and state elected officials, consultants, and lobbyists on behalf of a public agency on pending and proposed legislation. Testified before state senate subcommittees.
- Managed SCAQMD Small Business Assistance Office. Successfully created and opened small business assistance satellite offices in Los Angeles, Downey, and Palm Desert.
- Developed innovative inventory technique for quantifying area source emissions using statistical analysis methods. Protocol maximized data collection and minimized staff requirements.
- Researched, investigated and reported on new technology that can be applied to industrial sources. Investigation included foreign travel, cost estimation, cost/benefit analysis, PV/NPV/DCF and industry outreach.
- Published over 20 articles in professional journals.

Experience:

Consultant
April 2015 to August 2019
& August 2021 to present

CAREER SYNOPSIS

I have long had a passion for listening and learning, an appreciation of connectedness, and a boundless curiosity. These traits, coupled with the importance that I place on professionalism, honesty and integrity have guided my non-traditional career path and have been instrumental in the successes I have attained across a wide variety of functions within a broad spectrum of organizations.

I have acquired several years of experience leading organizations operating under for-profit and non-profit fiscal parameters, holding responsibility for accounting, budget, construction, customer service, environmental health and safety, facility maintenance, fleet, grounds, human resources, information technology, maintenance and operations, park services, payroll, public works, purchasing, sustainability, traffic / transportation, utilities, and warehouse operations. I have also personally overseen hundreds of technical, administrative, salary and hourly employees, and managed general and special fund budgets in excess of \$200 million.

As I reflect on my career, the accomplishments that I am most proud of fall into three categories: Resource Management, Building High Performance Organizations, and Innovation/Collaboration.

Resource Management points to my ability to understand the current state, determine the needs and wants of an organization, develop priorities and action plans to address deficiencies, and ensure the availability and stewardship of resources.

Building High Performance Organizations describes my focus on expanding the capabilities of an organization by providing a challenging yet supportive work environment; fostering cooperation and alignment among various partners, encouraging development and career advancement; and supporting a diverse work force.

Innovation and collaboration highlight my strength in identifying connections; thinking outside the box to improve processes; anticipating and responding to opportunities created by change; establishing approaches that are designed to ensure continuous improvement.

ADMINISTRATIVE EXPERIENCE

Hearing Board Engineer Member Alternate (3-year appointment, July 2021 – June 2024)
South Coast Air Quality Management District

The South Coast Air Quality Management District (SCAQMD) South Coast AQMD is the regulatory agency responsible for improving air quality for more than 17 million people across Los Angeles, Orange County, Riverside and San Bernardino counties. The Hearing Board is a quasi-judicial panel authorized to provide relief from SCAQMD regulations under certain circumstances.

Founder / Owner (November 2015 – Present)
MWS & Associates

MWS & Associates is a California certified Small Business (SB-Micro) and a Federally certified Disadvantaged Business Enterprise (DBE) that provides a wide range of B2B and B2G consulting services.

Selected Accomplishments

- Secured more than \$750,000 in additional revenue for peer small businesses
- Develop business plans and facilitated a variety of certifications for Socially and Economically Disadvantaged Individual (SEDI) Businesses
- Increased the productivity of manufacturing facilities in California, Connecticut and Rhode Island by 30%
- Provided Six Sigma Training, Certification and Support to the Department of Transportation

Special Consultant (January 2012 – Present)
California State University System, Office of the Chancellor

The Office of the Chancellor is the oversight body for the 23 campuses within the California State University System that educates 470,000 students with a budget totaling \$5 billion.

Responsibilities and Selected Accomplishments

- Handle a myriad of tasks in a variety of arenas including but not limited to evaluating issues and determining the optimal strategies that should be implemented in order to improve resource utilization
- Developed the Strategic Plan for the Council of Police Chiefs
- Developed curriculum and facilitated several 2-day Process Improvement Workshops for administrative employees working in the California higher education system (CSU, UC and CCC)
- Assisted with the systemwide GAAP Audit and the budget allocation process
- Member, Quality Improvement Consortium
- Member, Procure to Pay / Shared Services Task Force

OPERATIONAL EXPERIENCE

Deputy Director, Operations & Maintenance (2021 - present)

Long Beach Community College District

Long Beach Community College is one of the largest colleges in the California Community College System. The two-campus district has a student population of over 34,000, a 2020/2021 budget of approximately \$305 million and a \$850 million bond program.

Responsibilities and Select Accomplishment

- Responsible for ensuring efficient academic and administrative operations by managing the resources associated with the security, maintenance and repair of District facilities, grounds, and equipment
- Oversees Special Events and Stadium Operations
- Oversees Business Services (Human Resources and Budget)
- Provides high level support to the Senior Director, Bond Management Team and Facilities Projects Team.
- Co-Chair, Inclusive and Culturally Affirming Campus Art Workgroup
- Secured over \$1.1 million in grant funds focused on sustainability and enhancing infrastructure

Director of Public Works (January 2015 – March 2020)

City of Carson, California

The City of Carson, California is a community of approximately 93,000 located within an area of 19 square miles. Carson contains 263 lane miles, is essentially bound by 4 freeways, and impacts 3 watersheds. Carson is governed by the Mayor and four Council members and operated under general law from 1968 until 2019 when it became a Charter City. The City's 2019/20 annual budget was approximately \$94 million.

Responsibilities and Selected Accomplishments

- Responsible for providing the community with a safe, clean, and healthy environment through the design, construction, maintenance, and management of the vital municipal infrastructure system
- Oversaw 140 employees (45% of the City's full-time staff)
- Responsible for Business Services (Human Resources, Payroll, Contracts, Budget)
- Provided high level support to the City Manager's Office.
- Developed a new fee structure for the pipeline franchise, increasing annual revenue by 100%
- Transitioned the community to a new 15-year comprehensive solid waste franchise agreement
- Assisted in structuring the City's initial Development Impact Fee
- Initiated Citywide participation in the Clean Power Alliance Community Choice Aggregation at 35%renewables
- Completed a \$22 million downtown revitalization project
- Selected and implemented a new Computerized Maintenance Management System
- Attained SCE Energy Leadership Program Platinum status
- Received Cool Planet Award
- Developed and facilitated PW Compendium training
- Secured more than \$30 million dollars in state and federal grants within a two-year period
- Oversaw the Public Works Commission and the Beautification Commission
- Established infrastructure baseline metrics (Pavement Management Study, Sidewalk Assessment)
- Instituted first ever Environmental Resources Fair

- Implemented A/E contractor pools
- Completed reclaim water installations at two parks
- Transitioned over 2,000 streetlights and park lights to LED
- Initiated bulk fuel gas cards
- Created sustainability administrator positions
- Secured an SCAQMD MRSC grant for 5 Electric Vehicles and two charging stations
- Initiated a fleet audit and replacement plan
- Secured a Cal Fire Grant to plant 1,200 new trees
- Established a deferred maintenance surcharge on building rental fees
- Presenter, “Greater South Los Angeles Water Tour,” Our Water LA
- Presenter, “GPS Your Future,” International Trade Education Program
- Presenter, “Strategies for Success,” American Public Works Association, Institute
- Presenter, Quality in Practice, Carson Toastmasters
- Member, Community Facilities District Formation Team
- Member, Legislative Advocacy and Grant Writing Team
- Member, Measure M and R Bond Financing Team
- Member, South Bay Council of Governments (SBCOG) Infrastructure Working Group
- Member, South Santa Monica Bay Watershed Area Steering Committee
- Member, LA Metropolitan Transportation Authority (LA Metro) Technical Advisory Committee

Director, Physical Planning and Facilities Management (January 2010 – January 2015)

Associate Director, Physical Planning and Facilities Management (January 2008 – December 2009)

Assistant Director, Physical Planning and Facilities Management (January 2007 – December 2007)

California State University Long Beach

California State University Long Beach is one of the 23 campuses within the CSU System. It is a 322-acre campus, serving 36,000 students, staff and faculty with a budget exceeding \$150 Million.

Responsibilities and Selected Accomplishments

- Oversaw Physical Planning and Facilities Management - the largest non-academic department
- Involved with capital projects from concept through construction, operations, and maintenance
- Responsible for the Central Plant
- Managed sustainability
- Served in dual Director roles for two years (Director of PPFM and Director of Environmental Health and Safety).
- Oversaw Business Services (IT, Purchasing, Payroll, Budget and Human Resources)
- Established the campus wide chargeback methodology for utilities and non-routine services
- Developed and initiated a groundbreaking Apprenticeship program
- Enhanced Temporary to Permanent tracking methodology to ensure equity
- Initiated the first departmental ESL class to promote diversity and inclusion
- Revamped the budgeting process to ensure accountability
- Conducted initial shop safety assessment
- Developed campus tree removal and replacement program
- Oversaw daily operations and all short- and long-term maintenance and construction at the Miller House / President’s residence
- Initiated a key control process that led to increased public safety
- Systemwide Quality Award
- Presenter, “Selecting a Computerized Maintenance Management System,” Synergy by the Bay

- Panel Moderator, CSU Annual Compliance Conference
- Member, Campus Planning Committee
- Member, Utility Optimization Task Force
- Member, Information Technology Task Force

Operations and Maintenance Director (November 1998 - January 2007)

Environmental Manager (November 1997 – November 1998)

RR Donnelley & Sons

RR Donnelley & Sons was the nation's largest printing company. Customers included Sports Illustrated, Time, and People Magazine. The plant had 500 employees and operated 24 hours per day, 7 days per week.

Responsibilities and Selected Accomplishments

- Led the Technical Resources Team which included Engineering, Warehouse, Building Maintenance, Utilities, and Environmental Health and Safety.
- Saved \$1 million in potential remediation costs
- Conceptualized, planned, and successfully executed an Open House and Awareness Fair for over 1,500 customers, co-workers, and their families
- Facilitated a 40% reduction in solid waste generation which was the impetus for nine consecutive awards from the California Integrated Waste Management Board
- Implemented the Shadow an Engineer Program
- Developed a utilities strategic plan
- Managed the Cogeneration Plant
- Managed a \$15 million dollar equipment replacement project that was completed on time and under budget
- Mentor, Reserve Development Committee
- Panel Moderator, Printing Industries of America Annual Conference
- Regular Contributor, "The Printers Point"
- Inclusion Ambassador
- Member, Diversity Council
- Member, Safety Committee

Member of the Technical Staff (1993 – 1997)

Environmental Health and Safety Intern (1992-1993)

Rockwell International, Rocketdyne Division

Rockwell International was a major American manufacturing conglomerate that was involved in aircraft, the space industry, both defense-oriented and commercial electronics, automotive and truck components, printing presses, power tools, valves and meters, and industrial automation. Rocketdyne was an American rocket engine design and production company that was part of Rockwell International from 1967 through 1997.

Responsibilities and Selected Accomplishments

- Responsible for ensuring air quality compliance
- Received a Special Achievement Award for asbestos remediation at two campuses
- Reduced OSHA recordable rate by 5% and lost time incidents by 25%
- Successfully led the compliance efforts for all air quality programs in two compliance districts
- Wrote the operating manual for the Canoga Wastewater Treatment Plant
- Member, Rockwell Organization for Women

Junior Electrical Estimator (1991-1992)

Transpac Fiber Optics & Telecommunication

Transpac was a company focused on designing, engineering, and implementing cabling media and supporting hardware in the field of telecommunications.

I was responsible for quantifying resource needs associated with construction bids specifically related to CSU Los Angeles and the Staples Center.

Construction Project Management Intern (1990-1991)

Motion Picture and Television Fund

The Motion Picture and Television Fund is a charitable organization that aids those in the industry by way of a retirement community, a long-term care facility and an acute-care hospital.

I was responsible for managing grounds and maintenance, serving as a liaison to external agencies and supporting the Construction Manager.

Production Intern (1988-1990)

Union Oil Company (Unocal)

Unocal was a major petroleum explorer and marketer from the late 19th century, through the early 21st century.

I worked in the oil fields and offshore and was responsible for developing electrical allocation factors, measuring casing pressure for vapor recovery systems, pulling pipes to refresh wells, inventorying equipment, and developing a restart plan for Platform Edith.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 9

PROPOSAL: Approve Contract Award as Approved by MSRC

SYNOPSIS: As part of their FYs 2016-18 Work Program, the MSRC approved a contract with the City of Paramount under their Local Government Partnership Program. The MSRC seeks Board approval of the contract award as part of the FYs 2016-18 Work Program.

COMMITTEE: Mobile Source Air Pollution Reduction Review, May 16, 2024;
Recommended for Approval

RECOMMENDED ACTIONS:

1. Approve a contract with the City of Paramount, in an amount not to exceed \$42,686, to complete installation of publicly accessible electric vehicle charging infrastructure under the Local Government Partnership Program, using funds previously awarded to the City, as part of approval of the FYs 2016-18 Work Program, as described in this letter; and
2. Authorize the Chair of the Board (or by the Board Chair's designation, the Executive Officer) to execute the contract under the FYs 2016-18 Work Program, as described above and in this letter.

Larry McCallon
Chair, MSRC

AK:CR

Background

In September 1990, Assembly Bill 2766 (AB 2766) was signed into law under Health & Safety Code Sections 44220-44247, authorizing an annual \$4 motor vehicle registration fee to fund the implementation of programs exclusively to reduce air pollution from motor vehicles. AB 2766 provides that 30 percent of the annual \$4 vehicle registration fee subvented to the South Coast AQMD be placed into an account to be allocated pursuant to a work program developed and adopted by the MSRC and approved by the Board.

Proposals

At its May 16, 2024 meeting, the MSRC considered recommendations from the MSRC Technical Advisory Committee (MSRC-TAC) and approved the following:

FYs 2016-18 Local Government Partnership Program

As part of the FYs 2016-18 Local Government Partnership Program, the MSRC originally awarded \$72,580 to the City of Paramount to install a total of five charging stations: two public-access stations and three limited-access stations. The City subsequently requested to reduce the project's scope, decreasing the number of stations from five to three and making all three stations publicly accessible, with a corresponding value reduction to \$64,675. The City completed installation of two stations. However, the contract was terminated prior to the City submitting a final report and invoice. The MSRC considered and approved a six-month contract for the two stations in an amount not to exceed \$42,686 as part of the FYs 2016-18 Work Program, using a portion of the funds from the earlier contract. The other \$21,989 will revert to the AB 2766 Discretionary Fund.

At this time, the MSRC requests the South Coast AQMD Board approve the contract award as part of approval of the FYs 2016-18 Work Program as outlined above.

Resource Impacts

South Coast AQMD acts as fiscal administrator for the AB 2766 Discretionary Fund Program (Health & Safety Code Section 44243). Money received for this program is recorded in a special revenue fund (Fund 23) and the contract specified herein will be drawn from this fund.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 10

REPORT: Legislative, Public Affairs and Media Report

SYNOPSIS: This report highlights the April 2024 outreach activities of the Legislative, Public Affairs and Media Office, which includes Major Events, Community Events/Public Meetings, Environmental Justice Update, Speakers Bureau/Visitor Services, Communications Center, Public Information Center, Small Business Assistance, Media Relations, and Outreach to Community Groups and Federal, State and Local Governments.

COMMITTEE: No Committee Review

RECOMMENDED ACTION:
Receive and file.

Wayne Natri
Executive Officer

AL:DS:cb:bel:sr

Background

This report summarizes the activities of the Legislative, Public Affairs and Media Office for April. The report includes Major Events, Community Events/Public Meetings, Environmental Justice (EJ) Update, Speakers Bureau/Visitor Services, Communications Center, Public Information Center, Small Business Assistance, Media Relations, and Outreach to Community Groups and Governments.

Major Events (Hosted and Sponsored)

Each year, staff engage in hosting and sponsoring several major events throughout South Coast AQMD's four-county jurisdiction to promote, educate, and provide important information to the public regarding reducing air pollution, protecting public health, and improving air quality while minimizing economic impacts.

34th Annual Clean Air Awards

On April 5, South Coast AQMD hosted the 34th Annual Clean Air Awards to honor community leaders, organizations and businesses who have made outstanding clean air contributions to improve the health of our communities and the economy. Spectrum News 1 Meteorologist Autumn Robertson served as the emcee.

This year's awardees included:

- S. Roy Wilson Memorial Award for Leadership in Government – Los Angeles City Council President Paul Krekorian
- Robert M. Zweig, M.D. Memorial Award – Congressman Raul Ruiz, M.D.
- Dr. William A. Burke Award for Leadership in Environmental Justice – California Attorney General Rob Bonta
- John J. and Ben J. Benoit Award for Innovative Clean Air Technology – Schneider National, Inc.
- Leadership in Air Quality Award – Center for Environmental Research & Technology at University of California, Riverside,
- Leadership in Air Quality Award – Los Angeles City Councilmember Monica Rodriguez
- Youth Leadership in Air Quality Award – Emily Ng, Los Angeles County Youth Climate Commission

Earth Day Webinars

On April 19, staff held Clean Air Program for Elementary Students (CAPES) and Why Healthy Air Matters (WHAM) Earth Day webinars for approximately 520 students in South Coast AQMD's region. A total of 14 elementary schools with 17 classrooms, and nine high schools with nine classrooms, registered to participate in the educational events.

Community Events/Public Meetings

Staff engaged with residents and stakeholders of diverse communities to provide information about the agency, incentive programs, and ways individuals can help reduce air pollution, through events and meetings sponsored by South Coast AQMD or in partnership with others. Attendees typically receive information regarding the following:

- Tips on reducing their exposure to smog and its negative health effects;
- How to file a complaint;
- Clean air technologies and their deployment;
- Invitations to or notices of conferences, seminars, workshops, and other public events;
- South Coast AQMD incentive programs;
- Funding/grant opportunities by South Coast AQMD and partner agencies;
- Ways to participate in South Coast AQMD's rules and policy development; and
- Assistance in resolving air pollution-related problems.

Staff attended and/or provided information and updates at the following April events and meetings:

San Gabriel Valley Council of Governments

On April 2, staff provided program updates at the San Gabriel Valley Council of Governments, Energy, Environment & Natural Resources Committee meeting on the Volkswagen (VW) Mitigation Trust fund opportunities, CEC Communities in Charge Program, and the 34th Annual Clean Air Awards.

Arroyo Verdugo Communities Joint Powers Authority

On April 2, staff attended Arroyo Verdugo Communities Joint Powers Authority's Governing Board meeting to provide information on the VW Mitigation Trust fund opportunities, 34th Annual Clean Air Awards, CAPES, and WHAM programs, and Earth Day virtual events.

San Bernardino County Transportation Authority

On April 4, staff participated in the San Bernardino County Transportation Authority's City Manager Technical Advisory Committee meeting extending an invitation to attendees to the 34th Annual Clean Air Awards, and to provide information on the VW Mitigation Trust fund opportunities.

Discovery Cube Science Museum

On April 6, staff hosted a booth at Discovery Cube Los Angeles' Earth Day event, to share information on South Coast AQMD, air quality, tips on how to help clean the air, CAPES and WHAM programs, how to file complaints, the South Coast AQMD Mobile App, and residential incentive programs.

South Pasadena Sustainability Fair

On April 6, staff participated in the South Pasadena Sustainability Fair, to provide community members information on South Coast AQMD and air quality, tips on how to help clean the air, CAPES and WHAM programs, how to file complaints, the South Coast AQMD Mobile App, and residential incentive programs.

Orange County Business Council

On April 9, staff attended the Orange County Business Council's Infrastructure Committee meeting, to thank the organization for providing a letter of support for South Coast AQMD's Climate Pollution Reduction Grant (CPRG) application, submitted to U.S EPA, and to share the latest South Coast AQMD Advisor newsletter.

South Pasadena Chamber of Commerce

On April 10, staff participated in the South Pasadena Chamber of Commerce's Legislative Affairs Committee meeting, to thank the organization for providing a letter of support for South Coast AQMD's CPRG application submitted to U.S EPA, and to share the latest Advisor newsletter.

Upland Chamber of Commerce

On April 11, staff participated virtually in the Upland Chamber of Commerce's Government Affairs Committee meeting, to provide information on the Commercial Electric Lawn and Garden Equipment Incentive and Exchange program.

Riverside Chamber of Commerce

On April 12, staff participated virtually in Riverside Chamber of Commerce's Government Affairs Committee meeting, to present updates regarding the VW Mitigation Trust Fund opportunities and the CEC Communities in Charge Program.

Earth to Table

On April 17, staff hosted a booth at Rialto's Earth to Table event, to provide information on South Coast AQMD and air quality, how to file complaints, the South Coast AQMD Mobile App, and current incentive programs.

Whittier Transportation Fair

On April 17, staff attended the Whittier Transportation Fair, to share information on Replace Your Ride, how to file complaints, the South Coast AQMD Mobile App, and incentive programs for vehicles.

Harbor Association of Industry and Commerce

On April 18, staff attended the Harbor Association of Industry and Commerce's Government Affairs Committee meeting to conduct outreach for the PM2.5 Plan regional public hearings.

Inland Empire Utilities Agency

On April 18, staff hosted a booth at the Inland Empire Utilities Agency's Earth Day event, to share information on South Coast AQMD and air quality, tips on how to help clean the air, how to file air complaints, Replace Your Ride, and the residential Electric Lawn Mower Rebate program.

Diamond Bar Earth Day Celebration

On April 20, staff participated in Diamond Bar's Earth Day Celebration, to provide information on South Coast AQMD and air quality, tips on how to help clean the air, how to file complaints, Replace Your Ride, and residential Electric Lawn Mower Rebate program.

Earth Day Everyday

On April 20, staff participated in the Citizen's Climate Lobby Earth Day Everyday event in Cerritos, to provide information including tips on how to help clean the air, Replace Your Ride, residential Electric Lawn Mower Rebate program, and the South Coast AQMD Mobile App.

7th Annual Eco-Friendly Fair

On April 20, staff hosted a booth at Paramount's 7th Annual Eco-Friendly Fair, to provide information on how to file complaints, tips on how to help clean the air, Replace Your Ride, and residential Electric Lawn Mower Rebate program.

Earth Day Celebration

On April 20, staff participated in Moreno Valley's Earth Day Celebration, to share information on how to file complaints, Replace Your Ride, residential Electric Lawn Mower Rebate program, and the South Coast AQMD Mobile App.

Bolsa Chica Conservancy

On April 21, staff hosted a booth at the Bolsa Chica Conservancy's Earth Day event, to provide information on South Coast AQMD and air quality, how to file complaints, tips on how to help clean the air, the South Coast AQMD Mobile App, Replace Your Ride, and residential Lawn Mower Rebate program.

California State University, Dominguez Hills

On April 23, staff hosted a booth at California State University, Dominguez Hills' Earth Day Festival, to provide information on South Coast AQMD and air quality, how to file complaints, tips on how to help clean the air, the South Coast AQMD Mobile App, Replace Your Ride, and other programs.

Fullerton College

On April 24, staff participated in California State University, Fullerton's Earth Day event, to provide information on South Coast AQMD and air quality, how to file complaints, tips on how to help clean the air, the South Coast Mobile App, Replace Your Ride, and other programs.

South Bay Cities Council of Governments

On April 25, staff participated in the South Bay Cities Council of Governments' Board of Directors meeting, to provide updates on the upcoming Wilmington/Carson/West Long Beach AB617 Community Steering Committee meeting, and regional hearings for the PM2.5 Plan.

Orange County Council of Governments

On April 25, staff provided an update at the Orange County Council of Governments' Board of Directors meeting, with regard to an \$8 million state grant for a zero-emission technology demonstration project in partnership with Balboa Island Ferry.

Chino Corn Feed Run

On April 27, staff attended the Chino Corn Feed Run car show, hosting a booth and display of a clean air vehicle. Staff shared information on Replace Your Ride, how to file complaints, and Small Business Assistance.

Echo Park Earth Day Fest

On April 27, staff participated in the Echo Park Earth Day Fest in Los Angeles, to share information on how to file complaints, Replace Your Ride, and the residential Electric Lawn Mower Rebate program.

Greater Wilshire Neighborhood Earth Day

On April 27, staff participated in the Greater Wilshire Neighborhood Earth Day in Los Angeles. Staff provided a booth to share information on South Coast AQMD and air quality, how to file complaints, the South Coast AQMD Mobile App, Replace Your Ride, and the residential Electric Lawn Mower Rebate program.

Active Streets

On April 28, staff participated in Active Streets: Mission-to-Mission event hosted by LA Metro, San Gabriel Valley Council of Governments and the cities of Alhambra, San Gabriel and South Pasadena. Staff hosted a booth to provide information on South Coast AQMD and air quality, how to file complaints, the South Coast AQMD Mobile App, Replace Your Ride, and the residential Electric Lawn Mower Rebate program.

Spheres of Sustainability Summit

On April 30, staff participated in the Hispanic Coalition of Small Businesses Spheres of Sustainability Summit, to provide information on SBA services, the Commercial Electric Lawn and Garden Equipment Incentive and Exchange program, and other incentive programs.

Environmental Justice Update

The following are key EJ-related activities that staff participated in during April. These events and meetings involve communities affected disproportionately from adverse air quality impacts.

Pacoima Community Initiative

On April 12, staff participated in the Pacoima Community Initiative's monthly meeting held at the Serra Medical Center in Sun Valley. Staff shared information on the CAPES and WHAM programs, how to report complaints, the South Coast AQMD Mobile app, and other programs.

9th Annual Environmental Justice and Enforcement Symposium

On April 24, staff participated in the 9th Annual Environmental Justice and Enforcement Symposium. This year's focus was on environmental laws and practices that reduce pollution, and protect overburdened communities, including a presentation on South Coast AQMD's Rule 2305: Warehouse Actions and Investments to Reduce Emissions.

Speakers Bureau/Visitor Services

South Coast AQMD regularly receives requests for staff to speak on air quality-related issues from a wide variety of organizations, such as trade associations, chambers of commerce, community-based groups, schools, hospitals, and health-based organizations. South Coast AQMD also hosts visitors from around the world who meet with staff on a wide range of air quality issues.

Hope International University

On April 11, staff presented an overview on South Coast AQMD and air quality issues to Hope International University students. The students also toured the laboratory and a display of electric vehicles, as well as charging and fueling stations.

California State Polytechnic University

On April 12, staff hosted a laboratory tour for students from California State Polytechnic University, Pomona. Students also learned about South Coast AQMD, air quality issues, and potential career opportunities.

Chinese Ministry of Ecology and Environment

On April 12, staff presented to a delegation from the Chinese Ministry of Ecology and Environment on South Coast AQMD's AQMP, MATES VI, and an overview of the permit process. Staff also hosted a tour of the laboratory.

Energize SoCal 2024

On April 24, staff participated in a panel at the Energize SoCal 2024: Sustainable Energy and Mobility Summit organized by the Chino Valley Chamber of Commerce. Topics presented included incentive programs and the path to an energy efficient economy.

Communication Center Statistics

The Communication Center handles calls on South Coast AQMD's main line, 1-800-CUT-SMOG®, the Spanish line, and after-hours calls to those lines. Total calls received in the month of April are summarized below:

Calls to South Coast AQMD's Main Line and 1-800-CUT-SMOG®	2,777
Calls to South Coast AQMD's Spanish Line	21
Clean Air Connections	2
Total Calls	2,800

Public Information Center Statistics

The Public Information Center (PIC) handles phone calls and assists individuals who walk in for general information. Email advisories provide information on upcoming meetings and events, program announcements and alerts on time-sensitive issues.

Information for the month of April is summarized below:

Calls Received by PIC	26
Calls to Automated System	163
Total Calls	189
Visitor Transactions	135
Email Advisories Sent	17,043

Small Business Assistance

South Coast AQMD notifies local businesses of proposed regulations so they can participate in the agency's rule development process. South Coast AQMD works with other agencies and governments to identify efficient, cost-effective ways to reduce air pollution and shares that information broadly. Staff provided personalized assistance to small businesses over the telephone, at South Coast AQMD headquarters and via virtual on-site consultation, as summarized below for April.

- Provided permit application assistance to 259 companies.
- Processed 138 Air Quality Permit Checklists.

Types of businesses assisted:

Auto Body Shops	Dry Cleaners
Manufacturing Facilities	Warehouses
Beauty Salons	Construction, Architecture, Engineering
Offices	Restaurants

Media Relations

The Media Office handles all South Coast AQMD outreach and communications with television, radio, newspapers and all other publications, and media operations. The April report is listed below:

Major Media Interactions	115
Press Releases	12
News Carousel	3

Major Media Topics:

- **State of the Air Report (SOTA):** Staff participated in an interview with ABC7 to discuss air quality improvements. KVCR requested information on emissions reductions in light of the SOTA report. Response was provided.
- **U.S. EPA Emission Standards:** The Press-Telegram requested a statement on U.S. EPA's new emission standards for trucks and other heavy-duty vehicles. Response was provided.
- **EPA Contingency Measure Plan (CMP) Deadline:** Bloomberg Law requested a comment on U.S. EPA's proposed disapproval of CMP. Response was provided.
- **Warehouse Indirect Source Rule (ISR):** Babaco News requested a quote for a newsletter article on the Warehouse ISR. Response was provided.
- **Dust in La Quinta:** The Coachella Valley Independent asked questions about a construction site known as Talus Development in La Quinta. Response was provided.
- **Quemetco/Ecobat:** Public Health Watch requested details on the facility's Title V permit. Response was provided. Reporter followed up with questions about Quemetco's 2015 Health Risk Assessment. Reporter was directed to submit a public records request.
- **Southern California Landfills:** Los Angeles Times requested a list of regional landfills with a copy of their quarterly reports and source tests. Reporter was directed to submit a public records request.
- **Residential Purifiers:** Desert Sun requested information on the availability of residential air purifiers, and whether outreach events are scheduled in Eastern Coachella Valley, particularly in Spanish. Response was provided.
- **Warehouse Indirect Source Rule:** Inside EPA asked whether U.S. EPA has finalized its approval of the Warehouse ISR as part of the State Implementation Plan. Response was provided.
- **Lead Pollution:** A freelance reporter from Seal Beach is looking for information about potential lead pollution surrounding the Long Beach Airport and a nearby elementary school. Research is in progress.
 - **State of the Air Statement:** Pitched release to media outlets resulting in media coverage.
- **Windblown Dust Advisory (4/3, 4/13, 4/23 & 4/25):** Pitched to media outlets resulting in media coverage.
- **Windblown Dust Advisory Extension (4/4):** Pitched to media outlets resulting in media coverage.

News Releases:

- **South Coast AQMD Issues Windblown Dust Advisory for the San Geronio Pass area, the Coachella Valley, and Eastern Riverside County – April 3, 4 and 14th, 2024 (English and Spanish)** – Informed the public of a PM10 Dust Advisory caused by high winds.

- **South Coast AQMD Issues Windblown Dust Advisory for Portions of Riverside County – April 23, 2024 (English and Spanish)** – Informed the public of a PM10 Dust Advisory caused by high winds.
- **South Coast AQMD Statement on the American Lung Association's 25th State of the Air Report – April 24, 2024 (English and Spanish)** – Informed the public of our implementing the Indirect Source Rule for warehouses, and developing proposals for additional rules for railyards and ports.
- **Windblown Dust Advisory Updated: Portions of Riverside County could see Hazardous Air Quality Levels – April 25, 2024 (English and Spanish)** – Informed the public of an update to the PM10 Dust Advisory caused by high winds.

Outreach to Community Groups and Federal, State and Local Governments

Communication was conducted in April with elected officials and/or staff from the following state and federal offices:

- U.S. Senator Laphonza Butler
- U.S. Senator Alex Padilla
- U.S. Representative Pete Aguilar
- U.S. Representative Nanette Barragán
- U.S. Representative Ken Calvert
- U.S. Representative Tony Cardenas
- U.S. Representative Judy Chu
- U.S. Representative Robert Garcia
- U.S. Representative Mark Takano

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 11

REPORT: Hearing Board Report

SYNOPSIS: This reports the actions taken by the Hearing Board during the period of March 1 through March 31, 2024 and April 1 through April 30, 2024.

COMMITTEE: No Committee Review

RECOMMENDED ACTION:
Receive and file.

Cynthia Verdugo-Peralta
Hearing Board Chair

ft

Attached are the following summaries: **March 2024 and April 2024 Hearing Board Cases, and Rules From Which Variances and Orders for Abatement Were Requested from January 1, 2024 Through April 30, 2024.** The applicable South Coast AQMD Rules for 2024 are also attached.

There were no appeals filed during the period of March 1, 2024 to April 30, 2024.

Report of March 2024 Hearing Board Cases

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
1. Goodrich Corporation Case No. 6253-1 (M. Reichert)	203(b)	Gas was inadvertently flared, due to a malfunctioning solenoid valve in a carbon ceramic vapor deposition (CVD) furnace. Exceeding Limit in Emergency Flare Permit.	Not Opposed/Granted	IV granted commencing 3/7/24 and continuing for 90 days or until the RV hearing scheduled for 4/30/24, whichever comes first.	NOx: 0.4 lb/day
2. Innovative Baking Co dba Venice Baking Company Case No. 6144-2 (M.Reichert)	203(b)	The Regenerative Thermal Oxidizer (RTO) completion date was delayed due to delivery problems w/essential components, which are crucial to the RTO.	Not Opposed/Granted	SV granted commencing 3/18/24 and continuing through 5/31/24.	VOC: 6.9 lbs/day
3. County of San Bernardino – Fleet Management Case No. 6070-12 (M. Reichert)	203(b)	Due to the Governor's SOE-Atmospheric River weather cond., an unforeseen loss of power for 8.5 days triggered the ICE to potentially go over the allotted annual 200 hrs.	Not Opposed/Granted	IV granted commencing 3/14/24 and continuing for 90 days or until the RV hearing scheduled for 4/23/24, whichever comes first.	TBD
4. Torrance Refining Company Case No. 6060-20 (Consent Calendar)	203(b) 1150.1(e)(2)(A) 1150.1(e)(2)(E) 2004(f)(1) 3002(c)(1)	To Modify Cond. #1 of the Short Var. & AOCs granted on 01/11/24. All other Variance conditions & AOCs granted to remain in full force and effect.	Not Opposed/Granted	RV & AOC granted commencing 3/14/24 and continuing through 4/29/24, the FCD.	None

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
5. Tesoro Marketing & Refining Company LLC Case No. 4982-135 (S. Pruitt)	203(b) 1173(g)(1) 2004(f)(1) 3002(c)(1)	On 3/20/24, the flange was observed leaking liquid. Repairs are still needed due to VOC measurements above 25,000 ppm.	Not Opposed/Granted	Ex Parte EV granted commencing 3/22/24 and continuing for 30 days, 4/22/24, or until final compliance, whichever comes first.	VOC: 3.6 lbs/day
6. South Coast AQMD vs. Chiquita Canyon LLC Case No. 6177-4 (K. Roberts, M. Reichert & R. Mansell)	203(b) 402 431.1(c)(2) 1150(b)(2) H&S §41700	Another regulatory agency's requirements conflict with AQMD's Stipulated O/A Condition #49 re: notification required re: compliance & leachate concerns.	Stipulated/Issued	Mod. O/A issued; the Board shall continue to retain jurisdiction over this matter until 9/6/24.	N/A
7. Colton Power LP Case No. 6167-3 (Consent Calendar)	203(b) 1134(e)(2)(C)(iii) 2004(f)(1) 3002(c)(1)	Petitioner in violation of permit conditions due to lack of annual ammonia source (slip) test due to unit inoperability.	Not Opposed/Granted	RV granted commencing 3/26/24 and continuing through 7/30/24, the FCD.	None
8. Colton Power LP Case No. 6167-4 (Consent Calendar)	203(b) 1134(e)(2)(C)(iii) 2004(f)(1) 3002(c)(1)	Petitioner will still be out of compliance due to the new SCR catalyst not arriving on time to conduct the req. ammonia slip test.	Not Opposed/Granted	RV granted commencing 3/26/24 and continuing through 7/30/24, the FCD.	None

Report of April 2024 Hearing Board Cases

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
1. Beta Offshore Operating, LLC Case No. 5855-7 (Consent Calendar)	N/A	An unforeseen pipeline rupture by 3 rd parties, resulted in an oil spill. All production was shut down for 18 mos. Petitioner needs more time and clarification to come into compliance w/all conditions.	Not Opposed/Granted	The Board modified and/or clarified Conditions Nos. 5, 9 and 12.d of the regular variance granted to petitioner on 12/7/23.	N/A
2. Chevron Products Company Case No. 831-400 (Consent Calendar)	203(b) 464(b)(1)(A) 464(b)(2) 464(b)(3) 1176(e)(1) 1176(e)(2) 2004(f)(1) 3002(c)(1)	Petitioner needs to remove permanent covers and open equipment for maintenance to ensure proper operation of equipment to achieve compliance by performing maintenance within 56 days to remove materials from #4 separator then replace permanent covers.	Not Opposed/Granted	SV granted commencing 4/10/24 and continuing through 6/4/24.	VOC: 2.6 lbs./total for variance period
3. Chevron Products Company Case No. 831-401 (Consent Calendar)	203(b) 2004(f)(1) 3002(c)(1)	Need for emergency repair of Caustic Solution Flow Meter in C—2180 Caustic Scrubber to ensure continuous monitoring of caustic solution flow per Title V permit conditions.	Not Opposed/Granted	EV granted commencing 4/18/24 and continuing through 5/18/24.	None
4. Chiquita Canyon Landfill, LLC Case No. 6177-4 (K. Roberts & M. Reichert)	203(b) 402 431.1(c)(2) 1150(b)(2) 3002(c)(1) H&S §41700	The Leachate problem continues to be of major concern. Other regulatory agencies requirements still conflict with AQMD's Stipulated O/A Condition #49. More time is needed.	Stipulated/Issued	Mod. O/A issued commencing 4/24/24; the Hearing Board shall retain jurisdiction over this matter until 12/31/25.	N/A

Case Name and Case No. (South Coast AQMD Attorney)	Rules	Reason for Petition/Hearing	South Coast AQMD Position/Hearing Board Action	Type and Length of Variance or Order	Excess Emissions
5. County of San Bernardino – Fleet Management Case No. 6070-12 (M. Reichert)	203(b)	Due to atmospheric river conditions causing loss of power for 8.5 days - Big Bear Electric, triggered Emergency ICE. Will exceed Annual allotted hours.	Not Opposed/Granted	RV granted commencing 4/23/24 and continuing through 12/31/24, the FCD.	CO: 0.3 lb./hr. NOx: 0.003 lb./hr. RHC: 0.13 lb./hr. SOx: 0.35 lb./hr. PM10: 5 lbs./hr.
6. Goodrich Corporation Case No. 6253-1 (Consent Calendar)	203(b)	Due to an unanticipated & temporary undetected malfunction of solenoid valve in a carbon ceramic vapor deposition furnace resulting in production gas bypassing the process boilers resulting in emergency flare.	Not Opposed/Granted	RV granted commencing 4/30/24 and continuing through 1/31/25, the FCD.	NOx: 0.4 lb./day
7. Monarch Orange Crematory Case No. 6254-1 (J. Lee)	1147(h)(13)(A)	Due to a last-minute delay in materials, Petitioner was unable to conduct testing on time to comply with permit conditions.	Not Opposed/Granted	EV granted commencing 4/23/24 and continuing through 5/14/24.	None
8. Sentinel Energy Center LLC Case No. 6141-2 (Consent Calendar)	203(b) 2004(f)(1) 3002(c)	Staff's view of permit Condition D29.4 testing requirements differed with Petitioner's. Condition D29.4 must be in effect at the time of the CO catalyst replacement. Unable to conduct that test due to the outage.	Not Opposed/Granted	IV granted commencing 4/10/24 and continuing for 90 days or until the RV hearing scheduled for 5/14/24, whichever comes first.	None

AGENDA NO. 13

REPORT: Intergovernmental Review of Environmental Documents and CEQA Lead Agency Projects

SYNOPSIS: This report provides a listing of environmental documents prepared by other public agencies seeking review by South Coast AQMD between April 1, 2024 and April 30, 2024, and proposed projects for which South Coast AQMD is acting as lead agency pursuant to CEQA.

COMMITTEE: Mobile Source, May 17, 2024, Reviewed

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

SR:MK:BR:SW:HK

Background

The California Environmental Quality Act (CEQA) Statute and Guidelines require public agencies, when acting in their lead agency role, to provide an opportunity for other public agencies and members of the public to review and comment on the analysis in environmental documents prepared for proposed projects. A lead agency is a public agency that has the greatest responsibility for supervising or approving a proposed project and is responsible for the preparation of the appropriate CEQA document. A responsible agency is a public agency other than the lead agency who has discretionary approval authority over the project.

Each month, South Coast AQMD receives environmental documents, which include CEQA documents, for proposed projects that could adversely affect air quality. South Coast AQMD fulfills its intergovernmental review responsibilities, in a manner that is consistent with the Board's 1997 Environmental Justice Guiding Principles and Environmental Justice Initiative #4, by reviewing and commenting on the adequacy of the air quality analysis in the environmental documents prepared by other public agencies, who are acting in their capacity as a lead agency.

The status of these intergovernmental review activities is provided in this report in two sections: 1) Attachment A lists all of the environmental documents prepared by other public agencies seeking review by South Coast AQMD that were received during the reporting period; and 2) Attachment B lists the active projects for which South Coast AQMD has reviewed or is continuing to conduct a review of the environmental documents prepared by other public agencies. Further, as required by the Board's October 2002 Environmental Justice Program Enhancements for fiscal year (FY) 2002-03, each attachment includes notes for proposed projects which indicate when South Coast AQMD has been contacted regarding potential air quality-related environmental justice concerns. The attachments also identify for each proposed project, as applicable: 1) the dates of the public comment period and the public hearing date; 2) whether staff provided written comments to a lead agency and the location where the comment letter may be accessed on South Coast AQMD's website; and 3) whether staff testified at a hearing.

In addition, the South Coast AQMD will act as lead agency for a proposed project when the South Coast AQMD has primary discretionary authority over the approvals. Attachment C lists the proposed air permit projects for which South Coast AQMD is lead agency under CEQA.

Attachment A – Log of Environmental Documents Prepared by Other Public Agencies and Status of Review, and Attachment B – Log of Active Projects with Continued Review of Environmental Documents Prepared by Other Public Agencies

Attachment A contains a list of all environmental documents prepared by other public agencies seeking review by South Coast AQMD that were received pursuant to CEQA or other regulatory requirements. Attachment B provides a list of active projects, which were identified in previous months' reports, and which South Coast AQMD staff is continuing to evaluate or prepare comments relative to the environmental documents prepared by other public agencies. The following table provides statistics on the status of review¹ of environmental documents for the current reporting period for Attachments A and B combined²:

¹ The status of review reflects the date when this Board Letter was prepared. Therefore, Attachments A and B may not reflect the most recent updates.

² Copies of all comment letters sent to the lead agencies are available on South Coast AQMD's website at: <http://www.aqmd.gov/home/regulations/ceqa/commenting-agency>.

Statistics for Reporting Period from April 1, 2024 to April 30, 2024	
Attachment A: Environmental Documents Prepared by Other Public Agencies and Status of Review	86
Attachment B: Active Projects with Continued Review of Environmental Documents Prepared by Other Public Agencies (which were previously identified in the March 2024 report)	8
Total Environmental Documents Listed in Attachments A & B	94
<i>Comment letters sent</i>	<i>17</i>
<i>Environmental documents reviewed, but no comments were made</i>	<i>73</i>
<i>Environmental documents currently undergoing review</i>	<i>4</i>

Staff focuses on reviewing and preparing comments on environmental documents prepared by other public agencies for proposed projects: 1) where South Coast AQMD is a responsible agency under CEQA (e.g., when air permits are required but another public agency is lead agency); 2) that may have significant adverse regional air quality impacts (e.g., special event centers, landfills, goods movement); 3) that may have localized or toxic air quality impacts (e.g., warehouse and distribution centers); 4) where environmental justice concerns have been raised; and 5) where a lead or responsible agency has specifically requested South Coast AQMD review.

If staff provided written comments to a lead agency, then a hyperlink to the “South Coast AQMD Letter” is included in the “Project Description” column which corresponds to a notation in the “Comment Status” column. In addition, if staff testified at a hearing for a proposed project, then a notation is included in the “Comment Status” column. Copies of all comment letters sent to lead agencies are available on South Coast AQMD’s website at: <http://www.aqmd.gov/home/regulations/ceqa/commenting-agency>. Interested parties seeking information regarding the comment periods and scheduled public hearings for projects listed in Attachments A and B should contact the lead agencies for further details as these dates are occasionally modified.

In January 2006, the Board approved the Clean Port Initiative Workplan (Workplan). One action item of the Workplan was to prepare a monthly report describing CEQA documents for projects related to goods movement and to make full use of the process to ensure the air quality impacts of such projects are thoroughly mitigated. In accordance with this action item, Attachments A and B organize the environmental documents received according to the following categories: 1) goods movement projects; 2) schools; 3) landfills and wastewater projects; 4) airports; and 5) general land use projects. In response to the action item relative to mitigation, staff maintains a compilation of mitigation measures presented as a series of tables relative to off-road engines; on-road engines; harbor craft; ocean-going vessels; locomotives; fugitive dust; and greenhouse gases which are available on South Coast AQMD’s website at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>. Staff will continue compiling tables of mitigation measures for other emission sources such as ground support equipment.

Attachment C – Proposed Air Permit Projects for Which South Coast AQMD is CEQA Lead Agency

The CEQA lead agency is responsible for determining the type of environmental document to be prepared if a proposal requiring discretionary action is considered to be a “project” as defined by CEQA. South Coast AQMD periodically acts as lead agency for its air permit projects and the type of environmental document prepared may vary depending on the potential impacts. For example, an Environmental Impact Report (EIR) is prepared when there is substantial evidence that the project may have significant adverse effects on the environment. Similarly, a Negative Declaration (ND) or Mitigated Negative Declaration (MND) may be prepared if a proposed project will not generate significant adverse environmental impacts, or the impacts can be mitigated to less than significance. The ND and MND are types of CEQA documents which analyze the potential environmental impacts and describe the reasons why a significant adverse effect on the environment will not occur such that the preparation of an EIR is not required.

Attachment C of this report summarizes the proposed air permit projects for which South Coast AQMD is lead agency and is currently preparing or has prepared environmental documentation pursuant to CEQA. As noted in Attachment C, South Coast AQMD is lead agency for three air permit projects during April 2024.

<u>SOUTH COAST AQMD LOG-IN NUMBER</u>	PROJECT DESCRIPTION	TYPE OF DOC.	LEAD AGENCY	COMMENT STATUS
PROJECT TITLE				
<i>Utilities</i>	The project consists of developing and constructing a 250-megawatt (MW) alternating current (AC) solar photovoltaic (PV) energy generating project and a 5.9-mile-long, 230 kV generation tie (gen-tie) line to the approved Arica and Victory Pass substation on 3,487 acres. The Project is located on federal lands in Chuckwalla Valley in Riverside County, and 8.5 miles east of the unincorporated area of Desert Center.	Site Plan	United States Department of the Interior Bureau of Land Management California Desert District	Under review, may submit comments
RVC240327-01 Redonda Solar Project CACA 059387				
	Comment Period: N/A Public Hearing: 4/15/2024			
<i>Warehouse & Distribution Centers</i>	The project consists of demolishing a 144,906 square foot building and constructing and operating a 165,803 square foot warehouse on 8.83 acres. The project is located at 26200 Enterprise Way. Off-site improvements are located at five intersections to enhance public safety and address concerns related to large truck turning movements: Bake Parkway/Commercentre Drive, Bake Parkway/Dimension Drive, Dimension Drive/Commercentre Drive/Enterprise Way, Lake Forest Drive/Dimension Drive, and Lake Forest Drive/Rancho Parkway. https://www.aqmd.gov/docs/default-source/ceqa/comment-letters/2024/april-2024/ORC240326-05.pdf	Notice of Preparation	City of Lake Forest	Comment letter sent on 4/18/2024
ORC240326-05 IPT Enterprise Business Center LLC Project				
	Comment Period: 3/20/2024 - 4/18/2024 Public Hearing: 4/3/2024			
<i>Warehouse & Distribution Centers</i>	The project consists of construction of a 700,037 square foot warehouse on 40.03 acres. The project is located on the southeast corner of Ethanac Road and Wheat Street. Reference RVC220503-10 https://www.aqmd.gov/docs/default-source/ceqa/comment-letters/2024/april-2024/RVC240313-05.pdf	Notice of Availability of a Draft Environmental Impact Report	City of Menifee	Comment letter sent on 4/17/2024
RVC240313-05 CADO Menifee Industrial Warehouse Project, Tentative Parcel Map (TPM) No. PLN22-0041, and Plot Plan No. PLN 21-0370				
	Comment Period: 3/13/2024 - 4/27/2024 Public Hearing: N/A			
<i>Industrial and Commercial</i>	The project consists of soil vapor extraction, in-situ chemical oxidation, and reductive bioremediation activities on a 0.32-acre site to reduce various volatile organic compounds in soil and groundwater. The project is located at 8325 Hindry Avenue in Los Angeles. https://www.aqmd.gov/docs/default-source/ceqa/comment-letters/2024/april-2024/LAC240320-05.pdf	Public Notice	Department of Toxic Substances Control	Comment letter sent on 4/18/2024

ATTACHMENT C
PROPOSED AIR PERMIT PROJECTS FOR
WHICH SOUTH COAST AQMD IS CEQA
LEAD AGENCY THROUGH APRIL 30, 2024

PROJECT DESCRIPTION	PROPONENT	TYPE OF DOCUMENT	STATUS	CONSULTANT
Quemetco is proposing to modify existing South Coast AQMD permits to allow the facility to recycle more batteries and to eliminate the existing daily idle time of the furnaces. The proposed project will increase the rotary feed drying furnace feed rate limit from 600 to 750 tons per day and increase the amount of total coke material allowed to be processed. In addition, the project will allow the use of petroleum coke in lieu of or in addition to calcined coke and remove one existing emergency diesel-fueled internal combustion engine (ICE) and install two new emergency naturalgas-fueled ICEs.	Quemetco	Environmental Impact Report (EIR)	<p>The Draft EIR was released for a 124-day public review and comment period from October 14, 2021 to February 15, 2022 and approximately 200 comment letters were received.</p> <p>South Coast AQMD held two community meetings, on November 10, 2021 and February 9, 2022, which presented an overview of the proposed project, the CEQA process, detailed analysis of the potentially significant environmental topic areas, and the existing regulatory safeguards. Response to written comments submitted relative to the Draft EIR and oral comments made at the community meetings are currently being prepared by the consultant.</p> <p>After the Draft EIR public comment and review period closed, Quemetco submitted additional applications for other permit modifications. South Coast AQMD staff is evaluating the effect of these new applications on the EIR process.</p>	Trinity Consultants
Sunshine Canyon Landfill is proposing to modify its South Coast AQMD permits for its active landfill gas collection and control system to accommodate the increased collection of landfill gas. The proposed project will: 1) install two new low emission flares with two additional 300-horsepower electric blowers; and 2) increase the landfill gas flow limit of the existing landfill gas collection system.	Sunshine Canyon Landfill	Subsequent Environmental Impact Report (SEIR)	South Coast AQMD staff reviewed and provided comments on the preliminary air quality analysis, health risk assessment (HRA), and Preliminary Draft SEIR which are currently being addressed by the consultant.	Castle Environmental Consulting
Tesoro is proposing to modify its Title V permit to: 1) add gas oil as a commodity that can be stored in three of the six new crude oil storage tanks at the Carson Crude Terminal (previously assessed in the May 2017 Final EIR); and 2) drain, clean and decommission Reservoir 502, a 1.5-million-barrel concrete lined, wooden-roof topped reservoir used to store gasoil.	Tesoro Refining & Marketing Company, LLC (Tesoro)	Addendum to the Final Environmental Impact Report (EIR) for the May 2017 Tesoro Los Angeles Refinery Integration and Compliance Project (LARIC)	South Coast AQMD staff received a revised Preliminary Draft Addendum, which is currently being reviewed.	Environmental Audit, Inc.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 14

REPORT: Rule and Control Measure Forecast

SYNOPSIS: This report highlights South Coast AQMD rulemaking activities and public hearings scheduled for 2024.

COMMITTEE: No Committee Review

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

SLR:MK:IM:JA:ZS

2024 MASTER CALENDAR

The 2024 Master Calendar provides a list of proposed or proposed amended rules for each month, with a brief description, and a notation in the third column indicating if the rulemaking is for an AQMP, either the 2016 AQMP or 2022 AQMP, when adopted, Toxics, AB 617 (for BARCT) or measures identified in an AB 617 Community Emission Reduction Plan (CERP), SIP to address comments or actions from U.S. EPA for a rule that is in an approved SIP, or Other. Rulemaking efforts that are noted for implementation of the 2016 AQMP or 2022 AQMP when adopted, Toxics, and AB 617 are either statutorily required and/or are needed to address a public health concern. Projected emission reductions will be determined during rulemaking.

The following symbols next to the rule number indicate if the rulemaking will be a potentially significant hearing, will reduce criteria pollutants, or is part of the RECLAIM transition. Symbols have been added to indicate the following:

- * *This rulemaking may have a substantial number of public comments.*
- + *This rulemaking will reduce criteria air contaminants and assist toward attainment of ambient air quality standards.*
- # *This rulemaking is part of the transition of RECLAIM to a command-and-control regulatory structure.*

The following table provides a list of changes since the previous Rule Forecast Report.

1135	Emissions of Oxides of Nitrogen from Electricity Generating Facilities
Proposed Amended Rule 1135 is being moved from August to October 2024 to allow time to complete the CEQA analysis.	
1165	Control of Emissions from Municipal Solid Waste Incinerators
Proposed Rule 1165 is being moved from Fourth Quarter to September 2024 as BARCT assessment has been completed ahead of schedule.	
1173	Control of Volatile Organic Compound Leaks and Releases from Components at Petroleum Facilities and Chemical Plants
Proposed Amended Rule 1173 is being moved from September to October 2024 to allow additional time to conduct the BARCT assessment.	

2024 MASTER CALENDAR

Month	Title and Description	Type of Rulemaking
August		
1148.1* ⁺	Oil and Gas Production Wells Proposed Amendments to Rule 1148.1 are needed to further reduce emissions from operations and implement early leak detection, odor minimization plans, and enhanced emissions and chemical reporting from oil and drilling sites. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 CERP
2306* ⁺ 316.2	Freight Rail Yards Fees for Rule 2306 Proposed Rule 2306 will establish requirements to reduce emissions from new and existing freight rail yards and the mobile sources attracted to these facilities. Proposed Rule 316.2 will establish fees to recover the South Coast AQMD's anticipated cost of implementing Proposed Rule 2306 <i>Elaine Shen 909.396.2715; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 CERP
September		
1165	Control of Emissions from Municipal Solid Waste Incinerators Proposed Rule 1165 will establish emission standards, source testing, and monitoring, recordkeeping, and reporting requirements for incinerators. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / Other
1445*	Control of Toxic Emissions from Laser Arc Cutting Proposed Rule 1445 will establish requirements to reduce hexavalent chromium and other metal toxic air contaminant particulate emissions from laser arc cutting. <i>Kalam Cheung 909.396.3281; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / AB 617 CERP
October		
1135 ⁺	Emissions of Oxides of Nitrogen from Electricity Generating Facilities Proposed Amended Rule 1135 will modify provisions for electricity generating units at Santa Catalina Island to reflect a revised BARCT assessment. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 BARCT

* Potentially significant hearing

⁺ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

[#] Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 MASTER CALENDAR *(Continued)*

Month	Title and Description	Type of Rulemaking
October (Continued)		
1173 ⁺	Control of Volatile Organic Compound Leaks and Releases from Components at Petroleum Facilities and Chemical Plants Proposed Amended Rule 1173 will further reduce emissions from petroleum, include contingency provisions, and chemical plants by requiring early leak detection approaches. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 CERP
November		
1159.1 [#]	Control of NOx Emissions from Nitric Acid Tanks Proposed Rule 1159.1 will establish requirements to reduce NOx emissions from nitric acid units that will apply to RECLAIM, former RECLAIM, and non-RECLAIM facilities. <i>Kalam Cheung 909.396.3281; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 BARCT
1401	New Source Review of Toxic Air Contaminants Proposed Amended Rule 1401 will amend Table 1 to include new toxic air contaminants identified by California Office of Environmental Health Hazard Assessment (OEHHA). <i>Kalam Cheung 909.396.3281; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
December		
1111	Reduction of NOx Emissions from Natural-Gas-Fired, Fan-Type Central Furnaces Proposed Amended Rule 1111 will implement the 2022 AQMP control measure R-CMB-02 requiring zero emission residential space heating. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP
1121 [*]	Control of Nitrogen Oxides from Residential Type, Natural-Gas-Fired Water Heaters Proposed amendments may be needed to further reduce NOx emissions from water heaters. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP

^{*} Potentially significant hearing

⁺ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

[#] Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 MASTER CALENDAR *(Continued)*

Month	Title and Description	Type of Rulemaking
December (Continued)		
Regulation XIII* [#]	New Source Review Proposed Amended Regulation XIII will revise New Source Review provisions to address facilities that are transitioning from RECLAIM to a command-and-control regulatory structure and to address comments from U.S. EPA. Additional rules under Regulation XIII may be needed to address offsets and other provisions under Regulation XIII. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP
Regulation XX* [#]	RECLAIM Proposed Amended Regulation XX will address the transition of NOx RECLAIM facilities to a command-and-control regulatory structure. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP
2304* ⁺ 316.1	Commercial Marine Ports – Container Terminals Fees for Rule 2304 Proposed Rule 2304 will establish requirements to reduce emissions from container terminals located at commercial marine ports and the mobile sources attracted to these facilities. Proposed Rule 316.1 will establish fees to recover the South Coast AQMD’s anticipated cost of implementing Proposed Rule 2304. <i>Elaine Shen 909 396. 2715; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 CERP

* *Potentially significant hearing*

+ *Reduce criteria air contaminants and assist toward attainment of ambient air quality standards*

Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 To-Be-Determined

2024	Title and Description	Type of Rulemaking
102	Definition of Terms Proposed amendments may be needed to update and add definitions, and potentially modify exemptions. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
103	Definition of Geographical Areas Proposed amendments are needed to update geographic areas to be consistent with state and federal references to those geographic areas. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
209	Transfer and Voiding of Permits Proposed amendments may be needed to clarify requirements for change of ownership and permits and the assessment of associated fees. <i>Kalam Cheung 909.396.3281; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
223	Emission Reduction Permits for Large Confined Animal Facilities Proposed Amended Rule 223 will seek additional ammonia emission reductions from large, confined animal facilities by lowering the applicability threshold. Proposed amendments will implement BCM-04 in the 2016 AQMP. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP
403	Fugitive Dust Proposed Amended Rule 403 will seek to remove outdated provisions and clarify existing provisions to enhance compliance. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
403.1	Supplemental Fugitive Dust Control Requirements for Coachella Valley Sources Proposed Amended Rule 403.1 will clarify existing requirements for dust control and remove outdated provisions contained in supporting documents for Rule 403.1. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
407 [#]	Liquid and Gaseous Air Contaminants Proposed Amended Rule 407 will update SO _x emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 To-Be-Determined (*Continued*)

2024	Title and Description	Type of Rulemaking
410	Odors from Transfer Stations and Material Recovery Facilities Proposed Amended Rule 410 will clarify existing provisions. Additional provisions may be needed to address activities associated with diversion of food waste to transfer stations or material recovery facilities. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
425	Odors from Cannabis Processing Proposed Rule 425 will establish requirements for control of odors from cannabis processing. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
430	Breakdown Provisions Amendments to Rule 430 will be needed to remove exemptions for facilities that exit the RECLAIM program and update references to CEMS rules. Other amendments may be needed to address current policies from U.S. EPA regarding startup, shutdown, and malfunction requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	RECLAIM / Other
431.1 [#]	Sulfur Content of Gaseous Fuels Proposed Amended Rule 431.1 will assess exemptions, including RECLAIM, and update other provisions, if needed. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT / AB 617 CERP
431.2 [#]	Sulfur Content of Liquid Fuels Proposed Amended Rule 431.2 will assess exemptions, including RECLAIM, and update other provisions, if needed. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT / AB 617 CERP
431.3 [#]	Sulfur Content of Fossil Fuels Proposed Amended Rule 431.3 will assess exemptions, including RECLAIM, and update other provisions, if needed. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT / AB 617 CERP
444	Open Burning Amendments may be needed to clarify existing provisions. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
445 [*]	Wood Burning Devices Proposed Amended Rule 445 will address additional U.S. EPA requirements for Best Available Control Measures, including lowering the curtailment threshold. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 To-Be-Determined (*Continued*)

2024	Title and Description	Type of Rulemaking
461	Gasoline Transfer and Dispensing Amendments to Rule 461 may be needed to address potential regulatory gaps. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
462	Organic Liquid Loading Proposed Amended Rule 462 will incorporate the use of advanced techniques to detect fugitive emissions and Facility Vapor Leak. Other amendments may be needed to streamline implementation and add clarity. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
468 [#]	Sulfur Recovery Units Proposed Amended Rule 468 will update SO _x emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT
469 [#]	Sulfuric Acid Units Proposed Amended Rule 469 will update SO _x emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT
1101 [#]	Secondary Lead Smelters/Sulfur Oxides Proposed Amended Rule 1101 will update SO _x emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT
1102	Dry Cleaners Using Solvent Other Than Perchloroethylene Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 CERP
1105 [#]	Fluid Catalytic Cracking Units SO_x Proposed Amended Rule 1105 will update SO _x emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT / AB 617 CERP

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

[#] Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 To-Be-Determined (*Continued*)

2024	Title and Description	Type of Rulemaking
1107	Coating of Metal Parts and Products Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1108	Cutback Asphalt Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1108.1	Emulsified Asphalt Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics/ Other
1110.2*+ #	Emissions from Gaseous- and Liquid-Fueled Engines Proposed amendments will address use of emergency standby engines, incorporate possible comments by U.S. EPA for approval into the SIP, and address monitoring provisions for new engines. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AQMP / AB 617 BARCT
1110.4	Emissions from Emergency Generators Proposed Rule 1110.4 will establish and revise rule provisions to reduce NOx, CO, and PM emissions from emergency generators. <i>Michael Morris 909.396.3282; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other / AQMP
1113	Architectural Coatings Proposed amendments may be needed to address delisted compounds and other amendments to improve clarity and to remove obsolete provisions. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other
1114	Petroleum Refinery Coking Operations Proposed Amended Rule 1114 will seek to add notification requirements when coke particles, liquid and/or gas is ejected from the coke drum during cutting. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Other

* Potentially significant hearing

+ Reduce criteria air contaminants and assist toward attainment of ambient air quality standards

Part of the transition of RECLAIM to a command-and-control regulatory structure

2024 To-Be-Determined (*Continued*)

2024	Title and Description	Type of Rulemaking
1119 [#]	Petroleum Coke Calcining Operations – Oxides of Sulfur Proposed Amended Rule 1119 will update SOx emission limits to reflect Best Available Retrofit Control Technology, if needed, remove exemptions for RECLAIM facilities, and update monitoring, reporting, and recordkeeping requirements. <i>TBD; CEQA and Socio: Barbara Radlein 909.396.2716</i>	AB 617 BARCT / AB 617 CERP
1122	Solvent Degreasers Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1124	Aerospace Assembly and Component Manufacturing Operations Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1125	Metal Container, Closure, and Coil Coating Operations Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1126	Magnet Wire Coating Operations Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1128	Paper, Fabric, and Film Coating Operations Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other
1130	Graphic Arts Proposed amendments may be needed to address certain exempt compounds, VOC limits for certain applications, and other amendments to improve clarity. <i>Heather Farr 909.396.3672; CEQA and Socio: Barbara Radlein 909.396.2716</i>	Toxics / Other

[#] Part of the transition of RECLAIM to a command-and-control regulatory structure

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 15

PROPOSAL: Report of RFQs/RFPs Scheduled for Release in June

SYNOPSIS: This report summarizes the RFQs/RFPs for budgeted services over \$100,000 scheduled to be released for advertisement for the month of June.

COMMITTEE: Administrative, May 9, 2024, Reviewed

RECOMMENDED ACTION:

Approve the release of RFQs/RFPs for the month of June.

Wayne Nastri
Executive Officer

SJ:gp

Background

In January 2020, the Board approved a revised Procurement Policy and Procedure. Under the revised policy, RFQs/RFPs for budgeted items over \$100,000 that follow the Procurement Policy and Procedure would no longer be required to obtain individual Board approval. However, a monthly report of all RFQs/RFPs over \$100,000 is included as part of the Board agenda package and the Board may, if desired, take individual action on any item. The attached report provides the title and synopsis of the RFQ/RFP, the budgeted funds available, and the name of the Deputy Executive Officer/Assistant Deputy Executive Officer responsible for that item. Further detail including closing dates, contact information, and detailed proposal criteria will be available online at <http://www.aqmd.gov/grants-bids> following the Board's approval on June 7, 2024.

Outreach

In accordance with South Coast AQMD's Procurement Policy and Procedure, a public notice advertising the RFQs/RFPs and inviting bids will be published in the Los Angeles Times, the Orange County Register, the San Bernardino Sun, and Riverside County's Press Enterprise newspapers to leverage the most cost-effective method of outreach to the South Coast Basin.

Additionally, potential bidders may be notified utilizing South Coast AQMD's own electronic listing of certified minority vendors. Notice of the RFQs/RFPs will be emailed to the Black and Latino Legislative Caucuses and various minority chambers of commerce and business associations and placed on South Coast AQMD's website (<http://www.aqmd.gov>), where it can be viewed by making the selection "Grants & Bids."

Proposal Evaluation

Proposals received will be evaluated by applicable diverse panels of technically qualified individuals familiar with the subject matter of the project or equipment and may include outside public sector or academic community expertise.

Report of RFQs/RFPs Scheduled for Release in June 2024

**June 7, 2024 Board Meeting
Report on RFQs/RFPs Scheduled for Release on June 7, 2024**

(For detailed information visit South Coast AQMD's website at
<http://www.aqmd.gov/nav/grants-bids>
following Board approval on June 7, 2024)

SPECIAL TECHNICAL EXPERTISE

RFP #P2024-12 Issue RFP to Establish a Prequalified list of GILCHRIST/3459
Outside Counsel

From time to time the South Coast AQMD requires the assistance of outside litigation counsel having expertise and experience in areas including, but not limited to, the California Environmental Quality Act, air quality laws, administrative law, the Brown Act, representation of government agencies, constitutional issues, Clean Air Act issues, and complex environmental litigation. This RFP has two purposes: to solicit qualified law firms or sole practitioners in order to establish a prequalified list that General Counsel may use to represent the South Coast AQMD in ongoing and possible future litigation where outside counsel is required in environmental matters; and, to solicit qualified law firms or sole practitioners in order to establish a prequalified list that General Counsel may use to represent the South Coast AQMD in ongoing and possible future litigation where outside counsel is required for general governmental matters. The list will be valid for a three-year period. Funding for this contract will be requested in the FY 2024-25 budget and in subsequent fiscal year budgets annually for up to three years.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 16

REPORT: Status Report on Major Ongoing and Upcoming Projects for Information Management

SYNOPSIS: Information Management is responsible for data systems management services in support of all South Coast AQMD operations. This action is to provide the monthly status report on major automation contracts and planned projects.

COMMITTEE: Administrative, May 10, 2024, Reviewed

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

RMM:XC:DD:HL:dc

Background

Information Management (IM) provides a wide range of information systems and services in support of all South Coast AQMD operations. IM's primary goal is to provide automated tools and systems to implement rules and regulations, and to improve internal efficiencies. The annual Budget and Board-approved amendments to the Budget specify projects planned during the fiscal year to develop, acquire, enhance, or maintain mission-critical information systems.

Summary of Report

The attached report identifies the major projects/contracts or purchases that are ongoing or expected to be initiated within the next six months. Information provided for each project includes a brief project description and the schedule associated with known major milestones (issue RFP/RFQ, execute contract, etc.).

Attachment

Information Management Status Report on Major Ongoing and Upcoming Projects During the Next Six Months

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 17

REPORT: Administrative Committee

SYNOPSIS: The Administrative Committee held a hybrid meeting on Thursday, May 9, 2024. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Vanessa Delgado, Chair
Administrative Committee

SN:cb

Committee Members

Present: Chair Vanessa Delgado, Committee Chair
Vice Chair Michael Cacciotti
Board Member Gideon Kracov
Supervisor V. Manuel Perez

Call to Order

Chair Delgado called the meeting to order at 10:45 a.m.

For additional details of the Administrative Committee Meeting, please refer to the [Webcast](#).

DISCUSSION ITEMS:

1. **Board Members' Concerns:** No Board Members' concerns were reported.
2. **Chair's Report of Approved Travel:** Travel reported for Supervisor Curt Hagman to attend the ACT Expo in Las Vegas, Nevada.
3. **Report of Approved Out-of-Country Travel:** Out-of-country travel reported for Dr. Sarah Rees to travel to Denmark for American Council for an Energy Efficient Economy from June 22 through June 29, 2024.

4. **Review June 7, 2024 Governing Board Agenda:** Executive Officer Wayne Nastri confirmed Public Hearings for Proposed Rule 317.1 for non-attainment fees and Proposed Amended Rule 1146.2 for boilers and heaters. Mr. Nastri also added that there will be several Set Hearings for August on the following: Proposed Amended Rule 1135 which pertains to emissions of NOx from electricity generating facilities, Proposed Amended Rule 1148.1 which pertains to oil and gas production wells, and Proposed Rule 2306 which pertains to the Rail Indirect Source Rule. For additional information please refer to the [Webcast at 5:51](#).
5. **Approval of Compensation for Board Member Assistant(s)/Consultant(s):** This item was moved to Action Items as approval from the Administrative Committee is needed. For additional information please refer to the [Webcast at 6:47](#).
6. **South Coast AQMD's FY 2023-24 Third Quarter Ended March 31, 2024 Budget vs. Actual (Unaudited):** Sujata Jain, Chief Financial Officer, presented the third quarter budget information that ended on March 30, 2024. Ms. Jain provided a summary which included revenue and expenditure comparisons, fund balance and the five-year projection. For additional information please refer to the [Webcast at 7:15](#).
7. **Report of RFQs/RFPs Scheduled for Release in June:** Ms. Jain reported on the release of an RFP to establish a pre-qualified list of outside counsel for Legal. For additional information please refer to the [Webcast at 12:54](#).
8. **Status Report on Major Ongoing and Upcoming Projects for Information Management:** Ron Moskowitz, Chief Information Officer, reported on the status of various projects and projects that have been completed. For additional information please refer to the [Webcast at 13:21](#).

ACTION ITEMS:

5. **Approval of Compensation for Board Member Assistant(s)/Consultant(s):** There were 25 proposals for the compensation of the Board Member Assistant(s)/Consultant(s) for new fiscal year 2024-2025. The contracts will be effective from July 1, 2024 through June 30, 2025. For additional information please refer to the [Webcast at 6:47](#).

Moved by Cacciotti; seconded by Perez, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

9. **Appoint Regular and Alternate Attorney and Engineer Members to South Coast AQMD Hearing Board for July 1, 2024 to June 30, 2027:** Faye Thomas, Clerk of the Boards, reported that the current terms for Hearing Board Attorney and Engineer Members, as well as their Alternates is expiring at the end of the month. The item is to recommend appointments for the next three-year term which begins on July 1, 2024. Ms. Thomas summarized the recommendations from the Hearing Board Advisory Committee and also informed the Administrative Committee that two of the candidates for the Attorney member position, Adrienne Konigar-Macklin and Anne Shultz were unavailable for the interview.

The Administrative Committee interviewed one Attorney member candidate: Robert Pearman, who is currently serving as the regular Attorney member on the Hearing Board.

The Administrative Committee interviewed two Engineer member candidates: Mohan Balagopalan, who is currently serving as the regular Engineer member on the Hearing Board; and Robert Pease.

The Administrative Committee interviewed two Alternate Engineer member candidates Jenny Lu; and Dr. Maria Slaughter, who is currently serving as the Alternate Engineer member on the Hearing Board

After interviewing the candidates and discussion amongst Administrative Committee members, Board Member Kracov moved to re-appoint the candidates currently serving on the Hearing Board: Attorney member, Robert Pearman; Alternate Attorney member, Adrienne Konigar-Macklin; Engineer member Mohan Balagopalan; and Alternate Engineer member, Dr. Maria Slaughter. Board Member Kracov's motion was seconded by Vice Chair Cacciotti. The motion was unanimously approved. For additional information please refer to the [Webcast at 14.18.](#)

Moved by Kracov; seconded by Cacciotti, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

10. **Authorize Purchase of OnBase Software Support:** Mr. Moskowitz recommended approval for a sole-source purchase of OnBase Software and support for one year in the amount, not to exceed \$200,000, which funding is available in the budget. For additional information please refer to the [Webcast at 1:12:03.](#)

Moved by Cacciotti; seconded by Perez, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

11. **Issue RFP for Legislative Representation in Washington, D.C.:** Lisa Tanaka, Assistant Deputy Executive Officer/Legislative & Public Affairs & Media, reported that this item is to issue an RFP for federal legislative representation for South Coast AQMD for 2025. The amount is not to exceed \$665,000, which funding is available in the budget. The contracts could be extended for up to two additional one-year terms upon Board approval and the current contracts expire on January 20, 2025. For additional information please refer to the [Webcast at 1:13:04](#).

Moved by Cacciotti; seconded by Kracov, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

12. **Recognize Revenue, Appropriate Funds and Issue Solicitation and Purchase Order for Laboratory Equipment:** Dr. Jason Low, Deputy Executive Officer, Monitoring & Analysis, reported that this item is to recognize revenue of about \$200,000 from U.S. EPA for the NATTS program, appropriate the funds to the Monitoring & Analysis budget and purchase a piece of laboratory equipment. For additional information please refer to the [Webcast at 1:14:09](#).

Moved by Kracov; seconded by Cacciotti, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

13. **Appropriate Funds, Issue Solicitation and Purchase Orders to Meet Operational Needs for Rule 1180 Air Monitoring Program:** Dr. Low reported that this item is to appropriate funds of about \$200,000 into the Monitoring & Analysis budget and issue solicitation and purchase orders for some supporting needs for the operation of the Rule 1180 projects. For additional information please refer to the [Webcast at 1:14:53](#).

Moved by Kracov; seconded by Cacciotti, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

14. **Appropriate Funds from the General Fund Undesignated (Unassigned) Fund Balance for Administrative and Human Resources Related Expenditures, and Approve Amending Contracts with Outside Labor and Employment Counsel:** John Olvera, Deputy Executive Officer/Administrative & Human Resources, reported that this item is to transfer funds from the Undesignated (Unassigned) Fund Balance in the amount of \$800,000 to the District General – Administrative & Human Resources budget accounts to cover costs for labor and employment law services, increases in worker's compensation payments, liability insurance premiums and other items for safety and training programs for employees. This

item is also to authorize the Executive Officer to amend contracts with outside counsel as needed. For additional information please refer to the [Webcast at 1:15:36](#).

Moved by Kracov; seconded by Cacciotti, unanimously approved.

Ayes: Cacciotti, Delgado, Kracov, Perez

Noes: None

WRITTEN REPORT:

None.

OTHER MATTERS:

15. **Next Meeting Date:** The next regular Administrative Committee meeting is scheduled for Friday, June 14, 2024 at 10:00 a.m.

Adjournment

The meeting was adjourned at 11:58 a.m.

 [Back to Agenda](#)

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 18

REPORT: Legislative Committee

SYNOPSIS: The Legislative Committee held a hybrid meeting on Thursday, May 9, 2024. The following is a summary of the meeting.

Agenda Item	Recommendation/Action
AB 2851 (Bonta) – Metal shredding facilities: fence-line air quality monitoring,	Support if Amended
SB 1054 (Rubio) – Climate Pollution Reduction in Homes Initiative: natural gas: customer credit.	Support
SB 1095 (Becker) – Cozy Home Clean Up Act: building standards: gas-fuel-burning, appliances.	Support
SB 1298 (Cortese) – Certification of thermal powerplants: data centers.	Oppose

RECOMMENDED ACTION:

Receive and file this report and approve agenda items as specified in this letter.

Michael A. Cacciotti, Committee Chair
Legislative Committee

DJA:LTO:PFC:DPG:ar:mc

Committee Members

Present: Councilmember Michael A. Cacciotti, Committee Chair
Mayor Patricia Lock Dawson
Supervisor V. Manuel Perez
Councilmember Nithya Raman
Mayor José Luis Solache
Absent: Supervisor Curt Hagman

Call to Order

Chair Michael Cacciotti called the meeting to order at 10:02 a.m.

ACTION/DISCUSSION ITEMS:

1. Update on 2024 South Coast AQMD Sponsored State Bills

Derrick Alatorre, Deputy Executive Officer/Legislative, Public Affairs & Media, presented on the 2024 South Coast AQMD sponsored state bills as described below:

- AB 2522 (W. Carrillo) would increase compensation for local air district board members by doubling the current limit. The bill was referred to the Senate Environmental Quality and Local Government Committees.
- AB 2958 (Calderon) would provide board members, who represent local air districts, with the same level of compensation as other voting CARB board members. The bill is in the Assembly Appropriations Suspense File.
- SB 1158 (Archuleta) would update the Carl Moyer program by extending the liquidation time for funding from 4 to 6 years. The bill was ordered to the Senate Floor's consent calendar.

For additional information, please refer to the Webcast beginning at 00:[01](#).

There was no public comment.

2. Recommend Position on State Bills

Philip Crabbe, Senior Public Affairs Manager/Legislative, Public Affairs & Media, presented AB 2851 (Bonta) – Metal shredding facilities: fenceline air quality monitoring. The bill would require the Department of Toxic Substances Control (DTSC), in consultation with local air districts, to develop and implement facility-wide fenceline air quality monitoring at metal shredding facilities.

Staff recommended a support if amended position on AB 2851 to:

- Add provisions that require local air districts to be reimbursed by DTSC or metal shredding facilities for implementation costs.
- Establish a longer timeframe to initiate air monitoring.
- Provide an off-ramp if air monitoring shows that respirable metal particles are below a specified threshold.
- Delete light fibrous material from the list of items to be included in the facility fenceline monitoring requirements.

Moved by: Solache, Seconded by: Lock Dawson

Ayes: Cacciotti, Dawson, Raman, Solache

Noes: None

For additional information, please refer to the Webcast beginning at [1:17](#).

Denise Peralta Gailey, Public Affairs Manager/Legislative, Public Affairs & Media, presented on SB 1054. The bill would, until January 1, 2029, establish the Climate Pollution Reduction in Homes Initiative to provide financial assistance to low-income households for the purchase of zero-carbon-emitting appliances.

Councilmember Raman inquired about the funding source for the program. Ms. Gailey responded that the initiative would be generated through the climate credit, which requires power plants, natural gas providers, and other industries to buy carbon pollution permits. The program would reallocate funds used by a program that expired in 2023. For additional information, please refer to the Webcast beginning at [3:45](#).

Staff recommended a support position on SB 1054.

Moved by: Solache, Seconded by: Lock Dawson
Ayes: Cacciotti, Dawson, Raman, Solache
Noes: None

Mr. Crabbe presented SB 1095 (Becker) – Cozy Homes Cleanup Act: building standards: gas-fuel-burning appliances. The bill would update ambiguities and issues in existing law to ensure that individuals can switch from gas to electric appliances, thereby allowing Californians to opt for healthier zero-emission homes.

Staff recommended a support position on SB 1095.

Moved by: Lock Dawson, Seconded by: Raman
Ayes: Cacciotti, Dawson, Raman, Solache
Noes: None

For additional information, please refer to the Webcast beginning at [5:47](#).

Ms. Gailey presented SB 1298 (Cortese) – Certification of thermal powerplants: data center. The bill would authorize the California Energy Commission to exempt a thermal powerplant with generation capacity up to 150 megawatts from their siting review process.

Staff recommended an opposed position on SB 1298.

Moved by: Raman, Seconded by: Solache
Ayes: Cacciotti, Dawson, Raman, Solache
Noes: None

For additional information, please refer to the Webcast beginning at [6:44](#).

There was no public comment.

DISCUSSION ITEMS:

3. Update and Discussion on Federal Legislative Issues

South Coast AQMD's federal legislative consultants (Cassidy & Associates, Kadesh & Associates, and Carmen Group) provided written reports on key Washington, D.C. issues.

Gary Hoitsma, Carmen Group, reported action on major bills may occur after the November General Election such as fiscal year (FY) 2025 appropriations and annual authorization bills for defense, agriculture, aviation, and water.

Jed Dearborn Morales, Cassidy & Associates, reported that staff is working with Senator Alex Padilla's office on FY 2025 appropriations bills to support investment in research and development projects related to oceangoing vessels.

Mark Kadesh, Kadesh & Associates, reported that staff is in the process of obtaining signatures for a Congressional letter of support for South Coast AQMD's regional Climate Pollution Reduction grant application. Senator Padilla and Representatives Pete Aguilar and Tony Cardenas have agreed to lead the letter.

Chair Cacciotti inquired about the Federal Railroad Administration's Consolidated Rail Infrastructure and Safety Improvement (CRISI) grant program. Lisa Tanaka, Assistant Deputy Executive Officer, Legislative, Public Affairs & Media, replied that staff is tracking and evaluating grant programs.

Dr. Aaron Katzenstein, Deputy Executive Officer/Technology Advancement Office, added that staff is aware that CARB may be applying for CRISI funding and South Coast AQMD is not competing with the state for funding. For additional information, please refer to the Webcast beginning at [11:45](#).

There was no public comment.

4. Update and Discussion on State Legislative Issues

South Coast AQMD's state legislative consultants (California Advisors, LLC, Joe A. Gonsalves & Son, and Resolute) provided written reports on key issues in Sacramento.

David Quintana, Resolute, reported that the Governor will be releasing the Revised Budget Plan (May Revise) on May 10. Tax receipts have been lower than the Governor projected.

Ross Buckley, California Advisors, LLC, reported that the Department of Finance was granted the authority to freeze one-time funding from previous years for General Fund allocations exceeding \$1 million.

Paul Gonsalves, Joe A. Gonsalves & Son, provided an overview of upcoming legislative deadlines. The legislature is mid-way through this year's legislative session. The budget must be passed by June 15.

Committee Chair Cacciotti requested an update on the budget estimates. Mr. Quintana replied that the Legislative Analyst's Office estimates a budget shortfall of \$5.8 billion.

Committee Chair Cacciotti asked if South Coast AQMD has received any letters regarding the halting of or delay of state funds. Executive Officer Wayne Natri responded that staff has been working to ensure state funds are encumbered following the receipt of a letter from CARB indicating that unencumbered funds may be subject to withholding by the legislature. Staff is also closely monitoring any potential budget impacts to the AB 617 Program.

Mayor Solache inquired about the cost-of-living adjustment (COLA) in the May Revise. Mr. Gonsalves replied that an update on COLA could be provided following the release of the May Revise. For additional information, please refer to the Webcast beginning at [16:50](#).

There was no public comment.

OTHER MATTERS:

5. Other Business

There was no other business to report.

6. Public Comment Period

There was no public comment.

7. Next Meeting Date

The next regular Legislative Committee meeting is scheduled for Friday, June 14, 2024, at 9:00 a.m.

Adjournment

The meeting was adjourned at 10:30 a.m.

South Coast Air Quality Management District
Legislative Analysis Summary – AB 2851 (Bonta)
Version: As Amended – 4/4/24
Analyst: PC

AB 2851 (Bonta)

Metal shredding facilities: fence-line air quality monitoring.

Summary: This bill would require the Department of Toxic Substances Control (DTSC), in consultation with local air districts, to develop and implement facility-wide fence-line air quality monitoring at metal shredding facilities.

Background: According to the author, most scrap metal in California comes from old vehicles, appliances, construction and demolition materials, and manufacturing. Metal shredding facilities process the scrap to separate metals by type and separate out non-metal material. The metal shredding process has environmental impacts on communities. These include improper hazardous waste storage, soil contamination, and release of hazardous waste into surrounding communities. The Department of Toxic Substances Control (DTSC) has limited ability to regulate metal shredding facilities. Under existing law, the metal shredding industry is not required to submit a permit for operating, therefore DTSC is unable to withhold permitting when violations and penalties are cited.

Status: 4/23/24 – Passed Assembly Natural Resources Committee. Re-referred to Assembly Appropriations Committee.

Specific Provisions: Specifically, this bill would:

- 1) Require, on or before July 1, 2025, DTSC, in consultation with affected local air districts, to develop requirements for facility-wide fence-line air quality monitoring at metal shredding facilities.
- 2) Provide that the requirements developed pursuant to this bill include, but are not limited to, the following:
 - a. Monitoring of light fibrous material, lead, zinc, cadmium, nickel, and any other substance required to be monitored by DTSC;
 - b. Monitoring at prescribed frequencies of the substances that are required to be monitored;
 - c. Reporting on the results of the monitoring required pursuant to this bill to DTSC, the local air district, and the local public health department; and,
 - d. A requirement on the local public health department, if the monitoring required pursuant to this bill indicates a potential adverse impact on air quality or public health, to issue a community notification to the public for the area in which the metal shredding facility is located that informs the public that the facility is causing the potential adverse impact on air quality or public health.
- 3) Require all metal shredding facilities, subject to the Hazardous Waste Control Law (HWCL), to implement the bill's facility-wide fence-line air quality monitoring requirements.

- 4) Require, on or before December 31, 2025, DTSC to oversee and enforce the implementation of the facility-wide fence-line air quality monitoring requirements developed pursuant to this bill.
- 5) Authorize DTSC to be reimbursed for any regulatory costs incurred in implementing the provisions of this bill through the existing fee that DTSC can impose on metal shredding facilities under the HWCL.

Impacts on South Coast AQMD’s Mission, Operations or Initiatives: South Coast AQMD passed a recent metal shredding rule and this bill will have an impact on the agency’s regulatory activities relating to this sector. South Coast AQMD Rule 1460 applies to an owner or operator of a metal recycling facility or metal shredding facility within the South Coast region. The rule focuses on minimizing fugitive dust emissions from these operations and includes registration, housekeeping, best management practices, signage, and recordkeeping requirements. Rule 1460 does not apply to recycling centers where the primary business is processing empty beverage containers for California Redemption Value (CRV). Metal recycling and metal shredding facilities have also been subject to South Coast AQMD Rule 403 which applies to any activity capable of generating fugitive dust.

Staff have concerns that the bill’s timelines is too short to implement and the bill and is too broad as currently drafted. It is also a concern that DTSC is the agency that is required to do the fence-line monitoring, as this is not their primary area of expertise.

If air districts were to be more involved in the monitoring efforts, then it would take substantial air district resources to implement, including possible rulemaking and monitoring planning, prior to full implementation. A methodology for multimetals would need to be developed, with an additional focus on monitoring of respirable particles. However, any larger sized metal pieces that are captured on a filter that are not respirable would skew the results (typically these operations result in larger coarse particles). There are also questions as to how to monitor for “light fibrous material”.

South Coast AQMD proposed amendments:

- 1) Add provisions to the bill that require local air districts to be reimbursed by DTSC or the metal shredding facility for any costs air districts incur in implementing the provisions of this bill.
- 2) Establish a longer timeframe to initiate air monitoring.
- 3) Provide an off-ramp if air monitoring shows that respirable metal particles are below a specified threshold.

- 4) Delete light fibrous material from the list of items to be included in the facility fence-line monitoring requirements.

ATTACHMENT 2B

AMENDED IN ASSEMBLY APRIL 4, 2024

AMENDED IN ASSEMBLY MARCH 21, 2024

CALIFORNIA LEGISLATURE—2023–24 REGULAR SESSION

ASSEMBLY BILL

No. 2851

Introduced by Assembly Member Bonta

February 15, 2024

An act to add Section 25150.87 to the Health and Safety Code, relating to air pollution.

LEGISLATIVE COUNSEL'S DIGEST

AB 2851, as amended, Bonta. Metal shredding facilities: fence-line *air quality* monitoring.

~~Existing law imposes various limitations on emissions of air contaminants for the control of air pollution from vehicular and nonvehicular sources. Existing law generally designates the State Air Resources Board as the state agency with the primary responsibility for the control of vehicular air pollution and air pollution control and air quality management districts with the primary responsibility for the control of air pollution from all sources other than vehicular sources.~~

Existing law defines a “fence-line monitoring system,” for purposes of specified laws requiring the monitoring of toxic air contaminants from nonvehicular sources, to mean monitoring equipment that measures and records air pollutant concentrations at or adjacent to a stationary source that may be useful for detecting or estimating emissions of pollutants from the source, including the quantity of fugitive emissions, and in supporting enforcement efforts.

Existing law requires the Department of Toxic Substances Control to adopt, and revise when appropriate, standards and regulations for the

management of hazardous wastes to protect against hazards to the public health, to domestic livestock, to wildlife, or to the environment, including the operation of metal shredding facilities for appliance recycling. *Existing law authorizes the department to collect an annual fee from all metal shredding facilities that are subject to the requirements of the hazardous waste control laws, and to deposit those fees into a subaccount in the Hazardous Waste Control Account. Existing law makes those moneys available to the department, upon appropriation by the Legislature, to reimburse the department's costs to implement the hazardous waste control laws applicable to metal shredder facilities.*

This bill would require, on or before July 1, 2025, the department, in consultation with ~~the state board and~~ affected local air pollution control and air quality management districts, to develop ~~standards~~ requirements for facilitywide fenceline air quality monitoring at metal shredding facilities. ~~The bill would require the standards to require monitoring of specified substances, such as lead and zinc.~~ *facilities. Those requirements would include, among other things, monitoring light fibrous material, lead, zinc, cadmium, and any other substance required to be monitored by the department, and a requirement that, if the monitoring indicates a potential adverse impact on air quality or public health, the local public health department issue a community notification, as provided.* The bill would also require ~~each local public health department to issue a community notification regarding the adverse impacts on air quality and public health as a result of the operation of metal shredding facilities in that jurisdiction, as provided, and to provide a biannual assessment to the local governmental entity for the jurisdiction in which the metal shredding facility is located.~~ *all metal shredding facilities that are subject to the hazardous waste control laws to implement the fenceline air quality monitoring requirements.* The bill would require the department to ~~ensure the successful~~ *oversee and enforce the* implementation of ~~those the~~ fenceline air quality monitoring ~~standards~~ requirements on or before December 31, 2025. *The bill would also authorize any regulatory costs incurred by the department in implementing the bill's requirements to be reimbursed from the subaccount in the Hazardous Waste Control Account.* By imposing new duties on local public health departments, the bill would impose a state-mandated local program.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that, if the Commission on State Mandates determines that the bill contains costs mandated by the state, reimbursement for those costs shall be made pursuant to the statutory provisions noted above.

Vote: majority. Appropriation: no. Fiscal committee: yes.
State-mandated local program: yes.

The people of the State of California do enact as follows:

1 SECTION 1. Section 25150.87 is added to the Health and
2 Safety Code, to read:
3 25150.87. (a) On or before July 1, 2025, the department, in
4 consultation with ~~the State Air Resources Board~~ and affected local
5 air pollution control and air quality management districts, shall
6 develop ~~standards~~ *requirements* for facilitywide fenceline air
7 quality monitoring at metal shredding facilities, as defined in
8 Section 25150.82, that are subject to this chapter.
9 (b) The ~~standards~~ *requirements* developed pursuant to
10 subdivision (a) shall ~~do~~ *include, but not be limited to*, all of the
11 following:
12 (1) ~~Require monitoring of the following substances previously~~
13 ~~identified by the department: Monitoring of light fibrous material,~~
14 ~~lead, zinc, cadmium, and nickel. These standards may also require~~
15 ~~the monitoring of additional substances: nickel, and any other~~
16 ~~substance required to be monitored by the department.~~
17 (2) ~~Require each local public health department to issue a~~
18 ~~community notification regarding the adverse impacts on air quality~~
19 ~~and public health as a result of the operation of metal shredding~~
20 ~~facilities in that jurisdiction and assist in identifying the underlying~~
21 ~~causes of the air pollution.~~
22 (3) ~~Require each local public health department to provide a~~
23 ~~biannual assessment to the local governmental entity for the~~
24 ~~jurisdiction in which the metal shredding facility is located.~~
25 (2) *Monitoring at prescribed frequencies of substances*
26 *monitored pursuant to paragraph (1).*
27 (3) *Reporting on the results of the monitoring required pursuant*
28 *to this subdivision to the department, the local air district or local*

1 *air quality management district, and the local public health*
2 *department.*

3 *(4) If the monitoring required pursuant to this subdivision*
4 *indicates a potential adverse impact on air quality or public health,*
5 *requiring the local public health department to issue a community*
6 *notification to the public for the area in which the metal shredding*
7 *facility is located that informs the public that the facility is causing*
8 *the potential adverse impact on air quality or public health.*

9 *(c) All metal shredding facilities subject to this chapter shall*
10 *implement the facilitywide fenceline air quality monitoring*
11 *requirements developed pursuant to this section.*

12 ~~(e)~~

13 *(d) The department shall ~~ensure the successful~~ oversee and*
14 *enforce the implementation of the facilitywide fenceline air quality*
15 *monitoring ~~standards~~ requirements developed pursuant to this*
16 *section on or before December 31, 2025.*

17 *(e) Any regulatory costs incurred by the department in*
18 *implementing this section may be reimbursed by the fee on metal*
19 *shredding facilities imposed pursuant to subdivision (a) of Section*
20 *25150.84.*

21 SEC. 2. If the Commission on State Mandates determines that
22 this act contains costs mandated by the state, reimbursement to
23 local agencies and school districts for those costs shall be made
24 pursuant to Part 7 (commencing with Section 17500) of Division
25 4 of Title 2 of the Government Code.

South Coast Air Quality Management District
Legislative Analysis Summary – SB 1054 (Rubio)
Version: Amended – 4/30/24
Analyst: DPG

SB 1054 (Rubio)

Climate Pollution Reduction in Homes Initiative: natural gas: customer credit.

Summary: This bill would establish the Climate Pollution Reduction in Homes Initiative to provide financial assistance to low-income households for the purchase of zero-carbon-emitting appliances.

Background: Existing law requires the Energy Commission to prescribe, by regulation, among other things, lighting, insulation, climate control system, and other building design and construction standards, energy and water conservation design standards, and appliance efficiency standards to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy and to manage energy loads to help maintain electrical grid reliability.

Existing law vests the Public Utilities Commission (PUC) with regulatory authority over public utilities, including gas corporations. The California Global Warming Solutions Act of 2006 designates CARB as the state agency charged with monitoring and regulating sources of emissions of greenhouse gases and the authority to include the use of market-based compliance mechanisms in regulating those emissions. The implementing regulations adopted by CARB provide for the direct allocation of greenhouse gas allowances to electrical corporations and gas corporations pursuant to a market-based compliance mechanism.

Status: 4/30/24 - Read second time and amended. Re-referred to Senate Appropriations Committee.

Specific Provisions: Specifically, this bill would:

- 1) Require the Energy Commission, in consultation with the Department of Community Services and Development, to develop and supervise the Climate Pollution Reduction in Homes Initiative to require gas corporations to jointly award grants for local service providers, nonprofit organizations, and regional collections of local governments to provide financial assistance to low-income households for the purchase of zero-carbon-emitting appliances.
- 2) Require the Energy Commission, as part of developing and administering the initiative, to develop guidelines and authorize local service providers, nonprofit organizations, and regional collections of local governments to use those grant moneys for outreach and technical assistance, rebates, loans, installation, educational information, and other support services to assist low-income households.

- 3) Repeal the above-described provisions on January 1, 2029.
- 4) Require the Energy Commission, on March 1 of every year from 2026 to 2030, inclusive, to submit a report to the relevant policy committees of the Legislature on the implementation of the initiative.
- 5) Require the PUC to direct the balance of revenues received by a gas corporation, as a result of their allocation of greenhouse gas allowances being auctioned off as part of the state’s cap-and-trade program, to be credited directly to the residential customers of the gas corporation,
 - a. except that, until January 1, 2029, the bill would authorize the PUC to require gas corporations to annually use up to 15% of revenues received as a result of that allocation to fund the Climate Pollution Reduction in Homes Initiative.
- 6) Require the PUC to annually direct gas corporations to distribute the credit, derived from revenues received by a gas corporation as a result of their greenhouse gas allowances being auctioned off, to residential customers of the gas corporation.

Impacts on South Coast AQMD’s Mission, Operations or Initiatives:

As part of the 2022 State Strategy for the State Implementation Plan, CARB has proposed a statewide zero GHG emissions standard for residential and commercial building appliances, which would have criteria pollutant co-benefits. South Coast AQMD has also developed multiple building-related control measures to address emissions from residential and commercial combustion equipment for space heating, water heating, cooking, and others. This bill aligns with South Coast AQMD’s goals of reducing harmful emissions and protecting public health.

ATTACHMENT 2D

AMENDED IN SENATE APRIL 30, 2024

AMENDED IN SENATE MARCH 20, 2024

SENATE BILL

No. 1054

Introduced by Senator Rubio

February 8, 2024

An act to add *and repeal* Chapter 8.65 (commencing with Section 25760) ~~to~~ *of* Division 15 ~~of~~ *of*, and to repeal Section 25760 *of*, the Public Resources Code, and to add Section 748.7 to the Public Utilities Code, relating to energy.

LEGISLATIVE COUNSEL'S DIGEST

SB 1054, as amended, Rubio. Climate Pollution Reduction in Homes Initiative: natural gas: customer credit.

Existing law requires the State Energy Resources Conservation and Development Commission (Energy Commission) to prescribe, by regulation, among other things, lighting, insulation, climate control system, and other building design and construction standards, energy and water conservation design standards, and appliance efficiency standards to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy and to manage energy loads to help maintain electrical grid reliability, as specified.

This bill would require the Energy Commission, in consultation with the Department of Community Services and Development, to develop and supervise the Climate Pollution Reduction in Homes Initiative to require gas corporations to jointly award grants for local service providers, as defined, nonprofit organizations, and regional collections of local governments to provide financial assistance to low-income households for the purchase of zero-carbon-emitting appliances. The bill would require the Energy Commission, as part of developing and

administering the initiative, to develop guidelines, as specified, and authorize local service providers, nonprofit organizations, and regional collections of local governments to use those grant moneys for outreach and technical assistance, rebates, loans, installation, educational information, and other support services to assist low-income households. *The bill would repeal the above-described provisions on January 1, 2029. The bill would also require the Energy Commission, on March 1 of every year from 2026 to 2030, inclusive, to submit a report to the relevant policy committees of the Legislature on the implementation of the initiative, as specified.*

Existing law vests the Public Utilities Commission (PUC) with regulatory authority over public utilities, including gas corporations. The California Global Warming Solutions Act of 2006 designates the State Air Resources Board as the state agency charged with monitoring and regulating sources of emissions of greenhouse gases. The act authorizes the state board to include the use of market-based compliance mechanisms in regulating those emissions. The implementing regulations adopted by the state board provide for the direct allocation of greenhouse gas allowances to electrical corporations and gas corporations pursuant to a market-based compliance mechanism.

This bill would require the PUC to direct the balance of the revenues received by a gas corporation as a result of that allocation to be credited directly to the residential customers of the gas corporation, except that, until January 1, 2029, the bill would authorize the PUC to require gas corporations to annually use up to 15% of the revenues received as a result of that allocation of allowances to fund the Climate Pollution Reduction in Homes Initiative, and would require the PUC to direct the balance of those revenues, including any accrued interest, received by a gas corporation to be credited directly to the residential customers of the gas corporation. The bill would require the PUC to annually direct gas corporations to distribute the credit, as specified. Initiative, as specified.

Under existing law, a violation of the Public Utilities Act or any order, decision, rule, direction, demand, or requirement of the PUC is a crime.

Because certain of the above-described provisions would be part of the act and a violation of a PUC action implementing this bill's requirements would be a crime, the bill would impose a state-mandated local program.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that no reimbursement is required by this act for a specified reason.

Vote: majority. Appropriation: no. Fiscal committee: yes.

State-mandated local program: yes.

The people of the State of California do enact as follows:

1 SECTION 1. The Legislature finds and declares all of the
2 following:

3 (a) The state is a global leader in greenhouse gas emissions
4 reduction targets, including establishing state policies to return to
5 1990 greenhouse gas emissions levels by 2020, to reduce
6 greenhouse gas emissions levels to 40 percent below 1990 levels
7 by 2030, and to achieve carbon neutrality by 2045.

8 (b) Energy use in buildings is responsible for 25 percent of all
9 emissions of greenhouse gases in the state and contributes to indoor
10 and outdoor air pollution.

11 (c) Low-income communities across the state have
12 disproportionately shouldered high energy costs and the burdens
13 of poor air quality.

14 (d) Reducing home energy use through energy efficiency
15 measures and retrofitting appliances simultaneously reduces
16 residential energy expenses and harmful emissions, thereby
17 improving economic security and indoor air quality, particularly
18 in low-income communities.

19 SEC. 2. Chapter 8.65 (commencing with Section 25760) is
20 added to Division 15 of the Public Resources Code, to read:

21
22 CHAPTER 8.65. CLIMATE POLLUTION REDUCTION IN HOMES
23 INITIATIVE
24

25 25760. (a) For purposes of this chapter, the following
26 definitions apply:

27 (1) "Department" means the Department of Community Services
28 and Development.

29 (2) "Initiative" means the Climate Pollution Reduction in Homes
30 Initiative.

1 (3) “Local service provider” has the same meaning as defined
2 in Section 16367.5 of the Government Code.

3 (4) “Low-income household” means a person or family with a
4 household income at or below 60 percent of the area median
5 income, including such a person or family in a multiunit dwelling.

6 (b) (1) The commission, in consultation with the department,
7 shall develop and supervise the Climate Pollution Reduction in
8 Homes Initiative to require gas corporations to jointly award grants
9 for local service providers, nonprofit organizations, and regional
10 collections of local governments to provide financial assistance to
11 low-income households for the purchase of zero-carbon-emitting
12 appliances.

13 (2) For purposes of supervising the initiative, the commission
14 shall act as third-party administrator.

15 (3) Moneys allocated pursuant to Section 748.7 of the Public
16 Utilities Code shall be available to the commission, as the
17 third-party administrator, for allocation consistent with this section.

18 (c) As part of developing and administering the initiative, the
19 commission shall develop guidelines that do all of the following:

20 (1) Provide for the expenditure of grant funds to ensure
21 expeditious delivery of financial assistance to low-income
22 households.

23 (2) Specify criteria for which appliances, which may include
24 water heaters, stoves and cooking appliances, home heating and
25 cooling systems, refrigerators and freezers, and washers and dryers,
26 are eligible for financial assistance.

27 (3) Ensure the initiative provides safe and reliable appliances
28 that stabilize the utility bills of low-income households.

29 (4) Provide funding for single-family and multifamily residential
30 buildings.

31 (5) Provide preference to projects that are receiving or
32 combining funding from other sources, including, but not limited
33 to, the Energy Efficiency Low-Income Weatherization Program
34 established pursuant to Section 12087.5 of the Government Code.

35 (6) Provide tenant protections for rental properties, where
36 appropriate.

37 (7) Maximize community-based outreach and education for the
38 initiative through collaboration with local service providers,
39 nonprofit organizations, or regional collections of local
40 governments that have demonstrated ties to the local community

1 at the neighborhood, city, or county level and have experience
2 delivering energy incentives.

3 (8) Ensure that moneys from each gas corporation for the
4 initiative are used for grants located in the service territory of the
5 gas corporation from which the moneys are received.

6 (d) (1) A local service provider, nonprofit organization, or
7 regional collection of local governments may use grant moneys
8 for outreach and technical assistance, rebates, loans, installation,
9 educational information, and other support services to assist
10 low-income households.

11 (2) A local service provider, nonprofit organization, or regional
12 collection of local governments may authorize up to 20 percent of
13 the financial assistance provided to a low-income household to be
14 used on electrical upgrades to the low-income household's property
15 to support the installation of a zero-carbon-emitting appliance.

16 (e) *This section shall remain in effect only until January 1, 2029,*
17 *and as of that date is repealed.*

18 25761. (a) *On March 1, 2026, and each March 1 thereafter,*
19 *the commission shall submit a report to the relevant policy*
20 *committees of the Legislature on the implementation of this chapter*
21 *that details all of the following:*

22 (1) *The amount of funding received.*

23 (2) *The grants awarded.*

24 (3) *The number and location of projects funded.*

25 (4) *The number of completed projects.*

26 (5) *Any challenges and lessons learned.*

27 (b) *A report to be submitted pursuant to subdivision (a) shall*
28 *be submitted in compliance with Section 9795 of the Government*
29 *Code.*

30 25762. *This chapter shall remain in effect only until January*
31 *1, 2031, and as of that date is repealed.*

32 SEC. 3. Section 748.7 is added to the Public Utilities Code, to
33 read:

34 748.7. (a) Except as provided in subdivision (c), the
35 commission shall require revenues, including any accrued interest,
36 received by a gas corporation as a result of the direct allocation of
37 greenhouse gas allowances to gas utilities pursuant to subdivision
38 (a) and paragraphs (2) and (3) of subdivision (d) of Section 95893
39 of Title 17 of the California Code of Regulations to be credited
40 directly to the residential customers of the gas corporation.

(b) Each year, the commission shall direct each gas corporation to distribute the credit described in subdivision (a) ~~during the February utility billing cycle, so as to coincide with the highest usage gas utility bill during the year.~~ *to residential customers of the gas corporation.*

~~(e) The commission may consider a gas corporation's billing system's ability to distribute the credit described in subdivision (a) in February and may authorize the gas corporation to provide the credit as close to the February utility billing cycle as feasible.~~

~~(d)~~
(c) (1) The commission may require gas corporations to annually use up to 15 percent of the revenues, including any accrued interest, received as a result of the direct allocation of greenhouse gas emissions allowances provided to gas corporations as part of a market-based compliance mechanism adopted pursuant to subdivision (c) of Section 38562 of the Health and Safety Code to fund the Climate Pollution Reduction in Homes Initiative established pursuant to Chapter 8.65 (commencing with Section 25760) of Division 15 of the Public Resources Code.

(2) *This subdivision shall become inoperative on January 1, 2029.*

SEC. 4. No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution because the only costs that may be incurred by a local agency or school district will be incurred because this act creates a new crime or infraction, eliminates a crime or infraction, or changes the penalty for a crime or infraction, within the meaning of Section 17556 of the Government Code, or changes the definition of a crime within the meaning of Section 6 of Article XIII B of the California Constitution.

South Coast Air Quality Management District
Legislative Analysis Summary – SB 1095 (Becker)
Version: As Amended – 4/8/24
Analyst: PC

SB 1095 (Becker)

Cozy Homes Cleanup Act: building standards: gas-fuel-burning appliances.

Summary: This bill would update ambiguities in existing law to ensure that individuals can switch from gas to electric appliances, thereby allowing Californians to opt for healthier zero-emission homes. The bill would:

- 1) Establish the Cozy Homes Clean-up Act, which clarifies the authority of individuals in mobilehomes, manufactured homes, and common interest developments (CIDs) to possess and use electric appliances, in addition to gas appliances, and
- 2) Require the Department of Housing and Community Development (HCD) to regulate electric appliances.

Background: According to the author: “Despite California’s ambitious greenhouse gas reduction targets and incentives to convert to more climate-friendly appliances, local agencies and non-profit organizations at the forefront of electric appliance installations have raised concerns about outdated health and safety codes that could prevent or discourage individuals from making the switch from gas to electric appliances. Issues such as legal ambiguities or delays in approval of installation from a homeowner association (HOA) can potentially add time or costs to the process of allowing residents to make the switch. This is particularly burdensome in cases of changes of appliances at the ‘end of life,’ where a family cannot and will not wait 3-6 months for their HOA to approve replacement water heater installation. These outdated regulations could preemptively increase building electrification barriers and costs, particularly for installations of heat pumps on the exteriors of homes, or for replacements in mobile and multi-family homes. SB 1095 will help preemptively remove potential barriers that could frustrate Californians trying to make the switch to electric appliances so that all Californians can have cozier, healthier zero-emission homes.”

CIDs are a type of housing with separate ownership of housing units that also share common areas and amenities. There are a variety of different types of CIDs including condominium complexes, planned unit developments, and resident-owned mobilehome parks. In recent years, CIDs have represented a growing share of California’s housing stock. In 2019 there were an estimated 54,065 CIDs in the state which contain 5 million housing units, or about 35% of the state’s total housing stock. CIDs and their governing documents are regulated under the Davis-Stirling Act. CIDs can also have Covenants, Conditions, and Restrictions (CC&Rs) which are filed with the county recorder at the time they are established. Owners in a CID are contractually obligated to abide by the CC&Rs and the governing documents of a CID, which specify rules, such as how an owner can modify their home. Additionally, CIDs include HOAs which are run by an elected board of directors.

Status: 4/15/24 – Placed on Senate Appropriations Committee suspense file.

Specific Provisions: Specifically, this bill would:

- 1) Void, within the Davis Sterling Act, any governing document or architectural guidelines or policies within CIDs that prevent the replacement of a fuel-gas-burning appliance with an electric appliance;
- 2) Add that nothing shall prohibit the replacement of fuel-gas-burning water heaters with electric appliances in manufactured homes or mobilehomes;
- 3) Provide that nothing shall prohibit the installation of plumbing, heating, or air-conditioning systems for manufactured homes, mobilehomes, or multifamily manufactured homes from being located outside the home if necessary to replace an existing fuel-gas-burning water heater;
- 4) Require HCD, by July 1, 2026, to issue regulations that include standards for electric water heater seismic bracing, anchoring, and strapping to be applicable statewide in manufactured homes and mobilehomes. Requires new relevant appliances to adhere to these standards; and
- 5) Require HCD to by July 1, 2026, update existing regulations regarding the facilitation of electric appliance replacement in manufactured homes and mobilehomes.

Impacts on South Coast AQMD’s Mission, Operations or Initiatives: According to the CARB 2018 GHG Inventory, commercial and residential buildings are responsible for approximately 12% each of all greenhouse gas (GHG) emissions, and space and water heating make up nearly 75% of all building-related fuel consumption. To date, electric appliances have been key in helping fulfill California’s zero emissions goals. Because of the impacts to the environment, CARB is considering a regulation requiring any newly purchased heater to be a zero-emission space or water heater as an important part of their effort to decrease GHG emissions to help meet the state’s climate goals of achieving carbon neutrality by 2045 or earlier. Similarly, the sponsor of this bill, the Bay Area AQMD, is considering amending their Regulation 9, Rules 4 and 6 to reduce emissions of nitrogen oxides from residential and commercial furnaces and water heaters via replacement or upgrade to zero emission electric appliances. These Bay Area AQMD amendments would bring the Bay Area into line with air districts in the Southern California and Central Valley regions, which are developing programs to help residents facilitate the transition to zero-emission electric appliances. These changes in regulation are examples of a trend to electrification to reduce GHG and air pollutant emissions.

This bill is consistent with South Coast AQMD’s policy priorities to promote zero emission technology, reduce emissions and protect public health within the South Coast region.

ATTACHMENT 2F

AMENDED IN SENATE APRIL 8, 2024

AMENDED IN SENATE MARCH 21, 2024

SENATE BILL

No. 1095

Introduced by Senator Becker

February 12, 2024

An act to add Section 4737 to the Civil Code, and to amend Sections 17958.8, 18031.7, and 18031.8 of, *and* to add Section 18031.9 to, the Health and Safety Code, relating to building standards.

LEGISLATIVE COUNSEL'S DIGEST

SB 1095, as amended, Becker. Cozy Homes Cleanup Act: building standards: gas-fuel-burning appliances.

(1) Existing law, the Manufactured Housing Act of 1980 (the “act”), requires the Department of Housing and Community Development to enforce various laws pertaining to the structural, fire safety, plumbing, heat-producing, or electrical systems and installations or equipment of a manufactured home, mobilehome, commercial coach, or special purpose commercial coach. The act defines “manufactured home” and “mobilehome” to mean a structure that meets specified requirements, including that the structure is transportable in one or more sections and is 8 body feet or more in width, or 40 body feet or more in length, in the traveling mode, or, when erected onsite, is 320 or more square feet, and includes the plumbing, heating, air-conditioning, and electrical systems contained within the structure.

The act specifies that it does not prohibit the replacement of water heaters or appliances for comfort heating in manufactured homes or mobilehomes with fuel-gas-burning water heaters or fuel-gas appliances for comfort heating that are not specifically listed for use in a manufactured home or mobilehome, as specified.

This bill would extend those provisions to also apply to electric water heaters and electric appliances for comfort heating that are not specifically listed for use in a manufactured home or mobilehome.

This bill would provide that the act, including any regulation, rule, or bulletin adopted pursuant thereto, does not prohibit the installation of plumbing, heating, or air-conditioning systems for manufactured homes, mobilehomes, or multifamily manufactured homes from being located outside of the home if necessary to replace an existing fuel-gas-burning water heater.

(2) The act requires replacement fuel-gas-burning water heaters to be listed for residential use and installed within the specifications of that listing to include tiedown or bracing to prevent overturning.

This bill would also require replacement electric water heaters to be listed for residential use and installed within the specifications of that listing to include tiedown or bracing to prevent overturning.

The act requires fuel-gas-burning water heater appliances in new manufactured homes or new multifamily manufactured homes to be seismically braced, anchored, or strapped, as specified.

This bill would also require electric water heater appliances in new manufactured homes or new multifamily manufactured homes to be seismically braced, anchored, or strapped, as specified.

The act required the Department of Housing and Community Development, on or before July 1, 2009, to promulgate rules and regulations that include standards for water heater seismic bracing, anchoring, or strapping.

This bill would require the department, on or before ~~August 15, 2025~~, *July 1, 2026*, to promulgate rules and regulations that include standards for electric water heater seismic bracing, anchoring, or strapping, as specified.

This bill would also require the department, if necessary, by ~~December 31, 2025~~, *July 1, 2026*, to update rules and regulations that facilitate the use of electricity-powered space and water heating technologies for manufactured homes, mobilehomes, and multifamily manufactured homes when necessary to replace fuel-burning appliances with electric appliances.

The act provides that any person who knowingly violates any provision of the act or any rule or regulation issued pursuant to the act is guilty of a misdemeanor.

By establishing new standards applicable to the installation and replacement of electric water heaters, the bill would expand the above-mentioned crime and thus impose a state-mandated local program.

(3) The act provides that it does not prohibit the replacement in manufactured homes or mobilehomes of ovens, ranges, or clothes dryers with fuel-gas-burning ovens, ranges, or clothes dryers that are not specifically listed for use in a manufactured home or mobilehome.

This bill would authorize the replacement in manufactured homes or mobilehomes of ovens, ranges, or clothes dryers with electric ovens, ranges, or clothes dryers that are not specifically listed for use in a manufactured home or mobilehome.

The act requires replacement gas-fuel-burning ovens, ranges, or clothes dryers to be listed for residential use and installed in accordance with the specifications of that listing to include tiedown and bracing to prevent displacement.

This bill would require replacement electric ovens, ranges, or clothes dryers to be listed for residential use and installed in accordance with the specifications of that listing to include tiedown and bracing to prevent displacement.

(4) Existing law, the State Housing Law, establishes statewide construction and occupancy standards for buildings used for human habitation. The State Housing Law requires local ordinances or regulations that govern the alteration and repair of existing buildings to permit the replacement, retention, and extension of original materials and the use of original methods of constructions, provided that the portion of the building and structure complies with applicable building code provisions and the building does not become or continue to be a substandard building, as specified.

This bill would provide that the above provision regarding the use of original materials and methods of construction does not prevail over any state or local law that prohibits the use or installation of fuel-gas-burning appliances or that requires the use or installation of electric appliances.

(5) The Davis-Stirling Common Interest Development Act governs the management and operation of common interest developments. Existing law makes void and unenforceable any provision of the governing documents or architectural or landscaping guidelines or policies that prohibits use of low water-using plants, or prohibits or restricts compliance with water-efficient landscape ordinances or regulations on the use of water, as specified.

This bill would make void and unenforceable any provision of the governing documents or architectural guidelines or policies to the extent that the provision prevents the replacement of a fuel-gas-burning appliance with an electric appliance.

(6) This bill would state that specified provisions of the bill are declaratory of existing law.

(7) The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that no reimbursement is required by this act for a specified reason.

Vote: majority. Appropriation: no. Fiscal committee: yes.
State-mandated local program: yes.

The people of the State of California do enact as follows:

1 SECTION 1. This act shall be known, and may be cited, as the
2 Cozy Homes Cleanup Act.

3 SEC. 2. Section 4737 is added to the Civil Code, to read:

4 4737. Notwithstanding any other law, any provision of the
5 governing documents or architectural guidelines or policies shall
6 be void and unenforceable to the extent that the provision prevents
7 the replacement of a fuel-gas-burning appliance with an electric
8 appliance.

9 SEC. 3. Section 17958.8 of the Health and Safety Code is
10 amended to read:

11 17958.8. (a) Local ordinances or regulations governing
12 alterations and repair of existing buildings shall permit the
13 replacement, retention, and extension of original materials and the
14 use of original methods of construction for any building or
15 accessory structure subject to this part, including a hotel,
16 lodginghouse, motel, apartment house, or dwelling, or portions
17 thereof, as long as the portion of the building and structure subject
18 to the replacement, retention, or extension of original materials
19 and the use of original methods of construction complies with the
20 building code provisions governing that portion of the building or
21 accessory structure at the time of construction, and the other rules
22 and regulations of the department or alternative local standards
23 governing that portion at the time of its construction and adopted

1 pursuant to Section 13143.2 and the building or accessory structure
2 does not become or continue to be a substandard building.

3 (b) This section shall not prevail over any other state or local
4 law that prohibits the use or installation of fuel-gas-burning
5 appliances or that requires the use or installation of electric
6 appliances.

7 SEC. 4. Section 18031.7 of the Health and Safety Code is
8 amended to read:

9 18031.7. (a) (1) Nothing in this part shall prohibit the
10 replacement of water heaters in manufactured homes or
11 mobilehomes with electric or fuel-gas-burning water heaters not
12 specifically listed for use in a manufactured home or mobilehome
13 or from having hot water supplied from an approved source within
14 the manufactured home or mobilehome, or in the garage, in
15 accordance with this part or Part 2.1 (commencing with Section
16 18200).

17 (2) Nothing in this part shall prohibit the replacement of
18 appliances for comfort heating in manufactured homes,
19 mobilehomes, or multifamily manufactured homes with electric
20 or fuel-gas appliances for comfort heating not specifically listed
21 for use in a manufactured home or mobilehome within the
22 manufactured home, mobilehome, or multifamily manufactured
23 home in accordance with this part, Part 2.1 (commencing with
24 Section 18200), or Part 2.3 (commencing with Section 18860).

25 (b) Nothing in this part, nor any regulation, rule, or bulletin
26 adopted pursuant to this part, shall prohibit the installation of
27 plumbing, heating, or air-conditioning systems for manufactured
28 homes, mobilehomes, or multifamily manufactured homes from
29 being located outside of the home if necessary to replace an
30 existing fuel-gas-burning water heater.

31 (c) Replacement electric or fuel-gas-burning water heaters shall
32 be listed for residential use and installed within the specifications
33 of that listing to include tiedown or bracing to prevent overturning.

34 (d) Replacement electric or fuel-gas-burning water heaters
35 installed in accordance with subdivision (c) shall bear a label
36 permanently affixed in a visible location adjacent to the fuel gas
37 inlet or electrical power source which reads, as applicable:

38
39

--

WARNING

This appliance is approved only for use with natural gas (NG).

OR

WARNING

This appliance is approved only for use with liquified petroleum gas (LPG).

OR

WARNING

This appliance is approved only for electrical use.

Lettering on the label shall be black on a red background and not less than $\frac{1}{4}$ inch in height except for the word “WARNING” which shall be not less than $\frac{1}{2}$ inch in height.

(e) (1) All electric or fuel-gas-burning water heater appliances in new manufactured homes or new multifamily manufactured homes installed in the state shall be seismically braced, anchored, or strapped pursuant to paragraph (3) or (4) and shall be completed before or at the time of installation of the homes.

(2) Any replacement electric or fuel-gas-burning water heater appliances installed in existing mobilehomes, existing manufactured homes, or existing multifamily manufactured homes that are offered for sale, rent, or lease shall be seismically braced, anchored, or strapped pursuant to paragraph (3) or (4).

(3) On or before July 1, 2009, the department shall promulgate rules and regulations that include standards for water heater seismic bracing, anchoring, or strapping. These standards shall be substantially in accordance with either the guidelines developed pursuant to Section 19215 or the California Plumbing Code (Part 5 of Title 24 of the California Code of Regulations), and shall be applicable statewide.

(4) On or before ~~August 15, 2025~~, *July 1, 2026*, the department shall promulgate rules and regulations that include standards for electric water heater seismic bracing, anchoring, or strapping. These standards shall be substantially in accordance with either

1 the guidelines developed pursuant to Section 19215 or the
2 California Plumbing Code (Part 5 of Title 24 of the California
3 Code of Regulations), and shall be applicable statewide.

4 (5) The dealer, or manufacturer acting as a dealer, responsible,
5 as part of the purchase contract, for both the sale and installation
6 of any home subject to this subdivision shall ensure all water
7 heaters are seismically braced, anchored, or strapped in compliance
8 with this subdivision prior to completion of installation.

9 (6) In the event of a sale of a home, pursuant to either paragraph
10 (1) of subdivision (e) of Section 18035 or Section 18035.26, the
11 homeowner or contractor responsible for the installation of the
12 home shall ensure all electric or fuel-gas-burning water heater
13 appliances are seismically braced, anchored, or strapped consistent
14 with the requirements of paragraph (3). This requirement shall be
15 satisfied when the homeowner or responsible contractor signs a
16 declaration stating each electric or fuel-gas-burning water heater
17 is secured as required by this section on the date the declaration
18 is signed.

19 (f) All used mobilehomes, used manufactured homes, and used
20 multifamily manufactured homes that are sold shall, on or before
21 the date of transfer of title, have the electric or fuel-gas-burning
22 water heater appliance or appliances seismically braced, anchored,
23 or strapped consistent with the requirements of paragraph (3) or
24 (4) of subdivision (e). This requirement shall be satisfied if, within
25 45 days prior to the transfer of title, the transferor signs a
26 declaration stating that each water heater appliance in the used
27 mobilehome, used manufactured home, or used multifamily
28 manufactured home is secured pursuant to paragraph (3) or (4) of
29 subdivision (e) on the date the declaration is signed.

30 (g) For sales of manufactured homes or mobilehomes installed
31 on real property pursuant to subdivision (a) of Section 18551, as
32 to real estate agents licensed pursuant to Division 4 (commencing
33 with Section 10000) of the Business and Professions Code, the
34 real estate licensee duty provisions of Section 8897.5 of the
35 Government Code shall apply to this section.

36 SEC. 5. Section 18031.8 of the Health and Safety Code is
37 amended to read:

38 18031.8. (a) Nothing in this part or the regulations promulgated
39 thereunder shall prohibit the replacement in manufactured homes
40 or mobilehomes of ovens, ranges, or clothes dryers with electric

1 or fuel gas burning ovens, ranges, or clothes dryers not specifically
2 listed for use in a manufactured home or mobilehome.

3 (b) Replacement electric or fuel gas burning ovens, ranges, or
4 clothes dryers shall be listed for residential use and installed in
5 accordance with the specifications of that listing to include tiedown
6 and bracing to prevent displacement.

7 (c) Replacement electric or fuel gas burning ovens, ranges, or
8 clothes dryers installed in accordance with subdivision (b) shall
9 bear a label in compliance with subdivision (c) of Section 18031.7.

10 SEC. 6. Section 18031.9 is added to the Health and Safety
11 Code, to read:

12 18031.9. The department shall, if necessary, by ~~December 31,~~
13 ~~2025, July 1, 2026,~~ update existing rules and regulations that
14 facilitate the use of electricity-powered space and water heating
15 technologies for manufactured homes, mobilehomes, and
16 multifamily manufactured homes when necessary to replace
17 fuel-burning appliances with electric appliances.

18 SEC. 7. The amendments to Section 17958.8 of the Health and
19 Safety Code made by this act do not constitute a change in, but
20 are declaratory of, existing law.

21 SEC. 8. No reimbursement is required by this act pursuant to
22 Section 6 of Article XIII B of the California Constitution because
23 the only costs that may be incurred by a local agency or school
24 district will be incurred because this act creates a new crime or
25 infraction, eliminates a crime or infraction, or changes the penalty
26 for a crime or infraction, within the meaning of Section 17556 of
27 the Government Code, or changes the definition of a crime within
28 the meaning of Section 6 of Article XIII B of the California
29 Constitution.

Western
Manufactured Housing Communities
Association

May 3, 2024

The Honorable Josh Becker
California State Senate
1021 O Street, Suite 7250
Sacramento, CA 95814

RE: SB 1095 (Becker) Cozy Homes Cleanup Act (April 8, 2024) — **NEUTRAL POSITION**

Senator Becker,

On behalf of the Western Manufactured Housing Communities Association (WMA), I appreciate your willingness to amend SB 1095 to address our concern about the original version's language's potential to require significant utility system upgrades necessary to comply with the legislation.

Further, we appreciate you agreeing to ensure electric appliances installed do not jeopardize the health and safety of residents and the mobilehome park and requires the Department of Housing and Community Development to promulgate rules and regulations to satisfy the requirements of SB 1095.

For the reasons listed above, WMA has adopted a neutral position on SB 1095. If you have any questions or comments regarding our position, please contact me at (916) 448-7002, and thank you for your consideration.

Sincerely,

Christopher Wysocki
State Legislative Advocate

CC: The Honorable Anna Caballero, Chair, Senate Appropriations Committee
The Honorable Brian Jones, Vice-Chair, Senate Appropriations Committee
Members, Senate Appropriations Committee
Mark McKenzie, Staff Director, Senate Appropriations Committee
Kirk Feely, Fiscal Director, Senate Republican Caucus

March 26, 2024

Senator Thomas J. Umberg
Chair, Senate Judiciary Committee
1021 O Street, Room 3240
Sacramento, CA 95814

**RE: SB 1095 (Becker) Cozy Homes Cleanup Act: Building Standards
California Manufactured Housing Institute: Removal of Opposition
Set for hearing 4/2/24**

Chair Umberg:

On March 11th 2024, the California Manufactured Housing Institute (CMHI) submitted an *Oppose Unless Amended* letter on Senator Becker's SB 1095, primarily based on our concerns with the bill's definition of, "manufactured home."

Based on the author's March 21, 2024 amendments, taken in Senate Housing Committee, we write with thanks for Senator Becker's amendments to address our concerns and we have adopted a *Neutral* position on SB 1095.

If you have any questions regarding our change in position, please contact John Moffatt or Geoff Neill, CMHI's legislative representatives, at (916) 446-6752. Thank you for your consideration.

Sincerely

A handwritten signature in blue ink, appearing to read "J. Maxcy", is written over a horizontal line.

Jess Maxcy
President

South Coast Air Quality Management District
Legislative Analysis Summary – SB 1298 (Cortese)
Version: As Amended 4/22/24
Analyst: DPG

SB 1298 (Cortese)

Certification of thermal powerplants: data centers.

Summary: This bill authorizes the California Energy Commission (CEC) to exempt a thermal powerplant with generating capacity up to 150 megawatts (MW) from the CEC’s powerplant siting review, if the facility is used solely as a backup generation facility for a data center and certain other conditions are met.

Background: Existing law:

- 1) Defines a “thermal powerplant” as any stationary or floating electrical generating facility with a generating capacity of 50 MW or more using any source of thermal energy. Thermal powerplants include facilities related to the powerplant; however, they do not include facilities related to a geothermal development or production facility. Existing law also exempts certain renewable energy generation facilities from the definition of a thermal powerplant, including wind, hydroelectric, and solar photovoltaic facilities.
- 2) Provides the CEC with exclusive authority to certify all power facilities in the state, regardless of whether a facility is a new power site or an addition to an existing site. A certificate provided by the CEC for a power facility serves in lieu of any permit, certificate, or similar authorization required by any local, regional, state, or federal agency to the extent permitted by federal law.
- 3) Designates the CEC as the lead review agency under the California Environmental Quality Act (CEQA) for projects subject to the CEC’s powerplant siting review authority. Any other public agency making a decision related to the CEQA review of a powerplant that is subject to the CEC’s authority must use the CEC’s certification review as the environmental impact report for that decision.
- 4) Allows the CEC to exempt from its certification process certain thermal powerplants with a generating capacity up to 100 MW and modifications to existing facilities that do not add capacity in excess of 100 MW. The CEC may provide an exemption as long as the CEC finds that no substantial adverse impact on the environment or energy resources will result from the construction or operation of the proposed facility or from the modifications.
- 5) Provides an expedited judicial review of CEC decisions for powerplant and transmission applications for certification. These decisions are subject to judicial review by the California Supreme Court. All other courts within the state are prohibited from hearing or determining any issue regarding CEC powerplant and transmission applications which could have been determined in a CEC proceeding and all other courts may not delay or

stop construction of a powerplant except to enforce a CEC decision regarding the construction.

Status: 4/22/24 - Read second time and amended. Re-referred to Senate Appropriations Committee.

Specific Provisions: Specifically, this bill authorizes the CEC to exempt a thermal powerplant with generating capacity up to 150 MW from CEC's powerplant siting review, if it meets the following conditions:

- 1) The facility is used solely as a backup generation facility for a data center;
- 2) The facility is located on the customer side of the meter and is not interconnected to the distribution system; and
- 3) CEC finds that no substantial adverse impact on the environment or energy resources will result from the construction and operation of the facility.

Impacts on South Coast AQMD's Mission, Operations or Initiatives: Numerous data center projects with large diesel generators as a source of backup power have been installed through the CEC's Small Power Plant Exemption (SPPE) program. These generators emit cancer causing toxic air contaminants including diesel particulate matter, criteria air pollutants, and greenhouse gases. The risk to public health and the environment from operation of diesel-fired generators is significant. Much of the risk can be avoided by requiring cleaner technologies such as natural gas engines or fuel cells. Raising the exemption threshold from the current 100 to 150 MW will encourage larger data centers to be installed, resulting in even more negative impacts to nearby communities.

AMENDED IN SENATE APRIL 22, 2024

SENATE BILL

No. 1298

Introduced by Senator Cortese

February 15, 2024

An act to amend Section 25541 of the Public Resources Code, relating to energy.

LEGISLATIVE COUNSEL'S DIGEST

SB 1298, as amended, Cortese. Certification of thermal powerplants: data centers.

Existing law vests the State Energy Resources Conservation and Development Commission with the exclusive power to certify all locations on which an electrical transmission line or thermal powerplant is constructed, or is proposed to be constructed, and related electrical transmission lines or thermal powerplants. Existing law authorizes the commission to exempt from certification a thermal powerplant with a generating capacity of up to 100 megawatts, and modifications to existing generating facilities that do not add capacity in excess of 100 megawatts, if the commission finds that no substantial adverse impact on the environment or energy resources will result from the construction or operation of the proposed facility or from the modifications.

This bill would additionally authorize the commission to exempt from certification a thermal powerplant with a generating capacity of up to ~~200~~ 150 megawatts ~~that if it is used solely as an emergency backup generating a backup generation facility for a data center and that is not interconnected with the electrical transmission grid for purposes of exporting electricity, if center, it is located on the customer side of the meter and is not interconnected to the distribution system, and the~~ commission finds that no substantial adverse impact on the environment

or energy resources will result from the construction ~~or~~ *and* operation of the ~~proposed data center facility.~~

Vote: majority. Appropriation: no. Fiscal committee: yes.

State-mandated local program: no.

The people of the State of California do enact as follows:

1 SECTION 1. Section 25541 of the Public Resources Code is
2 amended to read:

3 25541. The commission may exempt from this chapter both
4 of the following:

5 (a) Thermal powerplants with a generating capacity of up to
6 100 megawatts and modifications to existing generating facilities
7 that do not add capacity in excess of 100 megawatts, if the
8 commission finds that no substantial adverse impact on the
9 environment or energy resources will result from the construction
10 or operation of the proposed facility or from the modifications.

11 ~~(b) Thermal powerplants with a generating capacity of up to~~
12 ~~200 megawatts that are used solely as emergency backup generating~~
13 ~~facilities for a data center and that are not interconnected with the~~
14 ~~electrical transmission grid for purposes of exporting electricity,~~
15 ~~if the commission finds that no substantial adverse impact on the~~
16 ~~environment or energy resources will result from the construction~~
17 ~~or operation of the proposed data center.~~

18 (b) *Thermal powerplants with a generating capacity of up to*
19 *150 megawatts, subject to all of the following conditions:*

20 (1) *The facility is used solely as a backup generation facility*
21 *for a data center.*

22 (2) *The facility is located on the customer side of the meter and*
23 *is not interconnected to the distribution system.*

24 (3) *The commission finds that no substantial adverse impact on*
25 *the environment or energy resources will result from the*
26 *construction and operation of the facility.*

Re: Federal Update -- Executive Branch

Department of Transportation

DOT Announces Funds Available for Mega, INFRA, and Rural Grants: In late March, the Department of Transportation announced the availability of \$5.1 billion for three significant grant opportunities under a single application process through the Multimodal Projects Discretionary Grant Program (MPDG). This includes \$1.7 billion for the Mega program to help fund large complex projects above \$100 million in total cost; \$2.7 billion for the INFRA program for multimodal freight and highway projects; and \$780 million for the Rural program to fund highway, bridge and tunnel projects in rural areas. Applications due May 6, 2024.

FRA Announces Funds Available Rail Infrastructure Grants: In late March, the Federal Railroad Administration (FRA) announced the availability of \$2.4 billion under the Consolidated Rail Infrastructure and Safety Improvements (CRISI) program for projects that modernize freight and passenger rail infrastructure. Applications due May 29, 2024.

FTA Announces Funds Available for Ferry Service Modernization: In April, the Federal Transit Administration (FTA) announced the availability of \$316 million for projects to modernize passenger ferry service across the country. This includes \$49 million for electric or low-emission ferry vessels that use alternative fuels or on-board energy storage systems. Applications due June 17, 2024.

FHWA Announces Grants to Reduce Truck Air Pollution Near Ports: In April, the Federal Highway Administration (FHWA) announced \$148 million in grants to 16 projects in 11 states under the Reduction of Truck Emissions at Port Facilities grant program. In California, \$49.7 million in grants went to the Ports of Long Beach, Los Angeles and Oakland, each receiving funds to replace diesel and gas trucks with zero-emission technologies, electric trucks and EV chargers.

FAA Announces Research Grants to Reduce Aviation Emissions and Noise: In late March, the Federal Aviation Administration (FAA) announced the award of \$27.1 million to 11 universities as part of the Aviation Sustainability Center (ASCENT) program. This includes sustainable aviation fuel research at Stanford University in California.

Proven Process. Proven Results.™

901 F Street, NW Suite 600 Washington, DC 20004 T 202.785.0500 F 202.478.1734 carmengroup.com

DOT IG Launches Audit of MARAD's Port Infrastructure Program Grants: In April, DOT's Inspector General (IG), citing the heightened risks associated with administering a grant program that has received a substantial increase in funding, launched a formal audit to assess the Maritime Administration's management and oversight of the Port Infrastructure Development Program's funded grants.

Notable Personnel Change: Christopher Coes, Assistant Secretary for Transportation Policy, now serves as Acting Under Secretary for Policy, replacing Carlos Monte Jr. who announced his departure in April.

Environmental Protection Agency

EPA Finalizes Phase 3 GHG Standards for Heavy-Duty Trucks: In late March, the Environmental Protection Agency announced final greenhouse gas emissions standards for heavy-duty vehicles, such as freight trucks and buses, for model years 2028-2032, after digesting over 175,000 public comments. The "Phase 3" standards build on EPA's Heavy-Duty Phase 2 program from 2016. The standards are to be technology-neutral, allowing manufacturers flexibility in choices of emissions control methods, and envisions a gradual transition in the development and deployment of future vehicle technologies. At the same time, the EPA says the agency will closely monitor implementation and may decide to issue further guidance documents or issue a new rulemaking if deemed necessary as circumstances warrant.

EPA Announces Its Selections to Coordinate New Clean Energy Grants: In April, the EPA announced the selection of eight private entities that will coordinate the distribution of \$20 billion in grant awards under the Greenhouse Gas Reduction Fund (GGRF) created by the Inflation Reduction Act. The EPA says the three selections under the \$14 billion National Clean Energy Investment Fund and the five selections under the \$6 billion Clean Communities Investment Accelerator will create a national clean financing network for clean energy and climate solutions that will help communities have the access they need to benefit from the financing of tens of thousands of projects expected under these programs. Meanwhile, the EPA also announced under the GGRF a \$7 billion investment in 60 Solar for All recipients that it says will enable 900,000 households in low-income and disadvantaged communities to deploy and benefit from distributed solar energy.

EPA Announces Funds Available for Clean Heavy-Duty Vehicle Grants: In April, the EPA announced the new Clean Heavy-Duty Vehicle grant program, making nearly \$1 billion available to fund the replacement of older Class 6 and 7 vehicles with new zero-emission heavy-duty vehicles. Approximately 70% of the funding will go to school buses and 30% will go to vocational vehicles such as garbage trucks, dump trucks, delivery trucks and utility trucks. Applications due July 25, 2024.

EPA's Car/Truck Emissions Rule Draws Legal Challenge: In April, a coalition of 25 state attorneys general, led by the state of Kentucky, filed a legal challenge to the EPA's March 20 final rule designating new emissions standards for cars and light trucks for

model years 2027-2032. The challenge frames the EPA action as an “electric vehicle mandate” that the state AG’s group claims exceeds the agency’s authority, and asks the DC Circuit Court of Appeals to vacate the rule.

Department of Energy

DOE Rule Pushes Federal Buildings Toward Zero Emissions: In April, the Department of Energy (DOE) announced a final rule which it says implements a Congressional mandate under the Energy Independence and Security Act of 2007 to phase out fossil fuel usage in new federal building construction. The Clean Energy for New Federal Buildings Rule is expected to achieve a 90% reduction in fossil fuel use in new projects started between 2025 and 2029, and completely eliminate on-site fossil fuel usage in new projects beginning in 2030. Meanwhile, the DOE also released a report, *Decarbonizing the US Economy by 2050: A National Blueprint for the Buildings Sector*, described as a comprehensive plan to reduce greenhouse gas emissions from all buildings by 65% by 2030 and 90% by 2050.

DOE Loan Will Support Domestic Electric Vehicle Manufacturing: In April, the DOE’s Loan Programs Office announced the closing of a \$362 million loan to CelLink Corporation of San Carlos, CA, to help finance the construction of a domestic manufacturing facility in Georgetown, TX, that will produce components essential to electric vehicle assembly. CelLink brings expertise in producing wiring harnesses and related equipment that relay information and carry electricity throughout electric vehicles.

DOE Releases Reports on Pathways to Bolster National Electric Grid: In April, the DOE release two reports designed to show progress in efforts to improve the reliability and capacity of the nation’s electric grid, which will be essential in the drive toward net zero emissions in all sectors. The *Transmission Interconnection Roadmap* serves as a guide for transmission providers, consumer advocates, and other stakeholders to meet success targets and outline tools for connecting more clean energy projects to the grid in a timely way. The *Pathways to Commercial Liftoff: Innovative Grid Deployment* report demonstrates how commercially available advanced grid solutions can cost-effectively increase the existing grid’s capacity to support higher peak demand growth.

DOE Announces Environmental Justice Grants: In April, the DOE announced \$27 million in financial and technical assistance to 40 partner teams of states and local governments through the Energy Futures Grants (EFG) Program. The EFG program supports partnership efforts to facilitate and advance clean energy projects in disadvantaged communities. Receiving one the multiple \$500,000 grants was the EV Equity Workforce Program in Los Angeles County, CA, which DOE says is bringing equity and diversity to the field of electric vehicle infrastructure development while partnering with local unions and community and technical colleges.

ATTACHMENT 3B

To: South Coast Air Quality Management District
From: Cassidy & Associates
Date: April 24, 2024
Re: April Report

HOUSE/SENATE

Congress

During the short April session Congress passed a bill to reauthorize Section 702 of the Foreign Intelligence Surveillance Act and the Senate voted to dismiss the articles of impeachment for Homeland Security Secretary Alejandro Mayorkas. In addition, House and Senate Committees held several hearings related to Fiscal Year 2025 budget requests.

Although the Senate was scheduled to be in recess this week, members stayed for an extended session to pass the foreign aid package that was passed by the House over the weekend. The \$95 billion package includes funding for Israel, Ukraine, and Taiwan, as well as a prospective TikTok ban and language authorizing the sale of Russian assets. The House and Senate will be back in session April 29.

EPA

On April 19, the Environmental Protection Agency (EPA) issued a final rule to designate two PFAS chemicals, perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), as hazardous substances. The rule will ensure reporting and cleanup of the two chemicals from leaks, spills, and other releases. The EPA also issued a separate enforcement discretion policy to focus enforcement of the new rule on manufacturing and industrial companies who have significantly contributed to the release of PFAS chemicals. Read more [here](#).

On April 15, the EPA denied a petition to remove stationary combustion turbines from compliance with national limits on hazardous air pollutants under section 112 of the Clean Air Act. Stationary combustion turbines release toxic emissions in their exhaust gases. Petitioners claimed that cancer risks from their exhaust should meet the statutory delisting threshold, but the EPA determined that the petition was incomplete. Stationary combustion turbines will continue to be required to limit emissions of air toxics, including formaldehyde. Read more [here](#).

On April 11, the EPA released the annual “Inventory of U.S. Greenhouse Gas Emissions and Sinks,” which offers a national-level overview of emissions of seven greenhouse gases (GHG) – carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride – during 2022. The report also calculates carbon dioxide that is removed from the atmosphere through the uptake of carbon in forests. The country saw a 1.3% increase in GHG emissions as a result of higher energy use in 2022. However, emissions have declined 17% overall since 2005. Read more [here](#).

On April 10, the EPA used its authority under the American Innovation and Manufacturing Act of 2020 (AIM) to file a complaint against USA Wholesale, Inc. for unlawfully importing hydrofluorocarbons (HFCs). The San Jose corporation sells engine lubricants and attempted to illegally import 34,480.3 pounds of HFC-134a. The AIM Act requires the United States to phase down HFC production and consumption by 85% by 2036. HFCs have global warming potentials hundreds to thousands of times higher than carbon dioxide. Read more [here](#).

On April 1, the EPA announced settlements with four automotive parts distributors based in Southern California to resolve claims of violations of the Clean Air Act. Domestic Gaskets, Mizumo Auto, PPE Inc, and Performance Parts will all pay penalties to settle violations from manufacturing and selling defeat devices that exacerbate harmful air pollution by disabling required emissions control systems. Defeat devices can enable large emissions of nitrogen oxides and particulate matter, which can contribute to respiratory issues. Read more [here](#).

On March 29, the EPA announced final national greenhouse gas pollution standards for heavy-duty vehicles for model years 2027 through 2032. The standards, which will apply to heavy-duty vocational vehicles and tractors, will allow each manufacturer to choose what emissions control technologies are best for them. The final rule will reduce dangerous air pollution and is expected to avoid one billion tons of greenhouse gas emissions. The EPA is allowing more time in the early model years of the program for development of vehicle technologies and deployment of charging and refueling infrastructure. Read more [here](#).

Cassidy and Associates support in April:

- Worked with SCAQMD staff to strategize on future DC outreach.
- Strategized with SCAQMD staff regarding EPA Proposed Disapproval.
- Continued to monitor and report on activities in Congress and the Administration that impact the District.
- Assisted SCAQMD to prepare for upcoming appropriations cycle by sharing submission dates, exploring opportunities to influence policy through report language, and providing updates on status of spending bills
- Participated in weekly strategy sessions with SCAQMD staff.

IMPORTANT LEGISLATIVE DATES

May 10, 2024: Deadline for the Federal Aviation Administration reauthorization.

September 30, 2024: Reauthorization deadline for the Farm Bill, an omnibus package of legislation that supports US agriculture and food industries; the bill is reauthorized on a five-year cycle. The Congressional Budget Office (CBO) projects a combined budget of \$648 billion for the 2023 Farm Bill.

December 31, 2024: Expiration of the National Defense Authorization Act, which authorizes and funds specialized Department of Defense (DoD) programs and sets the DoD's policy agenda each year.

ATTACHMENT 3C

KADESH & ASSOCIATES

South Coast AQMD Report for the May 2024 Legislative Meeting covering April 2024 Kadesh & Associates

As reported last month, Congress finally completed work on the FY24 appropriations cycle and – with the release of the President’s FY25 budget request – Washington officially kicked off the FY25 budget process. The House and Senate Appropriations committees have spent the first part of the month of April on their annual budget hearings, taking testimony from agency and departmental officials. EPA Administrator Regan will testify in the House on April 30.

Despite this early committee activity, until the House and Senate arrive at an agreed-upon spending deal, government funding is still likely to lapse at the end of the fiscal year, requiring a continuing resolution and all of the attendant politics that accompanies end-of-election-year funding fights. At the end of March, House Appropriations Chair Kay Granger announced that she would step down from the role in advance of her retirement at the end of the session. Senior committee member Tom Cole (R-OK) was approved by the Republican conference as the new full committee chairman and will oversee this year’s process, which means that the House Republicans will bring different negotiators to the table for FY25 than they did for the start of FY24 (from McCarthy/Granger to Johnson/Cole).

The House was only in session for the first two weeks of the month, but it was an active work period: after much hand-wringing, the chamber was able to pass a long-stalled package of foreign assistance bills, including \$61 billion for Ukraine. The Senate returned from its recess to pass the funding package, and President Biden will sign it into law soon. With Speaker Johnson having finally called their bluff, Members of the House Freedom Caucus have now filed a motion to vacate the chair – ie a “no confidence” vote in his leadership. However, it is unclear whether this vote will actually occur given that the bills passed overwhelmingly, and it is unclear if House Democrats will support the Speaker in appreciation of his decision to finally bring up the Ukraine/Israel/Indo-Pacific aid packages. The House majority is deeply divided and it remains unlikely whether any further meaningful legislation will be considered between now and the election.

Kadesh & Associates Activity Summary-

-Worked with South Coast AQMD and the congressional delegation on whole-of-government efforts to address air quality through BIL and IRA funding programs including CPRG. Assisted with efforts related to U.S. EPA’s proposed disapproval of South Coast AQMD’s Contingency Measure Plan for 1997 8-hour ozone standard.

Contacts:

Contacts included staff and Members throughout the CA delegation, Senate offices, and members of key committees. We have also been in touch with administration staff.

###

South Coast Air Quality Management District Legislative and Regulatory Update –April 2024

❖ Important Upcoming Dates

May 24, 2024 – House of Origin Deadline for Legislation Introduced in that House.

❖ RESOLUTE Actions on Behalf of South Coast AQMD. RESOLUTE partners David Quintana, and Alfredo Arredondo continued their representation of SCAQMD before the State's Legislative and the Executive branch. Selected highlights of our recent advocacy include:

- Provided ongoing updates as the Legislature began committee hearings in mid-March and continued staff work on legislation during the legislative spring recess
- Set and attended meetings with legislative offices regarding bills for the 2024 legislative session, including for SCAQMD sponsored legislation.

❖ AB 2522 (W. Carrillo): SCAQMD Sponsored Legislation

Summary: the bill states that each member of the board shall receive compensation of \$200 for each day, or portion thereof, but not to exceed \$2,000 per month, while attending meetings of the board or any committee, or on official business of the district. The bill also authorizes increases to the compensation amount pegged to the Consumer Price Index (CPI) with a ceiling of 10 percent per year.

This bill had been set for hearing on April 8th in the Assembly Natural Resources Committee and received unanimous support. Because this bill is not estimated to have a fiscal impact on the State, the bill avoided the Appropriations committee and was sent to the Assembly Floor. On April 18th, the bill passed the Assembly with unanimous support on the Consent File. Now the bill will head to the Senate for further deliberations after May.

❖ AB 2958 (Calderon): SCAQMD Sponsored Legislation

Summary: this bill repeals the existing statute prohibiting compensation for CARB members from Air Districts. In doing so, the bill addresses the inequity in compensation among CARB board members.

This bill had been set for hearing on April 8th in Assembly Natural Resources where it received unanimous support. Because this bill is expected to have a fiscal impact on the State, the bill was sent to the Appropriations Committee where it was placed on the Suspense File. The Appropriations Committee will take up the Suspense File on May 16th.

❖ Early Action on Budget Items. On April 4th, legislative leadership and the Governor agreed on the final version of the Early Action Package. Governor's overview is available here: <https://www.gov.ca.gov/wp-content/uploads/2024/04/Early-Action-Agreement-Overview-.pdf>

The Early Action Package was contained in AB 106, which was subsequently passed by the legislature and signed by the Governor on April 15th.

❖ Legislative Meetings Set in March. As the legislative hearing process in the capitol picked up pace, the SCAQMD Government Affairs team and the Resolute team met with the following offices regarding priority legislation: Asm. Josh Hoover, Asm. Mathis, Asm. Friedman, Asm. Muratsuchi, and Asm. Kalra.

CALIFORNIA ADVISORS, LLC

South Coast AQMD Report

California Advisors, LLC

May 9, 2024, Legislative Committee Hearing

Legislative Update

April is traditionally one of the busiest months in the California State Legislature, primarily because this month includes the deadline for policy committees to hear and vote on bills. This stage is crucial as it marks the beginning of the legislative process for many proposals. During these committee hearings, legislators and advocates engage in detailed discussions and debates on the bills, often for the first time. Although passing the policy committees is a significant first step for legislation, the Appropriations Committee plays an especially critical role this year, given the state's ongoing budget deficit. The Appropriations Committee “suspense” hearings will happen in mid-May this year.

Budget Update

The Legislature passed AB 106 which encompassed the early action budget items the Governor and the Legislature agreed upon. The budget bill contained two noteworthy provisions in Sections 74 and 77 which required the Department of Finance to send two letters to the Joint Legislative Budget Committee (JLBC) within 7 days.

The first letter, as mandated by Section 74, announced the administration’s plan to issue directives for suspending further expenditures of certain one-time appropriations from the Budget Acts of 2021, 2022, and 2023. This measure aims to provide policymakers with additional options to balance the budget in June, following a review period by the JLBC.

The second letter, required by Section 77, recorded the early action budget items previously released by the Senate and Assembly. This was important because many items in the

agreement concerned 2024-25 budget plans that will be reflected in the new 2024-25 budget bill by the June deadline. This notification memorialized the \$17.3 billion of changes to previously planned General Fund expenditures.

In March, the preliminary General Fund agency cash receipts were \$243 million or 1.6 percent below the projections set by the Governor's Budget, with a fiscal year-to-date shortfall of \$5.8 billion or 4.0 percent below the forecast of \$146.0 billion. Although personal income tax receipts for March exceeded expectations by \$683 million, this gain was negated by significant deficits in sales and use taxes (down \$653 million) and corporation taxes (down \$247 million).

For this year, personal income tax receipts have contributed \$3.4 billion to the shortfall and corporation tax receipts were also down by \$1.4 billion. The Department of Finance specifically noted that the current and longer-term sales tax receipts trends reflect ongoing weakness in taxable sales for the State. The next update on the State's cash position will come when the Governor provides his May Revise.

SUBJECT: Legislative Update – April, 2024

DATE: Tuesday, April 23, 2024

The Legislature returned from their week-long Spring Recess to a busy Capitol on April 1. April is typically a busy month in the Legislature. April 26 marks the deadline to pass all bills with costs to the State out of policy committees and to the fiscal committees. As this deadline applies to most legislation introduced each year, our firm has been tracking a number of bills and issues of interest to the District.

The following will provide you with updates of interest to the District:

Budget Update

California is facing a significant budget deficit. The highly respected non-partisan Legislative Analyst's Office (LAO) previously projected a \$58 billion deficit based on the Governor's revenue projections. However, the Governor's January budget proposal projected a \$38 billion deficit.

In early February, the LAO released an update that predicts that by the time the Governor releases his May Revision to the budget, the state's deficit is projected to be \$15 billion higher, ballooning to \$73 billion. On the other hand, State revenues came in \$1.16 billion higher than projected for the month of February, mainly from personal income taxes and corporation taxes. Even with slightly higher projections, the Governor and Legislature have their work cut out for them to balance the state's budget.

On April 11, the Legislature passed AB 106 (Committee on Budget), a budget bill that reflects the early action budget agreement announced by the Governor and legislative leaders earlier this month to reduce the shortfall by approximately \$17.3 billion.

AB 106 is part of the early action agreement that contains a mix of \$3.6 billion in reductions (primarily to one-time funding), \$5.2 billion in revenue and borrowing, \$5.2 billion in delays and deferrals, and \$3.4 billion in shifts of costs from the general fund to other state funds.

Although the agreement addresses \$17 billion of the State's budget shortfall, it is also saving the more challenging fiscal decisions for later this summer when lawmakers have a more complete budget picture. With this \$17 billion in early actions, coupled with \$12.2 billion from the state Rainy Day Fund, Legislative leaders estimate the remaining deficit to be anywhere from \$8.6 billion to \$23.6 billion.

California Climate Actions

The State of California enjoyed a series of big climate wins this month, including new technology that cuts emissions from making cement and a groundbreaking clean energy project in tribal communities. The following will provide you with a summary of those actions:

- Court reaffirms California's right to fight vehicle pollution. California won a major legal victory to protect communities from dirty air and the climate crisis, defeating the fossil fuel industry. The federal appeals court reaffirmed our decades-old authority to innovate new clean-car standards to cut a major source of pollution.
- Making cleaner, greener cement. Roughly 8% of global emissions are caused by manufacturing, one of the larger contributors to the climate crisis. A California startup that just opened in Redding developed innovative technology to cut these emissions, capturing the carbon dioxide from when cement is made and using it to make more cement.
- Clean energy in tribal communities. A cutting-edge microgrid project funded by a \$32 million state grant will support energy sovereignty and sustainable economic growth for the Paskenta Band of Nomlaki Indians, one of the largest to benefit a California Native American tribe.
- \$75 million for clean water innovation. California's Lawrence Berkeley National Laboratory is pioneering cutting-edge technologies to produce more clean water, everything from wastewater recycling to desalination to water efficiency. The U.S. Department of Energy announced \$75 million to continue these innovations, on top of \$2.5 million the state invested in this program.
- \$58 million for climate-resilient infrastructure. The Biden-Harris Administration announced that California received six grants to protect infrastructure from the climate crisis, funding projects in California to upgrade roads, protect against flooding, improve safety, and more.
- Leading the country in solar power. A new report showed that California is a solar superpower, leading the nation with 68,816 gigawatt-hours of electricity produced by the sun – a 9% increase from the previous year. And, the state's grid broke a record for solar generation, with 17,170 megawatts on Wednesday afternoon; the next day another record was set by the grid, with 86% of demand being served by solar generation.
- First EV freight truck crosses the U.S.-Mexico border. New EV charging infrastructure, which was funded by a California climate grant, and a partnership between SDG&E and Bali Express has resulted in a significant milestone in

binational relations and clean energy – the first of many EV freight trucks to transport goods between the United States and Mexico.

California and Norway Climate Partnership

On April 16, Governor Newsom welcomed a delegation from Norway led by His Royal Highness Crown Prince Haakon. The California and Norway delegations visited the Larkspur Ferry Terminal, which includes the backdrop of one of the world's first clean hydrogen fuel cell passenger ferries, to sign a new Memorandum of Understanding (MOU) to advance climate collaboration.

The MOU outlines four years of cooperation between California and Norway on clean energy, zero-emission transportation and ports, carbon removal and climate-smart agriculture. The two delegations also signed a joint statement highlighting the new areas of climate collaboration, existing work on economic development and continued partnership on criminal justice and prison reform.

California's world-leading climate policies have led the state to exceed its 2020 climate target six years ahead of schedule, and formed partnerships across the U.S. and around the world.

Legislation

SB 1158 (Archuleta): This bill is sponsored by SCAQMD and proposes to extend the time air districts have to use Carl Moyer Program funds from 4 to 6 years.

SB 1158 was set for hearing in the Senate Transportation Committee on April 23. After meeting with the Committee staff, all 15 members of the committee, and the republican caucus, we were able to get unanimous support for the bill. Ultimately, SB 1158 was placed on the Senate Transportation Committee consent file and the bill passed.

SB 1158 will be heard next in the Senate Appropriations Committee.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 19

REPORT: Mobile Source Committee

SYNOPSIS: The Mobile Source Committee held a hybrid meeting on Friday, May 17, 2024. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Gideon Kracov, Chair
Mobile Source Committee

SLR:ja

Committee Members

Present: Board Member Gideon Kracov, Committee Chair
Mayor Pro Tem Larry McCallon
Supervisor V. Manuel Perez
Councilmember Nithya Raman
Councilmember Carlos Rodriguez

Absent: Supervisor Holly J. Mitchell, Committee Vice Chair

Call to Order

Committee Chair Kracov called the meeting to order at 9:00 a.m.

For additional details, please refer to the [Webcast](#).

ROLL CALL

INFORMATIONAL ITEM (Item 1):

1. 2023 Ozone and PM2.5 Summary

Scott Epstein, Planning and Rules Manager/Planning, Rule Development and Implementation, provided a summary of 2023 ozone and PM2.5 levels. For additional details, please refer to the [Webcast](#) beginning at 00:03:30.

Committee Chair Kracov inquired about the amount of reductions that are needed to meet the ozone standard by 2037. Ian MacMillan, Assistant Deputy Executive Officer/Planning, Rule Development and Implementation, confirmed that a 67 percent reduction in NOx emissions beyond existing measures is needed for attainment. Executive Officer Wayne Nastri added that a substantial fraction of reductions needed are from sources that are regulated by the federal government. For additional details, please refer to the [Webcast](#) beginning at 13:30.

Councilmember Rodriguez asked about the amount of reductions needed from federally regulated sources to bring the Basin into attainment. Mr. MacMillan explained that if all emissions from sources regulated by South Coast AQMD were eliminated, the Basin would not attain the ozone standards. For additional details, please refer to the [Webcast](#) beginning at 18:24.

Mayor McCallon asked why ozone levels in the San Bernardino area have been increasing in recent years while NOx has been decreasing. Dr. Epstein explained that this is due to the chemistry of ozone. For additional details, please refer to the [Webcast](#) beginning at 24:54.

Mayor Pro Tem McCallon asked what the mechanism is that can lead to increased ozone from wildfires. Dr. Epstein explained that in addition to PM2.5, wildfires emit NOx and VOCs which can form ozone. Supervisor Perez commented that dust is a major issue for the Coachella Valley. For additional details, please refer to the [Webcast](#) beginning at 30:41.

Committee Chair Kracov asked which control measures have improved PM2.5. Mr. MacMillan replied that NOx controls, direct PM controls, and changes in fuels have reduced PM2.5 emissions. Committee Chair Kracov also asked when South Coast AQMD needs to submit a Plan for the new 24-hour PM2.5 standard. Mr. MacMillan responded in about 2026. For additional details, please refer to the [Webcast](#) beginning at 43:19.

Committee Chair Kracov asked if the public is responding to the no-burn days from the measurement data. Mr. MacMillan responded that modeling analyses have quantified the impact of how direct controls of PM2.5 emissions can reduce concentrations. For additional details, please refer to the [Webcast](#) beginning at 51:55.

Mr. Nastri commented about the impacts of climate change on ozone levels and mentioned the possibility of hosting an international conference as suggested by Supervisor Perez. For additional details, please refer to the [Webcast](#) beginning at 55:46.

Harvey Eder, Public Solar Power Coalition, commented that the agency has not done enough. Mark Abramowitz, Community Environmental Services, commented that staff should focus on public health instead of sanctions and state standards should be addressed. Moses Huerta, resident of the city of Paramount, commented that a recent community meeting with South Coast AQMD was a good experience. For additional details, please refer to the [Webcast](#) beginning at 57:40.

Mayor McCallon discussed temperature trends over the past several decades. For additional details, please refer to the [Webcast](#) beginning at 1:02:36.

WRITTEN REPORTS (Items 2-4):

2. Rule 2305 Implementation Status Report: Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program

This item was received and filed.

3. Rule 2202 Activity Report: Rule 2202 Summary Status Report

This item was received and filed.

4. Intergovernmental Review of Environmental Documents and CEQA Lead Agency Projects

This item was received and filed.

OTHER MATTERS:

5. Other Business

There was no other business to report.

6. Public Comment Period

Mr. Eder expressed support for both wind and solar technologies. Thomas Jelenic, Pacific Merchant Shipping Association, stated that work will need to continue to support electrification, hydrogen deployment and infrastructure to reduce emissions from port-related sources.

7. Next Meeting Date

The next regular Mobile Source Committee meeting is scheduled for Friday, June 21, 2024 at 9:00 a.m.

Adjournment

The meeting adjourned at 10:11 a.m.

Rule 2305 Implementation Status Report:
Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program

April 1, 2024 to April 30, 2024

1. Implementation and Outreach Activities:

Activity	Since Last Report*	Since Rule Adoption
Calls and Emails to WAIRE Program Hotline (909-396-3140) and Helpdesk (waire-program@aqmd.gov)	380	8,387
Views of Compliance Training Videos (outside of webinars)	133	7,180
Emails Sent with Information About WAIRE Program Resources	0	~ 77,332
Visits to www.aqmd.gov/waire	2,860	~ 64,066
Warehouse Locations Visited In-Person	158	1,179
Presentations to Stakeholders*	1	144

**Los Angeles Environmental Justice Network Enforcement Symposium*

2. Highlights of Recent Implementation and Enforcement Activities

Warehouse operators in Phase 1 and Phase 2 were required to submit their Annual WAIRE Report (AWR) by January 31, 2024. As of April 30th, South Coast AQMD has received the following AWRs from these two phases:

Compliance Period	Phase 1 (≥250,000 sf)	Phase 2 (≥150,000 - <250,000 sf)	Phase 3 (≥100,000 - <150,000 sf)*	Grand Total
2022	581	N/A	N/A	581
2023	518	325	N/A	843

*Phase 3 warehouse operators are required to submit their first Annual WAIRE Report by January 31, 2025.

Of the submitted reports, 78 warehouse operators still need to submit the required fees (including mitigation fees, as applicable). The warehouse operators who submitted an AWR earned a total of about 888,878 WAIRE Points in the two compliance periods, far exceeding the total WAIRE Points Compliance Obligation reported by these entities. These excess points may be banked for future compliance. The operators reported approximately \$27.4 million in mitigation fees, of which about \$22.8 million were paid by April 30, 2024.

Rule 2305 allows warehouse operators or owners the option of earning WAIRE Points for early actions completed prior to their first compliance period. As of April 30th, 2023 warehouse operators and facility owners filed Early Action AWRs. These early action reports include about 80,308 earned WAIRE Points.

Since December 2023, over 200 Notice of Violations (NOVs) have been issued for failure to submit reports. Approximately one hundred warehouses have contacted South Coast AQMD directly in response to the NOVs issued, and staff is providing compliance assistance as needed. Sixty-one facilities have subsequently filed the required reports and fees. An additional eight facilities have submitted the required reports but have not yet submitted the associated fees. Some operators provided additional documentation to assert that the rule may not apply to their facility, and staff is in the process of evaluating this information.

Staff continued working on eight Public Records Act Requests preparing information that includes Rule 2305 reported data.

Anticipated Activities in May

- Custom WAIRE Plan applications for the 2024 compliance period will be due no later than May 7, 2024. Staff will begin review of the Custom WAIRE Plan applications submitted for the 2024 compliance period.
- Continue outreach and support efforts to warehouse operators in preparation of their ISIR/AWR submittals.
- Continue to pursue potential enforcement action as necessary.
- Continue to review and verify submitted information and analyze data reported by facilities.
- Continue to provide documents in response to Public Records Act Requests.
- Continue to develop an approach for addressing business confidentiality concerns and making WAIRE Program data publicly accessible via the online F.I.N.D. tool on the South Coast AQMD website.
- Continue to enhance the WAIRE POP software to support Phase 3 ISIR submittals and improved functionality (e.g., program administration, and an amendment process for submitted reports).

 2. ECRP Offset (combines ECRP w/AQIP). AQIP funds are used to supplement the ECRP AVR survey shortfall.
 3. ERS with Employee Survey to get Trip Reduction credits. Emission/Trip Reduction Strategies are used to supplement the ECRP AVR survey shortfall.
 4. Totals may vary slightly due to rounding.

DRAFT VERSION

BOARD MEETING DATE: June 7, 2024

AGENDA NO.

REPORT: Intergovernmental Review of Environmental Documents and CEQA Lead Agency Projects

SYNOPSIS: This report provides a listing of environmental documents prepared by other public agencies seeking review by South Coast AQMD between April 1, 2024 and April 30, 2024, and proposed projects for which South Coast AQMD is acting as lead agency pursuant to CEQA.

COMMITTEE: Mobile Source, May 17, 2024, Reviewed

RECOMMENDED ACTION:
Receive and file.

Wayne Nastri
Executive Officer

SR:MK:BR:SW:HK

Background

The California Environmental Quality Act (CEQA) Statute and Guidelines require public agencies, when acting in their lead agency role, to provide an opportunity for other public agencies and members of the public to review and comment on the analysis in environmental documents prepared for proposed projects. A lead agency is when a public agency has the greatest responsibility for supervising or approving a proposed project and is responsible for the preparation of the appropriate CEQA document.

Each month, South Coast AQMD receives environmental documents, which include CEQA documents, for proposed projects that could adversely affect air quality. South Coast AQMD fulfills its intergovernmental review responsibilities, in a manner that is consistent with the Board's 1997 Environmental Justice Guiding Principles and Environmental Justice Initiative #4, by reviewing and commenting on the adequacy of the air quality analysis in the environmental documents prepared by other lead agencies.

The status of these intergovernmental review activities is provided in this report in two sections: 1) Attachment A lists all of the environmental documents prepared by other public agencies seeking review by South Coast AQMD that were received during the reporting period; and 2) Attachment B lists the active projects for which South Coast AQMD has reviewed or is continuing to conduct a review of the environmental documents prepared by other public agencies. Further, as required by the Board's October 2002 Environmental Justice Program Enhancements for fiscal year (FY) 2002-03, each attachment includes notes for proposed projects which indicate when South Coast AQMD has been contacted regarding potential air quality-related environmental justice concerns. The attachments also identify for each proposed project, as applicable: 1) the dates of the public comment period and the public hearing date; 2) whether staff provided written comments to a lead agency and the location where the comment letter may be accessed on South Coast AQMD's website; and 3) whether staff testified at a hearing.

In addition, the South Coast AQMD will act as lead agency for a proposed project and prepare a CEQA document when: 1) air permits are needed; 2) potentially significant adverse impacts have been identified; and 3) the South Coast AQMD has primary discretionary authority over the approvals. Attachment C lists the proposed air permit projects for which South Coast AQMD is lead agency under CEQA.

Attachment A – Log of Environmental Documents Prepared by Other Public Agencies and Status of Review, and Attachment B – Log of Active Projects with Continued Review of Environmental Documents Prepared by Other Public Agencies

Attachment A contains a list of all environmental documents prepared by other public agencies seeking review by South Coast AQMD that were received pursuant to CEQA or other regulatory requirements. Attachment B provides a list of active projects, which were identified in previous months' reports, and which South Coast AQMD staff is continuing to evaluate or prepare comments relative to the environmental documents prepared by other public agencies. The following table provides statistics on the status of review¹ of environmental documents for the current reporting period for Attachments A and B combined²:

¹ The status of review reflects the date when this Board Letter was prepared. Therefore, Attachments A and B may not reflect the most recent updates.

² Copies of all comment letters sent to the lead agencies are available on South Coast AQMD's website at: <http://www.aqmd.gov/home/regulations/ceqa/commenting-agency>.

Statistics for Reporting Period from April 1, 2024 to April 30, 2024	
Attachment A: Environmental Documents Prepared by Other Public Agencies and Status of Review	86
Attachment B: Active Projects with Continued Review of Environmental Documents Prepared by Other Public Agencies (which were previously identified in the March 2024 report)	8
Total Environmental Documents Listed in Attachments A & B	94
<i>Comment letters sent</i>	9
<i>Environmental documents reviewed, but no comments were made</i>	67
<i>Environmental documents currently undergoing review</i>	18

Staff focuses on reviewing and preparing comments on environmental documents prepared by other public agencies for proposed projects: 1) where South Coast AQMD is a responsible agency under CEQA (e.g., when air permits are required but another public agency is lead agency); 2) that may have significant adverse regional air quality impacts (e.g., special event centers, landfills, goods movement); 3) that may have localized or toxic air quality impacts (e.g., warehouse and distribution centers); 4) where environmental justice concerns have been raised; and 5) which a lead or responsible agency has specifically requested South Coast AQMD review.

If staff provided written comments to a lead agency, then a hyperlink to the “South Coast AQMD Letter” is included in the “Project Description” column which corresponds to a notation in the “Comment Status” column. In addition, if staff testified at a hearing for a proposed project, then a notation is included in the “Comment Status” column. Copies of all comment letters sent to lead agencies are available on South Coast AQMD’s website at: <http://www.aqmd.gov/home/regulations/ceqa/commenting-agency>. Interested parties seeking information regarding the comment periods and scheduled public hearings for projects listed in Attachments A and B should contact the lead agencies for further details as these dates are occasionally modified.

In January 2006, the Board approved the Clean Port Initiative Workplan (Workplan). One action item of the Workplan was to prepare a monthly report describing CEQA documents for projects related to goods movement and to make full use of the process to ensure the air quality impacts of such projects are thoroughly mitigated. In accordance with this action item, Attachments A and B organize the environmental documents received according to the following categories: 1) goods movement projects; 2) schools; 3) landfills and wastewater projects; 4) airports; and 5) general land use projects. In response to the action item relative to mitigation, staff maintains a compilation of mitigation measures presented as a series of tables relative to off-road engines; on-road engines; harbor craft; ocean-going vessels; locomotives; fugitive dust; and greenhouse gases which are available on South Coast AQMD’s website at:

<http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>. Staff will continue compiling tables of mitigation measures for other emission sources such as ground support equipment.

Attachment C – Proposed Air Permit Projects for Which South Coast AQMD is CEQA Lead Agency

The CEQA lead agency is responsible for determining the type of environmental document to be prepared if a proposal requiring discretionary action is considered to be a “project” as defined by CEQA. South Coast AQMD periodically acts as lead agency for its air permit projects and the type of environmental document prepared may vary depending on the potential impacts. For example, an Environmental Impact Report (EIR) is prepared when there is substantial evidence that the project may have significant adverse effects on the environment. Similarly, a Negative Declaration (ND) or Mitigated Negative Declaration (MND) may be prepared if a proposed project will not generate significant adverse environmental impacts, or the impacts can be mitigated to less than significance. The ND and MND are types of CEQA documents which analyze the potential environmental impacts and describe the reasons why a significant adverse effect on the environment will not occur such that the preparation of an EIR is not required.

Attachment C of this report summarizes the proposed air permit projects for which South Coast AQMD is lead agency and is currently preparing or has prepared environmental documentation pursuant to CEQA. As noted in Attachment C, South Coast AQMD is lead agency for three air permit projects during April 2024.

PROPOSED AIR PERMIT PROJECTS FOR
WHICH SOUTH COAST AQMD IS CEQA
LEAD AGENCY THROUGH APRIL 30, 2024

PROJECT DESCRIPTION	PROPONENT	TYPE OF DOCUMENT	STATUS	CONSULTANT
Quemetco is proposing to modify existing South Coast AQMD permits to allow the facility to recycle more batteries and to eliminate the existing daily idle time of the furnaces. The proposed project will increase the rotary feed drying furnace feed rate limit from 600 to 750 tons per day and increase the amount of total coke material allowed to be processed. In addition, the project will allow the use of petroleum coke in lieu of or in addition to calcined coke and remove one existing emergency diesel-fueled internal combustion engine (ICE) and install two new emergency naturalgas-fueled ICEs.	Quemetco	Environmental Impact Report (EIR)	<p>The Draft EIR was released for a 124-day public review and comment period from October 14, 2021 to February 15, 2022 and approximately 200 comment letters were received.</p> <p>South Coast AQMD held two community meetings, on November 10, 2021 and February 9, 2022, which presented an overview of the proposed project, the CEQA process, detailed analysis of the potentially significant environmental topic areas, and the existing regulatory safeguards. Response to written comments submitted relative to the Draft EIR and oral comments made at the community meetings are currently being prepared by the consultant.</p> <p>After the Draft EIR public comment and review period closed, Quemetco submitted additional applications for other permit modifications. South Coast AQMD staff is evaluating the effect of these new applications on the EIR process.</p>	Trinity Consultants
Sunshine Canyon Landfill is proposing to modify its South Coast AQMD permits for its active landfill gas collection and control system to accommodate the increased collection of landfill gas. The proposed project will: 1) install two new low emission flares with two additional 300-horsepower electric blowers; and 2) increase the landfill gas flow limit of the existing landfill gas collection system.	Sunshine Canyon Landfill	Subsequent Environmental Impact Report (SEIR)	South Coast AQMD staff reviewed and provided comments on the preliminary air quality analysis, health risk assessment (HRA), and Preliminary Draft SEIR which are currently being addressed by the consultant.	Castle Environmental Consulting
Tesoro is proposing to modify its Title V permit to: 1) add gas oil as a commodity that can be stored in three of the six new crude oil storage tanks at the Carson Crude Terminal (previously assessed in the May 2017 Final EIR); and 2) drain, clean and decommission Reservoir 502, a 1.5-million-barrel concrete lined, wooden-roof topped reservoir used to store gasoil.	Tesoro Refining & Marketing Company, LLC (Tesoro)	Addendum to the Final Environmental Impact Report (EIR) for the May 2017 Tesoro Los Angeles Refinery Integration and Compliance Project (LARIC)	South Coast AQMD staff received a revised Preliminary Draft Addendum, which is currently being reviewed.	Environmental Audit, Inc.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 20

REPORT: Stationary Source Committee

SYNOPSIS: The Stationary Source Committee held a hybrid meeting on Friday, May 17, 2024. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Mayor Pro Tem Larry McCallon,
Committee Chair
Stationary Source Committee

JA:cr

Committee Members

Present: Mayor Pro Tem Larry McCallon, Committee Chair
Vice Chair Michael A. Cacciotti
Mayor José Luis Solache

Absent: Chair Vanessa Delgado
Supervisor Holly J. Mitchell, Committee Vice Chair
Board Member Veronica Padilla-Campos

Call to Order

Committee Chair McCallon called the meeting to order at 10:30 a.m.

For additional information of the Stationary Source Committee Meeting, please refer to the [Webcast](#).

Roll Call

INFORMATIONAL ITEMS:

1. Update on Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters

Heather Farr, Planning and Rules Manager/Planning, Rule Development and Implementation, provided a summary of key remaining issues associated with Proposed Amended Rule 1146.2. For additional details please refer to the [Webcast](#) beginning at 3:20.

Committee Chair McCallon asked for the number of sites staff visited for each type of application; expressed concern with the challenges for dry cleaners including availability and the footprint of zero-emission technology units, as well as needing electrical upgrades as a tenant in commercial spaces; and requested that the proposed technology check-in be moved 6 months earlier. Staff responded that they have conducted one to four site visits per facility type, highlighted alternative compliance options that have been incorporated to assist small businesses, and agreed to an earlier technology check-in. For additional details please refer to the [Webcast](#) beginning at 5:28.

Mayor Solache asked for clarification on the additional time provided to small businesses, commented that he supports the future technology check-in with a focus on small businesses and suggested to move forward with the proposed amended rule. For additional details please refer to the [Webcast](#) beginning at 9:20.

Vice Chair Cacciotti inquired about a potential conflict with local regulations as cited in a comment letter by a list of stakeholders including the Los Angeles County Business Federation (BizFed). Staff responded that a new rule provision has been created to address construction needs such as moving walls. For additional details please refer to the [Webcast](#) beginning at 20:30.

There were ten commentors which included representatives from industry and environmental groups. For additional details please refer to the [Webcast](#) beginning at 22:18.

Sassan Rahimzadeh, ARYA Cleaners, expressed concern with tenant challenges. For additional details please refer to the [Webcast](#) beginning at 22:18.

Harvey Eder, Public Solar Power Coalition, spoke to the technology of solar energy. For additional details please refer to the [Webcast](#) beginning at 25:36.

Michael Leeming, Parker Boiler, expressed concern on electrical upgrades, installation costs, and the high operating costs of electric boilers. For additional details please refer to the [Webcast](#) beginning at 29:01.

Chris Chavez, Coalition for Clean Air, Monica Embrey, Industrious Labs, and Kim Orbe, Sierra Club, requested no delay in the adoption of the proposed amended rule to address 2022 AQMP goals. For additional details please refer to the [Webcast](#) beginning at 31:54.

Bill Pearce, Boeing, expressed concern about whether the current timeframes in the proposed amendments will allow adequate time for utility upgrades. For additional details please refer to the [Webcast](#) beginning at 35:58.

Sarah Wiltfong, BizFed, asked for delay of the rule adoption to consider a report to be released in the following weeks. For additional details please refer to the [Webcast](#) beginning at 37:53.

Jed Holtzman, RMI, supported the rule adoption in June without further delay and highlighted the new rule provisions provided to address industry stakeholder concerns. For additional details please refer to the [Webcast](#) beginning at 39:46.

Adrian Martinez, Earthjustice, concurred with the support for adoption of the proposed amended rule without delay, emphasized the substantial emission reductions needed, and supported Committee Chair McCallon's suggestion on reporting on the technology check-in earlier. For additional details please refer to the [Webcast](#) beginning at 43:44.

2. Update on Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards

Kalam Cheung, Ph.D., Planning & Rules Manager/Planning, Rule Development and Implementation, provided a summary of Proposed Rule 317.1 (PR 317.1). For additional details please refer to the [Webcast](#) beginning at 51:30.

Committee Chair McCallon suggested that the funds collected be spent in the environmental justice areas where the fee payers are generating the funds along with mitigating the impacts on stationary sources. For additional details, please refer to the [Webcast](#) beginning at 57:19.

Committee Chair McCallon inquired about rule language proposed by David Rothbart of the Los Angeles County Sanitation District and Steven Jepsen of Clean Water SoCal. Michael Krause, Assistant Deputy Executive Officer/Planning, Rule Development and Implementation, responded that suggestions to the proposed rule language are under consideration. For additional details, please refer to the [Webcast](#) beginning at 59:00.

There were seven commentors which included representatives from industry and environmental groups. For additional details, please refer to the [Webcast](#) beginning at 01:01:20.

Chris Chavez, Coalition for Clean Air, Monika Embry, Industrious Labs, and Jane Williams, California Communities Against Toxics, expressed support for the proposed rule. For additional details, please refer to the [Webcast](#) beginning at 01:03:53.

Rita Loof, RadTech International, suggested facilities who have voluntarily reduced their emissions be provided flexibility and expressed concerns over the process to exit the Title V permit program. For additional details, please refer to the [Webcast](#) beginning at 01:06:50.

Bill LaMarr, California Alliance of Small Business Associations, commented that under-controlled mobile and federal sources should be paying the penalty fees, highlighted a major stationary source could be a small business, and suggested a delegation to formulate a feasible legislative pathway to attainment and provide recommendations to the federal government. For additional details, please refer to the [Webcast](#) beginning at 01:09:55.

Jason Aspell, Deputy Executive Officer/Engineering and Permitting, responded that the process to be excluded from the rule is in the staff report and Mr. Krause added that the rule needs to be implemented in accordance with the Clean Air Act. For additional details, please refer to the [Webcast](#) beginning at 01:14:38

3. Update on Proposed Amended Rule 1148.1 – Oil and Gas Production Well

Michael Morris, Planning & Rules Manager/Planning, Rule Development and Implementation, presented a summary of the proposed amendments to Rule 1148.1. For additional details please refer to the [Webcast](#) beginning at 1:17:03.

Mark Abramowitz, Community Environmental Services, expressed concern over cost-effectiveness calculations and also stated that other technologies such as fuel cells could be used in lieu of combustion engines for workover rigs. For additional details please refer to the [Webcast](#) beginning at 1:25:12.

Jane Williams, California Communities Against Toxics, expressed concern with the proposed notification threshold of 25,000 ppm for leaks identified using Optical Gas Imaging (OGI) technology since 9,000 ppm is fenceline reporting threshold for benzene from refineries. For additional details please refer to the [Webcast](#) beginning at 1:27:30.

Mr. Morris responded that zero-emission technology workover rigs are not readily available and added that CARB's future clean fleets rule may address this issue. Mr. Morris also stated that leaks detected with OGI occur much closer to the actual leak source resulting in more accurate values than fenceline monitoring. For additional details please refer to the [Webcast](#) beginning at 1:29:01.

WRITTEN REPORTS:

4. Monthly Permitting Enhancement Program (PEP) Update

The report was acknowledged by the committee.

5. Monthly Update of Staff's Work with U.S. EPA and CARB on New Source Review Issues for the Transition of RECLAIM Facilities to a Command-and-Control Regulatory Program

The report was acknowledged by the committee.

6. Notice of Violation Penalty Summary

The report was acknowledged by the committee.

OTHER MATTERS:

7. Other Business

There was no other business to report.

8. Public Comment Period

Ms. Loof commented that it is currently difficult to find the section for proposed rules and staff reports on the website. She suggested adding a link to the calendar section whenever rules are before the Stationary Source Committee to make it easier for the public to find the staff reports. She also stated it would be beneficial to include resources and links to external organizations that can assist businesses, such as trade associations, as businesses may be more comfortable reaching out to them for help rather than directly to the South Coast AQMD.

9. Next Meeting Date

The next Stationary Source Committee meeting is scheduled for Friday, June 21, 2024, at 10:30 a.m.

Adjournment

The meeting was adjourned at 12:00 p.m.

Monthly Permitting Enhancement Program (PEP) Update
South Coast AQMD
Stationary Source Committee – May 17, 2024

Background

At the February 2, 2024 Board meeting, the Board directed staff to provide monthly updates to the Stationary Source Committee to report progress made under the Permitting Enhancement Program (PEP). The Chair's PEP initiative was developed to enhance the permitting program and improve permitting inventory and timelines. This report provides a summary of the pending permit application inventory, monthly production, and other PEP related activities.

Summary

Pending Permit Application Inventory

The permitting process consists of a constant stream of incoming applications and outgoing application issuances, rejections, and denials. The remainder of the applications are considered the pending application inventory. The inventory consists of applications that are being prescreened prior to being accepted, workable applications, and non-workable applications. Non-workable means that staff are unable to proceed with processing an application because it is awaiting actions to address various regulatory requirements or deficiencies. As an example, after staff issues a Permit to Construct to a facility, staff must wait for the facility to construct and test the equipment prior to issuing a final Permit to Operate. Once a final Permit to Operate is issued, the permit application is removed from the pending application inventory. Other examples include facilities that may be in violation of rules and cannot be permitted until a facility achieves compliance, staff awaiting additional information from facilities, or facilities that have not completed the CEQA process for their project. During the life of an application, it may switch several times between being workable and non-workable as actions are taken by facilities and staff. Attachment 1 contains more detailed descriptions of the categories of non-workable permit applications. Figure 1 below provides a monthly snapshot of the pending application inventory.

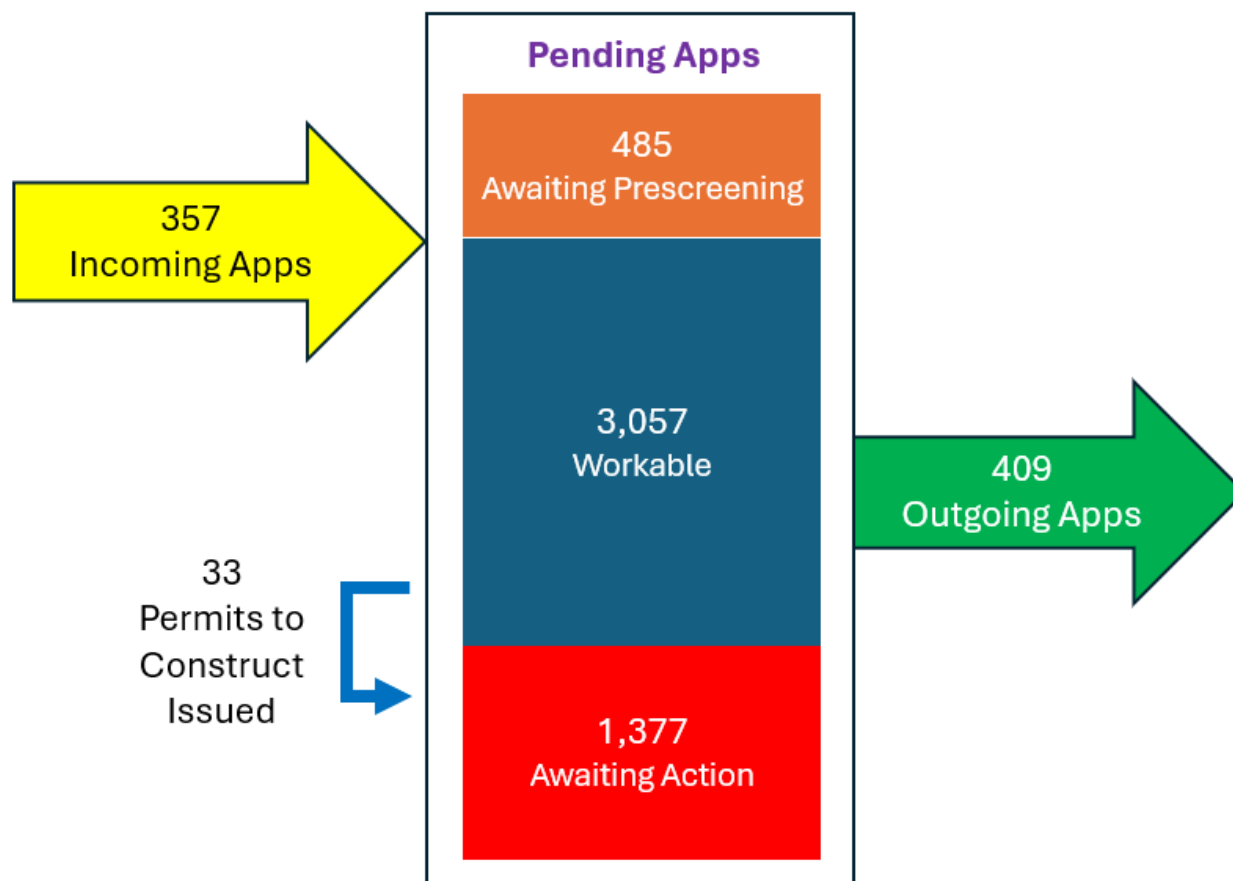

Figure 1: Application Processing Workflow – April 2024

Table 1 below lists the categories included in Awaiting Action (Non-Workable) for the last month. Please note that Table 1 provides a snapshot of data and applications may change statuses several times before final action.

Table 1: Awaiting Action (Non-Workable) Applications Summary

Awaiting Action (Non-Workable) Categories	March 2024	April 2024
Additional Information from Facility	235	223
CEQA Completion	25	27
Completion of Construction	770	794
Facility Compliance Resolution	17	19
Facility Draft Permit Review	92	91
Fee Payment Resolution	2	3
Other Agency Review	35	52
Other Facility Action	69	7
Other South Coast AQMD Review	100	0
Public Notice Completion	23	34
Source Test Completion	117	127
Total	1,485	1,377

Please see Attachment 1 for more information on these categories.

In April, 357 incoming applications were submitted which was a decrease of 88 incoming applications from the previous month. There were 409 outgoing applications which was a decrease of 57 applications from February (further information is provided in the “Production” section of this report). Several applications changed status from “Awaiting Action” to “Workable” after other Facility Actions and Other South Coast AQMD Reviews were addressed in April. Since outgoing applications (green arrow) exceeded incoming applications (yellow arrow) this month, the pending application inventory decreased.

The rate of incoming applications is unpredictable and is dependent on business demands and the economic climate, as well as South Coast AQMD rule requirements. Maintaining the average production rate of outgoing applications greater than average rate of incoming applications is key to reducing the pending application inventory until a manageable working inventory is established. Looking ahead to the next reporting period in June, there historically has been a spike in incoming applications before fee increases take effect on July 1 for application fees. This typically results in a swell in the inventory as time is needed to address the surge of permit applications.

Maintaining a low vacancy rate with trained and experienced permitting staff is the biggest factor in maintaining high production and reducing the pending application inventory. In addition, data and analysis showed that addressing vacancies at the Senior and Supervising AQ Engineers was vital since these positions are the review and approval stages of the permitting process. Now that vacancies and process bottlenecks are in the final stages of being addressed, production is improving.

Production

Prior to staff retirements, permit production levels in 2020 were typically above 500 completions per month. Prior to PEP implementation, high vacancy rates resulted in decreased permit completions. Lower production rates nearing 400 completions per month occurred as the vacancy rate peaked. As the vacancy rate has been reduced and staff have been trained, production has increased. Figure 2 below shows a rolling 12-month average of application completions and the monthly production for the last three months. Recently, increased monthly production levels (orange circles) are raising the rolling 12-month production averages (black line) in the chart below. The rolling 12-month average includes the monthly totals from the last year to visualize the trend over time, as production in individual months often fluctuates (in addition to fluctuations in incoming application submittals). The current rolling 12-month average production rate is 461 completions per month. In the coming months, staff anticipates production rates will return to 2020 levels. A higher rolling 12-month average will indicate sustained higher production levels. These higher production levels will begin to reduce the pending application inventory and improve permit processing times.

Figure 2: Application Completions - Rolling 12-Month Average and Recent Three Months

Production began to increase in the second half of 2023 as substantial promotional and hiring occurred. New engineering staff are currently being trained and production is expected to increase over the coming months and years as they become more experienced in their duties.

Production data is collected in whole calendar weeks. April only had four calendar weeks for production as compared to March which had five weeks. On a weekly average basis, this equates to 110 completions per week in March and 93 completions per week in April, which indicates an overall dip in production occurred in April. Potential causes for this decrease include the normal expected monthly fluctuations but also increased training and rulemaking support activities, as well as activities related to the Chiquita Canyon Landfill Hearing Board case this month.

Engineering & Permitting (E&P) Vacancy Rate

The current E&P vacancy rate is 10.2%. The minimum target vacancy rate for PEP is 10%. When PEP was first announced, the E&P vacancy rate was greater than 20%.

In April, there was one vacancy created through a promotion of a Senior Office Assistant to another division, however the resulting increase in E&P vacancy rate was offset by the onboarding of a new Staff Specialist.

Interviews for an Air Quality Engineer 2 recruitment were initiated on April 26 and will continue into May. Selected candidates from this external recruitment will reduce the E&P vacancy rate. This recruitment is targeted to be completed by July.

Key Activities This Month

- Approximately 15 permit processing engineers in the Waste Management team received enhanced onsite training at Orange County Sanitation District (OCSan) in Fountain Valley. Staff received a detailed tour of the wastewater treatment process and the related air pollution control equipment.

- E&P staff conducted recruitment and engineering information sessions for engineering students at CSU Long Beach and Cal Poly Pomona. Past efforts have been successful in recruiting new engineering staff.
- A Permit Streamlining Task Force (PSTF) meeting was held on April 11. Discussion topics included the Certified Permit Professional program and development and consistency of permit conditions.
- Staff initiated testing of the new electronic permit application forms. The new forms are expected to streamline permit processing. The forms are expected to be introduced at the July Permit Streamlining Task Force subcommittee.
- Staff promoted two Supervising Air Quality Engineers in the Waste Management team. One promotion was effective on April 15, and the second promotion will be effective May 7. These promotions will triple the current Supervisors reviewing and approving permits in the Waste Management team. The waste management sector is a focus of PEP efforts, and these positions will relieve identified bottlenecks in the coming months.
- A new Staff Specialist position was filled on April 29 to consolidate permit public noticing functions. This new process will be developed in the coming months and is expected to streamline the public notice process and decrease the time to distribute public notices and therefore improve permit processing timelines.

Upcoming Meetings:

- Staff will conduct Permitting Working Group (PWG) meetings that will be a collaborative public effort to discuss permitting requirements with various industry sectors and receive public input.
- Staff are targeting to conduct at least six public meetings regarding permitting in Fiscal Year 2024-2025. A schedule of future PSTF and PWG meetings is under development.
- The first PWG is tentatively targeted for June.
- The next PSTF is targeted for July 17.
- A PEP update to the Board will occur in the third quarter of 2024.

Attachment 1

Explanation of Non-Workable Application Statuses

Workable applications are those applications where staff have the required information to process the permit application.

Non-workable applications are those applications where the application process has been paused while staff are awaiting the resolution of one or more related tasks or where the permit cannot be issued.

Description of Non-Workable/Awaiting Action Terms

Additional Information from Facility

During permit processing staff may need additional information from a facility that was not included in the original permit application package or a change of scope of the proposed project. Additional information may include items regarding materials used in the equipment (such as toxics), equipment information, or other items to perform emission calculations or determine compliance for the proposal in the application.

CEQA Completion

Prior to issuing permits, CEQA requirements are required to be evaluated and completed. South Coast AQMD can either be the Lead Agency that certifies or approves the CEQA document or the Responsible Agency that consults with the Lead Agency (typically a land use agency) on the CEQA document.

Completion of Construction

After a Permit to Construct is issued, the permit application file remains in the pending application inventory. Staff must wait for the facility to complete construction prior to completing other compliance determination steps before the permitting process can continue. Typically, a Permit to Construct is valid for one year, but it may be extended for various reasons if the facility demonstrates they are making increments of progress. For some large projects, construction may take years while the permit application remains in the pending application inventory.

Facility Compliance Resolution

Prior to issuing permits the affected facility must demonstrate compliance with all rules and regulations [Rule 1303(b)(4)]. Prior to the issuance of a Permit to Construct, all major stationary sources that are owned or operated by, controlled by, or under common control in the State of California are subject to emission limitations must demonstrate that they are in compliance or on a schedule for compliance with all applicable emission limitations and standards under the Clean Air Act. [Rule 1303(b)(2)(5)].

Facility Draft Permit Review

If a facility requests to review their draft permit, staff provides the facility a review period prior to proceeding with issuance. During the review period, staff do not perform any additional evaluation until feedback from the facility is received. Some projects include several permits or large facility permit documents which may take a substantial time to review.

Fee Payment Resolution

Prior to issuing permits, all fees must be remitted, including any outstanding fees from associated facility activities including, but not limited to, annual operating and emission fees, modeling or source testing fees, and permit reinstatement fees.

Other Agency Review

The Title V permitting program requires a 45-day review of proposed permitting actions by U.S. EPA prior to many permitting actions. During the review period, staff are unable to proceed with permit issuance. If U.S. EPA has comments or requests additional information, the review stage may add weeks or months to the process before staff can proceed with the project.

For Electricity Generating Facilities (Power Plants), CEC may provide a review of proposed permits prior to issuance.

Other Facility Action

Prior to issuing a permit, a facility may need to take action to address deficiencies or take steps to meet regulatory requirements. This may include acquiring Emission Reduction Credits after staff notifies a facility the project requires emissions to be offset, performing an analysis for Best Available Control Technology requirements, or conducting air dispersion modeling.

Other South Coast AQMD Review

Prior to proceeding with a permit evaluation, permit engineering staff may require assistance and support from other South Coast AQMD departments. For example, IM support for electronic processing due to unique or long-term project considerations or to complete concurrent review of separate phases or integrated processes for multi-phase projects is routinely needed.

Public Notice Completion

There are several South Coast AQMD requirements that may require public noticing and a public participation process prior to permit issuance. Rule 212 and Regulation XXX both detail public noticing thresholds and requirements which include equipment located near schools, high-emitting equipment, equipment above certain health risk thresholds, or significant projects or permit renewals in the Title V program. The public notice period is typically 30 days, and staff are required to respond to all public comments in writing prior to proceeding with the permitting process. Other delays in the public notice process may include delays in distribution of the notice by the facility, incomplete distribution which may require restarting the 30-day period, or requests for extension from the public.

Source Test Completion

Many rules require source testing prior to permit issuance. Source testing is the measurement of actual emissions from a source that may be used to determine compliance with emission limits, or measurements of toxic emissions may be used to perform a health risk assessment. Lab analysis of an air sample is often required as part of the process. The testing is performed by third party contractors who prepare a source test protocol to detail the testing program, and a source test report with the results of the testing and equipment operation. Both the protocol and report need to be reviewed and approved by South Coast AQMD staff.

May 2024 Update on Work with U.S. EPA and California Air Resources Board on New Source Review Issues for the RECLAIM Transition

At the October 5, 2018, Board meeting, the Board directed staff to provide the Stationary Source Committee with a monthly update of staff's work with U.S. EPA regarding resolving NSR issues for the transition of facilities from RECLAIM to a command-and-control regulatory structure. The table below summarizes key activities with U.S. EPA and California Air Resources Board (CARB) since the last report.

Item	Discussion
In person meeting with U.S. EPA (Region IX) – April 18, 2024	<ul style="list-style-type: none">• Discussed options to address offset availability for RECLAIM facilities

- A follow up meeting with U.S. EPA (Region IX) is planned for May 2024 to continue discussions from April 18th meeting
- RECLAIM/NSR Working Group meeting will not be held in May
- The next Working Group Meeting is planned for third quarter 2024 to provide an update on discussions with U.S. EPA regarding the New Source Review issues for the RECLAIM transition

AGENDA NO. 21

REPORT: Mobile Source Air Pollution Reduction Review Committee

SYNOPSIS: The Mobile Source Air Pollution Reduction Review Committee held a hybrid meeting on Thursday, May 16, 2024. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Daphne Hsu
Principal Deputy District Counsel
South Coast AQMD

AK:CR:me

MSRC Chair and MSRC Vice Chair Elected

Annually the MSRC elects its Chair and Vice Chair. At its May 16, 2024 meeting, the MSRC re-elected Mayor Larry McCallon as its Chair for a one-year term. Mayor McCallon is Mayor Pro Tem from District 5 for the City of Highland and represents the San Bernardino County Transportation Authority on the MSRC.

The MSRC also re-elected Mayor Brian Berkson as its MSRC Vice Chair for a one-year term. Mayor Berkson serves as Mayor Pro Tem from District 3 for the City of Jurupa Valley and represents the Riverside County Transportation Commission on the MSRC.

FYs 2016-18 Local Government Partnership Program

As part of the FYs 2016-18 Local Government Partnership Program, the MSRC originally awarded \$72,580 to the City of Paramount to install a total of five charging stations: two public-access stations and three limited-access stations. The City subsequently requested to reduce the project's scope, decreasing the number of stations from five to three and making all three stations publicly accessible, with a corresponding value reduction to \$64,675. The City completed installation of two stations. However, the contract was terminated prior to the City submitting a final report

and invoice. The MSRC considered and approved a six-month contract for the two stations in an amount not to exceed \$42,686 as part of the FYs 2016-18 Work Program, using a portion of the funds from the earlier contract. The other \$21,989 will revert to the AB 2766 Discretionary Fund.

Contract Modification Requests

The MSRC considered three contract modification requests and took the following actions:

1. Air Products and Chemicals, Inc., Contract #MS18182 to install a hydrogen refueling station in Paramount, approval of 18-month term extension;
2. City of Yucaipa, Contract #ML18129 to install EV charging infrastructure, approval of modified statement of work and payment schedule; and
3. Ryder Integrated Logistics, Inc., Agreement #MS21016 to procure two integrated power centers and four Mega Chargers, approval to extend the deadline for delivery of associated vehicles without extending the overall contract term.

Operational Policies and Procedures

The MSRC's "Operational Policies and Procedures" were originally adopted in 1993 and amended in 2020 with respect to the Regional Rideshare Agency position. The MSRC considered a more comprehensive set of proposed amendments to bring the policies up to date. Key language changes included making it apparent that the MSRC-TAC, in addition to the MSRC, is subject to the Conflict of Interest Code, and standardizing the withholding amount on invoices at 5 percent for any funding recipient, whether a public or private entity. The MSRC approved the proposed amendments.

Contracts Administrator's Report

The MSRC AB 2766 Contracts Administrator's report provides a written status report on all open contracts from FY 2011-12 to the present. The Contracts Administrator's Report for March 28, 2024 through April 24, 2024 is attached (*Attachment 1*).

Attachments

1. March 28 through April 24, 2024 Contracts Administrator's Report
2. Minutes of the March 21, 2024 MSRC Meeting

MSRC Agenda Item No. 2

DATE: May 16, 2024

FROM: Cynthia Ravenstein

SUBJECT: AB 2766 Contracts Administrator's Report

SYNOPSIS: This report covers key issues addressed by MSRC staff, status of open contracts, and administrative scope changes from March 28 to April 24, 2024.

RECOMMENDATION: Receive and file report

WORK PROGRAM IMPACT: None

Contract Execution Status

2021-24 Work Program

On September 2, 2022, the SCAQMD Governing Board approved an award under the Major Event Center Transportation Program. This contract is executed.

On February 3, 2023, the SCAQMD Governing Board approved an award under the Transformative Transportation Strategies & Mobility Solutions Program. This contract is executed.

On June 2, 2023, the SCAQMD Governing Board approved six awards under the Microtransit Service RFP, for zero-emission shared mobility service. These contracts are under development, with the prospective contractor for signature, with the SCAQMD Board Chair for signature, or executed.

On September 1, 2023, the SCAQMD Governing Board approved two awards under the Publicly Accessible Goods Movement Zero Emission Infrastructure Request for Information. One of these contracts will be administered by SCAQMD on behalf of the MSRC, and the other award is conditional upon successful selection of a site developer and operator and securing co-funding commitments.

On November 3, 2023, the SCAQMD Governing Board approved an allocation for partnership with SCAQMD and other partners in proposals seeking funding under the CARB "Advanced Technology Demonstration and Pilot Projects" solicitation. If proposal(s) had been awarded funding, contract(s) would have been administered by SCAQMD on behalf of the MSRC. However, MSRC staff have received notification that these proposals were not selected for funding award. The \$3,000,000 reverts to the AB 2766 Discretionary Fund.

On February 2, 2024, the SCAQMD Governing Board approved allocations for partnership in applications seeking funding under the Carl Moyer Program solicitation. If the applications are awarded funding, to the extent feasible these contracts will be administered by SCAQMD on behalf of the MSRC.

Work Program Status

Contract Status Reports for Work Program years with open and/or pending contracts are attached.

FY 2011-12 Work Program Contracts

One contract is in “Open/Complete” status, having completed all obligations except operations.

FY 2011-12 Invoices Paid

No invoices were paid during this period.

FYs 2012-14 Work Program Contracts

3 contracts from this Work Program year are open, and 6 are in “Open/Complete” status.

FYs 2012-14 Invoices Paid

No invoices were paid during this period.

FYs 2014-16 Work Program Contracts

9 contracts from this Work Program year are open, and 14 are in “Open/Complete” status.

FYs 2014-16 Invoices Paid

No invoices were paid during this period.

FYs 2016-18 Work Program Contracts

36 contracts from this Work Program year are open, and 57 are in “Open/Complete” status. One contract was cancelled at the contractor’s request during this period: City of San Bernardino, Contract #ML18177 – Purchase Medium- and Heavy-Duty EVs and Install EV Charging Infrastructure. One contract was terminated during this period: Irvine Ranch Water District (IRWD), Contract #MS18029 – Install New Limited-Access CNG Station. IRWD’s extension request was denied by the MSRC Contracts Administrator because the contract had previously been extended for a total of three years or more, and the request was for greater than one year. IRWD opted not to request MSRC review of the denial, so the contract was terminated.

FYs 2016-18 Invoices Paid

One invoice in the amount of \$10,000.00 was paid during this period.

FYs 2018-21 Work Program Contracts

12 contracts from this Work Program year are open, and 3 are in “Open/Complete” status.

FYs 2018-21 Invoices Paid

5 invoices totaling \$364,102.00 were paid during this period.

FYs 2021-24 Work Program Contracts

5 contracts from this Work Program year are open.

FYs 2021-24 Invoices Paid

No invoices were paid during this period.

Administrative Scope Changes

No administrative scope changes were initiated during the period from March 28 to April 24, 2024.

**MOBILE SOURCE AIR POLLUTION REDUCTION REVIEW COMMITTEE
THURSDAY, MARCH 21, 2024 MEETING MINUTES**
21865 Copley Drive, Diamond Bar, CA 91765

Pursuant to Assembly Bill 361 the MSRC meeting was held at 2:00 p.m. on Thursday, January 18, 2024 through a hybrid format of in-person attendance in Conference Room CC-8 at the South Coast AQMD Headquarters, 21865 Copley Drive, Diamond Bar, California, and/or virtual attendance via videoconferencing and by telephone.

MEMBERS PRESENT:

(Vice-Chair) Brian Berkson, representing Riverside County Transportation Commission (RCTC)
William Robertson, representing California Air Resources Board (CARB)
Curt Hagman, representing South Coast AQMD
Patrick Harper, representing Orange County Transportation Authority (OCTA)
Rena Lum (Alt.), representing Los Angeles County Metropolitan Transportation Authority (Metro)
Mark Henderson, representing Southern California Association of Governments (SCAG)

MEMBERS ABSENT:

Chair Lary McCallon, representing San Bernardino County Transportation Authority (SBCTA)
Cindy Allen (Alt.), representing SCAG
Steve Veres, representing Metro
Linda Krupa (Alt.), representing RCTC
John Dutrey (Alt.), representing SBCTA
Peter Christensen (Alt.), representing CARB

MSRC-TAC MEMBERS PRESENT:

Scott Strelecki (Alt.), representing SCAG
Joseph Alcock, representing Cities of Orange County

OTHERS PRESENT:

Kimberly Young, City of Fontana
Katrina Kunkel, City of Yucaipa
Dan Penoyer
Sam Emmersen, Better World Group

Ryan Laws, SCAG
Moses Huert, City of Paramount
Lawrence Brown
Kirk Vyravan

SOUTH COAST AQMD STAFF & CONTRACTORS PRESENT:

Aaron Katzenstein, Deputy Executive Officer
Cynthia Ravenstein, MSRC Contracts Administrator
Daphne Hsu, Principal Deputy District Counsel
Karen Sandoval, Financial Analyst
Kristin Remy, Sr. Administrative Assistant
Lane Garcia, Program Supervisor
Laura Dunlap, Contractor
Maria Allen, Administrative Assistant
Marjorie Eaton, Administrative Assistant
Matt McKenzie, MSRC Contracts Assistant
Mei Wang, Assistant Deputy Executive Officer
Paul Wright, Information Technology Specialist
Ray Gorski, MSRC Technical Advisor-Contractor
Sindy Enriquez, MSRC Contracts Assistant

CALL TO ORDER

- Vice Chair Berkson called the meeting to order at 2:00 p.m.
- Roll call was taken at the start of the meeting.
- Vice Chair Berkson asked for disclosures.

Item No. 3 – MSRC Vice Chair Berkson said he does not have a financial interest in Item No. 3 but is required to identify for the record that he is a Commissioner for RCTC, which is involved in the item.

Items Nos. 3 and 5 – MSRC Member Curt Hagman said he does not have a financial interest in Item No. 3, but is required to identify for the record that he is a Regional Council Member for SCAG, which is involved in the item. In addition, he does not have a financial interest in Item No. 5, but is required to identify for the record that he is a member of SBCTA, which is involved in the item.

Item Nos. 3 and 4 – MSRC Member Mark Henderson said he does not have a financial interest in Item No. 3, but is required to identify for the record that he is a Regional Council Member for SCAG,

which is involved in the item. In addition, he does not have a financial interest in Item No. 4, but is required to identify for the record that he is a member of the City of Gardena City Council which is involved in the item.

- Retiring MSRC staff member Matthew Mackenzie was recognized for his many years of service.
- Vice Chair Berkson asked for public comments on the Consent Calendar.

No public comment.

STATUS REPORT

Clean Transportation Policy Update

CONSENT ITEMS (Items 1 through 4):

Information Only – Receive and File

1. MSRC Contracts Administrator's Report

The MSRC AB 2766 Contracts Administrator's Report for January 4, 2024 through February 28, 2024 was included in the agenda package.

Moved by Hagman; seconded by Henderson; under approval of Consent Calendar Items #1-4, item unanimously approved.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: Staff will include the MSRC Contracts Administrator's Report in the MSRC Committee Report for the April 2024 South Coast AQMD Board meeting.

2. Financial Report on AB 2766 Discretionary Fund

A financial report on the AB2766 Discretionary Fund for March 2024 was included in the agenda package.

Moved by Hagman; seconded by Henderson; under approval of Consent Calendar Items #1-4, item unanimously approved.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: No further action is required.

3. Consider 18-Month Term Extension by Southern California Association of Governments (SCAG), Contract #MS21005 (\$16,751,000- Last Mile Freight Program)

SCAG requests an 18-month term extension due to various issues encountered by delay in deliveries of vehicles from the manufacturers. This contract was previously extended a total of 18 months.

Moved by Hagman; seconded by Henderson; under approval of Consent Calendar Items #1-4, item unanimously approved.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: Staff will amend the above contract accordingly.

4. Consider Reduced Scope and Value by City of Gardena, Proposed Agreement #MS24007 (\$475,312- Implement GTrans Microtransit Service)

GTrans requests to reduce the proposed hours of operation on the weekends, eliminating Sunday service and moving Saturday start time, with a corresponding \$51,178 value reduction.

Moved by Hagman; seconded by Henderson; under approval of Consent Calendar Items #1-4, item unanimously approved.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: Staff will amend the above contract accordingly.

For Approval – As Recommended

5. Consider Modified Lighting and One-Year Extension by City of Fontana, Contract #ML16047 (\$500,000- Enhance Existing Class I Bikeway)

Cynthia Ravenstein, MSRC Contracts Administrator, presented that the City requests a one-year term extension due to the estimated cost increased drastically with the final design approval, resulting in the city securing additional funding. A change in the lighting is proposed to reduce the risk of vandalism.

Ravenstein related that the City of Fontana was awarded \$500,000 under the 2014/16 Work Program to enhance a Class I Bikeway. This contract has previously been extended five years total. There will be no further extensions of the contract term.

Vice Chair Berkson asks when and how long was their last extension, if we have proof of executed contracts and how long ago were the installation contracts executed.

Ravenstein replies that their previous extension was for two years, we have proof of contracts, and the installation contracts were executed in January.

Vice Chair Berkson asked for public comment.

No public comment.

Moved by Hagman; seconded by Robertson; item unanimously approved.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: MSRC staff will amend the contract accordingly.

6. Consider Authorizing Issuance of New Contract to Complete Work Initiated by City of Yucaipa, Contract #ML16057 (\$380,000- Implement a “Complete Streets” Pedestrian Access Project

Cynthia Ravenstein, MSRC Contracts Administrator, presented that the City completed the sidewalk element and a portion of the work on the bicycle lane element, but the contract lapsed after being granted extensions totaling five years. Completion of the bicycle lanes is delayed due to drainage and waterline improvement projects. The City of Yucaipa requests either a new 21-month contract in the amount of \$380,000 or a new six-month contract in the amount of \$174,420 for the sidewalk element only.

Ravenstein stated that the City of Yucaipa was awarded \$380,000 under the 2014/16 Work Program to implement “Complete Streets” improvements on a segment of roadway. The project includes pedestrian and bicycle elements. The contract has been extended for a total of five years. When granting the last extension, the MSRC made a contingency that the City had to have an executed construction contract. There was a misunderstanding, and they executed a construction contract for only the pedestrian portion of the work. The City is having delays in completing the bicycle work due to roadway drain and water line improvements out of their jurisdiction and control. The City anticipates completing all projects by the end of 2025. MSRC staff is recommending approval of new six-month contract for \$174,420 for the pedestrian

element of the project. This will allow the City to turn in their final report and get reimbursed for the work that they completed.

Vice Chair Brian Berkson asks if anyone has questions.

Dr. Robertson asks if the money is going back into the MSRC fund.

Ray Gorski, MSRC Technical Advisor, replies yes it goes back in the account but it's unallocated.

Katrina Kunkel, who is employed by the City of Yucaipa, states that the project is located in multiple jurisdictions along County Line Road. The City has completed a roadway alignment, including widening, reconstruction of driveway approaches to be ADA compliant, construction of sidewalks, construction of curb ramps, and construction of bike ramps to allow bicycles to traverse the new roundabout. The only items left to complete are three-inch cap over the bike lane, striping and signage. The City is waiting for the water company to install a high pressurized water line and the City of Calimesa to finish their portion of the improvements, which are adjacent. The City has spent \$480,000 on the construction contract, which well exceeds the \$174,420 that they will be reimbursed. She is asking the MSRC to approve the alternative option, which would grant the City more time as they wait for the other entities to finish their construction work, so the City can finish the three remaining items.

Vice Chair Brian Berkson asked if anyone had questions.

Supervisor Curt Hagman asked if construction was going on currently.

Ravenstein replied that there was some construction going on.

Vice Chair Brian Berkson asked Katrina Kunkel what the current progress was on the waterline install.

Katrina Kunkel replied that the plans are complete. They are awaiting an encroachment permit through CalTrans. The improvements by the City of Calimesa are 50% complete.

Moved by Hagman, seconded by Robertson; item unanimously approved to grant the six-month, \$174,420 contract.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: MSRC staff will place this item on the agenda for consideration by the

South Coast AQMD Governing Board.

7. Consider Nine-Month Term Extension by City of Carson, Contract ML#18057 (\$106,250- Purchase 5 Light-Duty ZEVs and Install Charging Infrastructure

Cynthia Ravenstein, MSRC Contracts Administrator, presented that the City of Carson requests an extension to August 31, 2027, approximately a nine-month term extension, due to longer than expected time for design and selection of construction contractor of the stations. This contract was previously extended a total of 41 months.

Ravenstein stated that the reason this item is on the action calendar is that there is a condition that this be the final extension. The contract was previously extended a total of 47 months, not 41 months as stated incorrectly in the agenda.

Vice Chair Brian Berkson asked if anyone had questions.

Dr. Robertson and Vice Chair Berkson asked if there had been any action on this contract, if they bought vehicles or was it completely waiting on construction.

Ravenstein replied that the vehicles have been in service. They now have the construction contract awarded.

Moved by Berkson; seconded by Hagman; item unanimously approved.

Ayes: Hagman, Henderson, Lum, Berkson, Robertson

Noes: None

Action: MSRC staff will amend the contract accordingly.

OTHER BUSINESS:

12. Other Business

Vice Chair Berkson asked if anyone has other business.

Cynthia Ravenstein, MSRC Contracts Administrator, stated that WattEV, who received funding under the MSRC's partnership with SCAG under the Last Mile Freight Program, is opening their charging depot in San Bernardino on April 15th. She asked if anyone has interest in attending.

Dr. Robertson stated he will be attending so there is MSRC representation.

PUBLIC COMMENT PERIOD

No public comments.

ADJOURNMENT

The meeting adjourned at 2:37 p.m.

NEXT MEETING

Thursday, April 8th at 2:00 p.m.

[Prepared by Kristin Remy]

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 22

REPORT: California Air Resources Board Monthly Meeting

SYNOPSIS: The California Air Resources Board held a public Board meeting on May 23, 2024. The following is a summary of the meeting.

RECOMMENDED ACTION:
Receive and file.

Gideon Kracov, Member
South Coast AQMD Governing Board

ft

The May Board meeting of the California Air Resources Board (Board) was held in Sacramento, California at the California Environmental Protection Agency Headquarters Building. Key items presented are summarized below.

CONSENT ITEM

24-2-1: Public Meeting to Consider the Proposed 2024 State Implementation Plan Submittal of Five Previously Adopted California Air Resources Board Regulations

The Board approved the submittal of five previously adopted California Air Resources Board regulations to the U.S. Environmental Protection Agency to be included in the California State Implementation Plan under the Clean Air Act. This action was limited to the submittal of the previously adopted regulations into the California State Implementation Plan. This action will not result in any changes to existing regulatory language.

DISCUSSION ITEMS

24-2-3: Public Meeting to Consider a Proposed New Member for the California Air Resources Board's Research Screening Committee

The Board approved the appointment of Dr. Michael Schmeltz, Assistant Professor at California State University, East Bay, as a new member of the CARB Research Screening Committee.

24-2-2: Public Hearing to Consider Proposed Amendments to the Advanced Clean Trucks Regulation and the Zero-Emission Powertrain Certification Test Procedure

The Board heard Staff's proposed amendments to the Advanced Clean Trucks regulation and the Zero-Emission Powertrain Certification test procedure. In consideration of Stakeholder comments, the Board directed Staff to address the comments and bring the amendments back to the Board at a future meeting.

The May 23, 2024, meeting of the California Air Resources Board (CARB or Board) will be held at 1001 I Street in Sacramento, with remote participation also available. This facility is accessible to persons with disabilities and by public transit. For transit information, call (916) 321-BUSS (2877) or visit <http://sacrt.com/>.

To only watch the Board Meeting and not provide verbal comments, please view the [webcast](#). If you do not wish to provide oral comments, we strongly recommend watching the webcast as this will free up space on the webinar for those who are providing oral comments. Please do not view the webcast and then switch over to the webinar to comment as the webcast will have a time delay; instead, register to participate via the Zoom webinar.

Public Comment Guidelines and Information

- [In-Person Public Testimony](#)
- [Remote Public Participation](#)

The Board will set a two-minute time limit on oral comments; however, the amount of time could change at the Chair's discretion. In-person speakers signed up to comment will be called upon first, followed by public Zoom and phone participants wishing to comment. The Chair may close speaker sign-ups 30 minutes after the public comment portion of an item has begun.

Please note that under the California Public Records Act (Gov. Code, § 7920.000 et seq.), your written and oral comments, attachments, and associated contact information (e.g., your address, phone, email, etc.) become part of the public record and can be released to the public upon request.

Spanish interpretation will be available for the May 23rd Board Meeting.

Thursday, May 23, 2024 @ 9:00 a.m.

Hard copies of the Public Agenda and Proposed Resolutions (when applicable) will be provided at the meeting; copies of all other documents linked below will only be available upon request.

Consent Calendar:

These items are scheduled to be heard on the Board's Consent Calendar and will not have a presentation by CARB staff. The Board will vote on all agenda items on the Consent Calendar at the beginning of the public meeting.

24-2-1: Public Meeting to Consider the Proposed 2024 State Implementation Plan Submittal of Five Previously Adopted California Air Resources Board Regulations

The Board will consider submitting five previously adopted California Air Resources Board regulations to the U.S. Environmental Protection Agency to be added to the California State Implementation Plan under the Clean Air Act. This proposed action is limited to submitting the previously adopted regulations into the California State Implementation Plan. This proposed action will not result in any changes to existing regulatory language.

No. D080902; remanded to superior court)

The Two Hundred for Homeownership, Robert Apodaca, and Jose Antonio Ramirez v. California Air Resources Board, Steven S. Cliff et al. (United States District Court, Eastern District of California, Fresno, Case No. 1:22-at-904)

Western States Petroleum Association v. California Air Resources Board et al. (Fresno County Superior Court, Case No. 22CECG03603.)

Western States Petroleum Association v. California Air Resources Board. (Los Angeles County Superior Court, Case No. 20STCP03138x, Appeal No. B327663)

Western States Petroleum Association v. California Air Resources Board (Fresno County Superior Court, Case No. 23CECG02976)

Western States Trucking Association v. California Air Resources Board (Fresno County Superior Court, Case No. 23CECG02964)

Opportunity for Members of the Board to Comment on Matters of Interest

Board members may identify matters they would like to have noticed for consideration at future meetings and comment on topics of interest; no formal action on these topics will be taken without further notice.

Open Session to Provide an Opportunity for Members of the Public to Address the Board on Subject Matters within the Jurisdiction of the Board

Although no formal Board action may be taken, the Board is allowing an opportunity to interested members of the public to address the Board on items of interest that are within the Board's jurisdiction, but that do not specifically appear on the agenda. Each person will be allowed a maximum of two minutes to ensure that everyone has a chance to speak. The public will also have an opportunity to *submit written comments* for open session the morning of the Board Meeting.

Other Information

Submit Comments Electronically the Day of the Board Meeting

View Submitted Comments

Please Note: PowerPoint presentations to be displayed during public comment at the Board meeting must be electronically submitted via email to the Clerks' Office at cotb@arb.ca.gov no later than noon on the business day prior to the scheduled Board Meeting.

If you have any questions, please contact the Clerks' Office:

1001 I Street, 23rd Floor, Sacramento, California 95814

cotb@arb.ca.gov or (916) 322-5594

Special Accommodation Request

Consistent with California Government Code section 7296.2, special accommodation or language needs may be provided for any of the following:

- An interpreter to be available at the hearing;
- Documents made available in an alternate format or another language;
- A disability-related reasonable accommodation.

To request these special accommodations or language needs, please contact the Clerks' Office at cotb@arb.ca.gov or at (916) 322-5594 as soon as possible, but no later than 7 business days before the scheduled Board hearing. TTY/TDD/Speech to Speech users may dial 711 for the California Relay Service.

Acomodación Especial

Consecuente con la sección 7296.2 del Código de Gobierno de California, una acomodación especial o necesidades lingüísticas pueden ser suministradas para cualquiera de los siguientes:

- Un intérprete que esté disponible en la audiencia;
- Documentos disponibles en un formato alternativo u otro idioma;
- Una acomodación razonable relacionados con una incapacidad.

Para solicitar estas comodidades especiales o necesidades de otro idioma, por favor contacte la oficina del Consejo al (916) 322-5594 o por correo electrónico al cotb@arb.ca.gov lo más pronto posible, pero no menos de 7 días de trabajo antes del día programado para la audiencia del Consejo. TTY/TDD/Personas que necesiten este servicio pueden marcar el 711 para el Servicio de Retransmisión de Mensajes de California.

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 24

PROPOSAL: Determine That Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards Is Not Considered Subject to CEQA; and Adopt Rule 317.1

SYNOPSIS: Section 185 of the federal Clean Air Act (CAA) requires areas that are classified as “severe” or “extreme” that do not attain the NAAQS for ozone by their assigned attainment dates to pay fees based upon a prescribed formula each year until the NAAQS is attained. Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards (PR 317.1) would implement these CAA requirements for the 1997 and 2008 8-hour ozone standards. The provisions of PR 317.1 would address when and how the CAA nonattainment fees would be assessed and collected.

COMMITTEE: Stationary Source, April 19 and May 17, 2024, Reviewed

RECOMMENDED ACTIONS:

Adopt the attached Resolution:

1. Determining that Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards, is Not Considered Subject to California Environmental Quality Act; and
2. Adopting Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards.

Wayne Natri
Executive Officer

Background

Section 185 of the federal Clean Air Act (CAA) establishes fee requirements for areas that are classified as “severe” or “extreme” nonattainment that do not attain the National Ambient Air Quality Standards (NAAQS) for ozone by their assigned attainment dates. Both VOC and NO_x are precursors of ozone. Section 185 requires that major stationary sources, which are facilities located in the South Coast Air Basin or Coachella Valley that emit or have the potential to emit 10 tons or more of VOC and/or NO_x, to either reduce their emissions by 20 percent from a specified emissions baseline or pay a CAA nonattainment fee. The CAA requires that the baseline emissions be based on emissions in the attainment year. Upon the U.S. EPA issuing a final finding of failure to attain, the fee would be collected from all major stationary sources for each calendar year after the attainment date and shall continue until the area is redesignated as an attainment area for that ozone standard. Additionally, the U.S. EPA is required to collect the fees if the SIP does not meet the requirements or if a state is not administering and enforcing CAA Section 185. As such, South Coast AQMD must promulgate a rule to fulfill the obligations of CAA Section 185 to ensure fees are collected and disbursed locally.

Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards (PR 317.1) implements requirements of the CAA Section 185 for the 1997 and 2008 8-hour ozone standards. The provisions of PR 317.1 are needed to address when and how the CAA nonattainment fees would be assessed and collected.

Proposal

PR 317.1 requires major stationary sources of VOC and/or NO_x located in the South Coast Air Basin and Coachella Valley to pay nonattainment fees when the U.S. EPA makes a final finding that the area has failed to attain the 1997 or 2008 8-hour ozone NAAQS. Approximately 320 facilities are estimated to be impacted by PR 317.1. For the revoked 1997 ozone standard with an attainment date of June 15, 2024, although a fee equivalency approach is allowed, adequate funding to utilize the fee equivalency approach is not available. For the 2008 ozone standard with an attainment date of July 20, 2032, which is not a revoked standard, a fee equivalency approach is not available. Consequently, nonattainment fee collection is proposed for both of these standards.

PR 317.1 specifies that the baseline emissions would be based on the applicable source emissions information in the attainment year unless U.S. EPA approves of the alternative baseline emissions methodology set forth in PR 317.1. If a major stationary source does not reduce emissions by 20 percent from the emissions baseline, a nonattainment fee will be assessed annually for each excess ton of VOC and for each excess ton of NO_x emissions above their respective 80 percent thresholds. The fee would be collected from all major stationary sources for each calendar year after the attainment due date and shall continue until the area is redesignated as an attainment area for that ozone standard. PR 317.1 also establishes requirements such as emissions reporting, fee determination, and payment due dates. The CAA does not specify how these CAA nonattainment fees may be used and guidance on the spending of these

potential funds will be determined in the future through a public process separate from this rulemaking. PR 317.1 will be submitted into the SIP to fulfill the CAA obligations.

Public Process

PR 317.1 was developed through a public process that included two Working Group Meetings on November 7, 2023 and February 7, 2024. The meetings included a variety of stakeholders such as affected facilities, industry associations, public agencies and environmental groups. A Public Consultation Meeting was held on April 3, 2024 to present PR 317.1 and receive further public comments. As part of this rule development process, staff worked closely with U.S. EPA and CARB and also met with interested stakeholders to discuss the proposed rule.

Key Issues

Throughout the rulemaking process, staff has worked with stakeholders to resolve many issues, while ensuring PR 317.1 would be approvable by U.S. EPA. Stakeholders have continued to raise a concern that PR 317.1 may still require fee collection in cases where facilities are no longer required to pay nonattainment fees due to potential changes in the CAA or implementation guidance. The concerns presented by the stakeholders would require a departure from current legislation and current guidance from U.S. EPA. As with any other new or modified requirements, staff would evaluate the changes and take the necessary actions to reflect these updates.

CAA and Legal Mandates

South Coast AQMD is required to adopt rules demonstrating compliance with all federal regulations and standards. PR 317.1 is needed to fulfill the CAA nonattainment fee obligations required by CAA Section 185.

California Environmental Quality Act

PR 317.1 has been developed as a government funding mechanism to satisfy federal requirements without involving a commitment to any specific project that could result in a potentially significant physical impact on the environment. Therefore, PR 317.1 is not considered a project within the meaning of the California Environmental Quality Act (CEQA) pursuant to CEQA Guidelines Section 15378 (b)(4).

Socioeconomic Impact Assessment

Approximately 319 facilities are subject to PR 317.1 requirements, with the majority belonging to the Utilities (NAICS 22) sector and with 89 facilities potentially qualifying as small businesses based on various small business definitions. The total present value of compliance costs associated with implementing PR 317.1 over the 2025 – 2035 period is estimated to be \$258.42 million and \$214.84 million with a 1 percent and 4 percent discount rate, respectively. This is assuming that no facility will reduce its emissions by 20 percent from the baseline except for emissions reductions already expected from implementation of Rule 1109.1. The annual average compliance cost of

PR 317.1 is estimated to be \$25.07 million. The analysis projects 81 net jobs foregone annually on average from the period of 2025 to 2035 in the four-county economy, relative to the baseline scenario. The Final Socioeconomic Impact Assessment is included in Attachment H of this Board package.

Implementation Resource Impacts

Staff anticipates implementation of PR 317.1 will result in significant resource impacts:

1) An initial evaluation of each major stationary source's emissions is needed to determine applicability and baseline emissions; 2) Subsequent annual evaluations would be required to determine the annual CAA nonattainment fee for each major stationary source; 3) Evaluations needed for facilities that voluntarily submit requests for challenging applicability, challenging baseline emissions, establishing alternative baseline emissions, or a Rule 317.1 Exclusion Plan; and 4) Costs associated with upgrading the web tool for the Annual Emissions Reporting program to accommodate the need for calculating and invoicing CAA nonattainment fees. While PR 317.1 includes cost recovery for the evaluations of either alternative baseline emissions or Rule 317.1 Exclusion Plans, there is no existing cost allocated to implement other elements of PR 317.1. Instead, cost recovery for implementation of PR 317.1 is expected through future reimbursement from CAA nonattainment fees collected. Resource impacts are expected in various divisions including Planning, Rule Development and Implementation, Engineering and Permitting, Compliance and Enforcement, Finance, and Information Management. At this time, no funds have been reserved for administration and implementation of PR 317.1. Additional resources or staffing might be requested in the future.

SUMMARY OF PROPOSAL

Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards

Purpose

- Implement federal Clean Air Act (CAA) section 185 requirements for nonattainment areas classified as “severe” or “extreme” for the 1997 or 2008 8-hour ozone standards

Applicability

- Any Major Stationary Sources of VOC and/or NO_x in the South Coast Air Basin or Coachella Valley if and when the U.S. EPA makes a final finding that the area has failed to attain the 1997 or 2008 8-hour ozone standards

Requirements - Fee Assessment

- Specifies that the Executive Officer will assess the CAA Nonattainment Fees
- Determines CAA Nonattainment Fees based on each excess ton of VOC and/or NO_x emissions above 80% of their Baseline Emissions or Alternative Baseline Emissions

Requirements - Annual Reporting and Payment

- Establishes emissions reporting requirements which will be used to determine fee obligations
- Establishes payment due dates
 - Initial invoice: due date is 365 days from invoice issuance
 - Subsequent invoice: due date is December 15th of the year of invoice or no later than 75 days from invoice issuance, whichever is later

Process of Challenging Rule Applicability or Baseline Emissions

- Facility may challenge applicability or Baseline Emissions no later than 90 days from noticing

Alternative Baseline Emissions

- Establishes the requirements for a Major Stationary Source that elects to use Alternative Baseline Emissions instead of the applicable Baseline Emissions.

Exemptions

- Establishes that the CAA Nonattainment Fees will cease during an extension year or when the area attains the standard
- Establishes a regulatory pathway for facilities that no longer meet the definition of a Major Stationary Source through a Rule 317.1 Exclusion Plan.

ATTACHMENT B

KEY ISSUES AND RESPONSES

Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards
<p>Throughout the rulemaking process, staff has worked with stakeholders to resolve many issues, while ensuring PR 317.1 would be approvable by the U.S. EPA. Stakeholders have continued to raise a concern that PR 317.1 would still require fee collection in cases where facilities are no longer required to pay nonattainment fee due to potential changes in the CAA or the implementation guidance.</p> <p>The concern presented by the stakeholders would require a departure from current legislation or guidance from the U.S. EPA. As with any other new or modified requirements, staff would evaluate the updates and take any necessary actions to reflect these updates, if appropriate. Due to the uncertainty regarding a prospective modification, it is not possible to develop appropriate rule language.</p>

RESOLUTION NO. 24-____

A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) determining that Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards is not considered a project subject to the California Environmental Quality Act.

A Resolution of the South Coast AQMD Governing Board adopting Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards.

WHEREAS, the South Coast AQMD Governing Board finds and determines that Proposed Rule 317.1, which has been developed as a government funding mechanism to satisfy federal requirements without involving a commitment to any specific project that could result in a potentially significant physical impact on the environment, is not considered a project within the meaning of the California Environmental Quality Act (CEQA) pursuant to CEQA Guidelines Section 15378 (b)(4); and

WHEREAS, Proposed Rule 317.1 and supporting documentation, including but not limited to, the Final Staff Report, and the Final Socioeconomic Impact Assessment, were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the project; and

WHEREAS, the South Coast AQMD Governing Board finds and determines, taking into consideration the factors in Section (d)(4)(D) of the Governing Board Procedures (codified as Section 30.5(4)(D)(i) of the Administrative Code), that the modifications to Proposed Rule 317.1, since the notice of public hearing was published include: updates to subparagraph (c)(8)(C) to replace the typo of attainment year with the initial calendar year operating as a Major Stationary Source; clarification to paragraph (c)(10) that the CAA Nonattainment Fee is for each Applicable Ozone Standard; clarification that the Alternative Baseline Emissions used in paragraph (d)(2) shall be approved by the Executive Officer; clarification that the invoice amounts described in clause (d)(4)(A)(ii) are for CAA Nonattainment Fees; clarification in paragraph (d)(8) that the Alternative Baseline Emissions may not be used for any Fee Assessment Years prior to approval by the Executive Officer; clarification that the criteria specified in subparagraphs (d)(8)(B) and (d)(8)(D) must be met to use the Alternative Baseline Emissions regardless of whether such criteria are also included in U.S. EPA Alternative Baseline Emissions guidance; clarification under subparagraph (d)(8)(D) that the due date for additional information required by the U.S. EPA guidance will be no later than 120 days after the U.S. EPA issues such guidance; clarification of the timing for the cessation of fees under paragraph (e)(2); and grammatical updates and corrections of punctuations for clarity throughout. These revisions meet the same air quality objective and are not so substantial as to significantly affect the meaning of the proposed rule within the meaning

ATTACHMENT E

of Health and Safety Code Section 40726 because: (a) the changes do not impact emission reductions, (b) the changes do not affect the number or type of sources regulated by the proposed rule, (c) the changes are consistent with the information contained in the notice of public hearing, and (d) the consideration of the range of CEQA alternatives is not applicable because the proposed project is not subject to CEQA and therefore, alternatives are not required; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment for Proposed Rule 317.1, is consistent with the March 17, 1989 Governing Board Socioeconomic Resolution for rule adoption; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment for Proposed Rule 317.1 is consistent with the provisions of Health and Safety Code Sections 40440.8, and 40728.5; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 317.1 will result in increased costs to the affected industries, yet such costs are considered to be reasonable; and

WHEREAS, the South Coast AQMD Governing Board has actively considered the Final Socioeconomic Impact Assessment and has made a good faith effort to minimize such impacts; and

WHEREAS, the South Coast AQMD staff conducted one Public Consultation Meeting regarding Proposed Rule 317.1 on April 3, 2024; and

WHEREAS, Proposed Rule 317.1 will be submitted to the California Air Resources Board (CARB) and the United States Environmental Protection Agency (U.S. EPA) for inclusion into the State Implementation Plan; and

WHEREAS, Health and Safety Code Section 40727 requires that prior to adopting, amending or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board has determined that a need exists to adopt Proposed Rule 317.1 to implement the requirements of the federal Clean Air Act (CAA) section 185 for the 1997 and 2008 8-hour ozone standards; and

WHEREAS, the South Coast AQMD Governing Board obtains its authority to adopt, amend or repeal rules and regulations from Sections 39002, 40000, 40001, 40440, 40441, 40506, 40510, 40522, 40702, 40725 through 40728, 41508, 41510, 41511, 41700, 42300 et seq. of the Health and Safety Code, and Federal Clean Air Act Section 116; and

ATTACHMENT E

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 317.1 is written or displayed so that the meanings can be easily understood by the persons directly affected by it; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 317.1 is in harmony with and not in conflict with or contradictory to, existing statutes, court decisions or state or federal regulations; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Rule 317.1 does not impose the same requirements as any existing state or federal regulations, and is necessary and proper to execute the powers and duties granted to, and imposed upon, South Coast AQMD; and

WHEREAS, the South Coast AQMD Governing Board, in adopting Proposed Rule 317.1, references the following statutes which the South Coast AQMD hereby implements, interprets, or makes specific: Health and Safety Code Sections 40000, 40440, 41511, and Federal Clean Air Act Section 185 (42 U.S.C. Section 7511d); and

WHEREAS, a public hearing has been properly noticed in accordance with the provisions of Health and Safety Code Sections 40725 and 40440.5; and

WHEREAS, the South Coast AQMD Governing Board has held a public hearing in accordance with all applicable provisions of state and federal law; and

WHEREAS, the South Coast AQMD specifies that the Assistant Deputy Executive Officer overseeing the development of Proposed Rule 317.1 as the custodian of the documents or other materials which constitute the record of proceedings upon which the adoption of the Proposed Rule 317.1 is based, which are located at the South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, California; and

NOW, THEREFORE BE IT RESOLVED, that the South Coast AQMD Governing Board directs staff to initiate a future public process for the spending of funds generated by Proposed Rule 317.1; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby adopt, pursuant to the authority granted by law, Proposed Rule 317.1, as set forth in the attached, and incorporated herein by reference; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board requests that Proposed Rule 317.1 be submitted for inclusion in the State Implementation Plan; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to forward a copy of this Resolution and Proposed Rule 317.1 to CARB for

ATTACHMENT E

approval and subsequent submittal to U.S. EPA for inclusion into the State Implementation Plan.

CLERK OF THE BOARDS

ATTACHMENT F

(~~Version 2024/05/07~~ Adopted [Date of Rule Adoption])

RULE 317.1 CLEAN AIR ACT NONATTAINMENT FEES FOR 8-HOUR OZONE STANDARDS

(a) Purpose

The purpose of this rule is to satisfy requirements as specified in Sections 182(d), 182(e), 182(f) and 185 of the 1990 amendments to the federal Clean Air Act (CAA) for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) and the 2008 8-hour ozone NAAQS.

(b) Applicability

- (1) This rule shall become applicable if and when the U.S. Environmental Protection Agency (EPA) makes a final finding that a Basin within the South Coast Air Quality Management District has failed to attain the 1997 8-hour ozone NAAQS or the 2008 8-hour ozone NAAQS by the applicable Attainment Date.
- (2) Except as otherwise provided as exempt in subdivision (e), this rule is applicable to any Major Stationary Source of Volatile Organic Compounds (VOC) and/or Nitrogen Oxides (NO_x) located in the Basin for which the U.S. EPA has made a final finding as described in paragraph (b)(1).
- (3) Except as otherwise provided as exempt in subdivision (e), this rule is applicable to any Major Stationary Source of VOC and/or NO_x located in the Basin during or after the Attainment Year for an Applicable Ozone sStandard.

(c) Definitions

For the purpose of this rule, the following definitions shall apply:

- (1) ACTUAL EMISSIONS means the mass of all emissions of VOC or NO_x at a Major Stationary Source during a calendar year reported to or amended by the Executive Officer through the South Coast AQMD Annual Emissions Reporting (AER) Program.
- (2) ACTUAL QUALIFYING EMISSIONS FOR BASELINE means the mass of emissions of VOC or NO_x at a Major Stationary Source used to calculate the Baseline Emissions. The Actual Qualifying Emissions For Baseline are Actual Emissions, excluding emissions that exceed limits specified in the permit(s), plan(s), applicable rules(s), and implementation plan(s), regardless of whether administratively allowed.
- (3) ALTERNATIVE BASELINE EMISSIONS means a Major Stationary Source's VOC or NO_x average annual Actual Emissions for twenty-four consecutive

months within up to the last ten (10) calendar years prior to and including the Attainment Year, excluding emissions that exceed limits specified in the permit(s), plan(s), applicable rules(s), and implementation plan(s), regardless of whether administratively allowed.

- (c) (4) ANNUAL CAA NONATTAINMENT FEE RATE means \$5,000 per ton (in 1990 dollars), adjusted for inflation annually, beginning in the year after 1990, by the percent change in consumer price index (CPI), if any, pursuant to CAA Sections 185(b)(3) and 502(b)(3)(B)(v).
- (5) APPLICABLE OZONE STANDARD means either the 1997 8-hour ozone NAAQS or 2008 8-hour ozone NAAQS, as applicable.
- (6) ATTAINMENT DATE means the U.S. EPA-approved date, established pursuant to the CAA, by which a Basin must attain a federal NAAQS. Where no such U.S. EPA approval exists, the date of the Basin's maximum statutory attainment date for that standard.
- (7) ATTAINMENT YEAR means the calendar year containing the Attainment Date.
- (8) BASELINE EMISSIONS means the mass of emissions calculated for VOC and/or NO_x, individually, in tons per year, for the determination of CAA Nonattainment Fee. Baseline Emissions for VOC and/or NO_x are calculated separately for each Applicable Ozone Standard, and as follows:
 - (A) For a Major Stationary Source that began operation as a Major Stationary Source prior to the Attainment Year, the Baseline Emissions are the lower of:
 - (i) Actual Qualifying Emissions For Baseline during the Attainment Year; or
 - (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s) during the Attainment Year.
 - (B) For a Major Stationary Source that begins operation as a Major Stationary Source during the Attainment Year, the Baseline Emissions are the lower of:
 - (i) Emissions during the Attainment Year based on either:
 - (I) Actual Qualifying Emissions For Baseline; or
 - (II) Actual Qualifying Emissions For Baseline adjusted by extrapolating operational data as a Major Stationary Source for the entire Attainment Year, provided the Major Stationary Source demonstrates through operational data

that emissions differ between operating as a Major Stationary Source and prior to operating as a Major Stationary Source; or

- (c) (8) (B) (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s) as a Major Stationary Source in the Attainment Year.

- (C) For a Major Stationary Source that begins operation as a Major Stationary Source after the Attainment Year, the Baseline Emissions is the lower of:

- (i) Emissions during the initial calendar year of operating as a Major Stationary Source based on either:

- (I) Actual Qualifying Emissions For Baseline; or
- (II) Actual Qualifying Emissions For Baseline adjusted by extrapolating operational data as a Major Stationary Source for the entire ~~Attainment Year~~ initial calendar year operating as a Major Stationary Source, provided the Major Stationary Source demonstrates through operational data that emissions differ between operating as a Major Stationary Source and prior to operating as a Major Stationary Source; or

- (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s), for the initial calendar year operating as a Major Stationary Source.

- (9) BASIN means either the South Coast Air Basin or Riverside County portion of the Salton Sea Air Basin (Coachella Valley). The boundaries of each Basin are as defined by 40 Code of Federal Regulations (CFR), Section 81.305.
- (10) CAA NONATTAINMENT FEE means the federally mandated ozone NAAQS nonattainment fee assessed to a Major Stationary Source for excess emissions of VOC and NOx air contaminants pursuant to Section 185 of the CAA. It is the summation of the annual VOC CAA Nonattainment Fee and the annual NOx CAA Nonattainment Fee for each Applicable Ozone Standard. The fee is assessed only for the pollutant(s) for which the facility qualifies as a Major Stationary Source.
- (11) EXTENSION YEAR means the year that the U.S. EPA grants, pursuant to Section 181(a)(5) of the CAA and upon the state's request, an extension of the Attainment Date.

- (12) FEE ASSESSMENT YEAR means the calendar year when emissions occurred for which the CAA Nonattainment Fee are being calculated and assessed under the provisions of this rule for each Applicable Ozone Standard.
- (c) (13) MAJOR STATIONARY SOURCE means a facility that emits or has the potential to emit VOC and/or NO_x emissions equal to or greater than the applicable major stationary source threshold, specified in CAA Sections 182(d), 182(e), or 182(f). The following types of emissions are not considered in determining whether a facility emits or has the potential to emit equal to or greater than the applicable major stationary source threshold:
 - (A) Fugitive Emissions of VOC or NO_x, unless the source belongs to one of the categories listed in paragraph 2 of the definition of major source in 40 CFR Part 70, Section 70.2.
 - (B) Emissions from the following on-road and off-road mobile equipment:
 - (i) Motor vehicle or vehicle as defined by the California Vehicle Code as it exists on [Date of Rule Adoption].
 - (ii) Marine vessel as defined by Health and Safety Code Section 39037.1 as it exists on [Date of Rule Adoption].
 - (iii) A motor vehicle or a marine vessel that uses one internal combustion engine to propel the motor vehicle or marine vessel, and the same engine to operate other equipment mounted on the motor vehicle or marine vessel.
 - (iv) Equipment that is mounted on a vehicle, motor vehicle or marine vessel if such equipment does not emit air contaminants.
 - (v) Asphalt pavement heaters (which are any mobile equipment used for the purposes of road maintenance and new road construction).
 - (vi) Mobile day tankers that only carry fuel oil with an organic vapor pressure of 5 mm Hg (0.1 psi) absolute or less at 21.1 °C (70 °F).
 - (C) Off-site emissions from portable equipment permitted to operate at various locations.
 - (D) Emissions from non-road engines, as defined by 40 CFR Part 1039, Section 1039.801.
- (14) NITROGEN OXIDES (NO_x) means the sum of nitric oxides and nitrogen dioxides calculated as nitrogen dioxide.
- (15) VOLATILE ORGANIC COMPOUNDS (VOC) means the sum of any VOC as defined by Rule 102 – Definition of Terms.

(d) Requirements

(1) Fee Assessment

The Executive Officer will assess the CAA Nonattainment Fee for each Applicable Ozone Standard:

(A) Beginning the calendar year after the Attainment Year for a:

- (i) Major Stationary Source that began operating as a Major Stationary Source prior to the Attainment Year; or
- (ii) Major Stationary Source that begins operating as a Major Stationary Source during the Attainment Year; or

(B) Beginning the calendar year after the calendar year used to establish Baseline Emissions for a Major Stationary Source that begins operating as a Major Stationary Source after the Attainment Year.

(2) Fee Determination

Beginning the calendar year after the applicable Attainment Year, the CAA Nonattainment Fee shall be the Annual CAA Nonattainment Fee Rate for the applicable Fee Assessment Year assessed per ton of Actual Emissions of VOC and/or NO_x during the Fee Assessment Year that exceed 80% of the Baseline Emissions or approved Alternative Baseline Emissions. For each Major Stationary Source existing during the Fee Assessment Year, the CAA Nonattainment Fee shall be calculated as follows:

VOC CAA Nonattainment Fee =

$$\text{Annual CAA Nonattainment Fee Rate} \times [A_V - (0.8 \times B_V)]$$

NO_x CAA Nonattainment Fee =

$$\text{Annual CAA Nonattainment Fee Rate} \times [A_N - (0.8 \times B_N)]$$

CAA Nonattainment Fee =

$$\text{NO}_x \text{ CAA Nonattainment Fee} + \text{VOC CAA Nonattainment Fee}$$

Where:

- For a Major Stationary Source of VOC:
 - A_V = Actual Emissions of VOC for the applicable Fee Assessment Year (in tons per year). If A_V is less than or equal to 80% of B_V , there shall be no VOC CAA Nonattainment Fee assessed for the Fee Assessment Year.
 - B_V = Baseline Emissions or approved Alternative Baseline Emissions for VOC (in tons per year).
- For a Major Stationary Source of NO_x:

- A_N = Actual Emissions of NO_x for the applicable Fee Assessment Year (in tons per year). If A_N is less than or equal to 80% of B_N , there shall be no NO_x CAA Nonattainment Fee assessed for the Fee Assessment Year.
- B_N = Baseline Emissions or approved Alternative Baseline Emissions for NO_x (in tons per year).

(d) (3) Annual Reporting and Payment

- (A) The owner or operator of a Major Stationary Source shall report all Actual Emissions annually.
- (B) The owner or operator of a Major Stationary Source existing during the Fee Assessment Year shall, for each applicable Fee Assessment Year, which includes the years following the Attainment Year and prior to the U.S. EPA making a final finding that a Basin has failed to attain the Applicable Ozone ~~s~~Standard, pay the appropriate CAA Nonattainment Fee, determined pursuant to paragraph (d)(2), regardless of whether the owner or operator received an invoice from the Executive Officer.

(4) Payment Due Date

- (A) If the Executive Officer has issued an invoice for the CAA Nonattainment Fee for a Fee Assessment Year, the owner or operator of a Major Stationary Source existing during the Fee Assessment Year shall submit full payment for:
 - (i) The invoice amount that includes the CAA Nonattainment Fee for the initial Fee Assessment Year for the Applicable Ozone Standard, no later than 365 days from the date the invoice is issued by the Executive Officer; and
 - (ii) Any other invoice amount for any CAA Nonattainment Fee except for the invoice amount described in clause (d)(4)(A)(i), either:
 - (I) No later than December 15th of the year the invoice is issued by the Executive Officer; or
 - (II) No later than 75 days from the date the invoice is issued by the Executive Officer, whichever is later.
- (B) If the Executive Officer has not issued an invoice for the CAA Nonattainment Fee for a Fee Assessment Year, the owner or operator of a Major Stationary Source existing during the Fee Assessment Year shall submit payment and the calculations used to determine the amount of payment, determined pursuant to paragraph (d)(2), for the applicable CAA

Nonattainment Fee for the Fee Assessment Year no later than December 15th of the second year following either:

- (d) (4) (B) (i) The calendar year the U.S. EPA makes a final finding that a Basin has failed to attain the Applicable Ozone Standard; or
- (ii) The Fee Assessment Year for the Applicable Ozone Standard, whichever is later.

(5) Failure to Pay Fees

If one-hundred twenty (120) days have elapsed since the payment due date and all CAA Nonattainment Fees have not been paid in full, the Executive Officer has the authority to take action to revoke all Permits to Operate for equipment issued to the owner or operator at the Major Stationary Source, as authorized in California Health and Safety Code Section 42307.

(6) Process of Challenging Rule Applicability

(A) No later than 90 days after a notice issued by the Executive Officer specifying a facility is subject to this rule for VOC and/or NO_x for an Applicable Ozone Standard, the owner or operator of a facility that elects to challenge the applicability shall provide evidence to the Executive Officer to demonstrate that the facility does not meet the definition of a Major Stationary Source.

(B) No later than 90 days before the payment due date of the CAA Nonattainment Fee for the initial Fee Assessment Year for the Applicable Ozone Standard, unless the owner or operator is notified that additional time is needed to investigate, the Executive Officer will:

- (i) Review the evidence submitted in subparagraph (d)(6)(A) and other available data; and
- (ii) Notify the owner or operator the final decision regarding the challenge submitted, pursuant to subparagraph (d)(6)(A), that the facility is subject to this rule or the facility is not subject to this rule.

(C) The owner or operator of a facility that challenges rule applicability pursuant to subparagraph (d)(6)(A) shall:

- (i) Remain subject to the rule unless and until the Executive Officer notifies the owner or operator that the facility is not subject to this rule; and
- (ii) Not be eligible to challenge rule applicability for VOC and/or NO_x for the Applicable Ozone Standard pursuant to subparagraph

(d)(6)(A), after the Executive Officer notifies the owner or operator that the facility is subject to this rule, pursuant to clause (d)(6)(B)(ii).

(d) (7) Process of Challenging Baseline Emissions

- (A) No later than 90 days after a notice issued by the Executive Officer specifying a Major Stationary Source's assigned Baseline Emissions for VOC and/or NOx for an Applicable Ozone Standard, the owner or operator of the Major Stationary Source that elects to challenge the assigned Baseline Emissions shall provide evidence to the Executive Officer that supports adjustment of the assigned Baseline Emissions.
- (B) No later than 90 days before the payment due date of the CAA Nonattainment Fee for the initial Fee Assessment Year for the Applicable Ozone Standard, unless the owner or operator is notified that additional time is needed to investigate, the Executive Officer will:
 - (i) Review the evidence submitted in subparagraph (d)(7)(A) and other available data; and
 - (ii) Notify the owner or operator the final decision regarding the challenge submitted, pursuant to subparagraph (d)(7)(A), to either retain the assigned Baseline Emissions or revise the Baseline Emissions.
- (C) The owner or operator of a Major Stationary Source that challenges the Major Stationary Source's assigned Baseline Emissions pursuant to subparagraph (d)(7)(A) shall:
 - (i) Remain subject to the applicable CAA Nonattainment Fee pursuant to paragraph (d)(2) using the assigned Baseline Emissions unless and until the Executive Officer provides notification for a revised Baseline Emission; and
 - (ii) Not be eligible to challenge the assigned Baseline Emissions for VOC and/or NOx for the Applicable Ozone Standard, pursuant to subparagraph (d)(7)(A), after the Executive Officer notifies the owner or operator of the determination that the assigned Baseline Emissions is retained or revised, pursuant to clause (d)(7)(B)(ii).

(8) Alternative Baseline Emissions

If the owner or operator of a Major Stationary Source requests to use Alternative Baseline Emissions to determine the CAA Nonattainment Fee for a Fee

Assessment Year, the following criteria shall be met prior to the payment due date for the Fee Assessment Year:

- (d) (8) (A) The U.S. EPA has issued guidance authorizing an alternative methodology for calculation of a Major Stationary Source's Baseline Emissions, pursuant to CAA Section 185(b)(2) for the Applicable Ozone Standard, that is consistent with the methodology specified in subparagraph (d)(8)(C) ~~and criteria specified in subparagraphs (d)(8)(B) and (d)(8)(D)~~;
- (B) The Major Stationary Source was a Major Stationary Source during the entirety of the Attainment Year;
- (C) No later than 180 days after the end of the Attainment Year or no later than 120 days after the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the applicable Attainment Date, whichever is later, the owner or operator of a Major Stationary Source submits to the Executive Officer an Alternative Baseline Emissions Request that contains the following:
 - (i) An Alternative Baseline Emissions Report including Actual Qualifying Emissions For Baseline, for each of the relevant ten (10) calendar years preceding and including the Attainment Year;
 - (ii) Identification of the twenty-four consecutive months when Actual Qualifying Emissions For Baseline represent typical operations:
 - (I) For a Major Stationary Source without an electrical steam generating unit(s), within the last relevant ten (10) calendar years prior to and including the Attainment Year; or
 - (II) For a Major Stationary Source with an electrical steam generating unit(s), within the last relevant five (5) calendar years prior to and including the Attainment Year or, with justification, the relevant five (5) calendar years prior to the aforementioned calendar years;
 - (iii) An analysis demonstrating that the Actual Qualifying Emissions For Baseline from the average of the twenty-four consecutive months, identified pursuant to clause (d)(8)(C)(ii), represent typical operations;
 - (iv) Analysis of adopted local, state, and federal rules or regulations that would have restricted the source's ability to either operate or emit a particular pollutant, had they been in effect during the consecutive twenty-four months selected;

- (d) (8) (C) (v) The average Actual Qualifying Emissions For Baseline of the twenty-four months, identified in clause (d)(8)(C)(ii), considering the impacts identified in clause (d)(8)(C)(iv); and
 - (vi) Certification, in writing, by the highest-ranking executive on site that the source’s emissions are irregular, cyclical, or otherwise vary significantly from year to year; and
 - ~~(vii) Any other information as required by the U.S. EPA guidance referenced in subparagraph (d)(8)(A); and~~
 - (D) No later than 120 days after the U.S. EPA issues the guidance referenced in subparagraph (d)(8)(A), the owner or operator of a Major Stationary Source electing to include additional information as required by the U.S. EPA guidance submits such information to the Executive Officer; and
 - ~~(DE)~~ The Executive Officer has provided a written approval of the Alternative Baseline Emissions Request based on evaluation of the information provided by the Major Stationary Source.
 - (9) Alternative Baseline Emissions Request Payment
 - (A) The owner or operator of a Major Stationary Source electing to submit an Alternative Baseline Emissions Request pursuant to subparagraph (d)(8)(C) shall pay an hourly staff rate equivalent to the applicable Plan Evaluation Fee for a Non-Title V Facility or Title V Facility, pursuant to Rule 306 – Plan Fees.
 - (B) No later than 60 days from the date the invoice is issued by the Executive Officer for the evaluation of the Alternative Baseline Emission Request, the owner or operator of a Major Stationary source shall submit full payment for the amount invoiced.
- (e) Exemptions
 - (1) Extension Year

The owner or operator of a Major Stationary Source shall not be required to remit the CAA Nonattainment Fee under this rule during any calendar year that is considered a Basin’s Extension Year for the Applicable Ozone Standard.
 - (2) Cessation of Fees

The owner or operator of a Major Stationary Source shall not be required to remit the CAA Nonattainment Fee for an Applicable Ozone Standard beginning the calendar year one when the Basin has been redesignated by the U.S. EPA to attainment for that Applicable Ozone Standard or, for a revoked Applicable Ozone

Standard, if the U.S. EPA has terminated the anti-backsliding requirement associated with the CAA Nonattainment Fee for the Applicable Ozone Standard. The CAA Nonattainment Fee will cease in the same calendar year as the redesignation or termination.

(e) (3) Enforceable Limitation through a Rule 317.1 Exclusion Plan

The owner or operator of a Major Stationary Source that elects to take a federally enforceable limitation such that the facility no longer meets the definition of a Major Stationary Source shall:

- (A) Submit a Rule 317.1 Exclusion Plan and pay fees specified in Rule 306 – Plan Fees;
- (B) Beginning the Fee Assessment Year after the calendar year in which the Executive Officer approves the Rule 317.1 Exclusion Plan, not be required to remit the applicable CAA Nonattainment Fee; and
- (C) Remit the applicable CAA Nonattainment Fee, pursuant to this rule, for all Fee Assessment Years for the Applicable Ozone Standard beginning the calendar year of exceedance of the emission limitation, if the emission limitation specified in the Rule 317.1 Exclusion Plan is exceeded.

EXECUTIVE SUMMARY

Section 185 was included in the 1990 amendments to the federal Clean Air Act (CAA) as a backstop provision for areas that are classified as “severe” or “extreme” and do not attain the national ambient air quality standards (NAAQS or standards) for ozone by their assigned attainment dates. Both volatile organic compounds (VOC) and nitrogen oxides (NOx) are precursors of ozone. Section 185 requires that major stationary sources of VOC and/or NOx in those nonattainment areas either reduce their emissions by 20% from a baseline amount or pay a CAA nonattainment fee. If a major stationary source does not reduce emissions by ~~below~~ 20% from a baseline amount, a nonattainment fee will be assessed annually for each excess ton of VOC and for each excess ton of NOx emissions above their respective 80% thresholds. The fee would be collected from all major stationary sources for each calendar year beginning after the attainment date and shall continue until the area is redesignated as an attainment area for that ozone standard. Additionally, the United States Environmental Protection Agency (U.S. EPA) is required to collect the fees if the state implementation plan (SIP) does not meet the requirements or if a state is not administering and enforcing CAA section 185. As such, South Coast AQMD ~~is required~~ needs to promulgate a rule to fulfill the obligations of CAA section 185.

The objective of Proposed Rule 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards (PR 317.1) is to implement CAA section 185 until the U.S. EPA declares that the nonattainment area is in attainment with the federal 8-hour standard for ozone. PR 317.1 establishes the regulatory pathway necessary to comply with the requirements of the CAA section 185 for the 1997 and 2008 8-hour ozone standards. The provisions of PR 317.1 would address when and how the CAA nonattainment fees would be assessed and collected.

1.1. INTRODUCTION

The 1990 amendments to the federal Clean Air Act (CAA) require the United States Environmental Protection Agency (U.S. EPA) to establish national ambient air quality standards (NAAQS or standards) for various air pollutants to be protective of human health and the environment. The CAA requires the U.S. EPA to designate areas across the nation as meeting (attainment) or not meeting (nonattainment) the standard.¹ As shown in Figure 1-1, areas not meeting the ozone standards are designated as nonattainment areas and are classified (e.g., “extreme,” “severe,” “serious,” “moderate,” or “marginal”) based on their exceedance level for each standard.

Figure 1-1
U.S. EPA Nonattainment Area Designations

In 1979, the U.S. EPA approved a 1-hour ozone standard (120 ppb) that was replaced in 1997 with a more stringent 8-hour ozone standard (80 ppb). The U.S. EPA subsequently revoked the 1-hour standard entirely effective June 15, 2005. The 8-hour ozone standard was subsequently lowered to 75 ppb in 2008 and to 70 ppb in 2015. The U.S. EPA subsequently revoked the 1997 8-hour ozone standard (80 ppb), effective April 6, 2015, as it was inadequate for protecting public health, but the U.S. EPA still requires adherence due to anti-backsliding measures.

Even though, pursuant to 40 CFR 51.1105(d), CAA sections 181(b)(2) and 179(c) no longer obligate the U.S. EPA to determine whether an area has attained the revoked 1997 8-hour ozone standard by the area’s attainment date, the U.S. EPA is still required to determine whether an area has attained a revoked standard by the area’s attainment date. The purpose of the U.S. EPA determination is to address the applicable requirements for nonattainment contingency measures and CAA section 185 fee programs, such as that of PR 317.1, solely for anti-backsliding purposes.^{2,3} For a revoked standard, an area may submit a request for redesignation accompanied by a maintenance plan, at which point the U.S. EPA would perform a “functional redesignation.”

The jurisdiction of the South Coast AQMD covers (Figure 1-2) an area of approximately 10,743 square miles, consisting of the South Coast Air Basin, and the Riverside County portions of the Salton Sea Air Basin (SSAB, also referred to as Coachella Valley Planning Area or Coachella Valley) and the Mojave Desert Air Basin (MDAB). The boundaries of each air basin are defined in 40 Code of Federal Regulations Section 81.305.⁴ The South Coast Air Basin, which is a sub-region of the South Coast AQMD’s jurisdiction, is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto mountains to the north and east. It includes all

of Orange County and major portions of Los Angeles, Riverside, and San Bernardino counties. The Coachella Valley (Riverside County portion of the SSAB) is a federal nonattainment area that is part of a sub-region of Riverside County in the SSAB that is bounded by the San Jacinto Mountains to the west and the eastern boundary of the Coachella Valley. The Riverside County portion of the MDAB within the South Coast AQMD jurisdiction is bounded by the eastern boundary of the Coachella Valley in the west and spans eastward to the Palo Verde Valley. The SSAB and MDAB were previously included in a single large basin called the Southeast Desert Air Basin (SEDAB).

**Figure 1-2
Regions in South Coast AQMD’s Jurisdiction**

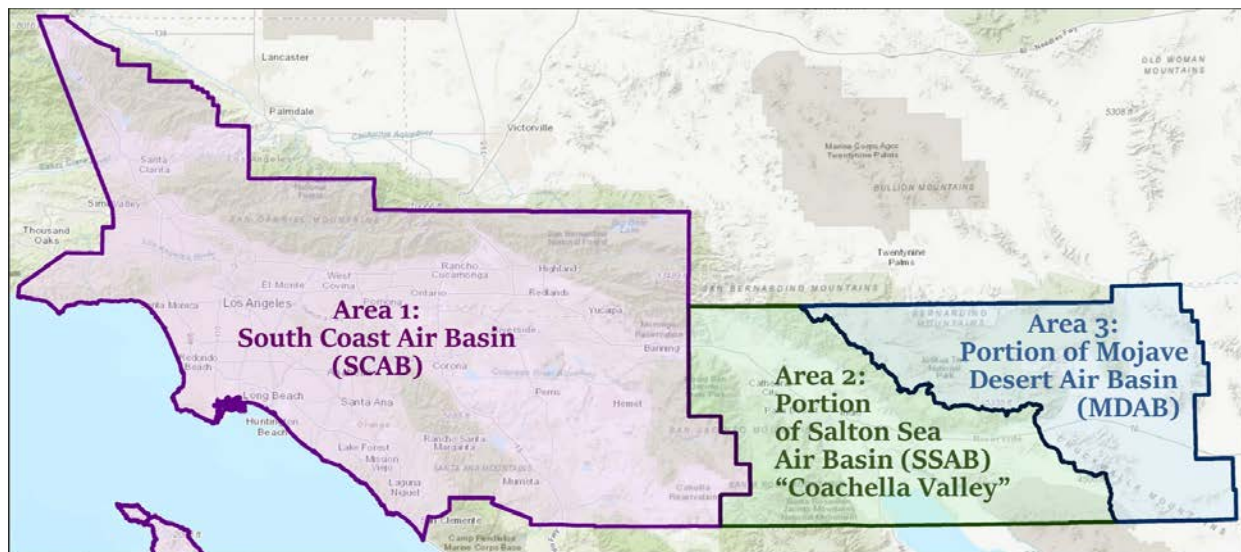

Table 1-1 shows the four U.S. EPA promulgated NAAQS for ozone as well as the attainment status and attainment deadline for each region in the South Coast AQMD’s jurisdiction. As the Riverside County portion of the MDAB is not classified as nonattainment for the 8-hour ozone standards, it is excluded from Table 1-1.^{5, 6, 7} For the 8-hour ozone standards, the South Coast Air Basin and Coachella Valley have been classified as “extreme” nonattainment for the 1997, 2008, and 2015 standards. As an “extreme” ozone nonattainment area for the 1997 8-hour ozone standard, the attainment deadline is June 15, 2024.

				Coachella Valley	Extreme Nonattainment ³	08/03/2038 ³

¹ South Coast AQMD portion of MDAB is designated as unclassifiable.

² U.S. EPA. (04/15/2015). Finding of Attainment in 80 FR 20166. <https://www.govinfo.gov/content/pkg/FR-2015-04-15/pdf/2015-08582.pdf>.

³ Voluntary reclassification to “extreme” nonattainment is pending U.S. EPA approval and would allow 5 more years to attain the standard.

1.2. OZONE TRENDS AND EMISSIONS SOURCES

1.2.1. Ozone Trends

Despite improvements in cleaner technology and strict regulations that have reduced ozone levels since their peak in the mid-twentieth century, ozone levels have remained high over the past decade. This trend is due to the changes in climate and other weather conditions such as the increase in hot stagnant days that can lead to the formation of ozone that have been experienced in recent years. Although the Coachella Valley has reached attainment with the 1-hour ozone standard, the Coachella Valley and SCAB have not yet reached attainment with any of the three 8-hour standards (Figure 1-3). Attainment with the 1997 8-hour standard is due by June 15, 2024 and current ozone concentrations indicate ~~impart~~ that the South Coast AQMD will not be able to meet this deadline. Overall, air quality has improved and continued emissions reductions will be needed to further reduce ozone.

Figure 1-3
8-Hour Ozone Design Values¹

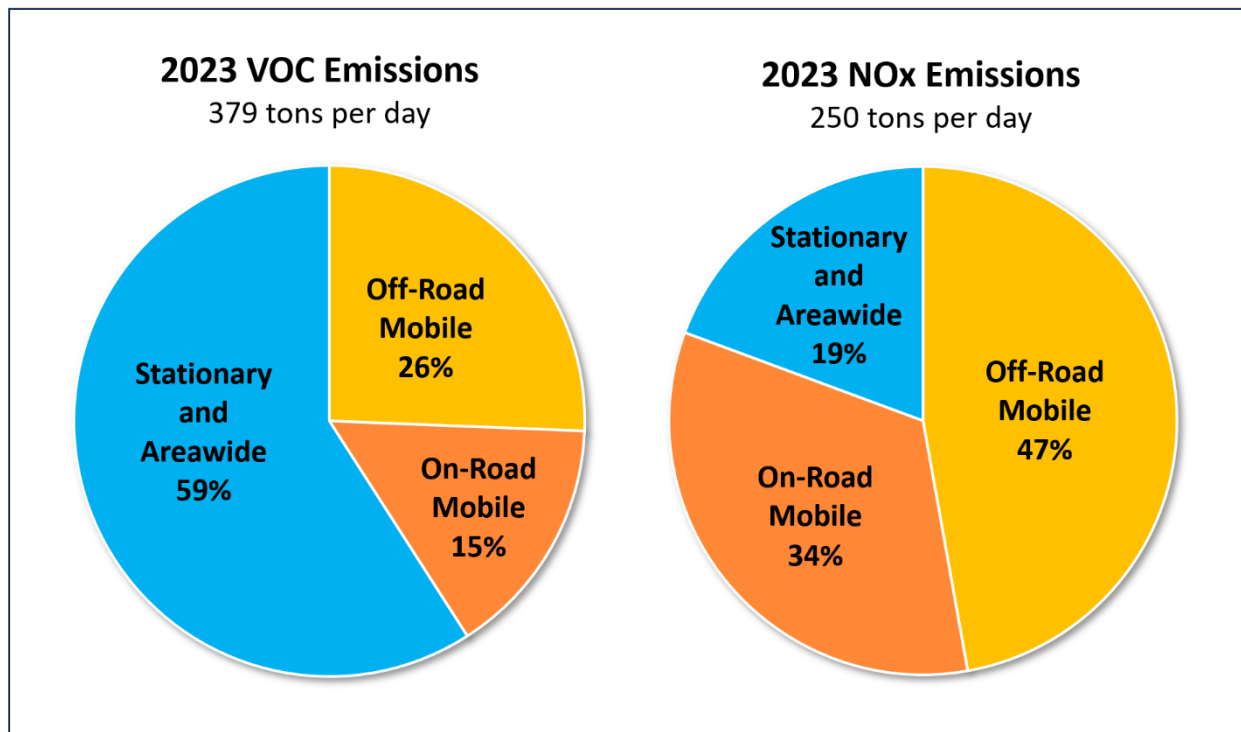

¹ Annual 4th highest 8-hour average concentration, averaged over 3 years.

1.2.2. Emissions Sources of Ozone

Unlike most other air pollutants, ground level ozone is not emitted directly into the atmosphere, but formed by the reaction of ozone precursors, nitrogen oxides (NO_x) and volatile organic

compounds (VOC), in the presence of sunlight. Figure 1-4 illustrates the calendar year 2023 emissions inventory for VOC and NO_x. It shows that 59% of the VOC emissions originate from stationary and area sources while 41% of the VOC emissions originate from mobile sources. Additionally, 19% of the NO_x emissions originate from stationary and area sources while 81% of the NO_x emissions originate from mobile sources. To attain the 8-hour ozone standards, the 2022 Air Quality Management Plan (AQMP) demonstrates that the primary pollutants that must be controlled are NO_x.⁸ Although mobile sources are responsible for more than 80% of the of smog-forming pollution, the majority of South Coast AQMD’s regulatory authority is for stationary sources with only limited authority to control mobile sources.

Figure 1-4
Source Contributions for Ozone Precursors

1.3. CLEAN AIR ACT SECTION 185 NONATTAINMENT FEES REQUIREMENTS

CAA section 185 requires each major stationary source of VOC and/or NO_x, ~~that is~~ located in “severe” or “extreme” ozone nonattainment area where the area has failed to attain the NAAQS by the applicable attainment date, to either reduce their emissions by 20% from a baseline amount or pay a fee.⁹ CAA nonattainment fees only apply to major stationary sources of NO_x and/or VOC. A fee will only apply to a major stationary source of that particular pollutant. If a major stationary

⁸ South Coast Air Quality Management District. (2022, December 2). *2022 Air Quality Management Plan*, Pgs. ES-4 and 2-47. <https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2022-air-quality-management-plan/final-2022-aqmp/final-2022-aqmp.pdf?sfvrsn=16>.

⁹ CAA. Part D - Plan Requirements for Nonattainment Areas. *Section 185 [Section 7511d] Enforcement for Severe and Extreme ozone nonattainment areas for failure to attain*. <https://www.govinfo.gov/content/pkg/USCODE-2013-title42/html/USCODE-2013-title42-chap85-subchapI-partD-subpart2-sec7511d.htm>.

source is not a major stationary source of VOC or NO_x, no CAA nonattainment fees will be required.

Major stationary sources are defined in CAA sections 182(d), or 182(e), and 182(f), as applicable.¹⁰ Within South Coast AQMD's jurisdiction a major stationary source is any facility which emits or has the potential to emit the following amounts or more:

Table 1–2
Major Stationary Source Emissions Thresholds for VOC and NO_x

Pollutant	SCAB (tons/year)	Riverside County Portion	
		SSAB (tons/year)	MDAB (tons/year)
Volatile Organic Compounds or Hydrocarbons (VOC)	10	10	100
Nitrogen Oxides (NO _x)	10	10	100

The CAA section 185 nonattainment fees will be calculated separately for each standard the area has failed to attain. The fee shall be collected for each calendar year beginning after the attainment date and shall continue until the area is redesignated as an attainment area for that ozone standard. The fee does not go away when an ozone standard is revoked or a new ozone standard is promulgated. Additionally, the U.S. EPA is required to collect the fees if the state implementation plan (SIP) does not meet the requirements or if a state is not administering and enforcing CAA section 185.

1.3.1. Baseline Emissions

Pursuant to CAA section 185, a source's baseline emissions must be the lower of the amount of actual or allowable emissions under the permit applicable to the source (or if no permit has been issued for the attainment year, the amount of emissions allowed under the applicable implementation plan) during the attainment year. A facility will have separate facility baseline emissions for each applicable pollutant, VOC and/or NO_x, for each of the applicable ozone standards the area has failed to attain.

1.3.2. Alternative Baseline Emissions

The CAA requires that the fee obligation be generally derived using a baseline amount based on applicable source emissions information in the attainment year. In some cases, the baseline emissions amount determined based on emissions in the attainment year may not be considered representative of the source's normal operating conditions and would not be appropriate for purposes of setting the CAA section 185 fee. In cases where a source's annual emissions are "irregular, cyclical, or otherwise vary significantly from year to year" the CAA provides that the U.S. EPA may issue guidance providing an acceptable alternative methodology for calculating an alternative baseline emissions amount.

On March 21, 2008, the U.S. EPA issued a memorandum outlining guidance for establishing alternative emissions baselines for areas that fail to attain the 1-hour ozone NAAQS by their

¹⁰ CAA. (2023, November 29). Part D - Plan Requirements for Nonattainment Areas. <https://www.epa.gov/clean-air-act-overview/clean-air-act-title-i-air-pollution-prevention-and-control-parts-through-d#id>.

attainment deadline.^{11, 12} The alternative methodology should provide an alternative baseline more representative of a source's normal operations.¹³ This alternative method is provided for States to use at their discretion and the adequacy of given source operating data for the selected time period is to be determined on a case-by-case basis by the reviewing authority.

The U.S. EPA has not issued alternative baseline guidance for the 8-hour ozone standards.

1.3.3. Fee Determination

The fee collected shall be the annual CAA section 185 fee rate for each major stationary source of VOC and/or NOx per ton of applicable VOC and/or NOx emitted by the source during the calendar year in excess of 80% ~~percent~~ of the baseline amount for that pollutant. In 1990, the fee rate was set as \$5,000. The fee rate must be annually adjusted beginning in the year after 1990 for inflation based on the consumer price index (CPI) for the most recent calendar year on an annual basis.¹⁴ The annual U.S. EPA fee rates are published annually in the *Clean Air Act Section 185 Fee Rates Memorandum*, and is \$11,922 for calendar year 2023.¹⁵

Figure 1-5

Example Calculation of Annual CAA Section 185 Fee Amount for a Major Stationary Source of VOC Emissions for the 1997 8-Hour Ozone Standard

$$\left[\text{Actual Annual Tons of VOC Emitted} - \left(0.8 \times \text{Baseline Annual Tons of VOC Emitted} \right) \right] \times \text{Annual U.S. EPA CAA §185 Fee Rate (\$/ton)} = \text{Annual CAA Nonattainment Fee for VOC}$$

Hypothetical Facility Calculation for VOCs

- **2024 Baseline Annual Tons of VOCs = 15.00**
- **2025 Annual Tons of VOCs = 13.00**
- **2025 Annual U.S. EPA CAA §185 Fee Rate = \$11,922.00/ton**

$$\text{Annual CAA Nonattainment Fee for VOC} = [13.00 - (0.8 \times 15.00)] \times \$11,922.00/\text{ton} = \$11,922.00$$

The example in Figure 1-5 is for the annual CAA nonattainment fee for VOC from a hypothetical major stationary source of VOC emissions that was subject to the rule prior to the attainment year for the 1997 8-hour ozone standard. The annual CAA nonattainment fee rate used in the calculation should be for the year in which the actual emissions occurred. If the annual actual emissions of VOC emissions in tons are less than or equal to 80% of the baseline emissions of VOC emissions

¹¹ For background on the 1-hour standard, its revocation and relationship to the section 185 fee provisions, see the following documents: 40 CFR 50.9(b); 69 FR 23951 at 23968 (April 30, 2004); 70 FR 44470 (August 3, 2005); and *South Coast Air Quality Management Dist. v. EPA*, 472 F.3d 882 (D.C. Cir. 2006).

¹² U.S. EPA. (2028, March 21). *Guidance on Establishing Emissions Baselines under Section 185 of the Clean Air Act (CAA) for Severe and Extreme Ozone Nonattainment Areas that Fail to Attain the 1-Hour Ozone NAAQ by their Attainment Memorandum*.
https://www3.epa.gov/ttn/naaqs/aqmguide/collection/cp2/20080321_harnett_emissions_baseline_185.pdf.

¹³ The U.S. EPA guidance in Footnote 12 provides a discussion regarding normal conditions.

¹⁴ See <http://www.bls.gov/cpi/> which provides a tool for calculating adjustments based on the CPI.

¹⁵ U.S. EPA. (2023, October 12). *U.S. EPA Clean Air Act Section 185 Fee Rates Memorandum*.
https://www.epa.gov/system/files/documents/2023-10/memorandum_sec-185-penalty-fees-for-year-2023_10-12-2023.pdf.

in tons, there shall be no VOC CAA nonattainment fee assessed for the fee assessment year. If a major stationary source is not a major stationary source for NOx emissions, there shall be no assessment of the CAA Nonattainment Fee for NOx emissions. The same methodology would be used to calculate the annual CAA nonattainment fee for NOx emissions. The total annual CAA nonattainment fees for a major stationary source of both VOC and NOx would be the summation of the annual CAA nonattainment fee for VOC emissions and the annual CAA nonattainment fee for NOx emissions.

The CAA nonattainment fees decrease as emissions decrease from the baseline emissions. The CAA nonattainment fees for a major stationary source of VOC or NOx would not be assessed for the fee assessment year or would cease for the applicable standard, in the following scenarios.:

CAA nonattainment fees would not be assessed for a fee assessment year when:

- Emissions are reduced by 20% from the baseline for the fee assessment year

CAA nonattainment fees would cease for the applicable standards when:

- Facility is no longer classified as a major stationary source of emissions,
- Area is redesignated as an attainment area for the ozone NAAQS, or
- U.S. EPA approves of an air district rule for CAA section 172(e) fee equivalency and the air district has adequate equivalency funds.

1.3.4. Alternative CAA Section 172(e) Fee Equivalency Approach

CAA section 172(e) requires the promulgation of requirements for an area which has not attained a relaxed standard. Such requirements shall provide for controls which are not less stringent than the controls applicable to areas designated nonattainment before such relaxation.¹⁶ The U.S. EPA issued a memorandum in 2010 noting that section 172(e) of the CAA allows for programs that are “not less stringent” than the section 185 program.¹⁷ Fee equivalent and emissions equivalent programs were identified as possible approaches under a section 172(e) construct. Fee equivalency may be approvable under the 172(e) concept if the program “clearly raises at least as much revenue as otherwise required Section 185 fee program [and] if the proceeds are spent to pay for emissions reductions” that will further improve ozone air quality. As the goal of the fee equivalency approach is to achieve further reductions to attain the standard, it should not rely on emissions reductions which are already obligated through an applicable SIP and should only include emissions reductions which are surplus to all the applicable SIPs.

1.4. IMPLEMENTATION OF CLEAN AIR ACT SECTION 185 NONATTAINMENT FEES REQUIREMENTS

1.4.1. Equivalency Approach for 1979 1-Hour Ozone Standard

The existing Rule 317 implements an alternative program to the section 185 fee program for the 1979 1-hour ozone standard. South Coast AQMD continues to submit *Rule 317 Fee Assessment*

¹⁶ CAA, Part D - Plan Requirements for Nonattainment Areas. *Section 172 [Section 7502] Nonattainment plan provisions in general.* <https://www.govinfo.gov/content/pkg/USCODE-2013-title42/html/USCODE-2013-title42-chap85-subchapI-partD-subpart1-sec7502.htm>.

¹⁷ U.S. EPA. (2010, January 5). *Guidance on Developing Fee Programs Required by Clean Air Act Section 185 for the 1-Hour Ozone NAAQS Memorandum.* https://www.epa.gov/sites/default/files/2015-09/documents/1hour_ozone_nonattainment_guidance.pdf.

Reconciliation Reports for failure to demonstrate attainment with this standard by the prior statutory attainment deadline of 11/15/2010. The South Coast AQMD's aggregate CAA nonattainment fees for all major stationary sources has been fully offset by the fee equivalency account. The South Coast AQMD fee equivalency account consists of funds for emissions reductions projects that are surplus to any SIP obligations for the 1979 1-hour ozone standard. In the event that the fee obligation is not fully offset, a backstop provision triggers adoption of a new rule for this standard. Rule 317 has been approved into the California's SIP.

1.4.2. Consideration of Equivalency Approach for 1997 Ozone Standard

The 2016 AQMP outlined the attainment strategies for the 1997 8-hour ozone standard, and it relied heavily on incentives to successfully achieve the emissions reductions needed to reach attainment with the 8-hour ozone NAAQS. CAA section 182(e)(5) emissions reductions account for a substantial portion of the NOx emissions reductions (approximately 200 tons per day) needed to reach attainment with the 8-hour ozone NAAQS. With such substantial emissions reduction obligations, adequate funding to utilize the fee equivalency approach to generate surplus emissions reductions for the 1997 8-hour standard is not available.

1.4.3. Consideration of Equivalency Approach for 2008 and 2015 Ozone Standard

The 2008 and 2015 8-hour ozone standards have not been revoked by the U.S. EPA. Consequently, the U.S. EPA would not allow use of this alternative approach for these standards and requires adherence to CAA section 185 though fee collection.

1.4.4. CAA Section 185 Compliance Pathway for 1997 and 2008 Ozone Standards

For the 1997 8-hour ozone standard, which is a revoked standard, the fee equivalency approach is allowed, but adequate funding to utilize the fee equivalency approach is not available. For the 2008 8-hour ozone standard, which is not a revoked standard, the South Coast AQMD may not utilize a fee equivalency approach. Consequently, CAA nonattainment fee collection is proposed for both of these 8-hour ozone standards. The summary of the ozone NAAQS and an overview of the compliance pathway is provided in Table 1-3.

Table 1-3
Ozone NAAQS Nonattainment Fee Summary and Compliance Pathway Overview

		Rule 317 – Clean Air Act Non-Attainment Fees	PR 317.1 – Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards		TBD

² Voluntary reclassification to “extreme” nonattainment is pending U.S. EPA approval.

1.5. TITLE V PERMIT PROGRAM

Title V is a federal program designed to standardize air quality permits and the permitting process for any facility which emits, or has the potential to emit (PTE) of, a criteria pollutant or hazardous air pollutant at levels equal to or greater than the major source thresholds. South Coast AQMD uses the U.S. EPA’s definition of a major source (40 CFR Part 70, Section 70.2), which excludes certain emissions from being considered in the facility’s PTE. In South Coast AQMD, this is implemented through Regulation XXX – Title V Permits, which issues federally enforceable permits to facilities required to be in the Title V permitting program. The South Coast AQMD Title V Program universe consists of approximately 320 facilities. These facilities are considered major sources of one or more pollutants described below:

- VOC
- NO_x
- Oxides of sulfur (SO_x)
- Carbon monoxide (CO)
- Particulate matter 10 micrometers or less in diameter (PM₁₀)
- Single hazardous air pollutant
- Combination of hazardous air pollutants

While the Title V permit program is a good starting point in determining the facilities affected by PR 317.1, it is important to note that not all facilities in the Title V permit program are considered Major Stationary Sources, for purposes of PR 317.1, and not all Major Stationary Sources as

defined in PR 317.1 have Title V permits. More details are provided in Chapter 2 when discussing the definition of a Major Stationary Source.

1.6. USE OF FUNDS

PR 317.1 is being developed to set the regulatory framework for collection of CAA nonattainment fees for the 1997 and 2008 ozone standards. The CAA does not provide direction on how these CAA nonattainment fees may be used. Throughout the rule development process, stakeholders have proposed some considerations for the use of funds that include, but are not limited to:

- Implementation and administration of PR 317.1
- Emission reduction projects for:
 - Environmental justice areas located near the major stationary sources,
 - AB 617 areas,
 - Residential sources,
 - Mobile sources, and
 - Stationary source facilities.

Overall, the CAA nonattainment fees collected by the South Coast AQMD would support South Coast AQMD's efforts to improve air quality. Staff anticipates:

- Substantial resources will be needed to properly implement PR 317.1,
- Significant uncertainty in the amount of the future fees the South Coast AQMD will receive and an inability to commit funds which are not guaranteed,
- The fees would not be potentially assessed until calendar year 2026 (for annual emissions in 2025) for the 1997 8-hour ozone standard and calendar year 2034 (for annual emissions in 2033) for the 2008 8-hour ozone standard,
- Readily available technologies will continue to advance, and
- South Coast AQMD emissions reductions strategies will continuously be evolving.

For the aforementioned reasons, guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking.

1.7. NEED FOR RULEMAKING

As shown in Table 1-3, a compliance deadline for rule development addressing the CAA nonattainment fees was not established for the revoked 1997 8-hour ozone standard, but a deadline of July 20, 2022 was established for the 2008 8-hour ozone standard. As the attainment deadline for the 1997 8-hour ozone standard is June 15, 2024, the CAA nonattainment fees for the standard will need to be assessed as early as calendar year 2026. Consequently, it is necessary to promptly adopt a rule demonstrating compliance with section 185 of the CAA for these two ozone standards and that pursuant to a Consent Decree, South Coast AQMD must present this rule to the Governing Board no later than October 31, 2024.

In addition, the U.S. EPA is required to collect the fees if the SIP does not meet the requirements or if a state is not administering and enforcing CAA section 185. If the U.S. EPA makes a finding, disapproval, or determination of a failure to submit certain state implementation plans required for the ozone NAAQS, a federal sanction clock timeline is triggered. Pursuant to CAA section 179, if U.S. EPA has not affirmatively determined that the state has made a complete submission for the areas within 18 months from the effective date of the U.S. EPA making a finding of failure,

disapproval, or determination, the U.S. EPA is to implement a “first sanction” which may be either 1 or 2 below:

1) Increased offset ratio:

The ratio of emissions reductions to increased emissions shall be at least 2 to 1 for a new or modified source or emissions unit for which a permit is required.

2) Highway sanctions:

The highway funding sanction will apply in accordance with CAA section 179(b)(1).

If the U.S. EPA has not affirmatively determined that the state has made a complete submission for the areas within 6 months from the “first sanction” being imposed, the U.S. EPA is to impose the remaining sanction and may withhold “all or part of the grants for support of air pollution planning and control programs.”¹⁸ The CAA section 110(c) requires that no later than 24 months (2 years) after the effective date of the U.S. EPA making a finding of failure to submit or a disapproval, the U.S. EPA must promulgate a federal implementation plan (FIP).

Rulemaking is needed to comply with the requirements of the CAA section 185 for the 1997 and 2008 8-hour ozone NAAQS. PR 317.1 provides a compliance pathway to meet such requirements, and will be submitted into the SIP to fulfill the CAA obligations.

1.8. AFFECTED INDUSTRIES/FACILITIES

As a conservative approach to identify potentially impacted facilities, all Title V Program facilities are assumed to be major stationary sources of VOC and/or NOx and subject to this rule. Based on the South Coast AQMD permit database, staff estimates that there are approximately 320 major stationary sources in the South Coast AQMD’s jurisdiction that would potentially be affected by PR 317.1. Additionally, based on an assessment of the most recent available AER data (2021) there are an additional 14 facilities that reported emitting more than 10 tons of VOC and/or NOx, but are not part of the Title V program. Some of these were fugitive emissions, which may be excluded for purposes of determining applicability for PR 317.1. A preliminary assessment identified that out of the 14 facilities, 2 facilities may still meet the definition of Major Stationary Source under PR 317.1 after excluding fugitive emissions. The number of facilities that would be impacted by this rule would be due to amount emitted in 2024 and beyond. As the amount emitted vary from year to year, these 2 facilities were not included in the ~~Draft~~ Socioeconomic Impact Assessment. The potentially impacted facilities have been identified either through the Title V permitting program or AER data and are included in Appendix A. Staff performed an assessment to determine if any of the Title V facilities qualify as a small business, as defined in Rule 102 – Definition of Terms, and determined that none of these facilities meet the criteria of a small business.¹⁹ There are 39 facilities which qualify for access to services from the South Coast AQMD’s Small Business Assistance Office and 89 facilities which qualify as a small business

¹⁸ CAA, Part D - Plan Requirements for Nonattainment Areas. *Section 179 (a) [Section 7509] Sanctions and Consequences of Failure to Attain for State Failure*. <https://www.govinfo.gov/content/pkg/USCODE-2013-title42/html/USCODE-2013-title42-chap85-subchapI-partD-subpart1-sec7509.htm>.

¹⁹ South Coast AQMD. (2020, January 10). *Rule 102 – Definition of Terms*. <https://www.aqmd.gov/docs/default-source/rule-book/reg-i/rule-102-definition-of-terms.pdf?sfvrsn=4>.

through the U.S. Small Business Administration. Title V permitting program facilities have been categorized by industry and are presented in Figure 1-6 below.

Figure 1-6
Projected Calendar Year 2025 Title V Facility Universe

¹ As only those facilities that are a major stationary source of VOC and/or NOx will be potentially impacted by PR 317.1, staff estimates that the number of facilities impacted will be fewer than the estimate provided in this PR 317.1 Staff Report.

² Public service facilities include general medical and surgical hospitals; sewage treatment; solid waste landfill; water supply and irrigation systems; natural gas distribution; regulation and administration of communications, electric, gas, and other utilities; and other general government support.

³ Refinery industries include petroleum refineries, petroleum bulk stations and terminals, pipeline transportation of refined petroleum products, and petroleum and petroleum products merchant wholesalers (except bulk stations and terminals).

1.9. PUBLIC PROCESS

The development of PR 317.1 has been a regional, multi-agency effort that includes South Coast AQMD, CARB, and the U.S. EPA. A PR 317.1 Working Group was formed to provide the public and stakeholders an opportunity to discuss important details about the proposed rule and provide staff with input during the rule development process. The Working Group is composed of a wide range of representatives from businesses, environmental groups, public agencies, and consultants.

Staff has held two (2) Working Group Meetings conducted in a virtual format using Zoom. The meetings were held on November 7, 2023 and February 7, 2024. Staff also met with interested stakeholders to discuss the proposed rule. A Public Consultation Meeting was held on April 3, 2024 to present PR 317.1 and receive public comments. Written comments relating to PR 317.1 were accepted through April 17, 2024. The comments and responses to these comments are located in Appendix B – Responses to Comments of this Staff Report. PR 317.1 was also presented at the Stationary Source Committee held on April 19, 2024 and ~~scheduled to be held on May 17, 2024.~~

The public hearing to consider adoption of PR 317.1 is scheduled for Friday, June 7, 2024, at 9 a.m. (subject to change) in the auditorium at the South Coast AQMD's Diamond Bar Headquarters and via a Zoom link that will be available in the June 7, 2024 Governing Board agenda, which will be released no later than 72 hours prior to the Public Hearing.

CHAPTER 2 - SUMMARY OF PROPOSED RULE 317.1

OVERVIEW OF PR 317.1

PROPOSED RULE 317.1

2.1. OVERVIEW OF PR 317.1

The objective of this rule is to implement CAA section 185 until the U.S. EPA declares that the nonattainment area is in attainment with the federal 8-hour standard for ozone. PR 317.1 accomplishes this by incorporating the requirements of CAA section 185 to establish the regulatory pathway necessary to comply with these requirements for the 1997 and 2008 8-hour ozone standards.

PR 317.1 would apply to a major stationary source of VOC and/or NO_x and would become applicable if and when the U.S. EPA makes a final finding that a Basin has failed to attain the 1997 8-hour ozone standard or the 2008 8-hour ozone standard by attainment deadlines of June 15, 2024 (1997 standard) and July 20, 2032 (2008 standard). For the reasons specified in Chapter 1 within section “1.4.4. CAA Section 185 Compliance Pathway for 1997 and 2008 Ozone Standards” of this PR 317.1 Staff Report CAA nonattainment fee collection is proposed for both of these 8-hour ozone standards.

Pursuant to CAA section 185, if an applicable Major Stationary Source does not reduce emissions below 20% from their Baseline Emissions, a CAA Nonattainment Fee will be assessed annually for each excess ton of VOC and for each excess ton of NO_x emissions above 80% of their Baseline Emissions. PR 317.1 includes the following subdivision rule structure for when and how the CAA Nonattainment Fees would be assessed and collected:

- (a) Purpose
- (b) Applicability
- (c) Definitions
- (d) Requirements
- (e) Exemptions

In the event the Congress amends or repeals section 185 of the CAA, or U.S. EPA modifies the guidance for CAA section 185 (e.g., no longer requiring fee equivalency programs to be surplus to the applicable SIP, allowing fee equivalency for unrevoked standards, etc.), the South Coast AQMD may open PR 317.1 for amendment.

2.2. PROPOSED RULE 317.1

2.2.1. Purpose – Subdivision (a)

The purpose of PR 317.1 is to meet the CAA requirements for areas which are classified as “severe” or “extreme” that have failed to meet the federal 1997 or 2008 8-hour ozone standards until the U.S. EPA declares that the nonattainment area is in attainment with the applicable 8-hour ozone standard.

2.2.2. Applicability – Subdivision (b)

This rule shall become applicable to any Major Stationary Source of VOC and/or NO_x in the Basin if and when the U.S. EPA makes a final finding that the Basin has failed to attain the 1997 or 2008 8-hour ozone NAAQS by the applicable Attainment Dates of June 15, 2024 (1997 standard) and July 20, 2032 (2008 standard). Additional information on the U.S. EPA’s determination on whether an area has attained the revoked 1997 8-hour ozone standard is located in the “1.1. Introduction” section of Chapter 1 of this PR 317.1 Staff Report. Further discussion and

explanation of a Major Stationary Source is found later in the definition of a Major Stationary Source.

If the CAA Nonattainment Fee obligations for the 1997 and the 2008 8-hour ozone standards are in effect at the same time, a CAA Nonattainment Fee would be assessed for each 8-hour ozone standard.

2.2.3. Definitions – Subdivision (c)

PR 317.1 includes definitions for specific terms. These terms will be capitalized when they appear in the rule for easy identification of a defined term. Some of the definitions are based on definitions from existing South Coast AQMD rules with slight modifications, while other definitions are unique to PR 317.1. For certain key definitions, additional clarification is provided in this chapter below or in the specific provision where the definition is used. Please refer to PR 317.1 subdivision (c) for definitions used in the proposed rule.

- **ACTUAL EMISSIONS**

Actual Emissions are emissions at the Major Stationary Source which are required to be reported through the South Coast AQMD's Annual Emissions Reporting (AER) program pursuant to Rule 301 – Permitting and Associated Fees (Rule 301) paragraph (e)(2).^{20, 21, 22} The VOC and NOx emissions reported in the AER program will be used to determine the Major Stationary Source's Actual Emissions for the respective calendar year. As described later under the definition of Major Stationary Source, a facility's Actual Emissions might include more emissions than those to be considered when determining PR 317.1 applicability. Annual Emissions should be reported pursuant to "South Coast Air Quality Management District. Annual Emissions Reporting, Reporting Tool - Frequently Asked Questions."²³ In anticipation of implementing PR 317.1, the Annual Emission Reporting Tool – Frequently Asked Questions will be updated prior to the initial Fee Assessment Year to incorporate the changes, including, but not limited to:

- List any additional emission categories that would be required to be reported from sources at the Major Stationary Source (e.g. portable equipment registered under the Statewide Portable Equipment Registration Program (PERP), clean air solvents, architectural coatings, and emissions from charbroilers and deep fat fryers operating by restaurants and eatery establishment directly servicing consumers)
- Clarification regarding the portion of emissions that would be required to be reported for a specified emission category for Major Stationary Sources.

²¹ For additional information regarding AER, see the following website: *Annual Emissions Reporting Overview Website*. <https://www.aqmd.gov/home/rules-compliance/compliance/annual-emission-reporting>.

²² For additional information on what to report through AER, see the following document: South Coast Air Quality Management District. *South Coast Air Quality Management District Annual Emissions Reporting, Reporting Tool - Frequently Asked Questions*. <https://www.aqmd.gov/docs/default-source/planning/annual-emission-reporting/frequently-asked-questions.pdf?sfvrsn=6>.

²³ South Coast Air Quality Management District. *South Coast Air Quality Management District Annual Emissions Reporting, Reporting Tool - Frequently Asked Questions*. <https://www.aqmd.gov/docs/default-source/planning/annual-emission-reporting/frequently-asked-questions.pdf?sfvrsn=6>.

Additional emissions categories or an additional portion of emissions categories that are currently not required to be reported under the AER program are anticipated to be only assessed a CAA Nonattainment Fee instead of paying both an annual emissions fee and CAA Nonattainment Fee.

- **ACTUAL QUALIFYING EMISSIONS FOR BASELINE**

The Actual Qualifying Emissions For Baseline may be used to determine the Baseline Emissions. The VOC and NO_x emissions reported in the AER program would be used to determine the Major Stationary Source's Actual Emissions for the respective calendar year. The Actual Qualifying Emissions For Baseline would exclude from Actual Emissions any emissions that exceed limits specified in the permit(s), plan(s), applicable rule(s), and implementation plan(s), regardless of whether administratively allowed. Types of emissions which will be excluded are those due to exceeding a limit that may have been administratively allowed including, but are not limited to breakdown relief granted pursuant to Rule 430 – Breakdown Provision and variances granted by the South Coast AQMD Hearing Board. The intent of this restriction is to prevent the inflation of Baseline Emissions through exceedances of requirements. Additionally, certain Actual Emissions that were excluded for purposes of determining PR 317.1 applicability would be included when determining the Actual Qualifying Emissions For Baseline.

Example of Actual Qualifying Emissions For Baseline Evaluation:

The following is an example to calculate the Actual Qualifying Emissions For Baseline for a Major Stationary Source of NO_x only:

- Actual Emissions: 20.00 tons of NO_x
- Actual Emissions due to Violation of Permits: 0.50 tons of NO_x
- Actual Emissions due to Violations of Rules: 0.75 tons of NO_x
- Actual Emissions due to Violations of Implementation Plans: 0.10 tons of NO_x
- Actual Emissions due to Breakdowns: 0.03 tons of NO_x
- Actual Emissions due to Variances: 0.05 tons of NO_x
- **Actual Qualifying Emissions For Baseline:**
 $20.00 \text{ tons} - 0.50 \text{ tons} - 0.75 \text{ tons} - 0.10 \text{ tons} - 0.03 \text{ tons} - 0.05 \text{ tons} = 18.57 \text{ tons}$

If a facility is both a Major Stationary Source of NO_x and a Major Stationary Source of VOCs, the above determination should be performed separately for both NO_x and VOCs.

- **ANNUAL CAA NONATTAINMENT FEE RATE**

The Annual CAA Nonattainment Fee Rate is the amount assessed per ton of VOC and/or NO_x that exceeds 80% of the applicable Baseline Emissions. In 1990, the CAA section 185(b)(2) annual U.S. EPA fee rate was set as \$5,000 per ton of VOC and/or NO_x emitted by the Major Stationary Source during the calendar year in excess of 80% ~~percent~~ of the ~~share~~ Baseline Emissions. The fee must be annually adjusted beginning in the year after 1990 for inflation based on the consumer price index (CPI) for the most recent calendar year on an annual basis.²⁴ The U.S EPA fee rates are published annually in the *Clean Air Act Section 185 Fee Rates Memorandum*.²⁵

²⁴ See <http://www.bls.gov/cpi/> which provides a tool for calculating adjustments based on the CPI.

²⁵ U.S. EPA Clean Air Act Section 185 Fee Rates Memorandum:
https://www.epa.gov/system/files/documents/2023-10/memorandum_sec-185-penalty-fees-for-year-2023_10-12-2023.pdf.

- **BASELINE EMISSIONS**

This definition is consistent with the CAA requirements of section 185 (b)(2). The method to calculate the Baseline Emissions depends on when the Major Stationary Source begins operating as a Major Stationary Source.

A Major Stationary Source will be assigned separate Baseline Emissions for each applicable pollutant, VOC and/or NO_x, for each of the Applicable Ozone Standards the Basin has failed to attain. Table 2-1 summarizes which subparagraph of the Baseline Emissions definition is applicable based on when the Major Stationary Source began/begins operating.

Table 2-1
Baseline Emissions Applicable Rule Provision Based on when
Major Stationary Source Begins Operation

Rule Provision	(c)(8)(A)	(c)(8)(B)	(c)(8)(C)
Began/begins operations as a Major Stationary Source	As of beginning of Attainment Year	During Attainment Year	After Attainment Year

For each Major Stationary Source, the Baseline Emissions for subparagraphs (c)(8)(A), (c)(8)(B), and (c)(8)(C) shall be the lower of clauses (i) or (ii).

PR 317.1 clauses (c)(8)(A)(i), (c)(8)(B)(i), and (c)(8)(C)(i) use the Actual Qualifying Emissions For Baseline which do not exceed the allowable emissions to determine the Baseline Emissions. The Actual Qualifying Emissions For Baseline used to calculate the Baseline Emissions, as set forth in these clauses, will be limited to only include emissions allowed through permit(s), plan(s), applicable rule(s), and implementation plan(s), regardless of whether administratively allowed. The intent of this restriction is to prevent the inflation of Baseline Emissions through exceedances of requirements. These Baseline Emissions would include fugitive emissions from both permitted and unpermitted sources. An example of a permitted source of fugitive emissions is a storage tank, while examples of unpermitted sources are flanges and piping that connect storage tanks. Depending on when the Major Stationary Source began operations as a Major Stationary Source, the facility may also extrapolate the Actual Qualifying Emissions For Baseline over the entire initial year of operation as a Major Stationary Source.

PR 317.1 clauses (c)(8)(A)(ii), (c)(8)(B)(ii), and (c)(8)(C)(ii) are calculated based on the amount of allowable emissions. The allowable emissions used to calculate the Baseline Emissions, as set forth in these clauses, include emissions allowed through permit(s), plan(s), applicable rule(s), and implementation plan(s), regardless of whether administratively allowed.

The following is an example to determine a Major Stationary Source's Baseline Emissions.

- Facility has 21 units, each permitted to emit 1.00 ton
- The Actual Emissions for the year when Baseline Emissions are established is 12 tons with:
 - 20 units report emitting 0.50 tons

- 1 unit report emitting 2.00 tons (exceeding the permit limit of 1.00 ton)
- Baseline Emissions are based on either the PTE or Actual Qualifying Emissions for Baseline, whichever is lower:
 - Potential to Emit: 21 tons
 - Actual Qualifying Emissions for Baseline: $20 \times 0.50 \text{ tons} + 1.00 \text{ ton}$ (cannot exceed what is allowed beyond the permit limit) = 11.00 tons
 - Baseline Emissions would be 11.00 tons.

For the purposes of Baseline Emissions used to calculate the CAA Nonattainment Fees, adding existing equipment to a facility shall be evaluated the same as adding new equipment to an existing Major Stationary Source. If an existing Major Stationary Source adds new equipment or modifies their permit(s) to allow a higher throughput, the Major Stationary Source's Baseline Emissions will not change to reflect the increase in PTE or increase in Actual Emissions from this new equipment or increased throughput. The Baseline Emissions determination process will include the same considerations as determining a Facility under Rule 1302(p). If a facility that is a non-major stationary source merges with a Major Stationary Source located on contiguous properties such that the two facilities are considered one facility, the new Major Stationary Source (consisting of the non-major stationary source and original Major Stationary Source) shall retain the Baseline Emissions from the original Major Stationary Source and no new Baseline Emissions will be calculated. If a Major Stationary Source goes through a change of ownership process to incorporate another Major Stationary Source, the Baseline Emissions shall be that of the Major Stationary Source which is going through the change of ownership process to incorporate the other Major Stationary Source.

Example of Baseline Emissions Evaluation:

For example, during the attainment year, a new facility that is a Major Stationary Source due to PTE obtains permits in July for several boilers that have a PTE of 25 tons of NO_x per year. The facility turns on the equipment and begins operating the boilers in December and reports 2 tons for the month of December. Since it is a brand-new facility, no emissions have been generated from January to November and the Actual Emissions from these boilers would be 2 tons for the calendar year. If the Major Stationary Source is able to demonstrate operational difference between operating as a Major Stationary Source and prior to operating as a Major Stationary Source, it is allowed to extrapolate the data from December. Extrapolating the reported data for the entire year would result in 24 tons (12 months \times 2 tons) of adjusted emissions. As Baseline Emissions are based on the lower of either the Actual Qualifying Emissions For Baseline (24 tons) or the allowed emissions (25 tons) during the calendar year, the facility's Baseline Emissions would be 24 tons.

• MAJOR STATIONARY SOURCE

A Major Stationary Source is as described in CAA sections 182(d), 182(e), or 182(f), as applicable. The major stationary source thresholds established by these CAA requirements are summarized below:

- CAA section 182(d): Establishes a major stationary source threshold for areas classified as "severe" as a facility that emits or has the PTE of at least 25 tons per year of VOCs.
- CAA section 182 (e): Establishes a major stationary source threshold for areas classified as "extreme" as a facility that emits or has the PTE of at least 10 tons per year of VOCs.

- CAA section 182 (f): Establishes that the major stationary source threshold for sources of VOC shall also apply to sources of NOx.

Unlike other rules where the applicability is based on static characteristics, such as processes or equipment, facilities may modify their PTE or reduce emissions to no longer be subject to PR 317.1. As there is no set list of facilities that meet the definition of a Major Stationary Source per the respective sections of the CAA, South Coast AQMD will initially be using established programs to identify potential Major Stationary Sources for PR 317.1. The two programs that will be used are 1) Title V permitting program and 2) AER program.

As described in section “1.5. Title V Permit Program” of this Staff Report, a facility’s permits may have a PTE for VOC or NOx that would qualify the facility as a Major Stationary Source pursuant to CAA sections 182(d), 182(e), or 182(f) and therefore these facilities would be subject to PR 317.1. The types of emissions which are not to be considered in determining whether a facility exceeds an applicable threshold were established based closely on South Coast AQMD’s Title V permit program as described in the definition of Reported Emissions within Rule 3000 – General (Rule 3000). Under PR 317.1, the types of emissions that are not to be considered in determining whether a facility emits or has the PTE equal to or greater than the applicable major stationary source threshold are as follows:

(A) Fugitive emissions of VOC or NOx unless the source belongs to one of the categories listed in paragraph 2 of the definition of major source in 40 CFR Part 70, Section 70.2.

(B) Emissions from the following on-road and off-road mobile equipment:

- Motor vehicle or vehicle as defined by the California Vehicle Code as it exists on [Date of Rule Adoption]
- Marine vessel as defined by Health and Safety Code Section 39037.1 as it exists on [Date of Rule Adoption].
- A motor vehicle or a marine vessel that uses one internal combustion engine to propel the motor vehicle or marine vessel, and the same engine to operate other equipment mounted on the motor vehicle or marine vessel.
- Equipment that is mounted on a vehicle, motor vehicle or marine vessel if such equipment does not emit air contaminants.
- Asphalt pavement heaters (which are any mobile equipment used for the purposes of road maintenance and new road construction)
- Mobile day tankers that only carry fuel oil with an organic vapor pressure of 5 mm Hg (0.1 psi) absolute or less at 21.1 °C (70 °F).

(C) Off-site emissions from portable equipment permitted to operate at various locations.

(D) Emissions from non-road engines, as defined by 40 CFR Part 1039, Section 1039.801.²⁶

²⁶ The Rule 3000 definition of Reported Emissions excludes “[e]missions from non-road engines, as defined by 40 CFR Part 89, Section 89.2, manufactured on or after November 15, 1990 or another date subsequently determined by EPA” while the PR 317.1 definition of Major Stationary Source excludes “[e]missions from non-road engines, as defined by 40 CFR Part 1039~~89~~, Section ~~89~~1039.2801, manufactured on or after November 15, 1990 or another date subsequently determined by U.S. EPA.” 40 CFR Part 89, Section 89.2 was updated to 40 CFR Part 1039~~89~~, Section ~~89~~1039.2801. The new section houses the emissions standards

This list of exclusions applies to the PTE as well as the facility's emissions. The emissions categories used to establish Major Stationary Source applicability are not the same as those used to establish Actual Emissions, Actual Qualifying Emissions for Baseline, Baseline Emissions, or Alternative Baseline Emissions and are not used in the calculation of the CAA Nonattainment Fees. The AER program reported emissions are more comprehensive than the emissions that need to be considered for PR 317.1 applicability. For example, fugitive emissions are reported in the AER program but fugitive emissions, except if the source belongs to one of the categories listed in 40 CFR Part 70, Section 70.2, would be excluded from PR 317.1 emissions for applicability purposes. It is important for facilities to review the amount of VOC and/or NO_x emitted and the PTE of VOC and/or NO_x for applicability in PR 317.1 to confirm if they are subject to this rule and if they will be required to pay CAA Nonattainment Fees. In addition, as described earlier in Chapter 2, the AER program requires the annual reporting of emissions that include NO_x and VOC from facilities that exceed specific reporting thresholds. The AER program requires facilities to report all emissions, including those that would be exempt or excluded from a facility's PTE. The reporting threshold for NO_x and VOC is four tons per year, which is lower than the Major Stationary Source threshold specified in the CAA. Further discussion on emissions reported through the AER program is located in the definition of Actual Emissions.

Staff will review facilities with a Title V permit and data submitted via the AER program as a starting point to identify facilities subject to PR 317.1. This method would ensure that facilities aren't overlooked. Owners or operators of facilities should review the facility's emissions or PTE to confirm whether the facility is subject to PR 317.1.

A Major Stationary Source as defined in PR 317.1 may not be required to pay CAA Nonattainment Fees under the following scenario:

- For a Fee Assessment Year with 20% Emissions Reductions from Baseline:
 - Emissions are reduced by 20% from the Baseline Emissions or Alternative Baseline Emissions, as applicable, for the fee assessment year.

A non-major stationary source is not subject to PR 317.1. A facility may demonstrate to the satisfaction of the Executive Officer that the facility's VOC and/or NO_x emissions, as applicable, have been limited to below the applicable major source threshold by accepting an enforceable condition in an enforceable permit(s) or plan(s). As the CAA Nonattainment Fee is determined on a calendar year basis, a facility that is a Major Stationary Source for any time of the year will be considered as a Major Stationary Source for the Fee Assessment Year. Paragraph (e)(3) describes how facilities can submit a Rule 317.1 Exclusion Plan to take an enforceable limit to no longer be subject to CAA Nonattainment Fee for PR 317.1 purposes.

for non-road engines that were formally part of 40 CFR Part 89, Section 89.2. The U.S. EPA explanation for relocating these standards is included at 86 Federal Register 34308, 34342 (June 29, 2021). The date of manufacture is omitted as it is no longer part of U.S. EPA's definition.

Example of Major Stationary Source Applicability Evaluation:

The following is an example to evaluate if a facility is a Major Stationary Source of VOC only:

- PTE: 8.00 tons of VOC
- Actual Emissions: 15.00 tons of VOC, which includes 6.00 tons of fugitive emissions that should be excluded from determining applicability
- **Major Stationary Source Evaluation for PTE:**
8.00 tons (below 10 tons Major Stationary Source threshold)
- **Major Stationary Source Evaluation for Amount Emitted:**
15.00 tons – 6.00 tons = 9.00 tons (below 10 tons Major Stationary Source threshold)
- **Conclusion: The facility is a not Major Stationary Source pursuant to PR 317.1**

The evaluation must be done for both PTE and amount emitted. If a facility is not below the applicable Major Stationary Source threshold for both PTE and amount emitted, then the facility is a Major Stationary Source pursuant to PR 317.1. If a facility is being evaluated for being both a Major Stationary Source of NO_x and a Major Stationary Source of VOCs, the above determination should be performed separately for both NO_x and VOCs.

2.2.4. Requirements – Subdivision (d)

Subdivision (d) specifies the requirements for the owner or operator of a Major Stationary Source.

2.2.4.1. Fee Assessment Requirements – Paragraph (d)(1)

Paragraph (d)(1) specifies that the Executive Officer will assess the CAA Nonattainment Fees for each Applicable Ozone Standard. The CAA Nonattainment Fees would be assessed in years subsequent to the year used to establish the Baseline Emissions.

Example of Fee Assessment Requirements:

An example of each type of Major Stationary Source rule applicability is diagramed for the 1997 8-hour ozone standard in Table 2-2 below.

Table 2-2
1997 8-Hour Ozone NAAQS Assessment Years

Calendar Year	Begins Operation as a Major Stationary Source:		
	Prior to Beginning of Attainment Year	During Attainment Year	After Attainment Year (e.g., Calendar Year 2026)
	Rule Clause (d)(1)(A)(i)	Rule Clause (d)(1)(A)(ii)	Rule Paragraph (d)(1)(B)
2024	Attainment Year	Attainment Year	Attainment Year
	Baseline Year	Baseline Year	
2025	Assessment Year ¹	Assessment Year ¹	N/A
2026	Assessment Year	Assessment Year	Baseline Year
2027	Assessment Year	Assessment Year	Assessment Year ²
2028	Assessment Year	Assessment Year	Assessment Year

¹ For a Major Stationary Source that begins operating as a Major Stationary Source prior to or during the Attainment Year, the fee assessment will begin the calendar year after the Attainment Year.

² For a Major Stationary Source that begins operation after the Attainment Year, the fee assessment will begin the calendar year after the calendar year used to establish the Baseline Emissions.

2.2.4.2. Fee Determination Requirements – Paragraph (d)(2)

Paragraph (d)(2) establishes the calculation methodology for the CAA Nonattainment Fees. This calculation is consistent with the CAA requirements of section 185. The Annual CAA Nonattainment Fee Rate used in the calculation would be for the year when the Actual Emissions occurred and is adjusted annually for inflation based on the CPI. If the annual Actual Emissions of VOC and/or NOx emissions in tons are less than or equal to 80% of the Baseline Emissions of VOC and/or NOx emissions in tons, there would be no VOC and/or NOx CAA Nonattainment Fee assessed for that pollutant in the Fee Assessment Year. A Major Stationary Source that is not a Major Stationary Source of VOC and/or NOx emissions would not be assessed the CAA Nonattainment Fee for that particular pollutant. A facility which was a Major Stationary Source in the Fee Assessment Year, is required to pay CAA Nonattainment Fees for the year in which they met the PR 317.1 definition of a Major Stationary Source. The total annual CAA Nonattainment Fees for a Major Stationary Source of both VOC and NOx emissions would be the summation of the annual CAA Nonattainment Fee for VOC emissions and the annual CAA Nonattainment Fee for NOx emissions.

The fee is based on Actual Emissions, rounded to the hundredth ton (0.01 ton), that exceeds 80% of their Baseline Emissions. This avoids over or under assessing fees by rounding to the nearest whole ton. This approach is also consistent with the determination of Basin-wide debits for facilities in the annual Rule 317 Fee Equivalency Account Reconciliation Report. Additionally, this approach is consistent with the determination of AER fees where rounding is performed to the hundredth ton at the very end of the summation for a given device (emission source) and at the end for fee calculation. An Alternative Baseline may be substituted for the Baseline Emissions, provided the requirements of PR 317.1 paragraphs (d)(8) and (d)(9) are met.

Example of Fee Determination Requirements:

The following is an example to calculate the annual CAA Nonattainment Fee for a Major Stationary Source of NOx only:

- Baseline Emissions: 20.00 tons of NOx emissions
- 80% of Baseline Emissions: 16.00 tons of NOx emissions

- NO_x Actual Emissions in Fee Assessment Year: 23.40 tons of NO_x
- Emissions subject to CAA Nonattainment Fee: 23.40 tons – 16.00 tons = 7.40 tons of NO_x
- **CAA Nonattainment Fee: 7.40 tons × \$11,922.00/ton = \$88,222.80**

If a facility is both a Major Stationary Source of NO_x and a Major Stationary Source of VOCs, the above determination should be performed separately for both NO_x and VOCs.

2.2.4.3. Annual Reporting and Payment Requirements – Paragraph (d)(3)

Subparagraph (d)(3)(A) requires the reporting of all Actual Emissions annually. This is also required pursuant to Rule 301 paragraph (e)(2) which requires all Major Stationary Sources of VOC and/or NO_x, as defined in Rule 317 and other rule(s) implementing section 185 of the CAA, to annually report and pay the appropriate CAA Nonattainment Fees. The AER for the Major Stationary Sources will be used to determine the CAA Nonattainment Fee.

Subparagraph (d)(3)(B) requires the payment of the appropriate CAA Nonattainment Fees for each applicable Fee Assessment Year. This includes the years prior to the U.S. EPA making a final finding that a Basin has failed to attain the Applicable Ozone standard if such finding is delayed. An example of this requirement is depicted in Figure 2-1 of the next section (2.2.4.4. Payment Due Date Requirements – Paragraph [d](4)) to show that CAA Nonattainment Fee applies to years prior to the U.S. EPA making a finding of failure and after the Attainment Year. A calendar year would not be applicable if it was a calendar year prior to when the facility met the definition of a Major Stationary Source in this rule. A calendar year when a change of ownership occurs would be an applicable year to be assessed CAA Nonattainment Fees.

The owner or operator of the Major Stationary Source shall submit all Actual Emission reports and CAA Nonattainment Fee payment submittals required, regardless of whether the owner or operator received an invoice from the Executive Officer.

2.2.4.4. Payment Due Date Requirements – Paragraph (d)(4)

Paragraph (d)(4) specifies the payment due dates for CAA Nonattainment Fees.

The initial invoice will, at a minimum, bill for the initial year's CAA Nonattainment Fee, however, multiple subsequent years may be included if there is a delay in the finding of failure issued by the U.S. EPA. The initial invoice due date for the applicable standard is 365 days from the date the invoice is issued to provide the Major Stationary Source adequate time to incorporate the initial CAA Nonattainment Fees for the applicable standard into their annual budget.

Subsequent invoices will bill for the subsequent year's CAA Nonattainment Fees. Subsequent invoices are required to be paid no later than December 15th of the year of invoice issuance or no later than 75 days from the date the invoice was issued, whichever is later. After the initial year, a Major Stationary Source should be able to better estimate their future CAA Nonattainment Fees for incorporation into their annual budgets. Based on conversations with stakeholders, prior CAA Nonattainment Fees would be used to estimate future CAA Nonattainment Fees, which is similar to the practice for budgeting for AER emissions fees.

In the event the invoice is not received by the owner or operator, but the invoice was issued by the Executive Officer, the owner or operator would still be subject to the payment due date specified in subparagraph (d)(4)(A). Examples of why an invoice would not be received include: change in

responsible official, change in mailing location, or invoice being lost in the mail. For the first two examples, the facility is responsible for notifying the ~~District~~ South Coast AQMD of the change.

If the Executive Officer has not issued an invoice for the CAA Nonattainment Fees, the owner or operator of the Major Stationary Source would be required to submit payment on December 15th of the second year following either the calendar year when the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard or the Fee Assessment Year for the Applicable Ozone Standard, whichever is later. This requirement provides assurance that, in the event invoices are not issued, the CAA Nonattainment Fees will still be collected by the South Coast AQMD.

Example of Payment Due Date Requirements:

An example of a Major Stationary Source's reporting and invoice payment for the 1997 8-hour ozone standard from calendar years 2024 through 2030 is provided in Figure 2-1 below. The Attainment Year is 2024 for the 1997 8-hour ozone standard and the Major Stationary Source's Baseline Emissions would be established in 2024. In this example, the U.S. EPA will make a final finding of failure in calendar year 2027. The full payment of the initial invoice, issued on 11/1/27, would be due no later than 365 days later or 10/31/28. Full payment of subsequent invoices would be due either 75 days from issuance or December 15, whichever is later. In this example, years 2028 and 2029 had invoices issued more than 75 days earlier than December 15, therefore, the respective due dates are December 15. For the year 2030, the invoice is issued less than 75 days earlier than December 15, so the due date is 75 days after the date when the invoice was issued or December 31.

¹ +365 days from issuance.

² Later of 12/15 or +75 days from issuance.

2.2.4.5. Failure to Pay Fees Requirements – Paragraph (d)(5)

Violations of requirements set forth in PR 317.1 are subject to penalties as set forth under the Health and Safety Code. Additionally, Paragraph (d)(5) specifies that should one-hundred twenty (120) days lapse after the invoice due date, pursuant to the authority of in Health and Safety Code Section 42307, the Executive Officer has the authority to take action to revoke all Permits to

Operate for equipment on the premises.²⁷ In order for the South Coast AQMD to comply with CAA section 185, it is essential that the CAA Nonattainment Fees are administered and enforced. This requirement promotes compliance with payment of the CAA Nonattainment Fees. A similar requirement exists in Rule 301 to help ensure that all emission fees and surcharges are paid in full for the AER submittals.

2.2.4.6. Process of Challenging Rule Applicability – Paragraph (d)(6)

As described earlier in Chapter 2, the applicability of this rule is dependent on the facility's emissions, either PTE or emissions reported through the South Coast AQMD's AER program. Staff will review facilities with a Title V Program permit and data submitted via the AER program to identify potential facilities subject to PR 317.1. As a courtesy, after identification, the Executive Officer may send out notifications to owners or operators of facilities on the applicability to PR 317.1. Paragraph (d)(6) specifies that, when the Executive Officer sends notification that the facility is subject to Rule 317.1, the owner or operator of the facility shall have no later than 90 days from the notice issue date to challenge the rule applicability. This notice will allow the facility the opportunity to provide any additional information which may be relevant to this determination. The Executive Officer will review evidence and notify the facility of the rule applicability no later than 90 days before the payment due date of the CAA Nonattainment Fees for the initial Fee Assessment Year for the Applicable Ozone Standard, unless the Executive Officer informs the owner or operator of the facility that more time is needed. The facility shall remain subject to PR 317.1 until the Executive Officer has provided notification that they are no longer subject to PR 317.1. Additionally, once the Executive Officer has made a determination on the challenge that the facility meets the definition of a Major Stationary Source and is subject to PR 317.1, the Major Stationary Source shall not be eligible to challenge the rule applicability again. Failure to receive notice of rule applicability does not absolve the owner or operator of a Major Stationary Source of the duty to pay CAA Nonattainment Fees. A notice not contested by the applicable date shall be considered confirmed.

2.2.4.7. Process of Challenging of Baseline Emissions – Paragraph (d)(7)

Paragraph (d)(7) specifies that, when the Executive Officer sends notification to the Major Stationary Source specifying the assigned Baseline Emissions, the owner or operator of the Major Stationary Source shall have no later than 90 days from the notice issue date to challenge the Baseline Emissions. As a courtesy to the Major Stationary Sources, the Executive Officer may send out notifications of their assigned Baseline Emissions. This notice will allow the Major Stationary Source the opportunity to provide any additional information which may be relevant to this determination. The Executive Officer will review evidence and notify the facility of their Baseline Emissions no later than 90 days before the payment due date of the CAA Nonattainment Fees for the initial Fee Assessment Year for the Applicable Ozone Standard, unless the Executive Officer informs the owner or operator of the facility that more time is needed. The Major Stationary Source shall use the originally assigned Baseline Emissions until the Executive Office has provided notification of a revised Baseline Emissions. Additionally, the Major Stationary Source shall not be eligible to challenge the assigned Baseline Emissions after the Executive Officer has made a determination on the challenge to retain or revise the original Baseline Emissions. Failure to receive notice of Baseline Emissions, does not absolve the owner or operator of a Major

²⁷ California Code. *Health and Safety Code Section 42307*. <https://codes.findlaw.com/ca/health-and-safety-code/hsc-sect-42307/>.

Stationary Source of the duty to pay CAA Nonattainment Fees. A notice not contested by the applicable date shall be considered confirmed.

This process is independent from the process to seek Alternative Baseline Emissions. For Major Stationary Sources that seek to use Alternative Baseline Emissions, please refer to the next section.

2.2.4.8. Alternative Baseline Emissions Requirements – Paragraph (d)(8)

Paragraph (d)(8) establishes the requirements for a Major Stationary Source to use Alternative Baseline Emissions instead of the applicable Baseline Emissions to determine their CAA Nonattainment Fees for a Fee Assessment Year. The CAA requires that the fee obligation is generally derived using a Baseline Emissions amount based on applicable source emissions information in the attainment year. In some cases, the Baseline Emissions amount, when calculated in the Attainment Year as required pursuant to under CAA section 185(b)(2), may not be considered representative of the source's normal operating conditions and not appropriate for purposes of setting the CAA Nonattainment Fee. In cases where a source's annual emissions are "irregular, cyclical, or otherwise vary significantly from year to year" the CAA provides that the U.S. EPA may issue guidance providing an acceptable alternative methodology for calculating an Alternative Baseline Emissions amount. Subparagraphs (d)(8)(A) through (D) specify the ~~conditional requirements~~ criteria to be met to use Alternative Baseline Emissions. If all applicable requirements are not met, Alternative Baseline Emissions cannot be used.

This is a tentative pathway and is subject to U.S. EPA review and approval. Subparagraph (d)(8)(A) ~~requires~~ specifies a criterion that U.S. EPA ~~must~~ has issued a guidance approve ~~allowing~~ of an alternative methodology that is consistent with the methodology or requirements specified in subparagraphs (d)(8)(B) through (D). As discussed in Chapter 1, the U.S. EPA had approved an alternative methodology by issuing guidance for establishing Alternative Baseline Emissions for areas that fail to the attain the 1-hour ozone standard by their attainment deadline. However, this approach has not been approved for either of the 8-hour ozone standards. There is a need for an Alternative Baseline Emissions option and a request has been submitted with the U.S. EPA to allow Alternative Baseline Emissions for the 8-hour ozone standards.

Subparagraph (d)(8)(C) requires the submittal of information to demonstrate that a Major Stationary Source meets the criteria of qualifying to use Alternative Baseline Emissions in the form of an Alternative Baseline Emission Request. The requirements for Alternative Baseline Emissions Requests were incorporated and are consistent with prior U.S. EPA issued guidance for establishing alternative emissions baselines. The relevant years used for calculation of the Alternative Baseline Emissions shall only consist of years in which the facility was a Major Stationary Source pursuant to PR 317.1. The Executive Officer may only authorize the use of Alternative Baseline Emissions for calculation of a Major Stationary Source's CAA Nonattainment Fees if the U.S. EPA has issued guidance authorizing methodology for determining the Alternative Baseline Emissions which is consistent with the requirements of PR 317.1 subparagraph (d)(8)(C). Additionally, only a Major Stationary Source which was a Major Stationary Source during the attainment year may be assigned Alternative Baseline Emissions. Once the Executive Officer has provided a written approval of the Alternative Baseline Emissions Request, the Alternative Baseline Emissions would be used for the calculation of future CAA Nonattainment Fees.

An Alternative Baseline Emissions may only be requested within one-hundred twenty (180) days after the end of the Attainment Year or within one-hundred twenty (120) days after the U.S. EPA

makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the applicable Attainment Date, whichever is later. This is to allow sufficient timing to make a decision on the appropriate baseline level, which will be used to assess the CAA Nonattainment Fees. Additionally, if a Major Stationary Source elects to include additional information as required by the U.S. EPA guidance referenced in subparagraph (d)(8)(A), the additional information shall be submitted to the Executive Officer no later than 120 days after the issuance of such guidance.

2.2.4.9. Alternative Baseline Emissions Request Payment – Paragraph (d)(9)

Paragraph (d)(9) establishes the fee and invoice due date for evaluation of the Alternative Baseline Emissions Request. Since this request is optional and conditional, it is anticipated that only a small number of Major Stationary Sources would proceed with this request. The duration of evaluation time may also vary significantly from facility to facility, depending on completeness of information and complexity of data or facility's operations. The evaluation fee for the Alternative Baseline Emissions Request is equal to the total actual and reasonable time incurred by ~~District~~ South Coast AQMD staff for evaluation of the Alternative Baseline Emissions Request and does not exceed the ~~District's~~ South Coast AQMD's reasonable regulatory costs. As the U.S. EPA guidance has not been issued, there may or may not be additional steps as part of the evaluation, but based on the Harnett Memo,²⁸ the evaluation would consist of the following that include, but are not limited to:

- Reviewing facility supporting information that include:
 - Relevant Actual Emission data for the past five or ten years (depending on the type of facility)
 - Analysis of Actual Emissions of the 24-consecutive month selected
 - Analysis of applicable regulations
- Reviewing the request provided by the facility is consistent of the U.S. EPA guidance for alternate baseline emissions
- Providing a written approval

The evaluation is anticipated to be performed primarily by staff who are classified as an Air Quality Specialist and/or Air Quality Engineer II. This classification is equivalent to staff who would evaluate plans or permits. As there is no past precedent for how long an evaluation would take, the evaluation is assessed at an hourly staff evaluation rate that is equivalent to the applicable Plan Evaluation Fee for a Non-Title V Facility or Title V Facility, pursuant to Rule 306 – Plan Fees, and consistent with the hourly rate for the following, but not limited to:

- Requests to amend emissions report and refund of emission pursuant to Rule 301 subparagraph (e)(9)(A),
- California Environmental Quality Act (CEQA) assistance pursuant to Rule 301 subparagraph (j)(1)(A),
- Review of continuous emissions monitoring systems, fuel sulfur monitoring systems, and alternative continuous emissions monitoring systems pursuant to Rule 301 paragraph (j)(5),

²⁸ Guidance on Establishing Emissions Baselines under Section 185 of the Clean Air Act (CAA) for Severe and Extreme Ozone Nonattainment Areas that Fail to Attain the 1-hour Ozone NAAQS by their Attainment (epa.gov)

- National Emission Standard for Hazardous Air Pollutants evaluation pursuant to Rule 301 (q)(1), and
- ~~Expedited processing requests pursuant to Rule 301 subdivision (v).~~

2.2.5. Exemptions – Subdivision (e)

Subdivision (e) specifies the requirements for exemptions from either specific provisions of the rule or the entire rule.

2.2.5.1. Extension Year – Paragraph (e)(1)

Paragraph (e)(1) establishes that the CAA Nonattainment Fees are not applicable during an Extension Year. This exemption is consistent with CAA section 185(c) that provides an exception to the CAA Nonattainment Fee during an Extension Year which has been granted pursuant to CAA section 181(a)(5).²⁹ However, as there was more than one exceedance in SCAB in the year preceding the Extension Year of the 1997 8-hour ozone standard, the SCAB is not eligible to receive an Extension Year for this standard, but Coachella Valley may be eligible. The South Cost AQMD may be eligible to be granted Extension Years for the 2008 8-hour ozone standard.

2.2.5.2. Cessation of Fees – Paragraph (e)(2)

Paragraph (e)(2) specifies when the CAA Nonattainment Fees will cease. For the Applicable Ozone Standard, the CAA Nonattainment Fees will cease beginning the calendar year when the Basin has been redesignated by U.S. EPA to attainment for that Applicable Ozone Standard. For a revoked Applicable Ozone Standard, this will occur when the U.S. EPA has terminated the anti-backsliding requirement for the applicable standard.

2.2.5.3. Enforceable Limitation Through a Rule 317.1 Exclusion Plan – Paragraph (e)(3)

As described early in Chapter 2, a facility is a Major Stationary Source pursuant to PR 317.1 based on either the amount of VOC or NO_x emitted or the PTE. A facility would be required to demonstrate that it does not meet both criteria in order to no longer be considered a Major Stationary Source as defined in paragraph (c)(13). Currently, the Title V permit program allows for facilities to take such a limitation to exempt the facility from the Title V permit program. This can be a lengthy process due to the time and work needed to evaluate the permit application, ensure that the facility can comply with the facility-wide limitation, reduced equipment PTEs, and possibly convert the facility's Title V permit into individual command and control permits for all pieces of permitted equipment at the facility.

Paragraph (e)(3) establishes an alternate pathway for a Major Stationary Source to expedite this process by establishing limits in a Rule 317.1 Exclusion Plan that would ensure the facility would no longer meet the definition of a Major Stationary Source and therefore be exempt from CAA Nonattainment Fees. Some facilities have already taken similar permit conditions to limit the facility's Title V PTE or have an approved Title V Exclusion Plan to be exempted from the Title V permit program. Since PR 317.1 and the Title V permit program use the same definition of PTE and the permit condition taken by these facilities limits the total reported emissions from the facility by pollutant, the facilities exempted from the Title V permit program will not need to submit an application for a Rule 317.1 Exclusion Plan. Title V facilities may elect to submit an

²⁹ CAA. (2023, November 29). Part D - Plan Requirements for Nonattainment Areas. <https://www.epa.gov/clean-air-act-overview/clean-air-act-title-i-air-pollution-prevention-and-control-parts-through-d#id>.

application for a Rule 317.1 Exclusion Plan, which will allow the facility to not be subject to Rule 317.1, but still stay in the Title V permit program and retain their Title V permit. Subsequent permit applications may be filed to exempt the facility from the Title V permit program, which will take much longer to evaluate and process, due to the need to convert the Title V permit into individual command and control permits, each with the facility-wide limitation on total emissions from the facility. Facilities should also be aware that more than one permit application might be necessary (e.g. application for Title V permit modification) in addition to the application for the Rule 317.1 Exclusion Plan.

In the interim period between ~~plan~~-application and ~~plan~~-issuance of the Rule 317.1 Exclusion Plan, the facility would continue to meet the definition of a Major Stationary Source and be required to pay any applicable CAA Nonattainment Fees. The Rule 317.1 Exclusion Plan would be available to Title V facilities that previously had a permit condition limiting the facility's emissions, but the facility exceeded the limits established in the permit condition and the facility was brought back into the Title V permit program, provided the Title V facility can meet the criteria for approval. The Rule 317.1 Exclusion Plan would be subject the applicable plan fees, including but not limited to Plan Filing Fee and Plan Evaluation Fee, specified in Rule 306 – Plan Fees. The evaluation is anticipated to be performed primarily by staff who are classified as an Air Quality Specialist and/or Air Quality Engineer II. This classification is equivalent to staff who would evaluate plans or permits. As there is no past precedent for how long an evaluation would take, the evaluation is assessed at an hourly staff evaluation rate that is equivalent to the applicable Plan Evaluation Fee for a non-Title V Facility or Title V Facility, pursuant to Rule 306 – Plan Fees, and consistent with the hourly rate for other plans subject to Rule 306 fees. The Plan Filing Fee is \$207.19 for non-Title V facilities and \$259.66 for Title V facilities for fiscal year 2024-2025, and accounts for the time and materials for filing and receiving of a plan, such as work hours by administrative staff. The Plan Evaluation Fee is the amount equal to the total actual and reasonable time incurred by ~~District~~-South Coast AQMD staff for evaluation of a plan, assessed at the hourly rate of \$207.19 for non-Title V facilities and \$259.66 for Title V facilities for fiscal year 2024-2025. Other fees in Rule 306, such as Duplicate Plan Fee and Inspection Fee, might also apply.

While the facility would no longer be subject to the CAA Nonattainment Fees in PR 317.1, the Rule 317.1 Exclusion Plan will still require the reporting of Actual Emissions and recordkeeping to ensure that the facility does not exceed the limits and becomes a Major Stationary Source.

Currently, it is the ~~District's~~-South Coast AQMD's practice in the Title V permitting program to require that a facility's most recent five years of AER data do not exceed 80% of the major source threshold. This provides assurance that the facility will be able to comply with the reduced facility-wide emissions limitation. In a similar manner, approval of the Rule 317.1 Exclusion Plan will be based on, but not limited to, the following criteria:

- Demonstration that the facility's most recent five calendar years of emissions do not exceed 8 tons per year for ~~either both~~ VOC ~~or--and~~ NOx, subject to verification by South Coast AQMD staff. This demonstration will be based on the reported AERs at the time of submittal of the Rule 317.1 Exclusion Plan application, ~~but excluding the emissions listed in~~ inconsistent with this rule's definition of Major Stationary Source in paragraph (c)(13). This criterion provides assurance that the facility will be able to meet the emission limit(s) in the Rule 317.1 Exclusion Plan. The Rule 317.1 Exclusion Plan evaluation process will only consider finalized AER emissions. A facility requesting to amend past AERs for Rule 317.1 purposes, must complete the amendment process prior to submitting a Rule 317.1

Exclusion Plan. Facilities that were previously exempt from reporting through the AER program due to emissions below reporting thresholds will need to demonstrate through records that they were below AER thresholds. Facilities with insufficient records will need to base their emissions on PTE.

- Acceptance of a condition in the Rule 317.1 Exclusion Plan that limits the facility's total VOC and/or NOx emissions, ~~excluding the emissions listed inconsistent with~~ this rule's definition of Major Stationary Source in paragraph (c)(13) to less than the Major Stationary Source thresholds annually. Facilities may choose to take a total facility limit based on the emissions reported through the AER program.
- Acceptance of a condition in the Rule 317.1 Exclusion Plan that requires monthly recordkeeping of all VOC and/or NOx emissions, as applicable, at the facility. Records shall include equipment type, application number, emission factors, and all operating parameters used to calculate emissions subject to the rule.
- Acceptance of a condition in the Rule 317.1 Exclusion Plan that requires the facility to notify the Executive Officer if the facility's annual total VOC and/or NOx emissions exceeded the Major Stationary Source threshold, no later than February 1 of the following year.
- Acceptance of a condition in the Rule 317.1 Exclusion Plan that requires the records of the facility's monthly and annual emissions to be signed and certified for accuracy by the highest ranking individual responsible for compliance with ~~District~~ South Coast AQMD rules.
- Acceptance of a condition in the Rule 317.1 Exclusion Plan that requires the facility to report actual emissions annually either by using the AER program or another mechanism.
- Acceptance of a condition in the Rule 317.1 Exclusion Plan that requires the facility to keep all records in a format acceptable by the ~~District~~ South Coast AQMD and retained at the facility for a minimum of five years. Records shall be made available to ~~District~~ South Coast AQMD representatives upon request.

Note that the criteria reflect ~~the District~~ South Coast AQMD's current practices for implementing the Title V permitting program. Future changes might be reflected in the criteria used for the Rule 317.1 Exclusion Plans, as applicable.

In the event the facility fails to comply with any condition in the Rule 317.1 Exclusion Plan, the facility could be considered a Major Stationary Source and resume being required to or begin to be required to pay the applicable CAA Nonattainment Fee. If the emission(s) limitation is exceeded, the facility will be considered a Major Stationary Source and shall be required to pay the applicable CAA Nonattainment Fees beginning the calendar year of the exceedance or calendar year the emission(s) limitation is no longer enforceable.

A facility that exceeds the emission(s) limitation in the Rule 317.1 Exclusion Plan and becomes a Major Stationary Source will not be eligible to submit another application for a Rule 317.1 Exclusion Plan.

CHAPTER 3 – IMPACT ASSESSMENT

INTRODUCTION

AFFECTED SOURCES

EMISSIONS IMPACT

CALIFORNIA ENVIRONMENTAL QUALITY ACT
ASSESSMENT

SOCIOECONOMIC IMPACT ASSESSMENT

DRAFT FINDINGS UNDER HEALTH AND SAFETY CODE
SECTION 40727

3.1. INTRODUCTION

PR 317.1 is applicable to major stationary sources of VOC and/or NO_x, and will impact major stationary sources of VOC and/or NO_x located in South Coast Air Basin and the Coachella Valley.

3.2. AFFECTED SOURCES

The exact number of facilities subject to PR 317.1 is currently unknown because applicability will be determined from a combination of a subset of the entire universe of Title V program facilities and non-Title V program facilities with actual emissions data provided in 2024 and beyond, which 2024 AER data will not be available until the Spring of 2025. While not all Title V program facilities are Major Stationary Sources of VOC and/or NO_x, it is estimated that there are 316 facilities with Title V program permits in the SCAB and 3 facilities with Title V program permits in the Coachella Valley. As the Title V permitting program excludes or exempts certain emissions, it may not completely identify all the facilities that may be subject to PR 317.1. As indicated in Chapter 2, PR 317.1 would be applicable to a facility based on either the facility's PTE or the facility's actual emissions. Therefore, it is estimated that 2 additional facilities might be subject to this rule based on analysis of 2021 AER emissions of VOC and/or NO_x. To determine applicability to PR 317.1, a facility's emissions in 2024 and later will be used.

3.3. EMISSIONS IMPACT

Staff does not anticipate any direct emissions impact from PR 317.1 as it does not have any emissions requirements. However, as CAA section 185 requires that major stationary sources of VOC and/or NO_x in nonattainment areas either reduce their emissions by 20% from a baseline amount or pay a CAA nonattainment fee, PR 317.1 may incentivize Major Stationary Sources to reduce their emissions to below the baseline amount.

3.4. CALIFORNIA ENVIRONMENTAL QUALITY ACT ASSESSMENT

PR 317.1 has been developed as a government funding mechanism to satisfy federal requirements without involving a commitment to any specific project that could result in a potentially significant physical impact on the environment. Therefore, PR 317.1 is not considered a "project" within the meaning of the California Environmental Quality Act (CEQA) pursuant to CEQA Guidelines Section 15378 (b)(4).

3.5 SOCIOECONOMIC IMPACT ASSESSMENT

Health and Safety Code Section 40440.8 requires a socioeconomic impact assessment for proposed and amended rules resulting in significant impacts to air quality or emission limitations. However, PR 317.1 would not result in significant impacts to air quality or emission limitations. Nevertheless, a Draft Socioeconomic Impact Assessment has been ~~conducted~~ prepared and was released for public review on May 7, 2024. The Final Socioeconomic Impact Assessment is available in Attachment H of the June 7, 2024, Governing Board Package ~~as a separate document~~ at least 30 days prior to the South Coast AQMD Governing Board Hearing for PR 317.1, which is ~~anticipated to be heard on June 7, 2024.~~

3.6. DRAFT FINDINGS UNDER HEALTH AND SAFETY CODE SECTION 40727

3.6.1. Requirements to Make Findings

Health and Safety Code Section 40727 requires that prior to adopting, amending, or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the staff report.

3.6.2. Necessity

PR 317.1 is needed to comply with the requirements of the CAA Section 185 requirements for the 1997 or 2008 8-hour ozone standard.

3.6.3. Authority

The South Coast AQMD Governing Board has authority to adopt PR 317.1 pursuant to the Health and Safety Code Sections 39002, 40000, 40001, 40440, 40441, 40702, 40725 through 40728, 41511, and 42300 et seq. and CAA Sections 172(e), 182(d), 182(e), 182(f) and 185.

3.6.4. Clarity

PR 317.1 is written or displayed so that its meaning can be easily understood by the persons directly affected by it.

3.6.5. Consistency

PR 317.1 is in harmony with and not in conflict with or contradictory to, existing statutes, court decisions, or state or federal regulations.

3.6.6 Non-Duplication

PR 317.1 will not impose the same requirements as or in conflict with any existing state or federal regulations. The proposed amended rule is necessary and proper to execute the powers and duties granted to, and imposed upon, the South Coast AQMD.

3.6.7. Reference

By adopting PR 317.1, the South Coast AQMD Governing Board will be implementing, interpreting or making specific the provisions of the Health and Safety Code Sections ~~39002 (authority for control of air pollution)~~, 40000 (non-vehicular air pollution), ~~40001 (rules to achieve ambient air quality standards)~~, 40440 (rules to carry out the Air Quality Management Plan), ~~40441, , 40440 (adopt regulation to carry out plan)~~, ~~40702 (adopt regulations and execute duties)~~, ~~40725 through 40728 (public hearings)~~, ~~41510 (right of entry)~~, 41511 (rules to require source to determine emissions), ~~42300 et seq. (permitting)~~, ~~42303 (requests for information)~~, and CAA Sections ~~116 (Retention of State authority)~~, 172(e), 181, 182, 185 (42 U.S.C. Section 7511d), and ~~502(b)(3)(B)(v)~~.

APPENDIX A: AFFECTED FACILITIES

Table A-1
PR 317.1 Potentially Impacted Major Stationary Sources

ID	Name	County	City

Re: PROPOSED RULE 317.1 – CLEAN AIR ACT NONATTAINMENT FEES FOR 8-HOUR OZONE STANDARDS

Clean Water SoCal appreciates the opportunity to comment on the Proposed Rule 317.1– Clean Air Act Nonattainment Fees for 8-hour Ozone Standards.

Clean Water SoCal represents over 80 public water/wastewater agencies in Southern California. Clean Water SoCal members provide essential water supply and wastewater treatment for approximately 20 million people in San Diego, Orange, Los Angeles, Santa Barbara, Riverside, San Bernardino, and Ventura counties. Our wastewater members provide environmentally sound, cost-effective management of more than two billion gallons of wastewater each day and, in the process, convert wastewater into resources for beneficial uses such as recycled water and renewable energy.

Proposed Rule 317.1 will require major stationary sources, including publicly owned wastewater facilities, to pay for the regions inability to achieve attainment with the 1997 and 2008 federal 8-hour ozone standards pursuant to Section 185 of the Clean Air Act (CAA). This makes little sense today because most of the pollution leading to nonattainment is caused by mobile and federal sources such as cars, trucks, trains, boats, and planes. These sources are regulated by State and Federal agencies beyond the control of the SCAQMD, but only the major stationary sources will be required to pay these penalties. Even with the elimination of all stationary sources, the South Coast Air Basin will not achieve the 1997 or 2008 federal 8-hour ozone standards. Instead, the penalty should be imposed upon ozone precursor sources that lack adequate emission controls (i.e., mobile and federal sources). Proposed Rule 317.1 places an unnecessary burden on the wastewater facilities in the SCAQMD that are classified as major stationary sources. These facilities provide essential wastewater treatment to the communities in the South Coast Air Basin; therefore, they cannot relocate or reduce treatment capacity to avoid the inequitable penalties that Proposed Rule 317.1 will impose. Moreover, these facilities are already required to meet

phone: 760.415.4332

stringent SCAQMD Best Available Control Technology standards and cannot reduce emissions to avoid this penalty. It is unfortunate that the fees imposed on these essential public service facilities won't even address the source of the subject pollution, as intended by the CAA.

} Comment
1-1 Cont.

As Congressman Henry Waxman, one of the primary authors of the 1990 CAA amendments, told us in 2010, it was never the intent of the CAA to penalize stationary sources when mobile and federal sources, beyond the control of air districts, are the reason for nonattainment. Due to this disconnect, USEPA accepted the concept of "not less stringent" fee or emission reduction programs in response to nonattainment with the 1-hour federal ozone standard. To our knowledge, USEPA has not performed a critical high-level review of the 8-hour nonattainment problem and the principles contained in their 2010 Section 185 Guidance¹ should be considered to avoid illogical results. In other words, Congress never intended to penalize sources that were not responsible for ozone nonattainment. Even with the complete closure of all major stationary sources in the South Coast Air Basin, attainment of the 8-hour standards would not be possible due to the fact that the majority of ozone-forming emissions are derived from mobile and federal sources.

} Comment
1-2

The Mojave Desert Air Quality Management District (MDAQMD) adopted Rules [315.1](#), [315.2](#) and [315.3](#) to implement Section 185 penalties for nonattainment with the 1997, 2008, and 2015 ozone standards. All three rules include Section 185 equivalency provisions for USEPA's consideration. As described in [MDAQMD's staff report](#) USEPA expressed concerns about the approvability of these rules, but further discussions with USEPA are needed to determine whether potential "not less stringent" requirements could be acceptable. The San Joaquin Valley Air Pollution Control District (SJVAPCD) nonattainment fee rules also have equivalency language. We respectfully request the inclusion of language in Proposed Rule 317.1 that allows SCAQMD to implement equivalency in the event that USEPA develops new equivalency guidance. We understand that SCAQMD staff believe equivalency criteria cannot be met for the 1997 and 2008 standards, however the exclusion of such language could set an unreasonable precedence. It is important for local air districts to have a uniform approach to Section 185 compliance which would encourage USEPA to draft new guidance clearly allowing for equitable equivalency programs.

} Comment
1-3

As such, SCAQMD Proposed Rule 317.1 should include additional provision language for the Cessation of Fees if either of the following occur:

1. If the USEPA approves an equivalent alternative Section 185 fee program.
2. If the USEPA provides guidance for acceptable fee equivalency for non-revoked standard and/or revoked standards for which the SCAQMD can demonstrate fee equivalency.

¹ Although this guidance was vacated by the D.C. Circuit Court of Appeals in [NRDC v. EPA, 643 F.3d 322 \(D.C. Cir. 2011\)](#) on procedural grounds, the Court did not prohibit alternative programs.

P.O Box 231565
Encinitas, CA 92024

email: info@scap1.org
phone: 760.415.4332

In addition, Clean Water SoCal requests some additional clarifications in the rule language related to the fee applicability for synthetic minor source facilities, and the applicability for multiple fees. The MDAQMD rules include provisions limiting the fee collection to a single standard. Clean Water SoCal requests a similar approach in Proposed Rule 317.1 to reduce the economic burden and ratepayer impact to public wastewater facilities that will be magnified by the collection of fees for multiple standards.

Recommended Rule Language:

Clean Water SoCal requests the addition of the following language to the “*Exemptions*” section of the “*Preliminary Draft Rule Language-Version 2024/03/22*” to further clarify the rule.

Cessation of Fees:

- The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees, if the USEPA has approved an equivalent alternative Section 185 fee program for the Applicable Ozone Standard for the Basin. The CAA Nonattainment Fees will cease in the same calendar year as the approved alternative program approval.
- The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees if the District has demonstrated fee equivalency in accordance with USEPA guidance for acceptable fee equivalency for the Basin. The CAA Nonattainment Fees will cease in the same calendar year as the demonstrated fee equivalency.

Additional clarifying exemption language:

- No Major Stationary Source permitted as a Synthetic Minor Source facility shall be required to remit CAA Nonattainment Fees under this rule.
- No facility otherwise subject to this rule shall be required to remit CAA Nonattainment Fees under this rule for any calendar year in which the Facility emits verified Actual Emissions equal to or less than 80 percent of its Baseline Emissions
- No Facility otherwise subject to this Rule shall be required to remit CAA Nonattainment Fees for more than one Federal ozone standard for any specific calendar year. A Facility's applicable CAA Nonattainment Fees for any calendar year shall be the largest of all such applicable CAA Nonattainment Fees.

Comment
1-3 Cont.

Use of Funds:

In addition, affected Clean Water SoCal agencies strongly urge the SCAQMD to develop a fee distribution program that would facilitate the use of funds collected from the public wastewater sector to return to the sector for use towards Clean Air Projects implemented by public wastewater agencies. Clean Water SoCal understands that the focus of the current rule development for

Proposed Rule 317.1 is on the regulatory framework for collection of the CAA nonattainment fees and not the use of funds, however a mechanism for the funds collected from public wastewater agencies for CAA nonattainment fees to be allocated towards Clean Air Projects by public wastewater agencies should be considered as part of the program for the use of funds collected from CAA nonattainment fees.

1-1 Response

Staff disagrees that PR 317.1 will “place an unnecessary burden on the wastewater facilities” as the CAA Nonattainment Fees will be collected from Major Stationary Sources of VOC and/or NOx regardless of whether PR 317.1 is adopted. PR 317.1 is being developed to implement the existing requirements of CAA section 185 for the 1997 and 2008 8-hour ozone NAAQS. If a regulatory pathway is not developed, these Major Stationary Sources would still be required to comply with CAA section 185 and CAA Nonattainment Fees would instead be collected by the U.S. EPA.

Additionally, Best Available Control Technology (BACT) standards are implemented at the time of permitting and new BACT standards would only be triggered if the equipment was modified with an emissions increase. Equipment which was permitted several years ago, for which there have been more recent BACT standards established, may not be at current BACT standards. Examples include the new Tier 4 Final Emergency Engines that were established as BACT/ Lowest Achievable Emission Rate (LAER), or the Rule 1118.1 – Control of Emissions from Non-Refinery Flares NOx standards. Staff is clarifying how BACT is implemented and acknowledges that some facilities which have very recently been issued permits for all of their equipment could be at current BACT levels.

1-2 Response

To clarify, the U.S. EPA allows for a fee equivalency approach for the revoked 1979 1-hour standard as well as the revoked 1997 8-hour ozone standard, but has determined that it should not be used for any standard that is not revoked. Please see section “1.4.4. CAA Section 185 Compliance Pathway for 1997 and 2008 Ozone Standards” of this PR 317.1 Staff Report for an explanation of why CAA Nonattainment Fee collection is necessary for the 1997 and 2008 8-hour ozone standards.

1-3 Response

Fee Equivalency Approach:

San Joaquin Valley Air Pollution Control District (SJVAPCD) has implemented the following rules for implementing section 185 requirements:

- Rule 3170 – Federally Mandated Ozone Nonattainment Fee,
- Rule 3171 – Federally Mandated Ozone Nonattainment Fee – 1997 8-Hour Standard
- Rule 3172 – Federally Mandated Ozone Nonattainment Fee – 2008 8-Hour Standard, and
- Rule 3173 – Federally Mandated Ozone Nonattainment Fee – 2015 8-Hour Standard.³⁰

SJVAPCD has only proposed the fee equivalency approach for Rules 3170 and 3171 which are both for revoked standards where a fee equivalency approach is allowed by the U.S. EPA. Rules 3172 and 3173 are unable to utilize the fee equivalency approach as both address ozone standards that have not been revoked.

³⁰ San Joaquin Valley Air Pollution Control District. *Rules and Regulations*. <https://ww2.valleyair.org/rules-and-planning/current-district-rules-and-regulations/>.

Mojave Desert Air Quality Management District's (MDAQMD) has implemented a fee equivalency approach in:

- Rule 315 – Federal Clean Air Act Section 185 Penalty (1979 Ozone Standard),
- Rule 315.1 – Federal Clean Air Act Section 185 Penalty (1997 Standard),
- Rule 315.2 – Federal Clean Air Act Section 185 Penalty (2008 Standard), and
- Rule 315.3 – Federal Clean Air Act Section 185 Penalty (2015 Ozone Standard).³¹

These MDAQMD regulations have not been approved by the U.S. EPA and the U.S. EPA staff has indicated that the fee equivalency approach is not available for unrevoked ozone standards. Incorporation of such language would make the rule vulnerable to disapproval as part of the U.S. EPA state implementation plan (SIP) review process. Please see section “1.4.4. CAA Section 185 Compliance Pathway for 1997 and 2008 Ozone Standards” of this PR 317.1 Staff Report for why CAA Nonattainment Fee collection is necessary for South Coast AQMD the 1997 and 2008 8-hour ozone standards.

Payment of Single Largest Standard in Year:

Mojave Desert Air Quality Management District's (MDAQMD) requires a major stationary source to only remit the largest applicable CAA Nonattainment Fee for a single ozone standard in any calendar year in:

- Rule 315.1 – Federal Clean Air Act Section 185 Penalty (1997 Standard),
- Rule 315.2 – Federal Clean Air Act Section 185 Penalty (2008 Standard), and
- Rule 315.3 – Federal Clean Air Act Section 185 Penalty (2015 Ozone Standard).

These MDAQMD regulations have not been approved by the U.S. EPA and the U.S. EPA staff has indicated that only paying the largest of the applicable CAA Nonattainment Fees in MDAQMD's Rules 315.1 may not be approvable.^{32, 33} Incorporation of such language would make the rule vulnerable to disapproval as part of the U.S. EPA SIP review process. Please see section “1.4.4. CAA Section 185 Compliance Pathway for 1997 and 2008 Ozone Standards” of this PR 317.1 Staff Report for why CAA Nonattainment Fee collection is necessary for the 1997 and 2008 8-hour ozone standards.

Applicability to Non-Major Stationary Sources:

PR 317.1 is applicable to facilities that meet this rule's definition of a Major Stationary Source. Please refer to the definition of Major Stationary Source in “2.2.3. Definitions – Subdivision (c)” of this PR 317.1 Staff Report for an explanation of how a Major Stationary Source may no longer be subject to PR 317. Additionally, please refer to section “2.2.5.3. Enforceable Limitation Through a Rule 317.1 Exclusion Plan– Paragraph (e)(3)” of this PR 317.1 Staff Report for an explanation of the enforceable limit to not be subject to nonattainment fee through a Rule 317.1 Exclusion Plan.

³¹ Mojave Desert Air Quality Management District. *Rules and Regulations*. <https://www.mdaqmd.ca.gov/rules/rule-book/regulation-iii-fees>.

³² Mojave Desert Air Quality Management District. (2022, March). *Governing Board Meeting Agenda for March 28, 2022*. See Doris Lo. (August 16, 2018). *Preliminary Review of Mojave Desert AQMD Rule 315.1*. <https://www.mdaqmd.ca.gov/home/showpublisheddocument/9292/637835283042130000>.

³³ Mojave Desert Air Quality Management District. (2022, March). *Governing Board Meeting Agenda for March 28, 2022*. See Donnique Sherman. (March 10, 2022). *EPA Comments on MDAQMD Rule 315.1 RE: Amendment/Adoption of MDAQMD Rule 315 Series*. <https://www.mdaqmd.ca.gov/home/showpublisheddocument/9292/637835283042130000>.

Actual Emissions Below 80% of Baseline Emissions:

Pursuant to PR 317.1 paragraph (d)(2), no CAA Nonattainment Fees are charged when actual emissions are less than 80%~~percent~~ of the Baseline Emissions or Alternative Baseline Emissions. Therefore, there is no need for an exemption from PR 317.1 in this scenario.

1-4 Response

Please see section “1.6. Use of Funds” of this PR 317.1 Staff Report for an explanation of why guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking. The South Coast AQMD may consider prioritizing monies collected to be spent on emissions reduction projects near essential public services, environmental justice areas, and stationary sources.

2. Hoag Memorial Hospital Presbyterian Comment Letter, Submitted 04/16/24

April 16, 2024

Ms. Britney Gallivan
Air Quality Specialist
South Coast Air Quality Management District (SCAQMD)
21865 Copley Drive
Diamond Bar, CA 91765
Work: (909) 396-2792
E-mail: bgallivan@aqmd.gov

Subject: Proposed Rule Language to Include Title V Exclusions and Processes; Proposed Rule 317.1

Dear Ms. Gallivan:

Hoag Memorial Hospital Presbyterian (Hoag Hospital, Facility ID: 11245) is an acute care, not-for-profit hospital that offers a comprehensive mix of health care services, including Centers of Excellence in cancer, heart and vascular, neurosciences, women's health, and orthopedics.

Proposed Rule (PR) 317.1 would impose penalty fees on facilities that have already reduced emissions to below major source threshold levels. Moreover, the rule does not adequately provide for facilities with actual emissions below major source thresholds to leave the Title V program through a Synthetic Minor facility-wide limit, commonly referred to as a Title V Exclusion. Hoag Hospital provides an example of why the PR language must include provisions that allow low-emitting facilities the opportunity to exclude themselves from Title V in a timely manner to avoid undue fees.

Comment
2-1

Comment
2-2

Hoag Hospital currently holds a Title V permit, which is a federal operating permit required for Major Sources of air emissions. The facility submitted the Initial Title V application in 2006 under Application Number (A/N) 454723 and currently remains a Title V facility. Initially considered a Major Source based on the potential to emit (PTE) for nitrogen oxides (NO_x) and volatile organic compound (VOC) emissions, Hoag Hospital has been below Major Source thresholds for all pollutant emissions since 2019 due to emission reduction retrofit projects and reduced actual emissions. In May 2023, Hoag Hospital submitted a Title V Exclusion application with the request that the facility be made a Synthetic Minor by accepting a 12-month PTE limit for all criteria pollutants. Hoag Hospital has been working diligently with the South Coast Air Quality Management District (SCAQMD) to complete processing this Title V Exclusion application. Since June 2023, Hoag Hospital has been in regular communication with SCAQMD staff, providing additional supporting data to justify the request for Synthetic Minor status.

Below is a timeline of Hoag Hospital's Title V Exclusion activities based on agency correspondence and records obtained from the SCAQMD's online Facility Information Detail (F.I.N.D.) system:

Comment
2-3

- May 2023 – Hoag Hospital submitted a Title V Exclusion application package;
- June 8, 2023 – Title V Exclusion application received by the SCAQMD (as noted in F.I.N.D.);
- June 22, 2023 – E-mail submitted to the SCAQMD in regards to their initial rejection of the application;
- June 26, 2023 – E-mail submitted to the SCAQMD (Li Chen) in regards to the initial determination;
- July 18, 2023 – Letter submitted to the SCAQMD challenging the application refusal;
- August 3, 2023 – Met with SCAQMD staff to discuss the letter and their reservations about the application;

hoag.
hoag.org

- October 4, 2023 – Letter submitted to the SCAQMD challenging additional points made by SCAQMD staff;
- October 31, 2023 – March 28, 2024 – Continued follow-up for a status update;
- March 29, 2024 – Adan Velasco of the SCAQMD replied that the application cannot be processed based on internal policy;
- April 8, 2024 – Requested the internal SCAQMD policy; and
- April 9, 2024 – SCAQMD cannot provide the internal SCAQMD policy.

Comment
2-3 Cont.

Processing Title V Exclusions can and should be an important aspect in the implementation of PR 317.1. Hoag Hospital, like many Title V facilities, does not significantly cause or contribute to the South Coast Air Basin's nonattainment status. Hoag Hospital supports the SCAQMD's efforts to comply with the Clean Air Act should the South Coast Air Basin fail to attain the 1997 and/or 2008 8-hour standard with the implementation of Rule 317.1, but the primary objective of this fee is as a penalty levied on Major Sources of emissions that have caused or contributed to failure of the region to meet its attainment goals.

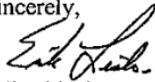

We reviewed the PR 317.1 dated March 22, 2024, as part of the Public Consultation Meeting held April 3, 2024, during which the SCAQMD did not consider applicability of the rule to Title V facilities who have applied and are currently in the process of being excluded from the Title V program. As mentioned above, Hoag Hospital has applied to the SCAQMD for a Title V Exclusion; therefore, we are requesting that the SCAQMD examine the following for inclusion into Rule 317.1 implementation:

Comment
2-4

- Allow an exemption or deferral period in Rule 317.1 (e), Exemptions, for Title V facilities who have applied for Title V Exclusions with the submittal of Form 500-E and are awaiting SCAQMD final approval; and
- Create a streamlined process and guidelines for Title V facilities submitting a Form 500-E, Title V Exclusion/Exemption Request, per Rule 301(p)(13) and Rule 306.

We appreciate your assistance in addressing this matter.

Sincerely,

Erik Lidecis
Director of Facilities, Energy, & Sustainability

2-1 Response

The CAA Nonattainment Fees will be collected ~~from~~ from Major Stationary Sources of VOC and/or NO_x regardless of whether PR 317.1 is adopted. The CAA section 185 requires that a Major Stationary Source of VOC and/or NO_x in an area classified as “severe” or “extreme” that has failed to attain the ozone standard by the assigned attainment dates, either reduce their emissions by 20% from a baseline amount or pay a CAA nonattainment fee. PR 317.1 is being developed to implement the existing requirements of CAA section 185 for the 1997 and 2008 8-hour ozone NAAQS. If a regulatory pathway is not developed, these Major Stationary Sources would still be required to comply with CAA section 185 and CAA Nonattainment Fees would instead be collected by the U.S. EPA.

2-2 Response

PR 317.1 applies to Major Stationary Sources that emit or have the PTE more than 10 tons per year of either VOC or NO_x. Pathways already exist for facilities to exit the Title V permitting program and these pathways are specified on South Coast AQMD website at <https://www.aqmd.gov/home/permits/title-v/what-is-title-v->. Please refer to the definition of Major Stationary Source in “2.2.3. Definitions – Subdivision (c)” of this PR 317.1 Staff Report for an explanation of how a Major Stationary Source may no longer be subject to PR 317.1. Additionally, please refer to section “2.2.5.3. Enforceable Limitation Through a Rule 317.1 Exclusion Plan – Paragraph (e)(3)” of this PR 317.1 Staff Report for an explanation of the enforceable limit to not be subject to the nonattainment fee through a Rule 317.1 Exclusion Plan.

2-3 Response

South Coast AQMD Engineering and Permitting staff reviews every Title V exclusion application to ensure that facilities meet the criteria to exit the Title V permit program. A facility may be excluded from the Title V permit program by either demonstrating that the facilities actual emissions are below 50% of the Title V major source thresholds pursuant to Rule 3008 or below 80% of the Title V major source thresholds to take a permit limit pursuant to Rule 3001. So it is not an arbitrary analysis, it has been staff’s practice to require facilities to demonstrate that the most recent five years of actual emissions reported through the AER program are under 80% of the Title V major source thresholds to provide assurance that the facility can and will comply with the permit condition that limits the facility’s total emissions to less than the Title V major source threshold. As explained in this Staff Report, PR 317.1 includes an exemption for facilities electing to accept federally enforceable limits through a Rule 317.1 Exclusion Plan. The facility would have to demonstrate that the facility’s emissions, excluding the emissions listed in this rule’s definition of Major Stationary Source, were below the major source threshold for the most recent five calendar years, and be willing to accept conditions to ensure that the facility’s emissions do not exceed the threshold. Please refer to section “2.2.5.3. Enforceable Limitation Through a Rule 317.1 Exclusion Plan – Paragraph (e)(3)” of this PR 317.1 Staff Report for additional details. Alternatively, a facility could also request to reduce their permitted PTEs below Major Stationary Source thresholds, however this approach is dependent on business decisions and process needs by the facility.

2-4 Response

PR 317.1 has been modified to clarify that facilities with enforceable conditions that reduce emissions to below the Major Stationary Source thresholds are exempt from payment of applicable

CAA Nonattainment Fees beginning the calendar year after the calendar year such conditions are added.

South Coast AQMD's Title V permit program is separate from PR 317.1. Please contact the South Coast AQMD engineer assigned to your facility for the process for exiting the Title V permit program.

Re: Proposed Rule 317.1

Dear Ms. Gallivan:

The undersigned organizations are grateful for the opportunity to comment on Proposed Rule 317.1. Overall, we remain pleased that the South Coast AQMD has proposed to actually adopt a fee on the largest stationary sources, as opposed to using an “equivalency” approach for the 1997 and 2008 8-hour ozone standards. A fee rule is not only a welcome sight but also a legal requirement under Section 185 of the Clean Air Act, which requires that major stationary sources in regions classified “severe” or “extreme” for ozone that fail to attain are subject to fees. Many of the large facilities that will be subject to Proposed Rule 317.1 would have paid fees under the originally adopted Rule 317, but the South Coast AQMD decided to exempt these entities from fees by taking credit for other incentive programs the legislature and voters approved (e.g. Proposition 1B, Carl Moyer Program, etc.). The end result of this “equivalency” approach has been corporations – some of them amongst the largest and most profitable in the world – not having to pay fees or reduce emissions by 20%. The unfortunate reality is this decadal free pass has meant more pollution in communities, particularly those living in the shadows of oil and gas infrastructure and in an air basin that is habitually in non-compliance with federal air quality standards. We anticipate that industry and major polluters will push South Coast AQMD to again develop a program outside of the clear requirements of Section 185 of the Clean Air Act. As the following sections outline, a direct fee approach is not only the soundest approach legally, but also makes the most sense if the South Coast AQMD desires to reduce emissions and address rampant and persistent environmental injustice.

I. Commenters Continue to Object to Rule 317 – the 1-hour Ozone Fee Rule – Because It Was Adopted Under a False Premise and Exacerbates Environmental Injustice.

In its initial promulgation of a fee program for the 1979 one-hour ozone standard, South Coast

} Comment
3-1

AQMD provided that major polluters in non-attainment areas can either pay a fee representative of 20% of their NOx and VOCs emissions or reduce their emissions by 20% to comply.¹ However, lawyers for industry invented and sold the air district on a credit equivalency program – fundamentally a scheme under which no polluting facility would have to pay a single cent for their emissions.

In promulgating the final rule, SCAQMD admitted to the fossil fuel lobby's efforts stating:

“[T]here is substantial opposition to [an initial 2010] fee rule by the regulated community as the fee burden is significant while the relative contribution by major stationary sources to ground level ozone is small relative to area and mobile sources. Further, the applicability of the fee solely to major stationary sources is seen as unfair given the fact that major stationary sources in the South Coast air basin are subject to the nation's most stringent regulations and have reduced their emissions significantly over the years.”²

Ignoring calls for stronger fee provisions, South Coast AQMD capitulated to fossil fuel lobbyists and instituted an alternative fee program pursuant to Section 172(e), called Rule 317. Rule 317, as amended on February 4, 2011, and approved as a revision to the California State Implementation Plan (SIP) by U.S. EPA on December 14, 2012, provides the framework for implementing an alternative fee program to Section 185, as authorized under CAA Section 172(e). Rule 317 requires the Executive Officer (“EO”) to establish and maintain a Section 172(e) fee equivalency account (“FEA”).³

Under Rule 317 FEA, South Coast AQMD tracks expenditures from “qualified programs” and uses them as credits to offset any Section 185 non-attainment fee obligation incurred by major stationary sources.⁴ The expenditures for which South Coast AQMD could take credit were “designed to result or have resulted in direct VOC or NOx reductions in the South Coast AQMD; or have facilitated VOC or NOx reductions in the South Coast AQMD through vehicle/engine fueling infrastructure or advanced technology development and demonstration efforts for implementation within the next 10 years.”⁵ *In theory*, the hope was that these credits would avoid the need for a facility-specific fee.

Stated differently, instead of collecting a fee from large stationary sources like refineries, South Coast AQMD decided to take credit for a grab bag of programs fundamentally untethered to limiting ozone precursors. For example, instead of making Tesoro Refinery pay a fee or reduce emissions by 20%, South Coast AQMD took credit for programs like California Natural Gas Vehicle Partnership to promote the greater deployment of natural gas vehicles in California, the “Prop 1B Program,” which provides funding for projects that reduce emissions from goods movement operations, and the Carl Moyer Program, a voluntary program that provides incentives to private companies to purchase cleaner than-required engines, equipment, and emission reduction technologies.⁶ Tesoro has paid no fees under

⁵ *Id.* at 4.

⁶ *Id.* at 5-7.

Rule 317 and did not even have to find and fund the programs that it was credited for itself.

Since no fees are levied on stationary sources, there is also no incentive mechanism to undertake abatement actions that would reduce emissions by 20%. Thus, SCAQMD's fee program for the 1-hour ozone standard amounts to no penalty and instead a paper exercise providing the veneer of a penalty.

Worse yet, incorrect data informed the Rule 317 credit approach. In the 2011 Staff Report supporting the revisions to Rule 317, staff noted the following: "Staff's approach builds on that concept as major stationary sources are already at BACT ["Best Available Control Technology"] or BARCT ["Best Available Retrofit Control Technology"] with limited potential for further VOC/NOx reductions through additional control."⁷ We now know that this was absolutely incorrect, as many of the largest stationary sources were not at BACT/BARCT in 2011 and continue to not be at BACT/BARCT today.

In fact, in its effort to dismantle the Regional Clean Air Incentives Market ("RECLAIM"), staff noted the following: "Based on South Coast AQMD's permit database, well over half of the equipment at RECLAIM facilities is currently not at BARCT. Much of this equipment resides at some of the largest NOx emitting facilities in the Basin."⁸ Thus, this failure to impose a fee or compel cleanup of these highly toxic and polluting facilities was based on an error that gravely understated the extent of uncontrolled emissions in the South Coast.

The biggest beneficiaries of this "equivalency approach" are some of the largest oil corporations in the world, the U.S. Department of Defense, investor owned utilities, amongst others. The following chart uses data from the South Coast AQMD's equivalency reports to show what facilities have benefited most from not paying fees under Rule 317 over a period from 2018 to 2022.

ID	Facility Name	2022	2021	2020	2019	2018	Total

Proponents of facilities subject to Rule 317 might try to point to the ongoing dismantling of the RECLAIM program as evidence that South Coast is on track to rectifying its ozone pollution problem.

⁷ SCAQMD, Proposed Amended Rule 317 Staff Report, at p. p. 317-1 (Feb. 4, 2011), <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2011/2011-feb4-029.pdf?sfvrsn=2>.

⁸ RECLAIM Transition Plan Draft Version 2.0, S. Coast AQMD vii (Dec. 2020), <http://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/regx111/reclaim-transition-plan-draft-version-2-0.pdf?sfvrsn=6> ("South Coast AQMD retains broad statutory authority to adopt emission-control requirements for stationary sources, and that authority may include equipment replacement, as long as the requirement is not arbitrary and capricious").

We remind South Coast AQMD, however, that many compliance dates for RECLAIM facility equipment have been outdated for a decade or more, so deadly and archaic equipment could continue to poison communities for years, as the South Coast Air Basin fails to achieve both the 1979 standard and the 1997 eight-hour ozone standard.

Comment
3-1 Cont.

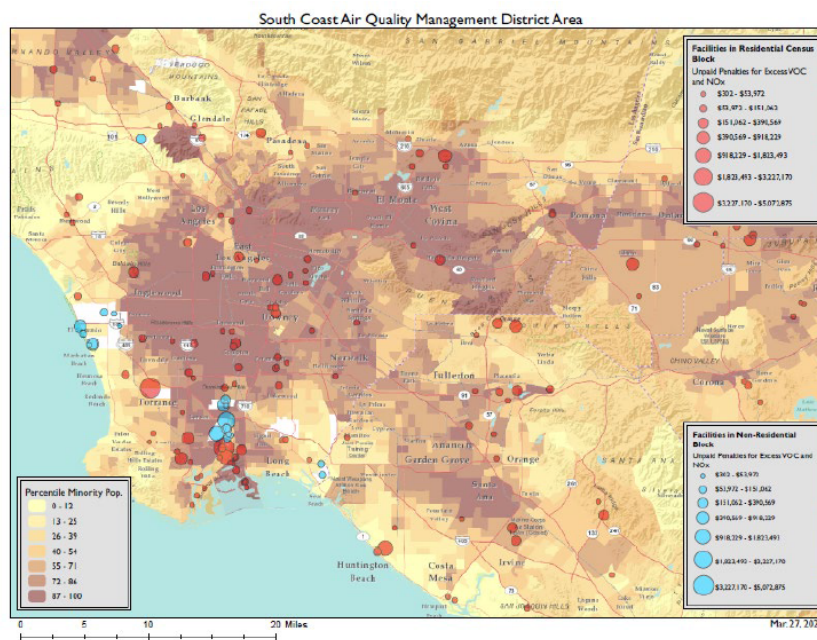

II. The Current Proposal for Rule 317.1 Makes More Sense Than the Rule 317 Approach.

The current staff proposal for the 1997 ozone nonattainment fee makes sense from an air quality and environmental justice perspective. In fact, if implemented correctly, Proposed Rule 317.1 could be used as a start to address the environmental injustice associated with the location of some of the largest polluting facilities in the region. In addition, it could result in oil refineries and other polluting sources hastening implementation of BARCT to turn off the penalties. This would provide desperately needed relief to communities.

Comment
3-2

A. Data From Rule 317 Shows the Largest Stationary Sources Have a Disparate Impact on Overburdened Communities.

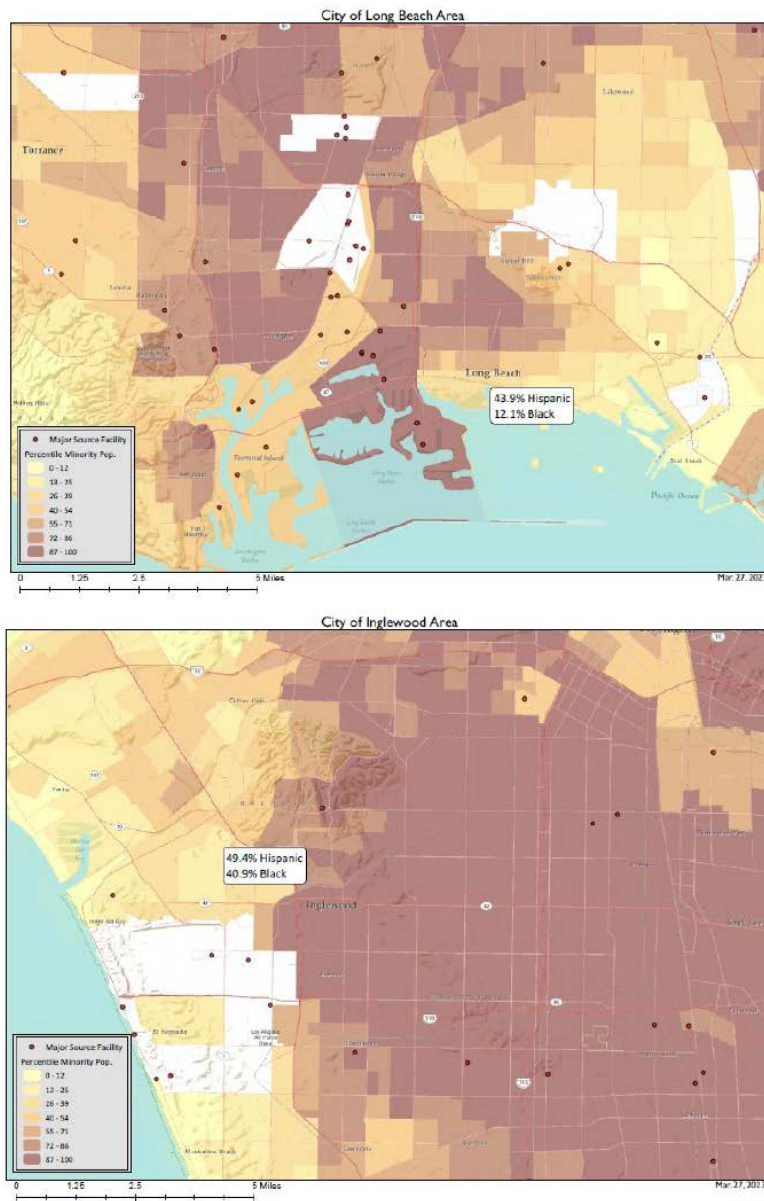

The following maps show the concentration of and proximity of major source facilities that are subject Rule 317 that are adding a significant amount of pollution to these already over-burdened areas.

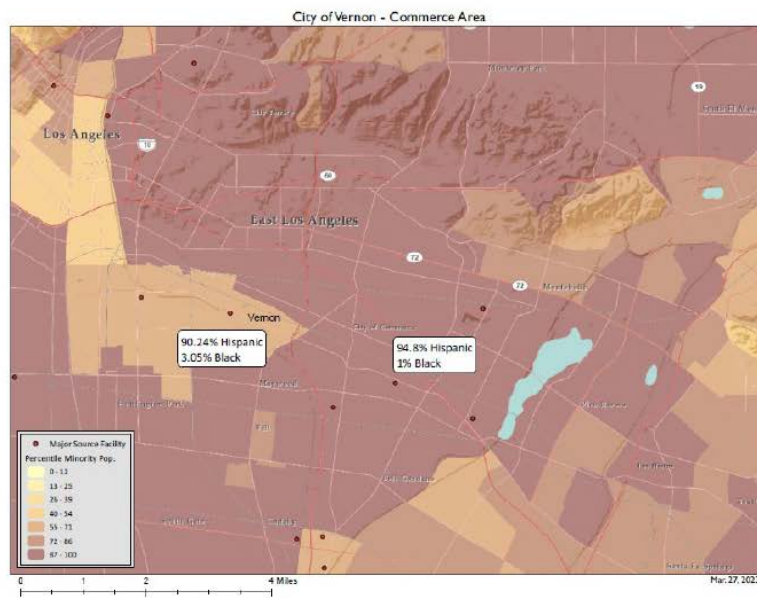

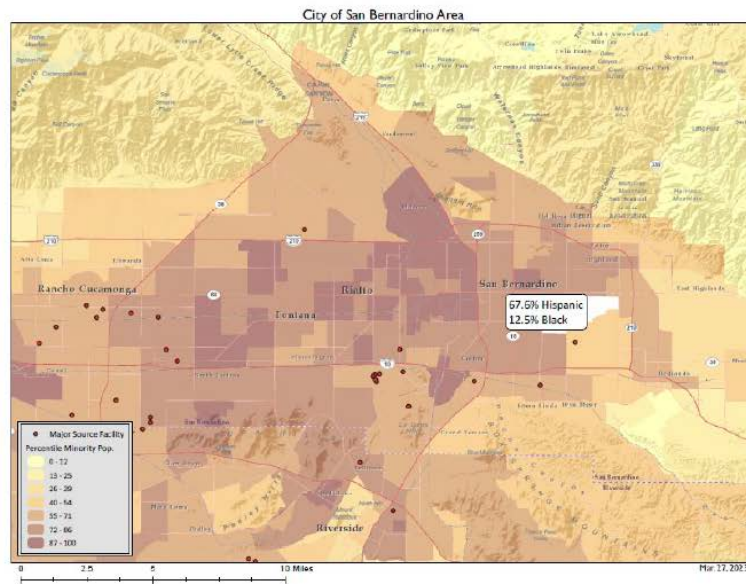

Comment
3-2 A Cont.

While the above map clearly demonstrates the pattern and practice of major sources in communities of color, the maps below also show a more granular view of the cities in the Air Basin. The red dots represent facilities covered under South Coast AQMD Rule 317.

The maps below show locations of Rule 317 facilities in various communities throughout the South Coast Air Basin.

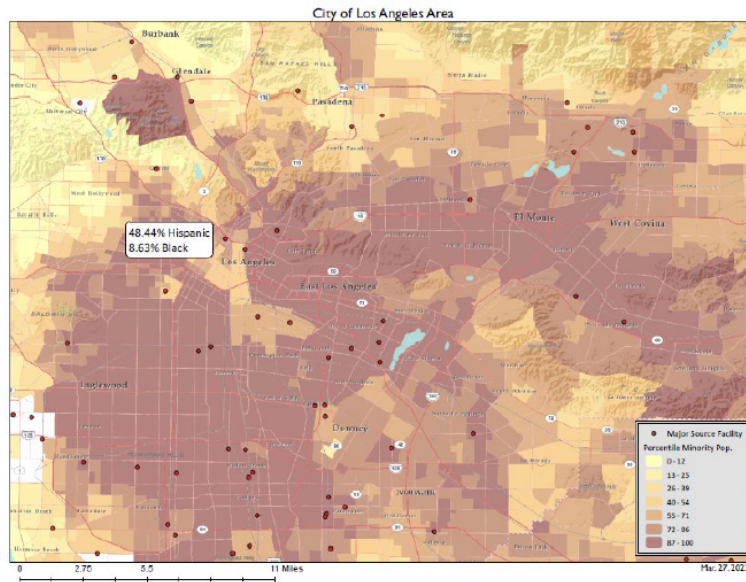

Comment
3-2 A Cont.

Comment
3-2 A Cont.

Comment
3-2 A Cont.

The disparate impacts demonstrated by these maps are clear. Communities that are majority Black and Hispanic/Latinx are disproportionately burdened. Importantly, failing to collect the required fee on these stationary sources – as some working group participants suggest – means the precursors to ozone pollution – VOC and NO_x are emitted in these communities, in addition to cumulative impacts from air toxic reductions that would be foregone if large facilities had to actually pay a fee. So, by not taking a straight-forward fee approach, South Coast AQMD would forego “section 185’s powerful incentive for major stationary sources to reduce emissions,”⁹ which would continue this legacy of disparate impact.

Besides, since passage of Rule 317, the California Legislature has confirmed the importance of addressing the harm from industrial sources in Assembly Bill (AB) 617.¹⁰ Several of the communities that have been identified as overburdened pursuant to the AB 617 process host or are impacted by dozens or more of facilities covered by Rule 317. It is imperative to assess the fee to create an incentive for emissions reductions.

B. In Addition to Addressing Environmental Justice, the Fee Provides a Powerful Incentive to Move to Zero-Emissions.

During the workgroup meeting, several commenters raised concerns about facilities at BACT and BARCT having to pay fees. To the extent staff seeks to dig into this issue, we want to highlight several clarifying points. We remind the Air District that BARCT is constantly evolving. With South Coast AQMD revising cost effectiveness thresholds in the last AQMP, it is likely that BARCT levels are not set at appropriate levels for some categories of equipment. Thus, some facilities claiming to be at

Comment

⁹ *NRDC v. EPA*, 643 F.3d 311, 318 (D.C. Cir. 2011).

¹⁰ *See generally* Cal. Health & Safety Code § 44391.2.

BARCT may have some additional technologies that could be deployed to reduce emissions. Moreover, this fee will provide a powerful incentive for facilities with combustion equipment to shift to zero-emitting equipment as the most recent air plan says needs to happen. Finally, we would be amenable to discussions of allocating some portion of incentive funds for facilities that are at BARCT to move to zero-emissions.

Comment
3-2 B Cont.

III. Specific Comments on Proposed Rule 317.1.

Commenters provide the following feedback on the text of Proposed Rule 317.1:

- The South Coast AQMD should post all requests for Alternative Baseline Emissions on the South Coast AQMD website. It will be critical to have transparency if industrial sources seek an alternative baseline.
- The Proposed Rule should require payments sooner. The current rule provides a full 12 months from invoicing. That is an absurd amount of time, and the South Coast AQMD should consider moving the payment date to four (4) months after invoicing.
- In section (d)(5) of Proposed Rule 317.1, the proposal provides 120 days for companies that are truants and do not pay their bills on time. It is not clear why there should be 4 months of penalty-free amnesty for companies that decide not to pay their fees on time. This is especially important because facilities will have a full 365 days to pay invoices under the rule.
- Some commenters suggested using the Mojave Air District approach of only requiring one fee be paid when a region violates multiple standards. This request is patently unlawful, and we suggest this type of language, which would make the rule legally vulnerable, not be included in the final rule.

Comment
3-3

Comment
3-4

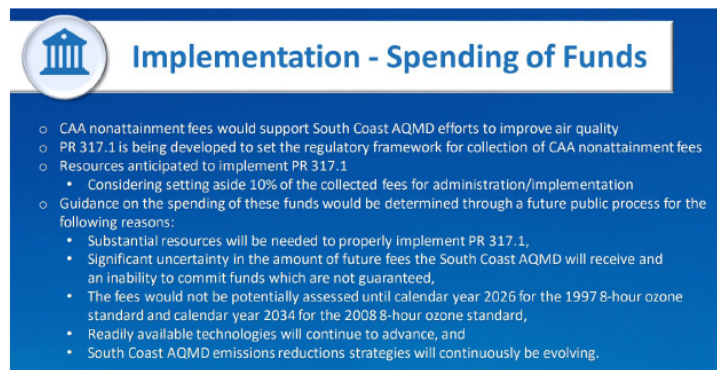

Comment
3-5

Comment
3-6

To the extent language changes, we will likely provide additional comments on the proposal.

IV. Discussions on How Funds Should Be Used Must Center Communities.

We appreciate staff recognition in the slide provided below that a public process is needed to decide how funding is allocated.

Implementation - Spending of Funds

- o CAA nonattainment fees would support South Coast AQMD efforts to improve air quality
- o PR 317.1 is being developed to set the regulatory framework for collection of CAA nonattainment fees
- o Resources anticipated to implement PR 317.1
 - Considering setting aside 10% of the collected fees for administration/implementation
- o Guidance on the spending of these funds would be determined through a future public process for the following reasons:
 - Substantial resources will be needed to properly implement PR 317.1,
 - Significant uncertainty in the amount of future fees the South Coast AQMD will receive and an inability to commit funds which are not guaranteed,
 - The fees would not be potentially assessed until calendar year 2026 for the 1997 8-hour ozone standard and calendar year 2034 for the 2008 8-hour ozone standard,
 - Readily available technologies will continue to advance, and
 - South Coast AQMD emissions reductions strategies will continuously be evolving.

Comment
3-7

In implementing Proposed Rule 317.1, there must be full engagement of stakeholders from overburdened communities. The “equivalency” approach used in Rule 317, which allowed large stationary sources to emit without a fee, had disparate impacts on certain communities, including several that have been identified as AB 617 communities. To repair the harm of allowing this to happen for the last decade, the South Coast AQMD should center communities in its decisions.

3-1 Response

We appreciate your comment. Rule 317, or the pathway to implement section 185 requirement for the 1979 1-hour ozone standard, is outside the scope of this rule development effort under PR 317.1.

3-2 Response

- A. Staff appreciates your comment and support for the proposed approach under PR 317.1. South Coast AQMD agrees that emissions reductions from Major Stationary Sources will improve the air quality surrounding overburdened communities. However, this comment fails to consider that the emissions reductions from the incentive programs under Rule 317 are also primarily located in overburdened communities, either as a requirement of the program or due to how they have been implemented. Moreover, the comment's assertion that the incentive programs are "untethered" to emissions reductions is simply incorrect, as all of the programs currently used for Rule 317 do reduce emissions.
- B. South Coast AQMD agrees that transition from combustion equipment to zero-emission equipment is necessary to achieve attainment with our clean air goals. The CAA Nonattainment Fees may promote the conversion to zero-emission equipment. Please see section "1.6. Use of Funds" of this PR 317.1 Staff Report for an explanation of why guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking.

3-3 Response

Applications/requests from facilities are not posted on the South Coast AQMD website as they may contain confidential business information and contain unevaluated information. The final determinations for any facilities requesting Alternative Baseline Emissions will be available through the Public Records Request process. Requests may be made here: <https://www.aqmd.gov/nav/online-services/public-records>.

3-4 Response

Please refer to section "2.2.4.4. Payment Due Date Requirements – Paragraph (d)(4)" of this PR 317.1 Staff Report for additional details regarding the payment due date for the invoice that includes the CAA Nonattainment Fees for the initial Fee Assessment Year for the Applicable Ozone Standard. The initial invoice will, at a minimum, bill for the initial year's CAA Nonattainment Fees, however, multiple subsequent years may be included if there is a delay in the finding of failure by the U.S. EPA. Impacted facilities have raised concerns about the payment due date for the initial invoice as the fee obligation may not be included in the budget and about the uncertainty of the fee amount for the initial invoice. As such, the initial invoice due date for the applicable standard is 365 days from the date the invoice is issued to provide the Major Stationary Source adequate time to incorporate the initial CAA Nonattainment Fees for the Applicable Ozone Standard into their annual budget. Subsequent invoices would be required to be paid sooner with a deadline of no later than December 15th of the year of invoice issuance or no later than 75 days from the date the invoice was issued, whichever is later.

3-5 Response

A Major Stationary Source will only have a payment due date which is 365 days after issuance for the invoice that includes the CAA Nonattainment Fees for the initial Fee Assessment Year for the

Applicable Ozone Standard. Please refer to section “2.2.4.5. Failure to Pay Fees Requirements – Paragraph (d)(5)” of this PR 317.1 Staff Report for additional details regarding the one-hundred twenty (120) days lapse after the invoice due date before the Executive Officer has the authority to take action to revoke all Permits to Operate for equipment on the premises. The one-hundred twenty (120) days are based on a similar requirement which exists in Rule 301 subparagraph (c)(10)(F) to help ensure that all emission fees and surcharges are paid in full for the AER submittals.

3-6 Response

PR 317.1 requires CAA Nonattainment Fees for each Applicable Ozone Standard. Please refer to the “Payment of Single Largest Standard in Year” section of the “1-3 Response” in this PR 317.1 Staff Report for an explanation of why the South Coast AQMD would not require a Major Stationary Source to only remit the largest applicable CAA Nonattainment Fees for a single ozone standard in any calendar year.

3-7 Response

PR 317.1 is being developed to set the regulatory framework for collection of CAA Nonattainment Fees for the 1997 and 2008 ozone standards. Overburdened communities may be considered in the implantation phase of PR 317.1. Please see section “1.6. Use of Funds” of this PR 317.1 Staff Report for an explanation of why guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking.

4. RadTech Comment Letter, Submitted 04/17/24

April 17, 2024

Mr. Michael Krause
Assistant Deputy Executive Officer
South Coast Air quality Management District
mkrause@aqmd.gov

Re: Public Comments Rule 371.1 -- Clean Air Act Nonattainment Fees

Dear Mr. Krause:

RadTech is pleased to comment on the District's Proposed Amended Rule 317.1. Our Association represents over 800 members who are involved in industry sectors ranging from printing and packaging to nail polish. UV/EB/LED processes are all electric, eliminating the need for add-on control devices thereby preventing NOx and Greenhouse Gases. The materials are not formulated with conventional solvents and therefore the emissions of VOCs are negligible. They are "super-compliant" as they go above and beyond current rule requirements and provide the district with excess emission reductions. Our recommendations are as follows:

Baseline Emissions Calculation

We urge the district to recognize the efforts of facilities who have voluntarily reduced their emissions. There should be an exemption for companies that have invested in clean technology early on. The baseline calculation may penalize operators who have been good environmental stewards. Presumably, the emissions from facilities that have implemented clean technology will be lower than those who have not done so. The baseline emissions of the good stewards will be lower than those of facilities that did not implement early voluntary emission reductions. The good operators will have less flexibility because their baseline emissions will be lower. The district should provide exemptions from Rule 317.1 fees for facilities that have gone above and beyond district requirements and have done so voluntarily. As an example, facilities that have transitioned to energy curable processes have most likely phased out processes that generate Greenhouse Gases like afterburners.

} Comment
4-1

Title V Applicability

During the public consultation meeting, permit holders expressed concern that they may have been advised by district staff to participate in the Title V program. One commenter stated that the emissions from his facility were well below the Title V applicability threshold but that permit engineers had encouraged the facility to stay in the Title V program. Since Proposed Amended

} Comment
4-2

Rule 317.1 specifically targets Title V facilities, it is now even more important for facilities to avoid applicability. Currently, there is no clear procedure on how facilities can petition the district if they want to get out of the Title V program. We urge the district to explain the process in the staff report.

} Comment
4-2 Cont.

Relief from Fees for Clean Technology

In 2010, UV/EB processes were included in Table 1 of district Rule 3008 h (1)(B)(6) (Potential to Emit Limitations) as alternative operational limits. We urge the district to provide relief from Rule 317.1 fees to companies that have UV/EB/LED operations that meet the specified limits in Rule 3008. Rule 317.1 should mirror the existing Title V program rules and the staff report should provide clarification that the processes listed in Table 1 of Rule 3008 will not be subject to the Clean Air Act fees contemplated by Rule 317.1.

} Comment
4-3

As I mentioned during the public consultation meeting, we are concerned that Rule 317.1 is extremely punitive to stationary sources who are not responsible for the majority of emissions in the South Coast Basin. We hope the district will provide incentives for facilities who have achieved voluntary emission reductions. We thank you for your consideration, and look forward to further conversations on our suggestions.

} Comment
4-4

Regards,

Rita M. Loof
Director, Environmental Affairs

4-1 Response

Please refer to section “1.4.4. CAA Section 185 Compliance Pathway for 1997 and 2008 Ozone Standards of this Staff Report for an explanation of why CAA Nonattainment Fee collection is necessary for South Coast AQMD for the 1997 and 2008 8-hour ozone standards.

4-2 Response

Please refer to the “2-2 Response”, “2-3 Response”, and “2-4 Response” of this PR 317.1 Staff Report for an explanation of what qualifies as a Major Stationary Source and the existing pathway for facilities to exit the Title V permit program. The process to exit Title V has been implemented since the beginning of the ~~District’s~~ South Coast AQMD’s Title V program and there is a dedicated permit application form posted on the ~~District’s~~ South Coast AQMD’s webpage. Each facility deciding whether to remain or request to exit the Title V permit program is a case-by-case situation and is dependent on each facility’s actual emissions and PTE at the time of the request. Staff does not consult facilities on their business decisions, and those decisions are left to the facility based on their process and economic needs. Staff may provide explanations on each of the permit application processes for businesses seeking information to support their decisions.

4-3 Response

The Alternative Operational Limits of Table 1 in Rule 3008 – Potential to Emit Limitations (Rule 3008) are not part of Rule 3008 (h)(6). Rather, Table 1 of Rule 3008 is referenced in Rule 3008 (d)(2) for alternative operational limits that require that “[a]ny facility for which 90 percent of the facility’s emissions from the permitted emission units in every 12-month period are associated with one of the operations identified in Table 1 shall comply with the corresponding operational limits in Table 1.” Facilities may elect to use Table 1, which requires a usage limit in every 12-month period for “Ultraviolet/Electron Beam Cured Operations” be “21,582 gallons of ultraviolet/electron beam materials not to exceed 50 grams/liter.” Table 1 does not address LED technologies. Facilities meeting the applicable requirements of Rule 3008 (d)(2) do not meet the definition of a Major Stationary Source in Regulation XXX - Title V Permits. Similarly, they would not meet the PR 317.1 definition of a Major Stationary Source and, therefore, not be applicable to PR 317.1. Please refer to the definition of Major Stationary Source in section “2.2.3. Definitions – Subdivision (c)” of this PR 317.1 Staff Report for an explanation of what qualifies as a Major Stationary Source.

4-4 Response

Staff disagrees that PR 317.1 would be “extremely punitive” as the CAA Nonattainment Fees will be collected from Major Stationary Sources of VOC and/or NOx regardless of whether PR 317.1 is adopted. PR 317.1 is being developed to implement the existing requirements of CAA section 185 for the 1997 and 2008 8-hour ozone NAAQS. If a regulatory pathway is not developed, these Major Stationary Sources would still be required to comply with CAA section 185 and CAA Nonattainment Fees would instead be collected by the U.S. EPA. Please see section “1.6. Use of Funds” of this PR 317.1 Staff Report for an explanation of why guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking.

5. Western States Petroleum Association (WSPA) Comment Letter, Submitted 04/17/24**Ramine Ross**

Senior Manager, Southern California Region

April 17, 2024

Dr. Kalam Cheung
Planning & Rules Manager
South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, CA 91765

Via e-mail at: kcheung@aqmd.gov

Re: SCAQMD Proposed Rule 317.1, Clean Air Act Nonattainment Fees for the 8-Hour Ozone Standards: WSPA Comments on Preliminary Draft Rule Language

Dear Dr. Cheung,

Western States Petroleum Association (WSPA) appreciates the opportunity to participate in South Coast Air Quality Management District (SCAQMD or District) Proposed Rule 317.1, Clean Air Act Nonattainment Fees for the 8-Hour Ozone Standards (PR 317.1). The stated purpose of this rulemaking is to satisfy requirements as specified in Sections 182(d), 182(e), 182(f) and 185 of the 1990 amendments to the federal Clean Air Act (CAA) for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) and the 2008 8-hour ozone NAAQS.¹ PR 317.1 is proposed to apply to any Major Stationary Source of volatile organic compounds (VOCs) and/or oxides of nitrogen (NOx) pursuant to Section 185 of the federal CAA.²

WSPA is a non-profit trade association representing companies that explore for, produce, refine, transport, and market petroleum, petroleum products, natural gas, renewable fuels, and other energy supplies in five western states including California. WSPA has been an active participant in air quality planning issues for over 30 years. WSPA member companies operate petroleum refineries and other facilities in the South Coast Air Basin that are within the purview of the SCAQMD and thus will be impacted by PR 317.1.

SCAQMD published the Preliminary Draft Rule Language on March 22, 2024.³ WSPA offers the following comments.

¹ SCAQMD Proposed Rule 317.1 Preliminary Draft Rule Language. Available at: https://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/317.1/pdrl-317-1_2024-03-22_final.pdf?sfvrsn=16.

³ Ibid.

April 17, 2024
Page 2

1. The United States Environmental Protection Agency (U.S. EPA) previously issued guidance for alternative methodologies for establishing emissions baselines under Section 185 of the CAA for the 1-hour Ozone Standard. This methodology should be allowed under PR 317.1 without accruing additional fees.

PR 317.1(d)(8) states that once EPA issues guidance authorizing an alternative methodology for calculation of baseline emissions, facilities may submit a request for alternative baseline conditions if the attainment year is not representative of normal operating conditions. This would allow facilities to select an alternative baseline using twenty-four consecutive months out of the past 10 years that are representative of normal operating conditions.⁴ This policy is presented in the U.S. EPA Guidance on Establishing Emissions Baselines under Section 185 of CAA for Severe and Extreme Ozone Nonattainment Areas that Fail to Attain the 1-hour Ozone NAAQS by their Attainment (Guidance).⁵ The policy is consistent with the method for calculating "baseline actual emissions" found in U.S. EPA's regulations for Prevention of Significant Deterioration of Air Quality (PSD) (40 CFR 52.21(b)(48)).⁶

According to the Guidance, U.S. EPA determined it is fair and reasonable for a source to use a 10-year look back period for baseline calculating "actual emissions" because it allows the source to consider a full business cycle in setting a baseline emissions rate that represents normal operation of the source for that time period.⁷ According to SCAQMD staff, U.S. EPA may be amenable to the use of this methodology within PR 317.1.

PAR 317.1 is written such that an alternative baseline can be established for facilities only if the attainment year is not representative of normal operations. WSPA members have taken a significant number of actions to reduce VOC and NOx emissions as a result of the reduction of NOx RECLAIM Trading Credits over the past 15 years and the 2016 Air Quality Management Plan (AQMP) and associated transition of RECLAIM facilities to command and control rules.⁸ Facilities should be able to receive credit under PR 317.1 for these reductions in emissions.

Additionally, PAR 317.1(d)(9)(A) states:

The owner or operator of a Major Stationary Source electing to submit an Alternative Baseline Emissions Request, pursuant to subparagraph (d)(8)(c), shall pay an hourly staff evaluation rate of \$209.31, unless Regulation III - Fees assigns a fee amount associated with evaluating the Alternative Baseline Emissions Request that shall be paid in lieu of this rate.

April 17, 2024
Page 3

It is unclear why the District proposes charging an hourly staff evaluation fee if a facility were to pursue this alternative baseline emissions approach. It is reasonable to expect the District to engage with facilities and evaluate baseline emissions without additional fees. As stated in the Public Consultation Meeting on April 3, 2024, staff is considering reserving 10% of the collected fees for administration and implementation purposes.⁹ According to the Preliminary Draft Staff Report, the total collected funds in 2025 are (conservatively) approximated to be ~\$26 million per year from 320 Major Stationary Sources in SCAQMD's jurisdiction in calendar year 2025, so ~\$2.6 million could be set aside in the first year alone.¹⁰ Staff would need to demonstrate that the administrative burden for the one-time assessment of alternative baseline year methodologies would exceed the cumulative funds reserved for administrative purposes over the timeline of these fee schedules in order to justify the additional hourly staff evaluation fee. For these reasons, WSPA recommends that the hourly evaluation fee be removed from the rule.

Comment
5-1 Cont.

- 2. SCAQMD should follow the example set by Mojave Desert Air Quality Management District and revise PR 317.1 such that facilities would be required to pay only one nonattainment fee should the air basin remain in nonattainment NAAQS, rather than pay fees on all three NAAQS.**

Mojave Desert Air Quality Management District (MDAQMD) Rules 315.1, 315.2, and 315.3 state:^{11,12,13}

No Facility otherwise subject to this Rule shall be required to remit a FCAA Section 185 penalty for more than one Federal ozone standard for any specific calendar year. A Facility's applicable FCAA Section 185 penalty for any calendar year shall be the largest of all such applicable penalties.

Comment
5-2

SCAQMD stated in the April 3rd Public Consultation Meeting that facilities would be required to pay nonattainment penalties on each of the 1997, 2008, and 2015 federal ozone standards, should the basin remain in nonattainment with each standard through 2033 and 2039, effectively "triple dipping" on facilities' emissions.¹⁴

U.S. EPA's periodic review and revision of the NAAQS is intended to set standards that adequately protect public health and public welfare based on the evolving understanding of the environmental and health impacts of criteria pollutants. The revisions to the standards do not represent a level of ambient air concentrations corresponding to a separate public health benchmark, rather they are the standards that would have been established in prior years had the public health and welfare impacts of these pollutants been better understood. Consequently, treating nonattainment under each standard for the same pollutant as a

April 17, 2024
Page 4

separate violation rather than a continuous evolution of public health sciences unjustly penalizes stationary sources within the basin.

Revising the approach to the collection of fees would not compromise SCAQMD's ability to apply enforcement actions to facilities located in severe or extreme ozone nonattainment areas, as defined under Section 185 of the Clean Air Act.¹⁵ As it currently stands, the South Coast Air Basin is designated as extreme nonattainment for all three of the 1997, 2008, and 2015 ozone standards.¹⁶ WSPA strongly recommends that the District incorporate language into PR 317.1 similar to that in the MDAQMD rules that address CAA Section 185 penalties, allowing facilities to remit fees for only one ozone standard in any calendar year.

Comment
5-2 Cont.

3. Emissions from equipment that are not federal sources, such as those registered under the Portable Equipment Registration Program (PERP), should be excluded from the calculation of Baseline and Actual Emissions.

PR 317.1 (c)(1) defines Actual Emissions as:¹⁷

The mass of emissions of NO_x or VOCs emitted by a Major Stationary Source as reported through SCAQMD's Annual Emission Report (AER) program and shall include, but not be limited to the following:

- (i) Permitted emissions;
- (ii) Regulated emissions;
- (iii) Fugitive emissions; and
- (iv) Unregulated emissions

Comment
5-3

Baseline Emissions would be calculated based on the lower of Actual Emissions, adjusted for emission exceedances, or the amount of emissions allowed under permits, plans, applicable rules, etc.¹⁸ Some of the emissions reported under the AER program do not meet the definition of Major Stationary Source emissions and are not required to be counted under federal source requirements. Therefore, those emissions should not count towards a facility's Baseline or Actual Emissions.

PR 317.1 references CAA section 182(e) for extreme Nonattainment Areas, which defines a "Major Stationary Source" as:¹⁹

Any stationary source or group of sources located within a contiguous area and under common control that emits, or has the potential to emit, at least 10 tons per year of volatile organic compounds.

April 17, 2024
Page 5

Mobile and portable sources are not required to be counted under federal source requirements. The inclusion of emissions of these sources within the Actual Emissions impacts the difference between Actual and Baseline Emissions in a given year and misrepresents the progress being made by stationary sources towards the attainment goals. WSPA suggests aligning the baseline and actual emission inventories with federal act requirements.

Comment
5-3 Cont.

4. WSPA encourages SCAQMD to develop a resolution to direct the fees collected under this rule towards programs that facilitate VOC and NOx emission reductions projects at the Major Stationary Sources from which the fees were paid.

SCAQMD currently plans to defer the decision on how to allocate the funds collected under PR 317.1 until future proceedings due to uncertainties in the resources necessary to implement the rule and the amount of future fees that will be collected.²⁰ The South Coast Air Basin's nonattainment status primarily results from emissions from mobile sources, and yet the penalties of nonattainment are solely felt by Major Stationary Sources.²¹ As such, WSPA recommends SCAQMD to allocate the funds raised back to those facilities to implement emission reduction projects.

Comment
5-4

WSPA appreciates the opportunity to provide these comments related to PR 317.1. We look forward to continued discussion of this important rulemaking. If you have any questions, please contact me at (310) 808-2146 or via e-mail at ross@wspa.org.

Sincerely,

Cc: Wayne Nastri, Executive Officer, SCAQMD
Sarah Rees, Deputy Executive Officer, SCAQMD

5-1 Response

South Coast AQMD is appreciative of the efforts WSPA members have made to improve air quality. Unfortunately, these efforts alone were not enough to achieve attainment with the 1997 8-hour ozone standard. As such, the SCAB and Coachella Valley are subject to the fee collection requirements of CAA section 185, which determines fee obligations based on emissions relative to the established Baseline Emissions or Alternative Baseline Emissions. Please refer to the “2.2.4.9. Alternative Baseline Emissions Request Payment – Paragraph (d)(9)” section of this PR 317.1 Staff Report for an explanation of why South Coast AQMD has set a fee for evaluation of the Alternative Baseline Emissions Request. At this time, no funds have been reserved for administration and implementation of PR 317.1.

5-2 Response

Please refer to the “Payment of Single Largest Standard in Year” section of the “1-3 Response” in this PR 317.1 Staff Report for an explanation of why the South Coast AQMD would not require a Major Stationary Source to only remit the largest applicable CAA Nonattainment Fee for a single ozone standard in any calendar year.

5-3 Response

The definition of Actual Emissions has been revised since the release of the Preliminary Draft Rule Language. Please refer to the definition of Actual Emissions in section “2.2.3. Definitions – Subdivision (c)” of this PR 317.1 Staff Report. Actual Emissions are VOC and/or NO_x emissions reported to or amended by the Executive Office through the AER program. Actual Emissions during the Fee Assessment Year would be used to establish Baseline Emissions. Portable equipment may qualify as emissions from stationary sources as certain portable equipment is required to be permitted by South Coast AQMD. Also, there could be emissions from PERP equipment that operates at a Major Stationary Source. As such, staff disagrees that emissions from PERP shall not be included in determination of the CAA Nonattainment Fees. For questions regarding which emissions would or would not be included in reporting to the AER program, please refer to the AER program.³⁴

5-4 Response

PR 317.1 is being developed to set the regulatory framework for collection of CAA Nonattainment Fees for the 1997 and 2008 ozone standards. Please see section “1.6. Use of Funds” of this PR 317.1 Staff Report for an explanation of why guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking. The South Coast AQMD may consider prioritizing monies collected to be spent on emissions reduction projects at or near essential public services, environmental justice areas, and stationary sources.

³⁴ For additional information on what to report through AER, see the following document: South Coast Air Quality Management District. *South Coast Air Quality Management District Annual Emissions Reporting, Reporting Tool - Frequently Asked Questions*. <https://www.aqmd.gov/docs/default-source/planning/annual-emission-reporting/frequently-asked-questions.pdf?sfvrsn=6>.

Re: Proposed Rule 317.1

Dear Mr. Krause and Ms. Gallivan:

We would like to take this opportunity to provide comments on the South Coast Air Quality Management District proposed Rule 317.1, which has the potential to deal a significant economic blow to regulated businesses in the air basins within the District's jurisdiction. With this Rule, the District should aim to satisfy Section 185 of Clean Air Act in a manner that imposes the least possible burden on the facilities within the District that will be subject to the rule's requirements. Our comments and proposed revisions to the proposed Rule, provided below, are reasonable and practical adjustments that the District can make to ease the burden on its local businesses without compromising timely compliance with the Clean Air Act.

Alternative Baseline Emissions

We propose certain revisions to the Alternative Baseline Emissions provisions under proposed Rule 317.1. We appreciate the District proposed an Alternative Baseline Emissions pathway to help make sure that the new nonattainment fees will be calculated more fairly and accurately. Our proposed changes would capture this intent, by ensuring that regulated facilities can appropriately utilize the Alternative Baseline Emissions option.

} Comment
6-1

123090529.4 0045631-00062

Mr. Michael Krause
 April 23, 2024
 Page 2

Definition of Alternative Baseline Emissions

In proposed Rule 317.1(c)(2), “Alternative Baseline Emissions” is defined as the average annual actual emissions for two consecutive years within the last ten calendar years. This definition should be revised to allow for average annual emissions data from two *non-consecutive* years. This revision would also be reflected in proposed Rule 317.1(d)(8)(C)(ii) with removal of the word “consecutive.” For many regulated facilities, the most representative years of emissions may not be in consecutive years, due to normal fluctuations in production or operations. Flexibility to incorporate emissions data from two consecutive – or non-consecutive years – would allow for calculation of the most representative Alternative Baseline Emissions period for a given source.

Comment
 6-2

Determination of Alternative Baseline Emissions

We propose a revision to Rule 317.1(d)(8)(D), for approval of Alternative Baseline Emissions by the Executive Officer where all requirements delineated in the preceding clause (d)(8)(C) are met. As currently drafted, proposed clause (d)(8)(D) implies that the Executive Officer has discretion to disallow use of a proposed Alternative Baseline Emissions calculation, even where all of the requirements of clause (d)(8)(C) have been demonstrated. This would introduce the potential for a regulated source to be held to an undefined, ambiguous standard, outside of the delineated requirements of clause (d)(8), in order to use Alternative Baseline Emissions. We do not believe that is the District’s intent. We would suggest revision of this clause to remove this ambiguity, and also include a timeline for approval by the Executive Officer:

Comment
 6-3

The Executive Officer shall approve ~~has authorized~~ a Major Stationary Source to use this Alternative Baseline Emissions within 90 days if all requirements identified in clause (d)(8)(C) are met.

This revision would allow the Executive Office to evaluate a request for Alternative Baseline Emissions and determine whether all the delineated requirements of clause (d)(8)(C) have been met prior to authorization of Alternative Baseline Emissions, but would avoid the potential for rejection of a proposed Alternative Baseline Emissions based on some unspecified or additional criteria.

We also propose revisions to certain criteria in clause (d)(8)(C), where requirements are unnecessary to adequately demonstrate alternative representative emissions, or unnecessarily burdensome. First, we propose deletion of proposed Rule 317.1(d)(8)(C)(iv), requiring analysis of all adopted local, state, and federal rules or regulations that would have restricted a source’s operations and emissions during the proposed 24-month Alternative Baseline Emissions period. Such a comprehensive, hypothetical legal analysis is unnecessarily burdensome and complicated for regulated entities. Clause (d)(8)(C)(iii) already requires that a regulated entity provide an analysis demonstrating that Actual Emissions from the proposed 24-month period represent typical operations. With this analysis, the District can adequately evaluate whether proposed

Comment
 6-4

123090529.4 0045631-00062

Mr. Michael Krause
 April 23, 2024
 Page 3

Alternative Baseline Emissions are representative. To the extent new regulations have impacted a facility's operations or emissions in recent times, this would be implicated in the analysis prepared under clause (d)(8)(C)(iii) to support use of an alternative two-year period.

Comment
 6-4 Cont.

Second, we also propose deletion of proposed Rule 317.1(d)(8)(C)(vi), requiring certification that a source's emissions are irregular, cyclical, or otherwise vary significantly from year to year. This certification is unnecessary. If a facility's pattern of emissions is substantially variable, this alone shows that emissions are irregular and vary significantly from year to year. Moreover, the analysis required under clause (d)(8)(C)(iii), demonstrating that a proposed 24-month period represents typical operations, would include an explanation of any irregular, cyclical, or variable emissions at the source. Therefore, no additional certification is needed.

Comment
 6-5

Lastly, we request that the timeline for submission of an Alternative Baseline Emissions Report in clause (d)(8)(C) be revised from 120 days to 180 days, from U.S. EPA's final nonattainment finding. The preparation of a complete and supported Alternative Baseline Emissions Report will require significant efforts by a regulated entity and additional time is necessary to meet this burden.

Comment
 6-6

Stationary Source Status During the Attainment Year

We propose deletion of proposed Rule 317.1(d)(8)(B), providing that a stationary source be major during the entirety of the Attainment Year, as defined, in order to use an alternative baseline. A facility is subject to the proposed Rule and potentially substantial Nonattainment Fees whether it is a major stationary source prior to, during, or following the defined Attainment Year. There is no reason for the Alternative Baseline Emissions pathway to be available only to those facilities that are major during the entirety of the Attainment Year.

Comment
 6-7

Timing of Compliance

We would request that certain timelines in the proposed Rule be revised to allow sufficient time for evaluation and compliance. Regulated businesses need time to manage compliance with a new program with the potential for such significant impact.

Proposed Rule 317.1(d)(6) provides 60 days for a source to confirm or contest the Rule's applicability. We request that this timeline be revised to 90 days to allow regulated entities sufficient time to evaluate the applicability of this new program to their facilities. Likewise, we request that the timeline to confirm or contest assigned Baseline Emissions under proposed Rule 317.1(d)(5) be revised from 60 days to 90 days. Regulated entities need adequate time to evaluate the District's assignment of Baseline Emissions.

Comment
 6-8

The timeline for the District to take action under proposed Rule 317.1(d)(5) for failure to pay fees should be extended to one year. California Health and Safety Code Section 42307 provides the District with authority to request a hearing to revoke a permit, but does not dictate a

Comment
 6-9

123090529.4 0045631-00062

Mr. Michael Krause
April 23, 2024
Page 4

timeline for such action. The District should allow for more than 120 days before this rather significant step is taken for a late payment of Rule 317.1 fees.

} Comment
6-9 Cont.

Revise Exemptions for Clarity

We propose an additional clause in proposed Rule 317.1(e) to make explicit the exemption offered to sources that emit less than 80% of their baseline in a given year. The fee determination provisions of proposed Rule 317.1(d)(2) stipulate that if actual emissions are less than or equal to 80% of baseline emissions, no nonattainment fee is assessed for that year. We suggest a new subsection (e)(3) to provide:

} Comment
6-10

No VOC or NOx CAA Nonattainment Fee shall be assessed for a Fee Assessment Year where Actual Emissions of VOC or NOx do not exceed 80% of Baseline Emissions or Alternative Baseline Emissions for VOC or NOx, as applicable.

Conclusions

We recognize that factors outside of the District's control have placed it in a difficult position and led to the proposed Rule 317.1. Yes, proposed Rule 317.1 represents a significant new economic burden on regulated stationary sources in the District, unrelated to the sources' contribution (or lack thereof) to the District's nonattainment status. It is widely acknowledged that certain air basins in the District would not be able to meet applicable air quality standards, even if all emitting industries were eliminated in the District. Over 80% of ozone forming emissions in the District derive from mobile sources, including trucks, cars, airplanes, trains, and ships. None of these sources are subject to these nonattainment fees. For all these reasons, we urge the District to revise proposed Rule 317.1 where feasible, to comply with the Clean Air Act while lessening unnecessary burdens on major stationary sources.

Very truly yours,

Allison C. Smith

Enclosure

cc: Ivan Tether, Esq., Tether Law

123090529.4 0045631-00062

(Preliminary Draft Rule Language - Version 2024/03/22)

RULE 317.1 CLEAN AIR ACT NONATTAINMENT FEES FOR 8-HOUR OZONE STANDARDS

(a) Purpose

The purpose of this rule is to satisfy requirements as specified in Sections 182(d), 182(e), 182(f) and 185 of the 1990 amendments to the federal Clean Air Act (CAA) for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) and the 2008 8-hour ozone NAAQS.

(b) Applicability

- (1) This rule shall become applicable if and when the U.S. Environmental Protection Agency (EPA) makes a final finding that a Basin has failed to attain the 1997 8-hour ozone NAAQS or the 2008 8-hour ozone NAAQS by the applicable Attainment Date.
- (2) Except as otherwise provided as exempt in subdivision (e), this rule is applicable to any Major Stationary Source of Volatile Organic Compounds (VOC) and/or Nitrogen Oxides (NOx).

(c) Definitions

For the purpose of this rule, the following definitions shall apply:

- (1) ACTUAL EMISSIONS means the mass of emissions of NOx or VOCs, which are emitted by a Major Stationary Source to the atmosphere during a calendar year, reported to or amended by the Executive Officer, through the South Coast AQMD's Annual Emissions Report (AER) program and shall include, but not be limited to the following:
 - (i) Permitted emissions;
 - (ii) Regulated emissions;
 - (iii) Fugitive emissions; and
 - (iv) Unregulated emissions
- (2) ALTERNATIVE BASELINE EMISSIONS means a Major Stationary Source's VOCs or NOx average annual Actual Emissions for two ~~consecutive~~ years within up to the last ten (10) calendar years prior to and including the Attainment Year, not to exceed emissions allowed through the permit(s), plan(s), applicable rules(s), and implementation plan(s).

123091083.1 0045631-00062

PR 317.1 - 1

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

- (3) ANNUAL CAA NONATTAINMENT FEE RATE means \$5,000 (in 1990 dollars), adjusted for inflation annually, beginning in the year after 1990, by the percent change in consumer price index (CPI), if any, pursuant to CAA Sections 185(b)(3) and 502(b)(3)(B)(v). The Annual CAA Nonattainment Fee Rate is published annually for each calendar year in a memorandum by the U.S. EPA.
- (4) APPLICABLE OZONE STANDARD means either the 1997 8-hour ozone NAAQS or 2008 8-hour ozone NAAQS, as applicable.
- (5) ATTAINMENT DATE means the U.S. EPA approved date, established pursuant to the CAA, by which a Basin must attain a federal NAAQS. Where no such U.S. EPA approval exists, the date of the Basin's maximum statutory attainment date for that standard.
- (6) ATTAINMENT YEAR means the calendar year containing the Attainment Date.
- (7) BASELINE EMISSIONS means a Major Stationary Source's VOC and/or NOx emissions, for which a source qualifies as a Major Stationary Source. Baseline Emissions for VOC and/or NOx are calculated separately for each Applicable Ozone Standard, and as follows:
 - (A) For a Major Stationary Source which was a Major Stationary Source during the entirety of the Attainment Year, the Baseline Emissions is the lower of:
 - (i) The Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), during the Attainment Year or
 - (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s) during the Attainment Year.
 - (B) For a Major Stationary Source that becomes subject to this rule during the Attainment Year, the Baseline Emissions is the lower of:
 - (i) The Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), for the operational period as a Major Stationary Source in the Attainment Year, extrapolated over the entire Attainment Year or
 - (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s) for the operational period as a Major Stationary Source in the Attainment Year, extrapolated over the entire Attainment Year.
 - (C) For a Major Stationary Source that becomes subject to this rule after the Attainment Year, the Baseline Emissions is the lower of:

123091083.1 0045631-00062

PR 317.1 - 2

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

- (i) The Actual Emissions for the operational period in the initial calendar year of operation as a Major Stationary Source, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), extrapolated over the entire initial year of operation as a Major Stationary Source or
 - (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s), for the facility for the operational period in the initial calendar year as a Major Stationary Source, extrapolated over the entire initial year as a Major Stationary Source.
- (8) BASIN means either the South Coast Air Basin or Riverside County portion of the Salton Sea Air Basin (Coachella Valley). The boundaries of each Basin shall be as defined by 40 Code of Federal Regulations, Section 81.305.
- (9) CAA NONATTAINMENT FEE means the federally mandated ozone NAAQS nonattainment fee assessed to a Major Stationary Source for excess emissions of VOC and NO_x air contaminants pursuant to Section 185 of the CAA. It is the summation of the annual VOC CAA Nonattainment Fee and the annual NO_x CAA Nonattainment Fee.
- (10) EXTENSION YEAR means the year that the U.S. EPA may grant, pursuant to Section 181(a)(5) of the CAA and upon the state's request, an extension of the Attainment Date.
- (11) FEE ASSESSMENT YEAR means the calendar year in which emissions occurred for which the CAA Nonattainment Fees are being calculated and assessed under the provisions of this rule for each Applicable Ozone Standard.
- (12) MAJOR STATIONARY SOURCE means a Major Stationary Source as defined in CAA sections 182(d), 182(e), 182(f) and 185 and is required to operate under the authority of a Title V Program facility permit.
- (13) NITROGEN OXIDES (NO_x) means the sum of nitric oxides and nitrogen dioxides emitted, calculated as nitrogen dioxide.
- (14) VOLATILE ORGANIC COMPOUNDS (VOC) means the sum of any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds.
- (d) Requirements
 - (1) Fee Assessment

The Executive Officer shall assess the CAA Nonattainment Fees for each Applicable Ozone Standard:

123091083.1 0045631-00062

PR 317.1 - 3

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

- (A) Beginning the calendar year after the Attainment Year for a:
 - (i) Major Stationary Source which was a Major Stationary Source during the entirety of the Attainment Year; or
 - (ii) Major Stationary Source that becomes subject to this rule during the Attainment Year; or
- (B) Beginning the calendar year after the calendar year used to establish Baseline Emissions for a Major Stationary Source that becomes subject to this rule after the Attainment Year.

(2) Fee Determination

Beginning the calendar year after the applicable Attainment Year, the CAA Nonattainment Fee shall be the Annual CAA Nonattainment Fee Rate for the applicable Fee Assessment Year per ton of Actual Emissions of VOC and/or NOx during the Fee Assessment Year that exceed 80% of the Baseline Emissions or Alternative Baseline Emissions. For each Major Stationary Source, the CAA Nonattainment Fee shall be calculated as follows:

VOC CAA Nonattainment Fees =

$$\text{Annual CAA Nonattainment Fee Rate} \times [A_V - (0.8 \times B_V)]$$

NOx CAA Nonattainment Fees =

$$\text{Annual CAA Nonattainment Fee Rate} \times [A_N - (0.8 \times B_N)]$$

CAA Nonattainment Fees =

$$\text{NOx CAA Nonattainment Fees} + \text{VOC CAA Nonattainment Fees}$$

Where:

- For a Major Stationary Source of VOC:
 - A_V = Actual Emissions of VOC for the applicable Fee Assessment Year (in tons per year). If A_V is less than or equal to 80% of B_V , there shall be no VOC CAA Nonattainment Fee assessed for the Fee Assessment Year.
 - B_V = Baseline Emissions or Alternative Baseline Emissions for VOC (in tons per year).
- For a Major Stationary Source of NOx:
 - A_N = Actual Emissions of NOx for the applicable Fee Assessment Year (in tons per year). If A_N is less than or equal to 80% of B_N , there shall be no NOx CAA Nonattainment Fee assessed for the Fee Assessment Year.
 - B_N = Baseline Emissions or Alternative Baseline Emissions for NOx (in tons per year).

PR 317.1 - 4

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

- (3) Annual Reporting and Payment
 - (A) The owner or operator of a Major Stationary Source shall annually report all Actual Emissions, regardless of whether the owner or operator received notice from the Executive Officer.
 - (B) The owner or operator of a Major Stationary Source shall, for each applicable Fee Assessment Year, which includes the years prior to the U.S. EPA making a final finding that a Basin has failed to attain the Applicable Ozone standard, pay the appropriate CAA Nonattainment Fees, determined pursuant to paragraph (d)(2), regardless of whether the owner or operator received notice from the Executive Officer.
- (4) Payment Due Date

Unless a later date, not to exceed 365 days from the applicable due date, is specified by the Executive Officer, the owner or operator of a Major Stationary Source, regardless of whether the owner or operator received notice from the Executive Officer, shall submit full payment for:

 - (A) The invoice that includes the CAA Nonattainment Fee for the initial Fee Assessment Year for the Applicable Ozone Standard for the Major Stationary Source, no later than 365 days from the date the invoice is issued by the Executive Officer; and
 - (B) An invoice subsequent to the first invoice that included the CAA Nonattainment Fee for the initial Fee Assessment Year for the Applicable Ozone Standard for the Major Stationary Source, either:
 - (i) No later than December 15th of the year the invoice is issued by the Executive Officer; or
 - (ii) No later than 75 days from the date the invoice is issued by the Executive Officer, whichever is later.
- (5) Failure to Pay Fees

If ~~one hundred twenty (120) days have~~ one year has elapsed since the invoice due date and all CAA Nonattainment Fees have not been paid in full, the Executive Officer may take action to revoke all Permits to Operate for equipment on the premises, as authorized in California Health and Safety Code Section 42307.
- (6) Notice of Rule Applicability

No later than ~~60~~90 days after a notice is issued by the Executive Officer that the facility is a Major Stationary Source subject to this rule, the owner or operator of a Major Stationary Source shall confirm or contest the Major Stationary Source's rule applicability.

123091083.1 0045631-00062

PR 317.1 - 5

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

(7) Notice of Baseline Emissions

No later than ~~60~~90 days after a notice is issued by the Executive Officer specifying the Baseline Emissions for the Major Stationary Source, the owner or operator of a Major Stationary Source shall confirm or contest the assigned Baseline Emissions.

(8) Alternative Baseline Emissions

If the owner or operator of a Major Stationary Source requests to use an Alternative Baseline Emissions to determine the CAA Nonattainment Fee, the following requirements shall be met:

- (A) U.S. EPA has issued guidance authorizing an alternative methodology for calculation of a Major Stationary Source's Baseline Emissions, pursuant to CAA Section 185(b)(2) for the Applicable Ozone Standard, that is consistent with the methodology specified in subparagraph (d)(8)(C) and requirements specified in subparagraphs (d)(8)(B) and (d)(8)(D).
- (B) The Major Stationary Source was a Major Stationary Source during the entirety of the Attainment Year;
- (C) No later than 120 days after the end of the Attainment Year or no later than ~~120~~180 days after the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the applicable Attainment Date, whichever is later, the owner or operator of a Major Stationary Source submits to the Executive Officer an Alternative Baseline Emissions Request that contains the following:
 - (i) An Alternative Baseline Emissions Report including Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), for each of the relevant ten (10) calendar years preceding and including the Attainment Year;
 - (ii) Identification of the twenty-four ~~consecutive~~ months representing typical operations:
 - (a) For a Major Stationary Source without an electrical steam generating unit(s), within the last relevant ten (10) calendar years prior to and including the Attainment Year selected; or
 - (b) For a Major Stationary Source with an electrical steam generating unit(s), within the last relevant five (5) calendar years prior to and including the Attainment Year selected or, with justification, the relevant five (5) calendar years prior to the aforementioned calendar years;

123091083.1 0045631-00062

PR 317.1 - 6

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

- (iii) An analysis demonstrating that the Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rules(s), and implementation plan(s), from the average of the twenty-four months, identified pursuant to clause (d)(8)(C)(ii), represent typical operations;
- ~~(iv) Analysis of adopted local, state, and federal rules or regulations that would have restricted the source's ability to either operate or emit a particular pollutant, had they been in effect during the consecutive twenty-four months selected;~~
- (iv) The average annual emissions of the twenty-four months, identified in clause (d)(8)(C)(ii), not to exceed emissions allowed through the permit(s), plan(s), applicable rules(s), and implementation plan(s), considering the impacts identified in clause (d)(8)(C)(iv);
- ~~(vi) Certification, in writing, by the highest ranking executive on site that the source's emissions are irregular, cyclical, or otherwise vary significantly from year to year; and~~
- ~~(vii) Any other information as required by the U.S. EPA guidance; and~~
- (D) The Executive Officer ~~shall approve~~has authorized a Major Stationary Source to use this Alternative Baseline Emissions within 90 days if all requirements identified in clause (d)(8)(C) are met.
- (9) Alternative Baseline Emissions Request Payment
 - (A) The owner or operator of a Major Stationary Source electing to submit an Alternative Baseline Emissions Request, pursuant to subparagraph (d)(8)(c), shall pay an hourly staff evaluation rate of \$209.31, unless Regulation III - Fees assigns a fee amount associated with evaluating the Alternative Baseline Emissions Request that shall be paid in lieu of this rate.
 - (B) The owner or operator of a Major Stationary Source shall submit full payment of the amount invoiced no later than 60 days from receiving the invoice for evaluation of the Alternative Baseline Emissions Request.
- (e) Exemptions
 - (1) Extension Year

The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees under this rule during any calendar year that is considered a Basin's Extension Year for the Applicable Ozone Standard.
 - (2) Cessation of Fees

123091083.1 0045631-00062

PR 317.1 - 7

Proposed Rule 317.1 (Cont.)

(Version 2024/03/22)

The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees for an Applicable Ozone Standard once the Basin has been redesignated by U.S. EPA to attainment for that Applicable Ozone Standard or, for a revoked Applicable Ozone Standard, if U.S. EPA has terminated the anti-backsliding requirement associated with the CAA Nonattainment Fees for the Applicable Ozone Standard. The CAA Nonattainment Fees will cease in the same calendar year as the redesignation or termination.

(3) Baseline Emissions Threshold

No VOC or NOx CAA Nonattainment Fee shall be assessed for a Fee Assessment Year where Actual Emissions of VOC or NOx do not exceed 80% of Baseline Emissions or Alternative Baseline Emissions for VOC or NOx, as applicable.

123091083.1 0045631-00062

PR 317.1 - 8

6-1 Response

The South Coast AQMD appreciates your support of the inclusion of an Alternative Baseline Emissions pathway.

6-2 Response

As discussed in section “1.3.2. Alternative Baseline Emissions” of the PR 317.1 Staff Report, the requirements in PR 317.1 are in alignment with the Alternative Baseline Emissions guidance, established by the U.S. EPA on March 21, 2008, in which the U.S. EPA determined that 24-consecutive month period is reasonable. The guidance did not allow the use of non-consecutive months or years.

6-3 Response

A Major Stationary Source shall be allowed to use Alternative Baseline Emissions only if such request has been evaluated and approved by the Executive Officer to ensure the conditions described in the guidance established by U.S. EPA are met. Submission of an Alternative Baseline Emissions Request alone does not allow the use of Alternative Baseline Emissions. The Alternative Baseline Emissions Request requires evaluation by the South Coast AQMD and will only be approved if the South Coast AQMD believes there is adequate evidence to authorize the use of Alternative Baseline Emissions. The proposed rule language has been revised since the release of the Preliminary Draft Rule Language to clarify the basis of approval of the request.

6-4 Response

The intent is that the impacts from other requirements are evaluated to ensure Alternative Baseline Emissions represent typical operations. As the Major Stationary Source is most knowledgeable of their process and business decisions, they are required to identify if any changes in emissions are due to changes made in response to any local, state, or federal rules or regulations. Without this analysis, a facility may present a proposed Alternative Baseline Emissions which does not account for emissions reductions which are currently required.

6-5 Response

As discussed in section “1.3.2. Alternative Baseline Emissions” of the PR 317.1 Staff Report, the South Coast AQMD is establishing these requirements in alignment with the Alternative Baseline Emissions guidance established by the U.S. EPA on March 21, 2008, which requires that Alternative Baseline only be used if a source’s annual emissions are “irregular, cyclical, or otherwise vary significantly from year to year.” PR 317.1 clause (d)(8)(C)(ii) requires an analysis for representation of typical operations and makes no mention of requirements that the emissions be “irregular, cyclical, or otherwise vary significantly from year to year.” PR 317.1 clause (d)(8)(C)(ii) would not be duplicative of PR 317.1 clause (d)(8)(C)(vi).

6-6 Response

A facility may begin preparing their Alternative Baseline Emissions Request at any time and does not need to delay preparation until after the Attainment Year or until after the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the applicable Attainment Date. In consideration of this comment, PR 317.1 has been revised to from “no later than one-hundred twenty (120) days” to “no later than one-hundred eighty (180) days” after the end of the Attainment Year or no later than one-hundred twenty (120) days after the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the

applicable Attainment Date, whichever is later. In making a finding of failure to attain, the U.S. EPA typically first issues a proposed rule and adopts a final rule within a few months (sometimes longer). As this requirement is the later of two options, one-hundred twenty (120) days from whenever the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the applicable Attainment Date should allow ample time (more than one-hundred eighty (180) days after U.S. EPA's proposed rule) for the preparation of an Alternative Baseline Emissions Request.

6-7 Response

A facility qualifying as a Major Stationary Source after the start of the Attainment Year shall not be eligible to use Alternative Baseline Emissions as the Alternative Baseline Emissions would then be representative of their operations as a non-major stationary source instead of those as a Major Stationary Source.

6-8 Response

PR 317.1 has been revised as recommended to allow 90 days to challenge rule applicability and Baseline Emissions.

6-9 Response

PR 317.1 was revised from one-hundred twenty (120) days from the invoice due date to one-hundred twenty (120) days from the payment due date to provide clarity. Please refer to the section "2.2.4.5. Failure to Pay Fees Requirements – Paragraph (d)(5)" of the PR 317.1 Staff Report for an explanation of why the Executive Officer may take action to revoke all Permits to Operate for equipment on the premises if one-hundred twenty (120) days have lapsed since the payment due date.

6-10 Response

Please refer to the "Actual Emissions Below 80% of Baseline Emissions" section of the "1-3 Response" in this PR 317.1 Staff Report for an explanation of why an exemption is not necessary when actual emissions are less than 80% ~~percent~~ of the Baseline Emissions or Alternative Baseline Emissions.

Re: Regulatory Flexibility Group Comments on Proposed Rule 317.1

Dear Ms. Gallivan and Mr. Krause,

We write on behalf of our client, the Regulatory Flexibility Group (“RFG”), with comments on Proposed Rule 317.1 (“PR 317.1”). RFG members include companies in the refining, utility, and aerospace sectors that operate facilities within the South Coast Air Quality Management District (“SCAQMD” or the “District”) and that will be required to pay fees pursuant to PR 317.1.

The RFG appreciates the opportunity to participate in the rulemaking process and provide these comments. We recognize that Section 185 of the federal Clean Air Act requires the District to collect nonattainment penalty fees from stationary sources, and that the District’s discretion in developing PR 317.1 is limited. Where the District does have discretion, however, it should be used to minimize the burden on the region’s already heavily controlled stationary sources that have limited feasible opportunities to reduce emissions and avoid penalty fees. Below, we provide background comments and propose three primary ways in which the District can partially alleviate the substantial burden of this rule.¹

Clean Air Act Section 185 Was Not Intended to Penalize Well-Controlled Stationary Sources

As a backdrop for our proposals, it should be noted that Congress designed Section 185 as a penalty backstop for failures by a state to regulate major stationary sources. But here, the State of California and the District have not failed, and the stationary sources potentially subject to PR 317.1 are among the most – if not the most – controlled sources in the country. The legislative history of Section 185 acknowledges that Congress intended the fee to function as a penalty for an

} Comment
7-1

¹ RFG’s proposed amendments in Attachment A also suggest certain revisions to alleviate certain timing burdens and provide additional certainty for sources looking to utilize the alternative baseline approach.

LATHAM & WATKINS LLP

area's failure to attain the ozone standard, but it was not intended to punish individual sources.² Rather, the Section 185 fee mechanism was designed to serve as an economic incentive if an area failed to regulate major stationary sources. The fee was intended to encourage stationary sources to implement the controls that the state had failed to require in order to reduce emissions and avoid paying the fee.

As the District is well aware, stationary sources in the District's jurisdiction are already heavily controlled, leaving scant yet-to-be-implemented controls that will reduce emissions from these sources. Indeed, as stated in the District's recent comment letter to EPA, "[SCAQMD has] established Best Available Retrofit Control Technology (BARCT) standards in rules that impose strict emission limits for virtually every combustion category of stationary sources to reduce NOx emissions to the greatest extent feasible."³ The only remaining options, therefore, are to reduce emissions by curtailing operations or pay the penalty fee.

Moreover, the District's nonattainment stems primarily from emissions from mobile and federal sources, not from the stationary sources singled out by Section 185. The District itself forcefully made this point in response to EPA's proposed disapproval of SCAQMD's Contingency Measure Plan for the 1997 Ozone Standard:

Today, over 80 percent of NOx emissions are from mobile sources, and of these, it is the trucks, ships, aircraft, locomotives, and similar heavy-duty engines that are responsible for about three-quarters of these emissions. Indeed, . . . since 1997 emissions under South Coast AQMD's and CARB's control have declined by 70 percent; yet the emissions subject to EPA's authority have only declined 15 percent. . . . It is not possible for our region to meet the 1997 and future standards without the federal government addressing the sources under its control.⁴

The District went on to argue that "[it] does not make sense that a region with the most stringent rules and largest investments in advanced clean air technology deployment should face perpetual nonattainment and *looming harsh economic sanctions with no ability to resolve the situation*."⁵ The same is true here. Because nonattainment is a mobile and federal source problem, it does not make sense to sanction stationary sources that have no ability to resolve the situation.

Owners of stationary sources have been doing their part for decades to improve air quality in the region, while mobile and federal sources remain under-controlled. Contrary to

LATHAM & WATKINS LLP

Congressional intent and ordinary logic, the imposition of Section 185 fees on stationary sources within the District is an unfair penalty simply for doing business in the region. The District should therefore take every opportunity it has to relieve this burden.

Comment
7-1 Cont.

The Alternative Baseline Approach Should Be Established Prior to Rule Adoption

The Clean Air Act uses a default baseline of actual emissions during the attainment year to calculate Section 185 fees, but it allows EPA to issue guidance authorizing the use of actual emissions averaged over multiple years for sources with emissions that vary from year to year.⁶ PR 317.1 incorporates an alternative baseline option by allowing a facility to identify a two-year period that is representative of a source's typical emissions within the prior ten years.⁷ The District used the same alternative baseline approach in Rule 317, consistent with EPA guidance issued for the 1-hour ozone standard.⁸ However, EPA has not issued guidance authorizing the alternative baseline for the 8-hour ozone standard. Accordingly, we understand PR 317.1 only authorizes the alternative baseline approach once EPA has issued the requisite guidance. We further understand that Staff has submitted a request for EPA to issue guidance authorizing use of the alternative baseline for the 8-hour ozone standard.⁹

The RFG supports the District's proposal to include an alternative calculation for a source's baseline emissions, and it is grateful for the District requesting that EPA issue guidance that will allow such alternative calculation. With respect to the specifics of the alternative calculation approach itself, given the significant variability of emissions at certain major sources, we do recommend revising the language to give the Executive Officer authority to approve an alternative time period to the twenty-four consecutive months during the preceding 10-years.¹⁰

Comment
7-2

Because a source's emissions baseline is determined once and used to calculate fees for every subsequent year, *it is incredibly important that the baseline accurately represents the source's typical actual emissions*. As Staff is aware, a source's emissions during the attainment year may not be representative of the source's typical emissions. The alternative baseline approach therefore provides the needed flexibility to ensure that a source will not be assessed fees calculated using an unrepresentative baseline.

Because of the critical importance of the baseline to the fundamental accuracy of the fee determination, *the District should not adopt PR 317.1 until EPA issues guidance that definitively authorizes use of the alternative baseline as proposed in the rule.*

Collected Fees Should Be Used to Generate Offsets for RECLAIM Facilities Transitioning to Command-and-Control

The Clean Air Act does not dictate how the District must use the Section 185 fees that it collects. As described above, the fees unfairly single out highly controlled stationary sources. Accordingly, we propose that fees be used in part to generate offsets that will be made available to Regional Clean Air Incentives Market (“RECLAIM”) facilities as they exit the program.¹¹

Background

As you are aware, the District is in the process of transitioning facilities out of the RECLAIM regulatory program for nitrogen oxides (NO_x) emissions and into a command-and-control regulatory structure. One of the more challenging aspects of the proposed transition from RECLAIM’s market-based design to a command-and-control structure relates to the nature of SCAQMD’s current new source review (“NSR”) programs and, in particular, the offsetting provisions that would apply to former NO_x RECLAIM sources in the future. When the RECLAIM program was launched in 1993, facilities were granted RECLAIM Trading Credits (“RTCs”) equal to their initial allocation of emissions. Under the RECLAIM program, RTCs are used as both a BARCT compliance instrument and as NSR offsets.

EPA has taken the position that a NO_x RECLAIM facility exiting the program must surrender its RTCs.¹² Without RTCs, the current supply of NO_x ERCs on the open market is far below anticipated future demand if former NO_x RECLAIM facilities were transitioned into the Regulation XIII NSR program.¹³ The lack of NO_x ERCs on the open market to meet the needs of all sources means that a transitioning facility that is unable to generate or acquire sufficient offsets will be unable to obtain a permit to install new equipment. If such offsets are not available, permits for the new equipment cannot be issued. Such a facility would be prevented from expanding its operations or from modernizing its equipment to increase efficiency and throughput, even when the modernization would include using newer, lower emitting equipment than the equipment currently in use. Preventing modernization due to a lack of offsets would impede achieving important modernization co-benefits, including lower air toxics and GHG emissions.

Comment
7-3

¹¹ We recognize that a portion of the fees will need to be used to cover the costs of administering the fee program.

¹² It should be noted that RFG fundamentally disagree with this position. If the NO_x RECLAIM NSR program were to be replaced by a program in which NO_x RTCs are no longer available as NSR offsets, then existing NO_x RTCs should be convertible to ERCs. In particular, a facility that holds RTCs in excess of its actual emissions at the time it exits RECLAIM should be allowed to retain the benefit of that corresponding emission reduction by converting the surplus RTCs to ERCs.

¹³ The District previously estimated that the average annual offset demand for RECLAIM facilities could be 1,000 lbs/day, which would exceed the total NO_x ERCs in the open market, which is roughly 800 lbs/day. See RECLAIM Working Group Meeting Presentation (Feb. 14, 2019) at slide 18; see also SCAQMD, Current and Historical Active ERC and STERC Lists, available at <http://www.aqmd.gov/home/permits/emission-reduction-credits/historical-active-erc-and-sterc-lists>.

April 30, 2024
Page 5

LATHAM & WATKINS LLP

Proposal

The District anticipates that it will collect approximately \$26 million in Section 185 fees for the 1997 ozone standard in calendar year 2025 pursuant to PR 317.1.¹⁴ We propose that the District deposit the fees into a “Rule 317.1 RECLAIM Transition Fund” that will be used to, among other things,¹⁵ subsidize the adoption of surplus emission-reducing control equipment and technologies throughout the District. Reductions in NOx emissions realized through these efforts would be banked as offsets while the reduction of co-pollutant emissions would benefit overall air quality. The NOx offsets generated by the Rule 317.1 RECLAIM Transition Fund would then be banked to be made available to RECLAIM facilities in need of offsets when exiting the program. To facilitate this, we propose the amendments to PR 317.1 shown in Attachment A to this letter.

Using the fees in this way would alleviate some of the offset burden associated with exiting the RECLAIM program, would aid the District in realizing a successful RECLAIM transition, and would benefit air quality overall.

Comment
7-3 Cont.

The Definition of Actual Emissions Should Be Clarified

The definition of “actual emissions” in the preliminary draft rule language introduces ambiguity regarding the emissions that will be used to calculate a facility’s fee determination. Paragraph (c)(1) states that actual emissions means the emissions a facility reports through the District’s Annual Emissions Report (“AER”) program and “shall include, but not be limited to (i) Permitted emissions; (ii) Regulated emissions; (iii) Fugitive emissions; and (iv) Unregulated emissions.”¹⁶ According to the Staff Report, these emissions include, among other things, emissions from portable equipment, solvents, and architectural coatings.¹⁷ However, the AER Reporting Tool – Frequently Asked Questions, cited in the Staff Report as providing additional information on what emissions to report through AER, states that certain portable equipment, solvents, and architectural coatings are *not* subject to reporting under the AER program.¹⁸

Comment
7-4

To avoid confusion, we suggest revising the definition of “actual emissions” in PR 317.1 to refer directly to a facility’s emissions reported through the District’s AER program pursuant to Rule 301. It should also specifically exclude emissions from equipment registered under CARB’s

¹⁴ SCAQMD, Preliminary Draft Staff Report, Proposed Rule 317.1 (March 2024), p. 3-5. Staff estimates the total collected for the 1997 standard will gradually decline before leveling out around \$19 million in 2029. *Id.* For the 2008 standard, the District estimates it will collect approximately \$20 million beginning in 2033. *Id.*

¹⁵ We propose the Fund could also purchase available offsets (e.g. ERCs) in the market and provide them to the transitioning RECLAIM sources.

¹⁶ PR 317.1(c)(1) (preliminary draft rule language released March 22, 2024).

¹⁷ SCAQMD, Preliminary Draft Staff Report, Proposed Rule 317.1 (March 2024), p. 2-3.

¹⁸ See SCAQMD, Annual Emissions Reporting, Reporting Tool - Frequently Asked Questions (FAQ) (March 2023) pp. 1-2, available at <https://www.aqmd.gov/docs/default-source/planning/annual-emission-reporting/frequently-asked-questions.pdf?sfvrsn=6>. Specifically, the FAQ states that emissions need not be reported from portable equipment registered under CARB’s Statewide Portable Equipment Registration Program (unless otherwise required), Clean Air Solvents, and architectural coatings used on structures defined by Rule 1113. *Id.*

April 30, 2024
Page 6

LATHAM & WATKINS LLP

Portable Equipment Registration Program (“PERP”), as these emissions should not be categorized as emitted by the regulated facility. Because the PERP equipment are not owned by or permitted at the facility, we believe the emissions need not be attributed to the facility under Section 185.¹⁹ As shown in Table 1, major sources, like all sources, already pay fees based on emissions. Section 185 fees are punitive and duplicative, so the District should not further punish major sources unfairly with another layer of duplicative fees not required by the Clean Air Act. We believe exclusion of PERP emissions is also consistent with other California air district rules addressing Section 185 penalties.²⁰

Table 1: Fees Paid to District by Facility Type

	Major Sources	Minor Sources
AER/Rule 301 Fees	Yes	Yes
Section 185 Fees	Yes	No
PERP 185 Fees (under current draft of PR 317.1)	Potentially Unless Amended ²¹	No

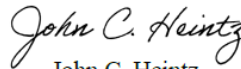

Comment
7-4 Cont.

Suggested revisions to the definition to address this inequity are shown in Attachment A.²² We believe our proposed approach remains consistent with the Clean Air Act.

Conclusion

We greatly appreciate the opportunity to provide these comments on PR 317.1. We would also appreciate a meeting to discuss the proposals discussed in this letter. Please contact me at (213) 891-7395, or by email at john.heintz@lw.com with your availability to schedule a discussion.

Best regards,

John C. Heintz
of LATHAM & WATKINS LLP

¹⁹ See 42 U.S.C. §7511d

²⁰ See Mojave Desert AQMD (see MDAQMD Rules 315, 315.1, 315.2, and 315.3; see also MDAQMD, Comprehensive Emission Inventory Guidelines (Nov. 2023) at 7, available at <https://www.mdaqmd.ca.gov/home/showpublisheddocument/10031/638362505853570000>); Antelope Valley AQMD (see AVAQMD Rules 315, 315.1, and 315.2; see also AVAQMD, Comprehensive Emission Inventory Guidelines (Dec. 2020) at 7, available at <https://avaqmd.ca.gov/files/9ce7b3ca0/AV+CEI+Guidance+2020.pdf>); and San Joaquin Valley APCD (see SJVAPCD Rules 3170, 3171, 3172, and 3173 [fees for permitted emissions only].)

²¹ We understand that some facilities are required to report PERP emissions to the District for tracking purposes pursuant to CARB’s Criteria Air Pollutants and Toxic Air Contaminant Reporting Regulation. A requirement to report for tracking purposes does not mean such emissions are attributable to the facility under Section 185.

²² We note that corresponding revisions should be made to PAR 301 paragraph (e)(2) to exclude PERP equipment from emissions fees. Specifically, we propose adding to paragraph (e)(2) the following sentence: “Emissions from Statewide Equipment emitted at any facility shall be excluded from emissions fees, including from clean air act nonattainment fees under any rule implementing section 185 of the federal Clean Air Act.”

Attachment A: RFG Suggested Revisions to Proposed Rule 317.1

RULE 317.1 CLEAN AIR ACT NONATTAINMENT FEES FOR 8-HOUR OZONE STANDARDS

(a) Purpose

The purpose of this rule is to satisfy requirements as specified in Sections 182(d), 182(e), 182(f) and 185 of the 1990 amendments to the federal Clean Air Act (CAA) for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) and the 2008 8-hour ozone NAAQS.

(b) Applicability

- (1) This rule shall become applicable if and when the U.S. Environmental Protection Agency (EPA) makes a final finding that a Basin has failed to attain the 1997 8-hour ozone NAAQS or the 2008 8-hour ozone NAAQS by the applicable Attainment Date.
- (2) Except as otherwise provided as exempt in subdivision (e), this rule is applicable to any Major Stationary Source of Volatile Organic Compounds (VOC) and/or Nitrogen Oxides (NOx).

(c) Definitions

For the purpose of this rule, the following definitions shall apply:

- (1) ACTUAL EMISSIONS means the mass of emissions of NOx or VOCs, which are emitted by a Major Stationary Source to the atmosphere during a calendar year, reported to or amended by the Executive Officer, through the South Coast AQMD's Annual Emissions Report (AER) program pursuant to Rule 301, excluding emissions from equipment registered pursuant to the Air Resources Board's Portable Equipment Registration Program. ~~and shall include, but not be limited to the following:~~
 - ~~(i) Permitted emissions;~~
 - ~~(ii) Regulated emissions;~~
 - ~~(iii) Fugitive emissions; and~~
 - ~~(iv) Unregulated emissions~~
- (2) ALTERNATIVE BASELINE EMISSIONS means a Major Stationary Source's VOCs or NOx average annual Actual Emissions for two consecutive years within up to the last ten (10) calendar years prior to and including the Attainment Year, not to exceed emissions allowed through the permit(s), plan(s), applicable rules(s), and implementation plan(s).

April 30, 2024
Page 9

LATHAM & WATKINS LLP

- (3) ANNUAL CAA NONATTAINMENT FEE RATE means \$5,000 (in 1990 dollars), adjusted for inflation annually, beginning in the year after 1990, by the percent change in consumer price index (CPI), if any, pursuant to CAA Sections 185(b)(3) and 502(b)(3)(B)(v). The Annual CAA Nonattainment Fee Rate is published annually for each calendar year in a memorandum by the U.S. EPA.
- (4) APPLICABLE OZONE STANDARD means either the 1997 8-hour ozone NAAQS or 2008 8-hour ozone NAAQS, as applicable.
- (5) ATTAINMENT DATE means the U.S. EPA approved date, established pursuant to the CAA, by which a Basin must attain a federal NAAQS. Where no such U.S. EPA approval exists, the date of the Basin's maximum statutory attainment date for that standard.
- (6) ATTAINMENT YEAR means the calendar year containing the Attainment Date.
- (7) BASELINE EMISSIONS means a Major Stationary Source's VOC and/or NOx emissions, for which a source qualifies as a Major Stationary Source. Baseline Emissions for VOC and/or NOx are calculated separately for each Applicable Ozone Standard, and as follows:
 - (A) For a Major Stationary Source which was a Major Stationary Source during the entirety of the Attainment Year, the Baseline Emissions is the lower of:
 - (i) The Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), during the Attainment Year or
 - (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s) during the Attainment Year.
 - (B) For a Major Stationary Source that becomes subject to this rule during the Attainment Year, the Baseline Emissions is the lower of:
 - (i) The Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), for the operational period as a Major Stationary Source in the Attainment Year, extrapolated over the entire Attainment Year or

April 30, 2024
Page 10

LATHAM & WATKINS LLP

- (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s) for the operational period as a Major Stationary Source in the Attainment Year, extrapolated over the entire Attainment Year.
- (C) For a Major Stationary Source that becomes subject to this rule after the Attainment Year, the Baseline Emissions is the lower of:
 - (i) The Actual Emissions for the operational period in the initial calendar year of operation as a Major Stationary Source, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), extrapolated over the entire initial year of operation as a Major Stationary Source or
 - (ii) The amount of emissions allowed under permit(s), plan(s), applicable rule(s), and implementation plan(s), for the facility for the operational period in the initial calendar year as a Major Stationary Source, extrapolated over the entire initial year as a Major Stationary Source.
- (8) BASIN means either the South Coast Air Basin or Riverside County portion of the Salton Sea Air Basin (Coachella Valley). The boundaries of each Basin shall be as defined by 40 Code of Federal Regulations, Section 81.305.
- (9) CAA NONATTAINMENT FEE means the federally mandated ozone NAAQS nonattainment fee assessed to a Major Stationary Source for excess emissions of VOC and NOx air contaminants pursuant to Section 185 of the CAA. It is the summation of the annual VOC CAA Nonattainment Fee and the annual NOx CAA Nonattainment Fee.
- (10) EXTENSION YEAR means the year that the U.S. EPA may grant, pursuant to Section 181(a)(5) of the CAA and upon the state's request, an extension of the Attainment Date.
- (11) FEE ASSESSMENT YEAR means the calendar year in which emissions occurred for which the CAA Nonattainment Fees are being calculated and assessed under the provisions of this rule for each Applicable Ozone Standard.
- (12) MAJOR STATIONARY SOURCE means a Major Stationary Source as defined in CAA sections 182(d), 182(e), 182(f) and 185 and is required to operate under

April 30, 2024
Page 11

LATHAM & WATKINS LLP

the authority of a Title V Program facility permit.

- (13) NITROGEN OXIDES (NO_x) means the sum of nitric oxides and nitrogen dioxides emitted, calculated as nitrogen dioxide.
- (14) VOLATILE ORGANIC COMPOUNDS (VOC) means the sum of any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds.

(d) Requirements

(1) Fee Assessment

The Executive Officer shall assess the CAA Nonattainment Fees for each Applicable Ozone Standard:

- (A) Beginning the calendar year after the Attainment Year for a:
 - (i) Major Stationary Source which was a Major Stationary Source during the entirety of the Attainment Year; or
 - (ii) Major Stationary Source that becomes subject to this rule during the Attainment Year; or
- (B) Beginning the calendar year after the calendar year used to establish Baseline Emissions for a Major Stationary Source that becomes subject to this rule after the Attainment Year.

(2) Fee Determination

Beginning the calendar year after the applicable Attainment Year, the CAA Nonattainment Fee shall be the Annual CAA Nonattainment Fee Rate for the applicable Fee Assessment Year per ton of Actual Emissions of VOC and/or NO_x during the Fee Assessment Year that exceed 80% of the Baseline Emissions or Alternative Baseline Emissions. For each Major Stationary Source, the CAA Nonattainment Fee shall be calculated as follows:

VOC CAA Nonattainment Fees =

$$\text{Annual CAA Nonattainment Fee Rate} \times [AV - (0.8 \times BV)]$$

NO_x CAA Nonattainment Fees =

$$\text{Annual CAA Nonattainment Fee Rate} \times [AN - (0.8 \times BN)]$$

CAA Nonattainment Fees =

April 30, 2024
Page 12

LATHAM & WATKINS LLP

NOx CAA Nonattainment Fees + VOC CAA Nonattainment

Fees Where:

- For a Major Stationary Source of VOC:
 - AV = Actual Emissions of VOC for the applicable Fee Assessment Year (in tons per year). If AV is less than or equal to 80% of BV, there shall be no VOC CAA Nonattainment Fee assessed for the Fee Assessment Year.
 - BV = Baseline Emissions or Alternative Baseline Emissions for VOC (in tons per year).
- For a Major Stationary Source of NOx:
 - AN = Actual Emissions of NOx for the applicable Fee Assessment Year (in tons per year). If AN is less than or equal to 80% of BN, there shall be no NOx CAA Nonattainment Fee assessed for the Fee Assessment Year.
 - BN = Baseline Emissions or Alternative Baseline Emissions for NOx (in tons per year).

(3) Annual Reporting and Payment

- (A) The owner or operator of a Major Stationary Source shall annually report all Actual Emissions, regardless of whether the owner or operator received notice from the Executive Officer.
- (B) The owner or operator of a Major Stationary Source shall, for each applicable Fee Assessment Year, which includes the years prior to the U.S. EPA making a final finding that a Basin has failed to attain the Applicable Ozone standard, pay the appropriate CAA Nonattainment Fees, determined pursuant to paragraph (d)(2), regardless of whether the owner or operator received notice from the Executive Officer.

(4) Payment Due Date

Unless a later date, not to exceed 365 days from the applicable due date, is specified by the Executive Officer, the owner or operator of a Major Stationary Source, regardless of whether the owner or operator received notice from the Executive Officer, shall submit full payment for:

- (A) The invoice that includes the CAA Nonattainment Fee for the initial Fee

April 30, 2024
Page 13

LATHAM & WATKINS LLP

Assessment Year for the Applicable Ozone Standard for the Major Stationary Source, no later than 365 days from the date the invoice is issued by the Executive Officer; and

- (B) An invoice subsequent to the first invoice that included the CAA Nonattainment Fee for the initial Fee Assessment Year for the Applicable Ozone Standard for the Major Stationary Source, either:
 - (i) No later than December 15th of the year the invoice is issued by the Executive Officer; or
 - (ii) No later than 75 days from the date the invoice is issued by the Executive Officer, whichever is later.
- (5) Failure to Pay Fees

If ~~one hundred twenty (120) days~~ one (1) year has~~ve~~ elapsed since the invoice due date and all CAA Nonattainment Fees have not been paid in full, the Executive Officer may take action to revoke all Permits to Operate for equipment on the premises, as authorized in California Health and Safety Code Section 42307.
- (6) Notice of Rule Applicability

No later than 60 days after a notice is issued by the Executive Officer that the facility is a Major Stationary Source subject to this rule, the owner or operator of a Major Stationary Source shall confirm or contest the Major Stationary Source's rule applicability.
- (7) Notice of Baseline Emissions

No later than ~~60~~ 90 after a notice is issued by the Executive Officer specifying the Baseline Emissions for the Major Stationary Source, the owner or operator of a Major Stationary Source shall confirm or contest the assigned Baseline Emissions.
- (8) Alternative Baseline Emissions

If the owner or operator of a Major Stationary Source requests to use an Alternative Baseline Emissions to determine the CAA Nonattainment Fee, the following requirements shall be met:

 - (A) U.S. EPA has issued guidance authorizing an alternative methodology for calculation of a Major Stationary Source's Baseline Emissions, pursuant to CAA Section 185(b)(2) for the Applicable Ozone Standard, that is consistent with the methodology specified in subparagraph (d)(8)(C) and requirements specified in subparagraphs (d)(8)(B) and (d)(8)(D).

April 30, 2024
Page 14

LATHAM & WATKINS LLP

- (B) The Major Stationary Source was a Major Stationary Source during the entirety of the Attainment Year;
- (C) No later than 120 days after the end of the Attainment Year or no later than 120 days after the U.S. EPA makes a final finding that the Basin has failed to attain the Applicable Ozone Standard by the applicable Attainment Date, whichever is later, the owner or operator of a Major Stationary Source submits to the Executive Officer an Alternative Baseline Emissions Request that contains the following:
 - (i) An Alternative Baseline Emissions Report including Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rule(s), and implementation plan(s), for each of the relevant ten (10) calendar years preceding and including the Attainment Year;
 - (ii) Identification of the twenty-four consecutive months or alternative time period approved by the Executive Officer, representing typical operations:
 - (a) For a Major Stationary Source without an electrical steam generating unit(s), within the last relevant ten (10) calendar years prior to and including the Attainment Year selected; or
 - (b) For a Major Stationary Source with an electrical steam generating unit(s), within the last relevant five (5) calendar years prior to and including the Attainment Year selected or, with justification, the relevant five (5) calendar years prior to the aforementioned calendar years;
 - (iii) An analysis demonstrating that the Actual Emissions, not to exceed emissions allowed through the permit(s), plan(s), applicable rules(s), and implementation plan(s), from the average of the twenty-four months (or approved alternative time period), identified pursuant to clause (d)(8)(C)(ii), represent typical operations;
 - (iv) Analysis of adopted local, state, and federal rules or regulations that would have restricted the source's ability to either operate or emit a particular pollutant, had they been in effect during the

April 30, 2024
Page 15

LATHAM & WATKINS LLP

- consecutive twenty-four months (or approved alternative time period) selected;
- (v) The average annual emissions of the twenty-four months (or approved alternative time period), identified in clause (d)(8)(C)(ii), not to exceed emissions allowed through the permit(s), plan(s), applicable rules(s), and implementation plan(s), considering the impacts identified in clause (d)(8)(C)(iv);
 - (vi) Certification, in writing, by the highest-ranking executive on site that the source's emissions are irregular, cyclical, or otherwise vary significantly from year to year; and
 - (vii) Any other information as required by the U.S. EPA guidance; and
- (D) In the event a Major Source submits an application establishing the required elements in 8(C), ~~the~~ Executive Officer shall ~~has~~ authorized a Major Stationary Source to use this Alternative Baseline Emissions.
- (9) Alternative Baseline Emissions Request Payment
- (A) The owner or operator of a Major Stationary Source electing to submit an Alternative Baseline Emissions Request, pursuant to subparagraph (d)(8)(c), shall pay an hourly staff evaluation rate of \$209.31, unless Regulation III - Fees assigns a fee amount associated with evaluating the Alternative Baseline Emissions Request that shall be paid in lieu of this rate.
 - (B) The owner or operator of a Major Stationary Source shall submit full payment of the amount invoiced no later than 60 days from receiving the invoice for evaluation of the Alternative Baseline Emissions Request.
- (e) Use of CAA Nonattainment Fees
- (1) CAA Nonattainment Fees collected pursuant to paragraph (d)(3)(B) shall be used in the following ways:
- (A) Ten (10) percent of the fees shall be retained by the District for costs in administering the CAA Nonattainment Fee collection program;
 - (B) The remaining ninety (90) percent of collected fees shall be deposited into a Rule 317.1 RECLAIM Transition Fund, created pursuant to paragraph (f).
- (f) RECLAIM Transition Fund

April 30, 2024
Page 16

LATHAM & WATKINS LLP

- (1) The Executive Officer shall establish a RECLAIM Transition Fund (“RTF”) for investment in emerging low-emission technologies and/or incentive programs that the Governing Board determines will benefit attainment of National Ambient Air Quality Standards, meet the District’s public health objectives, and generate federally verifiable NOx emissions offsets that may be used by RECLAIM facilities in order to satisfy offset requirements upon exiting the RECLAIM program.
- (2) The RTF shall be funded by CAA Nonattainment Fees deposited pursuant to paragraph (e)(1)(B).
- (3) Funds in the RTF may be used to generate offsets in the following way:

 - (A) Emission reduction projects approved by the Governing Board. Emission reductions achieved by approved projects shall be banked as offsets in the RTF if the Executive Officer determines that the emission reductions achieved:

 - (i) are not used to demonstrate equivalency with federal or state NSR requirements;
 - (ii) are not used to demonstrate attainment in any Air Quality Management Plan; and
 - (iii) meet the requirements of each of Rule 1309(b)(4), 42 U.S.C. § 7503(c)(1), and 40 CFR 51.165(a)(3)(ii)(C)(i).
 - (B) Purchase of available NOx emission reduction credits from the open market;
 - (C) Other methods as approved by the Executive Officer.
- (4) The Executive Officer shall account for reductions in each pollutant for which emissions are reduced by a RTF-funded project and that meet the requirements of paragraph (f)(2)(A) of this Rule. The Executive Officer shall generate NOx offsets for any reduction in NOx emissions.

 - (A) NOx offsets generated in accordance with (f)(3) shall be banked in the RTF and made available at no cost to RECLAIM facilities that have paid CAA Nonattainment Fees. A RECLAIM facility that has paid CAA Nonattainment Fees shall be granted access to offsets in the RTF to satisfy any offset requirements necessary to facilitate the facility’s exit from the RECLAIM program.

 - (i) No individual RECLAIM facility shall receive a portion of the total offsets available in the RTF that is greater than the total CAA

April 30, 2024
Page 17

LATHAM & WATKINS LLP

Nonattainment Fees collected from that facility divided by the total CAA Nonattainment Fees collected from all RECLAIM facilities in the prior calendar year.

(B) The Executive Officer may use reductions in emissions of any non-NOx pollutant to demonstrate attainment or for any other purpose it deems appropriate.

~~(e)~~ (g) Exemptions

(1) Extension Year

The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees under this rule during any calendar year that is considered a Basin's Extension Year for the Applicable Ozone Standard.

(2) Cessation of Fees

The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees for an Applicable Ozone Standard once the Basin has been redesignated by U.S. EPA to attainment for that Applicable Ozone Standard or, for a revoked Applicable Ozone Standard, if U.S. EPA has terminated the anti-backsliding requirement associated with the CAA Nonattainment Fees for the Applicable Ozone Standard. The CAA Nonattainment Fees will cease in the same calendar year as the redesignation or termination

7-1 Response

PR 317.1 is being developed to implement the existing requirements of CAA section 185 for the 1997 and 2008 8-hour ozone NAAQS. If a regulatory pathway is not developed, these Major Stationary Sources would still be required to comply with CAA section 185 and CAA Nonattainment Fees would instead be collected by the U.S. EPA. The South Coast AQMD has explored many options with the U.S. EPA and did not identify a pathway to relieve the burden of CAA Nonattainment Fees from Major Stationary Sources for the 1997 and 2008 ozone standards.

7-2 Response

If a state is not administering and enforcing CAA section 185, the CAA Nonattainment Fees will instead be collected by the U.S. EPA. As the 1997 8-hour ozone standard attainment date is this year, the South Coast AQMD is unable to accommodate a request to postpone adoption of PR 317.1 until after the U.S. EPA issues guidance that definitively authorizes the use of Alternative Baseline Emissions. The requirements for Alternative Baseline Emissions Requests were incorporated and are consistent with the prior U.S. EPA issued guidance. The CAA requires that the Alternative Baseline Emissions must be in alignment with guidance established by the U.S. EPA. The U.S. EPA guidance for the 1979 1-hour ozone standard does not provide authority to approve Alternative Baseline Emissions based on any time period, other than for electrical steam generating unit(s), that is not twenty-four consecutive months during the preceding ten years. Incorporation of such language would make the rule vulnerable to disapproval as part of the U.S. EPA SIP review process. Please refer to section “2.2.4.8. Alternative Baseline Emissions Requirements – Paragraph (d)(8)” of this PR 317.1 Staff Report for an explanation of the basis for the requirements to use an Alternative Baseline Emissions.

7-3 Response

Please refer to section “1.6. Use of Funds” of this PR 317.1 Staff Report for an explanation of why guidance on the spending of these potential funds would be determined in the future through a public process that would be separate from this rulemaking.

7-4 Response

Please refer to the definition of “Actual Emissions” in section “2.2.3. Definitions – Subdivision (c)” of this PR 317.1 Staff Report for an explanation of what emissions should be included in the AER. Please refer to the “5-3 Response” of this PR 317.1 Staff Report for an explanation of including portable emissions in AER.

8. Los Angeles County Business Federation (BizFed) Comment Letter, Submitted 05/02/24

May 2, 2024

Via e-mail at:
mkrause@aqmd.gov

Michael Krause
Assistant Deputy Executive Officer
South Coast Air Quality Management District
21865 Copley Drive
Diamond Bar, CA 91765

Re: SCAQMD Proposed Rule (PR) 317.1 Clean Air Act Nonattainment Fees for the 8-Hour Ozone Standards

Dear Mr. Krause,

We are contacting you on behalf of BizFed, the Los Angeles County Business Federation. We are an alliance of over 240 business organizations who represent over 420,000 employers in Los Angeles County, including large and small businesses from a wide range of industries throughout the South Coast Air Basin (SCAB). Many of the businesses we represent have or will be writing their own individual comment letters that specifically address the impacts to their industries. Our comments address the impacts to the business community as a whole and include overarching concerns of our diverse membership.

SCAQMD is in the process of rule development for Proposed Rule 317.1 (PR 317.1), Clean Air Act Nonattainment Fees for the 8-Hour Ozone Standards. While SCAQMD has already addressed several concerns expressed by stakeholders as part of their working group meeting (WGM) #2 presentation, BizFed would like to raise additional thoughts for the District to consider as they refine PR 317.1. BizFed offers the following comments on the proposed rule concepts for PR 317.1:

- 1. The District has stated that the fee equivalency approach utilized in existing Rule 317 – Clean Air Act Non-Attainment Fees for the revoked 1979 standard is not available for use in PR 317.1. BizFed requests that SCAQMD provide additional information on the funding limitations that restrict use of this funding pathway for the revoked 1997 standard.**

SCAQMD outlined the existing fee equivalency approach established in existing Rule 317 and noted that the U.S. EPA has advised that such an approach may be approvable under CAA section 172(e) only for revoked standards as an equivalent pathway to satisfy requirements of CAA Section 185.¹ The fee

} Comment
8-1

¹ SCAQMD PR 317.1, Working Group Meeting #1. Available at: https://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/317.1/pr317-1_wgm1_110723.pdf?sfvrsn=20.

equivalency approach would allow Districts to satisfy Section 185 requirements by:²

"...comparing expected fees and/or emissions reductions directly attributable to application of Section 185 to the expected fees, pollution control project funding, and/or emissions reductions from the proposed alternative program."

SCAQMD noted in their presentation to the Stationary Source Committee that fee collection is the only pathway available for the 1997 and 2008 ozone standards.³ For the 1997 standard, SCAQMD noted that adequate funding is not available.

BizFed requests that SCAQMD provide additional information on funding needs for a fee equivalency approach, including details on the amount of incentive funding that would be required to utilize the fee equivalency option.

Comment
8-1 Cont.

2. The District has acknowledged the need for an alternative baseline option. BizFed requests that SCAQMD engage with EPA staff to reiterate the need for issuance of an alternative baseline guidance document for the 8-hour ozone standards.

In WGM #2, SCAQMD responded to concerns related to the 2024 attainment baseline, agreeing with the need for an alternative baseline option.⁴ Implementation of an alternative baseline policy would allow facilities to establish a baseline year that is reflective of normal operating conditions in the event that emissions in the default baseline year are irregular. Due to legal constraints established by the Clean Air Act (CAA), an alternative baseline can only be utilized if U.S. EPA has issued guidance for establishing an alternative baseline. SCAQMD has submitted a request to U.S. EPA for allowing an alternative baseline for the 8-hour ozone standards.

BizFed requests that SCAQMD take actions to engage with EPA to advocate for the issuance of the 8-hour ozone standard alternative baseline guidance document and consider this as a key remaining issue for the development of PR 317.1.

Comment
8-2

3. As drafted, PR 317.1 would require facilities to pay nonattainment fees on each individual Federal ozone standard. BizFed recommends that SCAQMD revise the proposed rule language to instead require facilities to pay nonattainment fees on only one standard for any specific calendar year, similar to the example set by the Mojave Desert Air Quality Management District.

Comment
8-3

² 40 CFR Part 52, Revisions to the California State Implementation Plan, South Coast Air Quality Management District. Available at: <https://www.federalregister.gov/documents/2012/01/12/2012-447/revisions-to-the-california-state-implementation-plan-south-coast-air-quality-management-district>.

³ SCAQMD Stationary Source Committee, April 19, 2024. Available at: <https://www.aqmd.gov/docs/default-source/Agendas/ssc/ssc-agenda-4-19-2024.pdf?sfvrsn=10>.

⁴ SCAQMD PR 317.1 Working Group Meeting #2. Available at: <https://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/317.1/pr-317-1---wgm-2-presentation-020224.pdf?sfvrsn=14>.

National Ambient Air Quality Standards (NAAQS) are reviewed and may be revised by U.S. EPA on a 5-year cycle to reflect the most recent scientific findings, including the review of relevant scientific literature as summarized in an Integrated Science Assessment (ISA) report and an assessment of risk and exposure as summarized in the Risk and Exposure Assessment (REA) report.^{5,6} Each revision is intended to reflect an updated understanding of impacts associated with exposure to a given criteria air pollutant. Establishing a requirement for facilities to pay fees on each Federal ozone standard suggests that the revised NAAQS are independent in nature when instead they are intended to reflect a more appropriate threshold of impact to human wellbeing.

PR 317.1(d)(1) states:

"The Executive Officer shall assess the CAA Nonattainment Fees for Each Applicable Ozone Standard..."

Per PR 317.1(e)(2):

"The owner or operator of a Major Stationary Source shall not be required to remit CAA Nonattainment Fees for an Applicable Ozone Standard once the Basin has been redesignated by U.S. EPA to attainment for that Applicable Ozone Standard or, for a revoked Applicable Ozone Standard, if U.S. EPA has terminated the antibacksliding requirement associated with the CAA Nonattainment Fees for the Applicable Ozone Standard. The CAA Nonattainment Fees will cease in the same calendar year as the redesignation or termination."

Comment
8-3 Cont.

So if the basin is found to be in nonattainment with the 1997, 2008, and 2015 8-hour ozone standards beyond the 2032 and 2038 attainment deadlines, facilities would be required to pay annual nonattainment fees associated with all three NAAQS under this draft PR 317.1.

In contrast, the Mojave Desert Air Quality Management District (MDAQMD) has taken an approach to nonattainment fees that better aligns with the spirit of NAAQS revisions established by the U.S. EPA. The MDAQMD nonattainment fee policy is established in Rules 315.1, 315.2, and 315.3, including the following language:^{7,8,9}

"No Facility otherwise subject to this Rule shall be required to remit a FCAA Section 185 penalty for more than one Federal ozone standard for any specific calendar year. A Facility's applicable FCAA Section 185 penalty for any calendar year shall be the largest of all such applicable penalties."

⁵ U.S. EPA Integrated Science Assessment (ISA) for Ozone and Related Photochemical Oxidants. Available at: <https://www.epa.gov/isa/integrated-science-assessment-isa-ozone-and-related-photochemical-oxidants>.

⁶ U.S. EPA Risk Assessment and Modeling – Ozone Risk Analyses. Available at: <https://www.epa.gov/fera/risk-assessment-and-modeling-ozone-risk-analyses>.

⁷ MDAQMD Rule 315.1. Available at: <https://www.mdaqmd.ca.gov/home/showpublisheddocument/9306/637847640024930000>.

⁸ MDAQMD Rule 315.2. Available at: <https://www.mdaqmd.ca.gov/home/showpublisheddocument/9308/637847619490870000>.

⁹ MDAQMD Rule 315.3. Available at: <https://www.mdaqmd.ca.gov/home/showpublisheddocument/9733/63815600353770000>.

BizFed requests that SCAQMD consider revising the draft rule language to incorporate nonattainment fee payment procedures similar to those established by MDAQMD and allow for the payment of one ozone standard in a given calendar year to satisfy CAA Section 185 requirements.

Comment
8-3 Cont.

Finally, BizFed would be interested in joining any effort to address the Section 185 provision in the Clean Air Act directly with a legislative fix. While EPA and others refer to the Section 185 requirement as a "fee", it is in reality a penalty on businesses that have not violated the Clean Air Act. As BizFed understands the SCAQMD's position, the failure to attain is directly attributable to EPA's failure to regulate sources that it cannot regulate, and further that even if SCAQMD regulated all sources to the maximum extent possible, the revoked ozone standard could not be attained. The businesses that are being penalized have no control over when the fines will cease because they have no control over abatement of the violation. Only EPA does. It is imperative that this issue be addressed with the Congress.

Comment
8-4

We look forward to continuing our work with the District to see progress made in a way that is equitable and lasting.

Thank you for your consideration of our letter. If you have any questions, please contact BizFed's Director of Advocacy Sarah Wiltfong at sarah.wiltfong@bizfed.org.

8-1 Response

The 2016 Air Quality Management Plan (AQMP) is the applicable SIP for the 1997 ozone standard. In the 2016 AQMP, emissions reduction strategies relied heavily on incentives and yet to be determined programs to successfully achieve the emissions reductions needed to attain the 1997 standard. Emissions reductions from incentives account for a substantial portion of NO_x emissions reductions (approximately 200 tons per day). The 2016 AQMP also indicated approximately \$1 billion per year would be needed from 2017 to achieve such emissions reductions (cost not adjusted per inflation). Despite many actions undertaken to solicit additional and sustainable funding, the incentive funding implemented in South Coast AQMD has been considerably below \$1 billion per year since the adoption of 2016 AQMP. As such, it is infeasible to identify incentive programs surplus to the SIP for the fee equivalency approach.

8-2 Response

Please refer to section “2.2.4.8. Alternative Baseline Emissions Requirements – Paragraph (d)(8)” of this PR 317.1 Staff Report for an explanation of the requirements to use Alternative Baseline Emissions. The requirements for Alternative Baseline Emissions Requests were incorporated and are consistent with U.S. EPA guidance issued for the 1979 1-hour ozone standard. The CAA requires that the Alternative Baseline Emissions must be in alignment with guidance established by the U.S. EPA. As the U.S. EPA has not issued guidance for Alternative Baseline Emissions for the 8-hour ozone standards, South Coast AQMD will continue to engage with the U.S. EPA to advocate the need for such guidance documents for 8-hour ozone standards.

8-3 Response

PR 317.1 requires CAA Nonattainment Fees for each applicable ozone standard. Please refer to the “Payment of Single Largest Standard in Year” section of the “1-3 Response” in this PR 317.1 Staff Report for an explanation of why the South Coast AQMD would not require a Major Stationary Source to only remit the largest applicable CAA Nonattainment Fee for a single ozone standard in any calendar year.

8-4 Response

The South Coast AQMD appreciates your understanding of the limitations of the South Coast AQMD and support for reaching attainment.

EXECUTIVE SUMMARY

On March 17, 1989, the South Coast Air Quality Management District (South Coast AQMD) Governing Board adopted a resolution which requires an analysis of the economic impacts associated with adopting and amending rules and regulations. In addition, Health and Safety Code Section 40440.8 requires a socioeconomic impact assessment for any proposed rule, rule amendment or rule repeal which will “significantly affect air quality or emission limitations.” Lastly, Health and Safety Code Section 40728.5 requires the South Coast AQMD Governing Board to actively consider the socioeconomic impacts of rules and regulations and make a good faith effort to minimize adverse socioeconomic impacts.

Proposed Rule 317.1– Clean Air Act Nonattainment Fees for 8-Hour Ozone Standards (PR 317.1) has been developed to implement requirements as specified in Section 185 of the 1990 amendments to the federal Clean Air Act (CAA) for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS) and the 2008 8-hour ozone NAAQS. A socioeconomic impact assessment was conducted to provide information to Governing Board and stakeholders but is not required per Health and Safety Code Sections 40440.8 and 40728.5 because air quality or emission limitations will not be significantly affected by PR 317.1.

The following presents a summary of the analysis and findings of the Socioeconomic Impact Assessment conducted for PR 317.1:

Key Elements of PR 317.1

PR 317.1 would implement federal CAA section 185, which requires major stationary sources of volatile organic compounds (VOC) and/or nitrogen oxides (NOx), located within “severe” or “extreme” ozone nonattainment areas, where that area has failed to attain the 1997 8-hour ozone and 2008 8-hour ozone NAAQS by the applicable attainment dates, to either reduce their emissions by 20 percent from a baseline amount or pay CAA nonattainment fee. The fee will be calculated as the annual CAA section 185 nonattainment fee rate per ton of actual VOC and/or NOx emissions during the fee assessment year that exceed 80 percent of a facility’s baseline emissions in the attainment year, for each applicable pollutant.

Affected Facilities and Industries

The fee provisions in PR 317.1 will affect facilities which are major stationary sources of VOC and/or NOx. A major stationary source is a facility that emits or has the potential to emit VOC and/or NOx emissions equal to or greater than the applicable major stationary source threshold, specified in CAA sections 182(d), 182(e), or 182(f). The precise number of facilities that may be subject to PR 317.1 is currently unknown because applicability will be determined from a combination of a subset of the entire universe of Title V program facilities and non-Title V program facilities with actual emissions data provided in the 2024 Annual Emissions Report (AER) (e.g., data which will not be available until 2025). While not all Title V program facilities are major stationary sources of VOC and/or NOx, for the purpose of conducting a conservative analysis, all Title V program facilities are assumed to be

major stationary sources of VOC and NO_x and will be subject to this rule. Based on the South Coast AQMD permit database of Title V program facilities, there are approximately 319 facilities in the South Coast AQMD's jurisdiction that would potentially be affected by PR 317.1, with 196 located in Los Angeles County, 48 located in Orange County, 47 located in San Bernadino County, and 28 located in Riverside County.

A small business analysis was also conducted for the facilities affected by PR 317.1. Affected facilities that were governmental institutions were excluded from the analysis, resulting in 259 non-governmental facilities. The following table presents the number of affected facilities that qualify as small businesses which is dependent on the specific applicable definition used in the analysis:

Definition	Number of Facilities
South Coast AQMD Rule 102	0
South Coast AQMD's Small Business Assistance Office	39
U.S. Small Business Administration	89

Assumptions for the Analysis

For the major stationary sources of VOC and/or NO_x in “severe” or “extreme” ozone nonattainment areas that have failed to attain the 1997 and 2008 8-hour ozone NAAQS by their applicable attainment dates, PR 317.1 requires these facilities to either pay a CAA nonattainment fee or reduce emissions by 20 percent from their baseline emissions amount. Staff recognizes that there will be no CAA nonattainment fee collected from any facility which reduces its emissions by 20 percent from the baseline emissions in a given fee assessment year, is no longer a major stationary source due to VOC and/or NO_x emissions or is located in an area that is redesignated as in attainment for the applicable ozone NAAQS. As there is great uncertainty in future emissions reductions for each facility and the timelines for these emissions reductions, staff used a conservative approach of assuming no emission reductions from the projected baseline emissions, except for the emission reductions anticipated from implementation of South Coast AQMD Rule 1109.1– Emissions of Oxides of Nitrogen from Petroleum Refineries (Rule 1109.1). The two areas within the South Coast AQMD jurisdiction that are anticipated to be affected by PR 317.1 are the South Coast Air Basin (SCAB) and the Riverside County portions of the Salton Sea Air Basin (SSAB, also referred to as Coachella Valley Planning Area), both of which are classified as “extreme” nonattainment for the 1997 and 2008 8-hour ozone standards.

Compliance Cost: The compliance cost analysis uses a forecast period from 2025-2035. The total present value of the compliance cost of implementing PR 317.1 is estimated at \$258.42 million and \$214.84 million with a 1 percent and 4 percent discount rate, respectively. The annual average compliance cost of PR 317.1 is estimated to be \$25.07 million. This is a conservative estimate and the CAA nonattainment fees for a major stationary source of VOC and/or NOx would not be assessed for the fee assessment year or would cease for the applicable standard for the following scenarios:

CAA nonattainment fees would not be assessed for a fee assessment year when:

- Emissions are reduced by 20% from the baseline for the fee assessment year.

CAA nonattainment fees would cease for the applicable standards when:

- The facility is no longer classified as a major stationary source of emissions, or
- Area the facility resides in is redesignated as an attainment area for the applicable ozone NAAQS.

The Petroleum and Coal Products Manufacturing sector, with a North American Industrial Classification System (NAICS) code 324 is expected to incur the largest share of the total annual average compliance costs which is estimated to be about \$8.93 million or 36 percent of the total annual average cost. The Utilities sector (NAICS 22) is expected to incur the second largest share of the total annual average cost of about \$3.51 million or 14 percent. The facilities in the Utilities sector which are subject to PR 317.1 are mostly fossil fuel electric power generation facilities, other electric power generating facilities, or sewage treatment facilities.

Job Impacts

Direct costs and corresponding revenues of PR 317.1 are used as inputs to the Regional Economic Models, Inc (REMI) PI+ v3 model to assess job impacts and secondary/induced impacts for all the industries in the four-county economy on an annual basis. The forecast time horizon used in the REMI model was from 2025 to 2035.

The REMI analysis projects 81 jobs foregone annually on average from 2025-2035 in the four-county region, relative to the baseline scenario. The 81 annual jobs foregone represent approximately 0.001 percent of total annual jobs in the four-county area.

The largest job impacts are projected to occur in 2034 and 2035, when

facilities are required to pay both the 1997 and 2008 8-hour ozone NAAQS nonattainment fees. In 2035, PR 317.1 is projected to result in roughly 132 jobs foregone relative to the baseline scenario according to the REMI model simulation.

**Competitiveness
and Price Impact**

The overall impact of PR 317.1 on production cost and delivered prices in the region is not expected to be substantial. Based on the REMI analysis, the implementation of PR 317.1 is projected to increase the relative cost of production by 0.003 percent and increase the relative delivered price of goods by 0.002 percent for all the industries in the South Coast AQMD jurisdiction in the year 2033, which is when implementation of PR 317.1 will have the greatest impact upon cost of production and delivered price of goods in the region.

INTRODUCTION

The federal CAA section 185 requires that major stationary sources of VOCs and/or NOx, which are precursors of ozone, located in a “severe” or “extreme” ozone nonattainment areas, where the area has failed to attain the NAAQS, to either reduce their emissions by 20 percent from a baseline amount or pay a CAA nonattainment fee.¹ If a major stationary source does not reduce their emissions by 20 percent from the baseline amount, a CAA nonattainment fee will be assessed annually for each excess ton of VOC and/or NOx emissions above their respective 80 percent thresholds, for each ozone standard.¹ The fee would be collected for each calendar year beginning after the attainment date and shall continue until the area is redesignated as an attainment area for that ozone standard.

PR 317.1 outlines the regulatory pathway necessary to comply with the requirements of federal CAA section 185 for the 1997 and 2008 8-hour ozone standards. PR 317.1 addresses when and how the federal CAA section 185 nonattainment fee would be assessed and collected from major stationary sources of VOC and/or NOx within the SCAB and Coachella Valley Planning area, which have been classified as “extreme” nonattainment for both the 1997 and 2008 8-hour ozone NAAQS. The provisions of PR 317.1 will become applicable if/when the United States Environmental Protection Agency (U.S. EPA) makes a final finding that the SCAB or Coachella Valley Planning Area have failed to attain the 1997 8-hour ozone NAAQS or the 2008 8-hour ozone NAAQS by attainment deadlines of June 15, 2024 (1997 standard) and July 20, 2032 (2008 standard).

LEGISLATIVE MANDATES

The legal mandates directly related to the socioeconomic impact assessment of PR 317.1 include the South Coast AQMD Governing Board resolution and various sections of the Health and Safety Code.

South Coast AQMD Governing Board Resolution

On March 17, 1989, the South Coast AQMD Governing Board adopted a resolution that requires an analysis of the economic impacts associated with adopting and amending rules and regulations that considers all of the following elements:

- Affected industries;
- Range of probable costs;
- Cost-effectiveness of control alternatives; and
- Public health benefits.

Health and Safety Code Requirements

The state legislature adopted legislation which reinforces and expands the South Coast AQMD Governing Board resolution requiring socioeconomic impact assessments for rule development projects. Health and Safety Code Section 40440.8, which went into effect on January 1, 1991, requires a socioeconomic impact assessment for any proposed rule, rule amendment, or rule repeal which “will significantly affect air quality or emissions limitations.”

¹ U.S. EPA, Clean Air Act Overview, Clean Air Act, Title I-Air Pollution Prevention and Control, Parts A through D, Part D - Plan Requirements for Nonattainment Areas, Subpart 2 - Additional Provisions for Ozone Nonattainment Area, Enforcements for Severe and Extreme Ozone Nonattainment Areas for Failure to Attain, <https://www.govinfo.gov/content/pkg/USCODE-2013-title42/html/USCODE-2013-title42-chap85-subchapI-partD-subpart2-sec7511d.htm>, accessed March 21, 2024.

To satisfy the requirements in Health and Safety Code Section 40440.8, the scope of the socioeconomic impact assessment should include all of the following information:

- Type of affected industries;
- Impact on employment and the regional economy;
- Range of probable costs, including those to industry;
- Availability and cost-effectiveness of alternatives to the rule;
- Emission reduction potential; and
- Necessity of adopting, amending, or repealing the rule in order to attain state and federal ambient air quality standards.

Additionally, Health and Safety Code Section 40728.5, which went into effect on January 1, 1992, requires the South Coast AQMD Governing Board to: 1) actively consider the socioeconomic impacts of regulations; 2) make a good faith effort to minimize adverse socioeconomic impacts; and 3) include small business impacts. To satisfy the requirements in Health and Safety Code Section 40728.5, the socioeconomic impact assessment should include the following information:

- Type of industries or business affected, including small businesses; and
- Range of probable costs, including costs to industry or business, including small business.

PR 317.1 does not directly affect air quality or establish an emission limitation within the meaning of Health and Safety Code Section 40440.8. However, a socioeconomic impact assessment was conducted to provide information to the Governing Board and stakeholders although it is not required per Health and Safety Code Sections 40440.8 and 40728.5.

Finally, Health and Safety Code Section 40920.6, which went into effect on January 1, 1996, requires an incremental cost-effectiveness analysis for a proposed rule or amendment which imposes Best Available Retrofit Control Technology (BARCT) or “all feasible measures” requirements relating to emissions of ozone, carbon monoxide (CO), sulfur oxides (SO_x), NO_x, VOC, and their precursors. However, since PR 317.1 does not include new BARCT requirements, Health and Safety Code Section 40920.6 does not apply to the proposed rule.

AFFECTED FACILITIES

PR 317.1 requires major stationary sources of VOC and/or NO_x within the SCAB and Coachella Valley Planning Area to pay a CAA nonattainment fee if the areas fail to attain the 1997 and 2008 8-hour ozone NAAQS by applicable attainment dates. A major stationary source for the purposes of PR 317.1 is a facility that emits or has the potential to emit VOC and/or NO_x emissions equal to or greater than the applicable major stationary source threshold, as specified in CAA sections

182(d), 182(e), or 182(f).^{2,3} The major stationary source thresholds established by these CAA requirements are summarized as follows:

- CAA section 182(d): Establishes a major stationary source threshold for areas classified as “severe” as a facility that emits or has a PTE of at least 25 tons per year of VOCs.
- CAA section 182 (e): Establishes a major stationary source threshold for areas classified as “extreme” as a facility that emits or has a PTE of at least 10 tons per year of VOCs.
- CAA section 182 (f): Establishes that the major stationary source threshold for sources of VOC shall also apply to sources of NOx.

The federal Title V program is designed to standardize air quality permits and the permitting process for major sources of emissions. South Coast AQMD uses U.S. EPA’s definition of a major source (40 CFR Part 70, Section 70.2), which excludes certain emissions from being considered in the facility’s PTE. The South Coast AQMD implements the federal Title V program permits through Regulation XXX – Title V Permits, which issues federally enforceable permits to facilities that are major stationary sources of emissions.^{4,5}

The precise number of facilities that may be subject to PR 317.1 is currently unknown because applicability will be determined from a combination of the following:

- A subset of the entire universe of Title V program facilities, since some Title V program facilities may be a major source for pollutants other than VOC and/or NOx; and
- Certain non-Title V program facilities with actual emissions data provided in the 2024 AER which will not be available until 2025.

Since the precise number of facilities that may be subject to PR 317.1 is unknown at this time, due to absence of actual emissions data for calendar year 2024 from non-Title V facilities, for the purpose of conducting a conservative analysis, all Title V program facilities are assumed to be major stationary sources of VOC and NOx and will be subject to this rule. The actual universe of Title V program facilities subject to PR 317.1 is expected to be smaller than the entire Title V program universe of facilities. In addition, based on an assessment of the most recent available AER data (2021) there are up to an additional 14 facilities that reported emitting more than 10 tons of VOC and/or NOx, but are not part of the Title V program. Some of these were fugitive emissions, which may qualify to be excluded in determining applicability for PR 317.1. A preliminary assessment identified that out of the 14 facilities, two facilities may still meet the definition of major stationary source after excluding fugitive emissions. For these reasons, the

² U.S. EPA, Clean Air Act Overview, Clean Air Act, Title I-Air Pollution Prevention and Control, Parts A through D, Part D - Plan Requirements for Nonattainment Areas, Subpart 2 - Additional Provisions for Ozone Nonattainment Area, Plan Submissions and Requirements, <https://www.epa.gov/clean-air-act-overview/clean-air-act-title-i-air-pollution-prevention-and-control-parts-through-d#id>, accessed May 01, 2024.

³ Please note there are certain emissions that are not to be considered in determining whether a facility emits or has the PTE equal to or greater than the applicable major stationary source threshold. For more information see Draft Rule Language for PR 317.1, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-317-1>. The Final Rule Language is located in Attachment F of the June 7, 2024, Governing Board package for PR 317.1, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

⁴ South Coast AQMD, Home-Permits-Title V-What is Title V?, <http://www.aqmd.gov/home/permits/title-v/what-is-title-v-who>, accessed March 20, 2024.

⁵ South Coast AQMD, Regulation XXX – Title V Permits, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/regulation-xxx>, Accessed April 25, 2024.

entire Title V program universe is being relied upon as a conservative surrogate for the actual number of affected facilities that may be subject to PR 317.1.

Based on the South Coast AQMD permit database of Title V program facilities, there are approximately 319 facilities in the South Coast AQMD's jurisdiction that would potentially be affected by PR 317.1, with 196 located in Los Angeles County, 48 located in Orange County, 47 located in San Bernadino County, and 28 located in Riverside County. Regarding the distribution of the affected facilities across different sectors, Table 1 presents the number/share of affected facilities within each sector. The Utilities sector hosts the largest proportion of the facilities (15.0%), followed by the Fabricated metal product manufacturing sector (8%), and the Wholesale trade sector (7.8%). Within the Utilities sector, the affected facilities are mostly fossil fuel electric power generators, other electric power generators, and sewage treatment facilities.

Table 1
Number and Share of Affected Facilities by Sector

NAICS	Sector Name	Number of Facilities	Percentage of Facilities
22	Utilities	48	15.0%

532-533	Rental and leasing services; Lessors of nonfinancial intangible assets	1	0.3%
Total		319	100%

SMALL BUSINESS

The South Coast AQMD defines a “small business” in Rule 102 for the purpose of determining the applicable fee as one which employs 10 or fewer persons and which earns less than \$500,000 in gross annual receipts. The South Coast AQMD also defines “small business” for the purpose of qualifying for access to services from the South Coast AQMD’s Small Business Assistance Office as a business with an annual receipt of \$5 million or less, or with 100 or fewer employees. In addition to the South Coast AQMD’s definition of a small business, the United States (U.S.) Small Business Administration and the federal 1990 Clean Air Act Amendments (1990 CAAA) each have their own definition of a small business.

The 1990 CAAA classifies a business as a “small business stationary source” if it: 1) employs 100 or fewer employees; 2) is not a major stationary source; and 3) is a small business as defined by the U.S. Small Business Administration. Based on firm revenue and employee count, the U.S. Small Business Administration definition of a small business varies by the six-digit NAICS codes.⁶ For example, according to the U.S. Small Business Administration definition, a business with less than 950 employees in the industry of Fossil fuel electric power generations (NAICS 221112) is classified as a small business, while a business in the Petroleum Refineries industry (NAICS 324110) is considered a small business with 1,500 employees.

⁶ U.S. Small Business Administration, 2023 Small Business Size Standards, <https://www.sba.gov/document/support-table-size-standards>, accessed March 20, 2024.

South Coast AQMD generally relies on Dun & Bradstreet data to conduct small business analyses on private companies. In cases where the Dun & Bradstreet revenue and/or employee data are unreliable, other external data sources such as Manta, Hoover, company websites, and LinkedIn are used. The determination of data reliability is based on data quality confidence codes in the Dun & Bradstreet data as well as staff's discretion. Revenue and employee data for publicly owned companies is gathered from Securities and Exchange Commission (SEC) filings. Since subsidiaries under the same parent company are interest-dependent, the revenue and employee count of each facility's parent company is used for determining its small business status. For the purpose of the small business analysis, staff excluded governmental facilities and assessed only 259 of the 319 affected facilities. Employment and revenue data from Dun and Bradstreet as well as other external sources is available for 254 out of the 259 facilities assessed in the small business analysis. All potentially affected facilities are assumed to be major stationary sources of VOC and NOx, and thus, the facilities will not be classified as small businesses under the 1990 CAAA small business definition. The number of affected facilities that are small businesses based on each of the three definitions is presented in Table 2.

Table 2
Number of Affected Small Business Facilities Based on Various Definitions

Definition	Number of Facilities
South Coast AQMD Rule 102	0
South Coast AQMD's Small Business Assistance Office	39
U.S. Small Business Administration	89

COMPLIANCE COST

The 319 potentially affected facilities, which are assumed to be major stationary sources of VOC and/or NOx, are located in the SCAB or Coachella Valley Planning area, which are both classified as "extreme" nonattainment areas for the 1997 and 2008 8-hour ozone standards. The attainment year for the 1997 8-hour ozone standard and 2008 8-hour ozone standard for "extreme" nonattainment areas are 2024 and 2032, respectively. The CAA nonattainment fee shall be calculated separately for the ozone NAAQS if either the SCAB or Coachella Valley Planning Area fails to achieve attainment with either of the ozone standards, as determined by the U.S. EPA.

When estimating baseline emissions, the analysis relies on a conservative approach which assumes no emission reductions from the projected baseline emissions, except for the emissions reductions anticipated from certain facilities subject to the NOx emission reduction requirements in South Coast AQMD Rule 1109.1 because it contains established emission reduction targets for each affected facility to meet by certain dates.⁷

However, no CAA nonattainment fee would be assessed if a major stationary source of VOC and/or NOx: 1) reduces their emissions by 20 percent from the baseline emissions; 2) is no longer a major stationary source of VOC and/or NOx, or 3) is located in an area which is redesignated as in attainment for the applicable ozone NAAQS. If any of these aforementioned conditions occur,

⁷ South Coast AQMD, Rule 1109.1 – Emissions of Oxides of Nitrogen from Petroleum Refineries and Related Operations, , <https://www.aqmd.gov/docs/default-source/rule-book/reg-xi/r1109-1.pdf>, accessed March 22, 2024.

a major stationary source would not be required to pay a PR 317.1 nonattainment fee.

The CAA nonattainment fee is calculated separately for VOC and NO_x. The fee is calculated by multiplying the difference between actual emissions in a fee assessment year and 80 percent of baseline emissions by the annual CAA section 185 nonattainment fee rate for that pollutant.⁸ In 1990, the fee rate for both VOC and NO_x was set at \$5,000 per ton. The fee rate must be annually adjusted beginning in the year after 1990 for inflation based on the consumer price index (CPI) for the most recent calendar year.⁹ The annual U.S. EPA fee rates are published in the federal Clean Air Act section 185, fee rates memorandum. For the year 2023, the fee rate is \$11,922 for both VOC and NO_x.¹⁰ Figure 1 provides an example of how the CAA nonattainment Fee would be calculated.¹¹

Figure 1
Example Calculation of Annual CAA Section 185 Fee Amount for a Major Stationary Source of VOC Emissions for the 1997 8-Hour Ozone Standard

$$\text{Actual Annual Tons of VOC Emitted} - \left(0.8 \times \text{Baseline Annual Tons of VOC Emitted} \right) \times \text{Annual U.S. EPA CAA §185 Fee Rate (\$/ton)} = \text{Annual CAA Nonattainment Fee for VOC (\$)}$$

Hypothetical Facility Calculation for VOCs

- **Baseline Annual Tons of VOCs = 15 tons**
- **2023 Annual Tons of VOCs = 13 tons**
- **2023 Annual U.S. EPA CAA §185 Fee Rate = \$11,922.00/ton**

$$\text{Annual CAA Nonattainment Fee for VOC} = [13 - (0.8 \times 15)] \text{ tons} \times \$11,922.00/\text{ton} = \$11,922.00$$

For the purpose of this analysis, the potential baseline emissions were estimated by relying upon the most recent emission data from the AERs from calendar year 2021 for all facilities. However, there are four facilities in the PR 317.1 universe which are also subject to Rule 1109.1, but their emission reductions were calculated on a calendar year basis as reported in the 2017 AER, instead of the 2021 AER. The actual emissions for NO_x were estimated by using baseline emissions while

⁸ Baseline emissions are calculated based on 1990 CAA Section 185 guidelines mentioned in introduction of this report and when a facility becomes a Major Stationary Source based on PR 317.1. The baseline emission calculation guidelines based on when a facility becomes a Major Stationary Source can be found in the PR 317.1 Draft Rule Language, Subdivision (c) – Definitions, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-317-1>, accessed May 2024. The Final Rule Language is located in Attachment F of the June 7, 2024, Governing Board package for PR 317.1, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

⁹ U.S. Bureau of Labor Statistics, Data Tools-Data Retrieval Tools-BLS Popular Series-CPI for All Urban Consumers (CPI-U), 1982-84=100 (Unadjusted), <https://data.bls.gov/cgi-bin/surveymost?bls>, accessed March 22, 2024.

¹⁰ U.S. EPA, Ground-level Ozone Pollution, Guidance on Developing Fee Programs Required by Clean Air Act Section 185 for the Ozone National Ambient Air Quality Standards (NAAQS), https://www.epa.gov/system/files/documents/2024-01/memorandum_sec-185-penalty-fees-for-year-2023_10-12-2023.pdf, accessed March 22, 2024.

¹¹ South Coast AQMD, Draft Staff Report for Proposed Amended Rule 317.1 – Clean Air Act Nonattainment Fees for the 8-Hour Ozone Standards, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-317-1>, accessed May 2024. The Final Staff Report is located in Attachment G of the June 7, 2024, Governing Board package for PR 317.1, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

accounting for NO_x emission reductions from all facilities subject to Rule 1109.1. Lastly, the analysis applied the CAA section 185 fee rate for calendar year 2023, since future CPI adjustments are unknown. The calendar year 2023 CAA section 185 fee rate is \$11,922.

The analysis models the impact of CAA nonattainment fees for both the 1997 and 2008 8-hour ozone NAAQS. The 1997 and 2008 8-hour NAAQS nonattainment fees are assumed to begin in calendar years 2025 and 2033, respectively. The analysis spans from 2025 to 2035 and assumes that the fees are paid in the same year they are assessed, with a starting fee assessment year of 2025. The actual timing of South Coast AQMD collecting the nonattainment fee payments may differ based on provisions of PR 317.1.¹² The total present value of the compliance cost of PR 317.1 is estimated at \$258.42 million and \$214.84 million with a 1 percent and 4 percent discount rate, respectively. The annual average compliance cost of implementing PR 317.1 is estimated to be \$25.07 million. Table 3 presents the breakdown of total annual average compliance costs during 2025 - 2035 across different sectors. The Petroleum and Coal Products Manufacturing sector (NAICS 324) is expected to incur the largest share of the total annual average compliance costs, which is estimated to be \$8.93 million or 36 percent of the total annual average cost. The sectors of Utilities (NAICS 22) and Waste Management and Remediation Services (NAICS 562) follow with an estimated total annual average compliance cost of \$3.51 million and \$1.59 million, respectively.

Table 3
Annual Average Compliance Costs by Sector

NAICS	Sector Name	Annual Average Compliance Costs	Percentage
324	Petroleum and coal products manufacturing	\$8,930,250	35.62%
22	Utilities	\$3,511,380	14.01%
562	Waste management and remediation services	\$1,589,662	6.34%
332	Fabricated metal product manufacturing	\$1,509,607	6.02%
326	Plastics and rubber product manufacturing	\$1,246,651	4.97%
42	Wholesale trade	\$1,208,323	4.82%
325	Chemical manufacturing	\$939,597	3.75%
92	State and Local Government	\$879,484	3.51%
486	Pipeline transportation	\$764,257	3.05%
211	Oil and gas extraction	\$441,881	1.76%
322	Paper manufacturing	\$404,464	1.61%
311	Food manufacturing	\$394,631	1.57%
331	Primary metal manufacturing	\$388,531	1.55%
622	Hospitals	\$374,420	1.49%
61	Educational services	\$371,598	1.48%
3364-3369	Other transportation equipment manufacturing	\$295,033	1.18%
312	Beverage and tobacco product manufacturing	\$267,720	1.07%
327	Nonmetallic mineral product manufacturing	\$233,125	0.93%
487-488	Scenic and sightseeing transportation; Support activities for transportation	\$219,135	0.87%

¹² For more information about Payment Requirements and timing, see Chapter 2 of the Draft Staff Report for PR 317.1, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-317-1>. The Final Staff Report is located in Attachment G of the June 7, 2024, Governing Board package for PR 317.1, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

NAICS	Sector Name	Annual Average Compliance Costs	Percentage
621	Ambulatory health care services	\$180,928	0.72%
561	Administrative and support services	\$129,217	0.52%
323	Printing and related support activities	\$119,719	0.48%
334	Computer and electronic product manufacturing	\$96,989	0.39%
333	Machinery manufacturing	\$86,276	0.34%
44-45	Retail trade	\$81,026	0.32%
213	Support activities for mining	\$73,348	0.29%
335	Electrical equipment and appliance manufacturing	\$64,214	0.26%
713	Amusement, gambling, and recreation	\$63,729	0.25%
212	Mining (except oil and gas)	\$50,528	0.20%
512	Motion picture and sound recording industries	\$40,908	0.16%
321	Wood product manufacturing	\$20,909	0.08%
493	Warehousing and storage	\$19,361	0.08%
532-533	Rental and leasing services; Lessors of nonfinancial intangible assets	\$18,785	0.07%
339	Miscellaneous manufacturing	\$16,266	0.06%
3361-3363	Motor vehicles, bodies and trailers, and parts manufacturing	\$13,929	0.06%
54	Professional, scientific, and technical services	\$12,199	0.05%
337	Furniture and related product manufacturing	\$10,712	0.04%
811	Repair and maintenance	\$3,065	0.01%
Total		\$25,071,858	100%

Utilities Sector

The Utilities sector (NAICS 22) has multiple industries within the sector that are expected to be affected by PR 317.1. To provide more information about these industries, the annual average compliance costs that each industry under the Utilities sector is expected to incur was assessed. Table 4 presents the annual average compliance costs during 2025 - 2035 across the various industries within the Utilities sector. The Fossil Fuel Electric Power Generation industry (NAICS 221112) is expected to incur the largest share of the total annual average compliance costs of the Utilities sector, which is estimated to be \$1.30 million. The industries of Other Electric Power Generation (NAICS 221118) and Sewage Treatment Facilities (NAICS 221320) follow with an estimated total annual average compliance cost of \$1.18 million and \$0.69 million, respectively.

Table 4
Annual Average Compliance Costs under Utilities Sector

NAICS	Industry	Annual Average Compliance Costs
221112	Fossil Fuel Electric Power Generation	\$1,297,421
221117	Biomass Electric Power Generation	\$28,617
221118	Other Electric Power Generation	\$1,181,162
221122	Electric Power Distribution	\$5,038
221210	Natural Gas Distribution	\$249,057
221310	Water Supply and Irrigation Systems	\$60,906
221320	Sewage Treatment Facilities	\$689,178
Total		\$3,511,380

MACROECONOMIC IMPACTS ON THE REGIONAL ECONOMY

The REMI model was used to assess the socioeconomic impacts of the proposed rule.¹³ The model links the economic activities in the counties of Los Angeles, Orange, Riverside, and San Bernardino, and it is comprised of five interrelated blocks: 1) output and demand; 2) labor and capital; 3) population and labor force; 4) wages, prices, and costs; and 5) market shares.¹⁴

It should be noted that the REMI model is not designed to assess impacts on individual operations. The model was used to assess the impacts of PR 317.1 on various industries that make up the local economy. Cost impacts on individual operations were assessed outside of the REMI model and were aggregated to the 70-sector NAICS code level to be used as inputs into the REMI model.

Impact of PR 317.1

This assessment is performed relative to a baseline (“business as usual”) forecast where the proposed rule would not be implemented. The analysis assumed that the 319 affected facilities would pay the nonattainment fee during the corresponding fee assessment years from 2025 to 2035.

The nonattainment fee is the only direct cost of PR 317.1 and is used as an input in the REMI model which uses this information to assess secondary and induced impacts for all the industries in the four-county economy on an annual basis over the 2025 – 2035 period.

The facilities subject to PR 317.1, as listed in Table 1 and as modeled in REMI across 70 sectors, are anticipated to pay nonattainment fees would incur direct costs. South Coast AQMD will be the agency collecting the nonattainment fees from the affected facilities.

¹³ Regional Economic Modeling Inc. (REMI). Policy Insight® for the South Coast Area (70-sector model). Version 3. 2023.

¹⁴ Within each county, producers are made up of 156 private non-farm industries and sectors, three government sectors, and a farm sector. Trade flows are captured between sectors as well as across the four counties and the rest of U.S. Market shares of Within each county, producers are made up of 156 private non-farm industries and sectors, three government sectors, and a farm sector. Trade flows are captured between sectors as well as across the four counties and the rest of U.S. Market shares of industries are dependent upon their product prices, access to production inputs, and local infrastructure. The demographic/migration component has 160 ages/gender/race/ethnicity cohorts and captures population changes in births, deaths, and migration. (For details, please refer to REMI online documentation at <http://www.remi.com/products/pi>).

Regional Job Impacts

As presented in Table 5, the REMI modeling analysis projects that there would be 81 foregone jobs annually on average over the 2025 – 2035 period relative to the baseline forecast. The Construction and Retail trade industries are the most negatively impacted sectors with 19 and 12 foregone jobs annually relative to the baseline, respectively. These jobs foregone may be attributed to the labor-intensive nature of these two industries and can also be viewed as less job growth within these industries relative to the baseline. The Transit and Ground Passenger Transportation industry will have 14 additional jobs gained annually, relative to the baseline scenario. The greatest job impacts are projected to occur in 2034 and 2035, when both the 1997 and 2008 8-hour ozone NAAQS nonattainment fees are assumed to be paid by the affected facilities. The REMI model forecasts 132 foregone jobs annually in the regional economy in 2034 and 2035, relative to the baseline scenario. The “Other industries” row in Table 5 presents the sum of job impacts for all the other industries excluding the 10 selected industries in the table. The small number of foregone jobs relative to the high compliance cost of PR 317.1 is mainly attributed to the capital-intensive nature of the most impacted industries, characterized by a substantial proportion of equipment/machinery relative to labor.

Table 5
Projected Job Impacts of PR 317.1 by Selected Industries and Years

Industry (NAICS)	2025	2030	2035	Annual Average (2025-2035)	Baseline Job Counts (Average, 2025-2035)	Percent Relative to Baseline
Construction (23)	-5	-20	-24	-19	490,499	-0.0039%
Retail Trade (44-45)	-7	-11	-17	-12	797,155	-0.0015%
State and Local Government (92)*	2	-9	-11	-6	932,416	-0.0007%
Ambulatory Health Care Services (621)	-1	-5	-8	-6	597,405	-0.0009%
Fabricated Metal Product Manufacturing (332)	-1	-5	-9	-5	88,372	-0.0061%
Real Estate (531)	0	-5	-7	-5	553,746	-0.0008%
Administrative and Support Services (561)	9	-2	-1	1	786,720	0.0001%
Federal Military (92)*	1	1	1	1	42,258	0.0024%
Securities, Commodity Contracts, Other Investments; Funds, Trusts, Other Financial Vehicles (523)	5	1	3	2	280,027	0.0008%
Transit and Ground Passenger Transportation (485)	19	9	17	14	312,337	0.0044%
Other Industries	13	-50	-76	-44	6,296,744	-0.0007%
All Industries	34	-97	-132	-81	11,177,679	0.0007%

*REMI software models Federal Military industry separate from State and Local Government industry. Please note that the NAICS Association encompasses both industries under the same primary NAICS code (92). The Federal Military industry specifically falls under NAICS code 928, which is National Security and International Affairs.

In addition, in 2013, South Coast AQMD contracted with Abt Associates Inc. to review the South Coast AQMD socioeconomic assessments for Air Quality Management Plans and individual rules with the goal of providing recommendations that could enhance South Coast AQMD's socioeconomic analyses. In 2014, Abt Associates Inc. published a report which included a recommendation for South Coast AQMD to enhance socioeconomic analyses by testing major assumptions through conducting a scenario analysis. As such, South Coast AQMD generally includes an alternative worst-case scenario in Socioeconomic Impact Assessments which analyzes a scenario that assumes the affected facilities would purchase all feasible monitoring equipment and services from providers located outside of the South Coast AQMD's jurisdiction.¹⁵ In short, this alternative worst-case scenario only models the impacts of the costs of compliance. This hypothetical scenario is designed to test the sensitivity of the embedded assumptions in the REMI model about how compliance costs and revenues would be distributed inside and outside of South Coast AQMD's jurisdiction. However, PR 317.1 does not require the purchase of equipment or services and is only designed to implement the framework by which South Coast AQMD assesses and collects the CAA nonattainment fee from affected facilities. For this reason, the worst-case scenario for PR 317.1 instead models the impacts of the nonattainment fees paid by affected facilities, and eliminates the revenue associated with the collection of these fees from South Coast AQMD. This worst-case scenario would result in an annual average of approximately 192 jobs foregone relative to the baseline scenario. The 192 jobs foregone represent only 0.0017 percent of the forecasted average baseline jobs in the regional economy. Figure 2 presents the projected regional job impacts over the 2025 – 2035 period for both the standard and worst-case scenario forecasts.

Figure 2
Projected Regional Job Impact, 2025 – 2035

¹⁵ Abt Associates Inc., August 2014, Review of the SCAQMD Socioeconomic Assessments, Chapter 6, Section 3, <https://www.aqmd.gov/docs/default-source/Agendas/aqmp/scaqmd-report---review-socioeconomic-assessments.pdf>, accessed April 2, 2024.

Price Impact and Competitiveness

The overall impacts of PR 317.1 on production cost and delivered prices in the region is not expected to be substantial. Based on the REMI analysis, the implementation of PR 317.1 is projected to increase the relative cost of production by 0.003 percent and increase the relative delivered price of goods by 0.002 percent for all the industries in the South Coast AQMD jurisdiction in the year 2033, when implementation of PR 317.1 will have the greatest impact upon cost of production and delivered price of goods in the region.

Proposed Rule 317.1

Clean Air Act Nonattainment Fees
for 8-Hour Ozone Standards

Cleaning The Air That We Breathe...

Board Meeting

June 7, 2024

Background – CAA Section 185

- Federal Clean Air Act (CAA) Section 185 requires collection of nonattainment fees if the South Coast Air Basin or Coachella Valley fails to attainment a federal ozone standard
 - Fee applies to facilities with 10 tons or more of VOC or NOx emissions per year (Major Stationary Sources)
 - Fees collected until attainment
- PR 317.1 implements Section 185 for the 1997 (revoked) and 2008 ozone standards
 - Attainment deadline for 1997 standard: June 15, 2024
 - Attainment deadline for 2008 standard: July 20, 2032

Nondiscretionary Action – U.S. EPA is required to collect the fees if South Coast AQMD does not

Pathways to Comply with CAA Section 185

Fee Collection

- Available for unrevoked and revoked standards
- Collect fees each year based on the amount of emissions that exceed 80% of the baseline emissions

Fee Equivalency Alternative

- Only available if both conditions are met:
1. Ozone standard has been revoked by U.S. EPA
 2. Utilizes funds beyond commitments in the applicable Air Quality Management Plan

Fee equivalency alternative is not available for 1997 and 2008 ozone standards for South Coast AQMD

8-Hour Ozone Trends

8-Hour Ozone Design Values¹

- Overall air quality has improved
- For 1997 standard, South Coast Air Basin will not be in attainment by 2024 but Coachella Valley will likely attain following an extension²

¹ – Annual 4th highest 8-hour average concentration, averaged over 3 years
² – Facilities are exempt from PR 317.1 fees in the extension year

Source Contributions for Ozone Precursors of VOC and NOx

2023 VOC Emissions

379 tons per day

- The primary pollutants that must be controlled to achieve 8-hour ozone standards are NOx
- Over 80% of the NOx emissions in 2023 are from mobile sources

2023 NOx Emissions

250 tons per day

1 – Includes point and areawide sources. Major stationary sources potentially impacted by PR 317.1 represent 4% of the VOC emissions and 7% of the NOx emissions.

PR 317.1 Key Requirement

Affected Facilities

- About 320 facilities (estimated based on number of Title V facilities)

Fee Obligations

- Applies to emissions¹ that exceed 80 percent of baseline emissions
 - Baseline emissions are based on emissions in the attainment year
 - Fee rate was \$11,922 per ton in 2023²
- Applicable facilities are responsible for paying fees for each applicable standard

Criteria	8-Hour Ozone NAAQS	
	Revoked 1997	2008
Baseline Emissions	2024	2032
Year Fee Obligation Begins	2025	2033

1 – Major stationary source only pays for pollutant which qualifies them as a major stationary source
2 – U.S. EPA annually adjusts the fee rate by CPI

CAA Section 185 NO_x Fee Example for 1997 Ozone Standard

Fee applies to emissions above 80% of baseline

1 – Assuming rounded 2023 fee rate, subject to future CPI adjustment

2 – Assessment would continue for future years until area is in attainment with 1997 standard

Alternative Baseline Option

Alternative Baseline Emissions Option

- Facility may propose alternate method to determine baseline emissions level if emissions are irregular, cyclical, or vary
- Alternate baseline shall reflect emissions from normal operating conditions
- Alternate method conditioned upon U.S. EPA issuing a guidance document

Socioeconomic Impacts

- In 2025, total fees estimated conservatively to be \approx \$26 million
 - Assumed all Title V facilities (\approx 320) to be major stationary sources of VOCs and NO_x and emissions remain the same as baseline except for Rule 1109.1 implementation
- Estimated about 80 jobs foregone annually on average with \approx 20 jobs foregone from construction sector

1 – Other public service facilities include general medical & surgical hospitals; sewage treatment; solid waste landfill; water supply & irrigation systems; natural gas distribution; regulation & administration of communications, electric, gas, & other utilities; and other general government support.

2 - Refinery industries include petroleum refineries, petroleum bulk stations and terminals, pipeline transportation of refined petroleum products, and petroleum and petroleum products merchant wholesalers (except bulk stations and terminals).

Key Remaining Issue

Comment: PR 317.1 may require fee collection even when facilities are no longer required to pay due to potential changes in the CAA or the implementation guidance

Response:

- No foreseeable changes are anticipated
- Uncertainties with the potential changes, if any
- Staff is committed to evaluate the updates and take any necessary actions to reflect these updates, if appropriate

Next Steps - Spending of Funds

- Stakeholders have commented on the use of the fees collected through PR 317.1
 - CAA does not specify how to spend the funds
 - Usage will be determined through a future public process

Recommended Actions

- **Recommended actions:**
 - Determine that PR 317.1 is not considered subject to CEQA and
 - Adopt Rule 317.1

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 25

PROPOSAL: Certify the Final Environmental Assessment for Proposed Amended Rule 463 – Organic Liquid Storage; and Amend Rule 463

SYNOPSIS: Proposed Amended Rule 463 (PAR 463) establishes enhanced leak detection using optical gas imaging, more stringent control requirements to dome external floating roof tanks, and other requirements. Additionally, PAR 463 will include contingency measures for both the Coachella Valley and the South Coast Air Basin, which will require more frequent use of optical gas imaging, if triggered.

COMMITTEE: Stationary Source, April 19, 2024, Reviewed

RECOMMENDED ACTIONS:

Adopt the attached Resolution:

1. Certifying the Final Environmental Assessment for Proposed Amended Rule 463 – Organic Liquid Storage; and
2. Amending Rule 463 – Organic Liquid Storage.

Wayne Natri
Executive Officer

SR:MK:MM:IS:JE

Background

Rule 463 – Organic Liquid Storage (Rule 463) limits VOC emissions from storage tanks that store organic liquids. Rule 463 applies to above-ground stationary tanks with approximate capacity of 19,800 gallons or more, above-ground tanks with approximate capacity between 250 gallons and 19,800 gallons that are used to store gasoline, and any stationary tank with a potential for VOC emissions of six tons per year or greater used in crude oil and natural gas production operations.

California Assembly Bill 617 (AB 617) was signed into law in 2017 to develop a new community-focused program to reduce emissions and exposure to sources of air pollution and preserve public health. Objectives in the Wilmington, Carson, West Long Beach (WCWLB) and South Los Angeles (SLA) Community Emission Reduction Plans (CERPs) specify initiating rule development to require the use of enhanced leak detection tools and other leak prevention and emission reduction technologies (e.g., domed roofs) in various South Coast AQMD rules. Rule 463 was not identified as an objective for rule development within the two CERPs; however, Rule 463 regulates the same emission sources within the affected WCWLB and SLA communities.

Amendments to Rule 463 will help reduce VOC emissions from storage tanks in WCWLB, SLA, and in other communities within the South Coast AQMD jurisdiction. Recommendations for proposed amendments to Rule 463 focus on improving leak detection requirements with the use of advanced leak detection technologies and requiring additional emission controls.

Clean Air Act (CAA) Section 182(c)(9) requires that ozone nonattainment areas classified as “serious” or above provide for contingency measures to be implemented if the area fails to meet any applicable milestone. Amendments to Rule 463 include contingency measures to fulfill the CAA requirement.

Proposal

PAR 463 establishes enhanced leak detection and more stringent control requirements by requiring optical gas imaging (OGI) inspections for tank farms every other week for all tanks. Furthermore, PAR 463 requires semi-annual OGI inspections on individual floating roof tank components, in addition to existing provisions that require semi-annual seal gap inspections. The proposed amended rule requires doming for external floating roof tanks that store organic liquids with a true vapor pressure (TVP) of 3.0 psia or greater. Domes must be installed during the next internal API 653 inspection or the next time a tank is cleaned and degassed, but no later than 23 years after a test indicates the organic liquid stored has a TVP of 3.0 psia or greater. Secondary seals are also required on all floating roof tanks. Installation of secondary seals on internal floating roof tanks will be required the next time the tank is cleaned and degassed, but no later than 22 years after date of rule adoption. Additionally, PAR 463 will include federal seal gap requirements by reference for floating roof tanks and require an increased emission control efficiency of 98 percent by weight for fixed roof tanks. These requirements will be effective immediately. PAR 463 also establishes additional requirements for true vapor pressure and vapor recovery unit testing, reporting, and recordkeeping.

Public Process

PAR 463 was developed through a public process. Two Working Group meetings were held on January 3, 2024, and March 7, 2024. Working Group Meeting participants included attendees from affected businesses, environmental and community

representatives, public agencies, consultants, and other interested parties. A Public Workshop was held on March 27, 2024, where staff presented the proposed amended rule to the general public and stakeholders and solicited comments. Staff also held individual meetings regarding PAR 463 with stakeholders, including facilities to understand specific concerns and how the rule may uniquely affect them. Staff also met with technology and leak detection service providers. In addition, staff conducted multiple site visits to understand facility operations.

Emission Reductions

The total VOC emission reductions associated with the implementation of PAR 463 are 1.65 tons per day. Optical gas imaging inspections will result in 0.40 tons per day of VOC reductions. Doming will result in 0.05 ton per day of VOC reductions. Internal floating roof seal requirements will result in 0.01 tons per day of VOC reductions. Increased emission control efficiency for fixed roof tanks will result in 1.19 tons per day of VOC emission reductions.

Key Issues

Throughout the rulemaking process, staff worked with stakeholders to resolve key issues. Staff is not aware of any remaining key issues.

California Environmental Quality Act

PAR 463 is considered a “project” as defined by the California Environmental Quality Act (CEQA), and the South Coast AQMD is the designated lead agency. Pursuant to South Coast AQMD’s Certified Regulatory Program (Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l); codified in South Coast AQMD Rule 110) and CEQA Guidelines Section 15070, the South Coast AQMD has prepared an Environmental Assessment (EA) for PAR 463, which is a substitute CEQA document pursuant to CEQA Guidelines Section 15252, prepared in lieu of a Negative Declaration. Implementation of the proposed project is estimated to reduce VOC emissions by 1.65 ton per day, and the Final EA did not identify any environmental topic areas that would be significantly adversely affected by physical modifications resulting from the proposed project. The Final EA is included as an attachment to this Board package (see Attachment H).

Socioeconomic Impact Assessment

Approximately 1,600 storage tanks at 429 facilities are subject to PAR 463 requirements with the majority belonging to the Oil and Gas Extraction (NAICS 211) sector. Of the 429 facilities, up to 282 facilities may qualify as small businesses based on various small business definitions. The key requirements of PAR 463 that would have cost impacts for the affected facilities include: 1) periodic OGI inspections; 2) doming of external floating roof storage tanks; 3) installation of secondary seals on internal floating roof storage tanks; and 4) periodic performance testing on vapor recovery units of fixed-roof storage tanks. The total present value of compliance costs of implementing PAR 463 over the 2024 – 2080 period is estimated to be \$147.60

million and \$71.77 million with a 1 percent and 4 percent discount rate, respectively. The annual average compliance costs of PAR 463 are estimated to range from \$2.95 million to \$3.47 million for a 1 percent to 4 percent real interest rate, respectively. When the compliance costs are amortized using a 4 percent interest rate, 25 net jobs foregone annually are projected in the four-county economy over the period from 2024 to 2080, relative to the baseline scenario. The Final Socioeconomic Impact Assessment is included as an attachment to this Board package (see Attachment I).

AQMP and Legal Mandate

PAR 463 implements requirements aligned with objectives stated in the WCWLB and SLA CERPs to reduce VOC emissions from refineries and oil and gas operations, respectively. Additionally, PAR 463 updates BARCT requirements by establishing more stringent leak detection and control requirements pursuant to Health and Safety Code section 40920.6.

Furthermore, PAR 463 partially implements control measure FUG-01 – Improved Leak Detection and Repair in the 2022 Final Air Quality Management Plan. Control Measure FUG-01 seeks to reduce VOC emissions through utilizing advanced remote sensing technologies to allow for faster identification and repair of leaks from equipment at oil and gas sites and other facilities that are currently required to maintain a leak detection and repair program.

In addition, South Coast AQMD is amending Rule 463 to introduce a contingency measure to partially satisfy CAA Section 182(c)(9) that requires that ozone nonattainment areas classified as “serious” or above provide for contingency measures to be implemented if the area fails to meet any applicable milestone. PAR 463 introduces periodic OGI inspections at more frequent intervals as contingency measures to fulfill ozone attainment plan requirements for the applicable National Ambient Air Quality Standards.

Implementation and Resource Impacts

Existing staff resources are adequate to implement the proposed amendments.

ATTACHMENT A

SUMMARY OF PROPOSAL

Proposed Amended Rule 463 — Organic Liquid Storage

Purpose

- Contains a new purpose to establish contingency measures in the South Coast Air Basin and Coachella Valley for applicable ozone standards

Requirements

- U.S. EPA seal gap requirements are incorporated by reference
- Tanks must be maintained free of visible vapors resulting from a defect in equipment
- Domes required on all external floating roof (EFR) tanks storing organic liquids with a true vapor pressure (TVP) of 3.0 psia or greater except for waste water tanks where the installation of a dome could lead to the buildup of pyrophoric materials
- True vapor pressure testing for EFR tanks without domes
- Domes required to be maintained free of gaps and other openings that are not part of the dome design
- Secondary seals required on all internal floating roof (IFR) tanks
- Fixed roof tanks required to have 98% by weight emission control
- Performance testing for vapor recovery units
- Contingency measures for the applicable 8-hour ozone standards in the South Coast Air Basin and the Coachella Valley that would require more frequent optical gas imaging (OGI) tank farm inspections

Compliance Schedules

- Starting three years after the date of adoption, EFR tanks must install domes at the next internal API 653 inspection or the next time a tank is cleaned and degassed, whichever is sooner, but not to exceed 23 years after a test verifies that an organic liquid stored has a TVP of 3 psia or greater
- Starting two years after date of adoption, IFR tanks are required to have secondary seals installed at the next internal API 653 inspection or when the tank is next cleaned or degassed, but no later than 22 years after date of adoption

Monitoring

- Tank farm inspections required at least once every other calendar week
- Component inspections required for floating roof tanks twice a year at four-to-eight month intervals

Maintenance

- Tanks found in non-compliance during an inspection with an OGI device must be repaired within 72 hours after the inspection

Recordkeeping and Reporting

- Reporting when defects or visible vapors from vapor tight components are identified during a tank farm inspection
- Written records for tank farm and component inspections
- Digital time-stamped recordings of visible vapors identified during tank farm inspections
- Submittal of TVP test results of 3.0 psia or greater for EFR tanks
- Allowance for electronic report forms that contain all information required in the Compliance Report Form
- Allowance of electronic submittal of written and electronic inspection and non-compliance reports
- Reporting for vapor recovery system performance tests
- Maintain all records for a minimum of three years

Test Methods and Procedures

- Contains two new vapor pressure test methods: ASTM – 6377 and ASTM – 6378

Exemptions

- Exemptions from the provisions of Rule 463 for tanks regulated by Rule 1178, with the exception of other performance requirements, seal categories, and the definition for Product Change
- Exemption from OGI inspections when a tank is out of service
- Exemption from certain OGI inspection requirements when required procedure is deemed unsafe

RESOLUTION NO. 24-_____

A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) certifying the Final Environmental Assessment for Proposed Amended Rule 463 – Organic Liquid Storage.

A Resolution of the South Coast AQMD Governing Board amending Rule 463 – Organic Liquid Storage.

WHEREAS, the South Coast AQMD Governing Board finds and determines that Proposed Amended Rule 463 is considered a “project” as defined by the California Environmental Quality Act (CEQA); and

WHEREAS, the South Coast AQMD has had its regulatory program certified pursuant to Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l) and has conducted a CEQA review and analysis of the proposed project pursuant to such program (South Coast AQMD Rule 110); and

WHEREAS, the South Coast AQMD Governing Board has determined that the requirements for a Negative Declaration have been triggered pursuant to its Certified Regulatory Program and CEQA Guidelines Section 15070, and that an Environmental Assessment (EA), a substitute document allowed pursuant to CEQA Guidelines Section 15252 and South Coast AQMD’s Certified Regulatory Program, is appropriate; and

WHEREAS, the South Coast AQMD prepared a Draft EA pursuant to its Certified Regulatory Program and CEQA Guidelines Sections 15070 and 15252 setting forth the potential environmental consequences of Proposed Amended Rule 463 and determined that the proposed project would not have the potential to generate significant adverse environmental impacts; and

WHEREAS, a Draft EA was prepared and circulated for a 30-day public review and comment period from March 27, 2024 to April 26, 2024 and no comments were received relative to the analysis such that it is now a Final EA; and

WHEREAS, it is necessary that the South Coast AQMD Governing Board review the Final EA prior to its certification, to determine that it provides adequate information on the potential adverse environmental impacts that may occur as a result of adopting Proposed Amended Rule 463; and

WHEREAS, pursuant to CEQA Guidelines Section 15252 (a)(2)(B), since no significant adverse impacts were identified, no alternatives or mitigation measures are required for project approval; thus, a Mitigation, Monitoring, and Reporting Plan pursuant to Public Resources Code Section 21081.6 and CEQA Guidelines Section 15097, has not been prepared; and

WHEREAS, Findings pursuant to Public Resources Code Section 21081.6 and CEQA Guidelines Section 15091 and Statement of Overriding Considerations pursuant to CEQA Guidelines Section 15093 were not prepared because the analysis shows that Proposed Amended Rule 463 would not have a significant adverse effect on the environment, and thus, are not required; and

WHEREAS, the South Coast AQMD Governing Board voting to adopt Proposed Amended Rule 463 has reviewed and considered the information contained in the Final EA and all other supporting documentation, prior to its certification, and has determined that the Final EA, has been completed in compliance with CEQA; and

WHEREAS, Proposed Amended Rule 463 and supporting documentation, including but not limited to, the Final EA, the Final Staff Report, and the Final Socioeconomic Impact Assessment were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the proposed project; and

WHEREAS, the Final EA reflects the independent judgment of the South Coast AQMD; and

WHEREAS, the South Coast AQMD Governing Board finds and determines that all changes made in the Final EA after the public notice of availability of the Draft EA were not substantial revisions and do not constitute significant new information within the meaning of CEQA Guidelines Sections 15073.5 and 15088.5, because no new significant effects and no substantial increase in the severity of an environmental effect were identified that would require new mitigation measures or project revisions to reduce impacts to less than significant levels, and all changes merely clarify, amplify, or make insignificant modifications to the Draft EA, and recirculation is therefore not required; and

WHEREAS, the South Coast AQMD Governing Board finds and determines, taking into consideration the factors in Section (d)(4)(D) of the Governing Board Procedures (Section 30.5(4)(D)(i) of the Administrative Code), that there were no modifications to Proposed Amended Rule 463 since the Notice of Public Hearing was published; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment of Proposed Amended Rule 463 is consistent with the March 17, 1989 Governing Board Socioeconomic Resolution for rule amendment; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment is consistent with the provisions of Health and Safety Code Sections 40440.8, 40728.5, and 40920.6; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 463 will result in increased costs to the affected industries, yet such costs are considered to be reasonable, with a total annualized cost as specified in the Final Socioeconomic Impact Assessment; and

WHEREAS, the South Coast AQMD Governing Board has actively considered the Final Socioeconomic Impact Assessment and has made a good faith effort to minimize such impacts; and

WHEREAS, the South Coast AQMD staff conducted a Public Workshop regarding Proposed Amended Rule 463 on March 27, 2024; and

WHEREAS, Proposed Amended Rule 463 will be submitted for inclusion into the State Implementation Plan; and

WHEREAS, Health and Safety Code Section 40727 requires that prior to adopting, amending, or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board has determined that a need exists to amend Rule 463 to implement Best Available Retrofit Control Technology, partially implement Control Measure FUG-01 of the 2022 Final Air Quality Management Plan, fulfill a commitment contained in the Wilmington, Carson, West Long Beach Community Emission Reduction Plan, fulfill a commitment contained in the South Los Angeles Community Emission Reduction Plan, and partially satisfy Clean Air Act Section 182(c)(9) requirements for ozone nonattainment areas classified as “serious” or above to included contingency measures to be implemented if the area fails to meet any applicable milestone; and

WHEREAS, the South Coast AQMD Governing Board has determined, pursuant to Health and Safety Code Section 40001(c), that there is a problem that the proposed amended rule will alleviate, namely nonattainment of several federal ozone standards, and the rule will help attain state and federal ambient air quality standards; and

WHEREAS, the South Coast AQMD Governing Board obtains its authority to adopt, amend or repeal rules and regulations from Health and Safety Code Sections 39002, 40000, 40001, 40440, 40702, 40725 through 40728, 40920.6, 41508; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 463 is written and displayed so that its meaning can be easily understood by persons directly affected by it; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 463 is in harmony with, and not in conflict with or contradictory to, existing statutes, court decisions, or state or federal regulations; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 463 does not impose the same requirements as any existing state or federal regulations, and the proposed amended rule is necessary and proper to execute the powers and duties granted to, and imposed upon, the South Coast AQMD; and

WHEREAS, the South Coast AQMD Governing Board, in amending Rule 463, references the following statutes which the South Coast AQMD hereby implements, interprets, or makes specific: Health and Safety Code Sections 39002, 40001, 40406, 40702, 40440(a), 40725 through 40728.5; and

WHEREAS, Health and Safety Code Section 40727.2 requires the South Coast AQMD to prepare a written analysis of existing federal air pollution control requirements applicable to the same source type being regulated whenever it adopts, or amends a rule, and the South Coast AQMD's comparative analysis of Proposed Amended Rule 463 is included in the Final Staff Report; and

WHEREAS, the Public Hearing has been properly noticed in accordance with all provisions of Health and Safety Code Sections 40725 and 40440.5; and

WHEREAS, the South Coast AQMD Governing Board has held a Public Hearing in accordance with all provisions of state and federal law; and

WHEREAS, the South Coast AQMD specifies the Planning and Rules Manager overseeing the rule development for Proposed Amended Rule 463 as the custodian of the documents or other materials which constitute the record of proceedings upon which the adoption of this proposed project is based, which are located at the South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, California; and

NOW, THEREFORE BE IT RESOLVED, that the South Coast AQMD Governing Board has considered the Final EA for Proposed Amended Rule 463, and, on the basis of the whole record before it, the South Coast AQMD Governing Board: 1) finds that the Final EA, was completed in compliance with CEQA and the South Coast AQMD's Certified Regulatory Program, 2) finds that the Final EA and all supporting documents were presented to the South Coast AQMD Governing Board, whose members exercised

their independent judgment and reviewed, considered, and approved the information therein prior to acting on Proposed Amended Rule 463, and 3) certifies the Final EA; and

BE IT FURTHER RESOLVED, that because no significant adverse environmental impacts were identified as a result of adopting Proposed Amended Rule 463, Findings, a Statement of Overriding Considerations, and a Mitigation, Monitoring, and Reporting Plan are not required and were not prepared; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby adopt, pursuant to the authority granted by law, Proposed Amended Rule 463 as set forth in the attached, and incorporated herein by reference; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board requests that Proposed Amended Rule 463 be submitted into the State Implementation Plan; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to forward a copy of this Resolution and Proposed Amended Rule 463 to the California Air Resources Board for approval and subsequent submittal to the U.S. Environmental Protection Agency for inclusion into the State Implementation Plan.

DATE: _____

CLERK OF THE BOARDS

ATTACHMENT F

(Adopted August 15, 1977)(Amended June 1, 1984)(Amended December 7, 1990)
(Amended March 11, 1994)(Amended May 6, 2005)
(Amended November 4, 2011)(Amended May 5, 2023)(Amended TBD)

PROPOSED AMENDED RULE 463. **ORGANIC LIQUID STORAGE**

[RULE INDEX TO BE ADDED AFTER RULE ADOPTION]

(a) ~~Purpose and Applicability~~

The purpose of this rule is to reduce emissions of Volatile Organic Compounds (VOC) from the storage of ~~o~~Organic ~~L~~iquids in stationary above-ground ~~t~~Tanks and establish contingency measures for applicable ozone standards for the reduction of VOCs. ~~This rule applies to any above-ground stationary tank with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of organic liquids, and any above-ground tank with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline. This rule also applies to any stationary tank with a Potential For VOC Emissions of 6 tons per year or greater used in Crude Oil And Natural Gas Production Operations.~~

(b) Applicability

This rule applies to any above-ground stationary Tank with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of Organic Liquids, and any above-ground Tank with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of Gasoline. This rule also applies to any stationary Tank with a Potential For VOC Emissions of 6 tons per year or greater used in Crude Oil And Natural Gas Production Operations.

(~~b~~c) Definitions

For purposes of this rule, the following definitions apply:

- (1) ACCESS HATCH is an opening in the roof with a vertical well and a cover attached to it. Access Hatch provides passage for workers and materials through the roof for construction or maintenance.
- (42) ACTUAL STORAGE CONDITIONS means the temperature at which a product is stored in an above-ground stationary ~~t~~Tank.
- (23) AMBIENT TEMPERATURE is the temperature of an ~~o~~Organic ~~L~~iquid within a storage ~~t~~Tank that has been influenced by atmospheric conditions only and is not elevated by a non-atmospheric means of heating at the

- (b)(c) €Tank which includes but is not limited to steam, hot water, heaters, heat exchangers, €Tank insulation, or €Tank jacketing.
- (34) CERTIFIED PERSON is ~~an individual~~ a person who has successfully completed the ~~District~~ South Coast AQMD €Tank self-inspection program and a South Coast AQMD approved fugitive emissions compliance inspection program, and who holds a certificate issued by the Executive Officer evidencing that such ~~individual-person~~ is in good standing in this program.
- (5) CLEANING is the process of washing or rinsing a stationary Tank, reservoir, pipelines, or other container or removing vapor, sludge, or rinsing liquid from a stationary Tank, reservoir, or other container.
- (6) COMPONENT is any valve, fitting, pump, compressor, pressure relief device, diaphragm, hatch, sight-glass, Roof Opening, Rim Seal System, pressure vacuum vents, Guidepoles, Roof Legs, or meter in VOC service.
- (7) COMPONENT INSPECTION is monitoring for Visible Vapors with a handheld Optical Gas Imaging Device of a Storage Tank roof and individual Components, including but not limited to Roof Openings and Rim Seal Systems, viewable from the Tank platform or a vantage point capable of seeing the Tank roof, and ground for Components not viewable from the Tank platform or vantage point but viewable at ground level.
- (48) CRUDE OIL AND NATURAL GAS PRODUCTION OPERATIONS are any operations from a crude oil well to the point of custody transfer to a refinery and any operations from a natural gas well to the natural gas customer.
- (9) DOMED ROOF is a self-supporting Fixed Roof attached to the top of an External Floating Roof Tank to reduce evaporative losses. An External Floating Roof Tank equipped with a Domed Roof is a Domed External Floating Roof Tank.
- (510) DRAIN-DRY BREAKOUT TANK is an above-ground ~~s~~Storage €Tank designed such that the floating roof rests on support legs no higher than one foot along the €Tank shell with a bottom sloped to a sump or sumps such that no product or sludge remains on the €Tank bottom and walls after emptying except clingage and is primarily used to receive product from pipelines and to distribute product back into pipelines.
- (11) EMISSION INVENTORY YEAR is the annual emission-reporting period

specified by the Annual Emission Reporting (AER) Program requirements for a given year.

(612) EXEMPT COMPOUND is as defined in Rule 102.

(13) EXTERNAL FLOATING ROOF TANK is a Storage Tank with a roof consisting of a double deck or pontoon single deck which rests or floats on the liquid being contained and is not equipped with a Fixed Roof above the floating roof.

(c)

(14) FACILITY is any equipment or group of equipment or other VOC-emitting activities, which are located on one or more contiguous properties within the South Coast AQMD, in actual physical contact or separated solely by a public roadway or other public right-of-way, and are owned or operated by the same person (or by persons under common control), or an outer continental shelf (OCS) source as determined in 40 CFR Section 55.2. Such above- described groups, if noncontiguous, but connected only by land carrying a pipeline, shall not be considered one Facility.

(15) FIXED ROOF SUPPORT COLUMN AND WELL is a column made of round pipe or of structural shape with an irregular cross section that passes through the floating roof via a peripheral vertical well and is used to support the roof of an Internal Floating Roof Tank.

(16) FIXED ROOF TANK is a Storage Tank with a permanently affixed roof.

(17) FLEXIBLE ENCLOSURE SYSTEM is a VOC emission reduction system made of a VOC impervious material which is resistant to ultraviolet radiation, completely enclosing a Slotted Guidepole and controls the vapor emission pathway from inside the storage vessel through the Guidepole slots to the outside air.

(18) FUEL GAS SYSTEM is the piping and control system that gathers gaseous stream(s) generated by onsite operations and transports the gaseous stream for sale or for use as fuel gas in combustion devices, or in-process combustion equipment such as furnaces and gas turbines, either singly or in combination.

(719) GASOLINE means any petroleum distillate having a Reid vapor pressure of 200 mm Hg (3.9 pounds per square inch), or greater.

(20) GAUGE FLOAT is a device that is used to indicate the level of liquid within the Tank. The float rests on the liquid surface and is housed inside a well that is closed by a removable cover.

- (c) (21) GAUGE HATCH/SAMPLE PORT is an opening in the roof that provides access for gauging or sampling. A Gauge Hatch/Sample Port is usually equipped with a closing cover or a funnel and slit-fabric Seal to cover the opening.
- (22) GUIDEPOLE is an anti-rotation device that is fixed to the top and bottom of the Tank, passing through a well that is equipped with a sliding cover. The Guidepole is used to prevent adverse movement of the roof and subsequent damage to the roof fittings and rim Seals, or as access for level gauging or sampling of the liquid stock. The Guidepole can be solid or equipped with slots or holes for gauging purpose.
- (823) HEAVY CRUDE OIL means a crude oil with American Petroleum Institute (API) gravity 20 degrees or less.
- (24) INTERNAL FLOATING ROOF TANK is a Storage Tank equipped with a fixed roof and a floating roof which rests on the liquid being contained.
- (25) LADDER AND WELL is a ladder that passes through a well and is used to access the Tank bottom of an Internal Floating Roof Tank.
- (26) LIQUID MOUNTED PRIMARY SEAL is a Primary Seal that is mounted in full contact with the liquid in the annular space between the Tank shell and the floating roof.
- (27) MECHANICAL SHOE PRIMARY SEAL is a metallic band attached to the floating roof sliding in contact with the Tank shell. The shoes are supported and held against the Tank shell by a mechanical device, and are joined together to form a ring. The vapor space between the shoe and the roof is sealed from the atmosphere by a Primary Seal of coated or VOC impervious fabric.
- (28) OPTICAL GAS IMAGING DEVICE is an infrared camera with a detector capable of visualizing gases in the 3.2-3.4 micrometer waveband.
- (929) ORGANIC LIQUID is any liquid containing VOC.
- (30) POLE FLOAT is a device located inside a Guidepole that floats on the surface of the stored liquid, and is used to indicate the liquid level inside the Tank.
- (31) POLE SLEEVE is a device that extends from either the cover or the rim of an opening in a floating roof deck to the outer surface of a pole that passes through the opening.

- (32) POLE WIPER is a Seal that extends from either the cover or the rim of an opening in a floating roof deck to the outer surface of a pole that passes through the opening.
- (4033) POTENTIAL FOR VOC EMISSIONS means emissions calculated using a generally accepted model or calculation methodology, based on permitted throughput limits or, when permitted throughput limits are not available, based on the maximum throughput in a calendar month, where at least 30-days of production occurred, in years 2019 to 2022.
- (4434) PRESSURE RELIEF VALVE (PRV) is a valve which is automatically actuated by upstream static pressure, and used for safety or emergency purposes.
- (c) (35) PRIMARY SEAL is a Seal mounted below a Secondary Seal of a Rim Seal System that consists of two Seals. A Primary Seal, which is in contact with the floating roof Tank shell, can be either Mechanical Shoe, Resilient Filled, or a Seal with multiple wipers, drip curtain and weight.
- (36) PRODUCT CHANGE is the process of changing the Tank contents from one Organic Liquid to another Organic Liquid that has different characteristics i.e. vapor pressure, viscosity, etc.
- (37) RESILIENT FILLED PRIMARY SEAL is an envelope filled with resilient foam (non-metallic polyurethane) mounted at the rim of the floating roof that makes contact with the shell.
- (38) RIM MOUNTED SECONDARY SEAL is a Secondary Seal mounted on the rim of the floating roof of a Storage Tank. Rim Mounted Secondary Seals are effective at reducing losses from the Primary Seal fabric.
- (39) RIM SEAL SYSTEM is a closure device between the shell of the Storage Tank and the floating roof edge. A Rim Seal System may consist of two Seals, one above the other. The lower Seal is referred to as the Primary Seal and the upper Seal is referred to as the Secondary Seal.
- (40) RIM VENT is a device consisting of a weighted pallet that rests on a valve seat. Rim Vents are used to release any excess pressure or vacuum present in the vapor pocket between the Seal and the rim area of a floating roof Tank.
- (41) ROOF DRAIN is a drain on the roof of a floating roof Tank that is used to remove rainwater from the floating roof. There are two types of Roof Drains. A closed Roof Drain removes the rainwater from the surface of the roof through a flexible hose through the stored liquid prior to exiting the

Tank. With a closed Roof Drain, the rainwater does not come in contact with the liquid stored in the Tank. An open Roof Drain is any drain other than the closed Roof Drain. An open Roof Drain is typically used only during an emergency.

(42) ROOF LEG is a device that holds the floating roof at a predetermined distance from the Tank bottom to allow for Tank Cleaning or repair. There are two types of Roof Legs, adjustable or fixed. Fixed legs are attached to the floating roof or hangers suspended from the roof, whereas adjustable legs pass through a well or sleeve, and penetrate the roof.

(c)

(43) ROOF OPENING is any opening through a floating roof of a Storage Tank for any roof fitting including but not limited to Access Hatch, Fixed Roof Support Column And Well, Gauge Float, Gauge Hatch, Sample Port, Guidepole, Ladder And Well, Rim Vent, Roof Drain, Roof Leg, and Vacuum Breaker, and excluding Rim Seal System.

(1244) SEAL is a closure device between the Tank wall and the floating roof edge that controls emissions of VOCs. Approved floating roof Tank sSeals are categorized as follows:

(A) Category "A" sSeals are sSeals approved by the Executive Officer as most effective in the control of VOCs and are deemed Best Available Control Technology (BACT) according to the criteria set forth in Attachment A - "Floating Roof Tank Seal Categories."

(B) Category "B" sSeals are sSeals approved by the Executive Officer that are considered more effective than Category "C" sSeals based on the criteria set forth in Attachment A - "Floating Roof Tank Seal Categories."

(C) Category "C" sSeals are sSeals approved by the Executive Officer which are currently in service but are considered least effective in the control of VOCs.

(45) SECONDARY SEAL is a Seal mounted above the Primary Seal of a Rim Seal System that consists of two Seals.

(46) SLOTTED GUIDEPOLE is a Guidepole that has slots or holes through the wall of the Guidepole. The slots or holes allow the stored liquid to flow into the pole at liquid levels above the lowest operating level.

(13) ~~TANK is any stationary reservoir or any other stationary container used for storage of an organic liquid primarily constructed of non earthen materials.~~

- (47) STORAGE TANK or TANK is a stationary container primarily constructed of non-earthen materials that meets the applicability criteria of this rule.
- (48) TANK FARM INSPECTION is monitoring for Visible Vapors with a handheld Optical Gas Imaging Device of all applicable Storage Tanks at a Facility where the person conducting the inspection views the top of the Tank shell, and fixed roof or dome if applicable. Tank Farm Inspections may be conducted from an elevated position and/or from ground level.
- (49) TRUE VAPOR PRESSURE is the vapor pressure of a liquid at Actual Storage Conditions.
- (c) (50) VACUUM BREAKER is a device used to equalize the pressure of the vapor space across the deck as the floating roof is either being landed on or floated off its legs. A Vacuum Breaker consists of a well with a cover. Attached to the underside of the cover is a guided leg long enough to contact the Tank bottom as the floating roof is being landed. When in contact with the Tank bottom, the guided leg mechanically lifts the cover off the well.
- (451) VAPOR TIGHT is a condition that exists when the reading on a portable hydrocarbon meter is less than 500 parts per million (ppm), expressed as methane, above background.
- (52) VISIBLE GAP is a gap of more than 1/8 inch between any gasket or Seal and the opening that it is intended to control. Visible Gap for Primary and Secondary Seals is a gap that does not meet the requirements specified in subdivision (d).
- (53) VISIBLE VAPORS are any VOC vapors detected with an Optical Gas Imaging Device, when operated and maintained in accordance with manufacturer training or certification, or equivalent California Air Resources Board (CARB) training, user manuals, specifications, and recommendations.
- (454) VOLATILE ORGANIC COMPOUND (VOC) is as defined in Rule 102.
- (55) WASTE STREAM TANK is a Storage Tank containing at least 75% water by volume, and some liquid waste stream generated in a manner which contains petroleum liquid, emulsified oil, VOC or other hydrocarbons. For the purpose of this rule, Waste Stream Tanks include waste water Tanks and recovered oil (or slop oil) Tanks.

(~~465~~6) WORKING DAY is Monday through Friday and includes holidays that fall on any of the days Monday through Friday.

(~~ed~~) Tank Roof Requirements

No person shall place, store or hold in any ~~£~~Tank with a capacity of 150,000 liters (39,630 gallons) or greater, any ~~ø~~Organic ~~H~~Liquid having a ~~£~~True ~~¥~~Vapor ~~p~~Pressure of 25.8 mm Hg (0.5 psi) absolute or greater under a ~~a~~Actual ~~s~~Storage ~~e~~Conditions, in any ~~£~~Tank of more than 75,000 liters (19,815 gallons) capacity, any ~~ø~~Organic ~~H~~Liquid having a ~~£~~True ~~¥~~Vapor ~~p~~Pressure of 77.5 mm Hg (1.5 psi) absolute or greater under a ~~a~~Actual ~~s~~Storage ~~e~~Conditions, or any ~~£~~Tank with a Potential For VOC Emissions of 6 tons per year or greater used in Crude Oil And Natural Gas Production Operations, unless such ~~£~~Tank is a pressure ~~£~~Tank maintaining working pressures sufficient at all times to prevent organic vapor loss to the atmosphere, or is designed and equipped with one of the following vapor control devices, or other vapor control device that has been determined to be equivalent after review by ~~the staffs of the District~~South Coast AQMD, the Air Resources Board (ARB)~~CARB~~, and the United States Environmental Protection Agency (U.S. EPA), and approved in writing by the ~~District~~ Executive Officer, ~~ARB~~CARB, and U.S. EPA, which is properly installed and continuously maintained in good operating condition:

(1) External Floating Roof

An external floating roof shall consist of a pontoon-type or double deck-type cover that continuously rests on the surface of the ~~ø~~Organic ~~H~~Liquid and is equipped with a closure device between the ~~£~~Tank shell and roof edge. The closure device shall consist of two ~~s~~Seals, with one ~~s~~Seal placed above the other. The ~~s~~Seal below shall be designated as the ~~p~~Primary ~~s~~Seal, and the ~~s~~Seal above shall be designated as the ~~s~~Secondary ~~s~~Seal. An owner or operator shall not install or use A-a sSeal which is not identified on the current list of sSeals approved by the Executive Officer shall not be installed or used unless the Executive Officer determines that such sSeal meets the applicable criteria of subparagraphs (ed)(1)(A) through (ed)(1)(C). The owner or operator of an External Floating Roof Tank shall equip the tank with a Rim Seal System meeting the following requirements:

- (ed) (A) A closure device on a welded or a riveted ~~€~~Tank shell which uses a ~~metallic shoe type seal as its primary seal~~ Mechanical Shoe Primary Seal shall comply with the following requirements:
- (i) Gaps between the ~~€~~Tank shell and the ~~p~~Primary ~~s~~Seal shall not exceed 1.3 centimeters (1/2 inch) for a cumulative length of 30 percent of the circumference of the ~~€~~Tank, and 0.32 centimeter (1/8 inch) for 60 percent of the circumference of the ~~€~~Tank. No gap between the ~~€~~Tank shell and the ~~P~~Primary ~~s~~Seal shall exceed 3.8 centimeters (1-1/2 inches). No continuous gap between the ~~€~~Tank shell and the ~~p~~Primary ~~s~~Seal greater than 0.32 centimeter (1/8 inch) shall exceed 10 percent of the circumference of the ~~€~~Tank.
 - (ii) Gaps between the ~~€~~Tank shell and the ~~s~~Secondary ~~s~~Seal shall not exceed 0.32 centimeter (1/8 inch) for a cumulative length of 95 percent of the circumference of the ~~€~~Tank. No gap between the ~~€~~Tank shell and the ~~s~~Secondary ~~s~~Seal shall exceed 1.3 centimeters (1/2 inch).
 - (ed) (iii) ~~Metallic shoe type seals~~ Mechanical Shoe Primary Seals installed on or after August 1, 1977 shall be installed so that one end of the shoe extends into the stored ~~ø~~Organic ~~H~~Liquid and the other end extends a minimum vertical distance of 61 centimeters (24 inches) above the stored ~~ø~~Organic ~~H~~Liquid surface.
 - (iv) The geometry of the shoe shall be such that the maximum gap between the shoe and the ~~€~~Tank shell is no greater than double the gap allowed by the ~~s~~Seal gap criteria specified in clause (ed)(1)(A)(i) for a length of at least 46 centimeters (18 inches) in the vertical plane above the liquid surface.
 - (v) Primary and Secondary Seals for Tanks subject to U.S. EPA CFR 40 Part 60 Subpart Kb must meet the Seal gap requirements specified in U.S. EPA CFR 40 Part 60 Subpart Kb.
- (B) A closure device which uses a resilient toroid-type ~~s~~Seal as its ~~p~~Primary ~~s~~Seal shall comply with the applicable requirements of subparagraph (ed)(1)(A).

(C) The ~~p~~PPrimary and ~~s~~SSecondary ~~s~~SSeals shall comply with the following requirements:

(i) The ~~p~~PPrimary ~~s~~SSeal envelope shall be made available for unobstructed inspection by the Executive Officer along its circumference. In the case of riveted ~~t~~Tanks with resilient toroid-type seals, at least eight such locations shall be made available; for all other types of ~~s~~SSeals, at least four such locations shall be made available. If the Executive Officer deems it necessary, further unobstructed inspection of the ~~p~~PPrimary ~~s~~SSeal may be required to determine the ~~s~~SSeal's condition along its entire circumference.

(ii) The ~~s~~SSecondary ~~s~~SSeal shall be installed in a way that permits the Executive Officer to insert probes up to 3.8 centimeters (1-1/2 inches) in width to measure gaps in the ~~p~~PPrimary ~~s~~SSeal.

(iii) The ~~s~~SSecondary ~~s~~SSeal shall extend from the roof to the ~~t~~Tank shell and shall not be attached to the ~~p~~PPrimary ~~s~~SSeal.

(d)

(iv) Notwithstanding the ~~s~~SSecondary and the ~~p~~PPrimary ~~s~~SSeal requirements of paragraph ~~(ed)~~(1), a secondary or ~~p~~PPrimary ~~s~~SSeal may be loosened or removed for preventive maintenance, inspection or repair for a period not exceeding 72 hours with prior notification to the Executive Officer.

(D) ~~The owner or operator shall ensure that All-all openings in the roof~~ Roof Openings except pressure-vacuum valves, ~~shall provide a~~ projection below the liquid surface to prevent belching, escape, or entrainment of ~~e~~Organic ~~l~~Liquid, and shall be equipped with a cover, ~~s~~SSeal or lid. The cover, ~~s~~SSeal, or lid shall at all times be in a closed position, with no ~~v~~Visible ~~g~~Gaps, and maintained in a Vapor Tight condition except when the device or appurtenance is in use. Pressure vacuum valves shall be set to within 10 percent of the maximum allowable working pressure of the roof.

(E) ~~The owner or operator shall ensure that There there shall be~~ no holes, tears or openings in the ~~s~~SSecondary ~~s~~SSeal or in the ~~p~~PPrimary ~~s~~SSeal envelope surrounding the annular vapor space enclosed by the roof edge, ~~s~~SSeal fabric, and ~~s~~SSecondary ~~s~~SSeal.

(F) The owner or operator shall equip ~~Any~~ any emergency ~~Roof~~ ~~d~~Drain shall be provided with a slotted membrane fabric cover, or equivalent device, that covers at least nine-tenths (9/10) of the area of the opening.

(G) Tank Condition Requirements

The owner or operator shall maintain the Tank in a condition free of Visible Vapors resulting from a defect in equipment.

(i) In the event that Visible Vapors are detected and an owner or operator states the Tank is in compliance with the provisions in paragraphs (d)(1), (d)(2), (d)(3), or (d)(4), the owner or operator must demonstrate that the Visible Vapors are not the result of a defect in the equipment.

(H) Doming Requirements

Beginning three years after [Date of Adoption] the owner or operator shall install a Domed Roof on External Floating Roof Tanks used to store Organic Liquid with a True Vapor Pressure of 3 psia or greater as demonstrated pursuant to subparagraph (d)(1)(I) at the time of the next internal API 653 inspection or the next time the Tank is cleaned and degassed, whichever is sooner. The owner or operator shall install domes no later than twenty-three years after a test specified in subparagraph (d)(1)(I) verifies that the Organic Liquid stored has a True Vapor Pressure of 3 psia or greater.

(I) Verification of True Vapor Pressure

Effective January 1, 2025, an owner or operator of an External Floating Roof Tank shall demonstrate the True Vapor Pressure of the Organic Liquid stored using an initial test completed by July 1, 2025, with one representative sample. External Floating Roof Tanks storing Organic Liquids with True Vapor Pressure below 3 psia shall conduct subsequent tests at least once every six calendar months pursuant to the requirements of subdivision (i).

(i) In lieu of the semi-annual subsequent TVP tests specified in subparagraph (d)(1)(I), an owner or operator may elect to conduct monthly TVP tests beginning January 2025 and calculate an average every six months.

- (ed) (J) In lieu of complying with the requirements in subparagraph (d)(1)(H), the owner or operator of a waste water Tank where the conversion to a Domed External Floating Roof Tank may create a hazard due to the accumulation of pyrophoric material, as confirmed by the Executive Officer, shall accept permit conditions to limit the True Vapor Pressure of the Organic Liquid stored in a Tank to less than 3 psia.
- (2) Internal Floating-Type Cover
An owner or operator of A-a fFixed rRoof tTank equipped with an internal floating-type cover shall comply with the following requirements:
- (A) ~~A fixed roof tank with an existing internal floating type cover approved by the Executive Officer on or before June 1, 1984, shall comply with the requirements applicable at the time such approval was given.~~
- (d) (BA) A fFixed rRoof tTank which has an internal floating-type cover installed, modified, or replaced after June 1, 1984, shall have a closure device which consists of either a single HLiquid mMounted pPrimary sSeal or a primary and a sSecondary sSeal. All Roof oOpenings and fittings shall be fully gasketed and maintained in a Vapor Tight condition or controlled in a manner specified by the Executive Officer, except for when in operation or opened for access. The closure device shall control vapor loss with an effectiveness equivalent to a closure device which meets the requirements of subparagraph (ed)(1)(A), with the exception of a Mechanical Shoe Primary Seal which shall have one end extend a minimum vertical distance of 15 centimeters (6 inches) above the liquid surface and the other end extend into the liquid a minimum of 10 centimeters (4 inches). Seal designs not identified on the current list of sSeals approved by the Executive Officer shall not be installed or used unless the Executive Officer has given histheir prior written approval to its installation or use. For purposes of this paragraph, modification includes an identical replacement.
- (d) (CB) The concentration of organic vapor in the vapor space above the internal floating-type cover shall not exceed 50 percent of its lower explosive limit (LEL) for those installed prior to June 1, 1984 and

30 percent of its LEL for those installed after June 1, 1984. Compliance shall be verified by the use of an explosimeter.

(C) The owner or operator shall comply with the requirements of subparagraph (d)(1)(G).

(D) Beginning two years after [Date of Adoption], the owner or operator shall comply with the Primary and Secondary Seal requirements for Internal Floating Roof Tanks specified in subparagraph (d)(2)(A) at the time of the next internal API 653 inspection or the next time the Tank is cleaned and degassed, whichever is sooner. The owner or operator shall install Secondary Seals no later than twenty-two years after [Date of Adoption].

(3) ~~Vapor Recovery System~~ Fixed Roof Tanks

An owner or operator of A-a fFixed rRoof tTank not using an internal floating-type cover shall be equippedequip the Tank with a vapor recovery system shall complythat complies with the following requirements:

(A) Any tTank gauging or sampling device on a tTank vented to the vapor recovery system shall be equipped with a-vapor-tight cover maintained in Vapor Tight condition which shall be closed at all times except during gauging or sampling. The roof of such tTank shall be properly maintained in a vVapor tTight condition with no holes, tears or uncovered openings.

(B) All piping, valves and fittings shall be constructed and maintained in a vVapor- tTight condition, in accordance with requirements of other DistrictSouth Coast AQMD rules for such equipment.

(ed)

(C) For purposes of this paragraphFixed Roof Tanks, the efficiency of a vapor recovery system shall be determined by making a comparison of controlled emissions to those emissions which would occur from a fixed cone roof tTank holding the same oOrganic lLiquid without a vapor control or vapor recovery system. The vapor recovery system shall have an efficiency of at least 9598 percent by weight, or vent tTank emissions to a fFuel gGas sSystem.

(D) The owner or operator shall comply with the requirements of subparagraph (d)(1)(G).

(4) Domed External Floating Roof Tanks

The owner or operator of a Domed External Floating Roof Tank shall:

- (A) Equip and maintain all Roof Openings and Rim Seal Systems and in accordance with the specifications listed in paragraph (d)(1), except for Slotted Guidepoles. Each Slotted Guidepole shall be equipped with the following combination of Components:
 - (i) A gasketed cover, a Pole Wiper, a Pole Float with a wiper or Seal; or
 - (ii) A gasketed cover, a Pole Wiper, and a Pole Sleeve that shall be extended into the stored liquid; or
 - (iii) A gasketed cover, a Pole Wiper, and a flexible enclosure system.
- (B) Ensure that the concentration of organic vapor in the vapor space above the floating roof does not exceed 30 percent of its lower explosive limit (LEL).
- (C) Comply with the requirements of subparagraph (d)(1)(G).
- (D) Maintain the Domed Roof in a condition that is free of gaps, cracks, punctures, and other openings, except where vents and access points are located.

(~~d~~e) Other Performance Requirements

- (1) ~~A person~~ An owner or operator shall not place, store or hold ~~g~~Gasoline in any ~~t~~Tank, with a capacity of between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) unless such ~~t~~Tank is equipped with a pressure-vacuum valve which is set to within 10 percent of the maximum allowable working pressure of the container, or is equipped with a vapor loss control device which complies with the requirements set forth in subdivision (~~e~~d).**
- (2) An owner or operator shall float ~~The the~~ roof of any ~~i~~Internal or ~~e~~External ~~f~~Floating ~~r~~Roof ~~t~~Tank ~~shall float~~ on the ~~o~~Organic ~~l~~Liquid at all times (i.e., free of the ~~r~~Roof ~~l~~Leg supports) except when the ~~t~~Tank is being completely emptied for ~~e~~Cleaning, ~~or~~ repair, or during a Product Change. The process of emptying or refilling, when the roof is resting on leg supports, shall be continuous.**
- (3) If a ~~t~~Tank has been gas-freed and is to be refilled with ~~g~~Gasoline, the ~~owner or operator~~ roof shall be refloated ~~refloat the roof~~ with water or by an equivalent procedure approved by the Executive Officer. Paragraphs**

- (e) ~~(d)~~(2) and ~~(d)~~(3) shall be inapplicable to ~~g~~Gasoline ~~s~~Storage ~~t~~Tanks at bulk ~~g~~Gasoline distribution terminals which do not have:
- (A) existing facilities for treatment of waste water used to refloat the ~~t~~Tank roof; or
 - (B) facilities for equivalent emission control when refloating the roof with ~~o~~Organic ~~l~~Liquid.
- (4) An owner or operator shall not use A-a fFixed rRoof tTank with an internal floating-type cover or a tTank with an external floating roof cover shall not be used for storing oOrganic lLiquids having a tTrue vVapor pPressure of 11 psia (569 mm Hg) or greater under aActual sStorage eConditions.
- (5) The owner or operator shall not replace Replacement of a sSeal on a floating roof tTank shall be allowed only ifunless the replacement sSeal is chosen from the current list of sSeals approved by the Executive Officer. Category "A" sSeals shall be replaced only by Category "A" sSeals. Category "B" sSeals shall be replaced only by Category "A" or Category "B" sSeals. Category "C" sSeals shall be replaced only by Category "A" or Category "B" sSeals. Seal designs not identified on the current list of Seals approved by the Executive Officer shall not be installed or used unless the Executive Officer has given their prior written approval to its installation or use.
- (6) ~~Organic liquids listed on the addendum to this rule shall be deemed to be in compliance with~~The addendum to this rule can be used as a guide for compliance with the appropriate vapor pressure limits for the ~~t~~Tank in which ~~it~~the corresponding Organic Liquid is stored provided the actual storage temperature does not exceed the corresponding maximum temperature listed.

(e) ~~f~~ Self Inspection of Floating Roof Tanks Monitoring Requirements

Any owner or operator of a floating roof ~~t~~Tank(s) shall conduct self-inspections of its ~~t~~Tank(s) according to the following procedures:

- (1) Inspection and Maintenance Plan
 - (A) Each owner or operator shall maintain a current or revised Inspection and Maintenance Plan approved by the Executive Officer. Each owner or operator constructing floating roof ~~t~~Tank(s) subject to this rule shall submit an Inspection and

(f) Maintenance Plan, or a revision of its current Inspection and Maintenance Plan, to the Executive Officer prior to the completion of construction. The Inspection and Maintenance Plan shall include an inventory of floating roof ~~t~~Tanks subject to this rule, the proposed self-inspection schedule, the number of ~~e~~Certified ~~p~~Persons to be dedicated to the program, any self-inspection procedures proposed in addition to those required by the ~~District~~South Coast AQMD, and a copy of the owner or operator's safety procedures used for floating roof ~~t~~Tanks. The ~~t~~Tank inventory shall include ~~t~~Tank identification number, maximum design capacity, product, shell type, dimensions, ~~s~~Seal type and manufacturer, floating roof type, date of construction and location.

(2) Identification Requirements

(A) All floating roof ~~t~~Tanks subject to this rule shall be clearly and visibly identified by a sign on the outside wall for inventory, inspection and recordkeeping purposes.

(B) Any change(s) in floating roof ~~t~~Tank identification shall require prior written approval by the Executive Officer.

(3) Owner or Operator Inspection Requirements

(A) All floating roof ~~t~~Tanks subject to this rule shall be inspected by a ~~e~~Certified ~~p~~Person twice per year at 4 to 8 months intervals according to the procedures and guidelines set forth in Attachment B - "Inspection Procedures and Compliance Report Form."

(B) The ~~p~~Primary and ~~s~~Secondary ~~s~~Seals shall be inspected by a ~~e~~Certified ~~p~~Person each time a floating roof ~~t~~Tank is emptied and degassed. Gap measurements shall be performed on an ~~e~~External ~~F~~floating ~~r~~Roof ~~T~~tank when the liquid surface is still but not more than ~~24~~48 hours after the ~~t~~Tank roof is refloated.

(C) The Executive Officer shall be notified electronically in writing to the Executive Officer via Rule463ComplianceReports@aqmd.gov at least ~~2 weeks~~2 days prior to the start of any tank-emptying or roof-refloating operation for planned maintenance of a ~~t~~Tank.

(D) Optical Gas Imaging Inspections

Effective July 1, 2025, the owner or operator shall demonstrate compliance with subparagraphs (d)(1)(G), (d)(2)(C), (d)(3)(D) and (d)(4)(C) for Tanks with a capacity greater than 75,000 liters

- (f) (19,815 gallons) storing Organic Liquid with a True Vapor Pressure of 1.5 psi or greater, Tanks with a capacity of 150,000 liters (39,630 gallons) and above storing Organic Liquid with a True Vapor Pressure of 0.5 psi or greater, Tanks with a capacity of 950 liters (251 gallons) to 75,000 liters (19,815 gallons) used to store Gasoline, and any Tank with a Potential For VOC Emissions of 6 tons per year or greater used in Crude Oil And Natural Gas Production Operations by conducting OGI inspections in accordance with the following requirements:
- (i) The person conducting an OGI inspection shall:
 - (A) Complete a manufacturer's certification or training program, or equivalent CARB training for the OGI Device used to conduct the inspection; and
 - (B) Operate and maintain the OGI Device in accordance with the manufacturer's specifications and recommendations.
 - (ii) Tank Farm Inspections

A person meeting the requirements of clause (f)(3)(D)(i) shall:

 - (A) Conduct a Tank Farm Inspection at least once every two calendar weeks; and
 - (B) When Visible Vapors are detected from a Tank, conduct an inspection from the Tank's platform or a vantage point capable of seeing the top of the tank roof if there is no platform available to identify Components and/or equipment emitting Visible Vapors.
 - (1) If determined that Visible Vapors are emitted from Components required to be maintained in a Vapor Tight condition or in a condition with no Visible Gaps, the owner or operator shall make necessary repairs or adjustments pursuant to paragraph (f)(4), or demonstrate compliance with a Vapor Tight condition or a condition with no Visible

(hf)

Gaps for the Component from which Visible Vapors are emitted within 3 days.

- (2) If determined that Visible Vapors are emitted from equipment not specified in item (f)(3)(D)(ii)(B)(1), a visual inspection for defects in equipment shall be conducted, which may include the use of the OGI Device. The owner or operator shall make necessary repairs or adjustments pursuant to paragraph (f)(4) for any defects identified.

(iii) Component Inspections

A person that meets the requirements of clause (f)(3)(D)(i) shall:

- (A) Conduct a Component Inspection for each floating roof Tank at least twice per year at 4 to 8 month intervals; and
- (B) When Visible Vapors are detected, and are not emitted from the Rim Seal System, the owner or operator shall make any necessary repairs or adjustments pursuant to paragraph (f)(4), or demonstrate compliance with the applicable rule requirements for the Components or equipment from which Visible Vapors are detected within 3 days; and
- (C) When the Visible Vapors are detected from the Rim Seal System, the owner or operator shall identify any defects in the equipment and make any necessary repairs or adjustments pursuant to paragraph (f)(4). If no defects are identified, an inspection from ground level shall be conducted. If Visible Vapors are detected at the top of the Tank shell or roof vents, the owner or operator shall demonstrate compliance with the Rim Seal requirements of this rule, or make any necessary repairs, within 3 days.

(f)

(E) In lieu of the required OGI inspections specified in subparagraph (f)(3)(D), an owner or operator may elect to use an alternative monitoring method approved in writing by the U.S. EPA that is equivalent or more stringent than the monitoring requirements specified in subparagraph (f)(3)(D).

(i) An owner or operator seeking to use the alternative monitoring method specified in subparagraph (f)(3)(E) shall submit written documentation of the U.S. EPA approved method to the South Coast AQMD for approval.

(4) Maintenance Requirements

Any ~~floating-roof~~ tank which does not comply with any provision of this rule shall be brought into compliance within 72 hours of the determination of non-compliance.

(5) Vapor Recovery Systems

No later than one year after [Date of Adoption], the owner or operator of a Facility who operates a vapor recovery system to comply with the requirements in subparagraph (d)(3)(C) shall conduct an initial performance test to determine the overall efficiency of the vapor recovery system. The performance testing of the vapor recovery system shall be repeated when the system is modified or an operating parameter is changed in a manner that affects the capture or control efficiency. In such case, the performance test shall be within 180 days after the modification. Subsequent to the initial performance test, the operator shall conduct a performance test at least once every ten years, and shall monitor and record applicable operating parameters on a weekly basis to ensure that the vapor recovery system is achieving 98% overall control efficiency.

(fg) Reporting and Recordkeeping Requirements

(1) The following shall apply to an owner or operator activities ~~subject to the provisions of subdivision (ef):~~

(A) All inspections shall be recorded on compliance inspection report forms approved by the Executive Officer as described in Attachment B - "Inspection Procedures and Compliance Report Form." An owner or operator may use an electronic compliance inspection report form provided that all required information

- (fg) specified in Attachment B is contained in the electronic report form.
- (B) All compliance inspection reports and documents shall be submitted to the Executive Officer either electronically or by hard copy within 5 ~~w~~Working dDays of completion of the self-inspection. Electronic reports shall be submitted to the Executive Officer via Rule463ComplianceReports@aqmd.gov.
- (C) If a ~~t~~Tank is determined to be in violation of the requirements of this rule, a written report shall be submitted electronically to the Executive Officer via Rule463ComplianceReports@aqmd.gov within 120 hours of the determination of non-compliance, indicating corrective actions taken to achieve compliance.
- (D) All records of owner or operator inspection and repair shall be maintained at the ~~f~~Facility for a period of 3 years and shall be made available to the Executive Officer upon request.
- (2) Emissions Reporting
- (A) An owner or operator shall provide emissions information, to the Executive Officer upon request, based on the parameters listed in Attachment C using AQMD's Annual Emissions Reporting Program, ~~or U.S. EPA's most recent version of TANKS 4.0 Program.~~ The requirement shall apply to all ~~o~~Organic ~~H~~Liquid ~~s~~Storage ~~t~~Tanks without regard to exemptions specified in subdivision (gh).
- (B) An owner or operator shall provide all upset emissions information associated with ~~p~~Product ~~e~~Change, repair, and turnover or any other excess emission incidents.
- (C) An owner or operator shall maintain records of emissions data for all ~~o~~Organic ~~H~~Liquid ~~s~~Storage ~~t~~Tanks for the most recent two (2) year period.
- (3) ~~A person~~An owner or operator whose t~~Tanks are subject to this rule~~ shall keep an accurate record of liquids stored in such containers, the vapor pressure ranges, the API gravity, the temperature, and the initial boiling points referenced.
- (4) For OGI inspections required by subparagraph (f)(3)(D), the owner or operator shall:

(hg)

- (A) Report Visible Vapors detected during a Tank Farm Inspection requiring a demonstration with rule requirements or a repair pursuant to subclause (f)(3)(D)(ii)(B) to the Executive Officer by phone (1-800-CUT-SMOG or 1- 800-288-7664) within 24 hours after the inspection is completed;
- (B) Keep written records and digital recordings of Visible Vapors detected during a Tank Farm Inspection resulting from a defect or emitted from a Component required to be maintained in a Vapor Tight condition or a condition with no Visible Gaps. Written records shall include Tank identification, date of inspection, and findings. Findings shall include identification of Tanks from which Visible Vapors were identified and any repairs or determinations made pursuant to clause (f)(3)(D)(ii). Digital recordings shall be accurately time-stamped and capture the Visible Vapors for a minimum of 5 seconds; and
- (C) Keep written records of Component Inspections that include Tank identification, date of inspection and findings. Findings shall include identification of Storage Tanks from which Visible Vapors were identified, any repairs or determinations made pursuant to clause (f)(3)(D)(iii).
- (5) An owner or operator shall keep records of all True Vapor Pressure results from tests specified in subparagraph (d)(1)(I) for the most recent 20 year period and records shall be made available to the Executive Officer upon request.
- (6) An owner or operator shall report any tests specified in subparagraph (d)(1)(I) that result in a True Vapor Pressure of 3.0 psia or greater to the Executive Officer via Rule463ComplianceReports@aqmd.gov within 14 days. The report shall include the year of the next internal API 653 inspection and the next planned tank cleaning and degassing.
- (7) The owner or operator of a vapor recovery system shall submit all performance test reports to the Executive Officer via Rule463ComplianceReports@aqmd.gov no later than 60 days after conducting the test.

(gh) Exemptions

- (1) The provisions of this rule shall not apply to the following ~~¶~~Tanks, unless the ~~¶~~Tank has a Potential For VOC Emissions of 6 tons per year or greater and is used in Crude Oil And Natural Gas Production Operations, provided the ~~person-owner or operator~~ seeking the exemption supplies proof of the applicable criteria sufficient to satisfy the Executive Officer:

(h)

- (A) Oil production ~~¶~~Tanks with a capacity of between 75,000 liters (19,815 gallons) and 159,000 liters (42,008 gallons) which have a ~~properly maintained vapor tight-roof~~ maintained in a Vapor Tight condition and are equipped with a pressure-vacuum valve which is set within 10 percent of the maximum allowable working pressure of the ~~¶~~Tank, are exempt from the control requirements of this rule when:

- (i) The ~~o~~Organic ~~H~~Liquid contents fail to comply with subdivision (ed) only when heated for shipment, and such heating occurs for not more than 48 hours and not more than once in any 20-day period; or
- (ii) The ~~¶~~Tank has a monthly average throughput of not more than 30 barrels of oil per day and was constructed prior to June 1, 1984.

- (B) Tanks being brought into compliance within the time period specified in paragraph (ef)(4).

- (2) The provisions of paragraph (de)(2) shall not apply to ~~d~~Drain-~~d~~Dry ~~b~~Breakout ~~¶~~Tanks that are subject to the provisions of Rule 1149 - Storage Tank And Pipeline Cleaning And Degassing.

- (3) The provisions of this rule shall not apply to Storage Tanks that are subject to Rule 1178, except for subdivision (e) and paragraphs (c)(36) and (c)(44).

- (4) Any tank that is out of service, where the tank has been emptied or has been opened to the atmosphere pursuant to the requirements of Rule 1149, shall be exempt from the requirements of subparagraphs (f)(3)(D) and (f)(3)(E) until the tank is refilled.

- (5) An owner or operator shall be exempt from the requirements of clause (f)(3)(D)(iii) if a determination is made that it is unsafe to conduct an inspection from a Tank platform or vantage point capable of seeing the Tank roof, provided that the reason(s) and date(s) the inspection was not

conducted is documented. The inspections shall resume on the first day determined to be safe.

(h) Test Methods

The following test methods and procedures shall be used to determine compliance with this rule. Other test methods determined to be equivalent after review by ~~the staffs of the District~~South Coast AQMD, the Air Resources Board~~CARB~~, and the U.S. EPA, and approved in writing by the ~~District~~Executive Officer may also be used.

- (i)**
- (1) Efficiency of a vapor recovery system specified in subparagraph ~~(e)~~(3)~~(C)~~ shall be determined according to ~~SC~~South Coast AQMD Method 501.1 for the determination of total organic compound emissions. EPA Reference Methods 25 or 25A may be used, as applicable, in place of ~~SC~~South Coast AQMD Method 25.1 specified in Method 501.1. An efficiency determined to be less than established by this rule through the use of any of the above-referenced test methods shall constitute a violation of the rule. Baseline emissions shall be calculated by using the criteria outlined in American Petroleum Institute Bulletin 2518.
 - (2) Exempt compounds shall be determined according to ~~SC~~South Coast AQMD Method 303. For the purpose of testing the efficiency of a vapor recovery system, ~~e~~Exempt e~~Compounds~~ shall be determined according to EPA Reference Method 18 or ~~ARB~~Air Resources Board Method 422. Any test method(s) for ~~e~~Exempt e~~Compounds~~ which cannot be identified through these referenced test methods shall be specified by the owner or operator seeking an exemption and shall be subject to approval in accordance with the procedures set forth above in this subdivision.
 - (3) The Reid vapor pressure specified in paragraph ~~(b)~~(6)~~(18)~~ and the Reid vapor pressure used in determining the ~~t~~True ~~v~~Vapor ~~p~~Pressure limit specified in paragraph ~~(d)~~(4) and subparagraph ~~(d)~~(1)~~(I)~~ shall be determined according to the following test methods and converted to True Vapor Pressure using applicable nomographs in U.S. EPA AP-42, or nomographs approved by the Executive Officer and U.S. EPA:
 - (A) ASTM D-323-82 —Vapor Pressure of Petroleum Products (Reid Method);
 - (B) ASTM D-6377 Standard Test Method for Determination of Vapor Pressure of Crude Oil: VPCRx (Expansion Method);

(C) ASTM D-6378 Standard Test Method for Determination of Vapor Pressure (VPX) of Petroleum Products, Hydrocarbons, and Hydrocarbon-Oxygenate Mixtures (Triple Expansion Method); or

(D) California Code of Regulations, Title 13, Section 2297.5, and converted to tTrue vVapor pPressure using applicable nomographs in U.S. EPA AP-42, Fifth Edition, Volume 1, Chapter 7, or nomographs approved by the Executive Officer and U.S. EPA.

(4) Notwithstanding the provisions of paragraph (h)(3), if a permit condition or ~~Distriet~~South Coast AQMD rule requires a demonstration of tTrue vVapor pPressure of less than 5 mm Hg (0.1 psi) absolute, either of the following test methods may be used:

(i)

(A) Organic liquids that are stored at aAmbient tTemperatures with a tTrue vVapor pPressure of greater than 5 mm Hg (0.1 psi) absolute under aActual sStorage eConditions shall be determined as those with a flash point of less than 100 °F as determined by ASTM Method D-93 – 10a - Flash Point by Pensky-Martens Closed Cup Tester.

(B) Organic liquids that are stored at above aAmbient tTemperatures with a tTrue vVapor pPressure greater than 5 mm Hg (0.1 psi) absolute under aActual sStorage eConditions shall be determined as those whose volume percent evaporated is greater than ten percent at an adjusted temperature T_{Adj} as determined by ASTM Method D-86 – 11a - Distillation of Petroleum Products at Atmospheric Pressure of:

$$T_{Adj} = 300\text{ }^{\circ}\text{F} + T_1 - T_a$$

Where:

T_1 = Liquid Storage Temperature (°F)

T_a = Ambient Temperature (°F) = 70 °F

(5) Notwithstanding the provisions of paragraph (h)(3), the tTrue vVapor pPressure of crude oils and distillates shall be determined, at aActual sStorage eConditions, by converting Reid vapor pressure using the appropriate API nomograph found in U.S. EPA AP-42, ~~Fifth Edition,~~

~~Volume 1, Chapter 7, or API nomograph found in API Publication 2517, Second Edition, February 1980. The $\frac{\text{True Vapor Pressure}}{\text{True Vapor Pressure}}$ of crude oils with an API gravity of 26.0 or less, may be measured using the Lawrence Berkeley National Laboratory "Test Method for Vapor Pressure of Reactive Organic Compounds in Heavy Crude Oil Using Gas Chromatography."~~, May 28, 2002.

- (6) Vapor ~~Tight~~ condition specified in subparagraphs (d)(1)(D), (d)(2)(A), ~~(ed)(3)(A) and (ed)(3)(B)~~, and (h)(1)(A) shall be determined according to U.S. EPA's Reference Method 21 using an appropriate analyzer calibrated with methane.
- (7) API gravity is determined using the following:
 - (A) ASTM D-1298-99e2 Standard Test Method for Density, Relative Density (Specific Gravity), or API Gravity of Crude Petroleum Products by Hydrometer Method; or
 - (B) ASTM D-6822-02 Standard Test Method for Density, Relative Density, and API Gravity of Crude Petroleum and Liquid Petroleum Products by Thermohydrometer Method; or
 - (C) ASTM D-287-92(2000)e1 Standard Test Method for API Gravity of Crude Petroleum and Petroleum Products (Hydrometer Method).

(i)

(j) Ozone Contingency Measure

- (1) The applicable contingency measure(s) specified in paragraph (j)(2) shall be implemented upon the issuance of a final determination by U.S. EPA that the South Coast Air Basin has failed to comply with any of the following requirements:
 - (A) meet a Reasonable Further Progress (RFP) requirement in an approved attainment plan for the 2008 or 2015 ozone National Ambient Air Quality Standard (NAAQS); or
 - (B) attain the 2008 or 2015 ozone NAAQS by the applicable date.
- (2) No later than 60 days after the final determination as specified in paragraph (j)(1), any owner or operator of a South Coast Air Basin Tank subject to the requirements of this rule, storing product with a TVP of 5.0 psi or greater pursuant to the requirements of subdivision (i), is required to increase the frequency of inspections specified in subclause (f)(3)(D)(ii)(A) to every calendar week.

- (3) The applicable contingency measure(s) specified in paragraph (j)(4) shall be implemented upon the issuance of a final determination by U.S. EPA that the Coachella Valley has failed to comply with any of the following requirements:
 - (A) meet a RFP requirement in an approved attainment plan for the 1997, 2008, or 2015 ozone NAAQS; or
 - (B) attain the 1997, 2008, or 2015 ozone NAAQS by the applicable date.
- (4) No later than 60 days after the final determination as specified in paragraph (j)(3), any owner or operator of a Coachella Valley Tank subject to the requirements of this rule, storing product with a TVP of 5.0 psi or greater pursuant to the requirements of subdivision (i), is required to increase the frequency of inspections specified in subclause (f)(3)(D)(ii)(A) to every calendar week.

<u>Category A</u>	<u>Category B</u>	<u>Category C</u>
1. Liquid mounted multiple wipers with drip curtain and weight	1. Liquid mounted single wiper with drip curtain and weight	1. Liquid mounted single wiper
2. Liquid mounted mechanical shoe	2. Liquid mounted double foam wipers with vapor curtain	2. Liquid mounted foam log
	3. Vapor mounted primary wiper	3. Liquid mounted foam log with vapor curtain
	4. Vapor mounted E wiper	4. Liquid mounted resilient toroid type liquid filled log
	5. Vapor mounted double wipers	5. Vapor mounted foam log/bag
	6. Vapor mounted double foam wipers	6. Vapor mounted foam wiper
	7. Vapor mounted multiple wipers	

SECONDARY SEALS

<u>Category A</u>	<u>Category B</u>	<u>Category C</u>
1. Multiple wipers	1. Single wiper	1. Liquid mounted wiper
		2. Foam log/bag
		3. Maloney

Criteria used for categorization of floating roof ~~t~~Tank sSeals:

1. Emission control effectiveness design
2. Ability to maintain contact with ~~t~~Tank wall
3. Longevity in service

ATTACHMENT B

INSPECTION PROCEDURES AND COMPLIANCE REPORT FORM

Equipment Needed:

Explosimeter (for ~~i~~Internal ~~f~~Floating ~~r~~Roof ~~t~~Tanks), liquid resistant measuring tape or device, ~~t~~Tank probe (to measure gaps in ~~t~~Tank ~~s~~Seals - 1/8 inch, 1/2 inch, 1-1/2 inch), flashlight.

Inspection Procedures:

1. The findings of all ~~t~~Tank self-inspections, whether completed or not, shall be recorded on the Rule 463 Compliance Report form prescribed by the Executive Officer and submitted to the ~~District's~~South Coast AQMD's Refinery Section in accordance with the rule's requirements. If an inspection is stopped before completion, indicate the reason for this action in the Comments section of the compliance report form.
2. During compliance inspection, the person(s) conducting the inspection must have a copy of the Permit to Operate or Permit to Construct pertinent to the ~~t~~Tank being inspected. Any discrepancies between the permit equipment description and the existing ~~t~~Tank or the permit conditions and the actual operating conditions of the ~~t~~Tank as verified during inspection must be recorded in the Comments section of the compliance report form.
3. Inspect the ground level periphery of each ~~t~~Tank for possible leaks in the ~~t~~Tank shell. Complete the ~~t~~Tank information section (D) on the report.
4. For floating roof ~~t~~Tanks containing ~~e~~Organic ~~l~~Liquid not subject to the provisions of subdivision (~~e~~d) of Rule 463, conduct only steps 1 through 3 of this attachment. For all other floating roof ~~t~~Tanks, conduct steps 5 through 7 as applicable.
5. For ~~e~~External ~~f~~Floating ~~r~~Roof ~~t~~Tanks:
 - o From the platform, conduct an overall visual inspection of the roof and check for obvious permit or rule violations. Record the information as shown under section F of the compliance report form.
 - o During visual inspection of the roof, check for unsealed ~~r~~Roof ~~l~~Legs, open hatches, open emergency ~~r~~Roof ~~d~~Drains or ~~v~~Vacuum ~~b~~Breakers and record the findings on the report accordingly. Indicate presence of any tears in the fabric of both ~~s~~Seals.
 - o After the visual inspection, conduct an inspection of the entire ~~s~~Secondary ~~s~~Seal using the 1/8" and 1/2" probes. Record the gap data in section F(4) of the report.
 - o Conduct an inspection of the entire ~~p~~Primary ~~s~~Seal using the 1/8", 1/2", and 1 1/2" probes. Inspect the ~~p~~Primary ~~s~~Seal by holding back the ~~s~~Secondary ~~s~~Seal. Record the gap data in section F(5) of the report.

- o Record all cumulative gaps between 1/8 inch and 1/2 inch; between 1/2 inch and 1-1/2 inch; and in excess of 1-1/2 inches, for both ~~p~~PPrimary and ~~s~~SSecondary ~~s~~SSeals in section G of the report. Secondary ~~s~~SSeal gaps greater than 1/2 inch should be measured for length and width, and recorded in Comments under section (J) of the report.
- 6. For ~~i~~Internal ~~f~~Floating ~~r~~Roof ~~t~~Tanks:
 - o Using an explosimeter, measure the concentration of the vapor space above the internal floating roof in terms of lower explosive limit (LEL), and record the reading in section (E) of the report.
 - o Conduct a visual inspection of the ~~r~~Roof ~~o~~Openings and the ~~s~~SSecondary ~~s~~SSeal, if applicable, and record findings on the report.
- 7. Complete all necessary calculations and record all required data accordingly on the report.

**SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT
RULE 463 COMPLIANCE REPORT**

****PLEASE COMPLETE FORM LEGIBLY IN BLACK INK****

Tank No. _____ SC South Coast AQMD Permit No. _____ Inspection Date _____ Time _____
Is This a Follow-up Inspection? No ☐ Yes ☐ If yes, Date of Previous Inspection _____

A. COMPANY INFORMATION:

Company Name _____
Location Address _____ City _____ Zip _____
Mailing Address _____ City _____ Zip _____
Contact Person _____ Title _____
Phone _____

B. INSPECTION CONDUCTED BY:

Name _____ Title _____
Company Name _____ Phone _____
Mailing Address _____ City _____ Zip _____

C. TANK INFORMATION:

Capacity _____ (bbls) Installation Date _____ Tank Diameter _____ (ft) Tank Height _____ (ft)
Product Type _____ Product RVP _____
Type of Tank: Riveted ☐ Welded ☐ Other ☐ (describe) _____
Color of Shell _____ Color of Roof _____
Roof Type: Pontoon ☐ Double Deck ☐ Other(describe) _____
External floating roof ☐ Internal floating roof ☐

D. GROUND LEVEL INSPECTION:

- 1) Product Temperature _____ ° F 2) Product level _____ (ft)
- 3) List type and location of leaks found in tTank shell.

- 4) List any discrepancies between the existing equipment and the equipment description on the Permit.

- 5) Is tTank in compliance with Permit conditions? No ☐ Yes ☐ If no, explain _____

E. INTERNAL FLOATING ROOF TANK:

- 1) Check vapor space between floating roof and fixed roof with explosimeter. _____ % LEL
- 2) Conduct visual inspection of roofs and sSecondary sSeals, if applicable.
- 3) Are all eRoof eOpenings covered? No ☐ Yes ☐ If no, explain in Comments section (J) and proceed to part (H)(6).

F. EXTERNAL FLOATING ROOF TANK:

- 1) On the diagram (below) indicate the location of the ladder, #Roof dDrain(s), anti-rotation device(s), platform, gauge well, and vents or other appurtenances. *Note information in relation to North (to the top of the worksheet).*
- 2) Describe any uncovered openings found on the roof in the Comments section (J).
- 3) Identify any tears in the sSeal fabric. Describe and indicate on diagram (below):

4) Secondary Seal Inspection

- a) Type of Secondary Seal: _____
- b) Does 1/2" probe drop past sSeal? No ☐ Yes ☐ if yes, measure length(s) and show on diagram
- c) Does 1/8" probe drop past sSeal? No ☐ Yes ☐ if yes, measure length(s) and show on diagram.
- d) Record dimensions of gaps for gaps > 1/8" _____ > 1/2" _____

NOTE: Record the actual width and cumulative length of gaps in feet and inches.

(Do not include gaps > 1/2" in 1/8" measurements)

5) Primary Seal Inspection

- a) Type of Primary Seal: ☐ Shoe; ☐ Tube; ☐ Other _____
- b) (shoe sSeal) does 1-1/2" probe drop past sSeal? No ☐ Yes ☐; if yes, measure length(s) and show on diagram.
- c) (shoe sSeal) does 1/2" probe drop past sSeal? No ☐; Yes ☐; if yes, measure length(s) and show on diagram.
- d) (tube sSeal) does 1/2" probe drop past sSeal? No ☐ Yes ☐ if yes, measure (length(s) and show on diagram.
- e) (all sSeal types) does 1/8" probe drop past sSeal? No ☐ Yes ☐ if yes, measure (length(s) and show on diagram.
- f) Record dimensions of gaps for gaps > 1/8" _____ > 1/2" _____

> 1-1/2" _____ *NOTE: Record the actual width and cumulative length of gaps in feet and inches.*

(Do not include gaps > 1/2" in 1/8" measurements, or gaps > 1-1/2" in 1/2" measurements)

NOTE: Show defects using symbols. Show sSeal gaps and lengths.

Tank No. _____ SC South Coast AQMD
Permit No. _____

Page 3 of 4

IF INTERNAL FLOATING ROOF TANK, PROCEED TO PART H(6).

G. CALCULATIONS - complete all applicable portions of the following:

Record dimensions of indicated gaps [from F(4)(d), F(5)(b), and F(5)(f)]. Record in feet and inches.

Gaps in pPrimary sSeal between 1/8 and 1/2 inch: _____
Gaps in pPrimary sSeal between 1/2 and 1-1/2 inch: _____
Gaps in pPrimary sSeal greater than 1-1/2 inches: _____
Gaps in sSecondary sSeal between 1/8 and 1/2 inch: _____
Gaps in sSecondary sSeal greater than 1/2 inch: _____

Multiply diameter (ft) of tTank to determine appropriate gap limits:

5% circumference = diameter X 0.157 = _____ 60% circ. = diam. X 1.88 = _____
10% circumference = diameter X 0.314 = _____ 90% circ. = diam. X 2.83 = _____
30% circumference = diameter X 0.942 = _____ 95% circ. = diam. X 2.98 = _____

H. DETERMINE COMPLIANCE STATUS OF TANK:

- | | | | |
|----|--|-----------------------------|------------------------------|
| 1) | Were any openings found on the roof? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| 2) | Were any tears in the sSeals found: | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| 3) | Is the product level lower than the level at which the roof would be floating? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| 4) | Secondary Seal: | | |
| | Did 1/2" probe drop between shell and sSeal? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | Did cumulative 1/8" - 1/2" gap exceed 95% circumference length? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| 5) | Primary Seal | | |
| | Shoe Did 1-1/2" probe drop between shell and sSeal? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | Did cumulative 1/2" - 1-1/2" gap exceed 30% circumference length, and | | |
| | Did cumulative 1/8 - 1/2" gap exceed 60% circumference length? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | Did any single continuous 1/8" - 1-1/2" gap exceed 10% circ. length? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | Tube Did 1/2" probe drop between shell and sSeal | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | Did cumulative 1/8" - 1/2" gap exceed 95% circumference length? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| 6) | Internal floating roof (installed before 6/1/84) did LEL exceed 50% | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | (installed after 6/1/84) did LEL exceed 30%? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| 7) | Does tTank have permit conditions? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |
| | Does tTank comply with these conditions? | No <input type="checkbox"/> | Yes <input type="checkbox"/> |

EXECUTIVE SUMMARY

Rule 463– Organic Liquid Storage (Rule 463) limits volatile organic compound (VOC) emissions from storage tanks that store organic liquids. Rule 463 applies to above-ground stationary tanks with capacity of 75,000 liters (19,815 gallons) or more, above-ground tanks with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) that are used to store gasoline, and any stationary tank with a potential for VOC emissions of six tons per year or greater used in crude oil and natural gas production operations. Rule 463 requires tanks that meet the capacity and vapor pressure requirements to install controls based on tank type. Rule 463 tank types include fixed roof, internal floating roof (IFR), and external floating roof (EFR).

California Assembly Bill 617 (AB 617) was signed into state law in 2017 and required the development of Community Emission Reduction Plans (CERPSs) to reduce toxic air contaminants and criteria pollutants in environmental justice communities. The Wilmington, Carson, West Long Beach (WCWLB) CERP¹, specified initiating rule development to amend Rule 1178 – Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities (Rule 1178) to incorporate advanced leak detection technologies and require additional emission controls. Similarly, the South Los Angeles (SLA) CERP² specified initiating rule development to the Rule 1148 series (Rule 1148 – Thermally Enhanced Oil Recovery Wells; Rule 1148.1 – Oil and Gas Production Wells; and Rule 1148.2 – Notification and Reporting Requirements for Oil and Gas Wells and Chemical Suppliers) to explore improved leak detection and repair (LDAR) and requirements for lower-emission or zero-emission equipment. Rule 463 was not identified as an objective for rule development within the WCWLB CERP or SLA CERP; however, Rule 463 regulates the same emission sources within the affected WCWLB and SLA communities. Amendments to Rule 463 will help reduce VOC emissions from storage tanks in WCWLB, SLA, and in other communities within the South Coast AQMD jurisdiction.

Control Measure FUG-03 – Further Reductions of Fugitive VOC Emissions in the 2012 Final Air Quality Management Plan (AQMP) identified the implementation of advanced leak detection technologies, including optical gas imaging (OGI), as a method to reduce the emissions impact from leaks. The 2016 Final AQMP included Control Measure FUG-01 – Improved Leak Detection and Repair to utilize advanced remote sensing technologies to allow for faster identification and repair of leaks from equipment at facilities that must maintain a LDAR program. The 2022 Final AQMP also included Control Measure FUG-01 – Improved Leak Detection and Repair to reduce VOC emissions from fugitive leaks from process and storage equipment. PAR 463 partially implements Control Measure FUG-01 that commits to improved leak detection requirements in South Coast AQMD rules, including Rule 463.

The Coachella Valley Planning Area (Coachella Valley) is defined as the desert portion of Riverside County in the Salton Sea Air Basin (SSAB) under the jurisdiction of the South Coast AQMD. The Coachella Valley is designated Extreme nonattainment for the 2008 8-hour ozone National Ambient Air Quality Standard (NAAQS). South Coast AQMD has prepared the

¹WCWLB CERP, <https://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/wilmington/cerp/final-cerp-wcwlb.pdf?sfvrsn=8>

²SLA CERP, [aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/south-la/final-cerp.pdf?sfvrsn=18](https://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/south-la/final-cerp.pdf?sfvrsn=18)

Coachella Valley Contingency Measure State Implementation Plan (SIP) Revision for the 2008 8-Hour Ozone Standard focused on satisfying the requirement for contingency measure elements.³ Contingency measures are defined by Clean Air Act (CAA) Section 172(c)(9) as “specific measures to be undertaken if the area fails to make reasonable further progress, or to attain the national primary ambient air quality standard by the attainment date.” CAA Section 182(c)(9) further requires that ozone nonattainment areas classified as “serious” or above provide for contingency measures to be implemented if the area fails to meet any applicable milestone. U.S. EPA finalized a finding of failure to submit contingency measure elements for the 2008 ozone NAAQS in Coachella Valley effective October 31, 2022. The finding established an 18-month deadline for the South Coast AQMD to submit contingency measures or face stationary source permitting sanctions as defined in CAA Section 179(b)(2). There is also a 24- month deadline for highway sanctions as defined in CAA Section 179(b)(1). For stationary sources, South Coast AQMD is amending Rule 463 to introduce a contingency measure to partially satisfy the CAA contingency requirement.

Proposed Amended Rule 463 (PAR 463) establishes more stringent leak detection and control requirements. PAR 463 establishes periodic OGI inspections with contingency measures to fulfill ozone attainment plan requirements. Furthermore, PAR 463 establishes requirements for doming EFR tanks and installing secondary seals on IFR tanks as well as more stringent requirements for emission control systems and seal gaps. PAR 463 applies to approximately 1,600 tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. The proposed requirements will reduce VOC emissions by 1.65 tons per day. The overall cost-effectiveness of PAR 463 is \$27,300 per ton of VOC reduced.

PAR 463 was developed through a public process. Two Working Group meetings for PAR 463 were held on January 3, 2024, and March 7, 2024. Working Group meeting participants included attendees from affected businesses, environmental and community representatives, public agencies, consultants, and other interested parties. The purpose of the Working Group meetings was to discuss details of proposed amendments and listen to stakeholder concerns with the objective to build a consensus regarding the proposal and resolve issues. Staff met with multiple stakeholders during the rule development process and conducted several site visits. A Public Workshop for PAR 463 was held on March 27, 2024. The purpose of the Public Workshop was to present the proposed amended rule language to the general public and to stakeholders and to solicit comments.

CHAPTER 1: BACKGROUND

INTRODUCTION

BACKGROUND

REGULATORY HISTORY

AFFECTED FACILITIES AND EQUIPMENT

PUBLIC PROCESS

INTRODUCTION

Rule 463 limits VOC emissions from storage tanks containing volatile organic liquids as depicted in Figure 1-1. This rule applies to any above-ground stationary tank with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of organic liquids and any above-ground tank with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline. Rule 463 also applies to stationary tanks with a potential to emit (PTE) of six tons per year (tpy) or more used in crude oil and natural gas production. Rule 463 implements different control requirements based on storage tank type.

Figure 1-1- Example of Storage Tanks Subject to Rule 463

Control requirements include specifications for tank roofs, seals, emission control systems, and covers for roof openings. Inspection and monitoring requirements are specific to the type of tank.

BACKGROUND

California Assembly Bill 617 (AB 617) Community Emissions Reductions Plans (CERPs)

In 2017, Governor Brown signed AB 617 (C. Garcia, Chapter 136, Statutes of 2017) to develop a new community-focused program to reduce emissions and exposure to sources air pollution and preserve public health. AB 617 directed the California Air Resources Board (CARB) and all local air districts, including the South Coast AQMD, to enact measures to protect communities disproportionately impacted by air pollution. On September 27, 2018, CARB designated 10 communities across the state to implement community plans for the first year of the AB 617 program. Local air districts were tasked with developing and implementing CERPs and community air monitoring plans in partnership with residents and community stakeholders. The Community Air Monitoring Plan (CAMP) includes actions to enhance the understanding of air pollution in the designated communities and to support effective implementation of the CERP. Each CERP includes objectives for achieving air pollution emission and exposure reductions to address the community's highest air quality priorities.

During the development of the WCWLB CERP⁴, community members expressed concern about refinery emissions. Chapter 5b, Objective 4 in the WCWLB CERP specifies initiating rule development for Rule 1178 to require the use of enhanced leak detection tools and other leak prevention and emission reduction technologies (e.g., domed roofs). Rule development for Rule 463 was not identified as a course of action within the WCWLB CERP; however, Rule 463 regulates the same emission sources as Rule 1178 within the affected WCWLB communities.

During the development of the SLA CERP⁵, community members expressed concerns about emissions from oil and gas operations. Table 5f-1 in the SLA CERP specified initiating rule

⁴ WCWLB CERP, <https://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/wilmington/cerp/final-cerp-wcwlb.pdf?sfvrsn=8>

⁵ SLA CERP, [aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/south-la/final-cerp.pdf?sfvrsn=18](https://www.aqmd.gov/docs/default-source/ab-617-ab-134/steering-committees/south-la/final-cerp.pdf?sfvrsn=18)

development to amend the Rule 1148 series to explore requirements for improved LDAR and lower-emission or zero-emission equipment. Similar to the WCWLB CERP, Rule 463 was not identified as a course of action for rule development within the SLA CERP; however, Rule 463 regulates emission sources at oil and gas facilities within the SLA community. Amendments to Rule 463 will help reduce VOC emissions from storage tanks in WCWLB, SLA, and in other communities within the South Coast AQMD jurisdiction. Recommendations for proposed amendments to Rule 463 focused on improving leak detection requirements with the use of advanced leak detection technologies and requiring additional emission controls.

Control Measures in the 2012, 2016, and 2022 Final AQMPs

Control Measure FUG-03 – Further Reductions of Fugitive VOC Emissions in the 2012 Final AQMP identifies the implementation of advanced leak detection technologies, including OGI, as a method to reduce the emissions impact from leaks. The 2016 Final AQMP included Control Measure FUG-01 – Improved Leak Detection and Repair to utilize advanced remote sensing technologies to allow for faster identification and repair of leaks from equipment at oil and gas sites and other facilities that are currently required to maintain an LDAR program. The 2022 Final AQMP also included Control Measure FUG-01 – Improved Leak Detection and Repair to reduce VOC emissions from fugitive leaks from process and storage equipment. PAR 463 partially implements Control Measure FUG-01 that commits to improved leak detection requirements in South Coast AQMD rules, including Rule 463.

Coachella Valley Contingency Measure SIP Revision

Coachella Valley is defined as the desert portion of Riverside County in the SSAB under the jurisdiction of the South Coast AQMD. The Coachella Valley is designated nonattainment for the 2008 8-hour ozone NAAQS. Originally classified as “severe-15” nonattainment with an attainment date of July 20, 2027, the Coachella Valley was reclassified to “extreme” nonattainment with an attainment date of July 20, 2032. South Coast AQMD voluntarily requested the reclassification to resolve a transportation conformity lockdown impacting billions of dollars’ worth of transportation projects.

South Coast AQMD prepared the Coachella Valley Contingency Measure SIP Revision for the 2008 8-Hour Ozone Standard focused on satisfying the requirement for contingency measure elements for the SIP. Contingency measures are defined by CAA Section 172(c)(9) as “specific measures to be undertaken if the area fails to make reasonable further progress (RFP), or to attain the national primary ambient air quality standard by the attainment date.” CAA Section 182(c)(9) further requires that ozone nonattainment areas classified as “serious” or above provide for contingency measures to be implemented if the area fails to meet any applicable milestone.

The most recent, comprehensive SIP for the 2008 ozone NAAQS in the Coachella Valley was submitted as part of the 2016 AQMP. That SIP included required RFP contingency measure elements. The RFP contingency measure relied upon surplus emission reductions from already implemented control measures, consistent with U.S. EPA’s past guidance. The 2016 AQMP was supplemented with CARB’s attainment contingency measure for the Coachella Valley, which was submitted to U.S. EPA on May 5, 2017. However, subsequent court decisions held that contingency measures must be additional measures for emission reductions, not just surplus emission reductions from ongoing programs, and that these measures must contain triggering

mechanisms such that they are automatically implemented once an area has failed to attain or missed a major milestone for RFP. Neither the RFP contingency measure nor the attainment contingency measure met these new requirements. In 2020, U.S. EPA approved the Coachella Valley portion of the 2016 AQMP as meeting all applicable statutory and regulatory requirements, with the exception of the attainment contingency measure element. With respect to the RFP contingency measure element, U.S. EPA conditionally approved the element based on commitments by CARB and the South Coast AQMD to supplement the element within one year of conditional approval, by October 16, 2021. The due date was later revised to September 30, 2022, based on consent decree.

On August 8, 2022, South Coast AQMD via CARB, withdrew the contingency measure elements for the 2008 ozone NAAQS in Coachella Valley. At the time, U.S. EPA had failed to provide revised contingency measure guidance, and lacking such guidance it was unclear what would suffice as an approvable contingency measure. As a result of this withdrawal, U.S. EPA finalized a finding of failure to submit contingency measure elements for the 2008 ozone NAAQS in Coachella Valley effective October 31, 2022. The finding established an 18-month deadline for the South Coast AQMD to submit contingency measures or face stationary source permitting sanctions as defined in CAA Section 179(b)(2). ~~There is also~~ The finding also imposed a 24-month deadline for highway sanctions as defined in CAA Section 179(b)(1). Submission of the SIP revision followed by a completeness determination by U.S. EPA will stay the sanctions. In addition, if within 24 months U.S. EPA has not approved a contingency measure SIP revision, U.S. EPA must promulgate a federal contingency measure plan in the Coachella Valley. A more complete discussion is available in the South Coast AQMD Draft Final Staff Report for Coachella Valley Contingency Measure SIP Revision for the 2008 8-Hour Ozone Standard, February 2024⁶.

For stationary sources, South Coast AQMD is amending Rule 463 to introduce a contingency measure found in chapter 3 of the Coachella Valley Contingency Measure SIP Revision for the 2008 8-Hour Ozone Standard that would require more frequent OGI tank farm inspections for certain storage tanks to facilitate leak detection and repair. Emission reductions would be achieved by identifying leaks and repairing them. Triggers are included if a nonattainment area fails to attain the NAAQS by the applicable attainment date or fails to meet an RFP milestone (collectively referred to as “Triggering Events”). If a Triggering Event occurs, the Measure would: change the proposed OGI tank farm inspection frequency in the applicable nonattainment area(s); and be implemented within 60 days of the effective date of a U.S. EPA finding that a Triggering Event occurred.

Staff assessed current Rule 463 requirements and identified potential areas of improvement including leak detection and repair requirements and more stringent controls. Leak detection using enhanced detection technologies has become more widespread since the adoption of Rule 463. Staff assessed multiple leak detection technologies as part of the PAR 463 rule development. Staff also analyzed control technologies and methods with potential to further reduce emissions from storage tanks. Proposed amendments to PAR 463 are based on determination of feasible and cost-

⁶<https://www.aqmd.gov/docs/default-source/clean-air-plans/cv-contingency-measure-sip--draft-final-staff-report.pdf?sfvrsn=6>

effective technologies and methods that were assessed through a best available retrofit control technology (BARCT) analysis.

REGULATORY HISTORY

Rule 463 was adopted in August 1977 and subsequently amended six times. The 1984 amendment added a criterion for hydrogen sulfide content in crude oil contained in floating roof tanks; a subsequent amendment in March 2005 removed this limitation based on a comparative review of similar regulations within the state and at the federal level. The December 1990 amendment addressed SIP deficiencies inconsistent with U.S. EPA policies or requirements. The March 1994 amendment restructured the rule, clarified rule language, streamlined compliance activities by including a self-compliance program, and corrected rule deficiencies identified by the U.S. EPA and CARB. The November 2011 amendment harmonized test methods and leak standards with Rule 1178. The most recent amendment to Rule 463 in May 2023, addressed U.S. EPA's limited disapproval of CARB's Oil and Gas Methane Rule by aligning the applicability threshold with U.S. EPA's 2016 Control Techniques Guidelines for the Oil and Natural Gas Industry.

AFFECTED FACILITIES AND EQUIPMENT

PAR 463 affects approximately 1600 tanks located at approximately 429 facilities involved in petroleum refining, oil and gas production, and other various industries.

PUBLIC PROCESS

Development of PAR 463 was conducted through a public process. Two Working Group meetings were held on January 3, 2024, and March 7, 2024. The Working Group is composed of representatives from businesses, environmental groups, public agencies, and consultants. The purpose of the Working Group meetings is to discuss proposed concepts and work through the details of South Coast AQMD's proposal. Additionally, a Public Workshop was held on March 27, 2024. The purpose of the Public Workshop was to present the proposed amended rule language to the general public and stakeholders and to solicit comments. Staff also conducted multiple site visits as part of this rulemaking process.

CHAPTER 2: BARCT ASSESSMENT

INTRODUCTION

EMISSIONS FROM STORAGE TANKS

CURRENT REGULATORY REQUIREMENTS

CONTROL TECHNOLOGIES

LEAK DETECTION TECHNOLOGIES

SUMMARY

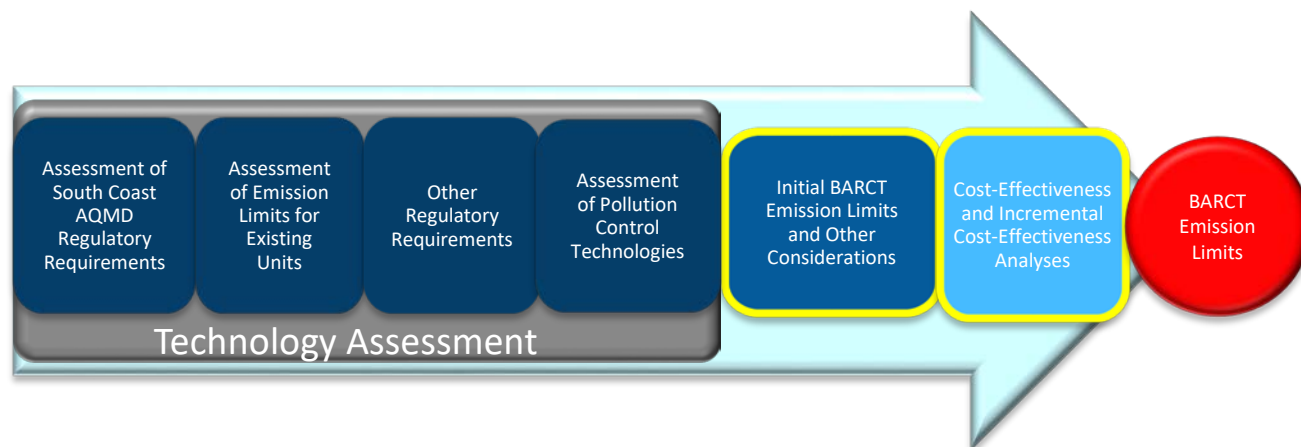

INTRODUCTION

PAR 463 rule development was initiated in response to objectives in the WCWLB and SLA CERPs for enhanced leak detection and to partially implement Control Measure FUG-01 in the 2022 Final AQMP. Additionally, South Coast AQMD periodically assesses rules to ensure that BARCT is reflected in rule requirements. To address community member objectives, partially implement Control Measure FUG-01, and ensure that Rule 463 reflects BARCT, a BARCT assessment was conducted to identify the potential to further reduce emissions from storage tanks.

BARCT is defined in the Health & Safety Code Section 40406 as “an emission limitation that is based on the maximum degree of reduction achievable, taking into account environmental, energy, and economic impacts by each class or category of source.” Consistent with state law, BARCT emission limits take into consideration environmental impacts, energy impacts, and economic impacts. The BARCT analysis approach follows a series of steps conducted for each equipment category.

The steps for BARCT analysis consist of:

- Assessment of South Coast AQMD Regulatory Requirements
- Assessment of Emissions Limits for Existing Units
- Other Regulatory Requirements
- Assessment of Pollution Control Technologies
- Initial BARCT Emission Limits and Other Considerations
- Cost-Effectiveness and Incremental Cost-Effectiveness Analyses
- BARCT Emission Limits

The BARCT assessment included a review of leak detection and emission reducing technologies. Newer leak detection technologies were reviewed and included OGI devices, gas sensors, and open path detection. Leak detection methods were also analyzed and included continuous monitoring and increased inspection frequency. Control technologies were reviewed and included domes, proximity switches, cable suspended floating roof systems, and vapor recovery. Staff analyzed the potential to reduce emissions from leaks with enhanced leak detection technologies and reduce emissions from tank operations by establishing more stringent requirements for existing controls including domes, seals, and emission control systems.

As part of the technology assessment, a cost-effectiveness analysis was conducted for technologies with potential to reduce emissions. A cost-effectiveness analysis determines the cost per ton of pollutant reduced. In the 2022 AQMP, a cost-effectiveness threshold of \$36,000 per ton of VOC reduced was established. After adjusting for inflation, the cost-effectiveness threshold is \$40,168.49 per ton of VOC reduced (2023 U.S. Dollars). An incremental cost-effectiveness analysis was also conducted for proposed controls and monitoring methods to establish BARCT, if applicable, and is discussed in Chapter 4.

EMISSIONS FROM STORAGE TANKS

Rule 463 applies to any above-ground stationary tanks with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of organic liquids and any above-ground tank with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline. Rule 463 also applies to stationary tanks with a PTE of six tpy or more used in crude oil and natural gas production. There are four major categories of storage tanks subject to Rule 463: fixed roof tanks, external floating roof tanks, domed external floating roof tanks, and internal floating roof tanks.

Storage tanks emit VOC through openings inherent in the tank design. Rule 463 requires the use of seals and covers to reduce the amount of VOC that can migrate out of the tank through the tank openings. Tank openings on fixed roof tanks include, but are not limited to, vapor recovery connection points, pressure vacuum vents and sample hatches. Floating roof tanks also contain openings that include the annular space around the floating roof, guidepoles, rim vents, pressure vents, hatches, and roof legs. Rule 463 already requires controls on all roof openings and as part of the PAR 463 rule development, staff reviewed additional technologies and methods to further reduce emissions from tank operation and leaks.

CURRENT REGULATORY REQUIREMENTS

South Coast AQMD Requirements

Rule 463 contains requirements for above-ground stationary tanks with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of organic liquids, above-ground tanks with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline, and stationary tanks with a PTE of six tpy or more used in crude oil and natural gas production. Control requirements include specifications for tank roofs, emission control systems, and covers and seals for roof openings. Inspection and monitoring requirements are specific to the type of tank.

Floating roofs or fixed roofs with 95% by weight emission control, are required for every tank. Rim seal systems for floating roofs have gap requirements. Primary seals must not have gaps larger than 1.5 inch. Gaps greater than 0.5 inch cannot exceed a cumulative length of 30% of the circumference of the tank and gaps greater than 0.125 inch cannot exceed 60% of the circumference. There cannot be a continuous gap of greater than 0.125 inch for more than 10% of the circumference. Secondary seals must not have gaps greater than 0.5 inch and gaps greater than 0.125 inch cannot exceed 95% of the circumference of the tank.

Controls for floating roofs include gaskets, gasketed covers, and sleeves or flexible enclosure systems for all roof penetrations. Certain roof openings cannot have a visible gap which is a gap greater than 1/8 inch that emits more than 500 parts per million (ppm) of VOC. Fixed roof tanks must maintain a vapor tight condition for all roof openings and have at least 95% by weight emission control.

Rule 463 contains differing inspection requirements dependent on tank type. Below is a summary of the inspection requirements.

Fixed roofs:

- Voluntary self-inspections

Internal and external floating roof tanks:

- Tank inspections semi-annually
- Gap measurements on all roof openings semi-annually and each time tank is degassed or emptied, or U.S. EPA Method 21
- Complete gap measurements of the rim seal system on a semi-annual basis and each time the tank is emptied or degassed

Other Regulatory Requirements

Staff reviewed rules and regulations of other air regulating agencies including U.S. EPA, San Joaquin Valley Air Pollution Control District (SJVAPCD), and Bay Area Air Quality Management District (BAAQMD). Staff identified requirements more stringent than those contained in South Coast AQMD's Rule 463 for controls and monitoring. It is important to note there are several requirements where South Coast AQMD's Rule 463 is more stringent than requirements contained in other air districts' rules, such as inspection frequency and other requirements. However, the following discussion describes the requirements found in other regulations that are more stringent than Rule 463 requirements.

U.S. EPA 40 Code of Federal Regulations (CFR) Part 60 Subpart Kb applies to tanks that were constructed, reconstructed or modified after July 23, 1984. Staff identified requirements for seal gaps that are more stringent. Subpart Kb requires primary seal gaps do not exceed 212 square centimeters (cm²) per meter of tank diameter and secondary seal gaps do not exceed 21.2 cm² per meter of tank diameter.

SJVAPCD's Rule 4623 contains more stringent gap requirements. A visible gap is any gap that is 0.06 inch. Primary seal gaps greater than 0.5 inch cannot occur for more than 10% of the tank circumference and primary seal gaps greater than 0.125 inch cannot occur for more than 30% of the tank circumference.

BAAQMD's Regulation 8, Rule 5 has more stringent gap requirements and a more stringent leak definition. BAAQMD defines a visual gap as a gap that is 0.06 inch. Primary seals gaps greater than 0.5 inch cannot occur for more than 10% of the tank circumference, gaps greater than 0.125 inch cannot occur for more than 40% of the tank circumference. BAAQMD also requires that the maximum gap for secondary seals on newer welded tanks cannot exceed 0.06 inch. BAAQMD has a leak definition of 100 ppm for all components except for pressure vacuum vents.

CONTROL TECHNOLOGIES

Domes

Domes are roofs that can be installed onto external floating roof tanks. They are typically a geodesic dome shape and made of lightweight material such as aluminum. Domes that are affixed onto external floating roof tanks are not vapor tight and have vents along the bottom of the dome where it meets the tank shell. This is a required design for floating roof tanks to allow the floating roof to move up and down without adverse effects. Domes are effective at reducing emissions from tanks by eliminating

Figure 2-1- Domed Storage Tanks

Figure 2-2- Wind Effect on Storage Tanks

wind moving over the external floating roof.

Figures 2-1 and 2-2 show a domed storage tank and the wind effect respectively. Wind can carry vapors out from inside the tank through the floating roof seals. It is estimated that installing domes on external floating roof tanks storing crude oil can reduce standing losses by 50%-70%.⁷

Costs and Cost-Effectiveness

Costs to install domes vary with diameter size. External floating roof tanks in South Coast AQMD's jurisdiction range from 30 feet in diameter to 299 feet in diameter. Costs associated with doming include materials, labor, vehicles for supply delivery and crane support, crane rentals, site preparation, cleaning, degassing, storage leasing, fire suppression systems, and permitting. Costs were obtained from vendors for equipment and installation for domes of different sizes. Facilities supplied costs from vendor quotes and past doming projects. Costs were calculated using equations developed during the 2023 PAR 1178 rule development process and facility-provided cost data. The PAR 1178 cost equations used to estimate both capital and operation/maintenance costs associated with doming were created by plotting quotes from both vendors and facilities and

⁷ Based on results from BREEZE TankESP PRO for doming external floating roofs of different diameters storing crude with RVP 6-9 at 80F in Los Angeles, with deck fittings currently required by Rule 463.

extracting the best fit equations. Based on cost information provided by facilities, staff developed a cost curve that estimates costs for tanks of all diameters. Refer to the 2023 PAR 1178 Staff Report Chapter 4-4 for more details related to the cost curve equation. Doming project costs ranged from approximately \$164,400 to \$3,826,400 and included costs for fire suppression systems and union labor required by Senate Bill 54. Refer to Chapter 4 for additional cost details. Staff identified seven external floating roof tanks used to store volatile organic liquids from a random sample of EFRs that provide a 95% confidence interval. After receiving comments from stakeholders that the cost-effectiveness analysis did not adequately consider larger diameter tanks, staff included tanks with diameters of 253 feet and 299 feet. Cost-effectiveness analysis is based on the sample group and applied to the remaining rule universe. Tank diameters ranged from 30 feet to 299 feet. Tank contents and throughput were identified using 2019 Annual Emission Reports and facility provided data for the 253 feet and 299 feet diameter tanks. The cost-effectiveness to require domes on nine tanks is \$24,800 per ton of VOC reduced. Refer to Chapter 4 for additional cost-effectiveness details.

Proximity Switches

Proximity switches are sensors designed to detect when sample hatch covers are open and are commonly used at remote oil well sites that are not inspected regularly. Proximity switches can also be used on pressure vacuum relief vents (PVRVs). The switch can alert facility personnel when a sample hatch cover or PVRV is open and results in quicker repair timelines and smaller emissions impacts. Limitations to using proximity switches include small openings that may go undetected and proximity switches only being able to monitor leaks from hatches or PVRVs.

Figure 2-3- Proximity Switch

Staff considered proximity switches for sample hatches on tanks at oil well sites. Oil and gas production facilities are typically more compact allowing for one transmitter to support multiple switches if needed. The spread-out design of tank farms at other types of facilities would require the use of multiple transmitters to support each switch, which would lead to higher equipment costs. Costs were obtained from the 2023 Proposed Amended Rule 1178 Final Staff Report and totaled \$12,300 for an oil well site with one tank. Costs included the switch, transmitter, base radio, solar power supply, and cellular connection. Installation costs were assumed at fifty percent of the equipment cost and include travel, site evaluation, planning, and installation. There are 247 oil well facilities subject to Rule 463 and staff assumed that one tank at each site meets the Rule 463 applicability criteria. The cost to require proximity switches at 247 facilities, assuming one tank at each facility, is \$3,038,100. The emissions reductions assumed are based on the estimated leaks from fixed roof tanks. Staff assumed one leak per 100 tanks per year at an estimated leak rate of 0.26 tons per day over seven days. Staff assumed the leak would occur for seven days since it is the halfway point in between the proposed PAR 463 OGI tank farm inspection schedule of every two weeks. The cost effectiveness to require proximity switches on sample hatches at oil well sites, assuming a 10-year equipment life is \$67,582 per ton of VOC reduced.

Cable Suspension Systems

Cable suspended floating roofs are designed with cable suspension systems to support the floating roof and remove the need for roof legs as depicted in Figure 2-4 below. Emissions from internal floating roof tanks are reduced with cable suspension systems by the elimination of floating roof leg penetrations that provide a potential opening where VOCs can migrate from below the floating roof to atmosphere. There are 93 internal floating roof tanks subject to Rule 463. Costs were obtained from the 2023 Proposed Amended Rule 1178 Final Staff Report. A cost-effectiveness analysis was conducted for an average internal floating roof tank 87 feet in diameter, with an average throughput, storing gasoline with an RVP of 10 psi. The cost to require a cable suspended floating roof on the model tank described is \$255,400. The emission reductions were modeled in BREEZE TankESP for an internal floating roof tank with zero legs and resulted in emission reductions of 196 pounds per year. The cost effectiveness to require cable suspension systems of 93 tanks is \$130,300 per ton of VOC reduced, assuming a 20-year equipment life.

Figure 2-4: Cable Suspended Roof

Emission Control Systems (Vapor Recovery)

Emission control systems are connected to fixed roof tanks and control VOC emissions with carbon adsorption or combustion. Compliance reports containing performance tests results for vapor recovery systems used at facilities subject to Rule 463 were reviewed. All compliance reports reviewed stated the vapor recovery systems were compliant but not all specified the vapor recovery efficiency. Only the initial performance tests stated the control efficiency for the three combustion vapor recovery systems which were specified at over 99% combustion efficiency. During a site visit, staff was informed that the facility's carbon adsorption system performs at over 99% emission control, which was further confirmed with performance test reports. During the last rulemaking for Rule 1178 it was determined that 98% efficiency is achievable based on performance test results for combustion and carbon adsorption systems. Staff estimates there are 479 fixed roof storage tanks connected to vapor recovery systems. Costs for vapor recovery systems include early Title V permit revisions pursuant to Rule 3005 – Permit Revisions as well as performance tests to verify compliance with the new control efficiency. The total cost associated with increasing the control efficiency to 98% is \$18,492,800 over ten years.

Staff recommends increasing the emission control system efficiency requirements to 98% emission control, by weight, based on available performance test results and information obtained at site visits and requiring performance tests on vapor recovery systems to be conducted every ten years. Since units are currently achieving a 98% control efficiency, no reductions are assumed in the cost-effectiveness analysis to be conservative.

Seals

Primary and secondary seals are used on floating roof tanks to seal the annular space between the floating roof and the tank shell to prevent VOC vapors from migrating out of the tank. Seal systems can have only a primary seal or a primary seal and secondary seal. Internal floating roof tanks are not currently required in Rule 463 to have both a primary seal and secondary seal. Examples of seals are depicted in Figures 2-5 below.

Figure 2-5: Seals on Floating Roof Storage Tanks

Staff identified five internal floating roof tanks that are not equipped with secondary seals subject to Rule 463. A cost-effectiveness analysis was conducted for requiring secondary seals for the internal floating roof tanks. Costs were obtained from the 2023 Proposed Amended Rule 1178 Final Staff Report. A 20-year equipment life was assumed. The cost to install a secondary seal is \$220 per foot and the cost to replace the rubber components of the seal 10 years after installation is \$42 per foot. Permit fees were included and totaled \$9,000 per modification. The total cost to require secondary seals on five tanks is \$412,000 and the associated emission reductions calculated in BREEZE TankESP are 61.77 tons over the life of the equipment. The cost-effectiveness to require secondary seals on internal floating roof tanks is \$6,700 per ton of VOC reduced. Staff recommends requiring secondary seals on internal floating roof tanks.

Staff analyzed the feasibility of meeting the more stringent gap requirements in Rule 1178 for all floating roof tanks subject to Rule 463. A review of a random sample of leak reports for floating roof tanks (20%) was conducted and showed that some tanks were not meeting more stringent gap requirements. It is expected that more stringent gap requirements could be met with better seals. A cost-effectiveness analysis was conducted to replace seals. Meeting more stringent gap requirements found in Rule 1178 would result in very small emission reductions and is not cost-effective for facilities subject to Rule 463. For an average tank that is 117 feet in diameter, storing crude oil with RVP 6, with an average throughput, the cost-effectiveness using similar cost

estimates to the costs obtained for the 2023 Proposed Amended Rule 1178 Final Staff Report (\$200 per foot to replace the primary seal) is over one million dollars per ton of VOC reduced. Therefore, staff is not proposing to include the more stringent gap requirements in Rule 1178 in PAR 463.

Staff identified more stringent gap requirements contained in U.S. EPA's Subpart Kb that applies to certain tanks. Rule 463 will be updated to incorporate U.S. EPA's seal gap requirements by reference.

LEAK DETECTION TECHNOLOGIES

Multiple leak detection technologies and methods were considered to reduce the emissions impact from leaks from storage tanks. A review of continuous monitoring technologies including fixed gas sensor networks and open path device systems was conducted. Periodic monitoring with handheld optical gas imaging devices was also reviewed.

Continuous Monitoring Systems

Continuous monitoring solutions using open path detection and fixed gas sensor networks were assessed in 2023 for the Rule 1178 rulemaking. It was determined that the best solution for monitoring tanks is to require periodic monitoring with handheld OGI devices due to their ability to identify small and large leaks. Continuous monitoring systems are limited in their ability to detect smaller leaks because they are installed at a distance from the tank. Depending on the detection technology of the continuous monitoring system, a leak may need to be significantly large at the source to be detected and has the potential to go undetected. One significant drawback to requiring stationary continuous monitoring system of gas sensors or open path devices, is the chance that a large leak goes undetected because it does not make contact with the fixed sensor or emitted open path beam. Continuous monitoring systems with sensors that must come in contact with the VOC vapor may not be the most effective technologies to reduce the emissions impact from tank leaks. Another drawback to requiring continuous monitoring systems is the delayed implementation timeline due to the plan approval and installation timeframes. Although continuous monitoring may not be as effective as manual inspections, staff analyzed the cost-effectiveness. Continuous monitoring was analyzed for facilities subject to Rule 1178 in the 2023 Rule 1178 rulemaking. For this rule development, staff determined the cost-effectiveness to implement continuous monitoring at facilities that are subject to Rule 463 and are not subject to Rule 1178.

Staff used costs from the 2023 Proposed Amended Rule 1178 Final Staff Report to calculate cost-effectiveness for continuous monitoring using fixed gas sensors and open path. For continuous monitoring with fixed gas sensors, staff assumed that one sensor per tank would provide sufficient coverage at a tank farm and considered cost to implement the fixed gas sensor network as a service where the technology supplier installs, operates and maintains the monitoring system. Six hundred and seventy-nine sensors, as depicted in Figure 2-6, would be required to monitor the tank subject to Rule 463 controls. The cost per sensor is approximately \$10,000. The estimated emission reductions from 679 tanks are 159 tons per year and is

Figure 2-6- Gas Sensor

based on the leak assumptions detailed in Chapter 4. The total costs are \$6,790,000 per year to monitor all tanks and the cost-effectiveness is \$42,700 per ton of VOC reduced.

Staff used cost estimates from the 2023 Proposed Amended Rule 1178 Final Staff Report to calculate cost-effectiveness for continuous monitoring with open path detection devices as shown in Figure 2-7 below. Staff assumed that five open path devices are needed for every 22 tanks for sufficient coverage in the Rule 1178 rulemaking. The same assumptions were made for the cost-

Figure 2-7- Open Path Device

effectiveness analysis for Rule 463 except for oil well sites where each site is assumed to have one tank subject to Rule 463. For these sites, staff assumed one open path device was used. For all other facilities, staff assumed for every 22 tanks five open path devices are needed. There are 679 tanks that meet the requirements to conduct monitoring at facilities subject to Rule 463, that are not subject to Rule 1178, and therefore do not already have enhanced LDAR requirements. Based on the aforementioned assumptions, staff calculated 249 open path devices at the 279 oil well sites and 98 open path devices for the remaining tanks for a cost-effectiveness analysis. Staff obtained costs from the 2023 Proposed Amended Rule 1178 Final Staff Report. The cost of one open path device is \$190,000, the estimated installation cost

is equal to the equipment cost, and the annual O&M cost is estimated at \$5,000. The total cost for equipment, installation, and O&M over a 20-year equipment life is \$189,431,000. The emission reductions over 20 years are 3,182 tons and is estimated based on the leak assumptions detailed in Chapter 4. The cost-effectiveness is \$48,600 per ton of VOC reduced to implement continuous monitoring with open path detection.

Staff does not propose requiring the use of continuous monitoring systems in PAR 463. The continuous monitoring systems analyzed were all above the VOC cost-effectiveness threshold. Exceeding the cost-effectiveness threshold in combination with the limitations of the technologies when compared to manual OGI inspections resulted in staff's proposal to not require continuous monitoring systems as BARCT. However, due to stakeholder interest in the opportunity to utilize continuous monitoring systems, staff will include a provision in PAR 463 that allows for the use of U.S. EPA approved alternative monitoring methods provided they can achieve equivalent or more stringent monitoring as the proposed requirements for manual OGI inspections.

Periodic Monitoring with Optical Gas Imaging

An optical gas imaging camera uses infrared technology capable of visualizing vapors. Optical gas imaging cameras have different detectors capable of visualizing a variety of gas wavelengths. VOC wavelengths are in the 3.2-3.4 micrometer waveband. The difference in views is shown in Figure 2-8 below.

Figure 2-8: View with naked eye compared to view with an OGI camera

OGI cameras with the ability to detect or visualize in this waveband range contain a cryocooler that is integrated into the sensor and increases the sensitivity of the camera to detect smaller leaks. OGI cameras are widely used as a screening tool for leak detection purposes and have continuous monitoring capability. Fixed OGI systems have been implemented at well sites and compression stations for continuous emissions monitoring. Handheld OGI cameras, as seen in Figure 2-9, are used widely by leak detection service providers as well as facilities for periodic monitoring.

Figure 2-9- OGI camera

Fixed OGI cameras may not catch all leaks that can be identified during an inspection where a portable OGI device is manually operated. Fixed OGI cameras are limited in the number of angles from which a tank can be viewed and would likely be stationed further away from an emissions source compared to a person conducting an inspection with a portable OGI device. Stationary and portable devices both have the capability to detect large leaks, however, there is greater chance that smaller leaks would be identified with a manual field inspection than with a stationary camera because tanks can be monitored in close proximity using portable devices such as handheld OGI cameras and toxic vapor analyzers (TVA).

Manual inspections with a portable OGI device can be more or less time intensive depending on how the inspection is conducted. If inspections are conducted for all components on each tank, approximately four tanks per day can be monitored individually from the tank platform. It is not cost-effective to require individual monitoring of each tank every two calendar weeks. Monitoring the entire tank farm from a distance would allow multiple tanks to be viewed in one frame, is less time intensive, and cost-effective to carry out more frequently when compared to individual component monitoring. Large leaks can be identified quicker when conducting tank farm inspections, since the inspections would be carried out on a more frequent basis.

Costs and Cost-Effectiveness

Costs were obtained from the Proposed Amended Rule 1148.1 – Oil and Gas Production Wells rule development for handheld OGI cameras. A portable cooled OGI camera costs approximately

\$120,000 and requires replacement of the cryocooler every 3-4 years or every 10,000-13,000 hours of operation. Maintenance is estimated to cost \$1,500 per year. Staff analyzed cost-effectiveness for OGI tank farm inspections at increasing frequencies using handheld devices assuming owner or operator ownership of the cameras. The results are provided in Table 2-1 below.

Table 2-1: Cost-Effectiveness of OGI Inspection Frequencies

	Every two months	Monthly	Every two weeks	Weekly	Every other day	Daily
Total cost over 10 years (\$)	\$16,104,000	\$18,288,000	\$22,656,000	\$32,848,000	\$80,168,000	\$146,780,000
Total emission reductions (tons over 10 years)	1,061	1,326	1,467	1,529	1,574	1,591
Cost effectiveness (\$/ton VOC)	\$15,200	\$13,800	\$15,400	\$21,500	\$50,900	\$92,200
Incremental cost (\$/ton VOC)	N/A	\$8,200	\$31,000	\$164,400	\$1,051,600	\$3,918,400

Staff proposes OGI tank farm inspections every other calendar week, as the frequency is both cost-effective and incrementally cost-effective. PAR 463 will require OGI monitoring for all tanks meeting the capacity and vapor pressure thresholds in subdivision (d) and paragraph (e)(1). OGI tank farm inspections will not require an inspector to climb or access a tank unless vapors are observed that indicate malfunctioning equipment. Semi-annual OGI component inspections for floating roof tanks are also being proposed in PAR 463 to supplement other existing semi-annual inspections, such as gap measurements and Lower Explosive Limit (LEL) readings. Semi-annual OGI component inspections will require the inspector to conduct the inspection from the tank platform. Semi-annual component OGI inspections are proposed to identify smaller leaks that may go undetected during existing inspections and proposed OGI tank farm inspections. The cost-effectiveness to require every other calendar week OGI tank farm inspections is \$15,400. No additional costs were assumed for conducting OGI component inspections, as they can occur at the same time as other semi-annual inspections. Refer to Chapter 4 for details on costs and cost-effectiveness.

SUMMARY

Several technologies were assessed for their potential to reduce emissions from storage tanks. Cost-effectiveness was determined for each technology with the potential to reduce emissions. Based on the BARCT assessment, staff proposes to require doming for all external floating roof

tanks storing organic liquid with true vapor pressure of 3.0 psia and greater, more stringent gap requirements to reflect requirements in the U.S. EPA's 40 CFR Part 60 Subpart Kb, 98% emission control for fixed roof tanks, secondary seals on all floating roof tanks, and OGI inspections every other week for tank farm inspections and semi-annually for component inspections. Table 2-2 shows the cost-effectiveness for proposed requirements.

Table 2-2 — Cost-Effectiveness of Proposed Requirements

Proposed Requirement	Cost-Effectiveness (\$/ton)
Doming of EFR tanks storing organic liquids with a TVP of 3.0 psia or above	\$24,800
More stringent primary and secondary seal gap requirements	\$0
Secondary seals on all floating roof tanks	\$6,700
OGI tank farm inspections every other week	\$15,400

CHAPTER 3: PROPOSED AMENDED RULE 463

INTRODUCTION

PROPOSED AMENDED RULE STRUCTURE

PROPOSED AMENDED RULE 463

INTRODUCTION

PAR 463 establishes requirements for the storage of organic liquids in tanks. PAR 463 includes requirements for tank seals, emission control systems, doming, inspections and monitoring, reporting and recordkeeping.

The following information describes the structure of PAR 463 and explains the provisions incorporated from other source-specific rules. New provisions and any modifications to provisions that have been incorporated are also explained. PAR 463 also includes grammatical and editorial changes for clarity. Several requirements were moved to consolidate.

PROPOSED AMENDED RULE STRUCTURE

PAR 463 will contain the following subdivisions:

- a) Purpose*
- b) Applicability*
- c) Definitions*
- d) Tank Roof Requirements*
- e) Other Performance Requirements*
- f) Monitoring Requirements*
- g) Reporting and Recordkeeping Requirements*
- h) Exemptions*
- i) Test Methods*
- j) Ozone Contingency Measures*

PROPOSED AMENDED RULE 463

Subdivision (a) — Purpose

The purpose of this rule is to reduce VOC emissions from above-ground storage tanks storing organic liquids. Furthermore, PAR 463 contains a new purpose to establish contingency measures for ozone standards.

Subdivision (b) — Applicability

The applicability was separated from the purpose to reflect the current South Coast AQMD preferred rule format. There have been no other changes to the applicability.

Subdivision (c) — Definitions

Definitions were added or modified for clarity of new requirements. Key definition changes are referenced and discussed below.

- *COMPONENT is any valve, fitting, pump, compressor, pressure relief device, diaphragm, hatch, sight-glass, Roof Opening, Rim Seal System, pressure vacuum vents, guidepoles, roof legs, or meter in VOC service.*

This is a definition from Rule 1173 — Control of Volatile Organic Compound Leaks and Releases from Components at Petroleum Facilities and Chemical Plants (Rule 1173) that was modified to include additional tank specific parts. The definition adds clarity on the meaning of component for the proposed semi-annual OGI component inspection requirement.

- *COMPONENT INSPECTION is monitoring for Visible Vapors with a handheld Optical Gas Imaging Device of a Storage Tank roof and individual components, including but not limited to Roof Openings and Rim Seal Systems, viewable from the Tank platform or a vantage point capable of seeing the Tank roof, and ground for components not viewable from the Tank platform or vantage point but viewable at ground level.*

This is a definition from Rule 1178 that was modified to include component inspection procedures for tanks that do not have access to a tank platform. In the event there is no platform from which a component inspection can be conducted, an owner or operator can use a vantage point capable of viewing the roof of the tank and/or other vantage points needed to complete the OGI inspection.

- *PRODUCT CHANGE is the process of changing the Tank contents from one Organic Liquid to another Organic Liquid that has different characteristics i.e. vapor pressure, viscosity, etc.*

This is a new definition to clarify the new rule language added in PAR 463 paragraph (e)(2) in response to stakeholder request.

- *VISIBLE GAP is a gap of more than 1/8 inch between any gasket or Seal and the opening that it is intended to control. Visible Gap for Primary and Secondary Seals is a gap that does not meet the requirements specified in subdivision (d).*

This is a definition from Rule 1178 that was modified to clarify that visible gaps can occur in both seals and gaskets.

- *VISIBLE VAPORS are any VOC vapors detected with an Optical Gas Imaging Device, when operated and maintained in accordance with manufacturer training or certification, or equivalent California Air Resources Board (CARB) training, user manuals, specifications, and recommendations.*

This is a definition from Rule 1178 that was modified to include the CARB OGI camera training as an approved training method for OGI camera operators. The definition was also modified to remove the reference to tank farm inspections and component inspections so that visible vapors can be identified outside of those two operations.

The following definitions were added or modified to be consistent with the definitions Rule 1149 – Storage Tank and Pipeline Cleaning and Degassing (Rule 1149), Rule 1173, and Rule 1178:

- *ACCESS HATCH*
- *CERTIFIED PERSON*
- *CLEANING*
- *DOMED ROOF*
- *EMISSION INVENTORY YEAR*
- *EXTERNAL FLOATING ROOF TANK*
- *FACILITY*
- *FIXED ROOF SUPPORT COLUMN AND WELL*
- *FIXED ROOF TANK*
- *FLEXIBLE ENCLOSURE SYSTEM*
- *FUEL GAS SYSTEM*
- *GAUGE FLOAT*
- *GAUGE HATCH/SAMPLE PORT*
- *GUIDEPOLE*
- *INTERNAL FLOATING ROOF TANK*
- *LADDER AND WELL*
- *LIQUID MOUNTED PRIMARY SEAL*
- *MECHANICAL SHOE PRIMARY SEAL*
- *OPTICAL GAS IMAGING DEVICE*
- *POLE FLOAT*
- *POLE SLEEVE*
- *POLE WIPER*
- *PRIMARY SEAL*
- *RESILIENT FILLED PRIMARY SEAL*
- *RIM MOUNTED SECONDARY SEAL*
- *RIM SEAL SYSTEM*
- *RIM VENT*
- *ROOF DRAIN*
- *ROOF LEG*
- *ROOF OPENING*
- *SECONDARY SEAL*
- *SLOTTED GUIDEPOLE*
- *STORAGE TANK or TANK*

- *TANK FARM INSPECTION*
- *TRUE VAPOR PRESSURE*
- *VACUUM BREAKER*
- *WASTE STREAM TANK*

Subdivision (d) — Tank Roof Requirements

PAR 463 includes revisions to existing requirements and new requirements. PAR 463 establishes requirements for rim seal gaps, secondary seals, emission control systems, doming, testing, implementation and monitoring.

Primary and Secondary Seal Gap Requirements – Clause (d)(1)(A)(v)

New seal gap requirements for primary and secondary seals were added by reference to reflect seal gap requirements contained in U.S. EPA's 40 CFR 60 Subpart Kb. The new seal gap requirements are in addition to the existing seal gap requirements specified in clauses (d)(1)(A)(i) to (d)(1)(A)(iv). Seal gap requirements are contained under requirements for external floating roofs but apply to all floating roof tanks; requirements for other floating roof tanks refer to subparagraph (d)(1)(A).

Vapor Tight Requirements for Openings – Subparagraphs (d)(1)(D), (d)(2)(A), (d)(3)(A), (d)(3)(B), and (d)(4)(A)

New language was added to clarify that covers and openings must be controlled in a manner that is vapor tight. Vapor tight is a defined term in Rule 463. Domed external floating roof tanks also have requirements to be in a vapor tight condition, as subparagraph (d)(4)(A) refers to paragraph (d)(1).

Maintain Tanks Free of Visible Vapors for External Floating Roof Tanks – Subparagraphs (d)(1)(G), (d)(2)(C), (d)(3)(D), and (d)(4)(C)

PAR 463 requires tanks to be free of visible vapors that could result from a defect determined by an optical gas imaging inspection. Defects can be anything that leads to uncontrolled emissions such as a physical malfunction, a hatch improperly closed, or components not operating as intended. For example, visible vapors resulting from a pressure vacuum relief valve (PVRV) opening to relieve pressure build up is allowable. However, if that same PVRV does not re-seal properly after being opened then that is considered a defect. Requirements to maintain tanks free of visible vapors are contained under requirements for external floating roof tanks but applies to all tanks; requirements for other tanks refer to subparagraph (d)(1)(G).

Visible Vapor Cause Determination – Clause (d)(1)(G)(i)

If an OGI camera detects visible vapors and an owner or operator claims the vapors are not the result of a defect, then the owner or operator must demonstrate that the vapors in question are not the result of a defect. This provision is intended to put the onus on the owner or operator to prove their claim that visible vapors detected by an OGI camera is allowable by Rule 463 (e.g. PVRV opening to temporarily relieve pressure build up). Requirements for the owner or operator to demonstrate that visible vapors are not the result of a defect are contained under requirements for

external floating roof tanks but applies to all tanks; requirements for other tanks refer to subparagraph (d)(1)(G), which includes clause (d)(1)(G)(i).

Doming Requirements – Subparagraph (d)(1)(H)

PAR 463 requires that facilities install a dome on any external floating roof tank storing organic liquid with a true vapor pressure of 3 psia or greater. The new provision reflects existing doming requirements in Rule 1178. External floating roof tanks that meet the requirements of subparagraph (d)(1)(H) must install domes at the next internal API 653 inspection or the next time a tank is cleaned and degassed, whichever is sooner, but not to exceed 23 years after a test verifies that an organic liquid stored has a TVP of 3 psia or greater. Internal API 653 inspections require the tank to be taken out of service to inspect the inside of the tank and are carried out every 20 years. Tanks need to be cleaned and degassed prior to the installation of a dome for safety concerns. Furthermore, doming is not cost-effective when cleaning and degassing costs are considered. The implementation timeframe for doming begins three years after *[Date of Adoption]* to account for planning and budgetary needs and the permitting process. It is the responsibility of the owner or operator to submit permit applications in a timely manner to ensure that permits can be issued prior to the implementation schedule specified in subparagraph (d)(1)(H). The backstop of 23 years for installing domes was calculated by adding the three year on-ramp period to the standard 20-year interval for internal API 653 inspections. The effective date of this provision is June 7, 2027.

True Vapor Pressure Measurements – Subparagraph (d)(1)(I)

Facilities are required to measure and record the true vapor pressure of the organic liquid inside any external floating roof tank not equipped with a dome with an initial vapor pressure test. Any tanks storing organic liquids with a TVP less than 3.0 psia are required to conduct subsequent tests on a semi-annual basis (once every six months) to verify the true vapor pressure remains less than 3 psia. This requirement is effective on January 1, 2025, and the first test must be conducted by July 1, 2025. If an EFR tank shows a single test indicating the stored organic liquid has a TVP of ≥ 3.0 psia a dome must be installed pursuant to the implementation schedule in subparagraph (d)(1)(H) unless the tank is placed out of service and the permit is surrendered or if the owner or operator elected to conduct TVP tests according to the alternative schedule specified in clauses (d)(1)(I)(i). An EFR tank with permit conditions that limit the true vapor pressure of the organic liquid stored to < 3.0 psia is not exempt from the doming requirements, if the result from a test specified in subparagraph (d)(1)(I) or the average result from tests specified in clause (d)(1)(I)(i) is ≥ 3.0 psia, with the exception of EFR tanks storing waste water where the installation domes can lead to unsafe conditions pursuant to subparagraph (d)(1)(J). However, owners or operators of EFR tanks that are pursuing the alternative compliance pathway in subparagraph (d)(1)(J) may be subject to penalties and/or additional actions if TVP tests indicate that the product stored is ≥ 3.0 psia.

Alternative True Vapor Pressure Measurements – Clauses (d)(1)(I)(i)

An owner or operator can choose to conduct monthly TVP tests and submit an average TVP of the organic liquid stored in a tank every six months. If an owner or operator opts to use this alternative pathway, the owner or operator must commence testing in January 2025. Any owner or operator that fails to test monthly as of January 2025 must comply with the semi-annual TVP test requirements specified in subparagraph (d)(1)(I). If an EFR tank subject to the alternative TVP testing schedule has an average TVP over six months that is ≥ 3.0 psia, a dome must be installed

pursuant to the implementation schedule in subparagraph (d)(1)(H) unless the tank is placed out of service and the permit is surrendered. The average test results are not to be calculated on a rolling average. Each calculated six month average will include the TVP test results from tests conducted from January-to-June and July-to-December each year.

Doming Alternative for Tanks with Pyrophoric Material – Subparagraph (d)(1)(J)

For waste water EFR tanks where the installation of a dome could lead to the buildup of pyrophoric materials, PAR 463 includes an option to accept permit conditions to limit the TVP of the organic liquid stored to less than 3 psia as an alternative to doming.

Removal of Alternative Compliance Pathway for Fixed Roof Tanks with an Internal Floating Type Cover from Paragraph (d)(2)

An alternative compliance pathway which allowed fixed roof tanks with an existing internal floating type cover approved on or before June 1, 1984, to comply with requirements applicable at the time of approval was removed from paragraph (d)(2). All fixed roof tanks with internal floating type covers will be required to comply with the provisions in PAR 463.

Seal Requirements for Internal Floating Roof Tanks – Subparagraph (d)(2)(A)

Internal floating roof tanks must be equipped with both a primary and secondary seal. Primary seal and secondary seal are defined terms in PAR 463. In response to a comment from a stakeholder, the mechanical shoe primary seal requirements for IFR tanks were updated to require that one end of the shoe extend 6 inches above the liquid surface and the other end extend into the liquid a minimum of 4 inches. The proposed PAR 463 requirements align with Rule 1178 and are consistent with the API 650.H.4.4.5.c requirements. Rule 463 subparagraph (d)(1)(A) requires that mechanical shoe primary seals extend a minimum vertical distance of 24 inches above the surface of the organic liquid. Since the internal floating roofs are much lighter structures and are not subject to the effects of wind, larger mechanical shoe primary seals are not required for seal control effectiveness. Furthermore, maintaining the current requirement of larger mechanical shoe primary seals for all internal floating roof tanks could cause some roof systems to fail and could result in an adverse emission impact. During the 2006 Rule 1178 amendment process staff determined, based on information provided by seal manufacturers, there is no difference in emissions as long as the mechanical shoe length meets the API Guidelines and the structural integrity of the roof is maintained.

Compliance Schedule to Install Secondary Seals on Internal Floating Roof Tanks – Subparagraph (d)(2)(D)

Any internal floating roof tanks not equipped with a secondary seal are required to have a secondary seal installed at the time of the next internal API 653 inspection or the next time the tank is cleaned and degassed, whichever is sooner, but no later than 22 years past the date of adoption for PAR 463. Internal API 653 inspections require the tank to be taken out of service to inspect the inside of the tank and are carried out every 20 years. Tanks need to be cleaned and degassed prior to the installation of secondary seals due to safety concerns. The implementation timeframe for installing secondary seals begins two years after *[Date of Adoption]* to account for planning and budgetary needs as well as the permitting process. It is the responsibility of the owner or operator to submit permit applications in a timely manner to ensure that permits can be issued prior to the implementation schedule specified in subparagraph (d)(2)(D).

Vapor Recovery Systems for Fixed Roof Tanks – Subparagraph (d)(3)(C)

Vapor Recovery systems required on fixed roof tanks must achieve 98% control efficiency by weight. The owner or operator is required to submit early Title V permit revisions pursuant to South Coast AQMD Rule 3005.

Domed External Floating Roofs – Paragraph (d)(4)

Staff added a new paragraph to specify requirements for domed external floating roofs.

Roof Openings and Rim Seal Systems for Domed External Floating Roofs – Subparagraph (d)(4)(A)

Domed external floating roofs are subject to the same requirements as external floating roofs to equip and maintain roof openings and rim seal systems, with the exception of slotted guidepoles. Specific requirements for the components needed for slotted guidepoles are specified in subparagraph (d)(4)(A).

Concentration of Organic Vapor for Domed External Floating Roofs – Subparagraph (d)(4)(B)

Subparagraph (d)(4)(B) is based on the requirements in subparagraph (d)(2)(B) to ensure that the concentration of organic vapor in the vapor space above the floating roof does not exceed 30% of its lower explosive limit.

Condition Requirements for Domed Roof – Subparagraph (d)(4)(D)

Subparagraph (d)(4)(D) mirrors Rule 1178 and specifies that domes must be maintained in a condition that is free from openings that are not part of the dome design such as gaps, cracks, separations and other openings. This requirement excludes openings that are part of the dome design such as vents and access points or doors.

*Subdivision (e) – Other Performance Requirements*Exceptions for Floating Roof During Product Change – Paragraph (e)(2)

The proposed amended rule includes product change as an activity in which an internal floating roof or external floating roof does not need to float on the organic liquid. Product change is a defined term in PAR 463. Staff updated the rule language in response to a stakeholder request. The proposed amended rule language clarifies the intent of existing rule language as tanks must be emptied during a product change, which requires floating roofs to rest on support legs (unless the roof is cable suspended).

Executive Officer Approval of Alternative Seals – Paragraph (e)(5)

Seals that are not on the current list of approved seals cannot be used unless a facility is given written approval by the Executive Officer.

Use of PAR 463 Addendum for Vapor Pressure Limits – Paragraph (e)(6)

Organic liquids listed on the Rule 463 addendum can no longer be deemed to be in compliance. The addendum can be used as a guide for compliance with the appropriate vapor pressure limits.

*Subdivision (f) — Monitoring Requirements*Tank Roof Refloating Seal Inspections — Subparagraph (f)(3)(B)

PAR 463 extends the time to conduct required seal inspections on floating roofs to 48 hours after a tank roof is refloated. A stakeholder stated that tank refilling at their facility can take up to 48 hours to complete. Under the current rule requirements, facilities are required to conduct seal inspections within 24 hours. Therefore, facilities with tank refilling operations longer than 24 hours are required to conduct seal inspections before the tank refilling is complete; once the seal inspection is completed the facility resumes tank refilling operations. The pause in operations can lead to unintended excess auxiliary emissions. For example, if a vessel is used to refill a large tank that takes more than 24 hours to complete, the process must pause for the inspection to occur and then continue. During this pause the vessel is on standby, generating emissions. The extended seal inspection deadline accounts for longer refill operations while maintaining a deadline for seal inspections.

Electronic Notifications – Subparagraph (f)(3)(C)

PAR 463 specifies electronic notifications to the email address designated by the Executive Officer. The timeframe to submit notifications was also shortened to 2 days prior to the start of any tank-emptying or roof-refloating operation for planned maintenance. Electronic notifications are almost instantaneous which reduces the need for a longer notification timeframe.

Optical Gas Imaging Inspections – Subparagraph (f)(3)(D)

Effective July 1, 2025, optical gas imaging inspections are required for tanks that meet the capacity and vapor pressure requirements specified in subdivision (d) and paragraph (e)(1) to determine compliance with the requirement for tanks to be maintained in a condition that is free of visible vapors resulting from a defect or malfunction of equipment. This subparagraph contains the requirements for OGI inspections.

Certification/Training of Person Conducting OGI Inspection – Clause (f)(3)(D)(i)

Contains requirements for qualification for the persons conducting an OGI inspection. Persons conducting the OGI inspection must be certified, have undergone training provided by the manufacturer of the OGI camera, or have completed an equivalent CARB training program. The persons conducting the inspections must also complete all subsequent training or certification recommended by the OGI manufacturer, or have completed an equivalent CARB training program. This paragraph also contains requirements for proper operation and maintenance of the OGI device. The OGI camera must be operated and maintained in accordance with all manufacturer guidance including but not limited to that stated in any training or certification course, user manuals, specifications, recommendations.

Tank Farm Inspection Requirements – Clause (f)(3)(D)(ii)

Contains requirements for tank farm inspections.

Frequency (Tank Farm Inspection) – Subclause (f)(3)(D)(ii)(A)

Inspections must be conducted at least once every two calendar weeks.

Procedure (Tank Farm Inspection) – Subclause (f)(3)(D)(ii)(B)

A person using an OGI device is required to monitor for visible vapors with a tank farm inspection, as defined in PAR 463. If visible vapors are detected during a tank farm inspection, the person must conduct an additional inspection from the tank's platform, or a vantage point for tanks without a platform, to make an effort to determine the source of emissions. From the platform or vantage point, the person will use an OGI device to inspect components required to be maintained in a vapor tight condition or with no visible gaps. If visible vapors are detected from any components that are required to be maintained in a vapor tight condition or in a condition with no visible gaps, the facility must demonstrate compliance with applicable rule requirements for any component from which visible vapors are emitted or make a repair, within three days of identifying the visible vapors. If visible vapors are detected, the person must conduct a visual inspection to identify any defects in equipment from which visible vapors are emitted. Defects may include, but are not limited to, equipment that is not operating as intended, equipment not found in good operating condition, equipment not meeting all the requirements of Rule 463, or other indicators that equipment has failed (e.g., organic liquid pooled on a floating roof). The visual inspection for defects may include the use of an OGI device. If no defects are identified, no further action is required for the inspection. If a defect is identified, a repair must be made within three days.

Component Inspections – Clause (f)(3)(D)(iii)

Contains requirements for component inspections. Component is a defined term in PAR 463.

Frequency (Component Inspection) – Subclause (f)(3)(D)(iii)(A)

Inspections must be conducted at least twice per year at 4 to 8 month intervals for floating roof tanks. The component inspection frequency mirrors the timeframe specified in Rule 463 for other required semi-annual inspections, so that component inspections may be conducted at the same time.

Procedure (Component Inspection) – Subclauses (f)(3)(D)(iii)(B)-(C)

Repairs or demonstration with applicable rule requirements must be conducted when visible vapors are detected from any component or equipment, except for rim seal systems. Repairs or demonstrations with rim seal requirements must be conducted when a defect is visible from the tank platform, or a vantage point for tanks without a platform, and when visible vapors are emitted from the rim seal and are also detectable at the top of the tank shell or from roof vent.

Alternative Monitoring Method – Subparagraph (f)(3)(E)

An owner or operator may elect to use an alternative monitoring method approved in writing by the U.S. EPA that is equivalent or more stringent than the OGI inspection requirements specified in PAR 463. Alternative monitoring methods submitted to U.S. EPA for approval, but that have not received written approval from U.S. EPA, do not qualify as an approved alternative method in lieu of required OGI inspections. An owner or operator is required to submit written documentation of the U.S. EPA approved method to the South Coast AQMD, so staff can verify that the method is approved by U.S. EPA prior to the alternative monitoring method being implemented. Until the approved monitoring method is approved by South Coast AQMD, an owner or operator is subject to the OGI inspection requirements in PAR 463.

Performance Tests for Vapor Recovery Systems – Paragraph (f)(5)

An owner or operator of an existing vapor recovery system must conduct an initial performance test to verify compliance with the new control efficiency within one year of the date of adoption of PAR 463. Additional performance tests must be conducted for all vapor recovery systems at a frequency of least once every ten years. If a vapor recovery system is changed in any way that affects the capture or control efficiency, a performance test must be conducted within 180 days of the equipment modification. For example, changing the temperature in which a combustion based vapor recovery unit achieves ignition may lead to a change in the achieved control efficiency. Under the described scenario, a performance test would need to be conducted within 180 days of the vapor recovery system modification to verify compliance with the control efficiency requirements. Fuel gas systems operating to comply with the requirements in subparagraph (d)(3)(C) are not required to conduct performance tests.

*Subdivision (g) – Reporting and Recordkeeping Requirements*Electronic Compliance Inspection Report Option – Subparagraph (g)(1)(A)

Paragraph (g)(A) was updated to allow for an electronic compliance inspection report, provided that all information required in Attachment B is included.

Electronic Option for Non-Compliance Report – Subparagraph (g)(1)(C)

Paragraph (g)(C) was updated to specify that a non-compliance report is required to be submitted electronically to the email address designated by the Executive Officer.

Emissions Reporting – Subparagraph (g)(2)(A)

U.S. EPA Tanks 4.0 was removed as an option to base emission information parameters on for South Coast AQMD's Annual Emission Reporting Program. U.S. EPA Tanks 4.0 was developed using a software that is now outdated and is not reliably functional. U.S. EPA currently recommends the use of formulas found in AP-42: Compilation of Air Pollutant Emissions Factors from Stationary Sources (AP-42), Chapter 7 to estimate VOC emissions from storage tanks. Currently the U.S. EPA is developing Tanks 5.0 as a replacement for the outdated Tanks 4.0. Pending U.S. EPA approval, Tanks 5.0 would be an acceptable tool to calculate emissions, for as long as U.S. EPA deems Tanks 5.0 to be an appropriate tool to estimate VOC emissions.

Reporting and Recordkeeping Requirements for OGI Inspections – Paragraph (g)(4)

Contains notification and recordkeeping requirements for OGI inspections.

Reporting for OGI Inspections – Subparagraph (g)(4)(A)

Contains reporting requirements for tank farm inspections. Facilities must report to 1-800-CUTSMOG when visible vapors are detected during a tank farm inspection that require a demonstration with rule requirements or a repair pursuant to the requirements of subclause (f)(3)(D)(ii)(B) within 24 hours of identifying the visible vapors.

Records for Tank Farm Inspections – Subparagraph (g)(4)(B)

Contains recordkeeping requirements for tank farm inspections. Written and digital records must be kept for findings of visible vapors resulting from a defect in equipment or from components required to be vapor tight or with no visible gap.

Records for Component Inspections – Subparagraph (g)(4)(C)

Contains recordkeeping requirements for component inspections.

Recordkeeping and Reporting TVP Test Results – Paragraphs (g)(5) and (g)(6)

Contains recordkeeping and reporting requirements for the TVP tests required for EFR tanks. Test results must be kept for 20 years to confirm tanks are under the doming TVP thresholds. Any test that indicates a TVP of 3.0 psia or greater must be reported to the South Coast AQMD and contain the year of the next internal API 653 inspection and the next planned time a tank is to be cleaned and degassed to aid in determining compliance with the dome installation schedule.

Reporting for VRU Performance Tests – Paragraphs (g)(7)

Contains reporting requirements for VRU performance tests. Facilities must submit reports of any performance tests within 60 days of conducting the test.

*Subdivision (h) – Exemptions*Exemption for Tanks Regulated by Rule 1178 – Paragraph (h)(3)

An exemption from the provisions of Rule 463 for tanks regulated by Rule 1178, with the exception of other performance requirements, seal categories, and the definition for Product Change, was added to PAR 463. The new exemption increases clarity of compliance requirements for affected facilities subject to Rules 463 and 1178.

Exemption from OGI Inspections – Paragraph (h)(4)

Any tank that is out of service and complying with the requirements of Rule 1149 is exempt from OGI inspections. OGI inspections must resume once the tank is refilled and the initial inspection must be carried out within 14 days of the date the tank is refilled.

Exemption from OGI Inspections Due to Safety – Paragraph (h)(5)

If a facility or person responsible for conducting an OGI inspection at a facility determines that it is unsafe to climb a tank due to safety concerns, such as wind or slippery surfaces from rain, the facility is not required to conduct an inspection from the tank platform, or other vantage point for tanks without a platform. A component inspection for tanks that were identified as having visible vapors during a tank farm inspection must be conducted the first day the facility or person responsible for conducting the OGI inspection determines it safe to do so. An owner or operator is required to document the date that a required inspection was not completed and the reason.

*Subdivision (i) – Test Methods*Additional Vapor Pressure Test Methods – Paragraph (i)(3)

Contains the approved test methods to verify compliance with Rule 463 requirements. New test methods were added to expand the test options used to determine the Reid Vapor Pressure of organic liquids. The new test methods include ASTM – 6377 and ASTM – 6378 which provide updated testing procedures for crude oils and heavier petroleum products, respectively. Additional changes include the removal of references to specific editions of U.S. EPA AP-42 and updates to include the verification of the new vapor tight requirements.

Removal of Reference to AP-42 Fifth Edition – Paragraph (i)(5)

A reference to the fifth edition of U.S. EPA AP-42 was removed, as future versions of AP-42 may be published. Removing the reference to the specific edition will reduce the need for future Rule 463 amendments.

Verification of Vapor Tight – Paragraph (i)(6)

Contains the methods used to determine the vapor tight condition for storage tanks.

Subdivision (j) – Ozone Contingency Measure

The proposed amendments add the required ozone contingency measures to the rule. These contingency measures would only be implemented in the event that the U.S. EPA determines that the South Coast AQMD had failed to meet an RFP milestone or attain an ozone NAAQS. These contingency control measures are necessary as part of comprehensive efforts to timely attain ozone standards.

When implemented, the proposed contingency measures would automatically establish increased OGI tank farm inspection frequencies for storage tanks that contain organic liquids with a TVP of 5.0 psi or greater. The contingency measures would be triggered upon the issuance of a final determination by the U.S. EPA that the South Coast AQMD has failed to comply with either of the following requirements:

1. Meet any ozone RFP requirement in an attainment plan approved in accordance with section 51.1012; or
2. Attain the applicable ozone NAAQS by the applicable attainment date.

PAR 463 includes contingency measures for both the South Coast Air Basin and the Coachella Valley which require weekly OGI tank farm inspections for tanks storing product with a TVP greater than or equal to 5.0 psi. Triggering the contingency measure for the South Coast Air Basin will result in an estimated additional 2,038 pounds per year of VOC reduction. Triggering the contingency measure for the Coachella Valley Air Basin will result in an estimated additional 36.4 pounds per year of VOC reduction.

Contingency measures should provide for emission reductions approximately equivalent to either one year's worth of air quality improvement or one year's worth of reductions needed for RFP in the years following RFP milestone and attainment years. While the proposed amendments in Rule 463 satisfy a 'triggering mechanism' requirement set by the U.S. EPA, the reductions from the rule alone are not adequate to satisfy the one-year's worth (OYW) of progress, which is calculated as the percentage of the base year emission inventory (EI) the annual rate of reductions represents of either NO_x or VOC (or combined) per year. See the equation 3-1 below for an example.

Equation 3-1: Equation to Calculate OYW

$$\frac{(\text{base year EI} - \text{attainment year EI})}{(\text{attainment year} - \text{base year})} \div \text{base year EI} \times \text{attainment year EI} = \text{OYW of Progress}$$

Contingency measures are required to result in emission reductions within 60 days of a final action by the U.S. EPA. It would be challenging to implement more stringent requirements, achieving additional NO_x or VOC reductions, in rules involving other traditional sources within the mandated 60-day period. Retrofitting and/or replacement of existing equipment with newer technologies and/or equipment which involve permitting requirements would likely take more than 60 days to effectively implement. Conversely, the proposed amendment to Rule 463 for OGI tank farm inspections does not require permit applications, does not require units be retrofitted or replaced, and does not require reformulation or development of new products. Consequently, Rule 463 is well suited for contingency provisions since implementing higher frequency OGI tank farm inspection monitoring could be easily implemented in less than 60 days following the triggering of a contingency measure.

Based on the above analysis, the South Coast AQMD will satisfy the contingency requirements in CAA section 172(c)(9) and the U.S. EPA's Ozone Implementation Rule with these proposed amendments to Rule 463. PAR 463 provides contingency measures to be triggered if the South Coast Air Basin or Coachella Valley fails to meet RFP or attain the applicable ozone standards by the applicable date. The emission reductions anticipated from PAR 463, in conjunction with reductions from existing rules and regulations, are expected to achieve the reductions equivalent to or more than OYW of progress. PAR 463 addresses the contingency measures for RFP and attainment for the applicable ozone standards (2008 & 2015 8-hour ozone NAAQS).

CHAPTER 4: IMPACT ASSESSMENTS

INTRODUCTION

EMISSION REDUCTIONS

COSTS AND COST-EFFECTIVENESS

INCREMENTAL COST-EFFECTIVENESS

SOCIOECONOMIC IMPACT ASSESSMENT

CALIFORNIA ENVIRONMENTAL QUALITY ACT ANALYSIS

DRAFT FINDINGS UNDER HEALTH AND SAFETY

CODE SECTION 40727

COMPARATIVE ANALYSIS

INTRODUCTION

Impact assessments were conducted as part of PAR 463 rule development to assess the environmental and socioeconomic implications. These impact assessments include emission reduction calculations, cost-effectiveness and incremental cost-effectiveness analyses, a socioeconomic impact assessment, and a California Environmental Quality Act (CEQA) analysis. Staff prepared draft findings and a comparative analysis pursuant to Health and Safety Code Sections 40727 and 40727.2, respectively.

EMISSION REDUCTIONS

PAR 463 will establish more stringent control and monitoring requirements that result in emission reductions. The proposed amendments will introduce requirements for doming and increase the stringency of existing requirements for seals, emission control systems, and monitoring. Emission reductions were calculated based on estimated baseline emissions and the expected efficacy for the proposed control or monitoring requirement. BREEZE TankESP PRO software was used to determine baseline emissions and emission reductions for proposed control requirements. This software calculates tank emissions based on emissions estimate procedures from Chapter 7 of U.S. EPA's Compilation of Air Pollutant Emission Factors for VOC emissions from storage tanks. Calculated emissions are based on many parameters such as tank diameter, tank height, controls, location of tank, product stored, characteristics of product stored and product throughput. U.S. EPA's estimates for uncontrolled tanks contained in the 2016 CTG were used to determine baseline emissions in the cost-effectiveness analysis for implementing OGI inspections. Staff did not evaluate the emission reductions associated with PAR 463 requirements from tanks subject to both Rules 463 and 1178 because they were already accounted for as part of the Rule 1178 rule development. The total estimated emission reductions from the implementation of PAR 463 is 1.65 ton per day.

Doming

BREEZE TankESP PRO software was used to calculate baseline emissions and emission reductions from doming. Using 2022 AER reports, staff randomly selected a sample of EFR tanks with known throughput data (40% of the 89 known EFR tanks regulated by Rule 463) that provide a 95% confidence interval. In the 35-tank sample, there were 20 tanks storing organic liquids under 3.0 psia and eight tanks were already domed. Staff identified seven external floating roof tanks without domes storing organic liquids with a TVP of 3.0 psia or greater. The size range of the tanks captured by the random sample are 30 feet to 144 feet. Staff included two additional tanks at 253 feet and 299 feet into the sample to account for the larger tank diameters regulated by PAR 463. Staff used 2019 Annual Emission Reports to identify the throughput for each tank and facility provided data for the 253 feet and 299 feet diameter tanks. It was determined that reported throughputs in 2019 were more representative of normal operations compared to 2022, as one of the tanks was lacking throughput data in 2022. The total VOC emission reductions from doming the sample group over the life of the equipment (50 years) is 402.72 tons, or 0.022 tons per day. The sample makes up 45% of the tanks that will be subject to the doming requirements. Applying the sample reductions to the whole universe gives a total estimated VOC emission reduction of 894.94 tons over 50 years or 0.049 tons per day.

Secondary Seals

BREEZE TankESP PRO software was used to calculate baseline emissions and emission reductions from adding secondary seals to internal floating roof tanks not equipped with secondary seals. Five internal floating roof tanks were identified that meet this criterion according to 2022 Annual Emission Report information. Baseline emissions for the five tanks are 0.03 ton per day. The total VOC emission reductions from installing secondary seals on five internal floating roof tanks is 0.01 ton per day.

Seal Gap Requirements

Staff is including a reference to the U.S. EPA's CFR 40 Part 60 Subpart kb seal gap requirements. Since the requirement would only apply to facilities that are already subject to CFR 40 Part 60 Subpart kb, no emission reductions or costs will result from the updated seal gap requirements in PAR 463.

Vapor Recovery

BREEZE TankESP PRO was used to calculate emission reductions from increasing emission control efficiency from 95% to 98%, by weight, for fixed roof tanks connected to emission control systems. Tanks connected to fuel gas systems (typically found at refineries and oil and gas wells) were not included in the analysis. The 2022 Annual Emission Reports were used to identify the fixed roof tanks that meet the vapor pressure and capacity thresholds to trigger controls under PAR 463 and determine throughput. Staff identified nine fixed roof storage tanks connected to VRUs. Of the nine tanks identified, seven were regulated by Rule 1178 leaving only two tanks that would be subject to the increased VRU efficiency levels. Baseline VOC emissions for the two fixed roof tanks are 0.008 ton per day. Staff estimates there are 479 fixed roof storage tanks connected to vapor recovery systems. The VOC emission reductions associated with increasing emission control system efficiency to 98% by weight from 95% by weight are for all 479 tanks is 1.19 tons per day. Costs for vapor recovery systems include early Title V permit revisions pursuant to South Coast AQMD Rule 3005 – Permit Revisions as well as regular performance tests to verify compliance with the new control efficiency. Staff identified 40 Title V facilities regulated by Rule 463, and not regulated by Rule 1178. Staff assumes 60% of those facilities will need to submit early Title V revisions to update the permits conditions of the vapor recovery systems to reflect the new control efficiency standard of 98%, as well as other PAR 463 requirements. Total permit costs for the estimated 24 Title V facilities needing permit revisions are \$80,000. Staff is proposing performance tests every ten years to verify the systems are in compliance with the new standard. The total cost of performance tests over the course of ten years for the 479 tanks is \$18,780,200. The estimated emission reductions for the increase in control efficiency is 4,327 tons of VOC over ten years.

OGI Monitoring

Baseline emissions were estimated using emission factors established in U.S. EPA's 2016 Control Technology Guidelines for Oil and Gas Industry. Table 4-2 of the 2016 CTG contains emission estimates for an uncontrolled tank expressed in tons of VOC per year for different brackets of

throughput in barrels per day. The average throughput of fixed roof tanks storing crude oil was used to determine the bracket to consider for estimating emissions from an uncontrolled tank. The average throughput was 618 barrels per day which corresponded to estimated emissions of 97.7 tons per year or 0.26 tons per day.

To estimate baseline emissions from leaks, staff assumed that one percent of tanks subject to Rule 463 would experience a large leak once each year. The shortest frequency between inspections currently required is 180 days (semi-annual inspections). Staff assumed that a leak would occur 90 days after an inspection (90 days before the next semi-annual inspection). Total emissions using the emission factors in Table 4-2 of the 2016 CTG and the assumption that a leak would occur 90 days before the next semi-annual inspection and once per year results in baseline emissions of 159 tons per year.

The amount of VOC emission reductions achievable depends on the monitoring frequency. Emission reductions resulting from conducting monitoring at different frequencies were analyzed and are described in Chapter 2. PAR 463 will require OGI tank farm inspections every two weeks and semi-annual component inspections. The estimated VOC emission reductions from the proposed OGI tank farm inspections are 0.40 tons per day and based on the assumption that a leak would occur 7 days (1/2 the inspection frequency) after the previous inspection.

Emission reductions by requirement and total emission reductions are summarized in Table 4-1 below.

Table 4-1: Summary of Emission Reductions

Proposed Requirement	Emission Reductions (tons per day)
Doming	0.049
Secondary Seals	0.01
Seal Gap	0
Vapor Recovery	1.19
OGI Monitoring	0.40
Total	1.65

COSTS AND COST-EFFECTIVENESS

Health and Safety Code Section 40920.6 requires a cost-effectiveness analysis when establishing BARCT requirements. The cost-effectiveness of a control is measured in terms of the control cost in dollars per ton of air pollutant reduced. The costs for the control technology include purchasing, installation, operation, maintenance, and permitting. Emission reductions were calculated for each requirement and based on estimated baseline emissions. The 2022 AQMP established a cost-effectiveness threshold of \$36,000 per ton of VOC reduced. A cost-effectiveness that is greater than the threshold of \$36,000 per ton of VOC reduced requires additional analysis and a hearing before the Governing Board on costs. After adjusting for inflation, the cost-effectiveness threshold is \$40,168.49 per ton of VOC reduced (2023 U.S. Dollars).

The cost-effectiveness is estimated based on the present value of the retrofit cost, which was calculated according to the capital cost (initial one-time equipment and installation costs) plus the annual operating cost (recurring expenses over the useful life of the control equipment multiplied by a present worth factor). Capital costs are one-time costs that cover the components required to assemble a project. Annual costs are any recurring costs required to operate equipment. Costs for this proposal were obtained from available literature, vendors, and facilities.

Staff did not evaluate the costs, except as noted, or the emission reductions associated with PAR 463 requirements from tanks subject to both Rules 463 and 1178 because they were already accounted for as part of the Rule 1178 rule development. Additional details for costs and cost-effectiveness determinations are included in Chapter 2.

Secondary Seals

Costs to install secondary seals were obtained from the 2023 Proposed Amended Rule 1178 Final Staff Report. The cost to install a secondary seal is \$220 per linear foot. The cost to replace the rubber components of the seal 10 years after installation is \$42 per linear foot. Permitting costs are \$9,000 per permit. Storage tank diameters ranged from 70 feet to 110 feet. Total costs to install secondary seals over 20 years are \$412,000 with capital costs totaling \$325,000, annualized O&M costs totaling \$42,000 and permitting totaling \$45,000. The total emission reductions are 61.77 tons over 20 years or 0.01 ton per day. The cost-effectiveness to require secondary seals on internal floating roof tanks is \$6,700 per ton of VOC reduced.

Doming

PAR 463 Doming Costs

Costs for doming were obtained from the 2023 Proposed Amended Rule 1178 Staff Report. Using 2022 AER reports, staff randomly selected a sample of EFR tanks with known throughout data (40% of the 89 known EFR tanks regulated by Rule 463) that provide a 95% confidence interval. In the 35-tank sample, there were 20 tanks storing organic liquids under 3.0 psia and eight tanks were already domed. Staff identified seven external floating roof tanks without domes storing organic liquids with a TVP of 3.0 psia or greater. After receiving comments from stakeholders that the cost-effectiveness analysis did not adequately consider larger diameter tanks, staff included tanks with diameters of 253 feet and 299 feet. Cost-effectiveness analysis is based on the sample group and was applied to the remaining rule universe. Staff estimates that 20 tanks will need to be domed as a result of the proposed doming requirements in PAR 463. The diameters of the nine tanks in the sample ranged from 30 feet – 299 feet. Costs to dome tanks with this range in diameters are \$164,400-\$3,826,400. Additional capital costs were added for fire suppression systems and permitting. Fire suppression systems are not required for tanks located at non-refineries; however, costs for fire suppression systems were applied to all tanks. A total of \$945,000 (\$105,000 each system) was added for fire suppression systems. A total of \$79,731 was added for permitting 9

tanks (\$8,859 for each tank based on the current fee schedule in South Coast AQMD Rule 301 – Permitting and Associated Fees). The total installation cost to dome nine external floating roof tanks is \$8,405,300. The total O&M cost is \$546,900. The cost-effectiveness to require domes on nine tanks is \$24,800 per ton of VOC reduced.

Table 4-2: EFR Tank Sample Group for Doming Analysis

Tank ID	Diameter (ft)	Cost to Dome (\$)	O&M Cost (\$)	Permitting Cost (\$)	Fire Suppression Cost (\$)	Total Costs (\$)
1	144	624,000	68,000	8,859	105,000	806,000
2	144	624,000	68,000	8,859	105,000	806,000
3	48	203,000	34,000	8,859	105,000	350,000
4	30	164,000	27,000	8,859	105,000	305,000
5	70	263,000	42,000	8,859	105,000	418,000
6	60	234,000	38,000	8,859	105,000	385,000
7	60	234,000	38,000	8,859	105,000	385,000
8	253	2,234,000	108,000	8,859	105,000	2,455,000
9	299	3,826,000	124,000	8,859	105,000	4,065,000

Table 4-2 above represents the sample used for the BARCT analysis on doming. Staff estimates that 20 tanks will be domed as a result of the proposed requirement. The costs and reductions from the sample group have been scaled up to reflect the entire affected universe.

Cost Equations from the 2023 Rule 1178 Rule Development Process

During the 2023 Rule 1178 amendment process staff developed equations to estimate the costs associated with installing domes on EFR tanks. Costs were obtained from facilities, dome suppliers, and dome maintenance service providers. Four cost-effectiveness analyses were conducted based on the information provided to staff throughout the 2023 Rule 1178 development. The first analysis was based on cost information from dome suppliers for equipment and installation. After that analysis, facilities provided cost information from past projects and another cost-effectiveness analysis was conducted. After the second analysis, facilities provided additional cost information for past and projected projects and staff conducted a third analysis based solely on cost information provided by facilities. After the third analysis, stakeholders commented that operating and maintenance costs must be considered in the analysis. A fourth cost-effectiveness analysis was conducted that included operating and maintenance (O&M) costs.

The first cost-effectiveness calculation relied on costs provided by three dome suppliers for equipment and installation. Additional costs for creating space for dome assembly, crane rental and union labor were assumed. A 25-year equipment life was assumed based on the assumption used for the cost-effectiveness for doming in Rule 1178 adoption in 2001. Costs ranged from approximately \$100,000 to \$1.75 million dollars for tanks ranging in size from 30 to 275 feet in

diameter. Figure 4.3 shows the cost curve based on estimates from dome suppliers for equipment and installation.

Figure 4.3 - Vendor Cost Curve

After the second cost-effectiveness analysis, facilities informed staff of additional expenses associated with doming and provided costs for doming tanks 160 feet in diameter and smaller. Costs provided were based on vendor quotes and past projects adjusted to reflect current day dollars. A 50-year equipment life was assumed based on updated information provided by dome suppliers. Two dome suppliers estimated a 50-year useful life, while one dome supplier estimated 30 years of useful life for a tank exposed to precipitation and additional load from snowfall. Staff determined that a 50-year useful life is reasonable and consistent with the condition of domes observed that were installed almost 20 years ago. A hybrid cost curve was created using vendor and facility cost data. To create the hybrid cost curve, staff added a calculated premium based on costs provided by facilities to the costs provided by vendors to reflect actual project costs. Costs ranged from approximately \$383,000 to \$2.25 million dollars for tanks ranging in size from 30 to 275 feet in diameter. Figure 4.4 shows the hybrid cost curve based on facility information for tanks less than or equal to 160 feet in diameter and vendor quotes for tanks ranging in size from 75 to 300 feet in diameter.

Figure 4.4 - Hybrid Cost Curve

After the second cost-effectiveness analysis, facilities provided additional cost information for doming 33 tanks, including tanks larger than 200 feet in diameter. Another cost-effectiveness analysis was performed and relied solely on facility data for total equipment and installation costs. Costs ranged from approximately \$165,000 to \$2.89 million dollars for tanks ranging in size from 30 to 275 feet in diameter. Figure 4.5 shows the cost curve for equipment and installation based on information provided by seven facilities. Figure 4.6 shows the resulting cost curves for each iteration.

Figure 4.5 - Facility Cost Curve

Figure 4.6 - Cost Curve Comparison

Operating and Maintenance (O&M) Costs

Dome suppliers, dome maintenance providers, and facilities provided information about maintenance required to keep a dome in good operating condition. The typical maintenance for domes involves re-sealing of seams. Common signs of degrading seals and gaskets include panels pulling away from seams or bolts beginning to uplift from seams. One dome supplier stated that, over 46 years of operation, they have only witnessed the need for minimal maintenance to gaskets and seals. This supplier estimated that a complete re-seal or re-gasket may be needed after 20 years of dome service. Two dome maintenance service providers stated that typical maintenance they perform involves preparing the aluminum surface and applying a sealant or tape to the hubcaps and seams. The dome maintenance service providers estimated that re-sealing would be required every 10 to 25 or more years. One facility stated that they apply caulking to seal gaps on the dome and estimated that they would need to seal the dome about every 20 years. Costs were obtained from the dome maintenance service providers for tanks of different diameters. The cost-analysis assumes that maintenance would be required every 20 years (1.5 times throughout the 50-year life of the dome). The maintenance cost was estimated at \$70,000 for a 53-foot diameter tank, \$100,000 for a 74-foot diameter tank, \$200,000 for a 200-foot diameter tank, and \$250,000 for a 260-foot diameter tank. The cost curve used to estimate O&M costs for tanks of different diameters is shown in Figure 4.6. The discounted cash flow method at 4% was applied to determine total O&M cost.

Figure 4.6 – O&M Cost Curve*OGI Monitoring*

PAR 463 will require facilities to monitor storage tanks for leaks by conducting tank farm inspections with an OGI device every other calendar week for all tanks as well as semi-annual component inspections. Approximately 1,010 tanks will be subject to PAR 463, however, only above-ground stationary tanks with a capacity > 75,000 liters (19,815 gallons) storing organic liquid with TVP \geq 1.5 psi, above-ground stationary tanks with a capacity \geq 150,000 liters (39,630 gallons) storing organic liquid with TVP \geq 0.5 psi, above-ground tanks used to store gasoline with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons), and tanks with the PTE to emit 6 tons per year or greater year used in Crude Oil And Natural Gas Production Operations will be subject to OGI inspections. Staff estimates that there are 679 tanks located at 429 facilities that are subject to Rule 463 and not subject to Rule 1178 that will be subject to the OGI monitoring requirements. Staff did not include tanks subject to both Rules 463 and 1178 in the cost-effectiveness analysis because the costs and emission reductions were already accounted for as part of the Rule 1178 rule development. However, the capital costs for OGI devices are conservative as a company subject to Rule 1178 may have multiple facilities, and some of those facilities may be subject to Rule 463, but not Rule 1178. In which case, the capital costs for OGI devices were accounted for in both the Rule 1178 rule development and PAR 463. Costs for OGI inspections were obtained from the 2023 Rule 1178 amendment process and the 2024 PAR 1148.1 rule development.

Staff assumed OGI camera ownership for each company identified under the Rule 463 affected universe. Staff estimates that 91 companies make up the 679 tanks subject to the OGI requirements. Camera costs are estimated at \$120,000 per device with a ten-year equipment lifespan. Operating and maintenance costs are estimated to be \$1,500 per year with an additional \$400 labor cost per inspection. The total capital cost for OGI inspections for 679 tanks is \$10,920,000 over the span of ten years. The total O&M cost is \$11,500,000. The cost-effectiveness to require OGI monitoring inspections every other calendar week is \$15,400.

The cost-effectiveness for each proposed requirement and the overall cost-effectiveness is summarized in Table 4-3 below.

Table 4-3 Summary of Cost-Effectiveness

Proposed Requirement	Annualized Cost	Annual Emission Reductions (Tons per Year)	Cost-Effectiveness (\$/ton)
Doming of EFR tanks storing organic liquids with a TVP of 3.0 psia or above	\$443,400	17.90	\$24,800
More stringent primary and secondary seal gap requirements	\$0	0	\$0
Secondary seals on all floating roof tanks	\$20,600	3.09	\$6,700
OGI inspections every other week	\$2,265,600	146.74	\$15,400
Increasing the control efficiency for VRUs	\$1,849,300	0*	N/A
Overall	\$4,578,900	167.73	\$27,300*

*The overall rule cost-effectiveness includes the costs associated with increasing the control efficiency of the vapor recovery units to 98%. Staff did not include the emission reductions from increasing the control efficiency for VRUs as part of the cost-effectiveness analysis as it is assumed facilities are already meeting the proposed standard. As such, the emission reductions are not included in Table 4-1 above, however, the emission reductions are being submitted for SIP credit.

INCREMENTAL COST-EFFECTIVENESS

Health and Safety Code Section 40920.6 requires an incremental cost-effectiveness analysis for BARCT rules or emission reduction strategies when there is more than one control option which would achieve the emission reduction objective of the proposed amendments, relative to ozone, CO, SO_x, NO_x, and their precursors. Since volatile organic compounds are precursors to ozone, an incremental cost-effectiveness analysis is required for controls proposed to limit VOC emissions. Incremental cost-effectiveness is the difference in the dollar costs divided by the difference in the emission reduction potentials between each progressively more stringent potential control option as compared to the next less expensive control option.

Incremental cost-effectiveness is calculated as following:

$$\text{Incremental Cost-Effectiveness} = \frac{\text{Cost of Option 2} - \text{Cost of Option 1}}{\text{Benefit of Option 2} - \text{Benefit of Option 1}}$$

PAR 463 would require facilities to conduct more stringent control or monitoring requirements. The next progressively more stringent potential control option (if applicable) is different for each proposed requirement.

Incremental Cost-Effectiveness for OGI Inspections

PAR 463 will require periodic OGI inspections. Staff analyzed costs and emission reductions from progressively more frequent intervals (annually to daily). The incremental cost-effectiveness is provided in Table 4-4. The most stringent frequency that is cost-effective and incrementally cost-effective is every other calendar week. The next progressively more stringent requirement is to require OGI inspections on a weekly basis. The total annual cost for weekly OGI inspections for all facilities is \$3,284,800 and the estimated reductions are 153 tons per year.

$$\text{Incremental cost-effectiveness} = (\$3,284,800 - \$2,265,600) / (152.9 - 146.7) = \$164,400 \text{ per ton of VOC reduced}$$

The incremental cost-effectiveness analysis presented above demonstrates that the alternative control option is not incrementally cost-effective when compared to the control strategy of the proposed amendments.

Incremental Cost-Effectiveness for Doming

PAR 463 will require facilities to dome any external floating roof tank storing organic liquid with a true vapor pressure of 3 psia or greater the next time the tank is cleaned and degassed, or the time of the next internal API 653 inspection but not to exceed twenty-three years after a test verifies that the organic liquid stored has a TVP of 3 psia or greater.

The next progressively more stringent requirement would be to require all external floating roof tanks to be domed, regardless of the TVP of the organic liquid stored. A cost-effectiveness analysis for doming all external floating roof tanks regardless of the TVP of the material stored was conducted. The same assumptions were made for doming all EFR tanks regardless of TVP as the cost-effectiveness analysis for doming tanks with TVP of 3 psia and greater. BREEZE TankESP PRO software was used to calculate emission reductions. Approximately 83.5% of EFR tanks storing material with TVP less than 3 psia are used to store heavy petroleum products such as diesel, jet fuel and kerosene. These products have a TVP of less than 0.1 psia. Because of the low TVP, far less emission reductions result in doming tanks storing such material. Staff analyzed EFR tanks for which emissions were reported in the 2022 Annual Emission Reports. The incremental cost-effectiveness to dome all tanks is:

$$\text{Incremental cost-effectiveness} = (\$93,575,711 - \$20,070,900) / (2080 - 894.94) = \$62,000 \text{ per ton of VOC reduced}$$

The incremental cost-effectiveness analysis presented above demonstrates that the alternative control option is not incrementally cost-effective when compared to the control strategy of the proposed amendments.

Table 4-4 Summary of Incremental Cost-Effectiveness

Proposed Requirement	More Stringent Potential Requirement	Incremental Cost-Effectiveness
OGI inspections every two weeks	Weekly OGI inspections	\$164,400
Doming for EFR tanks storing materials with a TVP \geq 3.0 psia	Doming for all EFR tanks	\$62,000

SOCIOECONOMIC IMPACT ASSESSMENT

~~A socioeconomic impact assessment will be prepared and released for public review and comment as a separate document at least 30 days prior to the South Coast AQMD Governing Board Hearing, which is scheduled for June 7, 2024 (subject to change). A Draft Socioeconomic Impact Assessment for PAR 463 was released for public review and comment on May 7, 2024. For a copy of the Final Socioeconomic Impact Assessment, please refer to Attachment I of the June 7, 2024, Governing Board package.~~

CALIFORNIA ENVIRONMENTAL QUALITY ACT ANALYSIS

PAR 463 is considered a “project” as defined by the California Environmental Quality Act (CEQA) and the South Coast AQMD is the designated lead agency. Pursuant to South Coast AQMD’s Certified Regulatory Program (Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l); codified in South Coast AQMD Rule 110) and CEQA Guidelines Section 15070, the South Coast AQMD prepared an Environmental Assessment (EA) with less than significant impacts for PAR 463, which is a substitute CEQA document; prepared in lieu of a Negative Declaration pursuant to CEQA Guidelines Section 15252. A Draft EA was released for a 30-day public comment and review period from March 27, 2024 to April 26, 2024 to provide public agencies and the public an opportunity to obtain, review, and comment on the environmental analysis. ~~No comments were made relative to the analysis in the Draft EA, and responses to the comments will be included in~~ For a copy of the Final EA, please refer to Attachment H of the June 7, 2024 Governing Board package.

DRAFT FINDINGS UNDER HEALTH AND SAFETY CODE SECTION 40727

Requirements to Make Findings

Health and Safety Code Section 40727 requires that the Governing Board make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the staff report. In order to determine compliance with Health and Safety Code Section 40727, Health and Safety Code Section 40727.2

requires a written analysis comparing the proposed amended rule with existing regulations, if the rule meets certain requirements.

Necessity

A need exists to amend PAR 463 to implement best available retrofit control technology, emission reduction strategies recommended in the WCWLB and SLA CERPs as part of the AB 617 commitment, Control Measure FUG-01 in the 2022 Final AQMP, and a contingency measure for the Coachella Valley Contingency Measure SIP Revision for the 2008 8-Hour Ozone Standard.

Authority

The South Coast AQMD obtains its authority to adopt, amend, or repeal rules and regulations pursuant to Health and Safety Code Sections 39002, 40000, 40001, 40440, 40702, 40725 through 40728, 40920.6, and 41508.

Clarity

PAR 463 is written or displayed so that its meaning can be easily understood by the persons directly affected by them.

Consistency

PAR 463 is in harmony with and not in conflict with or contradictory to existing statutes, court decisions, or state or federal regulations.

Non-Duplication

PAR 463 will not impose the same requirements as any existing state or federal regulations. The proposed amended rule is necessary and proper to execute the powers and duties granted to, and imposed upon, the South Coast AQMD.

Reference

In amending this rule, the following statutes which the South Coast AQMD hereby implements, interprets or makes specific are referenced: Health and Safety Code Sections 39002, 40001, 40406, 40702, 40440(a), and 40725 through 40728.5.

COMPARATIVE ANALYSIS

Under Health and Safety Code Section 40727.2, the South Coast AQMD is required to perform a comparative written analysis when adopting, amending, or repealing a rule or regulation. The comparative analysis is relative to existing federal requirements, existing or proposed South Coast AQMD rules and air pollution control requirements and guidelines which are applicable to storage tanks.

	PAR 463	Rule 1178	40 CFR 60
Applicability	<ul style="list-style-type: none"> •Stationary above-Ground storage tanks with capacity greater than 75K liters (19,815 gal) with volatile organic liquids with TVP of 1.5 psi or greater •Stationary above-ground storage tanks with capacity of 150K liters (39,630 gal) or greater than with volatile organic liquids with TVP of 0.5 psi or greater •Above-ground storage tanks used for gasoline with cap between 950 liters (251 gal) and 75k liters (19,815 gal) •Any tank with potential VOC emissions of 6 tons per year or greater used in Crude Oil or Natural Gas Production Operations 	<ul style="list-style-type: none"> •Storage tanks located at any Petroleum Facility that emits more than 40K lbs (20 tons) per year VOC in any inventory year starting in 2000 that: <ul style="list-style-type: none"> • Have the potential for VOC emissions of 6 tons per year or greater •Storage tanks with a capacity equal to or greater than 75K liters (19,815 gal) storing organic liquid with a TVP greater than 5mm Hg (0.1 psia) absolute under actual storage conditions 	<ul style="list-style-type: none"> •Storage constructed, reconstructed or modified after July 23, 1984 with capacity of 75 m3 or greater •Tanks with capacity of 19,185-39,889 gallons with a vapor pressure between 4 psia and 11.1 psia and tanks with capacity greater than 39,889 gal with vapor pressure between 0.75 psia and 11.1 psia
Requirements	<ul style="list-style-type: none"> •Seals/covers on all roof openings • Rim seals consisting of primary and secondary seals on all floating roof tanks •Vapor recovery systems on fixed roof tanks with at least 98% reduction by weight •Gap requirements for primary and secondary floating roof seals •Doming for EFR tanks storing organic liquids with a TVP of 3.0 psia or greater •Contingencies for the applicable ozone NAAQS 	<ul style="list-style-type: none"> •Fixed and floating roofs with 98% control •Seals/covers on all roof openings •Rim seals consisting of primary and secondary seals on all floating roof tanks •Vapor recovery with 98% efficiency on all fixed roof tanks •Gap requirements for primary and secondary floating roof seals •Doming for crude oil tanks 	<ul style="list-style-type: none"> •Seals and covers on all roof openings •Rim seals consisting of primary and secondary seals •Vapor recovery of 95% by volume on all fixed roof tanks •Gap requirements for primary and secondary seals •Fixed roofs with internal floating roofs only require one seal •External floating roofs require two seal system greater than or equal to 76.6 kPa (11psia) must have a control device or equivalent (fixed roof and internal floating roof)
Reporting	<ul style="list-style-type: none"> •Submit reports for all semi-annual inspections •Submit report for all leaks identified during any inspection •Executive Officer shall be notified electronically at least two days prior to the start of any tank-emptying or roof-refloating operation •Submit reports of TVP tests with results of 3.0 psia or above 	<ul style="list-style-type: none"> •Submit reports for all semi-annual and quarterly inspections (non-OGI) •Submit report for all leaks identified during any inspection 	<ul style="list-style-type: none"> •Inspection reports of floating roof tanks submitted within 30 days •For fixed roofs vented to a flare or incinerator a report shall be submitted indicating any period of pilot flame out within six months of initial start-up and on a semi-annual basis thereafter •Records to be kept for a minimum of two years

Monitoring	<ul style="list-style-type: none"> •Periodic gap measurements for floating roof tanks •OGI tank farm monitoring every two weeks for all tanks and additional semi-annual OGI inspections for floating roof tanks 	<ul style="list-style-type: none"> •Periodic gap measurements for floating roof tanks •Periodic Method 21 measurements for fixed roof tanks •Weekly OGI monitoring for all tanks and additional semi-annual OGI inspections for floating roof tanks 	<ul style="list-style-type: none"> •Measurements of gaps between the tank wall and the primary seal (seal gaps) shall be performed during the hydrostatic testing of the vessel or within 60 days of the initial fill with volatile organic liquid and at least once every five years thereafter •Measurements of gaps between the tank wall and the secondary seal shall be performed within 60 days of the initial fill with volatile organic liquid and at least once per year thereafter
Record Keeping	<ul style="list-style-type: none"> •Self-inspection and repair records must be held and available for a period of 3 years •All compliance inspection reports and documents shall be submitted to the Executive Officer either electronically or by hard copy within 5 working days of completion of the self-inspection •If a tank is determined to be in violation of the requirements of this rule, a written report shall be submitted to the Executive Officer within 120 hours of the determination of non-compliance •Emissions reports must be held and available for the most recent two year period •TVP test results must be kept for the most recent 20 year period •Digital and written records of all leaks identified during OGI tank farm inspections •Written records of all leaks identified during OGI component inspections 	<ul style="list-style-type: none"> •Written records of inspections and findings •Digital recordings of all leaks identified during OGI inspections •All data required by this rule shall be maintained for at least five years and made available for inspection by the Executive Officer 	<ul style="list-style-type: none"> •Most records kept for two years except records that contain the dimensions and capacity of a storage vessel which must be available for the life of the unit

APPENDIX A: RESPONSE TO PUBLIC COMMENTS

Public Workshop Comments

Comment Letters

Public Workshop Comments

Public Workshop Commenter #1: Connie Cunningham – Zenith Energy West Coast Terminals

The commenter highlighted the fast pace of the rule development. The commenter also requested:

1a) Clarity on the applicability of the OGI inspections.

1b) That the frequency of the OGI component inspections mirror those of the semi-annual floating roof inspections at four to eight months.

1c) That staff consider another doming analysis that considers the cost for larger tanks as the current analysis looked at tanks that ranged in size from 30ft to 144ft in diameter. The commenter stated that their facility has nine tanks that are 200 ft to 299 ft in diameter. With the high cost of doming in combination with the relatively low emission reductions at 0.01 tons/day the commenter expressed a preference to retire Emission Reduction Credits (ERCs) in lieu of doming.

Staff Response to Public Workshop Commenter #1:

Staff acknowledges the fast pace of the rule development. The pace of the PAR 463 rulemaking schedule is attributed to the need for ozone NAAQS contingency measures to be adopted by South Coast AQMD and submitted into the SIP.

1a) Subparagraph (f)(3)(D) was updated to specify that the following tanks are subject to the OGI monitoring requirements: tanks with a capacity of 75,000 liters (19,815 gallons) and above storing organic liquid with a true vapor pressure of 1.5 psi or greater, tanks with a capacity of 150,000 liters (39,630 gallons) and above storing organic liquid with a true vapor pressure of 0.5 psi or greater, tanks with a capacity of 950 liters (251 gallons) to 75,000 liters (19,815 gallons) used to store gasoline, and tanks with a PTE of six tons per year or greater. Tanks subject to OGI requirements mirror the applicability for tank roof requirements specified in subdivision (d) and paragraph (e)(1).

1b) The frequency of inspections in subclause (f)(3)(D)(iii)(A) was updated to mirror the frequency of the existing semi-annual floating roof tank inspections at four-to-eight-month intervals.

1c) Staff used the cost curve developed in the Rule 1178 rule development to estimate doming costs. The cost curve incorporated vendor data which reflects an exponential increase in doming costs for larger diameter tanks. Staff included two new tanks at 253 feet and 299 feet in diameter to the sample group to determine if the addition of larger tanks had an impact on the cost-effectiveness analysis. While the addition of the new tanks added more costs, the emissions reductions achieved also increased. The updated cost-effectiveness is \$24,800 per ton of VOC reduced which is still below the inflation adjusted cost-effectiveness threshold of \$40,168.49. The new analysis indicates that the cost curve equation used accounted for the increasing costs of doming on larger tanks. Furthermore, the evaluation considered the emission reductions achieved over the life of the equipment (50 years) and indicates that while the cost increases exponentially

for the large tanks, doming overall is cost-effective. Therefore, staff is continuing to propose requiring domes on any EFR tank storing organic liquids with a TVP of 3.0 psia or greater. ERCs are required to offset emission increases of one pound per day or greater under New Source Review. ERCs cannot be used in lieu of installing emission control devices required in South Coast AQMD rules.

Public Workshop Commenter #2: Alok Das – World Oil Recycling

The commenter requested the following:

- 2a) Clarify which tanks are subject to the OGI monitoring requirements in PAR 463.
- 2b) Clarify the meaning of “component” in PAR 463.
- 2c) Clarify the OGI tank farm procedure when the storage tanks do not have any type of platform.
- 2d) Consider adding an exemption from the proposed OGI monitoring requirements for tanks using an active VRU system.

Staff Response to Public Workshop Commenter #2:

- 2a) See response to Public Workshop Commenter 1a.
- 2b) PAR 463 was updated to incorporate the Rule 1173 definition of “component” with modifications to include tank specific parts.
- 2c) The intent of the OGI tank farm inspections is to identify visible vapors. The OGI tank farm inspection procedure was updated to allow for a follow up inspection to be conducted from a tank’s platform or a vantage point capable of seeing the tank roof in the event a tank has no platform. Additionally, the definition for Component Inspection and the exemption from OGI inspections in unsafe conditions in PAR 463 was updated to allow inspections from a vantage point in the event there is no tank platform.
- 2d) Staff is not considering an exemption from OGI inspections for tanks using active VRU systems. Leaks can still occur in tanks using active VRU systems and OGI inspections are an additional monitoring tool to more quickly identify leaks. However, facilities have the option to apply for a permit condition to restrict the products stored in the tank to below the TVP thresholds for OGI inspection applicability.

Public Workshop Commenter #3: George L. Morovich – Tank and Environmental Technologies Inc.

The commenter highlighted the upcoming U.S. EPA Tanks 5.0 software that is currently in the final stages of development and indicated that it would be a valuable tool to include in the rule language for owners and operators to calculate their emissions.

Staff Response to Public Workshop Commenter #3:

Staff is aware of the development of the U.S. EPA Tanks 5.0 program and added a clarification in Chapter 3 that, pending U.S. EPA approval, Tanks 5.0 will be an acceptable tool to calculate emissions. However, if U.S. EPA states at some point in the future that U.S. EPA Tanks 5.0 is outdated or is no longer appropriate for use for some other reason, then U.S. EPA Tanks 5.0 will not be considered an acceptable tool to calculate emissions for compliance with South Coast AQMD rules.

Public Workshop Commenter #4: Mark Abramowitz – Community Environmental Services

The commenter expressed the following:

4a) Asked for clarification if there was any technical or feasibility reason why OGI inspections could not be conducted at more frequent intervals. Staff's proposal of weekly OGI inspections as contingency measures indicates that weekly OGI inspections are feasible.

4b) Cost-effectiveness thresholds are guidelines, but should not be considered a strict number.

4c) By not implementing the more frequent OGI inspections proposed as contingency measures as regular rule requirements, South Coast AQMD is not being consistent with state law that requires that emission reductions be achieved in AB 617 communities as soon as possible.

Staff Response to Public Workshop Commenter #4:

4a) PAR 463 rule development included a BARCT assessment, which includes a technological feasibility component as well as a cost-effectiveness and incremental cost-effectiveness analysis. As such, staff would not incorporate BARCT requirements or contingency measures into PAR 463 that are not technologically feasible. Staff does not see any technical or feasibility issues with conducting OGI inspections on a more frequent basis. Owners or operators can conduct OGI inspections more regularly than PAR 463 requires. Although weekly OGI tank farm inspections are technically feasible, they were not determined to be incrementally cost-effective, and therefore weekly OGI tank farm inspections are being proposed as contingency measures.

4b) Cost-effectiveness thresholds are guidelines and as such staff proposed OGI tank farm inspections to be conducted at a frequency of every two weeks as BARCT because it was the most stringent frequency that was both cost-effective and incrementally cost-effective. Staff proposed the contingency measures at a frequency that was cost-effective, but not incrementally cost-effective. Staff is proposing contingency measures to address U.S. EPA requirements, as described in Chapter 1. Since staff must include contingency measures in PAR 463, cost-effectiveness and incremental cost-effectiveness analysis were used to determine the OGI tank farm inspection frequency that represents BARCT (every two weeks) and a more stringent OGI tank farm inspection frequency for contingency measures (every week).

4c) AB 617 requires air districts that are in nonattainment for one or more air pollutants to adopt an expedited schedule for the implementation of BARCT. PAR 463 included a BARCT assessment

consistent with state law and implements AB 617 CERP objectives by requiring enhanced LDAR through OGI inspections. OGI tank farm inspections are being proposed at a frequency of every two weeks and OGI component inspections are being proposed semi-annually, in addition to the existing semi-annual inspections required in Rule 463. OGI inspection requirements will take effect on July 1, 2025. The implementation date reflects the lead time necessary to procure OGI cameras and for operators to complete the required OGI manufacturer training or CARB training, while achieving emission reductions as soon as possible.

Public Workshop Commenter #5: Justin Avril – Olympus Terminals

The commenter requested clarity on the implementation timeline for the proposed OGI inspections pending the adoption of PAR 463.

Staff Response to Public Workshop Commenter #5:

The proposed OGI requirements in PAR 463 would come into effect on July 1, 2025.

Public Workshop Commenter #6: Cinnamon Smith – Kinder Morgan

The commenter asked the following:

6a) If the approved list of seal referenced in paragraph (e)(5) supersedes the categories of seals in Attachment A and how to gain access to the list.

6b) If an EFR tank has a permit condition that limits the TVP of the product stored to less than 3.0 psia would that tank still be required to conduct the TVP tests?

6c) When the “most recent” 20 year period for TVP test result recordkeeping begins.

Staff Response to Public Workshop Commenter #6:

6a) The list of approved seals referenced in paragraph (e)(5) does not supersede the list of seals in Attachment A. The list of seals in attachment A are used by facilities to determine what kind of seals they need to install as well as for seal manufacturers to get approvals for seal designs. A facility seeking to install a seal would look to the list of approved seals referenced in paragraph (e)(5) for approved vendors or manufacturers. Seal approvals are based on the categories found in Attachment A of PAR 463. The list of approved seals referenced in paragraph (e)(5) will be posted on the permitting page of the South Coast AQMD website.

6b) Staff responded during the Public Workshop that an exemption from TVP testing requirements would be possible for EFR tanks with permit conditions limiting the TVP of the organic liquid stored to < 3.0 psia. However, upon further consideration staff is not including the requested exemption into PAR 463. TVP testing requirements are essential to determine compliance with the doming requirements.

6c) The recordkeeping requirements for TVP tests begins on January 1, 2025 and is not retroactive. Once facilities have more than 20 years of TVP tests they would only be required to retain TVP test results from the most recent 20 year period.

Subject: PAR 463 Comments

Zenith Energy West Coast Terminals (ZEWCT) is pleased to submit the following comments to be considered for PAR 463 rule language.

First, this rule making process has been extremely fast and rushed. The proposed rule language was only recently released and according to the calendar, it does not appear that there will be another iteration before the public hearing in June. ZEWCT would like to propose splitting PAR 463 into two rule-making events. The optical gas imaging inspection (OGI) language is similar to Rule 1178 and has fewer potential issues while the doming of external floating roof (EFR) tanks requires more discussion as the draft rule language seems to be changing more frequently.

1-1

OGI related:

PAR 463 (f)(3)(D)(iii)(A):

Conduct a Component Inspection for each floating roof Tank at least ~~once every six months~~ twice per year at 4 to 8 months intervals; and

REASON: It was stated that these inspections would ideally occur at the same time as the semi-annual seal inspections which have a frequency of twice per year at 4 to 8 months intervals in (e)(3)(A).

1-2

Also, it would be much clearer if there was an exemption in section (h) for OGI tank farm and component inspections for tanks that store a product of less than 0.5 psia for tanks with a capacity of 39,630 gallons are greater or less than 1.5 psia for tanks with a capacity of 19,815 gallons are greater.

Doming related:

PAR 463 (d)(1)(H):

Beginning three years after [Date of Adoption] the owner or operator shall install a Domed Roof on External Floating Roof Tanks used to store Organic Liquid with a True Vapor Pressure of 3 psia or greater as demonstrated pursuant to subparagraph (d)(1)(I) at the time of the next out of service API 653 inspection or the next time the Tank is emptied, ~~and~~ degassed, and cleaned.

1-3

<https://zenithem.sharepoint.com/sites/HSE/Management/West Coast Terminals/Non-Facility Specific/RECLAIM/PAR463 comments2.docx>

ZENITH ENERGY WEST COAST TERMINALS LLC

18000 Studebaker Rd., Suite 960
Cerritos, CA 90703

REASON: In the previous presentations, it was emphasized that doming was only cost effective if it occurred during an *out of service* API 653 inspection. Out of service is added for clarification as to the type of API 653 inspection that is to occur. It is during this type of inspection when the tank is not only emptied and degassed but also cleaned (removal of all vapors, liquids, sludge, etc) it is safe for workers to perform major modifications to a tank, such as adding a dome. With a cleaned tank, dome construction can occur on the tank roof which is necessary for large diameter tanks with limited surrounding flat land. If the dome is to be constructed adjacent to the tank, there must be enough flat space next to the tank to construct the dome (of the same tank diameter) and a suitable location for a crane to have the horizontal reach to laterally move and lift the dome to the top of the tank. ZEWCT does not have this kind of room next to our tanks, especially for our 250 and 300 foot diameter tanks.

1-3
cont.

In the presentation, it was stated that 0.01 tpy of emissions would be reduced due to doming EFR tanks. This amounts to 20 lbs/day. If we were to retire 20 ERCs at \$5,000 each for a total of \$100,000, therefore doming one tank at a cost of \$3 million appears to be unreasonable.

1-4

Staff identified only two of our tanks out of the 20 EFR tanks slated to be domed under this program. According to the same parameters used by staff, ZEWCT would have a minimum of 6 EFR tanks and up to a potential of 17 EFR tanks to be domed. According to the staff report, the cost effectiveness for doming EFRs was based on tanks with diameters of 30-144 feet. ZEWCT has three tanks at the upper end of this analysis and 11 tanks above that, including five tanks *more than twice the diameter* size used in the cost effectiveness analysis. According to the exponential Facility Cost Curve equation, the cost to dome our larger EFR tanks would potentially be 2 to 6 times more than what is specified in the staff report as being cost effective. Therefore, it is *not* cost effective for ZEWCT to dome the larger diameter tanks.

1-5

Thank you for considering these comments. If you have any questions, please email, or call me at (562) 233-5370.

Sincerely,

CM Cunningham, PE
HSER Manager
Zenith Energy West Coast Terminals LLC

Staff Response to Comment Letter #1*Response to Comment 1-1:*

Staff acknowledges the fast pace of the rule development. The updated Draft Rule Language and Draft Staff Report will be released no later than May 7, 2024, giving the public at least 31 days prior to the scheduled Public Hearing on June 7, 2024 to review the changes. Staff is not considering bifurcation of PAR 463 at this time.

Response to Comment 1-2:

See response to Public Workshop Commenter 1a and 1b.

Response to Comment 1-3:

PAR 463 subparagraph (d)(1)(H) was updated to state that domes must be installed at the next internal API 653 inspection or the next time the tank is degassed and cleaned. Staff removed the term “emptied” as tanks will need to be emptied to be cleaned and degassed. Staff did not include the qualifier of “out of service” API 653 inspections, as tanks are cleaned and degassed during an internal API 653 inspection, which satisfies the conditions to dome.

Response to Comment 1-4:

See response to Public Workshop Commenter 1c.

Response to Comment 1-5:

See response to Public Workshop Commenter 1c.

Re: SCAQMD Proposed Amended Rule 463, Organic Liquid Storage – WSPA Comments on Preliminary Draft Rule Language

Dear Mr. Morris,

Western States Petroleum Association (WSPA) appreciates the opportunity to participate in the Working Group Meetings (WGMs) for South Coast Air Quality Management District (SCAQMD or District) Proposed Amended Rule 463, Organic Liquid Storage (PAR 463). WSPA is a non-profit trade association representing companies that explore for, produce, refine, transport, and market petroleum, petroleum products, natural gas, renewable fuels, and other energy supplies in five western states including California. WSPA has been an active participant in air quality planning issues for over 30 years. WSPA-member companies operate petroleum refineries and other facilities in the South Coast Air Basin that will be impacted by PAR 463.

SCAQMD released initial preliminary draft rule language for PAR 463 on March 22, 2024.¹ WSPA offers the following comments on the draft rule language.

- 1. PAR 463(d)(3)(C) would require a control efficiency of 98% for Fixed Roof Tanks, despite these tanks holding permits based on a 95% control efficiency. The proposed language in this section should revert back to the current language and maintain the requirement at 95%.**

The District has proposed that Fixed Roof Tank emissions be vented to a Fuel Gas System or an Emissions Control System with an overall control efficiency of 98%. The control efficiency in the current rule is 95%. In the PAR 463 Preliminary Draft Staff Report (PDSR), SCAQMD references the recent rulemaking for Rule 1178, noting that 98% efficiency is achievable based on performance test results for combustion and carbon adsorption systems.² The report also suggests that SCAQMD is assuming no costs would be needed to meet a 98% control efficiency.³ The PAR 1178 staff report notes that the most common type of vapor recovery system used on fixed roof tanks are combustion systems, with one supplier guaranteeing 98% control efficiency on such systems.⁴ Adsorption systems have higher

⁴ SCAQMD PAR 1178 Staff Report. Available at: <https://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/1178/par-1178-draft-staff-report-final.pdf?sfvrsn=10>

April 10, 2024

Page 2

capital costs and are less desirable for tanks, and the same supplier guaranteed 95% control efficiency for such systems.⁵

During the PAR 1178 rulemaking, the District reported having reviewed four initial performance tests, which all showed greater than 99% control efficiency.⁶ The District has not defined the number of vapor recovery systems in the regulated community, nor have they presented any evidence to demonstrate that these four tests are representative for all affected equipment. Furthermore, the District has not yet provided information to demonstrate that all existing operating emission control systems affected by the rule would meet the proposed control efficiency.⁷ It is important that this information be provided to stakeholders prior to rule adoption.

Current permits are issued based on a 95% control efficiency. If the District intends to require a higher control efficiency standard, it must provide evidence to support the assertion that all existing fixed roof tanks with vapor recovery systems can meet this standard without modifications. If the District is not able to provide such technical evidence, the proposal would require a complete BARCT analysis, including evaluation of technical feasibility and potential compliance costs.

Additionally, WSPA would like to understand the basis for claiming 0.005 tons per day of VOC emission reductions from this proposed change.⁸ If, as asserted in the PDSR, all existing emission control systems already meet the proposed control efficiency, then there would be no creditable reductions available.

WSPA recommends that the language revert back to the current rule language:

The vapor recovery system shall have an efficiency of at least 95 percent by weight, or vent Tank emissions to a Fuel Gas System.

- 2. In estimating the cost-effectiveness for doming of external floating roof tanks, the District has provided an incomplete analysis of potential cost and potential emission reductions. WSPA recommends that SCAQMD revisit the cost-effectiveness analysis to account for all potential costs, and updates emission reduction estimates.**

The California Health & Safety Code requires the District, in adopting any Best Available Retrofit Control Technology (BARCT) standard, to ensure the standard is technologically feasible, to take into account "environmental, energy, and economic impacts" and to assess the cost-effectiveness of the proposed control options.⁹ Cost-effectiveness is defined as the cost, in dollars, of the control alternative, divided by the emission reduction benefits, in tons, of the control alternative.¹⁰ If the cost per ton of emissions reduced is less than the established cost-effectiveness threshold, then the control method is considered to be cost-effective. Cost-effectiveness evaluations need to consider both capital costs (e.g., equipment procurement, shipping, engineering, construction, and installation) and operating (including expenditures

Page 3

associated with utilities, labor, and replacement) costs. Currently, the District is applying a cost-effectiveness threshold of \$36,000 per ton of VOC emissions reduced, consistent with the 2022 Air Quality Management Plan (2022 AQMP).¹¹

In estimating costs for doming of external floating roof tanks, the District has not provided a complete picture of the potential costs or potential emission reductions. The District cost estimates include capital, installation, and operating costs for the dome. However, in doming tanks, there are multiple other costs that may be required depending on the current configuration of the tank. For example, rolling ladders would need to be replaced with vertical ladders. Replacement of rolling ladders is necessary due to the risk of catastrophic damage that would result from a ladder crashing into the dome. Additionally, gauge hatches would need to be replaced with slotted gauge poles for product quality testing. Finally, the cost estimates have not been adjusted to reflect cost at the time of doming, which could be as much as 23 years after the date of rule adoption.

SCAQMD has also overestimated the potential emission reductions resulting from the proposed installation of the domes. For example, slotted gauge poles would result in higher emissions from the tanks, partially negating some of the claimed emission reductions. In addition, The Advanced Clean Cars II Regulation is designed to reach 100% new vehicle zero emission vehicles and clean plug-in hybrid electric vehicles in California by the 2035 model year. This planned phase-out of gasoline powered vehicles is expected to cause a significant reduction in California gasoline consumption. The proposed 50-year useful life of the dome is therefore overestimated given California's other regulatory mandates.

WSPA recommends that the District revisit the cost-effectiveness analysis to include all costs associated with doming, update the estimate of emission reductions, and reconsider the useful life of the equipment.

- 3. PAR 463(d)(1)(I) would require facilities to demonstrate the true vapor pressure (TVP) of organic liquid in an External Floating Roof Tank (EFRT) using an initial test effective January 1, 2025. EFRTs storing organic liquids with TVP below 3 psia would be required to conduct subsequent tests at least once every six calendar months. PAR 463(g)(6) would require results of TVP monitoring greater than 3.0 psia to be reported to the District within one week of measurement. This is a very short time frame that would cause undue burden to facilities. Additionally, the rule should include a provision that allows for a monthly average of TVP measurements to be reported instead of individual measurements when this threshold is exceeded.**

PAR 463(d)(1)(I) states:

Effective January 1, 2025, an owner or operator of an External Floating Roof Tank shall demonstrate the True Vapor Pressure of the Organic Liquid using an initial test, with one representative sample. External Floating Roof Tanks storing Organic Liquids with True Vapor Pressure below 3 psia shall conduct subsequent tests at least once every six calendar months pursuant to the requirements of subdivision (i).

¹¹ SCAQMD Draft Final 2022 Air Quality Management Plan. Available at: <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan>.

2-2
Cont.

2-3

April 10, 2024
Page 4

PAR 463(g)(6) states:

An owner or operator shall report any tests specified in subparagraph (d)(1)(I) that result in a True Vapor Pressure of 3.0 psia or greater to the Executive Officer within one week.

WSPA requests that the language be updated to allow facilities two weeks (14 days) to provide notification to the District when TVP is measured above 3.0 psia.

WSPA requests that the District include a provision that allows for monthly averaging of TVP measurements, similar to allowances provided in Rule 1178. This would give facilities the opportunity to resample the tank or adjust the stock blend as needed to bring the TVP under 3.0 psia. WSPA recommends the language be updated as follows:

PAR 463(d)(1)(I):

Effective January 1, 2025, an owner or operator of an External Floating Roof Tank shall demonstrate the True Vapor Pressure of the Organic Liquid ~~using an initial test, with one representative sample based on a monthly average of sample results.~~ External Floating Roof Tanks storing Organic Liquids with True Vapor Pressure below 3 psia shall conduct subsequent tests ~~to determine the monthly average true vapor pressure~~ at least once every six calendar months pursuant to the requirements of subdivision (i).

PAR 463(g)(6):

An owner or operator shall report any tests specified in subparagraph (d)(1)(I) that result in a True Vapor Pressure of 3.0 psia or greater ~~based on a monthly average~~ to the Executive Officer within ~~one week~~ fourteen days.

4. **PAR 463(d)(2)(d) would require a facility to comply with seal requirements for Internal Floating Roof Tanks when the tanks are scheduled for emptying and degassing, but no later than 10 years after becoming subject to the requirements of the rule. SCAQMD should include the cost of forcing an early turnaround on tanks in the cost-effectiveness analysis. If that analysis is not complete, WSPA recommends that the 10-year installation requirement be removed from the rule.**

PAR 463(d)(2)(D) would require a facility to comply with the Primary and Secondary Seal requirements for Internal Floating Roof Tanks (IFRTs) when the tanks are scheduled for emptying and degassing and install Secondary Seals no later than 10 years after becoming subject to the requirements of the rule. This could force an early turnaround of a tank before it's next required API inspection, adding to the cost of compliance. To our knowledge, SCAQMD has not evaluated the impact of such compliance schedule requirements, nor the associated costs to determine whether such a requirement would be cost-effective. WSPA recommends the proposed language be updated as follows:

Beginning two years after [Date of Adoption], the owner or operator shall comply with the Primary and Secondary Seal requirements for Internal Floating Roof Tanks specified in subparagraph (d)(2)(A) when the Tanks are scheduled for emptying and degassing. ~~The owner or operator shall install Secondary Seals no later than ten years after [Date of Adoption].~~

April 10, 2024
Page 5

- 5. PAR 463(h)(3) exempts storage tanks that are subject to Rule 1178, with exceptions for subdivision (e) and paragraph (c)(42). WSPA recommends that 463(c)(34) should be included among these exceptions.**

PAR 463(h)(3) includes the following exemption:

The provisions of this rule shall not apply to Storage Tanks that are subject to Rule 1178, except for subdivision (e) and paragraph (c)(42).

WSPA suggests that a reference to paragraph (c)(34) be added to the exception list as well. WSPA recommends that the language be updated as follows:

*The provisions of this rule shall not apply to Storage Tanks that are subject to Rule 1178, except for subdivision (e), **paragraph (c)(34)**, and paragraph (c)(42).*

WSPA appreciates the opportunity to provide these comments related to PAR 463. We look forward to continued discussion of this important rulemaking. If you have any questions, please contact me at (310) 808-2146 or via e-mail at ross@wspa.org.

Staff Response to Comment Letter #2

Response to Comment 2-1:

Staff looked at four VRU performance reports with results all over 98% during the PAR 463 rule development process. Three combustion VRUs had initial performance tests with results over 99% efficiency. A facility's carbon adsorption VRU system was stated to be performing at over 99% emission control, which was later confirmed with source test results. Rule 1178 also proposed a 98% control efficiency for VRUs which was supported by another four initial performance tests that indicated the systems were capable of performing at or above 99%. During the 2023 PAR 1178 amendment process staff informed WSPA that any performance tests that suggest the inability or difficulty to meet the proposed requirement should be provided to staff for reconsideration of the BARCT analysis conclusion for emission control systems. Staff similarly asked stakeholders for any performance tests that suggested the inability to meet 98% control efficiency during the PAR 463 rule development process. No performance tests have been submitted that indicate staff's proposal to increase the control efficiency is not feasible.

Staff did not include the emission reductions associated with increased control efficiency of vapor recovery systems into the cost-effectiveness analysis, as it is assumed that all units are already meeting the proposed control efficiency, and staff aims to be conservative in cost-effectiveness analysis. However, the emission reductions associated with increased control efficiency of vapor recovery systems can still be claimed for SIP credit.

Response to Comment 2-2:

Staff used the cost equation used in the 2023 Rule 1178 rule development to estimate doming costs. The cost equation incorporated both vendor quotes to dome tanks from as well as cost data provided by facilities. Facility quotes included all the costs associated with the installation of a dome including the replacement of existing components such as gauge hatches and ladders. The costs provided were adjusted to reflect current day dollars during the cost-effectiveness analysis. Staff conducted an analysis in TankESP to determine if the switch to slotted guidepoles resulted in excess emissions. The analysis showed the use of slotted guidepoles resulted in approximately 7% fewer emissions than the same set of tanks using solid guidepoles. Furthermore, PAR 463 requires all guidepoles to be installed with emission controls, minimizing the potential fugitive emissions associated with the component. Staff accounted for the increasing cost of controls by applying a present value factor to the operation and maintenance costs which included an interest rate of 4%. Furthermore, the cost-effectiveness threshold is adjusted annually to account for inflation as specified in the 2022 Final AQMP. The 50-year useful life for domes was provided by two suppliers during the 2023 Rule 1178 amendment. If facilities expect tanks to be taken out of service due to the Advanced Clean Cars II Regulation and the potential decline of gasoline consumption in California, staff is open to considering permit conditions to remove tanks from service upon a future date in lieu of doming.

Response to Comment 2-3:

PAR 463 was updated to allow facilities 14 days to submit TVP test results that indicate the organic liquid stored in a tank has a TVP ≥ 3.0 psia. Staff included a provision in PAR 463 to give owners or operators the option to submit monthly averages of TVP tests instead of the semi-annual tests. Facilities must begin monthly testing as of January 2025 to utilize monthly averaging. Tanks not commencing monthly testing as of January 2025 shall comply with the semi-annual TVP test requirements.

Response to Comment 2-4:

During the 2023 rule development process for Rule 1178, suppliers stated that tanks would not be required to be emptied and degassed for installation of a secondary seal, however, one facility stated that it is their practice for a tank to be emptied and degassed prior to installing a secondary seal for safety reasons. Staff confirmed that the installation of secondary seals on IFR tanks may result in confined space entry. Therefore, the implementation schedule for secondary seals in PAR 463 was updated to have a back stop date of twenty-two years after the *[Date of Adoption]*. The updated installation backstop includes the two year phase-in period to allow for the permitting process and the 20 year internal API 653 inspection frequency.

Response to Comment 2-5:

PAR 463 was updated to include the definition for Product Change in the list of Rule 463 provisions which apply to Rule 1178 regulated tanks.

Comment Emails

Email #1

Hi Joshua: Following up on our conversation from last week, please find attached some emission information from the dome application (App. 450147) that we had discussed. I have also provided a table that shows we calculated small emissions increase when it was necessary to replace the rolling ladder with a vertical ladder, and the gauge hatch with a slotted gauge pole due to the dome installation. In this situation, the domes were installed on two identical small diameter ERF's storing CARB gasoline. Given this information, I think AQMD should take another look at the cost efficiency calculations. While the annual average TVP for CARB gasoline is over 3 psia, it did not make sense to dome these small diameter tanks based on the circumstances involved.

1-1

As for PAR 463(d)(2)(d), I have confirmed with our Safety Professional and one of our contractors that entering onto the roof of an IFR is a permit required confined space that requires the enterents to be in supplied air and on a tether. A rescue team also needs to be on stand-by. Hot-work would not be allowed, so no-spark tools would be needed which just adds to the time to complete the installation. Therefore, installing secondary seals in-service is a high-risk activity that should be avoided. Based on this, this requirement should be modified so the secondary seal installation coincides with a tanks next outage.

1-2

Let me know if you have any questions regarding this email.

Respectfully,
Jim Adams
Senior Environmental Consultant

Staff Response to Email #1

Response to Comment 1-1:

The analysis in Email Comment 1-1 was conducted using Tanks 4.0, which is no longer supported by the U.S. EPA. The BREEZE TankESP software used by staff to calculate the emission reductions from doming uses the currently approved formulas in AP-42 Chapter 7 to calculate storage tank emissions. Staff used a sample group that consisted of smaller diameter (30 feet) to larger diameter (299 feet) tanks in the analysis to determine the cost-effectiveness of installing domes on EFR tanks storing organic liquids with a TVP of 3.0 psia or greater. The cost-effectiveness for doming is \$24,800 per ton of VOC reduced. Therefore, staff is continuing to propose requiring domes on any EFR tank storing organic liquids with a TVP of 3.0 psia or greater.

Response to Comment 1-2

PREFACE

This document constitutes the Final Environmental Assessment (EA) for Proposed Amended Rule (PAR) 463 – Organic Liquid Storage. The Draft EA was circulated for a 30-day public review and comment period from March 27, 2024 to April 26, 2024. No comment letters were received relative to the analysis in the Draft EA during the comment period.

Subsequent to the release of the Draft EA for public review and comment, the following modifications were made to the proposed project: 1) several definitions and other parts of the rule language were updated for clarity and consistency; 2) the secondary seal compliance schedule was updated; 3) the True Vapor Pressure (TVP) test procedure that allows for monthly averaging was added; 4) the mechanical shoe primary seal requirements for Internal Floating Roof (IFR) tanks were updated; 5) the procedure for conducting Optical gas imaging (OGI) inspections was updated; 6) requirements for vapor recovery systems were added; 7) the recordkeeping and reporting requirements for the TVP tests required for External Floating Roof (EFR) tanks, Vapor Recovery Unit (VRU) Performance Tests, and vapor recovery system performance tests were updated; 8) the exemption from Rule 463 specific to tanks regulated by Rule 1178 was updated to include the definition for Product Change; and 9) references to the revoked 1997 ozone National Ambient Air Quality Standard in the contingency for the South Coast Air Basin were removed.

Therefore, some modifications have been made to the Draft EA to make it a Final EA which include the aforementioned updates and additions made to PAR 463 after the Draft EA was released for the public review and comment period. Specifically, the CEQA analysis in the Final EA was updated to include: 1) an increase in the amount of estimated VOC emissions reductions from 0.43 ton per day to 1.65 ton per day; 2) revised inspection requirements for OGI tank farms to be conducted more frequently, from semi-annually to twice per year at four-to-eight month intervals; and 3) increased the compliance timeframe for the installation of secondary seals from 10 years to 22 years.

To facilitate identification of the changes between the Draft EA and the Final EA, modifications to the document are included as underlined text and text removed from the document is indicated by ~~striktthrough-text~~. To avoid confusion, minor formatting changes are not shown in underline or strikethrough mode.

South Coast AQMD staff has evaluated the modifications made to PAR 463 after the release of the Draft EA for public review and comment and concluded that none of the revisions constitute significant new information, because: 1) no new significant environmental impacts would result from the proposed project; 2) there is no substantial increase in the severity of an environmental impact; 3) no other feasible project alternative or mitigation measure was identified that would clearly lessen the environmental impacts of the project and was considerably different from others previously analyzed, and 4) the Draft EA did not deprive the public from meaningful review and comment. In addition, revisions to PAR 463 and the analysis in response to verbal or written comments during the rule development process would not create new, avoidable significant effects. As a result, these revisions do not require recirculation of the Draft EA pursuant to CEQA Guidelines Sections 15073.5 and 15088.5. Therefore, the Draft EA has been revised to include the aforementioned modifications such that it is now the Final EA.

Project Description

INTRODUCTION

The California Legislature created the South Coast Air Quality Management District (South Coast AQMD) in 1977¹ as the agency responsible for developing and enforcing emission control rules and regulations in the South Coast Air Basin (Basin) and portions of the Salton Sea Air Basin and Mojave Desert Air Basin. By statute, the South Coast AQMD is required to adopt an air quality management plan (AQMP) demonstrating compliance with all federal and state ambient air quality standards for the areas under the jurisdiction of the South Coast AQMD². Furthermore, the South Coast AQMD must adopt rules and regulations that carry out the AQMP³. The AQMP is a regional blueprint for how the South Coast AQMD will achieve air quality standards and healthful air; it contains multiple goals promoting reductions of criteria air pollutants including volatile organic compounds (VOC). The 2022 AQMP included Control Measure FUG-01 – Improved Leak Detection and Repair (LDAR), which explores the potential for newer leak detection technologies to improve current LDAR requirements thereby reducing VOC emissions from fugitive leaks from process and storage equipment at a variety of sources including, but not limited to, oil and gas production sites, petroleum refining, storage and transfer, etc.⁴ Previously, the 2016 AQMP included Control Measure FUG-01 to utilize advanced remote sensing technologies to allow for faster identification and repair of leaks, and the 2012 AQMP included Control Measure FUG-03 – Further Reductions of Fugitive VOC Emissions, which identified the implementation of advanced leak detection technologies, including optical gas imaging (OGI), as a method to reduce the emissions impact from leaks.

In accordance with Assembly Bill (AB) 617, which was signed into state law in 2017, and the California Air Resources Board's (CARB) Community Air Protection Program which implements AB 617, the South Coast AQMD is required to take specific actions to reduce air pollution and toxic air contaminants from commercial and industrial sources to address the disproportionate impacts of air pollution in environmental justice communities. The Wilmington, Carson, and West Long Beach (WCWLB) community, which is qualified as a high priority area, identified in its Community Emission Reduction Plan (CERP) adopted on September 6, 2019, emissions from refineries as an air quality concern, and specified initiating rule development to amend Rule 1178 – Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities (Rule 1178) to incorporate advanced leak detection technologies and requiring additional emission controls. In particular, Chapter 5b, Action 1 in the WCWLB CERP recommended incorporating new, advanced tools to modernize and improve LDAR programs for storage tanks at refineries to enhanced leak detection. Similarly, the South Los Angeles (SLA) community identified in its CERP adopted on June 3, 2022, emissions from operation of oil and gas facilities as an air quality concern. In particular, Chapter 5f, Action 1, recommended installation of emission reduction technologies at oil and gas facilities and specified initiating rule development to the Rule 1148 series to explore improved LDAR and requirements for lower-emission or zero-emission equipment. Rule 463 was not identified as an action for rule development within the 2019 WCWLB CERP or 2022 SLA CERP; however, Rule 463 regulates the same emission sources within the affected WCWLB and SLA communities.

¹ The Lewis-Prezley Air Quality Management Act, 1976 Cal. Stats., ch. 324 (codified at Health and Safety Code Section 40400-40540).

² Health and Safety Code Section 40460(a).

³ Health and Safety Code Section 40440(a).

⁴ South Coast AQMD, Final 2022 Air Quality Management Plan, December 2022. <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan>

Rule 463 applies to tanks that meet the following criteria: 1) above-ground stationary tanks with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of organic liquids, 2) any above-ground tank with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline, and 3) any stationary tank with a Potential For VOC Emissions of six tons per year or greater used in Crude Oil And Natural Gas Production Operations.

Proposed Amended Rule 463 (PAR 463) establishes more stringent leak detection and repair and control requirements, such as optical gas imaging tank farm inspections every other calendar week, and additional control requirements for installing domes (referred to as doming) and secondary roof seals. PAR 463 will establish Best Available Retrofit Control Technology (BARCT) requirements, including leak inspections using OGI devices. Additionally, PAR 463 will include contingency measures for both the Coachella Valley and the South Coast Air Basin, which will require more frequent OGI inspections, if triggered.

The federal Clean Air Act (CAA) requires State implementation Plans (SIPs) to include contingency measures which are triggered if an area fails to make reasonable further progress or fails to attain an air quality standard by the applicable date. Therefore, South Coast AQMD has prepared the Coachella Valley Contingency Measure State Implementation Plan (SIP) Revision for the 2008 8-Hour Ozone Standard focused on satisfying the requirement for contingency measures elements for the plan. Specifically, South Coast AQMD is amending Rule 463 to introduce a contingency measure to partially satisfy the federal CAA contingency requirement by establishing more frequent OGI inspections every calendar week for tanks storing product with a TVP of 5.0 psia or greater.

PAR 463 applies to approximately 1,600 tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. There are four major categories of storage tanks subject to Rule 463, as follows: fixed roof tanks, external floating roof tanks, domed external floating roof tanks, and internal floating roof (IFR) tanks. Storage tanks emit VOC through openings inherent in the tank design. Rule 463 requires the use of seals and covers to reduce the amount of VOC that can migrate out of the tank through the tank openings. Tank openings on fixed roof tanks include, but are not limited to, vapor recovery connection points, pressure vacuum vents and sample hatches. Floating roof tanks also contain openings that include the annular space around the floating roof, guidepoles, rim vents, pressure vents, hatches, and roof legs. Proposed amendments to Rule 463 are based on determination of feasible and cost-effective technologies and methods that were assessed through a BARCT analysis. Rule 463 already requires controls on all roof openings and as part of the PAR 463 rule development, staff reviewed additional technologies and methods to further reduce emissions from tank operation and leaks. The proposed amendments will reduce VOC emissions from these sources by approximately ~~0.43~~1.65 ton per day.

Implementation of PAR 463 is expected to result in less than significant increases of criteria air pollutants in the short-term due to construction impacts, and an overall long-term decrease in VOC emissions through minimizing fugitive losses from storage tanks at petroleum facilities.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

The California Environmental Quality Act (CEQA) is comprised of Public Resources Code Section 21000 *et seq.* and CEQA Guidelines which are codified at Title 14 California Code of Regulations, Section 15000 *et seq.* CEQA requires all potential adverse environmental impacts of proposed projects be evaluated and methods to reduce or avoid identified significant adverse

environmental impacts of these projects be implemented, if feasible. [Public Resources Code Section 21061.1 and CEQA Guidelines Section 15364]. The purpose of the CEQA process is to inform decision makers, public agencies, and interested parties of potential adverse environmental impacts that could result from implementing a proposed project and to identify feasible mitigation measures or alternatives, when an impact is significant.

Public Resources Code Section 21080.5 allows public agencies with regulatory programs certified by the Secretary of the Resources agency to prepare a plan or other written documents in lieu of a Negative Declaration or Environmental Impact Report (EIR). The South Coast AQMD's regulatory program was certified on March 1, 1989. [CEQA Guidelines Section 15251(l)]. In addition, the South Coast AQMD adopted Rule 110 – Rule Adoption Procedures to Assure Protection and Enhancement of the Environment, which implements the South Coast AQMD's certified regulatory program. Under the certified regulatory program, the South Coast AQMD typically prepares an Environmental Assessment (EA) to evaluate the environmental impacts for rule projects proposed for adoption or amendment.

The proposed amendments to Rule 463 are a discretionary action subject to South Coast AQMD Governing Board consideration that has the potential for resulting in changes to the environment, and therefore, is considered a “project” as defined by CEQA. [CEQA Guidelines Section 15378]. The lead agency is the “public agency that has the principal responsibility for carrying out or approving a project that may have a significant effect upon the environment.” [Public Resources Code Section 21067]. Since the South Coast AQMD Governing Board has the primary responsibility for approving and carrying out the entire project as a whole, the South Coast AQMD is the most appropriate public agency to act as CEQA lead agency for the proposed project. [CEQA Guidelines Section 15051(b)].

The proposed project would further reduce VOC emissions from above-ground storage tanks containing volatile organic liquids through establishing optical gas imaging tank farm inspections every other calendar week and additional control requirements for doming, emission control systems, and secondary seals. However, South Coast AQMD's review of the proposed project also shows that the activities that facility operators may undertake to comply with PAR 463 may also create secondary adverse environmental impacts that would not result in significant impacts for any environmental topic area. Thus, the analysis of PAR 463 indicates that the type of CEQA document appropriate for the proposed project is an EA with no significant impacts. The EA is a substitute CEQA document, which the South Coast AQMD, as lead agency for the proposed project, prepared in lieu of a Negative Declaration with no significant impacts [CEQA Guidelines Section 15252], pursuant to the South Coast AQMD's Certified Regulatory Program [Public Resources Code Section 21080.5, CEQA Guidelines Section 15251(l); South Coast AQMD Rule 110].

The EA includes a project description in Chapter 1 and an Environmental Checklist in Chapter 2. The Environmental Checklist provides a standard tool to identify and evaluate a proposed project's adverse environmental impacts and the analysis concluded that no significant adverse impacts would be expected to occur if the proposed project is implemented. Because the proposed project would have no statewide, regional, or areawide significance, no CEQA scoping meeting is required to be held pursuant to Public Resources Code Section 21083.9(a)(2). Further, pursuant to CEQA Guidelines Section 15252, since no significant adverse impacts were identified, no alternatives or mitigation measures are required.

The Draft EA ~~is being~~ was released for a 30-day public review and comment period from March 27, 2024 to April 26, 2024. ~~No comment letters were received during the comment period. Any comments on the analysis presented in this Draft EA received during the public comment period will be responded to and included in an appendix of the Final EA.~~

Subsequent to the release of the Draft EA for public review and comment, the following modifications were made to the proposed project: 1) several definitions and other parts of the rule language were updated for clarity and consistency; 2) the secondary seal compliance schedule was updated; 3) the True Vapor Pressure (TVP) test procedure that allows for monthly averaging was added; 4) the mechanical shoe primary seal requirements for Internal Floating Roof (IFR) tanks were updated; 5) the procedure for conducting Optical gas imaging (OGI) inspections was updated; 6) requirements for vapor recovery systems were added; 7) the recordkeeping and reporting requirements for the TVP tests required for External Floating Roof (EFR) tanks, Vapor Recovery Unit (VRU) Performance Tests, and vapor recovery system performance tests were updated; 8) the exemption from Rule 463 specific to tanks regulated by Rule 1178 was updated to include the definition for Product Change; and 9) references to the revoked 1997 ozone National Ambient Air Quality Standard in the contingency for the South Coast Air Basin were removed.

Therefore, some modifications have been made to the Draft EA to make it a Final EA which include the aforementioned updates and additions made to PAR 463 after the Draft EA was released for the public review and comment period. Specifically, the CEQA analysis in the Final EA was updated to include: 1) an increase in the amount of estimated VOC emissions reductions from 0.43 ton per day to 1.65 ton per day; 2) revised inspection requirements for OGI tank farms to be conducted more frequently, from semi-annually to twice per year at four-to-eight month intervals; and 3) increased the compliance timeframe for the installation of secondary seals from 10 years to 22 years.

South Coast AQMD staff has evaluated the modifications made to PAR 463 after the release of the Draft EA for public review and comment and concluded that none of the revisions constitute significant new information, because: 1) no new significant environmental impacts would result from the proposed project; 2) there is no substantial increase in the severity of an environmental impact; 3) no other feasible project alternative or mitigation measure was identified that would clearly lessen the environmental impacts of the project and was considerably different from others previously analyzed, and 4) the Draft EA did not deprive the public from meaningful review and comment. In addition, revisions to PAR 463 and the analysis in response to verbal or written comments during the rule development process would not create new, avoidable significant effects. As a result, these revisions do not require recirculation of the Draft EA pursuant to CEQA Guidelines Sections 15073.5 and 15088.5. Therefore, the Draft EA has been revised to include the aforementioned modifications such that it is now the Final EA.

Prior to making a decision on the adoption of the proposed project, the South Coast AQMD Governing Board must review and certify the Final EA, including responses to comments, as providing adequate information on the potential adverse environmental impacts that may occur as a result of amending Rule 463.

PROJECT LOCATION

The proposed project applies to owners or operators of tanks that meet the following criteria: 1) stationary above-ground tanks with a capacity of 75,000 liters (19,815 gallons) or greater used for storage of organic liquids, 2) any above-ground tank with a capacity between 950 liters (251

gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline, and 3) any stationary tank with a Potential For VOC Emissions of six tons per year or greater used in Crude Oil and Natural Gas production operations. PAR 463 applies to approximately 1,600 tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities which are located throughout South Coast AQMD's jurisdiction. However, initial estimates indicated that approximately 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed.

South Coast AQMD's jurisdiction covers an area of approximately 10,743 square miles and includes the four-county Basin (all of Orange County and the non-desert portions of Los Angeles, Riverside and San Bernardino counties), and the Riverside County portion of the Salton Sea Air Basin and the non-Palo Verde, Riverside County portion of the Mojave Desert Air Basin. The Basin is a subarea of South Coast AQMD's jurisdiction; it is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto mountains to the north and east. The Riverside County portion of the Salton Sea Air Basin, which is a federal nonattainment area known as the Coachella Valley Planning Area, is bounded by the San Jacinto Mountains to the west and spans the eastern boundary of the Coachella Valley up to the Palo Verde Valley (see Figure 1-1).

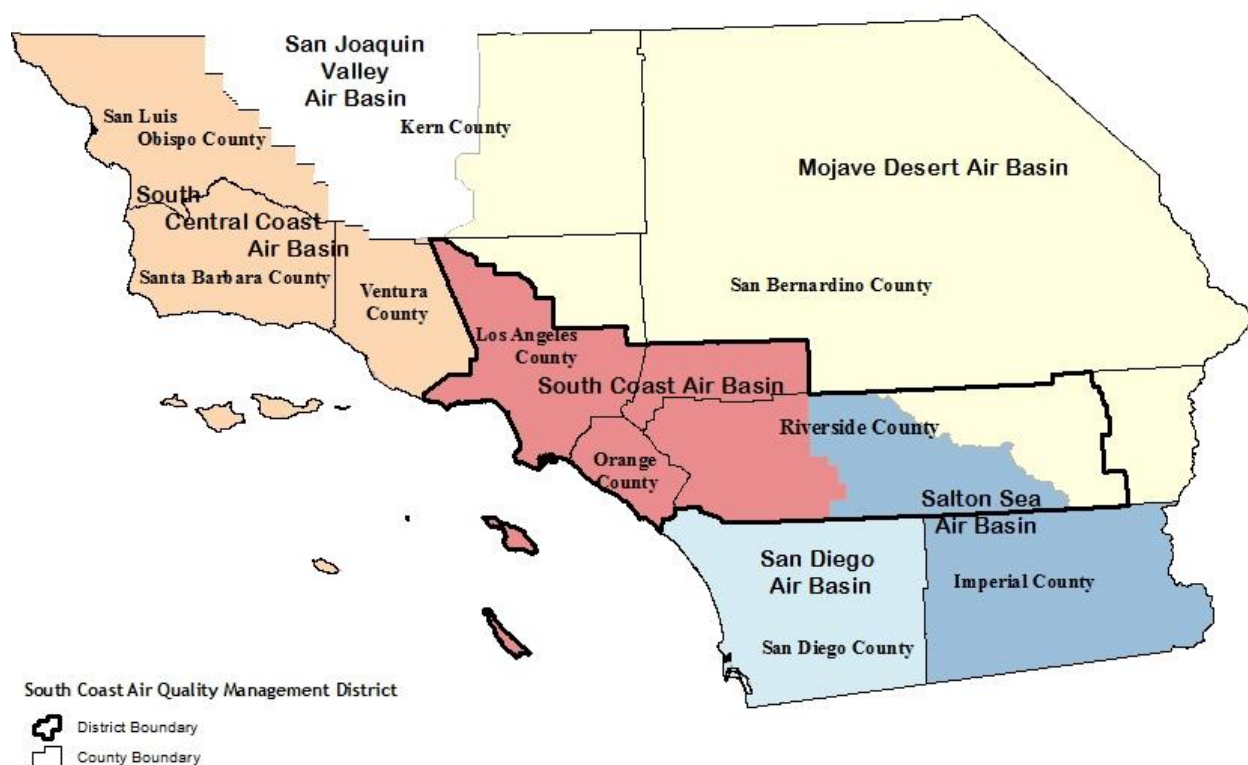

Figure 1-1
Southern California Air Basins and South Coast AQMD's Jurisdiction

PROJECT BACKGROUND

Rule 463 was adopted in August 1977 and subsequently amended six times. The 1984 amendment added a criterion for hydrogen sulfide content in crude oil contained in floating roof tanks; a subsequent amendment in March 2005 removed this limitation based on a comparative review of

similar regulations within the state and at the federal level. The December 1990 amendment addressed SIP deficiencies inconsistent with U.S. EPA policies or requirements. The March 1994 amendment restructured the rule, clarified rule language, streamlined compliance activities by including a self-compliance program, and corrected rule deficiencies identified by the U.S. EPA and California Air Resources Board (CARB). The November 2011 amendment harmonized test methods and leak standards with Rule 1178. The most recent amendment to Rule 463 in May 2023, addressed U.S. EPA's limited disapproval of CARB's Oil and Gas Methane Rule by aligning the applicability threshold with U.S. EPA's 2016 Control Techniques Guidelines for the Oil and Natural Gas Industry.

Since its adoption on August 8, 1977, Rule 463 has been applicable to any tank regardless of type of business that meets the following criteria: 1) stationary above-ground tanks with a capacity of 75,000 liters (19,815 gallons) or greater or, 2) any above-ground tank with a capacity between 950 liters (251 gallons) and 75,000 liters (19,815 gallons) used for storage of gasoline. In response U.S. EPA's limited disapproval of CARB's Oil and Gas Methane Rule, Rule 463 was amended on May 2023 to include any stationary tank with a potential for VOC emissions of six tons per year or greater used in crude oil and natural gas production operations.

In accordance with AB 617, which was signed into state law in 2017, and the CARB Community Air Protection Program which implements AB 617, the South Coast AQMD is required to take specific actions to reduce air pollution and toxic air contaminants from commercial and industrial sources to address the disproportionate impacts of air pollution in environmental justice communities, such as Wilmington, Carson, and West Long Beach. The WCWLB CERP, adopted on September 6, 2019 by this community, identified emissions from refineries as an air quality concern, and Chapter 5b, Action 1 in the WCWLB CERP recommended incorporating new, advanced tools to modernize and improve LDAR programs for storage tanks at refineries to enhanced leak detection. Similarly, the South Los Angeles (SLA) community identified in its CERP adopted on June 3, 2022, emissions from operation of oil and gas facilities as an air quality concern. In particular, Chapter 5f, Action I, recommended installation of emission reduction technologies at oil and gas facilities and specified initiating rule development to the Rule 1148 series to explore improved LDAR and requirements for lower-emission or zero-emission equipment. Rule 463 was not identified as an action for rule development within the 2019 WCWLB CERP or 2022 SLA CERP; however, Rule 463 regulates the same emission sources within the affected WCWLB and SLA communities. Recommendations for potential amendments included improving current leak detection and repair requirements by incorporating advanced leak detection technologies and requiring additional controls. Also, both the 2016 AQMP and 2022 AQMP included Control Measure FUG-01 – Improved Leak Detection and Repair (LDAR) which was specifically designed to utilize advanced remote sensing technologies to allow for the faster identification and repair of leaks from equipment at oil and gas and other facilities that are currently required to maintain a LDAR program.

In 2016, U.S. EPA released the 2016 CTG for the Oil and Gas Industry. Nonattainment areas classified as "Moderate" or worse, such as South Coast AQMD, are required to implement Reasonably Available Control Technology (RACT) for VOC sources covered by the CTG. Storage tanks covered by the 2016 CTG include those with the potential for VOC emissions of six tons per year or more, and are located at oil and natural gas facilities (excluding distribution); the RACT recommendation for such storage tanks is 95% emission control. While Rule 463 contained requirements for 95% emission control or greater, the rule did not apply to storage tanks based on the quantity of their potential VOC emissions. Rather, Rule 463 was applicable to storage tanks

based on the capacity and the TVP of the material stored. Because the U.S. EPA stated that it was unclear whether all tanks subject to the 2016 CTG were covered by the applicability requirements, Rule 463 was amended on May 5, 2023 to ensure the applicability would use direct terms to include storage tanks subject to the U.S. EPA's 2016 CTG for the Oil and Gas Industry.

PAR 463 is now being amended to partially implement the 2022 AQMP Control Measure FUG-01 and include a contingency measure in the event that the U.S. EPA determines that the South Coast AQMD had failed to meet an RFP milestone or to attain an applicable ozone NAAQS, and assist to achieve the goals of the WCWLB and SLA CERPs.

TECHNOLOGY OVERVIEW

The following discussion provides a general overview of the control technologies and enhanced leak detection technologies associated with aboveground storage tank emissions.

Control Technologies

Domes

Domes are roofs that can be installed onto EFR tanks. They are typically a geodesic dome shape and made of lightweight material such as aluminum. Domes that are affixed onto EFR tanks are not vapor tight and have vents along the bottom of the dome where it meets the tank shell. This is a required design for floating roof tanks to allow the floating roof to move up and down without adverse effects. Domes are effective at reducing emissions from tanks by eliminating wind moving over the external floating roof. Wind can carry vapors out from inside the tank through the secondary roof seals which float. It is estimated that installing domes on EFR tanks storing crude oil can reduce standing losses by 50%-70%.

Proximity Switches

Proximity switches are sensors designed to detect when sample hatch covers are open and are commonly used at remote oil well sites that are not inspected regularly. Proximity switches can also be used on pressure vacuum relief vents (PVRVs). The switch can alert facility personnel when a sample hatch cover or PVRV is open and result in quicker repair timelines and smaller emissions impacts. Limitations to using proximity switches include small may go undetected and other leaks that may occur from the monitored equipment would not be detected such as leaks from the gaskets or connection points.

Cable Suspension Systems

Cable suspended floating roofs are designed with cable suspension systems to support the floating roof and remove the need for roof legs. Emissions from IFR tanks are reduced with cable suspension systems by the elimination of floating roof leg penetrations that provide a potential opening where VOC can migrate from below the floating roof to atmosphere.

Emission Control Systems (Vapor Recovery)

Emission control systems are connected to fixed roof tanks and control VOC emissions with carbon adsorption or combustion. Compliance reports containing performance tests results for vapor recovery systems used at facilities applicable to Rule 463 were reviewed. All compliance reports reviewed stated the vapor recovery systems were compliant but not all specified the vapor recovery efficiency. Only the initial performance tests stated the control efficiency for the three

combustion vapor recovery systems which were specified at over 99% combustion efficiency. During a site visit, staff was informed that the facility's carbon adsorption system performs at over 99% emission control, which was further confirmed with performance test reports. All compliance reports reviewed stated the vapor recovery systems were compliant but did not specify the vapor recovery efficiency. The initial performance efficiency for three combustion vapor recovery systems were specified at over 99% combustion efficiency. During a site visit, staff was informed that the facility's carbon adsorption system performs at over 99% emission control, which was further confirmed with performance test reports. During the last rulemaking for Rule 1178 it was determined that 98% efficiency is achievable based on performance test results for combustion and carbon adsorption systems.

Staff recommends increasing the emission control system efficiency requirements to 98% emission control, by weight, based on available performance test results and information obtained at site visits.

Seals

Primary and secondary seals are used on floating roof tanks to seal the annular space between the floating roof and the tank shell to prevent VOC vapors from migrating out of the tank. Seal systems can have only a primary seal or a primary seal and secondary seal. Internal floating roof tanks are not required to have both a primary seal and secondary seal.

Staff identified five IFR tanks that are not equipped with secondary seals applicable to the rule.

Leak Detection Technologies

Multiple leak detection technologies and methods were considered to reduce the emissions impact from leaks from storage tanks. A review of continuous monitoring technologies including fixed gas sensor networks and open path device systems was conducted. Periodic monitoring with handheld optical gas imaging devices was also reviewed.

Continuous Monitoring Systems

Continuous monitoring solutions using open path detection and fixed gas sensor networks were assessed in 2023 for the Rule 1178 rulemaking. It was determined that the best solution for monitoring tanks is to require periodic monitoring with handheld optical gas imaging devices due to the nature of storage tank operations and the ability to identify small and large leaks. Continuous monitoring systems are limited in their ability to detect smaller leaks because they are installed at a distance from the tank. Depending on the detection technology of the continuous monitoring system, a leak may need to be significantly large at the source to be detected and has the potential to go undetected. One significant drawback to requiring stationary continuous monitoring system of gas sensors or open path devices, is the chance that a large leak goes undetected because it does not make contact with the fixed sensor or emitted open path beam. Due to the potential for the large emissions impact from large leaks, continuous monitoring systems with sensors that must come in contact with the VOC vapor may not be the most effective technologies to reduce the emissions impact from leaks from tanks. Another drawback to requiring continuous monitoring systems is the delayed implementation timeline due to the plan approval and installation timeframes.

Staff does not propose requiring the use of continuous monitoring systems in PAR 463. The continuous monitoring systems analyzed were all above the VOC cost-effectiveness threshold. Exceeding the cost-effectiveness threshold in combination with the limitations of the technologies

when compared to manual OGI inspections resulted in staff's proposal to not require continuous monitoring systems as BARCT. However, due to stakeholder interest in the opportunity to utilize continuous monitoring systems, staff will include a provision that allows for the use of U.S. EPA approved continuous monitoring methods provided they can achieve equivalent or more stringent monitoring as manual OGI inspections.

Optical Gas Imaging (OGI)

An optical gas imaging camera uses infrared technology to visualize vapors and has different detectors capable of visualizing a variety of gas wavelengths. VOC wavelengths range between 3.2 to 3.4 micrometers. The difference in views is shown in Figure 1-2 below. OGI cameras with the ability to detect or visualize in this range of wavelength contain a cryocooler that is integrated into the sensor which increases the sensitivity of the camera and the ability to detect smaller leaks. OGI cameras are widely used a screening tool for leak detection purposes.

Figure 1-2
View with Naked Eye Compared to View with an OGI Camera

Fixed OGI systems have been implemented at well sites and compression stations for continuous emissions monitoring. Handheld OGI cameras, as seen in Figure 1-3, are used widely by leak detection service providers as well as facilities for periodic monitoring.

Figure 1-3
OGI camera

Fixed OGI cameras may not catch all leaks that can be identified during an inspection where a portable OGI device is manually operated. Fixed OGI cameras are limited in the number of angles from which a tank can be viewed and would likely be stationed further away from an emissions source compared to a person conducting an inspection with a portable OGI device. Stationary and portable devices both have the capability to detect large leaks, however, there is greater chance that smaller leaks would be identified with a manual field inspection than with a stationary camera because tanks can be monitored in close proximity using portable devices such as handheld OGI cameras and toxic vapor analyzers (TVA).

Staff proposes OGI tank farm inspections every other calendar week for tanks that meet the capacity and vapor pressure thresholds that trigger control requirements in Rule 463 and additional semi-annual component inspections for tanks.

PROJECT DESCRIPTION

Rule 463 limits VOC emissions from any stationary storage tank with a potential for VOC emissions of six tons per year or greater used in crude oil and natural gas production operations, above-ground stationary tanks with a capacity of 19,815 gallons or greater used to store organic liquids, and above-ground tanks with a capacity between 251 and 19,815 gallons used to store gasoline. PAR 463 establishes requirements for: 1) conducting inspections, including but not limited to optical gas imaging tank farm inspections every other calendar week; 2) installing domes on EFR tanks storing organic liquids with a true vapor pressure of 3.0 psia or greater; 3) installing secondary seals on all floating roof tanks; 4) increasing the efficiency of emission control systems; 5) more stringent seal gap allowances; and 6) conducting monitoring, maintenance, recordkeeping, and reporting activities. PAR 463 will affect 429 facilities including refineries, bulk storage, loading, and oil production facilities, and is estimated to reduce VOC emissions by ~~0.43~~1.65 ton per day. Implementation of PAR 463 is expected to require physical modifications that could create secondary adverse environmental impacts relating to the installation of domes on EFR tanks and additional secondary seals on IFR tanks. The Final ~~Draft~~ EA did not identify any environmental topic areas that would be significantly adversely affected by PAR 463. Facilities with storage tanks subject to PAR 463 may be identified on lists compiled by the California Department of Toxic Substances Control per Government Code Section 65962.5 but the implementation of PAR 463 will not alter the status of the facilities on the lists.

The following is a detailed summary of the key elements contained in PAR 463. Appendix A of this EA contains draft rule language; actual text from PAR 463 is italicized while the explanation and clarification of each provision is in a non-italicized font.

Proposed Amended Rule 463

PAR 463 will contain the following subdivisions:

- a) Purpose*
- b) Applicability*
- c) Definitions*
- d) Tank Roof Requirements*
- e) Other Performance Requirements*
- f) Monitoring Requirements*
- g) Reporting and Recordkeeping Requirements*
- h) Exemptions*
- i) Test Methods*

*j) Ozone Contingency Measures**Subdivision (a) – Purpose*

The purpose of this rule is to reduce VOC emissions from above ground storage tanks storing organic liquids. Furthermore, PAR 463 contains a new purpose to establish contingency measures for ozone standards.

Subdivision (b) – Applicability

The applicability was separated from the purpose to reflect the current South Coast AQMD preferred rule format. There have been no other changes to the applicability.

Subdivision (c) – Definitions

Definitions were added or modified for clarity of new requirements. Key definition changes are referenced and discussed below.

- ~~*CLEANING is the process of washing or rinsing a stationary Tank, reservoir, pipelines, or other container or removing vapor, sludge, or rinsing liquid from a stationary Tank, reservoir, or other container.*~~

~~This is a new definition that uses existing rule language from South Coast AQMD Rule 1149 to clarify the meaning of cleaning within the rule language as well as consistency across South Coast AQMD rules.~~

COMPONENT is any valve, fitting, pump, compressor, pressure relief device, diaphragm, hatch, sight-glass, Roof Opening, Rim Seal System, pressure vacuum vents, guidepoles, roof legs, or meter in VOC service.

This is a definition from Rule 1173 – Control of Volatile Organic Compound Leaks and Releases from Components at Petroleum Facilities and Chemical Plants (Rule 1173) that was modified to include additional tank specific parts. The definition adds clarity on the meaning of component for the proposed semi-annual OGI component inspection requirement.

- *COMPONENT INSPECTION is monitoring for Visible Vapors with a handheld Optical Gas Imaging Device of a Storage Tank roof and individual components, including but not limited to Roof Openings and Rim Seal Systems, viewable from the Tank platform or a vantage point capable of seeing the Tank roof, and ground for components not viewable from the Tank platform or vantage point but viewable at ground level.*

This is a definition from Rule 1178 that was modified to include component inspection procedures for tanks that do not have access to a tank platform. In the event there is no platform from which a component inspection can be conducted, an owner or operator can use a vantage point capable of viewing the roof of the tank and/or other vantage points needed to complete the OGI inspection.

- *PRODUCT CHANGE is the process of changing the Tank contents from one ~~product~~ Organic Liquid to another ~~product~~ Organic Liquid that has different characteristics i.e. vapor pressure, viscosity, etc.*

This is a new definition to clarify the new rule language added in PAR 463 paragraph (e)(2) in response to stakeholder request.

- *VISIBLE VAPORS are any VOC vapors detected with an Optical Gas Imaging Device, when operated and maintained in accordance with manufacturer training or certification, or equivalent California Air Resources Board (CARB) training, user manuals, specifications, and recommendations.*

This is a definition from Rule 1178 that was modified to include the CARB OGI camera training as an approved training method for OGI camera operators. The definition was also modified to remove the reference to tank farm inspections and component inspections so that visible vapors can be identified outside of those two operations.

The following definitions were added or modified to be consistent with the definitions in South Coast AQMD Rule 1178:

- *ACCESS HATCH*
- *CERTIFIED PERSON*
- *CLEANING*
- ~~*COMPONENT INSPECTION*~~
- *DOMED ROOF*
- *EMISSION INVENTORY YEAR*
- *EXTERNAL FLOATING ROOF TANK*
- *FACILITY*
- *FIXED ROOF SUPPORT COLUMN AND WELL*
- *FIXED ROOF TANK*
- *FLEXIBLE ENCLOSURE SYSTEM*
- *FUEL GAS SYSTEM*
- *GAUGE FLOAT*
- *GAUGE HATCH/SAMPLE PORT*
- *GUIDEPOLE*
- *INTERNAL FLOATING ROOF TANK*
- *LADDER AND WELL*
- *LIQUID MOUNTED PRIMARY SEAL*
- *MECHANICAL SHOE PRIMARY SEAL*
- *OPTICAL GAS IMAGING DEVICE*
- *POLE FLOAT*
- *POLE SLEEVE*
- *POLE WIPER*
- *PRIMARY SEAL*
- *RESILIENT FILLED PRIMARY SEAL*
- *RIM MOUNTED SECONDARY SEAL*
- *RIM SEAL SYSTEM*

- RIM VENT
- ROOF DRAIN
- ROOF LEG
- ROOF OPENING
- SECONDARY SEAL
- SLOTTED GUIDEPOLE
- STORAGE TANK or TANK
- TANK FARM INSPECTION
- TRUE VAPOR PRESSURE
- VACUUM BREAKER
- VISIBLE GAP
- ~~VISIBLE VAPORS~~
- WASTE STREAM TANK

Subdivision (d) – Tank Roof Requirements

PAR 463 includes revisions to existing requirements and new requirements. PAR 463 establishes requirements for rim seal gaps, secondary seals, emission control systems, doming, testing, implementation and monitoring.

Primary and Secondary Seal Gap Requirements – Clause (d)(1)(A)(v)

New seal gap requirements for primary and secondary seals were added by reference to reflect seal gap requirements contained in U.S. EPA's 40 CFR 60 Subpart Kb. The new seal gap requirements are in addition to the existing seal gap requirements specified in clauses (d)(1)(A)(i) to (d)(1)(A)(iv). Seal gap requirements are contained under requirements for external floating roofs but apply to all floating roof tanks; requirements for other floating roof tanks refer to subparagraph (d)(1)(A).

Vapor Tight Requirements for Openings – Subparagraph (d)(1)(D)

New language was added to clarify that covers and openings must be controlled in a manner that is vapor tight. Vapor tight is a defined term in Rule 463. Domed external floating roof tanks also have requirements to be in a vapor tight condition, as subparagraph (d)(4)(A) refers to paragraph (d)(1).

Maintain Tanks Free of Visible Vapors for External Floating Roof Tanks – Subparagraph (d)(1)(G) (d)(2)(C), (d)(3)(D), and (d)(4)(C)

The proposed amended rule requires tanks to be free of visible vapors that could result from a defect determined by an optical gas imaging inspection conducted pursuant to the requirements of subparagraph (f)(3)(D). Defects can be anything that leads to uncontrolled emissions such as a physical malfunction, ~~or~~ a hatch improperly closed, or components not operating as intended. For example, visible vapors resulting from a pressure vacuum relief valve (PVRV) opening to relieve pressure build up is allowable. However, if that same PVRV does not re-seal properly after being opened then that is considered a defect. Requirements to maintain tanks free of visible vapors are contained under requirements for external floating roofs but applies to all tanks; requirements for other tanks refer to subparagraph (d)(1)(G).

Visible Vapor Cause Determination – Clause (d)(1)(G)(i)

If an OGI camera detects visible vapors and an owner or operator claims the vapors are not the result of a defect, then the owner or operator must demonstrate that the vapors in question are not the result of a defect. This provision is intended to put the onus on the owner or operator to prove their claim that visible vapors detected by an OGI camera is allowable by Rule 463 (e.g., PVRV opening to temporarily relieve pressure build up). Requirements for the owner or operator to demonstrate that visible vapors are not the result of a defect are contained under requirements for external floating roof tanks but applies to all tanks; requirements for other tanks refer to subparagraph (d)(1)(G), which includes clause (d)(1)(G)(i).

Doming Requirements – Subparagraph (d)(1)(H)

PAR 463 requires that facilities install a dome on any external floating roof tank storing organic liquid with a true vapor pressure of 3 psia or greater. The new provision reflects existing doming requirements in Rule 1178. External floating roof tanks that meet the requirements of subparagraph (d)(1)(H) must install domes at the next internal API 653 inspection or the next time a tank is cleaned and degassed, whichever is sooner, but not to exceed 23 years after a test verifies that an organic liquid stored has a TVP of 3 psia or greater. Internal API 653 inspections require the tank to be taken out of service to inspect the inside of the tank and are carried out every 20 years. Tanks need to be cleaned and degassed prior to the installation of a dome for safety concerns. Furthermore, doming is not cost-effective when cleaning and degassing costs are considered. The implementation timeframe for doming begins three years after [Date of Adoption] to account for planning and budgetary needs and the permitting process. It is the responsibility of the owner or operator to submit permit applications in a timely manner to ensure that permits can be issued prior to the implementation schedule specified in subparagraph (d)(1)(H). The backstop of 23 years for installing domes was calculated by adding the three year on-ramp period to the standard 20-year interval for internal API 653 inspections. The effective date of this provision is June 7, 2027; to allow for planning and budgetary considerations.

True Vapor Pressure Measurements – Subparagraph (d)(1)(I)

Facilities are required to measure and record the true vapor pressure of the organic liquid inside any external floating roof tank not equipped with a dome with an initial vapor pressure test. Any tanks storing organic liquids with a TVP less than 3.0 psia are required to conduct subsequent test on a semi-annual basis (once every six months) to verify the true vapor pressure remains less than 3 psia. This requirement is effective on January 1, 2025, and the first test must be conducted by July 1, 2025. If an EFR tank shows a single test indicating the stored organic liquid has a TVP of ≥ 3.0 psia a dome must be installed pursuant to the implementation schedule in subparagraph (d)(1)(H) unless the tank is placed out of service and the permit is surrendered or if the owner or operator elected to conduct TVP tests according to the alternative schedule specified in clauses (d)(1)(I)(i). An EFR tank with permit conditions that limit the true vapor pressure of the organic liquid stored to < 3.0 psia is not exempt from the doming requirements, if the result from a test specified in subparagraph (d)(1)(I) or the average result from tests specified in clause (d)(1)(I)(i) is ≥ 3.0 psia, with the exception of EFR tanks storing waste water where the installation domes can lead to unsafe conditions pursuant to subparagraph (d)(1)(J). However, owners or operators of EFR tanks that are pursuing the alternative compliance pathway in subparagraph (d)(1)(J) may be subject to penalties and/or additional actions if TVP tests indicate that the product stored is ≥ 3.0 psia.

Alternative True Vapor Pressure Measurements – Clauses (d)(1)(I)(i)

An owner or operator can choose to conduct monthly TVP tests and submit an average TVP of the organic liquid stored in a tank every six months. If an owner or operator opts to use this alternative pathway, the owner or operator must commence testing in January 2025. Any owner or operator that fails to test monthly as of January 2025 must comply with the semi-annual TVP test requirements specified in subparagraph (d)(1)(I). If an EFR tank subject to the alternative TVP testing schedule has an average TVP over six months that is ≥ 3.0 psia, a dome must be installed pursuant to the implementation schedule in subparagraph (d)(1)(H) unless the tank is placed out of service and the permit is surrendered. The average test results are not to be calculated on a rolling average. Each calculated six month average will include the TVP test results from tests conducted from January-to-June and July-to-December each year.

Doming Alternative for Tanks with Pyrophoric Material – Subparagraph (d)(1)(J)

Facilities are required to accept permit conditions that limit the TVP of the product stored to less than 3.0 psia for tanks that meet the doming requirements in subparagraph (d)(1)(H), but the installation of a dome could lead to the buildup of pyrophoric materials. For wastewater EFR tanks where the installation of a dome could lead to the buildup of pyrophoric materials, PAR 463 includes an option to accept permit conditions to limit the TVP of the organic liquid stored to less than 3 psia as an alternative to doming.

Removal of Alternative Compliance Pathway for Fixed Roof Tanks with an Internal Floating Type Cover from Paragraph (d)(2)

An alternative compliance pathway which allowed fixed roof tanks with an existing internal floating type of cover approved on or before June 1, 1984, to comply with requirements applicable at the time of approval was removed from subparagraph (d)(2)(A). All fixed roof tanks with internal floating type covers will be required to comply with the provisions in PAR 463.

Secondary Seal Seal Requirements for Internal Floating Roof Tanks – Subparagraph (d)(2)(A)

Internal floating roof tanks must be equipped with both a primary and secondary seal. Primary seal and secondary seal are defined terms in PAR 463. In response to a comment from a stakeholder, the mechanical shoe primary seal requirements for IFR tanks were updated to require that the shoe extend 6 inches above the liquid surface and the other end extend into the liquid a minimum of 4 inches. The proposed PAR 463 requirements align with Rule 1178 and are consistent with the API 650.H.4.4.5.c requirements. Rule 463 subparagraph (d)(1)(A) requires that mechanical shoe primary seals extend a minimum vertical distance of 24 inches above the surface of the organic liquid. Since the internal floating roofs are much lighter structures and are not subject to the effects of wind, larger mechanical shoe primary seals are not required for seal control effectiveness. Furthermore, maintaining the current requirement of larger mechanical shoe primary seals for all internal floating roof tanks could cause some roof systems to fail and could result in an adverse emission impact. During the 2006 Rule 1178 amendment process staff determined, based on information provided by seal manufacturers, that there is no difference in emissions as long as the mechanical shoe length meets the API Guidelines and the structural integrity of the roof is maintained.

Internal Floating Roof Tank Vapor Tight Requirements for Openings — Subparagraph (d)(2)(A)

~~The proposed amended rule clarifies that covers and openings must be controlled in a manner that is vapor tight. Vapor tight is a defined term in Rule 463.~~

Maintain Tanks Free of Visible Vapors for Internal Floating Roof Tanks — Subparagraph (d)(2)(C)

~~A provision is included that requires that tanks be free of visible vapors that could result from a defect determined by an optical gas imaging inspection conducted pursuant to the requirements of subparagraph (f)(3)(D). Defects can be anything that leads to uncontrolled emissions such as a physical malfunction or a hatch improperly closed.~~

Compliance Schedule to Install Secondary Seals on Internal Floating Roof Tanks — Subparagraph (d)(2)(D)

~~Any internal floating roof tanks not equipped with a secondary seal are required to have a secondary seal installed at the time of the next internal API 653 inspection or the next time the tank is cleaned and degassed, whichever is sooner, but no later than 22 years past the date of adoption for PAR 463. Internal API 653 inspections require the tank to be taken out of service to inspect the inside of the tank and are carried out every 20 years. Tanks need to be cleaned and degassed prior to the installation of secondary seals due to safety concerns. The implementation timeframe for installing secondary seals begins two years after [Date of Adoption] to account for planning and budgetary needs as well as the permitting process. It is the responsibility of the owner or operator to submit permit applications in a timely manner to ensure that permits can be issued prior to the implementation schedule specified in subparagraph (d)(2)(D). the next time the tank is emptied and degassed, but no later than ten years past the date of adoption for PAR 463.~~

Fixed Roof Tank Vapor Tight Requirements for Openings — Subparagraph (d)(3)(A)

~~New language was added to clarify that covers and openings must be controlled in a manner that is vapor tight. Vapor tight is a defined term in PAR 463.~~

Emission Control Systems for Fixed Roof Tanks — Subparagraph (d)(3)(C)

~~Emission control systems required on fixed roof tanks must achieve 98% control efficiency by weight. The owner or operator is required to submit early Title V permit revisions pursuant to South Coast AQMD Rule 3005.~~

Maintain Tanks Free of Visible Vapors for Fixed Roof Tanks — Subparagraph (d)(3)(D)

~~New language was added that requires that tanks be free of visible vapors that could result from a defect determined by an optical gas imaging inspection conducted pursuant to the requirements of subparagraph (f)(3)(D). Defects can be anything that leads to uncontrolled emissions such as a physical malfunction or a hatch improperly closed.~~

Domed External Floating Roofs — Paragraph (d)(4)

~~Staff added a new paragraph to specify requirements for domed external floating roofs.~~

Roof Openings and Rim Seal Systems for Domed External Floating Roofs — Subparagraph (d)(4)(A)

~~Domed external floating roofs are subject to the same requirements as external floating roofs to equip and maintain roof openings and rim seal systems, with the exception of~~

slotted guidepoles. Specific requirements for the components needed for slotted guidepoles are specified in subparagraph (d)(4)(A).

Concentration of Organic Vapor for Domed External Floating Roofs – Subparagraph (d)(4)(B)

Subparagraph (d)(4)(B) is based on the requirements in subparagraph (d)(2)(B) to ensure that the concentration of organic vapor in the vapor space above the floating roof does not exceed 30 percent of its lower explosive limit.

Maintain Tanks Free of Visible Vapors for Domed External Floating Roofs – Subparagraph (d)(4)(C)

~~Subparagraph (d)(4)(C) requires that tanks be free of visible vapors that could result from a defect determined by an optical gas imaging inspection conducted pursuant to the requirements of paragraph (f)(3)(D). Defects can be anything that leads to uncontrolled emissions such as a physical malfunction or a hatch improperly closed.~~

Condition Requirements for Domed Roof – Subparagraph (d)(4)(D)

Subparagraph (d)(4)(D) mirrors Rule 1178 and specifies that domes must be maintained in a condition that is free from openings that are not part of the dome design such as gaps, cracks, separations and other openings. This requirement excludes openings that are part of the dome design such as vents and access points or doors.

Subdivision (e) – Other Performance Requirements

Exceptions for Floating Roof During Product Change – Paragraph (e)(2)

The proposed amended rule includes product change as an activity in which an internal floating roof or external floating roof does not need to float on the organic liquid. Product change is a defined term in PAR 463. Staff updated the rule language in response to a stakeholder request. The proposed amended rule language clarifies the intent of existing rule language as tanks must be emptied during a product change, which requires floating roofs to rest on support legs (unless the roof is cable suspended).

Executive Officer Approval of Alternative Seals – Paragraph (e)(5)

Seals that are not on the current list of approved seals cannot be used unless a facility is given written approval by the Executive Officer.

Use of PAR 463 Addendum for Vapor Pressure Limits – Paragraph (e)(6)

Organic liquids listed on the Rule 463 addendum can no longer be deemed to be in compliance. The addendum can be used as a guide for compliance with the appropriate vapor pressure limits.

Subdivision (f) – Monitoring Requirements

Tank Roof Refloating Seal Inspections – Subparagraph (f)(3)(B)

~~The proposed amended rule~~ PAR 463 extends the time to conduct required seal inspections on floating roofs to 48 hours after a tank roof is refloated. A stakeholder stated that tank refilling at their facility can take up to 48 hours to complete. Under the current rule requirements, facilities are required to conduct seal inspections within 24 hours. Therefore, facilities with tank refilling operations longer than 24 hours are required to conduct seal

inspections before the tank refilling is complete; once the seal inspection is completed the facility resumes tank refilling operations. The pause in operations can lead to unintended excess auxiliary emissions. For example, if a vessel is used to refill a large tank that takes more than 24 hours to complete, the process must pause for the inspection to occur and then continue. During this pause the vessel is on standby, generating emissions. The extended seal inspection deadline accounts for longer refill operations while maintaining a deadline for seal inspections.

Electronic Notifications – Subparagraph (f)(3)(C)

The proposed amended rule specifies electronic notifications to the email address designated by the Executive Officer. The timeframe to submit notifications was also shortened to 2 days prior to the start of any tank-emptying or roof-refloating operation for planned maintenance. Electronic notifications are almost instantaneous which reduces the need for a longer notification timeframe.

Optical Gas Imaging Inspections – Subparagraph (f)(3)(D)

Effective July 1, 2025, optical gas imaging inspections are required for tanks that meet the capacity and vapor pressure requirements specified in subdivision (d) and paragraph (e)(1) to determine compliance with the requirement for tanks to be maintained in a condition that is free of visible vapors resulting from a defect or malfunction of equipment. This subparagraph contains the requirements for OGI inspections.

Certification/Training of Person Conducting OGI Inspection – Clause (f)(3)(D)(i)

Contains requirements for qualification for the persons conducting an OGI inspection. Persons conducting the OGI inspection must be certified or have undergone training for the camera used provided by the manufacturer of the OGI camera or the equivalent CARB training. The persons conducting the inspections must also complete all subsequent training or certification recommended by the OGI manufacturer. This paragraph also contains requirements for proper operation and maintenance of the OGI device. The OGI camera must be operated and maintained in accordance with all manufacturer guidance including but not limited to that stated in any training or certification course, user manuals, specifications, recommendations.

Tank Farm Inspection Requirements – Clause (f)(3)(D)(ii)

Contains requirements for tank farm inspections.

Frequency (Tank Farm Inspection) – Subclause (f)(3)(D)(ii)(A)

Inspections must be conducted at least once every two calendar weeks.

Procedure (Tank Farm Inspection) – Subclause (f)(3)(D)(ii)(B)

A person using an OGI device ~~inspector~~ is required to monitor for visible vapors with a tank farm inspection, as defined in PAR 463. If visible vapors are detected during a tank farm inspection, ~~an inspector~~ person must conduct an additional inspection from the tank's platform, or a vantage point for tanks without a platform, to make an effort to determine the source of emissions. From the platform or vantage point, ~~an inspector~~ person will use an OGI device to inspect components required to be maintained in a vapor tight condition or with no visible gaps, ~~viewable from the tank platform~~. If visible vapors are detected from any components that are required to be maintained in a vapor tight condition or in a condition with no visible gaps, the facility must demonstrate compliance with applicable

rule requirements for any component from which visible vapors are emitted or make a repair, within three days of identifying the visible vapors. If visible vapors are detected from the roof or other components not required to be vapor tight or with no visible gaps, the ~~inspector~~ person must conduct a visual inspection to identify any defects in equipment from which visible vapors are emitted. Defects may include, but are not limited to, equipment that is not operating as intended, equipment not found in good operating condition, equipment not meeting all the requirements of Rule 463~~the rule~~, or other indicators that equipment has failed (e.g., organic liquid pooled on a floating roof). The visual inspection for defects may include the use of an OGI device. If no defects are identified, no further action is required for the inspection. If a defect is identified, a repair must be made within three days.

Component Inspections – Clause (f)(3)(D)(iii)

Contains requirements for component inspections. Component inspections is a defined term in PAR 463~~include monitoring of individual components including, but not limited to rim seals, pressure vacuum vents, hatches, guidepoles, roof legs, emission control system connections and vents.~~

Frequency (Component Inspection) – Subclause (f)(3)(D)(iii)(A)

Inspections must be conducted at least twice per year at 4 to 8 month intervals~~once every six months~~ for floating roof tanks. The component inspection frequency mirrors the timeframe specified in Rule 463 for other required semi-annual inspections, so that component inspections may be conducted at the same time. ~~Component inspections may be conducted during other required semi-annual inspections.~~

Procedure (Component Inspection) – Subclauses (f)(3)(D)(iii)(B)-(C)

Repairs or demonstration with applicable rule requirements must be conducted when visible vapors are detected from any component or equipment, except for rim seal systems. Repairs or demonstrations with rim seal requirements must be conducted when a defect is visible from the tank platform, or a vantage point for tanks without a platform, and when visible vapors are emitted from the rim seal and are also detectable at the top of the tank shell or from roof vent.

Alternative Monitoring Method – Subparagraph (f)(3)(E)

An owner or operator may elect to use an alternative monitoring method approved in writing by the U.S. EPA that is equivalent or more stringent than the OGI inspection requirements specified in PAR 463. Alternative monitoring methods submitted to U.S. EPA for approval, but that have not received written approval from U.S. EPA, do not qualify as an approved alternative method in lieu of required OGI inspections. An owner or operator is required to submit written documentation of the U.S. EPA approved method to the South Coast AQMD, so staff can verify that the method is approved by U.S. EPA prior to the alternative monitoring method being implemented. Until the approved monitoring method is approved by South Coast AQMD, an owner or operator is subject to the OGI inspection requirements in PAR 463.

Performance Tests for Vapor Recovery Systems – Paragraph (f)(5)

An owner or operator of an existing vapor recovery system must conduct an initial performance test to verify compliance with the new control efficiency within one year of the date of adoption of PAR 463. Additional performance tests must be conducted for all

vapor recovery systems at a frequency of least once every ten years. If a vapor recovery system is changed in any way that affects the capture or control efficiency, a performance test must be conducted within 180 days of the equipment modification. For example, changing the temperature in which a combustion based vapor recovery unit achieves ignition may lead to a change in the achieved control efficiency. Under the described scenario, a performance test would need to be conducted within 180 days of the vapor recovery system modification to verify compliance with the control efficiency requirements. Fuel gas systems operating to comply with the requirements in subparagraph (d)(3)(C) are not required to conduct performance tests.

Subdivision (g) – Reporting and Recordkeeping Requirements

Electronic Compliance Inspection Report Option – Subparagraph (g)(1)(A)

Paragraph (g)(A) was updated to allow for an electronic compliance inspection report, provided that all information required in Attachment B is included.

Electronic Option for Non-Compliance Report – Subparagraph (g)(1)(C)

Paragraph (g)(C) was updated to specify that a non-compliance report is required to be submitted electronically to the email address designated by the Executive Officer.

Emissions Reporting – Subparagraph (g)(2)(A)

U.S. EPA TANKS 4.0 was removed as an option to base emission information parameters on for South Coast AQMD's Annual Emission Reporting Program. U.S. EPA TANKS 4.0 was developed using a software that is now outdated and is not reliably functional. U.S. EPA currently recommends the use of formulas found in AP-42: Compilation of Air Pollutant Emissions Factors from Stationary Sources (AP-42), Chapter 7 to estimate VOC emissions from storage tanks. Currently the U.S. EPA is developing Tanks 5.0 as a replacement for the outdated Tanks 4.0. Pending U.S. EPA approval, Tanks 5.0 would be an acceptable tool to calculate emissions, for as long as U.S. EPA deems Tanks 5.0 to be an appropriate tool to estimate VOC emissions.

Reporting and Recordkeeping Requirements for OGI Inspections – Paragraph (g)(4)

Contains notification and recordkeeping requirements for OGI inspections.

Reporting for OGI Inspections – Subparagraph (g)(4)(A)

Contains reporting requirements for tank farm inspections. Facilities must report to 1-800-CUTSMOG when visible vapors are detected during a tank farm inspection that require a demonstration with rule requirements or a repair pursuant to the requirements of subclause (f)(3)(D)(ii)(B) within 24 hours of identifying the visible vapors.

Records for Tank Farm Inspections – Subparagraph (g)(4)(B)

Contains recordkeeping requirements for tank farm inspections. Written and digital records must be kept for findings of visible vapors resulting from a defect in equipment or from components required to be vapor tight or with no visible gap.

Records for Component Inspections – Subparagraph (g)(4)(C)

Contains recordkeeping requirements for component inspections.

Recordkeeping and Reporting TVP Test Results – Paragraphs (g)(5) and (g)(6)

Contains recordkeeping and reporting requirements for the TVP tests required for EFR tanks. Test results must be kept for 20 years to confirm tanks are under the doming TVP thresholds. Any test that indicates a TVP of 3.0 psia or greater must be reported to the South Coast AQMD and contain the year of the next internal API 653 inspection and the next planned time a tank is to be cleaned and degassed to aid in determining compliance with the dome installation schedule. ~~to aid in determining compliance with the dome installation schedule.~~

Reporting for VRU Performance Tests – Paragraphs (g)(7)

Contains reporting requirements for VRU performance tests. Facilities must submit reports of any performance tests within 60 days of conducting the test.

*Subdivision (h) – Exemptions*Exemption for Tanks Regulated by Rule 1178 – Paragraph (h)(3)

An exemption from the provisions of Rule 463 for tanks regulated by Rule 1178, with the exception of other performance requirements, ~~and seal categories, and the definition for Product Change,~~ was added to PAR 463. The new exemption increases clarity of compliance requirements for affected facilities subject to Rules 463 and 1178.

Exemption from OGI Inspections – Paragraph (h)(4)

Any tank that is out of service and complying with the requirements of Rule 1149 is exempt from OGI inspections. OGI inspections must resume once the tank is refilled and the initial inspection must be carried out within 14 days of the date the tank is filled.

Exemption from OGI Inspections Due to Safety– Paragraph (h)(5)

If a facility or person responsible for conducting an OGI inspection at a facility determines that it is unsafe to climb a tank due to safety concerns such as wind or slippery surfaces from rain, the facility is not required to conduct an inspection from the tank platform, or other vantage point for tanks without a platform. A ~~platform~~ component inspection for tanks that were identified as having visible vapors during a tank farm inspection must be conducted the first day the facility or person responsible for conducting the OGI inspection determines it safe to do so. An owner or operator is required to document the date that a required inspection was not completed and the reason.

*Subdivision (i) – Test Methods*Additional Vapor Pressure Test Methods – Paragraph (i)(3)

Contains the approved test methods to verify compliance with the Rule 463 requirements. New test methods were added to expand the test options used to determine the Reid Vapor Pressure of organic liquids. The new test methods include ASTM – 6377 and ASTM –6378 which provide updated testing procedures for crude oils and heavier petroleum products, respectively. Additional changes include the removal of references to specific editions of U.S. EPA AP-42 and updates to include the verification of the new vapor tight requirements.

Removal of Reference to AP-42 Fifth Edition – Paragraph (i)(5)

A reference to the fifth edition of U.S. EPA AP-42 was removed, as future versions of AP-42 may be published. Removing the reference to the specific edition will reduce the need for future Rule 463 amendments.

Verification of Vapor Tight – Paragraph (i)(6)

Contains the methods used to determine the vapor tight condition for storage tanks.

Subdivision (j) – Ozone Contingency Measure

The proposed amendments add the required ozone contingency measures to the rule. These contingency measures would only be implemented in the event that the U.S. EPA determines that the South Coast AQMD had failed to meet an RFP milestone or to attain an ozone NAAQS. These contingency control measures are necessary as part of comprehensive efforts to timely attain ozone standards.

CHAPTER 2

ENVIRONMENTAL CHECKLIST

Introduction

General Information

Environmental Factors Potentially Affected

Determination

Environmental Checklist and Discussion

INTRODUCTION

The environmental checklist provides a standard evaluation tool to identify a project's potential adverse environmental impacts. This checklist identifies and evaluates potential adverse environmental impacts that may be created by the proposed project.

GENERAL INFORMATION

Project Title:	PAR 463 – Organic Liquid Storage
Lead Agency Name:	South Coast Air Quality Management District
Lead Agency Address:	21865 Copley Drive Diamond Bar, CA 91765
CEQA Contact Person:	Jivar Afshar, (909) 396-2040, jafshar@aqmd.gov
PAR 463 Contact Person:	Joshua Ewell, (909) 396-2212, jewell@aqmd.gov
Project Sponsor's Name:	South Coast Air Quality Management District
Project Sponsor's Address:	21865 Copley Drive Diamond Bar, CA 91765
General Plan Designation:	Not applicable
Zoning:	Not applicable
Description of Project:	Rule 463 limits VOC emissions from any stationary storage tank with a potential for VOC emissions of six tons per year or greater used in crude oil and natural gas production operations, above-ground stationary tanks with a capacity of 19,815 gallons or greater used to store organic liquids, and above-ground tanks with a capacity between 251 and 19,815 gallons used to store gasoline. PAR 463 establishes requirements for: 1) conducting inspections, including but not limited to optical gas imaging tank farm inspections every other calendar week; 2) installing domes on external floating roof tanks storing organic liquids with a true vapor pressure of 3.0 psia or greater; 3) installing secondary seals on all floating roof tanks; 4) increasing the efficiency of emission control systems; 5) more stringent seal gap allowances; and 6) conducting monitoring, maintenance, recordkeeping, and reporting activities. PAR 463 will affect 429 facilities including refineries, bulk storage, loading, and oil production facilities, and is estimated to reduce VOC emissions by 0.431 <u>1.65</u> ton per day.
Surrounding Land Uses and Setting:	Various
Other Public Agencies Whose Approval is Required:	Not applicable

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The following environmental impact areas have been assessed to determine their potential to be affected by the proposed project. As indicated by the checklist on the following pages, environmental topics marked with an "✓" involve at least one impact that is a "Potentially Significant Impact". An explanation relative to the determination of impacts can be found following the checklist for each area.

DETERMINATION

On the basis of this initial evaluation:

- ☒ I find the proposed project, in accordance with those findings made pursuant to CEQA Guidelines Section 15252, COULD NOT have a significant effect on the environment, and that an ENVIRONMENTAL ASSESSMENT with no significant impacts has been prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will NOT be significant effects in this case because revisions in the project have been made by or agreed to by the project proponent. An ENVIRONMENTAL ASSESSMENT with no significant impacts will be prepared.
- ☐ I find that the proposed project MAY have a significant effect(s) on the environment, and an ENVIRONMENTAL ASSESSMENT will be prepared.
- ☐ I find that the proposed project MAY have a "potentially significant impact" on the environment, but at least one effect: 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards; and, 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL ASSESSMENT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects: 1) have been analyzed adequately in an earlier ENVIRONMENTAL ASSESSMENT pursuant to applicable standards; and, 2) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL ASSESSMENT, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Planning, Rule Development and
Implementation

ENVIRONMENTAL CHECKLIST AND DISCUSSION

As explained in Chapter 1, PAR 463 limits VOC emissions from above-ground stationary tanks with a capacity of 19,815 gallons or greater used to store organic liquids, above-ground tanks with a capacity between 251 and 19,815 gallons used to store gasoline, and any stationary storage tank with a potential for VOC emissions of six tons per year or greater used in crude oil and natural gas production operations. PAR 463 establishes requirements for: 1) conducting inspections, including but not limited to optical gas imaging tank farm inspections every other calendar week; 2) installing domes on EFR tanks storing organic liquids with a true vapor pressure of 3.0 psia or greater; 3) installing secondary seals on all floating roof tanks; 4) increasing the efficiency of emission control systems; 5) more stringent seal gap allowances; and 6) conducting monitoring, maintenance, recordkeeping, and reporting activities.

Of the proposed changes in PAR 463, only the installation of domes on some EFR tanks and the installation of secondary roof seals on some IFR tanks are expected to require physical modifications involving construction and these activities could create secondary adverse environmental impacts. Construction from doming EFR tanks involves assembling the dome, lifting it, and installing the dome; while installing secondary roof seals on IFR tanks is a one-step process. These activities create the potential for secondary adverse environmental impacts due to construction.

PAR 463 provides long time frames for when domes are required to be installed on applicable storage tanks in accordance with subparagraph (d)(1)(H), as follows: all applicable storage tanks at the time of the next internal API 653 inspection or the next time the tank is emptied cleaned and degassed, but no later than 23 years after a true vapor pressure test indicates the organic liquid stored is ≥ 3.0 psia. The effective date of this provision is June 7, 2027, to allow time for planning and budgetary considerations. In addition, construction activities associated with installing domes are expected to occur concurrently in situations when requirements other than PAR 463 necessitate emptying cleaning and degassing the tank. For example, PAR 463 subparagraph (d)(2)(D) specifies that the timing of construction should be coordinated and coincide with when the storage tank is next emptied cleaned and degassed when installing secondary roof seals on IFR tanks. For these reasons, storage tank emptying cleaning and degassing activities are not considered unique to PAR 463 and as such, the environmental impacts from these activities are excluded from the analysis. In addition, no grading or site preparation activities are required for installing domes. Thus, this construction analysis focuses on impacts from the combined efforts associated with: 1) doming EFR tanks which involves assembling the dome, lifting it, and installing the dome; and 2) installing secondary roof seals on IFR tanks as a one-step process.

Once the domes and secondary roof seals are installed, no changes in process operations involving these storage tanks are expected to occur. Therefore, other than VOC emission reductions, which are an environmental benefit to air quality, no adverse operational impacts are expected.

Other components of PAR 463, such as requirements for conducting biweekly optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions would not be expected to cause any physical changes that would create any secondary adverse environmental impacts either during construction or operation.

For these reasons, the analysis in this EA focuses on the key elements in the proposed project with the potential to create secondary adverse environmental impacts associated with doming approximately 20 EFR tanks and installing secondary seals on 22 IFR tanks.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
I. <u>AESTHETICS.</u> Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point(s).) If the project is in an urbanized area, would the project conflict with applicable zoning or other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Significance Criteria

The proposed project impacts on aesthetics will be considered significant if:

- The project will block public views from a scenic highway or corridor.
- The project will adversely affect the visual continuity of public views of the surrounding area.
- The impacts on light and glare will be considered significant if the project adds lighting which would add glare to residential areas or sensitive receptors.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

I. a), b), & c) Less Than Significant Impact. For the purpose of determining significance under CEQA, a scenic vista is generally considered a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. Some scenic vistas are officially designated

by public agencies, or informally designated by tourist guides. Vistas provide visual access or panoramic views to a large geographic area and are generally located at a point where surrounding views are greater than one mile away. Panoramic views are usually associated with vantage points over a section of urban or natural areas that provide a geographic orientation not commonly available. Examples of panoramic views might include an urban skyline, valley, mountain range, a large open space area, the ocean, or other water bodies. A substantial adverse effect to a scenic vista is one that degrades the view from such a designated view spot.

A scenic highway is generally considered a stretch of public roadway that is designated as a scenic corridor by a federal, state, or local agency. Caltrans defines a scenic highway as any freeway, highway, road, or other public right of way, that traverses an area of exceptional scenic quality.

Physical modifications associated with the proposed project are limited to doming EFR tanks and installing secondary roof seals on IFR tanks at existing facilities. The construction equipment is expected to be at the height of or just above the existing storage tanks and not substantially visible to the surrounding area due to construction occurring within each existing facility's property line, existing fencing along property lines, and existing structures currently within each facility's boundaries that may buffer the views of the construction activities.

Since the affected facilities are located in existing industrial areas, the construction equipment is not expected to be substantially discernable from other off-road equipment that exists on-site for routine operations and maintenance activities. Further, the construction activities are not expected to adversely impact views and aesthetics resources since most of the construction equipment and activities are expected to occur within the confines of each existing facility and are expected to introduce only minor visual changes to areas outside each facility, if at all, depending on the location of the construction activities within each affected facility. In addition, the construction activities are expected to be temporary in nature. Once construction is completed, all construction equipment would be removed from each facility.

Since all of the affected facilities are located in urbanized areas, any changes to the buildings or structures would require approvals from the local city or county planning departments. It is important to note that the affected facilities are located throughout the South Coast AQMD jurisdiction. Counties are mandated by the state of California to prepare a general plan containing an aesthetics element. None of the anticipated physical activities associated with implementing PAR 463 are intended to interfere or be inconsistent with the local planning department aesthetics requirements in their general plans. Physical activities resulting from the proposed project are not expected to take place in nor have a substantial adverse effect on a scenic vista or scenic highway indicated in the Los Angeles County General Plan 2035⁵, Orange County General Plan⁶, Riverside County General Plan⁷, or San Bernardino Countywide Plan⁸. None of the affected facilities are expected to be located within the views of a scenic vista or state scenic highway as designated by

⁵ Los Angeles County, General Plan 2035, Chapter 9 Section VII, Updated July 14, 2022. https://planning.lacounty.gov/wp-content/uploads/2022/11/9.0_gp_final-general-plan-ch9.pdf.

⁸ San Bernardino County, Countywide Plan, Policy Plan - NR-3 Scenic Routes & Highways, Created October 27, 2020. <https://countywideplan.com/wp-content/uploads/sites/68/2021/02/NR-3-Scenic-Routes-Highways-201027.pdf>

the California Department of Transportation (CalTrans).⁹ Therefore, PAR 463 would not be expected to conflict with applicable zoning or other regulations governing scenic quality.

The existing storage tanks that will be domed range in height from 15 feet to 65 feet and diameter from 15 feet to 299 feet. For context, the size of these storage tanks can be compared to a building that is from two to seven floors or stories in height.

Domes for these existing storage tanks are typically designed with a maximum radius equal to 1.2 times the tank diameter with a minimum of 0.7 times the tank diameter; the ratio of dome height to tank diameter is about 1:6.¹⁰ For example, the largest of the affected storage tanks that would need a dome is 63-feet in height with a diameter of 299 feet and the new dome would be one-sixth of the diameter, or 49.8 feet which is equivalent to adding about five floors or stories in a building. After doming, the total height would be approximately 113 feet.

In conclusion, the visual character of the landscape at affected facilities is already predominantly defined by the existing storage tanks themselves, and at a height that already obstructs the surrounding views, depending on the observer's location, regardless of whether the storage tanks are located at or near the coast or coastal sightlines or more inland. Further, the installation of domes is expected to blend in with the current industrial aesthetic profile of existing domed storage tanks at affected facilities.

The requirements in PAR 463 specific to conducting monitoring and inspections would involve low-profile activities, if at all, that would be expected to blend in with routine day-to-day operations occurring within the fence line of each affected facility. Therefore, monitoring and inspections would not be expected to cause any discernable aesthetic impacts visible to outside the property lines of each facility.

Based on the preceding analysis, implementation of the proposed project would have less than significant impacts on scenic vistas and would not be expected to substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway. In addition, PAR 463 would not be expected to substantially degrade the existing visual character or quality of public views of the affects sites and their surroundings. Finally, PAR 463 would not be expected to conflict with applicable zoning or other regulations governing scenic quality.

I. d) Less Than Significant Impact. PAR 463 does not include any components that would require construction activities to occur at night. Further, cities often have their own limitations and prohibitions that restrict construction from occurring during evening hours and weekends. Therefore, no additional temporary construction lighting at the facility would be expected. However, if facility operators determine that the construction schedule requires nighttime activities, temporary lighting may be required. Nonetheless, since construction activities would be completely located within the boundaries of each affected facility, additional temporary lighting is not expected to be discernable from the existing permanent night lighting.

¹⁰ Maxwell Continental Tank Serv Engineering. <https://maxwelltanks.com/domed-floating-roof-tank/alu-geodesic-dome-roofs/>, accessed on March 22, 2024.

The existing buildings at the affected facilities are currently illuminated at night for safety and security purposes, and the lighting typically faces toward the interior of each facility's property so that they point downward or parallel to the ground, which has the effect of limiting the amount of lighting to what is needed to adequately illuminate the specific locations. While minimal, additional permanent light sources could potentially be installed at or near the installation of new domes, PAR 463 does not specifically require new lighting to be installed. Thus, any new lighting, if installed, would likely be consistent in intensity and type with the existing lighting on equipment and other structures at the existing facilities and directed to minimize potential lighting impacts on areas outside the property lines. These practices are followed to avoid or minimize potential lighting impacts on areas outside each facility's property. Since the anticipated modifications would occur within the boundaries of each facility's property, no new areas are expected to be illuminated off-site by permanent additional lighting, in the event any new lighting is installed.

While any new aluminum dome could create an initial glare initially, the dome's aluminum panels will gradually oxidize such that the initial glare will dull naturally over the course of three to 12 months, or sooner at facilities located within industrial areas or by the ocean. In addition, to more quickly alleviate or eliminate the glare, dome panels can also be painted or sandblasted to dull the finish.

As described earlier in the discussion for questions 1a), b), and c), the existing storage tanks are at a very tall height (e.g., ranging from 15 feet to 65 feet) and the installation of a dome would increase the total overall height by about 2.5 feet to 50 feet, depending on the tank diameter. As such, the installation of aluminum domes will mainly reflect up towards the sky except for certain angles and at certain times of the day as the sun moves across the sky. The degree of reflection will fade over time as the aluminum oxidizes. In any case, construction to install domes, whether painted, unpainted or sanded, on the affected storage tanks will be subject to local planning department aesthetics requirements to avoid any conflict with a city or county general plan's aesthetics element. PAR 463 does not contain requirements or restrictions relative to the surface features of the dome. Further, all facility owners have other existing storage tanks that are domed and prior experience and understanding of what the local planning departments and any other agencies that may have oversight have required previously and if any glare reduction actions may be needed on any new domes that are installed at the individual site. As such, facility owners will need to work with contractors and coordinate with the local planning agency when designing each dome to determine the appropriate course of action for how to employ glare minimization features on the domes, if needed.

For these reasons, the proposed project would not create a new source of substantial light or glare at any of the affected facilities in a manner that would significantly adversely affect day or nighttime views in the surrounding areas.

Conclusion

Based upon these considerations, less than significant adverse aesthetics impacts are expected from implementing the proposed project. Since no significant aesthetics impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
II. <u>AGRICULTURE AND FORESTRY RESOURCES.</u> Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland mapping and Monitoring Program of the California Resources Agency, to non- agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in the conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Project-related impacts on agriculture and forest resources will be considered significant if any of the following conditions are met:

- The proposed project conflicts with existing zoning or agricultural use or Williamson Act contracts.
- The proposed project will convert prime farmland, unique farmland or farmland of statewide importance as shown on the maps prepared pursuant to the farmland mapping and monitoring program of the California Resources Agency, to non-agricultural use.
- The proposed project conflicts with existing zoning for, or causes rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined in Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)).

- The proposed project would involve changes in the existing environment, which due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

II. a), b), c), d), & e) No Impact. Pursuant to the California Land Conservation Act of 1965, a Williamson Act Contract enables private landowners to voluntarily enter into contracts with local governments for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners receive lower property tax assessments based upon farming and open space uses as opposed to full market value.

The affected facilities and their immediately surrounding areas are not located on or near areas zoned for agricultural use, Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Department of Conservation.¹¹ Therefore, the proposed project would not result in any construction of new buildings or other structures that would require converting farmland to non-agricultural use or conflict with zoning for agriculture use or a Williamson Act contract. The construction and operation activities would be expected to occur within the confines of existing industrial facilities; thus, the proposed project is not expected to result in converting farmland to non-agricultural use; conflict with existing zoning for agricultural use, or a Williamson Act Control.

All of the facilities are located in industrial use areas in the urban portion of South Coast AQMD's jurisdiction and, as such, are not near forest land. Therefore, the proposed project is not expected to conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)) or result in the loss of forest land or conversion of forest land to non-forest use. Consequently, the proposed project would not create any significant adverse agriculture or forestry impacts.

Conclusion

Based upon these considerations, significant adverse agriculture and forestry resources impacts are not expected from implementing the proposed project. Since no significant agriculture and forestry resources impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
III. <u>AIR QUALITY AND GREENHOUSE GAS EMISSIONS.</u>				
Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Diminish an existing air quality rule or future compliance requirement resulting in a significant increase in air pollutant(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Significance Criteria

To determine whether or not air quality and greenhouse gas impacts from implementing the proposed project are significant, impacts will be evaluated and compared to the criteria in Table 2-1. The proposed project will be considered to have significant adverse impacts if any one of the thresholds in Table 2-1 are equaled or exceeded.

Table 2-1
South Coast AQMD Air Quality Significance Thresholds

Mass Daily Thresholds ^a		
Pollutant	Construction	Operation
NO _x	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM ₁₀	150 lbs/day	150 lbs/day
PM _{2.5}	55 lbs/day	55 lbs/day
SO _x	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
Toxic Air Contaminants (TACs), Odor, and GHG Thresholds		
TACs (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic & Acute Hazard Index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to South Coast AQMD Rule 402	
GHG	10,000 MT/yr CO ₂ eq for industrial facilities	
Ambient Air Quality Standards for Criteria Pollutants ^b		
NO ₂ 1-hour average annual arithmetic mean	South Coast AQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (state) 0.03 ppm (state) and 0.0534 ppm (federal)	
PM ₁₀ 24-hour average annual average	10.4 µg/m ³ (construction) ^c & 2.5 µg/m ³ (operation) 1.0 µg/m ³

Revision: March 2023

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

III. a) No Impact. The South Coast AQMD is required by law to prepare a comprehensive district-wide AQMP which includes strategies (e.g., control measures) to reduce emission levels to achieve and maintain state and federal ambient air quality standards, and to ensure that new sources of emissions are planned and operated to be consistent with the South Coast AQMD's air quality goals. The AQMP's air pollution reduction strategies include control measures which target stationary, area, mobile, and indirect sources. These control measures are based on feasible methods of attaining ambient air quality standards. Pursuant to the provisions of both the state and federal Clean Air Acts, the South Coast AQMD is also required to attain the state and federal ambient air quality standards for all criteria pollutants.

The most recent regional blueprints for how the South Coast AQMD will achieve air quality standards and healthful air are outlined in the 2022 AQMP¹² which contains multiple goals of promoting reductions of criteria air pollutants, greenhouse gases, and toxics. In particular, the 2022 AQMP contains Control Measure FUG-01– Improved Leak Detection and Repair (LDAR), which explores the potential for newer leak detection technologies to improve current LDAR requirements thereby reducing emissions of VOC from fugitive leaks from process and storage equipment from a variety of sources including, but not limited to, oil and gas production, petroleum refining, storage and transfer, etc.

The proposed project is not expected to obstruct or conflict with the implementation of the 2022 AQMP because minimizing VOC emissions from implementing the proposed project is in accordance with the emission reduction goals in the 2022 AQMP, and in particular, Control Measure FUG-01. Thus, implementing the proposed project would not conflict with or obstruct implementation of the applicable air quality plan.

III. b) and e) Less Than Significant Impact. While the proposed project is designed to reduce fugitive VOC emissions from aboveground storage tanks, secondary air quality impacts are expected due to PAR 463 physical activities that would occur from its implementation, in particular from the assembly and installation of domes on EFR tanks, and the installation of secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse air quality impacts. Because the proposed project will not affect operation, no secondary adverse

¹² South Coast AQMD, Final 2022 Air Quality Management Plan, December 2022. <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan>

impacts to air quality or greenhouse gases are expected from operation. Thus, the analysis in this EA only examines the potential adverse air quality impacts from construction activities.

Construction Impacts

PAR 463 provides long time frames for when domes are required to be installed on applicable storage tanks in accordance with subparagraph (d)(1)(H), as follows: all applicable storage tanks after being ~~emptied~~ cleaned or degassed but no later than 20 years after a true vapor pressure test indicates the organic liquid stored is ≥ 3.0 psia. The effective date of this provision is June 7, 2027, to allow for planning and budgetary considerations. In addition, construction activities associated with installing domes are expected to occur concurrently in situations when requirements other than PAR 463 necessitate emptying ~~cleaning~~ and degassing the tank. For example, PAR 463 subparagraph (d)(2)(D) specifies that the timing of construction should be coordinated and coincide with when the storage tank is next ~~emptied~~ cleaned or degassed when installing secondary roof seals on IFR tanks. For these reasons, storage tank cleaning ~~emptying~~ and degassing activities are not considered unique to PAR 463 and as such, the environmental impacts from these activities are excluded from the analysis of construction activities. In addition, no grading or site preparation activities are required for constructing domes. Thus, this construction analysis focuses on impacts from the combined efforts associated with: 1) doming EFR tanks which involves assembling the dome, lifting it, and installing the dome; and 2) installing secondary roof seals on IFR tanks as a one-step process.

Because of the long timeframe (e.g., up to 20 years) allowing facility operators to comply with PAR 463 and because of varying tank ages combined with the fact that only 20 tanks will need to be domed and 22 tanks will need secondary roof seals, as a practical matter, it is unlikely that construction will occur on more than one tank at a time at an affected facility, or that a large number of facilities will concurrently be under construction on the same day. However, since multiple facilities have both EFR and IFR tanks that would be subject to the requirements in PAR 463 and which may need to be domed and/or have secondary roof seals installed, this analysis considers a worst-case scenario and assumes that five EFR tanks would be domed and 11 IFR tanks would have secondary roof seals installed on a peak day.

Because the nature of the physical modifications that may occur if PAR 463 is implemented is similar to physical modifications analyzed for the September 2023 amendment to Rule 1178, the following construction analysis incorporates information from the September 2023 Final Environmental Assessment (EA) for Rule 1178.¹³ While the largest tank analyzed in the September 2023 Final EA for Rule 1178 had a diameter of 260 feet, the largest tank in the PAR 463 universe of equipment is somewhat larger at 299 feet in diameter. Nonetheless, the construction process for PAR 463, including the construction equipment used and timeframes, is expected to be the same or similar to what was analyzed in the September 2023 Final EA for Rule 1178.

The following bullets summarize the assumptions relied upon for the construction analysis:

Doming an External Floating Roof Tank

- On-road Motor Vehicles:
 - 1 Material Delivery Truck driving 50 miles per day

¹³ South Coast AQMD, Final Environmental Assessment for Proposed Amended Rule 1178 - Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities, September 2023. <http://www.aqmd.gov/docs/default-source/ceqa/documents/aqmd-projects/2023/final-environmental-assessment-for-proposed-amended-rule-1178.pdf>

- 10 Worker Vehicles driving 40 miles per day
- Off-road Construction Equipment:
 - 1 Crane, 3 Welders, and 1 Compressor each operating for 10 hours per day, 6 days per week, for 16 weeks

Installing Secondary Roof Seals on an Internal Floating Roof Tank

- On-road Motor Vehicles:
 - 1 Material Delivery Truck driving 50 miles per day
 - 10 Worker Vehicles driving 40 miles per day
- Off-road Construction Equipment:
 - 1 Crane for 4 hours per day, 5 days per week, and 8 weeks
 - 1 Compressor for 8 hours per day, 5 days per week, and 8 weeks

Criteria pollutant emissions were calculated for off-road construction equipment used for retrofitting the storage tanks and on-road motor vehicles transporting workers and material deliveries during construction using the California Emissions Estimator Model® (CalEEMod), version 2022.1.1.21. The detailed output reports for the CalEEMod¹⁴ runs, and a summary excel sheet with the peak daily construction impacts by construction activity type and season are included in Appendix B.

Table 2-2 summarizes the peak daily emissions associated with doming one EFR tank, installing a secondary roof seal on one tank, and the worst-case scenario based on the assumption that five EFR tanks would be domed and 11 IFR tanks would have secondary roof seals installed on a peak day.

Table 2-2
Peak Daily Construction Emissions by Pollutant (lb/day)

Construction Activity	VOC	NOx	CO	SOx	PM10	PM2.5
Doming 1 EFR Tank	1.37	10.90	13.40	0.03	0.67	0.40
Installing a Secondary Roof Seal on 1 IFR Tank	0.52	3.93	5.55	0.01	0.45	0.19
Doming 5 EFR Tanks and Installing Secondary Roof Seals on 11 IFR Tanks	12.57	97.95	128.05	0.26	8.3	4.09
Significance Threshold for Construction	75	100	550	150	150	55
Significant?	NO	NO	NO	NO	NO	NO

The air quality analysis indicates that the peak daily construction emissions do not exceed the South Coast AQMD's air quality significance thresholds for any pollutant during construction. Thus, the air quality impacts during construction are concluded to be less than significant.

¹⁴ CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas emissions associated with both construction and operations from a variety of land use projects.

Cumulatively Considerable Impacts

Based on the foregoing analysis, since criteria pollutant project-specific air quality impacts from implementing the proposed project would not be expected to exceed any of the air quality significance thresholds in Table 2-1, cumulative air quality impacts are also expected to be less than significant. South Coast AQMD cumulative air quality significance thresholds are the same as project-specific air quality significance thresholds. Therefore, potential adverse impacts from implementing the proposed project would not be “cumulatively considerable” as defined by CEQA Guidelines Section 15064(h)(1) for air quality impacts. Per CEQA Guidelines Section 15064(h)(4), the mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project’s incremental effects are cumulatively considerable.

The South Coast AQMD’s guidance on addressing cumulative impacts for air quality is as follows: “As Lead Agency, the South Coast AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR.” “Projects that exceed the project-specific significance thresholds are considered by the South Coast AQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant.”¹⁵

This approach was upheld by the Court in *Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal. App. 4th 327, 334. The Court determined that where it can be found that a project did not exceed the South Coast AQMD’s established air quality significance thresholds, the City of Chula Vista properly concluded that the project would not cause a significant environmental effect, nor result in a cumulatively considerable increase in these pollutants. The court found this determination to be consistent with CEQA Guidelines Section 15064.7, stating, “The lead agency may rely on a threshold of significance standard to determine whether a project will cause a significant environmental effect.” The court found that, “Although the project will contribute additional air pollutants to an existing non-attainment area, these increases are below the significance criteria...” “Thus, we conclude that no fair argument exists that the Project will cause a significant unavoidable cumulative contribution to an air quality impact.” As in *Chula Vista*, here the South Coast AQMD has demonstrated, when using accurate and appropriate data and assumptions, that the project will not exceed the established South Coast AQMD significance thresholds. See also, *Rialto Citizens for Responsible Growth v. City of Rialto* (2012) 208 Cal. App. 4th 899. Here again the court upheld the South Coast AQMD’s approach to utilizing the established air quality significance thresholds to determine whether the impacts of a project would be cumulatively considerable. Thus, it may be concluded that the proposed project would not contribute to a significant unavoidable cumulative air quality impact. Since no cumulatively significant air quality impacts were identified, no mitigation measures are necessary or required.

¹⁵ South Coast AQMD Cumulative Impacts Working Group White Paper on Potential Control Strategies to Address Cumulative Impacts From Air Pollution, August 2003, Appendix D, Cumulative Impact Analysis Requirements Pursuant to CEQA, at D-3. <http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper-appendix.pdf>

III. c) Less Than Significant Impact.***Toxic Air Contaminants (TACs) During Construction***

Diesel powered vehicles and equipment would be utilized during construction activities. Diesel PM is considered a carcinogenic and chronic TAC. A construction activity would be completed within four months; thus, a Health Risk Assessment (HRA) was not conducted, which is consistent with the Office of Environmental Health Hazard Assessment (OEHHA) Guidance Manual (2015). The analysis in Section III b) and e) concluded that the quantity of pollutants that may be generated from implementing the proposed project would be less than significant during construction. Because the emissions from all activities that may occur as part of implementing the proposed project are at less than significant levels, neither would the emissions be substantial, regardless of whether sensitive receptors are located near the affected facilities. Therefore, PAR 463 is not expected to generate significant adverse TAC impacts from construction or expose sensitive receptors to substantial pollutant concentrations. Since no significant air quality impacts were identified for TACs, no mitigation measures are necessary or required.

III. d) Less Than Significant Impact.***Odor Impacts***

Odor problems depend on individual circumstances. For example, individuals can differ quite markedly from the populated average in their sensitivity to odor due to any variety of innate, chronic or acute physiological conditions. This includes olfactory adaptation or smell fatigue (i.e., continuing exposure to an odor usually results in a gradual diminution or even disappearance of the small sensation).

During construction, diesel-fueled equipment and vehicles would be operated. Diesel fuel is required to have a low sulfur content (e.g., 15 ppm by weight or less) in accordance with South Coast AQMD Rule 431.2 – Sulfur Content of Liquid Fuels¹⁶; thus, the fuel is expected to have minimal odor. The operation of construction equipment would occur within the boundaries of existing affected facilities. It would be expected that sufficient dispersion of diesel emissions over distance generally occurs such that odors associated with diesel emissions may not be discernable to off-site receptors, depending on the location of the equipment and its distance relative to the nearest off-site receptor. The diesel trucks and equipment that would be operated on-site as a part of construction activities would not be allowed to idle longer than five minutes per any one location in accordance with the CARB idling regulation¹⁷, so lingering odors from idling vehicles would not be expected. In addition, construction activities would be temporary. Thus, PAR 463 is not expected to create significant adverse objectionable odors during construction. Since no significant air quality impacts were identified for odors, no mitigation measures for odors are necessary or required.

¹⁶ South Coast AQMD, Rule 431.2 – Sulfur Content of Liquid Fuels, September 15, 2000. <http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-431-2.pdf>

III. f) and g) Less Than Significant Impacts.

Greenhouse Gas (GHG) Impacts

Significant changes in global climate patterns have recently been associated with global warming, an average increase in the temperature of the atmosphere near the Earth's surface, attributed to accumulation of GHG emissions in the atmosphere. GHGs trap heat in the atmosphere, which in turn heats the surface of the Earth. Some GHGs occur naturally and are emitted to the atmosphere through natural processes, while others are created and emitted solely through human activities. The emission of GHGs through the combustion of fossil fuels (i.e., fuels containing carbon) in conjunction with other human activities, appears to be closely associated with global warming. State law defines GHG to include the following: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆) (Health and Safety Code Section 38505(g)). The most common GHG that results from human activity is CO₂, followed by CH₄ and N₂O.

Traditionally, GHGs and other global warming pollutants are perceived as solely global in their impacts and that increasing emissions anywhere in the world contributes to climate change anywhere in the world. A study conducted on the health impacts of CO₂ “domes” that form over urban areas cause increases in local temperatures and local criteria pollutants, which have adverse health effects¹⁸.

The analysis of GHGs is a different analysis than the analysis of criteria pollutants for the following reasons. For criteria pollutants, the significance thresholds are based on daily emissions because attainment or non-attainment is primarily based on daily exceedances of applicable ambient air quality standards. Further, several ambient air quality standards are based on relatively short-term exposure effects on human health (e.g., one-hour and eight-hour standards). Since the half-life of CO₂ is approximately 100 years, for example, the effects of GHGs occur over a longer term which means they affect the global climate over a relatively long timeframe. As a result, the South Coast AQMD's current position is to evaluate the effects of GHGs over a longer timeframe than a single day (i.e., annual emissions). GHG emissions are typically considered to be cumulative impacts because they contribute to global climate effects.

Since GHG impacts are defined on an annual, instead of a peak daily basis, the GHG emissions for construction were quantified by summing all of the GHGs occurring during construction activities for installing 20 domes on EFR tanks, and 22 secondary roof seals on IFR tanks, and then amortizing the total construction GHGs over 30 years.

The South Coast AQMD convened a “Greenhouse Gas CEQA Significance Threshold Working Group” to consider a variety of benchmarks and potential significant thresholds to evaluate GHG impacts. On December 5, 2008, the South Coast AQMD adopted an interim CEQA GHG Significance Threshold for projects where the South Coast AQMD is the lead agency (South Coast AQMD 2008). This GHG interim threshold is set at 10,000 metric tons (MT) of CO₂ equivalent emissions (CO₂eq) per year. Projects with incremental increases below this threshold will not be

¹⁸ Jacobsen, Mark Z. Environmental Protection Agency Hearing on California Waiver: “Effects of Local CO₂ Domes and of Global CO₂ Changes on California's Air Pollution and Health,” March 5, 2009.
<https://web.stanford.edu/group/efmh/jacobson/PDFfiles/0903EPACalif.pdf>

cumulatively considerable. GHG impacts from the implementation of the proposed project were calculated at the project-specific level during construction activities.

PAR 463 involves construction activities associated with installing domes on 20 EFR tanks and installing secondary seals on 22 IFR tanks which rely on construction equipment that emit GHGs when in use. Once construction is completed, PAR 463 does not have any requirements that would generate GHGs during operation of the storage tanks. Table 2-3 summarizes the GHG analysis which shows that the proposed project may result in the generation of 97 MT per year of CO₂eq from construction activities, which is less than the South Coast AQMD's air quality significance threshold for GHGs. Detailed calculations of project GHG emissions can be found in Appendix B.

Table 2-3
Summary of GHG Emissions

Construction Activity	CO₂eq Emissions (MT/yr)
Doming 1 EFR Tank	118
Installing Secondary Roof Seals on 1 IFR Tank	26
Doming 20 EFR Tanks and Installing Secondary Roof Seals on 22 IFR Tanks	97
Significance Threshold	10,000
Significant?	No

Note: 1 metric ton = 2,205 pounds. GHGs from short-term construction activities are amortized over 30 years.

As shown in Table 2-3, the South Coast AQMD air quality significance threshold for GHGs would not be exceeded. For this reason, implementing the proposed project would not be expected to generate significant adverse cumulative GHG air quality impacts. Further, as noted in Section III. a), implementation of the proposed project would not be expected to conflict with an applicable plan, policy or regulation adopted for the purpose of reducing criteria pollutants and the same is true for GHG emissions since the quantity of increased GHG emissions is at less than significant levels. Since significant air quality impacts were not identified for GHGs, no mitigation measures are necessary or required.

Conclusion

Based upon these considerations, significant air quality and GHG emissions impacts are not expected from implementing the proposed project. Since no significant air quality and GHG emissions impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
IV. <u>BIOLOGICAL RESOURCES.</u>				
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts on biological resources will be considered significant if any of the following criteria apply:

- The project results in a loss of plant communities or animal habitat considered to be rare, threatened or endangered by federal, state or local agencies.
- The project interferes substantially with the movement of any resident or migratory wildlife species.
- The project adversely affects aquatic communities through construction or operation of the project.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

IV. a), b), c), & d) No Impact. Implementation of PAR 463 would occur at existing affected facilities, which are located in industrial areas. Additionally, the physical improvements are expected to occur within the existing facility property boundaries which have been previously disturbed. Thus, PAR 463 is not expected to adversely affect in any way habitats that support riparian habitat, federally protected wetlands, or migratory corridors. Similarly, special status plants, animals, or natural communities identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service are not expected to be found on or in close proximity to affected facilities. Therefore, PAR 463 would have no direct or indirect impacts that could adversely affect plant or animal species or the habitats on which they rely. PAR 463 does not require the acquisition of additional land or further conversions of riparian habitats or sensitive natural communities where endangered or sensitive species may be found. In addition, any construction from the implementation of PAR 463 would take place at the existing facilities and would not occur on or near a wetland or in the path of migratory species.

IV. e) & f) No Impact. The proposed project is not expected to conflict with local policies or ordinances protecting biological resources or local, regional, or state conservation plans, because land use and other planning considerations are determined by local governments and no land use or planning requirements would be altered by implementation of PAR 463. Projects resulting in an air quality benefit: decreasing air pollutant emissions while not changing the type of pollutants emitted, will not conflict with any U.S. Department of Fish and Wildlife Habitat Conservation Plans (HCP). In addition, the doming and secondary roof seal requirements imposed on the existing storage tanks due to the implementation of PAR 463 will not necessitate any grading activities that could adversely impact any natural habitat. Thus, PAR 463 would not conflict with any adopted HCP, Natural Community Conservation Plan, or any other relevant habitat conservation plan, and would not create divisions in any existing communities because compliance with PAR 463 would occur at existing facilities in previously disturbed areas which are not typically subject to Habitat or Natural Community Conservation Plans.

Conclusion

Based upon these considerations, significant biological resource impacts are not expected from implementing the proposed project. Since no significant biological resource impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
V. <u>CULTURAL AND TRIBAL CULTURAL RESOURCES.</u>				
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074, as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is either:				
• Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in Public Resources Code Section 5024.1(c)? (In applying the criteria set forth in Public Resources Code Section 5024.1(c), the lead agency shall consider the significance of the resource to a California Native American tribe.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts to cultural resources will be considered significant if:

- The project results in the disturbance of a significant prehistoric or historic archaeological site or a property of historic or cultural significance, or tribal cultural significance to a community or ethnic or social group or a California Native American tribe.
- Unique resources or objects with cultural value to a California Native American tribe are present that could be disturbed by construction of the proposed project.
- The project would disturb human remains.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

V. a) No Impact. There are existing laws in place that are designed to protect and mitigate potential impacts to cultural resources. For example, CEQA Guidelines state that generally, a resource shall be considered “historically significant” if the resource meets the criteria for listing in the California Register of Historical Resources, which include the following:

- Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage;
- Is associated with the lives of persons important in our past;
- Embodies the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual, or possesses high artistic values;
- Has yielded or may likely to yield information important in prehistory or history (CEQA Guidelines Section 15064.5).

Buildings, structures, and other potential culturally significant resources that are less than 50 years old are generally excluded from listing in the National Register of Historic Places, unless they are shown to be exceptionally important. Buildings or structures that may be affected by PAR 463 are used for industrial purposes and would generally not be considered to be historically significant, since they would not have any of the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values. Therefore, PAR 463 is not expected to cause any impacts to historically significant cultural resources.

V. b), c), & d) No Impact. Construction-related activities associated with installing domes and secondary roof seals on existing IFR tanks are expected to be confined within the affected existing industrial facility boundaries and will occur aboveground. In addition, as mentioned in Section V. a) the existing storage tanks subject to PAR 463 are considered heavy industrial equipment and as such, are not unique resources or identified as having any cultural or tribal importance. Thus, PAR

463 is not expected to require physical changes to the environment which may disturb paleontological or archaeological resources. Furthermore, it is envisioned that these areas are already either devoid of significant cultural resources or whose cultural resources have been previously disturbed. Therefore, PAR 463 has no potential to cause a substantial adverse change to a historical or archaeological resource, directly or indirectly to destroy a unique paleontological resource or site or unique geologic feature, or to disturb any human remains, including those interred outside formal cemeteries. Implementing PAR 463 is, therefore, not anticipated to result in any activities or promote any programs that could have a significant adverse impact on cultural resources.

PAR 463 is not expected to require physical changes to a site, feature, place, cultural landscape, sacred place or object with cultural value to a California Native American Tribe. Furthermore, PAR 463 is not expected to result in a physical change to a resource determined to be eligible for inclusion or listed in the California Register of Historical Resources or included in a local register of historical resources. Similarly, PAR 463 is not expected to result in a physical change to a resource determined by the South Coast AQMD to be significant to any tribe. For these reasons, PAR 463 is not expected to cause any substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074.

As part of releasing this CEQA document for public review and comment, the South Coast AQMD also provided a formal notice of the proposed project to all California Native American Tribes (Tribes) that requested to be on the Native American Heritage Commission's (NAHC) notification list per Public Resources Code Section 21080.3.1(b)(1). The NAHC notification list provides a 30-day period during which a Tribe may respond to the formal notice, in writing, requesting consultation on the proposed project.

In the event that a Tribe submits a written request for consultation during this 30-day period, the South Coast AQMD will initiate a consultation with the Tribe within 30 days of receiving the request in accordance with Public Resources Code Section 21080.3.1(b). Consultation ends when either: 1) both parties agree to measures to avoid or mitigate a significant effect on a Tribal Cultural Resource and agreed upon mitigation measures shall be recommended for inclusion in the environmental document [see Public Resources Code Section 21082.3(a)]; or 2) either party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached [see Public Resources Code Section 21080.3.2(b)(1)-(2) and Section 21080.3.1(b)(1)].

Conclusion

Based upon these considerations, significant adverse cultural and tribal cultural resources impacts are not expected from implementing the proposed project. Since no significant cultural and tribal cultural resources impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
VI. <u>ENERGY</u>. Would the project:				
a) Conflict with or obstruct adopted energy conservation plans, a state or local plan for renewable energy, or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the need for new or substantially altered power or natural gas utility systems?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Create any significant effects on local or regional energy supplies and on requirements for additional energy?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create any significant effects on peak and base period demands for electricity and other forms of energy?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Comply with existing energy standards?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Require or result in the relocation or construction of new or expanded electric power, natural gas or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts to energy resources will be considered significant if any of the following criteria are met:

- The project conflicts with adopted energy conservation plans or standards.
- The project results in substantial depletion of existing energy resource supplies.
- An increase in demand for utilities impacts the current capacities of the electric and natural gas utilities.
- The project uses energy resources in a wasteful and/or inefficient manner.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

VI. a), e), f), & g) No Impact. The proposed project is not expected to conflict with any adopted energy conservation plans or violate any energy conservation standards because existing facilities would be expected to continue implementing any existing energy conservation plans that are currently in place regardless of whether the proposed project is implemented. The effects of implementing PAR 463 would apply to existing facilities. Any energy resources that may be necessary to dome EFR tanks, install secondary roof seals on IFR tanks, and utilize additional OGI technology would be used to achieve reductions in VOC; and therefore, would not be using non-renewable resources in a wasteful manner. For these reasons, the proposed project is not expected to conflict with energy conservation plans or existing energy standards, or use non-renewable resources in a wasteful manner. In addition, the construction and operation of domes is not expected to rely on electric power, natural gas or telecommunication facilities, as such PAR 463 will not cause the relocation or construction of new or expanded electric power, natural gas or telecommunication facilities. Therefore, no impacts are expected.

VI. b), c), & d) Less Than Significant Impact.***Fuel Usage during Construction***

Implementation of the proposed project would result in the installation of domes and secondary roof seals, and the utilization of OGI technology. To accomplish these activities, use of energy in terms of gasoline and diesel fuel would be needed for on-road passenger vehicles and heavy duty trucks associated with delivering supplies and construction materials, and off-road construction equipment, respectively. While construction under the proposed project is expected to be spaced out across multiple years, to estimate worst-case energy impacts associated with construction activities, South Coast AQMD staff estimated the total gasoline and diesel fuel consumption for doming 20 EFR tanks and installing secondary roof seals for 22 tanks all occurring in one year. Each installation of a dome or secondary seal is estimated to require 10 worker trips and one material delivery trip per day, with doming requiring one crane, three welders, and one air compressor, each for 10 hours per day and 97 days for completion (~ six days per week for 16 weeks); and installation of secondary roof seals requiring one crane four hours per day and one air compressor eight hours per day and 42 days for completion (~ 5 days per week for 8 weeks).

On-road passenger vehicles were modelled as gasoline passenger cars (LDA) and light-duty trucks (LDT1 and LDT2) traveling 40 miles per day, and heavy duty trucks associated with delivering supplies and construction materials were modelled as diesel Tier 7 CA International Registration Plan Trucks (T7 CAIRP) travelling 50 miles per day. Fuel use was estimated using EMFAC2021 version 1.0.2 for calendar year 2026. Fuel use for offroad equipment was estimated using equipment specifications from CalEEMod version 2022.1.1.21 and OFFROAD2021 version 1.0.3. Table 2-4 summarizes the projected fuel use impacts associated with construction activities and

compares it to the gasoline and diesel consumption rates in the South Coast AQMD jurisdiction, for 2017. Detailed fuel use calculations can be found in Appendix B.

Table 2-4
Annual Total Projected Fuel Usage for Construction Activities

	Diesel	Gasoline
Projected Construction Energy Use (gal/yr)	73,474	4,238
Year 2017 South Coast AQMD Jurisdiction Estimated Fuel Demand (gal/yr)	775,000,000	7,086,000,000
Total Increase Above Baseline	0.00948%	0.000060%
Significance Threshold	1%	1%
Significant?	No	No

Based on the foregoing analyses, the construction-related activities associated with the implementation of the proposed project would not use energy in a wasteful manner, would not result in substantial depletion of existing energy resource supplies, or create a significant demand of energy when compared to existing supplies. Thus, there are no significant adverse energy impacts associated with the implementation of PAR 463.

Conclusion

Based upon these considerations, significant adverse energy impacts are not expected from implementing the proposed project. Since no significant energy impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
• Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts on the geological environment will be considered significant if any of the following criteria apply:

- Topographic alterations would result in significant changes, disruptions, displacement, excavation, compaction or over covering of large amounts of soil.
- Unique geological resources (paleontological resources or unique outcrops) are present that could be disturbed by the construction of the proposed project.
- Exposure of people or structures to major geologic hazards such as earthquake surface rupture, ground shaking, liquefaction or landslides.
- Secondary seismic effects could occur which could damage facility structures, e.g., liquefaction.
- Other geological hazards exist which could adversely affect the facility, e.g., landslides, mudslides.
- Unique paleontological resources or sites or unique geologic features are present that could be directly or indirectly destroyed by the proposed project.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

VII. a), b), c), d), e), f) No Impact. The proposed project involves constructing new domes and installing roof tank seals on existing storage tanks located in already developed industrial settings and these activities would occur aboveground and as such, would not require any grading or site preparation activities. Therefore, the proposed project is not expected to adversely affect geophysical conditions in the South Coast AQMD jurisdiction.

Southern California is an area of known seismic activity. As part of the issuance of building permits, local jurisdictions are responsible for assuring that the Uniform Building Code is adhered to and can conduct inspections to ensure compliance. The Uniform Building code is considered to be a standard safeguard against major structural failures and loss of life. The basic formulas used for the Uniform Building Code seismic design require determination of the seismic zone and site coefficient, which represents the foundation condition at the site. The Uniform Building Code requirements also consider liquefaction potential and establish stringent requirements for building foundations in areas potentially subject to liquefaction. The proposed project will not require the modification of existing structures at existing facilities in a manner that would not conform to the Uniform Building Code or any other state and local building codes. Structures must be designed to comply with the Uniform Building Code Zone 4 requirements if they are located in a seismically active area. The Uniform Building Code is considered to be a standard safeguard against major structural failures and loss of life. Thus, the proposed project would not alter the exposure of people or property to geological hazards such as earthquakes, landslides, mudslides, ground failure, or other natural hazards. As a result, substantial exposure of people or structures to the risk of loss,

injury, or death involving the rupture of an earthquake fault, seismic ground shaking, ground failure or landslides is not anticipated.

Physical modifications as a result of the proposed project are limited to retrofitting existing aboveground storage tanks and require no grading activities or soil disturbance that would create any issues with erosion. For this reason, no unstable earth conditions or changes in geologic substructures are expected to result from implementing the proposed project and therefore, no impacts to the loss of topsoil or soil erosion will occur. Further, since soil at existing facilities will not be disturbed, it will not be made further susceptible to expansion or liquefaction. Further, the proposed project will not create any new conditions that would cause subsidence landslides, or alter unique geologic features at any of the facilities. Thus, the proposed project would not be expected to increase or exacerbate any existing risks associated with soils at any facility. Implementation of the proposed project would not involve re-locating facilities on a geologic unit or soil that is unstable or that would become unstable as a result of the project; therefore, it would not be expected to potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction or collapse. No impacts are anticipated.

The proposed project would not require the installation of septic tanks or other alternative wastewater disposal systems. Therefore, no persons or property would be exposed to new impacts related to expansive soils or soils incapable of supporting water disposal. Thus, the implementation of the proposed project would not adversely affect soils associated with the installation of a new septic system or alternative wastewater disposal system or modification of an existing sewer.

The proposed project does not cause or require the construction of any new facilities. No previously undisturbed land that may contain a unique paleontological resource or site or unique geological feature would be affected. Therefore, the proposed project is not expected to directly or indirectly destroy a unique paleontological resource or site or unique geological feature.

Conclusion

Based upon these considerations, significant adverse geology and soils impacts are not expected from the implementation of the proposed project. Since no significant geology and soils impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
VIII. <u>HAZARDS AND HAZARDOUS MATERIALS.</u> Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions, or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Significantly increased fire hazard in areas with flammable materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts associated with hazards will be considered significant if any of the following occur:

- Non-compliance with any applicable design code or regulation.
- Non-conformance to National Fire Protection Association standards.
- Non-conformance to regulations or generally accepted industry practices related to operating policy and procedures concerning the design, construction, security, leak detection, spill containment or fire protection.
- Exposure to hazardous chemicals in concentrations equal to or greater than the Emergency Response Planning Guideline (ERPG) 2 levels.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

VIII. a), b) & c) No Impact. While the proposed project will result in construction at affected facilities, doming EFR tanks, installing secondary roof seals on IFR tanks, and utilizing additional OGI technology will not require use or disposal of hazardous materials. Implementation of the proposed project is not expected to affect operations pertaining to hazardous materials, such as the processing of petroleum; thus, there will be no increase in nor creation of: a) significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; b) significant hazard to the public or the environment in the event of upset or accident conditions involving the release of hazardous materials from these storage tanks into the environment; or c) hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school if an existing facility happens to be located near an existing or proposed school.

VIII. d) No Impact. Government Code Section 65962.5 refers to hazardous waste handling practices at facilities subject to the Resources Conservation and Recovery Act (RCRA). Implementation of the proposed project is not expected to affect operations pertaining to hazardous materials, such as the processing of petroleum; thus, there will be no increase in or creation of a new significant hazard to the public or the environment if an existing facility happens to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.

VIII. e) Less than Significant Impact. Federal Aviation Administration regulation, 14 CFR Part 77 – Safe, Efficient Use and Preservation of the Navigable Airspace, provide information regarding the types of projects that may affect navigable airspace. Projects may adversely affect navigable airspace if they involve construction or alteration of structures greater than 200 feet above ground level within a specified distance from the nearest runway or objects within 20,000 feet of an airport or seaplane base with at least one runway more than 3,200 feet in length and the object would exceed a slope of 100:1 horizontally (100 feet horizontally for each one foot vertically from the nearest point of the runway). Some facilities may be located within a two-mile

radius of an airport that may require potential construction activities to install domes and roof tank seals on existing storage tanks. However, none of these facilities' storage tanks are expected to be taller than 200 feet above-ground. In addition, these facilities may have other heavy industrial equipment that will not be affected by PAR 463 but that are much taller than the existing storage tanks. Thus, for the facilities located near a runway or an airport, the facility operators will already have safety protocols and procedures in place for alerting the Federal Aviation Administration of any potential changes involving equipment greater than 200 feet above ground level. Thus, implementation of PAR 463 is not expected to interfere with navigable airspace or affect existing operations pertaining to hazardous materials, such as the processing of petroleum. Finally, PAR 463 does not contain any requirements that would interfere with any applicable design code or regulation the Federal Aviation Administration may have in effect for safety reasons. Thus, there will be no significant increase in existing safety hazards or the creation of new safety hazards to peoples working or residing in the vicinity of public/private airports.

VIII. f) No Impact. Health and Safety Code Section 25506 specifically requires all businesses handling hazardous materials to submit a business emergency response plan to assist local administering agencies in the emergency release or threatened release of a hazardous material. Business emergency response plans generally require the following:

- Identification of individuals who are responsible for various actions, including reporting, assisting emergency response personnel and establishing an emergency response team;
- Procedures to notify the administering agency, the appropriate local emergency rescue personnel, and the California Office of Emergency Services;
- Procedures to mitigate a release or threatened release to minimize any potential harm or damage to persons, property or the environment;
- Procedures to notify the necessary persons who can respond to an emergency within the facility;
- Details of evacuation plans and procedures;
- Descriptions of the emergency equipment available in the facility;
- Identification of local emergency medical assistance; and,
- Training (initial and refresher) programs for employees in:
 1. The safe handling of hazardous materials used by the business;
 2. Methods of working with the local public emergency response agencies;
 3. The use of emergency response resources under control of the handler;
 4. Other procedures and resources that will increase public safety and prevent or mitigate a release of hazardous materials.

In general, every county or city and all facilities using a minimum amount of hazardous materials are required to formulate detailed contingency plans to eliminate, or at least minimize, the possibility and effect of fires, explosion, or spills. In conjunction with the California Office of Emergency Services, local jurisdictions have enacted ordinances that set standards for area and business emergency response plans. These requirements include immediate notification,

mitigation of an actual or threatened release of a hazardous material, and evacuation of the emergency area.

Emergency response plans are typically prepared in coordination with the local city or county emergency plans to ensure the safety of not only the public (surrounding local communities), but the facility employees as well. The proposed project would not impair the implementation of, or physically interfere with any adopted emergency response plans or emergency evacuation plans that may be in place at existing facilities.

VIII. g) No Impact. The Uniform Fire Code and Uniform Building Code set standards intended to minimize risks from flammable or otherwise hazardous materials. Local jurisdictions are required to adopt the uniform codes or comparable regulations. Local fire agencies require permits for the use or storage of hazardous materials and permit modifications for proposed increases in their use. Permit conditions depend on the type and quantity of the hazardous materials at the facility. Permit conditions may include, but are not limited to, specifications for sprinkler systems, electrical systems, ventilation, and containment. The fire departments make annual business inspections to ensure compliance with permit conditions and other appropriate regulations. Further, businesses are required to report increases in the storage or use of flammable and otherwise hazardous materials to local fire departments. Local fire departments ensure that adequate permit conditions are in place to protect against the potential risk of upset. The proposed project would not change the existing requirements and permit conditions for the proper handling of flammable materials.

Conclusion

Based upon these considerations, significant adverse hazards and hazardous materials impacts are not expected from implementing the proposed project. Since no significant hazards and hazardous materials impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
IX. <u>HYDROLOGY AND WATER QUALITY.</u> Would the project:				
a) Violate any water quality standards, waste discharge requirements, or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
• Result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
• Impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
f) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, facilities or new storm water drainage facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Potential impacts on water resources will be considered significant if any of the following criteria apply:

Water Demand:

- The existing water supply does not have the capacity to meet the increased demands of the project, or the project would use more than 262,820 gallons per day of potable water.
- The project increases demand for total water by more than five million gallons per day.

Water Quality:

- The project will cause degradation or depletion of ground water resources substantially affecting current or future uses.
- The project will cause the degradation of surface water substantially affecting current or future uses.
- The project will result in a violation of National Pollutant Discharge Elimination System (NPDES) permit requirements.
- The capacities of existing or proposed wastewater treatment facilities and the sanitary sewer system are not sufficient to meet the needs of the project.
- The project results in substantial increases in the area of impervious surfaces, such that interference with groundwater recharge efforts occurs.
- The project results in alterations to the course or flow of floodwaters.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

IX. a), b), e), f), g) & h) No Impact. Implementation of PAR 463 would require construction activities associated with installing domes on existing EFR tanks and installing secondary roof seals on existing IFR tanks. These activities might first require storage tanks to be ~~emptied~~ cleaned and degassed if other repairs are needed, but those steps already occur as part of regular tank inspections, and not because of PAR 463.

PAR 463 subparagraph (d)(2)(D) specifies that the timing of construction should be coordinated and coincide with when the storage tank is next ~~emptied~~ cleaned or degassed when installing secondary roof seals on IFR tanks. For these reasons, storage tank ~~emptying~~ cleaning and degassing activities are not considered unique to PAR 463 and as such, the environmental impacts from these activities are excluded from the analysis of construction activities. It is important to note that dome suppliers and affected facilities say that a storage tank does not need to be ~~emptied~~ cleaned and degassed in order to install domes and secondary roof seals, unless the tank shell is in need of reinforcement and repairs that involve welding. Further, if a storage tank is ~~emptied~~ cleaned and degassed, water is not required for this process so no increase in water demand is expected. In addition, PAR 463 does not contain any requirements that would require the use of water during construction or operation. Further, since water is not needed to implement PAR 463, no wastewater would be expected to be generated and. Since no wastewater is generated and no increase in water demand is created from the proposed project, the proposed project would not be expected to: 1) violate any water quality standards, waste discharge requirements of the applicable Regional Water Quality Control Board, or otherwise substantially degrade surface or ground water quality; 2) require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, facilities or new storm water drainage facilities; 3) substantially decrease groundwater supplies or interfere substantially with groundwater recharge or impede sustainable groundwater management of the basin; 4) conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan; 5) impact the water supply available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years; and 6) give cause for the wastewater treatment provider to question or evaluate whether adequate wastewater capacity exists in addition to the provider's existing commitments.

Conclusion

Based upon these considerations, significant adverse hydrology and water quality impacts are not expected from implementing the proposed project. Since no significant hydrology and water quality impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
X. <u>LAND USE AND PLANNING.</u>				
Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Land use and planning impacts will be considered significant if the project conflicts with the land use and zoning designations established by local jurisdictions.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

X. a) & b) No Impact. The proposed project does not require the construction of new facilities, and the physical effects that would result from the proposed project would occur at existing facilities located in industrial areas and would occur within existing facility boundaries. For this reason, implementation of PAR 463 is not expected to physically divide an established community. Therefore, no impacts are anticipated.

Further, land use and other planning considerations are determined by local governments and the proposed project does not alter any land use or planning requirements. Compliance with the proposed project would apply to existing storage tanks operating within the boundary of existing facilities. Thus, the proposed project would not be expected to affect or conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.

Conclusion

Based upon these considerations, significant adverse land use and planning impacts are not expected from implementing the proposed project. Since no significant land use and planning impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XI. <u>MINERAL RESOURCES.</u> Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Project-related impacts on mineral resources will be considered significant if any of the following conditions are met:

- The project would result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.
- The proposed project results in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XI. a) & b) No Impact. There are no provisions in the proposed project that would result in the loss of availability of a known mineral resource of value to the region and the residents of the state, or of a locally-important mineral resource recovery site delineated on a local general plan, specific plant or other land use plant. Some examples of mineral resources are gravel, asphalt, bauxite, and gypsum, which are commonly used for construction activities or industrial processes. Implementation of the proposed project would result in the installation of domes and secondary roof seals; all of which have no effect on the use of minerals, such as those described above. Therefore, no new demand on mineral resources is expected to occur and no significant adverse mineral resources impacts from implementing the proposed project are anticipated.

Conclusion

Based upon these considerations, significant adverse mineral resource impacts are not expected from implementing the proposed project. Since no significant mineral resource impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XII. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Noise impact will be considered significant if:

- Construction noise levels exceed the local noise ordinances or, if the noise threshold is currently exceeded, project noise sources increase ambient noise levels by more than three decibels (dBA) at the site boundary. Construction noise levels will be considered significant if they exceed federal Occupational Safety and Health Administration (OSHA) noise standards for workers.
- The proposed project operational noise levels exceed any of the local noise ordinances at the site boundary or, if the noise threshold is currently exceeded, project noise sources increase ambient noise levels by more than three dBA at the site boundary.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XII. a) & b) Less than Significant Impact. The facilities subject to PAR 463 are located in urbanized industrial areas. The existing noise environment at each of the facilities is typically dominated by noise from existing equipment on-site, vehicular traffic around the facilities, and

trucks entering and existing facility premises. Large, potentially noise-intensive construction equipment may be needed temporarily to dome EFR tanks and install secondary roof seals on IFR tanks. Operation of the construction equipment would be expected to comply with all existing noise control laws and ordinances. Since all of the facilities are located in heavy industrial areas, which have a higher background noise level when compared to other areas, the noise generated during construction would likely be indistinguishable from the background noise levels at the property line. Further, Occupational Safety and Health Administration (OSHA) and California-OSHA have established noise standards to protect worker health both indoors and outdoors. Furthermore, compliance with local noise ordinances typically limit the hours of construction to reduce the temporary noise impacts from construction to sensitive and offsite receptors. These potential noise increases would only be temporary until construction is completed and would be expected to be within the allowable noise levels established by the local noise ordinances for industrial areas; thus, impacts are expected to be less than significant.

XII. c) No Impact. As stated in Section VIII e), some facilities may be located within a two-mile radius of an airport that may require potential construction activities to install domes and secondary roof tank seals on existing storage tanks. However, these facilities are located within an existing industrial zone which are dominated by noise from existing equipment on-site, vehicular traffic around the facilities, and trucks entering and exiting facility premises. Thus, any new noise impacts from temporary construction activities would be likely to generate noise that is indistinguishable from the background levels at the property line. Thus, PAR 463 is not expected to expose persons residing or working within two miles of a public airport or private airstrip to excessive noise levels.

Conclusion

Based upon these considerations, significant adverse noise impacts are not expected from the implementing the proposed project. Since no significant noise impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XIII. POPULATION AND HOUSING.				
Would the project:				
a) Induce substantial growth in an area either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts of the proposed project on population and housing will be considered significant if the following criteria are exceeded:

- The demand for temporary or permanent housing exceeds the existing supply.
- The proposed project produces additional population, housing or employment inconsistent with adopted plans either in terms of overall amount or location.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XIII. a) No Impact. The construction activities associated with the proposed project are not expected to involve the relocation of individuals, require new housing or commercial facilities, or change the distribution of the population. Approximately 10 construction workers per facility may be needed to perform construction activities to comply with PAR 463, and these workers can be supplied from the existing labor pool in the local Southern California area. The proposed project is not expected to affect day-to-day operations. As such, PAR 463 is not anticipated to cause change in population densities, population distribution, or induce significant growth in population.

XIII. b) No Impact. The proposed project would result in construction activities that are expected to occur within the confines of existing facilities, and would not be expected to substantially alter existing operations. Consequently, PAR 463 is not expected to result in the creation of any industry that would affect population growth, directly or indirectly induce the construction of single- or multiple-family units, or require the displacement of persons or housing elsewhere within the South Coast AQMD's jurisdiction.

Conclusion

Based upon these considerations, significant adverse population and housing impacts are not expected from implementing the proposed project. Since no significant population and housing impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XIV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services:				
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts on public services will be considered significant if the project results in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response time, or other performance objectives.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by 0.43 ~~1.65~~ ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XIV. a) & b) No Impact. Implementation of PAR 463 would require construction activities associated with installing domes on existing EFR tanks and installing secondary roof seals on existing IFR tanks. If other repairs to the storage tanks need to be made, then these activities may require storage tanks to first be ~~emptied~~ cleaned and degassed, but those steps occur as part of regular tank inspection. As such, no special circumstances with handling sensitive materials during construction would be expected. For these reasons, new safety hazards are not expected to occur during construction, and implementation of PAR 463 is not expected to substantially alter or

increase the need or demand for additional public services (e.g., fire and police departments and related emergency services, etc.) above current levels. No significant impact to these existing services is anticipated.

XIV. c), d), & e) No Impact. As explained in Section XIII. a), PAR 463 is not anticipated to generate any significant effects, either direct or indirect, on the population or population distribution within South Coast AQMD's jurisdiction as no permanent additional workers are anticipated to be required for compliance. Because PAR 463 is not expected to induce substantial population growth in any way, and because the local labor pool (e.g., workforce) would remain the same since PAR 463 would not trigger changes to current usage practices, no additional schools would need to be constructed. The analysis assumes that 10 construction workers per facility may be needed but any construction activities would be temporary and be expected to be supplied from the existing labor pool in the local Southern California area. There would be no corresponding impacts to local schools or parks, and there would be no corresponding need for new or physically altered public facilities in order to maintain acceptable service ratios, response times, or other performance objectives. Therefore, no impacts would be expected to schools, parks or other public facilities.

Conclusion

Based upon these considerations, significant adverse public services impacts are not expected from implementing the proposed project. Since no significant public services impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XV. <u>RECREATION.</u>				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment or recreational services?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts to recreation will be considered significant if:

- The project results in an increased demand for neighborhood or regional parks or other recreational facilities.
- The project adversely affects existing recreational opportunities.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XV. a) & b) No Impact. As previously explained in Section XIII – Population and Housing, the proposed project is not expected to affect population growth or distribution within the South Coast AQMD’s jurisdiction because only about 10 construction workers per facility will be needed to dome EFR tanks, install secondary roof seals on IFR tanks, and utilize additional OGI technology for compliance with the proposed project. These required construction workers can be supplied by the existing labor pool in the local Southern California area. As such, the proposed project is not anticipated to generate any significant adverse effects, either indirectly or directly on population growth within the South Coast AQMD’s jurisdiction or population distribution, and thus no additional demand for recreational facilities would be necessary or expected. No requirements in the proposed project would be expected to affect recreation in any way. Therefore, the proposed project would not increase the demand for or use of existing neighborhood and regional parks or other recreational facilities or require the construction of new or expansion of existing recreational

facilities that might have an adverse physical effect on the environment because it would not directly or indirectly increase or redistribute population.

Conclusion

Based upon these considerations, significant adverse recreation impacts are not expected from implementing the proposed project. Since no significant recreation impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XVI. <u>SOLID AND HAZARDOUS WASTE.</u> Would the project:				
a) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Comply with federal, state, and local statutes and regulations related to solid and hazardous waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

The proposed project impacts on solid and hazardous waste will be considered significant if the following occurs:

- The generation and disposal of hazardous and non-hazardous waste exceeds the capacity of designated landfills.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by 0.43 ~~1.65~~ ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XVI. a) & b) No Impact. While the proposed project will involve doming of EFR tanks, installation of secondary roof seals on IFR tanks, and utilization of additional OGI technology, construction will not require removal or replacement of existing equipment. Therefore, little to no solid construction waste would be generated that would need to be disposed of in a landfill, and the proposed project is not expected to impact existing permitted landfill capacity.

Current operations at facilities are assumed to comply with all applicable local, state, or federal waste disposal regulations, and PAR 463 does not contain any provisions that would weaken, alter, or interfere with current practices. Thus, implementation of the proposed project is not expected to interfere with any affected facility's ability to comply with applicable local, state, or federal waste disposal regulations in a manner that would cause a significant adverse solid and hazardous waste impact.

Conclusion

Based upon these considerations, significant adverse solid and hazardous waste impacts are not expected from implementing the proposed project. Since no significant solid and hazardous waste impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
<u>XVII. TRANSPORTATION.</u>				
Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with or be inconsistent with CEQA Guidelines Section 15064.3(b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

Impacts on transportation will be considered significant if any of the following criteria apply:

- A major roadway is closed to all through traffic, and no alternate route is available.
- The project conflicts with applicable policies, plans or programs establishing measures of effectiveness, thereby decreasing the performance or safety of any mode of transportation or contributes to changes in overall vehicle miles traveled.
- There is an increase in vehicle miles traveled that is substantial in relation to the existing travel activity.
- Water borne, rail car or air traffic is substantially altered.
- Traffic hazards to motor vehicles, bicyclists or pedestrians are substantially increased.
- The need for more than 350 employees.
- An increase in heavy-duty transport truck traffic to and/or from the facility by more than 350 truck round trips per day.
- Increase customer traffic by more than 700 visits per day.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XVII. a) & b) Less than Significant Impact. As previously discussed in Section III – Air Quality and Greenhouse Gas Emissions, compliance with PAR 463 would require construction activities to dome EFR tanks, install secondary roof seals on IFR tanks, and utilize additional OGI technology. To accomplish these various activities, on-road passenger vehicles and heavy duty trucks would be dispatched to the affected facilities in order to deliver supplies and construction materials.

Table 2-5 presents the number of vehicles round trips that may occur on a peak day which involves doming five EFR tanks and installing secondary roof seals on 11 IFR tanks.

**Table 2-5
Number of Round Trips in a Peak Day**

Activity	Vehicle Trips
Doming 5 EFR Tanks	5 Delivery Trucks 50 Passenger Autos
Installing Secondary Roof Seals for 11 IFR Tanks	11 Delivery Trucks 110 Passenger Autos
Total in a Peak Day	176 Vehicle Trips

In accordance with the promulgation of SB 743 which requires analyses of transportation impacts in CEQA documents to consider a project's vehicle miles traveled (VMT) in lieu of applying a LOS metric when determining significance for transportation impacts, CEQA Guidelines Section 15064.3(b)(4) gives a lead agency to use discretion to choose the most appropriate methodology to evaluate a project's VMT, allowing the metric to be expressed as a change in absolute terms, per capita, per household, or in any other measure.

On a peak day, these construction activities are estimated to result in 16 heavy duty delivery truck round trips and 160 passenger auto round trips, the former which is less than the threshold of 350 truck round trips per day. The proposed project is not expected to result in the need of 350 new employees; assumptions, such as that installing secondary roof seals for one IFR tank requires 10 workers similar to doming an EFR tank is to overestimate impacts for a peak day. The proposed project is not expected to cause a significant adverse transportation impact. Therefore, the proposed project would not conflict with or be inconsistent with CEQA Guidelines Section 15064.3(b). Further, because implementation of the proposed project would not alter any transportation plans, the proposed project would not conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

XVII. c) & d) No Impact. No existing roadways would need to be modified and no new roadways would need to be constructed as a result of the proposed project. Thus, there would be no change to current public roadway designs including a geometric design feature that could increase traffic hazards. Further, the proposed project is not expected to substantially increase traffic hazards or create incompatible uses at or adjacent to the facilities. Construction-related activities are expected to be temporary and occur over a short-term. Since construction activities and associated passenger vehicle trips and delivery truck trips would cease after construction is completed, the proposed project is not expected to alter the existing long-term circulation patterns within the areas of each affected facility during construction. Thus, no long-term impacts on the traffic circulation system are expected to occur. Further, existing emergency access at the affected facilities would also not

be affected because PAR 463 does not contain any requirements specific to emergency access points and each facility would be expected to continue to maintain their existing emergency access. As a result, PAR 463 is not expected to result in inadequate emergency access.

Conclusion

Based upon these considerations, significant adverse transportation impacts are not expected from implementing the proposed project. Since no significant transportation impacts were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XVIII. <u>WILDFIRE.</u> If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildfires?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Significance Criteria

A project's ability to contribute to a wildfire will be considered significant if the project is located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and any of the following conditions are met:

- The project would substantially impair an adopted emergency response plan or emergency evacuation plan.
- The project may exacerbate wildfire risks by exposing the project's occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire due to slope, prevailing winds, and other factors.
- The project may exacerbate wildfire risks or may result in temporary or ongoing impacts to the environment because the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) are required.
- The project would expose people or structures to significant risks such as downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

- The project would expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildfires.

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XVIII. a), b), c), d) & e) No Impact. Implementation of the proposed project would neither require the construction of any new facilities nor result in the construction of any occupied buildings or structures beyond the current boundaries of each affected facility. Thus, PAR 463 is not expected to substantially impair an adopted emergency response plan or emergency evacuation plan. Further, the existing facilities which are subject to PAR 463 are located in industrial areas, and not near wildlands. In the event of a wildfire, no exacerbation of wildfire risks, and no consequential exposure of the project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire due to slope, prevailing winds, or other factors would be expected to occur. Similarly, the existing facilities which are subject to PAR 463 are located in industrial areas and no new facilities are required to be constructed. Thus, PAR 463 would neither expose people or structures to new significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes, nor would it expose people or structures, either directly or indirectly, to a new significant risk of loss, injury or death involving wildfires. Finally, because PAR 463 does not require any construction beyond existing facility boundaries, the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment are not required.

Conclusion

Based upon these considerations, significant adverse wildfire risks are not expected from implementing the proposed project. Since no significant wildfire risks were identified, no mitigation measures are necessary or required.

	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
<u>XIX. MANDATORY FINDINGS OF SIGNIFICANCE.</u>				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Discussion

PAR 463 applies to storage tanks located at 429 facilities including refineries, bulk storage, loading, and oil production facilities. Staff estimates 20 tanks will need to be domed and 22 tanks will need secondary roof seals installed. PAR 463 is estimated to reduce VOC emissions by ~~0.43~~ 1.65 ton per day. The components of PAR 463 that would be expected to have physical effects are installing domes on EFR tanks and secondary roof seals on IFR tanks. Other components of PAR 463, such as requirements for conducting optical gas imaging tank farm inspections every other calendar week, ~~semi-annual~~ component inspections twice per year at four- to eight-month intervals and implementing recordkeeping and reporting provisions are not expected to create any secondary adverse environmental impacts.

XIX. a) No Impact. As explained in Section IV - Biological Resources, PAR 463 is not expected to significantly adversely affect plant or animal species, or the habitat on which they rely because any construction and operational activities are expected to occur entirely within the boundaries of

existing developed facilities in areas that have been greatly disturbed and that currently do not support any species of concern or the habitat on which they rely. For these reasons, PAR 463 is not expected to reduce or eliminate any plant or animal species or destroy prehistoric records of the past.

XIX. b) Less Than Significant Impact. Based on the preceding analyses, PAR 463 would not result in significant adverse project-specific environmental impacts. Potential adverse impacts from implementing PAR 463 would not be “cumulatively considerable” as defined by CEQA Guidelines Section 15064(h)(1) for any environmental topic because there are no, or only minor incremental project-specific impacts that were concluded to be less than significant. Per CEQA Guidelines Section 15064(h)(4), the mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project’s incremental effects are cumulative considerable. South Coast AQMD cumulative significant thresholds are the same as project-specific significance thresholds.

Therefore, there is no potential for significant adverse cumulative or cumulatively considerable impacts to be generated by PAR 463 for any environmental topic area.

XIX. c) Less Than Significant Impact. Based on the preceding analyses, PAR 463 is not expected to cause adverse effects on human beings for any environmental topic, either directly or indirectly because: 1) aesthetics impacts were determined to be less than significant as analyzed in Section I – Aesthetics; 2) the air quality and GHG impacts were determined to be less than the significance thresholds as analyzed in Section III – Air Quality and Greenhouse Gases; 3) energy impacts were determined to be less than significant as analyzed in Section VI – Energy; 4) the noise impacts were determined to be less than significant as analyzed in Section XII – Noise; and 5) transportation impacts were determined to be less than the significant as analyzed in Section XVII – Transportation. In addition, the analysis concluded that there would be no significant environmental impacts for the following remaining environmental impact topic areas: agriculture and forestry resources, biological resources, cultural and tribal cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, public services, recreation, solid and hazardous waste, transportation, and wildfire.

Conclusion

As previously discussed in environmental topics I through XIX, the proposed project has no potential to cause significant adverse environmental effects. Since no significance adverse environmental impacts were identified, no mitigation measures are necessary or required.

APPENDICES

Appendix A: Proposed Amended Rule 463 – Organic Liquid Storage

Appendix B: Modeling Files, Assumptions, and Calculations

APPENDIX A

Proposed Amended Rule 463 – Organic Liquid Storage

In order to save space and avoid repetition, please refer to the latest version of PAR 463 located elsewhere in the Governing Board Agenda for the public hearing scheduled on June 7, 2024. The version of PAR 463 that was circulated with the Draft EA for a 30-day public review and comment period from March 27, 2024 to April 26, 2024 was identified as the “Preliminary Draft Rule PAR 463, revision date March 22, 2024,” which is available from the South Coast AQMD’s website at: <https://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/rule-463/par-463-preliminary-draft-rule-language.pdf>. An original hard copy of the Draft EA, which included the draft version of PAR 463 listed above, can be obtained through the South Coast AQMD Public Information Center by phone at (909) 396-2001 or by email at PICrequests@aqmd.gov.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	17.6

AQ-PM	67.2
AQ-DPM	99.3
Drinking Water	42.4
Lead Risk Housing	91.8
Pesticides	0.00
Toxic Releases	97.1
Traffic	23.6
Effect Indicators	—
CleanUp Sites	71.7
Groundwater	76.2
Haz Waste Facilities/Generators	62.6
Impaired Water Bodies	0.00
Solid Waste	52.9
Sensitive Population	—
Asthma	83.0
Cardio-vascular	92.8
Low Birth Weights	72.9
Socioeconomic Factor Indicators	—
Education	99.6
Housing	58.2
Linguistic	97.3
Poverty	97.4
Unemployment	91.3

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	95.0
Healthy Places Index Score for Project Location (b)	6.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	Wilmington Long Beach Carson

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	PAR 1178 was used as a referenced.
Construction: Off-Road Equipment	The hours of operation was revised from 6 to 8 for worst case scenario.
Construction: Trips and VMT	Referenced Final EA or PAR 1178.

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Building Construction	Building Construction	6/1/2026	8/1/2026	5.00	45.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Building Construction	Cranes	Diesel	Average	1.00	4.00	367	0.29
Building Construction	Air Compressors	Diesel	Average	1.00	8.00	84.0	0.37

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Building Construction	—	—	—	—
Building Construction	Worker	10.0	40.0	LDA,LDT1,LDT2
Building Construction	Vendor	1.00	50.0	HHDT,MHDT
Building Construction	Hauling	0.00	20.0	HHDT
Building Construction	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
------------	--	--	--	--	-----------------------------

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
------------	------------------------	------------------------	----------------------	-------------------------------	---------------------

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
General Heavy Industry	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	690	0.05	0.01

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	67.2
AQ-DPM	59.7
Drinking Water	42.4
Lead Risk Housing	94.8
Pesticides	44.1
Toxic Releases	98.0
Traffic	32.5
Effect Indicators	—
CleanUp Sites	28.7
Groundwater	79.1

Haz Waste Facilities/Generators	43.7
Impaired Water Bodies	0.00
Solid Waste	37.6
Sensitive Population	—
Asthma	83.0
Cardio-vascular	92.8
Low Birth Weights	35.6
Socioeconomic Factor Indicators	—
Education	88.7
Housing	64.5
Linguistic	80.2
Poverty	71.7
Unemployment	74.1

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	28.7052483
Employed	80.73912486
Median HI	28.56409598
Education	—
Bachelor's or higher	11.58732196
High school enrollment	100
Preschool enrollment	70.15270114
Transportation	—
Auto Access	15.9373797

Active commuting	71.46156807
Social	—

2016 Voting	11.4

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	85.0
Healthy Places Index Score for Project Location (b)	34.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	Wilmington Long Beach Carson

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	67.2
AQ-DPM	59.7
Drinking Water	42.4
Lead Risk Housing	94.8

EXECUTIVE SUMMARY

On March 17, 1989, the South Coast Air Quality Management District (South Coast AQMD) Governing Board adopted a resolution which requires an analysis of the economic impacts associated with adopting and amending rules and regulations. In addition, Health and Safety Code Section 40440.8 requires a socioeconomic impact assessment for any proposed rule, rule amendment, or rule repeal which “will significantly affect air quality or emissions limitations.” Lastly, Health and Safety Code Section 40920.6 requires an incremental cost-effectiveness analysis for a proposed rule or amendment which imposes Best Available Retrofit Control Technology (BARCT) or “all feasible measures” requirements relating to emissions of ozone, carbon monoxide (CO), sulfur oxides (SO_x), nitrogen oxides (NO_x), volatile organic compounds (VOC), and their precursors.

Proposed Amended Rule 463 (PAR 463) has been developed to reduce VOC emissions from the storage of organic liquids in above-ground tanks and establish contingency measures for applicable ozone standards in order to have a backstop for achieving the VOC emission reductions. A socioeconomic impact assessment has been conducted accordingly, and the following presents a summary of the analysis and findings.

**Key Elements of
PAR 463**

PAR 463 would reduce VOC emissions from storage tanks by requiring periodic optical gas imaging (OGI) inspections at affected facilities, doming for external floating roof (EFR) storage tanks, installation of secondary seals on internal floating roof (IFR) storage tanks, and increased control efficiency and performance testing for fixed-roof tank vapor recovery units (VRUs).

**Affected
Facilities
and Industries**

PAR 463 is applicable to approximately 1,600 tanks located at 429 facilities, with 320 located in Los Angeles County, 94 located in Orange County, 10 located in San Bernardino County, and five located in Riverside County. The 429 facilities are distributed according to their applicable North American Industrial Classification System (NAICS) codes as follows: 336 facilities are classified under the Oil and Gas Extraction industry (NAICS 211); 30 facilities are classified under the Wholesale Trade industry (NAICS 42); 18 facilities are Petroleum and Coal Products Manufacturers (NAICS 324); and the remaining facilities are spread over various industry sectors.

A small business analysis was conducted for the facilities affected by PAR 463. The following table presents the number of affected facilities that qualify as a small business which is dependent on the specific applicable definition used in the analysis:

Definition	Number of Facilities
South Coast AQMD Rule 102	63
South Coast AQMD's Small Business Assistance Office	262
U.S. Small Business Administration	282

Assumptions for the Analysis

The key requirements of PAR 463 that would have cost impacts for the affected facilities include: 1) periodic OGI inspections; 2) doming of EFR storage tanks; 3) installation of secondary seals on IFR storage tanks; and 4) periodic performance testing on fixed-roof storage tank VRUs.

Approximately 1,600 storage tanks would be subject to PAR 463. However, only the following would be subject to PAR 463 OGI requirements: 1) stationary above-ground tanks with a capacity > 19,815 gallons storing organic liquid with a true vapor pressure (TVP) ≥ 1.5 psi; 2) above-ground stationary tanks with a capacity $\geq 39,630$ gallons storing organic liquid with TVP ≥ 0.5 psi; 3) above-ground tanks used to store gasoline with capacity between 251 gallons and 19,815 gallons; and 4) stationary tanks with a potential for VOC emissions of six tons per year or greater used in Crude Oil And Natural Gas Production Operations. Given these thresholds, approximately 679 storage tanks located at 429 facilities, which are owned by 91 companies will be subject to the OGI requirements.

PAR 463 would require the doming of EFR tanks storing organic liquid with a TVP of 3 psia or greater at the next internal API 653 inspection or the next time a tank is cleaned and degassed, but not to exceed 23 years after a test verifies that an organic liquid stored has a TVP of 3 psia or greater. Staff identified approximately 89 EFR storage tanks and estimated that 20 out of the 89 EFR tanks will need to install domes.

PAR 463 would require the installation of secondary seals on IFR storage tanks. Staff identified approximately 98 IFR storage tanks within the PAR 463 universe and estimated 22 out of the 98 IFR tanks would need to install secondary seals. Installation would be required the next time the tanks are cleaned and degassed, but no later than 22 years after the date of adoption of PAR 463.

Lastly, PAR 463 would require performance testing on fixed-roof tank VRUs to ensure they meet the 98 percent efficiency standard. Staff identified approximately 479 storage tanks that will need VRU performance testing.

The cost analysis uses a forecast period from 2024-2080 in order to annualize all the costs associated with doming and secondary seal installation within equipment lifetime. The cost estimates of complying with

PAR 463 over the period from 2024-2080 take into account: 1) the payment of permit fees pertaining to secondary seal and VRU performance testing requirement in 2024; 2) the purchase of OGI cameras in 2025; 3) payment of permit fees pertaining to doming requirement in 2025; 4) the purchase and installation of secondary seals in 2026; 5) the purchase and installation of domes and fire suppression systems in 2027; and 6) performance testing every 10 years for fixed-roof tank VRUs beginning with an initial performance test in 2025.

Compliance Costs

The total present value of the compliance costs of PAR 463 is estimated at \$147.60 million and \$71.77 million with a 1 percent and 4 percent discount rate, respectively. The average annual compliance costs of PAR 463 are estimated to range from \$2.95 million to \$3.47 million, for a 1 percent to 4 percent real interest rate, respectively. The following table presents a summary of the average annual cost of PAR 463 by cost category.

Cost Categories	Annual Average Cost of PAR 463 (2024 – 2080)	
	1% Real Interest Rate	4% Real Interest Rate
Capital/One-time Costs		
Domed EFR - Materials	\$212,052	\$375,747
Domed EFR - Installation	\$212,052	\$375,747
Domed EFR - Permitting	\$2,824	\$5,004
Domed EFR - Title V Fee (Permit Revision)	\$749	\$1,327
Domed EFR - Fire Suppression System	\$40,483	\$71,733
Secondary Seal - Installation and Materials	\$17,820	\$22,979
Secondary Seal - Title V Fee (Permit Revision)	\$1,180	\$1,521
Secondary Seal - Permitting	\$4,538	\$5,852
OGI Camera	\$1,121,514	\$1,271,843
VRU - Title V Revision and Permitting	\$1,403	\$1,403
Recurring Costs		
Domed EFR - Operating and Maintenance	\$48,421	\$48,421
Secondary Seal - Operating and Maintenance	\$5,118	\$5,118
OGI - Operating and Maintenance	\$134,105	\$134,105
OGI - Inspection Labor	\$929,796	\$929,796
VRU Testing	\$218,491	\$218,491
Total	\$2,950,547	\$3,469,089

Using a 4 percent real interest rate, this analysis indicates roughly 67 percent of the annual average compliance cost would result from OGI inspections, followed by doming (25 percent), VRU testing (6 percent), and secondary seals (1 percent).

Job Impacts

Direct costs and corresponding revenues of PAR 463 are used as inputs to the Regional Economic Models, Inc (REMI PI+) model to assess job impacts and secondary/induced impacts for all the industries in the four-county economy on an annual basis from 2024 to 2080.

When the compliance cost is annualized using a 4 percent real interest rate, the REMI analysis forecasted 25 net jobs foregone annually in the 4-county economy on average over the forecast period, relative to the baseline forecast. The 25 annual jobs forgone represent approximately 0.0002 percent of total annual jobs in the four-county area.

The largest job loss is projected to occur in 2056, when most of the PAR 463 requirements that have cost impacts are fully implemented. In 2056, PAR 463 is projected to result in 43 jobs foregone relative to the baseline scenario according to the REMI model simulation.

**Competitiveness
and Price
Impacts**

The overall impact of PAR 463 on production cost and delivered prices in the region is not expected to be substantial. According to the REMI Model, PAR 463 is projected to increase the relative delivered price of products produced by the Oil and Gas Extraction industry by a maximum of 0.016 percent in 2025, relative to the baseline. The relative cost of production for the Oil and Gas Extraction industry is forecasted to increase by a maximum of 0.488 percent relative to the baseline scenario, which is expected to occur in 2025.

INTRODUCTION

Rule 463 – Organic Liquid Storage, limits VOC emissions from tanks storing organic liquids. This rule applies to any above-ground stationary tank with a capacity of 19,815 gallons or greater used for storage of organic liquids, and any above-ground tank with a capacity between 251 gallons and 19,815 gallons used for storage of gasoline. Rule 463 also applies to stationary tanks with a potential for VOC emissions of six tons per year (tpy) or more used in crude oil and natural gas production operations. Rule 463 requires tanks that meet the capacity and vapor pressure requirements to install control equipment based on tank type. Control requirements include specifications for tank roofs, seals, emission control systems, and covers for roof openings. For some specific types of tanks, inspection and monitoring is also required. Rule 463 tank types include fixed roof, internal floating roof (IFR), and external floating roof (EFR). Rule 463 was adopted in August 1977 and last amended in 2023.

PAR 463 was developed to further limit VOC emissions from tanks storing organic liquids by establishing more stringent leak detection and control requirements. Specifically, PAR 463 seeks to establish requirements for: 1) periodic OGI inspections with contingency measures to fulfill ozone attainment plan requirements; 2) doming EFR storage tanks; 3) installing secondary seals on IFR storage tanks; and 4) increasing the control efficiency on fixed-roof storage tank VRUs.¹

PAR 463 would affect approximately 1,600 storage tanks at 429 facilities in the South Coast AQMD jurisdiction.

LEGISLATIVE MANDATES

The legal mandates directly related to the socioeconomic impact assessment of PAR 463 include South Coast AQMD Governing Board resolutions and various sections of the Health and Safety Code.

South Coast AQMD Governing Board Resolution

On March 17, 1989, the South Coast AQMD Governing Board adopted a resolution that requires an analysis of the economic impacts associated with adopting and amending rules and regulations that considers all of the following elements:

- Affected industries;
- Range of probable costs;
- Cost-effectiveness of control alternatives; and
- Public health benefits.

Health and Safety Code Requirements

The state legislature adopted legislation which reinforces and expands the South Coast AQMD Governing Board resolution requiring socioeconomic impact assessments for rule development projects. Health and Safety Code Section 40440.8, which went into effect on January 1, 1991, requires a socioeconomic impact assessment for any proposed rule, rule amendment, or rule repeal

¹ For more information and background on why PAR 463 was developed, ~~the Coachella Valley Contingency Measure State Implementation Plan (SIP)~~ please see Chapter 1 Background Section of Draft Staff Report for PAR 463, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-463>. The Final Staff Report is located in Attachment G of the June 7, 2024 Governing Board package for PAR 463, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

which "will significantly affect air quality or emissions limitations."

To satisfy the requirements in Health and Safety Code Section 40440.8, the scope of the socioeconomic impact assessment should include all of the following information:

- Type of affected industries;
- Impact on employment and the regional economy;
- Range of probable costs, including those to industry;
- Availability and cost-effectiveness of alternatives to the rule;
- Emission reduction potential; and
- Necessity of adopting, amending, or repealing the rule in order to attain state and federal ambient air quality standards.

Health and Safety Code Section 40728.5, which went into effect on January 1, 1992, requires the South Coast AQMD Governing Board to: 1) actively consider the socioeconomic impacts of regulations; 2) make a good faith effort to minimize adverse socioeconomic impacts; and 3) include small business impacts. To satisfy the requirements in Health and Safety Code Section 40728.5, the socioeconomic impact assessment should include the following information:

- Type of industries or business affected, including small businesses; and
- Range of probable costs, including costs to industry or business, including small business.

Finally, Health and Safety Code Section 40920.6, which went into effect on January 1, 1996, requires an incremental cost-effectiveness analysis for a proposed rule or amendment which imposes Best Available Retrofit Control Technology (BARCT) or "all feasible measures" requirements relating to emissions of ozone, carbon monoxide (CO), sulfur oxides (SO_x), nitrogen oxides (NO_x), VOC, and their precursors. A cost-effectiveness analysis was conducted for PAR 463 and can be found in Chapter 4 of the PAR 463 ~~Draft~~ Final Staff Report.²

AFFECTED FACILITIES

PAR 463 would affect 1,600 storage tanks at 429 facilities in the four-county area. Out of the 429 affected facilities, 320 are located in Los Angeles County, 94 are located in Orange County, 10 are located in San Bernardino County, and five are located in Riverside County. Table 1 presents the number of affected facilities by industry. The majority of the affected facilities are in the Oil and Gas extraction sector (78.3 percent), followed by the Wholesale Trade sector (7.0 percent) and the Petroleum and Coal Products Manufacturing sector (4.2 percent).

² South Coast AQMD, Draft Staff Report for Proposed Amended Rule 463 – Organic Storage Liquid, <http://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/rule-463/par-463-draft-staff-report-5-7-24.pdf>, accessed May 2024. The Final Staff Report is located in Attachment G of the June 7, 2024 Governing Board package for PAR 463, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

Table 1
Affected Facilities by Industry

NAICS	Industry Name	Number of Facilities	Percentage of Facilities
211	Oil and gas extraction	336	78.3%
42	Wholesale trade	30	7.0%
324	Petroleum and coal products manufacturing	18	4.2%
325	Chemical manufacturing	9	2.1%
493	Warehousing and storage	7	1.6%
562	Waste management and remediation services	6	1.4%
486	Pipeline transportation	5	1.2%
213	Support activities for mining	3	0.7%
327	Nonmetallic mineral product manufacturing	2	0.5%
339	Miscellaneous manufacturing	2	0.5%
312	Beverage and tobacco product manufacturing	2	0.5%
92	State and Local Government	1	0.2%
22	Utilities	1	0.2%
811	Repair and maintenance	1	0.2%
54	Professional, scientific, and technical services	1	0.2%
332	Fabricated metal product manufacturing	1	0.2%
311	Food manufacturing	1	0.2%
326	Plastics and rubber product manufacturing	1	0.2%
481	Air transportation	1	0.2%
622	Hospitals	1	0.2%
Total		429	100%

SMALL BUSINESS

The South Coast AQMD defines a “small business” in Rule 102 for purposes of fees as one which employs 10 or fewer persons and which earns less than \$500,000 in gross annual receipts. The South Coast AQMD also defines “small business” for the purpose of qualifying for access to services from the South Coast AQMD’s Small Business Assistance Office as a business with an annual receipt of \$5 million or less, or with 100 or fewer employees. In addition to the South Coast AQMD’s definition of a small business, the United States (U.S.) Small Business Administration and the federal 1990 Clean Air Act Amendments (1990 CAAA) each have their own definition of a small business.

The 1990 CAAA classifies a business as a “small business stationary source” if it: 1) employs 100 or fewer employees; 2) does not emit more than 10 tons per year of either VOC or NO_x; and 3) is a small business as defined by the U.S. Small Business Administration. Based on firm revenue and employee count, the U.S. Small Business Administration definition of a small business varies by six-digit NAICS codes.³ For example, according to the U.S. Small Business Administration definition, a business with less than 1,250 employees in the sector of Crude Petroleum Extraction (NAICS 211120) is classified as a small business, while a business in the Petroleum Bulk Stations

³ U.S. Small Business Administration, 2023 Small Business Size Standards, <https://www.sba.gov/document/support-table-size-standards>, accessed March 29, 2024.

and Terminals (NAICS 424710) sector is considered a small business with only 225 employees.

South Coast AQMD mostly relies on Dun & Bradstreet data to conduct small business analyses for private companies. In cases where the Dun & Bradstreet data are unavailable or unreliable, other external data sources such as Manta, Hoover, LinkedIn, and company website data will be used. The determination of data reliability is based on data quality confidence codes in the Dun & Bradstreet data as well as staff's discretion. Revenue and employee data for publicly owned companies are gathered from Securities and Exchange Commission (SEC) filings. Since subsidiaries under the same parent company are interest-dependent, the revenue and employee data of a facility's parent company will be used for the determination of its small business status. Staff excluded government owned facilities from the small business analysis, which left 423 of the 429 affected facilities. Employment and revenue estimates from 2024 Dun and Bradstreet data as well as other external sources are available for only 378 facilities. Note that although the employment and revenue data for some facilities are unknown or missing, the current data used for this small business analysis represent the most thorough and accurate information obtainable as of the date of this draft report. The number of affected facilities that are small businesses based on each of the three definitions is presented in Table 2.:

Table 2
Number of Affected Small Business Facilities Based on Various Definitions

Definition	Number of Facilities
South Coast AQMD Rule 102	63
South Coast AQMD's Small Business Assistance Office	262
U.S. Small Business Administration	282

Note that staff was unable to conduct a small business analysis for the 1990 CAAA definition of a small business as most of the facilities are not required to submit annual emission reports pursuant to South Coast AQMD Rule 222.⁴

⁴ South Coast AQMD, Rule 222 – Filling Requirements for Specific Emission Sources Not Requiring a Written Permit Pursuant to Regulation II, <https://www.aqmd.gov/docs/default-source/rule-book/reg-ii/Rule-222.pdf>, accessed April 11, 2024.

COMPLIANCE COST

The key requirements of PAR 463 that would have cost impacts for the affected facilities include: 1) periodic OGI inspections for leak detection; 2) doming of EFR storage tanks; 3) installation of secondary seals on IFR storage tanks; and 4) periodic performance testing on fixed-roof storage tank VRUs.

PAR 463 would require one-time investments in: 1) OGI cameras; 2) doming materials and installation; 3) fire suppression systems for EFR tanks that will be domed; 4) secondary seal materials and installation; and 5) permit and Title V revision fees. In addition, the affected facilities would also incur recurring O&M costs for domes, secondary seals, and OGI cameras, bi-weekly labor costs for OGI inspections, and performance testing costs on fixed-roof tank VRUs every 10 years. The compliance cost for PAR 463 is forecasted for a 57-year period from 2024 to 2080.

Costs assumptions for PAR 463 were obtained from a variety of sources including the 2023 rule amendments for Rule 1178 and the ongoing rule development for Proposed Amended Rule 1148.1.^{5,6} All the costs discussed in this Socioeconomic Impact Assessment are presented in 2023 dollars. The estimation procedure and assumptions for each cost category are discussed in the following sections.

Capital or One-Time Costs

Doming

PAR 463 requires facilities to install a dome on each EFR tank storing organic liquid with a TVP of 3 psia or greater. A domed roof is defined as a self-supporting fixed roof attached to the top of an EFR tank to reduce evaporative losses.⁷ Staff identified 89 EFR tanks that would potentially be affected by PAR 463 doming requirements. According to the PAR 463 ~~Draft~~ Final Staff Report, a random sample of 35 EFR tanks from the total affected universe of 89 tanks indicated that eight tanks (23%) already have domes installed, 20 tanks (57%) are below the TVP threshold, and seven tanks (20%) would be required to install domes. In addition, in response to stakeholders' comments, the number of tanks relied upon to conduct a cost analysis for doming was increased from seven to nine to include two additional tanks with diameters of 253 and 299 feet, respectively. Staff estimated that 20 tanks would be required to have domes installed in accordance with PAR 463 requirements. The timing of when the domes would be installed on EFR tanks is expected to occur during the next internal API 653 inspection or the next time a tank is cleaned and degassed, but not to exceed 23 years after a test verifies that the organic liquid stored in a tank has a TVP of

⁵ South Coast AQMD, September 2023, Governing Board Meeting Agenda No. 34, Rule 1178 - Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities Amendment Process, <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2023/2023-Sep1-034.pdf>, accessed April 9, 2024.

⁶ South Coast AQMD, Proposed Amended Rule 1148.1 – Oil and Gas Production Wells Development Process, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-1148-1>, accessed April 9, 2024.

⁷ South Coast AQMD, Draft Rule Language for Proposed Amended Rule 463 – Organic Liquid Storage, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-463>, accessed May 2024. Final Rule Language for PAR 463 is located in Attachment F of the June 7, 2024 Governing Board package, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

3 psia or greater.⁸ Based on this provision, installations of domes on the estimated 20 EFR tanks would occur as early as 2027 but no later than 2048, based on an anticipated equipment life of 50 years. This analysis assumes that an equal portion of the 20 EFR tanks will be domed in each year over the period from 2027 to 2048.

The cost of doming varies substantially depending on the diameter of the tank. During the 2023 amendments to Rule 1178, cost estimates from vendors and facilities were analyzed for tanks across a range of diameters and doming costs were found to increase exponentially with diameter.⁵ Cost curves created from best fit equations that relied on this data were then relied upon in this analysis to estimate doming costs.

In addition, the diameters of the seven tanks from the initial 35-tank sample as well as the two additional, larger tanks noted by stakeholders were included as inputs to the cost curves. The total estimated cost to dome nine tanks was then used to proportionally extrapolate the total doming costs of the universe of 20 tanks that would need to have domes installed in accordance with the requirements of PAR 463. Specifically, the cost to dome the nine sample tanks (45% of the estimated number of tanks required to dome) was multiplied by 1/.45 to estimate the total costs to dome all 20 tanks. The total capital cost to purchase and install domes under this method is estimated to be \$22,000,000 for the 20 EFR tanks.

Fire Suppression Systems

The analysis assumed that for each EFR tank needing a dome installed, a fire suppression system would also be required. The fire suppression system is expected to cost \$105,000 per EFR tank according to quotes provided by vendors. The installation of the fire suppression system is assumed to occur in the same year as the dome installation and is anticipated to have a 50-year useful life. The total capital cost across all affected facilities attributed to fire suppression systems for the 20 EFR tanks is estimated to be \$2,100,000.

Secondary Seals

PAR 463 requires facilities to install secondary seals on IFR tanks. A secondary seal is a seal mounted above the primary seal of a rim seal system that consists of two seals and 98 IFR tanks were identified that would potentially require the installation of secondary seals. However, according to permit data, approximately 22 of the 98 IFR tanks have not already installed secondary seals. PAR 463 would require secondary seals to be installed the next time an IFR tank is cleaned and degassed, but no later than 22 years after the date of adoption. Based on this provision, secondary seal installations would take place as early as 2026 and no later than 2046, with an anticipated equipment life of 20 years. This analysis assumes that the number of EFR tanks that have secondary seals installed is evenly distributed over the 2026-2046 period.

Secondary seal costs are based on the linear footage of the IFR's circumference. Installing each secondary seal would involve the following costs: equipment, installation, and permit application

⁸ Please note that the effective date of this provision is June 7, 2027, to allow for planning and budgetary considerations. For more information see Draft Rule Language for PAR 463, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-463>. Final Rule Language for PAR 463 is located in Attachment F of the June 7, 2024 Governing Board package, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

fees. Costs were obtained from the Final Staff Report for Rule 1178 and estimated to be \$220 per foot.⁹

The analysis estimated the average cost of secondary seal materials and installation to be approximately \$18,700 per tank, based on the average tank diameter of 85 feet of the 22 IFR tanks that do not already have secondary seals installed. The total capital cost across all affected facilities attributed to secondary seal materials and installation is estimated to be \$411,400.

OGI Cameras

PAR 463 requires facilities to monitor storage tanks for leaks by conducting inspections with an OGI device every other calendar week (biweekly) for all tanks as well as semi-annual component inspections. An OGI device as defined as an infrared camera with a detector capable of visualizing gases in the 3.2-3.4 micrometer waveband.⁷ Approximately 1,600 tanks would be subject to PAR 463; however, only above-ground stationary tanks with a capacity > 19,815 gallons storing organic liquid with TVP \geq 1.5 psi, above-ground stationary tanks with a capacity \geq 39,630 gallons storing organic liquid with TVP \geq 0.5 psi, above-ground tanks used to store gasoline with a capacity between 251 gallons and 19,815 gallons, and stationary tanks with a potential for VOC emissions of 6 tons per year or greater year used in crude oil and natural gas production operations will be subject to OGI inspections. Approximately 679 tanks located at 429 facilities would be subject to the OGI monitoring requirement and this analysis assumes that each parent company that operates an affected facility will purchase one OGI camera. Estimates indicate that there are 91 parent companies which own the 429 facilities that may be subject to PAR 463, and that these companies would purchase OGI cameras in 2025.¹⁰

Costs for OGI cameras were previously obtained from the 2023 amendments to Rule 1178 as well as from the ongoing development of PAR 1148.1 and OGI camera costs are estimated at \$120,000 per device, with an anticipated equipment lifetime of 10 years. The total capital cost across all affected facilities attributed to OGI cameras is estimated to be \$10,920,000.¹¹

Title V Revisions and Permitting

Facilities with tanks subject to the doming and secondary seal requirements in PAR 463 will need to revise their Title V facility permits. In addition, there are 24 Title V facilities that will be subject to the VRU performance testing requirement and their Title V facility permits will need to be revised accordingly. The Title V permit revisions are estimated to cost \$1,857 per revision.

PAR 463 would require affected facilities to submit a permit application for dome and secondary seal installations with a permit application fee of approximately \$7,002 and \$7,143 for installing a dome and secondary seal, respectively. Considering the timing between the submittal date of a

⁹ South Coast AQMD, September 2023, Governing Board Meeting Agenda No. 34, Proposed Amended Rule 1178 - Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities, Attachment G - Final Staff Report, pg. 94, <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2023/2023-Sep1-034.pdf>.

¹⁰ For more information on cost effectiveness analysis for OGI cameras see Chapter 4 Cost and Cost Effectiveness Analysis Section of the Draft Staff Report for PAR 463, <https://www.aqmd.gov/home/rules-compliance/rules/scaqmd-rule-book/proposed-rules/rule-463>. The Final Staff Report is located in Attachment G of the June 7, 2024 Governing Board package for PAR 463, which upon posting, will be available 72 hours prior to the Governing Board meeting at <https://www.aqmd.gov/home/news-events/meeting-agendas-minutes>.

¹¹ Please note that affected facilities would need to repurchase OGI cameras at the end of the camera's useful life (every ten years), which is about five times during the analysis period (2024-2080).

permit application and the issuance of the permit, the permit application and Title V facility permit revision fees are expected to be paid up to two years prior to doming and secondary seal installation.

For the anticipated permits needed for the 24 Title V facilities that will be subject to the VRU performance test requirement in PAR 463, the estimated costs will include: 1) \$1,857, to update the permit conditions of the vapor recovery systems to reflect the new control efficiency standard of 98%; and 2) \$1,476, to incorporate a schedule D modification. The total cost of both Title V permit revisions (\$3,333 per facility) is expected to be paid one year prior to the initial 3-run test scheduled to occur in 2025.

Recurring Costs

Doming Operation and Maintenance

According to feedback from industry stakeholders, domes require minor and infrequent maintenance activities, such as resealing of seams. During the 2023 amendments to Rule 1178, staff estimated the lifetime cost of doming maintenance to increase linearly with tank diameter based on quotes from manufacturers and affected facilities.¹² Based on the average tank diameter of 123 feet of the 20 applicable EFR tanks, staff estimates the average lifetime O&M cost to be \$138,000 per tank. The total cost of these recurring expenses for all 20 EFR tanks is approximately \$2,760,000 over the analysis period. Maintenance activities are not expected to take place immediately and will depend on weather conditions and other variables. For the purpose of this analysis, these costs were assumed to be incurred 20 years into each tank's useful life.

Secondary Seals Operation and Maintenance

Secondary seals would require the replacement of the rubber components of the seal 10 years after installation. The cost to replace the rubber component of the secondary seal depends on the diameter of the IFR tank and is estimated to cost approximately \$42 per foot. Using the average tank diameter of 85 feet, the estimated secondary seal maintenance cost is \$3,570 every 10 years per tank.

OGI Operation and Maintenance

OGI cameras would require annual maintenance and calibration to ensure equipment performance. The annual maintenance cost per camera is approximately \$1,500. OGI camera maintenance costs are anticipated to begin in 2025, which is the year when affected facilities would purchase OGI cameras and would recur on an annual basis throughout the forecast period. The total annual cost of OGI camera maintenance is estimated to be \$136,500 for all the 91 companies.

Labor for OGI Inspections

PAR 463 requires biweekly OGI inspections at each affected facility to detect potential leaks. This analysis assumes that inspections will be conducted by employees of the parent companies which own these facilities, and that inspections can be performed in one day for all the facilities under each parent company's ownership, on average. With an assumed pay rate of \$50 per hour and eight

¹² South Coast AQMD, September 2023, Governing Board Meeting Agenda No. 34, Proposed Amended Rule 1178 - Further Reductions of VOC Emissions from Storage Tanks at Petroleum Facilities, Attachment G – Final Staff Report, p. 89, <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2023/2023-Sep1-034.pdf>.

hours required to conduct the inspection, the total annual labor cost of OGI inspection is estimated at \$10,400 per parent company (\$50/hour x 8 hours per day x 26 inspection days/year). The total annual labor cost for OGI inspections is estimated to be \$946,400 for all 91 parent companies.

Vapor Recovery Unit (VRU) Performance Tests

PAR 463 requires facilities to conduct performance tests on fixed-roof tank VRUs to ensure they meet the 98 percent efficiency standard. Approximately 479 fixed-roof storage tanks were identified as needing VRU performance testing. Tests are required to be performed within one year of rule adoption, and every 10 years thereafter. The first test is expected to cost \$6,000 per tank for a more robust 3-run test, while the recurring tests every 10 years are estimated to cost \$4,000 per tank for a single-run test. The initial 3-run test is expected to occur in 2025 and the recurring test will occur in 10-year intervals following the initial test. The total costs for VRU performance tests are estimated to be \$2,874,000 for the initial 3-run tests and \$1,916,000 every 10 years for the single-run tests for the 479 affected fixed-roof tanks.

Total Compliance Cost

The total compliance cost includes all the estimated costs over a 57-year period, from 2024 to 2080. The total present value of compliance cost is estimated at \$147.60 million and \$71.77 million for a 1 percent and 4 percent discount rate, respectively. The average annual compliance costs of PAR 463 are estimated to range from \$2.95 million to \$3.47 million for a 1 percent to 4 percent real interest rate, respectively. Table 3 presents the estimated present value and average annual compliance cost of PAR 463 by expense categories.

Table 3
Total Present Value and Average Annual Estimated Costs of PAR 463

	Present Worth Value (2024)		Annual Average (2024-2080)	
Cost Categories	1% Discount Rate	4% Discount Rate	1% Real Interest Rate	4% Real Interest Rate
Capital Costs

Domed EFR - Operating and Maintenance	\$1,980,878	\$760,926	\$48,421	\$48,421
Secondary Seal - Operating and Maintenance	\$199,621	\$70,147	\$5,118	\$5,118
OGI - Operating and Maintenance	\$5,773,544	\$2,916,351	\$134,105	\$134,105
OGI - Inspection Labor	\$40,029,902	\$20,220,036	\$929,796	\$929,796
VRU Testing	\$9,854,123	\$5,826,779	\$218,491	\$218,491
Total	\$147,602,503	\$71,773,485	\$2,950,547	\$3,469,089

Figure 1 presents the estimated average annual compliance costs of PAR 463 by expense category. The expense for OGI camera purchase accounts for 37 percent – the largest share of the average annual compliance cost, followed by OGI inspection labor (27%), doming materials (11%), and doming installation (11%).

Figure 1
Average Annual Estimated Costs of PAR 463 by Expense Category

MACROECONOMIC IMPACTS ON THE REGIONAL ECONOMY

The Regional Economic Models, Inc (REMI) PI+ v3 model was used to assess the socioeconomic impacts of PAR 463.¹³ The model links the economic activities in the counties of Los Angeles, Orange, Riverside, and San Bernardino, and it is comprised of five interrelated blocks: 1) output and demand; 2) labor and capital; 3) population and labor force; 4) wages, prices, and costs; and 5) market shares.¹⁴

It should be noted that the REMI model is not designed to assess impacts on individual operations. The model was used to assess the impacts of the proposed amended rule on various industries that make up the local economy. Cost impacts on individual operations were assessed outside of the REMI model and were aggregated to the 70-sector NAICS code level to be used as inputs into the REMI model.

Impact of PAR 463

This assessment is performed relative to a baseline (“business as usual”) forecast where PAR 463 would not be implemented. The analysis assumed that the affected facilities would finance the capital and one-time costs described above at a 4 percent interest rate, and that these one-time costs are amortized over the useful life of each piece of equipment.

Direct costs of PAR 463 are used as inputs to the REMI model which uses this information to assess secondary and induced impacts for all the industries in the four-county economy on an annual basis over the 2024-2080 period. Direct effects of PAR 463 include the purchase of domed roofs, secondary seals, OGI cameras, and contracting for installation, labor, and other costs discussed in the compliance cost section above. The total cost of each item is allocated to the four counties based on the location of affected equipment. For example, since 69 of the 89 identified EFR tanks are located in Los Angeles County, 77.5 percent of the total doming costs will be allocated to Los Angeles County in the REMI Model.

While the compliance expenditures that are incurred by affected facilities would increase their cost of doing business, the purchase of required equipment and services would increase the sales and subsequent spending of businesses in various sectors, some of which may be located in South Coast AQMD’s jurisdiction. Table 4 lists the 70-sector NAICS codes modeled in REMI that would either incur direct cost or directly benefit from the compliance spending.

¹³ Regional Economic Modeling Inc. (REMI). Policy Insight® for the South Coast Area (70-sector model). Version 3. 2023.

¹⁴ Within each county, producers are made up of 156 private non-farm industries and sectors, three government sectors, and a farm sector. Trade flows are captured between sectors as well as across the four counties and the rest of U.S. Market shares of industries are dependent upon their product prices, access to production inputs, and local infrastructure. The demographic/migration component has 160 ages/gender/race/ethnicity cohorts and captures population changes in births, deaths, and migration. (For details, please refer to REMI online documentation at <http://www.remi.com/products/pi>).

Table 4
Industries Incurring and Benefitting from Compliance Costs/Spending

Source of Compliance Cost	REMI Industries Incurring Compliance Cost (NAICS)	REMI Industries Benefitting from Compliance Spending (NAICS)
Doming Installation	Oil and gas extraction (211) Wholesale trade (42) Petroleum and coal products manufacturing (324) Chemical manufacturing (325) Warehousing and storage (493) Waste management and remediation services (562) Pipeline transportation (486) Support activities for mining (213) Nonmetallic mineral product manufacturing (327) Miscellaneous manufacturing (339) Beverage and tobacco product manufacturing (312) State and Local Government (92) Utilities (22) Repair and maintenance (811) Professional, scientific, and technical services (54) Fabricated metal product manufacturing (332) Food manufacturing (311) Plastics and rubber product manufacturing (326) Air transportation (481) Hospitals (622)	Construction (23)
Doming Materials		Fabricated metal product manufacturing (332)
Permitting and Title V Fees		State and Local Government (92)
Doming Fire Suppression System		Construction (23)
Secondary Seals Installation and Materials		Construction (23)
OGI Camera		Computer and Electronic Product Manufacturing (334)
Doming O&M		Fabricated metal product manufacturing (332)
Secondary Seals O&M		Construction (23)
OGI O&M		Computer and Electronic Product Manufacturing (334)
OGI Labor Costs		All Industries Benefitting from OGI Labor*
VRU Performance Tests		Professional, scientific, and technical services (54)

*Labor for OGI inspections is modeled as additional compensation in each affected industry, reflecting the assumption that these inspections would be performed by existing employees of affected facilities working overtime.

Regional Job Impacts

When the compliance cost is annualized using a 4 percent real interest rate, the REMI model projects that there will be 25 foregone jobs annually on average over the 2024 – 2080 period relative to the baseline forecast. The sectors of Professional, Scientific, and Technical Services, Construction, and State and Local Government are expected to forego four, three, and three jobs annually, respectively, on average relative to the baseline forecast, while the Computer and Electronic Product Manufacturing industry is anticipated to gain one job annually on average. Table 4 presents the forecasted jobs foregone or added for selected years in the sectors with the largest magnitude of average annual job impacts. The “Other Industries” row in Table 5 shows the sum of job impacts for all the other industries excluding the 10 selected industries presented

in the table.

Table 5
Projected Job Impacts of PAR 463 for Selected Industries and Years

Industry	2025	2030	2050	2070	Annual Average (2024-2080)	Baseline Number of Jobs	% Of Baseline
Professional, scientific, and technical services (54)	17	-3	-6	-6	-4	1,103,469	-0.0004%
Construction (23)	0	-4	-6	-3	-3	564,165	-0.0006%
State and Local Government (NA)	2	-2	-4	-4	-3	988,219	-0.0003%
Oil and gas extraction (211)	-2	-3	-3	-2	-3	2,394	-0.1077%
Retail trade (44-45)	1	-2	-3	-3	-2	850,353	-0.0003%
Administrative and support services (561)	3	-2	-3	-3	-2	920,724	-0.0002%
Real estate (531)	1	-1	-2	-2	-2	581,801	-0.0003%
Wholesale trade (42)	2	-1	-2	-2	-2	734,489	-0.0002%
Food services and drinking places (722)	0	-1	-2	-1	-1	420,839	-0.0003%
Computer and electronic product manufacturing (334)	12	0	0	0	1	138,827	0.0006%
Other Industries	10	0	-6	-8	-4	6,026,573	-0.0001%
All Industries	46	-19	-37	-34	-25	12,331,853	-0.0002%

In addition, in 2013, South Coast AQMD contracted with Abt Associates Inc. to review the South Coast AQMD socioeconomic assessments for Air Quality Management Plans and individual rules with the goal of providing recommendations that could enhance South Coast AQMD's socioeconomic analyses. In 2014, Abt Associates Inc. published a report which included a recommendation for South Coast AQMD to enhance socioeconomic analyses by testing major assumptions through conducting a scenario analysis. As such, South Coast AQMD generally includes an alternative worst-case scenario in Socioeconomic Impact Assessments which analyzes a scenario that assumes the affected facilities would purchase all feasible monitoring equipment and services from providers located outside of the South Coast AQMD's jurisdiction.¹⁵ Permitting

¹⁵ Abt Associates Inc., August 2014, Review of the SCAQMD Socioeconomic Assessments, Chapter 6, Section 3, <https://www.aqmd.gov/docs/default-source/Agendas/aqmp/scaqmd-report---review-socioeconomic-assessments.pdf>, accessed April 2, 2024.

fee revenues were included in this scenario, as these permits are for equipment operating within the Basin and must be obtained from South Coast AQMD. In simple terms, this alternative worst-case scenario only models the impacts of the costs of compliance with PAR 463 while excluding the majority of revenues which would benefit equipment and service providers. This hypothetical scenario is designed to test the sensitivity of the embedded assumptions in the REMI model about how compliance costs and revenues would be distributed inside and outside of South Coast AQMD's jurisdiction. In practice, construction is likely to be provided by local companies and OGI inspections are likely to be performed by company employees. This worst-case scenario would result in an annual average of approximately 39 jobs foregone relative to the baseline scenario. The 39 jobs foregone represent a negligible portion of the average forecasted baseline jobs in the regional economy at an estimated 0.0003 percent. Figure 2 presents the projected regional job impacts over the 2024 – 2080 period for both the standard and the worst-case forecasts.

Figure 2
Projected Regional Job Impact, 2024 – 2080

Price Impact and Competitiveness

The impact of PAR 463 on production costs and delivered prices in the region is not expected to be substantial. In the Oil and Gas Extraction industry, which bears the majority of compliance costs associated with PAR 463, the REMI model projects an average increase in relative delivered prices of 0.007 percent over the forecast period, with a maximum increase of 0.016 percent forecasted in the year 2025. The relative cost of production for the Oil and Gas Extraction industry is forecasted to increase by 0.223 percent on average relative to the baseline scenario, with a maximum increase of 0.488 percent expected to occur in 2025. The larger percentage increase in the cost of production relative to delivered prices suggests companies in the Oil and Gas Extraction industry are largely unable to pass on additional costs to consumers. However, the small magnitude of the production cost increase implies that firms in the Oil and Gas Extraction industry should be able to absorb these costs.

Proposed Amended Rule 463 – Organic Liquid Storage

Board Meeting
June 7, 2024

Background and Need for PAR 463

Rule 463 was adopted in 1977 to reduce volatile organic compound (VOC) emissions from above-ground organic liquid storage tanks

Proposed Amended Rule 463 (PAR 463) affects 429 facilities and approximately 1,600 tanks

Rule development was initiated in response to:

Objectives in the Wilmington, Carson, West Long Beach Community Emission Reduction Plan (CERP) and the South Los Angeles CERP

Implement control measures in the 2012, 2016, and 2022 Air Quality Management Plans

Key Proposals in PAR 463

Require optical gas imaging (OGI) tank farm inspections every other week for all tanks and semi-annual OGI component inspections for floating roof tanks

Require the installation of domes on external floating roof tanks storing higher volatility products

Require secondary seals and more stringent seal gap requirements for all floating roof tanks

Increase vapor recovery emission control efficiency from 95% to 98% for fixed roof tanks

Cost-Effectiveness and Emission Reductions

The overall rule cost-effectiveness of PAR 463 is \$27,300*

Proposed Requirement	Cost-Effectiveness	Emission Reductions (tons per day)	Implementation Date
OGI Monitoring	\$15,400	0.40	July 1, 2025
Doming	\$24,800	0.05	When the tank is next emptied (no later than 23 years)
Secondary Seals	\$6,700	0.01	When the tank is next emptied (no later than 22 years)

*The overall rule cost-effectiveness includes the costs associated with performance testing and permitting for vapor recovery units, but does not include the corresponding emission reductions as it is assumed facilities are already meeting the proposed standard

Contingency Measures

The Clean Air Act requires air districts to implement contingency measures for any area classified as “serious” or above for nonattainment of National Ambient Air Quality Standards (NAAQS)

PAR 463 includes contingency measures for both the Coachella Valley and the South Coast Air Basin for multiple ozone NAAQS

If triggered, some facilities would be required to conduct more frequent (weekly) OGI inspections

Triggers are failure to meet a reasonable further progress milestone or attain an ozone NAAQS

CEQA and Socioeconomic Analysis

6

An Environmental Assessment was prepared pursuant to the California Environmental Quality Act (CEQA)

- Analyzed impacts from installation of domes and additional secondary seals

- Analysis concluded no significant environmental impacts

- No public comments were received

Socioeconomic Impact Assessment was conducted

- ~ 429 affected facilities with 1,600 tanks across four county region

- For 2024-2080, average annual cost = \$3.47 million at 4 percent interest rate

- ~ 25 jobs foregone annually on average using 4 percent real interest rate

BOARD MEETING DATE: June 7, 2024

AGENDA NO. 26

PROPOSAL: Determine That Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters does not require a new environmental document; and Amend Rule 1146.2

SYNOPSIS: Rule 1146.2 applies to units that are between 75,000 and 2,000,000 Btu/hour that are exempt from permitting. Proposed Amended Rule 1146.2 (PAR 1146.2) proposes to require a zero- NOx emission limit for new installations of applicable large water heaters, small boilers, and process heaters based on future effective dates, implementing a 2022 AQMP Control Measure necessary to meet the NAAQS ozone standards. PAR 1146.2 proposes zero-emission limits for existing units after the unit reaches a specific age, with an allowance for units installed at residential structures and small businesses to comply with the zero-emission limits upon natural replacement, and provides alternative compliance options and a low-use exemption to address challenges transitioning to zero-emission technologies. In addition, PAR 1146.2 clarifies existing rule language, removes obsolete provisions, and is a later activity within scope of Final Program Environmental Impact Report for 2022 AQMP such that no new environmental document will be required.

COMMITTEE: Stationary Source, March 15, April 19 and May 17, 2024

RECOMMENDED ACTIONS:

Adopt the attached Resolution:

1. Determining that Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters, is a later activity within the scope of the Final Program Environmental Impact Report for the 2022 AQMP such that no new environmental document will be required; and
2. Amending Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters.

Wayne Nastri
Executive Officer

Background

Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters (Rule 1146.2) was adopted in January 1998 to regulate NO_x emissions from natural gas-fired large water heaters, small boilers, and process heaters that have a rated heat input capacity of less than or equal to two million British thermal units (Btu) per hour. This rule does not regulate residential gas-fired tank type water heaters rated less than 75,000 Btu/hr heat input, which are regulated under Rule 1121 – Control of Nitrogen Oxides from Residential-Type, Natural Gas-Fired Water Heaters; however, residential instantaneous water heaters and pool heaters are regulated by Rule 1146.2 due to the higher Btu ratings of those type of units. The provisions of Rule 1146.2 are applicable to manufacturers, distributors, retailers, installers, refurbishers, and operators. Rule 1146.2 applies to more than one million units and the current NO_x limits were established based on a BARCT assessment conducted in 2006 that established the current NO_x emission limits of 20 parts per million by volume (ppmv), except for pool heaters, which remained at 55 ppmv.

South Coast Air Basin has been classified as in “extreme” nonattainment for the 2015 federal 8-hour ozone standard and is subject to requirements of the federal Clean Air Act (CAA). The 2022 AQMP adopted on December 2, 2022, set forth a path for improving air quality and meeting federal air pollution standards by striving for zero-emission technologies across all sectors. The 2022 AQMP included Control Measure C-CMB-01, which seeks 70 to 75 percent NO_x emission reductions by 2037 from commercial building water heating sources; PAR 1146.2 will implement that control measure.

Proposed Amendments

PAR 1146.2 requires applicable large water heaters, small boilers, and process heaters to meet a zero-emission NO_x standard for new equipment installations. The implementation approach and compliance schedule vary by the different categories of equipment and end-user. Earlier zero-emission implementation dates will be required for smaller units, beginning January 1, 2026 for installations in new buildings and January 1, 2029 for units installed in existing buildings; larger units and pool heaters will be required to transition to zero-emission units beginning January 1, 2028 for new buildings and January 1, 2031 for existing buildings, and the latest zero-emission limits will be required for high temperature units, beginning January 1, 2029 for new buildings and January 1, 2033 for existing buildings. The future effective dates will allow time for the technology to further mature, with longer timelines provided for the technologies that are not widely commercially available at time of rule adoption.

PAR 1146.2 allows existing units to reach the end of their unit age, as defined in the rule, before requiring operators to transition to zero-emission technologies. The proposed rule allows units used at residential structures and small businesses to comply with the zero-emission limits upon natural replacement as compared to replacing units at a defined unit age.

To address the challenges and costs associated with PAR 1146.2, several alternative compliance options are included to provide more time to transition to zero-emission technologies if: 1) utility upgrades are required; 2) multiple units are required to be replaced within two consecutive years; 3) an emergency replacement is required; 4) an instantaneous water heater in a mobile home is required to be replaced; 5) a new unit is required in a property under lease relying on landlords for electrical upgrades; and 6) construction is required to expand spacing or relocate a unit. During the extensions provided by the alternative compliance options, if a unit is not operational, or an emergency replacement is needed, PAR 1146.2 allows the use of a temporary unit that is certified to meet the specified low-NOx limit.

Public Process

PAR 1146.2 was developed through a public process that began in the second quarter of 2023 and included five Working Group Meetings on April 26, 2023, June 7, 2023, August 30, 2023, October 19, 2023, and December 13, 2023. The working group is composed of representatives from manufacturers, trade organizations, permit stakeholders, businesses, environmental groups, public agencies, consultants, and other interested parties. A public workshop was held on February 7, 2024, and a public consultation was held on February 23, 2024. Throughout the rulemaking, staff also met with individual stakeholders and conducted site visits to a wide variety of affected facilities.

Emission Reductions

PAR 1146.2 will affect approximately 1,070,000 units in the South Coast AQMD. The rule approach requires the transition to zero-emission units based on unit age and natural replacement; therefore, the emission reductions will occur gradually. At full implementation, PAR 1146.2 is estimated to be 5.6 tons per day (tpd) by 2058.

Key Issues

Throughout the rule development process, staff worked with stakeholders and revised PAR 1146.2 to address key issues. There are three remaining issues: impact on small businesses; limited market availability of zero-emission technologies for high temperature units; and high upfront costs for installing zero-emission equipment.

Impact on Small Businesses

PAR 1146.2 will affect many industries in the South Coast AQMD jurisdiction, including small businesses such as dry cleaning operations. In the case of dry cleaning operations, they operate high temperature units which have later compliance dates (e.g., 2029 for units installed in a new building and 2033 for units installed in an existing building). In addition, several proposed rule provisions will address impacts on small businesses, including a provision that allows small businesses to transition to zero-emission technologies at natural unit replacement instead of replacing units at the defined unit age. The rule also includes a low-use exemption that allows units installed before rule adoption to continue to operate and several alternative compliance options to

extend implementation timelines. These alternative compliance options include: 1) up to a five-year extension if utility upgrades are needed to operate the zero-emission unit; 2) up to a three-year extension if a facility is required to replace multiple units within two consecutive years; 3) up to a seven-year extension if a facility is required to replace multiple units within two consecutive years and utility upgrades are needed to operate the zero-emission unit; 4) up to a six-month extension if a facility needs to use a temporary unit for emergency replacement; 5) up to an eighteen-month extension if construction is required to expand the physical space where the unit is housed or if the unit needs to be relocated; and 6) up to a two-year extension for properties under lease requiring electrical upgrade. Numerous incentive programs are also available to help offset the high upfront costs to transition to zero-emission technologies, including an upcoming South Coast AQMD building appliance rebate program that will incentivize small businesses operating in overburdened areas to install zero-emission appliances.

Limited Market Availability of Zero-Emission Technologies for High Temperature Units
Staff analyzed available zero-emission technologies for each equipment category and acknowledges more time is needed to further develop zero-emission technologies for high temperature applications. To address this concern, PAR 1146.2 proposes later compliance dates (2029-2033) before requiring high temperature units to transition to zero-emission technologies. It is important to adopt future effective zero-emission standards, especially for units that are not yet widely commercially available; establishing zero-emission standards sends a strong market signal and provides certainty to manufacturers to encourage technology advancement. In addition, staff committed to conduct a technology check-in by June 1, 2027, to assess the technology development and market availability of high temperature units.

High Upfront Cost for Installing Zero-Emission Equipment

Some stakeholders object to the transition to zero-emission technologies citing the high upfront cost burden. To address upfront costs to transition to zero emission technologies, PAR 1146.2 requires units to be replaced at the end of the unit age, as defined by the rule; therefore, staff relied on the incremental cost between a conventional unit and a zero-emission unit. Estimated additional incremental capital and installation cost for zero-emission heat pumps ranged from \$675 to \$515,000 per unit; however, upfront costs are partially offset by fuel switching savings over the lifetime operation of the unit (range of \$600 to \$339,000 in operational cost savings). The highest estimated cost was for high temperature units and therefore the rule includes later compliance dates for those units to allow future market adoption to drive down costs. Federal, state, and local incentives could also offset some upfront costs, including the federal Inflation Reduction Act tax credits through 2032 and forthcoming rebates; state-wide TECH Clean California rebates for residential, multifamily, and commercial; the Southern California Edison program implemented by Willdan Energy Solutions; and the upcoming South Coast AQMD building appliance rebate program, which will be applicable to some PAR 1146.2 units. Staff will continue to monitor the cost impacts and provide a status update/technology check-in to the Stationary Source Committee by June 1, 2027.

California Environmental Quality Act (CEQA)

Pursuant to the CEQA and South Coast AQMD's certified regulatory program (Public Resources Code Section 21080.5, CEQA Guidelines Section 15251(l) and South Coast AQMD Rule 110), the South Coast AQMD, as lead agency, reviewed the PAR 1146.2 and determined that: 1) PAR 1146.2 implements the 2022 AQMP Control Measure C-CMB-01 – Commercial Water Heating; and 2) the Final Program Environmental Impact Report (EIR) for the 2022 AQMP evaluated Control Measure C-CMB-01 and analyzed its potential environmental impacts. Since PAR 1146.2 does not involve any new or modified impacts when compared to what was previously analyzed in the Final Program EIR for Control Measure C-CMB-01, PAR 1146.2 qualifies as a later activity within the scope of the program approved earlier for the 2022 AQMP per CEQA Guidelines Section 15168 (c), and the Final Program EIR for the 2022 AQMP adequately describes the activity for the purposes of CEQA such that no new environmental document will be required. The analysis supporting this conclusion can be found in Appendix A of the Final Staff Report (Attachment G to this Board Letter).

Socioeconomic Impact Assessment

The universe of PAR 1146.2 is based on affected units, instead of affected facilities, which is comprised of approximately 1,070,000 water heaters, high temperature units and pool heaters used in residential, commercial, or light industrial settings. Implementation of PAR 1146.2 requires the replacement of all gas-fired units with zero-emission units and unit replacements occurring at existing buildings may also involve upgrades to electrical panels. The timing of the replacement activities will be a gradual process dependent upon reaching the end of each unit's age, or at the natural turnover for units in residential structures and small businesses.

The average annual compliance costs of implementing PAR 1146.2 are estimated to range from \$48.99 million to \$96.77 million, depending on the real interest rate assumed (1 percent to 4 percent). The estimated annual costs are expected to be incurred by nearly all the industries in the South Coast AQMD jurisdiction. When the compliance costs are annualized using a 4 percent real interest rate, an annual average of 1,074 net jobs foregone is projected for the forecast period from 2026-2057. The 1,074 annual jobs foregone represents approximately 0.0084 percent of total annual jobs in the four-county area. The overall impacts of PAR 1146.2 on production cost and delivered price in the South Coast AQMD region are minimal. The details of the Socioeconomic Impact Assessment can be found in Attachment H to this Board Letter.

AQMP and Legal Mandates

Pursuant to Health and Safety Code Section 40460 (a), the South Coast AQMD is required to adopt an AQMP demonstrating compliance with all federal regulations and standards. The South Coast AQMD is required to adopt rules and regulations that carry out the objectives of the AQMP. PAR 1146.2 will implement the 2022 AQMP Control Measure C-CMB-01.

Implementation and Resource Impact

Resource impacts are expected in various divisions including Planning, Rule Development and Implementation, and Compliance and Enforcement; however, at this time, no funds have been reserved for administration and implementation of PAR 1146.2, but additional resources or staffing might be requested in the future.

ATTACHMENT A

SUMMARY OF PROPOSAL

Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters

Purpose

Reduce NOx emissions from water heaters, boilers, and process heaters as defined

Applicability

- Applicable to manufacturers, distributors, retailers, resellers, installers, owners, and operators of units that have a rated heat input capacity less than or equal to 2 MMBtu/hr

Requirements

- Emission limits prior to zero-emission requirements summarized in Table 1

Table 1 – Emission Limits

Equipment Category	NOx Emission Limit*	Carbon Monoxide (CO) Emission Limit*
Type 1 Units, excluding Pool Heaters	14 ng/J or 20 ppmv	N/A**
Type 1 Pool Heaters	40 ng/J or 55 ppmv	N/A**
Type 2 Units	14 ng/J or 20 ppmv	400 ppmv

* Nanograms per Joule (ng/J) of NOx (calculated as NO₂) of Heat Output or the specified ppmv of NOx or CO corrected at 3 percent volume stack gas oxygen (O₂) on a dry basis.

** Type 1 Units are not subject to a CO limit in Rule 1146.2 but may be subject to CO limits by other South Coast AQMD rules.

- Zero-emission requirements by equipment categories with future effective dates summarized in Table 2 and Table 3
 - Units divided into seven equipment categories
 - Zero-emission requirements by three phases, each applicable to specified equipment categories
 - For each phase, earlier compliance dates for new buildings vs. existing buildings

Table 2 – Zero-Emission Limits, Compliance Schedule, and Unit Age

Equipment Category	NOx and CO Emission Limits (ppmv)	Compliance Schedule	Unit Age (years)
Type 1 Unit*	0	Phase I	15

Instantaneous Water Heater ≤ 200,000 Btu/hr	0		25
Instantaneous Water Heater > 200,000 Btu/hr	0	Phase II	25
Type 1 Pool Heater	0		15
Type 2 Unit**	0		25
Type 1 High Temperature Unit	0	Phase III	25
Type 2 High Temperature Unit	0		25

* Referring to a Type 1 Unit that is not a High Temperature Unit, Pool Heater, or Instantaneous Water Heater.

** Referring to a Type 2 Unit that is not a High Temperature Unit or Instantaneous Water Heater.

Table 3 – Compliance Dates for Zero-Emission Limits

Phase	Building Type	Compliance Date
Phase I	New Buildings	January 1, 2026
	Existing Buildings	January 1, 2029
Phase II	New Buildings	January 1, 2028
	Existing Buildings	January 1, 2031
Phase III	New Buildings	January 1, 2029
	Existing Buildings	January 1, 2033

- Units reaching their unit age specified in Table 2 after Table 3 compliance dates of their applicable categories are subject to zero-emission standards, except for units for residential buildings and small businesses as defined by Rule 102
 - Except for residential buildings or small businesses, units reaching rule defined “unit age” after zero-emission compliance dates shall not operate if not meeting zero-emission standards

Unit Age

- Added subdivision on unit age determination

Alternative Compliance Options

- Alternative compliance options are provided for:

Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters

- Up to a five-year extension if a utility upgrade is required and the applicable utility company is unable to provide the necessary power to operate the unit;
- Up to a three-year extension if an owner or operator has five or more units that are required to meet the Table 2 emission limits within two consecutive calendar years pursuant to paragraph (d)(3) with an option to include several extensions if utility upgrades are required beyond the control of the facility;
- Up to six-months for using a temporary gas unit meeting specified emission limits, if an owner or operator of a unit requires a short-term replacement due to sudden unit failure after the applicable Table 3 compliance date and an electrical upgrade to increase the power supply capacity to operate a unit that complies with Table 2 emission limits;
- Up to a four-year extension if an owner or operator has an instantaneous water heater installed prior to the date of rule adoption in a mobile home;
- Up to a two-year extension if an owner or operator of a unit operates the unit in a property under lease; and
- Up to an eighteen-month extension if construction is required to expand the space designed to house the unit, and associated equipment necessary for operating the unit

Labeling, Reporting, and Recordkeeping Requirements

- Labeling is required for:
 - Units supplied or offered for sale in the period between the new building compliance date and the existing building compliance date of the unit equipment category; and
 - Instantaneous water heater with rated heat input capacity of less than or equal to 200,000 Btu/hr supplied or offered for sale for use in a mobile home in the extended period for instantaneous water heaters being installed in mobile homes
- Manufacturers of natural gas-fired units shall submit an annual report for the gas units sold into or within the South Coast AQMD after the zero-emission compliance dates
- Recordkeeping requirements include:
 - General recordkeeping for manufacturer and/or distributor's written instruction, maintenance activities, building permits, and fuel use if under low-use exemption;
 - Rated heat input capacity documentation;
 - Required documents if utilizing alternative compliance options for utility upgrade
 - Required documents if utilizing alternative compliance options for units at a property under lease
 - Required documents if utilizing alternative compliance options for construction
- Small businesses shall register their qualification of small business
- Alternative reporting method is provided for when a report cannot be submitted through the compliance portal

Exemptions

- Units subject to Rule 1121 - Control of Nitrogen Oxides from Residential Type, Natural Gas-fired Water Heaters

Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters,
Small Boilers and Process Heaters

- Units subject to Rule 1179.1 – Emission Reductions from Combustion Equipment at Publicly Owned Treatment Works Facilities
- Low-use exemption for 9,000 therms per calendar year with an end date on the applicable zero-emission compliance date
- Low-use exemption for 3,000 therms and 2,000 therms per calendar year
- Owners and operators of units installed or used in residential structures need not adhere to the unit age and recordkeeping requirements
- Small businesses need not adhere to the unit age requirement
- Zero-emission units exempted from the certification requirements

ATTACHMENT B

KEY ISSUES AND RESPONSES

Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters

Throughout the rule development process, staff worked with stakeholders and revised PAR 1146.2 to address key issues. There are three remaining issues below that staff has worked on with stakeholders and proposed solutions.

Impact To Small Businesses

PAR 1146.2 will affect many industries in the South Coast AQMD jurisdiction, including small businesses such as dry cleaning operations. In the case of dry cleaning operations, they operate high temperature units which have later compliance dates (e.g., 2029 for units installed in a new building and 2033 for units installed in an existing building). In addition, several proposed rule provisions will address impacts on small businesses, including a provision that allows small businesses to transition to zero-emission technologies at natural unit replacement instead of replacing units at the defined unit age. The rule also includes a low-use exemption that allows units installed before rule adoption to continue to operate and several alternative compliance options to extend implementation timelines. These alternative compliance options include: 1) up to a five-year extension if utility upgrades are needed to operate the zero-emission unit; 2) up to a three-year extension if a facility is required to replace multiple units within two consecutive years; 3) up to a seven-year extension if a facility is required to replace multiple units within two consecutive years and utility upgrades are needed to operate the zero-emission unit; 4) up to a six-month extension if a facility needs to use a temporary unit for emergency replacement; 5) up to an eighteen-month extension if construction is required to expand the physical space where the unit is housed or if the unit needs to be relocated; and 6) up to a two-year extension for properties under lease requiring electrical upgrade. Numerous incentive programs are also available to help offset the high upfront costs to transition to zero-emission technologies, including an upcoming South Coast AQMD building appliance rebate program that will incentivize small businesses operating in overburdened areas to install zero-emission appliances.

Limited Market Availability of Zero-Emission Technologies for High Temperature Units

Staff analyzed available zero-emission technologies for each equipment category and acknowledges more time is needed to further develop zero-emission technologies for high temperature applications. To address this concern, PAR 1146.2 proposes later compliance dates (2029-2033) before requiring high temperature units to transition to zero-emission technologies. It is important to adopt future effective zero-emissions standards, especially for units that are not yet widely commercially available; establishing zero-emission standards now

sends a strong market signal and provides certainty to manufacturers to encourage technology advancement. In addition, staff committed to conduct a technology check-in by June 1, 2027, to assess the technology development and market availability of high temperature units.

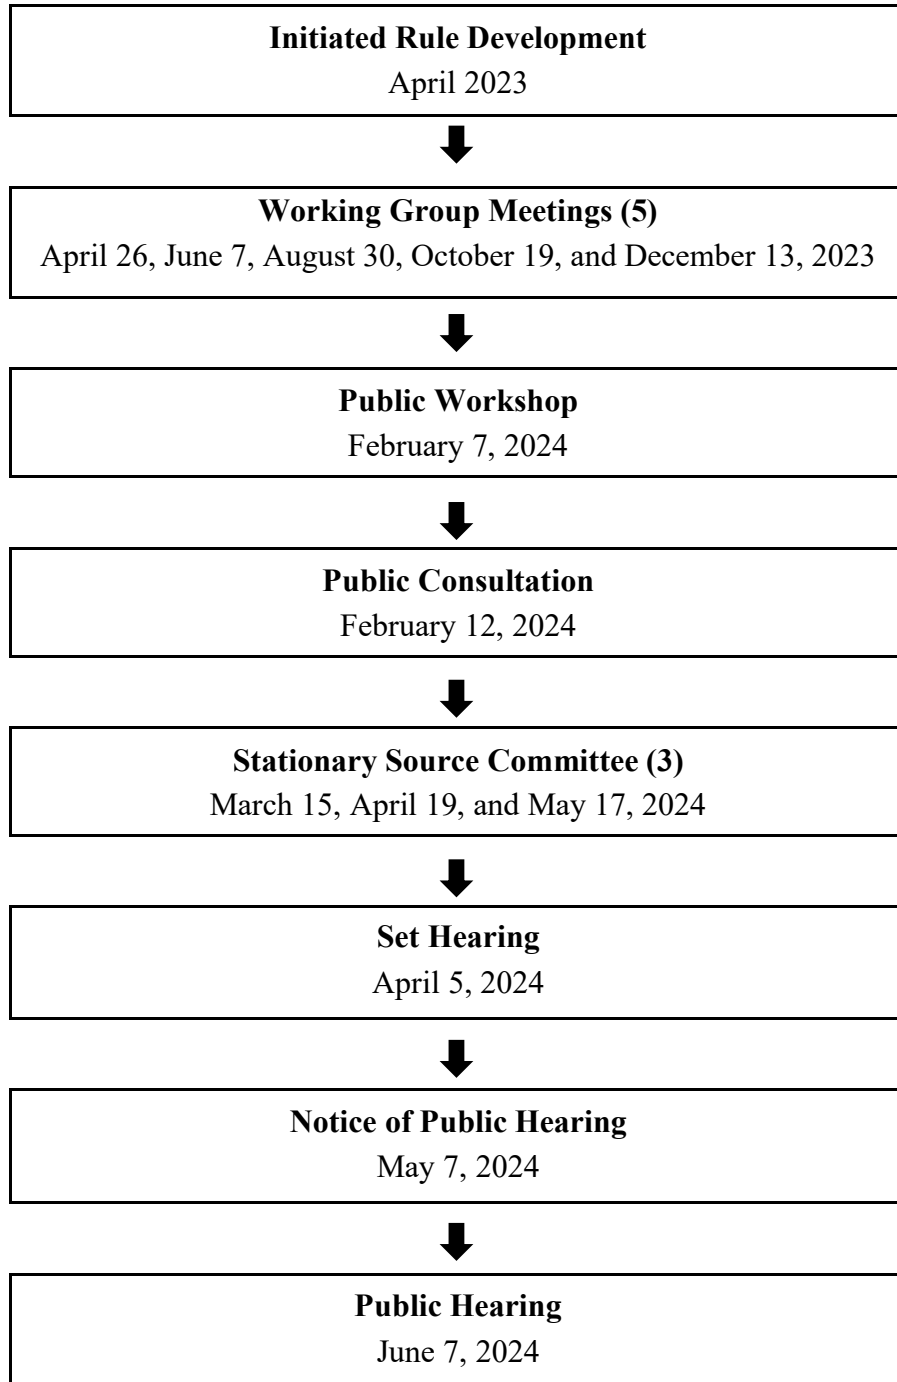

High Upfront Cost for Installing Zero-Emission Equipment

Some stakeholders object to the transition to zero-emission technologies citing the high upfront cost burden. To address upfront costs to transition to zero emission technologies, PAR 1146.2 requires units to be replaced at the end of the unit age, as defined by the rule; therefore, staff relied on the incremental cost between a conventional unit and a zero-emission unit. Estimated additional incremental capital and installation cost for zero-emission heat pumps ranged from \$675 to \$515,000 per unit; however, upfront costs are partially offset by fuel switching savings over the lifetime operation of the unit (range of \$600 to \$339,000 in operational cost savings). The highest estimated cost was for high temperature units and therefore the rule includes later compliance dates for those units to allow future market adoption to drive down costs. Federal, state, and local incentives could also offset some upfront costs, including the federal Inflation Reduction Act tax credits through 2032 and forthcoming rebates; state-wide TECH Clean California rebates for residential, multifamily, and commercial; the Southern California Edison program implemented by Willdan Energy Solutions; and the upcoming South Coast AQMD building appliance rebate program, which will be applicable to some PAR 1146.2 units. Staff will continue to monitor the cost impacts and provide a status update/technology check-in to the Stationary Source Committee by June 1, 2027.

ATTACHMENT E

RESOLUTION NO. 24-_____

A Resolution of the Governing Board of the South Coast Air Quality Management District (South Coast AQMD) determining that Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters and Small Boilers and Process Heaters qualifies as a later activity within the scope of the program approved earlier for the 2022 Air Quality Management Plan (AQMP) per California Environmental Quality Act (CEQA) Guidelines Section 15168 (c), and the Final Program Environmental Impact Report (EIR) for the 2022 AQMP adequately describes the activity for the purposes of CEQA such that no new environmental document will be required.

A Resolution of the South Coast AQMD Governing Board amending Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters and Small Boilers and Process Heaters.

WHEREAS, the South Coast AQMD Governing Board finds and determines that Proposed Amended Rule 1146.2 is considered a "project" as defined by CEQA; and

WHEREAS, the South Coast AQMD has had its regulatory program certified pursuant to Public Resources Code Section 21080.5 and CEQA Guidelines Section 15251(l), and has conducted a CEQA review and analysis of the proposed project pursuant to such program (South Coast AQMD Rule 110); and

WHEREAS, the South Coast AQMD Governing Board finds and determines that: 1) Proposed Amended Rule 1146.2 implements Control Measure C-CMB-01 – Commercial Water Heating which was previously adopted in the 2022 AQMP; 2) no subsequent EIR would be required per CEQA Guidelines Section 15168 (c)(2) because there are no new or modified physical changes that would result from implementing Proposed Amended Rule 1146.2 which were not previously analyzed in the Final Program EIR for the 2022 AQMP specific to Control Measure C-CMB-01; and 3) the Final Program EIR for the 2022 AQMP can be relied on for CEQA compliance; and

WHEREAS, the South Coast AQMD Governing Board finds and determines that Proposed Amended Rule 1146.2 is a later activity within the scope of the program approved earlier in the 2022 AQMP per CEQA Guidelines Section 15168 (c)(2), and the Final Program EIR for the 2022 AQMP adequately describes and analyzes the activities associated with implementing the proposed project for the purposes of CEQA such that no new environmental document will be required; and

WHEREAS, the South Coast AQMD Governing Board finds and determines that based on substantial evidence in the record and in accordance with the noticing requirements in CEQA Guidelines Section 15168 (e), Proposed Amended Rule 1146.2 qualifies as a later activity within the scope of the program approved earlier for the 2022 AQMP, and the Final Program EIR for the 2022 AQMP adequately describes the activity for the purposes of CEQA; and

WHEREAS, Proposed Amended Rule 1146.2, and supporting documentation, including but not limited to, the Final Staff Report which includes the CEQA analysis, and the Final Socioeconomic Impact Assessment, were presented to the South Coast AQMD Governing Board and the South Coast AQMD Governing Board has reviewed and considered this information, as well as has taken and considered staff testimony and public comment prior to approving the project; and

WHEREAS, the South Coast AQMD Governing Board finds and determines, taking into consideration the factors in Section (d)(4)(D) of the Governing Board Procedures (Section 30.5(4)(D)(i) of the Administrative Code), that the modifications to Proposed Amended Rule 1146.2 since the latest Notice of Public Hearing published through email notification on May 7, 2024 are clarifications that meet the same air quality objective and are not so substantial as to significantly affect the meaning of Proposed Amended Rule 1146.2 within the meaning of Health and Safety Code Section 40726 because: (1) revising the utility upgrade extensions in subparagraphs (i)(1)(B) and (i)(1)(C) from 18 months to 24 months including an additional 12-month extension in subparagraph (i)(1)(D) is to address implementation barriers for utility upgrades; (2) moving clause (i)(1)(C)(iii) to subparagraph (i)(1)(E) is for clarification; (3) including progress reports in subparagraph (i)(1)(E) establishes a check-in to ensure progress with the utility upgrades; (4) adding specific references to “subparagraphs (i)(1)(B), (i)(1)(C), and (i)(1)(D)” in subparagraph (i)(1)(H) is for clarity; (5) defining Rule 306 – Plan Fees as Rule 306 in subparagraph (i)(2)(A) streamlines the language; (6) replacing existing subparagraph (i)(2)(C) with the revised paragraph is for clarity and includes the extensions for the utility upgrades and progress reports included in paragraph (i)(1) for consistency; (7) revising clause (i)(2)(D)(ii) is to reflect the new provision for utility upgrade extensions; (8) replacing “or” with “and” in subparagraph (i)(3)(C) is for clarification; (9) replacing “until” with “before” in paragraph (i)(5) is for clarification; (10) adding “from the applicable compliance” date and adding that the alternative compliance option does not apply to units complying with the alternative compliance options in paragraphs (i)(1), (i)(2), and (i)(7) is for clarification; (11) adding “from the applicable compliance” date and adding “or relocate” to paragraph (i)(7) is for clarification; (12) revising six months to 18 months for additional time provided in paragraph (i)(7) for required construction or relocation is to address an implementation barrier; (13) adding the reference of “subparagraph (d)(5)(B)” in paragraph (i)(8) is for consistency; (14) correcting the typos in paragraphs (j)(1), (j)(2), and subparagraph (k)(3)(A) is for clarification; (15) adding “or subparagraph (i)(2)(C)” to paragraph (j)(6) is for clarification; (16) adding language in paragraph (j)(8) regarding unit relocation is for consistency; and: (a) the changes do not impact emission reductions, (b) the changes do not affect the number or type of sources

regulated by the rule, (c) the changes are consistent with the information contained in the notice of public hearing, and (d) the consideration of the range of CEQA alternatives was conducted in the Final Program EIR for the 2022 AQMP, which evaluated Control Measure C-CMB-01 upon which Proposed Amended Rule 1146.2 relies; and

WHEREAS, Proposed Amended Rule 1146.2 will be submitted for inclusion in the State Implementation Plan; and

WHEREAS, Health and Safety Code Section 40727 requires that prior to adopting, amending, or repealing a rule or regulation, the South Coast AQMD Governing Board shall make findings of necessity, authority, clarity, consistency, non-duplication, and reference based on relevant information presented at the public hearing and in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board has determined that a need exists to amend Rule 1146.2 to establish appropriate Best Available Retrofit Control Technology (BARCT) emission limits and implement the 2022 AQMP Control Measure C-CMB-01; and

WHEREAS, the South Coast AQMD Governing Board obtains its authority to adopt, amend or repeal rules and regulations from Health and Safety Code Sections 39002, 40000, 40001, 40440, 40702, 40725 through 40728.5, 40920.6, and 41508 as well as the federal Clean Air Act; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 1146.2 is written or displayed so that its meaning can be easily understood by the persons directly affected by it; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 1146.2 is in harmony with, and not in conflict with or contradictory to, existing statutes, court decision, or state or federal regulations; and

WHEREAS, the South Coast AQMD Governing Board has determined that Proposed Amended Rule 1146.2 does not impose the same requirements as any existing state or federal regulations, and the proposed amended rule is necessary and proper to execute the powers and duties granted to, and imposed upon, the South Coast AQMD; and

WHEREAS, the South Coast AQMD Governing Board, in amending Rule 1146.2, references the following statutes which the South Coast AQMD hereby implements, interprets or makes specific: Health and Safety Code Sections 39002, 40000, 40001, 40406, 40702, 40440(a), 40725 through 40728.5, 40920.6, 41508 and Clean Air Act Sections 110, 172, and 182(e); and

WHEREAS, Health and Safety Code Section 40727.2 requires the South Coast AQMD to prepare a written analysis of existing federal air pollution control

requirements applicable to the same source type being regulated whenever it adopts, or amends a rule, and that the South Coast AQMD's comparative analysis of Proposed Amended Rule 1146.2 is included in the Final Staff Report; and

WHEREAS, the South Coast AQMD Governing Board finds that staff's proposed control options for Proposed Amended Rule 1146.2 are being adopted because they constitute BARCT, and that there is no other control options that meet BARCT and the air quality objectives; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment for the proposed project is consistent with the March 17, 1989, Governing Board Socioeconomic Resolution for rule adoption; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment is consistent with the provisions of Health and Safety Code Sections 40440.8, 40728.5, and 40920.6; and

WHEREAS, the South Coast AQMD Governing Board has determined that the Final Socioeconomic Impact Assessment concludes that Proposed Amended Rule 1146.2 will result in increased costs to nearly all affected industries in the South Coast AQMD jurisdiction, yet such costs are considered to be reasonable; and

WHEREAS, the South Coast AQMD Governing Board has considered the Final Socioeconomic Impact Assessment, and has made a good faith effort to minimize such impacts; and

WHEREAS, the South Coast AQMD staff conducted a Public Workshop regarding Proposed Amended Rule 1146.2 on February 7, 2024; and

WHEREAS, the Public Hearing has been properly noticed in accordance with the provisions of Health and Safety Code Sections 40725 and 40440.5; and

WHEREAS, the South Coast AQMD Governing Board has held a Public Hearing in accordance with all provisions of state and federal law; and

WHEREAS, the South Coast AQMD Governing Board specifies the Planning, Rule Development and Implementation Manager overseeing the rule development for Proposed Amended Rule 1146.2 as the custodian of the documents or other materials which constitute the record of proceedings upon which the adoption of this proposed project is based, which are located at the South Coast Air Quality Management District, 21865 Copley Drive, Diamond Bar, California; and

NOW, THEREFORE, BE IT RESOLVED, that the South Coast AQMD Governing Board does hereby determine, pursuant to the authority granted by law, that Proposed Amended Rule 1146.2 qualifies as a later activity within the scope of the program

approved earlier for the 2022 AQMP per CEQA Guidelines 15168 (c), and the Final Program EIR for the 2022 AQMP adequately describes the activity for the purposes of CEQA such that no new environmental document will be required. This information was presented to the South Coast AQMD Governing Board, whose members exercised their independent judgement and reviewed, considered, and approved the information therein prior to acting on the proposed project; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board directs staff to conduct a status update/technology check-in and report to the Stationary Source Committee by June 1, 2027, if the zero-emission limits established in Proposed Amended Rule 1146.2 are technically feasible, cost effective, and represent BARCT as defined in the Health and Safety Code Section 40406; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board does hereby adopt, pursuant to the authority granted by law, Proposed Amended Rule 1146.2 as set forth in the attached, and incorporated herein by reference; and

BE IT FURTHER RESOLVED, that the South Coast AQMD Governing Board requests that Proposed Amended Rule 1146.2 be submitted for inclusion in the State Implementation Plan; and

BE IT FURTHER RESOLVED, that the Executive Officer is hereby directed to forward a copy of this Resolution and Proposed Amended Rule 1146.2 to CARB for approval and subsequent submittal to U.S. EPA for inclusion into the State Implementation Plan.

CLERK OF THE BOARDS

ATTACHMENT F

(Adopted January 9, 1998)(Amended January 7, 2005)(Amended May 5, 2006)
(Amended December 7, 2018)(Amended [Date of Rule Adoption])

[RULE INDEX TO BE ADDED AFTER RULE ADOPTION]

PROPOSED AMENDED RULE 1146.2. EMISSIONS OF OXIDES OF NITROGEN FROM LARGE WATER HEATERS AND SMALL BOILERS AND PROCESS HEATERS

(a) Purpose and Applicability

The purpose of this rule is to reduce Oxides of Nitrogen (NO_x) emissions from natural gas fired water heatersWater Heaters, boilersBoilers, and process heatersProcess Heaters fired with, or designed to be fired with, natural gas as defined in this rule. ~~This rule applies to units that have a rated heat input capacity less than or equal to 2,000,000 BTU per hour. Type 1 Units as defined in this rule are typically, but not exclusively, large water heaters or smaller sized process heaters in the above range. Type 2 Units as defined in this rule are typically, but not exclusively, small boilers or larger sized process heaters in this range. Beginning, January 1, 2000, the provisions of this rule are applicable to manufacturers, distributors, retailers, refurbishers, installers and operators of new units. Beginning July 1, 2002, the provisions of this rule are also applicable to operators of existing Type 2 Units.~~

(b) Applicability

The provisions of this rule are applicable to manufacturers, distributors, retailers, Resellers, Installers, owners, and operators of Units fired with, or designed to be fired with, natural gas that have a Rated Heat Input Capacity less than or equal to 2,000,000 British Thermal Units (Btu) per hour.

(b) Definitions

(1) ~~BEST AVAILABLE RETROFIT CONTROL TECHNOLOGY (BARCT)~~
~~as defined in the California Health and Safety Code Section 40406.~~

(21) ~~BOILER OR STEAM GENERATOR~~ means any equipment that is fired with, or is designed to be fired with, natural gas, used to produce steam or to heat water, and that is not used exclusively to produce electricity for sale. ~~Boiler or Steam Generator~~ does not include any waste heat recovery boiler that is used to recover sensible heat from the exhaust of a combustion

turbine or any unfired waste heat recovery boiler that is used to recover sensible heat from the exhaust of any combustion equipment.

~~(3) BTU means British thermal unit(s).~~

~~(42)~~ CERTIFIED RETROFIT KIT means any burner and ancillary controls or blowers that have been demonstrated to comply with the provisions of this rule, on a retrofit basis, on a particular model of ~~unit~~Unit.

~~(3)~~ COMPLIANCE PORTAL means the dedicated webpage on the South Coast AQMD website for submitting reports, notifications, or any documents to comply with South Coast AQMD rule(s).

~~(5) FIRE TUBE BOILER means a BOILER that passes hot gases from a fire box through one or more tubes running through a sealed container of water. The heat of the gases is transferred through the walls of the tubes by thermal conduction, heating the water and ultimately creating steam.~~

~~(4)~~ EXISTING BUILDING means a building that is not a New Building as defined in this rule. Existing Building includes any structures on the property including, but not limited to, sheds, detached garages, pools, and spas.

~~(65)~~ FORMER RECLAIM FACILITY means a facility, or any of its successors, that was in the Regional Clean Air Incentives Market as of January 5, 2018, as established in Regulation XX, that has received a final determination notification, and is no longer in the RECLAIM program.

~~(76)~~ HEAT INPUT means the chemical heat released due to assumed complete combustion of fuel ~~into~~ a ~~unit~~Unit, using the higher heating value of the fuel. This does not include the sensible heat of incoming combustion air.

~~(87)~~ HEAT OUTPUT means the enthalpy of the working fluid output of the ~~unit~~Unit.

~~(8)~~ HIGH TEMPERATURE UNIT means any Unit that is designed and used to produce steam or to heat water above 180 degrees Fahrenheit.

~~(9)~~ INDEPENDENT TESTING LABORATORY means a testing laboratory that meets the requirements of ~~District~~Rule 304 – Equipment, Materials, And Ambient Air Analyses, subdivision (k) and is approved by the ~~District~~Executive Officer to conduct certification testing under the Protocol: Nitrogen Oxides Emissions Compliance Testing for Natural Gas-Fired Water Heaters and Small Boilers (Protocol).

- (10) INSTALL means the action of an Installer to place a Unit in a position ready for use.
- (11) INSTALLER means a person who Installs a Unit and is required to obtain a license issued by the Department of Consumer Affairs Contractors State License Board for a classification related to buildings and appliances.
- (4012) INSTANTANEOUS WATER HEATER means a ~~WATER HEATER~~ tankless Water Heater with a ~~RATED HEAT INPUT CAPACITY~~ Rated Heat Input Capacity less than or equal to 2,000,000 BTU_{Btu} per hour that heats water only on-demand when it flows through a heat exchanger, which is a device used to transfer heat between two or more mediums of different temperatures.
- (13) MOBILE HOME means a prefabricated structure on a permanently attached chassis.
- (14) NEW BUILDING means a building that is newly constructed or a building with a major alteration which changes the occupancy classification of a building, which means a change in the formal designation of the primary purpose of the building pursuant to 2022 Title 24 California Building Code Part 2 Chapter 3 for occupancy classification and use, and that does not have a Unit installed prior to the applicable Table 3 compliance dates. New Building comprises any structures on the property including, but not limited to sheds, detached garages, pools, and spas.
- (4415) OXIDES OF NITROGEN (NO_x) EMISSIONS means the sum of nitric oxides and nitrogen dioxides emitted, calculated, and expressed as nitrogen dioxide.
- (16) PARTS PER MILLION BY VOLUME (ppmv) means, for the purpose of this rule, Parts Per Million by Volume of a pollutant at a three percent oxygen correction on a dry basis at Standard Conditions.
- (4217) POOL HEATER means a ~~WATER HEATER~~ Water Heater designed and used to heat a pool, hot tub, or spa.
- (4318) PROCESS HEATER means any equipment that is fired with, or is designed to be fired with, natural gas and which transfers heat from combustion gases to water or process streams. A Process Heater does not include any kiln or oven used for annealing, drying, curing, baking, cooking, calcining, or vitrifying; or any unfired waste heat recovery heater that is used to recover sensible heat from the exhaust of any combustion equipment.

- (1419) PROTOCOL means the South Coast Air Quality Management District AQMD Protocol to ensure standardization of compliance certification test procedures, titled: Nitrogen Oxides Emissions Compliance Testing for Natural Gas-Fired Water Heaters and Small Boilers.
- (14520) RECLAIM FACILITY means a facility, or any of its successors, that was in the Regional Clean Air Incentives Market as of January 5, 2018, as established in Regulation XX.
- (14621) RATED HEAT INPUT CAPACITY means the gross ~~HEAT INPUT~~ Heat Input of the combustion device, as supported by required documentation.
- (14722) RECREATIONAL VEHICLE means any vehicle used for recreational purposes designed to include a ~~w~~ Water h Heater and licensed to be driven or moved on the highways of California.
- ~~(18) REFURBISHER means anyone who reconditions a Type 1 Unit or TYPE 2 UNIT and offers the unit for resale, for use in the District.~~
- (14923) RESELLER means anyone who sells either retail, wholesale, or on an individual basis ~~TYPE 1 UNITS or TYPE 2 UNITS~~ any Unit.
- (2024) RESIDENTIAL STRUCTURE means any structure which is designed ~~for and used~~ exclusively as a dwelling for not more than four families, and where such equipment is used by the owner or occupant of such a dwelling. Residential Structures includes any structures on the property including, but not limited to, sheds, detached garages, pools, and spas.
- (25) SMALL BUSINESS is as defined by Rule 102 – Definition of Terms (Rule 102).
- (26) STANDARD CONDITIONS are as defined by Rule 102.
- ~~(21) TANK TYPE WATER HEATER means a WATER HEATER with a RATED HEAT INPUT CAPACITY from 75,000 BTU per hour to 2,000,000 BTU per hour and with an integral closed vessel in which water is heated and stored for use external to the vessel.~~
- (2227) THERM means 100,000 BTU Btu.
- ~~(23) THERMAL FLUID HEATER means a natural gas fired PROCESS HEATER in which a process stream is heated indirectly by a heated fluid other than water.~~
- (2428) TYPE 1 UNIT means any ~~WATER HEATER, BOILER or PROCESS HEATER~~ Unit with a ~~RATED HEAT INPUT CAPACITY~~ Rated Heat Input Capacity less than or equal to 400,000 BTU Btu per hour, excluding TANK

~~TYPE WATER HEATERS~~ Water Heaters subject to the limits of ~~District~~ Rule 1121 – Control of Nitrogen Oxides from Residential Type, Natural Gas-fired Water Heaters (Rule 1121).

(2529) ~~TYPE 2 UNIT~~ means any ~~WATER HEATER, BOILER or PROCESS HEATER~~ Unit with a ~~RATED HEAT INPUT CAPACITY~~ Rated Heat Input Capacity greater than 400,000 ~~BTU~~ Btu per hour up to and including 2,000,000 ~~BTU~~ Btu per hour.

(2630) ~~UNIT~~ means any ~~BOILER, STEAM GENERATOR, WATER HEATER~~ Boiler, Water Heater, or Process Heater as defined in ~~this rule~~ paragraph (b)(2), (b)(4), (b)(5), (b)(10), (b)(12), (b)(13), (b)(21), (b)(23), (b)(24), (b)(25) or (b)(27).

(2731) ~~WATER HEATER~~ means any equipment that is fired with, or designed to be fired with, natural gas and that is used solely to heat water for use external to the equipment.

(e) Requirements

(1) ~~On or after January 1, 2000, no person shall manufacture for use, or offer for sale for use, in the District any new Type 2 Unit, unless the NO_x emissions level is less than or equal to 30 ppm of NO_x emissions (at 3% O₂, dry) or 0.037 pound NO_x per million BTU of heat input and no more than 400 ppm of carbon monoxide (at 3% O₂, dry), as certified by the District according to subdivision (d).~~

(2) ~~On or after January 1, 2001, no person shall manufacture for use, or offer for sale for use, in the District any new Type 1 Unit, unless the NO_x emissions level is less than or equal to 40 nanograms of NO_x (calculated as NO₂) per joule (93 lb per billion BTU) of heat output or 55 ppm NO_x emissions (at 3% O₂, dry), as certified by the District according to subdivision (d).~~

(3) ~~Except for units at a RECLAIM or former RECLAIM facility, on or after July 1, 2002, no person shall operate in the District any unit with a rated heat input capacity greater than 1,000,000 BTU per hour but less than or equal to 2,000,000 BTU per hour manufactured prior to January 1, 1992, which does not meet the emissions limits required by paragraph (c)(1). Alternatively, a unit may be modified or demonstrated to meet the emission limits of paragraph (c)(1) pursuant to the provisions of subdivision (e).~~

- (1) Prior to the applicable Table 3 compliance dates, no person shall manufacture, supply, sell, offer for sale, or Install, for use within the South Coast AQMD, any Unit unless the Unit is certified pursuant to subdivision (f) not to exceed the applicable Table 1 emission limits.

Table 1 – Emission Limits

<u>Equipment Category</u>	<u>NOx Emission Limit*</u>	<u>Carbon Monoxide (CO) Emission Limit*</u>
<u>Type 1 Units, excluding Pool Heaters</u>	<u>14 ng/J or 20 ppmv</u>	<u>N/A**</u>
<u>Type 1 Pool Heaters</u>	<u>40 ng/J or 55 ppmv</u>	<u>N/A**</u>
<u>Type 2 Units</u>	<u>14 ng/J or 20 ppmv</u>	<u>400 ppmv</u>

* Nanograms per Joule (ng/J) of NOx (calculated as NO₂) of Heat Output or the specified ppmv of NOx or CO corrected at 3 percent volume stack gas oxygen (O₂) on a dry basis.

** Type 1 Units are not subject to a CO limit in Rule 1146.2 but may be subject to CO limits by other South Coast AQMD rules.

- (4) ~~Except for units at a RECLAIM or former RECLAIM facility, on or after January 1, 2006, no person shall operate in the District any unit more than 15 years old, based on the original date of manufacture as specified in paragraph (c)(6), with a rated heat input capacity greater than 1,000,000 BTU per hour but less than or equal to 2,000,000 BTU per hour and manufactured on or after January 1, 1992, which does not meet the emissions limits required by paragraph (c)(1). Alternatively, a unit may be modified or demonstrated to meet the emission limits of paragraph (c)(1) pursuant to the provisions of subdivision (e).~~
- (5) ~~Except for units at a RECLAIM or former RECLAIM facility, on or after January 1, 2006, no person shall operate in the District any unit more than 15 years old, based on the original date of manufacture as specified in paragraph (c)(6), with a rated heat input capacity greater than 400,000 BTU per hour but less than or equal to 1,000,000 BTU per hour manufactured prior to January 1, 2000, which does not meet the emissions limits required by paragraph (c)(1). Alternatively, a unit may be modified or demonstrated to meet the emission limits of paragraph (c)(1) pursuant to the provisions of subdivision (e).~~
- (6) ~~The original date of manufacture shall be determined by:~~

- ~~(A) Original manufacturer's identification or rating plate permanently fixed to the equipment. If not available, then;~~
- ~~(B) Invoice from manufacturer for purchase of equipment. If not available, then;~~
- ~~(C) Unit is deemed to be more than 15 years old.~~
- ~~(7) On or after January 1, 2010, no person shall manufacture for use or offer for sale for use within the District any Type 2 unit unless the unit is certified pursuant to subdivision (d) to a NOx emission level of less than 14 nanograms of NOx (calculated as NO₂) per joule of heat output or less than or equal to 20 ppm of NOx emissions (at 3% O₂, dry).~~
- ~~(8) On or after January 1, 2012, no person shall manufacture for use or offer for sale for use within the District any Type 1 unit (excluding pool heaters), unless the unit is certified pursuant to subdivision (d) to a NOx emission level of less than 14 nanograms of NOx (calculated as NO₂) per joule of heat output or less than or equal to 20 ppm of NOx emissions (at 3% O₂, dry).~~
- (2) No person shall manufacture, supply, sell, offer for sale, or Install, for use in the South Coast AQMD, any Unit, unless such Unit complies with the applicable Table 2 emission limits by the applicable Table 3 compliance dates.

Table 2 – Zero-Emission Limits, Compliance Schedule, and Unit Age

<u>Equipment Category</u>	<u>NOx and CO Emission Limits (ppmv)</u>	<u>Compliance Schedule</u>	<u>Unit Age (years)</u>
<u>Type 1 Unit*</u>	<u>0</u>	<u>Phase I</u>	<u>15</u>
<u>Instantaneous Water Heater ≤ 200,000 Btu/hr</u>	<u>0</u>		<u>25</u>
<u>Instantaneous Water Heater ≥ 200,000 Btu/hr</u>	<u>0</u>	<u>Phase II</u>	<u>25</u>
<u>Type 1 Pool Heater</u>	<u>0</u>		<u>15</u>
<u>Type 2 Unit**</u>	<u>0</u>		<u>25</u>
<u>Type 1 High Temperature Unit</u>	<u>0</u>	<u>Phase III</u>	<u>25</u>
<u>Type 2 High Temperature Unit</u>	<u>0</u>		<u>25</u>

* Referring to a Type 1 Unit that is not a High Temperature Unit, Pool Heater, or Instantaneous Water Heater.

** Referring to a Type 2 Unit that is not a High Temperature Unit or Instantaneous Water Heater.

Table 3 – Compliance Dates for Zero-Emission Limits

<u>Phase</u>	<u>Building Type</u>	<u>Compliance Date</u>
<u>Phase I</u>	<u>New Buildings</u>	<u>January 1, 2026</u>
	<u>Existing Buildings</u>	<u>January 1, 2029</u>
<u>Phase II</u>	<u>New Buildings</u>	<u>January 1, 2028</u>
	<u>Existing Buildings</u>	<u>January 1, 2031</u>
<u>Phase III</u>	<u>New Buildings</u>	<u>January 1, 2029</u>
	<u>Existing Buildings</u>	<u>January 1, 2033</u>

- (3) On and after the Table 3 compliance dates, an owner or operator of a Unit shall not operate a Unit which exceeds Table 2 emission limits once the Unit

age determined pursuant to subdivision (e) is greater than or equal to the applicable Table 2 Unit age.

- (4) The owner or operator of a Unit may modify a Unit and demonstrate it meets the emission limits in subdivision (d) by:
 - (A) Modifying the Unit with a Certified Retrofit Kit; or
 - (B) Causing an Independent Testing Laboratory to conduct a source test according to the South Coast AQMD Source Test Method 100.1 - Instrumental Analyzer Procedures for Continuous Gaseous Emission Sampling.
- (5) An owner or operator of a Unit that modifies or replaces a burner in the Unit shall comply with the following applicable emission limits:
 - (A) Table 1 emission limits if the modification or replacement occurs:
 - (i) Prior to the applicable Table 3 compliance dates; or
 - (ii) Before the Unit reaches its Table 2 Unit age; or
 - (B) Table 2 emission limits if the modification or replacement occurs:
 - (i) On and after the applicable Table 3 compliance dates; and
 - (ii) When the Unit has reached its Table 2 Unit age.
- (6) Except for units at a RECLAIM or former RECLAIM facility, an owner or operator shall not operate any Type 2 Unit manufactured prior to January 1, 2000, in the South Coast AQMD which does not meet the NOx emission limit of 30 ppmv, or 0.037 pound NOx per million Btu of heat input, and the CO emission limit of 400 ppmv.
- (7) An owner or operator of a Unit that elects to comply with the exemption in:
 - (A) Paragraph (k)(2) shall not operate a Unit that exceeds the applicable Table 1 emission limits on and after 180 days of failing to demonstrate compliance with paragraph (k)(2) pursuant to paragraph (g)(2);
 - (B) Paragraph (k)(3) shall not operate a Unit that exceeds the applicable Table 2 emission limits on and after 180 days of failing to demonstrate compliance with paragraph (k)(3) pursuant to paragraph (g)(2); or
 - (C) Paragraph (k)(5) shall not operate a Unit that does not comply with paragraph (d)(3) on and after 180 days of failing to meet the definition of a Small Business.

- ~~(9) — Notwithstanding the exemptions contained in Rule 2001 — Applicability and its accompanying Table 1 — Rules Not Applicable to RECLAIM Facilities for Requirements Pertaining to NOx Emissions If Rule Was Adopted or Amended Prior to October 5, 2018, on or after May 5, 2006, the owner or operator of any Type 2 unit shall perform maintenance in accordance with the manufacturer's schedule and specifications as identified in a manual and other written materials supplied by the manufacturer or distributor. The owner or operator shall maintain on site a copy of the manufacturer's and/or distributor's written instructions and retain a record of the maintenance activity for a period of not less than three years.~~
- ~~(10) — Notwithstanding the exemptions contained in Rule 2001 — Applicability and its accompanying Table 1 — Rules Not Applicable to RECLAIM Facilities for Requirements Pertaining to NOx Emissions If Rule Was Adopted or Amended Prior to October 5, 2018, the owner or operator shall maintain on site a copy of all documents identifying the unit's rated heat input capacity. The rated heat input capacity shall be identified by a manufacturer's or distributor's manual or invoice. If a unit is modified, the rated heat input capacity shall be calculated pursuant to paragraph (f)(3). The documentation of rated heat input capacity for modified units shall include a description of all modifications, the dates the unit was modified and calculation of rated heat input capacity. All documentation shall be signed by the licensed person modifying the unit.~~
- ~~(11) — Notwithstanding the requirements in paragraph (c)(7), until December 31, 2010, any person may sell, offer for sale, or install any Type 2 units that are manufactured and purchased prior to January 1, 2010 and in compliance with paragraph (c)(1).~~
- ~~(12) — Notwithstanding the requirements in paragraph (c)(8), until December 31, 2012, any person may sell, offer for sale, or install any Type 1 units that are manufactured and purchased prior to January 1, 2012 and in compliance with paragraph (c)(2).~~
- ~~(13) — By January 1, 2022, the Executive Officer shall conduct a technology assessment and report to the Governing Board if the NOx emission limits in subdivision (c) represent BARCT.~~
- ~~(A) — If the Executive Officer determines that the NOx emission limits specified in paragraph (c)(1) represents BARCT, notwithstanding~~

~~the exemptions contained in Rule 2001— Applicability and its accompanying Table 1— Rules Not Applicable to RECLAIM Facilities for Requirements Pertaining to NOx Emissions If Rule Was Adopted or Amended Prior to October 5, 2018, the owner or operator of a RECLAIM or former RECLAIM facility with any Type 2 Units shall meet the NOx emission limit specified in paragraph (c)(1) by December 31, 2023. A Type 2 unit may be modified or demonstrated to meet the emission limit of paragraph (c)(1), pursuant to the provisions of subdivision (e). Alternatively, a Type 2 unit may be replaced with a certified unit in compliance with the provisions of paragraph (c)(7).~~

~~(B) If the technology assessment specified in this paragraph demonstrates that more stringent BARCT requirements are applicable, the Executive Officer shall initiate rule development for the implementation schedule of the more stringent BARCT requirements within six months after the technology assessment.~~

(e) Unit Age

(1) For all Unit age determinations in this rule, an owner or operator of a Unit shall determine the Unit age as follows:

(A) Unit age shall be based on the original date of manufacture determined by:

- (i) Invoice from purchase of Unit provided by manufacturer;
- (ii) Original Unit manufacturer's identification or rating plate permanently affixed to the Unit; or
- (iii) Any other method of determining Unit age that can be substantiated through written information as approved by the Executive Officer.

(B) The Unit shall be deemed at the end of its Unit age as of January 1, 2025, for any Unit where the Unit age cannot be determined pursuant to subparagraph (e)(1)(A).

(d)f) Certification

(1) The manufacturer shall obtain confirmation from an Independent Testing Laboratory prior to applying for certification for a natural gas Unit that; each Unit model or retrofit kit complies with the applicable requirements

~~of subdivision (e)~~ Table 1 emission limits when fired with natural gas. -This confirmation shall be based upon emission source tests of a randomly selected ~~u~~Unit of each model, and the Protocol shall be adhered to during the confirmation testing of all ~~u~~Units subject to this rule.

(2) When applying for ~~u~~Unit(s) certification, the manufacturer shall submit to the Executive Officer the following:

(A) A statement that the model is in compliance with subdivision (~~e~~d). The statement shall be signed and dated, and shall attest to the accuracy of all statements;

(B) General Information including:

(i) Name and address of manufacturer;_;

(ii) Brand name;_; and

(iii)- Model number, as it appears on the ~~u~~Unit rating plate;

(C) A description of each model being certified; and

(D) A source test report verifying compliance with the emission limits in subdivision (~~e~~d) for each model to be certified. -The source test report shall be prepared by the confirming ~~i~~Independent ~~t~~Testing ~~l~~Laboratory and shall contain all of the elements identified in ~~Section 10 of the Protocol for each uUnit tested. -The source test shall have been conducted no more than ninety (90) days prior to the date of submittal to the Executive Officer.~~

(3) When applying for ~~u~~Unit certification, the manufacturer shall submit the items identified in paragraph (~~d~~f)(2) no more than ~~ninety (90)~~180 days after the date of the source test identified in subparagraph (~~d~~f)(2)(D) ~~and at least 120 days prior to the date of the proposed sale of the units.~~

(4) The Executive Officer shall certify a ~~u~~Unit model which complies with the provisions of subdivision (~~e~~d) and of paragraphs (~~d~~f)(1), (~~d~~f)(2), and (~~d~~f)(3).

~~(5) — Certification status shall be valid for three years from the date of approval by the Executive Officer. After the third year, recertification may be required according to the requirements of paragraphs (d)(1) and (d)(2).~~

(eg) ~~Modification (Retrofit) Provisions and Demonstration of Compliance W~~ith Emission Limits:

~~Any unit, may be modified or demonstrated to meet the requirements of paragraph (e)(1), (e)(2), (e)(3), (e)(4), or (e)(5) provided:~~

~~(1) — The unit is certified pursuant to subdivision (d); or~~

- ~~(2) A certified retrofit kit has been installed; or~~
- ~~(31) The owner or operator of a Unit shall demonstrate compliance pursuant to subparagraph (d)(4)(B) by maintaining Aa copy of athe South Coast AQMD approved source test report and making it available to the Executive Officer upon request. The source test report shall, at a minimum, include: conducted by an independent third party demonstrating the specific unit complies with the emission limits at low and high fire, shall be maintained on-site; and~~
- ~~(4A) The source test report clearly specifies tThe applicable NOx and CO emissions limit of the uUnit in parts per million or pounds of NOx per million BTU of heat input;:~~
- ~~(B) The source test report must identify that the source test was conducted pursuant to aThe DistrictSouth Coast AQMD approved test method protocoland Independent Testing Laboratory that conducted the source test; and~~
- ~~(5C) The source test report shall be maintained on-site at the facility where the unit is being operated and made available to the Executive Officer, at all times, upon request, as long as the unit is being operated. The model and serial numbers of the specified uUnit shall clearly be indicated on the source test report; and:~~
- ~~(D) The Rated Heat Input Capacity of the Unit.~~
- ~~(2) The owner or operator of a Unit electing to comply with the exemptions in paragraph (k)(2) or (k)(3) shall:~~
- ~~(A) Demonstrate compliance with the annual Therm limit for each calendar year, determined using one of the following methods:~~
- ~~(i) Fuel usage recorded by a non-resettable totalizing fuel meter, corrected to Standard Conditions;~~
- ~~(ii) Fuel usage calculated by multiplying the number of hours recorded by a non-resettable totalizing time meter and the Rated Heat Input Capacity of the Unit, as calculated using Equation 1 (Eq. 1):~~

$$\text{Fuel Usage (Therms)} = \frac{H \times R \times 1,000,000 \text{ (Btu per MMBtu)}}{100,000 \text{ (Btu per Therm)}} \quad (\text{Eq. 1})$$

Where:

H = Number of Hours Recorded

R = Rated Heat Input Capacity of the Unit (MMBtu/hr); or

(iii) Monthly fuel billing statement or equivalent documentation;

(B) Calibrate the non-resettable totalizing fuel meter or non-resettable time meter according to the manufacturer's recommendation; and

(C) Use the higher heating value of 1,050 million Btu per million standard cubic feet for converting natural gas measured in volume to Therm.

(fh) Identification of Compliant Units

(1) Newly Manufactured Units

The manufacturer shall display the model number of the ~~u~~Unit complying with subdivision (ed) on the shipping carton and permanent rating plate. The manufacturer shall also display the certification status on the shipping carton and on the ~~u~~Unit.

(2) Certified Retrofit Kits

The manufacturer shall display the model number of the retrofit kit and manufacturer and model of applicable ~~u~~Units on the shipping carton and in a plainly visible portion of the retrofit kit.

~~(3) Modified Units~~

~~A unit with a new or modified burner shall display the new rated heat input capacity and certification status on a new permanent rating plate. The gross heat input shall be based on the maximum fuel input corrected for fuel heat content, temperature and pressure.~~

~~(g) Enforcement~~

~~The Executive Officer may periodically inspect distributors, retailers, and installers of units located in the District, and conduct such tests as are deemed necessary to ensure compliance with subdivision (e).~~

(i) Alternative Compliance Options

(1) Alternative Compliance Option for Utility Upgrades

If an owner or operator of a Unit required to meet the Table 2 emission limits will encounter delays beyond the reasonable control of the owner or operator to meet the applicable compliance dates in Table 3 or paragraph (d)(3) because a utility upgrade is required and the applicable utility company is unable to provide the necessary power to operate the Unit as

demonstrated with documents specified in paragraph (j)(6), the owner or operator of a Unit shall:

(A) Notify the Executive Officer through the Compliance Portal:

(i) At least 90 days prior to the Unit's applicable compliance date in Table 3 or paragraph (d)(3) to request an extension of no more than 4824 months from the applicable compliance date; or

(ii) If utility upgrades are needed to operate a Unit that is replacing a Unit that failed and is no longer operational, no later than 30 days after the date the Unit became non-operational to request an extension of no more than 4824 months from the date of Unit failure;

(B) Obtain a letter from the Executive Officer through the Compliance Portal approving or disapproving the extension:

(i) Prior to the Unit's compliance date; or

(ii) No later than 90 days after the date the notification was submitted pursuant to clause (i)(1)(A)(ii) for a Unit failure;

(C) If the utility upgrades will not be completed within the 4824-month extension approved pursuant to subparagraph (i)(1)(B), the owner or operator may:

(i) Request an additional extension of no more than 4824 months through the Compliance Portal at least 90 days prior to the end of the initial 4824-month extension; and

(ii) Obtain a letter from the Executive Officer through the Compliance Portal prior to the end of the initial extension approving or disapproving the extension; and

(iii) Provide a progress report to the Executive Officer through the Compliance Portal every six months after the start of additional extension, which includes, but is not limited to:

(A) The status of the utility upgrade;

(B) The estimated date the utility provider will complete the utility upgrade; and

(C) Documentation which justifies the update to estimated date for completion;

- (D) If the utility upgrades will not be completed within the additional 24-month extension approved pursuant to subparagraph (i)(1)(C), the owner or operator may:

 - (i) Request a further extension of no more than 12 months through the Compliance Portal at least 90 days prior to the end of the additional 24-month extension; and
 - (ii) Obtain a letter from the Executive Officer through the Compliance Portal prior to the end of the additional 24-month extension approving or disapproving the extension;
- (E) Provide a progress report to the Executive Officer through the Compliance Portal every six months after the start of the initial extension approved pursuant to subparagraph (i)(1)(B) and for the applicable extension period(s) approved pursuant to subparagraphs (i)(1)(C) and (i)(1)(D), which includes, but is not limited to:

 - (i) The status of the utility upgrade;
 - (ii) The estimated date the utility provider will complete the utility upgrade; and
 - (iii) Documentation which justifies the update to estimated date for completion;
- ~~(F)~~ Provide a follow-up notification to the Executive Officer through the Compliance Portal no later than 72 hours after the Unit complying with the Table 2 emission limits has been installed;
- ~~(G)~~ Maintain records pursuant to paragraph (j)(6);
- ~~(H)~~ For a Unit that is non-operational during the extension(s) approved pursuant to subparagraphs (i)(1)(B), (i)(1)(C), and (i)(1)(D), the owner or operator may elect to operate a temporary Unit during the extension, provided:

 - (i) The temporary Unit complies with Table 1 emission limits;
 - (ii) No later than 72 hours after the date the temporary Unit was installed, the owner or operator notifies the Executive Officer through the Compliance Portal; and
 - (iii) No later than 72 hours after the date the temporary Unit was disconnected, the owner or operator notifies the Executive Officer through the Compliance Portal.

(2) Alternative Compliance Option for Multiple Units

An owner or operator of five or more Units that are required to meet the Table 2 emission limits within two consecutive calendar years pursuant to paragraph (d)(3) may elect to submit an alternative compliance plan requesting alternative compliance date(s), provided the owner or operator:

(A) Submit the alternative compliance plan at least one year prior to the earliest compliance due date, with a filing fee payment pursuant to Rule 306 – Plan Fees (Rule 306);

(B) Specify compliance date(s) in the alternative compliance plan for the number of Units to meet the Table 2 emission limits as below:

(i) Three or at least 30 percent of the Units by the latest applicable compliance date;

(ii) At least 30 percent of the Units one year after the latest applicable compliance date; and

(iii) The remaining Units two years after the latest applicable compliance date;

~~(C) If a Unit meets the requirements to apply for the alternative compliance option for utility upgrades pursuant to paragraph (i)(1), the owner or operator may elect to include a request in their alternative compliance plan for an extension of no more than 18 months from the earliest compliance due date of the Units in the alternative compliance plan, provided that the owner or operator shall:~~

~~(i) Include the documentation listed in paragraph (j)(6) with the application for an alternative compliance plan; and~~

~~(ii) If the utility upgrades will not be completed within the 18-month extension in the approved alternative compliance plan, the owner or operator may submit a revised alternative compliance plan at least 180 days prior to the end of the initial 18 month extension to request an additional extension of no more than 18 months before initiating the alternative compliance schedule specified in paragraph (i)(2)(B), with a filing fee payment pursuant to Rule 306 – Plan Fees; and~~

(C) In lieu of subparagraph (i)(2)(B), if an owner or operator of five or more Units electing to comply by submitting an alternative

compliance plan in subparagraph (i)(2)(A) will encounter delays beyond the reasonable control of the owner or operator to meet the applicable compliance dates because a utility upgrade is required and the applicable utility company is unable to provide the necessary power to operate the Units, as demonstrated with documents specified in paragraph (j)(6), the owner or operator of the Units may elect to:

- (i) Include a request for an extension of no more than 24 months from the earliest compliance due date of the Units included in the alternative compliance plan submitted pursuant to subparagraph (i)(2)(A); and specify alternative compliance date(s) in the alternative compliance plan for the number of Units to meet the Table 2 emission limits as below:
 - (A) Three or at least 50 percent of the Units no later than 24 months after end of the approved extension in clause (i)(2)(C)(i); and
 - (B) The remaining Unit(s) no later than 36 months after the end of the approved extension(s) in clause (i)(2)(C)(i);
- (ii) If the utility upgrades will not be completed within the initial 24-month extension period provided in clause (i)(2)(C)(i), the owner or operator may request a second extension of no more than 24 months by submitting a revised alternative compliance plan at least 180 days prior to the end of the first 24-month extension, with a filing fee payment pursuant to Rule 306 and Executive Officer approval or disapproval; and specify alternative compliance date(s) in the alternative compliance plan for the number of Units to meet the Table 2 emission limits as below:
 - (A) Three or at least 50 percent of the Units no later than 24 months after end of the approved extension in clause (i)(2)(C)(ii); and
 - (B) The remaining Unit(s) no later than 36 months after the end of the approved extension in clause (i)(2)(C)(ii);

- (iii) If the utility upgrades will not be completed within the second 24-month extension period provided in clause (i)(2)(C)(ii), the owner or operator may request a third extension of no more than 12 months by submitting a revised alternative compliance plan at least 180 days prior to the end of the second 24-month extension, with a filing fee payment pursuant to Rule 306 and Executive Officer approval or disapproval; and specify alternative compliance date(s) in the alternative compliance plan for the number of Units to meet the Table 2 emission limits as below:

 - (A) Three or at least 50 percent of the Units no later than 24 months after the end of the approved extension in clause (i)(2)(C)(iii); and
 - (B) The remaining Unit(s) no later than 36 months after the end of the approved extension in clause (i)(2)(C)(iii);
- (iv) Include the documentation listed in paragraph (j)(6) with the application for any alternative compliance plan or revised alternative compliance plan;
- (v) Provide a progress report to the Executive Officer through the Compliance Portal every six months after the start of the initial extension approved pursuant to clause (i)(2)(C)(i) for the applicable extension period(s) approved pursuant to clauses (i)(2)(C)(ii) or (i)(2)(C)(iii), which includes, but is not limited to:

 - (A) The status of the utility upgrade;
 - (B) The estimated date the utility provider will complete the utility upgrade; and
 - (C) Documentation which justifies the update to estimated date for completion;
- (D) Obtain written approval from the Executive Officer, as specified in paragraph (i)(3):

 - (i) Prior to the earliest compliance due date of all Units included in the alternative compliance plan; and

- (ii) If an additional extension(s) was requested pursuant to clauses (i)(2)(C)(ii) and/or (i)(2)(C)(iii), prior to the end of the initial previously approved 18-month extension.

(3) Approval of Alternative Compliance Option for Multiple Units

The Executive Officer shall review the request for alternative compliance date submitted pursuant to paragraph (i)(2) and provide written approval or disapproval based on whether the following criteria are met:

- (A) The owner or operator demonstrated they are operating five or more Units that are required to be replaced based on Unit age pursuant to paragraph (d)(3) to meet Table 2 emission limits within two calendar years;
- (B) The request was submitted at least one year prior to the earliest applicable compliance due date; and
- (C) The proposed alternative compliance date meets the criteria specified in subparagraph (i)(2)(B) ~~or~~ and subparagraph (i)(2)(C), if applicable.

(4) Alternative Compliance Option for Emergency Replacements

If a Unit requires a short-term replacement due to sudden Unit failure after the applicable Table 3 compliance date and an electrical upgrade is required to increase the power supply capacity to operate a Unit that complies with Table 2 emission limits, excluding Units utilizing alternative compliance options specified in paragraphs (i)(1), (i)(6), and (i)(7):

- (A) For Units used in buildings that are not Residential Structures, the owner or operator of the Unit may elect to Install and operate a temporary Unit that complies with Table 1 emission limits for up to six months prior to installing a Unit that complies with Table 2 emission limits provided the owner or operator of the Unit:
 - (i) Report the date the existing Unit failed and the date the temporary Unit was installed through the Compliance Portal no later than 72 hours after the date the temporary Unit was installed;
 - (ii) Report the date the temporary Unit was disconnected through the Compliance Portal no later than 72 hours after the date the temporary Unit was disconnected; and

(iii) Report the date the Unit complying with Table 2 emission limits was installed through the Compliance Portal no later than 72 hours after the date the new Unit was installed;

(B) For Units sold for use in Residential Structures, a manufacturer, distributor, retailer, or Installer may elect to offer a Unit for rent that complies with Table 1 emission limits for up to six months prior to installing a Unit that complies with Table 2 emission limits provided the manufacturer, distributor, retailer, or Installer report the date the temporary Unit was rented through the Compliance Portal no later than 72 hours after the date the temporary Unit was rented.

(5) Alternative Compliance Option for Mobile Homes

An owner or operator of an Instantaneous Water Heater manufactured prior to [Date of Rule Adoption] that is installed in a Mobile Home may elect to Install an Instantaneous Water Heater with Rated Heat Input Capacity of less than or equal to 200,000 Btu/hr that complies with the Table 1 emission limits until before January 1, 2033, in lieu of the applicable compliance date in Table 3 or paragraph (d)(3), provided the labeling requirement in paragraph (j)(2) is met. On and after January 1, 2033, any Instantaneous Water Heater with Rated Heat Input Capacity of less than or equal to 200,000 Btu/hr manufactured, supplied, sold, offered for sale, or installed for use in a mobile home must meet the Table 2 emission limits upon replacement.

(6) Alternative Compliance Option for Units at a Property Under Lease

An owner or operator of a Unit in a property under lease shall be provided an extension of no more than 24 months from the applicable compliance date to comply with the Table 2 emission limits, if the installation is delayed beyond the reasonable control of the owner or operator of the Unit, excluding Units utilizing the alternative compliance options specified in paragraphs (i)(1), (i)(2), and (i)(7), provided the owner or operator of the Unit:

(A) Occupies the property under a lease as a tenant before and after the applicable compliance date in Table 3 or paragraph (d)(3);

(B) Reports the date the existing Unit is required to be replaced to comply with the Table 2 emission limits to the Executive Officer

through the Compliance Portal no later than 90 days prior to the applicable compliance date in Table 3 or paragraph (d)(3);

(C) If a Unit is non-operational during the extension specified in paragraph (i)(6), the owner or operator may elect to operate a temporary Unit during the extension, provided:

(i) The temporary Unit complies with Table 1 emission limits;

(ii) No later than 72 hours after the date the temporary Unit was installed, the owner or operator notifies the Executive Officer through the Compliance Portal; and

(iii) No later than 72 hours after the date the temporary Unit was disconnected, the owner or operator notifies the Executive Officer through the Compliance Portal;

(D) Report the date the new Unit was installed to comply with the Table 2 emission limits to the Executive Officer through the Compliance Portal no later than 72 hours after the date the new Unit was installed; and

(E) Maintain records pursuant to paragraph (j)(7).

(7) Alternative Compliance Option for Construction

An owner or operator of a Unit shall be provided an extension of no more than ~~six~~18 months from the applicable compliance date to comply with the Table 2 emission limits if the installation is delayed because construction is required to expand the space designed to house or relocate the Unit, and associated equipment necessary for operating the Unit, excluding Units utilizing the alternative compliance options specified in paragraphs (i)(1), (i)(2), (i)(5), and (i)(6), provided the owner or operator of a Unit:

(A) Reports the date the existing Unit is required to be replaced to comply with the Table 2 emission limits to the Executive Officer through the Compliance Portal no later than 90 days prior to the applicable compliance date in Table 3 or paragraph (d)(3);

(B) If a Unit is non-operational during the extension specified in paragraph (i)(7), the owner or operator may elect to operate a temporary Unit during the extension, provided:

(i) The temporary Unit complies with Table 1 emission limits;

- (ii) No later than 72 hours after the date the temporary Unit was installed, the owner or operator notifies the Executive Officer through the Compliance Portal; and
 - (iii) No later than 72 hours after the date the temporary Unit was disconnected, the owner or operator notifies the Executive Officer through the Compliance Portal;
 - (C) Report the date the new Unit was installed to comply with the Table 2 emission limits through the Compliance Portal no later than 72 hours after the date the new Unit was installed; and
 - (D) Maintain records pursuant to paragraph (j)(8).
- (8) An owner or operator of a Unit electing to use any of the alternative compliance options in this subdivision that fails to comply with the applicable requirements of the alternative compliance options must comply with the applicable requirements in paragraph (d)(2)–~~or~~, (d)(3), or subparagraph (d)(5)(B).
- (j) Labeling, Reporting, and Recordkeeping Requirements
 - (1) Pursuant to the labeling schedule in Table 4, any Unit that is supplied or offered for sale for use within the South Coast AQMD prior to the applicable Table 3 compliance dates that complies with the Table 1 emission limits, but not the Table 2 emission limits, shall prominently display the statement “If Installed in South Coast AQMD: For Installation and Use in Existing Buildings Only.”

Table 4 – Labeling Schedule

<u>Unit’s Compliance Schedule</u>	<u>Labeling Requirements</u>	
	<u>Start Date</u>	<u>End Date</u>
<u>Phase I</u>	<u>January 1, 2026</u>	<u>January 1, 2029</u>
<u>Phase II</u>	<u>January 1, 2028</u>	<u>January 1, 2031</u>
<u>Phase III</u>	<u>January 1, 2029</u>	<u>January 1, 2033</u>

- (2) Effective January 1, 2029, to January 1, 2033, an Instantaneous Water Heater with Rated Heat Input Capacity of less than or equal to 200,000 Btu/hr supplied or offered for sale for use in a Mobile Home within the South Coast AQMD and complying with the alternative compliance date in

paragraph (i)(5) shall prominently display the statement “If Installed in South Coast AQMD: For Installation and Use in Mobile Homes Only.”

(3) Annual Reporting Requirement

Effective on and after the Table 3 compliance dates for Existing Buildings, manufacturers of natural gas-fired Unit(s) shall submit a report by March 1st of the following calendar year to the Executive Officer through the Compliance Portal. The report shall include:

(A) Name of the product manufacturer;

(B) List of product model(s);

(C) Number of Units and Rated Heat Input Capacity of each model that was sold into or within the South Coast AQMD; and

(D) The applicable equipment category in Table 2.

(4) General Recordkeeping Requirements

The owner or operator of a Unit shall maintain on-site, or provide upon the Executive Officer’s request, the following records:

(A) A copy of the manufacturer’s and/or distributor’s written instructions;

(B) A record of the maintenance activity for a period of not less than three years;

(C) A copy of a government-issued document that grants permission to an individual or organization to initiate a construction project which determines the eligibility of New Building or Existing Building for the compliance of the rule; and

(D) A record demonstrating annual fuel usage pursuant to subparagraph (g)(2)(D) for a period of not less than three years, if the owner or operator of a Unit is electing to comply with the exemptions in paragraph (k)(2) or (k)(3).

(5) Rated Heat Input Capacity Documentation

The owner or operator of a Unit shall maintain on-site, or provide upon the Executive Officer’s request, a copy of all documents identifying the Unit’s Rated Heat Input Capacity including:

(A) Manufacturer’s or distributor’s manual or invoice; and

(B) Maintain documentation of the Rated Heat Input Capacity for a Unit modified pursuant to paragraph (d)(5), signed by the licensed person modifying the Unit, including:

- (i) Description of all Unit modifications;
- (ii) Dates the Unit was modified; and
- (ii) Calculation of Rated Heat Input Capacity.

(6) Recordkeeping for Alternative Compliance Option for Utility Upgrades

An owner or operator of a Unit that elects to comply with paragraph (i)(1) or subparagraph (i)(2)(C) shall maintain records on-site, or make them available to the Executive Officer upon request, until three years after the end date of the approved extension(s), that demonstrate the utility provider's progress on providing the necessary power, including but not limited to an official document signed by the responsible party of the utility company that services the facility that includes:

- (A) An explanation of the utility upgrades required by the utility company;
- (B) Communications with the utility provider when the utility upgrade was requested;
- (C) Estimated date the utility provider will complete the utility upgrades;
- (D) Any additional information to substantiate that an additional time is necessary; and
- (E) Documentation which demonstrates that the delays are outside of the reasonable control of the owner or operator.

(7) Recordkeeping for Alternative Compliance Option for Units at a Property Under Lease

An owner or operator that elects to comply with paragraph (i)(6) shall maintain records on-site, or make them available to the Executive Officer upon request, until three years after reporting through the Compliance Portal pursuant to subparagraph (i)(6)(B), including but not limited to:

- (A) A legally binding contract that explains the terms and duration of the lease under which the owner or operator of the Unit is a tenant renting the property from a landlord; and
- (B) Documentation which demonstrates that the delays are beyond the reasonable control of the owner or operator of the Unit.

(8) Recordkeeping for Alternative Compliance Option for Construction

An owner or operator that elects to comply with paragraph (i)(7) shall maintain records on-site, or make them available to the Executive Officer

upon request, until three years after reporting through the Compliance Portal pursuant to subparagraph (i)(7)(A), including but not limited to:

(A) Images that show:

(i) ~~the activity of e~~Construction activity; and the

(ii) ~~e~~Expansion of the space for the Unit or new location where the Unit will be housed; and

(iii) ~~a~~Associated equipment by the construction; and

(B) Documentation which demonstrates the construction, which could be a construction permit or contract.

(9) Small Business Registration

An owner or operator of a Unit electing to comply with the exemption in paragraph (k)(5) shall register their facility as a Small Business through the Compliance Portal at least 90 days prior to the Unit reaching the Unit age specified in Table 2. The owner or operator of the Unit shall maintain records on-site, or make them available to the Executive Officer upon request, until three years after registering through the Compliance Portal, to demonstrate:

(A) Business legal owner and contact information;

(B) Number of current employees;

(C) The total gross annual receipts; and

(D) If the business is a not-for-profit training center.

(10) The owner or operator of a Unit required to submit information through the Compliance Portal in paragraph (i)(1), (i)(4), (i)(6), (i)(7), (j)(3), or (j)(9) shall provide the required information by calling 1-800-CUT-SMOG® (800-288-7664) if:

(A) The Compliance Portal is not available;

(B) The functions within the Compliance Portal do not allow the owner or operator of a Unit to enter the necessary information; or

(C) The owner or operator of a Unit does not have access to the Compliance Portal.

(~~h~~k) Exemptions

(1) The provisions of this rule shall not apply to:

(A) Units used in ~~r~~Recreational ~~v~~ehicles;

- (B) Units subject to ~~the~~ a NOx emission limits in District Rule 1121—Control of Nitrogen Oxides From Residential Type, Natural Gas-fired Water Heaters; and
 - ~~(C) Units at a RECLAIM or former RECLAIM facility subject to a NOx emission limit in a different rule for an industry-specific category defined in Rule 1100—Implementation Schedule for NOx Facilities.~~
 - ~~(D) Units at a municipal sanitation service facility subject to a NOx emission limit in a Regulation XI rule adopted or amended after December 7, 2018~~ Rule 1179.1 – Emission Reductions From Combustion Equipment at Publicly Owned Treatment Works Facilities.
- (2) Until the applicable Table 3 compliance dates, the Table 1 provisions of paragraphs (c)(3), (c)(4), and (c)(5) emission limits shall not apply to:
- ~~(A) Any residential unit.~~
 - ~~(B) Type 2 Units manufactured prior to January 1, 2000 with a rated heat input capacity greater than 400,000 BTU per hour, but less than or equal to 2,000,000 BTU per hour that are demonstrated to use less than 9,000 therms during every calendar year. Compliance with the exemption limit shall be demonstrated by a calculation based on the annual fuel consumption recorded by an in line fuel meter or the annual operating hours recorded by a timer and using one of the following methods:~~
 - ~~(i) Annual therm usage recorded by fuel meter and corrected to standard pressure; or~~
 - ~~(ii) Amount of fuel (i.e., in thousand cubic feet of gas corrected to standard pressure) converted to therms using the higher heating value of the fuel; or~~
 - ~~(iii) Annual therm usage calculated by multiplying the number of hours fuel is burned by the rated heat input capacity of the unit converted to therms.~~
- (3) The provisions of paragraphs (d)(2) and (d)(3) and subparagraph (d)(5)(B) shall not apply to the following Units installed prior to [Date of Rule Adoption] that meet Table 1 emission limits:
- (A) Units with a rated heat input capacity greater than 1,000,000 Btu per hour, but less than or equal to 2,000,000 Btu per hour that are

demonstrated to use less than 3,000 Therms during every calendar year-for; or

(B) Units with a rated heat input capacity greater than 400,000 Btu per hour, but less than or equal to 1,000,000 Btu per hour that demonstrate to use less than 2,000 Therms during every calendar year.

(4) The provisions of paragraphs (d)(3), (d)(4), (d)(5), (d)(6), and (d)(7), and the recordkeeping and reporting provisions in paragraphs (j)(4) through (j)(9) shall not apply to Units installed or used in Residential Structures.

(5) The provisions of paragraph (d)(3) shall not apply to a Unit installed in a Small Business, provided that the owner or operator of the Unit complies with paragraph (j)(9).

(6) Certification requirements specified in paragraphs (f)(1) through (f)(4) shall not apply to Units complying with Table 2 emission limits.

~~(i) — Progress Reports~~

~~Any person that manufacturers Type 1 units or Type 2 fire tube boilers, steam boilers producing steam pressure greater than 100 pounds per square inch or thermal fluid heaters subject to this rule shall submit to the District a report on progress towards compliance with the emission limits of paragraphs (e)(7) and (e)(8). Progress reports shall include detailed information on all burner and control technologies evaluated and emission tests. The progress reports shall be submitted to the District for the following categories of equipment by the specified date:~~

~~(1) — Type 2 fire tube boilers, steam boilers producing steam pressure greater than 100 pounds per square inch and thermal fluid heaters shall be submitted to the District by January 31, 2008.~~

~~(2) — Type 1 units shall be submitted to the District by January 31, 2010.~~

EXECUTIVE SUMMARY

South Coast AQMD Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters (Rule 1146.2), regulates oxides of nitrogen (NOx) emissions from natural gas-fired large water heaters, small boilers, and process heaters that have a rated heat input capacity of less than or equal to two million British thermal units (Btu) per hour. This rule does not regulate residential gas-fired tank type water heaters rated ~~at~~ less than 75,000 Btu/hr heat input, which are regulated under Rule 1121 – Control of Nitrogen Oxides from Residential-Type, Natural Gas-Fired Water Heaters (Rule 1121); however, instantaneous water heaters and pool heaters used in residential structures are regulated by Rule 1146.2 due to the higher Btu ratings of those type of units. The provisions of Rule 1146.2 are applicable to manufacturers, distributors, retailers, installers, refurbishers, and operators.

Rule 1146.2 was initially adopted in January 1998. A Best Available Retrofit Control Technology (BARCT) assessment was conducted for the 2006 amendment where the NOx emission limits were lowered from 30 parts per million by volume (ppmv) to 20 ppmv, except for pool heaters, which remained at 55 ppmv. The rule was last amended in 2018 to remove the exemption for facilities in the REgional CLean Air Incentives Market (RECLAIM) and to require applicable new installations in RECLAIM facilities to meet the 20 ppmv NOx emission limits.

Proposed Amended Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters, Small Boilers and Process Heaters (PAR 1146.2), seeks further NOx emission reductions and implements the 2022 Air Quality Management Plan (AQMP) Control Measure C-CMB-01- Emission Reductions from Replacement with Zero Emission or Low NOx Appliances – Commercial Water Heating (Control Measure C-CMB-01).

For PAR 1146.2, staff conducted a comprehensive BARCT assessment which included an analysis of the technical feasibility and cost-effectiveness of zero-emission NOx technologies. PAR 1146.2 proposes to divide the applicable large water heaters, small boilers, and process heaters into different categories and require zero-emission (0 ppmv) limits for new installations based on future effective dates ~~depending on the commercial availability of zero-emission technologies~~. The zero-emission compliance dates are further differentiated for units installed in new or existing buildings. The future effective dates will allow time for the technology to mature, with longer timelines provided for the technologies that are not widely commercially available at this time. PAR 1146.2 also proposes zero-emission limits for existing units that will reach the end of unit age after the zero-emission compliance dates, with an exemption for units used for residential structures and small businesses and provides alternative compliance options and a low-use exemption to address challenges transitioning to zero-emission technologies. In addition, PAR 1146.2 clarifies and updates rule language, restructures the rule, and removes obsolete language.

PAR 1146.2 will affect approximately 1,070,000 units in the South Coast AQMD. Staff estimates that upon full implementation, PAR 1146.2 will reduce NOx emissions by 5.6 tons per day (tpd). The public process for PAR 1146.2 consisted of five working group meetings, a public workshop, a public consultation, and multiple meetings with industry stakeholders and technology vendors to obtain feedback.

CHAPTER 1: BACKGROUND

INTRODUCTION

REGULATORY BACKGROUND

2022 AIR QUALITY MANAGEMENT PLAN

AFFECTED INDUSTRIES

~~AFFECTED EQUIPMENT~~

PUBLIC PROCESS

INTRODUCTION

Rule 1146.2 limits NO_x and carbon monoxide (CO) emissions from natural gas-fired large water heaters, small boilers, and process heaters that have a rated heat input capacity less than or equal to two million Btu per hour (MMBtu/hr). The rule was initially adopted in January 1998, and beginning on January 1, 2000, the provisions of the rule were applicable to manufacturers, distributors, retailers, refurbishers, installers, and operators of new units. Beginning July 1, 2002, the provisions of the rule were also applicable to operators of existing Type 2 units.

In Rule 1146.2, units are split into two categories based on rated heat input capacity: Type 1 units for units rated ~~at~~ less than or equal to 400,000 Btu per hour (kBtu/hr) and Type 2 units for units rated ~~at~~ greater than 400 kBtu/hr and less than or equal to 2 MMBtu/hr. Rule 1146.2 does not regulate residential gas-fired tank type water heaters rated less than 75,000 Btu/hr heat input, which are regulated under South Coast AQMD Rule 1121. However, instantaneous water heaters, also known as tankless water heaters, and pool heaters used in residential structures are regulated by Rule 1146.2 due to the higher Btu ratings of those type of units. Units used in recreational vehicles are exempt from the requirements of Rule 1146.2.

REGULATORY BACKGROUND

Rule 1146.2 was initially adopted in 1998 and has been amended three times: in 2005, 2006, and 2018. The table below summarizes the current NO_x and CO emission limits required in Rule 1146.2.

Table 1-1. Current Rule 1146.2 NO_x and CO Emission Limits

Equipment Category	NO _x Emission Limit*	CO Emission Limit*
Type 1 Units, excluding Pool Heaters	14 ng/J or 20 ppmv	N/A**
Type 1 Pool Heaters	40 ng/J or 55 ppmv	N/A**
Type 2 Units	14 ng/J or 20 ppmv	400 ppmv

* Nanograms per Joule (ng/J) of NO_x (calculated as NO₂) of heat output or the specified ppmv of NO_x or CO at three percent oxygen (O₂) correction, on a dry basis

** Type 1 units are not subject to a CO limit by Rule 1146.2 but may be subject to CO limits by other South Coast AQMD rules.

South Coast AQMD developed the Rule 1146.2 Certification Program in 1998 which requires manufacturers to submit documentation for new unit models, including source test reports, to South Coast AQMD to demonstrate compliance with Rule 1146.2 emission limits.

Rule 1146.2, as adopted in January 1998, required new Type 2 water heaters or boilers to meet an emission limit of 30 ppmv of NO_x or 0.037 pound NO_x per million Btu of heat input and 400 ppmv of CO. New Type 1 units were required to meet a NO_x emission limit of 55 ppmv of NO_x or 40 ng/J of heat output. Compliance dates for the emission limits were based on the date of unit manufacture. Following rule adoption, staff prepared three implementation studies as required by

the rule. A working group comprised of manufacturers, end-users, utilities, and other interested parties was convened to provide input and guidance to staff during each of the three implementation studies. The purpose of the third and final implementation study, Phase III Implementation Study, was to evaluate the requirement for retrofit of units greater than 400 kBtu/hr and less than or equal to 1 MMBtu/hr (smaller Type 2 units). The findings of the Phase III Implementation Study were presented at the July 2004 Governing Board meeting. The Phase III Implementation Study recommended modifying retrofit requirements and evaluating whether lower NO_x emission limits were feasible for new equipment.

Based on the findings of the Phase III Implementation Study, Rule 1146.2 was amended on January 7, 2005, to require existing in-use equipment to comply with the emission limit once the unit reached 15 years of unit age, and to address technical and cost issues for the retrofit of existing units. The rule was amended to require smaller Type 2 units up to 1 MMBtu/hr manufactured prior to January 1, 2000 with unit age over 15 years to be retrofitted to meet 30 ppmv NO_x limit and 400 ppmv CO limit; and require larger Type 2 units up to 2 MMBtu/hr manufactured on and after 1992 with unit age over 15 years to be retrofitted to meet 30 ppmv NO_x limit and 400 ppmv CO limit. Lower emission limits for new equipment were not considered for the January 7, 2005, rule amendment because additional time was needed to evaluate low NO_x technologies and their cost-effectiveness.

Rule 1146.2 was amended again in May 2006 to establish lower NO_x emission limits for new equipment. Staff noted that the technology to reduce NO_x emissions was available, that many of the new Rule 1146.2 boilers and heaters sold met the proposed 20 ppmv limit, and that the proposed amended rule allowed manufacturers four to six years to design equipment which would meet the proposed limit. New manufactured units rated greater than 400 kBtu/hr were required to meet a NO_x emission limit of 20 ppmv effective January 1, 2010, and new manufactured units rated less than or equal to 400 kBtu/hr, with the exception for pool heaters, had to meet a 20 ppmv (less than 14 ng/J heat output) NO_x limit effective January 1, 2012. The NO_x limit for pool heaters rated less than or equal to 400 kBtu/hr remained at 55 ppmv (or 40 ng/J heat output) because it was deemed not cost-effective for this category to meet a 20 ppmv NO_x limit at the time of the rulemaking, primarily due to the small number of hours these units operate each year.

Rule 1146.2 was amended in 2018 along with Rule 1146 – Emissions of Oxides of Nitrogen from Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters, and Rule 1146.1 – Emissions of Oxides of Nitrogen from Small Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters. The 2018 rule amendments were to create landing rules in anticipation of the sunset of the RECLAIM program when facilities would be transitioned to a command-and-control regulatory structure. The amendment for Rule 1146.2 extended the applicability to the RECLAIM facilities and required the RECLAIM facilities to meet applicable NO_x emission limits by December 31, 2023, for new installations. The 2018 amendment also committed staff to conduct a BARCT technology assessment by January 2022 to determine if a more stringent BARCT requirement should be applied to existing Type 2 units operated in RECLAIM facilities. About 80 RECLAIM facilities have been identified to operate one or more Rule 1146.2 units.

A technology assessment for Rule 1146.2 was completed by January 1, 2022, determining that the NO_x emission limits should be lowered in order to satisfy BARCT requirements. Staff evaluated water heaters and boilers rated less than or equal to 2 MMBtu/hr in both non-RECLAIM and RECLAIM facilities and reviewed certification test reports submitted in recent years to understand

the actual emission levels of certified models and the potential for achieving NO_x emission reductions. Staff reviewed 137 source tests conducted since 2017 for units required to be certified at 20 ppmv for NO_x emissions and found that 39 units (28 percent of units) had NO_x concentrations less than 12 ppmv and 21 units (15 percent of units) had NO_x concentrations less than 10 ppmv. As part of the 2021 technology assessment, staff met with stakeholders seeking their input and conducted a working group meeting on December 16, 2021. Staff recommended a future rule amendment and BARCT assessment to evaluate the potential for further NO_x emission reductions.

2022 AIR QUALITY MANAGEMENT PLAN

The 2022 Air Quality Management Plan (AQMP) adopted on December 2, 2022, set forth a path for improving air quality and meeting federal air pollution standards by striving for zero-emission technologies across all sectors. The 2022 AQMP included Control Measure C-CMB-01, which seeks further NO_x emission reductions from commercial building water heating sources subject to Rule 1146.2. Control Measure C-CMB-01 proposed an emission reduction of NO_x by 70 to 75 percent by 2037. The control strategy focused on a combination of long-term regulation and short-term incentives with a focus on replacing existing water heaters with new zero-emission units. The incentive approach would achieve additional emission reduction, encouraging use and further technology development of zero-emission water heating for existing buildings. PAR 1146.2 will implement the 2022 AQMP Control Measure C-CMB-01.

AFFECTED INDUSTRIES

Rule 1146.2 is applicable to manufacturers, distributors, refurbishers, retailers, resellers, installers, and operators of natural gas-fired large water heaters, small boilers, and process heaters less than or equal to 2 MMBtu/hr. The affected industries include water heater and boiler manufacturing and supply industries, professional installers, and facilities and residents that operate these types of water heaters and boilers. Nearly all industries will be affected by PAR 1146.2. Staff estimated a total of 1,070,000 units in the South Coast AQMD are regulated by PAR 1146.2.

PUBLIC PROCESS

PAR 1146.2 was developed through a public process that began in the second quarter of 2023 and included a series of working group meetings, individual stakeholder meetings, and site visits to affected facilities. South Coast AQMD staff held five working group meetings on April 26, 2023, June 7, 2023, August 30, 2023, October 19, 2023, and December 13, 2023. The working group is composed of representatives from manufacturers, trade organizations, permit stakeholders, businesses, environmental groups, public agencies, consultants, and other interested parties. The purpose of the working group meetings was to present and discuss staff's BARCT assessment and the development of the proposed amendments and NO_x limits for PAR 1146.2. Staff presented initial preliminary draft rule language at the working group meeting on December 13, 2023. A public workshop was held on February 7, 2024, and a public consultation was held on February 23, 2024. Staff presented PAR 1146.2 to the Stationary Source Committee on March 15, 2024, ~~and April 19, 2024, and will present it to the committee on~~ May 17, 2024. The table below summarizes the public meetings held throughout the development of PAR 1146.2 and provides a summary of the key topics discussed at each of the working group meetings.

Table 1-2. Summary of Working Group Meetings

Date	Meeting Title	Highlights
April 26, 2023	Working Group Meeting #1	<ul style="list-style-type: none"> • Rule development process • Rule 1146.2 background • Rule approach • Unit types and NOx emissions • BARCT analysis overview • Initiated BARCT Assessment

CHAPTER 2: BARCT ASSESSMENT

INTRODUCTION OF BARCT ASSESSMENT

EQUIPMENT CATEGORIES ~~AND PROCESSES~~

BARCT ASSESSMENT

COST-EFFECTIVENESS AND INCREMENTAL COST-EFFECTIVENESS

ADDITIONAL BENEFITS AND CHALLENGES

INTRODUCTION OF BARCT ASSESSMENT

The purpose of a BARCT assessment is to assess available pollution controls to establish emission limits for specific equipment categories consistent with state law. Under Health and Safety Code Section 40406, BARCT is defined as:

“an emission limitation that is based on the maximum degree of reduction achievable, taking into account environmental, energy, and economic impacts by each class or category of source.”

The BARCT assessment follows a framework through the rule development process and includes public participation. The figure below illustrates the overall BARCT assessment approach.

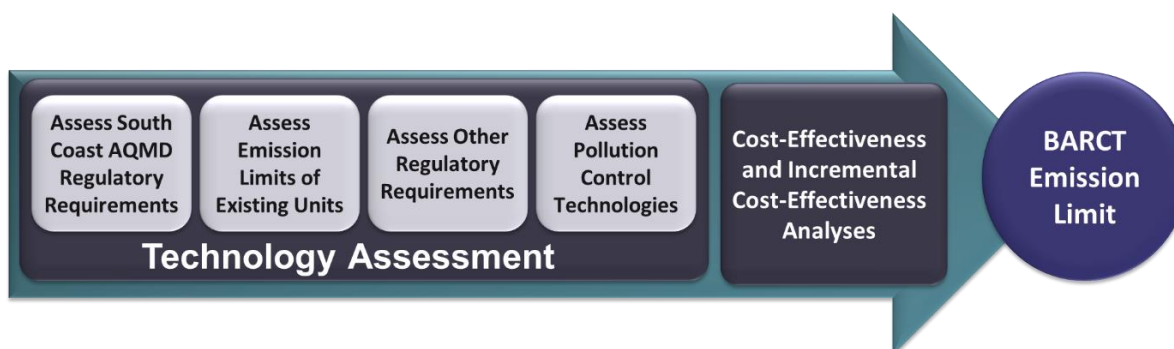

Figure 2-1. BARCT Assessment Approach

For PAR 1146.2, staff conducted a thorough technology assessment to evaluate the NO_x control technologies that will achieve the BARCT level equipment subject to PAR 1146.2. The technology assessment consists of four steps including the assessment of South Coast AQMD requirements, a complete assessment of emission limits of existing units, review of other regulatory requirements, and assessment of available pollution control technologies. Cost-effectiveness was estimated for each control technology which staff has referenced for the proposed BARCT emission limit.

EQUIPMENT CATEGORIES

One of the first steps in the BARCT assessment is to establish the category of equipment. Staff collaborated with the stakeholders to establish the categories by accounting for the type of equipment and other unique features of the units. Compared with the current Rule 1146.2, PAR 1146.2 defines Type 1 and Type 2 units by the same heat input capacities, except that additional categories are defined for Type 1 and Type 2 units for different implementation schedules. Staff categorized the equipment subject to PAR 1146.2 as presented in Table 2-1:

Table 2-1. PAR 1146.2 Equipment Categories

Equipment Category	Description
Type 1 Unit	Units with rated heat input capacity less than or equal to 400 kBtu/hr as defined in the rule. For zero-emission limit requirements, Type 1 high temperature units, Type 1 pool heaters, and instantaneous water heaters are divided out for different implementation dates.
Type 2 Unit	Units with rated heat input capacity greater than 400 kBtu/hr and up to and including 2 MMBtu/hr as defined in the rule. For zero-emission limit requirements, Type 2 high temperature units and instantaneous water heaters are divided out for different implementation dates.
Type 1 Pool Heater	Units with rated heat input capacity less than or equal to 400 kBtu/hr that are used for pool heating. Note that pool heaters in the Type 2 size range are covered under the Type 2 water heater category.
Type 1 High Temperature Unit	Referring to Type 1 units that are high temperature units, which are units used to produce steam or to heat water above 180 degrees Fahrenheit.
Type 2 High Temperature Unit	Referring to Type 2 units that are high temperature units.
Instantaneous Water Heater ≤ 200,000 Btu/hr	Units sized at or under 200 kBtu/hr that heat water only when water flows through a heat exchanger. There is no storage tank for this type of unit.
Instantaneous Water Heater > 200,000 Btu/hr	Units sized at or under 2 MMBtu/hr but greater than 200 kBtu/hr that heat water only when water flows through a heat exchanger. There is no storage tank for this type of unit.

BARCT ASSESSMENT

Assess South Coast AQMD Regulatory Requirements

Assessment of South Coast AQMD Regulatory Requirements

Staff reviewed existing South Coast AQMD NO_x regulations for large commercial water heaters, boilers, process heaters, and similar equipment. The following table summarizes the current South Coast AQMD NO_x rules that staff evaluated as part of the BARCT technology assessment. Staff presented the assessment of South Coast AQMD regulatory requirements in Working Group Meeting #1 on April 26, 2023.

Rules 1146, 1146.1, and 1121

Rule 1146 establishes emission limits for boilers, steam generators, and process heaters fueled by gaseous fuels, which are segregated into three different groups based on heat input capacity:

- Group I (greater than or equal to 75,000,000 Btu/hr, excluding thermal fluid heaters and units operated at schools and universities),
- Group II (greater than or equal to 20,000,000 Btu/hr and less than 75,000,000 Btu/hr, excluding units burning digester and landfill gases and thermal fluid heaters and units operated at schools and universities) and

- Group III (greater than or equal to 5,000,000 Btu/hr and less than 20,000,000 Btu/hr, excluding units burning digester and landfill gases and atmospheric units and thermal fluid heaters).

By the 2008 amendment, Rule 1146 Group I units were required to meet a lower NOx emission limit of 5 ppmv. Group II and III are subject to the 9 ppmv NOx limit.

Rule 1146.1 establishes emission limits for small industrial, institutional, and commercial boilers, steam generators, and process heaters with rated heat input greater than 2 MMBtu/hr and less than 5,000,000 Btu/hr. Most of the Rule 1146.1 units are subject to the 9 ppmv NOx limit.

Both Rules 1146 and 1146.1 include a limit of 12 ppmv NOx for atmospheric units and a limit of 30 ppmv for thermal fluid heaters. All units subject to Rule 1146 and 1146.1 fired by landfill gases were required to meet NOx emissions limits of 25 ppmv by January 1, 2015, and units fueled by digester gas were required to meet 15 ppmv by January 1, 2015.

Rule 1121 establishes NOx emissions limits for natural gas-fired water heaters with heat input rates less than 75,000 Btu/hr which are mostly tank type water heaters used in residential buildings. Rule 1121 requires a NOx emission limit of 10 ng/J (15 ppmv) with an exemption for water heaters in recreational vehicles.

Table 2-2. South Coast AQMD Regulatory Requirements

Regulation/Rule Title	Relevant Unit/Equipment Size	Current NOx Emission Limits in ng/J or ppmv at 3% O ₂ , dry
Rule 1146 – Emissions of Oxides of Nitrogen from Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters	Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters (greater than or equal to 5,000,000 Btu/hr rated heat input capacity)	<ul style="list-style-type: none"> • 7-9 ppm for units burning gaseous fuels 5,000,000 to less than 20,000,000 Btu/hr; • 5-9 ppmv for units burning gaseous fuels greater than 20,000,000 Btu/hr and less than 75,000,000 Btu/hr; • 5 ppmv for units burning natural gas greater than or equal to 75,000,000 Btu/hr; • 12 ppmv for thermal fluid heaters burning gaseous fuels; • 40 ppmv for nongaseous fuels; • 12 ppmv for atmospheric units; • 15 ppmv for units burning digester gas; • 25 ppmv for units burning landfill gas

Regulation/Rule Title	Relevant Unit/Equipment Size	Current NOx Emission Limits in ng/J or ppmv at 3% O ₂ , dry
Rule 1146.1 – Emissions of Oxides of Nitrogen from Small Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters	Small Industrial, Institutional, and Commercial Boilers, Steam Generators, and Process Heaters (greater than 2 MMBtu/hr and less than 5 MMBtu/hr rated heat input capacity)	<ul style="list-style-type: none"> • 7-9 ppmv for units greater than 2 MMBtu/hr and less than 5 MMBtu/hr burning natural gas; • 12 ppmv for atmospheric units; • 12 ppmv for thermal fluid heaters; • 15 ppmv for units burning digester gas; • 25 ppmv for units burning landfill gas
Rule 1146.2 – Emissions of Oxides of Nitrogen (NOx) from Large Water Heaters, Small Boilers and Process Heaters	Large Water Heaters, Small Boilers and Process Heaters (less than or equal to 2 MMBtu/hr rated heat input capacity, excluding tank type water heaters subject to Rule 1121)	14 ng/J; 20 ppmv (except for Type 1 pool heaters which are at 40 ng/J or 55 ppmv)
Rule 1121 – Control of Nitrogen Oxides from Residential-Type, Natural Gas-Fired Water Heaters	Residential-Type, Natural Gas-Fired Water Heaters (less than 75 kBtu/hr rated heat input capacity)	10 ng/J; 15 ppmv (except for water heaters used in recreational vehicles)

Emission Level of Existing Units

The next step of the BARCT assessment is to evaluate the emission of existing units operating within the South Coast AQMD. For this step, staff evaluated current South Coast AQMD NOx regulations for other similar combustion equipment to assess potential technology transfer. Staff reviewed 137 source tests conducted since 2017, as shown in the figure below. For Type 1 and Type 2 units required to be certified at 20 ppmv for NOx emissions, staff found that 39 units (28 percent of units) had tested under 12 ppmv and 21 units (15 percent of units) had tested under 10 ppmv. Reviewing certification tests conducted since 2017 indicated that 33 percent of certified pool heaters tested under 12 ppmv, with some testing at 3.3 ppmv.

Figure 2-1-2. Source Test Data: NOx ppmv at 3 percent Oxygen from Certifications

**Assess Other
Regulatory
Requirements**

Other Regulatory Requirements

The next step of the assessment is to identify other agencies that regulate the same or similar equipment and compare the regulatory requirements and emissions limits. The purpose of this step is to evaluate if there are applicable emissions limits lower than the current South Coast AQMD limits that should be considered. The table below includes the list of regulations by other agencies which staff reviewed for applicable emissions limits. The specific emission limits and their impact on the BARCT assessment included for each category are discussed later for each of the equipment categories.

With regards to zero-emission standards for building appliances, other agencies are considering or have already adopted similar rules, and a South Coast AQMD rule cannot be less stringent than a state-wide rule. The California Air Resources Board (CARB) has commenced its rulemaking process for potential state-wide standards to “develop and propose zero-emission standards for space and water heaters sold in California” with potential implementation in 2030 as committed in the 2022 State Strategy for the State Implementation Plan.¹ CARB held its first public workshop on May 10, 2023, [and its most recent public workshop on May 29, 2024](https://ww2.arb.ca.gov/sites/default/files/2022-08/2022_State_SIP_Strategy.pdf).² The California Energy Commission’s (CEC) 2022 Building Energy Efficiency Standards (Energy Code) apply to newly constructed buildings and additions and alterations to existing buildings. The 2022 Energy Code encourages efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, and more.³ Buildings whose permit applications are applied for on or after January 1, 2023, must comply with the 2022 Energy Code. There are mandatory requirements for electric ready and heat pump ready multifamily buildings, and the Energy Code discourages use of electric resistance heating when an alternative method of

¹ California Air Resources Board, 2022 State SIP Strategy, p. 30, https://ww2.arb.ca.gov/sites/default/files/2022-08/2022_State_SIP_Strategy.pdf

³ California Energy Commission, 2022 Building Energy Efficiency Standards, https://www.energy.ca.gov/sites/default/files/2022-12/CEC-400-2022-010_CMF.pdf

heating is available. The Energy Code is contained in Title 24, Part 6 of the California Code of Regulations and is updated every three years. [The 2025 Energy Code will apply to newly constructed buildings, additions, and alterations, with proposed standards to be adopted in 2024 and an effective date of January 1, 2026.](#)

Bay Area Air Quality Management District (BAAQMD) adopted Rule 9-6 – Nitrogen Oxides Emissions from Natural Gas-Fired Boilers and Water Heaters in March 2023 with zero-emission limits for 2031 implementation. The BAAQMD analysis found that zero-NO_x 240-volt heat pump water heaters are widely commercially available at sizes equivalent to existing natural gas systems on market for commercial spaces; technology development and field testing is still needed to bring compliant appliances of larger water heaters and boilers up to 2 MMBtu/hr to market; and BAAQMD staff expects that the availability of zero-NO_x units will increase, and costs will decrease over time. BAAQMD committed to an Implementation Working Group and reporting back to their Board on technology developments and availability. Staff presented the assessment of other regulatory requirements in Working Group Meetings #1 and #2, detailed in the tables below.

Table 2-3. Other Regulatory Requirements

Regulatory Entity	Regulation/Rule	Relevant Emission Limits
San Joaquin Valley Air Pollution Control District (Valley Air District)⁴	Rule 4308 – Boilers, Steam Generators, and Process Heaters (units with a total rated heat input capacity of greater than or equal to 75 kBtu/hr and less than 2 MMBtu/hr) – Exempts units installed in manufactured homes, units installed in recreational vehicles, and hot water pressure washers	20 ppmv (except for pool heaters greater than or equal to 75 kBtu/hr and less than or equal to 400 kBtu/hr, which are at 55 ppmv)
Bay Area Air Quality Management District (BAAQMD)⁵	Rule 9-6 – Nitrogen Oxides Emissions from Natural Gas-Fired Boilers and Water Heaters (units with total rated heat input capacity of 75 kBtu/hr – 2 MMBtu/hr) adopted in March 2023	Zero-emission limits with implementation in 2031 – Exempts units installed in manufactured homes (40 ng/J limit), units installed in recreational vehicles, and pool/spa heaters with less than 400 kBtu/hr rated heat input capacity used exclusively to heat swimming pools, hot tubs, or spas

Regulatory Entity	Regulation/Rule	Relevant Emission Limits
California Air Resources Board (CARB)⁶	2022 State Strategy for the State Implementation Plan (adopted September 22, 2022) proposed measures for residential and commercial buildings; Anticipating Board consideration for rule adoption in 2025	Proposed zero-emission limits (GHG, NO _x) for new equipment and appliances sold for use in both residential and commercial buildings, with implementation in 2030

On the local level, over 60 cities and counties across California are considering policies to support zero-emission appliances for new construction.

**Assess
Pollution
Control
Technologies**

Assessment of Pollution Control Technologies

The next step is to research the commercially available emission control technologies and seek information on any emerging emission control technologies. As part of this assessment, staff met with multiple manufacturers.

South Coast AQMD Rule 1146.2 is technology and fuel neutral and is focused on achieving the maximum NO_x emission reductions possible.

Staff assessed different pollution control technologies as part of the BARCT assessment. Staff presented and discussed the pollution control technology assessment in working group meetings. The objective is to identify and evaluate control technologies, approaches, and potential emission reductions.

Emerging Technology and Zero-Emission Technology

Zero-emission technologies such as heat pumps, electric resistance, and fuel cell technologies were explored as part of the BARCT assessment. Staff conducted internet searches, met with stakeholders, and sent a survey to manufacturers to gather more information on emerging and zero-emission technology.

Manufacturer Survey

On May 10, 2023, staff sent a survey to space and water heating manufacturers to gather information on zero-emission technologies, after sending an initial draft survey to stakeholders for feedback on April 28, 2023. The survey covered types of zero-emission technology; applications for installation in residential or commercial buildings; available models; energy efficiency ranges; current annual sales in the South Coast AQMD region; incremental manufacturing cost for the technology; concerns for the technology; and focus of current and future development.⁷ Staff received eight responses to the manufacturer survey and presented the aggregate and anonymized responses in the working group meeting on August 30, 2023. Manufacturers who responded to the survey reported that they provided air source and water source heat pump water heater units and hybrid heating, cooling, and water heating, including split system units with heating capacity between 60,000 to 250,000 Btu/hr; variable speed; ducted or ductless; indoor or outdoor; and

⁶ California Air Resources Board, 2022 State SIP Strategy, p. 30, https://ww2.arb.ca.gov/sites/default/files/2022-08/2022_State_SIP_Strategy.pdf

⁷ South Coast AQMD, Proposed Amended Rule 1146.2, Manufacturer Survey, <http://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/rule-1146-1146.1-and-1146.2/manufacturer-survey---may-10.xlsx?sfvrsn=6>

modular units (that can dynamically adjust their capacity) up to 2.2 MMBtu/hr. Manufacturers also reported integrated units with up to 2 MMBtu/hr output. Manufacturers reported plans for future heat pump water heater development, including: reduce necessary storage tank capacity; improve capacity and efficiency at lower ambient temperatures; improve efficiency through variable speed compressor and pump control; increase outlet water temperature; utilize alternate refrigerants that allow lower ambient and higher output temperature operation; expand integrated and split-system all-electric heat pumps (air-to-water) to units with larger heating capacities; expand water source in addition to air source technology; and expand efforts in modular design and commercial hydronic heating heat pumps.

Manufacturers who responded to the survey also reported that they provided electric resistance elements for boilers; electric resistance single-stage compressor and fan for pool heating; and all-electric air-to-water heat pumps for pool heating. Manufacturers who responded to the survey reported that they provide electric resistance storage water heater products up to 900 kW input (approximately 3 MMBtu/hr) and electric resistance instantaneous water heater products up to 150 kW (approximately 500,000 Btu/hr).

Based on the feedback from manufacturers, staff understands that there is a range of heat pump and electric resistance units available to replace gas units subject to this rule. However, manufacturers will continue development to improve and expand zero-emission products.

Heat Pump Technology

Common zero-emission water heating technology includes heat pumps. Heat pumps operate like a refrigerator or air conditioning unit by moving heat from one place (such as air, water, or ground) to another. This technology can be over three times more efficient than conventional appliances and can be used for water heating, space heating, and cooling. For pool heating, heat pump pool heaters are an option and are significantly more efficient than electric resistance pool heating.

An integrated heat pump with a water tank packaged as a single unit, as shown in the image below, can be sized for commercial applications and be located indoors. Another type of heat pump is a split system with a water tank that can be located as far as fifty feet away from the heat pump, as shown in the image below. In split systems the heat pump takes heat from outdoor air rather than indoor air.

Figure 2-2-3. Examples of Integrated Heat Pump (Left) and Split System Heat Pump (Right)

Some stakeholders have expressed concerns over how well heat pumps will operate in colder climates, such as the high-altitude locations within the South Coast AQMD. There are heat pump products available in the market that can operate at low temperatures, and the Northwest Energy Efficiency Alliance's Qualified Products List includes heat pump water heater products that are energy efficient in cold climates and products that can produce hot water via heat pump at negative 25 degrees Fahrenheit. Cold climate heat pumps can pull heat from the air even at below-zero temperatures and are utilized in colder climates in the U.S. and abroad. Maine has one of highest per capita heat-pump adoption rates, outpacing Scandinavian countries, with rebates incentivizing installation of approximately 116,000 heat pumps in a state that has fewer than 600,000 occupied housing units. Heat pump technology is also being adopted in states such as Vermont and Alaska, and according to the International Energy Agency, 60 percent of Norway's buildings are fitted with a heat pump.

One concern is whether sufficiently high-water temperatures needed to meet certain commercial applications could be achieved by using a heat pump water heater. One common practice is to use a booster heater, which can be electric, to increase water temperature up to 180 degrees Fahrenheit. This would satisfy the domestic water temperature requirements for dietary, laundry, and dishwashing. There are also products existing and emerging in the market that can meet the high-water temperature demand. For example, an internet search of units sold or installed in U.S. or Southern California with focus on high water temperatures found products providing water temperature between 160- and 248-degrees Fahrenheit, with waste heat recycling systems capable of achieving up to 248 degrees Fahrenheit. This is a type of technology where a heat pump extracts

wasted heat from a heat source (chilled water, cooling tower water, or any consistent waste heat) and raises the temperature to a useful level. The heat pump allows reuse of low-temperature heat (less than 140 degrees Fahrenheit). Through the refrigeration cycle of the heat pump, hot water temperature can be increased up to 248 degrees Fahrenheit.⁸ Applications of waste heat include sterilization; hot and chilled water for hotels, hospitals, schools, and universities; boiling processes for food manufacturing; and other industrial processes. Waste heat application is opted for only when there is an existing source that provides waste heat. It is not intended for large combustion units to be installed with the sole purpose of creating waste heat for a zero-emission unit. The energy efficiency of these products varies, with Coefficient of Performance (COP) between 4.3 and 6.0, or between 4.3 to 6 times more efficient than electric resistance units. For many commercial processes, heat pumps are a viable technology.

Staff recognizes that for steam, heat pump technology may not be viable in the market yet, and for certain industrial processes, heat pump technology is not as mature and electric resistance options are more expensive to operate due to the energy demand. As part of the BARCT assessment, including discussions with manufacturers, staff determined that a temperature threshold was necessary to provide more time for the zero-emission technology market to mature for high temperature applications. As discussed above, zero-emission technologies for providing water temperatures up to 180 degrees Fahrenheit are available. Further discussion in a later section indicates that California plumbing code hot water temperature requirements are also up to 180 degrees Fahrenheit. For PAR 1146.2, staff suggested a temperature threshold of 180 degrees Fahrenheit for special consideration on high temperature applications, to align with the Code of Federal Regulations definition for “residential-duty commercial water heater” for outlet water temperature. PAR 1146.2 provides a definition for high temperature units used to produce steam or heat water above 180 degrees Fahrenheit, and the compliance schedule for zero-emission limits differentiates high temperature units with further implementation dates. Staff intends to conduct a technology assessment prior to the proposed implementation dates for high temperature units to gather information on changes in technology development and availability.

Zero-emission technology for commercial and industrial applications is continuing to develop, with New Belgium Brewing in Colorado partnering with AtmosZero on a pilot study to replace their gas boiler with industrial electric heat pump technology in 2024.⁹ The facility is currently operating at 329 degrees Fahrenheit. An air source heat pump water heater can be used to generate steam (greater than 212 degrees Fahrenheit), operate in sub-zero temperatures, with potential applications including breweries, dairies, plastics, pharmaceuticals, food, paper, and more. The pilot study hopes to result in an off-the-shelf product at a comparable price to a combustion unit. The current unit is larger than the size range for 1146.2 units, with some potential for further technology development for smaller units. The International Energy Agency’s Technology Collaboration Programme on Heat Pumping Technologies expects high-temperature heat pump technologies to become more commercially available and implemented in coming years.¹⁰

Electric Resistance Technology

Another common zero-emission water heating technology is electric resistance water heating with storage. Generally, this consists of an insulated steel tank with two electric resistance elements that heat the water. These units are available in a large range of sizes for the commercial market. For a commercial electric boiler, no air intake or exhaust venting is required. There are also instantaneous/mini-tank (point-of-use) electric water heaters which provide hot water at the consumption point and only heat water when necessary. For pool heating, electric resistance swimming pool heaters are a more efficient option than gas-fired pool heaters.

There are also commercial hybrid electric water heaters which utilize heat pump heating and electric resistance heating. These units pull heat from the surrounding air to heat water and use less energy than a standard electric water heater. A commercial heat pump boiler would consist of an all-electric heat pump with an optional built-in backup electric boiler for very cold days.

Solar Water Heating Technology

Solar water heating is another option, where solar thermal hot water systems range in size from conventional-sized systems to large industrial applications and consist of flat plate collectors, a controller, pump, storage. There are also swimming pool solar heaters which consist of solar collectors, filters, pumps, and control valves. They can be standalone units, with collectors mounted on roofs or anywhere near the pool.

Fuel Cell Technology

Fuel cells have a broad range of applications from multi-megawatt systems to small units and continue to expand with emerging technologies.¹¹ Cost and durability are still critical challenges, and studies have indicated price ranges between \$4,000 to \$20,000 per kW. Natural gas fuel cells produce some NO_x emissions. Staff recognizes the applications of zero-emission fuel cells and that this is an emerging technology. Over 100,000 fuel cells have been deployed in Europe and over 300,000 units in Japan primarily for residential applications.¹² Fuel cell adoption in California currently is limited. However, fuel cell technology has the potential to replace existing units to meet the zero-emission limits, and it is especially promising for future high temperature applications.

COST-EFFECTIVENESS AND INCREMENTAL COST-EFFECTIVENESS

Initial BARCT Emission Limit and Other Considerations

After completing the technology assessment, staff recommends an initial BARCT NO_x emission limit established using information gathered from the technology assessment. All provided emission concentration values (i.e., initial and final) in this report refer to concentration in terms of parts per million by volume (ppmv) based on a dry basis. Additionally, staff evaluates other considerations that could affect the emission limits that represent BARCT, including limits for those units operating close to the BARCT NO_x limits. Heat pump technologies are still the main technologies that can achieve in the nearer-term the NO_x concentration limits proposed in PAR

1146.2. Summary of the BARCT assessment and staff's recommendations based on feasibility is shown below.

Method for Cost-Effectiveness and Incremental Cost Effectiveness Analysis

The South Coast AQMD routinely conducts cost-effectiveness analyses for proposed rules and proposed amended rules and regulations that result in the reduction of criteria pollutants (NO_x, SO_x, VOC, PM, and CO). The analysis is used as a measure of the relative effectiveness of a proposal. It is generally used to compare and rank rules, control measures, or alternative means of emissions control relating to the cost of purchasing, installing, and operating control equipment to achieve the projected emission reductions. The major components of the cost-effectiveness analysis are capital costs, emission reductions, discount rate, and equipment useful life. The cost-effectiveness for PAR 1146.2 was completed using the discounted cash flow method, explained below:

Discounted Cash Flow (DCF)

The DCF method converts all costs, including initial capital investments and costs expected in the present and all future years of equipment useful life, to present value. Conceptually, it is as if calculating the number of funds that would be needed at the beginning of the initial year to finance the initial capital investments and to set aside to pay off the annual costs as they occur in the future. The fund that is set aside is assumed to be invested and generates a rate of return at the discount rate chosen. The final cost-effective measure is derived by dividing the present value of total costs by the total emissions reduced over the equipment useful life. The equation below is used for calculating cost-effectiveness with DCF. The equation was presented in the 2022 AQMP Socioeconomic Report Appendix 2-B (p. 2-B-3):

$$\text{Cost} - \text{effectiveness} = \frac{\text{Initial Capital Investments} + (\text{Annual O\&M Costs} \times \text{PVF})}{\text{Annual Emission Reductions} \times \text{Years of Equipment Life}}$$

Where O&M = Operation and Maintenance; and
 PVF = Present Value Factor.

Equation 2-1. Discounted Cash Flow Cost Effectiveness Equation

And the PVF is calculated as follows:

$$\text{PVF} = \frac{(1 + r)^N - 1}{r * (1 + r)}$$

Where r = real interest rate (discount rate); and
 N = years of equipment life.

Equation 2-2. PVF Equation

Finally, Health and Safety Code Section 40920.6 (a)(3) states that an incremental cost-effectiveness assessment should be performed on identified potential control options that meet air quality objectives. To determine the incremental cost-effectiveness under this paragraph, South Coast AQMD calculates the difference in the dollar costs divided by the difference in the emission

reduction potentials between each progressively more stringent potential control option as compared to the next less expensive control option. Once the BARCT assessment is complete and NO_x limits are established, staff considers incrementally more stringent options to demonstrate that the NO_x limit represents the “maximum degree of reduction achievable by each class or category.” The equation for incremental cost-effectiveness is below:

$$I-CE \left(\$/\text{tons NO}_x \text{ reduced} \right) = \frac{\text{Incremental Difference in Cost (Present Worth Value)}}{\text{Incremental Difference in Emission Reductions (Lifetime Reductions)}}$$

Where I-CE = Incremental Cost-Effectiveness

Equation 2-3. Incremental Cost Effectiveness Equation

For PAR 1146.2, staff did not identify multiple control options that would meet the air quality objectives. The 2022 AQMP’s objective is to transition to zero-emission technologies wherever feasible and staff identified technically feasible zero-emission control options for each category of equipment subject to Rule 1146.2; therefore, staff did not conduct an incremental cost-effectiveness assessment.

Summary of Cost-Effectiveness Analysis and Incremental Cost-Effectiveness Analysis

In order to determine cost-effectiveness for the proposed BARCT limits, cost information and estimates for the control equipment were obtained. Staff met with multiple manufacturers and stakeholders to gather cost data and estimates for various types of units. In addition, staff also sent out a survey to the facilities to gather equipment data and cost information for recent NO_x control projects. After cost information was obtained, a bottom-up approach evaluated each unit category subject to PAR 1146.2 and cost-effectiveness analysis was conducted on a per equipment basis. Baseline emissions for each equipment were calculated using the assumption methodology outlined in Chapter 4.

Natural Gas-Fired Unit Efficiency

A major manufacturer recommended utilizing 95 percent efficiency for gas-fired units in cost effectiveness calculations. Currently products in the market range from 80 to 95 percent, with older units being less efficient. Some products in the market can reach a 95 percent efficiency, and manufacturers suggested that future U.S. Department of Energy (U.S. DOE) or CEC standards may be raised to require 95 percent efficiency. As not all units currently achieve 95 percent efficiency, this assumption results in an overestimate of the cost to switch to zero-emission technologies; however, the cost-effectiveness assessment is for future available technologies, so staff agreed to use the 95 percent efficiency assumption. For Type 1 pool heaters, staff utilized 84 percent efficiency to align with the U.S. DOE standard.

Capacity Factors

The capacity factor is the proportion of time the unit is expected to operate. Consistent with the rule development process for the Rule 1146.2 amendments in 2006, the analysis assumed the capacity factor for Type 1 and Type 2 natural gas-fired water heaters and boilers to be 21.5 percent, meaning the unit is estimated to operate 21.5 percent of time at maximum heat input capacity. This assumption was taken from a manufacturer survey conducted during the previous Rule 1146.2 rule development.

Instantaneous on-demand units operate at high heat for less time than tank-type units operate. The Energy Star's estimated annual usage for the natural gas-fired instantaneous water heater example is 178 therms or 17.8 MMBtu. The analysis divided 17.8 MMBtu by 8,760 hours in a year which resulted in approximately 2,032 Btu/hr. This number is used to estimate the capacity factor for a typical instantaneous water heater rated at 150,000 Btu/hr: $2,032 \text{ Btu/hr} \div 150,000 \text{ Btu/hr} = 0.0135$.

Incremental Installation, Maintenance, and Labor Cost
