

South Coast Air Quality Management District

NOTICE OF PUBLIC MEETING TO DISCUSS HEALTH RISK ASSESSMENT FOR A FACILITY IN YOUR NEIGHBORHOOD

The following business in your neighborhood has been emitting toxic air pollutants that could potentially cause a risk to public health. Sterigenics US, LLC (Sterigenics) has been required to conduct a Health Risk Assessment to evaluate how emissions are released and dispersed from Sterigenics, and the potential impact those releases may have to public health.

Business Name	Location Address	Type of Business
Sterigenics US, LLC	687 Wanamaker Ave, Ontario, CA 91761	Sterilization of medical supplies and devices

As the air pollution control agency for this area, South Coast Air Quality Management District (South Coast AQMD) will hold a public meeting to answer questions about the results of Sterigenics' 2026 Approved Health Risk Assessment. A representative for Sterigenics will also participate in the meeting. South Coast AQMD will hold the public meeting via video conferencing and by telephone. The audience will be able to participate during the public comment period.

Date & Time	Meeting Details
June 11, 2026 6:00 - 8:00 p.m.*	<p>Instructions for Electronic Participation Join Zoom Webinar - from PC or Laptop</p> <p>https://aqmd.zoomgov.com/j/1618769384 Zoom Webinar ID: 161 876 9384 Teleconference Dial In: +1 669 254 5252 One tap mobile: +16692545252,,1618769384#</p> <p>Audience will be allowed to participate during public comment periods.</p>

*Please note that the meeting will end once public participation has concluded or at 8:00 p.m., whichever is earlier.

INSTRUCTIONS FOR ELECTRONIC PARTICIPATION

Instructions for Participating in a Virtual Meeting as an Attendee

- As an attendee, you will have the opportunity to virtually raise your hand and provide public comment.
- Before joining the call, please silence your other communication devices such as your cell phone or desk phone. This will prevent any feedback or interruptions during the meeting.
- Please note that during the meeting, all participants will be placed on mute by the host. You will not be able to mute or unmute your lines manually.
- Speakers may be limited to a total of three (3) minutes for their opportunity to provide comments. This time may be reduced if there are a large number of commenters to ensure that all comments can be heard. A countdown timer may be displayed on the screen for each public comment.
- Once you raise your hand to provide public comment, your name will be added to the speaker list. Your name will be called when it is your turn to comment. The host will then unmute your line.

Directions for Video Zoom on a Desktop/Laptop/Smartphone

- If you would like to make a public comment, please click "Raise Hand" using the following steps:
 For the newer versions of Zoom, click "Reactions" 🗨️ or "React" ❤️ at the bottom of the screen, then click "Raise Hand" 🙋.
 For older versions of Zoom, click "Participants" 👥 button at the bottom of the screen. A list of participants will appear on the right side of the screen for computers and on a new screen for smartphones. Then click "Raise Hand" 🙋 at the bottom of the list.
- This will signal to the host that you would like to provide a public comment and you will be added to the list.
- Please Note: At the bottom of your screen, please click the "Interpretation" button and select the appropriate language.

Directions for Telephone Line Only

- If you would like to make a public comment, please dial *9 on your keypad to signal that you would like to comment.
- Please Note: There is no interpretation feature available when joining via telephone dial-in.

South Coast Air Quality Management District

Summary of Health Risk Assessment (HRA)

The approved HRA, which used 2021 emissions data, showed that emissions of a toxic air pollutant called ethylene oxide from Sterigenics may cause an increased health risk for people who work in the area as seen in the attached Facility Risk Map (Figure 1).

The attached information sheet provides additional background on the business, air pollutants, and health risks. The following table shows the estimated, potential health risks from the 2026 Approved HRA.

	2026 Approved HRA
Maximum probability of cancer for those working closest to the facility (25-year exposure)	568.0 chances in-one-million
Maximum chronic risk for those working closest to the facility	1.09 hazard index*

*A hazard index above 1.0 increases the probability of adverse human health effects.

For more information about South Coast AQMD programs to control toxic air pollution or the public meeting, please contact Scott Epstein of South Coast AQMD at (909) 396-3754 or . For more information about the facility, please contact David Ibarra at (909) 969-2487 or contact@sterigenics.com.

Disability and language-related accommodations can be requested to allow participation in the Sterigenics public notification meeting. The agenda will be made available, upon request, in appropriate alternative formats to assist persons with a disability (Gov't Code Section 54954.2(a)). In addition, other documents may be requested in alternative formats and languages. Any disability or language-related accommodation must be requested as soon as practicable. Requests will be accommodated unless providing the accommodation would result in a fundamental alteration or undue burden to the South Coast AQMD. Please contact the AB 2588 Hotline at (909) 396-3610 from 7:00 a.m. to 5:30 p.m., Tuesday through Friday, or send the request to AB2588@aqmd.gov.

South Coast Air Quality Management District

2026 Approved HRA Facility Risk Map (Figure 1)

Sterigenics US, LLC

(South Coast AQMD ID No. 126060)

Ontario, California

Public Notification Area Map

Worker cancer risk of 10 chances in-one-million or greater (Yellow Outline)

Worker chronic hazard index of 1 or greater (Green Outline)

Facility Boundary (Red Outline)

Public Notification is Required by South Coast AQMD Rule 1402 if any of the following criteria are met:

- Maximum probability of cancer for those living closest to the facility is greater than 10 chances in-one-million
- Maximum probability of cancer for those working closest to the facility is greater than 10 chances in-one-million
- Long-term non-cancer health effects have a hazard index greater than 1.0 for those working and living closest to the facility
- Short-term non-cancer health effects have a hazard index greater than 1.0 for those who are near the facility

BUSINESSES RECEIVING THIS NOTICE SHOULD POST IT WHERE IT IS MOST LIKELY TO BE READ BY EMPLOYEES.

South Coast Air Quality Management District

INFORMATION SHEET

What are toxic air pollutants?

Chemicals that can cause cancer and other adverse health effects, such as harm to the human respiratory system, are known as toxic substances. When these toxic substances are released in the air, they are called toxic air pollutants. Toxic air pollutants come from a variety of sources including chemical plants, large manufacturers, businesses, and cars and trucks. Many products used at home, such as cleaners and paint thinners, also contain toxic air pollutants.

What toxic air pollutants does this facility emit and what are their health impacts?

Exposure to elevated concentrations of toxic air contaminants can have potential cancer and non-cancer health risks. Long- and short-term health-based levels have been established by the California Office of Environmental Health Hazard Assessment (OEHHA).

The facility emits the following toxic air pollutant as a result of medical sterilization processes:

Pollutants	Possible Health Effects
Ethylene Oxide	Long-term inhalation (years to decades) can increase the chance or probability of developing cancer (e.g., breast cancer, cancer of the white blood cells).
	Short-term exposure can irritate your nose, throat, and eyes and cause nausea, vomiting, and headaches.

How was the health risk from this facility determined?

The 2026 Approved HRA used estimated amounts of pollutants released from operations at Sterigenics. That information is inputted into a computer-based model that evaluates air quality dispersion and predicts air pollution concentrations throughout the community. The results are then measured against exposure levels determined by OEHHA to predict potential impacts to people's health.

OEHHA updated their health effects guidance in March 2015 to specifically include new information that provides more insight on how toxic air pollutants can have a greater impact on children than they do on adults. This newer methodology led to stricter health standards, which in turn resulted in health risk estimates that are approximately three times more conservative than those using previous methods. This method of determining risk may differ from other regulatory programs, such as public notification being carried out under Proposition 65.

What did the Health Risk Assessment find?

An HRA is currently the best method for estimating the amount of exposure to a chemical over a long period of time and the potential health impacts. The 2026 Approved HRA for Sterigenics was calculated using conservative exposure periods that assumed continuous exposure from the facility.

The 2026 Approved HRA, based on known information at the time, found that people who work in the area shown on the Facility Risk Map (Figure 1), if continuously exposed for 25 years, would have a maximum increased risk of 568.0 chances in-one-million of developing cancer. Those who work in the area would also have a maximum chronic hazard index of 1.09. The cancer and chronic risks are primarily due to fugitive emissions of ethylene oxide from this facility.

What is being done to reduce the health risks from this facility?

Risk reduction requirements in South Coast AQMD Rule 1402 — Control of Toxic Air Contaminants from Existing Sources, applies to facilities that exceed specific risk thresholds (e.g., cancer risk greater than 25 chances in-one-million) and requires the facility to submit a plan to reduce its risk below thresholds. This plan must be implemented within two years after approval. In this case, Sterigenics is required to conduct both public notification and risk reduction.

Sterigenics has already made improvements to the facility that have significantly reduced estimated health risks as compared to the HRA results, which are based on 2021 emissions. The improvements that were made include fully enclosing the building and maintaining negative pressure to capture fugitive emissions; requiring doors to be closed except when needed for operational purposes; installing additional scrubbers to reduce EtO emissions; and combining the exhaust of the control equipment to increase dispersion and reduce nearby EtO concentrations. Current EtO levels measured near the facility are approximately 98% lower than they were in 2022.

South Coast AQMD has also developed other programs designed to prevent pollution and reduce exposure to toxic air pollution, such as air toxic regulations specific to certain sources.

What is the cancer risk from toxic air contaminants in general?

The Multiple Air Toxics Exposure Study V (MATES V) presents estimates of cancer risk throughout South Coast AQMD's four-county jurisdiction. The estimated risk for cancer from all toxic air contaminants emitted from all sources (cars, trucks, factories, power plants, etc.) is about 455 chances in-one-million averaged over the region's population.

How can I get more information?

Table ES-2 of MATES V Executive Summary, available at: <http://www.aqmd.gov/docs/default-source/planning/mates-v/mates-v-final-report-9-24-21.pdf>
