South Coast AQMD Issues Windblown Dust Advisory for Coachella Valley

Valid until Saturday 8:00 AM

Forecasted Air Quality Impacts

- Winds from the west with gusts up to 47 mph are predicted in the northwestern Coachella Valley below the San Geronio Pass.
- Gusty winds can lift dust and soil into the air, resulting in high particle pollution (PM10) levels in the region.

- Blowing dust may result in PM10 levels in the **Unhealthy** or higher air quality index (AQI) categories in the Coachella Valley.
- Expect elevated PM10 levels at times from Friday afternoon through Saturday morning, especially in the northwestern part of the valley.
- Air quality can vary by hour and location depending on wind conditions.

To view current air quality in your neighborhood, download the [South Coast AQMD app](#) or visit www.aqmd.gov/AQImap.

Detailed Forecast

Friday afternoon	Wind gusts are expected to increase starting at 2 PM. AQI categories are predicted to range from Moderate to Unhealthy or higher at times, with the highest AQI expected in the northwestern Coachella Valley.
Friday night through 8 AM Saturday	AQI in the Good to Unhealthy categories is expected, with air quality improving as winds decrease on Saturday morning.

South Coast AQMD will issue an update if additional information becomes available.

If you are in an area impacted by windblown dust or ash:

- Limit your exposure by remaining indoors with windows and doors closed or seeking alternate shelter.
- Avoid vigorous physical activity.
- Run your air conditioning and/or an air purifier. If possible, do not use swamp coolers or whole house fans that bring in outside air.
- Help minimize dust pollution by stabilizing loose soils and slowing down if driving on dirt roads.

For more information, see the [EPA Guide for Particle Pollution \(PDF\)](#).

South Coast AQMD is the regulatory agency responsible for improving air quality for large areas of Los Angeles, Orange, Riverside and San Bernardino counties, including the Coachella Valley.
