Subject: [EXTERNAL] 1111 & 1121

The cost of living in this great state of California is already unattainable for the majority of our population. The exodus of residents doesn't include all of our grown children that have moved to other states for more affordable options.

I moved here from Illinois in 1978, with my family, when I was 16 years old. The air quality here was terrible! We were lucky to have clear skies for a few chilly days in February. Now we have beautiful blue skies & multi-colored sunsets.

The cost to residents for living in this beautiful state will only get ridiculously higher if these rules are passed. With ongoing tariffs and the raise in prices since the pandemic & supply chain issues, putting more rules on the citizens of our state has got to STOP NOW! Just the increase in our electric utility bills on an already strained system is just plain idiotic! We need LESS government interference in our lives.

These rules are always aimed at Residents. The biggest waste of our energy is commercial. Comfortable doesn't mean we need to wear cold weather clothes in a supermarket or movie theater in the summer.

Forcing residents to go all electric is restricting our rights to more safe, abundant & affordable resources. STOP the power grabbing. STOP trying to control our lives. THINK about the citizens of this state & not your pockets. THIS IS A DEMOCRACY. You are supposed go be listening to the people of the state, not the bubble you are living in! Get some boots on the ground & find out what else the average citizen is passionate about. We just don't have the money to get elected to office to clean up the political system in our state or country. The divide is getting wider. Bring our citizens together. Don't impose shit that's hurting our citizens financially. We've had enough of Sacramento's bullshit!

This is something I CANNOT handle. I live in a mobile home park where we are not allowed to have electric appliances as the system cannot sustain them. Also, we are already being warned constantly on hot days to save electricity. I have a gas stove which does not work when the electricity is out. One year I could not cook Thanksgiving dinner because there was a power outage. Gas was fine but could not turn on. I am a senior citizen and cannot afford huge increases for my utilities. Life in CA is getting unsustainable!

Subject: [EXTERNAL] AQMD Gas Elimination Bill
Attachments: AQMD Gas.pdf

It is extremely concerning that this board is looking to burden an already outdated electrical grid that currently cannot support the population or business's of California with the elimination of a clean affordable heating and cooking option of gas appliances.

I do not support this bill and feel that this board is not doing justice to the people of the state of California with this excessive use of governance.

I strongly opposed the recent gas price tax, which is now causing gas prices in California to be one of highest in our nation over \$5.00 a gallon.

I truly wonder who provides you with the income to support a household in this beautiful state that is loosing jobs due to poor governance and lack of providing the people of California the right to survive.

Sincerely,

Sandy Zimmer

Subject: [EXTERNAL] AQMDs Proposed Amended Rules 1111 & 1121

Please do not implement these rules (PAR 1111 & 1121).

California homeowners and landlords do not need these potential financial burdens placed upon them by AQMD. Further, the vast majority of homeowners prefer to have gas furnaces and water heaters, and have no interest in changing due to the costs involved.

Such rules will only serve to force homeowners, especially those who might be equity-rich but are also cash-poor to spend or even have to borrow money they do not have to comply with such arguably unnecessarily overreaching and extremely unpopular government regulations.

Subject: [EXTERNAL] Electric appliance rules

These rules, are among the stupidest things I have ever heard. Electricity is the most inefficient means of generating heat, and the vast majority of the electricity generated in Orange county is from natural gas. That means that there is virtually no logical point for these rules. Wind power is not efficient, and it is certainly not "green". Solar, unless the panels are on top of your house are better than wind, but they are not "green" either. Put more effort into small nuclear plants and upgrade our out of date grid and harden it against sabotage from foreign or domestic terrorists.

The even more obvious issue is that the California Legislature, possibly the most hubristic organization on the planet, somehow believe that they have the right to tell people what they may buy and what they may not. Well I have a message for the State of California Legislature: Take your rules and put them where the sun doesn't shine.

While I am on a roll, how about the CA legislature stop wasting tax payer money by trying to subvert the US Bill of Rights by trying to get around the Second Amendment. They could certainly make better use of their time by actually reading the Constitution and maybe even learning some American history.

You may quote anything I have said here and I would be happy to deliver this message and more in person.

Sincerely, and Seriously,

Subject: [EXTERNAL] Fw: Costly New Appliance Rules Could Hit Your Wallet — Speak Up Now

Hello SCAQMD and good morning.

I expect this email account to no longer be monitored as Philip's blasting this account in his email will cause a flood of emails in the inbox.

In any event, I will voice my comments.

Reading between the lines, this is simply a money grab and a rate hike. Very few businesses and households are going to move to electric appliances. So, a "new fee" will be applied to most everyone's account to continue using natural gas. New fee being a rate hike.

I don't know if your seriously listening to people before passes these rules but if you are, please reconsider. Instead of a penalty, give a reward for those who want to, and can afford, to move to electric appliances. Sugar, not the stick.

Enjoy your Friday and please reconsider these rules.

Subject: Costly New Appliance Rules Could Hit Your Wallet — Speak Up Now

[Display errors? Click here to view in browser.](#)

Southern California families and small businesses are facing real financial pressures — from rising housing costs to increasing utility bills. And now, new proposed regulations could make things even more expensive.

The South Coast Air Quality Management District (SCAQMD) is considering two rules — Rules 1111 and 1121 — that would require homeowners, landlords, and small business owners to replace natural gas appliances with electric-only models.

These proposed changes affect over 17 million people across Los Angeles, Orange, Riverside, and San Bernardino counties.

What It Means for You

If adopted, Rules 1111 and 1121 would impact nearly every household and business in our region. Under these rules, families would be left with two expensive choices:

- If you are going to be replacing your gas furnace or water heater, you will need to pay a new fee just to continue using natural gas
- Switch to all-electric appliances, which may require upgrading your electrical panel and wiring — with some families facing up to \$47,000 to make the transition

In addition, the rules would:

- Add \$7.7 billion in new costs over time — or more than \$300 million every year
- Increase pressure on California's already strained power grid
- Limit energy options for families and businesses who prefer or rely on natural gas for affordability or reliability

We all want to improve air quality and support energy innovation — but it must be done in a way that's affordable, practical, and respects consumer choice.

Does Advocacy Work? Absolutely.

We've seen firsthand that when residents speak up, it makes a difference.

 Earlier this year, we asked you to sign a petition urging U.S. Secretary of Energy Chris Wright to protect consumer energy choice. More than 30,000 of you signed, and Secretary Wright responded by stating emphatically that he would defend access to natural gas as a reliable and affordable energy option.

 When Assembly Bill 1333 threatened public safety by making it illegal to use deadly force against an intruder in your own home, thousands of you took action. The author of the bill was overwhelmed with public opposition — and pulled the bill.

Your voice matters — and your advocacy gets results.

As a retired 26 year elected official, I oppose Rules 1111 and 11121. You're using a stick instead of a carrot to achieve your goal. The clean energy infrastructure/capacity is not in place to support this change. Increased incentives must be offered for home and business conversion to all-electric appliances.

Peter Campbell

From: Janice Haines [REDACTED]
Sent: Friday, April 4, 2025 11:52 AM
To: Jennifer Vinh
Subject: [EXTERNAL] Keep using Natural Gas in Orange County

To The people who wish to eliminate the use of Natural Gas, My home uses natural gas for heating, cooking, my clothes dryer and my hot water supply. It would be utterly ruinous to my finances, if I should have the necessity of the cost to renovate my now renovated home in order to install new electrical power circuits to heat my home, for cooking, for dryer clothes and to supply hot water. The cost of upgrading my electric panel to cope with the extra power circuits would be devastating to my limited income. The cost of new electric appliances would be horrendous for me. Are new power generating stations to be built to accommodate the required increase in power to the area? What are your plans for building one? The San Onofre Nuclear Generating Station was decommissioned many years ago. Are you planning to bring that generating station back online? How will you achieve that? How will you reduce the overall cost of electricity to cover the extra costs to me, and many others, for being forced to use electricity to heat my home, and their homes, for cooking, drying clothes and hot water, to my home and their homes?

Would the people on your board personally supply the funds to cover the costs for all those who will be impacted by this order or will they just shrug their shoulders and ignore the financial burden of those they are supposed to protect?

This is not a viable plan for helping people to lower their already high cost of living. It will do the opposite and impoverish the people who will be impacted by this irresponsible idea.

My suggestion is that you should relegate your plan to the garbage can and let the citizens of Orange County live as well as they can under the already high taxes and extreme regulations that exist in California.

Yours sincerely,
Janice Haines

Subject: [EXTERNAL] Natural Gas Issue

Questions:

If the electrical grid goes down, how is converting everything to all electric (cars, furnaces, stoves, etc.), a good idea ? Is relying on one energy source a good idea ?

How is it cost effective to forcing older homes to convert to larger electrical panels ? Currently most cities require a special permit if a resident needs a panel over 200 amps.

With the current tariffs in place, how much will it cost homeowners to convert to electrical stoves, electrical furnaces, etc., as well as upgrading their electrical panels.

Where is all this new power required being generated ? What is the main source of energy that produces power for our electrical grid. (Currently Natural Gas ?)

If you are so concerned about the environment, how is using more natural gas to produce electricity going to help ?

I hope you are taking all this into consideration.

Thank you for your time,

Subject: [EXTERNAL] NO on Rules 1111 and 1121

Good morning, SCAQMD,

I vehemently oppose enacting rules 1111 and 1121.

There are a multitude of reasons I oppose them, from making California even MORE expensive to live in, especially for the millions who are barely scraping by as it is, to gas stoves being better to cook on.

The main reason I oppose them, though, is that California has already enacted laws that will make electric cars a requirement within the next 10 years. As the wife of an electrical contractor who consistently hears "No, we don't have the power on the grid to allot you for that project" from power companies, it makes no sense to me that you will enact rules that place an even higher strain on an outdated, insufficient power grid that will be strained by adding electric car chargers already.

If businesses can't upgrade their electric services now, how much worse do you think it will be with mandatory electric cars and now mandatory electric appliances???

We live with brown outs, rolling power outages, TOU upcharges during the afternoon hours and more ridiculously, rules that limit the number of solar panels we are allowed to put on our houses. Why is that? (Answer: follow the money.) None of this makes sense, economically or with the current power infrastructure limits.

Enacting rules 1111 and 1121 at this time is irresponsible and burdensome to the public. Please use common sense and delay these rules until our power grid is updated. We are losing the solar plant out by the stateline soon which will make the problem even worse. Advocating for a more robust power grid and power generating options would be a better use of your time currently.

Thank you for your time and consideration of my views,

Danielle King

Subject: [EXTERNAL] Oppose Rules 1111 & 1121

To whom it may concern

It is imperative that you do not allow Rules 1111 & 1121 to go into effect. We have some of the highest electricity bills in the nation! I can barely afford my electric bills, especially in the summer! Thank goodness I gave a gas dryer, water heater and one day I'd like my stove to be so it is more cost effective.

We have constant power outages and Edison is constantly raising our rates almost yearly to pay for their mistakes and fires yet not cutting any cost!! To add more outages, fires, and higher cost to those of us living in this state is a crime.

I am 74 years old still working to keep up with the ridiculous bills and rules put into place by utility commissioners, politicians and not to mention the Governor who has ruined California!! I am wondering if anyone in the Capitol or Commissions have any "practical" sense anymore!!!

Don't pass the Rules!!!

Subject: [EXTERNAL] Opposition to Proposed Rules 1111 and 1121 Due to Increased Costs on Renters

I am writing to express my strong opposition to the proposed South Coast Air Quality Management District (SCAQMD) Rules 1111 and 1121, which will force landlords to replace natural gas furnaces and water heaters with electric-only models or pay a fee to continue using natural gas appliances. The costs associated with this mandate are astronomical, with some estimates reaching up to \$47,000 per unit due to necessary electrical panel and wiring upgrades. For multi-unit rental properties, these costs multiply exponentially, making compliance financially unfeasible for small property owners.

Landlords will have no choice but to pass these additional expenses onto tenants in the form of higher rent. Many rental properties operate on slim margins, and a sudden increase in infrastructure costs will necessitate rent hikes to cover the required upgrades. This will disproportionately impact middle and low income renters who are already facing affordability challenges in Southern California's competitive housing market.

Beyond the financial strain, requiring an all-electric transition will place additional stress on California's already overburdened power grid, which already has brownouts, rolling black-outs, and shut-downs during high winds.

A more balanced approach is needed—one that encourages energy efficiency and innovation without imposing excessive financial hardships on landlords and renters. I urge SCAQMD to reconsider Rules 1111 and 1121.

Sincerely,
Mitchell Reifel, Renter
San Clemente, CA

Subject: [EXTERNAL] Opposition to proposed Rules 1111 and 1121

AQMD,

I oppose the proposed Rules 1111 and 1121. They will have a vanishingly small positive effect, much of California's energy is Natural Gas this will just make it burned elsewhere to support the increased electrical demand. The direct harm will however be enormous, with secondary effects at an even larger level, driving more business and citizens out of the state.

Far better to invest in new nuclear power plants. They are also low carbon and require no breakthroughs in technology to implement practically. Once the 2/3 of carbon heavy power in the grid is replaced, it would be meaningful to consider the smaller uses.

CO₂ and green H₂ (electrolysed water) can be catalytically converted into methane via CO₂ methanation (also known as the Sabatier reaction) to replace the fossil fuels with carbon neutral ones with minimal effect on the economy using surplus electricity from nuclear, solar or wind.

Subject: [EXTERNAL] Plea against Rules 1111 and 1121

To Whom it May Concern,

I am concerned about the two new rules 1111 and 1211 trying to be added by SCAQMD.

As a citizen of Fullerton, CA, I would like to urge you to reconsider and not allow this to happen. There are so many homes with gas appliances. It works well. We have been using for a long time. Why change it now? Costs are high. It will be even higher with these two new rules if they are implemented. Making homeowners pay for more to keep on using what is available at their homes is absurd as well.

There are stark differences in using gas and electric. Gas is more reliable and cheap for the common folks. Electric can be convenient for small uses. It is not meant for everyday life uses. The transitioning from gas to electric is so great. That kind of financial burden will be all up to the homeowners, us!

So please please I urge you to reconsider about the rules 1111 and 1121.
Thank you!

Sincerely,

Annabelle Hong

Subject: [EXTERNAL] Proposed Rules 1111 & 1121

To whom it may concern,

I am writing to voice my objections to the proposed Rules 1111 & 1121. My objections are based on the following:

- Affordability – eliminating gas appliances will drive up the electricity usage and overall utility cost for all residences and businesses in California – EVERYONE! Not to mention that some of us may even have to upgrade the electrical panels to accommodate the additional electricity draw. We all know that gas is a much cheaper alternative. As a small business owner, this will no doubt increase my utility expenses and shrink my bottom line to the point where I will have not choice but to raise prices. This will in turn have the same spiraling negative impact as the ever increasing minimum wage in California.
- Electric Grid Capacity – it's a fact that our grid is already having a tough time meeting our usage demand, especially with brown outs happening during peak usage throughout California, it is very irresponsible for SCAQMD to even consider these rules.
- Nonsensical net impact – over 36% of California's electricity is generated by using natural gas!!! Not to mention that the efficiency of such generation is only in the 30 percentile – that is a net loss of 60 to 70%!!! These rules will not reduce natural gas demand. It will have the opposite intended effect and drive up overall natural gas usage.

Since the overall gas demand will go up with these proposed rules, they make absolutely no sense or whatsoever! For the welfare of the state and the environment, I sincerely urge you to reconsider.

Sincerely,
James Yeung

Subject: [EXTERNAL] Re: South Coast AQMD Proposed Amended Rule 1111 and Proposed Amended Rule 1121 Myths vs Facts

Ms. Vinh,

Thank you for your informative update on the proposed AQMD rules.

I have only three questions;

1. Will there be a financial penalty or increased cost for me to keep and maintain the current gas furnace, and water heater that I currently have? I am looking to keep these devices for their lifespan of 4 to 10 years.
2. If I have to replace my water heater in the next 2 - 3 years, will I have a financial penalty for a gas water heater?
3. Since I have had experience with brown outs and black outs, how will the state ensure that I will not be without heat in the winter? Note, I have lived with an electric furnace before, and have had a black out that threatened my water pipes. In that location, black outs were very uncommon.

I oppose the imposition of required electric appliances or face a fee for using natural gas. My home would require an upgraded electrical panel to say nothing of our electric grid which is already straining with all the electrical cars. You are killing us with taxes and unrealistic requirements.

Do not implement these rules. This is still a free country and we should be allowed to make the choice.

Respectfully,

Mary Louise O'Hara

Subject: [EXTERNAL] Rules 1111 and 1121

Good Afternoon,

I am writing to please ask that you not pass rules 1111 and 1121 that that would require homeowners, landlords, and small business owners to replace natural gas appliances with electric-only models.

We are already being hit hard by a tariff war, increased prices, inflation and many of us are on fixed or retirement incomes. The cost of this is simply too high. We do not need less choices right now but more to help bring costs down. It is becoming increasingly difficult to afford life here and this is just one more burden in a State where gas, sales tax and basic groceries continue to climb.

I urge you to please vote "no" on these rules.

Sincerely,

Sharon McDonald

Ms. Vinh:

We are writing to strongly strongly oppose Rules 1111 and 1121. This will destroy even more California's economy and cause a hardship of epic proportions for the hard working citizens of this state including driving seniors and low income families out of their homes. This will cost middle class families a huge financial burden which many will not be able to handle if you include all the taxes our California government officials already have in place.

PLEASE stop this from moving forward. I beg you for the sake of all that is good.

Thank you.

Connie and Brad Bryant

Good Afternoon,

Speaking out against these two rules trying to be put into place. Very simple, gas appliances tend to use less energy than electric. Same time we currently have blackout issues come summer where we inform electric car owners not to charge their vehicles, this will only increase with an electric appliance mandate. So Cal Edison has come out saying we don't have the infrastructure to support this.

Subject: [EXTERNAL] Rules 1111 and 1121

Good morning,

I am sending this message along to express my concerns in passing these above mentioned rules. My wife is retired and I am about to retire. Recently I had to replace my FAU and it cost me close to \$10,000. Last year I had to replace my water heater at a cost of over \$1,000.00. I do not plan on replacing either of those appliances again in my lifetime. If I had to replace these again, it would greatly affect my retirement plans. I understand the need to have clean air for myself and the rest of the people here in Southern California, but I do not see any reason to force everyone in our area to spend crazy money to upgrade their homes that could cause greater problems especially with the electrical grid. I have driven a natural gas car for years doing my part to help clean up the air from not having gasoline engine emissions. Unfortunately, the state of California then started to require that my natural gas car had to get a smog check. I know that never in my sixty some odd years of living in Southern California have I ever had anyone come in and do a smog check on my stoves, water heaters, or my forced air units. I honestly believe that smog checking a natural gas car is strictly a way to make more money for the state. These 2 rules to me are doing the exact same thing, making money for the state, not making a difference to the quality of the air.

I strongly oppose the passing of these 2 rules.

Thank you,
Brian Stover

Subject: [EXTERNAL] Rules 1111 and 1121

Good morning!

I oppose Rule 1111 and Rule 1121! These are absolutely absurd. California's power grid is far too strained already to support this increased demand for electricity. Not to mention it would put gas companies and countless thousands out of business and out of jobs. This is not good for California or anyone who lives here, including me! Many families are struggling to make ends meet, so this is not the time to lump on additional expenses. Some families would have to pay nearly \$45K to make this transition to all electric appliances. The excessive gas taxes are already far too much for families to bear. Please make this stop! We are begging you to stop. You say you care about low income families and immigrants to our state. How will they afford these costs? Our cost of living is through the roof. Enough is enough.

Thanks for your time.

To: Jennifer Vinh
Subject: [EXTERNAL] Rules 1111 and 1121

I am writing in opposition to Rules 1111 and 1121. We currently pay over \$350 a month for electricity and the majority of our appliances are natural gas. We rarely use our air conditioner, keepin our house at 78 degrees. We have invested in insulation, variable speed pool pump and new windows. Our house was built in the 1950's so in order to become more energy efficient, I would need to tear down and start all over. By switching all of our appliances to electric you're raising our bill even more. Not to mention the fact that I would need to switch out the electric panel.

By adopting this rule you are making it more expensive to live in CA for what reason. In addition the overall cost of living is continuing to rise from groceries to all consumer goods. By increasing electricity bills and forcing appliances to be electric, you're adding on more money. Families can cut back on groceries and purchasing goods, but they can't cut back on using electricity and using appliances.

I vehemently oppose these proposed rules.

To AQMD,

As a homeowner in Yorba Linda, I have struggled to keep my budget in line for the last 10 years. We have central air for no reason since I cannot afford the electric bills to run it. Now this year, I did not even turn on the furnace during the winter because of utility bills. The gas bill would have been bearable, but the electric bills are now obscene. And you want to raise them even more by making everything electric? If you follow through with these rules, just be aware that you are hurting us.

Subject: [EXTERNAL] SCAQMD - Rules 1111 and 1121

Re: The South Coast Air Quality Management District (SCAQMD) two rules — Rules 1111 and 1121 — that would require homeowners, landlords, and small business owners to replace natural gas appliances with electric-only models.

This new rule cannot and should not be implemented and certainly not at this time. November 2024 and January 2025, So Cal Edison turned off our electricity due to high winds and fire safety even though some days we did not have high winds.

The first outage was January 7th, 2025; we were not notified they were turning off our electricity. We were without electricity for 4 days straight plus intermittent outages thereafter until January 15th, 2025.

As a result of the first outage, we lost all our refrigerated and freezer food and lived with bare minimum food in our refrigerator for two weeks because of upcoming outages. Thankfully, we had a gas stove and we could cook some food on the stove and heat water to drink. Our water heater worked so we could take quick showers and wash dishes.

We bought a small portable power station to charge our cell phones and a small lamp. We bought extra flashlights and lanterns to be able to get around the house safely including going up and down the stairs. Worse yet, my husband's mother ended up in the hospital and he had to leave and my son had a business trip. I was the only person in the house for the majority of the outages.

We went to a town hall meeting with So Cal Edison (SCE). SCE cannot promise us that they will not turn off our electricity. It may be a future problem until they can figure out how to address the safety issues on their end.

Not everyone can afford to switch from gas to electric, people can barely afford to buy food, buy anything. Not everyone can afford to buy generators for their homes. Not everyone can afford to get solar roofing.

Some areas of California may be lucky to have reliable, dependable electricity; Southern California electricity is no longer dependable. The recent fires that hit Southern California in January 2025 has scared SCE because of lawsuits and SCE will continue to turn off electricity when they feel fit to do so.

Rules 1111 and 1121 should not be implemented and certainly not at this time.

Sincerely,
Erlinda Tan

Subject: [EXTERNAL] SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT RULES 1111 AND 1121

I am writing to express my strong concerns regarding the implementation of Rules 1111 and 1121, which require homeowners, landlords, and small business owners to replace their natural gas appliances with electric-only models.

At a time when the economy is already struggling due to the impact of tariffs, this decision seems to be a misguided and unnecessary burden on individuals and businesses. The financial strain this will place on families and small businesses is considerable, and it will only exacerbate the economic challenges many are already facing.

While I understand the intention behind these rules to reduce emissions, it seems that forcing such widespread and costly changes on the population is neither the most practical nor the most effective solution. People are already struggling to make ends meet, and adding additional financial pressure will likely push many into further hardship. The economic consequences of this policy could be severe, especially when the recession is already affecting so many.

This decision feels like another example of well-intentioned policies that fail to consider the real-world consequences for everyday people. The economic strain, especially on low-income families and small businesses, will only worsen if this policy goes forward. We cannot afford to ignore the financial reality many are facing in pursuit of environmental goals that may be better achieved through more balanced and targeted approaches.

I urge you to reconsider these rules. The current plan is simply not feasible for many people and could lead to more harm than good.

Thank you for considering my concerns.

Sent: Friday, April 4, 2025 3:25 PM
To: Jennifer Vinh
Subject: [EXTERNAL] Rules 1111 and 1121

I am writing to express my strong opposition to the proposed changes under Rule 1121 and Rule 1111, which would mandate the replacement of water heaters and furnaces with electric models in the coming years.

As outlined in Rule 1121, if your water heater breaks after January 1, 2027, you will be required by the government to replace it with an electric model. These electric systems are not only prohibitively expensive but also necessitate significant electrical upgrades to homes or businesses, which will likely involve lengthy permit wait times. Similarly, Rule 1111 targets natural gas furnaces, and if your furnace fails in 2028 or beyond, you will be forced to replace it with electric technology.

The financial impact of these rules could be devastating for homeowners, landlords, and businesses. The cost of implementing these rules could reach tens of thousands of dollars per unit, adding a substantial burden on individuals and families. Moreover, the overall cost to implement these rules across the entire SCAQMD service area is estimated to be at least \$20.4 billion.

While staff promises that costs will decrease over time, that does little to alleviate the immediate financial strain on consumers. These rules will make life in Southern California even more unaffordable, particularly for those already struggling with high living costs.

I urge you to reconsider these proposals and explore alternative solutions that do not place such an undue financial burden on the people of Southern California.

Thank you for your time.

sincerely,

Michael and Karen Peck

To whom it may concern,

I am writing to voice my strong opposition to these proposed rules which would affect so many people, forcing them to purchase new and unnecessary appliances. In my home alone, that would mean a new stovetop, furnace and hot-water heater. People are already struggling financially with the burdens placed on us due to inflation and the high cost of gasoline here in California. Please don't hesitate to not add additional burdens to the very people you are tasked to serve.

Sincerely,

Leslie Grayson

To Whom it May Concern:

I strongly oppose Rules 1111 and 1121.

In a state which shuts off electricity at the drop of a hat because "the grid" can't handle people running their air conditioners; in a state where I already have an incredibly high tax and gasoline rate; in a state that is a billion dollars in the red:

I do not need to pay more to use my natural gas and I do not need to switch to all-electric appliances, which would require upgrading my electrical panel and wiring — which could be \$30,000.

Stick to fixing the problems the state of CA has made for itself and leave well enough alone.

Subject: [EXTERNAL] Natural Gas use

My wife and I have lived in our home over fifty years and as ardent environmentalists we make it a conscious effort to minimize our use of natural resources, including natural gas. Presently we use gas for minimal water heating, occasional clothes drying (mostly sun dry clothes line), and infrequent home furnace use in the winter. Our monthly Gas bill averages around \$25.00 most of the year. To put new restrictions on our gas use would require additional investment in electrical service as we have maxed out our service panel when upgraded our kitchen to all electric and did the same with our spa and upgraded to new smaller and more efficient air conditioner. Any additional electrical use would necessitate major investment and inconvenience to upgrade our electrical service. I understand the AGMD's position but I believe it more equitable to first focus on the commercial and industrial use as these entities are major contributors to the problem and can recoup there their investments through their products, unlike the typical resident. I am all for transitioning to clean electricity, but with new construction first, and businesses next, and incentives or tax breaks for residential home owners. But to mandate these changes without these considerations is inappropriate and unjustified, not to mention the increased demand on our already overtaxed electrical system.

I read these documents and they are very misleading over costs for gas vs electric. I recently installed a low NOX gas water heater for \$1200 but if I have to install electric it would cost at least \$5000 to run a 220V circuit from my distribution panel and possibly much more to upgrade the panel.

The rules penalize the continued use of gas water heaters with arbitrary fees and penalties. Do this for new homes, not houses like mine built 50 years ago.

Subject: [EXTERNAL] Rule 1121

Members of the SCAQMD,

I would like to voice my opposition to Rule 1121.

Utilities in the state of California are already too high, due in part to excessive regulation. Our electrical grid is overloaded. I get email notifications from Southern California Edison telling me not to use electricity at certain times of the day because it puts too much of a strain on the grid. We are told not to charge our cars and run appliances, including air conditioners, during these times. Now you want to add even more appliances to this list by requiring businesses and homeowners to convert their gas water heaters to electric ones. This makes absolutely no sense.

What happens during fire season when our power is turned off? If we are required to have electric water heaters, that means that we will have no hot water. That becomes a public health issue because people won't be able to properly wash their hands. They won't be able to bathe or shower because there will be no hot water to do so.

I own two homes and business properties. People with properties that are older don't have the infrastructure to support this change. My mom has lived in the same house for over 60 years. There is no way she will be able to afford to upgrade her electrical panel to make this change when her water heater goes out. My home is almost 40 years old and my other home was built in the 1950s. My rentals were built in the 1970s. Making these changes won't be affordable for me on my retirement income and I will have to absorb the costs in my businesses until I can make adjustments to leases to cover the costs. What about the young families who have moved into our neighborhood? They have paid outrageous prices for their homes. Their property taxes are through the roof. Some can barely make ends meet. Now you are going to ask them to incur another huge expense to convert their water heaters when they go out. It isn't just the cost of the water heater, it is the cost of the upgrades that will be necessary to support the change. How does this make sense?

I don't believe the government should be able to tell me what appliances - water heater, stove, washer, dryer, furnace, etc I am allowed to have in my own home. These are personal preferences, not things that should be dictated to people in a free society like America.

Charging more for the "privilege" to maintain a gas water heater is not acceptable when this is what I am already paying for. It is morally and ethically wrong. If the issue is emissions, then the state needs to be doing things to help with wildfire control. Fires contribute far more harmful gasses into our air than stoves and water heaters do. Do not punish homeowners for the state's lack of responsibility in preventing and fighting wildfires.

I urge you to reconsider passage of Rule 1121.

Respectfully,
Carol Bledsoe

Subject: [EXTERNAL] Opposition of rules 1111 and 1121

Dear Members of the South Coast Air Quality Management District,

I am writing to express my strong opposition to the proposed Rules 1111 and 1121, which would require homeowners, landlords, and small business owners to replace natural gas appliances with electric-only models. While I fully support efforts to improve air quality and encourage energy innovation, these rules are both impractical and excessively burdensome for Southern California families and businesses.

These proposed regulations disproportionately affect over 17 million people across Los Angeles, Orange, Riverside, and San Bernardino counties, introducing financial challenges that many cannot afford. The new rules would force families to choose between paying a substantial fee to continue using natural gas or spending tens of thousands of dollars to transition to electric appliances and upgrade electrical systems. Studies estimate these changes would impose \$7.7 billion in added costs over time, further straining household budgets and small business operations.

Furthermore, the mandate to switch to all-electric appliances would increase demand on California's already fragile power grid. In addition to limiting energy choices for those who prefer or rely on natural gas for affordability and reliability, these rules risk exacerbating energy instability in the region.

While I recognize the importance of addressing environmental concerns, I believe these proposed regulations neglect to balance sustainability with affordability and practicality. I urge the District to reconsider these rules and seek alternative solutions that protect consumer choice, promote innovation, and remain accessible to all socioeconomic groups. Collaborative efforts that offer incentives for voluntary transitions or improvements to existing natural gas technologies may provide a more balanced approach to achieving our shared environmental goals.

Thank you for considering the perspectives of Southern California families and businesses impacted by these proposed changes. I respectfully request that you prioritize solutions that are both environmentally responsible and economically feasible for the communities you serve.

Sincerely,
Christine Mueller

Subject: [EXTERNAL] I oppose proposed Rules 1111 & 1121

Hello,

The purpose of this note is to express my opposition to proposed rules 1111 and 1121. My representative, Philip Chen, sent an email making me and others aware of this topic.

I am a homeowner with gas appliances. They work and are paid for.

Besides the cost of the appliances themselves, it would be extremely expensive to have to run new electrical wiring to support such appliances.

As well, it is much more expensive to operate electric appliances than gas ones. Years ago I lived in a home with an electric stove and I could see the difference in my electric bill just for baking a batch of cookies. In the summer, I am also careful to not run my air conditioning too much because of the high cost of electricity. Electric costs keep going up, not down. You have no control over electric bills.

It would be a hardship for people to be forced to replace appliances and rewire their homes and pay for expensive electricity.

I would also comment that the electrical grid is not perfectly reliable. Gas always works.

If you want to force people to use expensive electricity, then make that required with new construction, but leave existing homeowners alone.

Sincerely,

Christine Sorenson

To whom it may concern,

I have a simple question: Why are you making it your mission to crush every working class family in this state? Is it that you don't understand what you're doing? Or is it that you just don't care? You expect families to replace all natural gas appliances with electric? We already have the highest cost of living in the U.S.: utilities, gasoline, groceries, insurance, property taxes, sales tax. With these rules we would need to also incur the cost of upgrading our electrical panels. Older homes could not replace natural gas appliances with electric without doing so.

Also, we already have rolling brown outs during the summer and now you want to add all electric appliances to an obviously failing electrical grid? I don't understand your thought process. It makes no sense. There is no common sense.

Subject: [EXTERNAL] Mandating the switch from gas to electric appliances

To whom it may concern,

It troubles me to hear that California may choose to mandate everyone with gas appliances to switch to electric. With the price of electricity constantly rising, and the fact that many locations don't have a choice who their provider is due to monopolies, it is very disturbing that we may be forced to make the switch to electric appliances. It would be a huge burden with the initial cost of purchasing new electric appliances, in addition to doubling or tripling costs to cook and heat the house. In addition, for those in areas where the power is commonly shut off due to high winds, that would put us in a position where we would be unable to still cook, or heat our houses. On behalf of all the other Californians who have gas appliances, we are extremely opposed and extremely concerned about the hardship we would go through if we were mandated to switch from gas to electric.

Subject: [EXTERNAL] 1111 and 1121

SCAQMD,

This letter is my opposition to the two proposals above. Prices across the board have increased at a tremendous pace and working and retired people are struggling to keep up.

Natural gas is efficient and affordable compared to electricity prices.

We use less electricity than two years ago and paying much a lot more for it.

The electricity grid is not capable to cope now let alone if these proposals go through.

Also the electrical grid has been the cause of many huge life threatening fires over the last few years that have caused more pollution than people using gas.

Please consider dropping this two proposals.

Thank you.

Derek Elmes.

Subject: [EXTERNAL] South Coast Air Quality Management District (SCAQMD) and their considerations of two rules — Rules 1111 (Natural Gas Furnace) and 1121 (Natural Gas Water Heaters)

Hello,

I am sending you this email to express my opposition to the proposed rules 1111 & 1121.

If you have any influence on The South Coast Air Quality Management District (SCAQMD) and their considerations of two rules — Rules 1111 (Natural Gas Furnace) and 1121 (Natural Gas Water Heaters) — that would require homeowners, landlords, and small business owners to replace natural gas appliances with electric-only models - please influence a NO vote to help save money for hard working taxpayers, homeowners, landlords and small business of California. This will make housing less affordable, increase the maintenance cost, displace residents and tenants as units are replaced. The sole reliance on a single energy source is fraught with many future dangers and challenges. Conversion cost will be burdened on the California Taxpayer. Residents and businesses should have a choice if they should want to convert, but it should not be mandated.

I also don't see why \$500 million should be given to the SoCal Air Quality Management District, via the EPA under the Inflation Reduction Act. If anything we should be reevaluating our budgets to see if there are any inefficiencies and work more towards a reduction of cost, fraud and a reduction of our taxes. As a Southern California resident for almost 50 years, it is becoming increasingly difficult for the normal taxpayer to pay their monthly household expenses and almost impossible for the next generation of young adults to even envision a life in Southern California where they can comfortably raise a family.

Thank you for your consideration.

Hi.

Please do not penalize families for using natural gas for energy. It makes no sense.

Natural gas is a safe, cost effective energy source.

There are better ways to reduce green house gas.

The cost to homeowners would be expensive. Buying new appliances just to comply with crazy new rules (rule 111 and rule 1121) is ridiculous.

Penalizing homeowners for continuing to use natural gas for their water heater and furnace is unfair.

There are so many other problems that Californians face day to day. Why not create laws to make it safer for families to thrive in California?

It seems like the push for rule 1111 and rule 1121 is an attempt to push some fringe radical agenda.

Say 'no' to rule 1111 and rule 1121.

Thank you.

Subject: [EXTERNAL] Please do not adopt Rules 1111 and 1112

Hello AQMD,

I ask that you consider and are beholding to the Consumer when you make decisions that have great negative impact on the typical consumer...

I'm specifically referring to:

If adopted, Rules 1111 and 1121 would impact nearly every household and business in our region. Under these rules, families would be left with two expensive choices:

- If you are going to be replacing your gas furnace or water heater, you will need to pay a new fee just to continue using natural gas
- Switch to all-electric appliances, which may require upgrading your electrical panel and wiring — with some families facing up to \$47,000 to make the transition

In addition, the rules would:

- Add \$7.7 billion in new costs over time — or more than \$300 million every year
- Increase pressure on California's already strained power grid
- Limit energy options for families and businesses who prefer or rely on natural gas for affordability or reliability

We all want to improve air quality and support energy innovation — but it must be done in a way that's affordable, practical, and respects consumer choice.

Subject: [EXTERNAL] Rules 1111 and 1121

Please do not approve these ghastly rules to implement electric stoves only and take away our privilege to use natural gas. This will impact our homes, our pocket book and our ability to cook for our families properly. The control in cooking dishes is far superior on a gas range compared to a electric range and gas is more affordable for families. The cost to even replace the stove will impact us and families.

Two very ill-advised rules!
Regards,
Kelly Schlegel

Subject: [EXTERNAL] Rules 1111 and 1121

I strongly oppose Rules 1111 and 1121 which would limit my energy choices and would require great cost to convert my home from natural gas to electric. I do not have the money to upgrade my electrical panel. If natural gas appliances are unavailable, how will I heat my home and water? How will I cook my meals? Forcing already struggling California residents to convert their old homes to natural gas would create incredible hardships for them.

Subject: [EXTERNAL] Opposed Rule 1111 and 1121

My husband and I are on a fixed income, in a home built in the 1960's, that will undoubtedly require us to update our furnace, gas stove and oven, and gas water heater within the next few years.

Our electricity bill is already ridiculously high, and we are usually only paying within the first tier of usage each month. It just continues to go higher each year, despite cutting back as much as we possibly can. We don't even HAVE an air conditioner, because we can't afford it, and certainly cannot afford to run it!

I believe these rules will only place more costs on Californians, and I have little confidence that the grid will even keep up. We have rolling brownouts EVERY summer now.

Please consider not passing these. Thank you.

Enough is enough. I'm 78 and have lived in California since I was 21. This used to be a great place to live. You seem to do everything to make our lives more costly. One of my four children has already left this state. I am very opposed to telling us we need to eliminate our gas appliances yet you do nothing to fix the electric grid. I am in unbelief at what has happened to this state. Friends and family that live in other states make fun of California now. Crazy California or Peoples Republic of California.

I tried to contact someone about the Chemtrails that I have seen persistently in our skies and I was shuffled around to five different boards and have contacted a representative. I have yet to get an answer to who is responsible for permitting this and how to get them to stop. I get more information from others. Florida is aware of how harmful these chemtrails are and have stopped it. Now 31 other states are trying to do the same. If you live in this state and have children or grandchildren living here, you should also be concerned. Look into it and see if you can stop it! it would be greatly appreciated.

Respectfully,

Lois Carlson (mother of 4 and grandmother of 7) retired school teacher

Subject: [EXTERNAL] Rules 1111 and 1121

To Whom it May Concern:

We are writing to oppose your proposed Rules 1111 and 1121. We are a retired couple living on Social Security and there is NO WAY we can afford to replace our gas tankless water heater and NEW gas cook top. We spent thousands of dollars a few years ago on the tankless water heater after our old water heater leaked. As for the new gas cook top, we had to replace our 22 year old cook top after we had a flood caused by our refrigerator last May. The cook top cost us \$1700. It took 3 months and thousands of dollars to replace half our kitchen, ALL the LVP flooring in the kitchen, living room, dining room and entryway.

This proposed Rule is going to cost us more than we can afford. It is entirely unfair! In fact, it would probably cause us to sell our home of 38 years and move to another state! Not only are these Rules ridiculous, they would be discriminating to people in only four counties in California. No other California businesses and homeowners would have to comply. We are requesting that you abandon these proposed Rules because they will cause undue harm to many people in the four affected counties. How many people do you think would be able to comply???? Many, many cannot and should not.

Hello Madams and Sirs,

The South Coast Air Quality Management District (SCAQMD) is considering two rules — Rules 1111 and 1121 would require replacing our gas appliances with electric versions. This is government overreach, unfair, and unaffordable.

We want to keep our gas range, oven, fireplace, water heater, clothes dryer and barbecues! They are clean and efficient. Gas ranges are optimal for cooking, clothes dry better and faster with gas dryers. Wood burning fireplaces are already banned, so we would be left with nonfunctional fireplaces and have to use whole house heating which is more costly. Not to mention, paying for new appliances is prohibitive for most people!

Please, stop the madness,

Angela Allevato Butler, MD

Subject: [EXTERNAL] 1111 and 1121

These two rules would have astronomical consequences for many residents already facing tough economic conditions. Many homes in the area would need considerable and costly electrical improvements to support the additional load from electric appliances. With many electricity utility companies already implementing low energy periods during our increasing heatwaves, requiring or penalizing residents is illogical.

Subject: [EXTERNAL] Natural gas policies

To whom it may concern,

If we care about the environment in California, we should NOT outlaw natural gas as an energy delivery vehicle. It is much more efficient to use natural gas for heating appliances where the heat is needed than it is to produce electricity, transport it via lossy wires, and then take hits when converting to heat. Energy efficiency matters!

It also is counterproductive to say the least to require retrofitting of existing homes. The additional cost is directly attributable to energy; more cost = more energy consumed.

I urge a 'no' vote on rules 1111 and 1121. They are misguided and will actually make problems worse.

Subject: [EXTERNAL] RE: Rules 1111 and 1121

I received an e-mail from my assemblyman regarding these two proposed rules.

In my case I have a gas furnace, clothes dryer, and water heater. The e-mail states that it could cost up to \$47,000 to upgrade my electrical panel to account for the increased load for which my home, built in 1976, was never designed. The maximum load that my current service can support, is 175 amps. This is insufficient to add three new loads to it.

Should I decline to change to electric, the e-mail further states that, when I replace a gas appliance, I will need to pay a new ongoing fee just to continue using natural gas. This is outrageous.

My wife and I are both retired. I receive a pension and Social Security; my wife receives a pension. The financial consequences of these rules will be difficult for us to afford.

This is why people are leaving California.

Please do not pass these rules.

Sincerely,
Jim Rueff

Subject: [EXTERNAL] Pending Rules 1111 and 1121

Good morning.

I am writing as a result of a new awareness of pending SCAQMD rules related to my cost of home ownership.

I am opposed to Rules 1111 and 1121 that force me to choose costly alternatives to the gas utility that came with my home, as well as with the homes of millions of others in Southern California.

I am of the opinion that short of a miraculous instant overnight change of removing all natural gas equipment from all of the applicable homes, that a measurable, observable result of these rules is not even possible.

As an alternative, consider extending the idea of “no burn days” to a program to cap off chimneys. To this day, we will walk early in the morning and see/smell fireplaces in use. A vastly cheaper alternative for the homeowner would be to cap the chimney and disconnect any gas burning device within the fireplace. Add an incentive (like a \$500 rebate) with proof of cap install and I believe you would have much broader base of compliance.

As an owner of two homes, I respectfully ask the SCAQMD to reconsider the arbitrary implementation of these costly rules without further consideration and putting it to a vote of the affected populace.

Thank you.

Subject: [EXTERNAL] rules 1111 and 1121

I wanted to take this opportunity to write to you regarding the proposed changes to regulations on natural gas appliances. For the last 4 years I have lived in a 1100 square foot condo and for the first time have had an electric water heater. I absolutely hate it. You cannot run the dishwasher or washing machine at the same time as the shower (the water will not get above a warm temp) and you cannot shower more than 20 min before it starts to lose heat. Meaning if my daughter, my girlfriend, and myself all need to shower around the same time we are out of luck. In addition, it is significantly more expensive to run an electric water heater than a gas one. My electric bill is over \$200 every month (three hundred in winter), which has never happened in any previous residences. I consulted w SoCal Edison and even had a technician come out to make sure there were no issues with the meter or lines coming in and he said it was because of the heater. We even upgraded the heater to a newer energy efficient model two years ago but the difference was negligible. Fortunately our dryer runs on gas because if we had to use an electric dryer too we'd really be up the creek. My girlfriend and I both make over 100K a year, but the utility bills associated with these appliances are a large expense. I imagine it would be much worse for people with larger families and lower incomes. Please consider how these rules could affect the finances of lower income Californians, especially in these times of uncertainty and struggle.

Subject: [EXTERNAL] AQMD Rule Proposal on Gas-Powered Appliances

We are writing to express our serious concerns regarding Rules 1111 and 1121.

This proposal would either require special fees to continue with natural gas appliances, or require complete overhaul to electric.

We are retired and do not have the funds to pay for either option. And we know millions of other residents are in the same position.

Further, the strain on our already overloaded electrical grid would be enormous. This is definitely not a viable option. Currently, every time we have power outages, the first thing we're asked is to not charge any electrical vehicles, and do not use electrical appliances.

Please consider the serious negative impact of these proposed rules. Our communities cannot sustain this in any way.

Sincerely,
Mr. & Mrs. L.C. Fulton

Subject: [EXTERNAL] Appliance and natural gas restriction rules, 1111 and 1121

So far 600,000 California citizens have left the state for economic reasons. The state has done nothing to bring business back. Now you are considering making gas appliances illegal to use, taxes to use natural gas, make us use electric appliances, which cost much more to operate; and on top of that have to use them on it already overstrained electrical grid. You are not a solution to the problem, rather you are the problem with this once great prosperous state. As far as I am concerned, the science for global warming is not even close to settled. I am letting every neighbor know about this draconian encroachment on our freedoms. Every Orange County city council manager will receive a copy of this email; as well as the rules you unelected bureaucrats are putting forth. These rules are disgusting!

Subject: [EXTERNAL] AQMD Rule

Dear AQMD Representatives Heather Farr and Jennifer Vinh

I am reaching out due to the portent of the new proposed AQMD Rules 1111 / 1121, and in short, I believe the following about those proposals:

- 1) **I am not in support of these new regulations**, as I believe they are overbearing and punitively draconian in application and cost, and would present a sharp burden to an already hard economy, and to many State constituents.
- 2) I believe these rules could create hardships, financial burdens, legal difficulties, and logistical difficulties for both younger people, and especially for older people, both with limited incomes or abilities.
- 3) I believe the current Governmental and Economic conditions do not warrant or empower such a financially difficult and physically burdensome regulatory change.

I have lived in California in homes using Gas Stoves, Gas Heaters, Gas Dryers, and Gas Water Heaters all of my life, with no discernable specific or overall detriment to myself, or our collective community. As such, forced and manipulative changes such as Rules 1111 / 1121, especially during a politically and fiscally vulnerable time within our country is simply poor management and imprudently overzealous.

Sincerely

Mr. Patt Khalili

Subject: [EXTERNAL] Rules 1111 & 1121

To Whom This May Concern,

I'm opposed to implementation of Rules 1111 & 1121. Natural gas is one of the cleanest, affordable forms of energy available. I'm a retired person on a fixed income, for me to remake my home all electric isn't feasible. Even if I could afford it, I wouldn't do it. On top of everything else, asking for a special fee in order for me to retain my gas water heater, gas furnace, gas stove is nothing more than a money grab like most things in this state. Respectfully, keep your nose out of our business and our choices.

Sincerely,
Richard Stone

Subject: [EXTERNAL] Proposed Rules 1111 and 1121

Dear AQMD:

I am writing to state my opposition to these 2 proposed rules. I live in North Tustin, CA. We are retired and live on a mostly fixed income and cannot afford to be faced with having to upgrade our natural gas equipment to electric, not to mention that the cost of electricity here is already ridiculous and getting worse!

We have lived in our current home for 35 years. We don't want to have to move out of CA. The proposed rules are just one of many things that are making us think that CA is no longer affordable! Don't make things worse than they already are!

Best Regards,

Rob Colgrove

Sent: Friday, April 4, 2025 5:21 PM
To: Jennifer Vinh
Subject: [EXTERNAL] The South Coast Air Quality Management District (SCAQMD) Rules 1111 and 1121

OPPOSE!

"The South Coast Air Quality Management District (SCAQMD) is considering two rules — Rules 1111 and 1121 — that would require homeowners, landlords, and small business owners to replace natural gas appliances with electric-only models.

These proposed changes affect over 17 million people across Los Angeles, Orange, Riverside, and San Bernardino counties." Phillip Chen, 59th District

Please delay and amend the proposal to Rules 1111 and 1121 for the following reasons:

1. More research on how much these actions will impact air quality vs. cost-benefit ratio.
2. Only require new builds and remodels to make this change by giving manufacturers of Gas electric appliances a grace period to change their supply to predominantly Electric in California. This would make gas appliances more expensive to purchase while still giving California residents a choice if they would like to pay more, and part of the purchase would be paid into an Air Quality fund.
3. Grandfather in all gas appliances currently installed until the models must be replaced. Again, giving incentives to appliance manufacturers to help with a slow transition.
4. Avoid multiple lawsuits against these new rules, costing California taxpayers even more money. Lawsuits will
5. California homeowners & landlords have the right to have multiple sources and options of energy available as redundant backups in case of electrical power outages, which have been increasing over the years. Our current electrical grid can't handle current electrical grid loads now! The rolling electric blackouts have been growing!
6. Air Quality Cleanup is a multifaceted solution. Gas appliances are only 1 facet of clean-up! AVGAS (Aviation Jet Fuel) still has toxic LEAD levels! AVGAS has lost multiple lawsuits and was required to get LEAD out of JETFUEL by 2020, but COVID-19 happened, and nobody seems to be required to clean up the toxic chemicals from this serious problem! AVGAS should be the #1 facet of cleanup, not Natural Gas appliances. The last and #3 facet is Chemtrails that are constantly being sprayed all over California by various Watershed projects and other Science Experiments for Weather Modification. This is all public knowledge and on record. Last on this list should be Gas Appliances because the science is still not clear how much this contributes to air quality. The other 2 massive problems above are quantifiable at this point.
7. Propose a more cost-effective solution than \$10,000 per unit change (this number is from multi-family unit conversions to electrical appliances, including changing all pipe & electrical routing). This cost would wipe out many landlords, fixed-income single-family residents, and low-

income homeowners and renters who need to be displaced to make this drastic and quick change.

Whoever proposed these two rules did not consider the massive cost and electrical load of making this sweeping change too quickly. Slow change can happen more thoughtfully for California residents and property owners. How about starting with the modifications required by past lawsuits first to clean up air quality, as listed in #6 above? The writers of these proposals should be embarrassed for their haste and ignorance of human interest. Who edits these ridiculous proposals? If they went to law school and write legislation for a living, they should consider other jobs. As a California Resident, I expect more from the politicians we pay the highest rate of taxes to in the Country. Maybe an audit is in order for California State?

Subject: [EXTERNAL] Rules 1111 and 1121

Dear Relevant Members of the Agency,

As a resident that would be affected by the adoption of Rules 1111 and 1121, I am writing to let you know how completely OPPOSED I am to these proposals. I am a soon to retire person and will be living off a fixed income and should I need to replace any of my current appliances that use natural gas, I absolutely do not want (nor can I afford) the electric replacements. Southern California Edison isn't equipped to handle the grid as it is, let alone add more demand to its mismanaged empire. My electricity is shut off more times than I am okay with as it is now. That is the chief reason I will NEVER purchase an electric car. Natural gas is more cleanly produced than alternatives. It is efficient and the cost for me beats the ever escalating cost of electricity and keeps me less a victim of the corrupt corporate policies of Southern California Edison and their consistent ways of putting profit ahead of updating vulnerable tower threats and not burying the lines with the egregious rates they charge. I have over and over again considered moving out of California due to the tax and fee cancers that have metastaticized into every aspect of trying to live here. Please put this idea down and walk away before myself or more of my neighbors and coworkers (many who I have already said goodbye to as they have moved over the last 10 years) leave California for good. Lots of ideas sound good on paper and are enacted by people whose lives are very different from the affected folks who have to live under them.
DO NOT PERSUE THE ENACTMENT OF RULES 1111 AND 1121.

Regards,
Susan Casada
Southern California Resident

Subject: [EXTERNAL] Proposed amended rules 1111 and 1121

To Whom it may Concern,

I oppose South Coast AQMD's Proposed Amended Rules 1111 and 1121 and strongly urges you to thoroughly engage with the 17 million stakeholders who would be impacted by such a proposal. I have several significant concerns regarding the impact of these rules. Foremost among them is the issue of affordability and lack of consumer choice when replacing gas furnaces and water heaters with zero-emission appliances. Hot water and heating are essential human needs. When my appliances break down and need replacement, immediate service is paramount. Replacing a gas appliance with an electrical one will require far more intrusive electrical and plumbing upgrades and even physical renovations costing tens of thousands of dollars more which would be a huge burden to my family.

Equally concerning is that transitioning to all-electric water heaters and furnaces would increase the demand on California's already inconsistent and delicate power grid. Adding millions of new electric water heaters and furnaces would require a substantial amount of power and increase the potential for brownouts or outages.

I strongly oppose the amended rules 1111 and 1121.

Sincerely,
Theresa Lembesis

To: Jennifer Vinh
Subject: [EXTERNAL] Proposed Amended Rules (PAR) 1111 and 1121 - Natural Gas Bans and Electric Appliance Mandates

I urge you to not impose SCAQMD Rules 1111 or 1121.

We in California are admonished to reduce our electricity consumption during periods of hot and cold weather. Rules 1111 and 1121 work contrary to those requests. The rules will force us to use more electricity for vital needs such as water heating and cooking. In the event of an electrical blackout, we still need hot water and the means to cook food. With the push for more electric vehicles in California, the likelihood of electrical outages or shortages will only increase. While forced air furnaces do require electricity for the fans, a gas stove can provide much needed instant heat in an emergency.

Many homes and apartments will require upgraded wiring to accommodate the high wattage consumption of electric appliances. In addition to the cost of the re-wiring (permits, contracts, etc.), the cost of the electrical appliances themselves will be unaffordable to many. This affects property owners as well as tenants. Rents will increase beyond the budget of the average tenant.

The perils of household NOx emissions have been grossly overstated. Many of us, our parents, and grandparents, grew up with natural gas appliances and have suffered no consequences. My grandmother lived to be 99 and both of my parents lived to be 90. I am 80.

Please consider the above on behalf of the millions of residents and businesses affected by the SCAQMD, and do not pass Rule 1111 or 1121. Allow the residents and businesses to make their own decisions.

Sincerely,

William B. Bingham

Sent: Monday, April 7, 2025 1:36 PM
To: Jennifer Vinh
Subject: [EXTERNAL] Rules 1111 1121

Please consider the following input

According to a study by the Cost of Living Council, the proposal “introduces a phased transition to zero-NOx space and water heating units, applying new fees to “NOx-emitting units based on increasing sales targets for zero-NOx models over time.” The study concludes that, “The proposed rules will cost consumers living in the four-county SCAQMD region \$7.7 billion over the 25-year lifecycle of these appliances.”

In addition to the huge hit on property owners in the form of new and higher costs, the push to eliminate natural gas appliances as an option for consumers and businesses runs contrary to common sense. The stated goal, of course, is to fully “electrify” California, including everything from appliances and automobiles to public transit systems and trucks.

But have any political leaders or bureaucrats given any thought to where electricity comes from?

Much of the electricity California uses is from fossil fuels, including natural gas. And it will remain that way for the foreseeable future!!

Does it really make any sense to mandate replacing a gas stove with an electric model if the electricity used is from natural gas, or an EVEN DIRTIER SOURCE LIKE COAL???

Moreover, are the backers of the proposed rule change aware of the projections regarding the demands being placed on the electrical grid? With AI and server farms, there is a huge demand for additional power generation. While solar and wind are unquestionably part of the solution, they cannot begin to address California’s projected energy needs. Those needs can only be addressed by rapid development of Small Modular Reactors (SMRs) which, even under the best circumstances, would take several years to bring online.

We must acknowledge that California has some of the highest energy costs in the nation. And that is a direct result of policies that are pursued without fully thinking through the consequences of bad decisions.

I am against bills 1111 & 1121 for restriction of the use or increase in cost for the use of natural gas for the public. The impact of focusing on a single energy resource by increasing the cost of the one product over another energy resource to limit its availability is discrimination upon public choice plus is in conflict with principles of survival, i.e., species that lose variation of resources are closest to extinction. These bills are simply political decisions to attract voters through misguided legislation. Such costs should not be focused on one segment of a population, that is discrimination and an attempt to limit variation.

Subject: [EXTERNAL] Urgent Opposition to Rules 1111 and 1121 – Protect Families, Small Businesses, and Consumer Choice

Dear South Coast AQMD Board Members,

As a resident of California's 59th Assembly District, I strongly oppose the adoption of proposed Rules 1111 and 1121. These regulations would have serious financial and practical consequences for millions of families and small business owners across Los Angeles, Orange, Riverside, and San Bernardino counties.

Under these rules, homeowners and landlords would be forced to replace 'reliable' natural gas appliances with electric-only alternatives. This mandate could result in transition costs as high as \$47,000 for some families, particularly when electrical panel upgrades and rewiring are required. This would be another blow for small businesses already battling inflation and rising utility costs.

These rules would also add \$7.7 billion in new costs over time — more than \$300 million annually — with much of that burden falling directly on everyday Californians. Beyond the staggering cost, shifting entirely to electric appliances places even greater demand on our already strained power grid, increasing the likelihood of outages and service disruptions.

Importantly, this transition could also generate more environmental waste. Today's electric appliances often have shorter lifespans than their gas counterparts, leading to higher turnover and more discarded units in landfills — an apparent contradiction to our state's environmental goals.

While we all support cleaner air and sustainable innovation, we must pursue these goals through policies that are affordable, practical, and respectful of consumer choice. Forcing costly, one-size-fits-all solutions on millions of residents is not the way forward.

Please reject Rules 1111 and 1121. Let's protect our communities, preserve energy choice, and focus on balanced, practical solutions that work for everyone.

Sincerely,
Vicente Mendez
Resident, California's 59th Assembly District
