

LOS ANGELES INTERNATIONAL AIRPORT 2025 YEAR REPORT ON MOU IMPLEMENTATION SUMMARY AND DATA REPORT

Background

On December 13, 2019, Los Angeles World Airports (LAWA) and South Coast Air Quality Management District (SCAQMD) signed a Memorandum of Understanding (MOU) regarding Los Angeles International Airport (LAX). This MOU focuses on quantifying emission reduction benefits achieved through three (3) voluntary measures from LAWA's Air Quality Improvement Measures (AQIM) program at LAX:

1. **MOU Measure 1:** Ground Support Equipment Emission Reduction Policy
2. **MOU Measure 2:** LAX Alternative Fuel Vehicle Incentive Program
3. **MOU Measure 3:** Zero-Emission Bus Program

The annual emission data is used to quantify the estimated emission reduction benefits in the South Coast Air Basin. This MOU does not create State Implementation Plan (SIP) creditable reductions, but it identifies specific voluntary measures and provides the means for the SCAQMD to quantify the emission reductions from the MOU Measures to obtain SIP credits.

2025 Annual Report Summary

The 2025 Annual Report is the sixth report submitted by LAWA to the SCAQMD that reports on the LAX MOU progress towards meeting the targets in MOU Measures 1 to 3. The report does not apply to any source or operation of any source that is not specifically identified in the MOU Measures. This report and the attached excel datasets contain all the elements required in the MOU so the SCAQMD may calculate emission benefits from the measures. The emission factor calculation methodology and the performance targets were not amended from the 2021 submittal.

In 2025, LAX processed 73.7 million passengers, a modest decrease from 2024 levels, and remained below the 2019 peak of 88.1 million passengers. Air freight activity also moderately decreased in 2025 to approximately 2.23 million tons, reflecting a softening in cargo demand compared with 2024. Despite adding nearly 100 GSE units at LAX since the last MOU report, total nitrogen oxides (NOx) emissions decreased by over 10 tons. The LAWA GSE Emission Reductions policy surpassed both its 2023 and 2031 targets of 1.8 and 1.0 grams per brake horsepower-hour (g/bhp-hr) for hydrocarbons (HC) plus NOx. For 2025 reporting year, the emission factor has been further reduced to 0.89 g/bhp-hr.

Notable progress under the MOU in 2025 includes continued implementation of the LAX Zero-Emission Ground Support Equipment (ZE GSE) Policy and development of an updated policy in 2025 to enhance the implementation and enforcement procedures. LAWA also continued distributing funds through the LAX Electric GSE Incentive Program; as of June 2026, approximately

\$440,000 (88 percent of the \$500,000 allocation) has been awarded to four recipients to replace 35 conventional GSE units with zero-emission GSE. In addition, the Board of Airport Commissioners reauthorized the LAX Alternative Fuel Vehicle Incentive Program in April 2025, approving a refreshed \$175,000 zero-emission heavy-duty vehicle incentive program intended to deploy zero-tailpipe-emission trucks at LAX.

On the landside access side, the LAX/Metro Transit Center opened on June 6, 2025, improving regional transit connectivity and providing a direct rail-to-shuttle connection to the terminals while SkyLink (formerly known as the Automated People Mover) completes commissioning. SkyLink has progressed through testing and commissioning milestones and is now in active system demonstration testing ahead of passenger operations. Also, the Zero Emission Bus Program continues to exceed the MOU's interim target, with LAWA maintaining a fleet of 39 buses, including 20 electric buses (approximately 51 percent of the LAWA-owned bus fleet). Below is the status of each of the LAX MOU Measures.

MEASURE NO. 1 - GROUND SUPPORT EQUIPMENT EMISSIONS REDUCTION POLICY

This measure requires all ground support equipment operators at LAX to achieve fleet average hydrocarbon + nitrogen oxides emission factors of 1.8 and 1.0 grams per brake horsepower-hour (g/bhp-hr) by January 1, 2023, and January 1, 2031, respectively.

The 2025 report shows the fleet average HC + NOx emission factor for commercial GSE at LAX is 0.89 g/bhp-hr, which is lower than the 2017 AQIM baseline fleet averaged HC + NOx emission factor of 2.24 g/bhp-hr, exceeded (i.e., is better than) the 2031 target of 1.00 g/bhp-hr. LAWA continues to strive for accuracy of reporting, reconciling year-to-year discrepancies with operators, verifying newly added equipment specifications match manufacturer documentation, and collecting actual meter-based use hours for all equipment reported as "low use" (200 hours per year or less). LAWA continues to request actual dates added or removed for equipment inventory changes, which are used to prorate emissions for this equipment, yielding a more accurate representation of facility emissions. Note that consistent with previous years, equipment marked "removed" during the reporting year were not included in the fleet averaged HC + NOx emission factor.

The two summary tables below compare the number of GSE between the 2017 MOU baseline and the current reporting year. As seen in Table 1, the total electric GSE (eGSE) count has increased, specifically for equipment 2010 and newer. Additionally, there has been a notable shift overall towards model year 2010 and newer equipment, along with the removal of older equipment. This is likely due to the increased availability of eGSE, as well as outreach and improved data verification processes. Table 2 focuses specifically on off-road diesel engines, highlighting a continued transition from older, higher-emission equipment to newer, cleaner engines.

Overall, the data shows that there has been a significant movement away from older (pre-2010) toward newer (2010 to present) GSE. This has been the trend since the beginning of the MOU reporting and is expected to continue.

Table 1 – Fleet Comparison 2017 to 2025**2025 Fleet (difference as compared to 2019 reporting year [based on 2017 fleet])**

Tier	Model Year	Horsepower Bin								Total
		25 - 49	50 - 74	75 - 99	100 - 174	175 - 299	300 - 599	600 - 749	≥ 750	
≤ Tier 1	≤ 1999	1 (-)	1 (-)	0 (-11)	0 (-11)	0 (-11)	0 (-)	0 (-)	0 (-)	2 (-33)
Tier 1	1996 - 2005	3 (+1)	11 (+4)	7 (-74)	8 (-30)	5 (-20)	0 (-1)	1 (+1)	0 (-)	35 (-119)
Tier 2	2001 - 2010	2 (-3)	5 (-7)	2 (-9)	10 (-16)	0 (-16)	3 (-1)	1 (+1)	0 (-)	23 (-51)
Tier 3	2006 - 2011	0 (-)	0 (-)	4 (-3)	25 (-53)	14 (-25)	2 (-6)	0 (-3)	0 (-)	45 (-90)
Tier 4i	2008 - 2014	2 (-1)	1 (-3)	3 (-5)	23 (-11)	12 (-4)	6 (-)	0 (-)	0 (-)	47 (-24)
Tier 4	≥ 2013	15 (+10)	76 (+42)	65 (+51)	166 (+118)	74 (+45)	90 (+51)	4 (-)	1 (+1)	491 (+318)

Table 2 – Diesel Tier Comparing 2017 to 2025**2025 Fleet (difference as compared to 2019 reporting year [based on 2017 fleet])**

Model Year	Fuel Type				Total
	Gasoline	LPG/Propane	Electric	Diesel	
≤ 2007	122 (-137)	75 (-79)	289 (-288)	90 (-222)	576 (-726)
2008 - 2009	38 (-32)	22 (-19)	65 (-53)	24 (-39)	149 (-143)
2010 - 2015	207 (+80)	181 (+54)	285 (+66)	158 (-14)	831 (+186)
2016 - 2020	403 (+249)	185 (+106)	358 (+224)	303 (+190)	1249 (+769)
≥ 2021	174 (+174)	348 (+348)	419 (+419)	183 (+183)	1124 (+1124)
Total	944 (+334)	811 (+410)	1416 (+368)	758 (+98)	3929 (+1210)

Looking Ahead

Each year since the inception of the MOU, LAWA has achieved measurable reductions in emissions, demonstrating consistent progress toward its air quality goals. In January 2024, LAWA introduced the ZE GSE Policy, establishing a phased plan to transition all GSE at LAX to zero-emission alternatives by 2033. In 2025, LAWA advanced implementation planning by developing a supporting GSE/vehicle database and preparing an updated ZE GSE Policy to strengthen monitoring and compliance procedures, including requiring all motorized and designated non-motorized GSE operating on the Air Operations Area to obtain an Airside Tag.

Beginning in October 2024 and continuing through 2026, LAWA staff will hold monthly meetings with GSE managers to reinforce key requirements of the ZE GSE Policy and the GSE policy in this MOU, ensure compliance with reporting requirements, and provide updates on eGSE charging infrastructure at LAX. On June 13, 2023, LAWA approved a \$500,000 incentive program to speed up the adoption of eGSE at LAX. LAWA received applications from five LAX GSE operators to replace 35 older conventionally fueled GSE with eGSE. As of June 2026, a total of \$440,000 in incentive funds has been distributed, supporting the replacement of 35 conventional GSE with eGSE.

To support growing electrification, LAWA is advancing its Federal Aviation Administration (FAA) Voluntary Airport Low Emissions (VALE) Program funded charging projects. The VALE grant supports the installation of 27 tri-port chargers (81 ports) at the West Remote Pad and Tom Bradley International Terminal, with anticipated completion in Q2 2026. LAWA is coordinating with tenants, original engine manufacturers, and the FAA to expand charger deployment for eGSE and other airfield electric vehicles.

LAWA remains committed to the LAX GSE Emissions Policy, working with operators to accelerate the transition to cleaner equipment and complete required electrical upgrades. With no universal eGSE charging standard yet, LAWA is collaborating with operators and manufacturers to ensure interoperability, operational flexibility, and readiness for emerging technologies.

MEASURE NO. 2 - LAX ALTERNATIVE FUEL VEHICLE INCENTIVE PROGRAM

This measure is based on the LAX Zero and Near-Zero Emission Heavy-Duty Vehicle Incentive Program. It aims to replace diesel-fueled, heavy-duty trucks with a Gross Vehicle Weight Rating (GVWR) of 14,001 pounds or greater with zero or near-zero emission alternatives.

Following reauthorization of the LAX Alternative Fuel Vehicle Incentive Program in April 2025, LAWA launched a renewed zero-emission heavy-duty vehicle incentive effort in June 2025 using the remaining \$175,000 from the prior program cycle. Beginning in June 2025, LAWA conducted extensive and targeted outreach to promote the program, including broad email distribution of program announcements and application materials to LAX Alternative Fuel Vehicle contract holders, held virtual workshops, and created opportunities for one-on-one engagement with LAWA staff. The program was also promoted through recurring presentations at quarterly LAX Alternative Fuel Vehicle and GSE Manager meetings, each reaching more than 150 companies, as well as through direct engagement at industry events such as the International GSE Expo. LAWA expanded its efforts in 2025 through proactive, individualized outreach with key stakeholders, including in-person meetings, virtual discussions, and ongoing email communication to address operational considerations such as retrofit eligibility and technology feasibility.

Looking Ahead

Beginning in 2026, outreach intensified through targeted follow-up, technical assistance, application support, and communications to more than 60 qualifying LAX companies, including notifications of complementary funding opportunities such as CARB Clean Truck and Bus Voucher Incentive Project (HVIP). These efforts increased tenant engagement, resulting in submitted applications and ongoing participation discussions.

Building on this progress, LAWA will continue implementing the program in Fiscal Year 2026–2027, focusing on translating outreach and technical assistance into additional zero-emission heavy-duty vehicle deployments. LAWA will also continue evaluating broader strategies to support the transition of on-road vehicles over 8,500 pounds GVWR to zero-emission technologies.

LAWA remains committed to supporting participation through direct engagement, technical coordination, and alignment with complementary funding opportunities to maximize adoption at LAX.

MEASURE NO.3 – ZERO-EMISSION BUS PROGRAM

This measure is based on the LAX Zero-Emission Bus Program to convert LAWA-owned buses at LAX to zero-emission buses and is attached to and a part of the MOU between the LAWA and SCAQMD. The measure requires LAX to replace 20% and 100% of the Airport-owned and operated buses with zero-emission buses by January 1, 2023 and January 1, 2031, respectively.

As of December 31, 2025, LAWA owned a fleet of 39 buses. One older shuttle bus used on the airfield by LAWA for ADA transport was scrapped in October 2025, reducing the in-service inventory from 40 buses. Of the 39 buses, 20 remain electric, which represents approximately 51 percent of the LAWA-owned bus fleet. These electric buses are typically dedicated for use on the airfield and on occasion are used on-road to transport passengers. Thirteen additional buses were received in 2025 and were placed into service in early 2026; therefore, they are not reflected in the December 31, 2025 in-service inventory totals above.

Since the implementation of the MOU, LAWA has retired a total of 12 diesel and 49 CNG buses with engine model years between 1996 to 2009. Thirty-six of the 39 CNG buses were retired from the LAX Parking Shuttle fleet in 2022. In 2022, LAWA retired and submitted an "affidavit of non-use" to the California Department of Motor Vehicles for thirty-six of the 39 CNG buses. Salvage of these retired buses began in 2025 and is ongoing.

Table 3 below shows the LAWA buses that have been removed from service. The complete 2025 LAWA-owned fleet is available in the excel data report for MOU Measure 3.

Table 3 – LAWA Buses Removed from Operation

LAWA ID #	Engine Model Year	Fuel Type	Retired Date	Replaced Details	LAWA ID #	Engine Model Year	Fuel Type	Retired Date	Replaced Details

To meet ongoing operational demands, LAWA continues to contract with a third-party entity to service the LAX-it, Metro Line Connector, LAX Economy Parking, and LAX employee parking lots. Currently, 84 buses are under contract at LAX for these services.

Looking Ahead

LAWA plans to increase the number of electric buses servicing LAX. On May 2, 2024, the Board of Airport Commissioners approved the purchase of up to 27 electric buses - 13 in the initial phase, with an option for 14 more. Thirteen of these electric buses were received in 2025 and were placed into service in early 2026. In addition, ABM, which manages LAX parking operations, has received and put into service 11 electric buses in 2025.

As part of LAX's ongoing modernization, the new LAX/Metro Transit Center opened on June 6, 2025. The facility provides a direct connection for Metro train riders to the Transit Center, eliminating the need for an initial shuttle transfer from the rail station. Passengers currently continue from the Transit Center to the airport terminals by shuttle bus while the LAX SkyLink completes testing and commissioning.

The elevated SkyLink is progressing through system demonstration testing and is planned to begin passenger operations following successful completion of commissioning. Once in service, SkyLink will provide a direct, high-capacity connection between the LAX/Metro Transit Center, the Ground Transport Center, the LAX Rental Car Center, and the airport terminals substantially reducing the need for shuttle buses. As SkyLink transitions into operations, most contracted buses are expected to be phased out, with a limited number potentially retained for contingency service or specific operational needs.

2025 Measures 1-3 Data Reports

MOU MEASURE NO. 1 - GROUND SUPPORT EQUIPMENT EMISSIONS REDUCTION POLICY

This MOU Measure No. 1 is based on LAWA's Air Quality Improvement Measures plan for LAX (LAX AQIM), the Ground Support Emissions Reduction Policy for ground support equipment (GSE) at LAX and is attached to and a part of the MOU between LAWA and South Coast AQMD.

I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average oxides of nitrogen (NO_x) + hydrocarbon (HC) emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III. LAWA OBLIGATIONS - LAWA shall:

A. Airport shall implement the measure by working with airport tenants to achieve the above performance targets. Airport shall have complete discretion as to mechanisms used to implement this measure.

B. Beginning in 2021, and every year thereafter through 2032, provide the following information to South Coast AQMD on an annual basis by June 1 for each preceeding calendar year:

1. List of ground support equipment operating at LAX subject to this GSE measure with the following information:

- a. Equipment ID
- b. Equipment type
- c. Fuel type
- d. Engine model year
- e. Power rating (hp or kW)
- f. Engine tier level (for diesel engines)
- g. Annual activity data for non-zero emission equipment that is sufficient to determine emission reductions at a reasonable level of accuracy (i.e., actual operating hours from hour meter readings/maintenance records, average operating hours representative of equipment type and airport, or average operating hours by equipment/fuel type from CARB's OFFROAD model, if applicable).

2. For non-zero emission ground support equipment subject to this GSE measure, information regarding the sale or retirement of equipment available through CARB's DOORS system and, for pre-Tier 4 diesel, pre-2010 gasoline, or pre-2010 LPG ground support equipment relocated from LAX to another airport within the South Coast Air Basin, identify: a) the airport to which equipment is relocated, b) date of relocation, and c) estimated projected usage hours.

3. An annual emission inventory for ground support equipment operating at LAX, following the methodology and calculations used to generate the 2017 baseline inventory report for the LAX AQIM.

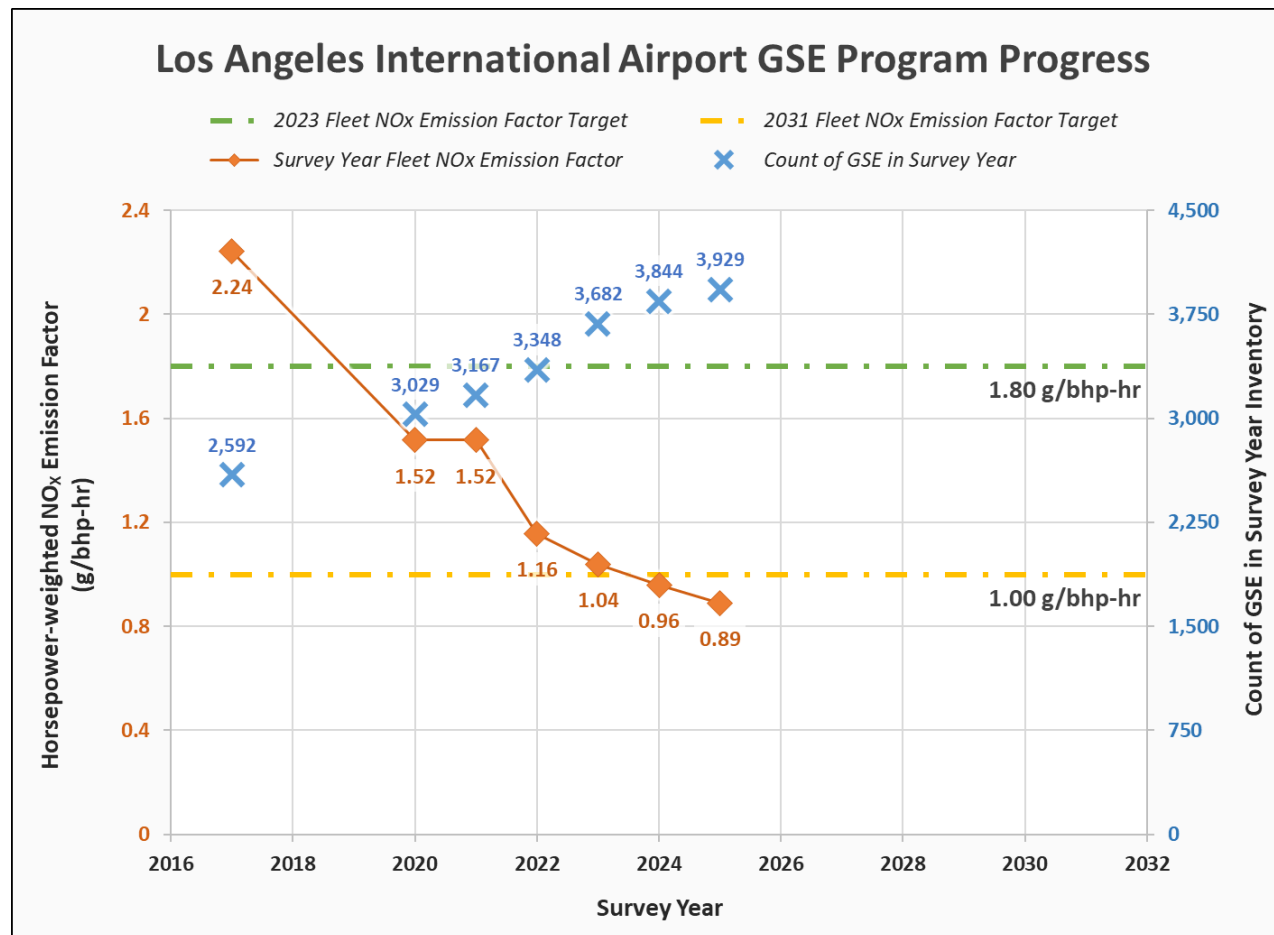

I. LAX Fleet-wide Emission Factor

I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average NOx + HC emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

Reporting year: 2025

LAX Facility Average NOx+HC Emission Factor (gr/bhp-hr): 0.89

III.B.1. List of Ground Support Equipment Operating at LAX Subject to this GSE Measure

I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average NOx + HC emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

AQMD I.D.	Company Equipment I.D.	GSE Category	Fuel Type	Engine Model Year	Horsepower (User Entered or Default)	Off-road or On-road Engine	Engine Tier (Off-Road Diesel Only)	Annual Activity Data (From CARB's OFFROAD Model, except * actual hours)
ST-0267	Truck #310	Service Truck	Gasoline	2015	255	Off-Road	--	883
BT-0804	BT001	Baggage Tug	LPG/Propane	2016	69	On-Road	--	846

III.B.2. Non-zero Emission GSE Sale or Retirement and Relocation Information

III.B.2. For non-zero emission ground support equipment subject to this GSE measure, information regarding the sale or retirement of equipment available through CARB's DOORS system and, for pre-Tier 4 diesel, pre-2010 gasoline, or pre-2010 LPG ground support equipment relocated from LAX to another airport within the South Coast Air Basin: a) the airport to which equipment is relocated, b) date of relocation, and c) estimated usage hours.

III.B.3. Emissions Inventory

- I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average NOx + HC emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.
- II. PROGRAM TIMEFRAME - Upon execution through 2032.

The MOU emissions inventory calculation has incorporated the updated LSI data provided by CARB in August 2021. This includes emission factors, load factors, fuel correction factors, and caps on equipment lifetime hours (deterioration rate caps). The following CARB rule-based approach are used as our standards in the GSE Emission Inventory calculation protocol:

- 1) Exclude all Low Use (ORD/PERP)/Limited Hours of Use (LSI) (<200 hours) from the LAX Fleet Average Emission Factor, but not from the Emission Inventory or Equipment Inventory.
- 2) Exclude all <25 bhp ORD/LSI and <50 bhp PERP equipment from the LAX Fleet Average Emission Factor, but not from the Emission Inventory or Equipment Inventory.
- 3) Exclude all "Other" and "Other ORE" categories from the LAX Fleet Average Emission Factor, Emission Inventory and Equipment Inventory.
- 4) Consistent with LSI Regulation, calculations may include on-road equivalent GSE that have been designed for on-road use, but not licensed for on-road use. These vehicles may also have been modified for airport use.
- 5) Per unit emissions were calculated using the following formula and summed across all equipment listed at the airport to determine the fleet-total emissions:

Emissions (grams per year) = Activity (hours per year) × Power Rating (horsepower) × Load Factor (dimensionless) × { Zero-hour Emission Factor (grams per brake horsepower-hour) + [Deterioration Rate (grams per brake horsepower-hour per hour) × Equipment Lifetime Cumulative Operational Hours (hours)] } × Fuel Correction Factor (dimensionless)

MOU MEASURE NO. 2 - LAX ALTERNATIVE FUEL VEHICLE INCENTIVE PROGRAM

This MOU Measure No. 2 is based on LAWA's Air Quality Improvement Measures plan for LAX (LAX AQIM), the LAX Zero and Near-Zero Emission Heavy-Duty Vehicle Incentive Program and is attached to and a part of the MOU between LAWA and South Coast AQMD.

I. PROGRAM DESCRIPTION - Implement an incentive program that will distribute up to \$500,000 dollars in funding to applicants based on the "incremental cost" differential of the zero or near-zero emission vehicles as compared to conventionally-fueled equivalents with a Gross Vehicle Weight Rating (GVWR) of 14,001 pounds or greater by December 31, 2021.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III. LAWA OBLIGATIONS - LAWA shall:

A. Ensure full subscription of incentive program funding, to the maximum extent feasible, to encourage the deployment of zero or near-zero emission vehicles at LAX.

B. Beginning in 2021, provide the following information to South Coast AQMD on an annual basis by June 1 for each preceeding calendar year:

1. Zero or near-zero vehicle VIN number
2. Zero or near-zero vehicle model year
3. Zero or near-zero vehicle GVWR
4. Zero or near-zero vehicle engine model year
5. Zero or near-zero vehicle engine power rating
6. Zero or near-zero vehicle fuel type
7. Executive Order Number for the zero or near-zero vehicle engine
8. Zero or near-zero vehicle annual VMT (estimated)¹
9. List of, and information on, replaced vehicles (e.g., scrapped, moved out of state)
10. An emission inventory for the new near-zero or zero-emission vehicles acquired by LAX operators under the Alternative Fuel Vehicle incentive Program, following the methodology and calculations used to generate the 2017 baseline inventory report for the LAX AQIM.

¹ Vehicle miles traveled (VMT) will be estimated from EMFAC2017 VMT for applicable vehicle size and technology categories in the South Coast Air Basin portion of Los Angeles County, unless CARB updates those activity levels at a future date within the Program.

2025	0.256	15.876	0.105	0.0054	0.0054	--	2,275.1

LAWA prepared the 2017 emission inventory baseline for the LAX AQIM. LAWA replicated the methodology and calculations used to prepare the 2017 emissions inventory to develop an emissions inventory for MOU reporting. For each incentive vehicle emission factors are based on the CARB Executive Order that certified the vehicle's engine. EMFAC categories for each vehicle are based on GVWR, EMFAC default VMT and average speeds for each unit.

MOU MEASURE NO. 3 - ZERO-EMISSION BUS PROGRAM

This MOU Measure No. 3 is based on LAWA's Air Quality Improvement Measures plan for LAX (LAX AQIM), the LAWA Zero-Emission Bus Program to convert LAWA-owned buses at LAX to zero-emission buses and is attached to and a part of the MOU between LAWA and South Coast AQMD.

I. PROGRAM DESCRIPTION - Replace 20% and 100% of LAWA-owned and operated buses with zero-emission buses by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III. LAWA OBLIGATIONS - LAWA shall:

A. Replace LAWA-owned buses to meet the specified targets.

B. Beginning in 2021, provide the following information to South Coast AQMD on an annual basis by June 1 for each preceeding calendar year:

1. List of buses operating at LAWA with the following information:

- a. Vehicle Identification Number
- b. Vehicle model year
- c. Vehicle GVWR¹
- d. Bus engine model year
- e. Power rating (hp or kW)
- f. Odometer reading
- g. Vehicle miles traveled²

2. An emission inventory for the LAWA-owned bus fleet, following the methodology and calculations used to generate the 2017 baseline inventory report for the LAX AQIM.

3. List of buses replaced during the reported year and information specified in III.B.1. above on replaced and replacement buses (i.e., replaced buses scrapped or moved out of state).

¹ Gross Vehicle Weight Rating

² Vehicle miles traveled (VMT) will be based on actual annual mileage traveled by each bus in the LAWA-owned bus fleet.

MOU MEASURE NO. 3 ZERO-EMISSION BUS PROGRAM

Operating List MOU Measure 3 III.B.1.

^a December 31, 2025 odometer reading was estimated by prorating available maintenance records.

MOU MEASURE NO. 3 ZERO-EMISSION BUS PROGRAM

Emission Inventory MOU Measure 3 III.B.2.

- I. PROGRAM DESCRIPTION - Replace 20% and 100% of LAWA-owned and operated buses with zero-emissions buses by January 1, 2023 and January 1, 2031, respectively.
II. PROGRAM TIMEFRAME - Upon execution through 2032.

Reporting Year	Bus Fleet Count	% Electric	Emissions						
			<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>Mtpy</i>
			ROG	CO	NOx	PM10	PM2.5	SOx	CO2e
2025	39	51.0	0.07	37.67	0.38	0.19	0.03	0.00	1,630

The 2017 emission inventory baseline was performed for the LAX AQIM. The methodology and calculations were replicated to develop an emissions inventory for MOU reporting. In summary, these are the general steps used to calculate the Emission Inventory:

UBUS aggregate data is downloaded for the reporting year from CARB's EMFAC2017 (v1.0.3) model for each type of fuel - gasoline, diesel, natural gas, and electricity.

An Excel SUMPRODUCT calculation is performed that multiplies the EMFAC value per fuel type [per day] times the fleet count of that fuel type, which is then divided by the fleet count total to get an average value per bus. Example: average Vehicle Miles Traveled (VMT) per day per bus, average tons per day of NOx per bus.

The average pollutant amounts [tons per day] are then divided by the average VMT per bus to get a tons per mile emissions amount. (It is at this step that the Global Warming Potential of CH4 and N2O are incorporated so that CO2e can be calculated.)

Then, the average VMT per bus per day is multiplied by the fleet count and converted to per year (multiplied by ~365), resulting in total VMT for all buses per year.

This VMT [miles per year] is then multiplied by each of the pollutant values [tons per mile] resulting in **tons per year**. This is the annual emissions inventory.

*Note: consistent with the 2017 LAX AQIM emissions inventory methodology, theoretical EMFAC VMT was used to calculate the **Emission Inventory**. The **Operating and Replacement/Replaced List** in this report shows actual VMT for each bus from available field logs.
