Writing in support of both amendments. It's the least we could do to reduce dependency on sources of energy that are non-zero emissions.

Thank you South Coast AQMD for proposing new fees on natural gas powered appliances. This is a plus for the environment and a step in the right direction for curbing greenhouse gases and addressing the growing threat to humanity from global warming and climate change.

### Message:

I hate having gas appliances in my home. I have eliminated the furnace, and put in a heat pump. However, I can't replace the range, water grater or dryer due to electrical limitations. I don't use the gas for cooking, as it stinks and is so slow. I use 2 portable induction cooktops and an electric countertop convention oven. If there were incentives available to upgrade the wiring to accommodate a 50 amp 240 v outlet in the kitchen, a 20 amp 240v in the laundry and whatever is necessary for the heat pump water heater in the garage, I'd love to be able to dump the gas meter all together.

**Dear Assemblyman Willis, I am completely in support of fees on new gas appliances, and all actions which wean us from natural gas as soon as possible. Natural gas produces methane emissions in our homes, and in its supply chain, harming our personal health and the health of all life on this Earth. Please help us to transition away from it by increasing clean energy and energy efficiency. Thank you,**

### Message:

"Natural" gas is dangerous, unhealthy and bad for the climate. I use an induction pad whenever possible - it is safe, clean and much more efficient. I wish all my appliances were electric. There is something to be said for progress...

I support changes to the regulations for natural gas appliances that reduce NOx impacts.
