Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Margaret Phelps
Los Angeles, CA

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Jim Haley
Santa Clarita, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Brenda Shelley-McIntyre

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Elliott Sernel
Palm Springs, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
patricia reynolds
Irvine, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Holly zentz
Los Angeles, CA

For much too long, our air has been way too toxic to breathe in southern California and so many improvements have been made the past 50 years to improve our air quality. We cannot afford to go back to before that time where it was unsafe for so millions of people to go outside with too much smog, that's toxic and dangerous. We need to protect and progress our health and safety and not roll it back in this critical time when everything is being rolled back at the federal level.

Please do not cower to these senseless and reckless attacks on our health, our safety and our environment by Trump and his complicit evil Republicans. Please move forward with these long overdue proposed rules and implement and enforce them immediately so that California can serve as an example for the rest of the country that we prioritize our environment and our safety and our children's health and safety over fossil fuels and profits, because we do not want more hospital visits to due to difficulty breathing & asthma.

Thank you!

Sincerely,

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Christine Ressa
Redlands, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Sue Brown
Valley Village, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Melkon Marco Khanlian
La Crescenta, CA

James Chavez

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
suteibun rin
Placentia, CA

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Katherine Hsu
Cerritos, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Gregory Tabat
Santa Ana, CA

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Yvonne Neal
Playa Del Rey, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Subject: [EXTERNAL] PAR 1111 and 1121 - Your community deserves clean air NOW

Dear Chair Delgado and Members of the Board,

The city of Los Angeles has the most fatal air pollution in the entire nation, and Riverside comes in at second worst. The American Lung Association recently ranked Los Angeles as the smoggiest city in the nation for the 25th time in the report's 26-year history. It is AQMD's responsibility to protect public health and reduce pollution, not cater to gas industry profits. I urge you to take bold action and support the transition to clean, zero-emission appliances to protect our health and prevent further climate devastation.

While I am disappointed these rules have been significantly weakened and delayed, I urge you to pass these rules now to protect our health and save lives. We are out of time for delay. Please pass PAR 1111 and 1121 on schedule. Every delay means more illness, more suffering, and more lives at risk.

Our future depends on your leadership. Please do the right thing.

Thank you,

D. Fachko

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Cody Low
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
F. Carlene Reuscher
Costa Mesa, CA

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Carol Lynne Eyster
Redlands, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Julie Holguin

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Noel Gray
Long Beach, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
David Shahal
La Crescenta, CA

James Chavez

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

The District's efforts to clean up harmful appliance pollution are helpful and should be implemented. The South Coast Air Quality Management District should make Rule 1111 and Rule 1121 as strong as possible to clean up smoggy skies and protect our health. It's disappointing that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new weakened proposal offers too many unwarranted concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Electric space and water heaters aren't niche appliances, they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over. In 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean up our air and cut pollution. Strong rules that significantly reduce harmful pollution are vital to help us move toward a healthier future. Stand for strong appliance standards.

Sincerely,

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Kelly Henkler
Valencia, CA

Subject: [EXTERNAL] Proposed rules 1111 and 1121

To whom it may concern,

I am writing about my concern for the AQMD's Rules 1111 and 1121 that will cause approximately 17 million residents in four counties alone, change from gas furnaces and AC units to electric only appliances. The estimated costs to change residential appliances is close to \$40,000! Around 87% of those affected are residential.

Not only is that completely unfair to those who will be unable to afford such an expense, if everything turned electric only, the grids in California would not be able to handle it. You will recall the rolling blackouts in the past.

Please reconsider this ridiculous proposal and remove it.

Thank you,

Scott Biedermann

Subject: [EXTERNAL] Cut air pollution from buildings: Pass 1111 and 1121

Dear Chair Delgado and the Governing Board,

I urge you to pass rules 1111 and 1121. They are essential for cutting deadly pollution from furnaces and water heaters powered by fossil fuels.

Recent revisions driven by the fossil fuel industry and its allies have significantly delayed and limited air pollution reductions. The new proposal has overwhelming support from those who have participated in the rule-making process, many of whom support the rules being strengthened.

Please pass the rules without further delay, and work with the communities to strengthen them through implementation.

I am including the Clerk of the Board and also lead staff on this message and ask that the Clerk forward to all Board Members as soon as possible.

Thank you for your attention.

Sincerely,

Anna Gerrard

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Michele Frey
Costa Mesa, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I just read information about the energy saving benefits of installing heat pumps in one's home. I trust that you are supporting this great new technology to replace gas furnaces. I support your agency's efforts to clean up harmful appliance pollution.

It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. However, I'm disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. The new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
