Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Erin Suyehara
Torrance, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution, and I'm writing to stress that it's critical for the South Coast Air Quality Management District (SCAQMD) to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health.

I understand the agency is proposing changes that make the proposal reduce fewer emissions. However, keeping the proposal strong would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable, and people are noticing! In 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules to reduce harmful pollution are vital to help us move toward a healthier future. I encourage you to stand for strong appliance standards.

Sincerely,
Cher Gilmore
