1. Introduction

Background

The Chiquita Canyon Landfill (CCLF or Landfill) is a municipal solid waste (MSW) landfill located in northern Los Angeles County. An area of the Landfill is currently experiencing elevated gas temperatures and surface subsidence, with accompanying elevated gas generation, due to a subsurface reaction. This report is intended to provide an emissions assessment to determine landfill surface emissions of odor and other substances for both the area of the Landfill affected by the reaction and areas not affected by the reaction. The first test event for this emissions assessment was conducted on August 29-31, 2023. A second test event was conducted on March 19-21, 2024. The "Third Test Event," which is described in this report, was conducted on November 19-21, 2024.

Site Location

The test site is Chiquita Canyon Landfill, which is located at 29201 Henry Mayo Drive, Castaic, California, 91384.

Figure 1.1 Site Location Map.

Facility Description

At the time of the Third Test Event, Chiquita Canyon Landfill was an active MSW disposal facility.

Objective

The objective of this emissions assessment was to quantify, by field measurement, the air emissions of odors, fixed gases (including methane, carbon dioxide, hydrogen, and carbon monoxide), reduced sulfur compounds, and speciated volatile organic compounds (VOCs) from the area of the Landfill affected by the reaction and areas not affected by the reaction.

Methodology

The Landfill's air emissions were directly measured using the U.S. Environmental Protection Agency (USEPA) Surface Emission Isolation Flux Chamber (flux chamber) following the USEPA User's Guidance document (see Photo 1.1). Whole air samples were collected from the flux chamber using Summa® canister and Tedlar® bags with analysis by the following methods:

- American Society for Testing and Materials (ASTM) E-679 for olfactory odor;
- ASTM D-1945/USEPA Method 3C for fixed gases (including methane, carbon dioxide, hydrogen, and carbon monoxide);
- USEPA Method 3C for helium;
- South Coast Air Quality Management District (SCAQMD) Method 307-91 for hydrogen sulfide (H_2S)/organic reduced sulfur (ORS);
- USEPA Method TO-14 for speciated VOCs;
- USEPA Method TO-15 for speciated VOCs (including tentatively identified compounds); and
- USEPA Method TO-12 for total non-methane VOC with functional group/molecular weight distribution.

Flux from soil surfaces can either be diffusive (driven by molecular action), advective (driven by gas movement), or a combination of both. Given that it was expected that the landfill surface would have an advective flow at some or many locations, the flux chamber assessment included the use of a tracer (10% helium) in the chamber sweep air gas as per SCAQMD Rule 1133.3, Attachment A. The dilution of the tracer taken from the evacuated canister samples was used to calculate total flow in the flux chamber for the emissions assessment. Note that TO-12, TO-14, TO-15, USEPA Method 3C, and USEPA Method 3C samples were collected and analyzed from the same sample canister.

Photo 1.1 USEPA Flux Chamber Used in Testing Program.

Landfill Surface Nomenclature

For the purposes of this test, the Landfill surface was divided into the following areas:

Non-Reaction Area

This is the portion of the Landfill that is not affected by the landfill reaction and that did not exceed the SCAQMD Rule 1150.1 integrated data limit of 25 parts per million by volume (ppmv) on November 4-5, 2024, the dates of the site-wide SEM event whose data was used to select the test cells.

Reaction Area

This is the portion of the Landfill designated as being affected by the landfill reaction by SCS Engineers' (SCS) staff as set forth by the Reaction Committee, and that did not exceed the SCAQMD Rule 1150.1 integrated data limit on November 4-5, 2024 (Appendix 1). Note that SCS is the Landfill's gas collection and control system consultant.

Exceedance Area

This is the portion of the Landfill that was designated as being affected by the landfill reaction and that exceeded the SCAQMD Rule 1150.1 integrated data limit on November 4-5, 2024. This portion of the Landfill was considered separately to assess any impact of the grid cells that exceeded the Rule 1150.1 integrated data criteria would have on total site surface emissions. Note that these grid cells are subject to a strict remediation schedule, so elevated emissions from these cells would be a temporary phenomenon.

2. Sampling Scope

This study was focused on the assessment of air emissions from areas of the Landfill affected by the reaction and areas not affected by the reaction. Each landfill area was tested using the flux chamber technology. Flux chamber measurement data performed at representative locations within grid cells was used to estimate the following: odor; VOC; sulfur compound; toxic air contaminant (TAC); and fixed gases emissions from the Landfill.

The completed scope of work for the emissions assessment is given below in Table 2.1.

Table 2.1 Scope of Work for the Emissions Assessment.

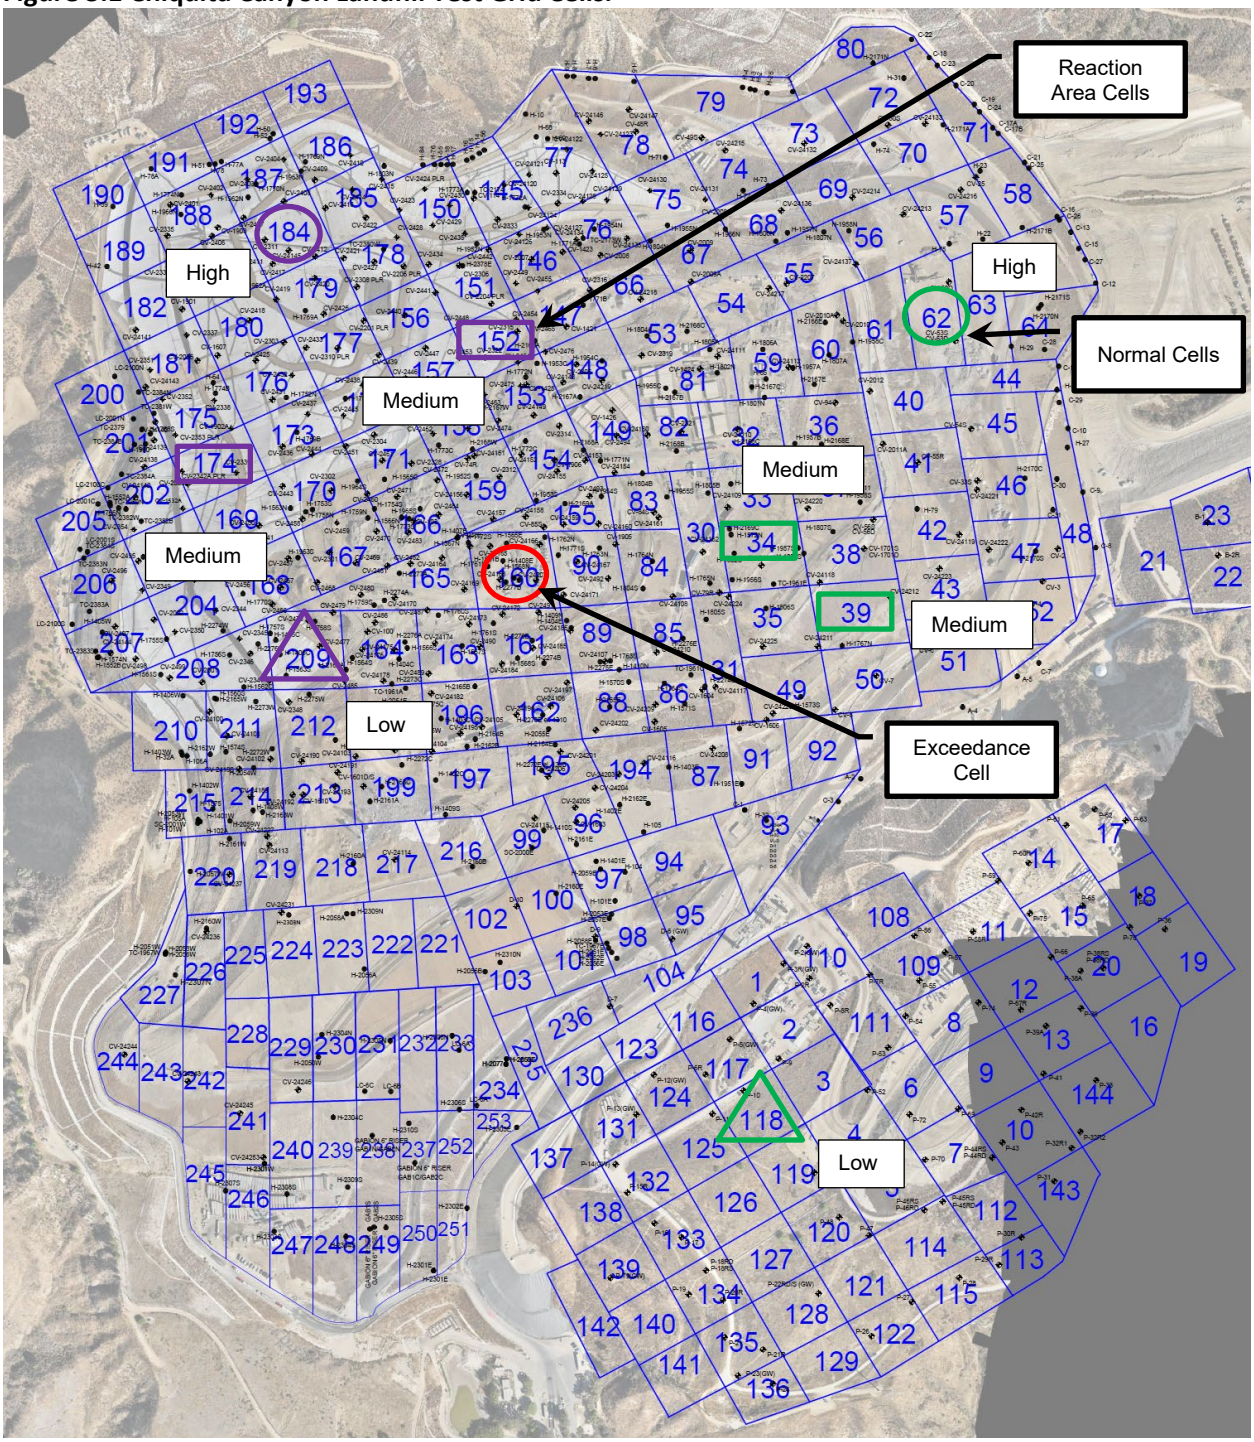
Source	Flux Chamber Tests	Odor/TAC/Fixed Gas/VOC Sampling	Comment
Non-Reaction Area Landfill Surfaces			
High Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Medium Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Second Medium Emission Category Grid Cell	4	4	Replicate cell for QA/QC
Low Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Reaction Area Landfill Surfaces (Footprint)			
High Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Medium Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Second Medium Emission Category Grid Cell	4	4	Replicate cell for QA/QC
Low Emission Category Grid Cell	4	4	Samples distributed within levels of emission potential within category of grid cell
Exceedance Area Surfaces			
Intent to quantify difference in grid testing	4	4	Samples taken at same or distributed within levels of emission potential within category of grid cell
Repeat Area Surfaces			
Intent to quantify difference in grid testing	4	4	Samples taken at initial, marked test locations within levels of emission potential within category of grid cell
QC Blank Samples		3	Minimum of 5% Blank Samples
QC Replicate Samples		3	Minimum of 5% Blank Samples
Total	40	46	

3. Sampling Strategy

Selection of Sampling Locations

Sampling locations were selected based on SEM data obtained under the SCAQMD Rule 1150.1 SEM program. The SEM program consists of surveying the Landfill surface on a track using a field portable, calibrated instrument sensitive to methane and total non-methane hydrocarbon (TNMHC). The Landfill grid pattern is shown in Figure 3.1. The grid cells over the areas of the Landfill affected by the reaction are highlighted. The grid cells that were sampled are enclosed in a geometric figure.

Figure 3.1 Chiquita Canyon Landfill Test Grid Cells.



Key: Normal Low, Normal Medium, Normal High, Reaction Low, Reaction Medium, Reaction High, Exceedance

Test Cell Selection Methodology

This emissions assessment was conducted by analyzing Rule 1150.1 SEM data and categorizing the Landfill areas based on surface emissions. At this site, SEM events are conducted as often as every two weeks.

The SEM events are conducted using an instrument fitted with a flame ionization detector (FID) along with global positioning system (GPS) location recording to map fugitive surface hydrocarbon concentrations following a pattern in each grid cell for the site. Instantaneous fugitive concentration data is determined by walking a serpentine path across each nominal 50,000 square foot (ft^2) Landfill grid cell. Integrated concentration data is determined by averaging the instrument readings obtained while traversing the serpentine path as illustrated in Figure 3.2.

Emissions concentration data and location information are collected and stored for the purpose of ranking grid cells on the Landfill by emissions concentration. The integrated concentration data was used to 'rank' the grid cells into categories of high emissions, medium emissions, and low emissions. The instantaneous fugitive concentration data was used to select representative locations for flux chamber testing where flux data for odors, VOCs, sulfur, and toxic air contaminants was collected. The flux from these representative locations was used to estimate air emissions from the entire surface of these cells.

Tables 3.1 through 3.3 show the sorted integrated SEM data for the non-reaction area cells during the period of October 15, 2024, through November 5, 2024. Table 3.4 shows the sorted integrated SEM data for the reaction area cells during the period of October 15, 2024, through November 5, 2024. Table 3.5 shows the sorted integrated SEM data for the exceedance area cells during the period of October 15, 2024, through November 5, 2024. The actual cell tested on each table is highlighted in yellow in Column 1.

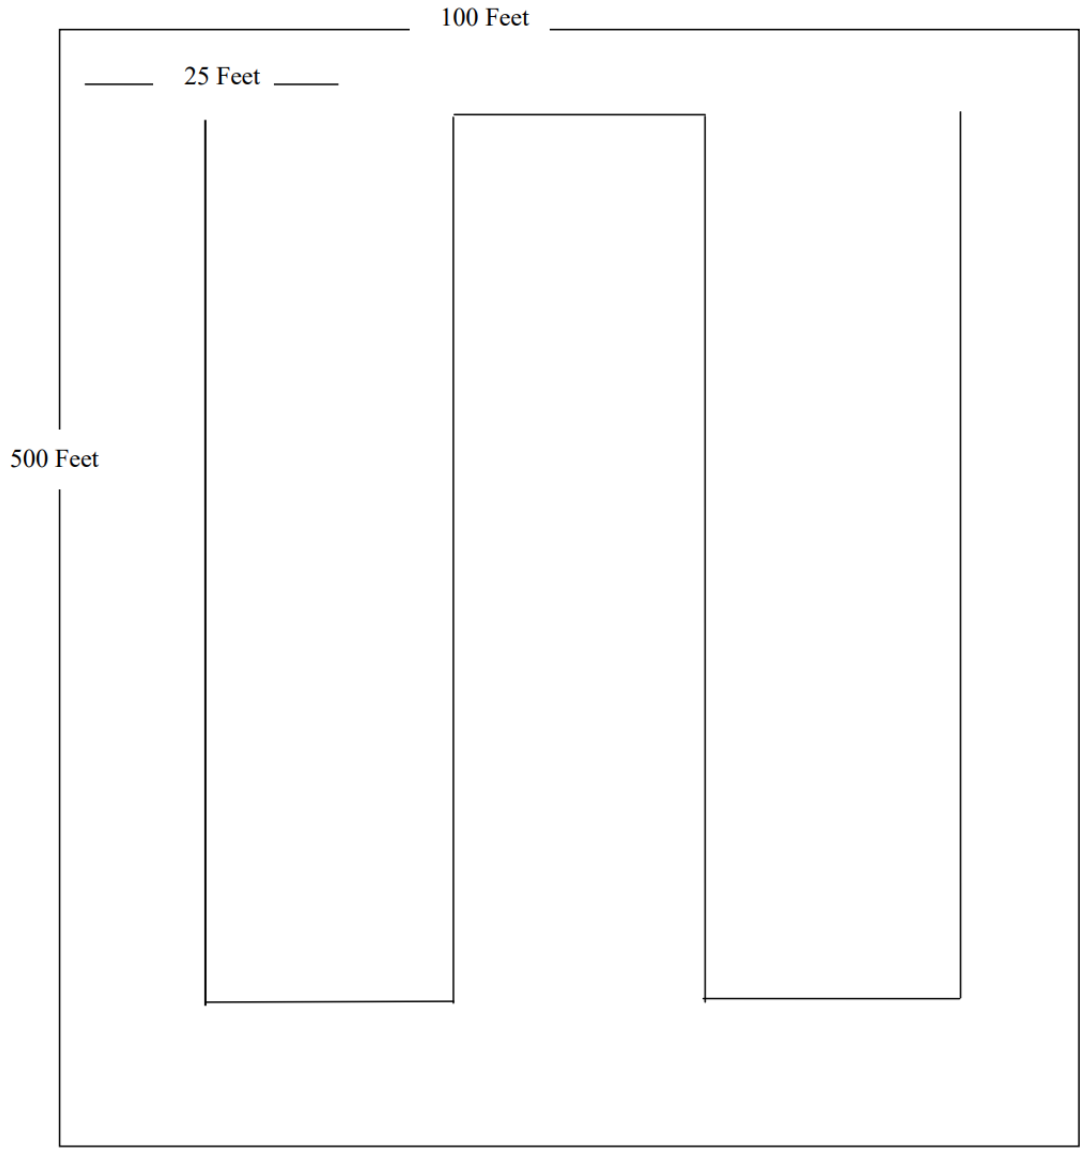
The structure of Tables 3.1 through 3.3 is as follows:

- Column 1 is the grid cell number designation.
- Column 2 is the surface area of each grid cell (each grid cell is nominally 50,000 ft^2, but for this analysis, the exact area of each grid cell is used).
- Columns 3 through 6 are the integrated SEM values (FID response as ppmv methane) for each SEM event from October 15, 2024 to November 5, 2024.
- Column 7 is the cumulative average of all the cells above the cell in question. Column 7 is the cumulative percentage of the cell group (reaction/non-reaction).

The non-reaction area test cells (see Tables 3.1 through 3.3) were initially selected by organizing the integrated SEM data by average (Column 6) and splitting the resulting data into three categories: high emission, medium emission, and low emission. From there, the mean cell(s) from each group were initially selected for testing. These cells are highlighted in blue in the tables below.

A similar process was used for the reaction area test cells (see Table 3.4). One grid cell was selected to be tested from the exceedance area. This cell, highlighted in red, was just over the mean value of all the exceedance area grid cells. The non-exceedance reaction area test cells were initially selected by splitting the data into high, medium, and low emission groups. The mean cell(s) from each group were initially selected for testing.

Figure 3.2 Typical Serpentine Landfill Walk Pattern for a 50,000 Square Foot Grid (from Rule 1150.1).



On Monday, November 18, 2024, the Landfill was evaluated for the final cell selection. This final selection process was necessary to verify whether a selected cell was accessible for testing or is otherwise not representative. Using the data in Table 3.2 as an example, it was determined on November 18, 2024, that Grid Cells 34 and 39 were the best cells for testing (other cells had access issues or active remediation activities), even though the target cell 96 was determined to be the mathematical optimum (which also had access issues or active remediation activity). As the cells selected for testing, Cells 34 and 39 were then highlighted in yellow, signifying that it was the actual test cell for that group. This procedure was replicated for each of the landfill area/sub-area groups.

Note that while any cell can be tested and pro-rated using this methodology, the mean emissions cells were used because they should result in the most accurate results.

Table 3.1 Summary of Non-Reaction Area Cell Sorted Integrated Grid Data (10/15/2024 – 11/5/2024) (ppmv FID as methane); High Emission Cells.

		Integrated ppmv as Methane				11/5	
GRID	Surface Area (ft2)	10/15	10/23	10/30	11/5	Cumulative	Fraction of Total

Normal Area, HIgh, Optimal Target Cells

Notes for Tables 3.1 through 3.4:

1. "HE" means that the grid cell was not monitored due to heavy equipment operating in the grid cell.
2. "AT" means that the grid cell was not monitored due to active trash disposal in the grid cell.

Selecting Test Points in a Cell

Using survey flags, the serpentine route prescribed by Rule 1150.1 in a cell was walked and FID readings were periodically noted on the planted flags and field screening data forms provided in Appendix 2.

Flux chamber samples were taken at the following target locations:

1. Highest Emission - Peak FID reading on serpentine walk.
2. High Emission - Mid-point of highest 10% of readings.
3. Medium Emission - Mid-point of the next 40% of readings.
4. Low Emission - Mid-point of lowest one half of readings.

Table 3.6 shows the selected test grid cells along with their area metrics.

Table 3.6 Selected Test Grid Cell Area Metrics.

		Rep	Cell Area		Area Rep	
Category	**Subset**	**Cell**	**(ft2)**	**(m2)**	**(ft2)**	**(m2)**
Exceedance Area		160	66,546	6,182	3,878,615	360,335
Repeat		160	66,546	6,182		
Reaction Area	High	184	51,245	4,761	439,863	40,865
Reaction Area	Med	174	48,344	4,491	513,112	47,670
Reaction Area	Med	152	42,032	3,905		
Reaction Area	Low	209	60,969	5,664	878,998	81,662
Non-Reaction Area	High	62	60,736	5,643	979,757	91,022
Non-Reaction Area	Med	34	55,632	5,168	1,413,324	131,302
Non-Reaction Area	Med	39	62,100	5,769		
Non-Reaction Area	Low	118	45,475	4,225	3,859,605	358,569
Non SEM Area					942,020	87,517
Total					12,905,294	1,111,425

Note: The area represented by the three sets of control cells (Reaction Area Medium, Non-Reaction Area High, and Non-reaction Area Medium) is the same for each set of two control cells.

4. Sampling Results

All sampling for the Third Test Event took place on November 19-21, 2024. Table 4.1 presents the sampling data for the key compounds: odor; methane; and VOC (TNMHC). Complete data with quality assurance/quality control (QA/QC) commentary and calculations are provided in Attachment 1 (**Data Validation Technical Memorandum** [DVTM]). Location 1 represents the highest emission grid measurement, location 2 represents the high emission grid measurement, location 3 represents the medium emission grid measurement, and location 4 represents the low grid measurement.

Table 4.2 shows the calculated flux for the TO-15 compounds that had at least one detect. Non-detects were assumed to be MDL/2. Tables 4.3 and 4.4 show the results for TO-14 and ORS (SCAQMD Method 307-91) respectively. The complete list of all target compounds is provided in the DVTM. Tentatively identified compound (TIC) concentrations are shown in the lab reports

Table 4.1 Notes: LOC = Location, H2 = Hydrogen, TNMHC = Total Non-Methane Hydrocarbon, He = Helium, CO2 = Carbon Dioxide, mg/m3 = milligram per cubic meter, mg/min = milligram per minute, m3/min = cubic meter per minute, m/min = meters per minute, DT/m2, min = Dilutions to threshold (or Odor Units) per square meter per minute, ug/m2, min = microgram per square meter per minute, J = quantified data near detection limit, Media Blank = QA/QC data (see DVTM), Flux = mg/m2-min or OU/m2-min.

Table 4.2a TO-15 Compounds (Flux in mg/m2-min for only compounds that had at least one detect).

5. Data Analysis

Cell Area Apportionment

Table 5.1 shows how the individual flux chamber data points were apportioned to calculate the average flux value for the test grid cell. Four measurements were made in each test cell. The four measurements were targeted to represent the low emission (bottom half), medium emission (between the bottom half and the top 10%), high emission (top 10%), and maximum screened concentration in the test cell. Therefore, the target low measurement represented 50% of the cell area, the medium measurement represented 40% of the cell area, the high measurement represented 10% of the cell area, and the maximum measurement represented the area of the flux chamber, 0.13 m^2. However, the actual values were substantially different than the target values. Table 5.1 shows the calculated apportionment values based on the analysis of interior cell screening. The calculation basis is provided in Appendix 2.

Table 5.1 Grid Cell Area Apportionment by Interior Grid Cell Zone.

		Rep	Sample Apportionment			
Category	**Subset**	**Cell**	**Max**	**High**	**Med**	**Low**
Exceedance Area		160	0.003%	18%	23%	60%
Repeat		160	0.003%	18%	23%	60%
Reaction Area	High	184	0.003%	15%	22%	63%
Reaction Area	Med	174	0.003%	9%	28%	63%
Reaction Area	Med	152	0.003%	20%	17%	63%
Reaction Area	Low	209	0.003%	17%	25%	61%
Non-Reaction Area	High	62	0.003%	26%	31%	43%
Non-Reaction Area	Med	34	0.003%	9%	35%	56%
Non-Reaction Area	Med	39	0.003%	7%	14%	79%
Non-Reaction Area	Low	118	0.003%	43%	23%	33%

The average flux value of the cell was calculated by multiplying the appropriate apportionment factor (see Table 5.1) by the measured flux value for each position. The maximum reading was assumed to be valid only under the flux chamber, an area of 0.13 m^2, because the maximum reading is only represented at one point of the grid. No other portion of the grid is represented by the maximum reading.

Emissions Calculations

All emissions calculations are provided in Appendix 3. As an example, the methane emissions calculation is provided below in Table 5.2. The flux values shown in Section 5 (for the four internal cell categories [low, medium, high, max]) are averaged based on the area apportionment described above. That average cell flux value (column “W. Avg”) is then multiplied by the area represented by that grid cell to arrive at the total emissions. Emissions were calculated and presented using the calculation methodology as stated in the test protocol. The highlighted data are flux values for test locations over the polymer membrane cover.

Carbon monoxide and hydrogen were not detected in any of the samples and were not otherwise quantified.

Table 5.2 Methane Emissions Calculations.

Emissions Summary

Table 5.3 and 5.4 summarize the total site surface emissions in tons per year. Although the emissions data is presented in tons per year, it should be noted that these emission rates are only valid for the time period during the sampling event and are not intended to imply that the emissions over the next 365 days would be equal to these values.

In addition, the average flux rate for each compound is provided in mg/m2-min.

Table 5.3 Site Surface Emissions Summary, Odor, Methane, VOC, TO-14 and 307-91 Compounds.

Table 5.5 provides a comparison of site-wide emission rates (in tons/year) for selected chemicals from the August 2023, March 2024, and November 2024 flux chamber testing events. These data demonstrate that although there was a significant increase in emissions estimates from the first to the second test, the results of the third event show a substantial decrease in emissions compared to the earlier events, likely resulting from improvements in gas recovery and cover systems. Note that for most of the speciated compounds, the laboratory results were near or below the method detection limit. Therefore, there will likely be no further reductions in quantifiable emissions for those compounds in future events due to the limitations of the performance of the chemical analysis for the gas samples.

Table 5.5 Comparison of Site-wide Surface Emissions for the Three Test Events.

		Event		
Compound	**Units**	**1 (8/23)**	**2 (3/24)**	**3 (11/24)**

EXECUTIVE SUMMARY

This Technical Memorandum documents the third air emissions testing event at the Chiquita Canyon Landfill (CCLF or Landfill). Field measurements were conducted by landfill screening experts at the CCLF facility located at 29201 Henry Mayo Drive in Castaic, California on November 18– 21 2024, to measure surface air emissions from the Landfill. Testing was performed using field screening for methane (total flame ionization detector [FID] response) at the surface. Following screening, in-depth area source testing was also conducted using the U.S. Environmental Protection Agency (USEPA) surface emission isolation flux chamber technology per the USEPA Guidance protocol (February 1986), which provides the guidance for constructing and operating an agency approved area source measurement technology. The average flux (in units of mass per time per unit area) of surface emissions were calculated per category of grid cell (i.e., low, medium, high, highest) and per type of Landfill area (i.e., reaction area and non-reaction area as defined in the Assessment of Air Emissions from Landfill Surfaces – Test Event 3 Report (Emissions Report).) The summation of these grid cell flux data multiplied by the number of grid cells in these categories represents the air emissions of compounds from the Landfill's surface.

The methane surface screening was conducted in similar fashion as the USEPA New Source Performance Standards (NSPS) Title 40 Code of Federal Regulations (CFR) Part 60.755 (c) and (d), CFR Part 60, Appendix A, Method 21, and the surface emissions monitoring (SEM) requirements contained within the California AB 32 Landfill Methane Rule (LMR) under Title 17 California Code of Regulations. The screening utilized the same grid system as is used in the Landfill's regular South Coast Air Quality Management District (SCAQMD) Rule 1150.1 surface emissions monitoring, which consists of nominal 1 acre grid cells (approximately 50,000 square feet). A total vapor analyzer (TVA) instrument fit with a flame ionization detector (FID) was used along with global positioning system (GPS) location recording to map fugitive surface emissions in each grid cell.

As described in the Emissions Report, methane screening was performed by recording data along a traverse pattern that is spaced at 25 feet over the Landfill grid cells. Concentration data and location information was collected and used to generate integrated or average screening concentration of each grid cell. Grid cells were then ranked and divided into three groups: low emission, medium emission, and high emission for both the reaction and non-reaction study areas. Grid cells were selected for testing as described in the Emissions Report. The selected grid cells were screened on a point-by-point basis and representative low, medium, high, and the highest emission locations were selected for flux chamber testing. Samples collected from the flux chamber were sent offsite for laboratory analysis.

Blank	NA	3
Replicate	NA	3
TOTAL		46

The samples collected from the flux chamber for each location were used to calculate air emissions. The sample concentration data (mass per time) as received from the labs were reviewed, quality control (QC) data checks were performed, and tables were composed for total non-methane hydrocarbon compounds (TNMHC), hydrocarbon species, hazardous air pollutants (HAPs), TO-15 non-HAP compounds, sulfur containing compounds, fixed gases (CO2, CH4), trace gas species helium (advective flow determination), and olfactory odor flux levels (dilution-to-threshold, DT). This Technical Memorandum reports flux data for these study compounds along with QC evaluation. Emission estimates for the study compounds are provided in the Emissions Report.

CE Schmidt, Ph.D.
Environmental Consultant

I. INTRODUCTION

This technical memorandum describes the field testing (or flux chamber study) that was conducted to characterize surface or fugitive air emissions at the Chiquita Canyon Landfill (CCLF or Landfill) located at 29201 Henry Mayo Drive, Castaic, California. As discussed in more detail in the Assessment of Air Emissions from Landfill Surfaces – Test Event 3 Report (Emissions Report), testing was conducted on November 18 through November 21, 2024 by Dr. C.E. Schmidt, Mr. Thomas Card, Mr. Josh Abbey, and Mr. Rich Wharton supported by SCS Engineers; and RES Environmental Inc., who performed landfill surface screening for methane prior to the test dates and during the testing program. Preparation for testing included submitting a Sampling Protocol (SP) that was approved by SCS Engineers and representatives of the South Coast Air Quality Management District (SCAQMD).

The objective of the overall flux chamber study (Study) was to measure fugitive air emissions from grid cells that represented areas of the Landfill affected by the subsurface reaction (reaction areas) as well as from areas unaffected by the reaction (non-reaction areas), as defined in the Emissions Report. The Study was conducted by selecting representative test locations and conducting quantitative analysis of air emissions to produce representative air emissions data for the Landfill.

This memorandum includes a discussion of the testing methodology, quality control procedures, and results. This memorandum only reports flux data per study compound and location.

CE Schmidt, Ph.D.
Environmental Consultant

II. TEST METHODOLOGY

The methodologies used in the study for flux chamber testing, including evacuated canister and Tedlar® bag sample collection are described in this section. Screening was performed following the NSPS landfill screening protocol with additional criteria derived from the California LMR. Testing for surface flux was conducted using the USEPA recommended Surface Isolation Flux Chamber (USEPA, Radian Corporation, February 1986). Flux chamber sampling was performed on pre-selected landfill grids as described in the Emissions Report and as directed by the SP.

Flux Chamber Sampling

As described in the USEPA User's Guide (February 1986), the flux chamber is an environmental or portable chamber also known as a mixed-tank reactor that is used to measure the "flux" or mass transfer of study compounds per surface area of area source per time. Ultra-high purity air (sweep air) from a compressed air cylinder is regulated and added to the flux chamber at a flow of 5 liters per minute (lpm) until the chamber contents are well mixed. The chamber is a 'vented' chamber which releases or exhausts the chamber gas through the pressure equalization port in the top of the chamber to the atmosphere which keeps the chamber contents at atmospheric pressure during the measurement. Chamber mixing is described by a number of 'residence times.' Residence time in the chamber is determined by dividing the chamber volume by the sweep air flow rate. Following the User's Guide and with a chamber volume of 30 liters, the residence time is 6 minutes. Proper mixing in the chamber is achieved after five residence times or 30 minutes. After mixing, or after the chamber contents (sweep air plus compounds emitted into the chamber) are at equilibrium, gas samples are collected per regulatory approved methods described in the SP. Knowing the sweep air flow rate (5 lpm), the area of the flux chamber on the test site (0.13 square meters), and the concentration of the study compounds, the flux of study compounds can be calculated (units of milligrams per square meter per minute, mg/m2,min). This Technical Memorandum reports the directly measured flux data for the study compounds that are used in the Emissions Report.

The basic operation of the flux chamber involved the following:

1. Identifying the test area or test surface
2. Initiating sweep gas flow rate to the flux chamber
3. Operating the chamber for at least five residence times (30 minutes)
4. Collecting sample gas from the chamber for analysis

CE Schmidt, Ph.D.
Environmental Consultant

5. Decontaminating the chamber

6. Relocating the measurement equipment to the next test area

The specific operating protocol for flux chamber sampling was as follows:

1. Locate the flux chamber, sweep gas, sample collection equipment, and field documents at the test location.
2. Document site information, location information, equipment information, name of sampler, date, and time on the Emissions Measurement Data Sheets. (The data sheets are provided in Attachment A.)
3. Place the flux chamber approximately 1/4 inch into the test surface at the test locations selected as described in the Emissions Report. Seal the chamber along the base to prevent air infiltration-sealing on membrane cover using clean fill soil making a barrier to air flow. Place thermocouples to monitor soil and air temperature inside and outside of the chamber.
4. Initiate the sweep gas flow rate and set the rotometer at 5.0 lpm.
5. Maintain a constant sweep gas flow rate. Record time.
6. Collect instrument background data (thermocouple) and other parameters (see Emissions Measurement Data Sheets) and record data.
7. Connect the purge pump to the flux chamber. Purge the sample line from the flux chamber without exceeding the line purge rate (or sample gas collection rate) of 2.5 lpm to prevent entraining of ambient air into the flux chamber.
8. Operate the flux chamber sweep air flow rate at 5.0 lpm and record data every residence time (6 minutes) for five residence times (30 minutes). Record the flow rate and time data. Maintain the flux chamber at steady state. Purge the sample line and Tedlar bags from the flux chamber with at least 10 line-volumes of air as part of the odor bag sampling protocol using the decompression lung device, preparing the sample line for the balance of the sample media collection.
9. Connect the sample media sequentially (odor bag, sulfur bag, and evacuated canister) to the purged sample line and collect the gas sample. Do not exceed a collection rate of 2.5 lpm at any time to prevent unwanted dilution of flux chamber exhaust gas by ambient air. Both the odor and sulfur bags are purged prior to sample collection; the evacuated canister is not purged.
10. Label sample bag and record sample collection on the data sheet (see Attachment A).
11. Store the sample(s) in the appropriate storage and/or shipping container as specified

CE Schmidt, Ph.D.
Environmental Consultant

in the SP.

12. Document sample collection on the Chain of Custody form.
13. Discontinue the flux measurement, shut off the sweep air, remove flux chamber, and secure equipment.
14. Decontaminate the flux chamber where contact was made with the liquid or solid material using a clean paper towel and water (if needed) to remove any soil and condensation from the inside of the flux chamber.
15. Relocate equipment to the next test location and repeat steps 1 through 13.

Tedlar® Bag Sampling
Grab samples were collected from the sample line from the flux chamber using Tedlar® bags at steady-state conditions after five residence times (or 30 minutes) in the chamber for analysis for olfactory odor and sulfur containing species. Sampling rate was maintained at less than 2.5 lpm from the flux chamber. Bag samples were collected by connecting the sampling line from the flux chamber using 1/4-inch Swage-lock® fittings fit inside the decompression lung or pressure fittings, drawing a vacuum on the decompression lung, and filling the Tedlar® bag. Both the odor bag and the sulfur bag were purged and evacuated prior to sample collection in order to minimize sample bag interaction. Note two Tedlar® bags were collected for sulfur species analysis according to the method.

Canister Sampling
Grab samples using Summa® polished, evacuated stainless steel canisters were collected from the exhaust line of the flux chamber at steady-state conditions after five residence times (or 30 minutes) in the chamber for speciation by gas chromatography. Sampling rate was maintained at less than 2.5 lpm from the flux chamber. Canister samples were collected by connecting the canister to the sampling line from the flux chamber using 1/4-inch Swage-lock® fittings, drawing a vacuum from the canister, and filling the canister. All canisters were batch certified by the laboratory according to USEPA Methods TO-15/TO-12/fixed gases/helium and sampled to full capacity (atmospheric pressure).

III. QUALITY CONTROL

Control procedures that were used to assure that data of sufficient quality resulted from the flux chamber study are listed and described below. The application and frequency of these procedures were developed to meet the program data quality objectives as described in the SP for all analytical methods used in this Study. Method detection limits for all sample data are provided in the attached laboratory reports.

CE Schmidt, Ph.D.
Environmental Consultant

Field Documentation – A field notebook containing data forms, including sample chain-of-custody (COC) forms, was maintained for the testing program. Attachment A contains the Emissions Measurement Data Sheets collected through field documentation.

Chain-of-Custody (COC) forms – COC forms were used for field data collection. Field data were recorded on the COC forms provided in Attachment B. Calibration records and certifications are found in Attachment D.

Total VOC as TNMNC by Analysis through USEPA Method TO-12

Method QC Requirements – Method QC procedures were completed as per method requirements. These data are reported in the method specific lab reports (footnoted as applicable on the lab report showing compliance with the methods).

Laboratory Method Blank – A total of seven laboratory method blank samples were performed by the laboratory. TNHMC compounds were not detected in the blank samples at the method detection limit (MDL) level of 0.13 mg/m^3. These data indicate acceptable method performance.

Laboratory Precision – A total of seven laboratory control duplicate (LCD) samples including nine compounds were performed by the laboratory. The LCD samples were reported within the criteria of less than 25%. These data indicate acceptable method performance.

Laboratory Accuracy – A total of seven laboratory control samples (LCS) or blank spike samples, including nine compounds, were performed by the laboratory. The LCS samples were reported within the criteria of 70 to 130% recovery. These data indicate acceptable method performance.

Field System Blank – Three media (field) blank samples were prepared in the field (T-418, T-514, T-614) and were analyzed as field samples (blind QC sample). All three field blank samples show non detect. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate (second sample taken immediately after the first sample for method precision data) and analyzed for the flux chamber testing (T-416/-417, T-512/-513, and T-612/-613). On sample/replicate pair showed a J value and a non-detect and did not provide precision data. The other two sample/replicate pairs showed relative percent difference (RPD) values for TNMHC of 45 and 52, with one sample/replicate pair just exceeding criteria (QC criteria 50RPD). Despite one exceedance, these data indicate acceptable method performance.

Hydrocarbon Species Analysis by USEPA Method TO-14

CE Schmidt, Ph.D.
Environmental Consultant

Method QC Requirements – Method QC procedures were completed as per method requirements. These data are reported in the method specific lab reports (footnoted as applicable on the lab report showing compliance with the methods).

Laboratory Method Blank – A total of seven laboratory method blank samples were performed by the laboratory. Hydrocarbon compounds were not detected in the blank samples at the method detection limit (MDL) level of 0.13 mg/m^3. These data indicate acceptable method performance.

Laboratory Precision – A total of seven laboratory control duplicate (LCD) samples including 18 compounds were performed by the laboratory. The LCD samples were reported within the criteria of less than 25%. These data indicate acceptable method performance.

Laboratory Accuracy – A total of seven laboratory control samples (LCS) or blank spike samples including 18 compounds were performed by the laboratory. The LCS samples were reported within the criteria of 70 to 130% recovery. These data indicate acceptable method performance.

Field System Blank – Three media (field) blank samples were prepared in the field (T-418, T-514, T-614) and were analyzed as field samples (blind QC sample). All three field blank samples show non detect. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate (second sample taken immediately after the first sample for method precision data) and analyzed for the flux chamber testing (T-416/-417, T-512/-513, and T-612/-613). On sample/replicate pair showed a J value and a non-detect and did not provide precision data. The other two sample/replicate pairs showed RPD values for TNMHC of 45 and 52, with one sample/replicate pair just exceeding criteria (QC criteria 50RPD). Despite one exceedance, these data indicate acceptable method performance.

Individual HAP Analysis by USEPA Method TO-15

Method QC Requirements – Method QC procedures were completed as per method requirements including recovery of surrogate compounds. These data are reported in the method specific lab reports.

Laboratory Method Blank – A total of five laboratory method blank samples were performed by the laboratory. Most compounds were not detected in the blank samples above the compound specific MDL levels (range of 0.010 to 0.064 mg/m^3). These data indicate acceptable method performance.

Laboratory Precision – A total of five laboratory LCD samples including 18 compounds were

CE Schmidt, Ph.D.
Environmental Consultant

performed by the laboratory. All LCD samples were reported within the criteria of less than 25%. These data indicate acceptable method performance.

Laboratory Accuracy – A total of five laboratory LCS samples including 18 compounds were performed by the laboratory. All LCS samples were reported within the criteria of 70 to 130% recovery. These data indicate acceptable method performance.

Field System Blank – Three media (field) blank samples were prepared in the field (T-418, T-514, T-614) and were analyzed as a field sample (blind QC sample). No compounds were detected above MDL (range of 0.010 to 69 mg/m^3) in the three field blank samples. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate and analyzed for the flux chamber testing (T-416/-417, T-512/-513, and T-612/-613). The sample/replicate pair T-416/-417 showed 2 compound pairs above reporting limits with an RPD range of 7.2 to 33; no compound pairs exceeded criteria. The sample/replicate pair T-512/-513 showed 2 compound pairs above reporting limits with an RPD range of 1.5 to 25; no compound pairs exceeded criteria. The sample/replicate pair T-612/-613 showed 1 compound pair above reporting limits with an RPD of 27; no compound pairs exceeded criteria. These data indicate acceptable method performance.

SCAQMD 307.91 Analysis for Hydrogen Sulfide

Method QC Requirements – Method QC procedures were completed as per method requirements. These data are reported in the method specific lab reports. Two QC standard QC data sets were run on the samples for each instrument used in analyzing the samples. In summary, the opening calibration verification standard and duplicate analysis QC (95%-105%, <5 RPD), method blank QC (<pql), standard and duplicate standard analysis QC (95%-105%, <10%), matrix spike/ QC (<10%), and closing calibration curve verification standard QC (90-110%) for both instruments used in the analyses were within the method requirements. These data indicate acceptable performance. Note that each sample was collected in duplicate (a, b) and samples labeled 'a' were analyzed.

Field System Blank – Three media (field) blank samples were prepared in the field (S-418, S-514, S-614) and were analyzed as field samples (blind QC sample). Hydrogen sulfide was not detected in the three blank samples at a level of 0.005 ppmv. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate and analyzed for the flux chamber testing (S-416/-417, S-512/-513, and S-612/-613). In each case, sample and replicate

CE Schmidt, Ph.D.
Environmental Consultant

pair, both were non-detect for all three pairs, thus no information could be obtained regarding precision for the method. However, the laboratory precision data was acceptable. These data indicate acceptable method performance.

USEPA 3C for Fixed Gases (methane and carbon dioxide)

Method QC Requirements – Method QC procedures were completed as per method requirements.

Laboratory Method Blank – A total of one laboratory method blank sample was performed by the laboratory. Fixed gases were not detected in the blank samples above the MDL that ranged between 0.01% to 0.05%. These data indicate acceptable method performance.

Laboratory Precision – Two LCD samples were performed by the laboratory. The LCD samples were reported within the criteria of less than 25%. These data indicate acceptable method performance.

Laboratory Accuracy – Two LCS samples were performed by the laboratory. The LCS samples were reported within the criteria of 70 to 130% recovery. These data indicate acceptable method performance.

Field System Blank (accuracy) – Three media (field) blank samples were prepared in the field (T-418, T-514, T-614) and were analyzed as field samples (blind QC sample). Carbon dioxide and methane were both not detected above the method detection limit. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate and analyzed for the flux chamber testing (T-416/-417, T-512/-513, and T-612/-613). Most of the sample/replicate pairs for methane and carbon dioxide were non-detect with the exception of one sample/replicate pair for methane, which had a RPD of 12 (QC criteria (50 RPD).) These data indicate acceptable method performance.

USEPA 3CM for Helium (trace gas detection)

Method QC Requirements – Method QC procedures were completed as per method requirements.

Laboratory Method Blank – A total of one laboratory method blank sample was performed by the laboratory. Helium was not detected in the blank samples at the MDL of 0.02% . These data indicate acceptable method performance.

Laboratory Precision – Two LCD samples were performed by the laboratory. The LCD samples

CE Schmidt, Ph.D.
Environmental Consultant

were reported within the criteria of less than 25%. These data indicate acceptable method performance.

Laboratory Accuracy – Two LCS samples were performed by the laboratory. The LCS samples were reported within the criteria of 70 to 130% recovery. These data indicate acceptable method performance.

Field System Blank – Three media (field) blank samples were prepared in the field (T-418, T-514, T-614) and were analyzed as field samples (blind QC sample). Given that these blank samples were taken from a calibration standard gas, these data serve as accuracy data or sample recovery QC data (±30%). The range of percent recovery for the three samples was 95.6% to 106.4%. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate and analyzed for the flux chamber testing (T-416/-417, T-512/-513, and T-612/-613). The RPD values ranged from 37 to 61 (QC criteria (50 RPD) with one pair exceeding precision criteria. These data indicate acceptable method performance.

ASTM E-679 for Olfactory Odor
Method QC Requirements – Method QC procedures were completed as per method requirements.

Field System Blank – Three media (field) blank samples were prepared in the field (O-418/-514/-614) and were analyzed as field samples (blind QC sample). The blank data showed typical MDL levels at DT values of 13, 9, and 9, respectively. Typical blank levels range from about 6 to 20 DT. These data demonstrate acceptable method performance.

Field Method Precision – Three field samples were collected in replicate and analyzed for the flux chamber testing (O-418-419, O-512/-513, and O-612/-613). The RPD values for olfactory odor were 63, 27, and 9.5, respectively (QC criteria (50 RPD). One of the three pairs showed a RPD greater than QC criteria, which is not uncommon at these low DT levels (DT less than 20). These data indicate acceptable method performance.

Field Calibration of the TVA-1000; Screening for Total Hydrocarbon Concentration
Pre-Use and Post-Use Instrument Response to Span (calibration) Gas and Zero Air (pure air)
The TVA-1000 instrument with an FID detector was pre-use and post-use calibrated each day of use using certified methane span gas standard at 100 ppmv. Zero air checks were acceptable with instrument response near the instrument detection, and all span checks were within 70% to 130% accuracy, indicating acceptable instrument performance. The cold morning startups did cause

higher blank levels and recalibration during the day as the ambient temperature increased, however the instrument did provide useful screening data. The instrument also came with a photo ionization detector (PID) detector, which was not used for the screening activities. No field data (TVA FID or PID) were used in the emissions calculations; these data were only used in the field for directive purposes.

Field Calibration of the J-631X; Screening for Hydrogen Sulfide

Pre-Use and Post-Use Instrument Response to Zero Air

The two J-631X hydrogen sulfide analyzers were pre-use and post-use zero air checked and re-zeroed without incident. These field screening instruments performed well as compared to pre and post zero air checks. The cold morning startups did cause higher blank levels and high/low response recalibration during the day as the ambient temperature increased, however the instrument did provide useful screening data. No field data (J-631X) were used in the emissions calculations; these data were only used in the field for directive purposes.

IV. RESULTS AND DISCUSSIONS

A summary of the field sample collection information and field data for the field testing is shown in Table 1. All field data for the surface flux chamber testing and sample identification information are presented in Table 2. Table 2 provides both concentration (%, ppmv, ug/m3, DT) and flux (mg/m^2,min, DT/m2,min) data. All laboratory data, including quality control data, are presented in Attachment C to this memorandum. Fixed gas data is presented in Table 3, TO-15 data is presented in Table 4, TO-14 data is presented in Table 5, and SCAQMD 307-91 data is presented in Table 6.

Surface flux data are shown in flux units for compound emissions (mg/m^2,min and DT/m2,min). Surface flux for a surface area source is calculated using measured target compound concentrations/odor DT and flux chamber operating parameter data (sweep air flow rate of 5.0 lpm [or 0.005 cubic meters per minute (m^3/min) plus advective flow], surface area of 0.13 square meters [m^2]). The site emissions can be calculated by multiplying the flux by the surface area of the grid cell or source tested. The flux (Fi, mg/m2,min or DT/m2,min) is calculated from the sweep air flow rate (Q, m^3/min)), the compound concentration (Yi, mg/m^3 or DT), and exposure to the chamber surface area (A, m^2)), as follows:

$$Fi = (Q)\ (Yi) / (A)$$

Emission rate (mass per time) from a source tested using the flux chamber technology can be obtained by multiplying unit or average flux data per compound by the surface area of the source.

CE Schmidt, Ph.D.
Environmental Consultant

Note that advective flow at each test location was determined by the dilution of the 10% helium trace gas as is the protocol for SCAQMD Rule 1133.3, Attachment A.

The flux of VOCs as TNMHC, HAPs compounds, non-HAP VOC, olfactory odor, sulfur containing compounds, and fixed gases (methane and carbon dioxide) from the landfill grid cells tested is provided in this Technical Memorandum and is used in the Emissions Report.

The data set met the QC requirements provided in the SP and the laboratory methods employed.

V. SUMMARY

A focused air emissions assessment was performed on the CCLF at the facility located in Castaic, California. Areas of the Landfill that were tested included grid cells representative of both areas of the Landfill affected by the reaction and areas of the Landfill not affected by the reaction. The following is a summary of activities and results associated with this Technical Memorandum:

- Surface flux measurements of VOCs as TNMHC, hydrocarbon species, HAP compounds, non-HAP VOC compounds, olfactory odor, sulfur containing compounds, and fixed gases (methane, carbon dioxide, helium) were measured on nine selected landfill grid cells; one grid cell was tested twice for field QC compliance (comparison purposes). Four flux chamber measurements were taken from each grid cell.

- Grid selection was based on the areas of interest (i.e., reaction area and non-reaction area) and methane surface screening data.

- Emissions testing was performed using the USEPA recommended surface flux chamber technology as described in the USEPA User's Guide for assessing fugitive air emissions from area sources. Surface advective flow was determined at each location by the dilution of a trace gas (10% helium) used as the chamber sweep air. Study compounds were tested following regulatory approved sampling and analytical methods. These technologies were used to quantitatively measure flux at the test surface of the listed study compounds.

- Field and laboratory quality control data indicate acceptable data quality for all of the analytical methods used. Lab method samples and media/field blank levels for the analytical methods were found to be common for this application of the test method and acceptable. Method precision for the lab replicates and spike samples (LCD and LCS) met the method criteria. The data set is of acceptable data quality for the purpose of assessing compound emissions from the landfill.

- The flux data generated in this field study can be used to estimate emission factors from

the landfill area sources tested.

RE: Odor Panel Analysis
OS&E Project No. 2458-M-00
Project Name: SCS-Chiquita Canyon Landfill

Dear Chuck:

This letter presents the results of the recent odor panel analyses conducted by Odor Science & Engineering, Inc. (OS&E) for your continued work with SCS Engineering at Chiquita Canyon Landfill. A total of forty-six (46) samples were collected over three separate days (November 19th -21st, 2024). The odor samples were collected into 12 liter Tedlar gas sampling bags provided by OS&E. Immediately following sample collection each day, the bags were shipped under chain of custody via priority overnight delivery service to OS&E's Olfactory Laboratory in Bloomfield, CT for sensory analysis. On days 1 and 3 all samples arrived the following morning as scheduled. On day 2 samples 0-513 & 0-514 were delayed (due to a FedEx shipping issue). These samples were analyzed upon arrival.

Upon arrival the samples were analyzed by dynamic dilution olfactometry using a trained and screened odor panel. The odor panelists were chosen from OS&E's pool of panelists from the Greater Hartford area who actively participate in ongoing olfactory research and represent an average to above average sensitivity when compared to a large population. The samples were quantified in terms of dilution-to-threshold (D/T) ratio and odor intensity in accordance with ASTM Methods E-679-04 and E-544-10, respectively. The odor panelists were also asked to describe the odor character of the samples at varying dilution levels. The odor panel methodology is further described in Attachment A.

The results of the odor panel testing are presented in the attached Tables 1, 2 and 3.

We appreciate the opportunity to assist you on this project. Please feel free to call Martha O'Brien or me if you have any questions concerning these results.

Sincerely,
ODOR SCIENCE & ENGINEERING, INC.

Gary K. Grumley
Associate Scientist

ATTACHMENT A
Odor Science & Engineering, Inc.
Odor Panel Methodology

Measurement of Odor Levels by Dynamic Dilution Olfactometry
Odor concentration is defined as the dilution of an odor sample with odor-free air, at which only a specified percent of an odor panel, typically 50%, will detect the odor. This point represents odor threshold and is expressed in terms of "dilutions-to-threshold" (D/T).

Odor concentration was determined by means of OS&E's forced choice dynamic dilution olfactometer. The members of the panel who have been screened for their olfactory sensitivity and their ability to match odor intensities, have participated in on-going olfactory research at OS&E for a number of years.

In olfactometry, known dilutions of the odor sample were prepared by mixing a stream of odor-free air with a stream of the odor sample. The odor-free air is generated in-situ by passing the air from a compressor pump through a bed of activated charcoal and a potassium permanganate medium for purification. A portion of the odor free air is diverted into two sniff ports for direct presentation to a panelist who compares them with the diluted odor sample.

Another portion of the odor-free air is mixed in a known ratio with the odor from the sample bag and is then introduced into the third sniff port. A panelist is thus presented with three identical sniff ports, two of which provide a stream of odor-free air and the third one a known dilution of the odor sample. Unaware of which is which, the panelist is asked to identify the sniff port which is different from the other two, i.e., which contains the odor. The flow rate at all three nose cups is maintained at 3 liters per minute.

The analysis starts at high odor dilutions. Odor concentration in each subsequent evaluation is increased by a factor of 2. Initially a panelist is unlikely to correctly identify the sniff port which contains an odor. As the concentration increases, the likelihood of error is reduced and at one point the response at every subsequently higher concentration becomes consistently correct. The lowest odor concentration at which this consistency is first noticed, represents the **detection odor threshold** for that panelist.

As the odor concentration is increased further in the subsequent steps, the panelist becomes aware of the odor character, i.e. becomes able to differentiate the analyzed odor from other odors. The lowest odor concentration at which odor differentiation first becomes possible, represent the **recognition odor threshold** for the panelist. Essentially all of OS&E's work is done with recognition odor threshold. By definition the threshold odor is equal to 1 D/T (i.e. the volume of odorous air after dilution divided by the volume before dilution equals one).

The panelists typically arrive at threshold values at different concentrations. To interpret the data statistically, the geometric mean of the individual panelist's thresholds is calculated.

The olfactometer and the odor presentation procedure meet the recommendations of ASTM Standard Practice for Determination of Odor and Taste Thresholds by a Forced-Choice Ascending Concentration Series of Limits (ASTM E679-04). The analysis was carried out in the OS&E Olfactory Laboratory in Bloomfield, Connecticut.

Odor Intensity

Odor intensity is determined using reference sample method with n-butanol as the reference compound (ASTM Method E-544-10). The n-butanol odor intensity scale is based on n-butanol vapor as odorant at eight concentrations. The concentration increases by a factor of two at each intensity step, starting with approximately 15 ppm at step 1.

Odors of widely different types can be compared on that scale just like the intensities of the lights of different colors can be compared to the intensity of standard, e.g. white light. Odor character and hedonic tone are ignored in that comparison. Odor intensities are routinely measured as part of the dynamic dilution olfactometry measurements. The n-butanol vapor samples are presented to the panelists in closed jars containing the standard solutions of n-butanol in distilled water. The vapor pressure above the butanol solutions corresponds to the steps on the n-butanol scale. To observe the odor intensity, a panelist opens the jar and sniffs the air above the liquid. The panelist then closes the jar so that the equilibrium vapor pressure of butanol can be re-established before the next panelist uses the jar. The odor in the jar is compared with unknown odor present at the olfactometer sniff port.

The relationship between odor concentration and intensity can be expressed as a psychophysical power function also known as Steven's law (Dose-Response Function). The function is of the form:

$$I = aC^b$$

where:

I = odor intensity on the butanol scale
C = the odor level in dilution-to-threshold ratio (D/T)
a,b = constants specific for each odor

The major significance of the dose-response function in odor control work is that it determines the rate at which odor intensity decreases as the odor concentration is reduced (either by atmospheric dispersion or by an odor control device).

Odor emissions are used as input to an odor dispersion model, which predicts odor impacts downwind under a variety of meteorological conditions. Whether or not an odor is judged objectionable depends primarily in its intensity. The dose-response constants are used to convert predicted ambient odor concentration to intensity levels. OS&E experience has shown that odors are almost universally considered objectionable when their intensity is 3 or higher on the 8-point n-butanol scale. In general, the lower the intensity, the lower the probability of complaints.

Odor Character Description

Odor character refers to our ability to recognize the similarity of odors. It allows us to distinguish odors of different substances on the basis of experience. We use three types of descriptors, general such as “sweet”, “pungent”, “acrid”, etc. or specific references to its source such as “orange”, “skunk”, “paint”, “sewage”, etc., or to a specific chemical, e.g. “methyl mercaptan”, “butyric acid”, or “cyclohexane”. In the course of the dynamic dilution olfactometry measurements, the odor panelists are asked to describe the character of the odors they detect.

S- 406 b	242843-67445	S- 412 b	242843-67457	S- 418 b	242843-67469

This analysis is performed in accordance with AAC's Quality Manual. Test results apply to the sample(s) as received. For detailed information pertaining to specific EPA, NCASI, ASTM and SCAQMD accreditations (Methods & Analytes), please visit our website at www.aaclab.com.

I certify that this data is technically accurate, complete, and in compliance with the terms and conditions of the contract. Per client request, all "b" samples were placed on hold and therefore not analyzed. Sample "S-405 b" was not received. No other problems were encountered during receiving, preparation, and/or analysis of this sample. The Technical Director or his/her designee, as verified by the following signature, has authorized release of the data.

If you have any questions or require further explanation of data results, please contact the undersigned.

Sucha Parmar, Ph.D.
Technical Director

Atmospheric Analysis & Consulting, Inc.

CLIENT	: Environmental Management Consulting
PROJECT NAME	: SCS Chiquita Canyon Landfill
PROJECT NUMBER	: CES F1-02106
AAC PROJECT NO.	: 242862
REPORT DATE	: 12/05/2024

On November 20th 2024, Atmospheric Analysis & Consulting, Inc. received twenty-eight (28) Tedlar Bags for Total Reduced Sulfur analysis by SCAQMD 307.91. Upon receipt, the samples were assigned unique Laboratory ID numbers as follows:

Client ID	Lab No.	Client ID	Lab No.
S- 501 a	242862-67542	S- 508 a	242862-67556
S- 501 b	242862-67543	S- 508 b	242862-67557
S- 502 a	242862-67544	S- 509 a	242862-67558
S- 502 b	242862-67545	S- 509 b	242862-67559
S- 503 a	242862-67546	S- 510 a	242862-67560
S- 503 b	242862-67547	S- 510 b	242862-67561
S- 504 a	242862-67548	S- 511 a	242862-67562
S- 504 b	242862-67549	S- 511 b	242862-67563
S- 505 a	242862-67550	S- 512 a	242862-67564
S- 505 b	242862-67551	S- 512 b	242862-67565
S- 506 a	242862-67552	S- 513 a	242862-67566
S- 506 b	242862-67553	S- 513 b	242862-67567
S- 507 a	242862-67554	S- 514 a	242862-67568
S- 507 b	242862-67555	S- 514 b	242862-67569

This analysis is performed in accordance with AAC's Quality Manual. Test results apply to the sample(s) as received. For detailed information pertaining to specific EPA, NCASI, ASTM and SCAQMD accreditations (Methods & Analytes), please visit our website at www.aaclab.com.

I certify that this data is technically accurate, complete, and in compliance with the terms and conditions of the contract. All "b" samples were placed on hold and therefore not analyzed. No problems were encountered during receiving, preparation, and/or analysis of these samples. The Technical Director or his/her designee, as verified by the following signature, has authorized release of the data.

If you have any questions or require further explanation of data results, please contact the undersigned.

Sucha Parmar, Ph.D.
Technical Director

Atmospheric Analysis & Consulting, Inc

CLIENT	:	Environmental Management Consulting
PROJECT NAME	:	SCS Chiquita Canyon Landfill
PROJECT NUMBER	:	CES F1-02106
AAC PROJECT NO.	:	242880
REPORT DATE	:	12/05/2024

On November 21st 2024, Atmospheric Analysis & Consulting, Inc. received twenty-eight (28) Tedlar Bags for Total Reduced Sulfur analysis by SCAQMD 307.91. Upon receipt, the samples were assigned unique Laboratory ID numbers as follows:

Client ID	Lab No.	Client ID	Lab No.
S- 601 a	242880-67643	S- 608 a	242880-67657
S- 601 b	242880-67644	S- 608 b	242880-67658
S- 602 a	242880-67645	S- 609 a	242880-67659
S- 602 b	242880-67646	S- 609 b	242880-67660

S- 607 b	242880-67656	S- 614 b	242880-67670

This analysis is performed in accordance with AAC's Quality Manual. Test results apply to the sample(s) as received. For detailed information pertaining to specific EPA, NCASI, ASTM and SCAQMD accreditations (Methods & Analytes), please visit our website at www.aaclab.com.

I certify that this data is technically accurate, complete, and in compliance with the terms and conditions of the contract. Per client request, all "b" samples were placed on hold and therefore not analyzed. No other problems were encountered during receiving, preparation, and/or analysis of this sample. The Technical Director or his/her designee, as verified by the following signature, has authorized release of the data.

If you have any questions or require further explanation of data results, please contact the undersigned.

Sucha Parmar, Ph.D.
Technical Director

Data Deliverable Package

Prepared For:
C.E. Schmidt
19200 Live Oak Road
Red Bluff CA 96080

EAS SDG Number: **224435**
Project Number: 17807
Report Sent:
Sample Event Date: 1/20,11/21/2024

Client Project Manager: Chuck Schmidt
Project Name: Chiquita Canyon
Project Number: Data Package GC Helium

This is the Laboratory Data Deliverable Package for the samples in the indicated Sample Delivery Group (SDG).

INDEX TO DATA PACKAGE:

Section 1 **Project Summary**
- Laboratory Work Order
- Sample Data
- Laboratory Case Narrative and Chain of Custody

Section 2 **Quality Control**
- Project QC Criteria
- DAB QC Reports

Section 3 **Analytical Methods**
- Analytical Method Description(s)
- Analytical Reports

Section 4 **Data Package with Quant Report and Chromatogram**
- DAB Run Logs and Preparation Log
- Sample Data Package
- Blank Data Package
- Continuing Calibration Package
- Initial Calibration Package

Section 5 **Standard Certificates**

Section 6 **SDG Documentation, Notes, Correspondence**

173 Cross Street, San Luis Obispo, California, 93401 (805) 781-3585

Section 1 Project Summary

The following pages provide detailed information about the sample receipt, log-in, and sample preparation. The Laboratory Work Order provides a cross reference between the Client ID number and the EAS Lab Number as well as a list of the analytical tests preformed. The items included in this section are listed below.

Project Sample Media

SDG Number: 224435

The following sample media was used for this Sample Delivery Group (SDG). The Sample Media column identifies the type of media. For canisters, the Sample Media Batch gives the canister number followed by the cleaning batch number, which is a unique identification. The initial pressure of the canister when it is received is recorded. If the canister is not pressurized, the final pressure will be the same as the initial pressure. If the canister is pessurized the final pressure will be recorded, and the canister dilution factor is calculated as the ratio of the final to initial pressure. The results are adjusted for the can dilution factor.

SDG	Lab ID	Client Sample No.	Sample Media	Batch	Pressure, torr Initial	Final	Can Factor

Laboratory Case Narrative

EAS SDG Number: 224435 **Project Number:** 17807

Client: C.E. Schmidt

The Laboratory Case Narrative for the SDG is below. The Chain of Custody form(s) follow the Laboratory Case Narrative.

Sample Control Narrative

The samples were all received in good condition and with proper preservation.

Analytical Methods

The methods used for sample analysis are listed on the Analytyical Report header, and have been modified as described in the EAS Quality Manual..

Case Narrative

QC Narrative

All analyses met EAS method criteria as defined in the Quality Manual, except as noted in the report or QC reports with data qualifiers.

Subcontract Narrative

No sample analysis was subcontracted for this project

Laboratory Certification

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness other than the condition(s) noted above. The Laboratory Report is property of EAS and its client. The entire report has been reviewed and approved.

Date Approved:

Steven D. Hoyt, Ph.D.
Environmental Analytical Service
Laboratory Director

Section 2 Quality Control

This section contains the QC Reports for each Daily Analytical Batch (DAB) which make up the Sample Delivery Group (SDG). It also contains either the EAS or Project QC criteria that was used for the DAB. The methods used for this project have been modified from the original method. The modifications include modifications to the QC for the method. This is either because the method did not specify certain aspects of the QC, the method was originally designed for a different matrix, or additional compounds were added to the target list of the method which required modified QC. The QC modifications used by EAS follows those used by other air testing laboratories.

The Daily Analytical Batch data was checked against the QC criteria for the method. Any deviations from the QC criteria are listed on the QC Reports for each DAB, which are summarized in this section and are given in more detail in Section 4 which has the Quantitation Reports and Calculations for the Samples, Method Blank, Lab Control Spikes, as well as the Initial Calibration and Continuing Calibration. This section contains the following:

Section Contents

Project QC Critera

DAB Quality Control Reports

- Laboratory Control Duplicate
- Continuing Calibration

Quality Control Report

EAS SDG Number: 224435

Project Number: 17807

QC Narrative

Samples were anlayzed in a daily analytical batch (DAB) designated by a QC batch number, and were analyzed using EAS standard laboratory QC specified in the EAS Quality Manual which may be different then the referrenced agency method. Any deviations from the EAS QC criteria are flagged in the Laboratory Control Reports or in the sample Analytical Reports.

Standard Laboratory QC Report

Unless project specific QC was requested, this Section containing the standard laboratory QC (Level 2) supplied with the Analytical Reports. Each sample is analyzed in a Daily Analytical Batch (DAB) which includes the method blank, a laboratory control spike (LCS) and a laboratory control duplicate (LCD). A Daily Analytical Batch QC report is supplied for each method requested.

Method Blank

The method blank is a laboratory generated sample which assesses the degree to which laboratory operations cause a false positive. The target analytes in the analytical reports for a daily analytical batch are "B" flagged if their concentrations are present in the Method Blank above the RL, unless the result is greater then ten times the blank value..

Laboratory Control Spike

A laboratory control spike is a well characterized matrix similar to the sample which is spiked and run in duplicate with each Daily Analytical Batch. The laboratory control spike results are reported as a percent recovery. The QC Criteria for the control spike is listed in the Laboratory Control Report. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report. The control spike contains an abbreviated list of compounds in the method, and may contain compounds not on the target list for the specified report.

Laboratory Control Duplicate

The laboratory control duplicate is a duplicate analysis of the laboratory control spike, a standard, or a sample depending on the method. The results are reported as a relative percent difference (RPD). The criteria for the duplicate is in the Laboratory Control Report for the Daily Analytical Batch. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report.

Analytical Method Description(s)

Analytical Reports

Analytical Reports

EAS SDG Number: 224435

Project Number: 17807

The following pages contain the certified Analytical Reports for the samples submitted in the Sample Delivery Group (SDG) and are in order of the EAS Lab ID number. All of the analytical methods used are modifications of the published methods. Procedural method modifications, QC modifications, QC Criteria modifications, target lists, definitions of detection limits, and flags are all explained in detail in the EAS Quality Manual. The Analytical Report has columns for the method detection limit (MDL), the reporting limit (RL), and the Amount. The Amount is the concentration of the compound in the sample. The report usually has the results reported with two commonly used units. The MDL, RL, and Amount are adjusted for the canister dilution factor and any dilution caused by sample matrix effects.

NELAC CERTIFICATION

EAS is accredited by the National Environmental Laboratory Accreditation (NELAC) with the Florida Department of Health, one of the NELAC certifying states. EAS is certified for the EPA TO-15, EPA TO-11 and EPA TO-4 methods. A list of accredited compounds is available on request.

DETECTION LIMITS

MDL: The MDL is lowest concentration that can be measured to be statistically above the noise level and is determined using the EPA 2016 method which uses the standard deviation of replicate measurements made over time. The method also incorporates systematic instrumentation blank levels. See Quality Manual for detailed explanation.

RL: The reporting limit (RL) is the lowest concentration that can be reliably reported for each compound that meets the QC Criteria for the method, background levels, or project specific considerations. The QC criteria level for the method blank is to be less then the RL See Quality Manual for more information.

DATA FLAGS

In the standard report, if a compound is not detected above the method detection limit, a "ND" is in the Amount column. The flag column is used for both the not detect flag and for any data flags.

B - This compound was detected in the batch method blank above the reporting limit and is greater then one tenth the amount in the sample.

E - This compound exceeds the calibration range for this sample volume.

J - The amount reported is estimated because it was below the RL and could be below the lowest calibration point, have higher uncertainty, or could be the result of system background

SIGNIFICANT FIGURES

Based on the uncertainty in the methods, the numbers on the Analytical Reports should be used with only two significant digits. Additional significant figures are reported for ease of use and to avoid rounding errors when used in further calculations.

UNITS

PPBV or PPMV: Parts-per-billion (or million) by volume is a mole (volume) ratio of the moles of analyte divided by the moles of air (gas). This is the primary unit used to report air or gas concentrations and is independent of temperature and pressure.

UG/M3 OR MG/M3: The reported result was calculated based on 1 atm pressure and a temperature of 25C. The conversion from PPBV is: UG/M3 = PPBV x MW/24.46 where 24.26 is the gas constant and MW is the Compounds Molecular Weight (sometimes called Formula Weight)

Section 4 Data Package

This section contains the Data Packages for the samples, blanks, and calibration. Each package has the analytical report, quantitation report, calculation sheet, instrument quantation report, and chromatograms.

Items provided in Data Package:

DAB Run Logs and Preparation Logs

Sample Packages

Blank Package for each Daily Analytical Batch

Quality Control Reports, LCS,LCD for each Daily Analytical Batch

Continuing Calibration Package for Each Daily Analytical Batch

Initial Calibration Data

Tune Data (if required)

DAB Run Logs and Preparation Logs

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument.
The DAB identifier is on each analytial report in the field called QC Batch.
This section contains the DAB Log Sheets and Preparation Logs.

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:		Holding Time:
GCO	ASTM D1945	ASTM D1945 He Low and Hydrogen Confirmation	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Continuing Calibration Data Package

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument. The DAB identifier is on each analytial report in the field called QC Batch. There will be one Continuing Calibration QC Batch report for each DAB in this SDG.

User Modified

==========

Initial Calibration Data Packages

Samples were analyzed using the methods listed in Section 3. For each of the methods there is an Initial Calibration Curve that meets the criteria defined in Section 2 on Quality Control for the modified method.

EAS SDG Number: **224435**
Project Number: 17807
Report Sent:
Sample Event Date: 1/20,11/21/2024

Client Project Manager: Chuck Schmidt
Project Name: Chiquita Canyon
Project Number: Data Package GC Methane Data

This is the Laboratory Data Deliverable Package for the samples in the indicated Sample Delivery Group (SDG).

INDEX TO DATA PACKAGE:

Section 1 **Project Summary**
- Laboratory Work Order
- Sample Data
- Laboratory Case Narrative and Chain of Custody

Section 2 **Quality Control**
- Project QC Criteria
- DAB QC Reports

Section 3 **Analytical Methods**
- Analytical Method Description(s)
- Analytical Reports

Section 4 **Data Package with Quant Report and Chromatogram**
- DAB Run Logs and Preparation Log
- Sample Data Package
- Blank Data Package
- Continuing Calibration Package
- Initial Calibration Package

Section 5 **Standard Certificates**

Section 6 **SDG Documentation, Notes, Correspondence**

173 Cross Street, San Luis Obispo, California, 93401 (805) 781-3585

Section 1 Project Summary

The following pages provide detailed information about the sample receipt, log-in, and sample preparation. The Laboratory Work Order provides a cross reference between the Client ID number and the EAS Lab Number as well as a list of the analytical tests preformed. The items included in this section are listed below.

Section Contents

Laboratory Work Order

Sample Data

Laboratory Case Narrative

Chain of Custody

Laboratory Work Order

SAMPLE DESCRIPTION AND ANALYSIS REQUESTED

Client Sample ID	EAS Lab No.	Analysis Requested	Date Sampled
T-401	224435 1	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-401	224435 1	ASTM D3416 Low Level Methane	11/19/2024
T-401	224435 1	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-401	224435 1	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-401	224435 1	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-402	224435 2	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-402	224435 2	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-402	224435 2	ASTM D3416 Low Level Methane	11/19/2024
T-402	224435 2	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-402	224435 2	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-403	224435 3	ASTM D3416 Low Level Methane	11/19/2024
T-403	224435 3	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-403	224435 3	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-403	224435 3	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-403	224435 3	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-404	224435 4	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-404	224435 4	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-404	224435 4	ASTM D3416 Low Level Methane	11/19/2024
T-404	224435 4	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-404	224435 4	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-405	224435 5	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-405	224435 5	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-405	224435 5	ASTM D3416 Low Level Methane	11/19/2024

Client Sample ID	EAS Lab No.	Analysis Requested	Date Sampled
T-405	224435 5	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-405	224435 5	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-406	224435 6	ASTM D3416 Low Level Methane	11/19/2024
T-406	224435 6	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-406	224435 6	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-406	224435 6	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-406	224435 6	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-407	224435 7	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-407	224435 7	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-407	224435 7	ASTM D3416 Low Level Methane	11/19/2024
T-407	224435 7	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-407	224435 7	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-408	224435 8	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-408	224435 8	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-408	224435 8	ASTM D3416 Low Level Methane	11/19/2024
T-408	224435 8	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-408	224435 8	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-409	224435 9	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-409	224435 9	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-409	224435 9	ASTM D3416 Low Level Methane	11/19/2024
T-409	224435 9	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-409	224435 9	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-410	224435 10	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-410	224435 10	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-410	224435 10	ASTM D3416 Low Level Methane	11/19/2024
T-410	224435 10	EPA TO-12 C2 to C12 CRYO	11/19/2024
T-410	224435 10	EPA TO-15 Full List 95 + Acrolein + TIC 10	11/19/2024
T-411	224435 11	ASTM D1945 He Low and Hydrogen Confirmation	11/19/2024
T-411	224435 11	ASTM D1945 Permanent Gas Analysis	11/19/2024
T-411	224435 11	ASTM D3416 Low Level Methane	11/19/2024

Client Sample ID	EAS Lab No.	Analysis Requested	Date Sampled
T-411	224435 11	EPA TO-12 C2 to C12 CRYO	11/19/2024

Project Sample Media

SDG Number: 224435

The following sample media was used for this Sample Delivery Group (SDG). The Sample Media column identifies the type of media. For canisters, the Sample Media Batch gives the canister number followed by the cleaning batch number, which is a unique identification. The initial pressure of the canister when it is received is recorded. If the canister is not pressurized, the final pressure will be the same as the initial pressure. If the canister is pessurized the final pressure will be recorded, and the canister dilution factor is calculated as the ratio of the final to initial pressure. The results are adjusted for the can dilution factor.

SDG	Lab ID	Client Sample No.	Sample Media	Batch	Pressure, torr Initial	Final	Can Factor

Laboratory Case Narrative

EAS SDG Number: 224435 **Project Number:** 17807

Client: C.E. Schmidt

The Laboratory Case Narrative for the SDG is below. The Chain of Custody form(s) follow the Laboratory Case Narrative.

Sample Control Narrative

The samples were all received in good condition and with proper preservation.

Analytical Methods

The methods used for sample analysis are listed on the Analytyical Report header, and have been modified as described in the EAS Quality Manual..

Case Narrative

QC Narrative

All analyses met EAS method criteria as defined in the Quality Manual, except as noted in the report or QC reports with data qualifiers.

Subcontract Narrative

No sample analysis was subcontracted for this project

Laboratory Certification

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness other than the condition(s) noted above. The Laboratory Report is property of EAS and its client. The entire report has been reviewed and approved.

Date Approved:

Steven D. Hoyt, Ph.D.
Environmental Analytical Service
Laboratory Director

Section 2 Quality Control

This section contains the QC Reports for each Daily Analytical Batch (DAB) which make up the Sample Delivery Group (SDG). It also contains either the EAS or Project QC criteria that was used for the DAB. The methods used for this project have been modified from the original method. The modifications include modifications to the QC for the method. This is either because the method did not specify certain aspects of the QC, the method was originally designed for a different matrix, or additional compounds were added to the target list of the method which required modified QC. The QC modifications used by EAS follows those used by other air testing laboratories.

The Daily Analytical Batch data was checked against the QC criteria for the method. Any deviations from the QC criteria are listed on the QC Reports for each DAB, which are summarized in this section and are given in more detail in Section 4 which has the Quantitation Reports and Calculations for the Samples, Method Blank, Lab Control Spikes, as well as the Initial Calibration and Continuing Calibration. This section contains the following:

Section Contents

Project QC Critera

DAB Quality Control Reports

- Method Blank
- Laboratory Control Spike
- Laboratory Control Duplicate
- Continuing Calibration

Quality Control Report

EAS SDG Number: 224435

Project Number: 17807

QC Narrative

Samples were anlayzed in a daily analytical batch (DAB) designated by a QC batch number, and were analyzed using EAS standard laboratory QC specified in the EAS Quality Manual which may be different then the referrenced agency method. Any deviations from the EAS QC criteria are flagged in the Laboratory Control Reports or in the sample Analytical Reports.

Standard Laboratory QC Report

Unless project specific QC was requested, this Section containing the standard laboratory QC (Level 2) supplied with the Analytical Reports. Each sample is analyzed in a Daily Analytical Batch (DAB) which includes the method blank, a laboratory control spike (LCS) and a laboratory control duplicate (LCD). A Daily Analytical Batch QC report is supplied for each method requested.

Method Blank

The method blank is a laboratory generated sample which assesses the degree to which laboratory operations cause a false positive. The target analytes in the analytical reports for a daily analytical batch are "B" flagged if their concentrations are present in the Method Blank above the RL, unless the result is greater then ten times the blank value..

Laboratory Control Spike

A laboratory control spike is a well characterized matrix similar to the sample which is spiked and run in duplicate with each Daily Analytical Batch. The laboratory control spike results are reported as a percent recovery. The QC Criteria for the control spike is listed in the Laboratory Control Report. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report. The control spike contains an abbreviated list of compounds in the method, and may contain compounds not on the target list for the specified report.

Laboratory Control Duplicate

The laboratory control duplicate is a duplicate analysis of the laboratory control spike, a standard, or a sample depending on the method. The results are reported as a relative percent difference (RPD). The criteria for the duplicate is in the Laboratory Control Report for the Daily Analytical Batch. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report.

Section 3 Analytical Methods

This section has information on the analytial methods and a copy of the analytical reports for the Sample Delivery Group (SDG) listed below. The reports are organized in order of the EAS Laboratory Number.

Section Contents

Analytical Method Description(s)

Analytical Reports

Analytical Reports

EAS SDG Number: 224435

Project Number: 17807

The following pages contain the certified Analytical Reports for the samples submitted in the Sample Delivery Group (SDG) and are in order of the EAS Lab ID number. All of the analytical methods used are modifications of the published methods. Procedural method modifications, QC modifications, QC Criteria modifications, target lists, definitions of detection limits, and flags are all explained in detail in the EAS Quality Manual. The Analytical Report has columns for the method detection limit (MDL), the reporting limit (RL), and the Amount. The Amount is the concentration of the compound in the sample. The report usually has the results reported with two commonly used units. The MDL, RL, and Amount are adjusted for the canister dilution factor and any dilution caused by sample matrix effects.

NELAC CERTIFICATION

EAS is accredited by the National Environmental Laboratory Accreditation (NELAC) with the Florida Department of Health, one of the NELAC certifying states. EAS is certified for the EPA TO-15, EPA TO-11 and EPA TO-4 methods. A list of accredited compounds is available on request.

DETECTION LIMITS

MDL: The MDL is lowest concentration that can be measured to be statistically above the noise level and is determined using the EPA 2016 method which uses the standard deviation of replicate measurements made over time. The method also incorporates systematic instrumentation blank levels. See Quality Manual for detailed explanation.

RL: The reporting limit (RL) is the lowest concentration that can be reliably reported for each compound that meets the QC Criteria for the method, background levels, or project specific considerations. The QC criteria level for the method blank is to be less then the RL See Quality Manual for more information.

DATA FLAGS

In the standard report, if a compound is not detected above the method detection limit, a "ND" is in the Amount column. The flag column is used for both the not detect flag and for any data flags.

B - This compound was detected in the batch method blank above the reporting limit and is greater then one tenth the amount in the sample.

E - This compound exceeds the calibration range for this sample volume.

J - The amount reported is estimated because it was below the RL and could be below the lowest calibration point, have higher uncertainty, or could be the result of system background

SIGNIFICANT FIGURES

Based on the uncertainty in the methods, the numbers on the Analytical Reports should be used with only two significant digits. Additional significant figures are reported for ease of use and to avoid rounding errors when used in further calculations.

UNITS

PPBV or PPMV: Parts-per-billion (or million) by volume is a mole (volume) ratio of the moles of analyte divided by the moles of air (gas). This is the primary unit used to report air or gas concentrations and is independent of temperature and pressure.

UG/M3 OR MG/M3: The reported result was calculated based on 1 atm pressure and a temperature of 25C. The conversion from PPBV is: UG/M3 = PPBV x MW/24.46 where 24.26 is the gas constant and MW is the Compounds Molecular Weight (sometimes called Formula Weight)

Section 4 Data Package

This section contains the Data Packages for the samples, blanks, and calibration. Each package has the analytical report, quantitation report, calculation sheet, instrument quantation report, and chromatograms.

Items provided in Data Package:

DAB Run Logs and Preparation Logs

Sample Packages

Blank Package for each Daily Analytical Batch

Quality Control Reports, LCS,LCD for each Daily Analytical Batch

Continuing Calibration Package for Each Daily Analytical Batch

Initial Calibration Data

Tune Data (if required)

DAB Run Logs and Preparation Logs

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument.
The DAB identifier is on each analytial report in the field called QC Batch.
This section contains the DAB Log Sheets and Preparation Logs.

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

GCL	ASTM D3416	ASTM D3416 Low Level Methane	30

Analysis Instructions | Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Section 5 Standard Calibration Certificates

This section contains the Standard Calibration Certificates for the Standards and Internal Standards.

Section Contents

Standard Calibration Certificates

7

ST63408	50% Air		RS
	50:50 syringe dilution	ST63400 : ISP He	4/18/24
ST63409	25% Air		RS
	1:4 syringe dilution	ST63400 : ISP He	4/19/24
ST63410	25% CO_2		RS
	1:4 Syringe dilution	ST61116 (100% CO_2) : ISP He	4/19/24
ST63411	25% Methane		RS
	1:4 syringe dilution	ST62124 (10% Meth) : ISP He	4/19/24
ST63412	Ambient Air		RS
	100% Ambient outdoor air syringe draw		4/19/24
ST63413	50% Ambient Air		RS
	1:1 syringe dilution	ST63412 : ISP He	4/19/24

ST63414 4/22/24

20 mL of ST63324 100% Methane was spiked into a Blue Scott and pressurized to 290 psig using CO300.

STANDARD CERTIFICATE
CALIBRATION GAS STANDARD

Standard ID: ST62407 **Date Prepared: 3/5/20**

Description: Methane Standard Analyst: SH
Canister: Blue Scotty Expiration Date: 3/4/25

Component	CAS No	Concentration
Methane	74-82-8	119.27

•This Analysis is NIST Traceable by either measurement or weight•

Analyst:

The stability of gas standards cannot be guaranteed and EAS will only be liable for replacement or reanalysis if the standard changes in six months from analysis date.

Standard Preparation

	Primary	Dilution 1	Dilution 2
Standard ID:	ST60775	ST62406	ST62407

Data Deliverable Package

Prepared For:
C.E. Schmidt
19200 Live Oak Road
Red Bluff CA 96080

EAS SDG Number: **224435**
Project Number: 17807
Report Sent:
Sample Event Date: 1/20,11/21/2024

Client Project Manager: Chuck Schmidt
Project Name: Chiquita Canyon
Project Number: Data Package GC TO-12/TO-14

This is the Laboratory Data Deliverable Package for the samples in the indicated Sample Delivery Group (SDG).

INDEX TO DATA PACKAGE:

Section 1 **Project Summary**
- Laboratory Work Order
- Sample Data
- Laboratory Case Narrative and Chain of Custody

Section 2 **Quality Control**
- Project QC Criteria
- DAB QC Reports

Section 3 **Analytical Methods**
- Analytical Method Description(s)
- Analytical Reports

Section 4 **Data Package with Quant Report and Chromatogram**
- DAB Run Logs and Preparation Log
- Sample Data Package
- Blank Data Package
- Continuing Calibration Package
- Initial Calibration Package

Section 5 **Standard Certificates**

Section 6 **SDG Documentation, Notes, Correspondence**

173 Cross Street, San Luis Obispo, California, 93401 (805) 781-3585

Section 1 Project Summary

The following pages provide detailed information about the sample receipt, log-in, and sample preparation. The Laboratory Work Order provides a cross reference between the Client ID number and the EAS Lab Number as well as a list of the analytical tests preformed. The items included in this section are listed below.

Project Sample Media

SDG Number: 224435

The following sample media was used for this Sample Delivery Group (SDG). The Sample Media column identifies the type of media. For canisters, the Sample Media Batch gives the canister number followed by the cleaning batch number, which is a unique identification. The initial pressure of the canister when it is received is recorded. If the canister is not pressurized, the final pressure will be the same as the initial pressure. If the canister is pessurized the final pressure will be recorded, and the canister dilution factor is calculated as the ratio of the final to initial pressure. The results are adjusted for the can dilution factor.

SDG	Lab ID	Client Sample No.	Sample Media	Batch	Pressure, torr Initial	Final	Can Factor

Laboratory Case Narrative

EAS SDG Number: 224435 **Project Number:** 17807

Client: C.E. Schmidt

The Laboratory Case Narrative for the SDG is below. The Chain of Custody form(s) follow the Laboratory Case Narrative.

Sample Control Narrative

The samples were all received in good condition and with proper preservation.

Analytical Methods

The methods used for sample analysis are listed on the Analytyical Report header, and have been modified as described in the EAS Quality Manual..

Case Narrative

QC Narrative

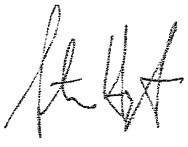
All analyses met EAS method criteria as defined in the Quality Manual, except as noted in the report or QC reports with data qualifiers.

Subcontract Narrative

No sample analysis was subcontracted for this project

Laboratory Certification

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness other than the condition(s) noted above. The Laboratory Report is property of EAS and its client. The entire report has been reviewed and approved.



Date Approved:

Steven D. Hoyt, Ph.D.
Environmental Analytical Service
Laboratory Director

Section 2 Quality Control

This section contains the QC Reports for each Daily Analytical Batch (DAB) which make up the Sample Delivery Group (SDG). It also contains either the EAS or Project QC criteria that was used for the DAB. The methods used for this project have been modified from the original method. The modifications include modifications to the QC for the method. This is either because the method did not specify certain aspects of the QC, the method was originally designed for a different matrix, or additional compounds were added to the target list of the method which required modified QC. The QC modifications used by EAS follows those used by other air testing laboratories.

The Daily Analytical Batch data was checked against the QC criteria for the method. Any deviations from the QC criteria are listed on the QC Reports for each DAB, which are summarized in this section and are given in more detail in Section 4 which has the Quantitation Reports and Calculations for the Samples, Method Blank, Lab Control Spikes, as well as the Initial Calibration and Continuing Calibration. This section contains the following:

Section Contents

Project QC Critera

DAB Quality Control Reports

- Method Blank
- Laboratory Control Spike
- Laboratory Control Duplicate
- Continuing Calibration

Quality Control Report

EAS SDG Number: 224435

Project Number: 17807

QC Narrative

Samples were anlayzed in a daily analytical batch (DAB) designated by a QC batch number, and were analyzed using EAS standard laboratory QC specified in the EAS Quality Manual which may be different then the referrenced agency method. Any deviations from the EAS QC criteria are flagged in the Laboratory Control Reports or in the sample Analytical Reports.

Standard Laboratory QC Report

Unless project specific QC was requested, this Section containing the standard laboratory QC (Level 2) supplied with the Analytical Reports. Each sample is analyzed in a Daily Analytical Batch (DAB) which includes the method blank, a laboratory control spike (LCS) and a laboratory control duplicate (LCD). A Daily Analytical Batch QC report is supplied for each method requested.

Method Blank

The method blank is a laboratory generated sample which assesses the degree to which laboratory operations cause a false positive. The target analytes in the analytical reports for a daily analytical batch are "B" flagged if their concentrations are present in the Method Blank above the RL, unless the result is greater then ten times the blank value..

Laboratory Control Spike

A laboratory control spike is a well characterized matrix similar to the sample which is spiked and run in duplicate with each Daily Analytical Batch. The laboratory control spike results are reported as a percent recovery. The QC Criteria for the control spike is listed in the Laboratory Control Report. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report. The control spike contains an abbreviated list of compounds in the method, and may contain compounds not on the target list for the specified report.

Laboratory Control Duplicate

The laboratory control duplicate is a duplicate analysis of the laboratory control spike, a standard, or a sample depending on the method. The results are reported as a relative percent difference (RPD). The criteria for the duplicate is in the Laboratory Control Report for the Daily Analytical Batch. Any results outside the control limits are flagged with a "Q" on the Laboratory Control Report.

Section 3 Analytical Methods

This section has information on the analytial methods and a copy of the analytical reports for the Sample Delivery Group (SDG) listed below. The reports are organized in order of the EAS Laboratory Number.

Section Contents

Analytical Method Description(s)

Analytical Reports

Analytical Reports

EAS SDG Number: 224435

Project Number: 17807

The following pages contain the certified Analytical Reports for the samples submitted in the Sample Delivery Group (SDG) and are in order of the EAS Lab ID number. All of the analytical methods used are modifications of the published methods. Procedural method modifications, QC modifications, QC Criteria modifications, target lists, definitions of detection limits, and flags are all explained in detail in the EAS Quality Manual. The Analytical Report has columns for the method detection limit (MDL), the reporting limit (RL), and the Amount. The Amount is the concentration of the compound in the sample. The report usually has the results reported with two commonly used units. The MDL, RL, and Amount are adjusted for the canister dilution factor and any dilution caused by sample matrix effects.

NELAC CERTIFICATION

EAS is accredited by the National Environmental Laboratory Accreditation (NELAC) with the Florida Department of Health, one of the NELAC certifying states. EAS is certified for the EPA TO-15, EPA TO-11 and EPA TO-4 methods. A list of accredited compounds is available on request.

DETECTION LIMITS

MDL: The MDL is lowest concentration that can be measured to be statistically above the noise level and is determined using the EPA 2016 method which uses the standard deviation of replicate measurements made over time. The method also incorporates systematic instrumentation blank levels. See Quality Manual for detailed explanation.

RL: The reporting limit (RL) is the lowest concentration that can be reliably reported for each compound that meets the QC Criteria for the method, background levels, or project specific considerations. The QC criteria level for the method blank is to be less then the RL See Quality Manual for more information.

DATA FLAGS

In the standard report, if a compound is not detected above the method detection limit, a "ND" is in the Amount column. The flag column is used for both the not detect flag and for any data flags.

B - This compound was detected in the batch method blank above the reporting limit and is greater then one tenth the amount in the sample.

E - This compound exceeds the calibration range for this sample volume.

J - The amount reported is estimated because it was below the RL and could be below the lowest calibration point, have higher uncertainty, or could be the result of system background

SIGNIFICANT FIGURES

Based on the uncertainty in the methods, the numbers on the Analytical Reports should be used with only two significant digits. Additional significant figures are reported for ease of use and to avoid rounding errors when used in further calculations.

UNITS

PPBV or PPMV: Parts-per-billion (or million) by volume is a mole (volume) ratio of the moles of analyte divided by the moles of air (gas). This is the primary unit used to report air or gas concentrations and is independent of temperature and pressure.

UG/M3 OR MG/M3: The reported result was calculated based on 1 atm pressure and a temperature of 25C. The conversion from PPBV is: UG/M3 = PPBV x MW/24.46 where 24.26 is the gas constant and MW is the Compounds Molecular Weight (sometimes called Formula Weight)

Section 4 Data Package

This section contains the Data Packages for the samples, blanks, and calibration. Each package has the analytical report, quantitation report, calculation sheet, instrument quantation report, and chromatograms.

Items provided in Data Package:

DAB Run Logs and Preparation Logs

Sample Packages

Blank Package for each Daily Analytical Batch

Quality Control Reports, LCS,LCD for each Daily Analytical Batch

Continuing Calibration Package for Each Daily Analytical Batch

Initial Calibration Data

Tune Data (if required)

DAB Run Logs and Preparation Logs

Samples are analyzed in a Daily Analytical Batch (DAB) on an instrument.
The DAB identifier is on each analytial report in the field called QC Batch.
This section contains the DAB Log Sheets and Preparation Logs.

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

QUANTITATION REPORT

EPA Method TO-14 FID

SDG: **224435**
EAS ID: **01**
File Name: **2443501A**
Sample ID: **T-401**
Sampled: **11/19/2024**
Received: **11/21/24**
Analyzed: **11/22/24**
QCBatch: **112224-GCK**
Can: **636**
Can Factor: **1.25**
Volume: **200.0**
Type: **SA**

Method: TO-14FID TO-14FID
Not Detected Flag: **ND** TO-15FID
SF: **2** TO-3
Instrument: **GCK** EPA 18M
Time: **8:51** Matrix **AA**
Time: **13:00** Chem **TRG**
Time: **14:07** MDL Fac: **1.0**
Unit Factor **1000** 1000 for ppb 1 for ppm
Hexane Area: **310466**
Hexane Concentration: **18.05**
Standard Volume: **1.00**
Standard ID: **ST62344**

ANALYTICAL REPORT

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-14 FID

Analytical Method: TO-14FID

SDG: 224435
Laboratory Number: 01

File Name: 2443501A
Description: T-401
Canister: 636
QC_Batch: 112224-GCK

Date Sampled: 11/19/24 **Time:** 8:51
Date Analyzed: 11/22/24 **Time:** 14:07
Can Factor: 1.25
Air Volume: 200 ml

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

ANALYTICAL REPORT

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-14 FID

Analytical Method: TO-14FID

SDG: 224435
Laboratory Number: 02

File Name: 2443502A
Description: T-402
Canister: 703
QC_Batch: 112224-GCK

Date Sampled: 11/19/24 **Time:** 8:35
Date Analyzed: 11/22/24 **Time:** 14:57
Can Factor: 1.25
Air Volume: 200 ml

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:		Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

SAMPLE CALCULATION

EPA Method TO-14 FID

SDG:		224435	
Laboratory Number:		08	
Standard Volume	STV	1.0	
Sample Volume	SV	200	
Can Dilution Factor	CDF	1.00	
Gas Constant		24.4	25C
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = Sum (Astdni) / (Cstdni) i

2) ppbC = 6 Carbons × Ansamp × CDF × 1000 / (Avg RFn) / SV = **Cn**

3) Amount ppbv = Cn / C#

4) Amount ug/m3 = (amt(ppbv) × MW) / 24.4

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:		Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

SAMPLE CALCULATION

EPA Method TO-14 FID

SDG:		224435	
Laboratory Number:		09	
Standard Volume	STV	1.0	
Sample Volume	SV	200	
Can Dilution Factor	CDF	1.00	
Gas Constant		24.4	25C
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = $\frac{\text{Sum}\ \left|\frac{(\text{Astd}ni)}{(\text{Cstd}ni)}\right|_i}{}$

2) ppbC = $\frac{6\ \text{Carbons} \times \text{Ansamp} \times \text{CDF} \times 1000}{(\text{Avg RFn}) \times \text{SV}}$ = **Cn**

3) Amount ppbv = $\frac{\text{Cn}}{\text{C\#}}$

4) Amount ug/m3 = $\frac{(\text{amt(ppbv)} \times \text{MW})}{24.4}$

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

QUANTITATION REPORT

EPA Method TO-14 FID

SDG: **224435**
EAS ID: **10**
File Name: **2443510A**
Sample ID: **T-410**
Sampled: **11/19/2024**
Received: **11/21/24**
Analyzed: **12/03/24**
QCBatch: **120324-GCK**
Can: **714**
Can Factor: **1.00**
Volume: **200.0**
Type: **SA**

Method: TO-14FID TO-14FID
Not Detected Flag: **ND** TO-15FID
SF: **2** TO-3
Instrument: **GCK** EPA 18M
Time: **11:59** Matrix **AA**
Time: **13:00** Chem **TRG**
Time: **11:51** MDL Fac: **1.0**
Unit Factor **1000** 1000 for ppb 1 for ppm
Hexane Area: **367502**
Hexane Concentration: **18.05**
Standard Volume: **1.00**
Standard ID: **ST62344**

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

QUANTITATION REPORT

EPA Method TO-14 FID

SDG: **224435**
EAS ID: **11**
File Name: **2443511B**
Sample ID: **T-411**
Sampled: **11/19/2024**
Received: **11/21/24**
Analyzed: **11/25/24**
QCBatch: **112524-GCK**
Can: **551**
Can Factor: **1.00**
Volume: **200.0**
Type: **SA**

Method: TO-14FID TO-14FID
Not Detected Flag: **ND** TO-15FID
SF: **2** TO-3
Instrument: **GCK** EPA 18M
Time: **11:51** Matrix **AA**
Time: **13:00** Chem **TRG**
Time: **16:05** MDL Fac: **1.0**
Unit Factor **1000** 1000 for ppb 1 for ppm
Hexane Area: **318104**
Hexane Concentration: **18.05**
Standard Volume: **1.00**
Standard ID: **ST62344**

RT Win C2-C5 C5-C12
RT **0.3** **0.1**

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

SAMPLE CALCULATION

EPA Method TO-14 FID

SDG:		224435	
Laboratory Number:		12	
Standard Volume	STV	1.0	
Sample Volume	SV	200	
Can Dilution Factor	CDF	1.00	
Gas Constant		24.4	25C
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = Sum [(Astdni) / (Cstdni)]$_i$

2) ppbC = $\frac{\text{6 Carbons} \times \text{Ansamp} \times \text{CDF} \times 1000}{\text{(Avg RFn)} \times \text{SV}}$ = **Cn**

3) Amount ppbv = $\frac{\text{Cn}}{\text{C\#}}$

4) Amount ug/m3 = $\frac{\text{(amt(ppbv)} \times \text{MW}}{24.4}$

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:		Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:		Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

QUANTITATION REPORT

EPA Method TO-14 FID

SDG: **224435**
EAS ID: **16**
File Name: **2443516A**
Sample ID: **T-416**
Sampled: **11/19/2024**
Received: **11/21/24**
Analyzed: **11/25/24**
QCBatch: **112524-GCK**
Can: **659**
Can Factor: **1.00**
Volume: **200.0**
Type: **SA**

Method: **TO-14FID** TO-14FID
Not Detected Flag: **ND** TO-15FID
SF: **2** TO-3
Instrument: **GCK** EPA 18M
Time: **13:24** Matrix **AA**
Time: **13:00** Chem **TRG**
Time: **20:43** MDL Fac: **1.0**
Unit Factor **1000** 1000 for ppb 1 for ppm
Hexane Area: **318104**
Hexane Concentration: **18.05**
Standard Volume: **1.00**
Standard ID: **ST62344**

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:		Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

ANALYTICAL REPORT

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-14 FID

Analytical Method: TO-14FID

SDG: 224435
Laboratory Number: 19

File Name: 2443519A
Description: T-501
Canister: 664
QC_Batch: 112624-GCK

Date Sampled: 11/20/24 **Time:** 8:30
Date Analyzed: 11/26/24 **Time:** 15:18
Can Factor: 1.00
Air Volume: 200 ml

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:		Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

ANALYTICAL REPORT

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-14 FID

Analytical Method: TO-14FID

SDG: 224435
Laboratory Number: 20

File Name: 2443520B
Description: T-502
Canister: 716
QC_Batch: 112624-GCK

Date Sampled: 11/20/24 **Time:** 8:37
Date Analyzed: 11/26/24 **Time:** 17:53
Can Factor: 1.00
Air Volume: 200 ml

Analysis Instructions

Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:		Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:		Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

SAMPLE CALCULATION

EPA Method TO-14 FID

SDG:		224435	
Laboratory Number:		24	
Standard Volume	STV	1.0	
Sample Volume	SV	200	
Can Dilution Factor	CDF	1.00	
Gas Constant		24.4	25C
Decimal Places:		2	

Sample Calculation:

1) Avg RFn = Sum (Astdni) / (Cstdni) i

2) ppbC = 6 Carbons × Ansamp × CDF × 1000 / (Avg RFn) / SV = **Cn**

3) Amount ppbv = Cn / C#

4) Amount ug/m3 = (amt(ppbv) × MW) / 24.4

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:		Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:		Item Description:	Holding Time:
GCK	TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

ANALYTICAL REPORT

ENVIRONMENTAL
Analytical Service, Inc.

EPA Method TO-14 FID

Analytical Method: TO-14FID

SDG: 224435
Laboratory Number: 28

File Name: 2443528A
Description: T-510
Canister: 860
QC_Batch: 112724-GCK

Date Sampled: 11/20/24 **Time:** 12:18
Date Analyzed: 11/27/24 **Time:** 15:21
Can Factor: 1.00
Air Volume: 200 ml

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

LABORATORY **Analytical Test:** Sample Location:

InstrumentMethod:	Item Description:	Holding Time:
GCK TO-12	EPA TO-12 C2 to C12 CRYO	30

Analysis Instructions Sample Type:

WE WILL NEED A DATA PACKAGE:
TO-15 Full List - Process with BAQMD 95 Excel Template + Acrolein (some projects)
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

TO-15 Full List - Process with BAQMD 95 Excel Template
TO-12 TNMHC Process with Detailed Hydrocarbon Analysis Template - Report TNMHC C2-C12
ASTM D1945 Helium Carrier Gas - Run Permanent Gas List including H2. Normaliaze for N2 result
ASTM D1945 Helium and Hydrogen Confirmation - Check to see if there is a singnificant H2 peak if so process and add to Helium template

QUANTITATION REPORT

EPA Method TO-14 FID

SDG: **224435**
EAS ID: **30**
File Name: **2443530A**
Sample ID: **T-512**
Sampled: **11/20/2024**
Received: **11/21/24**
Analyzed: **12/03/24**
QCBatch: **120324-GCK**
Can: **417**
Can Factor: **1.00**
Volume: **200.0**
Type: **SA**

Method: TO-14FID TO-14FID
Not Detected Flag: **ND** TO-15FID
SF: **2** TO-3
Instrument: **GCK** EPA 18M
Time: **12:41** Matrix **AA**
Time: **13:00** Chem **TRG**
Time: **12:49** MDL Fac: **1.0**
Unit Factor **1000** 1000 for ppb 1 for ppm
Hexane Area: **367502**
Hexane Concentration: **18.05**
Standard Volume: **1.00**
Standard ID: **ST62344**
