South Coast AQMD Continues Smoke Advisory Due to Lake Fire Northeast of Castaic

Valid: Sunday, August 16 through Monday, August 17, 2020

This advisory is in effect through Monday afternoon. South Coast AQMD will issue an update if additional information becomes available.

A wildfire named the Lake Fire is burning northeast of Castaic in Los Angeles County, within the Angeles National Forest. As of 12:00 p.m. on Sunday, the burn area was 17,862 acres with 12% containment. Current information on the Lake Fire can be found on the Incident Information System (InciWeb) at <https://inciweb.nwcg.gov/incident/6953/>.

Past and Current Smoke Impacts

The Lake Fire is producing smoke on Sunday afternoon based on satellite imagery, webcam imagery and social media posts. Intense fire activity is currently generating vertical smoke plumes, which are mainly concentrated to higher altitudes and moving to the north out of South Coast AQMD's jurisdiction on Sunday afternoon. PM_{2.5} concentrations at South Coast AQMD's monitors in Santa Clarita, Reseda, and North Hollywood have been within the **Good** to **Moderate** Air Quality Index (AQI) levels since Saturday evening. PM_{2.5} concentrations at low-cost sensors in Santa Clarita, the east San Fernando Valley, and the west San Gabriel Valley have also been within the **Good** to **Moderate** AQI levels since Saturday evening. Visit <https://www.aqmd.gov/aqdata> to view current air quality conditions.

Forecasted Smoke Impacts

- On Sunday afternoon, winds near the Lake Fire are predicted to be from the south and southwest and will push smoke to the north and northeast out of South Coast AQMD's jurisdiction.

- On Sunday evening through Monday morning, winds will shift to come from the west and northwest. During this time, it is possible that some smoke may be transported down from the higher elevations to areas east and southeast of the fire such as Santa Clarita and the Angeles National Forest. Elevated ground level concentrations of PM2.5 are expected overnight as the smoke is likely to remain closer to the ground.
- On Monday afternoon, winds near the fire will shift to come from the west and southwest and blow any smoke to the east and northeast out of South Coast AQMD's jurisdiction.

Overall, meteorological conditions may bring smoke and ash into portions of the San Gabriel Mountains and Santa Clarita Valley in Los Angeles County. **Unhealthy for Sensitive Groups** or higher AQI levels due to PM2.5 concentrations are possible in areas of direct smoke impacts. Ozone levels not associated with the fire are expected to reach **Unhealthy to Very Unhealthy** AQI levels on Monday.

In any area impacted by smoke: If you smell smoke or see ash due to a wildfire, limit your exposure by remaining indoors with windows and doors closed or seeking alternate shelter, and avoiding vigorous physical activity. For more tips on protecting yourself during a wildfire, see South Coast AQMD's Wildfire Smoke & Ash Health & Safety Tips page: <http://www.aqmd.gov/wildfire-health-info-smoke-tips>.

Areas of direct impacts and poor air quality may include portions of:

- **Los Angeles County:** Santa Clarita Valley (Area 13), San Gabriel Mountains (Area 15)
