**PROJECT: EXIDE TECHNOLOGIES FACILITY ID NO. 124868,
ORDER OF ABATEMENT CASE NO. 3151-32**
RE: WEEKLY STATUS REPORT # 6 (10/16/14 – 10/22/14)

Dear Mr. Pupka,

Tetra Tech Inc. is pleased to present the following Weekly Status Report for the above referenced project. This report covers the period of October 16, 2014 through October 22, 2014.

CURRENT ACTIVITIES WHERE PREVIOUSLY APPROVED MITIGATION MEASURES WERE FULLY IMPLEMENTED

Major items of work performed by Exide and/or its contractor(s) (including specific mitigation measures) currently under way or completed during this reporting period where mitigation measures were implemented in full compliance with the previously approved mitigation measures under the Mitigation Plan for Construction of Risk Reduction Measures, RCRA RFI Sampling, and Other Plant Activities or other Mitigation Plans, as approved by the SCAQMD, at the site during this period include:

TASK ID	Major Work Item	Mitigation Measure(s)
5f	Storm Water Piping Project Completion	Temporary Enclosure Under Negative Pressure*
2a	Dust Removal	Total Enclosure Building Under Negative Pressure
5g	Refining Department Production Office Repairs	Total Enclosure Building Under Negative Pressure
EX 43	West Yard Sump Piping	None Required*
EX 51	Sand Filter Tanks Repair	Temporary Enclosure Under Negative Pressure*
5d	Santa Maria Tank 12	Temporary Enclosure Under Negative Pressure within the Total Enclosure Building
5a	Reverb Furnace Activities	Temporary Enclosure Under Negative Pressure within the Total Enclosure Building
EX 68	Install Chains & Signage	Total Enclosure Building Under Negative Pressure

* Dust Trak monitoring performed for this work item.

Tetra Tech BAS, Inc.

1360 Valley Vista Drive, Diamond Bar, CA 91765

Storm Water Pipe Completion Project

Innovative Construction Solutions (ICS) and their subcontractor Brownco continued storm water pipe repair on the manholes in the south yard on Thursday, October 16, 2014, at manholes A and C. All work was done within temporary enclosures under negative pressure and vented to a permitted HEPA filtration system. Brownco saw-cut around each of the manholes, and then chipped out concrete using a roto hammer with dust shroud. Castlerock provided two (2) permitted 125 CFM HEPA vacuums to collect dust and liquids generated from the repair activities. Once ICS completed work at one manhole Castlerock would relocate the enclosure from the completed manhole to the next one requiring repair. During this reporting period, ICS completed work at manholes A, C, E, E-1, G, D, D-1, B, MH-6 and MH-6A. Work performed was similar and mitigation measures employed were the same at all locations.

Tetra Tech personnel were onsite to verify permits for the two (2) HEPA vacuums, review specifications and confirm that the Hilti roto hammer was an approved equal to the Bosch roto hammer identified in the approved mitigation plan. Tetra Tech personnel placed Dust Trak monitors upwind and downwind of the temporary enclosures place over the work areas for manholes A, B, C, D, D-1, E, E-1, G, MH-6 and MH-6A to monitor for fugitive dust during the repair activities conducted in the temporary enclosures to monitor for fugitive dust. Tetra Tech personnel also routinely verified that the temporary enclosures maintained negative pressure and were vented to a permitted HEPA filtration system once Castlerock completed erecting each. Dust Trak monitoring readings upwind and downwind of the work area were generally comparable, indicating that no significant dust emissions were generated from this project.

Verification activities included:

- Observation of the installation of the temporary enclosures.
- Continuous downwind Dust Trak monitoring on the temporary enclosure installations and repair activities within the enclosures, to monitor for fugitive dust emissions.
- Confirmation that negative pressure was maintained by checking the gauge on the temporary enclosures.
- Visual inspection of the enclosures prior to the start of each shift to confirm that no visible leaks or tears were present, that the structural integrity of the enclosures were maintained and that the enclosures were under negative pressure and vented to a permitted HEPA filtration system throughout the entirety of the project. Any noted areas where seams needed to be re-taped were repaired by Castlerock prior to resuming work within the enclosures. Seams that needed re-taping were identified during the initial inspection by Tetra Tech personnel or when a drop in negative pressure was noted. Any necessary repairs were made immediately.
- Visual inspection of the completed repair areas to confirm that all liquid and dust had been captured by HEPA vacuum and containerized in sealed 55 gallon drums.
- Visual inspection of drum labels and transfer of the drums to the total enclosure building for proper waste management.

Dust Removal

National Response Corporation (NRC) personnel continued dust removal on October 16, 2014, using eight (8) HEPA backpack type vacuums with valid SCAQMD various locations permits.

NRC continued dust removal in the total enclosure building in the area of the Reverb Furnace and Blast Furnace in the Smelting Building. Eight (8) back pack type HEPA vacuums were used to remove dust from horizontal cross members and supports. Vacuum activities occurred 24 hours per day through Friday October 17, 2014, at 6:00 pm and resumed on Sunday, October 19, 2014, at 6:00 pm. The contents of the vacuums were emptied into plastic bags and the plastic bags were transported to either the RMPS sump or into 55-gallon drums. The sumps are a part of the existing dust conveyance system which converts dust to a water slurry that is sent to the filter press circuit. During this period, access to the RMPS sump was temporarily obstructed by the erection of the temporary negative pressure enclosure at Santa Maria Tank 12. As a result, NRC began placing the plastic bags containing lead dust into 55-gallon drums for storage until access to the RMPS sump is cleared.

NRC maintains eight (8) permitted back pack type HEPA vacuums with SCAQMD Various Locations Permits that will be used during the dust removal process. The eight (8) permitted vacuums include two Pullman Holt Model 30 ASB (Serial Numbers 6773 and 6774), two Comfort Pro Model BP6S (Serial Numbers 0914002684 and 0914002684), and 4 Nilfisk Model GD 10 Back (Serial Numbers 1411-00096, 1411-00032, 1411-00064, and 1426-00160). In accordance with their permit conditions, NRC maintains a HEPA filter inspection log to document the inspection of the HEPA filters on a daily basis.

In addition to the eight (8) back pack type HEPA Vacuums, NRC used a vacuum truck (Vehicle License No. 7M95594) which has a valid SCAQMD Various Locations Permit for lead abatement (Permit No. G33129 A/N 568775). The vacuum truck was connected to the 3-inch PVC piping installed during mobilization and used to remove dust in the reverb furnace, blast furnace and soft lead bag house during this reporting period.

Tetra Tech personnel were onsite to monitor dust removal activities, verify permits for the HEPA vacuums and vacuum truck, and dust disposal at the RMPS sump. Verification activities included:

- Visual observation of the dust removal process for fugitive dust within the total enclosure building.
- Verification that the total enclosure building was maintained under negative pressure and vented to operational air pollution control equipment during all dust removal activities.
- Verification that SCAQMD various locations permits were present for all of the back pack type HEPA vacuums and that the serial numbers on the equipment matched the permit.
- Verification that the SCAQMD Various Locations Permit was present for the vacuum truck HEPA vacuum and that filters were certified with a minimum efficiency of 99.97% for capture of 0.3 micron particles.

- Observation of the emptying of the vacuums at the RMPS sump to confirm that no fugitive dust was generated during the process.
- Review of NRC HEPA vacuum logs that are updated daily.

Refining Department Production Office Repairs

Exide's contractor Brownco continued work in the refining department production office on October 16, 2014. The refining department production office is located within the total enclosure building and is maintained under negative pressure. Repair activities included plumbing, installation of electrical conduit and boxes, installation of drywall, installation of ceiling panels and painting. Repair activities in the bathroom and conference room continued beyond this reporting period.

Tetra Tech personnel were onsite to observe repair and mitigation activities associated with the refining department production office repairs. Verification activities included:

- Verification that the total enclosure building was maintained under negative pressure during repair activities.
- Verification that the HEPA vacuum that was used by Brownco had a valid permit for use with lead.
- Verification that Brownco vacuumed the work area at the completion of each shift in accordance with the mitigation plan.

West Yard Sump Piping

Advanced Construction installed aboveground piping along the west and north fence in the west yard to connect the west yard sumps to the water treatment system. This activity does not require a temporary negative pressure enclosure because no work is being performed that has the potential to generate dust

Sand Filter Tank Repairs

Exide's engineers completed pressure testing to verify that the repairs were complete. Castlerock mobilized to the site on Wednesday October 22, 2014, to remove the temporary negative air enclosure.

Tetra Tech personnel placed Dust Trak monitors upwind and downwind of sand filter tank repair area to monitor for fugitive dust during the removal of the temporary negative air enclosure. Dust Trak monitoring readings upwind and downwind of the work area were generally comparable, indicating that no significant dust emissions were generated from this project.

Verification activities included:

- Observation of the removal of the temporary enclosures.
- Continuous downwind Dust Trak monitoring on the temporary enclosure removal to identify potential fugitive dust emissions.

Santa Maria Tank 12

Castlerock continued building a temporary negative pressure enclosure over the Santa Maria Tank 12 area within the RMPS portion of the total enclosure building maintained under negative air. Erecting scaffolding for the temporary negative air enclosure continued through the reporting period. Installation of the temporary enclosure will continue into the next reporting period.

Tetra Tech personnel were onsite to observe erection of the Santa Maria Tank 12 enclosure. Verification activities included:

- Verification that the total enclosure building was maintained under negative pressure and vented to operational air pollution control equipment during all dust removal activities.

Installation of Chains and Signage

Exide personnel installed chains to hang safety signage and signs in the bag house row portion of the total enclosure building. Prior to the installation of chains and signage, Exide personnel cleaned each area, and maintained the area wet during the installation of chains and signs. Installation of the chains and signage will continue into the next reporting period.

Tetra Tech personnel were onsite to observe installation of the chains and signage. Verification activities included:

- Verification that the total enclosure building was maintained under negative pressure and vented to operational air pollution control equipment during all dust removal activities.

Reverb Furnace

Castlerock mobilized to the site on Tuesday October 21, 2014 and began building a temporary negative pressure enclosure over the Reverb Furnace area within the refining/smelting portion of the total enclosure building maintained under negative air. Erecting scaffolding for the temporary negative air enclosure continued through the reporting period. Installation of the temporary enclosure will continue into the next reporting period.

Tetra Tech personnel were onsite to observe erection of the Reverb Furnace enclosure. Verification activities included:

- Verification that the total enclosure building was maintained under negative pressure and vented to operational air pollution control equipment during all dust removal activities.

**CURRENT ACTIVITIES WHERE A DEVIATION FROM PREVIOUSLY APPROVED
MITIGATION MEASURES WERE OBSERVED AND THE CORRECTIVE ACTIONS TAKEN**

Major items of work performed by Exide and/or its contractor(s) (including specific mitigation measures) currently under way or completed during this reporting period where for each of the activities described below, mitigation measures were implemented which to some extent deviated from the previously approved mitigation measures under the Mitigation Plan for Construction of Risk Reducing Measures, RCRA RFI Sampling, and Other Plant Activities or other Mitigation Plans, as approved by the SCAQMD:

TASK ID	Major Work Item	Deviation(s)	CORRECTIVE ACTION
		None	

In accordance with the Order for Abatement Case No. 3151-32 Findings and Decision, air monitoring was conducted during enclosure installation/relocation and during all repair work performed within the temporary enclosures at the storm water piping project completion, and during the enclosure removal at the sand filter tanks repair area. Monitoring results and a site map showing the location of the temporary enclosures are attached. If the results of continuous Dust Trak air monitoring detected excessive dust, additional suppression activities are required to be implemented. For this reporting period, Dust Trak monitoring readings upwind and downwind of the noted work areas were generally comparable, indicating that no significant dust emissions were generated through these tasks. Therefore, no additional dust suppression activities were implemented.

Activity Which Resulted in Excessive Dust	Additional Suppression Activity
None	Not Required

WORKER SAFETY CONCERNs:

The following Health and Safety issues, as they apply to Tetra Tech employees, were observed during this reporting period:

- o None.

ACTUAL vs. FORECAST PROGRESS:

Exide Technologies submitted a schedule which outlines the tasks needed to be completed in response to this abatement order. The attached Gant Chart shows scheduled progress for all activities planned for the upcoming two week period. The table below shows the status of these activities

TASK	STATUS
Storm Water Pipe Completion	Ongoing
Dust Removal	Ongoing
Refining Dep. Production Office Repairs	Ongoing
West Yard Sump Piping	Ongoing
Sand Filter Repair Work	Completed
Santa Maria Tank 12	Ongoing
Install Chains and Signage	Started
Reverb Furnace Activities	Started

WORK SCHEDULED DURING THE UPCOMING PERIOD:

The following activities are anticipated for the upcoming weeks:

Week	Anticipated Activities
Oct. 23 - Oct. 29	<ul style="list-style-type: none">• Feed Room Floor Repair Starts• Stormwater Pipe Project Completion Continues• Dust Removal Continues• Refining Department Production Office Repairs Continues• West Yard Sump Piping Continues• Santa Maria Tank 12 Continues• Reverb Furnace Activities Continues• Install Chains and Signage Completes• Widening of Trailer Door Start/Complete• Scrap Cutting Pieces Starts• Underground Piping Project Starts

Week	Anticipated Activities
Oct. 30 - Nov. 5	<ul style="list-style-type: none">● Feed Room Floor Repairs Continue● Storm Water Pipe Project Completion Continues● Dust Removal Continues● Refining Department Production Office Continues● West Yard Sump Piping Continues● Santa Maria Tank 12 Continues● Reverb Furnace Activities Continue● Scrap Cutting Pieces Continues● Underground Pipe Project Continues● Sump 62 Repair Starts● Building Differential Pressure Monitoring Starts

KEY MILESTONES:

The following key milestones were achieved during this reporting period:

- Sand Filters Repair Work: COMPLETED
- Reverb Furnace Activities: BEGAN
- Chains and Signage Activities: BEGAN

POTENTIAL CHANGES AND ACTION ITEMS REQUIRING RESOLUTION:

The following items require resolution:

- None at this time.

OTHER NOTES/COMMENTS

Dust Removal activities are ongoing 24 hours per day 5 days per week with work starting on Sunday at 6:00 pm and continuing until 6:00 pm on Friday each week. Work related to the Santa Maria Tank 12, Reverb Furnace and the feed room floor repair are scheduled to occur seven days per week.

SUMMARY:

The summary provided herein covers the activities for the period of October 16, 2014 through October 22, 2014. Daily Dust Trak monitoring data are attached. Also attached please find a copy of Exide's upcoming two weeks schedule and site map identifying the location of the activities on the upcoming two weeks schedule.

Should you have questions regarding this report, or require additional information, please contact me at your earliest convenience.

Sincerely,

Nick Somogyi *SDT*
Project Engineer
