To: Michael Munoz **Subject:** RE: Current Pricing

Mike,

We have not sent one in a while, but I will get one out this week. I have provided indicative market pricing here:

- December 2024 \$6-\$8.00
- June 2025 \$12-\$15
- December 2025 \$15-\$18.00

Did you review the NOVs to ensure that you are not missing the deadline for when you must ensure that you have the RTCs replaced in your account? If you missed that deadline, then this is what happens:

- 1. You get an additional NO
- 2. They will replace the negative amount that they took out of the account, and take that amount from a later expiration
- 3. So, if you are looking to purchase to cover this deficit, then you may not want to, but you do have to ensure that you are in quarterly compliance by the end of the month

If you have not missed the deadline, you have the option to request an earlier vintage, which is less expensive than the vintage that they remove from your account, but you must do that within 60 days of receipt of the NOV.

If you want to send those over, then I will be able to tell you what the next steps are, and what your options are. I have been dealing with a lot of NOVs over the last couple of years for my clients, so pretty well versed in getting facilities back into compliance.

Sincerely,

Jackie Ferlita-Barnes AQC Environmental Brokerage Services, Inc. President, Emissions Desk 714-397-5508

Subject: RE: Current Pricing

Hi Mike,

It depends on what price – the average price of the December 2024 RTC has been about \$7.00/RTC.

What volume are you looking for?

Sincerely,

Jackie Ferlita-Barnes AQC Environmental Brokerage Services, Inc. President, Emissions Desk 714-397-5508
