South Coast AQMD Continues Smoke Advisory Due to Bobcat, El Dorado and Snow Fires

Valid: Friday, September 18, 2020 through Saturday, September 19, 2020

This advisory is in effect through Saturday afternoon. South Coast AQMD will issue an update if additional information becomes available.

Three major local wildfires are affecting air quality in the region. A wildfire named the Bobcat Fire is burning north of Azusa, Duarte, Monrovia, and Arcadia in the Angeles National Forest. As of 8:00 AM on Friday, the burn area was reported at 60,557 acres with 15% containment. Current information on the Bobcat Fire can be found on the Incident Information System (InciWeb) at <https://inciweb.nwcg.gov/incident/7152>.

A wildfire named the El Dorado Fire is burning in the San Bernardino Mountains near Yucaipa in San Bernardino County. As of 8:00 AM on Friday, the burn area was reported at 21,678 acres with 66% containment. Current information on the El Dorado Fire can be found on InciWeb at <https://inciweb.nwcg.gov/incident/7148/>.

A wildfire named the Snow Fire is burning in the San Jacinto Wilderness near Cabazon in Riverside County. As of 8:00 AM on Friday, the burn area was approximately 2,500 acres with 0% containment. Current information on the Snow Fire can be found on the Riverside County Fire Department's Incident Information website <http://www.rvcfire.org/Pages/default.aspx> as well as on InciWeb at <https://inciweb.nwcg.gov/incident/7207/>.

Past and Current Smoke Impacts

The Bobcat, El Dorado, and Snow Fires are producing substantial amounts of smoke on Friday morning based on satellite and webcam imagery. Smoke from the El Dorado and northern extent of the Bobcat Fire is being transported towards the north/northeast based on satellite imagery. However, smoke from the southwestern extent of the Bobcat fire is being transported southwest into the San Gabriel Valley

and Los Angeles in Los Angeles County on Friday morning. Smoke from the Snow Fire is being transported to the east/northeast into the northern portions of Coachella Valley.

Air quality improved on Thursday afternoon and as a result, all South Coast AQMD continuous PM2.5 monitors recording 24-hour average concentrations were below federal air quality standards, except for South Coast AQMD's temporary monitor in Azusa. Monitors throughout the South Coast AQMD jurisdiction measured Air Quality Index (AQI) levels in the **Good to Unhealthy for Sensitive Groups** categories at times throughout the day yesterday.

Unhealthy values were recorded at times near the Bobcat and El Dorado fires with South Coast AQMD's temporary monitors and low-cost sensors. <https://www.aqmd.gov/aqdata> to view current air quality conditions.

In any area impacted by smoke: If you smell smoke or see ash due to a wildfire, limit your exposure by remaining indoors with windows and doors closed or seeking alternate shelter, and avoiding vigorous physical activity. For more tips on protecting yourself during a wildfire, see South Coast AQMD's Wildfire Smoke & Ash Health & Safety Tips page: <http://www.aqmd.gov/wildfire-health-info-smoke-tips>

Forecasted Smoke and Ash Impacts

Areas in direct proximity to the Bobcat, El Dorado, and Snow Fires will experience the highest AQI levels due to smoke impacts. Smoke and ash impacts will be highly variable in both timing and location through Saturday.

Los Angeles County

- **Friday afternoon through Friday evening:** Winds will be from the southwest and push smoke from the Bobcat Fire to the northeast into the San Gabriel Mountains and out of the South Coast Air Basin.
- **Overnight Friday through Saturday morning:** Areas south and southeast of the Bobcat Fire along the I-210 corridor from Pasadena to Claremont will likely see the highest particulate matter levels as smoke is likely to remain closer to the ground overnight from the southern extents of the fire.
- **Saturday afternoon:** Southwest winds are predicted to move smoke from the Bobcat Fire to the northeast into the mountains of Los Angeles and out of the South Coast Air Basin.

San Bernardino County

- **Friday afternoon through Saturday morning:** Winds will be from the southwest and push smoke from the El Dorado Fire to the northeast into the San Bernardino Mountains. Heavy smoke is possible in cities such as Big Bear and Running Springs. On Saturday morning, the East San Bernardino Valley could see higher PM2.5 levels from the El Dorado Fire as smoke is likely to remain closer to the ground overnight. The West San Bernardino Mountains and western San Bernardino Valley could also see an increase in PM2.5 levels overnight due to smoke from the Bobcat Fire.

- **Saturday afternoon:** Southwest winds are predicted to move smoke from the El Dorado Fire to the northeast into the San Bernardino Mountains and out of the South Coast Air Basin. Big Bear and Running Springs will likely see smoke impacts.

Riverside County

- **Friday afternoon:** Winds will be from the west and southwest and push smoke from the Snow Fire to the east and northeast into northern portions of the Coachella Valley and Eastern Riverside County, and out of the South Coast Air Basin.
- **Friday evening through Saturday morning:** Winds will shift Friday evening to come from the west and northwest. After midnight, wind speeds will decrease and become light. Areas east and southeast of the Snow Fire along the I-10 corridor from Cabazon to Cathedral City will likely see the highest particulate matter levels as smoke is likely to remain closer to the ground overnight.
- **Saturday afternoon:** Winds are predicted to shift and come from the west and southwest. This will move smoke from the Snow Fire to the east and northeast into the Coachella Valley and Eastern Riverside County.

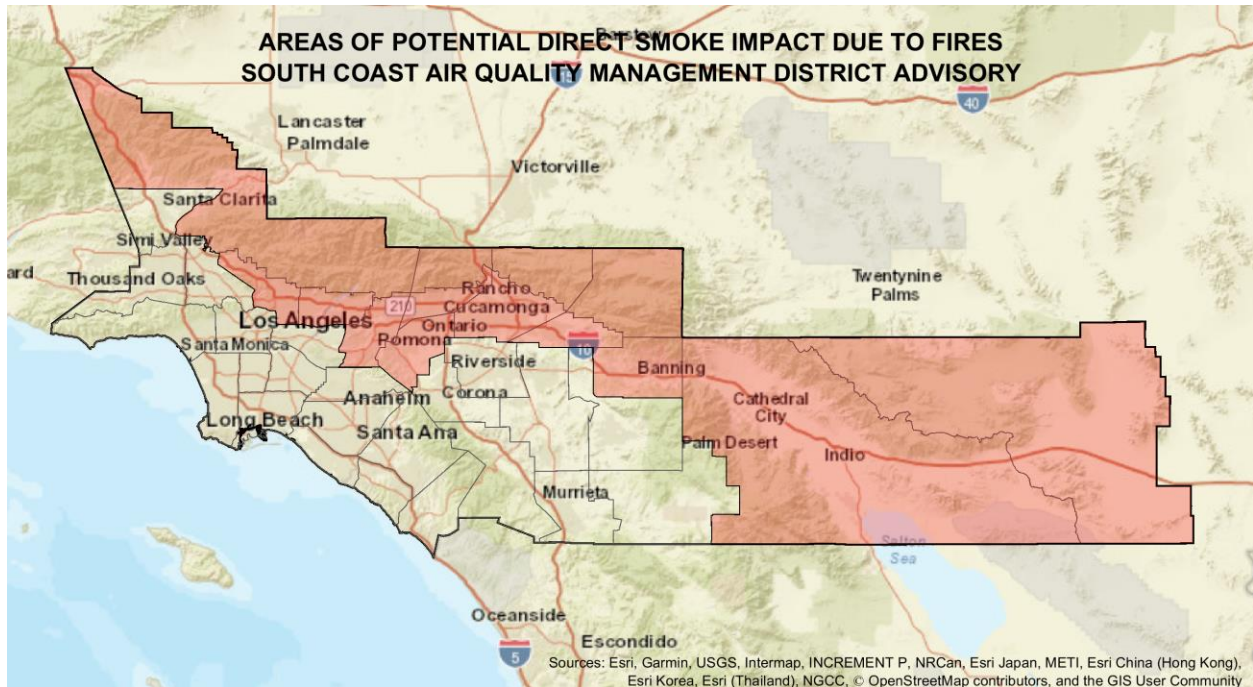

Extended Outlook for All Fires: Smoke impacts in the South Coast Air Basin and Coachella Valley will likely continue until fire activity decreases for the Bobcat Fire, El Dorado Fire, and Snow Fire. South Coast Air Quality Management District will continue to provide daily smoke advisory updates until air quality impacts from smoke subside.

In order to avoid increasing PM2.5 levels even further, South Coast AQMD recommends that the public avoid burning wood during periods of poor air quality. Per South Coast AQMD Rule 444, burning wood on the beach is prohibited on Friday September 18th due to forecasted AQI values above 100 in coastal areas, except in area 18 (North Coastal Orange County).

Areas of direct impacts and poor air quality may include portions of Los Angeles, Riverside, and San Bernardino Counties in the South Coast AQMD jurisdiction. **Unhealthy** or higher AQI levels due to PM2.5 concentrations are possible in areas of direct smoke impacts. Impacts will be highly variable throughout the day, impacting different parts of the region at different times.

Areas of direct impacts and poor air quality may include portions of:

- **Los Angeles County:** West San Gabriel Valley (Area 8), East San Gabriel Valley (Area 9), Pomona-Walnut Valley (Area 10), San Gabriel Mountains (Area 15)
- **Riverside County:** San Gorgonio Pass (Area 29), Coachella Valley (Area 30), East Riverside County (Area 31)
- **San Bernardino County:** Northwest San Bernardino Valley (Area 32), Southwest San Bernardino Valley (Area 33), Central San Bernardino Valley (Area 34), East San Bernardino Valley (Area 35), West San Bernardino Mountains (Area 36), Central San Bernardino Mountains (Area 37), East San Bernardino Mountains (Area 38)
