

LOS ANGELES INTERNATIONAL AIRPORT 2023 YEAR REPORT ON MOU IMPLEMENTATION

Summary and Data Report

Background

On December 13, 2019, Los Angeles World Airports (LAWA) and South Coast Air Quality Management District (SCAQMD) signed a Memorandum of Understanding (MOU) regarding Los Angeles International Airport (LAX). This MOU focuses on quantifying emission reduction benefits achieved through three (3) voluntary measures from LAWA's LAX's Air Quality Improvement Measures (AQIM). The LAX MOU measures are:

1. **MOU Measure 1:** Ground Support Equipment Emission Reduction Policy
2. **MOU Measure 2:** LAX Alternative Fuel Vehicle Incentive Program
3. **MOU Measure 3:** Zero-Emission Bus Program

The annual emission data is used to quantify the estimated emission reduction benefits in the South Coast Air Basin. This MOU does not create State Implementation Plan (SIP) creditable reductions, but it identifies specific voluntary measures and provides the means for the SCAQMD to quantify the emission reductions from the MOU Measures to obtain SIP credits.

2023 Annual Report Summary

The 2023 Annual Report is the fourth report submitted by LAWA to the SCAQMD that reports on the LAX MOU progress towards meeting the targets in MOU Measures 1 to 3. The report does not apply to any source or operation of any source that is not specifically identified in the MOU Measures. This report and attached excel datasets contain all the elements required in the MOU so the SCAQMD may calculate emission benefits from the measures. The emission factor calculation methodology and the performance targets were not amended from the 2021 submittal.

Over the past year, passenger air travel at LAX maintained strong post-pandemic growth, although passenger traffic in LAX has not reached pre-pandemic levels of 87.9 million in 2019 while cargo operations have dropped off slightly in 2023 compared to 2022. Despite an increase of over 300 GSE units at LAX since the last MOU report, total nitrogen oxides (NOx) emissions dropped by approximately 5 tons. The LAWA GSE Emission Reductions policy surpassed the 2023 goal of meeting 1.8 grams per brake horsepower hour (g/bhp-hr) for hydrocarbons (HC) plus NOx. The emission factor has been reduced to 1.04 for reporting year 2023. Notable MOU progress included the implementation of the LAX Electric Ground Support Equipment (GSE) Incentive Program to assist LAX operators accelerate the deployment of zero-emission GSE.

No funds were distributed under the Alternative Fuel Incentive program this year. The remaining awardees have withdrawn incentive program. Finally, the Zero Emission Bus Program has surpassed the Measure's goal with 50% LAWA-owned electric bus fleet as of January 1, 2024. Below is the status of each of the LAX MOU Measures.

MEASURE NO. 1 - GROUND SUPPORT EQUIPMENT EMISSIONS REDUCTION POLICY

This measure requires all ground support equipment operators at LAX achieve fleet average hydrocarbon + nitrogen oxides emission factors of 1.8 and 1.0 grams per brake horsepower-hour (g/bhp-hr) by January 1, 2023 and January 1, 2031, respectively.

The 2023 report shows the fleet average HC + NO_x emission factor for commercial GSE at LAX is 1.04 g/bhp-hr, which is lower than the 2017 AQIM baseline fleet averaged HC + NO_x emission factor of 2.24 g/bhp-hr, exceeded (i.e., is better than) the 2023 target, and has almost met the 2031 target of 1.00 g/bhp-hr. LAWA has continued its refined data collection process by providing operators with their previous inventory submittals, in addition to requesting clarification on year-to-year discrepancies. Newly added equipment was also reviewed and corrected/confirmed when operator reported specifications did not match those from manufacturer (or other public) documentation. Additionally, actual meter-based use hours were requested for all equipment designated by the operator as "low use" (200 hours per year or less). These actual hours were used for emissions inventory calculations, rather than the default 200 hours, yielding a more accurate representation of facility emissions.

On August 16, 2023, the SCAQMD requested LAWA develop a side-by-side comparison of all GSE reported in 2021 and 2022, paired by unique equipment ID for quality review purposes. A side-by-side comparison was developed and is now included in the calculation documents provided to SCAQMD as part of this and future annual reports.

The two summary tables below compare the number of equipment between the 2017 MOU baseline and the current reporting year. As seen in Table 1, the total electric count has increased, specifically equipment 2010 and newer. Additionally, there has been a notable shift overall towards 2010 and newer equipment, along with the removal of older equipment. This is likely due to the increased availability of electric GSE (eGSE) as well as outreach and improved data verification processes. Table 2 narrows the scope to off-road diesel engines, again showing a shift from older, dirtier equipment to newer, cleaner engines.

Table 1 – Fleet Comparison 2017 to 2023**2023 Fleet** (difference as compared to 2019 reporting year [based on 2017 fleet])

Model Year	Fuel Type				Total
	Gasoline	LPG/Propane	Electric	Diesel	
≤ 2007	154 (-105)	87 (-67)	329 (-248)	130 (-182)	700 (-602)
2008 - 2009	43 (-27)	22 (-19)	76 (-42)	40 (-23)	181 (-111)
2010 - 2015	209 (+82)	196 (+69)	293 (+74)	169 (-3)	867 (+222)
2016 - 2020	480 (+326)	186 (+107)	307 (+173)	312 (+199)	1285 (+805)
≥ 2021	96 (+96)	217 (+217)	237 (+237)	99 (+99)	649 (+649)
					3682 (+963)

Table 2 – Diesel Tier Comparing 2017 to 2023**2023 Fleet** (difference as compared to 2019 reporting year [based on 2017 fleet])

Tier	Model Year	Horsepower Bin								Total
		25 - 49	50 - 74	75 - 99	100 - 174	175 - 299	300 - 599	600 - 749	≥ 750	
≤ Tier 1	≤ 1999	1 (-)	3 (+2)	0 (-11)	0 (-11)	2 (-9)	1 (+1)	0 (-)	0 (-)	7 (-28)
Tier 1	1996 - 2005	4 (+2)	28 (+21)	13 (-68)	10 (-28)	5 (-20)	0 (-1)	0 (-)	0 (-)	60 (-94)
Tier 2	2001 - 2010	2 (-3)	9 (-3)	4 (-7)	11 (-15)	1 (-15)	3 (-1)	1 (+1)	0 (-)	31 (-43)
Tier 3	2006 - 2011	0 (-)	0 (-)	4 (-3)	32 (-46)	17 (-22)	12 (+4)	0 (-3)	0 (-)	65 (-70)
Tier 4i	2008 - 2014	1 (-2)	2 (-2)	2 (-6)	34 (-)	14 (-2)	7 (+1)	1 (+1)	0 (-)	61 (-10)
Tier 4	≥ 2013	14 (+9)	82 (+48)	32 (+18)	145 (+97)	67 (+38)	80 (+41)	3 (-1)	0 (-)	423 (+250)

Overall, the data shows that there has been a significant movement away from older (pre-2010) toward newer (2010 to present) GSE. This has been the trend since the beginning of the MOU reporting and is expected to continue.

Looking Ahead

LAWA took a significant additional step towards a cleaner future, on January 18, 2024, by adopting the LAX Zero-Emission Ground Support Equipment Policy. This policy outlines a phased approach to transitioning all GSE at LAX to zero-emission alternatives by 2033. On June 13, 2023, LAWA Board of Airport Commissioners (BOAC) adopted the Updated LAX Electric Ground Support Equipment Incentive Program to accelerate the deployment of zero-emission eGSE and achieve emission reductions at LAX. LAWA received five applications to replace 32 older conventionally fueled GSE with zero-emission eGSE. Additionally, the California Air Resources Board Off-Road Diesel rule will eliminate Tier 0 and Tier 1 diesel GSE from large fleets by 2026.

LAWA is committed to achieving the LAX GSE Emissions Policy targets. We continue working with GSE operators to expedite the transition to cleaner equipment and support any future electrical infrastructure upgrades required. In the absence of a universal charging standard for electric ground support equipment eGSE, LAWA is proactively working with GSE operators and charging station manufacturers. LAWA's goal is to ensure compatibility between various charging stations and different types of eGSE. This initiative promotes operational flexibility and prepares for the adoption of emerging technologies.

MEASURE NO. 2 - LAX ALTERNATIVE FUEL VEHICLE INCENTIVE PROGRAM

This measure is based on the LAX Zero and Near-Zero Emission Heavy-Duty Vehicle Incentive Program. It aims to replace diesel-fueled, heavy-duty trucks with a Gross Vehicle Weight Rating (GVWR) of 14,001 pounds or greater with zero or near-zero emission alternatives.

As of the end of 2023, LAWA has distributed \$325,000 for 15 vehicles. However, due to COVID-19 recovery, ongoing supply chain shortages, no incentive-funded vehicles were added in 2023. The remaining grant recipients have chosen not to proceed, however LAWA remains committed to cleaner air.

Looking Ahead

LAWA plans to re-authorize an updated LAX Alternative Fuel Vehicle Incentive Program in early summer 2024 to spend the remaining \$175,000 from the expired incentive program until all allocated funds are utilized. Additionally, LAWA is looking at the feasibility of developing zero-emission targets for all vehicles over GVWR or 8,500 pounds.

MEASURE NO.3 – ZERO-EMISSION BUS PROGRAM

This measure is based on the LAX Zero-Emission Bus Program to convert LAWA-owned buses at LAX to zero-emission buses and is attached to and a part of the MOU between the LAWA and SCAQMD. The Measure requires LAX to replace 20% and 100% of the Airport-owned and operated buses with zero-emission buses by January 1, 2023 and January 1, 2031, respectively.

As of December 31, 2023, LAWA owned a fleet of 40 buses, a decrease of 10 from the 50 buses owned on December 31, 2022. Of the 40 buses, 20 are electric, which represents 50 percent of the LAWA-owned bus fleet. These electric buses are typically dedicated for use on the airfield and on occasion are used on-road to transport passengers.

Since the implementation of the MOU, LAWA has retired a total of 11 diesel and 49 CNG buses with engine model years between 1996 to 2009. Thirty-six of the 39 CNG buses were retired from the LAX Parking Shuttle fleet in 2022. LAWA has also submitted an “affidavit of non-use” to the California Department of Motor Vehicles for 36 CNG buses. These buses have not yet been scrapped since there is an ongoing investigation regarding safety issues with the vehicles. Eight additional CNG buses were removed from LAWA’s fleet in 2023 and are in the process of being scrapped or salvaged.

Table 3 below shows the LAWA buses that have been removed from service. The complete 2022 LAWA-owned fleet is available in the excel data report for MOU Measure 3.

Table 3 – LAWA Buses Removed from Operation

Engine Model Year	Fuel Type	Retired Date	Replaced Details	Engine Model Year	Fuel Type	Retired Date	Replaced Details
1996	Diesel	10/28/2020	Scrapped	2007	CNG	7/15/2022	Scrapped

2007	CNG	5/31/2023	Permanently Out of Service	2019	CNG	9/26/2022	Affidavit of Non-Use

In 2023, LAWA has seen passenger traffic return to near pre-pandemic levels. To meet customer operational demand, LAWA needed to contract with a third-party entities to service the LAX-it, Metro Line Connector, LAX Economy Parking, and LAX employee parking lots. Currently there are 51 buses under contract at LAX. These buses will be in service until the LAX Automated People Mover comes on-line. Once testing has been completed these contracted buses are likely to be reduced or removed when no longer needed for operations. However, it is foreseeable that some buses may be kept in service as reserves or for limited purposes.

Looking Ahead

LAWA plans to increase the number of electric buses servicing LAX. On May 2, 2024, LAWA's BOAC approved the procurement of up to 27 (13 in the first phase, with an option to purchase 14 more) 35 feet electric buses. Additionally, ABM (the entity that manages the parking lots at LAX) has placed an order for 11 electric buses (the original delivery scheduled for summer 2023 was delayed due to procurement issues). The 13 LAWA and 11 ABM electric buses are expected to be delivered in the 3rd quarter of 2025.

2023 Measures 1-3 Data Reports

MOU MEASURE NO. 1 - GROUND SUPPORT EQUIPMENT EMISSIONS REDUCTION POLICY

This MOU Measure No. 1 is based on LAWA's Air Quality Improvement Measures plan for LAX (LAX AQIM), the Ground Support Emissions Reduction Policy for ground support equipment (GSE) at LAX and is attached to and a part of the MOU between LAWA and South Coast AQMD.

I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average oxides of nitrogen (NO_x) + hydrocarbon (HC) emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III. LAWA OBLIGATIONS - LAWA shall:

A. Airport shall implement the measure by working with airport tenants to achieve the above performance targets. Airport shall have complete discretion as to mechanisms used to implement this measure.

B. Beginning in 2021, and every year thereafter through 2032, provide the following information to South Coast AQMD on an annual basis by June 1 for each preceeding calendar year:

1. List of ground support equipment operating at LAX subject to this GSE measure with the following information:

- a. Equipment ID
- b. Equipment type
- c. Fuel type
- d. Engine model year
- e. Power rating (hp or kW)
- f. Engine tier level (for diesel engines)
- g. Annual activity data for non-zero emission equipment that is sufficient to determine emission reductions at a reasonable level of accuracy (i.e., actual operating hours from hour meter readings/maintenance records, average operating hours representative of equipment type and airport, or average operating hours by equipment/fuel type from CARB's OFFROAD model, if applicable).

2. For non-zero emission ground support equipment subject to this GSE measure, information regarding the sale or retirement of equipment available through CARB's DOORS system and, for pre-Tier 4 diesel, pre-2010 gasoline, or pre-2010 LPG ground support equipment relocated from LAX to another airport within the South Coast Air Basin, identify: a) the airport to which equipment is relocated, b) date of relocation, and c) estimated projected usage hours.

3. An annual emission inventory for ground support equipment operating at LAX, following the methodology and calculations used to generate the 2017 baseline inventory report for the LAX AQIM.

I. LAX Fleet-wide Emission Factor

I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average NO_x + HC emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

Reporting year: 2023

LAX Facility Average NO_x+HC Emission Factor (gr/bhp-hr): 1.04

III.B.1. List of Ground Support Equipment Operating at LAX Subject to this GSE Measure

I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average NOx + HC emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III.B.2. Non-zero Emission GSE Sale or Retirement and Relocation Information

III.B.2. For non-zero emission ground support equipment subject to this GSE measure, information regarding the sale or retirement of equipment available through CARB's DOORS system and, for pre-Tier 4 diesel, pre-2010 gasoline, or pre-2010 LPG ground support equipment relocated from LAX to another airport within the South Coast Air Basin: a) the airport to which equipment is relocated, b) date of relocation, and c) estimated usage hours.

III.B.3. Emissions Inventory

- I. PROGRAM DESCRIPTION - Require that all ground support equipment operators at LAX achieve fleet average NOx + HC emission factors of 1.8 and 1.0 grams per brake horsepower-hour by January 1, 2023 and January 1, 2031, respectively.
- II. PROGRAM TIMEFRAME - Upon execution through 2032.

The MOU emissions inventory calculation has incorporated the updated LSI data provided by CARB in August 2021. This includes emission factors, load factors, fuel correction factors, and caps on equipment lifetime hours (deterioration rate caps). The following CARB rule-based approach are used as our standards in the GSE Emission Inventory calculation protocol:

- 1) Exclude all Low Use (ORD/PERP)/Limited Hours of Use (LSI) (<200 hours) from the LAX Fleet Average Emission Factor, but not from the Emission Inventory or Equipment Inventory.
- 2) Exclude all <25 bhp ORD/LSI and <50 bhp PERP equipment from the LAX Fleet Average Emission Factor, but not from the Emission Inventory or Equipment Inventory.
- 3) Exclude all "Other" and "Other ORE" categories from the LAX Fleet Average Emission Factor, Emission Inventory and Equipment Inventory.
- 4) Consistent with LSI Regulation, calculations may include on-road equivalent GSE that have been designed for on-road use, but not licensed for on-road use. These vehicles may also have been modified for airport use.
- 5) Per unit emissions were calculated using the following formula and summed across all equipment listed at the airport to determine the fleet-total emissions:

Emissions (grams per year) = Activity (hours per year) × Power Rating (horsepower) × Load Factor (dimensionless) × { Zero-hour Emission Factor (grams per brake horsepower-hour) + [Deterioration Rate (grams per brake horsepower-hour per hour) × Equipment Lifetime Cumulative Operational Hours (hours)] } × Fuel Correction Factor (dimensionless)

MOU MEASURE NO. 2 - LAX ALTERNATIVE FUEL VEHICLE INCENTIVE PROGRAM

This MOU Measure No. 2 is based on LAWA's Air Quality Improvement Measures plan for LAX (LAX AQIM), the LAX Zero and Near-Zero Emission Heavy-Duty Vehicle Incentive Program and is attached to and a part of the MOU between LAWA and South Coast AQMD.

I. PROGRAM DESCRIPTION - Implement an incentive program that will distribute up to \$500,000 dollars in funding to applicants based on the "incremental cost" differential of the zero or near-zero emission vehicles as compared to conventionally-fueled equivalents with a Gross Vehicle Weight Rating (GVWR) of 14,001 pounds or greater by December 31, 2021.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III. LAWA OBLIGATIONS - LAWA shall:

A. Ensure full subscription of incentive program funding, to the maximum extent feasible, to encourage the deployment of zero or near-zero emission vehicles at LAX.

B. Beginning in 2021, provide the following information to South Coast AQMD on an annual basis by June 1 for each preceeding calendar year:

1. Zero or near-zero vehicle VIN number
2. Zero or near-zero vehicle model year
3. Zero or near-zero vehicle GVWR
4. Zero or near-zero vehicle engine model year
5. Zero or near-zero vehicle engine power rating
6. Zero or near-zero vehicle fuel type
7. Executive Order Number for the zero or near-zero vehicle engine
8. Zero or near-zero vehicle annual VMT (estimated)¹
9. List of, and information on, replaced vehicles (e.g., scrapped, moved out of state)
10. An emission inventory for the new near-zero or zero-emission vehicles acquired by LAX operators under the Alternative Fuel Vehicle incentive Program, following the methodology and calculations used to generate the 2017 baseline inventory report for the LAX AQIM.

¹ Vehicle miles traveled (VMT) will be estimated from EMFAC2017 VMT for applicable vehicle size and technology categories in the South Coast Air Basin portion of Los Angeles County, unless CARB updates those activity levels at a future date within the Program.

MOU MEASURE NO. 2 ALTERNATIVE FUEL VEHICLE INCENTIVE PROGRAM

MOU MEASURE NO. 2 ALTERNATIVE FUEL VEHICLE INCENTIVE PROGRAM

Emission Inventory MOU Measure 2 III.B.10.

- I. PROGRAM DESCRIPTION - Implement an incentive program that will distribute up to \$500,000 dollars in funding to applicants based on the "incremental cost" differential of the zero or near-zero emission vehicles as compared to conventionally-fueled equivalents with a Gross Vehicle weight Rating (GVWR) of 14,001 pounds or greater by December 31, 2021.
- II. PROGRAM TIMEFRAME - Upon execution through 2032.

Reporting Year	Emissions						
	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>Mtpy</i>
	ROG	CO	NOx	PM10	PM2.5	SOx	CO2e
2023	0.267	16.619	0.109	0.0056	0.0056	--	2,378.4

LAWA prepared the 2017 emission inventory baseline for the LAX AQIM. LAWLA replicated the methodology and calculations used to prepare the 2017 emissions inventory to develop an emissions inventory for MOU reporting. For each incentive vehicle emission factors are based on the CARB Executive Order that certified the vehicle's engine. EMFAC categories for each vehicle are based on GVWR, EMFAC default VMT and average speeds for each unit.

MOU MEASURE NO. 3 - ZERO-EMISSION BUS PROGRAM

This MOU Measure No. 3 is based on LAWA's Air Quality Improvement Measures plan for LAX (LAX AQIM), the LAWA Zero-Emission Bus Program to convert LAWA-owned buses at LAX to zero-emission buses and is attached to and a part of the MOU between LAWA and South Coast AQMD.

I. PROGRAM DESCRIPTION - Replace 20% and 100% of LAWA-owned and operated buses with zero-emission buses by January 1, 2023 and January 1, 2031, respectively.

II. PROGRAM TIMEFRAME - Upon execution through 2032.

III. LAWA OBLIGATIONS - LAWA shall:

A. Replace LAWA-owned buses to meet the specified targets.

B. Beginning in 2021, provide the following information to South Coast AQMD on an annual basis by June 1 for each preceeding calendar year:

1. List of buses operating at LAWA with the following information:

- a. Vehicle Identification Number
- b. Vehicle model year
- c. Vehicle GVWR¹
- d. Bus engine model year
- e. Power rating (hp or kW)
- f. Odometer reading
- g. Vehicle miles traveled²

2. An emission inventory for the LAWA-owned bus fleet, following the methodology and calculations used to generate the 2017 baseline inventory report for the LAX AQIM.

3. List of buses replaced during the reported year and information specified in III.B.1. above on replaced and replacement buses (i.e., replaced buses scrapped or moved out of state).

¹ Gross Vehicle Weight Rating

² Vehicle miles traveled (VMT) will be based on actual annual mileage traveled by each bus in the LAWA-owned bus fleet.

^a December 31, 2023 odometer reading was estimated by prorating available maintenance records.

^b December 31, 2022 odometer reading reported to LAWA EPD incorrectly: 360,717 should have been 105,969.

MOU MEASURE NO. 3 ZERO-EMISSION BUS PROGRAM

Emission Inventory MOU Measure 3 III.B.2.

- I. PROGRAM DESCRIPTION - Replace 20% and 100% of LAWA-owned and operated buses with zero-emissions buses by January 1, 2023 and January 1, 2031, respectively.
II. PROGRAM TIMEFRAME - Upon execution through 2032.

Reporting Year	Bus Fleet Count	% Electric	Emissions						
			<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>tpy</i>	<i>Mtpy</i>
			ROG	CO	NOx	PM10	PM2.5	SOx	CO2e
2023	40	50.0	0.07	37.66	0.42	0.19	0.08	< 0.01	1,714

The 2017 emission inventory baseline was performed for the LAX AQIM. The methodology and calculations were replicated to develop an emissions inventory for MOU reporting. In summary, these are the general steps used to calculate the Emission Inventory:

UBUS aggregate data is downloaded for the reporting year from CARB's EMFAC2017 (v1.0.3) model for each type of fuel - gasoline, diesel, natural gas, and electricity.

An Excel SUMPRODUCT calculation is performed that multiplies the EMFAC value per fuel type [per day] times the fleet count of that fuel type, which is then divided by the fleet count total to get an average value per bus. Example: average Vehicle Miles Traveled (VMT) per day per bus, average tons per day of NOx per bus.

The average pollutant amounts [tons per day] are then divided by the average VMT per bus to get a tons per mile emissions amount. (It is at this step that the Global Warming Potential of CH4 and N2O are incorporated so that CO2e can be calculated.)

Then, the average VMT per bus per day is multiplied by the fleet count and converted to per year (multiplied by ~365), resulting in total VMT for all buses per year.

This VMT [miles per year] is then multiplied by each of the pollutant values [tons per mile] resulting in **tons per year**. This is the annual emissions inventory.

*Note: consistent with the 2017 LAX AQIM emissions inventory methodology, theoretical EMFAC VMT was used to calculate the **Emission Inventory**. The **Operating and Replacement/Replaced List** in this report shows actual VMT for each bus from available field logs.

**MOU MEASURE NO. 3
