

Ralph E. Morris

Mr. Morris is the Managing Principal at ENVIRON International Corporation Novato, California office where he directs air quality modeling and analysis, control strategy development and evaluation, and regulatory air issues projects. He has over 27 years experience in air quality issues, with particular emphasis in the development and application of advanced air quality models and the development of air quality control plans. He has directed or was one of the key developers of many of the photochemical grid models that have been used to develop ozone attainment State Implementation Plans (SIPs) in the U.S. including the UAM, UAM-V, and CAMx. He has also been directly involved in the development of numerous ozone, PM₁₀, CO and Regional Haze emission control plans across the U.S.
