Subject: <SPAM> Comments on South Bay air quality

Dr. Ospital,

My wife and I have reviewed the Draft Report from the MATES III Study and find it very interesting. Our home is at 8407 Winsford Ave in Westchester, about 1/2 mile north of the north runway approach pattern at LAX, and about 3/4 - 1 mile west of I405. Our subjective observations of air quality in our neighborhood include a marked concentration of jet engine exhaust fumes/residue, especially when the prevailing winds are in our direction, which is very frequently the case. We have no way of estimating the carcinogenic qualities of the air, but are rather concerned for our - and our neighbors' - health and well being. We are quite interested in hearing of the findings and action items resulting from the study and the follow-up comments which it has prompted.

Sincerely,
Mr & Mrs Kenneth Dodge & Victoria Martinez
