## **South Coast AQMD Continues Smoke Advisory Due to Apple Fire North of Cherry Valley**

**Valid Monday August 03, 2020 through Tuesday August 04, 2020**

*This advisory is in effect through Tuesday Afternoon. South Coast AQMD will issue an update if additional information becomes available.*

A fire named the Apple Fire is burning north of Cherry Valley in Riverside County. As of 3:00 PM on Monday, the burn area was over 26,450 acres with 5% containment. Current information on the Apple Fire can be found on the Incident Information System (InciWeb) at <https://inciweb.nwcg.gov/incident/6902/>.

### **Past and Current Smoke Impacts**

The Apple Fire continues to produce smoke this afternoon based on satellite imagery, webcam imagery and social media posts. While smoke production has declined slightly since Sunday, the fire has been affecting air quality in the Northern Coachella Valley and Eastern Riverside County, predominately in the overnight hours. While AQI levels measured at a low-cost sensor in the Northern Coachella Valley is within the **Good to Moderate** category as of Monday afternoon, this sensor reached **Unhealthy** levels early Sunday and Monday morning. Also, a PM2.5 monitor operated by the National Parks Service in Joshua Tree recorded **Unhealthy for Sensitive Groups** AQI levels early Monday morning due to smoke from the fire. However, as of Monday afternoon, South Coast AQMD PM2.5 monitors in Banning and Indio have remained in the **Good to Moderate** category, illustrating that smoke impacts have been minimal west of the fire and in the Eastern Coachella Valley. Visit <https://www.aqmd.gov/aqdata> to view current air quality conditions.

### **Forecasted Smoke Impacts**

- San Gorgonio Pass (Area 29): most of the smoke impacts will continue to be concentrated at higher elevations near the fire. It is possible that some smoke may be transported down from the higher elevations in the overnight hours. Winds from the west in the proximity of the fire are expected to continue at least for the next several days. Therefore, significant smoke impacts are not expected west of Banning.
- East San Bernardino Mountains (Area 38): smoke impacts will continue in close proximity to the fire and towards the east. While conditions may change, significant smoke impacts are not likely in Big Bear, based on model predictions.
- Coachella Valley (Area 30): smoke impacts are expected to continue in the Northern Coachella Valley especially in the overnight hours when the plume is concentrated closer to the group. Air quality will be a strong function of how much smoke gets transported north through the Morongo Valley and Yucca Valley vs. how much smoke gets transported south into the Coachella Valley. Model predictions indicate that smoke transport to the south will continue to be a strong possibility.
- Impacts in Eastern Riverside County (Area 31): significant smoke impacts are expected to persist in this region and throughout Joshua Tree National Park.

Overall, meteorological conditions may bring smoke and ash into portions of the San Gorgonio Pass, the eastern San Bernardino Mountains, the Coachella Valley, and Eastern Riverside County. **Unhealthy** or higher AQI levels are possible in areas of direct smoke impacts.

Areas of direct impacts and poor air quality may include portions of:

- **Riverside County:** San Gorgonio Pass (Area 29), Coachella Valley (Area 30), East Riverside County (Area 31)
- **San Bernardino County:** East San Bernardino Mountains (Area 38)

**In any area impacted by smoke:** If you smell smoke or see ash due to a wildfire, limit your exposure by remaining indoors with windows and doors closed or seeking alternate shelter, and avoiding vigorous physical activity. For more tips on protecting yourself during a wildfire, see South Coast AQMD's Wildfire Smoke & Ash Health & Safety Tips page: <http://www.aqmd.gov/wildfire-health-info-smoke-tips>
