In regard to gas appliances and fining households for using gas appliances; this is extremely upsetting. Our air quality is much more impacted from the fires (caused by Edison) and smoking cigarettes, vaping, and gasoline leaf blowers, wood fireplaces and charcoal barques than by natural gas used to cook and heat homes. Why don't you start with dealing limiting those items rather than household cooks tops and gas oven ranges. It's policies like these that make people want to vote out all democrats from office.

Really folks, The proposed restriction on gas fired furnaces is ill conceived and brings into question whether you have your priorities straight. You are doing a great job of engendering REAL anger towards your decreasing inability to govern along the lines of what the people of California truly need, can afford, or ultimately want. You are ruining the quality of life in this state. Please pivot away from these fringe issues and deal with crime, homeless and reducing costs, not increasing them.

It doesn't make sense to increase prices in attempt to reduce emissions from natural gas. Appliances should be motified and naturally be introduced into the market, while phasing out applicances that create emissions. Pushing this cost on the consumer is unfair, this monopoly of utility prices needs to be highly reconsidered.

Dear Assemblymember Wallis, Thank you for bringing this proposal to the attention of your constituents. I am writing to express my strong opposition to the South Coast Air Quality Management District's consideration of new fees on gas-powered appliances. While I support efforts to improve air quality and reduce environmental impact, imposing additional financial burdens on households—especially during a time of record-high living costs—is not the right approach. Many families are already struggling to keep up with utility bills, rent, and basic necessities. This proposal would only exacerbate the problem, disproportionately affecting working- and middle-class households. Furthermore, the SCAQMD has completely ignored the serious dust consequences that Tropical Storm Hilary created

when the valley was flooded in 2023. There are several reports that outline this dust issue that has particulates from 2.5ppm to 10ppm and this issue is a far greater and dangerous public health hazard than any legislation that is attempted to be passed in regard to clean natural gas appliances. I sincerely hope that this dust mitigation is prioritized at the state and county level and SCAQMD needs to be held accountable for not addressing the public health and safety issue, whatsoever. Lastly, I believe we should be exploring more balanced and practical solutions that promote environmental responsibility without penalizing those who can least afford it. Incentives for transitioning to cleaner technologies, rather than punitive fees, would be a more effective and equitable path forward. I appreciate your continued advocacy for commonsense policies, and I hope you will stand firmly against this proposal. Sincerely, Brian Penna

The proposed new fees on gas appliances are unacceptable, especially with California's exorbitant electricity prices. For many, natural gas offers a more affordable and reliable energy solution for essential home functions. Implementing these fees would disproportionately harm middle-income families and retirees on fixed incomes, further inflating our already high cost of living. Policymakers must rethink this proposal and prioritize affordable energy options for all residents who aren't wealthy. Failing to do so could lead to a California divided into two economic tiers: the very rich and a working class often eligible for subsidies and cost-saving measures that exclude the middle class.

Subject: [EXTERNAL] Opposition to Proposed Amended Rules (PAR) 1111 & 1121

Dear SCAQMD Board Members:

I am writing to express my opposition to Proposed Amended Rules (PAR) 1111 & 1121.

This will cost each homeowner thousands of dollars for the conversion. Natural gas is a relatively clean, cheap, and reliable source of energy so stop demonizing it. Moreover, until other states and countries reduce their pollution, California's efforts will have little effect on the environment and will only further impoverish us.

Sincerely,

Cindy Jacobson

Subject: [EXTERNAL] SCAQMD Proposed Amended Rule 1146.2

Dear Yanrong Zhu -

The comment website is not working properly therefore I am writing to you here regarding the proposed rule change.

This is a government solution looking for a problem that does not exist.

Why would you vote to increase cost and electricity usage when this state already has the highest cost of living and one of the most unreliable electricity grids just to make yourself “feel better” and virtue signal over an insignificant issue.

If you’d like to decrease nitrogen release go to the countries that emit the most nitrogen and complain to them - don’t increase our cost.

People should be free to make their own choices about what type of appliances are used in their own homes without unelected bureaucratic control.

I oppose this new, overburdensome regulation.

Curt

To whom it my concern, When considering imposing additional fees on residential gas appliances, please consider that the cost of living in California is staggering for most families and many including mine struggle monthly to stay above water. Heat, cooking, hot water to shower and launder our close are nessesary to sustain our well being. Please vote against this additional fee and look for alternatives. Such as grandfathering in existing appliance until the purchase of new. Requiring the removal of gas lines at the time of major remodels to homes, or shared cost at sale of homes. Thank you,

Subject: [EXTERNAL] Gas Ban requirement

To whom it may concern,

All I can say is have you lost your mind? That is our only source of cheap energy. Do you know the cost associated with installing an electric water heater, electric stove, oven etc? Obviously you do not. I would have to upgrade my panel and amps for about 12 grand just for starters. I am of retirement age and can not afford to do any of this. What about our gas heat? Are we just supposed to sit in the cold? Do you realize how many law suits you will be facing? The best thing you can do is leave things like they are.

Thank you for considering NOT doing this idiotic move.

I strongly opposed adoption of amendments to PAR 1111 and PAR 1121. Carrots in the form of subsidies for zero NOx equipment should be prioritized over the stick of tight restrictions with penalties and government over-reach into private property matters that increases costs and cost of living for people already suffering in one of the most expensive states in the country (due to already overly strict regulations). Additionally, if the thought is to promote electric equipment, such equipment is connected to a grid powered primarily by fossil fuels with high rates of electricity loss over inefficient energy transmission lines. The result is higher levels of emissions from the point of electricity production to achieve the same function for a different piece of equipment utilizing other sources of energy at the point of use.

County Government, State Government, Federal Government, Dem or GOP it does "NOT" matter as all are driven by Lies, Greed, Power, Fame And/ Or Money. No wonder USA is collapsing as its people are crushed by the fCrime, The Inflation, The Lack of Humanity as our elected leaders are driven by mis-guided ideas that does nothing but add more taxes and costs to everything needed by its citizens for a decent life. The Mantra is SPEND MORE, DO LESS. UGH TO USA GOVERNMENT AND "MOST" ELECTED POLITICANS.

I am a Business Agent for Local 364, Plumbers/Pipefitters/Refrigeration for San Bernardino and Riverside counties. This is not good for anyone; it cuts thousands of jobs with very little impact on air quality. We can do better than this! Focusing on technologies that make bigger impacts on our environment will CREATE jobs for our communities. This kills thousands of jobs, at a time when our communities cannot sustain the economic impacts created by this.

Whoever is coming with these proposals have as it's been the case in California no common sense and it is making California unbearable to live. Propose that all new appliances should be electrical but don't burdknf households that already have in place a gas line to change to electric as it is not easy and could be very costly to upgrade. Does any of the people proposing this "green" rules or backwards penalty have any understanding of what is feasible or not? Provide tax incentives for homeowners to switch NOT penalize them! Outrageous as almost every measure that comes out from our representatives

Subject: [EXTERNAL] Gas appliances

To whom it may concern. Gas appliances are important to California. They provide an essential service to our daily lives. They are more reliable than electric and save us money versus electric appliances. I pray the AQMD does not allow a monopoly of energy to occur in our state. Multiple sources of energy creates more reliability. With rolling black outs, fires, winds, and other electrical vulnerabilities than exist AQMD must think of its people they serve, which include elderly and children for their sakes.of.not being left freezing cold or bathing in cold water.or not being able to cook fpr long periods of time. Use better technologies to filter and clean the alleged harmful out puts of natural gas versus going electric only, electric appliances fail more often than.gas appliances...not only when the grid goes down but the electrical components are so sensitive and faulty its not fair to already fina.cially tapped Californians...please do what is right in the grand scheme of things thank you

Please don't add to our burden to live here. There is no reason to change the rules on gas appliances. Don't force these unnecessary rules on us. Thank you Kent Andersen

Subject: [EXTERNAL] VOTE NO to transition to zero-emission appliances

All,

Please VOTE NO on this request to transition to zero emission appliances. How will I warm water to make formula for my baby? How do we keep our refrigerators running, or cook wood, heat our homes etc? This is just another attempt for the government to control us. We do not want this. We do not want all electric anything. Our electric companies have monopolizes the market and they are now demanding we all transition to their terrible overpriced electric options. No, we want gas options and shouldn't be forced against this and to fund it no less. The electric companies have proved time and time again that they will stop at nothing to control us and bankrupt us all.

Our power goes out about 5-10 times a year due to heat, wind and fire dangers. Do you mean to tell me we would have no way of living in our homes for these weeks this occurs?? All while still paying the mortgage, property taxes etc. No, we don't want this. No more control.

Please vote NO!!

Thank you,
Kimberly Racette

Please don't add new fees for gas-powered appliances. Families in CA are already paying a huge amount of money just to live here. Find others ways to protect the environment that won't add costs to individual families.
