Processing Notes:
1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**27**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.40
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum $\frac{(Astdni)\ (Cistdi)}{(Cstdni)\ (Aistdi)}$ Note: 1

2) Raw Amt = $\frac{(Ansamp)}{(Avg\ RFn)} \times \frac{(Cistdi)}{(Aistdi)}$ **= Cn**

3) Amount ppbv = (Raw Amt) $\times \frac{1000}{(SV)} \times$ (CDF)

4) Amount ug/m3 = (amt(ppbv) $\times \frac{MW}{24.42}$

None	3.31	7.10	ND	13.57	29.08	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 29

File Name: 224435
Descriptio 29
Canister: 627
QC_Batch: 121224-MA1

Date Sampled: 11/20/24 **Time:** 12:31
Date Analyzed: 12/12/24 **Time:** 20:06
Can Dilution Factor: 1.37
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.20	6.85	ND	13.09	28.05	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.17	6.80	ND	13.00	27.85	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 31

File Name: 224435
Descriptio 31
Canister: 781
QC_Batch: 121224-MA1

Date Sampled: 11/20/24 **Time:** 12:28
Date Analyzed: 12/12/24 **Time:** 21:22
Can Dilution Factor: 1.36
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.17	6.80	ND	13.00	27.85	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: LABQC
Laboratory ID: B09124

File Name: 224435
Descriptio 32
Canister: 506
QC_Batch: 121024-MA1

Date Sampled: 11/20/24 **Time:** 12:45
Date Analyzed: 12/10/24 **Time:** 15:54
Can Dilution Factor: 1.38
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.22	6.90	ND	13.19	28.26	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:
1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**32**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.38
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum $\frac{(Astdni)\ (Cistdi)}{(Cstdni)\ (Aistdi)}$ i Note: 1

2) Raw Amt = $\frac{(Ansamp)\ (Cistdi)}{(Avg\ RFn)\ (Aistdi)}$ = **Cn**

3) Amount ppbv = $\frac{(Raw\ Amt)\ 1000\ (CDF)}{(SV)}$

4) Amount ug/m3 = $\frac{(amt(ppbv)\ MW}{24.42}$

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 33

File Name: 224435
Descriptio 33
Canister: 700
QC_Batch: 121224-MA1

Date Sampled: 11/21/24 **Time:** 08:18
Date Analyzed: 12/12/24 **Time:** 22:00
Can Dilution Factor: 1.30
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.03	6.50	ND	12.42	26.62	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**33**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.30
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum [(Astdni) (Cistdi) / (Cstdni) (Aistdi)] i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) = **Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 34

File Name: 224435
Descriptio 34
Canister: 673
QC_Batch: 121224-MA1

Date Sampled: 11/21/24 **Time:** 08:29
Date Analyzed: 12/12/24 **Time:** 22:38
Can Dilution Factor: 1.28
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	2.99	6.40	ND	12.23	26.21	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**	
Laboratory Number:		**34**	
Standard Volume	STV	10.0	ml
Sample Volume	SV	300	ml
Can Dilution Factor	CDF	1.28	
Gas Constant		24.42	
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = Sum (Astdni) (Cistdi) / (Cstdni) (Aistdi) i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) = **Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**36**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.33
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum (Astdni) (Cistdi) / (Cstdni) (Aistdi) i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) **= Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**37**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.31
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum [(Astdni) (Cistdi) / (Cstdni) (Aistdi)] i — Note: 1

2) Raw Amt = (Ansamp) / (Avg RFn) × (Cistdi) / (Aistdi) = **Cn**

3) Amount ppbv = (Raw Amt) × 1000 / (SV) × (CDF)

4) Amount ug/m3 = (amt(ppbv) × MW / 24.42

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SDG: 224435

Analytical Method: TO-15 **Laboratory ID: 38**

File Name: 2443538A.D **Date Sampled:** 11/21/24 **Time:** 09:58
Description: T-606 **Date Analyzed:** 12/13/24 **Time:** 17:16
Canister: 608 **Can Dilution Factor:** 1.38
QC_Batch: 121324-MA1 **Air Volume:** 300 ml

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 38

File Name: 224435
Descriptio 38
Canister: 608
QC_Batch: 121324-MA1

Date Sampled: 11/21/24 **Time:** 09:58
Date Analyzed: 12/13/24 **Time:** 17:16
Can Dilution Factor: 1.38
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.22	6.90	ND	13.19	28.26	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**	
Laboratory Number:		**38**	
Standard Volume	STV	10.0	ml
Sample Volume	SV	300	ml
Can Dilution Factor	CDF	1.38	
Gas Constant		24.42	
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = Sum [(Astdni) (Cistdi) / (Cstdni) (Aistdi)] i — Note: 1

2) Raw Amt = (Ansamp) / (Avg RFn) × (Cistdi) / (Aistdi) = **Cn**

3) Amount ppbv = (Raw Amt) × 1000 / (SV) × (CDF)

4) Amount ug/m3 = (amt(ppbv) × MW / 24.42

None	3.06	6.55	ND	12.52	26.83	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 40

File Name: 224435
Descriptio 40
Canister: 531
QC_Batch: 121324-MA1

Date Sampled: 11/21/24 **Time:** 09:47
Date Analyzed: 12/13/24 **Time:** 18:34
Can Dilution Factor: 1.35
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.15	6.75	ND	12.90	27.64	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 42

File Name: 224435
Descriptio 42
Canister: 730
QC_Batch: 121324-MA1

Date Sampled: 11/21/24 **Time:** 11:11
Date Analyzed: 12/13/24 **Time:** 19:55
Can Dilution Factor: 1.37
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.20	6.85	ND	13.09	28.05	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 43

File Name: 224435
Descriptio 43
Canister: 701
QC_Batch: 121324-MA1

Date Sampled: 11/21/24 **Time:** 11:28
Date Analyzed: 12/13/24 **Time:** 20:34
Can Dilution Factor: 1.35
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.15	6.75	ND	12.90	27.64	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**	
Laboratory Number:		**43**	
Standard Volume	STV	10.0	ml
Sample Volume	SV	300	ml
Can Dilution Factor	CDF	1.35	
Gas Constant		24.42	
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = Sum (Astdni) (Cistdi) / (Cstdni) (Aistdi) i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) **= Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

None	3.24	6.95	ND	13.28	28.46	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**44**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.39
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum (Astdni) (Cistdi) / (Cstdni) (Aistdi) i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) **= Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: 224435
Laboratory ID: 45

File Name: 224435
Descriptio 45
Canister: 694
QC_Batch: 121324-MA1

Date Sampled: 11/21/24 **Time:** 11:25
Date Analyzed: 12/13/24 **Time:** 22:06
Can Dilution Factor: 1.39
Air Volume: 300.00 ml

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	3.24	6.95	ND	13.28	28.46	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**2E+05**
Laboratory Number:		**45**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.39
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum (Astdni) (Cistdi) / (Cstdni) (Aistdi) i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) = **Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

None	3.22	6.90	ND	13.19	28.26	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

No Library Search Compounds Detected

Method Blank Data Packages

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument. The DAB identifier is on each analytial report in the field called QC Batch. There will be one Method Blank QC Batch report for each DAB in this SDG.

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: LABQC
Laboratory ID: B09124

File Name: LABQC
Descriptio B121044
Canister:
QC_Batch: 12104-MA1

Date Sampled:
Date Analyzed: 12/10/24
Can Dilution Factor: 1.00
Air Volume: 300.00 ml

Time:
Time: 14:37

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	2.33	5.00	ND	9.56	20.48	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

SAMPLE CALCULATION

EPA Method TO-15 Modified Full Scan GC/MS

SDG:		**LABQC**
Laboratory Number:		**B121044**
Standard Volume	STV	10.0 ml
Sample Volume	SV	300 ml
Can Dilution Factor	CDF	1.00
Gas Constant		24.42
Decimal Places:		2

Sample Calculation:

1) Avg RFn = Sum [(Astdni) (Cistdi) / (Cstdni) (Aistdi)] i — Note: 1

2) Raw Amt = (Ansamp) (Cistdi) / (Avg RFn) (Aistdi) = **Cn**

3) Amount ppbv = (Raw Amt) 1000 (CDF) / (SV)

4) Amount ug/m3 = (amt(ppbv) MW / 24.42

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: LABQC
Laboratory ID: B09124

File Name: LABQC
Descriptio B121144
Canister:
QC_Batch: 12114-MA1

Date Sampled:
Date Analyzed: 12/11/24
Can Dilution Factor: 1.00
Air Volume: 300.00 ml

Time:
Time: 14:36

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	2.33	5.00	ND	9.56	20.48	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

Tentatively Identified Compounds

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-15 Modified Full Scan GC/MS

Analytical Method: TO-15

SDG: LABQC
Laboratory ID: B09124

File Name: LABQC
Descriptio B12134
Canister:
QC_Batch: 121344-MA1

Date Sampled:
Date Analyzed: 12/13/24
Can Dilution Factor: 1.00
Air Volume: 300.00 ml

Time:
Time: 14:44

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	2.33	5.00	ND	9.56	20.48	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

TIC Compound	MDL PPBV	RL PPBV	Amount PPBV	MDL UG/M3	RL UG/M3	Amount UG/M3
None	2.33	5.00	ND	9.56	20.48	ND

Tentatively Identified Compounds are Identified by a Computer Match and Semi-Quantitated against an Internal Standard
1) The identity of the compound is determined by a match to a computer library.
2) Many compounds have similar mass spectra so the actual compound can be different from the one reported
3) Hydrocarbons especially have similar mass spectra so it is difficult to determine which hydrocarbon is present
4) If there is not a good computer match, a type of compound may be indicated or it may be called "Unknown"
5) The Amount of the compound is calculated against an Internal Standard, so the reported Amounts are approximate.
6) The conversion from ppbv to ug/m3 is done assuming an average molecular weight of 100 since the identity of the compound is often not known with certainty.

Processing Notes:

1) A CAS Number is not necessary unless the client wants it and it is a 90+ match - It has to be mapped to the
2) We use an approximate molectular weight unless the client wants an exact weight and it is a 90+ match
3) Put in Match Quality from the LSC Report
4) Enter Retention Time from LSC Report
5) Enter the calculated concentration form the LSC Report in ppbv
6) Do not include 1,4-Difluorobenzene (our IS) - also do not include any target compounds - the machine should
7) Do not call hexane, ethyl ether, or acetonitrile since they are common lab solvents.
8) Check with Lab Director before calling high siloxanes - a couple of low siloxanes are ok. call as unknown silo

LCS/LCD Data Packages

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument. The DAB identifier is on each analytial report in the field called QC Batch. There will be one LCS/LCD report for each QC Batch (DAB) in this SDG.

Continuing Calibration Data Package

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument. The DAB identifier is on each analytial report in the field called QC Batch. There will be one Continuing Calibration QC Batch report for each DAB in this SDG.

Initial Calibration Data Packages

Samples were analyzed using the methods listed in Section 3. For each of the methods there is an Initial Calibration Curve that meets the criteria defined in Section 2 on Quality Control for the modified method.

Secondary Calibration Data Package

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument. The DAB identifier is on each analytial report in the field called QC Batch. There will be one Continuing Calibration QC Batch report for each DAB in this SDG.

CONTINUING CALIBRATION REPORT

SDG:	**LABQC**		
QC_Batch:	**121124-MA1**		
Sample ID:	ST62125		
Sample Analysis Date:	11 Dec 124 10:05 am		
Run Method:	A1563_L.M		
Quant/Calibration Method:	A15CS2_M.M		
Calibration Level:	**Level 4**	**10**	

A passing calibration can have (10%) or 10 compounds out

Sample Calculation:

1) $CCRFi = \left| \frac{(Astdi)\ (Cistdi)}{(Cstdi)\ (Aistdi)} \right|_i$

CCRFi is the Continuing Calibration RF

PFB - Pentafluorobenzene
14DFB - 1,4-Difluorobenzene
d5CB - d5-Chlorobenzene

Data Deliverable Package

Prepared For:
C.E. Schmidt
19200 Live Oak Road
Red Bluff CA 96080

EAS SDG Number: **224435**
Project Number: 17807
Report Sent:
Sample Event Date: 1/20,11/21/2024

Client Project Manager: Chuck Schmidt
Project Name: Chiquita Canyon
Project Number: Data Package GC Premanent Gas

This is the Laboratory Data Deliverable Package for the samples in the indicated Sample Delivery Group (SDG).

INDEX TO DATA PACKAGE:

Section 1 **Project Summary**
- Laboratory Work Order
- Sample Data
- Laboratory Case Narrative and Chain of Custody

Section 2 **Quality Control**
- Project QC Criteria
- DAB QC Reports

Section 3 **Analytical Methods**
- Analytical Method Description(s)
- Analytical Reports

Section 4 **Data Package with Quant Report and Chromatogram**
- DAB Run Logs and Preparation Log
- Sample Data Package
- Blank Data Package
- Continuing Calibration Package
- Initial Calibration Package

Section 5 **Standard Certificates**

Section 6 **SDG Documentation, Notes, Correspondence**

173 Cross Street, San Luis Obispo, California, 93401 (805) 781-3585

Section 1 Project Summary

The following pages provide detailed information about the sample receipt, log-in, and sample preparation. The Laboratory Work Order provides a cross reference between the Client ID number and the EAS Lab Number as well as a list of the analytical tests preformed. The items included in this section are listed below.

Project Sample Media

SDG Number: 224435

The following sample media was used for this Sample Delivery Group (SDG). The Sample Media column identifies the type of media. For canisters, the Sample Media Batch gives the canister number followed by the cleaning batch number, which is a unique identification. The initial pressure of the canister when it is received is recorded. If the canister is not pressurized, the final pressure will be the same as the initial pressure. If the canister is pessurized the final pressure will be recorded, and the canister dilution factor is calculated as the ratio of the final to initial pressure. The results are adjusted for the can dilution factor.

SDG	Lab ID	Client Sample No.	Sample Media	Batch	Pressure, torr Initial	Final	Can Factor
224435	1	T-401	636		737	921	1.25

Laboratory Case Narrative

EAS SDG Number: 224435 **Project Number:** 17807

Client: C.E. Schmidt

The Laboratory Case Narrative for the SDG is below. The Chain of Custody form(s) follow the Laboratory Case Narrative.

Sample Control Narrative

The samples were all received in good condition and with proper preservation.

Analytical Methods

The methods used for sample analysis are listed on the Analytyical Report header, and have been modified as described in the EAS Quality Manual..

Case Narrative

QC Narrative

All analyses met EAS method criteria as defined in the Quality Manual, except as noted in the report or QC reports with data qualifiers.

Subcontract Narrative

No sample analysis was subcontracted for this project

Laboratory Certification

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness other than the condition(s) noted above. The Laboratory Report is property of EAS and its client. The entire report has been reviewed and approved.

Date Approved:

Steven D. Hoyt, Ph.D.
Environmental Analytical Service
Laboratory Director

Section 2 Quality Control

This section contains the QC Reports for each Daily Analytical Batch (DAB) which make up the Sample Delivery Group (SDG). It also contains either the EAS or Project QC criteria that was used for the DAB. The methods used for this project have been modified from the original method. The modifications include modifications to the QC for the method. This is either because the method did not specify certain aspects of the QC, the method was originally designed for a different matrix, or additional compounds were added to the target list of the method which required modified QC. The QC modifications used by EAS follows those used by other air testing laboratories.

The Daily Analytical Batch data was checked against the QC criteria for the method. Any deviations from the QC criteria are listed on the QC Reports for each DAB, which are summarized in this section and are given in more detail in Section 4 which has the Quantitation Reports and Calculations for the Samples, Method Blank, Lab Control Spikes, as well as the Initial Calibration and Continuing Calibration. This section contains the following:

Quality Control Report

EAS SDG Number: 224435

Project Number: 17807

QC Narrative

Samples were anlayzed in a daily analytical batch (DAB) designated by a QC batch number, and were analyzed using EAS standard laboratory QC specified in the EAS Quality Manual which may be different then the referrenced agency method. Any deviations from the EAS QC criteria are flagged in the Laboratory Control Reports or in the sample Analytical Reports.

Standard Laboratory QC Report

Unless project specific QC was requested, this Section containing the standard laboratory QC (Level 2) supplied with the Analytical Reports. Each sample is analyzed in a Daily Analytical Batch (DAB) which includes the method blank, a laboratory control spike (LCS) and a laboratory control duplicate (LCD). A Daily Analytical Batch QC report is supplied for each method requested.

Method Blank

The method blank is a laboratory generated sample which assesses the degree to which laboratory operations cause a false positive. The target analytes in the analytical reports for a daily analytical batch are "B" flagged if their concentrations are present in the Method Blank above the RL, unless the result is greater then ten times the blank value..

Laboratory Control Spike

A laboratory control spike is a well characterized matrix similar to the sample which is spiked and run in duplicate with each Daily Analytical Batch. The laboratory control spike results are reported as a percent recovery. The QC Criteria for the control spike is listed in the Laboratory Control Report. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report. The control spike contains an abbreviated list of compounds in the method, and may contain compounds not on the target list for the specified report.

Laboratory Control Duplicate

The laboratory control duplicate is a duplicate analysis of the laboratory control spike, a standard, or a sample depending on the method. The results are reported as a relative percent difference (RPD). The criteria for the duplicate is in the Laboratory Control Report for the Daily Analytical Batch. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report.

Section 3 Analytical Methods

This section has information on the analytial methods and a copy of the analytical reports for the Sample Delivery Group (SDG) listed below. The reports are organized in order of the EAS Laboratory Number.

Section Contents

Analytical Method Description(s)

Analytical Reports

Analytical Reports

EAS SDG Number: 224435

Project Number: 17807

The following pages contain the certified Analytical Reports for the samples submitted in the Sample Delivery Group (SDG) and are in order of the EAS Lab ID number. All of the analytical methods used are modifications of the published methods. Procedural method modifications, QC modifications, QC Criteria modifications, target lists, definitions of detection limits, and flags are all explained in detail in the EAS Quality Manual. The Analytical Report has columns for the method detection limit (MDL), the reporting limit (RL), and the Amount. The Amount is the concentration of the compound in the sample. The report usually has the results reported with two commonly used units. The MDL, RL, and Amount are adjusted for the canister dilution factor and any dilution caused by sample matrix effects.

NELAC CERTIFICATION

EAS is accredited by the National Environmental Laboratory Accreditation (NELAC) with the Florida Department of Health, one of the NELAC certifying states. EAS is certified for the EPA TO-15, EPA TO-11 and EPA TO-4 methods. A list of accredited compounds is available on request.

DETECTION LIMITS

MDL: The MDL is lowest concentration that can be measured to be statistically above the noise level and is determined using the EPA 2016 method which uses the standard deviation of replicate measurements made over time. The method also incorporates systematic instrumentation blank levels. See Quality Manual for detailed explanation.

RL: The reporting limit (RL) is the lowest concentration that can be reliably reported for each compound that meets the QC Criteria for the method, background levels, or project specific considerations. The QC criteria level for the method blank is to be less then the RL See Quality Manual for more information.

DATA FLAGS

In the standard report, if a compound is not detected above the method detection limit, a "ND" is in the Amount column. The flag column is used for both the not detect flag and for any data flags.

B - This compound was detected in the batch method blank above the reporting limit and is greater then one tenth the amount in the sample.

E - This compound exceeds the calibration range for this sample volume.

J - The amount reported is estimated because it was below the RL and could be below the lowest calibration point, have higher uncertainty, or could be the result of system background

SIGNIFICANT FIGURES

Based on the uncertainty in the methods, the numbers on the Analytical Reports should be used with only two significant digits. Additional significant figures are reported for ease of use and to avoid rounding errors when used in further calculations.

UNITS

PPBV or PPMV: Parts-per-billion (or million) by volume is a mole (volume) ratio of the moles of analyte divided by the moles of air (gas). This is the primary unit used to report air or gas concentrations and is independent of temperature and pressure.

UG/M3 OR MG/M3: The reported result was calculated based on 1 atm pressure and a temperature of 25C. The conversion from PPBV is: UG/M3 = PPBV x MW/24.46 where 24.26 is the gas constant and MW is the Compounds Molecular Weight (sometimes called Formula Weight)

Section 4 Data Package

This section contains the Data Packages for the samples, blanks, and calibration. Each package has the analytical report, quantitation report, calculation sheet, instrument quantation report, and chromatograms.

Items provided in Data Package:

DAB Run Logs and Preparation Logs

Sample Packages

Blank Package for each Daily Analytical Batch

Quality Control Reports, LCS,LCD for each Daily Analytical Batch

Continuing Calibration Package for Each Daily Analytical Batch

Initial Calibration Data

Tune Data (if required)

DAB Run Logs and Preparation Logs

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument.
The DAB identifier is on each analytial report in the field called QC Batch.
This section contains the DAB Log Sheets and Preparation Logs.

Index

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Continuing Calibration Data Package

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument. The DAB identifier is on each analytial report in the field called QC Batch. There will be one Continuing Calibration QC Batch report for each DAB in this SDG.

CONTINUING CALIBRATION REPORT

ASTM D1945 GC/TCD

SDG: LABQC
QC_Batch: **120924-GCO**
Sample Analysis Date: 12/09/24
Initial Calibration Date: 04/19/24

Sample Calculation:

1) $CCRRF = \left| \frac{(Astdni)}{(Cstdni)} \right|$

2) Avg $RFn = Sum \left| \frac{(Astdni)}{(Cstdni)} \right|$

Calibration Level Level 9

Compound	Area Astdi	Cal Level Cstdi %	CCRRF	RFn	%Dev	%Dev Limit	%Dev Flag

Initial Calibration Data Packages

Samples were analyzed using the methods listed in Section 3. For each of the methods there is an Initial Calibration Curve that meets the criteria defined in Section 2 on Quality Control for the modified method.

CERTIFICATE OF ANALYSIS

Grade of Product: CERTIFIED STANDARD-SPEC

Customer:	ENV ANALYTICAL SVCS		
Part Number:	X07HE74CP14C000	Reference Number:	160-403006142-1
Cylinder Number:	ST0000232990	Cylinder Volume:	14.0 LG
Laboratory:	124 - Plumsteadville - PA	Cylinder Pressure:	240 PSIG
Analysis Date:	Mar 26, 2024	Valve Outlet:	160
Lot Number:	160-403006142-1		

Expiration Date: Mar 26, 2027

Product composition verified by direct comparison to calibration standards traceable to N.I.S.T. weights and/or N.I.S.T. Gas Mixture reference materials.

ANALYTICAL RESULTS

Component	Req Conc	Actual Concentration (Mole %)	Analytical Uncertainty
OXYGEN	2.500 %	2.490 %	+/- 2%
HYDROGEN	4.000 %	4.124 %	+/- 2%
METHANE	4.000 %	3.970 %	+/- 2%
CARBON DIOXIDE	5.000 %	4.799 %	+/- 2%
CARBON MONOXIDE	5.000 %	5.151 %	+/- 2%
NITROGEN	5.000 %	4.840 %	+/- 2%
HELIUM	Balance

1. SCS Site Specific Health and Safety Plan

1. Introduction

Landfill Surface Nomenclature

For the purposes of this protocol, the surface of the Chiquita Canyon Landfill (CCL or Landfill) was divided into the following areas:

Non-Reaction Area

This will be the portion of the Landfill that is not affected by the landfill reaction and that does not exceed the South Coast Air Quality Management District (SCAQMD) Rule 1150.1 integrated data limit of 25 parts per million by volume (ppmv) on the most recent surface emissions monitoring (SEM) event.

Reaction Area

This will be the portion of the Landfill designated as being affected by the landfill reaction and that does not exceed the SCAQMD Rule 1150.1 integrated data limit of 25 ppmv on the most recent SEM event.

Exceedance Area

This will be the portion of the Landfill designated as being affected by the landfill reaction and that exceeds the SCAQMD Rule 1150.1 integrated data limit of 25 ppmv on the most recent SEM event. This portion of the Landfill will be considered separately to assess any impact that the grid cells that exceeded the Rule 1150.1 integrated data criteria might have on total site surface emissions. Note that these grid cells are subject to a strict remediation schedule, so any emissions from these cells, over and above those from a reaction area cell not in exceedance, would be a temporary phenomenon.

Background

CCL is a municipal solid waste (MSW) landfill located in northern Los Angeles County. It recently has had an area in the landfill experiencing elevated gas temperatures and surface subsidence, with accompanying high SEM values, due to a subsurface reaction.

In accordance with Condition 12.d of the Stipulated Order for Abatement (SOFA) (Case No. 6177-4) between the SCAQMD and Chiquita Canyon, LLC (Chiquita), Chiquita is required to conduct an additional flux chamber study as a follow-up to a flux chamber study previously completed under the direction of the Los Angeles County Department of Public Health, which was submitted to the SCAQMD by October 31, 2023. Procedures for this additional study, as detailed in Condition 12.d, are provided below:

> *Respondent shall conduct an additional landfill gas flux study for methane, non-methane organic compounds ("NMOC"), total reduced sulfur ("TRS"), and speciated sulfur compounds to determine the surface flux throughout the landfill. The study shall be conducted through the use of static flux chambers oriented at various locations throughout the landfill site. Respondent shall prepare a proposed protocol for the study based on the results of the initial study and shall submit the protocol to South Coast AQMD [Baitong Chen, Air Quality Engineer, (bchen@aqmd.gov); Nathaniel Dickel, Senior Air Quality Engineer, (ndickel@aqmd.gov), and Christina Ojeda, Air Quality Inspector, (cojeda@aqmd.gov)] for review and approval by December 31, 2023. A report documenting the differences in the findings between the initial study and the additional study shall be submitted by no later than 90 days after South Coast AQMD approves the protocol to South Coast AQMD [Baitong Chen, Air Quality Engineer, (bchen@aqmd.gov); Nathaniel Dickel, Senior Air Quality Engineer, (ndickel@aqmd.gov), and Christina Ojeda, Air Quality Inspector, (cojeda@aqmd.gov)].*

This protocol is intended to address the requirements in the SOFA as well as provide an emissions assessment to determine the landfill emissions of odor and other substances for both the "non-reaction area" and "reaction area" of the Landfill.

Regarding the testing technologies to be used, as with the initial flux chamber study, the U.S. Environmental Protection Agency (USEPA) surface emission isolation flux chamber (flux chamber) technology will be used. This preferred USEPA technology as modified and described by SCAQMD Rule 1133.3, Attachment A is a dynamic chamber method for direct measurement on advective area sources. This approach is further described in Section 5.

In addition, data will be collected that will allow for the accurate estimation of past and future emissions based on past and future SEM events.

Site Location

The test site is the Chiquita Canyon Landfill, which is located at 29201 Henry Mayo Drive, Castaic, California, 91384.

Figure 1.1 – Site Location Map.

Facility Description

Chiquita Canyon Landfill is an active MSW disposal facility.

Objective

The objective of this additional emission assessment is to quantify by field measurement, the air emissions of odors, fixed gases (including methane, carbon dioxide, and carbon monoxide), reduced sulfur compounds, and speciated volatile organic compounds (VOCs) from the areas of the Landfill affected by the reaction and areas not affected by the reaction.

The air emissions will be directly measured using the USEPA Surface Emission Isolation Flux Chamber (flux chamber) following the USEPA User's Guidance document. Whole air samples will be collected

from the flux chamber by lined Summa® canister and Tedlar® bag with analysis by the following methods:

- American Society for Testing and Materials (ASTM) E-679 for olfactory odor,
- ASTM D-1945/USEPA Method 3C for fixed gases (including methane, carbon dioxide, and carbon monoxide),
- USEPA Method 3C for helium,
- SCAQMD Method 307-91 for hydrogen sulfide (H_2S)/organic reduced sulfur (ORS),
- USEPA Method TO-15 for speciated VOCs, and
- USEPA Method TO-12 for total non-methane VOC with functional group/molecular weight distribution.

Flux from soil surfaces can either be diffusive (driven by molecular action), advective (driven by gas movement), or a combination of both.

Given that it is expected that the landfill surface will have an advective flow at some or many locations, the flux chamber assessment will include the use of a tracer (10% helium) in the chamber sweep air gas as per SCAQMD Rule 1133.3, Attachment A. The dilution of the tracer taken from the evacuated canister samples will be used to calculate total flow in the flux chamber for the emissions assessment. Note that TO-12, TO-15, and ASTM D-1945/USEPA Method 3C samples will be collected and analyzed from the same sample canister.

2. Sampling Scope

This study will focus on the assessment of air emissions from areas of the Landfill affected by the reaction and areas not affected by the reaction. Each landfill area will be tested using the flux chamber technology. Flux chamber measurement data performed at representative locations within grid cells will be used to estimate odor/NMOC/sulfur compound/toxic air contaminant (TAC)/fixed gases emissions from the Landfill.

Cell grouping (see Table 2.1) is proposed to test high, medium, and low emitting cells (based on screening data) for both the non-reaction area surfaces and the reaction area surfaces. In addition, in order to better understand variability, replicate medium emission cells will be tested along with one cell that will be tested twice, with at least 24 hours between tests.

The product of the measurement program, which is based on the screening or monitoring data for air emission potential, is an average flux of odor/NMOC/sulfur/TAC emissions per category of grid cell. These grid cell flux data multiplied by the number of grid cells in these categories when summed, will represent the air emissions of compounds from the landfill operation.

Table 2.1 Landfill Emissions Flux Chamber Testing Scope.

SOURCE	Flux Chamber Tests	Odor/TAC/Fixed Gas/VOC Sampling	Comment
Non-Reaction Area Landfill Surfaces			
High Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Medium Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Second Medium Emission Category Grid Cell	4	4	Replicate cell for QA/QC
Low Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Reaction Area Landfill Surfaces (Footprint)			
High Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Medium Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Second Medium Emission Category Grid Cell	4	4	Replicate cell for QA/QC
Low Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Exceedance Area Surfaces			
Intent to quantify difference in grid testing	4	4	Samples taken at same or distributed within levels of emission potential within category of grid cell
Repeat Area Surfaces			
Intent to quantify difference in grid testing	4	4	Samples taken at initial, marked test locations within levels of emission potential within category of grid cell
QC Blank Samples		4	Minimum of 5% Blank Samples
QC Replicate Samples		4	Minimum of 5% Blank Samples
Total	40	48	

3. Quality Control

Quality control (QC) procedures that are used to assure data quality from flux chamber measurement are listed and described below. USEPA recommends no specific QC requirements except that a flow meter is used to introduce the sweep air at a rate of 5.0 liters per minute (l/min), which requires calibration (i.e., multiple trials at single point of use calibration using a primary standard current for the year). The rotometer used as part of the emission measurement test should not be used for other applications, ensuring the clean operation of the air introduction system. Operation of the chamber should follow the specific protocol for use described in the USEPA User's Guide. This includes using a 5.0 l/min sweep airflow rate and allowing for five residence times to achieve equilibration prior to sample collection. Other sampling quality control procedures are listed below.

- Media Blank Sample -- A media blank sample is obtained by filling sampling media with ultra high purity air, water, or impinger solution in the field, and handling the media blank samples as field samples. The frequency of media blank samples is a minimum of 5%, or one per trip. Media blank samples will be collected daily, and these data will be used to establish the system baseline.

- Replicate Sample -- Sample precision is determined by collecting a replicate sample immediately after a sample is collected and analyzing both the field sample and the field replicate sample. The frequency of replicate sample collection will be a minimum of 5%; a replicate sample will be collected daily. The criteria for acceptable field precision is ±50% relative percent difference (RPD).

- Specific Method Performance -- Specific method QC is conducted as per analytical method requirements. This includes laboratory blanks, species recovery, and adherence to other method performance objectives such as calibration and retention time identifications. The laboratories will follow the method QA requirements for all listed methods.

- Sample Management -- Sample management is defined by the specific sampling method used to satisfy the program objectives. Sample management typically includes all activities, including the recording, preserving, storing, handling, and shipping of the field samples. A summary of the sample management information for the proposed field measurement activities is given in Tables 3.1 and 3.2.

Table 3.1 Summary of Sample Management Information

Analytical Method	Sample Container	Hold Time	Preservation	Special Considerations	Comment
ASTM E-679	10-Liter Tedlar® Bag	30 hours	None	Ship in Cardboard	None
USEPA Method TO-15/TO-12	6-Liter Canister	28 days	None	Ship in Cardboard	None
SCAQMD 307-91	1-Liter Tedlar® Bag	24 hours	None	Ship in Cardboard	None
ASTM D-1945/USEPA Method 3C	6-Liter Canister	30 days	None	Ship in Cardboard	None

Data qualifiers that will be used to assist in data usage include:

- J -- estimated value or below method reporting limit (MRL);
- B -- value found in blank sample and baseline corrected; and
- E -- value found at level that exceeds calibration range.

Laboratory recovery and precision data, as well as field precision data, will be used to qualify data usage for the site flux chamber program.

The field QC activities scheduled for the field testing are summarized in Table 3.2. Deviation in schedule or frequency of QC activities will require corrective action, including documentation of corrective action in the field notebook and notifying an SCS project manager of the deviation and corrective action.

Table 3.2. Summary of Field Quality Control Information

Sampling Method	Activity	Frequency	Criteria	Comment
Flux Chamber	Rotometer Single-Point Calib.	Once per year	Define Rotometer Setting	None
Field Blank	All media	Minimum of 5%	None	Use As Baseline Data
Replicate Sample	All media	Minimum of 5%	± 50% RPD	Qualify Exceedances

4. Sampling Strategy

Sample locations will be selected based on SEM data obtained under the SCAQMD Rule 1150.1 SEM program. The SEM program consists of surveying the landfill surface on a track using a field portable, calibrated instrument sensitive to methane and total non-methane hydrocarbon (TNMHC). Using this methodology, landfill grid cells will be selected for flux chamber testing. The landfill grid pattern, showing the current designated reaction area grid cells, is shown in Figure 4.1.

Test Cell Selection Methodology

This emissions assessment will be conducted by analyzing the Rule 1150.1 SEM data and categorizing the landfill areas based on surface emissions. At this site, SEM events are conducted as often as every two weeks.

The SEM events are conducted using an instrument fit with a flame ionization detector (FID) along with global positioning system (GPS) location recording to map fugitive surface hydrocarbon concentrations following a pattern in each grid cell for the site. Instantaneous fugitive concentration data is determined by walking a serpentine path across each nominal 50,000 square foot (ft^2) landfill grid cell. Integrated concentration data is determined by averaging the instrument readings obtained while traversing the serpentine path as illustrated in Figure 4.2.

Emissions concentration data and location information will be collected and stored for the purpose of ranking grid cells on the Landfill by emissions concentration. The integrated concentration data will be used to 'rank' the grid cells into categories of high, medium, and low emissions. The instantaneous fugitive concentration data will be used to select representative locations for flux chamber testing where flux data for odors/VOCs/sulfur/TACs will be collected. The flux from these representative locations will be used to estimate air emissions from the entire surface of these cells.

Tables 4.1 through 4.3 show the sorted integrated SEM data for the non-reaction area cells for the period May 1, 2023 through July 25, 2023. Table 4.4 shows the sorted integrated SEM data for the reaction area cells for the period May 1, 2023 through July 25, 2023. The data included in Tables 4.1 through 4.4 are from the first test event and are solely provided here for illustrative purposes. For the actual test event, all data available will be used, with the most recent data receiving the most emphasis.

Column 1 will show the grid cell number designation.

Column 2 will show the surface area of each grid cell (each grid cell is nominally 50,000 ft^2, but for this analysis, the exact area of each grid cell will be used).

Columns 3 through 8 will show the integrated SEM values (FID response as ppmv methane) for each SEM event. The most recent SEM event will be shown in red.

Column 9 will show the average of all the SEM events.

Column 10 will show the cumulative average of all the cells above the cell in question.

Notes for Tables 3.1 through 3.4:

1. "HE" means that the grid cell was not monitored due to heavy equipment operating in the grid cell.
2. "AT" means that the grid cell was not monitored due to active trash disposal in the grid cell.

The non-reaction area test cells (see Tables 4.1 through 4.3) will be initially selected by organizing the integrated SEM data by average (Column 9) and splitting the resulting data into three categories: high, medium, and low emissions. From there, the mean cell(s) from each group will be initially selected for testing. These cells will be highlighted in blue in the data tables.

A similar process will be used for the reaction area test cells (see Table 4.4). One grid cell will be selected to be tested from the exceedance area. This cell will be highlighted in red. The non-exceedance reaction area test cells will be initially selected by splitting the data into high, medium, and low emission groups. The mean cell(s) from each group will be initially selected for testing. These cells will be highlighted in blue in the data tables.

Table 4.5 shows the anticipated integrated FID readings for each of these cell selection groups.

The Landfill will then be evaluated for the final cell selection. This will be done because sometimes a selected cell may not be accessible for testing or may not otherwise be representative. This cell will be highlighted in red, signifying that it is the actual test cell for that group. This procedure will be replicated for each of the landfill area/sub-area groups.

Note that any cell can be tested and pro-rated using this methodology. However, the mean emissions cells will be used because they should result in the most accurate results.

Table 4.5 Target Cell SEM Integrated Values for Each Test Condition.

Condition	Target Integrated Screening Value (ppmv)
Non-Reaction Area Low	4
Non-Reaction Area Medium	5
Non-Reaction Area High	8
Exceedance Area Low	12
Exceedance Area Medium	16
Exceedance Area High	22

Selecting Test Points in a Cell

Using survey flags, the serpentine route prescribed by Rule 1150.1 in a cell will be walked and FID readings will be periodically noted on planted flags and on the field screening data forms as shown in Figure 4.3. Flux chamber samples will be taken at the following target locations:

1. Highest Emission - Peak FID reading on serpentine walk.
2. High Emission - Mid-point of the highest 10% of readings.
3. Medium Emission - Mid-point of the next 40% of readings.
4. Low Emission – Mid-point of lowest one-half of readings.

During the testing event, areas will be assigned to each of the above four groups by the portion of data points (flags) in each group. Cells will be screened twice, once at least 24 hours but no more than 48 hours prior to the screening event, and again immediately prior to sampling. Results will be recorded on the same form using different ink colors. Photo 4.1 shows typical field screening activity.

5. Sampling Methods

Flux Chamber Sampling

As described in the USEPA User's Guide (February 1986), the flux chamber is an environmental or portable chamber also known as a mixed-tank reactor that is used to measure the 'flux' (mass transfer of study compounds per surface area of area source per time). Ultra-high purity air (sweep air) from a compressed air cylinder is regulated and added to the flux chamber at a flow of 5 liters per minute (lpm) until the chamber contents are well mixed. The chamber is a 'vented' chamber which releases or exhausts the chamber gas through the pressure equalization port in the top of the chamber to the atmosphere which keeps the chamber contents at atmospheric pressure during the measurement. Chamber mixing is described by a number of 'residence times.' A residence time in the chamber is determined by dividing the chamber volume by the sweep air flow rate. Following the User's Guide and with a chamber volume of 30 liters, the residence time is 6 minutes. Proper mixing in the chamber is achieved after five residence times or 30 minutes. After mixing, or after the chamber contents (sweep air plus compounds emitted into the chamber) are at equilibrium, gas samples are collected per regulatory approved methods. Knowing the sweep air flow rate (5 lpm), the area of the flux chamber on the test site (0.13 square meters), and the concentration of the study compounds, the flux of study compounds can be calculated (units of milligrams per square meter per minute, mg/m2,min).

Dynamic vs. Static Chamber Technologies

Direct measurement using portable environmental chambers has been around now for many decades. USEPA and the Environmental Monitoring Systems Laboratory (EMSL-Las Vegas) in the early 1980s were interested in providing a direct emission measurement technology for 'area' sources that would complement point source assessment and mobile source assessment technologies. Both 'static' and 'dynamic' chambers were explored, looking at the efficacy of both approaches for use on hazardous and non-hazardous sites with area sources. The evaluation included criteria such as accuracy, precision, repeatability, cost, and ease of operation or level of expertise needed.

Looking at both static and dynamic chamber technologies, static chamber technologies were generally considered for screening applications versus quantitative assessment of emissions. The dynamic chamber technology approach was selected for research and method development. Although static chambers are considered low-tech in that they do not need a sweep gas and are easy to use by comparison, the problems associated with collecting valid data focused USEPA and EMSL-Las Vegas's attention on dynamic chambers.

Basically, a static chamber on an area source will collect surface emissions until an equilibrium is achieved in the chamber. That equilibration time is different with various compounds and type of source being tested. The key parameter in measuring 'flux' of compounds (mass transfer of compounds from the surface- mass/time, surface area), which is equilibration 'time' from an area surface, was unknown and would have to be assumed when the air sample from the static chamber was made. In addition, static chambers have significant wall effects from compound interaction. Further, as chamber air is pulled out of a static chamber, which is a sealed vessel, a vacuum is created in the chamber, resulting in a bias in the measurement.

These problems with static chamber technologies are overcome by using a dynamic chamber that is well mixed by design, uses a sweep air, and, given that the dynamic chamber is vented to the atmosphere,

prevents unwanted pressure effects on collecting samples from the chamber. This results in an accurate, precise, and reliable assessment of surface flux from area sources.

The USEPA flux chamber technology, which provides a protocol for this technology standardizing the design and use of the method as described in the USEPA Guidance document, is considered a preferred, in-depth assessment technology. This Guidance and technology overcomes the issues with static chambers (recommended only for screening purposes) by using a standard chamber design, construction materials, sweep air, and standard operating protocol. The sweep air added to the chamber reduces or eliminates chamber wall effects, and allows for sampling the air in the chamber at steady state conditions (equilibration time constant) without influencing the flux event--sample collection is maintained by protocol at a rate in a vented chamber so that the pressure (negative or positive) in the dynamic chamber does not exceed 0.1 pascal.

Even though the dynamic flux chamber requires a higher level of expertise to use, is more cumbersome to use, and requires a companion compressed air cylinder of ultra high purity air as a sweep gas, the dynamic flux chamber is an agency approved technology for this application, providing the most reliable assessment of area sources available. In addition, as modified by the SCAQMD (Rule 1133.3, Attachment A), this dynamic area source assessment technology has been approved for use with advective sources that allow, by use of a trace gas (10% helium), quantitation of the advective flow for each location tested.

Flux Chamber Methodology Used for This Study

The surface emission isolation flux chamber (flux chamber) can be used on any liquid surface and on solid surfaces. The only requirement regarding application is that there must be access to the surface for testing. If the surface cannot support the chamber, the chamber must be suspended or equipped with a flotation device or suspended from overhead.

For sampling natural or uncontrolled systems, the location and number of locations for testing must be sufficient so that these data can be used to calculate the total emissions from the emitting surface area. Photographs of the flux chamber used to measure odor/VOC/sulfur/TAC emissions from landfill operations are shown in Photo 5.1.

Photo 5.1 USEPA Flux Chamber Sampling Solid Surface

The basic operation of the flux chamber involved the following:

1. Identifying the test area or test surface;
2. Initiating sweep gas flow rate to the flux chamber;
3. Operating the chamber for at least five residence times (30 minutes);
4. Collecting sample gas from the chamber for analysis;
5. Decontaminating the chamber; and
6. Relocating the measurement equipment to the next test area.

The specific operating protocol for flux chamber sampling is as follows:

1. Locate the flux chamber, sweep gas, sample collection equipment, and field documents at the test location.
2. Document site information, location information, equipment information, name of sampler, date, and time on the Emissions Measurement Data Sheets (Figure 5.1).
3. Place the chamber approximately ¼ inch into test surface at the test locations selected as described in the Emissions Report. Seal the chamber along the base to prevent air infiltration. Place thermocouples to monitor soil and air temperature inside and outside of the chamber.
4. Initiate the sweep gas flow rate and set the rotometer at 5.0 lpm. Maintain a constant sweep gas flow rate. Record time.
5. Collect instrument background data (thermocouple) and other parameters (see Emissions Measurement Data Sheets) and record data.
6. Connect the purge pump to the chamber. Purge the sample line from the flux chamber without exceeding the line purge rate (or sample gas collection rate of 2.5 lpm; this prevents entraining of ambient air into the chamber.
7. Operate the chamber sweep air flow rate at 5.0 lpm and record data every residence time (6 minutes) for four to five residence times or 30 minutes. Record the flow rate and time data. Maintain the chamber at steady state. Purge the sample line and Tedlar bags from the flux chamber with at least 10 line-volumes of air as part of the odor bag sampling protocol using the decompression lung device, preparing the sample line for the balance of the sample media collection.
8. Connect the sample media sequentially (odor bag, sulfur bag, and evacuated canister) to the purged sample line and collect the gas sample. Do not exceed a collection rate of 2.5 lpm at any time to prevent unwanted dilution of chamber exhaust gas by ambient air. Both the odor and sulfur bags are purged prior to sample collection; the evacuated canister is not purged.
9. Label the sample bag and record sample collection on the data sheet.
10. Store the sample(s) in the appropriate storage and/or shipping container as specified in the SP.
11. Document sample collection in field data sheets.
12. Discontinue the flux measurement, shut off the sweep air, remove chamber, and secure equipment.
13. Decontaminate the chamber where contact was made with the liquid or solid material using a clean paper towel and water (if needed) to remove any soil and condensation from the inside of the chamber.
14. Relocate equipment to the next test location or test setting, and repeat steps 1 through 13.

Canister Sampling

Grab samples using Summa® polished, evacuated stainless steel canisters will be collected from the exhaust line of the flux chamber at steady-state conditions for speciation by gas chromatography. Sampling rate will be maintained at less than 2.5 lpm from the flux chamber. Canister samples will be collected by connecting the canister to the sampling line from the flux chamber using 1/4-inch Swage-lock fittings, drawing a vacuum from the canister and filling the canister. All canisters will be batch certified by the laboratory according to USEPA Methods TO-15/TO-12/fixed gases/helium and sampled to full capacity (atmospheric pressure).

Tedlar Bag Sampling

Grab samples using Tedlar® bags will be collected from the sample line from the flux chamber at the steady-state conditions (five residence times) for analysis for olfactory odor and sulfur containing species. Bag samples will be collected by connecting the sampling line from the flux chamber using 1/4-inch Swage-lock fittings inside the decompression lung or pressure fittings, drawing a vacuum on the decompression lung, and filling the Tedlar bag. Both the odor bag and the sulfur bag will be purged and evacuated prior to the sample collection in order to minimize sample bag interaction.

Sample Handling

All sampling media will be recorded using a chain-of-custody sheet, as shown on Figure 5.2. A copy of the chain-of-custody will be kept with the field samplers, and a copy will be shipped to the lab along with the samples. The lab will review the chain-of-custody, make any necessary annotations, and return a copy of the chain-of-custody with the reporting of the lab results.

Shipping

Samples will be packaged according to media preservation and shipping instructions. All samples will be shipped using commercial shippers allowing for sample hold times to be met by the laboratories. Shipping receipts will be retained by the field crew.

6. Analytical Methods

Olfactometry (ASTM E-679)

Odor samples will be analyzed using an olfactory panel and butanol calibration. Gas samples are collected in purged Tedlar® bags using a decompression device where gas is collected by filling a bag without passing the sample through a pump. Tedlar® bag samples are collected, stored in light-shielded cardboard containers, and shipped to the lab via overnight express mail for analysis within 30 hours.

The odor samples are diluted to below olfactory detection limits and then introduced to a gas delivery system. A panel of eight members trained in odor response serves as the odor "detector." Panel members are asked to smell air samples delivered to one of three nose cones (the other nose cones have clean air), one of which has the diluted sample. The concentrations of sample are increased until one-half of the odor panel members can detect the odor. The odor measurement is concluded when detection by four of the eight panel members is recorded. The odor concentration is expressed as the number of dilutions that were required for one-half of the panel members to record detection: detection threshold (D/T) level. Typical method quality control includes field blank samples and duplicate analysis. Odor concentrations can be used to evaluate odor strengths, ambient odor, or in modeling exercises to estimate a downwind odor strength. Data will be reported as D/T and recognition threshold (R/T).

SCAQMD Method 307-91 for Organic Reduced Sulfur

Sulfur species will be analyzed from a Tedlar® bag using gas chromatography/sulfur chemiluminescence detector (GC/SCD). The target analyte list is shown on Table 6.1.

Table 6.1 Target Analyte List for H2S/ORS.

Hydrogen sulfide
Carbonyl sulfide
Methyl mercaptan
Ethyl mercaptan
Dimethyl sulfide (DMS)
Carbon disulfide
isopropyl mercaptan

n-propyl mercaptan
s-Butyl mercaptan
i-Butyl mercaptan
Dimethyl disulfide
Tetrahydrothiophene
Unidentified sulfurs
Total reduced sulfur (TRS)

ASTM D-1945/USEPA Method 3C for Fixed Gases

Fixed gases will be analyzed from a Summa® canister using a GC/TCD. The target analyte list is shown on Table 6.2.

Table 6.2 Target Analyte List for Fixed Gases.
Methane
Carbon dioxide
Oxygen
Nitrogen
Hydrogen
Carbon monoxide
Helium (as a tracer for flow determination)

USEPA TO-12 for VOCs or NMOCs

The C_2 to C_{12} hydrocarbons and TNMHC taken as VOC emissions is determined using fused silica capillary column on an HP 5890 GC with a FID detector. A 200 ml sample is loaded using a flow controller onto a glass bead freeze out trap immersed in liquid oxygen. The components are desorbed onto a cryo-focusing loop and separated using a 100-meter, 0.25-micron fused silica PetroCol capillary column. The column is programmed from -20 °C to 225 °C at 4 °C /min. On the FID, hydrocarbons have a uniform response based on the number of carbon atoms, and the total area is used to calculate the TNMHC. The instrument is calibrated using a National Institute of Standards and Technology (NIST) Traceable, 10 ppmv hexane standard. The data will be reported as TNMHC as methane. In addition, data will be provided as to distributions of functional groups and molecular weights/carbon counts.

USEPA TO-15 for VOC Species

USEPA Method TO-15 GC/MS method uses a cryo-trapping system with a high-resolution capillary column to analyze for TAC using gas chromatography/Mass Spectrometry (GC/MS). This method can be used for many saturated and unsaturated organic compounds, and includes alcohol compounds. The method can measure most compounds down to 0.2 parts per billion by volume (ppbv). The target compound list is provided in Table 6.3

Samples are analyzed on an HP 5890 Series II gas chromatograph. A gas phase internal standard mixture is injected with each sample prior to sample loading. The freeze-out loop is constructed of 1/8" x 8” nickel tubing packed with glass beads and is immersed in liquid oxygen while the sample is drawn through the loop using a vacuum pump connected to a mass flow controller adjusted to a flow of 50 milliliters per minute (ml/min). After the sample is trapped, it is thermally desorbed at 150 °C using an electric heater and is cryo-focused onto the beginning of a 0.32 millimeter (mm) internal diameter deactivated fused silica capillary column. The cryo-focused loop is then warmed, and the compounds are injected onto a 60-meter, DB-5, 0.25 mm ID fused silica capillary column in the GC. The GC is temperature programmed from -10 °C to 220 °C at a ramp rate of 13 °C /min. As the column is heated, the compounds elute off the column and enter the detector.

Table 6.3 Target List for TO-15 HAP/TAC Speciated Hydrocarbon Analysis.

Freon 12	n-Hexane	Dibromochloromethane
Chloromethane	Chloroform	1,2-Dibromoethane
Freon 114	Ethyl acetate	Tetrachloroethene
Vinyl chloride	Tetrahydrofuran	Chlorobenzene
1,3-Butadiene	1,2-Dichloroethane	Ethylbenzene
Bromomethane	1,1,1-Trichloroethane	m,p-Xylene
Chloroethane	Benzene	Bromoform
Acetone	Carbon tetrachloride	Styrene
Freon 11	Cyclohexane	1,1,2,2-Tetrachloroethane
Isopropyl Alcohol	1,20-Dichloropropane	o-Xylene
1,1-Dichloroethene	Bromodichloromethane	Benzyl chloride
Methylene chloride	Trichloroethene	4-Ethyl toluene
Carbon disulfide	1,4-Dioxane	1,3,5-Trimethyl benzene
Freon 113	n-Heptane	1,2,4-Trimethyl benzene
trans-1,2-Dichloroethene	cis-1,3-Dichloropropene	1,3-Dichlorobenzene
1,1-Dichloroethane	4-Methyl-2-pentanone	1,4-Dichlorobenzene
MTBE	trans-1,3-Dichloropropene	1,2-Dichlorobenzene
Vinyl acetate	1,1-2-Trichloroethane	1,2,4-Trichlorobenzene
2-Butanone	Toluene	Hexachlorobutadiene
cis-1,2-Dichloroethene	2-Hexanone	

7. Data Analysis and Reporting

Data Validation

All field and sample data will be reviewed and challenged against the method QC specifications. Data not meeting method specifications will be flagged appropriately.

Data Analysis

All cells will be quantitatively screened by FID for the integrated concentration. The cells will be placed into three groups based on emission levels for this screening. Cells will be assessed (high level, medium level, and low level) in detail by further screening and flux chamber measurement. The emissions from the representative cells will be used to estimate the emissions for the portion of the landfill that they represent, either non-reaction area surfaces or reaction area surfaces.

Report

The data will be presented in a report that provides a description of the sampling effort and tabular emission rates for each process. All field notes, chain-of-custody forms, and laboratory reports will be included in the report.

8. Project Implementation

Schedule

The project will be executed on the schedule given below. The project team will arrive the morning of testing at 0700. All equipment and field supplies will be inventoried that day. The first order of business will be to review health and safety issues. All field progress will be recorded on field data sheets, and all

chain-of-custody will be completed on the day of sample collection. All shipping records will be retained as part of the field data set, and the person shipping samples is responsible for contacting the laboratory prior to sample receipt.

Table 8.1 Project Schedule

Draft Protocol	12/31/2023
Field Sampling	Within 4 to 5 weeks of approval of protocol
Report	Within 3 to 4 weeks of receipt of laboratory data

Laboratory Shipping Addresses

Olfactometry Laboratory

Odor Science & Engineering, Inc.
105 Filley Street
Bloomfield, CT 06002
Contact: Martha O'Brien or Gary Grumley, (860) 243-9380 x102

FedEx: FedEx Ship Center
21300 Vanowen St
Canoga Park, CA 91303
Last East Coast Drop Off: 5:00 PM

Canister Analysis

EAS
173 Cross Street
San Luis Obispo, CA 93401
Contact: Steve Hoyt, (805) 781-3585

Sulfur Analysis (either lab)

AtmAA
23917 Craftsman Road
Calabasas, CA 91302
(818) 223-3277

AAC
2225 Sperry Avenue
Ventura, CA 93003
(805) 650-1642

Project Equipment

All sampling media (prepared per method specifications) will be provided by the contract laboratory, including clean, evacuated canisters. Dr. C.E. Schmidt will supply all other sampling equipment and expendable supplies. Following are the necessary field equipment and expendable supplies for the proposed field testing:

- USEPA flux chambers per USEPA design, including stainless steel Swage-lock fittings
- Support cooler with a mounted rotometer (0-to-5 liter per minute) through the cooler walls
- Brass, 2-stage regulator for bottled air (CGA 590) fitting for air and 1/4" Swage-lock (male) adapter fitting
- Ten-foot, ¼-inch Teflon® line with female fittings
- Ten-foot, ¼-inch Teflon® air inlet/outlet support line
- Large size plastic support cooler
- Set of miscellaneous hand-tools, including an adjustable crescent wrench for the CGA 580 regulator fitting, small adjustable crescent wrench for the 1/4-inch swage fittings, assorted medium- and small-size screw drivers
- Two 12-inch Type K thermocouple wires and temperature readout
- Rigid-wall shipping/storage crate for the flux chamber mounted on roller wheels
- Decontamination supplies, including Alconox soap, paper towels, and wash water
- Ultra high-purity air bottles with trace gas helium (4, size 150)
- Purge pump for sample line purging
- Canister media
- Sample shipping containers
- Hand tools
- Camera
- Hard hat
- Safety glasses
- Decompression lung samplers (2) for bag sample collection
- TVA-100B with support and calibration gases
- Jerome 631X analyzer

9. Health and Safety

All field work will be in conformance with the SCS Site Health and Safety Plan (attached). Specific requirements include:

- Hard hat,
- Safety shoes,
- Eye protection,
- Visibility clothing, and
- Personal gas monitoring.
